In 1793 his father's death gave Rogers the principal share in the banking house in Cornhill, and a considerable income.

He left Newington Green in the same year and established himself in chambers in the Temple. In his circle of friends at this time were "Conversation" Sharp and the artists Flaxman, Opie, Martin Shee and Fuseli. He also made the acquaintance of Charles James Fox, with whom he visited the galleries in Paris in 1802, and whose friendship introduced him to Holland House. In 1803 he moved to 22 St James's Place, where for fifty years he entertained all the celebrities of London. Flaxman and Stothard had a share in the decorations of the house, which Rogers had almost rebuilt, and now proceeded to fill with pictures and other works of art. His collections at his death realized £50,000. An invitation to one of Rogers's breakfasts was a formal entry into literary society, and his dinners were even more select. His social success was due less to his literary position than to his powers as a conversationalist, his educated taste in all matters of art, and no doubt to his sarcastic and bitter wit, for which he excused himself by saying that he had such a small voice that no one listened if he said pleasant things. Above all, he seems to have had a genius for benevolence. "He certainly had the kindest heart and unkindest tongue of any one I ever knew," said Fanny Kemble. He helped the poet Robert Bloomfield, he reconciled Moore with Jeffrey and with Byron, and he relieved Sheridan's difficulties in the last days of his life. Moore, who refused help from all his friends, and would only be under obligations to his publishers, found it possible to accept assistance from Rogers. He procured a pension for H. F. Cary, the translator of Dante, and obtained for Wordsworth his sinecure as distributor of stamps.

It is difficult to realize the length of time that Rogers played the part of literary dictator in England. He made his reputation by *The Pleasures of Memory* when Cowper's fame was still in the making. He became the friend of Wordsworth, Scott and Byron, and lived long enough to give an opinion as to the fitness of Alfred Tennyson for the post of poet laureate. Alexander Dyce, from the time of his first introduction to Rogers, was in the habit of writing down the anecdotes with which his conversation abounded. From the mass of material thus accumulated he made a selection which he arranged under various headings and published in 1856 as *Recollections of the Table-Talk of Samuel Rogers, to which is added Porsoniana*. Rogers himself kept a notebook, in which he entered impressions of the conversation of many of his distinguished friends—Charles James Fox, Edmund Burke, Henry Grattan, Richard Porson, John Horne Tooke, Talleyrand, Lord Erskine, Sir Walter Scott, Lord Grenville and the duke of Wellington. They were published by his nephew William Sharpe in 1859 as *Recollections by Samuel Rogers*; and *Reminiscences and Table-Talk of Samuel Rogers, Banker, Poet, and Patron of the Arts, 1763–1855* (1903), by G. H. Powell, is an amalgamation of these two authorities. Rogers held various honorary positions: he was one of the trustees of the National Gallery; and he served on a commission to inquire into the management of the British Museum, and on another for the rebuilding of the Houses of Parliament.

Meanwhile his literary production was slow. A poem of some autobiographical interest, *An Epistle to a Friend* (Richard Sharp), published in 1798, describes Rogers's ideal of a happy life. This was followed twelve years later by *The Voyage of Columbus* (1810), and by *Jacqueline* (1814), a narrative poem, written in the four-accent measure of the newer writers, and published in the same volume with Byron's *Lara*. His reflective poem on *Human Life* (1819), on which he had been engaged for twelve years, is written in his earlier manner.

In 1814 Rogers made a tour on the Continent with his sister Sarah. He travelled through Switzerland to Italy, keeping a full diary of events and impressions, and had made his way to Naples when the news of Napoleon's escape from Elba obliged him to hurry home. Seven years later he returned to Italy, paying a visit to Byron and Shelley at Pisa. Out of the earlier of these tours arose his last and longest work, *Italy*. The first part was published anonymously in 1822; the second, with his name attached, in 1828. The production was at first a failure, but Rogers was determined to make it a success. He enlarged and revised the poem, and commissioned illustrations from J. M. Turner, Thomas Stothard and Samuel Prout. These were engraved on steel in the sumptuous edition of 1830. The book then proved a great success, and Rogers followed it up with an equally sumptuous edition of his *Poems* (1838). In 1850, on Wordsworth's death, Rogers was asked to succeed him as poet laureate, but declined the honour on account of his great age. For the last five years of his life he was confined to his chair in consequence of a fall in the street. He died in London on the 18th of December 1855.

A full account of Rogers is given in two works by P. W. Clayden, *The Early Life of Samuel Rogers* (1887) and *Rogers and his Contemporaries* (2 vols., 1889). One of the best accounts of Rogers, containing many examples of his caustic wit, is by Abraham Hayward in the *Edinburgh Review* for July 1856. See also the Aldine edition (1857) of his *Poetical Works*, and the *Journals* of Byron and of Moore.

ROGERS, WILLIAM (1819–1896), English clergyman and educational reformer, was born in London on the 24th of November 1819, the son of a barrister. Educated at Eton and at Balliol College, Oxford, he entered Durham University in 1842, to study theology, and was ordained in 1843. In 1845 he was appointed to St Thomas Charterhouse, where he remained for eighteen years, throwing himself passionately into the work of education of his poor, degraded and often criminal parishioners. He began by establishing a school for ragamuffins in a blacksmith's abandoned shed, and with the generous help of friends he gradually extended its scope until the whole parish was a network of schools. In 1858 he was appointed a member of the Royal Commission to inquire into popular education, and he was returned a representative of the London School Board after the passing of Forster's Act in 1870. In 1863 the bishop of London gave him the living of St Botolph Bishopsgate. Rogers was also made a prebendary of St Paul's, and in 1857 he had been appointed Chaplain in Ordinary to the Queen. Having largely solved at St Thomas's the problem of elementary education, at Bishopsgate Rogers tackled the no less difficult one of middle-class schools. He believed in secular education, leaving doctrinal training to parents and clergy. To the cry against "godless education," Rogers impulsively replied, "Hang theology; let us begin"; and his nickname of "Hang-theology Rogers" stuck to him for the rest of his life. The Cowper Street Schools, costing £20,000, were the practical result of his energy. His next great work was the reconstruction of Edward Alleyn's charity at Dulwich. The new college was opened in 1870; new buildings were erected for the lower school, and the lion's share of the work fell upon Rogers. The culmination of his labours was the opening, on his seventy-fifth birthday, of the Bishopsgate Institute, including a hall, with accommodation for 500 people and a reference and lending library. On the same day a portrait and gift of plate was made him at the Mansion House, before a distinguished gathering. Lord Rosebery, then Prime Minister, observed in his speech that though bishoprics and deaneries had not been the rector's lot, there was not a poor Jew in Houndsditch or Petticoat Lane whose face would not brighten when he saw him coming. When he died, on the 19th of January 1896, this might have served as an appropriate epitaph.

ROGIER, CHARLES LATOUR (1800–1885), Belgian statesman, descended from a Belgian family settled in the department of the Nord in France, was born at St Quentin on 17th August 1800. His father, an officer in the French army, perished in the Russian campaign of 1812; and the family moved to Liége, where the eldest son, Firmin, held a professorship. Charles, after being called to the Bar, founded, in collaboration with his lifelong friends, Paul Devaux and Joseph Lebeau, the journal *Mathieu Laensberg* (afterwards *Le Politique*), which by its ardent patriotism and its attacks on the Dutch administration soon acquired a widespread influence. When the insurrection of 1830 broke out at Brussels, Rogier put himself at the head of 150 Liégeois, and inscribing on his banner the motto,

"Vaincre ou mourir pour Bruxelles," he obtained arms from a local factory, and marched upon the capital. Here he took his place at once among the leaders of the revolutionary party. His influence saved the town-hall from pillage on 19th September. On the 24th a *commission administrative* was formed, of which Rogier became president. The energetic measures of this body and of its successor, the *gouvernement provisoire*, soon freed the greater part of the country from the Dutch troops. Rogier was sent in October to suppress an outbreak among the colliers of Hainaut, and then as delegate of the provisional government to Antwerp, where the citadel still held out for Holland. He succeeded in arranging an armistice, and then, in the exercise of the absolute power with which he was invested, reorganized the entire administration of the city. He sat for Liège in the National Congress, voted for the establishment of a hereditary monarchy, and induced the congress to adopt the principle of an elective second chamber. In the long-drawn debates on the bestowal of the crown he ranged himself on the side of Louis Philippe: he first supported the candidature of Otto of Bavaria, and on his rejection declared for the duc de Nemours. Finally, when Louis Philippe declined the crown on behalf of his son, Rogier voted with the majority for Leopold of Saxe-Coburg. In June 1831 he was appointed governor of the province of Antwerp, a post rendered exceptionally difficult by the continued presence of Dutch troops in the citadel. In October 1832 he was made minister of the interior in the Goblet-Devaux cabinet. In the following June he intervened in a quarrel in the chamber of deputies between Dewerpe and the Opposition leader, Alexandre Gendebien, claimed a prior right to give satisfaction, and fought a duel, in which he was severely wounded. During his term of office he carried, in the teeth of violent opposition, a law that established in Belgium the first railways on the continent of Europe, and thus laid the foundation of her industrial development. Owing to dissensions in the cabinet, he retired in 1834, together with Lebeau, and resumed the governorship of Antwerp. On Lebeau's return to power in 1840, Rogier became minister of public works and education. The proposals that he made in the latter capacity were defeated by the determined opposition of the Clerical party, and on the resignation of the ministry in 1841, Rogier gave his support to a compromise on the subject of education, which passed into law in 1842. He led the Liberal party in Opposition till 1847, when he formed a cabinet in which he held the ministry of the interior. He at once embarked on a programme of political and economic reform. He took effective steps to remedy the industrial distress caused by the decay of the Flemish linen trade. The limits of the franchise were extended; and as the result of the liberal policy of the government Belgium alone escaped the revolutionary wave that spread over the Continent in 1848. He passed a law in 1850 organizing secondary education under the control of the State, and giving the clergy only the right of religious instruction. The Clerical party, though unable to defeat this measure, succeeded in shaking the position of the cabinet; and it was finally undermined, after Prince Louis Napoleon's *coup d'état* of 1851, by the hostility of the French government, which found its political exiles welcomed by the liberal cabinet at Brussels. Rogier retired in October 1852, but was brought back into office by the liberal reaction of 1857. He again became president of the council and minister of the interior in a cabinet of which Frère-Orban was the most conspicuous member. The first important measure passed by the ministry was one for the fortification of Antwerp. In 1860 the fear of French designs on the independence of Belgium led to a movement of reconciliation with Holland, and inspired Rogier to write the only one of his numerous poems that is likely to survive, his national anthem, "La Nouvelle Brabançonne." Some of the ministers resigning in 1861, on the question of recognizing the kingdom of Italy, the cabinet was reconstructed, and Rogier exchanged the ministry of the interior for that of foreign affairs. In this capacity he achieved a diplomatic triumph in freeing the navigation of the Scheldt, and thus enabling Antwerp to become the second port on the mainland of Europe. Defeated at Dinant, he sat for Tournai from 1863 till his death. His younger and more energetic colleague, Frère-Orban, gradually overshadowed his chief, and in 1868 Rogier finally retired from power. He continued, however, to take part in public life, and was elected president of the extraordinary session of the chamber of representatives in 1878. From this time his age, his devoted patriotism and the unassuming simplicity of his life made him the idol of all classes. The fiftieth anniversary of the kingdom of Belgium in 1880, and two years later that of his entry into parliament, were the occasion of demonstrations in his honour. He died at Brussels on the 27th of May 1885, and his remains were accorded a public funeral.

See T. Juste, *Charles Rogier, 1800–1885, d'après des documents inédits* (Verviers, 1885).

ROGUE, a word which came into use about the middle of the 16th century as a slang or "cant" term for a vagrant vagabond, answering to the modern "tramp," and was adopted into English legal phraseology together with "vagabond" in the Statute of Elizabeth 1572, "rogue and vagabond" and "incorrigible rogue" remaining as legal terms for certain classes of persons amenable to the law under the Vagrancy Acts (see VAGRANCY). The act of Elizabeth defined "rogues, vagabonds and sturdy beggars" as including "idle persons going about and using subtle craft and unlawful games and all persons whole and mighty in body, but having neither land nor master, nor able to give an account how they get their living and all common labourers using loitering and refusing to work for the wages commonly given" (Sir G. Nicholls' *History of the English Poor Law*, ed. 1898 by H. G. Willink, vol. i. 159). The word has now the general meaning of a knave or rascal, though also used (by meiosis) as a term of playful or tender banter and in various special applications (*e.g.* a "rogue" elephant, one who has been driven out by the herd and lives a solitary life, becoming very savage and destructive. Gardeners also apply the word to a plant which does not come true from seed, showing some variation from the type).

The derivation of the word has been much disputed. It has usually been referred to Fr. *rogue*, meaning proud, arrogant, which is variously derived from the Icelandic *hroke*, rook, long-winded talker, or Breton *rok*, proud, haughty; cf. Irish and Gaelic *rucas*, pride. The *New English Dictionary*, however, rejects this derivation, and considers possible a connexion with another early "cant" word "roger," a begging vagabond pretending to be a poor university scholar.

ROHAN, the name of one of the most illustrious of the feudal families of France, derived from that of a small town in Morbihan, Brittany. The family appears to have sprung from the viscounts of Porhoët, and claims connexion with the ancient sovereigns of Brittany. Since the 12th century it held an important place in the history of Brittany, and strengthened its position by alliances with the greatest houses in France. It was divided into several branches, the eldest of which, that of the viscounts of Rohan, became extinct in 1527. Of the younger branches the most famous is that of Guéménée, from which sprang the branches of Montbazon, Soubise and Gié. The seigneurs of Frontenay, an offshoot of this last branch, inherited by marriage the property of the eldest branch of the house. Hercule de Rohan, duc de Montbazon (1568–1654) served Henry III. and Henry IV. against the League, and was made by Henry IV. governor of Paris and the Isle of France, and master of the hounds. His grandson, Louis de Rohan-Guéménée, the chevalier de Rohan, who was notorious for his dissolute life, conspired with the Dutch against Louis XIV. and was beheaded in Paris in 1674. In the 18th century the Soubise branch furnished several prelates, cardinals and bishops of Strassburg, among others the famous cardinal de Rohan, the hero of the affair of the diamond necklace. The seigneurs of Gié, a branch founded by Pierre de Rohan (1453–1513), a cadet of the branch of Guéménée and marshal of France, were conspicuous on the Protestant side during the wars of religion. René de Rohan, seigneur of Pontivy and Frontenay, commanded the Calvinist army in 1570, and

defended Lusignan with great valour when it was besieged by the Catholics (1574–75). His son Henry, the first duke of Rohan, also distinguished himself in the Protestant army. His only child, Marguerite de Rohan, married in 1645 Henri Chabot, a cadet of a great family of Poitou. This marriage was opposed by her mother, Marguerite de Béthune, who put forward a rival heir called Tancred, whom she claimed to be her son by the duke of Rohan. This Tancred perished in the Fronde in 1649. The property and titles of Henry de Rohan thus passed to the Chabot family, which under the name of Rohan-Chabot produced some distinguished soldiers and a cardinal archbishop of Besançon. The male line of the Rohans is now represented by **an** offshoot of the Rohan-Guéménée branch.

ROHAN, HENRI, DUC DE (1579–1638), French soldier, writer and leader of the Huguenots, was born at the château of Blain, in Brittany, in 1579. His father was René II., count of Rohan (1550–86), and head of one of the oldest and most distinguished families in France, which was connected with many of the reigning houses of Europe. He was educated by his mother, who was a woman of exceptional learning and force of character. Rohan was by birth the second son, but his elder brother René dying young he became the heir of the name. He appeared at court and in the army at the age of sixteen, and was a special favourite with Henry IV., after whom, failing the house of Condé, he might be said to be the natural chief of the French Protestants. Having served till the peace of Vervins, he travelled for a considerable time over Europe, including Italy and Scotland, in the first of which countries he received the not unique honour of being called by Elizabeth her knight, while in the second he was godfather at Charles I.'s christening. On his return to France he was made duke and peer at the age of twenty-four, and two years later (1603) married Marguerite de Béthune, the duc de Sully's daughter. He served in high command at the celebrated siege of Jülich in 1610, but soon afterwards he fell into active or passive opposition to the government over the religious disputes. For a time, however, he abstained from actual insurrection, and he endeavoured to keep on terms with Marie de' Medici; he even, despite his dislike of De Luynes, the favourite of Louis XIII., reappeared in the army and fought in Lorraine and Piedmont. It was not till the decree for the restitution of church property in the south threw the Bearnese and Gascons into open revolt that Rohan appeared as a rebel. His authority and military skill were very formidable to the royalists; his constancy and firmness greatly contributed to the happy issue of the war for the Huguenots, and brought about the treaty of Montpellier (1623). But Rohan did not escape the results of the incurable factiousness which showed itself more strongly perhaps among the French Huguenots than among any other of the numerous armed oppositions of the 17th century. He was accused of lukewarmness and treachery, though he did not hesitate to renew the war when the compact of Montpellier was broken. Again a hollow peace was patched up, but it lasted but a short time, and Rohan undertook a third war (1627–29), the first events of which are recounted in his celebrated *Memoirs*. His last war (famous for the defence of La Rochelle by Soubise, Rohan's younger brother) was one of considerable danger for Rohan. In spite of all efforts he had in the end to sign a peace, and after this he made his way quickly to Venice. Here he is said to have received from the Porte the offer of the sovereignty of Cyprus. It is more certain that his hosts of Venice wished to make him their general-in-chief, a design not executed owing to the peace of Cherasco (1631). At Venice he wrote his *Memoirs*; at Padua, *Le Parfait Capitaine*. But when France began to play a more conspicuous part in the Thirty Years' War Rohan was again called to serve his lawful sovereign, and entrusted with the war in the Valtelline. The campaign of 1633 was completely successful, but Rohan was still considered dangerous to France, and was soon again in retirement. At this time he wrote his *Traité du gouvernement des treize cantons*. Rohan fought another Valtelline campaign, but without the success of the first, for the motives of France were now held in suspicion. The unfortunate commander retired to Geneva and thence went to the army of Bernhard of Saxe-Weimar. He received a mortal wound at the death of Rheinfelden on the 28th of February 1638, and died at the abbey of Königsfeld, canton Berne, on the 13th of April. His body was buried at Geneva, and his arms were solemnly handed over to the Venetian government. With this daughter Marguerite the honours of the family of Rohan-Gié passed to the house of Chabot.

Rohan's *Mémoires sur les choses qui se sont passées en France*, &c., rank amongst the best products of the singular talent for memoir writing which the French *noblesse* of the 16th and 17th centuries possessed. Alike in style, in clearness of matter and in shrewdness, they deserve very high praise. The first three books, dealing with the civil wars, appeared in 1644; the fourth, containing the narrative of the Valtelline campaigns, not till 1758. Some suspicions were thrown on the genuineness of the latter, but it would seem, groundlessly. His famous book on the history and art of war, *Le Parfait Capitaine*, appeared in 1631 and subsequently in 1637 and 1693 (see also Quincy, *Art de la guerre*, Paris, 1741). It treats of the history and lessons of Caesar's campaigns and their application to modern warfare, and contains appendices dealing with phalangite and legionary methods of fighting and the art of war in general. He also wrote an account of his travels, the book on Switzerland mentioned above, *De l'intérêt des princes et états de la chrétienté*, etc. The *Memoirs* may be conveniently found in the collection of Michaud and Poujoulat, vol. 19.

See Fauvelet de Foix, *Histoire du Duc Henri de Rohan* (Paris, 1667); Schybergson, *Le Duc de Rohan et la charte du parti protestant en France* (Paris, 1880); Bühring, *Venedig, Gustaf Adolf, und Rohan* (Berlin, 1885); Laugel, *Henri de Rohan, son rôle politique et militaire* (Paris, 1889); Veraguth, *Herzog Rohan und seine Mission in Graubünden* (Berne, 1894); and Shadwell, *Mountain Warfare*.

ROHAN, LOUIS RENÉ ÉDOUARD, CARDINAL DE (1734–1803), prince de Rohan-Guéménée, archbishop of Strassburg, a cadet of the great family of Rohan (which traced its origin to the kings of Brittany, and was granted the precedence and rank of a foreign princely family by Louis XIV.), was born at Paris on the 25th of September 1734. Members of the Rohan family had filled the office of archbishop of Strassburg from 1704—an office which made them princes of the empire and the compeers rather of the German prince-bishops than of the French ecclesiastics. For this high office Louis de Rohan was destined from his birth, and soon after taking orders, in 1760, he was nominated coadjutor to his uncle, Constantine de Rohan-Rochefort, who then held the archbishopric, and he was also consecrated bishop of Canopus. But he preferred the elegant life and the gaiety of Paris to his clerical duties, and had also an ambition to make a figure in politics. He joined the party opposed to the Austrian alliance, which had been cemented by the marriage of the archduchess Marie Antoinette to the dauphin. This party was headed by the duc d'Aiguillon, who in 1771 sent Prince Louis on a special embassy to Vienna to find out what was being done there with regard to the partition of Poland. Rohan arrived at Vienna in January 1772, and made a great noise with his lavish fêtes. But the empress Maria Theresa was implacably hostile to him; not only did he attempt by her policy, but he spread scandals about her daughter Marie Antoinette, laughed at herself, and shocked her ideas of propriety by his dissipation and luxury. On the death of Louis XV. in 1774, Rohan was recalled from Vienna, and coldly received at Paris; but the influence of his family was too great for him to be neglected, and in 1777 he was made grand almoner, and in 1778 abbot of St Vaast. In 1778 he was made a cardinal on the nomination of Stanislaus Poniatowski, king of Poland, and in the following year succeeded his uncle as archbishop of Strassburg and became abbot of Noirmoutiers and Chaise-Dieu. His various preferments brought him in an income of two and a half millions of livres; yet the cardinal was restless and unhappy until he should be reinstated in favour at court and had appeased the animosity which Marie Antoinette felt against him. In pursuit of this object he fell into the hands of a gang of intriguers, the comtesse de Lamotte, the notorious Cagliostro and others, whose actions

form part of the "affair of the diamond necklace." This story is disentangled elsewhere (see DIAMOND NECKLACE), and diverging views are still taken of it. Rohan certainly was led to believe that his attentions to the queen were welcomed, and that his arrangement by which she received the famous necklace was approved. He was the dupe of others, and at the trial in 1786 before the parlement his acquittal was received with universal enthusiasm, and regarded as a victory over the court and the unpopular queen. He was deprived, however, of his office as grand almoner and exiled to his abbey of Chaise-Dieu. He was soon allowed to return to Strassburg, and his popularity was shown by his election in 1789 to the states-general by the clergy of the bailiages of Haguenau and Weissenburg. He at first declined to sit, but the states-general, when it became the national assembly, insisted on validating his election. But as a prince of the church in January 1791 he refused to take the oath to the constitution, and went to Ettenheim, in the German part of his diocese. In exile his character improved, and he spent what wealth remained to him in providing for the poor clergy of his diocese who had been obliged to leave France; and in 1801 he resigned his nominal rank as archbishop of Strassburg. On the 17th of February 1803 he died at Ettenheim.

See the *Mémoires* of his secretary, the abbé Georgel, of the baroness d'Oberkirch, of Beugnot, and of Madame Campan; and works cited under DIAMOND NECKLACE.

ROHILKHAND, a tract in the United Provinces of India. The name is associated with the Rohilla tribe (*q.v.*), but in its historical significance it covers an area almost coincident with the modern division of Bareilly, for which it is a common alternative title. This division has an area of 10,720 sq. m., and comprises the districts of Bareilly, Bijnor, Budaun, Moradabad, Shahjahanpur and Pilibhit. Pop. (1901) 5,479,688. Political control over the state of Rampur is exercised by the commissioner for the division.

ROHILLA (a Pushtu word for "mountaineer"), a tribe of Afghan marauders, who, towards the beginning of the 18th century, conquered a district of Hindostan, giving it the name of Rohilkhand, which still survives as an alternative title of the Bareilly division of the United Provinces. The Rohillas are chiefly notable for their association with Warren Hastings, which formed one of the main counts in his impeachment. Having been driven into the mountains by the Mahrattas, they had appealed for aid to Shuja-ud-Dowlah, wazir of Oudh, and ally of the British. The wazir promised to assist them in return for a sum of money; but when the Mahrattas were driven off the Rohilla chiefs refused to pay. The wazir then decided to annex their country, and appealed to Hastings for assistance, which was given in return for a sum of forty lakhs of rupees. Hastings justified his action on the ground that the Rohillas were a danger to the British as uncovering the flank of Oudh; and while he would never involve the company in an unjust war, neither did he desire an unprofitable one. The Rohillas were defeated by Colonel Champion in April 1774, and the majority of them fled across the Ganges; but the charges of destroying a nation, brought against Hastings by Burke and Macaulay, were greatly exaggerated. The Rohillas were never a nation, but consisted of a small body of Mahommedans, who had imposed an alien rule upon a million Hindus; and one of their chiefs was left in possession of a tract which now forms the state of Rampur (*q.v.*).

See Charles Hamilton, *History of the Rohilla Afghans* (1787); and Sir J. Strachey, *Hastings and the Rohilla War* (Oxford, 1892).

ROHLFS, FRIEDRICH GERHARD (1831–1896), German explorer of the Sahara, son of a physician, was born at Vegesack, near Bremen, on the 14th of April 1831. After the ordinary course at the gymnasium of Osnabrück he entered the Bremen corps in 1848, and took part as a volunteer in the Schleswig-Holstein campaign, being made an officer after the battle of Idstedt (July 1850). He became a medical student at the universities of Heidelberg, Würzburg and then Göttingen; but his natural inclination was for travelling, and in 1855 he went to Algeria and enlisted in the Foreign Legion. He took part in the conquest of Kabylia, and was decorated for bravery as Chevalier of the Legion of Honour. Having made himself master of Arabic and gained a thorough knowledge of native customs, Rohlfs went to Morocco in 1861; presenting himself as a Mussulman, he gained the favour of the enlightened sherif of Wazzan, and was thus enabled to travel over the length and breadth of the country. He then entered the Sahara and traversed the entire extent of the Wad Draa, being the second European (the first being René Caillié) to visit Tafilet. On leaving Tafilet he was robbed by his guides and left for dead; but two marabouts charitably succoured him and he was able to reach Algeria. When scarcely recovered from his wounds he started once more for the Sahara (August 1862) by way of Algeria. Compelled by tribal disturbances to turn back, he went to Tangier and thence in March 1864 made a fresh start. Crossing the Atlas by an eastern route he again visited Tafilet, and thence made his way across the desert to the oasis of Tuat, which he was the first European to describe. Returning by Ghadames and Tripoli he spent three months in Germany, and then (March 1865) went back to Tripoli, intending to explore the highlands of the Ahaggar; being prevented, however, by a war among the Tuareg, he went from Ghadames to Murzuk, where he spent five months, and thence across the Sahara to Bornu, mapping *en route* the oasis of Kawar. Rohlfs passed through Mandara and its ancient capital Mora, and struck out for the coast of the Gulf of Guinea. He reached the Benue by way of the Bauchi highlands, and descended that river to its confluence with the Niger, which he ascended to Rabba. Thence he made his way on horseback to Lagos, reaching Liverpool on the 2nd of July 1867. In the following year he accompanied the British expedition against Theodore of Abyssinia, and on his return went once more to Tripoli, whence he traversed the Cyrenaica, reaching Egypt by way of the oasis of Siwa (1869). Returning home, he married and settled down in Weimar. He did not rest long, however, for in 1873–74 he took command of an expedition sent by the Khedive Ismail into the Libyan Desert, which made investigations of great value to science. In 1878 Rohlfs and Dr Stecker were commissioned by the German African Society to go to Wadai. They succeeded in reaching the capital, but one of their chief centres of the Senussites, but being attacked by the Arabs, they were obliged to retreat, making their way to the coast at Benghazi, reached in October 1879. In 1880 Rohlfs accompanied Dr Stecker in an exploring expedition to Abyssinia; but after delivering a letter from the German emperor to the Negus, he returned to Europe. In 1885, when the rivalry between the British and Germans in East Africa was very keen, Prince Bismarck appointed Rohlfs consul at Zanzibar, which island Bismarck desired to secure for Germany. Rohlfs, untrained in diplomacy, was no match for Sir John Kirk, the British Agent, and he was soon recalled, and did not again visit Africa. He died at Rüngsdorf, near Bonn, on the 2nd of June 1896. Rohlfs visited many regions not before traversed by Europeans, and the value of his work was recognized in 1868 by the Royal Geographical Society, which bestowed on him the Patron's Medal.

Accounts of each of his expeditions, and other works on Africa were published by Rohlfs, including *Mein Erster Aufenthalt in Marokko* (Bremen, 1873; English edition, *Travels in Morocco*, London, 1874); *Reise durch Marokko* (Bremen, 1868); *Quer durch Afrika* (Leipzig, 1874–75); *Von Tripolis nach Alexandrien* (Bremen, 1871); *Expedition zur Erforschung der Libyschen Wüste* (Cassel, 1875–76); *Kufra: Reise von Tripolis nach der Oase Kufra* (Leipzig, 1881); *Land und Volk in Afrika* (Bremen, 1870); *Quid novi ex Africa?* (Cassel, 1886). See also a biographical notice by Dr W. Wolkenhauer in the *Deutsche geo. Blätter* for 1896.

ROHTAK, a town and district of British India, in the Delhi division of the Punjab. The town, which is of great antiquity, became the headquarters of a British district in 1824. Viewed from the sandhills to the south, Rohtak, with its white mosque in the centre, a fort standing out boldly to the east, is striking and picturesque. It has a station on the Southern Punjab

railway, 44 m. N.W. of Delhi. Pop. (1901) 20,323. It is an important trade centre, with factories for ginning and pressing cotton, and a speciality in muslin turbans.

The district of Rohtak has an area of 1797 sq. m. It is situated in the midst of the level tableland between the Jumna and the Sutlej, forming one unbroken plain of hard clay copiously interspersed with light yellow sand, and covered in its wild state by a jungle of scrubby brushwood. The only natural reservoir for its drainage is the Najafgarh *jhil*, a marshy lake lying within the boundaries of Delhi. The Sahibi, a small stream from the Ajmere hills, traverses a corner of the district, and the northern portions are watered by the Rohtak and Butana branches of the Western Jumna canal; but the greater portion of the central plain, comprising about two-thirds of the district area, is entirely dependent upon the uncertain rainfall. The climate, though severe in point of heat, is generally healthy; the rainfall averages annually about 20 in.

The population in 1901 was 630,672, showing an increase of 6·8% in the decade. The principal crops are millets, wheat, barley, pulses, cotton and sugar-cane. The district is traversed by the line of the Southern Punjab railway from Delhi to Jind, and also touched by the Rewari-Ferozepore branch of the Rajputana railway. It is peculiarly exposed to drought, suffering in the famine of 1896–97, and yet more severely in 1899–1900, when the highest number of persons relieved was 33,632 in March 1900.

Rohtak was formerly included within the region known as Hariana. The district, with the other possessions of Sindhia west of the Jumna, passed to the British in 1803. Until 1832 Rohtak was under the administration of a political agent, resident at Delhi, but in that year it was brought under the general regulations and annexed to the North-Western Provinces. The outbreak of the Mutiny in 1857 led to its abandonment, when the mutineers attacked and plundered Rohtak, destroying every record of administration. It was not until after the fall of Delhi that the authority of the British government was permanently restored. Rohtak was then transferred to the Punjab.

ROJAS ZORRILLA, FRANCISCO DE (1607–*c.* 1660), Spanish dramatist, was born at Toledo; the only circumstance recorded of his life is that he became a knight of Santiago in 1644. The exact date of his death is unknown. His plays were published in 1640–45; the best of his dramatic compositions, *Del Rey abajo Ninguno*, is not included in the collection and was printed separately under the title of *Garcia del Castañar*. Of his other pieces, apart from their intrinsic merit, an international interest attaches to *No hay padre siendo rey*, which was borrowed by Rotrou for his *Venceslas*; to *Donde hay agravios no hay zelos* and the *Amo criado*, which were imitated by Scarron in his *Jodelet Soufflet* and *Maître Valet*; to *Entre Bobos anda el juego*, the source of Thomas Corneille's *Don Bertrand de Cigarral*, as well as of Scarron's *Don Japhet d'Armenie*; to *Obligados y ofendidos*, from which are derived *Les Généreux Ennemis* by Boisrobert, *Les Illustres Ennemis* by Thomas Corneille, and Scarron's *Écolier de Salamanque*; and to *La traición busca el castigo*, upon which is based Vanbrugh's *False Friend* and Le Sage's *Traître puni*. Rojas Zorrilla's power of conveying a tragic impression is manifest in *Garcia del Castañar*; his chief defect is his persistent preciosity of diction.

ROKITANSKY, CARL, FREIHERR VON (1804–1878), the founder of the Vienna school of pathological anatomy, was born on the 19th of February 1804 at Königrätz in Bohemia. He studied medicine at Prague and at Vienna, graduating at the latter place in 1828. Soon afterwards he became assistant to Johann Wagner, the professor of pathological anatomy, and succeeded him in 1834 as prosector, being at the same time made extraordinary professor. It was not until ten years later (1844) that he reached the rank of full professor. To his duties as a teacher he added in 1847 the onerous office of medico-legal anatomist to the city, and from 1863 he filled an influential office in the ministry of education and public worship, wherein he had to advise on all routine matters of medical teaching, including patronage. A seat in the upper house of the Reichsrath rewarded his public labours in 1867, and on his retirement from all his offices in 1874 he was made a commander of the Order of Leopold. He joined the Imperial Academy of Sciences as a member in 1848, and became its president in 1869. He was president also of the medical society of the Austrian capital and an honorary member of many foreign societies. On his retirement at the age of seventy his colleagues celebrated the occasion by a function in the aula of the university, where his bust was unveiled. In his leave-taking speech he said that work had always been a pleasure to him and pleasures mostly a toil. His death in Vienna on the 23rd of July 1878 elicited many genuine expressions of affection and of esteem for his upright character. Two of his sons became professors at Vienna, one of astronomy and another of medicine, while a third gained distinction on the lyric stage.

With Rokitansky's name is associated the second great period of the medical school of Vienna, its first success having been identified with the liberal patronage of it by Maria Theresa and with the fame of Van Swieten, whom the empress had attracted thither from Leiden. The basis of its second reputation was morbid anatomy, together with the precision of clinical diagnosis dependent thereon, and associated with the labours of Rokitansky's lifelong friend, Joseph Skoda (1805–1881). The anatomical vogue had begun under Wagner while Rokitansky was still a student; but it reached its highest point while the latter was assistant in the dead-house and afterwards prosector and professor. The enthusiasm for the post-mortem study of disease brought one very serious consequence in the onset, in the enormous increase of deathrate from puerperal fever in the lying-in wards of the general hospital. A comparison between the slight mortality in the wards that were afterwards reserved for the training of midwives and the excessive mortality in those set apart for the training of students proved that the cause was the conveyance of infection from the dead-house by the hands of the latter. The precautions introduced by I. P. Semmelweiss in 1847 proved adequate in removing that grave reproach from the study of morbid anatomy. Another and more lasting consequence of the assiduous pursuit of post-mortem study, counterbalancing somewhat the advantage of a more precise and localized diagnosis, was the loss of faith in the power of drugs to remedy the textural changes—the so-called "nihilism" of the Vienna school. The immediate outcome of Rokitansky's close application to the work of the dead-house was his *Handbuch der pathologischen Anatomie* (1842–46), in 3 vols., of which the first was published last. The value of the work lies in the second and third volumes, containing succinct descriptions of the visible changes and abnormalities in the several organs and parts of the body. Whenever Rokitansky touched the vital problems of general pathology, he did in the first instance, however, he revealed a metaphysical bent, which was strong in him behind all his undoubted powers of outward observation and accurate description. Being a few years too soon to profit by the microscopic movement which led to the cellular pathology, he endeavoured to reconcile the old humoral doctrine with his anatomical observations, and to read a new meaning into the doctrine of the various dyscrasias. In 1862 he entered into possession of a new pathological institute, in which he found means, for the first time, to display his extensive collection of specimens in a museum. Although he had no direct share in the newer developments of pathology, he was far from indifferent or reactionary towards them; indeed, the laboratories and chairs for microscopic and experimental pathology and for pathological chemistry were warmly encouraged and aided by him.

Next to his *Handbuch*, of which the Sydenham Society published an English translation in 4 vols. (1849–54), his most important writings were four memoirs in the *Denkschriften* of the Vienna Academy of Sciences (on the anatomy of goitre, cysts, diseases of arteries, and defects in the septa of the heart), the last as late as 1875. Other papers of less importance brought up the total of his writings to thirty-eight, including three addresses of a philosophical turn, on "Freedom of Inquiry" (1862), "The Independent Value of Knowledge" (1867) and "The Solidarity of Animal Life" (1869).

ROLAND [ROLAND DE LA PLATIÈRE], **JEAN MARIE** (1734–1793), French statesman, was born at Thizy on the 18th of February 1734. He received a good education, and early formed the studious habits which remained with him through life. Proposing to seek his fortune abroad, he went on foot to Nantes, but was there prostrated by an illness so severe that all thoughts of emigration were perforce abandoned. For some years he was employed as a clerk; thereafter he joined a relative who was inspector of manufactures at Amiens, and he himself speedily rose to the position of inspector. To these two employments may be ascribed those qualities of assiduity and

accuracy, and that familiarity with the commerce of the country, which distinguished his public career. In 1781 he married Manon Jeanne Phlipon (1754–1793), and the name of MADAME ROLAND is famous in history. She was the daughter of Gratien Phlipon, a Paris engraver, who was ambitious, speculative and nearly always poor. From her early years she showed great aptitude for study, an ardent and enthusiastic spirit, and unquestionable talent. She was to a considerable extent self-taught; and her love of reading made her acquainted first with Plutarch—a passion for which author she continued to cherish throughout her life—thereafter with Bossuet, Massillon, and authors of a like stamp, and finally with Montesquieu, Voltaire and Rousseau. These studies marked stages of her development, and as her mind matured she abandoned the idea of a convent which for a year or two she had entertained, and added to the enthusiasm for a republic which she had imbibed from her earlier studies not a little of the cynicism and the daring which the later authors inspired. She almost equalled her husband in knowledge, and infinitely excelled him in talent and in tact. Through and with him she exercised a singularly powerful influence over the destinies of France from the outbreak of the Revolution till her death.

For four years after their marriage Roland lived at Amiens, he being still an inspector of manufactures; but his knowledge of commercial affairs enabled him to contribute articles to the *Encyclopédie Nouvelle*, in which, as in all his literary work, he was assisted by his wife. On their removal to Lyons the influence of both became wider and more powerful. Their fervent political aspirations could not be concealed, and from the beginning of the Revolution they threw in their lot with the party of advance. The *Courrier de Lyon* contained articles the success of which reached even to the capital and attracted the attention of the Parisian press. They were from the pen of Madame Roland and were signed by her husband. A correspondence sprang up with Brissot and other friends of the Revolution at headquarters. In Lyons their views were publicly known; Roland was elected a member of the municipality, and when the depression of trade in the south demanded representation in Paris he was deputed by the council of Lyons to ask the Constituent Assembly that the municipal debt of Lyons, which had been contracted for the benefit of the state, should be regarded as national debt. Accompanied by his wife, he appeared in the capital in February 1791. He remained there until September, frequenting the Society of the Friends of the Constitution, and entertaining deputies of the most advanced opinions, especially those who later became the leading Girondists. Madame Roland took an active part in the political discussions in these reunions.

In September 1791, Roland's mission being executed, they returned to Lyons. Meanwhile the inspectorships of manufactures had been abolished; he was thus free; and they could no longer remain absent from the centre of affairs. In December they again reached Paris. Roland became a member of the Jacobin Club. They had made many and influential friends in advance, and Madame Roland's salon soon became the resort of Brissot, Pétion, Robespierre and other leaders of the popular movement, above all of Buzot, whom she loved with platonic enthusiasm. In person Madame Roland was attractive though not beautiful; her ideas were clear and far-reaching, her manner calm, and her power of observation extremely acute. It was almost inevitable that she should find herself in the centre of political aspirations and presiding over a company of the most talented men of progress. The rupture had not yet been made evident between the Girondist party and that section still more extreme, that of the Mountain. For a time the whole left united in forcing the resignation of the ministers. When the crisis came the Girondists were ready, and on the 23rd of March 1792 Roland found himself appointed minister of the interior. As a minister of the crown Roland exhibited a bourgeois brusqueness of manner and a remarkable combination of political prejudice with administrative ability. While his wife's influence could not increase the latter, it was successfully exerted to foment and embitter the former. He was *ex officio* excluded from the Legislative Assembly, and his declarations of policy were thus in writing—that is, in the form in which she could most readily exert her power. A great occasion was invented. The decrees against the emigrants and the non-juring clergy still remained under the veto of the king. A letter was penned by Madame Roland and addressed by her husband to Louis. It remained unanswered. Thereupon, in full council and in the king's presence, Roland read his letter aloud. It contained many and terrible truths as to the royal refusal to sanction the decrees and as to the king's position in the state; but it was inconsistent with a minister's position, disrespectful if not insolent in tone. Roland's dismissal followed. Then he completed the plan: he read the letter to the Assembly; it was ordered to be printed, became the manifesto of disaffection, and was circulated everywhere. In the demand for the reinstatement of the dismissed ministers were found the means of humiliation, and the prelude to the dethronement, of the king.

After the insurrection of the 10th of August, Roland was recalled to power, one of his colleagues being Danton. But now he was dismayed by the progress of the Revolution. He was above all a provincial, and was soon in opposition to the party of the Mountain, which aimed at supremacy not only in Paris but in the government as well. His hostility to the insurrectional commune of Paris, which led him to propose transferring the government to Blois, and his attacks upon Robespierre and his friends rendered him very unpopular. His neglect to seal the iron chest discovered in the Tuileries, which contained the proofs of Louis XVI.'s relations with the enemies of France, led to the accusation that he had destroyed a part of these documents. Finally, in the trial of the king he demanded, with the Girondists, that the sentence should be pronounced by a vote of the whole people, and not simply by the Convention. He resigned office on the 23rd of January 1793, two days after the king's execution.

Although now extremely unpopular, the Rolands remained in Paris, suffering abuse and calumny, especially from Marat. Once Madame Roland appeared personally in the Assembly to repel the falsehoods of an accuser, and her ease and dignity evoked enthusiasm and compelled an apology. But violence succeeded violence, and early on the morning of the 1st of June she was arrested and thrown into the prison of the Abbaye. Roland himself escaped secretly to shelter in Rouen. Released for an hour from the Abbaye, she was again arrested and thrown among the horrors of Sainte-Pélagie. Finally, she was transferred to the Conciergerie. In prison she won the affections of the guards, and was allowed the privilege of writing materials and the occasional visits of devoted friends. She there wrote her *Appel à l'impartiale postérité*, those memoirs which display a strange alternation between self-laudation and patriotism, between the trivial and the sublime. On the 8th of November 1793 she was conveyed to the guillotine. Before ascending her head to the block, she bowed before the clay statue of Liberty erected in the Place de la Révolution, uttering her famous apostrophe—"O Liberty! what crimes are committed in thy name!" When Roland heard of his wife's condemnation, he wandered some miles from his refuge in Rouen; maddened by despair and grief, he wrote a few words expressive of his horror at those massacres which could only be inspired by the enemies of France, protesting that "from the moment when I learned that they had murdered my wife I would no longer remain in a world stained with enemies." He affixed the paper to his breast, and unsheathing a sword-stick fell upon the weapon, which pierced his heart, on the 10th of November 1793.

Madame Roland's *Mémoires*, first printed in 1820, have been edited among others by P. Faugère (Paris, 1864), by C. A. Dauban (Paris, 1864), by J. Claretie (Paris, 1884), and by C. Perroud (Paris, 1905). Some of her *Lettres inédites* have been published by C. A. Dauban (Paris, 1867), and a critical edition of her *Lettres* by

C. Perroud (Paris, 1900-2). See also C. A. Dauban, *Étude sur Madame Roland et son temps* (Paris, 1864); V. Lamy, *Deux femmes célèbres, Madame Roland et Charlotte Corday* (Paris, 1884); C. Bader, *Madame Roland, d'après des lettres et des manuscrits inédits* (Paris, 1892); A. J. Lambert, *Le mariage de Madame Roland, trois années de correspondance amoureuse* (Paris, 1896); Austin Dobson, *Four Frenchwomen* (London, 1890); and articles by C. Perroud in the review *La Révolution française* (1896-99).

ROLAND, LEGEND OF. The legend of the French epic hero Roland (transferred to Italian romance as Orlando) is based on authentic history. Charlemagne invaded Spain in 778, and had captured Pampeluna, but failed before Saragossa, when the news of a Saxon revolt recalled him to the banks of the Rhine. On his retreat to France through the defiles of the Pyrenees, part of his army was cut off from the main body by the Basques, who had ambushed in a narrow defile, and now drove the rear-guard into a valley where it was surrounded and entirely destroyed. The Basques, after plundering the baggage, made good their escape, favoured by the darkness and by their knowledge of the ground. The incident is related in the *Annales* (Pertz i. 159) commonly ascribed to Einhard, and with more detail in Einhard's *Vita Karoli* (cap. ix.; Pertz ii. 448), where the names of the leaders are given. "In this battle were slain Eggihard, *praepositus* of the royal table; Anselm, count of the palace; and Hruodland, prefect on the Breton march . . ." The scene of the disaster is fixed by tradition at Roncevaux, on the road from Pampeluna to Saint Jean Pied de Port. There is no foundation in this story for the fiction of the twelve peers, which may possibly arise from a still earlier tradition. In 636-37, according to the *Chronicles* of Fredegarius (ed. Krusch p. 159), twelve chiefs, whose names are given, were sent by Dagobert against the Basques. The expedition was successful, but in an engagement fought in the valley of Subola, or Robola, identified with Mauléon, which is not far from Roncevaux, the Duke Harembert, with other Frankish chiefs, was slain. Later fights in the same neighbourhood and under similar circumstances are related in 813 (*Vita Hludowici*; Pertz ii. 616), and especially in 824 (Einhard's *Annales*; Pertz i. 213). These incidents no doubt served to strengthen the tradition of the disaster to Charlemagne's rear-guard in 778, the importance of which was perhaps underrated by the Frankish historians and was certainly magnified in popular story. The author of the *Vita Hludowici*, writing sixty years after the battle of Roncevaux, thought it superfluous to give the names of the fallen chiefs, as being matter of common report.

Growth of the Legend.—The choice of Roland or Hruodland as the hero of the story probably points to the borders of French Brittany as the home of the legend. The exaggeration of a rear-guard action into a national defeat; the substitution of a vast army of Saracens, the enemies of the Frankish nation and the Christian faith, for the border tribe mentioned by Einhard[1] and the vengeance inflicted by Charlemagne, which in fact the enemy escaped with complete impunity—all are in keeping with the general laws of romance. Charlemagne himself appears as the ancient epic monarch, not as the young man he really was in 778. The earliest version of the legend which we possess dates no earlier than the 11th century, but there is abundant evidence of the existence of a continuous tradition dating from the original event, although its methods of transmission remain a vexed question. Roncevaux lay on the route to Compostella, and the many pilgrims who must have passed the site from the middle of the 9th century onwards may have helped to spread the story. Whether the actual *cantilena Rollandi* chanted by Taillefer at the battle of Hastings (William of Malmesbury, *De gestis regum angl.* iii. 242, and Wace, *Brut.* ii. 11, 8035 seq.) was any part of the existing *Chanson de Roland* cannot be stated, but the choice of the legend on this occasion by the trouvère is proof of its popularity.

The oldest extant forms of the legend are: (*a*) chapters xix.-xxx. of the Latin chronicle, known as the *Pseudo-Turpin*, which purports to be the work of Turpin, archbishop of Reims, who died about 800, but probably dates from the 12th century; (*b*) *Carmen de proditione Guenonis*, a poem in Latin distichs; and (*c*) the *Chanson de Roland*, a French *chanson de geste* of about 4000 lines, the oldest recension of which is in the Bodleian Library, Oxford (MS. Digby 23). It is in assonanced tirades, of unequal length, many of them terminated with the refrain *Aoi*. This MS. was written by an Anglo-Norman scribe about the end of the 12th century, and is a corrupt copy of a text by a French trouvère of the middle of the 11th century. It concludes with the words: "Ci fait la geste, que Turoldus declinet." There was a Turold (d. 1098) who was abbot of Peterborough; another was tutor to William the Conqueror and died in 1035. Even if we could identify this personage, we cannot tell whether he was the poet, the minstrel or the scribe of the MS., but it seems likely that he was merely the scribe. The poem, which was first printed by Francisque Michel (Oxford, 1837), is the finest monument of the heroic age of French epic. In its fundamental features it evidently dates back to the reign of Charlemagne, who is not represented as the capricious despot of the later *chansons de geste*, but as governing in accordance with Frankish custom, accepting the counsel of his barons, and carrying out the curious procedure of Frankish law. *Roland* represents the monarchical idea, and was evidently, in its primitive form, written before the feudal revolts which weakened the power of Charlemagne's successors. Its unity of conception, the severity and conciseness of the language, the directness, vividness and sobriety of the narrative, place it far above the chansons of later trouvères, with their wordiness and their loose, episodic construction. With the exception of the small place allotted to Alde, women have practically no place in the story, and the romantic element is thus absent. Roland's master-passions are daring and an exaggerated conception of honour, the extravagance of which is the cause of the disaster. His address to Oliver before the battle is typical of the warlike spirit of the poem:—

> "Notre empereur qui ses Francs nous laissa,
> Tels vingt mille hommes a pour nous mis à part,
> Qu'il sait très bien que pas un n'est couard.
> Pour son seigneur grands maux on souffrira,
> Terribles froids, grands chauds endurera,
> Et de son sang, de sa chair on perdra!
> Brandis ta lance; et moi, ma Durendal,
> Ma bonne épée, que le Roi me donna.
> Et si je meurs, peut dire qui l'aura
> C'était l'épée d'un très noble vassal."
> (tr. Petit de Julleville xi. 1114 seq.)

The Story as related in the Chanson de Roland.—Charlemagne, after fighting for seven years in Spain, had conquered the whole country with the exception of Saragossa, the seat of the Saracen king Marsile. He was encamped before Cordova when he received envoys from the Saracen king, sent to procure the evacuation of Spain by the Franks through false offers of submission. Charlemagne held a council of his barons, Naimes of Bavaria, Roland, Oliver, Turpin, Ogier, Ganelon and the rest. Roland, the emperor's nephew, was eager for war; the peace party was headed by Ganelon of Mayence.[2] The Franks were weary of campaigning, and Ganelon's counsels won the day. At the suggestion of Roland, Ganelon, who was his stepfather, was entrusted with the embassy to Marsile—a sufficiently perilous errand, since two former envoys had been beheaded by the Saracens. Ganelon, inspired by hatred of Roland and Oliver, agreed with Marsile to betray Roland and his comrades for ten mule-loads of gold. He then returned to Charlemagne bearing Marsile's supposed assent to the Frankish terms. The retreat began. Roland, at Ganelon's instigation, was placed in command of the rear-guard. With him were the rest of the famous twelve peers,[3] his companions-in-arms, Oliver, Gérin, Gérier, Oton, Bérengier, Samson, Anséis, Girard

[1] It is noteworthy, however, that an Arab historian, Ibn-al-Athîr, states that Charles's assailants were the Arabs of Saragossa, by whom he had been originally invited to interfere in Spain.

[2] Ganelon may perhaps be identified with Wenilo, archbishop of Sens, whose treason against Charles the Bald is related in the *Annales Bertiniani* (anno 859).

[3] The lists vary in different texts.

de Roussillon, Engelier the Gascon, Ivon and Ivoire, and the flower of the Frankish army. They had nearly reached the summit of the pass when Oliver, who had mounted a high rock, saw the advancing army of the Saracens, 400,000 strong. In vain Oliver begged Roland to sound his horn and summon Charlemagne to his aid. A description of the battle, a series of single combats, follows. Oliver, with his sword Hauteclère, rivalled Roland with Durendal. After the first fight, a second division of the pagan army appears, then a third. Roland's army was reduced to sixty men before he consented to sound his horn. Presently all were slain but Roland and Oliver, Turpin and another. Finally, when the Saracens, warned of the return of Charlemagne, had retreated, Roland alone survived on the field of battle. With a last effort he blew his horn once more, and heard before he died the sound of Charlemagne's battlecry of "Montjoie." Charlemagne pursued the enemy, and destroyed their army. The raising of a second army by Baligant, the emir of Babylon, and its defeat by the emperor, who slays Baligant in single combat, is obviously an interpolation in the original narrative. The trouvère then relates the return of the Franks, the burial of the heroes of Roncevaux, and, at great length, the trial of Ganelon at Aix, his execution, and that of his thirty kinsmen, and the death of Alde, Roland's betrothed and Oliver's sister, when she heard the news of Roland's death. The trial of Ganelon is one of the most curious parts of the story, providing, as it does, a full account of the Frankish criminal procedure.

Relations between the Earlier Forms of the Legend.—The *Pseudo-Turpin* represents a different recension of the story, and is throughout clerical in tone. It was the trouvère of the *Chanson de Roland* who developed the characters into epic types; he invented the heroic friendship of Roland and Oliver, the motives of Ganelon's treachery, and many other details. The famous fight between Roland and the giant Ferragus appears in the *Pseudo-Turpin* (chapter xviii.), but not in the poem. The *Chanson de Roland* presupposes the existence of a whole cycle of epic poetry, probably in episodic form; it contains allusions to many events outside the narrative, some of which can be explained from other existing chansons, while others refer to narratives which are lost. In lines 590–603 of the poem Roland gives a list of the countries he has conquered for Charles, from Constantinople and Hungary on the east to Scotland on the west. But most of these exploits no trace remains in extant poems, but his capture of Bordeaux, of Nobles, of Carcassonne, occur in various compilations. Roland was variously represented by the romancers as the son of Charlemagne's sister Gilles or Berte and the knight Milon d'Anglers. The romantic episode of the reconciliation of the pair with Charlemagne through Roland's childish prattle (*Berte et Milon*) is probably foreign to the original legend. In the Scandinavian versions Roland is the son of Charlemagne and his sister, a recital probably borrowed from mythology. His *enfances,* or youthful exploits, were, according to *Aspremont,* performed in Italy against the giant Eaumont, but in *Girais de Viane* his first taste of battle is under the walls of Vienne, where Oliver, at first his adversary, becomes his brother-in-arms.

Other Versions.—Most closely allied to the Oxford *Roland* are (*a*) a version in Italianized French preserved in a 13th or 14th century MS. in the library of St Mark, Venice (MS. Fr. iv.); (*b*) the *Rualantes Liet* (ed. W. Grimm, Göttingen, 1838) of the Swabian priest Konrad (fl. 1130), who gave, however, a pious tone to the whole;[1] (*c*) the 8th branch of the *Karlamagnus-saga* (ed. C. Unger, Christiania, 1860), and the Danish version of that compilation.

In the 12th century the *Chanson de Roland* was modernized by replacing the assonance by rhyme, and by amplifications and additions. Several MSS. of this rhymed recension, sometimes known as *Roncevaux,* are preserved. In the prose compilations of *Galien* and in David Aubert's *Conquêtes de Charlemagne* (1458) the story kept its popularity for many centuries. In England the story was understood in the original French, and the English romances of Charlemagne (*q.v.*) are mostly derived from late and inferior sources. In Spain the legend underwent a curious transformation. Spanish patriotism created a Spanish ally of Marsile, Bernard del Carpio, to be the rival and victor of Roland. It was in Italy that the Roland legend had its greatest fortune: Charlemagne and Roland appear in the *Paradiso* (canto xviii.) of Dante; the statues of Roland and Oliver appear on the doorway of the cathedral of Verona; and the French *chansons de geste* regularly appeared in a corrupt Italianized French. The Roland legend passed through a succession of revisions, and, as the *Spagna,* forming the 8th book of the great compilation of Carolingian romance, the *Reali di Francia,* kept its popularity down to the Renaissance. The story of Roland (Orlando) in a greatly modified form is the subject of the poems of Luigi Pulci (*Morgante Maggiore,* 1481), of Matteo Boiardo (*Orlando innamorato,* 1486), of Ariosto (*Orlando furioso,* 1516), and of Francesco Berni (*Orlando,* 1541).

AUTHORITIES.—For a complete bibliography of the editions of the various MSS. of the *Chanson de Roland,* of the foreign versions, and of the enormous literature of the subject, see Léon Gautier, *Les Épopées françaises* (2nd ed., vol. iii., 1880), and the same author's *Bibliographie des chansons de geste* (1897). Among critical editions of the *Chanson* are those by Wendelin Foerster in the *Altfrans.* Bibl. (vols. vi. and vii. (Heilbronn, 1883–85), and by E. Stengel, *Das altfranzösische Rolandslied* (Leipzig, 1900, &c.). The most popular edition is *La Chanson de Roland* (Tours, 1872, and numerous subsequent editions), by Léon Gautier, with text, translation, introduction, notes, variants and glossary. L. Petit de Julleville published in 1878 an edition with the old French text, and a modern French translation in assonanced verse. There are various other translations in French; in English prose by I. Butler (Boston, Mass., 1904); and in verse by the old English verse translation by A. Way and E. Spencer (London, 1895). Consult further G. Paris, *Hist. poét. de Charlemagne* (reprint, 1905), and *De Pseudo Turpino* (Paris, 1865); P. Rajna, *Le Origini dell' epopea francese* (Florence, 1884) and *Le Fonti dell' Orlando Furioso* (2nd ed., Florence, 1900); F. Picco, *Galando nella storia e nella poesia* (Turin, 1901); G. Paris, "Roncevaux," in *Légendes du moyen âge* (1903), on the topography of the battlefield.

ROLANDSECK, a village of Germany, in the Prussian Rhine province, delightfully situated on the left bank of the Rhine, 8 m. above Bonn, with a station on the railway Cologne-Coblenz. The place consists almost entirely of villas and is a favourite summer resort. Crowning the vine-clad hills behind it lie the ruins of the castle, a picturesque ivy-covered arch, whence a fine view is obtained of the Siebengebirge and the Rhine valley as far as Bonn. Immediately below Rolandseck in mid-river is the island of Nonnenwerth, on which is a nursing school under the conduct of Franciscan nuns, established in 1850. The convent which formerly stood here was founded in 1122 and secularized in 1802. Tradition assigns the foundation of the castle of Rolandseck to Charlemagne's paladin, Roland. It was certainly built at a very early date, as it was restored by Frederick, archbishop of Cologne, in 1120, and it was a fortress until the end of the 15th century.

ROLL, ALFRED PHILIPPE (1846–), French painter, was born in Paris on the 1st of March 1846. Pupil of Gérôme and Bonnat at the École des Beaux Arts, he made his *début* at the Salon in 1870 with "Environs de Paris," and "Evening," and attracted the widest attention in 1875 by his colossal painting of "The Flood at Toulouse" (now at the Havre Museum). All his early work is imbued with the spirit of romanticism under the influence of Géricault, whilst his colour tended to Bolognese heaviness with a strong leaning towards dark shadows in the flesh painting, in which he closely followed Courbet. In 1877 he showed at the Salon the "Fête of Silenus" (now at the Ghent Museum), a painting of such vivid colour and exuberant life that it recalls the work of Jordaens. About this time he began to devote himself to the realistic rendering of modern life, especially among the working classes, and together with romantic subjects he abandoned his earlier heavy colouring, and devoted himself to the study of free light. His "Miners' Strike" of 1880 (now at the Valenciennes Museum) placed him in the front rank of modern French painters, and from that date his career was one of continuous and brilliant success. He became "official painter" to the

[1] A proof of the popularity of the legend in Germany is supplied by the so-called Roland statues, of which perhaps the most famous example is that of Bremen. Mention of a *statua Rolandis* is made in a *privilegium* granted by Henry V. to the town of Bremen in 1111. The *Rolands-säule* were probably symbolic of the judicial rights possessed by the towns where they are found, and it has been suggested that the word arises from false etymology with *Rothland-säule,* red-land-pillar, the symbol of the possession of the power of life and death.

French government, and was entrusted with numerous commissions for the decoration of public buildings and for commemorative pictures, like the "President Carnot at Versailles at the Centenary of the États Généraux" (now at Versailles Palace), and "The Tzar and President Faure laying the Foundation Stone of the Alexandre III. Bridge." For the Hôtel de Ville he executed "The Pleasures of Life" and "The Rosetime of Youth." Besides the pictures already mentioned, a vast number of his works are to be found in the public galleries of France. The museum of the Hôtel de Ville in Paris owns his "National Fête at Paris in 1880"; the Cognac Museum, "Labour, Works at Suresnes"; the Luxembourg, his "War" and "Manda Lametrie, farm-hand." At Avignon Museum is the "Don Juan and Haidee"; at Laval Museum, "Halt!"; at Fontainebleau Palace, "In Normandy"; at Pau Museum, "Roubey, cementer"; and at the Museum of Geneva, "Marianne Offrey, crieuse de vert." In portraiture he is known by his "Yves Guyot," "Coquelin cadet," "Jules Simon," &c., but his greatest success was the group of "Fritz Thaulow and his Wife." In 1905 he replaced Carolus-Duran as president of the Société Nationale des Beaux-Arts, of which he was one of the founders.

ROLL (O. Fr. *rolle, roulle*, mod. *rôle*, Lat. *rotulus*, dim. of *rota*, wheel), something rolled or wound up in a cylindrical form on an axis, or something which "rolls," that is, moves or is moved along a service by a turning motion. Primarily the word is used of a piece of writing material, such as parchment or paper rolled up for the purpose of convenient storage, handling, &c. This is the meaning of the Med. Lat. *rotulus*, defined by Du Cange as "Scheda, charta in speciem rotulae seu rotae convoluta." It was thus the convenient name for any document kept in this form as an official record, and hence for any register, record, catalogue or official list. "The Rolls" was the name of the building where the records of the Chancery Court were kept, the keeper of which was the Master (*q.v.*) of the Rolls, now the title of the third member of the English Supreme Court of Judicature. Other familiar examples of the use of the word in this sense are the list of those admitted as qualified solicitors, whence the phrase "to strike off the rolls," of removal by the court of a solicitor for offences or delinquencies. There are numerous applications of the word to other objects packed in a cylindrical form, such as tobacco, cloth, &c., and particularly to a small loaf of bread rolled over before baking, the crust being thin and crisp and the crumb spongy.

In architecture a "roll" or "scroll" moulding is a moulding resembling a section of a roll or scroll of parchment with the end overlapping; a "roll and fillet" moulding is a section of a cylindrical moulding with a square fillet running along the centre of the face (see LABEL). For the sense of an object that rolls, the word "roller" is more general, but "roll" is frequent in technical usage for revolving cylinders, especially when working in fixed bearings. For the rolling of steel see ROLLING MILL.

ROLLAND, JOHN (fl. 1560), Scottish poet, appears to have been a priest of the diocese of Glasgow, and to have been known in Dutch in 1555. He is the author of two poems, the *Court of Venus* and a translation of the *Seven Sages*. The former, which was printed by John Ros in 1575, may have been written before 1560. The latter was translated from a Scots prose version at the suggestion of an aunt ("ane proper wenche"), who had found his treatment of the courtly allegory involved and uninteresting.

The *Court of Venus* was edited by Walter Gregor for the S.T.S. in 1884. See W. A. Craigie's long list of corrections of that edition in the *Modern Language Quarterly* (March 1898). The *Seven Sages* was printed in 1578, and frequently during the earlier decades of the 17th century. It was reprinted by David Laing for the Bannatyne Club (1837). Sibbald, in his *Chronicle of Scottish Poetry* (iii. 287), hinted that Rolland may be the author of the *Thrie Priestis of Peblis*. There is not a scrap of evidence in support of this; and there are many strong reasons against the ascription.

ROLLE DE HAMPOLE, RICHARD (d. 1349), English hermit and author, was born near the end of the 13th century, at Thornton (now Thornton Dale), near Pickering, Yorkshire. His father, William Rolle, was perhaps a dependant of the Neville family. Richard was sent to Oxford at the expense of Thomas de Neville, afterwards archdeacon of Durham. At Oxford he gave himself to the study of religion rather than to the subtleties of scholastic philosophy, for which he professed a strong distaste. At the age of nineteen he returned to his father's house, and, making a rough attempt at a hermit's dress out of two kirtles of his sister's and a hood belonging to his father, he ran away to follow the religious vocation. At Dalton, near Rotherham, he was recognized by John de Dalton, who had been at Oxford with him. After satisfying himself of Rolle's sanity, Dalton's father provided him with food and shelter and a hermit's dress. Rolle then entered on the contemplative life, passing through the preliminary stages of purification and illumination, which lasted for nearly three years, and then entering the stage of sight, the full revelation of the divine vision. He is very exact in his dates, and attained, he says, the highest stage of his ecstasy four years and three months after the beginning of his conversion. Richard belonged to no order and acknowledged no rule. He left the Daltons, and wandered from place to place, resting when he found friends to provide for his wants. He seems to have desired to form a rule of hermits, but met with much opposition. The pious compilers of his "office" evidently thought it necessary to defend him against the charge of mere vagrancy. He nowhere says himself that his preaching made many converts, but his example was followed by many recluses in the north of England. After some years of wandering he gave up his more energetic propaganda, contenting himself with advising those who sought him out. He began also to write the songs and treatises by which he was to exert his widest influence. He settled in Richmondshire, twelve miles from the recluse Margaret Kirkby, whom he had cured of a violent seizure. To her some of his works are dedicated. Finally he removed to Hampole, near Doncaster, invited by an inmate of the Cistercian nunnery of St Mary. There he died on the 29th of September 1349. Many miracles were wrought at his shrine, and, in view of an expected canonization, an office was drawn up giving an account of his life and the legends connected with it.

Richard Rolle had a great influence on his own and the next generation. He was a brilliant example of the spiritual side of religion over its forms, his enthusiastic celebration of the love of Christ, and his assertion of the individualist principle, he represented the best side of the influences that led to the Lollard movement. He was himself a faithful son of the church, and the political activity of the Lollards was quite foreign to his teaching. The popularity of his devotional writings is attested by the numerous existing editions and by the many close imitations of them.

A very full list of his Latin and English works is given (pp. 36–43) in Dr Carl Horstmann's edition (1895–96) of his works in the Library of Early English Writers. Some of his works exist in both English and Latin, and it is often not easy to say which is the original version. The most considerable of them are *The Pricke of Conscience* and his *Commentary on the Psalter*.

The Pricke of Conscience is a long religious poem, in rhyming couplets, dealing with the beginning of man's life, the instability of the world, why death is to be dreaded, of doomsday, of the pains of hell, and the joys of heaven, the two latter subjects being treated with uncompromising realism. Rolle wrote in the northern dialect, but southern transcripts are also found, and the poem exists in a Latin version (*Stimulus conscientiae*). The sources of this work included the *De Contemptu Mundi sive de miseria humanae conditionis* of Pope Innocent III., and Rolle also showed a knowledge of Bartholomew Glanville, Thomas Aquinas and Honorius of Awtun. His English devotional commentary on the Psalms follows very closely his Latin *Expositio Psalterii*, which he based partly on Peter Lombard's *Catena*. It often agrees with the English metrical Psalter preserved in three MSS. in the British Museum (Cotton Vesp. D. vii., Egerton 614, and Harl. 1770). Dr R. F. Littledale in his edition (1873) of J. M. Neale's *Commentary on the Psalms* called it a "terse mystical paraphrase, which often comes very little short in beauty and depth of Dionysius the Carthusian himself."

There is no complete and accessible edition of his works. The best collection is by C. Horstmann, *Yorkshire Writers: Richard Rolle of Hampole; An English Father of the Church and his Followers*

(2 vols., 1895–96), in the "Library of Early English Writers." This includes many English prose treatises by Rolle, some beautiful examples of his lyric poems, and other treatises in prose and verse from northern MSS., some of which he has attributed to Rolle, and others to his followers. Wynkyn de Worde printed in one volume, in 1506, *Rycharde Rolle Hermyte of Hampull in his contemplacyons of the drede and love of God . . . and the Remedy ayenst the troubles of temptacyons*. Neither of these are accepted by Dr Horstmann as Rolle's work. His Latin treatises, *De emendatione vitae* and *De incendio amoris*, the latter one of the most interesting of his works, because it is obviously largely autobiographical, were translated (1435–39) by Richard Misyn (Early English Text Society, Extra Ser., 1896). The *Priche of Conscience* was edited (1863) by Richard Morris for the Philological Society. His *Commentary on the Psalms* was edited by the Rev. H. R. Bramley (Oxford, 1884). Ten prose treatises by Richard Rolle from the Thornton MS. (c. 1440, Lincoln Cathedral Library) were edited by Canon George Perry for the Early English Text Society in 1866. Partial editions of his Latin works are dated Paris (1510), Antwerp (1533), Cologne (1535–36), Paris (1618); and in vol. xxvi. of the "Bibliotheca Patrum Maxima" (Lyons, 1677). The office, which forms the chief authority for Rolle's life, was printed in the *York Breviary*, vol. ii. (Surtees Soc., 1882), and in Canon Perry's edition referred to above.

See also Percy Andrecae, who collated eighteen MSS. in the British Museum in his *Handschriften des Priche of Conscience* (Berlin, 1888); *Studien über Richard Rolle von Hampole unter besonderer Berücksichtigung seiner Psalmencommentare*, by H. Middendorff (Magdeburg, 1896), with a list of MS. sources, &c.; J. Audelay, in *Englische Studien* (Heilbronn, vols. vii. and xii.); A. Hahn, *Quellenuntersuchungen zu Richard Rolle's Englischen Schriften* (Halle, 1900); and for his prosody, G. Saintsbury, *Hist. of English Prosody*, vol. i.

ROLLER, a very beautiful bird, so called from its way of occasionally rolling or turning over in its flight,[1] somewhat after the fashion of a tumbler-pigeon. It is the *Coracias garrulus* of ornithology, and is widely though not very numerously spread over Europe and Western Asia in summer, breeding so far to the northward as the middle of Sweden, but retiring to winter in Africa. It occurs almost every year in some part or other of the British Islands, from Cornwall to the Shetlands, while it has visited Ireland several times, and is even recorded from St Kilda. But it is only as a wanderer that it comes, since there is no evidence of its having ever attempted to breed in Great Britain; and indeed its conspicuous appearance—for it is nearly as big as a daw and very brightly coloured—would forbid its being ever allowed to escape a gun. Except the back, scapulars and tertials, which are bright reddish-brown, the plumage of both sexes is almost entirely blue—of various shades, from pale turquoise to dark ultramarine—tinted in parts with green. The bird seems to be purely insectivorous. The genus *Coracias*, for a long while placed by systematists among the crows, has really no affinity whatever to them, and is now properly considered to belong to the heterogeneous group of birds now associated as *Coraciiformes*, in which it forms the type of the family Coraciidae; and its alliance to the bee-eaters (Meropidae) and king-fishers (Alcedinidae) (*q.v.*) is very evident. Some eight other species of the genus have been recognized, one of which, *C. leucocephalus* or *C. abyssinicus*, is said to have occurred in Scotland. India has two species, *C. indicus* and *C. affinis*, of which thousands upon thousands used to be annually destroyed to supply the demand for gaudy feathers to bedizen ladies' dresses. One species, *C. lemminckí*, seems to be peculiar to Celebes and the neighbouring islands, but otherwise the rest are natives of the Ethiopian or Indian regions. Allied to *Coracias* is the genus *Eurystomus* with some half-dozen species, of similar distribution, but one of them, *E. pacificus*, has a wider range, for it inhabits Australia and reaches Tasmania.

Madagascar has four or five very remarkable forms which have often been considered to belong to the family Coraciidae; and, according to A. Milne-Edwards, no doubt should exist on that point. Yet if any may be entertained it is in regard to one of them, *Leptosomus discolor*, which, on account of its zygodactylous feet, some authorities place among the Cuculidae, while others have considered it the type of a distinct family Leptosomatidae. The genera *Brachypteracias* and *Atelornis* present fewer structural differences from the rollers, and perhaps may be rightly placed with them; but the species of the latter have long tarsi, and are believed to be of terrestrial habit, which rollers generally certainly are not. These very curious and in some respects very interesting forms, which are peculiar to Madagascar, are admirably described and illustrated by a series of twenty plates in the great work of A. Grandidier and A. Milne-Edwards on that island (*Oiseaux*, pp. 223–250), while the whole family Coraciidae is the subject of a monograph by H. E. Dresser, as a companion volume to his monograph on the Meropidae. (A. N.)

ROLLER. For agricultural purposes the roller formerly consisted of a solid cylinder of timber or stone attached to a frame and shafts, but to facilitate turning two or more iron cylinders revolving on an axle are now generally used. The simplest form has a smooth surface. The diameter of the drum should be as great as possible—30 in. being a good size—because the larger this is the more easily it is pulled (within certain limits), while rollers of small diameter are heavier of draught and do their work less efficiently. The implement is used in spring and summer as an aid in pulverizing and cleaning the soil, by breaking clods and lumps of the stirred earth which the cultivator or other implement has brought to the surface; in smoothing the surface for the reception of small seeds or the better operation of the mower or reaper; in consolidating soil that is too loose in texture and pressing it down about the roots of young plants. In the case of young plants the roots are close to the surface, which must therefore be kept moist. This end is attained by the compression by the roller of the top-soil of which the capillarity, *i.e.* the power of drawing water from the sub-soil is thereby increased. On the other hand, when it is desired to conserve the soil-moisture, the roller may be followed by the harrow, which, by pulverizing the surface-soil, breaks the capillarity. Of the variations on the common smooth roller, the clod-crusher and the cambridge roller are the most important. The clod-crusher combines weight with breaking power. The best-known form was patented about 1841 by Crosskill, and consists of a number of disks with serrated edges threaded loosely on an axle round which they revolve. The Cambridge roller carries on its axle a number of closely packed wheels, the rims of which narrow down to a wedge shape. The tubular roller, instead of drums, has tubes arranged longitudinally, producing a corrugated surface which is reproduced in the condition of the soil after it has been rolled.

ROLLER-SKATING, a pastime which, by the use of small wheels instead of a blade on the skate, has provided some of the pleasures of skating on ice without having ice as the surface (see SKATING). Wheeled skates were used on the roads of Holland as far back as the 18th century, but it was the invention of the four-wheeled skate, working on rubber springs, by J. L. Plimpton of New York, in 1863, that made the amusement popular. Still greater advance was made by the Raymond skate with ball and cone bearings. The wheels or rollers were first of turned boxwood, but the wearing of the edges was a fault which has been surmounted by making them of a hard composition or of steel. The floor of the rink on which the skating takes place is either of asphalt or of wood. The latter is that always used in newly made rinks. The best floors are of long narrow strips of maple. Figure-skating on roller-skates is in some respects easier to learn than on ice-skates, the four points of contact given by the wheels rendering easier the holding of an edge; but some figures, such as loops, are more difficult.

ROLLIN, CHARLES (1661–1741), French historian and educationist, was born at Paris on the 30th of January 1661. He was the son of a cutler, and at the age of twenty-two was made a master in the Collège du Plessis. In 1694 he was rector of the university of Paris, rendering great service among other things by reviving the study of Greek. He held that post for two years instead of one, and in 1699 was appointed principal of the Collège de Beauvais. Rollin held Jansenist

[1] Gesner in 1555 said that the bird was thus called, and for this reason, near Strassburg, but the name seems not to be generally used in Germany, where the bird is commonly called *Rake*, apparently from its harsh note. The French have kept the name *Rollier*. It is a curious fact that the roller, notwithstanding its occurrence in the Levant, cannot be identified with any species mentioned by Aristotle.

principles, and even went so far as to defend the miracles supposed to be worked at the tomb of François de Paris, commonly known as Deacon Paris. Unfortunately his religious opinions deprived him of his appointments and disqualified him for the rectorship, to which in 1719 he had been re-elected. It is said that the same reason prevented his election to the French Academy, though he was a member of the Academy of Inscriptions. Shortly before his death (14th December 1741) he protested publicly against the acceptance of the bull *Unigenitus*.

Rollin's literary work dates chiefly from the later years of his life, when he had been forbidden to teach. His once famous *Ancient History* (Paris, 1730–38), and the less generally read *Roman History*, which followed it, were avowed compilations, uncritical and somewhat inaccurate. But they instructed and interested generation after generation almost to the present day. A more original and really important work was his *Traité des études* (Paris, 1726–31). It contains a summary of what was even then a reformed and innovating system of education, including a more frequent and extensive use of the vulgar tongue, and discarded the medieval traditions that had lingered in France.

See Sainte-Beuve, *Causeries du lundi*, vol. vi.

ROLLINAT, MAURICE (1853–1903), French poet, was born at Châteauroux in 1853. His father represented Indre in the National Assembly of 1848, and was a friend of George Sand, whose influence is very marked in young Rollinat's first volume, *Dans les bruides* (1877). The volume, however, attracted little attention, and it was with his second publication, very different in manner, that he made his reputation. In *Les Névroses*, with the sub-title *Les Âmes, Les Luxures, Les Refuges, Les Spectres, Les Ténèbres*, he showed himself as a disciple of Charles Baudelaire. He constantly returns in these poems to the physical horrors of death, and is obsessed by unpleasant images. Less *outre* in sentiment are *L'Abîme* (1886), *La Nature*, and a book of children's verse, *Le Livre de la Nature* (1893). He was musician as well as poet, and set many of his songs to music. He lost his reason in consequence of his wife's death from hydrophobia, and died on the 26th of October 1903.

ROLLING-MILL, a term which includes several types of machines used for producing the sectional forms (fig. 1) in which wrought iron and steel are required for the use of boiler-makers, platers and bridge-builders, and for constructional work generally. The production of wrought iron has been a diminishing industry for many years, while that of steel increases. Though the plant employed for both is alike in essential principles of design, the growth in the use of steel has revolutionized the practice, chiefly on account of the more massive dimensions in which steel sections are rolled. Iron sections are relatively small, and many are produced by piling, *i.e.* by building up with small portions of malleable puddled metal. There is no limit in reason to the dimensions in which steel sections can be rolled, and they are never piled, however large, but always rolled from solid cast ingots.

When steel ingots are rolled into sectional forms the reduction in transverse dimensions is very great. The work begins at nearly a white heat, and continues until a low red is reached. Obviously the stresses to which the material is subjected are very severe. For this reason the process of reduction has to be effected very gradually, and especially so in those cases where reduction is being done in two directions at right angles with each other, as in channel sections (fig. 6) and joist or beam sections (figs. 7 and 8).

It might be thought, since steel is always cast previously to rolling, that it might be cast at once into the sectional forms required. But sound results could not be obtained in this way, because the gases occluded in the metal form blow-holes which are sources of weakness. The material itself, even in the solid portions, is not homogeneous. By removing the head of the ingot where the blow-holes chiefly congregate and rolling the remainder at a white or red heat, the metal is improved by consolidation, and by the work done upon it. To this practice there is no exception.

Rolling-mills are known as "two-high," or "three-high," according as two or three rolls are mounted one over the other

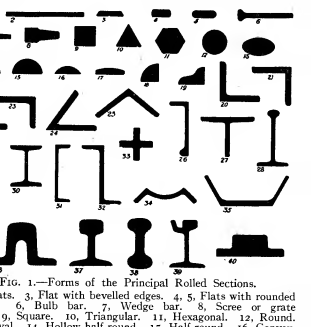

FIG. 1.—Forms of the Principal Rolled Sections.

1, 2, Flats. 3, Flat with bevelled edges. 4, 5, Flats with rounded edges. 6, Bulb bar. 7, Wedge bar. 8, Scree or grate bar. 9, Square. 10, Triangular. 11, Hexagonal. 12, Round. 13, Oval. 14, Hollow half-round. 15, Half-round. 16, Convex. 17, Square-edged convex. 18, Vee. 19, O.G. 20, Angle iron. 21, Square root, or square throat angle. 22, Round-backed angle. 23, Unequal-sided angle. 24, Acute angle. 25, Obtuse angle. 26, Bulb angle. 27, Tee. 28, Bulb tee. 29, 30, Beams or joists, or girders, or H-irons. 31, Channel. 32, Zed. 33, Cruciform section. 34, Pillar section. 35, Troughing. 36, 37, 38, Railway rail. 39, Tramway rail. 40, Heavy crane rail.

(figs. 2 and 3). In the two-high type the two rolls revolve in opposite directions, so that an ingot, slab or bloom presented to the entering side is drawn in and between the rolls, which reduce its thickness. In the case of rolls which are two perfectly plain cylinders (plate-rolls) the shape produced is that of broad, long and flat plates or sheets. Several passages (passes) are required to effect the reduction required, because this must be gradual. To regulate the amount the top roll is set down bodily by means of screws pressing on its bearings which slide in the end supports (housings). In the case of plate-rolls, which are plain cylinders, this setting down must be equal at each end. The mass of the top roll is balanced, to avoid shock when a plate is entering. The rolls are made of cast iron, and are either *grain* rolls or *chilled* rolls. The first are formed from a tough strong grade of iron, the quality which is used for all the roughing down and general work. The second are made of a highly mottled iron, cast against a cold mould (chill) of cast iron, by which a steely surface is obtained. These are used for fine finishing, or for imparting a polished surface to a section already nearly reduced to size in grain rolls. In later heavier practice, rolls of cast steel and forged steel are becoming common. They are more costly than iron, but more durable and much lighter for equal strength. They are essential in armour plate rolls. The length of rolls should not exceed about four times their diameter, for otherwise they are liable to spring and produce plates thicker at the centre than towards the edges.

From this elementary design several types are derived. In the two-high mill it is clear that if the direction of the rotation of the rolls is always the same, then the plate being rolled must be taken back after each "pass" to the front of the rolls. Hence there is one "lost pass" for every reduction in thickness. This is the case in the "pull-over" mill, nearly obsolete. In the two-high reversing mill, introduced to avoid this "lost pass," as soon as a plate has gone through, the direction of rotation of the rolls is reversed, and the plate is rolled again on the backward journey, so avoiding the lost

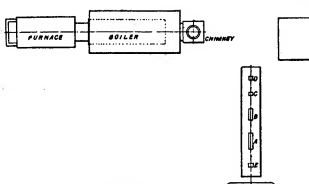

FIG. 2.—General Arrangement of 12-in. Merchant and Guide-Mill Plant. (Thomas Perry & Son Ltd., Bilston.)

A, First roughing rolls. B, Second ditto. C, Guide rolls for ovals or diamonds. D, Ditto for rounds or squares. E, Driving pinions. Engine, 30 in. × 22 in. cylinder, direct-coupled to rolls. Runs from 100 to 180 revolutions per minute to suit work. The shears are used for cutting the smaller sections, the hot saw for cutting the merchant iron.

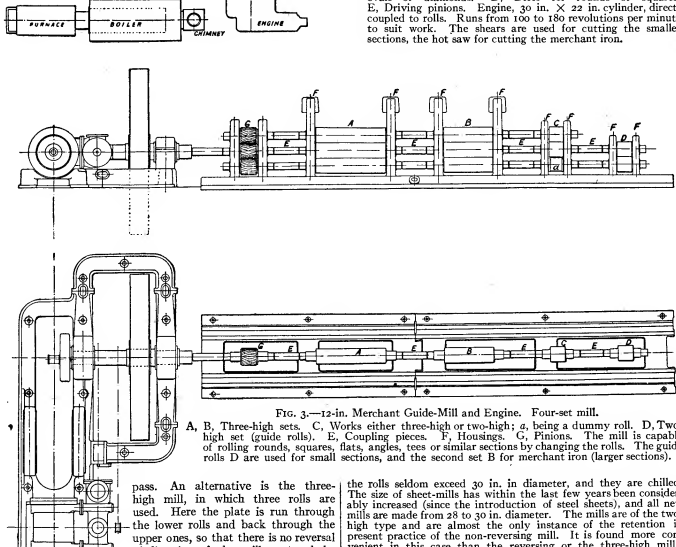

FIG. 3.—12-in. Merchant Guide-Mill and Engine. Four-set mill.

A, B, Three-high sets. C, Works either three-high or two-high; *a*, being a dummy roll. D, Two-high set (guide rolls). E, Coupling pieces. F, Housings. G, Pinions. The mill is capable of rolling rounds, squares, flats, angles, tees or similar sections by changing the rolls. The guide rolls D are used for small sections, and the second set B for merchant iron (larger sections).

pass. An alternative is the three-high mill, in which three rolls are used. Here the plate is run through the lower rolls and back through the upper ones, so that there is no reversal of direction of the mill as a whole, but the lower and upper rolls draw the plates in opposite directions (see also IRON AND STEEL, § 129).

Plate-Mills.—In Great Britain plate-mills are generally two-high reversing mills, in America three-high mills. Another difference is that in British practice two stands of rolls are used, in America one only. In the two-stand design there are two sets of rolls coupled endwise, one set being grain-rolls for roughing, and the other chilled rolls for finishing. Sets of live rollers conduct the plates to and from the separate rolls. The plate-mills proper are those which roll from ¼ in. to about 2 in. thick. Armour plate-mills are a special design for massive plates and sheet-mills are for thin plates or sheets having a less thickness than ¼ in. Armour plate-mills are of two-high reversing type usually, with forged steel rolls. They are of immense proportions, the rollers ranging from 10 to 14 ft. in length, by from 3 to 4 ft. in diameter. In sheet-mills, on the other hand, the rolls seldom exceed 30 in. in diameter, and they are chilled. The size of sheet-mills has within the last few years been considerably increased (since the introduction of steel sheets), and all new mills are made from 28 to 30 in. diameter. The mills are of the two-high type and are almost the only instance of the retention in present practice of the non-reversing mill. It is found more convenient in this case than the reversing or the three-high mills, because two men roll two pieces at once, one handing over a sheet just rolled to his fellow just as the latter has entered a sheet between the rolls on his side. Strip-mills are a smaller but similar type, used for rolling the thin narrow strips required for the hoops of barrels, ties for cotton bales, &c. The details of these mills cannot be discussed here, nor the numerous arguments in favour of the two systems. English practice retains the two-high reversing mill for all heavy work, the exceptions being those just noted. American practice retains the three-high mill.

Grooved Rolls.—In the mills designed for rolling various sectional forms the same distinction between two-high and three-high remains, but new problems arise. By "sectional forms" is meant all those which are not plates and sheets, such as bars of round and square section, angles, channels, rails and allied sections (fig. 1), for the production of which grooved rolls are required. The shapes and proportions of these grooves are such that reduction is effected very gradually. When metal is squeezed or hammered, one effect is to spread it laterally, since the metal cannot be appreciably squeezed in on itself. But the lateral extension is very much less than

the longitudinal. The most marked effect of reduction in thickness is extension in length. But as there is some lateral extension, three courses are open: one is to gauge the exact amount of width required for extension; another is to turn a bar over at intervals in order to exercise pressure on the portions extended laterally and obliterate them (open passes); and a third is to allow the extensions to take the form of fin to be cut off subsequently (closed passes). The first is generally impracticable. The second can be illustrated by diagrams representing roll sections.

The work of reduction is generally divided between three sets of rolls. The first are the cogging-, or blooming-rolls, as they are termed in America, in which ingots are reduced to blooms with dimensions suitable for rolling the various sections. In these an ingot of say 14 in. square may be reduced to a bloom of 6 in. square. The grooves form rectangular sections (box passes). The top roll being raised, the ingot is passed through the largest groove; then the roll is lowered and it is passed through a second time. Then it is turned round through 90° and re-rolled. Afterwards the same processes are gone through till the last groove is reached. There is a great difference between, say, a plate and a rail, but the cogging-rolls have to be designed as to produce blooms for varied forms. There are three principal forms: the box just noticed, the gothic and the diamond (fig. 4), all open passes. For plates,

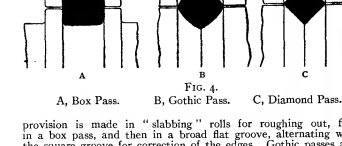

FIG. 4.

A, Box Pass. B, Gothic Pass. C, Diamond Pass.

provision is made in "dabbing" rolls for roughing out, first in a box pass, and then in a broad flat groove, alternating with the square groove for correction of the edges. Gothic passes and diamond passes produce blooms which are subsequently used for various shapes having little resemblance to each other. These shapes are simple, and little difficulty arises in the work of drawing down. The rolls make 40 to 50 revolutions per minute; the difference in the area of the cross section (draught) between adjacent grooves is from 20 to 25%.

The formative rolls for finished sections are of two classes: roughing and finishing. The roughing-rolls approximate much more closely to the finished sections than the cogging-rolls, but the aim is to make them do duty for a wide range of sections, in order to change them as seldom as possible. Thus the gothic pass (fig. 4) will serve alike for rolling square or round bars. Finishing rolls must be changed for every different section, except when slight differences in thicknesses only are made in the webbed portion of a rolled section. With the exception of rounds, sections are usually roughed and finished in closed passes—that is, the bar is wholly enclosed by the rolls. The groove in the lower roll is flanked by collars slightly deeper than the enclosed bar. These enter into grooves turned on the upper roll, and between them the bar is confined (fig. 5). It passes through a succession of these grooves,

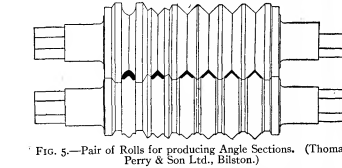

FIG. 5.—Pair of Rolls for producing Angle Sections. (Thomas Perry & Son Ltd., Bilston.)

being diminished in area and extended at each pass. A certain amount of fin is squeezed out, and this is obliterated in the succeeding pass, and more formed, until in the finishing pass the amount of reduction is very slight, a surface finish being the principal result.

Since but a slight amount of lateral extension occurs, it follows that the reduction wholly or mainly in the vertical plane is the most favourable condition. Rounds, squares and flats are wholly reduced in this way and offer no difficulty. The most unfavourable section is the joist or girder, the channels, tees and rails follow, and after these the various angles. In rolling a channel or a girder section (figs. 6, 7, 8), a square bloom is taken, and passed in succession through closed passes. The first produce shallow grooves in

FIG. 8.—Reduction of Girder Section in Finishing Rolls.

the opposite faces, gradually deepening until the insides of the flanges assume a definite slope. The angle of slope becomes gradually lessened, and the thicknesses of web and flanges, and also the radius in the corners, are reduced. At the same time the width over the flanges is being gradually increased. While this is going on, the fibres of the flanges are being strained, because the rolls run at a higher speed at their peripheries than next the body. The metal is being violently thrust and drawn in different ways, so that while economy has to be studied by reducing the number of passes as much as possible, undue stress must be avoided by making the reductions as easy as is practicable. These things cannot be put into a formula, but the roll-turners work by experience and empirical rules gathered by long practice. In order to avoid these deep grooverings, and also severe lateral thrusts on the rolls, angle sections are always rolled with the slope of the flanges approximately equalized; so too are zeds (fig. 1, No. 32). The reduction is then effected with the minimum of stress to the metal. Variations are readily made in the thicknesses of rolled sections without changing the rolls, by simply varying the distance between their centres. This is effected by the adjustment of the top roll (fig. 5). Differences in thickness are made in $\frac{1}{64}$ths of an inch, up to a maximum of about $\frac{1}{8}$ in. Another detail of design in closed passes is so to shape the rolls as to make any pass obliterate the fin produced in the previous groove. Sometimes sections are turned over to effect this, but often the bodies of the rolls are turned of suitable diameters to produce the result. Guards are required to prevent the bars from becoming wrapped round the rolls ("collaring"). With the same object the upper roll is always made larger in diameter than the lower. Its speed is therefore slightly greater than that of the lower one. This stretches the plate or bar very slightly on the upper side, and so imparts a downward movement to it towards the floor, which is what is required. The difference in diameter varies with circumstances, ranging from 3/8 to about 1 in.

Besides the standard types of mills noticed, the two-high and three-high, there are special mills. The merchant mill simply denotes either one of the above types used for the production of flat bars. The continuous mills are special designs for rolling small rods to be drawn into wire. In these there are several pairs of rolls placed in series, so that the billet is rolled from one stand to others in succession without re-heating. There are a number of different designs, one of which is the Belgian looping mill, so called because the rod is bent backward and forward in the form of the letter S in its passage through adjacent sets of rolls. In another design a flying shear is employed, which automatically cuts off billets from the bar while the latter is travelling at the rate of 6 or 8 ft. per second.

(J. G. H.)

ROLLOCK, ROBERT (*c.* 1555–1599), the first principal of the university of Edinburgh, son of David Rollock of Powis, near Stirling, was born about 1555. He received his early education at the school of Stirling from Thomas Buchanan, a nephew of George Buchanan, and, after graduating at St Andrews, became a regent there in 1580. In 1583 he was

appointed by the Edinburgh town council sole regent of the "town's college" ("Academia Jacobi Sexti," afterwards the university of Edinburgh), and three years later he received from the same source the title of "principal, or first master," and was engaged in lecturing on philosophy. When the staff of the young college was increased by the appointment of additional regents, he assumed with consent of the presbytery the office of professor of theology. From 1587 he also preached regularly in the East Kirk every Sunday at 7 a.m., and in 1596 he accepted one of the eight ministerial charges of the city. He took a prominent part in the somewhat troubled church politics of the day, and distinguished himself by gentleness and tact, as well as ability. He was appointed on several occasions to committees of presbytery and assembly on pressing ecclesiastical business. He was elected moderator of the General Assembly held at Dundee in May 1597. In 1598 he was translated to the parish church of the Upper Tolbooth, Edinburgh, and immediately thereafter to that of the Grey Friars (then known as the Magdalen Church). He died at Edinburgh on the 8th of February 1599.

Rollock wrote Commentaries on the Epistles to the Ephesians (1590) and Thessalonians (1598) and Hebrews (1605), the book of Daniel (1591), the Gospel of St John (1599) and some of the Psalms (1598); an analysis of the Epistle to the Romans (1594), and Galatians (1602); also *Questions and Answers on the Covenant of God* (1596), and a *Treatise on Effectual Calling* (1597). Soon after his death eleven *Sermons (Certaine Sermons upon Several Places of the Epistles of Paul*, 1599) were published from notes taken by his students. His *Select Works* were edited by W. Gunn for the Wodrow Society (1844–1849).

A Life by George Robertson and Henry Charteris was reprinted by the Bannatyne Club in 1826. See also the introduction to the *Select Works*, and Sir Alexander Grant's *History of the University of Edinburgh*.

ROMA, a town of Waldegrave county, Queensland, Australia, 318 m. by rail W.N.W. of Brisbane. It is the centre of a rich pastoral and wheat-growing district, in which oranges and vines are largely grown and much wine is produced. The town was incorporated in 1867. Flour-milling is its chief industry. Pop. (1901) of town, 2371; of the district, 7110.

ROMAN, capital of the department of Roman, Rumania, on the main line from Czernowitz in Bukovina to Galatz, and on the left bank of the river Moldova, 2¼ m. W. of its junction with the Sereth. Pop. (1900) 14,401, including 6092 Jews. The river is here spanned by a fine bridge of iron. Roman has been the seat of a bishop since 401. Its seminary dates from 1402. There are several ancient churches, including a cathedral, built in 1541. Roman has a transit trade in the products of northern Moldavia. A large annual fair is held in August.

ROMAN ARMY. In the long life of the ancient Roman army, the most effective and long-lived military institution known to history, we may distinguish four principal stages. (1) In the earliest age of Rome the army was a national or citizen levy such as we find in the beginnings of all states. (2) This grew into the Republican army of conquest, which gradually subdued Italy and the Mediterranean world. A citizen army of infantry, varying in size with the needs of each year, it eventually developed into a mercenary force with long service and professional organization. This became (3) the Imperial army of defence, which developed from a strictly citizen army into one which represented the provinces as well as Italy, and was a garrison rather than a field army. Lastly, (4) the assaults of the Barbarian horsemen compelled both the creation of a field force distinct from the frontier garrisons and the inclusion of a large mounted element, which soon counted for much more than the infantry. The Roman army had been one of foot soldiers; in its latest phase it was marked by that predominance of the horseman which characterized the earlier centuries of the middle ages.

So far as we can follow this long development in its details, it was throughout continuous. So unbroken, indeed, is the growth that many of the military technical terms survived in use from epoch to epoch, unchanged in form though deeply modified in meaning, and ordinary readers often miss the diversity which underlies this unchanged-seeming system. The term *legio*, for example, occurs in all the four stages above outlined. But in each its significance varies. Throughout, it denoted citizen-soldiers: throughout, it denoted also a force which was chiefly, if not wholly, heavy infantry. But the setting of these two constant features varies from age to age. In the first period *legio* was the "levy," the whole host summoned to take the field. In the second period it was not the whole levy, but one of the principal units into which developing organization had divided that levy; the "legion" was now a body of some 5000 men—the number of "legions" varied with the circumstances, and the army included other troops besides citizens, though they were for the most part unimportant. In the third or Imperial age there were many legions (indeed, a fixed number) quartered in fixed fortresses; there were also other troops, numerous and important, if not yet so formidable as the legionaries. Finally, the legions became smaller units, and the other troops of the army, notably the cavalry, became the real fighting-line of Rome (see LEGION).

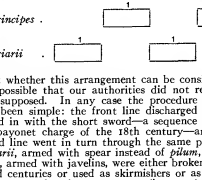
First Stage.—The history of the earliest Roman army is, as one might expect, both ill-recorded and contaminated with much legend and legal fiction. We read of a primitive force of 300 riders and 3000 foot soldiers, in which the horseman counted for almost everything. But the numbers are clearly artificial and invented, while the pre-eminence accorded to the cavalry has no sequel in later Roman history. We reach firmer ground with the organization ascribed to Servius Tullius. In this system the host included all citizens from 17 to 60 years of age, those under 47 for service in the field, those over 46 for garrison duty in Rome. The soldiers were grouped at first by their wealth—that is, their ability to provide their own horses, armour, &c.—into cavalry (18 "centuries"), heavy infantry, a remainder which it would be polite to call light infantry, and some artificers. The heavy infantry counted for most. Armed with long spears and divided into the three orders of *hastati*, *principes* and *triarii* (the origins and real senses of these names are lost), they formed a phalanx, and charged in a mass, while the cavalry protected the wings. The men were enrolled for a year—that is, for the summer campaign; in the autumn, like all primitive armies, they went home. It has been conjectured that about the time of the fall of the kings the normal Roman army comprised some 8500 infantry under 47 years of age, 5000 seniors, 1000 riders and 500 *fabri*, &c. The evidence for the calculation is unfortunately inadequate, but the result is not altogether improbable, and it may help the reader to realize what "may have been." It must be added that this Servian system is closely connected with the political organization (see ROME, *History*).

Second Stage.—From this Servian army a series of changes which we cannot trace in detail produced the Republican army of conquest. Our ancient authorities ascribe the chief reforms to the half-legendary Camillus (*q.v.*), who introduced the beginnings of pay and long service, improved the armour and weapons, abolished the phalanx and substituted for it an open order based on small subdivisions (maniples), each containing two centuries.

Whatever the truth about Camillus, some such reforms must at some time have been carried through, to convert the Servian system into the army which was engaged for nearly three centuries (from 350 B.C.) in conquering Italy and the world. This army broke in succession the stout native soldiers of Italy and the mountaineers of Spain and overthrew the trained Macedonian phalanx. Once only did it fall—against Hannibal (see PUNIC WARS). But not even Hannibal could oust it from entrenchments, and not even his victories could permanently break its *moral*. Much of its strength lay in the same qualities which made the Puritan soldiers of Cromwell terrible—the excellent character of the common soldiers, the rigid discipline, the high training. Credit, too, must be given to the genius of the Scipios and to the more commonplace capacities of many fairly able generals. But the organism

itself deserves attention, and, as it chances, we know much about it, mainly from Polybius. Its elements were three:—

(A) The principal unit was the legion, generally a division of 4500 men—3000 heavy infantry, 1200 lighter-armed (*velites*), 300 horse—though sometimes including as many as 6000 men. The heavy infantry were the backbone of the legion. They were levied from the whole body of Roman citizens who had some private means and who had not already served 16 campaigns, and in effect formed a yeoman force. For battle they were divided into 1200 *hastati*, 1200 *principes* and 600 *triarii*: all had a large shield, metal helmet, leather cuirass, short Spanish thrusting and cutting sword and in addition the *hastati* and *principes* each carried two short heavy throwing spears (*pila*), while the *triarii* had ordinary long spears (see ARMS AND ARMOUR). They were drawn up in three lines: (1) *hastati*, (2) *principes*, (3) *triarii*; the first two were divided into 10 maniples each (of 120 men, when the legion only counted 4500), the third into 10 maniples of half the strength. According to the ordinary interpretation of our ancient authorities, the maniples were arranged in a chess-board fashion (*quincunx*), the idea being that the front rank of maniples could retire through the intervals in the second row without disordering it, and the second row could similarly advance. Recent military writers, however,



doubt whether this arrangement can be considered workable, and it is possible that our authorities did not really mean what has been supposed. In any case the procedure in fighting seems to have been simple: the front line discharged a volley of *pila* and rushed in with the short sword—a sequence much like the volley and bayonet charge of the 18th century—and if this failed, the second line went in turn through the same process: the third line of *triarii*, armed with spear instead of *pilum*, was a reserve. The *velites*, armed with javelins, were either broken up among the heavy-armed centuries or used as skirmishers or as aids to the cavalry. The 300 cavalry, however, were the body of little use—no natural result if, as we have reason to think, the horses were small and stirrups were not used. The officers of the legion consisted of: (*a*) Six tribunes, in part elected by the comitia, in part appointed by the consuls, and holding command in rotation. They were either veteran officers, sometimes even ex-magistrates, or young noblemen beginning their career. (*b*) Sixty centurions, each commanding one century, or, rather, a pair commanding each maniple. They were chosen by the tribunes from among the veteran soldiers serving at the time and were arranged in a complicated hierarchy, by means of which a centurion might move upwards till he became *primus pilus*, senior centurion of the first maniple of *triarii*, the chief officer in the legion. (*c*) There were also standard-bearers and other under-officers, for whom reference must be made to specialist publications.

(B) Besides the legions, composed of citizens, the Roman army included contingents from the Italian "allies" (*socii*), subjects of Rome. These contingents appear to have been large: in many armies we find as many *socii* as legionaries, but we are ignorant of details. The men were armed and drilled like the legionaries, but they served not in legions but in cohorts, smaller units of 400-600 men, and their conventional positions seem to have been on the wings of the legions. They were principally infantry, but included also a fairly large proportion of cavalry. Despite their numbers, they do not appear to have ranked with the heavy legionary infantry, and they were probably used more as detachments from the main army than as infantry of the line.

(C) Besides legionaries and *socii*, the Roman army included non-Italian troops of special kinds, Balearic slingers, Numidian horsemen, Rhodians, Celtiberians and others: at Trasimene, for example (217 B.C.), the Roman army included 600 Cretan archers. The numbers of these *auxilia* varied; probably they were not numerous till the latest days of the Republic.

Composition and Size of Armies in the Second Stage.—According to the general practice, each of the two consuls, if he took the field alone, commanded an army of two legions with apparently *socii*. If the two consuls combined their forces, commanding the joint force in rotation (as often occurred), the total would be—according to our authorities—four legions, each of 4200 infantry, the same number of "allied" infantry (in all 33,600 infantry), 1200 legionary cavalry and about 3600 "allied" cavalry = 38,400 men. Such, for example, was the Roman army at Trebia (218 B.C.), where (says Polybius) there fought 16,000 legionaries and 20,000 allied infantry. The total number of men in the field could be increased—we even hear of 23 legions serving at one time in the Second Punic War. Just before this war, in 225 B.C., the total strength of Rome was reckoned at three-quarters of a million, of which about 65,000 were in the field and 55,000 were in a reserve at Rome; of the total, 325,000 were Roman citizens and 443,000 (apparently a rough estimate) were allies. The battle order in normal circumstances was simple. In the centre stood the legionary infantry: on each side of that was the allied infantry: on the wings the cavalry. But sometimes the legions were held in reserve and the brunt (and honour) of the fight was left to the allies. Sometimes, when the army was a double force, one commander's troops fought and the others lay in reserve. Frequently the attack was begun by one wing, as by Caesar at Pharsalus. At Ilipa in Spain Scipio put his Spanish auxiliaries in the centre, his Roman troops on the wings, and attacked with both wings. The chief command of the army fell (as stated above) to the consul, if present, or, if two consuls acted together, to them in turn. In default of consuls, a proconsul, praetor, or propraetor, in charge of a province, would command.

Development from the Second Stage to the Third.—Towards the end of the Republic many changes began to work themselves out in the Roman army. If Camillus began the system of pay and long service, it was effectually developed by long foreign wars in Spain and in the East. Moreover, the growth of Rome as a wealthy state tended to wreck the old theory that every citizen was a soldier, and favoured a division of labour between (*e.g.*) the merchant and the military, while the increasing complexity of war required a longer training and a more professional soldier. In consequence, the old restriction of legionary service to men with some sort of private property was abolished by Marius about 104 B.C. and the legionaries now became wholly proletariate and professionals. By a second change, also connected with the name of Marius, the legion was reorganized as a body of 6000 men in 60 centuries, divided into 10 cohorts instead of (as hitherto) into 30 maniples; the unit of tactical action thus became a body of 600 instead of 120. This was probably an adaptation within the legion of the system of cohorts already in use for the contingents of the *socii*. Soon after, the extension of the Roman franchise to all Italians converted allies and subjects into citizens, and the *socii* into legionaries. A fourth change abolished the legionary cavalry and greatly increased the *auxilia* (C above). And, finally, the appearance of great military leaders in place of civilian statesmen, and of pretenders to a throne in place of patriots, familiarized the world with the notion of large standing armies commanded by permanent chiefs, and at the same time destroyed discipline and military loyalty.

Third Stage.—The Imperial Army of Defence.—The evils of the Civil Wars (49–31 B.C.) furnished the first emperor, Augustus, with both the opportunity and the necessity for reforming the army. Disorganization had reigned for twenty years. It was needful to restore loyalty and system alike. Augustus did this, as he did all his work, by adapting the past: yet there is some truth in the view of his latest historian, von Domaszewski, that his army reforms were his greatest and most original work. The main lines of his work are simple. The Imperial army consisted henceforward of two classes or grades of troops, about equal in numbers if unequal in importance. The first grade were the legions, recruited from Roman citizens, whether resident in Italy or in the provinces. The second grade was formed by the *auxilia*, recruited from the subjects (not the citizens) of the Empire in the provinces, organized in cohorts and *alae* and corresponding somewhat to both the *socii* and the auxiliaries (B, C above) of the Republican army. There were also in Rome special "household" troops (see PRAETORIANS); and a large body of *vigiles* who were both fire brigade and police.

(A) The legion of the Empire was what Marius had left it—6000 heavy infantry divided into 10 cohorts: Augustus added only 120 horsemen to serve as despatch-riders and the like. The supreme command was no longer in the hands of the six tribunes. According to a practice which had sprung up in the latest Republic it was in the hands of a *legatus legionis*, deputy of the general (now of the emperor, commander-in-chief of the whole army) and a man usually of senatorial rank and position. The six tribunes assisted him, in theory; in practice they were now little more than young men of good birth learning their business or wasting their

time. The real officers of the legion were the 60 centurions, men who (at least in the early Empire) generally served up from the ranks, and who knew their work. The senior centurion, *primus pilus*, was an especially important officer, and on retirement frequently became *praefectus castrorum*, "camp adjutant," or obtained other promotion. Below the centurions were under-officers, standard-bearers, *optiones*, clerks and the like. The men themselves were recruited from the body of Roman citizens (though we may believe that birth-certificates were not always demanded). During the 1st century Italy, and particularly north Italy, provided the bulk of the recruits. After A.D. 70, recruiting in Italy for the legions practically ceased and men were drawn from the Romanized provinces. After Hadrian, each province seems to have supplied most of the men for the legion (if any) stationed in it, and so many sons of soldiers born during service (*castrenses*) flocked to the army that a military caste almost grew up. The term of service was 20 years, in full, twenty years, at least in theory, but recruiting was voluntary and when men were short discharges were often withheld. On discharge the ex-legionary received a bounty or land: many *coloniae* (municipalities) were established in the provinces by certain emperors for the special purpose of taking discharged veterans—according to a custom of which the first instances occur in the latest Republican age. On the whole, the legionary was still the typical "Roman" soldier. If he was no longer Italian, he was generally of citizen birth and always of citizen rank, and his connexion with the Empire and the government was real. Each legion bore a title and a number (*e.g.* II. Augusta, III. Gallica). The custom of using such titles and numbers can be traced sporadically from the latest Republic, and many titles and numbers then borne by legions passed on into the Empire with the legions themselves. As Augustus gradually became master of the world, he found himself with three armies, his own and those of Lepidus and Antony; from these armies he chose certain legions to form his new standing army, and he left these with the titles and numbers which they had previously borne, although that concession resulted in three legions numbered III. and two numbered V., V. and VI. respectively. Similar titles and numbers were given to legions raised afterwards either to fill up gaps caused by disaster or to increase the army. Here, as elsewhere in the Roman and above all in the Augustan system, precedent defied logic.

(B) Besides the legions Augustus developed a new order of *auxilia*. Auxiliaries (as is said above) had served occasionally in the Republican armies since about 250 B.C., and in the latest Republic large bodies of them had been enlisted in the armies of contending generals. Thus Caesar in Gaul enrolled a division of native Gauls, free men but not citizens of Rome, which ranked from the first in all but legal status as a legion, the "Alaudae," and in due course was formally admitted to the ordinary list (*legio* V.). Normally use of non-citizens had been limited in extent and confined in normal circumstances to special troops such as slingers or bowmen. This casual practice Augustus reduced, or rather extended, to system, following in many details the scheme of the Republican *auxilia* and veiling the novelty under old titles. Henceforward, regiments of infantry (*cohortes*) or cavalry (*alae*), 500 or 1000 strong, were regularly raised (apparently, by voluntary recruiting) from the non-citizen populations of the provinces and formed a force almost equal in numbers (and perhaps ultimately much more than equal) to the legions. The men who served in these units were less well paid and served longer than the legionaries; on their discharge they received a bounty and the Roman franchise for themselves and wife and children. They were commanded by Roman *praefecti* or *tribuni*, and were no doubt required to understand Roman orders; they must have generally become Romanized and fit for the citizenship, but they were occasionally (at least in the 1st century A.D.) permitted to retain tribal weapons and methods of fighting and to serve under the command of tribal leaders, who were at once their chiefs and Roman officers. These auxiliaries provided both the wings of the archers, &c., and nearly the whole of the cavalry of the army; they also included many foot regiments. A peculiar arrangement (to which no exact parallel seems to occur in any other army) was that a short of 500 men might include 380 foot and 120 horse and a cohort of 1000 men or 760 foot and 240 horse (*cohors equitata*), and an *ala* might similarly include a proportion of foot (*ala peditata*). Each regiment bore a number and a title, the latter often derived from the officer who had raised the corps (*ala Indiana*, raised by one Julius Indus) or, still more often, from the tribe which supplied the first recruits (*cohors VII. Gallorum, cohors II. Hispanorum* and the like). To what extent recruiting remained territorial is uncertain: after the 1st century, probably, the territorial names mean in most cases very little. The total number of the auxiliary regiments probably varied from time to time and can at present hardly be guessed.

Composition of Armies and Distribution of Troops in the Third Stage.—If the system of legions and *auxilia* in the early Empire was novel, the use made of them was no less so. The latest Republic offers to the student the spectacle of large field armies, and though it also reveals a counter tendency to assign special legions to special provinces, that tendency is very feeble. Augustus ended the era of large field armies: he could, indeed, leave no such weapons for future pretenders to the throne. By keeping the Empire within set frontiers, he developed the counter tendency. That policy exactly suited the military position in his time. The early Roman Empire had not to face—as Britain or France or Germany might have to face to-day—the danger of a war with an equal enemy, needing the mobilization of all its national forces. From Augustus till A.D.250 Rome had no conterminous foe from whom to fear invasion. Parthia, her one and dangerous equal, was far away in the East and little able to strike home. Elsewhere, her frontiers bordered more or less wild barbarians, who might often harass, but could not do serious harm. To meet this there was need, not of a strong army concentrated in one or two cantonments, but of many small garrisons scattered along each frontier, with a few stronger fortresses to act as military centres adjacent to these garrisons.

Accordingly, a system grew up under Augustus and his immediate successors whereby the whole army was distributed along the frontiers or in specially disorderly districts (such as N.W. Spain) in permanent garrisons. On the actual frontiers and on the chief roads leading to them were numerous cohorts and *alae* of auxiliaries, garrisoning each its own *castellum* of 3–7 acres in extent. Close behind the frontiers, or even on them, were the twenty-five legions, each (with a few exceptions of early date) holding its own fortress (*castra stativa* or *hiberna*) of 50–60 acres. Details varied at different times. Sometimes, where no Rhine or Danube helped, and where outside enemies were many, the frontier was further fortified by a continuous wall of wooden palisades (as in part of Germany, see LIMES) or of earth or stone (as in Britain, see article BRITAIN, ROMAN), or the boundary might be guarded by a road patrolled from forts planted along it (as in part of Roman Africa). The result was a long frontier guard covering Britain, and Europe from the German Ocean to the Black Sea, and the upper Euphrates valley, and the edge of the Sahara south of Tunis and Algeria and Morocco, while the wide Empire behind it was little troubled by the presence of soldiers.

The following table shows the disposition of the legions about A.D. 120 and for many decades subsequently. It would be impossible, even if space allowed, to add the auxiliaries, since the details of their distribution are too little known. But it may be in general assumed that the total number of auxiliaries in any province was little less, and probably rather greater, than the number of legionaries, and the sizes of the various provincial armies can thus be calculated roughly. Thus Britain was held probably by 35,000–40,000 men. Each provincial army was commanded either by the governor of the province or (in a few exceptional cases) by the senior *legatus* of the legions stationed there:—

Britain	II.	Augusta (*Isca Silurum*, now Caerleon).
"	VI.	Victrix (*Eburacum*, York).
"	XX.	Valeria Victrix (*Deva*, Chester).
Lower Germany (=lower Rhine)	I.	Minervia (*Bonna*, Bonn).
" "	XXX.	Ulpia Victrix (*Vetera*, Xanten).
Upper Germany	XXII.	Primigenia (*Mogontiacum*, Mainz).
"	VIII.	Augusta (*Argentorate*, Strassburg).
Pannonia (Danube to Semlin)	X.	Gemina (*Vindobona*, Vienna).
" "	XIV.	Gemina (*Carnuntum*, Petronell).
" "	I.	Adiutrix (*Brigetio*, near Komorn).
" "	II.	Adiutrix (*Aquincum*, near Budapest).
Upper Moesia (Middle Danube)	IV.	Flavia (*Singidūnum*, Belgrade).
" "	VII.	Claudia (*Viminacium*, Kostolac).
Dacia (now Transylvania)	XIII.	Gemina (*Apulum*, Karlsburg).
Lower Moesia (Lower Danube)	I.	Italica (*Novae*, Sistov).
" "	XI.	Claudia (*Durostorum*, Silistria).
" "	V.	Macedonica (*Troesmis*, Iglitza).
Asia Minor (Cappadocia)	XV.	Apollinaris (*Satala*, Armenian frontier).
" "	XII.	Fulminata (*Melitene*, on upper Euphrates).

Syria	XVI.	Flavia (*Samosata*, on upper Euphrates).
"	IV	Scythica
"	VI.	Ferrata } near Antioch (?).
"	III.	Gallica }
Judaea . . .	X.	Fretensis (Jerusalem).
Arabia . . .	III.	Cyrenaica (*Bostra*).
Egypt . . .	II.	Trajana (near Alexandria—a disorderly city).
Africa . . .	III.	Augusta (*Lambaesis*).
Spain . . .	VII.	Gemina (*Legio*, Leon, in N.W. Spain).

The total of legionaries may be put at about 180,000 men, the auxiliaries at about 200,000. If we exclude the "household" troops at Rome, the police fleets on the Mediterranean, and the local militia in some districts, we may put the regular army of the Empire at about 400,000 men. This army, as will be plain, was framed on much the same ideas as the British army of the 19th century. It was meant not to fight against a first-class foreign power, but to keep the peace and guard the frontiers of dominions threatened by scattered barbarian raids and risings. Field army there was none, nor any need. If special danger threatened or some special area was to be conquered—such as southern Britain (A.D. 43) or a little land across the upper Rhine (A.D. 74)—detachments (*vexillationes*) were sent by legions and sometimes also by auxiliaries in adjacent provinces, and a field force was formed sufficient for the moment and the work.

Change from the Third Period to the Fourth.—Two principal causes brought gradual change to the Augustan army. In the first place, the *pax Romana* brought such prosperity to many districts that they ceased to provide sufficient recruits. The Romans, like the British in India, had more and more to look to uncivilized regions and even beyond their borders. Hence comes, in the 2nd century and after, a new class of *numeri* or *cunei* or *vexillationes* who used (like the earlier auxiliaries) their national arms and tactics and imported into the army a more and more non-Roman element. This tendency became very marked in the 3rd century and bore serious fruit at its close. And, secondly, the old days of mere frontier defence were over. The barbarians began to beat on the walls of the Empire as early as A.D. 166: about A.D. 250 they here and there got through, and they came henceforward in ever-growing numbers. Moreover, they came on horseback, bringing new tactics for the Roman infantry to face, and they came in huge masses. We may doubt if any military system could have permanently stayed this astonishing torrent. But the Empire did what it could. It enlisted barbarians to fight barbarians, and added freely—too freely, perhaps, if there was any choice—to the non-Roman elements of the army. It increased its cavalry and began to form a distinct field force.

Fourth Period.—The results are seen in the reforms of Diocletian and Constantine the Great (A.D. 284–*circa* 320). New frontier guards, styled *limitanei* or *riparienses*, were established, and the old army was reorganized in field forces which accompanied or might accompany the emperors in war (*comitatenses, palatini*). The importance of the legions dwindled; the chief soldiers were the mercenaries, mostly Germans, enlisted from among the barbarians. New titles now appear, and it becomes plain even to the casual reader that in many points the new order is not the old. The details of the system are as complicated as all the administrative machinery of that age. Here it is enought to point out that the significance of such officers and titles as the *dux* and the *comes* (duke, count) lies ahead in the history of the middle ages, and not in the past, the history of the Roman army itself.

War Office, General Staff.—Under the Republic we do not find, and indeed should not expect to find, any central body which was especially entrusted with the development of the army system or military finance or military policy in wars. Even under the Empire, however, there was no such organization. The emperor, as commander-in-chief, and his more or less unofficial advisers doubtless decided questions of policy. But the army was so much a group of provincial armies that much was left to the chief officers in each province. Here, as elsewhere in the Empire, we trace a love if not for Home Rule, at least for Devolution. There was, however, a central finance office in Rome for the special purpose of meeting the bounties (or equivalent) due to discharged soldiers. This was established by Augustus in A.D. 6 with the title *aerarium militare*, and had, for receipts, the yield of two taxes, a 5% legacy duty and a 1% on sales (or perhaps only on auctionsales). The legacy duty did not touch legacies to near relations or legacies of small amount.

ROMAN ART. (1) *Introductory: History of Recent Research.*—The scientific study of ancient Roman art dates from a comparatively recent period. The great artists of the Renaissance, headed by Raphael and Michelangelo, showed no lack of appreciation for such models as the bas-reliefs of Trajan's Column; and it is sufficient to name Mantegna's "Triumph of Caesar" in order to recall the influence exerted by Roman historical sculpture upon their choice and treatment of monumental subjects; but their eyes were fixed on the Greek ideal, however imperfectly represented by monuments then accessible, and the supremacy of this standard became established beyond challenge. In the 18th century Winckelmann, the founder of the science of classical archaeology, directed the gaze of students and critics towards the glories of classical Greek art, which he divined behind the copies which filled the palaces and muscums of modern Rome;[1] and the rediscovery of the extant remains of that art, which began early in the 19th century and still continues, has naturally absorbed the attention of the great majority of classical archaeologists. Nevertheless, towards the close of the 19th century, when the main lines of Greek artistic development had been firmly traced and interest was aroused in its later offshoots, critics were led to examine more closely the products of the Roman period. As early as 1874 Philippi had published a study of Roman triumphal reliefs;[2] but his intention was to show that they were derived from the paintings exhibited on the occasion of a triumph—a theory which can no longer be maintained—and not to determine their place in the history of art. In 1893, however, Alois Riegl published a series of essays on the history of ornament under the title of *Stilfragen*, in one of which he expressed the opinion that "there was in the antique art of the Roman Empire a development along the ascending line and not merely a decadence, as is universally believed." This thesis was taken up two years later by Franz Wickhoff in a preface contributed to the reproduction in facsimile of the illustrated MS. of Genesis in the imperial library at Vienna. Wickhoff contended that, whilst the art of the Augustan period was the culmination of that which had flourished under the Hellenistic monarchies, it was succeeded by an outburst of genuinely Roman artistic effort, which reached the height of its achievement in the reliefs and portrait-sculpture of the Flavian period, and gave birth in the 2nd century A.D. to the monuments of the "continuous" style of representation exemplified by the imperial columns. Wickhoff's work has become familiar to English readers through Mrs Strong's

[1] The eleventh book of Winckelmann's *Geschichte der Kunst*, which deals with art under the Romans, contains notable proofs of the author's sureness of vision; for example, he divined the true date and affinities of the reliefs in the Villa Borghese, afterwards wrongly attributed to the time of Claudius (see below).

[2] "Über die römischen Triumphalreliefs und ihre Stellung in der Kunstgeschichte" (*Abhandlungen der sächs. Gesellsch. der Wissenschaften*, vi., 1874).

excellent translation, with copious illustrations, which appeared in 1900; in the following year Riegl published the first (which, by reason of his untimely death, remains the only) volume of his *Late Roman Industrial Art in Austria and Hungary*, in the opening chapters of which he endeavours to show that the later transformations of Roman art in the 2nd and succeeding centuries after Christ continue to mark a definite advance. On the other hand, the originality of Roman art under the Empire was called in question by Josef Strzygowski, whose first important work on the subject, *Orient oder Rom*, appeared in 1901. Strzygowski holds that even in the imperial period, Rome was receptive rather than creative; that what is termed "Roman imperial art" is in reality the latest phase of Hellenistic art, whose chief centres are to be sought in Asia Minor, Syria and Egypt; and that this late Hellenistic art was itself gradually transformed by the invading spirit of the East into that Byzantine art which is half Greek and half Oriental, but wholly un-Roman. The problem thus stated will presently be discussed; in the meantime it is to be noted that the principal monuments which fall within our province have been at length rendered accessible to students by a series of adequate reproductions. In sculpture, the reliefs of Trajan's Column have been published by Cichorius, and those of the column of Marcus Aurelius by Petersen and others; in metalwork, the treasure of Bosco Reale has been reproduced in the *Monumenta Piot*, and that of Hildesheim has been published by the authorities of the Berlin Museum; a series of reproductions, including all the important examples of Roman painting, is issued by the firm of Bruckmann under the supervision of Paul Herrmann; and the ancient paintings preserved in the Vatican library, which include some of the most famous examples of the art, were published and described by Dr Nogara in 1907. The discussion of the date to be assigned to the Trophy of Trajan at Adam-Klissi in the Dobruja, initiated by Adolf Furtwängler, has led to a closer study of the remains of Roman provincial art; and the discovery of the foundations of the Ara Pacis Augustae at Rome, together with additional remains of its sculptured decoration, has given an impulse to the study of Roman historical monuments. In this field important contributions to knowledge have been made by members of the British school at Rome, which will be noticed below. Finally, the history of Roman sculpture has for the first time been systematically and comprehensively treated by Mrs Strong in a handbook whose copious and well-chosen illustrations add greatly to its value. Thus the necessary equipment has been furnished for students of the problem presented by Roman art.

(2) *National Roman Art; Landmarks of its History.*—It is impossible to speak of a specifically Roman national art until we approach the latest period of Republican history. The germs of artistic endowment which existed in the Roman character were not developed until her political institutions were matured and her supremacy in the Mediterranean established. Up to that time such works of art as were produced in, or imported into, Rome were without exception Greek or Etruscan. Both in Etruria and in Latium Greek artists were commissioned to decorate the temples in which wood and terra-cotta took the place of the marble which Greece alone could afford to use. In 496 B.C., according to tradition, two Greek artists, Damophilos and Gorgasos, decorated the temple of Ceres, Liber and Libera with paintings and sculpture; when the temple was restored by Augustus their terra-cotta reliefs were carefully removed and framed.[1] But most of the early sculpture preserved in Rome doubtless belonged to the "Tuscan" school, whose works Pliny[2] quotes as evidence that there was an art of statuary native to Italy. It is true that Etruscan art was dependent for its motives and technique on Greek models; but in its portraiture—notably in the reclining figures which adorn Etruscan sarcophagi—we can trace the uncompromising realism and close attention to detail which are native to Italian soil; the fragments of temple-sculptures which have been preserved are of less value, since, if not the work of Greeks, they are entirely Greek in conception. Roman portraiture undoubtedly continues the Etruscan tradition. It was a common custom in Etruria to decorate the urn containing the ashes of the dead with a lid in the form of the human head (such urns are called *canopi*), and the same desire to record the features of the departed produced the waxen masks, or *imagines*, which were preserved in the houses of the Roman aristocracy. In architecture, too, Roman builders learnt much from their Etruscan neighbours, from whom they borrowed the characteristic form of their temples, and perhaps also the prominent use of the arch and vault. But the stream of Etruscan influence was met by a counter-current from the south, where the Greek colonies in Campania provided a natural channel by which Hellenic ideas reached the Latin race; and Roman architects soon abandoned the purely Etruscan type of temple for one which closely followed western Greek models. The conquests of the later Republic, however, brought them into more direct contact with the art of Greece proper. Beginning from 212 B.C., when Marcellus despoiled Syracuse of its principal statues, every victorious general adorned his triumph with masterpieces of Greek art, whether of sculpture or of painting, and, when Philhellenism became the ruling fashion at Rome, wealthy connoisseurs formed private collections drawn from the Greek provinces—Greek craftsmen, moreover, were employed in the decoration of the palaces of the Roman nobles and capitalists, which scarcely differed from those of the great Hellenistic cities. Except in portraiture, there was nothing characteristically Roman in the art which flourished in Rome in the time of Caesar and Cicero. But the remains of an altar, preserved partly at Munich and partly in the Louvre (Plate II. fig. 10), which is believed with good reason to have been set up by Cn. Domitius Ahenobarbus shortly before 30 B.C., furnish an early example of the historical, or, to speak more exactly, commemorative art, to whose development the Empire gave so powerful an impulse. On the one face of the altar we find a Greek subject—the marriage of Poseidon and Amphitrite,—on the other a Roman sacrifice, the *suovetaurilia*, with other scenes from the life of the army. Augustus enlisted art, as he did literature, in the service of the new order. The remarkable technical dexterity which characterizes all forms of art in this period—silver plate and stucco decoration, as well as sculpture in the round or in relief—is purely Greek; but the form is filled with a new content. For Augustus determined to enlist art as well as literature in the service of the new régime, and this purpose was served not only by public monuments, such as the Ara Pacis Augustae (Plate II. figs. 11–13), but by the masterpieces of the silversmith's and gem-engraver's art (Plate VII. figs. 32–37). In the art, as in the literature of the Augustan age, classicism was the dominant note, and the naturalism so congenial to the Italian temperament was repressed, though never extinguished. The result of this was that under the Julio-Claudian dynasty academic tradition filled the place of inspiration, and Roman art failed to discover its true vocation. A change came under the Flavian emperors. The painters who decorated with fairy landscapes the walls of Roman palaces, untrammelled by the conventions of official art, introduced into Rome a summary method of working, which has much in common with that of the modern impressionist school; and the sculptors of the Flavian period laid to heart the lesson taught by their successful "illusionism" (to borrow Wickhoff's term). We shall see that this is true of all forms of sculpture—historical sculpture, portraiture and decorative ornament; and we are entitled to rank this Flavian art as the specific creation of imperial Rome, whatever may have been the precise nationality of the individual workers who adorned the new capital of the world. But this phase was of short duration; and the Roman spirit, which in harmony with that of Greece had produced such brilliant results, triumphed under Trajan and found its characteristic expression in the "epic in stone" with which his column is adorned. Wickhoff claims the "continuous"

[1] *H.N.* xxxv. 154.
[2] *H.N.* xxxiv. 34; cf. 43; and see *Quint.* xii. 10, 1.

style in which the artist recounts the Dacian campaigns of Trajan as a creation of the Roman genius. We shall see that the term is not altogether a happy one; but there is good reason (as will be shown below) for the belief that the designer of the column, however profoundly influenced in his selection of motives and in his composition of individual scenes by Greek tradition, nevertheless worked out his main principles for himself. The realism of the Roman is shown in the minute rendering of details, which makes the reliefs a priceless source of information as to military antiquities. Historical art achieved no less a triumph in the great frieze from Trajan's Forum (Plate II. fig. 16), and in the panels of the arch at Benevento. Imposing as these works are, they suffer from the defects incidental to an art which endeavours to express too much. Overcharged with detail, and packed with meanings which reveal themselves only to patient study, they lack the spacious and reposeful character of Greek art; while, if we regard only their decorative function, we must admit that the excess of ornamental surface mars the effect of the buildings which they adorn. Along the path thus marked out, Roman art continued to progress; it is true that under the influence of Hadrian there was a brief renaissance of classicism which gave birth to the idealized type of Antinous, and to certain eclectic works which belong to Greek rather than to Roman art; but the historical reliefs which survive from the Antonine period, and more especially the sarcophagi, which reproduce scenes of Greek mythology with a close adherence to the letter but a fresh artistic spirit, show that the new leaven was at work. The main fact underlying the changes of the time was the loss of the true principles of plastic art, which even in Hellenistic times had become obscured by the introduction of pictorial methods into relief-sculpture. Colour, rather than form, now took the highest place in the gamut of artistic values. Painting, indeed, so far as our scanty knowledge goes, was not practised with conspicuous success; but the art of mosaic was carried to an extraordinary degree of technical perfection; and in strictly plastic art the choice of material was often determined by qualities of colour and transparency. For example, porphyry, basalt and alabaster of various hues were used by the sculptor in preference to white marble; and new conventions, such as the plastic rendering of the iris and pupil of the eye, were dictated by the ever-growing need for contrasts of light and shadow. This great revolution in taste has been traced, and doubtless with justice, to the permeation of the Graeco-Roman world of the 2nd century by oriental ideas. The East has always preferred colour to form, and richness of ornament to significance of subject; and in art, as in religion, the West was now content to borrow. Roman official art, however, continued to produce the historical monuments which the achievements of the time demanded; but the principles of figure-composition were less fully grasped. The reliefs of the Aurelian Column form a less intelligible series than those of the Column of Trajan; and the panels of the Arch of Septimius Severus, with their bird's-eye perspective, have not inaptly been compared to Flemish tapestries. The extravagance and pomp of the dynasty founded by Septimius Severus filled Rome with such works as the art of the time could produce; and the busts of Caracalla show that in portraiture Roman craftsmen retained their cunning. Even during the anarchy which followed masterpieces such as the portrait of Philip the Arabian were produced; and during the reign of Gallienus (A.D. 253–268), which saw the dismemberment of the Empire, there was a noteworthy outburst of artistic activity, whose products are seen in the naturalistic portraits of the emperor and the court.[1] But by the close of the 3rd century a further transformation had taken place, which coincided with the political revolution by which the absolute monarchy of Diocletian succeeded to the principate of Augustus. The portraits of Constantine and his house can no longer be termed naturalistic; they are monumental, both in scale and in conception, and, above all, their rigid "frontality" carries us back at a bound to the primitive art of the East. The classical standard set by the Greek genius had ceased to govern art, although the fund of types which Hellenism had created still furnished subjects to the artist, or was made the vehicle by which the new ideas derived from Christianity were expressed. The Roman spirit was still strong enough to maintain that interest in the human form and the representation of dramatic events which was lacking in the Oriental; but in the monuments of the Constantinian period, such as the narrow friezes of the Arch of Constantine, we can see nothing but the work of artists who had lost touch with true plastic principles, in spite of the ingenious arguments adduced by Riegl. If we are to seek for signs of progress, it must be rather in the domain of architecture, which had never ceased to make advances in dealing with the spatial and constructive problems presented by the great building works of the Empire; it was now called upon to face a fresh task in providing Christians with a fit place for public worship. In the solution of this problem the architects of the 4th century showed a wonderful fertility of resource; but to describe their achievements would be to pass the confines of Roman art in the proper sense of the word.

(3) *Individual Arts.* (*a*) *Architecture.*—This branch of the subject may be studied in the article ARCHITECTURE, and illustrations will be found in other articles (CAPITAL; COLUMN; ORDER; TRIUMPHAL ARCH; &c.). Architecture, regarded as a fine art, had been brought by the Greeks to the highest perfection of which it was capable under the limitations which they imposed upon themselves. The Greek temple appeals to the aesthetic sense by the simplicity and harmony of its proportions as well as by the rational correspondence between function and decoration in its several members. On these lines there was no room for progress. It is true that the Etruscans modified the type of the Greek temple and profoundly influenced Roman construction in this respect. The Etruscan temple was not approached on all sides by a low flight of steps, but raised on a high platform (*podium*) with a staircase in the front; it was broad in proportion to its depth, indeed, in many cases, square; and the temple itself (*cella*) was faced by a deep portico, which often occupied half the platform. Moreover, as the use of marble for building was unknown in early Italy, wood was employed in construction and terra-cotta in decoration, and this change of material led to a wider spacing of the columns than was possible in Greece. But these alterations in the system of proportions were disadvantageous to aesthetic effect; and the Romans—though they soon ceased (under the influence of the western Greeks) to build temples of purely "Tuscan" type—preserved certain of their features, such as the high platform and deep portico (see ARCHITECTURE, fig. 26). Nor can we regard as felicitous the design of certain Roman temples, such as that of Concord overlooking the Forum, and the supposed temple of Augustus (see ROME), which have a broad front (approached in the temple of Concord by a central portico) and narrow sides. The great temples of the Empire were (in general) inspired by Greek models, and need not therefore concern us; but we may notice Hadrian's peculiar design for the double temple of Venus and Rome, with twin *cellae* placed back to back. To the orders (see ORDER) of Greek architecture the Etruscans added the "Tuscan," a simplified Doric, of which an early example has been found at Pompeii, enclosed within the wall of the Casa del Fauno.[2] This column, which can scarcely be later than the 6th century B.C., has a smooth shaft with pronounced entasis, a heavy capital with a scotia between abacus and echinus, and a plain circular base. To the Romans we owe the "Composite" order, so called because it contains features distinctive of the Corinthian and Ionic orders (see ORDER, fig. 14). It is really a variety of the Corinthian, with Ionic volutes inserted in the capital; the earliest known example of its use is seen in the Arch of Titus. The Romans, moreover, made frequent use of the figured capital, which, as

[1] It is very remarkable that the coin-portraits of the Gallic usurper Postumus (A.D. 258–68) are executed in precisely the same style; the coins were struck either at Trier or at Cologne.

the remains of Pompeii show, was an invention of the later Hellenistic age. Reduced copies of statues are found in the decoration of such capitals in the baths of Caracalla; the capitals with Victories and trophies in S. Lorenzo Fuori also belonged to a building of pagan times.

But the specific achievement of the Roman architect was the artistic application of a new set of principles—those which are expressed in the arch, the vault and the dome. The rectilinear buildings of the Greeks, with their direct vertical supports, gave place to vaulted structures in which lateral thrust was called into play. The aesthetic effect of the curves thus brought into prominence was well understood by the Romans; and they were the inventors of the decorative combination of the Greek orders with the arcade. More than this, the erection of vaults and domes of wide span, rendered possible by the use of concrete, gave to the Roman architect the opportunity of dealing artistically with internal spaces. A simple yet grandiose example of this may be found in the Pantheon of Hadrian. Circular buildings were a common feature in Italian architecture;[1] the temple of Vesta, which doubtless represented the primitive hut or dwelling of the king, always had this form, and the theme was repeated with many variations, from the well-known circular temple in the Forum Boarium to the fantastic structure with broken outlines at Baalbek. But in the Pantheon the artist lays stress, not on the exterior, which possesses no special effect, but on the interior, whose proportions are carefully determined and give a most impressive result. The same may be said of the great halls of the Imperial Thermae, and as time went on more elaborate architectural schemes were devised to meet the requirements of the Christian Church.

(*b*) *Sculpture.*—It was pointed out above that in the late Republican period specifically Roman art was practically confined to portraiture. Of this we have many fine examples, such as the so-called Domitius Ahenobarbus of the Braccio Nuovo (Plate I. fig. 1); and there is a series of busts which possess a special interest in that some of them have been claimed as portraits of Scipio Africanus. The example in the Museo Capitolino (Plate I. fig. 2), with a modern inscription, though executed in the 2nd century A.D., is clearly copied from a famous Republican original. The baldness of the head has been thought to be derived from the technique of the waxen *imagines*, in which the hair was painted; the presence of a scar above the temple, which has given rise to various theories, merely betokens the unsparing realism of the Republican artist. In monumental sculpture our earliest datable example is the altar of Domitius Ahenobarbus, already referred to (Plate II. fig. 10). The ceremonial scene of the *suovetaurilia* fills the centre of the composition; to the left we see the dismissal of veterans for whom *diplomata* are being prepared; to the right the troops on active service, both horse and foot, are represented. The artist was clearly inspired by statuary and other types of earlier date, which are grouped in a somewhat loose composition. Augustan art is adequately represented by the Prima Porta statue of the emperor, discovered in 1863 in the Villa of Livia and now in the Braccio Nuovo (Plate III. fig. 17). The attitude of the figure is that of an imperator addressing his army; but there is a characteristic blending of the real with the ideal, for the emperor is not only bareheaded but barefoot, and beside him is a tiny cupid riding on a dolphin, which indicates the descent of the Julian house from Venus. We note, too, how the Roman artist—or the Greek artist interpreting the wishes of the Roman—is scarcely more concerned for the total effect of his work than for the significant details of the decoration. The chasings of the corselet display, as a central subject, the restoration by the Parthian in 20 B.C. of the standards taken from Crassus at Carrhae (53 B.C.). Not content with this, the artist has added a group of personifications indicating sunrise—Sol, Caelus, Aurora and the goddess of the morning dew—as well as Apollo, Diana, Mars and the earth goddess, and two figures symbolical of the western provinces, Gaul and Spain. It is also to be noted that the statue shows abundant traces of its original polychrome tints—brown, yellow, blue, red and pink. It must have been executed later—probably not much later—than 13 B.C., when Augustus returned from the West, and therefore belongs to the same period as the Ara Pacis Augustae, dedicated January 30, 9 B.C. This altar stood in a walled enclosure with two entrances, measuring $11\frac{1}{2}$ by $10\frac{1}{2}$ metres. The walls, with their plinth, were about 6 metres in height, and were decorated internally with a frieze of garlands and bucrania, and externally with two bands of relief, the lower consisting of conventional scrolls of acanthus varied with other floral motives, and teeming with bird and insect life, the upper showing processions (Plate II. fig. 11) passing from east to west. The most interesting of these is that on the south wall, which included Augustus himself, the *flamines* and the imperial family.[2] On the western face, towards which the processions are directed, we find a scene of sacrifice, with a landscape background, in which the ideal figures of senate and people appear. To the east front (apparently) belongs the beautiful group of the earth goddess (Tellus) and the spirits of air and water (Plate II. fig. 13). It is impossible to deny the incongruity of this composition with the realistic procession which adjoins it, and we can only suppose that the artist borrowed the group from some Hellenistic precursor and used it in that blend of the real and ideal which, as we saw, was the keynote of the new imperial art.

The lack of public monuments which can be assigned to the Julio-Claudian period is only in part supplied by those of private significance; the most important of these are the sepulchral *cippi* and other altars, decorated sometimes with figure-subjects, but largely with plant and animal forms rendered with the utmost naturalism. The altar with plane-leaves in the Museo delle Terme (fig. 38), though perhaps not

Redrawn from a photo by Anderson.

FIG. 38.—Altar with Plane-leaves.

later than Augustus, is typical of the spirit in which vegetable forms were treated under the first dynasty. We may take a female portrait discovered in a 1st-century house on the right bank of the Tiber (Plate I. fig. 3) as an example of the portraiture of this period, which shows great technical merit but a touch of conventionality.

The sculpture of the Flavian period finds its best-known example in the reliefs of the Arch of Titus. This has but a single archway; the piers had no sculptured decoration, and the narrow frieze which surmounts the architrave is perfunctorily executed. But the long panels on either side of the passage, which represent the triumph of Titus and the spoils of Jerusalem, have been deemed (by Wickhoff) worthy of a place in the history of art beside the masterpieces of Velazquez—the "Hilanderas" and the "Surrender of Breda"; and

[1] See Altmann, *Die italischen Rundbauten* (1906).

[2] Some doubt has recently been cast on the identification of the emperor and his family.

though we cannot subscribe to his view that the artist calculated the effect of natural illumination upon the relief, it remains true that they are eminently pictorial compositions in respect of their depth of focus, yet without sacrifice of plastic effect (Plate II. fig. 14). So far as bas-relief is concerned, the problem of representing form in open space is here solved. Equally admirable in technique, though of less historical importance, are the circular medallions (*tondi*) which now adorn the Arch of Constantine, but originally belonged (as the present writer has shown)[1] to a monument of the Flavian period, perhaps the "temple of the Flavian house" erected by Domitian. The one shown (Plate III. fig. 18) is remarkable in that the head of the emperor has been replaced by a portrait, not of Constantine, but (in all probability) of Claudius Gothicus (A.D. 268–70), who was the first to divert these sculptures from their original destination.

Flavian portraits,[2] of which two are here figured,—a bust of Vespasian in the Museo delle Terme (Plate I. fig. 4) and a bust, now in the Lateran, found in the tomb of the Haterii, which, as is shown by the snake, represents a physician (Plate I. fig. 5),—must rank as the masterpieces of Roman art. Their extraordinarily lifelike character is due to the fact that the artist, without accumulating unnecessary detail, has contrived to catch the characteristic expression of his subject, and to render it with the utmost technical virtuosity. These portraits differ from the works of the Greek masters, who always subordinated the individual to the type, and therefore gave a less complete impression of reality than the Roman artists.

The same tendency has been noted in ornamental work which may be dated to the Flavian period. Wickhoff selected a pilaster from the monument of the Haterii (Plate II. fig. 15) upon which a column entwined with roses is carved. The flowers are not in fact represented with precise fidelity to nature, but the illusion of reality is no less great than in more accurately worked examples.

Roman sculpture soon passed the zenith of its achievement. We are not able to assign any historical monuments to the earlier years of Trajan's reign, but the portraits of the emperor betray a certain hardness of touch which makes them less interesting than those of the Flavian period. To the latter part of the reign belong a number of monuments which represent Trajanic art at its best. First and foremost come the reliefs, colossal in scale, which appear to have decorated the walls of Trajan's Forum. Four slabs were removed by Constantine's order and used to adorn the central passage and the shorter sides of the attic of his arch. The first of these (Plate II. fig. 16) shows the victorious charge of the Roman cavalry, with the emperor at its head, against their Dacian enemies. Other fragments of this frieze are extant in the Louvre,[3] and a much-restored relief, walled up in the garden of the Villa Medici, shows a Dacian on horseback swimming the Danube with Trajan's Bridge in the background. The composition of the battle-scene is very fine, and the heads of the Dacians are full of character; but, although details of armour, &c., are carefully and accurately reproduced, we see clear signs of technical decadence in the fact that the human eye is in many cases represented as though in full face on heads which are shown in profile, and also in the naïve attempt to render several files of troops in perspective by means of superposed rows of heads.[4] The reliefs of the spiral column in the Basilica Ulpia tell the same tale. The designer borrowed certain motives from Hellenistic art; *e.g.* we find the suicide of the Dacian king Decebalus represented in precisely the same way as that of a Gallic chief on the well-known sarcophagus in the Capitoline Museum representing a battle between Greeks and Gauls; again, the symmetry of the scene in which the fall of Sarmizegetusa (the Dacian capital) is depicted recalls that of Greek monuments—particularly the painting of the fall of Troy by Polygnotus, described by Pausanias at Delphi. But the loving care with which the arms and accoutrements of the Roman troops—both regular and irregular—are rendered[5] betrays the nationality of the artist; and his technical deficiencies, especially in the matter of perspective, point in the same direction. It seems probable, moreover, that the artistic conception of a column ornamented with a band of relief was new, and that the designer had to find his own solution for the problem. We find, in fact, that he tells his story in more than one way: (*a*) Considerable portions of the narrative, *e.g.* Trajan's march in the opening campaign, consist in a series of isolated and successive scenes; the divisions are usually marked by some conventional means, such as the insertion of a tree, or a change of direction in the action. (*b*) At other times the scenes unfold themselves against a continuous background, and merge almost insensibly into those which succeed them; to this form of narrative the term "continuous style," brought into use by Wickhoff, more properly applies. (*c*) The direct progress of the narrative is sometimes broken by passages which can only be called "panoramic"; the great composition showing the siege and fall of Sarmizegetusa falls under this head, and the "continuous" narration of Trajan's journey at the outset of the second war is followed by an extensive panorama illustrating the operations in Moesia in A.D. 105.

The reliefs (as already indicated) tell the story of both of Trajan's wars with the Dacians, a formal division between the two narratives being made by a figure of Victory setting up a trophy; and the design of the second series shows a decided advance in artistic and dramatic effect on that of the first. Clearly the artist learnt the laws of composition applicable to his problem in the course of his work.

Before leaving the Trajanic period a word must be said as to the arch erected at Benevento (see TRIUMPHAL ARCH, fig. 2), from which point a new road—the Via Trajana—ran to Brundisium. The inscription on this arch bears the date A.D. 114, but the prominence given to Hadrian has led to the supposition that the reliefs were executed after his accession. We have already noted that the use of relief as ornament is here carried to excess in the artist's desire to present a summary of Trajan's achievements at home and abroad.[6] The arrangement of the panels is calculated and significant. On the side which faces the town of Benevento the subjects have reference to Trajan's work in Rome. On the attic we see, to the left, a group of gods with the Capitoline triad—Jupiter, Juno and Minerva—in the foreground; to the right, Trajan welcomed at the entrance to the Capitol by the goddess Roma, the penates and the consuls. He is accompanied by Hadrian, who is designated by the gesture of Roma as the emperor's successor. The two lowest panels likewise form a single picture. To the right Trajan appears at the entrance of the Forum, where he is welcomed by the *praefectus urbi*; to the left, with the Curia as background, we see the representatives of senate, knights and people. The central panels symbolize the military and civil aspects of Trajan's government—veterans to left, merchants to right, are the recipients of imperial favour. On the other

[1] *Papers of the British School at Rome*, vol. iii. pp. 229 ff. Sieveking (*Röm. Mitth.* (1907) pp. 345 ff.) believes that four of the medallions only belong to the Flavian period and the rest to Hadrian's reign.

[2] On this subject see Mr Crowfoot's paper in *Journal of Hellenic Studies*, xx. (1900) pp. 31 ff. A list of examples is given by Mr Wace in *Papers of the British School at Rome*, vol. iii. pp. 290 ff.

[3] Mr Wace has recently identified the reliefs which show an emperor sacrificing before the temple of Jupiter Capitolinus as a part of the frieze (*Papers of the British School at Rome*, iv. pp. 229 ff.).

[4] These features make it clear that the reliefs in the Villa Borghese, formerly supposed to belong to an arch of Claudius, are Trajanic; see *Papers of the British School at Rome*, iii. pp. 215 ff. (Stuart Jones).

[5] Thus Cichorius, in his publication of the reliefs, has been able to identify several of the corps which took part in the war; *e.g.* the "cohorts of Roman citizens" are distinguished from the barbarian auxiliaries by the national emblems on their shields.

[6] The significance of these reliefs was first demonstrated by Domaszewski (*Jahresheftе des österreichischen archäologischen Instituts*, ii. 1899, pp. 173 ff.); a full account will be found in Mrs Strong's *Roman Sculpture*, ch. 9.

face of the arch we have a series of panels relating to Trajan's work in the provinces. On the attic the gods of the Danube provinces appear to the left, the submission of Mesopotamia on the right; the lowest panels represent negotiations with Germans (left) and Parthians (right); in the centre (as on the other face) we have a military scene (recruiting in the provinces) to left, balancing the foundation of colonies and growth of the *proles Romana* on the right. As the above description will show, this arch is, in respect of its significance, the most important monument of Roman historical art. Technically, the reliefs fall somewhat short of the best work of the Flavian period—the long panels of the archway, which represent a sacrifice offered by Trajan and his benefactions to the *municipia* of Italy, have not the *verve* of those from the Arch of Titus, but are at least as fine as the works executed for Trajan's Forum.

With the accession of Hadrian—the "Greekling," as he was called by his contemporaries—a short-lived renaissance of classicism set in. The eclectic modifications of Greek statuary types which it called forth do not fall within our province; but it should be noticed that in portraiture the most important work of this period was the idealized type of Antinous, here represented by a famous example (Plate I. fig. 6) in the Louvre, which invests the favourite of Hadrian with a divinity expressed in the terms of Hellenic art as well as a pathos which belongs to his own time.[1] The historical monuments of this and the following reign are few in number, and lack the pregnancy of meaning and vigour of execution which distinguish those of the Trajanic period; mention may be made of three reliefs in the Palazzo dei Conservatori, one of which represents the apotheosis of an empress, and of the panels in the Palazzo Rondinini shown by the analogy of a medallion of Antoninus Pius to belong to his time. This is also the place to take note of the ideal figures symbolical of the subject peoples of the Empire. Under Trajan Roman sculptors had produced the fine statues of Dacian captives which now adorn the Arch of Constantine; to the Hadrianic period belong the idealized figures of provinces, classical in pose and motive, several of which are in the Palazzo de Conservatori.[2]

We pass on to the period of Marcus Aurelius and Commodus, in which Roman art underwent a further transformation. The earliest monument of the time which calls for our attention is the base of the column (now destroyed) erected in honour of Antoninus Pius. Two of its faces are here shown (Plate IV. figs. 21 and 22), and the contrast is remarkable between the classicistic representation of the apotheosis of Antoninus and Faustina, witnessed by the ideal figures of Rome and the Campus Martius (holding an obelisk), and the realistic treatment of the *decursio*, a ceremony performed by detachments of the praetorian guard on horse and foot. We note the endeavour of the Roman sculptor to express more than his medium will allow, and his inadequate grasp of the laws of proportion and perspective. Discarding the classical standard and its conventions, the artist disposes his figures like a child's toys, and, when confronted with the problem of the background, waves it aside and reduces the indication of the place of action to a few projecting ledges on which his puppets are supported. The reliefs of the Column of Marcus Aurelius suffer by comparison with those of Trajan's Column. The story which the designer had to tell was doubtless less definite in outline; we cannot trace, as in the former instance, the march of events towards a dramatic climax, and there is some reason to think that, although the two bands of relief, separated (as on Trajan's Column) by a figure of Victory, correspond generally with the "Germanic" and "Sarmatic" wars of Marcus down to A.D. 175, the narrative is not strictly chronological; thus the fall of rain ascribed by Christian tradition to the prayers of the "Thundering" Legion (Plate IV. fig. 24) is represented at a very early stage, whereas our historians place it towards the close of the war. The figures are smaller and at the same time more crowded than those upon Trajan's Column, and the landscape is less intelligently rendered. The type of the rain-god, which is without doubt the creation of the Roman sculptor, is boldly conceived but scarcely artistic. Still the reliefs show that the designers of the time were making vigorous efforts to think for themselves, and for this reason possess a higher value than the more conventional panels now distributed between the attic of the Arch of Constantine and the Palazzo dei Conservatori, which seem to have decorated a triumphal arch set up in or after A.D. 176.[3] The portraiture of the time also shows the invasion of new principles. Even before the reign of Marcus we find a tendency to emphasize the contrast between hair and flesh, the face often showing signs of high polish. In the latter half of the 2nd century the contrast is heightened by a new method of treating the hair, which is rendered as a mass of curls deeply undercut and honeycombed with drill-holes; a fine example is the Commodus of the Palazzo dei Conservatori. The aim of the sculptor is to obtain an ornamental effect by the violent contrast of light and dark—an adaptation for the purposes of plastic art of the *chiaroscuro* which more properly belongs to painting. This tendency may be seen at work in all branches of sculpture. The sarcophagi of the Antonine and later periods, with their crowded compositions and deep shadows, have the same pictorial effect; and in pure ornament the vivid illusionism of Flavian art disappears, and, though plant-forms are lavishly used—from the time of Trajan onwards we note a growing distaste for pure outlines, which are hidden beneath all-pervading acanthus foliage—the interest of the sculptor comes to lie more and more in intricacy of pattern, produced by the complementary effect of lights and shadows. An instance of this may be found in a pilaster now in the Lateran Museum (fig. 39), which Wickhoff justly contrasts with the pilaster from the monument of the Haterii.[4] It is all-important to remember that (as Strzygowski has pointed out)[4] it is not true shadow which is contrasted with the high lights in later Roman ornament; if so, the plastic effect of the free members would be heightened, whereas the reverse is actually the case, for even the figures on sarcophagi, worked in the round though they be, do not stand out from the background—which indeed is practically abolished—but seem rather to form elements in a pattern. The reason is that pure darkness is set off against the high lights, and the whole surface being thus broken up, there remains no impression of depth.

(Drawn from photo, Moscioni.)

FIG. 39.—Pilaster with Oak Leaf Ornament.

Under Septimius Severus and his successors, Roman art drifts steadily in its new direction. The reliefs of his arch at the entrance to the Forum represent the emperor's campaigns in the East in a compromise between bird's-eye perspective and the "continuous" style which cannot be called successful;

[1] It is in the portraits of the Hadrianic period that we first meet with the plastic rendering (in marble) of the iris and pupil of the eye; on the significance of this convention see above.

[2] On these see Lucas's article in *Jahrb. des k. deutschen arch. Instituts* (1900), pp. 1 ff., and Mrs Strong, *Roman Sculpture*, pp. 243 ff.

[3] This series of panels is discussed in *Papers of the British School at Rome*, vol. iii. p. 251 ff.

[4] *Jahrbuch der preussischen Kunstsammlungen* (1904), p. 271.

a better example of the art of this period is to be seen in the relief (Plate IV. fig. 29) now in the Palazzo Sacchetti, recently published by Mr A. J. B. Wace,[1] which probably represents the presentation of Caracalla to the senate as the destined successor of his father. The squat figures of the senators, their grouping, which, though not lacking in naturalism and a certain effectiveness, is not in its main lines aesthetic, and the lavish use of deeply drilled ornament, are features which leave no doubt as to the period to which this work should be assigned. Rome, however, could still boast a school of portrait-sculptors, whose work was of no ordinary merit. The bronze statue of Septimius Severus, which passed into the Somzée collection, has been pronounced by Furtwängler to be of much earlier date, except for the head of the emperor, and we cannot therefore feel confidence in using it as a measure of the artistic achievements of Severus's reign; but the busts of Caracalla, which represent the tyrant in his later years, are masterly both in conception and in execution.

In the second quarter of the 3rd century A.D., when the Empire was torn by internal strife, threatened in its very existence by the inroads of barbarism, and hastening towards economic ruin, art could no longer flourish, and monuments of sculpture become scarce, if we except portraits and sarcophagi. The busts of this period are easily distinguished by the treatment of the hair and beard, which seem to have been closely clipped, and are indicated by a multitude of fine chisel strokes on a roughened surface. But, rough as these technical methods may seem, the artists of the time used them with wonderful effect, and the portraits of the emperor Philip (A.D. 244–49) in the Braccio Nuovo, and an unknown Roman in the Capitoline Museum (Plate I. fig. 7), are hardly to be surpassed in their delineation of craft and cruelty. Amongst the sarcophagi of the 3rd century we select, in preference to those adorned with scenes of Greek mythology, the fine example in the Museo delle Terme (formerly in the Ludovisi collection) decorated with a mêlée of Romans and Orientals (Plate IV. fig. 23); the principal figure—whose portrait is also to be seen in the Capitoline Museum—has been identified by Mr A. H. S. Yeames as C. Furius Sabinius Aquila Timesitheus, the minister and father-in-law of Gordian III. (d. A.D. 244). Even after the middle of the century, when the Empire was for a time dismembered, portrait-sculpture put forth fresh evidences of life and vigour. Gallienus, who himself a dilettante and doubtless largely endowed with personal vanity, seems to have called into being a naturalistic school of sculptors, who harked back to the models of the later Antonine period, so that it is not always easy to distinguish the busts of his time from those of a much earlier date. The Louvre bust of the emperor (Plate I. fig. 8) will serve as a type of these works. But this singular renaissance was as short-lived as the eclectic revival of classicism under Hadrian. It is remarkable that the portrait of Gallienus is the last which can be identified by truly individual traits. The period of storm and stress which followed his death has left little or no monumental material for the historian of sculpture; and when the curtain again rises on the art of the new monarchy founded by Diocletian and perfected by Constantine, we seem to move in a new world. The East has triumphed over the West. Just as in Egyptian and, speaking generally, in all oriental art, before the revelation of true plastic principles, which we owe to the Greek genius, the law of "frontality" was universally operative, *i.e.* the pose of sculptured figures was rigidly symmetrical and without lateral curvature, so the portraits of Constantine and his successors are discerned at a glance by their stiff pose and fixed and stony stare. The fact is that the secret of organic structure has been lost; the bust (or statue) is no longer a true portrait, a block of marble made to pulsate with the life of the subject represented, but a monument. It was thus that the absolute monarchs of the Empire, before whom their subjects prostrated themselves in mute adoration, preferred to be portrayed; and we cannot help recalling Ammianus's[2] description of the entry of Constantius II. into Rome (A.D. 356). The emperor rode in a golden chariot, turning his head neither to the right nor to the left, but gazing impassively before him "tanquam figmentum hominis." The description fits such a portrait as that of an unknown personage of the 4th century in the Capitoline Museum (Plate I. fig. 9), which has found a panegyrist in Riegl. It remains to note that the narrow bands of relief on the Arch of Constantine, some of which probably date from the reign of Diocletian,[3] partake of the same monumental character as the single statues of the time. Where the nature of the subject permits, as in the case of the reliefs here represented (Plate III. fig. 19), the frontality of the central figure, and the strict symmetry of the grouping, which imparts an almost geometrical regularity to the main lines of the composition, are calculated for architectonic rather than for plastic effect. The breath of organic life has ceased to inspire the marble.

We have confined ourselves in the above section to tracing the course of development in what we may call official Roman sculpture, represented in the main, as is natural, by the monuments of the capital. The products of local schools cannot here be treated in detail. The difficult problems which they raise are best illustrated by the case of "Trajan's trophy" at Adam-Klissi in the Dobruja. Although the very name of the monument might seem to furnish sufficient evidence of its date, the late Professor Furtwängler stoutly maintained that Trajan did but restore a monument dating from 29 B.C.[4] He called attention to the uniformity in style of the grave-monuments of soldiers from north Italy, serving in the legions of the Rhine and Danube; these date from the early imperial period, and represent (according to Furtwängler) a traditional "legionary style." It may be admitted that they are eminently Italian in their hard realistic character; but the tradition was not extinct in the Trajanic period, so that the analogy between these monuments and its rudely carved figures is inconclusive, and the *ornament* of the trophy, which is far from being homogeneous, contains, as Studniczka[5] has observed, oriental elements which could not possibly be found in sculpture of the 1st century B.C. Local tradition may also be traced, *e.g.* in southern France, where the Hellenic influence which penetrated by way of Massilia was still strongly felt under the Julio-Claudian dynasty, as the sculptures of the tomb of the Julii at St Rémy and the triumphal arches of Orange and Carpentras suffice to prove. Gallo-Roman art, on the other hand, has a physiognomy of its own, whose outlines have been traced by M. Salomon Reinach (*Antiquités nationales; bronzes figurés de la Gaule romaine*, Introduction). In the Rhineland we find, at a later period, a singular school of realistic sculptors at work; the museum at Trier contains a number of their grave-monuments decorated with scenes of daily life.[6] Nor must we omit to mention the Palmyrene sculptors of the 3rd century A.D., whose portrait-statues give us the clue to the origin of the "frontal" style of the Constantinian period.[7]

(c) Painting and Mosaic.—The arts whose proper medium is colour enjoyed a popularity with the ancients and with the Romans, no less than with the Greeks, at least as great as that of sculpture; we need go no further for evidence of this than the statement of Pliny[8] that Julius Caesar paid eighty talents (£20,000) for the "Ajax and Medea" of Timomachus of Byzantium, which he placed in his newly built forum. But we are in a difficult position when we try

to estimate the artistic value of the masterpieces of ancient painting, since time has destroyed the originals, and it is but rarely that we can even recover the outlines of a famous composition from decorative reproductions. For the history of Greek painting we have in Pliny's *Natural History* a fairly full literary record; but this fails us when we come to Roman times, nor do original works, worthy to be ranked with the monuments of Roman historical sculpture, supply the want.

Painting in Italy was throughout its early history dependent on Greek models, and reflected the phases through which the art passed in Greece. Thus the frescoes which adorn the walls of Etruscan chamber-tombs show an unmistakable analogy with Attic vase-paintings. The neutral background, the use of conventional flesh-tones, and the predominant interest shown by the artists in line as opposed to colour, clearly point to the source of their inspiration; and the fine sarcophagus at Florence[1] depicting a combat between Greeks and Amazons, in which we first trace the use of naturalistic flesh-tints, though it bears an Etruscan inscription, can hardly have been the handiwork of native artists.

Roman tradition tells of early wall-paintings at Ardea and Lanuvium, which existed "before the foundation of Rome";[2] of these the Etruscan frescoes mentioned above may serve to give some impression. We also hear of Fabius Pictor, who earned his cognomen by decorating the temple of Salus on the Quirinal (302 B.C.); and a few more names are preserved by Pliny on account of the trivial anecdotes which attached to them. The chief works of specifically Roman painting in Republican times (other than the frescoes which adorned the walls of temples) were those exhibited by successful generals on the occasion of a triumph; thus we hear that in 263 B.C. M. Valerius Messalla was the first to display in the Curia Hostilia such a battle-piece, representing his victory over Hiero II. of Syracuse and the Carthaginians.[3] We may perhaps form some idea of these paintings from the fragment of a fresco discovered in a sepulchral vault on the Esquiline in 1889,[4] which appears to date from the 3rd century B.C. This painting represents scenes from a war between the Romans and an enemy who may almost certainly (from their equipment) be identified as Samnites; the names of the commanders are indicated, and amongst them is a Q. Fabius, probably Q. Fabius Maximus Rullianus, who played a part in the third Samnite War. The scenes are superposed in tiers; the background is neutral, the colour-scale simple, and there is but little attempt at perspective; but we note the files of superposed heads in the representation of an army, which are found at a later date in Trajanic sculpture.

We pass from this isolated example of early Roman painting to the decorative frescoes of Rome, Herculaneum and Pompeii, which introduce us to the new world conquered by Hellenistic artists. The scheme of colour is no longer conventional, but natural flesh-tints and local colour are employed; the "artist understands," as Wickhoff puts it, how to "concentrate the picture in space" instead of isolating the figures on a neutral background; he struggles (not always successfully) with the difficult problems of linear and aerial perspective, and contrives in many instances to give "atmosphere" to his scene; the modelling of his figures is often excellent; finally, he can, when need requires, produce an effective sketch by compendious methods. It must be premised that this style of wall-decoration was a new thing in the Augustan period. In the Hellenistic age the walls of palaces were veneered with slabs of many-coloured marble (*crustae*); and in humbler dwellings these were imitated in fresco. This "incrustation" style is found in a few houses at Pompeii, such as the Casa di Sallustio, built in the 2nd century B.C.; but before the fall of the Republic it had given place to what is known as the "architectural" style. In this the painter is no longer content to reproduce in stucco the marble decoration of more sumptuous rooms; by introducing columns and other architectural elements he endeavours to give the illusion of outer space, and this is heightened by the landscapes, peopled, it may be, with figures, which form the background. We shall take as an example of such decoration one of the "Odyssey landscapes" discovered on the Esquiline in 1849; these may be amongst the more recent works of this school, but can scarcely, from the character of their surroundings, be later than the reign of Claudius. Amongst the remains of a large private house was a room whose walls were decorated in their upper portion with painted pilasters treated in perspective, through which the spectator appears to look out on a continuous background of land and sea, which is diversified by scenes from the voyage of Odysseus. It is clearly to such works as these that Vitruvius refers in a well-known passage (vii. 5) where, in describing the wall-paintings of his time, he speaks of a class of "paintings on a large scale which represent images of the gods or unfold mythical tales in due order, as well as the battles of Troy or *the wanderings of Odysseus through landscapes (topia)*." And it is worthy of note that in a chamber discovered in the 18th century below the Flavian state-rooms on the Palatine (see ROME) the tale of Troy seems to have been represented in a very similar manner; drawings of the panel on which the landing of Helen is depicted have been preserved. Of the eight scenes from the Odyssey found on the Esquiline three represent the adventure in the country of the Laestrygones; the third forms a transition from this subject to the visit of Odysseus to Circe, which occupies the fourth and fifth panels;[5] the two last depict Odysseus among the shades. The second of these, which is here reproduced (Plate V. fig. 26), is only half as wide as the others, and was probably next to a door or window. It is, however, typical in style and treatment. The artist is mainly interested in the landscape, which is sketched with great freedom and breadth of treatment. He has clearly no scientific knowledge of perspective, and commits the natural error of placing the horizon too high. His figures are identified by Greek inscriptions, and we see that artistic considerations weigh more highly with him than close adherence to his poetical text; for the group of the Danaids in the foreground has no counterpart in the Homeric description. The conventional distinction of flesh-tints between the sexes is to be observed.

The use of landscape in decoration is expressly stated by Pliny (*H.N.* xxxv. 116) to have become fashionable in Rome in the time of Augustus. He attributes this to a painter named Studius, who decorated walls with "villas, harbours, landscape gardens, groves, woods, hills, fish-ponds, canals, rivers, shores," and so forth, diversified with figures of "persons on foot or in boats, approaching the villas by land on donkeys or in carriages, as well as fishers and fowlers, hunters and even vintagers." Vitruvius, too, in the passage above quoted, speaks of "harbours, capes, shores, springs, straits, temples, groves, mountains, cattle and herdsmen"; and existing paintings fully confirm the statements of ancient writers. In the Villa of Livia at Prima Porta the walls of a room are painted in imitation of a park; from the Villa of Fannius Synistor at Boscoreale we have a variety of landscapes and perspectives; and in the house discovered in the grounds of the Villa Farnesina by the Tiber we find a room decorated with black panels, upon which landscapes exactly conforming to Pliny's description are sketched in with brush-strokes of white. While we have no reason to dispute the accuracy of Pliny's statement, or to refuse credit to the Roman artist for the development of landscape decoration, it is to be noted that the summary methods of impressionist technique which are here employed are probably traceable to Alexandrian influence. Petronius, who puts into the mouth of one of his characters a lament over the decline of art, attributes the decadence of painting to the "audacity of the Egyptians" and their discovery of "a short cut to high art" (*iam magnae artis compendiaria*). This has been thought to mean no more than the process of fresco-painting, which led to the substitution of

[5] The latter of these is so badly preserved that the subject cannot be precisely identified.

mere wall-decoration for elaborate easel-paintings; but this was no new invention. It has been pointed out by Mrs Strong[1] that amongst the wall-paintings of Pompeii we can distinguish a group executed in bold dashes of colour—especially white—according to the principles of modern impressionism. The most striking example of this betrays its source of inspiration by its subject—the ceremony of the evening benediction in front of the temple of Isis (Plate V. fig. 27).

So far the paintings which we have considered can only be regarded as an extremely ingenious and, in the main, tasteful form of wall-decoration; they tell us little of that which we most wish to know—the style and treatment of substantive works of painting. The gap is in some measure filled by the central panels of Pompeian walls, which are usually adorned with subject-paintings, often mythological in subject, clearly marked off from the rest of the wall and intended to take the place of pictures. In the Architectural style these are usually framed in a species of pavilion or *aedicula*, painted in perspective;[2] but this motive gradually loses its importance. In the Third style ("ornate") distinguished by Mau the architectural design ceases to be intelligible as the counterfeit of real construction, and becomes a purely conventional scheme of decoration; and in the Fourth or Intricate style, which again reverts to true architectural forms, however fantastic and bewildering in their complexity, the figure-subjects are plainly conceived as pictures and framed with a simple band of colour. The subjects of these frescoes are the most part taken from Greek mythology, and it has been argued that in the main we have to deal with reproductions of Hellenistic paintings rather than of contemporary works of art. It is not to be denied that the motives of famous compositions of earlier date may have found their way into the repertory of the Pompeian artists; it is not unnatural, for example, to conjecture that the figure of Medea here reproduced (Plate VI. fig. 30) may have been inspired by the celebrated painting of Timomachus above-mentioned. But there are reasons for thinking that the debt owed by the Pompeian artists to the Greek schools of the Hellenistic age is not so direct as was believed by Helbig, whose *Untersuchungen über die kampanische Wandmalerei* won a general acceptance for the theory. It seems clear that in the central subjects of walls decorated in the Architectural style we are intended to see, not a picture in the strict sense, but a view of the outside landscape, generally with a small shrine or cult-statue as the centre of the piece; and the importance of the figure-subject was therefore at first subordinate. These subjects are, it is true, taken from Greek mythology, but this only proves that that source of inspiration was as freely drawn upon in the art as in the literature of imperial Rome. In the later styles figure-subjects without landscape are extremely common, but it has been shown that, *e.g.* in the triclinium of the Casa dei Vettii, which is decorated with a cycle of mythological paintings, the lighting is carefully calculated with a view to illusionistic effect under the local conditions, so that the conception of an outlook into external space is not given up. We sometimes, as in one of the rooms in the "Farnesina" house, find framed pictures directly imitated, and here the models were clearly of a relatively early period; but this is exceptional. The Pompeian paintings, therefore, may fairly be used as evidence for the methods and aims of art in imperial Rome; and when allowance is made for their decorative character and hasty execution, we must admit that they give token of considerable technical skill—the modelling of figures is often excellent, the colour-scale rich, the "values" nicely calculated. The composition of subject-pictures is somewhat theatrical. Amongst the wall-paintings which have been preserved are some which from their classicistic style have been thought to represent Greek originals; the most famous is the "Aldobrandini Marriage" (Plate V. fig. 28), now in the Vatican library. As a matter of fact, the composition is formed by the juxtaposition of sculpturesque types, after a fashion familiar to Roman wall-painters. Mention may here be made of the combination of ornamental work in plaster with painting which is found at Pompeii, in the work of the Flavian period at Rome, and in tombs of the 2nd century A.D. In the Augustan period we find exquisitely modelled relief-work in plaster, used to ornament vaulted surfaces in the "Farnesina" house; it might seem natural to treat of these under the heading of Sculpture, but in point of fact they are translations from painting into stucco. At a later time both painter and modeller worked in conjunction, with admirable effect; the results are best seen in the tombs on the Latin Way.

Little can be said as to Roman portrait-painting. We know that in this branch of art the technique generally used was that called "encaustic." The colours were mixed with liquefied wax and fixed by heat; whether they were applied in a molten state or not has been disputed, but it seems more likely that the pigments were laid on cold, and a hot instrument used afterwards. Several examples of such wax-paintings have been found in Egypt, where it was the custom during the 2nd and 3rd centuries A.D. to substitute panel portraits for the plastic masks with which mummy-cases were adorned; but these cannot be described as works of high art, though they sometimes have realistic merit. A good example in the Berlin Museum (*Antike Denkmäler*, ii. pl. 13) is executed in tempera on painted canvas. The medium used in ancient as in medieval tempera painting appears from the statements of ancient writers to have been yolk of egg mixed with fig-sap or natural gums.

To the little we know of purely Roman painting something is added by that which we learn from the remains of the sister art of mosaic, which, being less easily destroyed, have survived in large numbers to the present day. It has been estimated by Gauckler that considerably more than 2000 mosaics with figure-subjects have been discovered; and the number is steadily increasing. For the origin of the art reference may be made to the article MOSAIC, where the reader will also find an explanation of the essential differences of principle between the arts of painting and mosaic. It is to the credit of the Roman artists that they have generally speaking, alive to this distinction of method, and did not seek to produce the impression of painting executed with a liquid medium by the use of solid materials. Indeed, it seems not improbable that in this respect they had a truer conception of the function of mosaic decoration than their Greek forerunners. Amongst the mosaics of Roman date which employ a large number of exceedingly minute cubes in order to produce an illusion akin to that of painting, the most conspicuous examples are the pavement in the Lateran Museum signed by the Greek Heraclitus, which appears to reproduce the "unswept hall" of Sosos of Pergamum (see MOSAIC), and the Mosaic of the Doves from Hadrian's Villa, preserved in the Capitoline Museum, which may be supposed to have been inspired by the "drinking dove" of the same artist. The former of these contains about 120, the latter as many as 160 cubes to the square inch.

As shown in the article MOSAIC, a distinction must be drawn between *opus tessellatum*, consisting of cubes regularly disposed in geometrical patterns, and *opus vermiculatum*, in which a picture is produced by means of cubes irregularly placed. The two methods were commonly used in conjunction by the Romans, who recognized that a pavement should emphasize the form of the room to which it belonged by means of a geometrical border, while figure-subjects should be reserved for the central space. A good example is furnished by a mosaic pavement discovered on the Aventine in 1858, and preserved in the Museo delle Terme (Plate VI. fig. 29). Enclosed within a geometrical framework of guilloches and scroll-work, diversified with still-life subjects and scenic masks which break its monotony, we find a landscape evidently taken from the banks of the Nile, as the hippopotamus and crocodile, as well as the papyrus and lotus, clearly show. These Egyptian scenes are likewise found

[1] *The Elder Pliny's Chapters on the History of Art*, p. 238.

[2] The most striking example is that from the "House of Livia" on the Palatine.

at Pompeii, and the celebrated pavement at Palestrina, with a bird's-eye view of the Nile and its surroundings, is the finest, as well as the latest, example of the class. The conclusion to be drawn is that the Roman mosaic-workers of the early Empire owed much to Alexandrian models. Their finer works, however, were restricted in size, and formed small pictures isolated in geometrical pavements. Such mosaic-pictures were called *emblemata*, and were often transported from the great centres of production to distant provinces, where pavements were prepared for their reception. The subjects of these *emblemata*, like those of the wall-paintings of Pompeii, were, for the most part, taken from Greek mythology, and it is not easy to determine what degree of originality is to be assigned to Roman artists. We note a certain interest in the great figures of literature and philosophy. A subject of which two somewhat different versions have been preserved, commonly known as "The Academy of Plato," shows us a group of Greek philosophers engaged in discussion. In provincial pavements it is not uncommon to find portraits of poets or philosophers used to fill ornamental schemes of decoration, as in the famous mosaic at Trier signed by Monnus. And it is possible to trace the growth of interest in Roman literature at the expense of that of Greece. Fig. 31 (Plate VI.) shows a mosaic discovered in the *tablinum* of a villa at Sousse (Susa) in Tunis (the ancient *Hadrumetum*). It represents the poet Virgil seated, with a scroll on his knee, upon which is written *Aen.* i. 8; beside him stand the muses of tragedy and history. In one of the side-wings (*alae*) of the *atrium* was a mosaic representing the parting of Aeneas from Dido, and this was no doubt balanced by another scene from the *Aeneid*. It has also been shown that the mythological scenes depicted by the mosaic-workers of the later imperial period are frequently inspired, not by Greek poetry or even Greek artistic tradition, but by the works of Ovid; and the popularity of the legend of Cupid and Psyche is doubtless to be traced to its literary treatment by Apuleius.

The mosaic shown in fig. 31 is notable for the simplicity of its composition; and it may be laid down as a general rule that the later workers in this field preferred such subjects, consisting of few figures on a neutral background, which lend themselves to broad treatment, and are best suited to the genius of mosaic. The finer pavements discovered in the villas of the landed proprietors of the African provinces, Gaul, and even Britain, are distinguished by the excellent taste with which ornament and subject are adapted to the space at the disposal of the artist. Beside a well-chosen repertory of geometrical patterns, the mosaic-workers make use of vegetable motives taken from the vine, the olive, the acanthus or the ivy, as well as conventional figures, such as the seasons,[1] the winds, the months and allegorical figures of all kinds, forming elements in a scheme of decoration which, though often of great richness, is never lacking in symmetry and sobriety.

It is much to be regretted that the destruction, partial or complete, of the great thermae and palaces of the early Empire has deprived us of the means of passing judgment on the *opus musivum* proper (see MOSAIC), *i.e.* the decoration of vaults and wall-surfaces with mosaics in glass, enamel or precious materials. Effective as are the pavements constructed with tesserae of marble or coloured stone, they must have been eclipsed by the brilliant hues of the wall-mosaics. We can form but little idea of these from the decoration of fountains at Pompeii and elsewhere, and must depend chiefly on the compositions which adorn the walls and apses of early Christian basilicas. An attempt has, indeed, been made to prove that one of these—the church of S. Maria Maggiore—is nothing else than a private basilica once belonging to a Roman palace, and that its mosaics date from the period of Septimius Severus;[2] but it is impossible to accept this theory. The earliest monument of the class which we are now considering is the baptistery of S. Costanza at Rome, built by Constantine in the early years of the 4th century A.D. Unfortunately the mosaics of the cupola were destroyed in the 16th century, and we derive our knowledge of them from drawings made by Francesco d'Olanda. The tambour was decorated with a maritime landscape diversified with islands and filled with a crowd of *putti* fishing; and the cupola itself was divided into twelve compartments, containing figure-subjects, by acanthus motives and caryatids. The mosaics of the annular vault which surrounds the baptistery are extant, though much restored, and purely pagan in design, showing that the decorative schemes (Eros and Psyche, vine-patterns, medallions, &c.,) commonly found in pavements were also used by the *musivarii*. The mosaic-panels of the nave of S. Maria Maggiore already mentioned are (in the absence of earlier examples) very instructive as to the artistic quality of Roman *opus musivum*. Richter and Taylor's publication of some of the unrestored portions, which unfortunately form but a small fraction of the whole, serve to show that the *musivarii* had an accurate conception of the true function of mosaic destined to be seen at a distance. Their effects are produced by a bold use of simple means; a few large cubes of irregular shape serve to give just the broad impression of a human face or figure which suits the monumental surroundings and subdued light. Very remarkable is the success with which the atmospheric backgrounds are treated. To seek delicate gradations of tint by elaborate means would be waste of labour for the mosaic-worker, but the artists of S. Maria Maggiore are able to produce sky and cloud effects (cf. Plate V. fig. 25) of great beauty—when seen from the floor of the church, with the aid of broad masses of colour. Their gamut of tones is of the richest; and it is to be remarked that *no gold* is used except in the restored parts. Doubtless gold was employed in decorative wall-mosaics before the Constantinian period; but the Roman *musivarius* knew the secret of making a true mosaic picture with natural tints alone.

(4) *Work in Precious Metals.*—In the article PLATE the history of this branch of art in ancient times is treated, and it is there shown that it continued to be a living art, capable of producing works of the highest merit, in Roman times. The sections of Pliny's *Natural History* (xxxiii. 154 sqq.) which treat of *caelatura* deal only with the works of Greek artists, and Pliny ends with the statement that, as silver-chasing was in his time a lost art, specimens of embossed plate were valued according to their antiquity; but the extant remains of such plate suffice to disprove his statement, and in a previous passage (xxxiii. 139) he names the principal *ateliers* where such works were produced. The famous treasure of Bosco Reale (see PLATE) comprises specimens of silver-work belonging to various dates, many of which bear the inscription "Maximae"; this doubtless gives the name of the owner of the objects, whose skeleton was found near the treasure. But some of them had passed through other hands; for example, four "salt-cellars," probably of pre-Roman date, are also inscribed with the name of "Pamphilus, the freedman of Caesar." Certain pieces, too, seem older and more worn than others; two ewers, decorated with Victories sacrificing to Athena, are probably of Alexandrian origin—the lotus-flower on their handles most probably points to their Egyptian provenance. On the other hand, the various decorative styles characteristic of Augustan art are well represented,—not merely the elaborate and conventional plant-systems of the Ara Pacis Augustae, teeming with animal life, which adorn two splendid cantharí, but also the naturalistic treatment of vegetable forms, of which a cup decorated with sprays of olive furnishes a good example (Plate VII. fig. 32). But the most important pieces in the collection are those which show the silversmith at work on specifically Roman subjects. Amongst the cups with *emblemata* (for the meaning of the term see PLATE) were two which originally contained small portrait-busts of the master and mistress of the house to which the collection belonged. One of these became detached, and is now in the British Museum; the other is in the Louvre in its original setting. The lady's coiffure resembles that of the empresses of the later Julio-Claudian period; but this is not

[1] At least fifty examples of these have been found.

[2] See Richter and Taylor, *The Golden Age of Classic Christian Art* (1904).

conclusive as to date, and the style of the male portrait (which recalls the realistic bronze busts found at Pompeii) points rather to an early Flavian date. Amongst the finest pieces of this collection is a large bowl with an *emblema* in high relief (Plate VII. fig. 35), which was at first taken to represent the city of Alexandria, on account of the *sistrum* which appears amongst the attributes of the figure. It seems, however, to be a personification of the province of Africa, which was conventionally represented with a headdress formed by an elephant's scalp with trunk and tusks. We have in this *emblema* the earliest example of the ideal types which the Roman artists of the Empire called into being to symbolize the subject-countries; the inexhaustible fertility of the African soil is indicated by the cornucopiae and the fruits carried in the bosom of the figure. But there is some trace of that overcharging of symbolism to which we drew attention in discussing the Prima Porta statue of Augustus; and, though the bowl was in a very fine state of preservation, there is little doubt that this was due to the care with which it had been kept—it was of course an ornament reserved for the table or sideboard—and that we should date it to the Augustan period. The same is clearly true of the most important pieces comprised in the treasure—the pair of cups reserved by Baron Edmond de Rothschild and forming part of his collection (Plate VII. figs. 33 and 34). In these we have examples of the *crustae*, or plaques decorated 'in repoussé, which were mounted on smooth silver cups. The manufacture of these—or at least the designing thereof—was a special branch of *caelatura*, and Pliny mentions an artist named Teucer who achieved distinction therein; we may possibly identify him with the gem-engraver whose signature is read on an amethyst at Florence. Upon one of these (Plate VII. fig. 34), we see a seated figure of Augustus, approached by a processional group on both sides. To the left are three divinities, the foremost of whom presents a statuette of Victory to the emperor; to the right is Mars in full panoply, in whose train follow the conquered provinces, symbolized by female figures, amongst whom we recognize Africa with her elephant headgear (see above). On the other face of the cup we see Augustus again seated, receiving the homage of a group of barbarians ushered into his presence by a Roman commander. The schemes which are here found for the first time, became typical in Roman historical art, and thence passed into the service of Christianity to portray the homage of the Magi. The second cup celebrates the glories of Tiberius, whose triumphal procession appears on the one face, and a finely conceived scene of sacrifice on the other. For the occasion various dates have been suggested (13–12 or 8–7 B.C.); but it seems most likely that the return of Tiberius from Dalmatia in A.D. 9 is here commemorated.

The fortunate preservation of the Bosco Reale treasure has enabled us to appraise Roman silverwork at its true value. It also affords some confirmation of the rapid decadence of the art, which Pliny laments. Amongst the cups are two decorated with still-life subjects and signed by an artist who writes a Roman name (Sabinus) in Greek characters, which clearly belong to the last years of Pompeii, and are coarser in execution than the earlier pieces. And the simple *emblemata* of the classical period, which stand out against the background of the bowl in which they are framed, give place to such a crowded group as we find on a gold patera[1] found at Rennes and preserved in the Cabinet des Médailles, where the artist has surrounded the central *emblema* with a frieze which detracts from its effect. This and still later specimens of Roman silversmiths' work are described in the article PLATE.

(5) *Gem-Engraving and Minor Arts.*—The art of the gem-engraver, like that of the silversmith, was naturally held in high esteem by the wealthy Romans both of the Republic and Empire;[2] and the period of its highest excellence coincides almost precisely with that which gave birth to the masterpieces of Roman silver-chasing. By far the greater part of the ancient gems which exist in modern collections belong to the Roman period; and the great popularity of gem-engraving amongst the Romans is shown by the enormous number of imitative works cast in coloured glass paste, which reproduce the subjects represented in more precious materials. Not only were *intagli* thus produced to suit the popular demand, but fine cameos were at times cut (not cast) in coloured glass; the most notable example of these is a portrait of Tiberius in turquoise-coloured glass bearing the signature of Herophilus (see below).

In the style of Roman *intagli* we can trace each of the phases through which Roman plastic art has been shown to pass.[3] A black agate in the Hague Museum (Furtwängler, pl. xlvii. 13) supplies a characteristic portrait of the Ciceronian age; the splendid cornelian of the Tyszkiewicz collection (Furtwängler, pl. l. 19) with the signature ΠΟΠΠΑ · ΑΑΒΑΝ · which portrays Augustus in the guise of Poseidon in a chariot drawn by four hippocamps, is doubtless (as Furtwängler showed) to be referred to the victory of Actium; the classicism of the early Empire is exemplified by a sardonyx in Florence (Furtwängler, pl. lix. 11), which probably displays an empress of the Julio-Claudian line with the attributes of Hera; a sardonyx in the hermitage at St Petersburg (Furtwängler, pl. lvii. 1) is noteworthy because the subject is borrowed from painting and occurs on a Pompeian fresco discovered in 1897; the portraiture of the Flavian epoch is seen at its best in the aquamarine of the Cabinet des Médailles signed by Euhodos, which represents Julia, the daughter of Titus (Furtwängler, pl. xlviii. 8). Amongst later gems one of the finest is the "Hunt of Commodus" in the Cabinet des Médailles (Furtwängler, pl. l. 41), which is engraved in one of the stones most popular with the Roman artists—the "Nicolo," a sardonyx with a bluish-grey upper layer used as background and a dark brown under layer in which the design is cut.

But the masterpieces of Roman gem-cutting are to be found in the great cameos, the finest of which no doubt belonged to the treasures of the imperial house. These were engraved in various materials, including single coloured stones such as amethyst or chalcedony; but the stone most fitted by nature for this branch of art was the sardonyx in its two chief varieties —the Indian, distinguished by the warmth and lustre of its tones, and the Arabian, with a more subdued scale of colour. As examples of these we shall take the two master-works of the art—the "Grand camée de France" (Plate VII. fig. 37), and the "Gemma Augustea" (Plate VII. fig. 36), preserved in the imperial collection at Vienna. The latter is attributed by Furtwängler to Dioscorides, the artist who, as Pliny tells us, enjoyed the exclusive privilege of portraying the features of Augustus. We possess several gems inscribed with his name, as well as with those of his sons and pupils—Eutyches, Herophilus (see above) and Hyllos; and, though several of these in Renaissance forgeries, enough genuine material exists for an appreciation of his style. The Arabian sardonyx was amongst his favourite stones, and the Vienna cameo at least represents the work of his school. Blending the real with the ideal, the artist has represented in the upper zone Augustus and Rome enthroned. Behind them is a group of divine figures—the inhabited Earth, Time and Tellus, according to the most probable interpretation; to the left we see Tiberius descending from a chariot driven by Victory, before which stands a youth, probably Germanicus. We seem to have here, as in the Bosco Reale cup, a scene from the triumphal

[1] Works of pure gold have but rarely survived to modern times; but traces of gilding remain upon many of the specimens of plate described above. In the law-books we have mention of cups adorned with golden *crustae*.

[2] We first hear of collections of gems in the last century of the Republic. Pompey dedicated that which had belonged to Mithridates the Great on the Capitol; Julius Caesar placed six collections in the temple of Venus Genitrix; and Marcellus dedicated another in the temple of Apollo on the Palatine.

[3] The references given in the text are to Furtwängler's great work, *Die antiken Gemmen*, in which all ancient gems of any considerable importance are reproduced.

procession of A.D. 12, in the course of which, as Suetonius tells us, Tiberius stepped down from his car and did homage to his stepfather. In the lower zone we find loosely composed groups of captives and Roman soldiers, some of whom are setting up a trophy.

But the supreme triumph of imperial jewelry is attained in the Great Cameo of the Bibliothèque Nationale. This is an Indian sardonyx cut in five layers, the largest extant example of its class. There is a marked advance on the Vienna cameo in composition; the lower zone is reduced to the proportions of an exergue, whilst heaven and earth are kept clearly apart in the main subject, yet at the same time united in a single picture. In the centre are the living members of the Julio-Claudian house—Tiberius and Livia enthroned, together with Germanicus, his mother, and the rising generation—while above them hovers the deified Augustus, together with other deceased members of the family and an ideal figure in Phrygian garb bearing a globe, probably Iulus (Ascanius), or even Aeneas himself. The moment depicted is the departure of Germanicus for the East in A.D. 17, and amongst the figures of the central group we note the muse of history, bearing a scroll upon which to record the hero's deeds, and a personification of Armenia.

Engraved gems are not the only examples of Roman work in precious materials. Amongst the portraits of the first dynasty none is finer than a small head of Agrippina the younger (recently acquired by the British Museum) in *plasma* (root-of-emerald), a material much used by Roman gem-cutters. Vases, again, were carved in precious stones, such as the famous onyx vase at Brunswick (Furtwängler, *Die antiken Gemmen*, figs. 185–88), adorned with reliefs relating to the mysteries of Eleusis. A smaller, but finer, onyx vase in the Berlin Museum (Furtwängler, *op. cit.*, figs. 183, 184) represents the infancy of a prince of the Julian line—a rock surmounted by a small temple recalls the sculptures of the Ara Pacis, and the work seems to be of Augustan date.

It was mentioned above that coloured glass was used as a substitute for gems, and it is to the school which produced the cameos of the early Empire that we owe the exquisite vases in white and blue glass of which the Portland vase is the most famous example.[1] Pompeii furnishes a second in the amphora, decorated with vintage scenes, in the Naples Museum.

We must also class amongst the fine arts that of the die-sinker. Not only are the imperial portraits found on coins worthy of a place beside the works of the sculptor, but in the "medallions" of the 2nd century A.D. we find figure-subjects, often recalling those of contemporary reliefs, treated with the utmost delicacy and finish.

Of the purely industrial arts it is unnecessary to speak at length. The finds made in Gaul, Germany and Britain have enabled archaeologists to trace their history—particularly that of pottery—in some detail; but the chief importance of these discoveries lies in the fact that they prove the gradual diffusion of artistic talent throughout the provinces. In the last century of the republic a flourishing manufacture of red-glazed pottery was established with its chief centre at Arretium (Arezzo); the signatures of the vases enable us to distinguish a number of workshops owned by Romans who employed Greek or Oriental workmen. The repertory of decorative types used by these humble artists reflects the cross-currents of classicism and naturalism which were contending in the decadence of Hellenistic art; but, if we cannot set a high substantive value on their works, it is important to note that in the 1st century A.D. the Italian fabrics were gradually driven out of the market by those of Gaul, where the industry took root in the Cevennes and the valleys of the Rhone and the Allier; and before long north-eastern Gaul and the Rhineland became centres of production in the various minor arts,[2] which continued to flourish until the breakdown of the imperial system in the 3rd and 4th centuries A.D.

(6) *Summary: the Place of Roman Art in History.*—Just as the establishment of the Roman Empire gave a political unity to the ancient world, and the acceptance of Christianity by its rulers assured the triumph of a universal religion, so the growth of a Graeco-Roman nationality, due to the freedom of intercourse between the subjects of the emperors, led to a unity of culture which found expression in the art of the time. Yet no sooner was the fusion of the elements which contributed to the new culture complete than the process of disruption began, which issued in the final separation of the Eastern from the Western Empire. In the first, the oriental factors, which produced a gradual transformation in Graeco-Roman art, definitely triumphed; and the result is seen in Byzantine art. But in the West it was otherwise. The realism native to Italy remained alive in spite of the conventions imposed upon it; the human interest asserted itself against the decorative. The Christian art of the West, therefore, is the true heir of the Roman, and, through the Roman, of the classical tradition. The mosaics of S. Maria Maggiore, already referred to, show how strongly this tradition was at work in the 1st century of the Christian Empire; and monuments of the 5th century A.D., such as the consular diptychs of ivory and the carved doors of S. Sabina at Rome, tell the same tale. As we have seen, Roman art in its specific quality was an historical art; and it was for this reason eminently fitted for the service of an historical religion. The earliest Christian art whose remains are preserved is that of the catacombs; and this is not only devoid of technical merit, but is also dominated by a single idea, which governs the selection of subjects—that of deliverance from the grave and its terrors, whether this be conveyed by scriptural types or by representations of Paradise and its dwellers.[3] Not until the church's triumph was complete could she command the services of the highest art and unfold her sacred story on the walls of her basilicas; but, when the time came, the monumental art created by the demands of imperial pride was ready to minister *ad majorem gloriam Dei*.

BIBLIOGRAPHY.—F. Wickhoff's *Roman Art* (1900), translated by Mrs Strong from the author's *Wiener Genesis*, is well illustrated and indispensable to the student. A. Riegl's *Spätrömische Kunst-Industrie in Österreich-Ungarn* (1901) also repays close study. The views of Strzygowski are expressed in a large number of monographs and essays; the most important are *Orient oder Rom* (1901), *Kleinasien, ein Neuland der Kunstgeschichte* (1903), "Mschatta" (*Jahrbuch der preussischen Kunstsammlungen*, 1904), *Der Dom zu Aachen und seine Entstellung* (1904), and articles in *Byzantinische Zeitschrift*, *Byzantinische Denkmäler*, and other periodicals. A summary of the debate raised by these writers will be found in the *Quarterly Review*, January 1906 (Stuart Jones). The controversy carried on by Furtwängler and Studniczka as to the date of the Trophy of Adam-Klissi is instructive. Furtwängler's articles appeared in the *Transactions of the Munich Academy for 1903–4*. Studniczka's ("Tropaeum Traiani") in *Abhandlungen der sächs. Gesellschaft der Wissenschaften*, xxii. (1904).

Of Roman sculpture Mrs Strong's handbook (*Roman Sculpture*, 1907), which has a great number of excellent illustrations, gives a useful survey. Special branches are treated by E. Courbaud (*Le Bas-relief romain à répresentations historiques*, 1899), W. Altmann (*Die römischen Grabaltäre der Kaiserzeit*, 1905), A. J. Wace ("The Evolution of Art in Roman Portraiture," *Transactions of the British and American Archaeological Society of Rome*, 1906). There has been much recent discussion of historical monuments in Rome in the *Papers of the British School at Rome*, the *Römische Mitteilungen* of the German Archaeological Institute, the *Jahreshefte* of the Austrian Archaeological Institute, and the *Neue Jahrbücher für Philologie*. Important publications of single monuments are: O. Benndorf (and others), *Das Tropaion von Adamklissi* (1895); J. Petersen, *Ara Pacis Augustae* (1903); further discoveries since this date are discussed by the author in *Jahreshefte des österreichischen arch. Instituts* (1906), 298 ff., and Sieveking in the same journal (1907), 175 ff.); C. Cichorius, *Die Reliefs der Trajanssäule* (1896–1900), criticized by E. Petersen, *Trajans dakische Kriege*

[1] The tradition that this was found in the well-known sarcophagus of the early 3rd century now in the Capitoline Museum, formerly supposed to contain the ashes of Severus Alexander, is without foundation.

[2] For bronze-work see Willers in *Rheinisches Museum* (1907), pp. 133 ff.

[3] This principle is consistently applied by von Sybel, *Christliche Antike* (Marburg, 1907).

(1899–1903); E. Ferrero, *L'Arc d'Auguste à Suse* (1901); E. Petersen (and others), *Die Marcussäule* (1896).

For Roman portraits J. Bernoulli's *Römische Ikonographie* (2 vols., 1882–94) gives abundant material but little aesthetic criticism. Many of the finest portraits are included in Arndt-Bruckmann's series of *Griechische und römische Porträts*, and Brunn-Bruckmann's *Denkmäler griechisch-römischer Skulptur* contain reproductions of several Roman reliefs. The monuments collected by T. Schreiber under the title of *Hellenistische Reliefbilder* (1894) are largely of Roman date.

For Roman painting we have as yet no handbook; W. Helbig's *Untersuchungen über die campanische Wandmalerei* (1873) are still of great value, though the theory advanced is overstated. His *Campanieens Wandgemälde* (1868) gives a catalogue *raisonné* of Pompeian paintings, and has been supplemented by A. Sogliano, *Le pitture murali Campane* (1879). For Herculaneum, which is described in the *Notizie degli Scavi*, A. Mau's *Geschichte der Wandmalerei* is also indispensable. Hermann-Bruckmann, *Denkmäler der Malerei des Alterthums* (1907–), will give reproductions, partly in colour, of all important specimens of ancient painting. *Le Nozze Aldobrandine*, &c., by B. Nogara (1907), contains both coloured and photographic reproductions of the paintings preserved in the Vatican library. For the Fayûm portraits see G. Ebers, *Antike Porträts* (Leipzig, 1893); F. Petrie, *Hawara*, &c., viii., and C. Edgar, *Catalogue des antiquités du musée du Caire*, "Graeco-Egyptian Coffins," p. xi. ff. On the technique of ancient painting Otto Donner von Richter's introduction to Helbig's *Campanieens Wandgemälde* should be consulted, and Gerard's sketch of ancient painting (*La Peinture antique*, n.d.) is slight. For the bibliography of mosaics see that article (especially Gauckler in Daremberg and Saglio, *Dictionnaire des antiquités, s.v.* "Musivum Opus"); for work in gold and silver glass see Garucci, vi. For engraved gems, A. Furtwängler's *Die antiken Gemmen* (3 vols., 1900) is the standard work. The history of Roman pottery is summarized by H. B. Walters, *History of Ancient Pottery*, vol. ii. 430 ff.; the most important works are J. Déchelette, *Les Vases ornés de la Gaule romaine* (1904), and H. Dragendorff's articles on "Terra sigillata" in the *Bonner Jahrbücher*.

Sections on Roman art will be found in general handbooks, such as Springer-Michaelis, *Handbuch der Kunstgeschichte* (6th ed., 1904); L. von Sybel, *Weltgeschichte der Kunst* (2nd ed., 1902); and C. Gurlitt, *Geschichte der Kunst*, vol. i. (1902). (H. S. J.)

ROMAN CATHOLIC CHURCH, the name generally given to that great branch of the Christian Church which acknowledges the pope, or bishop of Rome, as its head, and holds as an article of faith that communion with and submission to the authority of the see of Rome is essential to effective membership of the Catholic Church as founded by Christ. This belief is based upon the commission given by Christ to Peter as "prince of the apostles," "Feed my sheep" (John xxi. 15–17); the saying, "Thou art Peter, and upon this rock I will build my church; and the gates of hell shall not prevail against it. And I will give unto thee the keys of the kingdom of heaven: and whatsoever thou shalt bind on earth shall be bound in heaven; and whatsoever thou shalt loose on earth shall be loosed in heaven" (Matt. xvi. 18, 19). The authority thus conferred upon St Peter is held by Roman Catholics to be permanently vested in the bishop of Rome, as successor to Peter, first bishop of the imperial see. As such, the pope is regarded as "vicar of Christ, head of the bishops, and supreme governor of the whole Catholic Church, of whom the whole world is the territory or diocese." His peculiar powers as pope he exercises immediately on election. Thus he may grant indulgences, issue censures, give dispensations, canonize saints, institute bishops, create cardinals—in short, perform all the acts of his *jurisdiction*, even though he be no more than a layman; but by custom certain of his more solemn acts are postponed till after the ceremony of his coronation, from which his pontificate is officially dated. To exercise the *actus ordinis* of a priest or bishop, however, he must, if not already in orders, be specially ordained and consecrated. Hence his office is a dignity, not of order, but of jurisdiction (see PAPACY and POPE).

The most distinctive characteristic of the Roman Catholic Church, at least as contrasted with the various Protestant communions, is its vigorous insistence on the principle of ecclesiastical authority. Of this authority the pope is regarded as the centre and source, so far as the interpretation of the Divine Will to the world is concerned in matters of faith and morals. His pronouncements are held to be infallible when he defines a doctrine concerning faith or morals *ex cathedra* to be held by the universal church (see INFALLIBILITY and VATICAN COUNCIL).

The government of the Roman Catholic Church being centred at Rome, an elaborate organization has been developed there for the administration of its affairs. At the head of this is the college of cardinals, who are the princes and senators of the Church, the counsellors of the pope, and his vicars in the functions of the pontificate. By those of them who are members of the various Congregations and other offices of the Curia the greater part of the government of the Church is directed. (For accounts of the organization of the Roman Curia the reader is referred to the articles CARDINAL and CURIA ROMANA.) The characteristic note of the Roman Curia is its intense conservatism and its slowness to move, whether in approving or condemning new developments of opinion or action. This is explained by the nature of its organization and by the tradition on which it is based. For, just as the Roman Church as a whole preserves in the spiritual sphere the spirit and much of the organization of the Roman Empire, so the administration of the Curia carries on the tradition of Roman government, with its reverence for precedent and its practice of deciding questions, not on their supposed abstract merits, but in accordance with the rules of law as defined in the codes or by previous decisions. Thus the genius of Rome remains, as it always has been, administrative rather than speculative. The great dogmas of the Christian Church were shaped by the interplay of the subtle wits of the theologians of the Oriental Churches. The new dogmas promulgated by the Holy See from time to time have been the outcome of the slow growth of ages, built up from precedent to precedent, and only defined at last when the accumulated weight of evidence in their favour, or the necessity for precise definition to meet the contradictions of heretics, seemed to demand a decision. This temper and the process in which it finds expression are well illustrated in the case of the dogma of the Immaculate Conception (*q.v.*) and in the authorization given to the cult of the Sacred Heart (*q.v.*).

This conservative spirit and extreme reverence for authority pervades the whole Roman Catholic Church in exact proportion to the degree of effective control which the see of Rome has succeeded in obtaining over its branches in various countries. To pretend to an independent judgment in questions of faith or morals is for a Roman Catholic to commit treason against his Church; and even in the wide sphere of questions lying beyond the dogmas defined as *de fide* a too curious discussion is discouraged, if not condemned. As opposed to the critical and analytical tendencies of the modern world, then, the Roman Catholic Church assumes the function of the champion of moral and intellectual discipline, an attitude defined, in its extremest expression, by Pius IX.'s *Syllabus* of 1864 (see SYLLABUS), and the famous encyclical *Pascendi* of Pius X. in 1907. The development of this attitude, known—in so far as it depends on the full pretensions of the Papacy—as Ultramontanism, since the definition of the Roman Catholic Church by the council of Trent in 1564, will be found sketched in the historical section attached to this article. The earlier history, which is that of the Latin Church of the West, will be found in the articles PAPACY, CHURCH HISTORY and REFORMATION.

Under the supreme authority of the pope the Roman Catholic Church is governed and served by an elaborate hierarchy. This, so far as its *potestates ordinis* are concerned, is divided into seven orders: the three "major orders" of bishops and priests, deacons, and subdeacons (bishops and priests forming two degrees of the *ordo sacerdotium*), and the four "minor orders" of acolytes, exorcists, readers, and door-keepers. These various orders do not derive their *potestas ordinis* from the pope, but from God, in virtue of their direct ministerial succession from the apostles.[1] So far as jurisdiction is concerned, however, those

[1] Thus sacraments administered by validly ordained or consecrated priests and bishops are regarded as valid, even when those who administer them are heretics or schismatics.

members of the hierarchy known as prelates (*praelati*), who possess this power (*potestas jurisdictionis in foro externo*), whether bishops or priests, derive it from the pope.

These jurisdictions are of very varied character, and in most cases are not peculiar to the Roman Catholic Church. They include those of patriarchs, archbishops, metropolitans and bishops in the first rank of the hierarchy, with their subordinate officials, such as archdeacons, archpriests, deans and canons, &c., in the lower ranks. All of these will be found described under their proper headings (see also ECCLESIASTICAL JURISDICTION). The basis of the organization of the Church is territorial, the world being mapped out into dioceses or, in countries where the Roman Church is not well developed—*e.g.* missions in non-Christian lands—into Apostolic Vicariates. The dioceses are grouped in various ways; some are immediately dependent upon the Holy See; some are grouped in ecclesiastical provinces or metropolitanates, which in their turn are sometimes grouped together to form a patriarchate.

According to the official *Gerarchia Cattolica*, published at Rome, there were in 1909 ten patriarchates, with fourteen patriarchal sees (including those of the Oriental rite, *i.e.* those Eastern communities which, though in communion with Rome, have been allowed to retain their peculiar ritual discipline). Of these the four greater patriarchates are those of Alexandria (with two petriarchs, Latin and Coptic); Antioch (with four, Latin, Graeco-Melchite, Maronite and Syriac); Constantinople (Latin) and Jerusalem (Latin). The lesser patriarchates are those of Babylon (Chaldaic), Cilicia (Armenian), the East Indies (Latin), Lisbon (Latin), Venice (Latin) and the West Indies (Latin). (See PATRIARCH.)

The archiepiscopal sees number 204, of these 21 are immediately subject to the Holy See, while those of the Latin rite having ecclesiastical provinces number 164. There are 19 of the Oriental rite: 3 with ecclesiastical provinces, viz. Armenian, Graeco-Rumanian and Graeco-Ruthenian respectively; the rest are subject to the patriarchates, viz. 2 Armenian, 3 Graeco-Melchite, 3 Syriac, 2 Syro-Chaldaic, 6 Syro-Maronite.

Of episcopal sees of the Latin rite 6 are suburbican sees of the cardinal bishops, 85 are immediately subject to the Holy See, and 662 are suffragan sees in ecclesiastical provinces. Of those of the Oriental rite one (Graeco-Ruthenian) is immediately subject to the Holy See: 9 are suffragan sees in ecclesiastical provinces, viz. 3 Graeco-Rumanian and 6 Graeco-Ruthenian; the rest are subject to the patriarchates, viz. 15 Armenian, 2 Coptic, 9 Graeco-Melchite, 5 Syriac, 9 Syro-Chaldaic, 2 Syro-Melchite.

The whole number of these *residential* sees, including the patriarchates, is 1023. Besides these there are 610 *titular* sees, formerly called sees *in partibus infidelium*, the archbishops and bishops of which are not bound to residence. These titles are generally assigned to bishops appointed to Apostolic Delegations, Vicariates and Prefectures, or to the office of coadjutor, auxiliary or administrator of a diocese. (See ARCHBISHOP and BISHOP.)

The dioceses are divided into parishes, variously grouped, the most usual organization being that of deaneries. In the parish the authority of the Church is brought into intimate touch with the daily life of the people. The main duties of the parish priest are to offer the sacrifice of the mass (*q.v.*), to hear confessions, to preach, to baptize and to administer extreme unction to the dying. It is true to say that in the "cure of souls" the confessional plays a larger part in the Church than the pulpit (see CONFESSION and ABSOLUTION). For the official costume of the various orders of clergy see the article VESTMENTS.

The clergy of the Roman Catholic Church are furthermore divided into regular and secular. The regular clergy are those attached to religious orders and to certain congregations (see MONASTICISM). Of these the former are outside the normal organization of the Church, being exempt from the ordinary jurisdiction of the diocesan bishops, while the more recently formed congregations are either wholly or largely subject to episcopal authority. By far the most powerful of the religious orders are the Jesuits (*q.v.*). The secular clergy, on the other hand, are bound by no vows beyond those proper to their orders. Both regular and secular clergy (those at least in major orders) are under the obligation of celibacy, which, by cutting them off from the most intimate common interests of the people, has proved a most powerful disciplinary force in the hands of the popes (see CELIBACY). The more complete isolation of the regular clergy, however, together with their direct relation to the Holy See, has made them, not only the more effective instruments of papal authority, but more obnoxious to the peoples and governments of countries where they have gained any considerable power. Their privileged position, moreover, leads everywhere to a certain amount of friction between them and the secular clergy.

In doctrine the Roman Catholic Church is divided from the orthodox communions of the East mainly by the claims of the papacy, which the Orientals reject, and the question of the "Procession of the Holy Ghost" (see CHURCH HISTORY). From the Protestant communities which were the outcome of the Reformation the divergence is more profound, though the central dogmas of the faith are common to Roman Catholics and orthodox Protestants. The difference lies essentially in the belief held as to the means by which the truths defined in these dogmas are to be made effective for the salvation of the world. It was defined in the canons of the council of Trent, as promulgated by Pope Pius IV. in 1564, in which the main theses of the Reformers as to the character of the Church, the sufficiency of Holy Scriptures, the nature of the sacraments, and the like were finally condemned (see TRENT, COUNCIL OF).

The Roman Catholic Church is by far the most widespread, numerous and powerful of all the Christian communions. It is the dominant Church in the majority of European states, in South and Central America and in Mexico; it is the largest single religious body in the United States of America, while in certain Protestant countries, *e.g.* Prussia and the United Kingdom, it has great religious and political influence. Any statistics of its membership, however, must necessarily be misleading. Those published are generally based on the principle of deducting the Protestant from the general population of "Catholic" countries and ascribing the rest to the Roman Church. This may be possible in Germany and other countries where there is a religious census; but it is, at best, a rough-and-ready method where, as in Italy or France, besides the class of "political" or "non-practising" Catholics, large numbers of the people are more or less actively hostile to Christianity itself. (For Roman Catholic missionary work see MISSIONS.)

The Uniat or United Oriental Churches.—The overwhelming majority of the adherents of the Roman Catholic Church throughout the world belong to the Latin rite, *i.e.* follow the usages and traditions of the Western Church.[1] Ever since the schism of East and West, however, it has been an ambition of the papacy to submit the Oriental Churches to its jurisdiction, and successive popes have from time to time succeeded in detaching portions of those Churches and bringing them into the obedience of the Holy See. This has only been possible owing to the temper of the Oriental mind which, while clinging tenaciously to its rites, values dogma only in so far as it is expressed in rites. The popes, then, or at least the more politic of them, have been content to lay down as the condition of reunion no more than the acceptance of the distinctive dogmas of the Roman Catholic Church, especially the supremacy and infallibility of the pope; the *ritus* of the Uniat Oriental Churches —liturgies and liturgical languages, ecclesiastical law and discipline, marriage of priests, beards and costume, the monastic system of St Basil—they have been content for the most part to leave untouched. The attempts of Pius IX., who in 1862 established the *Congratio de propaganda fide pro negotiis ritus orientalis*, to interfere in a Romanizing sense with the rites of the Armenians and Chaldaeans (by the bulls *Reversurus* of 1867 and *Cum Ecclesiastica* of 1869) led to a schism; and Leo XIII., who more than all his predecessors interested himself in the question of reunion, reverted to and developed the wiser

[1] The Latin word *ritus* covers not only the ordinary meaning of the modern English word "rite," *i.e.* "a formal procedure or act in a religious or other solemn function," or any "custom or practice of a formal kind," but the sense in which it is now obsolete in England—except in the religious connotation here used—of "the general or usual custom, habit or practice of a country, people, class of persons, &c." (*New English Dict.* s.v.). For the liturgies of the Latin and Oriental Churches see LITURGY.

principle of not aiming at any assimilation of rites, but only at "the full and perfect union of faith" (Encyclical *Praeclara gratulationis* of June 1894). This principle has even been carried to the extent of recognizing several bishops having jurisdiction over the adherents of various rites in the same see; thus there are three uniat patriarchs of Antioch (Graeco-Melchite, Maronite and Syrian).

Exact statistics of the membership of the Churches of the Oriental rite are almost impossible to obtain; the numbers of their adherents, moreover, are apt to vary suddenly with the shifting currents of political forces in the East, for political factors have always played a considerable part in these movements towards reunion or the reverse. In 1908 their numbers were estimated at approximately 5,500,000. The Churches of the Oriental rite fall under four main divisions: Greek, Armenian, Syrian, Coptic; and—with the exception of the Armenian—these are again subdivided according to nationality or to peculiarities of cult or language. The Churches may be further grouped according to the character of their constitution, *i.e.* (1) those having their own rite only in a restricted sense, since they have no hierarchy of their own but are subordinate to Latin bishops, *i.e.* the Greeks in Italy (*Italograeci*), the scattered Bulgarian Uniats, the Abyssinians, some of the Armenians and the "Christians of St Thomas"; (2) those having their own bishops and sometimes their own metropolitans, as in Austria-Hungary; (3) the Eastern patriarchates.

Geographically, the Uniat Churches may be grouped as follows:—

(A) EUROPE, where their association with the Roman Church is at once the oldest and the most intimate.

(1) The *Italograeci*. These are distributed in scattered groups throughout Italy, but are most compact in Apulia and Sicily, and number in all some 50,000. They are under the jurisdiction of the Latin diocesan bishops, but their priests are ordained by bishops of their own rite specially appointed by the pope.

(2) The Uniat Churches of Austria-Hungary. With the exception of the Armenian, these are all of the Greek rite, but are divided according to nationality and ritual language into the following groups:—(*a*) *Ruthenian Church*.—This, though still the most important numerically of all the Uniat Churches, is but a fragment of the Church which proclaimed its union with Rome at the synod of Brest in Lithuania in 1596, a union which, after long and bitter resistance, was completed by the submission of the dioceses of Lemberg and Halic in 1700 and 1702. The Church was broken up by the successive partitions of Poland, and those parts of it which fell to Russia were, notably under Catherine II. and Nicholas I., forcibly absorbed into the Orthodox Church. The Church, however, still numbers 3,000,000 adherents in Galicia and 500,000 in Hungary. In Galicia it has an independent organization under the Greek-Catholic archbishop of Lemberg, with two suffragan sees: Przemysl, for West Galicia, and Stanislawow for East Galicia. In Hungary there are two bishoprics, Munkacs and Eperies, under the Latin primate of Hungary, the archbishop of Gran. The Serb bishopric of Kreutz in Croatia, under the Latin archbishop of Agram, may be also grouped with the Ruthenian Church, since the rite is identical. Its adherents number from 15,000 to 20,000. The liturgical language of the Uniat Slav Churches is Old Slavonic, and, so far as their rite is concerned, they differ from the Orthodox Slav Churches only in using the Glagolitic instead of the Cyrillic alphabet. (*b*) *Rumonian Church*.—This numbers about 1,000,000 adherents and has its own organization under the metropolitan of Fogarasch or Alba Julia, with three suffragan sees: Lugos, Gross-Wardein and Szamos-Ujvar. It has its own ritual language since the 17th century. (*c*) *Armenian Church*.—This numbers in Austria-Hungary only some 4000 to 5000 members. It has an archbishopric at Lemberg, which has jurisdiction also over the Uniat Armenians at Venice.

(3) Uniat Churches in Russia and Turkey in Europe. (*a*) In Russia the Uniat Ruthenian Church (see above) ceased to exist with the incorporation of the little Polish diocese of Chelm in the Orthodox Church under Alexander II. in 1875. The Holy Synod, however, has never withdrawn its claim to jurisdiction over it, nor have the Ruthenians ever been wholly reconciled to their absorption in the Russian Church. The *ukas* of Nicholas II. (Easter, 1905), granting liberty of worship, produced a movement in the direction of Rome; but this appears to have been checked by the refusal of the government, even now, to recognize in Russia a Roman Catholic Church of the Greek rite. Converts to Rome have, therefore, to accept the Latin rite (see Prince Max of Saxony, *Vorlesungen über die orientalischen Kirchenfragen*, 1907). The scattered communities of the Uniat Armenian Church in Russia are subordinate to Latin vicars apostolic. The Uniat Armenian Church in the Caucasus, however, is under the jurisdiction of the patriarchate of Cilicia. (*b*) In European Turkey the Uniat Churches are represented by tiny groups, scattered about the Balkan Peninsula, attached to Latin "missions." The movement in favour of the union of the Bulgarian Church with Rome, which grew up in 1860, was the outcome of the national opposition to the Greeks, and with the establishment of the Bulgarian exarchate in 1872 it died away. There are not more than 10,000 to 15,000 Uniat Bulgarians, who have been ruled since 1883 by three vicars apostolic. The Uniat Armenians and Melchites in Constantinople belong to the Eastern patriarchates.

(B) ASIA AND AFRICA.—The Uniat Churches in Asia and Africa occupy a peculiar position in so far as Rome has recognized the traditional rights of the patriarchates (see, *e.g.*, Leo XIII.'s encyclical *Praeclara gratulationis* of June 1894), and they therefore enjoy almost complete autonomy; thus the patriarchs nominate their own suffragans and have the right to summon synods for specific purposes (see PATRIARCH).

There are six Uniat Patriarchates:—

(1) The *Patriarchatus Ciliciae Armenorum*. The Armenian patriarch, whose jurisdiction embraces the Catholic Armenians in the Balkan Peninsula, in Russian Armenia and in Asiatic Turkey, formerly resided in Lebanon, but has had his seat since 1867 at Constantinople. Under him are 19 dioceses, including a small one in Persia. The number of Catholic Armenians under his jurisdiction is, roughly, 100,000 (see ARMENIAN CHURCH).

(2) The three patriarchates of Antioch. (*a*) The Melchite (*Patriarchatus Antiochenus Graeco-Melchitarum*). The patriarch resides in the monastery of Ain-Traz in the Lebanon and has jurisdiction over all the Uniats of Greek nationality in the Turkish Empire, who number about 120,000. Under him are 3 archbishops and 9 bishops (see MELCHITES). (*b*) The Maronites (*Patriarchatus Antiochenus Syro-Maronitarum*), whose residence is in the Lebanon. The patriarch has jurisdiction over about 500,000 people (see MARONITES). (*c*) The Syrian (*Patriarchatus Antiochenus Syrorum*). The patriarch, who resides at Mardin near Diarbekr on the upper Tigris, is obeyed by from 15,000 to 20,000 people, who represent a secession from the Jacobite Church (see JACOBITE CHURCH). He has 3 archbishoprics and 5 bishoprics under his jurisdiction.

(3) The Chaldaeans (*Patriarchatus Chaldaeorum Babylonensis*). The patriarch has jurisdiction over the Uniat Nestorian Church, which numbers, roughly, about 50,000 adherents, and is divided, under the patriarch, into 11 dioceses (see NESTORIANS).

(4) The Coptic (*Patriarchatus Alexandrinus Coptorum*). This was founded on the 26th of August 1895 by Pope Leo XIII. The patriarch, who was given two suffragan bishops, has his seat at Cairo. The number of Uniat Copts is nominal.

(5) The Uniat Abyssinian Church. This has scarcely any adherents. Such as there are are under the authority of a vicar apostolic residing at Keren.

(6) The Christians of St Thomas (Malabar coast). For these Leo XIII. established in 1887 three special vicariates apostolic (*Vicariatus apostolici Syro-Malabarensium*); the vicars apostolic are Latins, but have the right to pontificate and to confirm according to the Syrian rite. The number of Christians of St Thomas in the obedience of Rome is said to be about 100,000.[1] (W. A. P.)

The Church in Europe since the Reformation.

The term "Romish Catholique" is as old as the days of Queen Elizabeth.[2] It is not happily chosen, for catholic means universal, and what is universal cannot be peculiar to Rome. But the term is inoffensive to Roman Catholics, since it advertises their claim that communion with the see of Rome is of the essence of Catholicity, and to Protestants, since it serves to emphasize the fact that the religion of modern Rome differs widely in many important respects from that of the undivided mediæval Church. The change has brought both good and evil. Protestant controversialists have some show of reason on their side when they argue that Luther saved the Roman Church by forcing it to put an end to many intolerable abuses. On the other hand, under stress of his revolt the papacy could not but develop in a strongly anti-Protestant direction, laying exaggerated emphasis on every point he challenged. The more fiercely he denounced infallibility, the confessional, the sacramental system, the larger these things bulked in the eyes of Rome.

Not that this consequence showed itself at once. The Reformation was well established before it attracted any serious

[1] This account of the Uniat Churches is largely condensed from the excellent article "Unierte Orientalen," by F. Kattenbusch in Herzog-Hauck *Realencyklopädie* (3rd ed., Leipzig, 1908), where numerous authorities are given.

[2] It was officially adopted in the Relief Act of 1791 in place of the designation "Protesting Catholic Dissenters," to which the vicars apostolic objected.

notice at Rome. The popes of the Renaissance were profoundly uninterested in theology; they were far more at home in an art gallery, or in fighting to recover their influence as temporal Italian princes, gravely shattered during the long residence of the papal court at Avignon in the 14th century. But these secular interests came to an end with the so-called sack of Rome in 1527, when Charles V. turned his arms against Clement VII., and made the pope a prisoner in his own capital. Thence-forward there was no more thought of territorial aggrandisement. The popes, as the phrase went, became Spanish chaplains, with a fixed territory guaranteed to them by Spanish arms; apart from the addition of Ferrara and one or two other petty principalities on the extinction of the reigning house, its boundaries remained unchanged till Napoleonic times. Under Clement's successor, Paul III., a new state of things began to dawn. Hitherto the way had been blocked by a horde of protonotaries, dataries and other officials—purveyors of indulgences, dispensations and such-like spiritual favours—to whom reform spelt ruin. Even the Reformation did not move them; if less money came in from Germany, that was all the more reason for leaving things unchanged in France and Spain. But among Paul's cardinals were three remarkable men, the Italians Contarini and Sadolet, and the Englishman Reginald Pole, afterwards archbishop of Canterbury under Mary. All three were disciples of Erasmus, the great apostle of a new, tolerant, scholarly religion very different from the grimy pedantry of the medieval doctors. It was better, he said, to be weak in Duns Scotus, but strong in Christ, to be cramped in outlook by all the learning of Durandus, and ignorant of the law of Christ. Men trained in this school were not likely to be tender towards vested interests in darkness, least of all when they stood in the way of a reconciliation with the Protestants: for the cardinals thought that the strength of the Reformation lay much less in the attractiveness of Luther's doctrines than in his vigorous denunciations of the vices of the clergy. Once root out abuses with a firm hand, and they believed that a few timely concessions on points of doctrine would tempt most Protestants back within the Roman pale. This belief was shared by Charles V. Together they persuaded the unwilling pope to call a general council. It met in December 1545, at the Tirolese city of Trent, with Pole as one of the three presidents (see TRENT, COUNCIL OF).

The Council of Trent.

As a means of reconciliation the council was a signal failure. The Protestants refused to attend an assembly where even the most conciliatory prelate could hardly condescend to meet them on equal terms. Nor was Pole allowed to use the only possible means of overcoming their reluctance. He had wished to begin by reforming abuses before proceeding to sit in judgment on doctrinal errors. But this arrangement was cried down as a revolutionary departure from all established precedent; and he had much ado to secure the compromise that doctrines and practical reforms should be simultaneously discussed. But in the midst of its labours the council was prorogued (March 1547) in consequence of a quarrel between the pope and emperor. In 1551 it met again, only to be again prorogued in 1552. Ten years later it met again for a third and final session, lasting throughout 1562 and 1563. During those ten years great changes had taken place. Charles V. had followed Pole and his peace-loving colleagues to the grave; in his place stood his son, Philip II. of Spain, while the intellectual leadership of the council fell to Jaime Laynez, general of the newly founded Society of Jesus. There was no longer any question of reconciliation with the Protestants. North Germany, England, Scandinavia were irretrievably lost to Rome; wars of religion had broken out in France. Clearly the one hope was to enter into a desperate struggle for the possession of such countries as still hung in the balance; and that could best be done by striking at the heart of the Reformation. Protestantism centred—or was by Catholics supposed to centre—in a mysterious "right of private judgment", the council accordingly retorted by hymning the praises of obedience, of submitting to authority and never thinking for oneself. To waverers it held up an absolutely sure and uniform Rule of Faith, contrasting impressively with the already multitudinous variations of the Protestant Churches. Moreover, thanks to Laynez, it accomplished this task without running the obvious danger of tying itself hand and foot to the past. When old-fashioned theologians talked about the canons and councils of antiquity, Laynez answered that the Church was not more infallible at one time than another; the Holy Ghost spoke through the decrees of Trent quite as plainly and directly as through the primitive Fathers. Thus the council's authority became at once peremptory and elastic. But the real gainer was the pope. Hitherto infallibility had been thought of as the supreme weapon of the Church's armoury, destined only for use in some extraordinary crisis; hence it was naturally conceived of as residing only in the extraordinary authority of a general council presided over by the pope. Since the outbreak of the Reformation, however, extraordinary crises, calling for immediate decision, might arise at any moment. It was no longer possible to wait for the assembling of a general council; stronger and stronger grew the tendency to ascribe infallibility to the pope alone, as being always on the spot.

Doctrine and discipline once settled at Trent, the work of counter-reformation could begin. Rebels were won back by force wherever force could be applied. In Spain the Inquisition soon snuffed out the few Reformers. In Italy, though declared Protestants were few, there was widespread sympathy with some of Luther's ideas; a committee of cardinals at Rome was accordingly organized into an Inquisition, with branches at the chief Italian towns. For half a century trials were many at Venice and elsewhere, but actual executions were only common at Rome; the most illustrious victim was the philosopher Giordano Bruno, burnt in 1600. In the imperial dominions, however, there could be no recourse to the stake. The peace of Augsburg (1555) forbade the German princes to persecute, though it recognized their right to determine to what religion their subjects should belong, and to banish nonconformists. At first this compromise had worked in favour of the Reformation, but presently the Catholic princes began to turn it against their Protestant subjects. "Governments learned to oppress them wisely, depriving them of church and school, of pastor and schoolmaster; and by those nameless arts with which the rich used to coerce the poor in the good old days. Fervent preachers came amongst them, widely differing in morality, education, earnestness and eloquence from the parish clergy, whose deficiencies gave such succour to Luther. Most of those who, having no taste for controversy, were repelled by scandals were easily reconciled. Others, who were conscious of disagreement with the theology of the last thousand years, had now to meet disputants of a more serious type than the adversaries of Luther, and to meet them unsupported by experts of their own. Therefore it was by honest conviction, as well as by calculated but not illegal coercion, that the Reformation was driven back" (Acton, *Lectures on Modern History*, p. 123).

The Counter-Reformation.

This system was not an unmixed success; for its extension to Bohemia early in the 17th century brought about the Thirty Years' War. But it obliged the authorities to pay anew attention to the training of the clergy. The "seminary system" came into being—that is, the custom of obliging candidates for ordination to spend several years in a theological college, whence lay influences were carefully excluded. But ecclesiastical learning of a wider type was also promoted. Gregory XIII. (1572–85) and Sixtus V. (1585–90) dreamed of making Rome once more the capital of European culture. Gregory reformed the Calendar, and founded the university that bears his name. Five years of power were enough for Sixtus to reform the central government of the Church and the administration of the Papal States, to set on foot the Vatican press and issue an official edition of the Vulgate. Their efforts bore fruit in many quarters. In Rome arose Cardinal Baronius, first of

modern Church historians; Spain produced Suarez, most philosophical of divines. A generation later the French Oratory became the home of Malebranche and of Richard Simon, father of Biblical criticism. Mabillon and his Benedictines of Saint-Maur paved the way for the systematic investigation of historical records. The Flemish Jesuit Bolland brought the light of criticism to bear on the legends of the saints (see BOLLANDISTS). His French colleague, Petau, better known under his latinized surname of Petavius, opened still wider floodgates when he taught that theological dogmas, like everything else, have a history. Lastly, the Jansenist "hermitage" at Port Royal contributed the historian Tillemont, whose bigotry Edward Gibbon declares to be overbalanced by his erudition, veracity and scrupulous minuteness. Other such communities and "congregations"—semi-monastic bodies standing in closer touch with the world than did the medieval orders—undertook the diffusion of knowledge. Wherever they went the Jesuits opened grammar-schools, which had the double advantage of being excellent and cheap. An Italian sisterhood, the Ursulines, was founded for the higher instruction of girls; late in the 17th century a French priest started the Christian Brothers, pioneers of elementary education. Other communities again devoted themselves to parochial work. Such were the Oratorians of St Philip Neri, founded to evangelize the middle classes of Rome. Such, again, were the Lazarists of St Vincent de Paul, whose duty was to preach in neglected country districts. But the most interesting of all these new foundations was the Sisters of Charity, also founded by St Vincent de Paul. This admirable body represents a significant departure from medieval ideals. The old-fashioned nun had spent her time behind high walls in prayerful contemplation; the one object of the Sister of Charity was the service of her neighbour.

Not that medieval ideals were by any means dead; they never burned more brightly than in the Spain of St Teresa (1515–82). Her first idea had been to combat alike the heresies and the worldliness of her time by a return to the austerities of a more heroic age. With this object she founded her order of "Discalced" or barefooted Carmelites; it presently became the refuge of Louise de la Vallière and many another penitent of rank. But mere bodily rigours were not enough for Teresa; she felt the need of rising to a state of complete detachment from all earthly interests and ties. Her whole theology centres in the lines—

> "The love of God flows just as much
> As that of ebbing self subsides;
> Our hearts, their scantiness is such,
> Bear not the conflict of these rival tides."

How, then, subdue the rivalry? Teresa turned to the mystical writers, and learnt from them how to root out the last relics of self-love from the mind by a long discipline of mystical trance and "contemplation." These ideas, in a very modified form, were introduced into France by the great devotional writer, St Francis of Sales; in the latter half of the 17th century they were pushed to the extravagant length known as Quietism by Fénelon, and especially by Madame Guyon and Michael de Molinos. Meanwhile, the leading conception from which St Teresa started had developed along characteristically different lines in the mind of her compatriot and contemporary, Ignatius Loyola. He quite agreed that self-will was the enemy; but was there no quicker way of checkmating it than an interminable course of ecstasies and austerities?

The Jesuits.

The thoughts of the converted soldier flew back to the military virtue of obedience. In the long-run no self-imposed hardships could prove quite as disagreeable as always being under the orders of some one else. Obedience accordingly became the typical virtue of Ignatius's society (see JESUITS). The individual Jesuit obeyed his superior, who obeyed the rector, who obeyed the provincial, who obeyed the general, who obeyed the pope, who took his orders straight from God Almighty. Such a theory was of untold practical value to the Church of Rome, more especially during the era of the Reformation. Laynez at the council of Trent has given one signal instance of its working, but its operations were by no means confined to the abstract field of dogma. If men were really to be made obedient, it could only be by stopping them from thinking for themselves about the everyday problems of conduct; and the best way to do this was to furnish them beforehand with a ready-made code of answers to such problems, warranted to meet all needs. Hence casuistry and the confessional loomed large on the Jesuit horizon. The casuist's duty was to apply the general precepts of the Church to particular cases. He explained, for instance, when a man was strictly bound to tell the truth; when he might avail himself of the mild licence of an equivocation; and when the Church placed at his service the greater indulgence of a mental reservation. The confessor brought the casuist's principles to bear on the conscience of his penitents, and thus saved them from the danger of acting on their own responsibility (see CASUISTRY).

Casuistry.

In its origin this system was a perfectly honest attempt to widen the sphere of obedience by making morality wholly objective and independent of the vagaries of the individual conscience. But what was begun in the interest of obedience was carried on in those of laxity. Experts proverbially differ, and the casuists were no exceptions to the rule. But when great authorities were at variance, it ill became an average priest or penitent to decide. Whatever a grave doctor said must have some solid reasons behind it—*aliqua nititi probabilitate*—and humble lay-folk could act upon it without a twinge of conscience. Thus arose lax casuists of the type of Antonio Escobar (1589–1669), the central figure of Pascal's *Provincial Letters*. Their whole business was to hunt through the older authorities in search of "benign" decisions. Their temptation is easy to understand. Half Europe was full of waverers between Protestantism and Catholicism tolerably certain to decide for the Church that offered them the cheapest terms of salvation; and even in wholly Catholic countries many, especially of the upper class, might easily be scared away from the confessional by severity. Thereby their money and influence would be lost to the Church, and their souls robbed of the priceless benefit of priestly absolution. On the other hand, these "Escobarine morals" by no means passed unchallenged; ever since the foundation of the society the aims and methods of the Jesuits had called forth lively opposition in many parts of Catholic Europe, and not least in Loyola's native land of Spain. But the most effective protest against them was a movement which began when Michel de Bay, a professor at the Flemish university of Louvain, put forward certain theories on grace and free-will in the latter part of the 16th century. In 1640 a much more elaborate statement of the same ideas appeared in a posthumous treatise on the theology of St Augustine from the pen of Cornelius Jansen, also a Louvain professor (see JANSENISM). Into the technical detail of the controversy there is no need to enter. It is enough to say that two rival doctrines of grace and free-will were struggling for mastery in the Roman Church. One theory emphasized the necessity of grace; having been formulated by St Thomas Aquinas, it was known as Thomism, and was especially championed by the Dominicans. The other laid the chief stress on free-will; it was known as Molinism from its inventor, the Jesuit Louis de Molina, and was in great favour with the society. The two orders came into violent collision at Rome between 1588 and 1606. But the quarrel, known as the controversy *de auxiliis gratiae*, was brought to an end by Pope Paul V., who closed the debates and adjourned his decision *sine die*.

Jansenism.

At first sight this abstract question seemed endlessly remote from the practical policy of Escobar; really there is a close connexion between the two. The whole system of the Jesuits rested on a basis of free-will. Their quarry was the average man; and the best way of impressing the average man is to set before him duties that he feels himself fully capable of performing. Then he will really feel morally responsible if he leaves them undone, hence the necessity of free-will. On

the other hand, as Jansen pointed out, free-will tends to make the average man's estimate of his own powers into the supreme criterion of all that is good and right. God must perforce be satisfied with whatever common sense thinks it fair and reasonable that He should expect. Jansen accordingly denounced free-will as dishonouring to God, and destructive of the higher interests of morality. But, if men threw over common sense, what was to be their guide in life? Jansen answered with his doctrine of Irresistible Grace. This was simply a cumbrous way of saying that God awakens in the righteous heart an intuitive faculty of discerning right from wrong. "This holy taste or relish," says a follower of Jansen, "distinguishes between good and evil without being at the trouble of a train of reasoning; just as the nature and tendency of a heavy body, let fall from a height, shows the way to the centre of the earth more exactly in a moment than the ablest mathematician could determine by his most accurate observations in a whole day." That being so, the Jansenist obeyed his Inner Light, and paid little heed to the earth-bound standards of unregenerate common sense. Nor was he much more respectful towards the official standards of the Church. Why should he consult a casuist rather than his Inner Light? Thus the Jesuits saw themselves menaced by a grave revolt. What would become of the confessional if penitents were allowed to act on what they fondly took to be a heaven-sent inspiration? In a twinkling they would be off to some spiritual Wonderland, where no confessor could bring them to book. On the other hand, only preach to them a strong doctrine of free-will, and all these dangers vanished. They would feel bound to disregard their sporadic intuitions, and act only for reasons that would be clearly set out in black and white. Their past performances could then be checked, and their future actions forecast by the priest; and there was small danger of their straying beyond the limits marked out by authority.

Thus within the spiritual sphere free-will led up to Jesuit obedience. But in the secular world this paradox failed to obtain; there free-will was only too ready to come into conflict with the Church. The 15th and 16th centuries had seen the final break-up of the medieval system of reverence for authority and tradition. In art and learning, morals and government, the old walls came crashing down; in the general bankruptcy of authority men were forced to depend on themselves. And the contemporaries of Machiavelli soon learned to take the fullest advantage of this liberty to pursue their own best interests in the way that pleased them best. But if individuals might be guided by self-interest, why should that privilege be denied to associations of men? On the ruins of a medieval Christendom, hierarchically organized under the pope, grew up the "new monarchy," or modern state, owning no law but its own will. Yet the popes laid aside none of their medieval claims, or even their traditional weapons. In 1606 Paul V. laid Venice under an interdict, on the ground that the republic had infringed the immunities of the clergy; the doge replied by threatening with death any one who took any notice of the papal thunders. Thenceforward the thunders continued chiefly on paper. In 1625 Catholic Europe was scandalized by the *De Schismate* of the Jesuit Santarelli, in which he claimed for the pope an absolute right to interfere in the concerns of secular princes, whenever he chose to declare that the interests of religion were in any way concerned. He could dictate their policy at home and abroad, revise their statute-book, upset the decisions of their law-courts. If they refused to listen he could punish them in any manner he thought fit; in the last resort he could release their subjects from allegiance and head a crusade of Catholic powers against them. These pretensions roused a special burst of indignation in France. There, on the divisions of the wars of religion, had followed an irresistible reaction towards patriotism and national unity. France had suddenly grown to her full stature; like the contemporary England of John Milton. she was become a "noble and puissant nation, rousing herself like a strong man after sleep." Even the clergy were swept away by the current, and meant to be patriots like every one else. "Before my ordination," said the eminent theologian Edmond Richer, "I was a subject of the king of France: why should that ceremony make me a subject of the pope?" Subjection to the pope implied an Italianization of French religion; and most Frenchmen looked on the Italians as an inferior race. Why, then, should the right to decide ecclesiastical disputes be taken away from their own highly competent fellow-countrymen, and reserved for a set of incapable judges in a foreign land? Germany and Spain might let themselves be bitted and bridled if they chose, but for centuries France had prided herself that, thanks to her Gallican liberties, she stood on a different footing towards Rome.

The Papacy and the New Monarchies.

The Liberties in question were certain ancient rights, whose origin was lost in the mists of time. One forbade papal bulls to be published in France without the consent of the crown. Another exempted French subjects from the jurisdiction of the Inquisition and other Roman tribunals—such as the Index of Prohibited Books. In the 17th century such immunities were all the more valuable since French statesmen found themselves in an awkward position. The great aim of Henry IV. and Richelieu was to exalt France at the expense of Vienna and Madrid. But Madrid and Vienna were the official champions of the papacy; hence to make war on them was indirectly to make war on the pope. This was enough to trouble the consciences of many excellent men; and it became necessary to devise a compromise that should set their minds at rest, by showing them that they could be at once good citizens and good Catholics. This compromise is known as Gallicanism. In the hands of Bossuet and other eminent divines it was developed along both theological and political lines. Theological Gallicanism refused to recognize papal decisions on questions of doctrine, until they had been ratified by the bishops of France. Political Gallicanism maintained that lawful sovereigns held their power directly of God, and not mediately through the pope. Hence no amount of misgovernment, or neglect of Catholic interests, could justify Rome in interfering with them. In other words, Bossuet only answered Santarelli by setting up the divine right of kings. However, this dogma by no means scandalized the subjects of Louis XIV., for the worship of the sovereign was one of their most cherished instincts. And Louis's ecclesiastical policy flattered their national pride. He introduced no theological novelties; all he did was to insist that, in matters of administration, he would be master in his own house. He supported pope and bishops so long as they took their marching orders from him. If they refused he was perfectly ready to make war on the one and send the others to the Bastille. It is eminently characteristic of his methods that, just at the same time as he was turning loose dragoons on his Protestant subjects after the revocation of the edict of Nantes (1685), he was employing other dragoons to invade the papal territory at Avignon, to compel Innocent XI. for having refused institution to some of his nominees to bishoprics.

Gallicanism.

The revocation of the edict of Nantes owes quite as much to the dream of political absolutism, inherited from Richelieu, as to religious bigotry. In the words of Saint-Simon, the Huguenots were "a sect that had become a state within the state, dependent on the king no more than it chose, and ready on the slightest pretext to embroil the whole country by an appeal to arms." So long as they were powerful, the crown had treated with them; but when once their power began to dwindle, it was certain that the crown would crush them. But during Louis's latter years, when the War of the Spanish Succession had brought a rain of disasters thickly upon him, bigotry got the upper hand. The broken old man became feverishly anxious to propitiate offended Heaven, and save himself another Blenheim or Malplaquet, by exterminating the enemies of the Church. And his Jesuit confessors had no doubt

that the first and foremost of those enemies were the Jansenists. Not only did their doctrine of grace defy the favourite Jesuit principle of obedience to authority, but it bade fair to set aside the whole Catholic machinery of infallibility and sacraments. If God spoke directly to the individual conscience, what was the use of intermediaries? Led by his Jesuits, Louis wrung from the unwilling Clement XI. the Bull *Unigenitus* (1713), which was intended to deprive believers in individual inspiration of all possible foothold within the Roman Church. The bull caused a violent uproar. Fénelon, although personally an admirer, admits that public opinion credited it with "condemning St Augustine, St Paul, and even Jesus Christ"; and the few Jansenist bishops appealed and "re-appealed" against it. But the government was inexorable; in 1732 the *Unigenitus* became part and parcel of the law of the land. Still, to make a law is one thing; to get it administered is quite another. The *parlement* of Paris was a strongly Gallican body, and had many grievances to avenge on Louis XV. and his ministers. To annoy them, it put every possible difficulty in the way of an execution of the bull. Under the fostering care of the judges, a belief sprang up that to call oneself a "Jansenist," and oppose the *Unigenitus*, was to show oneself a lover of civil and religious liberty. This feeling was intensified by the conviction that every blow struck against the bull was a blow against the Jesuits, its authors. For the Society, as befitted the great exponent of authority and the keeper of the consciences of many kings, had always been on the side of political autocracy; and therefore it became increasingly unpopular, when once the spirit of French intelligence began to set in the direction of revolutionary reform. Nor were the Jesuits in much better odour among other nations. Their perpetual meddling in politics, and even in speculation and finance, stank in the nostrils of every government in Europe; while their high-handedness and corporate greed in the matter of ecclesiastical privileges and patronage alienated the clergy. Their reform was more than once discussed; and death alone prevented Benedict XIV. (1740–58), the most remarkable of the 18th-century popes, from taking some very stringent measures. A year after Benedict's death the first blow fell. Pombal, the great reforming minister in Portugal, expelled them from that country on a charge of having conspired against the life of the king. Two years later the Paris *parlement* had its chance. La Valette, superior of the Jesuit missions in Martinique, had set up as a West-India merchant on a large scale. His enterprises were unsuccessful; in 1761 he became insolvent, and the Society refused to be responsible for his debts. The French courts made the consequent bankruptcy proceedings the excuse for a general inquiry into the Society's constitution, and ended by declaring its existence illegal in France, on the ground that its members were pledged to absolute obedience to a foreigner in Rome. Louis XV. now proposed that the French Jesuits should be placed under some special organization, less obnoxious to his *parlement*. The general only made the famous reply: "Sint ut sunt, aut non sint." Thereupon Louis let the judges have their way. In 1762 the Society was suppressed in France; in 1767 it was also declared illegal by Spain, Naples and other Italian powers. Pressure was now put on Clement XIII. to dissolve the Society altogether. He refused; but his successor, Clement XIV., was more pliable, and in 1773 the Jesuits ceased to be.

The Bull Unigenitus.

Suppression of the Jesuits.

In France the *philosophes* and the quarrels over the *Unigenitus* had effectually killed the spirit of religion; nor was the Christianity of other countries at a much higher ebb. Spain was utterly dumb; Italian fervour could only boast the foundation of two small orders of popular preachers—the Passionists (1737), and the Redemptorists, instituted in 1732 by St Alfonso Liguori (*q.v.*), who also won for himself a dubious reputation on the unsavoury field of casuistry. German Catholicism was still in a very raw, unsophisticated state. It is characteristic that, while Paris had its Bossuets and Bourdaloues, Vienna was listening to Abraham a Sancta Clara, the punning Capuchin whom Schiller, regardless of dates, introduces into the opening scene of his *Wallenstein*. However, from Germany was to come a serious attempt at reform. There the vision of a reunion with the Protestants had haunted many Catholic brains ever since Bossuet and Leibniz had corresponded on the subject. Faithful to the ancient tradition of Contarini and Pole at Trent, these good men persisted in supposing that the Reformation was nothing more than a protest against practical abuses: remove the abuses, and the rest would follow of itself. And, inasmuch as they held that most abuses were due to the slippery and procrastinating greed of Roman officials, the first step should be ruthlessly to curtail the power of Rome and extend that of local Churches. Such was the theme of a book, *De statu Ecclesiae, ad reuniendos dissidentes in religione Christianos compositus*, published by one Justinus Febronius in 1763. The author was Johann Nikolaus von Hontheim (*q.v.*), suffragan *in partibus* to the elector-archbishop of Treves. Hontheim's theories could not but prove attractive to the local Churches, more especially when they were governed by bishops who were also temporal great lords. The three ecclesiastical electors and the prince-archbishop of Salzburg met in congress at Ems in 1786, and embodied Hontheim's proposals, though in a very modified form, in a document known as the "punctuation of Ems" (see FEBRONIANISM). Meanwhile, their overlord, the emperor Joseph II. (1780–90), was dealing with the question of a much more radical spirit, and actually abolishing abuses wholesale. The reign of "Brother Sacristan," the nickname given to Joseph by Frederick the Great, was one continual suppression of superfluous abbeys, feast-days, pilgrimages. More dignified were his attempts to broaden the minds of the clergy. Instead of being brought up in diocesan seminaries, centres of provincial narrowness, candidates for ordination were to be collected into a few large colleges set up in university towns. Still, Joseph only touched the surface; his brother, the grand-duke Leopold of Tuscany, aspired to cut deeper, and provoke a religious revival on the lines of Jansenism. His plans, which made a great stir at the time, were outlined at a synod held at Pistoia in 1786 (see PISTOIA, SYNOD OF).

Febronianism.

Three years later, however, the world had more important things to think of than Leopold's ecclesiastical reforms. At first the French Revolution was by no means anti-Catholic—though the Constituent Assembly remembered too much of the quarrels about the *Unigenitus* not to be bitterly hostile to Rome—and its great aim was to turn the French Church into a purely national body. Hence it decreed the "civil constitution of the clergy." Bishops and rectors were made elective, with salaries paid by the state; and all priests were required to take an oath of fidelity to the government: those who refused the oath rendered themselves liable to banishment. Three years later the triumph of the Jacobins brought with it the "abolition of Christianity," and a spell of violent persecution, which gradually slackened under the Directory (1795–99). In 1799 Napoleon became First Consul, and at once set himself to deal with the ecclesiastical problem. There must clearly be a Church, and the small success of the civil constitution made it clear that public opinion would not put up with a Church practically detached from Rome. On the other hand, Napoleon quite agreed with Louis XIV. in wishing to be master in his own house, and to turn the clergy into a supplementary police. Accordingly, in 1801 he negotiated with Pius VII. a Concordat, which remained in force till 1905 (see CONCORDAT). The state undertook to pay the bishops and parochial clergy; it was directly to appoint the one, and to have a veto on the appointment of the other. But for the religious orders no provision was made; and Napoleon refused to tolerate the presence of unsalaried clerics on whom the government had no hold. When his fall brought about the restoration of Louis XVIII. (1815), this restriction was relaxed, and the "congregations" returned in large numbers to France. But the Bourbon government had no intention of encouraging them

The French Revolution.

France and the Papacy.

too much; it clung as closely as Napoleon himself to the idea of a State Church, taking its orders from the government. In this way Gallicanism, which had once stood for all that was national and progressive, now came to mean subservience to a feeble autocracy already tottering to its fall. "A free Church in a free State" became the motto of the group of brilliant men, led by Lamennais, Montalembert and Lacordaire, who started up as soon as the July Revolution of 1830 replaced Charles X. by Louis Philippe. They felt that Catholicism was strong enough to stand alone, without artificial support. For the Revolution had not "abolished Christianity," even among the educated classes, quite so thoroughly as it imagined. Many were only kept back from going to church by the fear that their neighbours would think them superstitious or narrow-minded. But in 1802 Chateaubriand had published his epoch-making *Génie du Christianisme*, in which he declared that of all religions Christianity was "the most poetical, the most human, the most favourable to freedom, art and letters." If that were so, no one need be ashamed to profess it; and the younger generation of Frenchmen began to gravitate back to the Church. Meanwhile, Germany was being profoundly influenced by the great aesthetic revival known as the Romantic Movement, which began with the worship of medieval art and literature, and ended with the worship of medieval religion. And even Italy and Spain presently began to play their part in the Christian reaction. Rosmini in one country, and Balmes in the other, "brought piety to the learned, and learning to the pious."

These writers, however, only touched the few; and the great aim of Lamennais and his friends was to reach the mass of the people. Immediately after the accession of Louis Philippe they started their famous newspaper, *L'Avenir*, hoping thereby to reconcile the Church with democracy, and make the pope the leader of the party of progress. The enterprise was hazardous, since democracy had hitherto brought nothing but ill to Rome. In 1798 French troops had entered the papal states, proclaimed a republic in Rome, and kept Pius VI. a prisoner till his death (1799). In 1808 Napoleon arrested his successor, Pius VII., threw the papal states into his new Italian kingdom, and dragged Pius about from prison to prison till the eve of his own fall in 1814. When the congress of Vienna gave the pope back his dominions, the one thought of the broken old man was to restore, as far as possible, the ancient order of things. But the traditional methods of Roman administration were deplorably ineffective; on the accession of Gregory XVI. (1831–46), the powers presented a memorandum strongly urging reform. Some reforms of detail were introduced; but Gregory declared that to grant a constitution to the States of the Church would be incompatible with the principle of the papacy. Such a man was hardly likely to listen to the plans of Lamennais. In 1832 the *Avenir* was condemned, and the disgusted Lamennais left the Roman Church. Lacordaire and Montalembert, however, continued their democratic campaign, by no means without success; for the revolution of 1848, which drove Louis Philippe from the throne, was far less hostile to Catholicism than that of 1830. Under the short-lived Second Republic (1848–52) the position of the Church grew even stronger, for the introduction of universal suffrage brought to the polls great masses of new voters strongly clerical in sympathies. In 1850 was passed the *Loi Falloux*, which broke down the Napoleonic idea of a state-monopoly of teaching, and allowed the opening of voluntary schools. Of this concession the religious orders took full advantage.

Meanwhile in Rome things had gone from bad to worse. Gregory XVI.'s refusal to grant a constitution called forth a series of sporadic outbursts, inspired by Mazzini and the "Young Italian" party, between 1832 and 1838. These were put down by French and Austrian arms, with the result of focusing the hatred of Young Italy on the pope. One last attempt was made to save him. In 1843 the Piedmontese priest Gioberti brought out a remarkable book, in which he urged his countrymen to combine into an Italian confederation with the pope at its head. For a moment it seemed as though Gioberti's dream were about to translate itself into reality. In 1846 Gregory died, and was succeeded by Pius IX., one of the youngest of the cardinals, and well known for his popular sympathies. He at once granted an amnesty to political prisoners, of whom the Roman gaols were full; two years later (March 1848) he issued a constitution to the papal states, and seemed about to throw in his lot with the forces making for Italian independence. But the first step thereto was deliverance from the Austrian yoke; and Pius, the Italian prince, was grievously hampered by his position as head of the Church. How could a pope make war on Austria, the one power that had never faltered in its allegiance to the Church? Accordingly Pius soon drew back, and his popularity waned. In the autumn the revolutionary fever, which had swept through all Europe earlier in the year, spread to Rome. The pope's prime minister, Count Rossi, was murdered, and Pius himself, escaping to Gaeta, threw himself under Neapolitan protection. In Rome Mazzini proclaimed a republic. Once more France and Austria intervened; in 1850 Pius went back to Rome, and ruled there under the shadow of foreign bayonets. Meanwhile the Second Republic had come to an end in France; in 1852 the prince-president, Louis Napoleon, was elected emperor. At first he greatly needed the support of the clergy to secure him on his precarious throne. But, as he grew stronger, his desire for their good opinion paled before an overmastering propensity to meddle in the affairs of foreign nations. He allied himself with Victor Emmanuel, and marched into Italy in 1859, with the object of expelling the Austrians from the peninsula. This expedition led directly up to the unification of Italy. Two years later Victor Emmanuel was master of the whole country, except Venice and the "Patrimony of St Peter." This last—about one-third of the papal states—was all that was left to Pius; and even this was only held for him by French troops. When Napoleon withdrew his garrison in 1866, Garibaldi immediately raised a body of volunteers to march on Rome; and Napoleon was obliged to send back his troops. Three years later, the outbreak of the Franco-Prussian War (July 1870) led to their recall. In the following September, ten days after the final collapse of Louis Napoleon at Sédan, the troops of Victor Emmanuel entered Rome; and the temporal power of Pius came to an end.

End of the Temporal Power.

Pius might no longer rule over the papal states; but there was consolation in the thought that, within the realm of conscience, his power had increased by leaps and bounds. The whole history of the 19th century is one vast conspiracy to exalt the importance of the papacy. At its opening both the intellectual and administrative guidance of the Church was entirely in French and Italian hands; and the first instincts of those countries is to lean on an all-sufficing government. The French Revolution had supposed itself to be fighting for the "rights of man"; really it was trying to replace an autocratic kingship by an equally autocratic "general will" of the multitude. And it failed because no general will could make its voice rise above the conflict of particular inclinations. Thankfully did men bow before Napoleon, who undertook to relieve them of the responsibility of having to make up their minds. Nor did the emperor's fall by any means entail the fall of his ideas; Count Joseph de Maistre, the great orator of ultramontanism, did little more than transplant them on to the ecclesiastical domain. Bossuet and the old-fashioned divines had believed in an elaborate system of checks and balances—popes, councils, bishops, temporal sovereigns each limiting and controlling the other—just as Montesquieu and Alexander Hamilton had believed in a careful separation of the executive from the legislative power. Napoleon swept away the checks and balances, and made the will of a single man the one and only sanction of government. In like manner de Maistre proposed to sweep away the ecclesiastical checks and balances, and vest the whole of the Church's authority in

"Ultramontanism."

the pope. That would bar out for ever all risk of a conflict of clerical wills. Fortune favoured his enterprise. The French bishops of the age of Bossuet had been a powerful estate of the realm, able in some degree to make their own terms with the king himself; their successors in the 19th century were a mere group of salaried public officials. Still more significant changes took place across the Rhine. An appreciable part of the Holy Roman Empire had been in the hands of clerical rulers. At their head stood the electors of Cologne, Mainz and Treves, temporal princes of no mean rank, usually chosen from the cadets of royal houses. But in 1803 electors and prince bishops came to an end. Their domains were secularized, and divided up among their lay neighbours, Prussia securing the lion's share. Thenceforward the German bishops became mere officials, as in France, and Rome had no cause to fear the opposition of another Febronius.

Still remoter was the danger of another Louis XIV. or Joseph II. The time had gone by when sovereigns could decide what particular shade of Catholicism their subjects should assume. Everywhere there was a growing belief that a man's religious tenets were his private affair, with which the state had nothing to do; and that a government only made itself ridiculous if it attempted to lay down which creeds were true and which were false. Hence the clergy were left to do as they pleased, so long as they respected the law of the land; and most of the modern collisions between Church and State have occurred on the debateable ground where their respective spheres overlap, over questions concerning education or the marriage-laws. Noticeable among these quarrels were the so-called *Kölnische Wirren* of 1837–40, when the archbishop of Cologne defied the Prussian government over the question of "mixed marriages," and paid for his rashness by a long imprisonment. Such conflicts did much to increase the power of the pope, by encouraging local Churches to turn to him as their protector. To ride rough-shod over individual bishops was nothing to Prussia; but to quarrel mortally with Rome was a serious matter for a sovereign reigning over millions of Catholic subjects. Even more successful were the papal incursions on to a more ethereal domain. Ever since the time of Kant and Goethe, the intellectual leadership of Europe has been slowly passing into the hands of the Germans, and Catholic theology shared the lot of other branches of learning. But the German divines were much more in touch with the world at large than were their brethren in Italy or France; and more than one interesting attempt was made to bring theology into line with modern schools of thought. Joseph von Görres read the medieval mystics in the light of the newer mysticism of Schelling. Hermes of Bonn defended Catholicism from the standpoint of Kant and Fichte. Continuing his work on a bolder scale, the Viennese priest Günther undertook to show that the articles of the Christian creed are only a rough-and-ready popular statement of the conclusions of philosophy. Of more enduring value have been the researches of the historical school, founded by Johann Möhler (1796–1838), whose famous *Symbolik* (1832) was perhaps the heaviest literary blow ever dealt at the Reformation. On his early death his mantle fell on to the shoulders of Ignatius Döllinger (1799–1890). This school claimed that its methods, unlike those of Hermes and Günther, avoided all danger of speculative caprice. Catholicism was considered as an organic growth, developing from certain seminal principles in accordance with certain definite laws. The business of a sound theology was to discover and apply those laws, not to patch up fleeting compromises with the intellectual fashions of an age. On the other hand, the Historical School found but little favour at Rome. "Truth," as Malebranche quaintly says, "always has a few hairs on her chin"; and the conclusions of sound learning must needs be slow, fragmentary and tentative. But Italian taste was all for bold, highly-coloured, slashing statements, that any one could understand; what it wanted was a method that should be at once intellectually impressive, and free from the usual clouds that beset the scholar's path. It found what it asked for, when the Jesuits, whom Pius VII. had recalled to life (1814), revived the methods of Aquinas and the medieval Schoolmen. Under the fostering care of Pius IX., this "neo-Scholasticism" spread from Italy to the German Catholic universities, and especially the seminaries of France. The secret of its power was that it gave scope for an immense amount of intellectual subtlety, and at the same time saved men from all danger of independent thought. Although a metaphysic, it was not, and did not pretend to be, an unbiased search for truth. It admittedly started by taking the truth of Catholicism for granted; and its only object was to make intelligible to reason the dogmas that faith already accepted. Thus the whole neo-Scholastic movement played straight into the hands of authority. So comprehensive were its methods, so self-confident its bearing, that those who had once fallen under its spell would never need to doubt or hesitate again. They knew exactly what to think on every conceivable subject; and there was small danger of their suspecting that there might be things in heaven and earth undreamed of in its philosophy.

Catholic developments in Germany.

To the learned Rome might serve up authority with a garnish of neo-Scholastic metaphysics; for average mankind authority pure and simple was enough. Terrified out of their lives at the way in which science and criticism were taking one theological citadel after another, the more militant section of the clergy declared war on thought itself. Not only must faith made independent of reason, but it was considered all the purer, the less it owed to any kind of mental process. If it was a merit to believe without evidence, it was a shining virtue to believe in the teeth of evidence. *Credo, quia absurdum* was applied, notably by the popular writers of the French Second Empire, in a fashion grotesquely literal enough to scandalize Tertullian himself. "There had always existed in France, as elsewhere, those who loved traditional stories of a marvellous nature, and tended to multiply the number which were presented as facts rather than legends. The existence of this school has always been inseparable from the element of pious belief which enters so much into popular devotion. But in pre-Revolution days there had also been a critical school of the Maurists, which offered an alternative to minds averse from implicit reliance on tradition. This had passed away, and was not yet replaced. The *Acta sincera Martyrum* by Ruinart was replaced by the thoroughly uncritical and inexact *Actes des martyrs* of Guéranger. Church history was allowed to be represented by such men as the Abbé Darras; and many French Catholics were ready to accept without question what the Bollandist Père de Smedt has not hesitated to call the historical errors and lies of Charles Bartélémy. Incredible and unsupported stories in history, and extravagances in dogma were the order of the day. Those traditions or doctrines which were most uncongenial to the modern world were placed in strong relief; and the disparagement of the individual intellect was extended to the disparagement of the scientific research itself" (Wilfrid Ward, *Life of W. G. Ward*, vol. ii. p. 119). The faithful were encouraged to drown all tendency to thought in an ever-increasing flood of sensuous emotionalism. In thirty years Pius IX. canonized more saints than all his predecessors together for a century and a half. In 1854 he gave a great impulse to the cultus of the Virgin by proclaiming her Immaculate Conception a dogma of the Church (see IMMACULATE CONCEPTION). In the following year he imposed on Catholicism at large a special "devotion" to the Heart of Mary Immaculate. Next year he added a similar devotion to the Sacred Heart of Jesus (see SACRED HEART).

Rome and the "historical School."

Pius IX. and the New Dogmas.

That these things only widened the breach between the Church and the outside world was of no account to Pius. Ever since his return from Gaeta, he had made up his mind to a policy of no surrender; and the curtailment of his own dominions in 1860 only made him the keener to denounce the iniquities of other rulers. In 1864 appeared the encyclical *Quanta Cura*,

together with a Syllabus of eighty of the most important "errors of our time" (see SYLLABUS). These two documents caused an excitement nowadays hard to understand. Apart from some fulminations against such modern pests as "socialism, communism, secret societies, Bible societies, clerico-liberal societies," the Syllabus says nothing that the papacy had not been saying for hundreds of years. Its real object is to attack such professedly Catholic governments as have fallen in with modern ideas—as for instance, by allowing freedom of worship to their Protestant subjects, or by refusing to punish brawling in Catholic churches more severely than other breaches of the peace. In other words, Pius utterly rejected the whole principle of toleration, and declared that the Church would still impose itself by force, whenever it got the chance to do so. However, any hopes he may have had of finding another Philip II. were soon dashed to the ground. Eighteen months after the publication of the Syllabus broke out the Austro-Prussian War (June 1866), when the one faithful ally of Rome was trampled under the feet of the arch-Protestant Hohenzollerns. But the pope's spirit was not broken. If he could not lord it over one sphere, at least he could be master in another. In 1869 he summoned a general council at the Vatican, avowedly for the purpose of getting it to declare his personal infallibility. For although the old rivalry between pope and council had long ago been practically settled in favour of the pope, no council had yet formally acknowledged its defeat. Indeed, many prominent Gallicans and Liberal Catholics still denied papal infallibility altogether; and Louis Napoleon had regularly fallen back on Richelieu's old device of stirring up the embers of Gallicanism, whenever the French clergy grew restive about his alliance with Victor Emmanuel. And even the more moderate believers in the pope's infallibility maintained that it was merely negative, a heaven-sent immunity against falling into error. But Pius and his immediate circle argued that this was not enough. The great need of the age was authority; and authority was most likely to strike the imagination of the faithful if it found a vivid concrete embodiment in the person of the pope. He must not simply be immune from error; truth must stream down on his head from heaven, and on his head alone. "We all know only one thing for certain," wrote the great Catholic pamphleteer, Louis Veuillot, "and that is that no one knows anything except the man with whom God is for ever, the man who carries the thoughts of God." But this view was too extreme for the council; the most Pius could hope for was to be declared immune from error, instead of positively inspired. Even this negative infallibility was stoutly contested by the French and German bishops during the eight months that the council lasted (December 1869 to July 1870). But they were richer in talents than numbers: out of six hundred prelates they only commanded eighty votes. Most left Rome before the final session; only two—one from Naples, one from the United States—continued their protest up to the end. On the 18th of July the pope's decrees were declared "irreformable of themselves, irrespectively of the consent of the Church," always provided that they dealt with doctrines of faith and morals, and were delivered *ex cathedra*—that is, with the intention of binding the consciences of all Catholics. These limitations were the work of the moderate infallibilists, but the real hero of the day was Pius. Theologians might draw their fine-spun distinctions between realms where the pope was actually infallible and realms where he was not; but Pius knew well that loyal Catholic common sense would brush their technicalities aside and hold that on any conceivable question the pope was fifty times more likely to be right than any one else (see VATICAN COUNCIL and INFALLIBILITY).

The Syllabus of 1864.

Definition of the dogma of papal Infallibility.

So absolute became the papal sovereignty over conscience that more than one government took alarm. While the council was still sitting the Bavarian minister, Prince Chlodwig zu Hohenlohe-Schillingsfürst, suggested to Bismarck that the Powers would do well to bring its deliberations to an end; and immediately after the publication of its decrees Austria notified the pope that so vast an extension of the Church's claims would necessitate a revision of the concordat. And when the excommunication of Döllinger and other anti-infallibilist divines (1871) led to the formation of an independent Old Catholic Church (see OLD CATHOLICS) Bavaria, Switzerland and other countries gave it a warm welcome. So also did Berlin. The new German empire, consolidated through wars with Catholic Germany and Catholic France, was of all countries least likely to tolerate Roman attempts to dictate to its subjects. Tension was increased by the fact that the Centre, or Catholic, party in the Reichstag was led by Windhorst, formerly prime minister to the dispossessed king of Hanover, and thus naturally became identified with the opposition of the smaller German states to the supremacy of Prussia. The quarrel began in 1871 when the Prussian government supported some teachers in state-aided Catholic schools whom the bishops wished to dismiss on account of their anti-infallibilist opinions. A year later, under the ministry of Falk, it developed into what the great scientist, Rudolf Virchow, called a *Kulturkampf*, or conflict of civilizations. The famous May laws (1873) were a determined attempt to bring the literary education, appointment and discipline of the clergy under state control, and to regulate the use of such spiritual penalties as deprivation and excommunication. When the bishops refused to obey, Falk fell back on force. The Jesuits were banished from the German Empire, and many of the other orders from Prussia. The archbishops of Gnesen and Cologne and many minor dignitaries were imprisoned (1874); and the so-called "Bread-basket Law" was passed to coerce the parish clergy by suspending the salaries of the disobedient. The result of these severities was exactly the opposite of what Falk intended. He had meant only to lop off a few ultramontane extremists; he succeeded in sending Catholics of every shade and colour pell-mell into the arms of Rome. And the effect remained long after the cause had died away. On the death of Pius IX. (February 1878) his successor, Leo XIII., at once showed himself willing to come to terms. Negotiations were long and difficult; for Bismarck would not abolish the May laws outright, and Leo had much ado to hold in check the *zelanti* of the Vatican. But Falk resigned in 1879; substantial concessions were made which led to a gradual abrogation of the May laws. Yet—thanks to its organization, its press, and the elaborate network of alliances spun by Windhorst—the Ultramontane Centre still remains a powerful force in German politics.

Old Catholicism.

The Kulturkampf.

This conciliatory policy towards Berlin was the first-fruits of a new régime; Leo XIII. was in every way a complete contrast to Pius IX. Pius had fed on inspirations; Leo was a man of calm, deliberate judgment, little likely to yield to the promptings of his *monsignori*. He was a polished scholar of the old-fashioned type; early in his reign he threw open the Vatican Archives to the students of the world. Having spent his youth in the papal diplomatic service—he was nuncio at Brussels from 1843–46—he had a certain knowledge of the world and parliamentary institutions, while the years immediately before his accession had been spent as archbishop of Perugia, so that he was not closely identified with any of the Vatican parties. The results of a change of master were soon seen. Pius IX. had died at war with almost every country in Europe. He had quarrelled with Austria; Russia was persecuting its Catholic subjects; France was under the spell of Gambetta and his doctrine that clericalism was the enemy; Spain and Belgium followed France; even Switzerland was waging a *Kulturkampf* on a small scale. In a few years Leo had made peace with Austria, pacified Switzerland and Belgium, opened up negotiations with Russia; while his elevation of Newman to the cardinalate (1879) made a great impression in Great Britain. About 1886 hopes even ran high that he was on the eve of a reconciliation with King Humbert at the Quirinal. These hopes were vain. Leo was absolutely convinced that a territorial sovereignty was required to

Pope Leo XIII.

ensure the moral independence of the papacy; and he believed that the new Italian kingdom was a mushroom growth, that might fall in pieces at any moment. Hence he followed in the steps of Pius IX. and refused to recognize the existence of the *de facto* government in any way whatsoever; he would not accept the subsidies it offered him, or allow Catholics to take any part in political life. During the earlier years of his reign he undoubtedly had hopes of recovering his lost dominions with the help of Germany, and Bismarck was not the man to discourage such expectations. They were suddenly blasted when Germany, Italy and Austria entered into a Triple Alliance at the end of 1887. Thereafter Leo turned to France. Already in 1884 he had warned the French clergy against meddling in royalist intrigues; in 1892 he issued a much more stringent exhortation to French Catholics to rally to the Republic. An idea got abroad that he was looking to the time when the old dream of Lamennais and Gioberti might become a reality, and Italy would split up into a number of republics, amongst which the temporal power of the pope might find a place.

Certainly his public pronouncements took on an increasingly democratic tone. From the first he had shown great interest in social questions; and his encyclicals deal much less with theology than with citizenship, socialism, labour, the marriage-laws. Under his influence a Christian Socialist movement sprang up in France and Belgium, and soon spread to Italy, Germany and Austria. It had undoubtedly done much to awaken interest in social problems, and to call forth philanthropic zeal; but the movement soon travelled far beyond the limits that Leo would have set to it. In Germany, in particular, it has grown into a political party connected with the Social Democrats; nor have the democratic socialists been slow to exploit their Christian allies for their own ends. And in other countries the attempt to bring religion into politics has sometimes had the effect of lowering religion, rather than ennobling politics. In an age of universal suffrage public men cannot afford to appeal to pure reason, or even to pure sentiment. Christian socialism becomes a real force when it translates itself into anti-Semitism; and anti-Semitism is at its strongest when it is pursuing one particular Jewish captain in the French artillery. Much on the same lines stands the Italian attempt to show that the Freemasons are the real founders of Italian independence, and to take the field against them with the help of Léon Taxil and "Diana Vaughan." And, quite apart from their political colouring, such attempts to meet the devotional tastes of the masses as the miracles of Lourdes, or the modern French religious press, lie well within the range of criticism. Nor have they even had the dubious merit of success. Dying in 1903, Leo XIII. was spared from seeing the failure of his policy of reconciliation with the French Republic; for the "denunciation of the concordat" (December 1905) and consequent separation of Church and State took place under his successor, Pius X. What results this measure may have on France it must be left to the future to decide. Nor is it yet possible to forecast the result of the only other sensational event that the reign of Pius X. has yet produced—his condemnation in 1907 of the complex movement known as Modernism. This began as an attempt to break loose from the neo-Scholasticism so ardently patronized both by Pius IX. and Leo XIII., and to supplant the critical methods of the medieval doctors by those of modern scholarship; and its leaders have won special distinction in the fields of Biblical criticism and ecclesiastical history. But Modernism soon broadened into a thoroughgoing revolt against the modes of thought and methods characteristic of the latter-day Vatican; its motto is that Catholicism is the strength of popery, but popery the weakness of Catholicism. By "popery" must here be understood the belief that spiritual doctrines always lend themselves to a precise embodiment in black and white, and can thereafter be dealt with like so many clauses of an act of parliament. Modernists deny that the spirit of religion can be thus imprisoned in an unchangeable formula; they hold that it is always growing, and therefore in continual need of readjustment and restatement. On the other hand, they maintain that the present always has its roots in the past, and therefore they are opposed to any violent change; they consider, for instance, that northern Europe would have done better to listen to Erasmus than to Luther. But progress can leave little room to individual initiative, if it must always be orderly and systematic; and the Modernists accordingly show little sympathy with Protestantism. The core of their creed is a fervid belief in the infallibility of Catholic instinct, if only Catholic theology can be induced to leave it to develop in peace. Hitherto the theologians have shown small disposition to hold their hand; and several of the leading Modernists have been excommunicated — especially the Abbé Loisy, A. F.), while the whole movement was condemned in bitter and scathing language by Pius X.'s encyclical (*Pascendi gregis*) against the Modernists. But ideas are difficult to kill, and it is possible that the Modernist movement may yet prove to be the opening chapter of a mighty revolution within the Church of Rome.[1]

Christian Socialism.

Pius X.

Modernism.

BIBLIOGRAPHY.—The literature on the Roman Catholic Church is, of course, vast. Many works will be found in the lists of authorities appended to the articles to which cross-reference is made above, notably PAPACY. Here it is only possible to give a few outstanding books of reference. The most compendious of all works of reference on the subject, though partly antiquated, is the *Encyclopédie théologique* of the Abbé Migne (1844–66), Ser. I. 50 vols., Ser. II. 52 vols., Ser. III. 66 vols. This is a series of dictionaries, and contains Fr. Périnnés's *Dictionnaire de bibliographie catholique*, 5 vols. (Paris, 1858–60). A useful systematized bibliography is also given in the Subject Index of the London Library (1909), pp. 945–951. Other encyclopaedias are Watzer and Welter's *Kirchenlexikon*, 13 B. (2nd ed., Hergenröther, &c., 1882–1903), Roman Catholic (there is a French translation of the 1st edition, ed. T. Goschler, 1870); Herzog-Hauck, *Realencyklopädie für Protestantische Theologie und Kirche* (3rd ed., Leipzig, 1896–1909), Protestant, but containing articles of universally recognized scientific authority on many aspects of the Roman Catholic Church; the *Catholic Encyclopaedia* (London and New York, 1907 ff.), invaluable as an authoritative account of Roman Catholicism in all its phases, by eminent Catholics of all nations. All these encyclopaedias are also bibliographies.
(ST C.)

The Church in England.

The origin of the English Roman Catholics as a community separated from the National Church is generally held to date from the accession of Queen Elizabeth in 1558. In the following year was passed an Act of Supremacy, whereby all public officials, clerical and lay, were required to acknowledge the supremacy of the queen "as used in spiritual things or causes as temporal." This Act was enforced on the existing bishops, with two exceptions, refused to make; some fled the country, some were imprisoned, others simply deprived and placed under surveillance.[2] To the parish clergy the declaration was not systematically tendered; of those deprived of their livings a large number were allowed to remain on as chaplains in private families. From laymen, unless they happened to hold some public office, no declaration was expected; and during the earlier years of Elizabeth's reign most of them continued to attend at their parish church. The line of division became much more acute when Pius V. deposed Elizabeth from her throne (1570); thenceforward her government looked on every Catholic as a potential rebel. Already it had passed a severe act against the Catholics in 1562; this was followed by other measures in 1571, 1580, 1584, 1585, 1593. During the forty-five years of Elizabeth's reign, however, only about 180 persons suffered death[3]—less than half the number of those whom the Catholic zeal

[1] For a criticism of the modern tendencies of the Roman Catholic Church from an outside point of view see ULTRAMONTANISM.

[2] From the Roman Catholic point of view the ancient English hierarchy came to an end with the death of Thomas Goldwell, some time bishop of St Asaph, at Rome on the 3rd of April 1585. Some six months previously Thomas Watson, formerly bishop of Lincoln, had died in prison in England.

[3] Not as heretics, by burning, but as traitors, by hanging, drawing and quartering. But, since to say or hear mass was constructive treason, the distinction was, in many cases, without a difference.

of her sister, Queen Mary, had burnt in one-ninth of the time. Under James I. an attempt was made to distinguish between the loyal and disloyal Catholics, the latter comprising all those who maintained the pope's right to depose sovereigns from their throne. This led to a violent division among the Catholics themselves. Many forswore the deposing power; the majority, acting under imperative orders from Rome, refused to deny it. The government retorted by adding several new penal laws to the statute-book, though less than thirty Catholics were brought to the scaffold during James's reign. Under Charles I. the position of the Catholics was greatly improved, largely owing to the king's marriage with a French princess. Although not actually repealed, the penal laws were seldom put in force, and mass was openly celebrated in London and elsewhere. On the outbreak of the Civil War the Catholics naturally sided with the king, and a great many fell fighting for the royalist cause; towards the survivors Cromwell was unexpectedly merciful. Very few were put to death, though a number of estates were confiscated. Under Charles II. came a new period of prosperity; two Catholics, Lords Arlington and Clifford, were admitted to the inner circles of the government. Protestant suspicion was excited; in 1673 was passed the Test Act, obliging all office-holders to receive the sacrament in the Established Church, and to declare their disbelief in transubstantiation.[1] Five years later (1678) popular exasperation found a more savage outlet, and greedily swallowed the tales of Titus Oates about a mythical "popish plot." A number of victims were brought to the scaffold; the Catholics were declared incapable of sitting in either house of parliament. James II., however, was utterly indifferent to the feelings of his subjects. He packed the privy council, the army and the universities with Catholics, and tried to legalize the exercise of their religion by an utterly unconstitutional Declaration of Indulgence. Three years were enough to convince the nation that he was "endeavouring to subvert and extirpate the Protestant religion, and the laws and liberties of this kingdom"; and on his deposition in 1688 Roman Catholics, or persons married to Roman Catholics, were declared incapable of succeeding to the throne. A new oath of allegiance was imposed on all holders of civil or military office; they were required to swear that no foreign prelate had, or ought to have, any jurisdiction, whether civil or ecclesiastical, within the realm. Further, a number of statutes were passed with the object of putting every possible obstacle in the way of Catholics educating their children in their own creed, or of inheriting or buying land. That they remained so long "utterly disabled from bearing any public office or charge" was due to the participation of many of their number in the Jacobite revolts of 1715 and 1745. After Culloden, however, it was seen that all serious danger of a Stuart restoration was passed; and in 1778 Catholics who abjured the Pretender and denied the civil authority of the pope were relieved from their most pressing disabilities. A proposal to extend this measure to Scotland led to violent agitation in that country. Feeling soon spread to England, and culminated in the Gordon riots of 1780. Meanwhile, however, strenuous efforts were being made by the Roman Catholics to obtain relief by establishing a reasonable *modus vivendi* with the government. Within the Catholic body itself there was even at this time a more or less pronounced anti-Roman movement, a reflection of the Gallican and Febronian tendencies on the continent of Europe, and the "Catholic Committee," consisting for the most part of influential laymen, which had been formed to negotiate with the government, was prepared to go a long way in repudiating the extreme claims of the Holy See, some even demanding the creation of a national hierarchy in merely nominal dependence on Rome, and advocating the substitution of English for Latin in the services. This attitude led to a somewhat prolonged conflict between the Committee and the vicars apostolic, who for the most part represented the high ultramontane view. The outcome of the Committee's work was the great Protest, signed by 1500 bishops, priests and leading laymen, in which the loyalty of Catholics to the crown and constitution was strenuously affirmed and the ultramontane point of view repudiated in the startling declaration, "We acknowledge no infallibility in the pope." As the result of the negotiations preceding and following this action, the government in 1791 passed a bill relieving from all their more vexatious disabilities those Roman Catholics[2] who rejected the temporal authority of the pope; and during the first quarter of the 19th century a series of attempts was made to abolish Catholic disabilities altogether. To this, however, George III. and his successors were bitterly opposed; only in 1829 did George IV. give way, and allow the passage of the Catholic Relief Act. This virtually removed all restrictions on Catholics, except that it left them incapable of filling the offices of Regent, Lord Chancellor, or Lord Lieutenant of Ireland; and it expressly debarred their priests from sitting in the House of Commons.

Ecclesiastical Administration.—During the reign of Elizabeth this was necessarily in a chaotic state. As the Marian clergy died out, their place was taken by priests trained at foreign colleges established for this purpose at Douai, Rome, Valladolid and other places. These were the "seminary priests," objects of great suspicion to the government. About 1580 Jesuit missionaries began to come, and soon became involved in bitter quarrels with the secular missionaries already at work. Mutual jealousies were only increased when the seculars were grouped together under an arch-priest in 1599. Nor were matters much bettered when the papacy took advantage of the presence of a Catholic queen in England, and sent over in 1625 a vicar-apostolic[3]—that is, a prelate in episcopal orders, but without the full authority of a diocesan bishop. He was soon compelled to withdraw, and the direction of affairs fell to an intermittent series of papal envoys accredited to Henrietta Maria or Catherine of Braganza. On the accession of James II. a new vicar-apostolic—John Leyburne, bishop of Adrumetum *in partibus*—was at once appointed (1685); three years later England was divided into four districts—the London, Midland, Northern and Western—each under a vicar-apostolic. This arrangement lasted till 1840, when the number of vicariates was doubled by the addition of the Welsh, Eastern, Lancashire and Yorkshire districts. In 1850 came the "restoration of the hierarchy" by Pope Pius IX., when England was mapped out into an archbishopric of Westminster[4] and twelve suffragan sees, since increased to fifteen (sixteen including the Welsh see of Menevia). This "papal aggression" caused great excitement at the time, and an Ecclesiastical Titles Act was passed in 1851, though never put in force, forbidding Roman Catholic prelates to assume territorial designations.[5]

[1] This declaration, which denounced the mass as "idolatrous and superstitious," was taken by all office-bearers, including bishops on taking their seats in the House of Lords, until the Relief Act of 1829. It was imposed by the Act of Settlement on the sovereign also, in order to make impossible any repetition of the policy of James II. This "Declaration of the Sovereign" formed the subject of heated debate on the accession of kings Edward VII. and George V., and in August 1910 parliament substituted for it a simple declaration of adhesion to the Protestant religion.

[2] They were described in the first draft of the bill as "Protesting Catholic Dissenters," but this was changed, in deference to the strenuous remonstrances of the vicars-apostolic, into "Roman Catholics."

[3] Richard Smith, bishop of Chalcedon *in partibus* (d. 1655).

[4] Cardinal Wiseman (q.v.) was the first archbishop of Westminster. It was on his advice that Pope Gregory XVI. increased the number of English vicariates-apostolic in 1839, and from 1840 onward, as vicar-apostolic first of the Midland and afterwards of the London district, he was mainly instrumental in bringing the English Roman Catholic Church into closer touch with "the spirit of Rome." The outward sign of this was the substitution of the Roman rituai for the English pre-Reformation use hitherto followed in the services, while the English Roman Catholicism became increasingly ultramontane in temper, a tendency much strengthened under Cardinal Manning.

[5] The titles of the sees could not by law be the same as those of the Established Church. In several cases, however (*e.g.* Birmingham, Liverpool, Southwark, Newcastle), sees have since been created by

Population.—No trustworthy figures are forthcoming as to the numbers of the English Roman Catholics at the different stages of their history. At the accession of Elizabeth they undoubtedly formed a large proportion of the population. During her reign they greatly decreased, and the decrease continued during the 17th century. A return, made with some apparent care soon after the accession of William III., estimates their total number at barely 30,000. During the 18th century the popular increase on returns presented to the House of Lords in 1780 estimates their number at nearly 70,000. Joseph Berington, himself a distinguished Catholic priest, considers that this number was above the mark; he reports that his coreligionists were most numerous in Lancashire and London; next came Yorkshire, Northumberland and Staffordshire. In many of the southern counties there were scarcely any Catholics at all. Even in Berington's time, however, there was a certain increase to increase; subsequently the number of converts that followed the Relief Act of 1791 was a stock argument of opponents of the act of 1829. Of late years, notably since the Oxford Movement within the Established Church, the number of converts has been much increased; for some time past it has averaged about 8000 souls a year. But a far more potent factor in swelling the numbers of the Catholics has been the immigration of the Irish, which began early in the 19th century, but was enormously stimulated by the famine of 1846. In 1870 Mr Ravenstein reckoned the total number of Roman Catholics in England as slightly under a million, of whom about 750,000 were Irish, and 50,000 foreigners. By 1910 the general total is considered to have risen to about a million and a half.

Stanton, *A Menology of England and Wales* (with supplement, London, 1892), and Bishop Challoner's *Missionary Priests* (1741 ff.), which still remains the standard work on the subject.

English Law relating to Roman Catholics.—The history of the old penal laws against Roman Catholics in the United Kingdom has been sketched above and in the article IRELAND, *History*.[1] The principal English acts directed against "popish recusants"[2] will be found in the list given in the acts repealing them (7 & 8 Vict. c. 102, 1844; 9 & 10 Vict. c. 59, 1846). The principal Scottish act was 1700, c. 3; the principal Irish act, 2 Anne c. 3. Numerous decisions illustrating the practical operation of the old law in Ireland are collected in G. E. Howard's *Cases on the Popery Laws* (1775). The Roman Catholic Emancipation Act 1829 (10 Geo. IV. c. 7), although it gave Roman Catholic subjects in the main complete civil and religious liberty, at the same time left them under certain disabilities, trifling in comparison with those under which they laboured before 1829. Nor did the act affect in any way the long series of old statutes directed against the assumption of authority by the Roman see in England. The earliest of these which is still law is the Statute of Provisors of 1351 (25 Edw. III. st. 4). The effect of the Roman Catholic Charities Act 1832 is to place Roman Catholic schools, places of worship and education, and charities, and the property held therewith, under the laws applying to Protestant nonconformists. The Toleration Act does not apply to Roman Catholics, but legislation of a similar kind, especially the Relief Act of 1791 (31 Geo. III. c. 32), exempts the priest from parochial offices, such as those of church, warden and constable, and from serving in the militia or on a jury, and enables all Roman Catholics scrupling the oaths of office to exercise the office of churchwarden and some other offices by deputy. The priest is, unlike the nonconformist minister, regarded as being in holy orders. He cannot, therefore, sit in the House of Commons, but there is nothing to prevent a peer who is a priest from sitting and voting in the House of Lords. If a priest becomes a convert to the Church of England he need not be re-ordained. The remaining law affecting Roman Catholics may be classed under the following five heads:—

(1) *Office.*—There are certain offices still closed to Roman Catholics. By the Act of Settlement a papist or the husband or wife of a papist cannot be king or queen. The act of 1829 provides that nothing therein contained is to enable a Roman Catholic to hold the office of guardian and justice of the United Kingdom, or of regent of the United Kingdom; of lord chancellor, lord keeper, or lord commissioner of the great seal of Great Britain or Ireland or lord lieutenant of Ireland; of high commissioner to the General Assembly of the Church of Scotland, or of any office in the Church of England or Scotland, the ecclesiastical courts, cathedral foundations and certain colleges. The disability in the case of the lord chancellor of Ireland was removed by statute in 1867, with necessary limitations as to ecclesiastical patronage. The act of 1829 preserved the liability of Roman Catholics to take certain oaths of office, but these have been modified by later legislation (see 29 & 30 Vict. c. 19; 30 & 31 Vict. c. 75; 31 & 32 Vict. c. 72; 34 & 35 Vict. c. 48). Legislation has given direction of the limiting words which might be supposed to give offence to Roman Catholics. The only offices which Roman Catholics are not legally capable of holding now are the lord chancellorship of England and the lord lieutenancy of Ireland (see, however, Lilly and Wallis, pp. 36–43).

(2) *Title.*—The act of 1829 forbids the assumption by any person, other than the person authorized by law, of the name, style or title of an archbishop, bishop or dean of the Church of England. The Ecclesiastical Titles Act 1851 went further, and forbade the assumption by an unauthorized person of a title from any place in the United Kingdom, whether or not such place were the seat of an archbishopric, bishopric or deanery. This act was, however, repealed in 1867, but the provisions of the act of 1829 are still in force.

(3) *Religious Orders.*—It was enacted by the act of 1829 that "every Jesuit and every member of any other religious order, community or society of the Church of Rome bound by monastic or religious vows" was, within six months after the commencement of the act, to deliver to the clerk of the peace of the county in which he should reside a notice or statement in the form given to the schedule to the act, and that every Jesuit or member of such religious order coming into the realm after the commencement of the act should be guilty of a misdemeanour and should be banished from the United Kingdom for life (with an exception in favour of natural-born subjects duly registered). A secretary of state, being a Protestant, was empowered to grant licences to Jesuits, &c., to come into the United Kingdom and remain there for a period not exceeding six months. An account of these licences was to be laid annually before parliament. The admission of any person as a regular ecclesiastic by any such Jesuit, &c., was made a misdemeanour, and the person so admitted was to be banished for life. Nothing in the act was to extend to religious orders of females. These provisions exist *in posse* only, and have, it is believed, never been put into force.

(4) *Superstitious Uses.*—Gifts for superstitious uses are void both at common law and by statute. It is not easy to determine what gifts are to be regarded as gifts to superstitious uses. Like contracts contrary to public policy, they depend to a great extent for their illegality upon the discretion of the court in the particular case. The act of 23 Hen. VIII. c. 10 makes void any assurance of lands to the use (to have obits perpetual) or the continual service of a priest for ever or for threescore or fourscore years. The act of 1 Edw. VI. c. 14 (specially directed to the suppression of chantries) vests in the crown all money paid by corporations and all lands appointed to the finding or maintenance of any priest, or any anniversary or obit or other like thing, or of any light or lamp in any church or chapel maintained within three years before 1547. The act may still be of value in the construction of old grants, and in affording examples of what the legislature regarded as superstitious uses. Gifts which the courts have held void on the analogy of those mentioned in the acts of Henry VIII. and Edward VI. are a devise for the good of the soul of the testator, a bequest to certain Roman Catholic priests that the testator may have the benefit of their prayers and masses, a bequest in trust to apply a fund to circulate a book teaching the supremacy of the pope in matters of faith, a bequest to maintain a taper for evermore before the image of Our Lady. The court may

[1] See also Stephen's *History of the Criminal Law*, vol. ii. p. 483; Anstey, *The Law affecting Roman Catholics* (1842); Lilly and Wallis, *Manual of the Law specially affecting Catholics* (1893).

[2] A recusant signified a person who refused duly to attend his parish church.

compel discovery of a secret trust for superstitious uses. Since 2 & 3 Will. IV. c. 115 gifts for the propagation of the Roman Catholic faith are not void as made to superstitious uses. It should be noted that the doctrine of superstitious uses is not confined to the Roman Catholic religion, though the question has generally arisen in the case of gifts made by persons of that religion. The Roman Catholic Charities Act 1860 enables the court to separate a lawful charitable trust from any part of the estate subject to any trust or provision deemed to be superstitious. It also provides that in the absence of any written document the usage of twenty years is to be conclusive evidence of the application of charitable trusts.

(5) *Patronage.*—A Roman Catholic may present to a benefice, prebend, or other ecclesiastical living, or collate or nominate to any free school, hospital or donative (3 Jac. I. c. 5). Such patronage is by the act vested in the universities, Oxford taking the City of London and twenty-five counties in England and Wales, mostly round the Trent, Cambridge the remaining twenty-seven. The principle is affirmed in subsequent acts (1 Will. and Mary, sess. 1, c. 26; 12 Anne, st. 2, c. 14; 11 Geo. II. c. 17). If the right of presentation to an ecclesiastical benefice belongs to any office under the crown, and that office is held by a Roman Catholic, the archbishop of Canterbury exercises the right for the time being (10 Geo. IV. c. 7, s. 17). No Roman Catholic may advise the crown as to the exercise of its ecclesiastical patronage (Ibid. s. 18). A Roman Catholic, if a member of a lay corporation, cannot vote in any ecclesiastical appointment (Ibid. s. 15). Grants and devises of advowsons, &c., by Roman Catholics are void, unless for valuable consideration to a Protestant purchaser (11 Geo. II. c. 17, s. 8). *Quare impedit* is pending before any court, the court may compel the patron to take an oath that there is no secret trust for the benefit of a Roman Catholic.

(J. W.)

The Church in the United States.

The history of Roman Catholicism in the New World begins with the Norse discoveries of Greenland and Vinland the Good. In the former the bishopric of Gardar was established in 1112, and extinguished only in 1492. To the latter (the coast of New England), the Northmen during the same period made "temporary visits for timber and peltries, or missionary voyages to evangelize for a season the natives." Beyond these facts, the Norse sagas and chronicles contribute little that is certain (cf. "The Norse Hierarchy in the United States," *Amer. Cath. Quart. Review*, April 1890). Although a bishop was appointed by the pope for the vaguely defined territory of Florida so early as 1528, the oldest Catholic community in what is now the United States dates from 1565, when the Spanish colony of St Augustine was founded. Hence the aboriginal tribes of the South were evangelized. In 1582 the missions of New Mexico were undertaken, and from 1601 Catholic missionaries were at work along the Pacific coast, especially in California. Early in the 17th century trading posts and mission centres were established on the coast of Maine, and during the same century French priests laboured zealously in northern New York, along the entire coast of the Mississippi from Wisconsin to Louisiana, and around the Great Lakes. Their principal concern was for the savages, over whom they acquired an extraordinary influence. Political jealousies, human avarice and treachery arrested the progress of most of their missions.

The English colony of Maryland, planned by the Catholic George Calvert (1st Lord Baltimore), and founded (1634) by his son the Catholic Cecilius Calvert (2nd Lord Baltimore), and Pennsylvania, founded (1681) by the tolerant Quaker William Penn, first permitted the legal existence of Catholicism in English-speaking communities of the New World. It is from these centres that it spread during the 18th century. In 1784 the Rev. John Carroll was appointed prefect-apostolic for the Catholics of the English colonies hitherto dependent on the vicar-apostolic of London. In 1790 Father Carroll was made bishop of the see of Baltimore, and given charge of all the Catholic interests in the United States. There were then about 24,500 Catholics in the land, of which number 15,800 were in Maryland, and 7000 in Pennsylvania, 200 in Virginia and 1500 in New York. In 1807 they had grown to 150,000 with 80 churches. In the following year Baltimore found itself the first metropolitan see of the United States, with New York, Philadelphia, Boston and Bardstown as suffragans.

The growth of the Catholic population by decades since 1820 was calculated by a competent historian, the late John Gilmary Shea, as follows:—

1820 . .	244,500	1860 . .	3,000,000
1830 . .	361,000	1870 . .	4,685,000
1840 . .	1,000,000	1880 . .	7,067,000
1850 . .	1,726,470	1890 . .	10,627,000

The number in 1906 was 12,079,142 (U.S. Census, *Special Report*, 1910). The main source of this growth has been immigration. Originally the Irish and the Germans furnished the greater quota. Later the French-Canadians, Italians, Poles and Bohemians added notably to the number; an appreciable percentage of Oriental Catholics is also found,—Greeks, Syrians, Armenians, &c. Natural increase, especially among the first Catholic immigrants, and a certain percentage of conversions from Protestantism, are contributory sources. Being under the protection of the constitution, and enjoying the advantages of the common law, Catholicism could not meet with any official opposition; such few outbursts of fanaticism as there have been were but temporary or local, and did not represent the true feelings of the country. As to the future of the Church in the United States, all Catholics feel, with their latest historian, that "the Catholic Church is in accord with Christ's revelation, with American liberty, and is the strongest power for the preservation of the Republic from the new social dangers that threaten the United States as well as the whole civilized world. She has not grown, she cannot grow so weak and old that she may not maintain what she has produced—Christian civilization."

Internally, Catholicism in the United States has been free from any noteworthy schisms or heresies that might impede its development—its doctrinal history offers nothing of importance. The discipline differs little from that of the other churches of Catholicism. The unity of doctrine, liturgy and moral ideals is preserved by an intimate union with the see of Rome. The general canonical legislation of the Church, the legislation by papal rescript and the Congregation of the Propaganda, the decisions of the Apostolic Delegation at Washington, and a certain amount of immemorial custom and practice, form the code that governs its domestic relations. Decennially each bishop of the United States is expected to pay a visit to Rome (*Ad Limina Apostolorum*), and to make a report of the spiritual condition of religion within his diocese. In addition a system of synods provides for local unity among bishops, priests and laity. Thus each province or body of bishops under a metropolitan holds provincial councils, while at greater intervals a plenary or national council is held. Of these last three have taken place—their decrees, when approved at Rome, are binding on all Catholics in the United States.

In education the Catholic Church endeavours to keep abreast with the best. There are, according to Hoffmann's *Directory* (Milwaukee, 1907), 4364 parochial schools, in which 1,096,842 children of both sexes receive instruction. The total number of children in Catholic institutions is given as 1,266,175. There are 198 colleges for boys and 678 academies for girls. This system of education is crowned by the Catholic University of America at Washington, established by Leo XIII. and the American hierarchy, and endowed with all the privileges of the old pontifical universities of Europe. In addition there are several other schools that rank as universities. The education of the clergy is provided for by 86 seminaries, in which there are 5697 students. The charitable institutions in the Church are very numerous. There are 255 orphan asylums, with 40,588 inmates. The other charitable institutions are 992 in number, and include every form of public and private charity; no diocese is without one or more such establishment. The actual government of the Church in the United States is represented by one cardinal, 14 archbishops, 89 bishops, 11,135 diocesan clergymen, under the sole and immediate direction of their bishops, 3958 members of religious orders subject to episcopal supervision—in all 15,093 clergymen. There are 8072 churches with resident priests, and 4076 mission churches—in all 12,148, to which must be added 3358 chapels. Several hundred weekly publications are printed in English and foreign tongues, to minister to the needs of the Catholic population. There exist also several literary and academical magazines and reviews of a high order of merit.

The principal religious events in the recent history of the Church were the holding of the Third Plenary Council of Baltimore (1884),

the Catholic Congress (1889), the opening of the Catholic University (1889), the Columbian Educational Exhibit at Chicago (1893), the establishment of the Apostolic Delegation at Washington (1893).

The Catholic Church in the United States conducts no foreign missions, but takes care of its own percentage of Indians and Negroes. Of the Indian population of the United States about 48,194 are Catholics, and they are attended by 65 priests, who look after 96 churches or chapels; there are 50 schools conducted by members of 16 sisterhoods, in which 4430 children are educated. The Catholic negroes are about 138,573 in number. They have 47 churches conducted by 43 white clergymen; 114 schools, in which 6294 children are educated by 31 sisterhoods, who also conduct 11 charitable institutions. The expenses of these missions are borne by private charity, and by a general annual collection.

(✠ J. G.)

ROMANCE, originally a composition written in "Romance" language: that is to say, in one of the phases on which the Latin tongue entered after or during the dark ages. For some centuries by far the larger number of these compositions were narrative fictions in prose or verse; and since the *special* "Romance" language of France—the earliest so-called—was the original vehicle of nearly all such fictions, the use of the term for them became more and more accepted in a limited sense. Yet for a long time there was no definite connotation of *fiction* attached to it, but only of narrative story: and the French version of William of Tyre's *History of the Crusades*, a very serious chronicle written towards the close of the 12th century, bears the name of *Roman d'Éracle* simply because the name of the emperor Heraclius occurs in the first line. But if the explanation of the name "Romance" is quite simple, certain and authentic, the same is by no means the case with its definition, or even with the origin of the thing to which that name came mostly to be applied. For some centuries an abstraction has been formed from the concrete examples. "Romance," "romanticism," "the romantic character," "the romantic spirits," have been used to express sometimes a quality regarded in itself, but much more frequently a difference from the supposed "classical" character and spirit. The following article will deal chiefly with the matter of Romance, excluding or merely referring to accounts of such individual romances as are noticed elsewhere. But it will not be possible to conclude without some reference to the vaguer and more contentious signification.

Speculations on the origin of the peculiar kind of story which we recognize rather than define under the name of romance have been numerous and sometimes confident; but a wary and well-informed criticism will be slow to accept most of them. It is certain that many of its characteristics are present in the *Odyssey*; and it is a most remarkable fact that these characteristics are singled out for reprehension—or at least for comparative disapproval—by the author of the *Treatise on the Sublime*. The absence of central plot, and the prolongation rather than evolution of the story; the intermixture of the supernatural; the presence and indeed prominence of love-affairs; the juxtaposition of tragic and almost farcical incident; the variety of adventure arranged rather in the fashion of a panorama than otherwise: all these things are in the *Odyssey*, and they are all, in varying degrees and measures, characteristic of romance. Nor are they absent from the few specimens of ancient prose fiction which we possess. If the *Satyricon* was ever more than a mass of fragments, it was certainly a romance, though one much mixed with satire, criticism and other things; and the various Greek survivals from Longus to Eustathius always and rightly receive the name. But two things were still wanting which were to be all-powerful in the romances proper—Chivalry and Religion. They could not yet be included, for chivalry did not exist; and such religion as did exist lent itself but ill to the purpose except by providing myths for ornament and perhaps pattern.

Romance in solution.

The "Saint's Life."

The gathering of matter.

A possible origin of the new romance into which these elements entered (though it was some time before that of chivalry definitely emerged) has been seen by one of the least hazardous of the speculations above referred to in the hagiology or "Saint's Life," which arose at an early though uncertain period, developed itself pretty rapidly, and spreading over all Christendom (which by degrees meant all Europe and parts of Asia) provided centuries with their chief supply of what may be called interesting literature. If the author of *On the Sublime* was actually Longinus, the minister of Zenobia, there is no doubt that examples both sacred and profane of the kind of "fiction" ("imitation" or "representation") which he deprecated were mustering and multiplying close to, perhaps in, his own time. The Alexander legend of the pseudo-Callisthenes is supposed to have seen the light in Egypt as early as A.D. 200, and the first Christian version of that "Vision of Saint Paul," which is the ancestor of all the large family of legends of the life after death, is pretty certainly as old as the 4th century and may be as old as the 3rd. The development of the Alexandreid was to some extent checked or confined to narrow channels as long as something like traditional and continuous study of the classics was kept up. But hagiology was entirely free from criticism; its subjects were immensely numerous; and in the very nature of the case it allowed the tendencies and the folk-lore of three continents and of most of their countries to mingle with it. Especially the comparative sobriety of classical literature became affected with the Eastern appetite for marvel and unhesitating acceptation of it; and the extraordinary beauty of many of the central stories invited and necessitated embroidery, continuation, episode. Later, no doubt, the adult romance directly reacted on the original saint's life, as in the legends of St Mary Magdalene most of all, of St Eustace, and of many others. But there can be very little doubt that if the romance itself did not spring from the saint's life it was fostered thereby.

Proceeding a little further in the cautious quest—not for the definite origins which are usually delusive, but for the tendencies which avail themselves of opportunities and the opportunities which lend themselves to tendencies—we may notice two things very important to the subject. The one is that as Graeco-Roman civilization began to spread North and East it met, to appearance which approaches certainty, matter which lent itself gladly to "romantic" treatment. The That such matter was abundant in the literature and folk-lore of the East we know: that it was even more abundant in the literatures and folk-lore of the North, if we cannot strictly be said to *know*, we may be reasonably sure. On the other hand, as the various barbarian nations (using the word in the wide Greek sense), at least those of the North, became educated to literature, to "grammar," by classical examples, they found not a few passages in these examples which were either almost romances already or which lent themselves, with readiness that was almost insistence, to romantic treatment. Apollonius Rhodius had made almost a complete romance of the story of Jason and Medea. Virgil had imitated him by making almost a complete romance of the story of Aeneas and Dido: and Ovid, who for that very reason was to become the most popular author of the middle ages early and late, had gone some way towards romancing a great body of mythology. We do not know exactly who first applied to the legendary tale of Troy the methods which the

pseudo-Callisthenes and "Julius Valerius" applied to the historical wars of Alexander, but there is every reason to believe that it was done fairly early. In short, during the late classical or semi-classical times and the whole of the dark ages, things were making for romance in almost every direction.

It would and did follow from this that the thing evolved itself in so many different places and in so many different forms that only a person of extraordinary temerity would put his finger on any given work and say, "This is the first romance," even putting aside the extreme chronological uncertainty of most of the documents that could be selected for such a position. Except by the most meteoric flights of "higher" criticism we cannot attain to any opinion as to the age and first developed form of such a story as that of Weland and Beadohild (referred to in the *Complaint of Deor*), which has strong romantic possibilities and must be almost of the oldest. The much more complicated Volsung and Nibelung story, though we may explore to some extent the existence backwards of its Norse and German forms, baffles us beyond certain points in each case; yet this, with the exception of the religious element, is romance almost achieved. And the origin of the great type of the romance that *is* achieved—that has all elements present and brings them to absolute perfection—the Arthurian legend, despite the immense labours that have been spent upon it and the valuable additions to particular knowledge which have resulted from some of them, is, still more than its own Grail, a quest unachieved, probably a thing unachievable. The longest and the widest inquiries, provided only that they be conducted in any spirit save that which determines to attain certainty and therefore concludes that certainty has been attained, will probably acquiesce most resignedly in the dictum that romance "grew"—that its birthplace is as unknown as the grave of its greatest representative figure.

Uncertainty of its order.

But when it has "grown" to a certain stage we can find it, and in a way localize it, and more definitely still analyse and comprehend its characteristics from their concrete expressions.

Approaching these concrete expressions, then, without at first too hard and fast requirements in regard to the validation of the claims, we find in Europe about the 11th century (the time is designedly left loose) divers classes of what we should now call imaginative or fictitious literature, nearly all (the exceptions are Scandinavian and Old English) in verse. These are: (i) The saints' lives; (ii) the Norse sagas, roughly so-called; (iii) the French *chansons de geste*; (iv) the Old English and Old German stories of various kinds; (v) perhaps the beginning of the Arthurian cycle; (vi) various stories more or less based on classical legend or history from the tales of Alexander and of Troy down to things like *Apollonius of Tyre*, which have no classical authority of either kind, but strongly resemble the Greek romances, and which were, as in the case named, pretty certainly derived from members of the class; (vii) certain fragments of Eastern story making their way first, it may be, through Spain by pilgrimages, latterly by the crusades.

Classes of source.

Now, without attempting to fence off too rigidly the classical from the romantic, it may be laid down that these various classes possess that romantic character, to which we are, by a process of netting and tracking, slowly making our way, in rather different degrees, and a short examination of the difference will forward us not a little in the hunt.

With i. (the saints' lives) we have least to do: because by the time that romance in the full sense comes largely and clearly into view, it has for the most part separated itself off—the legend of St Eustace has become the romance of Sir Isumbras, and so forth. But the influence which it may, as has been said, have originally given must have been continually re-exerted; the romantic-dynamic suggestion of such stories as those of St Mary of Egypt, of St Margaret and the Dragon, of St Dorothea, and of scores of others, is quite unmistakable. Still, in actual result, it works rather more on drama than on narrative romance, and produces the miracle plays.

In ii. (the sagas), while a large part of their matter and even not a little of their form are strongly romantic, differences of handling and still more of temper have made some demur to their inclusion under romance, while their final ousting in their own literatures by versions of the all-conquering French romance itself is an argument on the same side. But the Volsung story, for instance, is full of what may be called "undistilled" romance—the wine is there, but it has to be passed through the still—and even in the most domestic sagas proper this characteristic is largely present.

It is somewhat less so in iii. (the *chansons de geste*), at least in the apparently older ones, though here again the comparative absence of romantic characteristics has been rather exaggerated, in consequence of the habit of paying disproportionate and even exclusive attention to the *Chanson de Roland*. There is more, that is, of romance in *Aliscans* and others of the older class, while *Amis and Amiles*, which must be of this class in time, is almost a complete romance, blending war, love and religion—*salus, venus, virtus*—in full degree.

The other four classes, the miscellaneous stories from classical, Eastern and European sources, having less corporate or national character, lend themselves with greater ease to the conditions of romantic development; but even so in different degrees. The classical stories have to drop most of their original character and allow something very different to be superinduced before they become thoroughly romantic. The greatest success of all in this way is the story of *Troilus and Cressida*. For before its development through the successive hands of Benoît de Sainte-More, Boccaccio (for we may drop Guido of the Columns as a mere middleman between Benoît and Boccaccio) and Chaucer, it has next to no classical authority of any kind except the mere names. In the various Alexandreids the element of the marvellous—the Eastern element, that is to say—similarly overpowers the classical. As for the Eastern stories themselves, they are particularly difficult of certain unravelment. The large moral division—such as *Barlaam and Josaphat*, the *Seven Wise Masters* in its various forms, &c., comes short of the strictly romantic. We do not know how much of East and how much of West there is in such things as *Flore et Blanchefleur* or even in *Huon of Bordeaux* itself. Contrariwise we ought to know, more certainly than apparently is known yet, what is the date and history of such a thing as that story of Zumurrud and Sháh Shahr, which may be found partly in Lane and fully in the complete translations of the *Arabian Nights*, though not in the commoner editions, and which is evidently either copied from, or capable of serving as model to, a Western *roman d'aventures* itself.

We come, however, much closer to the actual norm itself—closer, in fact, than in any other place save one—in the various stories, English, French, and to a less extent German,[1] which gradually received in a loose kind of way the technical French term just used, a term not to be translated without danger. Nearly all these stories were drawn, by the astonishing centripetal tendency which made France the home of all romance between the 11th and the 13th centuries, into French forms; and in most cases no older ones survive. But it is hardly possible to doubt that in such a case, for instance, *Havelok*, an original story of English or Scandinavian origin got itself into existence before, and perhaps long before, the French version was retransferred to English, and so in other cases. If, once more, we take our existing English *Havelok* and its sister *King Horn*, we see that the latter is a *more* romanced form than the former. *Havelok* is more like a *chanson de geste*—the love interest in it is very slight; while in *King Horn* it is much stronger, and the increased strength is shown by the heroine being in some forms promoted into the title. If these two be studied side by side the process of transforming the mere story into the full romance is to no small extent seen in actual

[1] Italian romance seems to have modelled itself early on French, and it is doubtful, rich as is the late crop of Spanish romances, whether we have any that deserve the name strictly and are really early.

operation. But neither exhibits in any considerable degree the element of the marvellous, or the religious element, and the love interest itself is, even in *Horn*, simple and not very dramatically or passionately worked out. In the later *roman d'aventures*, of which the 13th century was so prolific (such as, to give one example out of many, *Amadas and Idoine*), these elements appear fully, and so they do in the great Auchinleck collection in English, which, though dating well within the 14th, evidently represents the meditation and adaptation of French examples for many years earlier.

The last of our divisions, however, exhibits the whole body of romantic elements as nothing else does. It is not our business in this place to deal with the Arthurian legend generally as regards origin, contents, &c., nor, in the present division of this actual article, to look at it except for a special purpose and in connexion with and contradistinction to the other groups just surveyed. Here, however, we at last find all the elements of romance, thoroughly mixed and thoroughly at home, with the result not merely that the actual story becomes immensely popular and widely spread; not only that it receives the greatest actual development of any romantic theme; but that, in a curious fashion, it attracts to itself great numbers of practically independent stories—in not a few cases probably quite independent at first—which seem afraid to present themselves without some tacking on (it may be of the loosest and most accidental description) to the great *polycentric* cycle, the stages of which gather round Merlin, the Round Table, the Grail and the Guinevere-Lancelot-Arthur catastrophe. All the elements, let it be repeated, are here present: war, love and religion; the characteristic extension of subject in desultory adventure-chronicles; the typical rather than individual character (though the strong individuality of some of the unknown or half-known contributors sometimes surmounts this); the admixture of the marvellous, not merely though mainly as part of the religious element; the presence of the chivalrous ideal. The strong dramatic interest of the central story is rather superadded to than definitely evolved from these elements; but they are still present, just as, though more powerfully than, in the weakest of miscellaneous *romans d'aventures*.

Types of story.

A further step in the logical and historical exploration of romance may be taken by regarding the character-and-story classes round which it instinctively gravitates itself, and which from the intense community of medieval literature—the habit of medieval writers not so much to plagiarize from one another as to take up each after each the materials and the instruments which were not the property of any—is here especially observable. Prominent above everything is the world-old motive of the quest; which, world-old as it is, here acquires a predominance that it has never held before or since. The object takes pretty various, though not quite infinitely various, forms, from the rights of the disinherited heir and the hand or the favour of the heroine, to individual things which may themselves vary from the Holy Grail to so many hairs of a sultan's beard. It may be a friendly knight who is lost in adventure, or a felon knight who has to be punished for his trespasses, a spell of some kind to be laid; a monster to be exterminated; an injured virgin or lady, or an infirm potentate, to be succoured or avenged; an evil custom to be put an end to; or simply some definite adventure or exploit to be achieved. But quest of some sort there must almost certainly be if (as in *Sir Launfal*, for instance) it is but the recovery of a love forfeited by misbehaviour or mishap. It is almost a *sine qua non*—the present writer, thinking over scores, nay hundreds, of romances, cannot at the moment remember one where it is wanting in some form or another.

Of incident.

It will be observed that this at once provides the amplest opportunity for the desultory concatenation or congregation of incident and episode which is of the very essence of romance. Often, nay generally, the conditions, localities and other circumstances of the quest are half known, or all but unknown, to the knight, and he is sometimes intentionally led astray, always liable to be incidentally called off by interim adventures. In many (perhaps most) cases the love interest is directly connected with the quest, though it may be in the way of hindrance as well as of furtherance or reward. The war interest always is so connected; and the religious interest commonly—almost universally in fact—is an inseparable accident. But everything leads up to, involves, eventuates in the fighting. The quest, if not always a directly warlike one, always involves war; and the endless battles have at all times, since they ceased to be the great attraction, continued to be the great obloquy of romance. It is possible no doubt that reports of tournaments and single combats with lance and sword, mace and battle-axe, may be as tedious to some people as reports of football matches certainly are to others. It is certain that the former were as satisfactory in former times to their own admirers as the latter are now. In fact the variety of incident is almost as remarkable as the sameness. And the same may be said, with even greater confidence, of the adventures between the fights in castle and church and monastery, in homestead or hermitage. The actual stories are not much more alike than those who have read large numbers of modern novels critically know to be the case with them. But the absence, save in rare cases, of the element of character, and the very small presence of that of conversation, show up the sameness that exists in the earlier case.

Of personages.

This same deficiency in individual character-drawing, and in the conversation which is one of its principal instruments, brings out in somewhat unfair relief some other cases of apparent sameness—the "common forms" of story and of character itself. The disinherited heir, the unfaithful or wronged wife, the wicked stepmother, the jealous or wrongly suspected lover, are just as universal in modern fiction as they are in medieval—for the simple reason that they are common if not universal in nature. But the skeleton is more obvious because it is less clothed with flesh and garments over the flesh; the texture of the canvas shows more because it is less worked upon. Some of these common forms, however, are more peculiar to medieval times; and some, though not many, allow excursions into abnormalities which, until recently, were tabooed to the modern novelist. Among the former the wickedness of the steward is remarkable, and of course not difficult to account for. The steward or seneschal of romance, with some honourable exceptions, is as wicked as the baronet of a novel, but here the explanation is not metaphysical. He was constantly left in charge in the absence of his lord and so was exposed to temptation. The extreme and almost Ephesian consolableness of the romance widow can be equally rationalized—and in fact is so in the stories themselves—by the danger of the fief being resumed or usurped in the absence of a male tenant who can maintain authority and discharge duties. While such themes as the usually ignorant incest of son with mother or the more deliberate passion of father for daughter come to us from very popular early sources—the legend of St Gregory of the Rock, or the story of Apollonius of Tyre.

Characters of romance proper.

The last point brings us naturally to another of considerable importance—the singular *purity* of the romances as a whole, if not entirely in atmosphere and situation, yet in language and in external treatment. It suited the purposes of the Protestant controversialists of the Renaissance, such as our own Ascham, to throw discredit upon work so intimately connected with Catholic ceremony and belief as the *Morte d'Arthur*; and it is certain that the knights of romance did not even take the benefit of that liberal doctrine of the *Cursor Mundi* which regards even illicit love as not mortal unless it be "with spouse or *sib*." But if in the romances such love is portrayed freely, and with a certain sympathy, it is never spoken of lightly and is always punished; nor are the pictures of it ever coarsely drawn. In a very wide reading of romance the present writer does not remember more than two or three passages of romance proper

(that is to say before the later part of the 15th century) which could be called obscene by any fair judge. And the term would have to be somewhat strained in reference even to these. The contrast with the companion divisions of *fabliaux* and farces is quite extraordinary; and nearly as sharp as that between Greek tragedy on the one hand and Greek comedy or satiric play on the other. It is brought out for the merely English reader in Chaucer of course, but in him it might have been studied. In the immense *corpus* of known or unknown French and English writers (the Germans are not quite so particular) it comes out with no possibility of deliberation and with unmistakable force.

Development.

The history of the forms in which romance presents itself follows a sufficiently normal and probable course. The oldest are always—save in the single case of part of the Arthurian division, in which we probably possess none of the *actually* oldest, and in some of the division of Antiquity which had a long line of predecessors in the learned languages—the shortest. They become lengthened in a way continued and exemplified to the present moment by the tendency of writers to add sequels and episodes to their own stories, and made still more natural by the fact that these poems were in all or almost all cases *recited*. "Go on" is the most natural and not the least common as well as the most complimentary form of "Bravo!" and the reciter never seems to have said "no" to the compliment. In not a few cases—*Huon of Bordeaux*, *Ogier the Dane*, *Guy of Warwick*, are conspicuous examples—we possess the same story in various stages; and can see how poems, perhaps originally like *King Horn* of not more than a couple of thousand lines or even shorter in the 13th century, grew to thirty, forty, fifty thousand in the 15th. The transference of the story itself from verse to prose is also—save in some particular and still controverted instances—regularly traceable and part of a larger and natural literary movement. While, also naturally enough, the pieces become in time fuller of conversation (though not as yet often of conversation that advances the story or heightens its interest), of descriptive detail, &c. And in some groups (notably that of the remarkable *Amadis* division) a very great enlargement of the proportion and degradation of the character of the marvellous element appears—the knights being no longer mystical, and magical only in the lower sense.

Characteristic examples.

And so we come to the particular characteristics of the kind or kinds in individual examples. Of these the English reader has a matchless though late instance in the *Morte d'Arthur* of Malory, a book which is at once a *corpus* and a pattern of romance in gross and in detail. The fact that it is not, as has been too often hastily or ignorantly asserted, a mere compilation, but the last of a singular series of rehandlings and redactions—conducted with extraordinary though for the most part indistinctly traceable instinct of genius—makes it to some extent transcend any single example of older date and more isolated composition. But it displays all the best as well as some of the less good characteristics of most if not all. Of the commonest kind—the almost pure *roman d'aventures* itself—the Gareth-Beaumains episode (for which we have no direct original, French or English, though *Lybius Disconus* and *Ipomedon* come near to it in different ways) will give a fair example; while its presentation of the later chapters of the Grail story, and the intertwisted plot and continuing catastrophe of the love of Lancelot and Guinevere, altogether transcend the usual scope of romance pure and simple, and introduce almost the highest possibilities of the romantic novel. The way in which Malory or his immediate authorities have extruded the tedious wars round the "Rock of the Saxons," have dropped the awkward episode of the false Guinevere, and have restrained the uninteresting exuberance of the continental wars and the preliminary struggles with the minor kings, keeps the reader from contact with the duller sides of romance only. Of the real variety which rewards a persistent reader of the class at large it would be impossible to present even a miniature hand-index here; but something may be done by sample, which will not be *mere* sample, but an integral part of the exposition. No arbitrary separation need be made between French and English; because of the intimate connexion between the two. As specially and symptomatically noteworthy the famous pair—perhaps the most famous of all—*Guy of Warwick* and *Bevis of Hampton*, should *not* be taken. For, with the exception of the separation of Guy and Felise in the first, and some things in the character of Josiane in the second, both are somewhat spiritless concoctions of stock matter. Far more striking than anything in either, though not consummately supported by their context, are the bold opening of *Blancandin et l'orgueilleuse d'amour*, where the hero begins by kissing a specially proud and prudish lady; and the fine scenes of fight with a supernatural foe at a grave to be found in *Amadas et Idoine*. Reputation and value coincide more nearly in the charming fairy story of *Parthenopex de Blois* and the Christian-Saracen love romance of *Flore* (Florice and other forms) *et Blanchefleur*. Few romances in either language, or in German, exhibit the pure adventure story better than Chrestien de Troyes's *Chevalier au Lyon*, especially in its English form of *Ywain and Gawain*; while the above-mentioned *Lybius Disconus* (*Le Beau Déconnu*) makes a good pair with this. For originality of form and phrase as well as of spirit, if not exactly of incident, *Gawain and the Green Knight* stands alone; but another Gawain story (in French this time), *Le Chevalieur aux deux épées*, though of much less force and fire, exceeds it in length without sameness of adventure. Only the purest romances—those ridiculed by Chaucer in *Sir Thopas*—which form a small minority, lack striking individual touches, such as the picture of the tree covered with torches and carrying on its summit a heavenly child, which illuminates the huge expanse of *Durmart le Gallois*. The various forms of the *Seven Wise Masters* in different European languages show the attitude of the Western to the Eastern fiction interestingly. The beautiful romance of *Emarè* is about the best of several treatments of one of the exceptional subjects classed above—the unnatural love of father for daughter, while if we turn to German stories we find not merely in the German variants of Arthurian themes, but in others a double portion of the mystical element. French themes are constantly worked up afresh—as indeed they are all over Europe—but the Germans have the advantage of drawing upon not merely Scandinavian traditions like those which they wrought into the *Nibelungen Lied* and *Gudrun*, but others of their own. And both in these and in their dealings with French they sometimes show an amount of story-telling power which is rare in French and English. No handling of the Tristan and Iseult story can compare with Gottfried's; while the famous *Der arme Heinrich* of Hartmann von Aue (the original of Longfellow's *Golden Legend*) is one of the greatest triumphs and most charming examples of romance, displaying in almost the highest degree possible for a story of little complexity all the best characteristics of the thing.

Summary of opinion and fact.

What, then, are these characteristics? The account has now been brought to a point where a reasoned résumé of it will give a definite answer as can be given.

Even yet we may with advantage interpose a consideration of the answer that *was* given to this question universally (with a few dissidents) from the Renaissance to nearly the end of the 18th century and not infrequently since; while it is not impossible that, in the well-attested revolutions of critical thought and taste, it may be given again. This is that romance on the whole, and with some flashes of better things at times, is a jumble of incoherent and mostly ill-told stories, combining sameness with extravagance, outraging probability and the laws of imitative form, childish as a rule in its appeal to adventure and to the supernatural, immoral in its ethics, barbarous in its aesthetics, destitute of any philosophy, representing at its very best (though the ages of its lowest appreciation were hardly able even to consider this) a necessary stage in the education of half-civilized peoples, and embodying some interesting legends, much curious folk-lore and a certain amount of distorted historical evidence. On

the other hand, for the last hundred years and more, there have been some who have seen in romance almost the highest and certainly the most charming form of fictitious creation, the link between poetry and religion, the literary embodiment of men's dreams and desires, the appointed nepethe of more sophisticated ages as it was the appointed pastime of the less sophisticated. Between these opposites there is of course room for many middle positions, but few of these will be occupied safely and inexpugnably by those who do not take heed of the following conclusions.

Romance, beyond all question, enmeshes and retains for us a vast amount of story-material to which we find little corresponding in ancient literature. It lays the foundation of modern prose fiction in such a fashion that the mere working out and building up of certain features leads to, and in fact involves, the whole structure of the modern novel (q.v.). It antiquates (by a sort of gradual "taking for granted") the classical assumption that love is an inferior motive, and that women, though they "may be good sometimes" are scarcely fit for the position of principal personages. It helps to institute and ensure a new unity—the unity of interest. It admits of the most extensive variety. It gives a scope to the imagination which exceeds that of any known older literary form. At its best it embodies the new or Christian morality, if not in a Pharisaic yet in a Christian fashion, and it establishes a concordat between religion and art in more ways than this. Incapable of exacter definition, inclining (a danger doubtless as well as an advantage) towards the vague, it is nevertheless comprehensible for all its vagueness, and, formless as it is, possesses its own form of beauty—and that a precious one. These characteristics were, if perceived at all by its enemies in the period above referred to, taken at their worst; they were perceived by its champions at the turn of the tide and perhaps exaggerated. From both attitudes emerged that distinction between the "classic" and the "romantic" which was referred to at the beginning of this article as requiring notice before we conclude. The crudest, but it must be remembered the most intentionally crude (for Goethe knew the limitations of his saying), is that "Classicism is health; Romanticism is disease." In a less question-begging proposition of single terms, classicism might be said to be method and romanticism energy. But in fact sharp distinctions of the kind do much more harm than good. It is true that the one tends to order, lucidity, proportion, the other to freedom, to fancy, to caprice. But the attempt to reimpose these qualities as absolutely distinguishing marks and labels on particular works is almost certain to lead to mistake and disaster, and there is more than mere irony in the person who defines romance as "Something which was written between an unknown period of the Dark Ages and the Renaissance, and which has been imitated since the later part of the 18th century." What that something really is is not well to be known except by reading more or less considerable sections of it—by exploring it like one of its own forbidden countries. But sometning of a sketch-map of that country has been attempted here.

To illustrate and restrict the above, see in the first place articles on the different national literatures, especially French and Icelandic; as also the following:—

Classical or Pseudo-Classical Subjects.—Apollonius of Tyre; Longus; Heliodorus; Apuleius; Troy; Thebes; Caesar, Julius; Alexander the Great; Hercules; Jason; Oedipus; Virgil.

Arthurian Romance.—Arthur; Gawain; Perceval; Lancelot; Merlin; Tristan; Round Table; Grail; and the articles on romance writers such as Malory, Wolfram von Eschenbach, Chrétien de Troyes, Gottfried of Strassburg, &c.

French Romance.—Charlemagne; Guillaume d'Orange; Doon de Mayence; Ogier the Dane; Roland; Renaud de Montauban (*Quatre fils Aymon*); Huon of Bordeaux; Girart de Roussillon; Amis et Amiles; Macaire; Partonopeus de Blois; Robert the Devil; Flore and Blanchefleur; Garin le Loherain; Raoul de Cambrai; Guillaume de Palerme; Adenès le Roi; Benoît de Sainte-More, &c.

Anglo-Norman, Anglo-Danish, English Romance.—Bevis of Hampton; Horn; Havelok; Guy of Warwick; Robin Hood; Maid Marian.

German.—Nibelungenlied; Ortnit; Dietrich of Bern; Wolfdietrich; Heldenbuch; Waltharius; Gudrun; Hildebrand, Lay of; Ruodlieb.

Northern.—Sigurd; Wayland; Hamlet; Edda.

Spanish.—Amadis de Gaula.

Various.—Reynard; Roman de la Rose; Griselda and kindred stories; Geneviève of Brabant; Gesta Romanorum; Barlaam and Josaphat; Seven Wise Masters; Maeldune, Voyage of.

Authorities.—The first modern composition of importance on romance (putting aside the dealings of Italian critics in the 16th century with the question of romantic v. classical unity) is the very remarkable dialogue *De la Lecture des vieux romans* written by Chapelain in mid-17th century (ed. Feillet, Paris, 1870), which is a surprising and thoroughgoing defence of its subjects. But for long afterwards there was little save unintelligent and mostly quite ignorant depreciation. The sequence of really important serious works almost begins with Hurd's *Letters on Chivalry and Romance* (1762). In succession to this may be consulted on the *general* subject (which alone can be here regarded) the dissertations of Percy, Warton and Ritson; Sir Walter Scott, "Essay on Romance" in the supplement to the *Encyclopaedia Britannica* (1816–24); Dunlop, *History of Fiction* (1816, to be usefully supplemented and completed by its latest edition, 1888, with very large additions by H. Wilson); Wolff, *Allgemeine Geschichte des Romans* (Jena, 1841–50); Ward, *Catalogue of Romances in the British Museum* (vol. i. 1883, vol. ii. 1893) (the most valuable single contribution to the knowledge of the subject); G. Saintsbury, *The Flourishing of Romance and the Rise of Allegory* (Edinburgh, 1897), and its companion volumes in *Periods of European Literature* [W. P. Ker, *The Dark Ages* (1904); Snell, *The Fourteenth Century* (1899); Gregory Smith, *The Transition Period* (1900); Hannay, *The Later Renaissance* (1898)]; W. P. Ker, *Epic and Romance* (1897).

ROMANCE LANGUAGES, the name generally adopted for the modern languages descended from the old Roman or Latin tongue, acted upon by inner decay or growth, by dialectic variety, and by outward influence, more or less marked, of all the foreign nations with which it came into contact.

During the middle ages the old Roman Empire or the Latin-speaking world was called Romania, its inhabitants Romani (adj. *Romanicus*), and its speech Romancium, Vulgar Romancio, Italian Romanzo, from *Romanice loqui* = to speak Romance; in Old French nominative *romanz*, objective *roman(t)*, Modern French *roman*, "a novel," originally a composition in the vulgar tongue. In English some moderns use Romanic (like Germanic, Teutonic) instead of Romance; some say Neo-Latin, which is frequently used by Romance-speaking scholars. By such names changes Latin, a synthetical language, rich in inflexions, was transformed into several cognate analytical tongues of few inflexions, most of the old forms being replaced by separate form-words. As the literary language of the ancient Roman civilization died out, seemingly extinguished by the barbarism of the middle ages, all the forms of the old classical language being confounded in the most hopeless chaos, suddenly new, vigorous and beautiful tongues sprang forth, ruled by the most regular laws, related to, yet different from, Latin. How was this wonderful change brought about? How can chaos produce regularity? The explanation of this mystery has been given by Diez, the great founder of Romance philology. The Romance languages did not spring from literary classical Latin, but from popular Latin, which, like every living speech, had its own laws, not subject to the changing literary fashions, but only to the slow process of phonetic change and dialectic variety. It is interesting to observe that much that is handed down to us in the oldest Latin literature (notably in the vocabulary) reappears in the most recent phase of Latin—the Romance languages. Thus, a verb *nivère*, "to snow," is known to Pacuvius, but does not again appear until the time of Venantius Fortunatus, and then with a change of conjugation —*nivĕre*, while it has now a new term of life in French and Rhaeto-Romanic dialects. It is obvious that there was no break of continuity in the vulgar language, for if in the later imperial ages a verb had been formed from *nix*, *nivis*, it must have been *nivare*, or *niviare* (Fr. *neiger*). Here especially the words of Horace come true:—

> "Multa renascentur, quae jam cecidere, cadentque
> Quae nunc sunt in honore vocabula, si volet usus,
> Quem penes arbitrium est et jus et norma loquendi."

The present article, embracing all the Romance languages, aims at tracing on the one hand their common origin and their common development, on the other hand at pointing out the peculiarities of the individual languages and the possible explanations of the growth of these peculiarities. Their common development is mainly dealt with under LATIN LANGUAGE. The relation of the early vulgar Latin to the literary language, the spread of Latin following the spread of Roman rule, the prevalence of Latin over Oscan, Umbrian, Etruscan, and late Iberian and Gallic—all these matters concern rather the history of Latin than of the Romance languages. But we may say broadly that the language spoken throughout the Roman Empire at the time of Augustus was fairly uniform, and that naturally by differentiations took place (varying according to regions) which were not, however, strongly marked, and which even tended to be obliterated in later times.

The causes of these variations were twofold. The process of Romanizing the various districts took place at epochs far remote one from the other, and between the earliest and the latest of these epochs Latin itself was modified.[1] (2) We have the reaction on Latin of the languages of the pre-Roman populations.

Applying this first point of view, we should find that the oldest form of Latin (oldest, that is, for our present purposes) was introduced into Sardinia (238 B.C.); next comes Spain (197 B.C.), Illyria (167 B.C.), South Gaul (120 B.C.), North Gaul (50 B.C.), Raetia (15 B.C.), Dacia (A.D. 107). And we can actually trace some of the results of these differences in date, chiefly perhaps in the vocabulary and morphology of the Romance languages. When, for example, we find the dative *illui* (Ital. *Fr.* *lui*) entirely missing in the Iberian peninsula, we may infer that it was unknown to the Latin introduced there, and conversely that Latin still used the ancient *cova* (Sp. *cueva*, " cava ") and not the more recent *cava* (Ital. *cava*), also *demagis* or *gumia*, which we only know from Lucilius, Sp. *demas*, *gomia*.

We may be justified in assigning to these historic causes the beginnings of the divergence from the original uniformity. Neither active intercourse, nor the dislocations of tribes and populations brought about by the exigencies of military or colonizing enterprise, ever effected a complete fusion of these divergences. To this we must add, as a second element, ethnic considerations.

To begin with, we seem to find in Italy itself, among the Italic population in country districts, the survival of isolated forms which had been discarded by the literary language with its levelling tendencies, and in consequence also by what may be called "Average Latin" (*Durchschnittslatein*). In early Latin *d* becomes *r* before labials, *e.g.* *ar me advenias* occurs in Plautus; *arvorsus*, *arger* from **argfer* are the ancient forms. Only *arbiter* has survived as a word of the literary language and has become completely isolated, while *arvorsus* was displaced by *adversus*. In Abruz. we have *arbendá*, "to rupture," beside Sabellic *abfertaom* which rule proves precisely that this is not a case of Umbrian influence, but of a preservation of ancient and popular forms. Beyond the limits of Italy *arger* has been preserved, *e.g.* Sp. *arcen*, and not only Ital. *argine*; further *armisaurus*, " stallion," in the Lex Salica and in Rum. *armesarit*, perhaps Sp. *almuerzo*, " breakfast," for **armuerso* beside Lat. *admorsus*.

In the second place we have, especially in Italy, clearly Umbro-Oscan forms. Contrary to Latin usage, these two dialects, the most important in ancient Italy, have *f* between vowels from an early *bh*, *dh*, as against Latin *b*, *d*; and Umbrian, Paelignan, &c., *ē*, *ō*, from an early *ei*, *ou*, as against Latin *ī*, *ū*. Thus *crefrat* (in the glossary) as against Latin *crebrat*, is Sabellic right of its vocalic consonant, an Umbrian form. And with this we must compare Ital. *bifolco* beside Lat. *bubulcus*; Ital. *taffiarsi*, " to feast," beside *tabulari*; *tafano*, " horsefly," beside Lat. *tabanus*; *bifalo*, beside Lat. *bubalus*. Further, Neap. *Ottufro*, " October," *morfemde*, " eye-teeth," Lat. *mordente*, &c. There is a special interest in cases like the French *mandrin* beside Ital. *manfano*. What has come down to us is *manpsur*, which is not Greek, its *ph* notwithstanding, but which owing to its *f* we must take to be Osco-Umbrian; while the corresponding Latin form would be **mandar*. The Latin supplies the French, the Osco-Umbrian the Italian form. As to the other instance, Varro points to *vella* beside *villa* as rustic, and to this we must add Ital. *stegola*, Sardin. *istewa*, Sp. and Port. *esteva* (**steva* for *stiva*), " plough tail "; Ital. *elce*, Sardin. *eligi*, Fr. *yeuse*, " holly " (**ilex* for *ilex*), or Ital. *pommice*, Fr. *ponce*, Sp. *pomes*, " pumice-stone " (**pomice* for *pumice*).

It must not be overlooked that the last word denotes an object found chiefly in Sicily and near Naples, that is, in the ancient seat of the Oscans. It will be clear that we are dealing chiefly with words connected with agriculture, and it is remarkable that those of our second category spread all over the empire, while those of the first were entirely, or almost entirely, limited to Italy.

As a parallel we may cite the vocabulary of North and South Gaul, which yields a number of Gallic elements, and one may safely infer that in the first few centuries after the Roman conquest these elements were more numerous than at a later stage, and there is in fact a definite justification for this inference. The so-called Endlichers glossary of the 5th century is a compilation, by a native of South Gaul, of Gallic words which were clearly at that time still current in the south of France.[2] And in this we have not only *dunum*, " *montem*," *cambiare*, " *per ire dare* " (Fr. *changer*); *caio*, " *bresiale sive bigardio* " (Fr. *quai*); *nanto* " *valle*," Savoy. *nâ*, " stream," but also *avallo*, " *poma*," which was lost in later times but is preserved in its derivative *amelanche*, " medlar."

Another Gallic word recorded by an ancient author is—*tegia*, " but " —still exists to-day with this meaning in the Venetian and Raetic Alps, and moreover plays an important part in toponomy—Fr. *Arthies* from Gall. *are Tegias*, " at the huts," N. Ital. *Tezze*; but in addition to Gallo-Romance it may have been in use in an appellative, and thence have passed into Basque—*e.g.* Basq. *tegi*, " hut." The permeation of the Latin vocabulary by Gallic elements dates from the time of the contact of Gauls and Roman forces. Many of these elements—*e.g.* *camisia*, " shirt "—are evidently used at so early a stage as to have penetrated into Rumania (Rum. *îmbrácă*, " put on," *cămeașă*, " chemise "); others again have scarcely, if at all, passed beyond their ancient limits, even those that Roman literature has preserved for us. It is true that Martial says—

> " Barbara de pictis veni bascauda Britannis
> Sed me jam mavult dicere Roma sibi,"

but only in France has *bachoue* been preserved up to the present, while so far no traces of *bascauda* have been established for Italy.

Glancing over the Gallic contributions to the Gallo-Romance vocabulary, we see at once that they belong to a considerable extent to the sphere of agriculture, and include among the implements mentioned it is chiefly vehicles of all kinds which have Gallic names. The record of Roman times supplies us with *benna*, *carpentum*, *carrum*, *caruca*, *agredum*, *petorritum*, *theda*, but *carrum* alone attained a firm footing *carruca* in the form of *charruca*, " plough," survives in France, and *benna* (Fr. *banne*, Ital. *benna*) in its ancient home. Under this heading we may perhaps add *taratrum*, " gimlet," in Isidore, Fr. *tarière*, Engad. *tarader*, Sp. *taladro*, Port. *trado*; Ital. *tarlo*, " fellow of a waggon-wheel," Sp. *tarmel*,[3] Engad. Gall. *tarinca*. With *caruca* we may class *soc*, " plough-share," and O. Fr. *raie*, Mod. Fr. *rayon*, " furrow," Gallic **rica* (cf. Cymr. *rhych*).

Further group is formed by *cervoise*, " beer," from Gall. *cerevisia*, O. Fr. *brais*, Mod. Fr. *brai*, " malt," *brasser*, " to brew," Gall. *brace*; *lie*, " yeast." Among the names of plants Gallic *betulla* has survived wherever the tree is common. Within narrower boundaries we find Fr. *if*, " yew," *saussaie*, " willow bed," probably **cassanus*, " oak," Fr. *chêne*, Prov. *casser*; Fr. *verne*, " alder " (cf. Ir. *fern* and the Gall. place-name Vernodubrum, " alderwater "); *beloce*, " sloe," *bulluca*, and S. Fr. *aranhon*, " sloe " (Ir. *áirne*). Plant-locations *marga*, " marl," as being in use among the Gauls as manure for soil, from the diminutive **margila*, Fr. *marne*. An agricultural measure was called *arepennis*, Fr. *arpent*. Fields were separated by a hedge—Prov. *gorce* (cf. O. Fr. *gort*, " fence "); a hedged-round piece of ground, Fr. *jardin*, Prov. *gardin*; Ital. *land*. Another method of demarcation was by means of hurdles, Fr. *claie*, Piedm. *cia* (cf. Ir. *cliath*); or of barricades, Fr. *combre* (whence the verbs *encombrer*, *décombrer*), which corresponds to a Gallic **combrosos*. Instead of fields the sheep and cows were kept whose milk yielded *mégues*, " whey " (Ir. *medg*). The wood needed for the erection of fences was cut with the " wood-knife," Gall. *vidubium*, Fr. *vouge*. We may notice further the group *braga*, " embrasure," " preserve," Prov. *brago* and the diminutive *bragila*, Fr. *breuil*.

In north Italy we find *fruda*, " torrent " (cf. Cymr. *frwth*), which is a parallel to *na* mentioned above; also Comasc. *dren*, " blackberry," Ir. *dréin*, " thorn," and (over a large part of north Italy) *bar*, " bunch," " tuft," O. Ir. *barr*. To single out a few words, there is Prov. *ban*, " horn," Cymr. *ban*; Piedm. *vinverra*, from a word that has come down to us as Latin, but is really Gallic: *vinverra*, Cymr. *gwyvre*, Gaelic *feoragh*, " weasel," and in the Rhaeto-Rom. dialect in Switzerland *carmun*, from a Gallic *carmon*, which is cognate with O.H.G. *harmo*, Mod. H.G. *hermelin*, " ermine."

In this way we might amplify examples, and it should not escape notice that we have to deal chiefly with substantives, with few adjectives and hardly any verbs.[1]

In precisely the same way the Spanish vocabulary must have been seasoned with traces of Iberian elements. But the process of elimination took place more rapidly and thoroughly in this case, so that the number of Iberian or Celtic-Iberian words that have resisted time and change is small. On a Latin inscription from Spain we find *paramus*, "plain," and *paramo* occurs to this day in this sense. As the Iberian does not know the sound *p*, the word cannot be Iberian, and must be Celtic.

In Isidore we find *baia*,[2] which should be read *baia*, as Sp. and Port. *bahia* prove—doubtless an Iberian word, since Fr. *baie* and Ital. *baia* are forms quite recently borrowed from Spanish. This *baia* is perhaps somehow connected with the place-name Bayona, in the *Ora Maritima* of Avienus. Less likely to be Iberian are Celtic rather than Iberian (cf. Sp. *losa*, Port. *lousa*, as well as Prov. *lausa*, Piedm. *losa*). Considering our ignorance of Iberian, and the pronounced colouring of Basque by Spanish words, it is not often easy to decide on which side the indebtedness lies when we meet with a word in Spanish and Basque whose etymology is still uncertain.

Much discussion centres round the question as to how far the pre-Romanic nations influenced the phonology of the Romans in the process of their assimilation. Opinions are strongly divergent. While G. I. Ascoli has repeatedly assumed influences of this kind on a large scale, the present writer is very sceptical.[3] It may be well to give the essential points.

Plautus uses *distennite* and *dispennite* instead of *distendite* and *dispendite*—forms he imported from his native Umbria. And like the Umbrians, the Oscans too pronounced *nn* instead of *nd*. Later we find this same change throughout the whole of South and central Italy, and even in Rome, whereas it is not observed in Tuscany, north Italy and other Romanic countries. We may therefore confidently assume that this is due to a reaction of the Oscan-Umbrian dialects. Similarly, in accordance with a habit Umbrian pronunciation to convert breathed plosives into voiced after nasals, *e.g. inenga* = Lat. *juvenca*; and similarly we have *cinque* in central and south Italy beside Tusc. *cinque* (*quinque*). But even in this particular the change affects not only the languages of ancient Umbria, but also those of the Oscans and Messapians, though again it must be admitted that we do not know what the pronunciation of the ancient Messapians was. And finally, we find the Latin *d* represented by *r* between vowels in the Umbrian pronunciation to convert breathed plosives into voiced after nasals, *e.g. inenga* = Lat. *juvenca*; and similarly we have *cinque* in central and south Italy beside Tusc. *cinque* (*quinque*). But even in this particular the change affects not only the languages of ancient Umbria, but also those of the Oscans and Messapians, though again it must be admitted that we do not know what the pronunciation of the ancient Messapians was. And finally, we find the Latin *d* represented by *r* between vowels in the Umbrian pronunciation of the ancient Messapians was. And finally, we find the Latin *d* represented by *r* between vowels in the sound which has a separate sign in the national alphabets and which in Latin is reproduced as *-rs*. And since the Paelignan alphabet too has a sign for a modified *d*, one may perhaps assume that in these districts *d* had a specialized sound as *th*, or *r*; and this view agrees with the fact that in the dialects of central and southern Italy *d* was pronounced sometimes like *r*, sometimes like *th*. And probably this sums up all we can safely assert.

It has always been maintained that French *u* (pronounced as German *ü*), derived from *ū*, is due to the influence of Gallic. The *u* (with modern sound) is identified with the whole area of the French language except Picardy, the Walloon, parts of Lorraine, Switzerland, and Piedmont, Genoa, Lombardy, the Grisons, Tirol and the northern part of the Emilia, but not Friuli, Venetia and Istria. On the other hand, the ancient *ū* became *i* in Cymric, to which it can be regarded as an intermediary step, that may therefore have existed in Gallic. But in the first place we must observe that Greek writers always render the Gallic *ū* by *ov*, never by *υ*; that the Romans too write *ū*, never *y*; and further, that over a large part of the area it came in compared by *eu*. Secondly, in Gallic inscriptions the combination CT is frequently replaced by XT, so that the Irish pronunciation *cht* (Ir. *nocht*, " night ") is as old as Ancient Gallic. And since the preliminary stage of the Fr. *fait* from *factum*, *nuit* from *nocte*, is likewise *cht*, it is natural to suppose a relation between these facts, and all the more because the Iberian Peninsula on the one hand, and a large part of the western and central area of upper Italy on the other, show an identical process; but in Venetian, central and southern Italy it is absent. Thirdly, initial *sc*, *sp*, *st* are in evidence chiefly in the ancient seats of the Celts—in northern and southern France, in Piedmont, Genoa, Lombardy and partly in Raetia, also in Portugal, but not as far as southern Emilia. At this point again evidence from the Gallic fails completely. Finally, an attempt has been made to trace back the general characteristics of the French and the Gallo-Romanic dialects of Italy to the peculiarities of the Gallic accent. It is assumed that there was a decided stress-accent, which brought about a strong emphasis of the initial syllable at the expense of the unaccented ones, with the result of a marked weakening of the unaccented vowels, and particularly of those following the stressed syllable. Here again we can only say that Gallic itself affords no evidence for this assumption, and that, on the contrary, this peculiar accentuation may be due to other reasons, unknown to us. To turn to morphology, the method of enumerating—as we find it, for example, in Fr. *quatre-vingts*, &c.—would seem to be Gallic, since it is common to all the Celts.

But even if we admit certain regional variations, all these were overlaid by an " Average Latin " which presents a number of essential features uniformly over the whole area, and which differed from the literary language. These characteristics (in historical sequence) are as follows: (1) Loss of final *m* in polysyllabic words (which we find exemplified in the very oldest inscriptions); (2) loss of the final *s* sound, a loss which dates from times of great antiquity (cf. *anser*), and at the beginning of imperial times was fairly common; (3) loss of *n* before *s* coupled with the lengthening of the vowel, for which Varro is evidence in his alternations of *mensa*—*mesa*; (4) the assimilation of *ns* to *ss*—*e.g. sassum* from *sursum* (Ital. *suso*, O. Fr. *sus*, Mod. Fr. *dessus*). Toward the end of the Republic *v* is lost before *u*—*e.g. vivus* instead of *vivus*, *rivus* instead of *rivus* (Ital. Sp. *rio*), *anticus* instead of *antiquus* (Ital. *antico*). In the first century A.D. *b* became *v* between vowels, thus merging itself into the latter sound, so that in examining the Romance languages it is impossible to decide whether the original was *v* or *b*. And this change spreads in sentences to the initial *b* (as in the inscription *mandue vibe lude e bene at me*), which leads in some cases to some uncertainty in the use of *v* and *b*. And lastly, we have the case of *cl* and *tl*—*e.g. veclus* (Ital. *vecchio*, Fr. *vieil*, Sp. *viejo*, Port. *velho*, Rum. *vechiu*) instead of *vetulus*; the reduction of *cl* and *tl* before *e*, *i* to *j* before *e*, *i* and to a single sound *j*, or rather *gj*, in consequence of which we have *diurnum* (Ital. *giorno*, Fr. *jour*); *juvenis* (Ital. *giovane*, Fr. *jeune*); *gener* (Ital. *genero*, Fr. *gendre*); *velosus* (Ital. *geloso*, Fr. *jalous*), all represented by *gelosus*.

To turn to vowels, we must first notice that, according to Varro, *ae* was pronounced *e* in the country, but that in the cities the diphthong was maintained at first, while the simple sound was rarely admitted during the first century A.D. Even in 54 A.D. we find an instance of an early spreading of a rustic pronunciation, we have in another case a victory for that of the bourgeoisie and aristocracy. *O* for *au* belongs to Umbrian, Volscian and vulgar Latin, which by the Emperor Otho Appius Claudius Lucher changed his name to Clodius when he deserted the patricians and went over to the plebeians. And there is other evidence of this change of sound. But in the inscriptions of the Empire *o* for *au* is very rare, save in proper names, and the Romance languages have preserved the sound of *au* to this day with little or no change (cf. Rum. *aust*, Prov. *austr*, Port. *ouvir* from *audire*), or only changed it to *o* at a later stage (cf. Fr. *chaud*, where *ch* could only have arisen from *a*, not *o*), so that one may assume that the " Average Latin " always preserved the *au*.

Then, without entering into detail, we must mention the prothesis of *i* before *st*, *sp*, *sc*, a phenomenon which arose, judging from the inscriptions, in the 2nd century A.D., but which finds it at the beginning of the sentence, and also within it after consonants, but not after vowels; *e.g. illa spata*, but *illas ispatas*; *istâre*, *istâ*, but *tu istâs*, &c.

Most important of all are the modifications that affect the accented vowels. Each vowel can give a new sound to the language as a whole. In Latin and even towards the end of the Republican age, vowels varied solely according to their quantity, *e.g. ā* was longer than *ă*, *ē* longer than *ĕ*, but the vowel sound was the same, or at any rate the difference was in quality between one vowel and another have been quite insignificant, seeing that Cicero and Quintilian wished the word *divisio* to be avoided in speech from motives of decorum, because of the likeness in sound to *vissio*. Quantity was not influenced by the number of the consonants following: *actus* was lengthened with *ā*, factus with *ă*, &c. In the course of the 1st century approximately quality was differentiated in addition to quantity in all vowels except *a*—short vowels being pronounced with an open, long ones with a close, sound. The written language expresses this change by writing *ae* for *ĕ*, *i* for *ē*, *e* for *ĭ*, *u* for *ŏ*, *o* for *ū*. In addition there are statements of the grammarians, though they mention only the double pronunciation of *e* and *o*, not that of *i* and *u*. It is probably in the case of *e* that the first sense-loss occurs. Further change took place, by which all vowels were lengthened before a single consonant, and shortened before two or more, *e.g. stīlis* became *stīlis*, while *lĕctum* became *lēctum*. But the older qualitative long ones were maintained, so that even now *stīlis*, or *lĕctum* and *lĕctum* did not contain the same vowel-sound, the former having a close, the latter an open, vowel. (Cf. Ital. *sete*, *vile*, Fr. *soif*, *vis*, Sp *sed*, *vid*; or Ital. *letto* and *letto*, Fr. *toit* and *lit*.) It is probable that the Gallic accent had a certain influence in this matter as corruption vocalium vel productione non judicant,"[4] and the uncertain practice of the poets in the matter of quantity points to the breaking down of the old conditions. This was not the end of the process of development. But the most important stages were already accomplished. In this, too, we are concerned with changes affecting the whole Romance region. The final step was taken when open *i* and close *e*, open *u* and close *o*, were reduced to one sound which may be called close *e* or *o*. That this step was not taken in the eastern regions, excepting as to *e*, and Sardinia remained completely unaffected (*v. infra*).

[1] Cf. R. Thurneysen, *Keltoromanisches* (Halle, 1885); W. Meyer-Lübke, *Einführung in die romanische Sprachwissenschaft*, p. 38 ff.

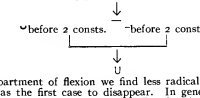
The vowel-system that developed in course of time is thus as follows:—



In the department of flexion we find less radical changes. The genitive was the first case to disappear. In general its functions were usurped by the preposition *de*. But for the possessive sense the dative was adopted, cf. HIC REQUIESCUNT MEMBRA AD DUOS FRATRES, in an inscription from Gaul. The accusative serves for the case after prepositions under all circumstances, and therefore even in places where the older language used the ablative, *e.g. magister cum suos discentes* in a Pompeian inscription. Nouns of the third declension with monosyllabic nominative, *e.g. lens, stirps, ars, &c.*, form a dissyllabic stem, *e.g. lente, stirpe, arte*, &c. The dividing line between masculine and neuter, at all times doubtful, is frequently broken down, especially in the singular, *e.g. cubitum* instead of *cubitus*, and there are converse cases. The absorption of the fourth declension by the second is almost complete. In the declension of the pronouns the genitives *ipsuius, illuius*, dat. *ipsui, illui*, fem. *illaeius, illaei*, are found in several inscriptions, but do not belong to the common language, since, as we have already said, they are not at home in the Iberian peninsula. On the other hand, all the Romance languages show that **eo* took the place of *ego*. The use of *ille* as personal pronoun, and also of *ipse*, and of both these forms as articles, dates from ancient times. We find a parallel to the weakening of these demonstratives in the amalgamation of the pronominal combinations to be found as early as Plautus with *ecce, eccum*, which results in new forms, *e.g. ecceille* (O. Fr. *cil*, Mod. Fr. *celui*) or *eccuille* (Ital. *quegli*, Sp. *aquel*); *eceiste* (Fr. *ce-* (>) ; *eccuiste* (Ital. *questo*, Sp. *aqueste*). In the verb-system a characteristic change is the disappearance of the future and passive forms, the explanation of the phenomenon in both cases being psychological rather than formal. Popular language is not familiar with the future, and replaces it by the present—or, more strictly speaking, the vulgar person deals only with the present or the past. The case of the passive is similar. The transposition of active into passive is too complicated a process for the simple mind. The object of the action remains the object, and the subject of the action is not known, they resorted to the indefinite third person plural, *e.g. vendunt casam* is the popular mode of expressing *domus venditur*. And further, the perfect *amatus sum* was replaced by *amatus fui*, since *fui* was a perfect and could take over the function of a present. For the moment, all other tenses and moods of the verb were preserved, only of the infinite forms, the gerundive, perfect infinitive and the two supines disappeared. Of the gerund nothing remained but the ablative. In compensation, however, we soon find a form *habeo cantatum* springing up beside *cantavi* in use as perfect, *e.g. litteras scriptas habeo* meant in the first instance, "I possess written letters," with nothing implied as to who wrote the letters; but later this usage is confined to cases where the owner is also the originator of the state of things expressed in the participle, and thus it attains to the force of a perfect.

There is little change in the formation of individual verb-forms. It is natural that the infinitives *esse, velle, posse*, being exceptional, should have been brought into line with all the rest. This was done by simply adding *-re* on to *esse* (Ital. *essere*, Fr. *être*), while the other two were constructed from the forms of the verb whose ending was accented, or from the perfect, *e.g. volebam, potebam, volui, potui*, gave rise to **volere*, **potere*, on the analogy of *docebam, docui, monebam, monui, nocebam, nocui*, &c.; with infinitives, *docere, monere, nocere*, &c. Ital. *volere, potere*, Fr. *vouloir, pouvoir*, Sp. and Port. *poder*, Rum. *vrea, putea*). In other infinitives there is much confusion, especially as between *-ēre*, and *-ĕre* verbs, noticed by the Latin grammarians themselves; we have evidence, too, that at an early stage the infinitive form in *-ēre* was lost, and confusion of *-ēre* and *-ĕre* conjugation, *e.g.* Plautus has *morire* (Ital. *morire*, Fr. *mourir*, Sp. *morir*, Rum. *muri*); Lucretius has *cupire*; Cato has *fodire*, &c. For the rest we may note as important that perfect-forms without *-s*, such as *-astī, -avit, -arunt*, instead of *-asti, -auit, -auerunt* singular, *e.g.* *-it* instead of *-ivi*. A new type in *-idi* arose on the model of *vendidi*, and then affected other verbs in *-ndere, e.g. descendidi* (in Gellius), *prendidi* (in the grammarian Probus) and in general verbs of the third conjugation. But the process was slow, so that it can scarcely be said to have been common to all the languages.

In the formation of words the popular language probably had far greater freedom than the written language. We find not only a marked preference for diminutives in *-ulus* and *-ellus*, but many other types are established, or new ones created. And as the chief ones we must mention the post-verbalia (nouns constructed out of verbs). Thus *pugnare*, being itself derived from *pugnum*, then produces *pugna* (on the pattern of *planta, plantare*), and these formations soon became extremely common, and not only in *a*- verbs, but also in *ĕre*-verbs, cf. in particular *dolus*, "grief" (not to be confused with the ancient *dolus*, "craft"), *C.I.L.* x. 4510 (Rum. *dor*, Ital. *duolo*, Fr. *deuil*, Sp. *duelo*). As examples of other types we have *-ura* beside *-or*, which we can trace back to *arātura*, a contamination of *ardor* and *arsura*, which extended to *fervura*; also to *strictura* beside *strictus*; *directura* beside *directus*, when the old participles had separated both in form and in meaning from the verbal-system and had become adjectives, we have *-tūdo* and *-mentum* to the stem. Another feature of the verb is the gradual retreat of old simple formations in favour of derivatives from the participle, *e.g. cantare, adjutare, ausare*, &c., in place of *canere, adjuvare, audere*; then for denominatives *-icare* and the like, *e.g. vocare* (>) *-ŏgare*, Sp. *-ear*) which, coming in with Christianity, was soon added on to Latin stems, *e.g.* (in Fulgentius) *citheriziantium aut libizantium*.

Among points of syntax we may single out the replacing of infinival sentences (following verbs of feeling, sensing, hearing, wishing) by clauses with *ut, quod* or *quia*, whence Ital. *che*, Fr. *que*. The latter particle spread most rapidly, and soon took precedence over the other conjunctions, not only in the cases just mentioned, but in introducing object-, subject- and final-clauses.

It is in the vocabulary that it is most difficult to define the relations of the common and the literary language. So much of the Latin vocabulary as appears over the whole Romance world must of course form the ordinary language which was used from the mouth of the Ebro to that of the Danube, but it is by no means all. It is more interesting to inquire whether anything can be reconstructed from Romance, and, if so, how much? The existence of a form *aiutare*, for example, mentioned above (Ital. *ajutare*, Fr. *aider*, Sp. *ayudar*, Rum. *ajutā*) and appearing in all the Romance languages, is indisputable. Between Fr. *grolle* ("crow"), Lyon. *grola*, Piedmont. *agraulla*, Ital. *grolo*, *grola* (with change of order) Abruzz. *raulu*, Rum. *graur*, the connexion, both in form and meaning, is so close that one is led to assume a common basis for all these words. This basis is **graulus, -a*, and it is safe to assume that such a word goes back to Latin, though nevertheless it was not found in the western regions. Rum. *afiā*, Sic. *asciari*, Sp. *hallar*, Port. *achar*, Gris. *aflār*, Dalm. *aflutr*, "to find," all point to *afflare*, and in this case, too, the change in meaning may be safely ascribed to Latin, only in this case Gaul is not included, cf. Ital. *avere*, Fr. *aube*, Prov. *aubo*, Sp. *alabe*, "paddle-board," in Rum. meaning also "wing," and in Sp. also "the wickerwork on both sides of a vehicle," in Port. "the wing of a parapet," point to a form **alapa*, "wing," "wing" and Latin must have belonged to it. It was language, even though no trace of it survives in Italy. Many other points could be enumerated, but problems are involved which have as yet hardly been taken up.[1]

In dealing with the relation of this common language into a number of individual languages there are still further points of view to be considered. Before we can touch upon these, we must first take a general survey of these languages. There are altogether nine—Rumanian, Dalmatian, Italian, Rhaetian, Sardinian, French, Provençal, Spanish and Portuguese. Of these nine languages, Dalmatian is now extinct, and even what we learn of it from the ancients is very meagre. On the one hand, Ragusa and the islands of Dalmatia must have retained the Latin of commerce in literature which would have brought about a *floruit* in the language such as Provençal has to show. Neither, on the other hand, was its political independence stable enough, nor was it sufficiently remote to escape intercourse with the rest of the world, like the Raeto-Romanic dialects. The hordes of Slavs pressing forward from the inner regions of the *hinterland* soon put an end to the Romanic civilization, first in the country and then in the towns. Italian of the more ancient type, both in point of culture and of commerce and of politics, on a higher level, regained their power over the Dalmatians by occasional conquests, chiefly over the cities, the result was of course all in favour of the Venetian dialect. On the island of Veglia alone there were still living about the middle of the 19th century a few people who still spoke Old Dalmatian. The last of these is now dead. Our approximate notions of this language are gleaned from the speech of these natives of Veglia, from a few more ancient monuments, place-names and words from the Romance elements in the Servo-Croatian dialect of Ragusa.[2] We may begin by reducing these nine languages to seven groups—Dacian, Dalmatian, Sardinian, Italian, Gallic and Iberian. The most striking peculiarity of the first three of these groups is the absence of Germanic words in the vocabulary. In other words, they were withdrawn from the influence of the general "Average-Latin" before the beginning of the more decided permeation of Latin by Germanic elements. There are other signs of their antiquity. In Central Sardinian *c* before *e, i*, and

[1] Cf. G. Gröber, *Archiv. f. lat. Lexicographie*, i. 204 ff.

[2] Cf. M. G. Bartoli, "Das Dalmatische" (1906), (*Schriften der Balkan-Kommission der K. Akademie der Wissenschaften*, linguistische Abteilung, Bd. iv. and v.).

in Dalmatian *c* before *e* are always preserved as velars, and in south Sardinian and in Rumanian the palatalization is more recent, and secondary. The preservation of the tenues between vowels as breathed forms is peculiar to Rumanian Dalmatian, but as north Sardinian used breathed lenes in their place, while the dialect of Nuoro, in Sardinia, preserved the fortes, we have every ground for assuming that central and south Sardinia also possessed either fortes or lenes in earlier times. Moreover, south Italy, which was a large part of central Italy as far as the Apennines replace the old Latin tenues either with breathed fortes or breathed lenes, in marked contrast to the regions of the Po, to Gallic and the Iberian groups. All these phenomena perhaps happened at the same conjunction with two historical events. By the abandonment of the province of Dacia (in A.D. 270), Rumanian lost its close touch with the languages of nearest affinity; and the division of the empire under Diocletian and Constantine necessarily entailed a linguistic division. At that epoch the linguistic conditions were roughly as follows:—

The principal changes in the vowel-system, especially the development of qualitative beside quantitative variations, had been accomplished, but there was still a difference between *ĭ* and *ę*, *ŭ* and *ǫ*. The old future had disappeared, and no tendency to produce a substitute had as yet appeared. The Latin pluperfect subjunctive still maintained its old usage, probably also the imperfect subjunctive and the future perfect. In declensions the type *membrum*, *-a*, had begun to spread; but *corpus*, *-ora*, was still in existence. Sardinia seems to have been, perhaps owing to its isolation, the first to have reached *ĭ* and *ŭ* unbroken. For the rest it was in consent with differentiating *ĭ* and *ŭ*, but it also retains *-s*, whereas the East-Rumanian and an Italian group suppressed *-s*, and in consequence also the difference between the nominative and the accusative singular. The old type of neuter nouns with *-a* as plural masculines in *-u* made it possible for the types *membra* and *corpora* to spread at the expense of the type *loci*,—a possibility of which South Italian and Rumanian made the fullest use.

On the given basis the groups took to carried on their various developments, influenced partly by contiguity of other idioms, partly by causes unknown to us. Among neighbouring idioms, Greek had by right of its degree of civilization and its political power great influence in giving Rumanian and South Italian a similar direction, and that at a time when every trace of a geographical connexion between these two language-groups had long vanished. Thus, the replacing of the construction "I will come" by "I will that I come" took its rise in Greece and was passed on to Rumania and Apulia. The rise of the new future *vŏlu cănta*, "I will sing," in Rumanian is probably due to Greek influence. In Latin itself both *ille caballus* and *caballus* are found, the position depending on the accentual conditions of the sentence. Then the loss of *s* made room for the form *caball*[*u*] *ille* with a victory for the inverted order. In Rumania along this was the actual process, under the influence of corresponding speeches, Illyrian or Bulgarian, or perhaps independently of them, in this latter case serving as prototype to these languages. Dalmatian and South Italian, on the other hand, were so closely connected with the languages that surrounded them, therefore probably the article that in this particular they separated from Rumanian. This is not the place to show how the Rumanian vocabulary and the structure of words was permeated markedly by elements from Slav, but markedly by elements from Turkish, Modern Greek and Hungarian, which gave the language an alien appearance in point of vocabulary.

In its consonants, and, as far as one can judge, in its morphology, Dalmatian has preserved the stamp of antiquity. But in its vowel-system there are marked changes, especially in the substitution of diphthongs for close vowels, *e.g.* changing *a* to *e*, *u* through the *ŭ* stage to *oi*, *ĭ* to *ei*, *ǫ* to *au*, *e* to *ai*. Diphthongs such as they appear also in Istrian and Abruzzian, so that we must presuppose some sort of connexion.

It may be that Sardinian took another course of development because (A.D. 458) the island was rent from Rome and incorporated in the Vandal empire of Carthage. Again, the Vandals, like the sympathies of Sardinia were alienated from Italy, and turned on the one hand towards Africa (and unfortunately we have no information as to the "latinity" of this region), on the other towards the Iberian peninsula. These connexions were not lasting, but later we find Genoa and Pisa fighting at intervals for supremacy in Sardinia, their organization being in many points identical with that of the island. On the whole, this new combination has not materially affected the Sardinian peculiarity in keeping the old vowel system (of great antiquity), as well as the velar pronunciation of *c* before *e*, *i*, remained unchanged, neither did they get as far as to adopt the future-forms current on the mainland; on the contrary, the Sardinians arrived independently and later at their usage of *depo cantare* or *kaia a cantar*. But the use of *ipse* as an article in Sardinia, Mallorca, and in the earliest times also in the Catalanian-Gascon area, clearly proves the linguistic connexion which for a time covered this area, and we may also see some connexion in the fact that the lenes became voiced between vowels. On the whole, and in spite of everything, Sardinian is the most archaic of the Romance languages. Owing to its retaining *s*, it has failed to extend the *membra-tempora* types of formation, indeed it has almost rejected them entirely. It has retained the imperfect subjunctive to this day, and as a corollary it has lost the pluperfect of that mood. And though every Romance language has a number of Latin words that are not common to the rest, yet in this language the number of these ἅπαξ λεγόμενα is greater than in others, and it is noteworthy that these have been preserved such common expressions as *domo*, "house," *mannu*, "great," with other examples.

The East-Rumanian group (coupled with Sardinia) finds its counterpart in the great group based upon the Latinity of Gaul, the Iberian peninsula, and north Italy. This group contains a considerable number of fundamental peculiarities in phonology, morphology and vocabulary which prima facie lead us to assume a fairly long period of contact.

The most striking of these peculiarities is the final change of the vowel-system, *i.e.* the loss of the distinction between *ĕ* and *ĭ*, between *ŏ* and *ŭ*; then the change of breathed plosives and fricatives between vowels into voiced plosives and fricatives respectively; the use of the pluperfect subjunctive instead of the pluperfect subjunctive (Ital. *cantasse*, Fr. *que je chantasse*, Sp. *cantase*, Port. *cantasse*), the formation of a new future from the infinitive of the verb and the present, or (as the case may be) the imperfect or perfect of *habere*, *e.g.* Ital. *canterò*, *canterei*, Fr. *je chanterai*, *chanterais*, Sp. *cantaré*, *cantaria*. If it is safe to assume that this latter formation had its origin in places where we find it most firmly rooted, we are led to assign it to the north of France. For it is only there that both great groups, in the transition, inseparably (*quoad nos*) at the beginning of our record. In the old Provençal the two constituent parts are still separable; in the oldest Spanish and Portuguese their position is not fixed (*i.e.* the auxiliary may follow or precede the infinitive). In north Italy we find the forms of the type *amo*, "I behave" + *harpa*, "harp," Ital. *arpa*, Fr. *harpe*, Sp. and Port. *arpa*; *medus*, "mead," which is found in Antimus and Isidore, but disappears later (cf. Fr. *mies*, "mead"); *waidanian*, Ital. *guadagnare*, Fr. *gagner*, Sp. *guadañar*, and Port. *ganhar*.

The further steps in the process of differentiation were conditioned by the breaking up of the Roman empire by the great migrations. The establishment of the rule of the Franks in north Gaul, of the Visigoths in south Gaul and the Iberian peninsula, loosened old ties, created new nations and in consequence new and independent groups of languages.

The Iberian group was marked primarily by a striking simplicity in its flexions. The three-case system was given up at an early stage, even in prehistoric times, and has left no traces whatever. Owing to the preservation of *-s* the type *membra* was doomed to perish, and this we find, from the beginning of our record and therefore presumably soon after the great cleavage took place, the prevalence in nouns of the following simple rule: sing. *-e*, *-o*, *-a*; plur. *-es*, *-os*, *-as*. The loss of the dative may have some connexion with the fact that the form for the 3rd personal pronoun had not yet established itself; and the desire for uniformity may have ousted the nominative of *o*- stems. There are analogies in the conjugation. The pluperfect indicative was preserved, even though with a Latin significance, whereas the region of flexion much simplification took place, *e.g.* uniformity of accentuation in the three conjugations, marked reduction of the *s*- perfect and *u*- perfect forms and a great reduction in the number of participles.

The vocabulary is characterized by certain archaisms, and still more by the fact that a series of common ideas are rendered by new words limited in use to the Iberian peninsula. Thus we have *querer* (deriv. uncertain) for *amare*; *guerir* (*guarire*) instead of *manere*; *callar* (deriv. uncertain) for *tacere*; *hablar* (*fabulare*), "to speak"; *llegar* (*plicare*), "to arrive"; *dejar* (?) instead of *laxare*, &c. Further, we may mention the preference of *tenere* to *habere* even for the formation of perfect-forms, of which examples are to be found in Orosius, and of *magis* to *plus* for expressing comparisons, for which also we may find examples in Latin authors or the Iberian peninsula. The influence of the Goths or Suevi and Vandals on the vocabulary is inconsiderable, and when we trace it it is not easy to explain; *e.g.* Galician *laverca*, "lark," is clearly from a western Gothic **lawerka*, but it is difficult to see why the name for this bird should have been supplied by the Germanic. To sum up, one may say that the Latin of Iberia was a self-contained language, at first showing little modification by influences from Iberian, or later by those from Germanic; further, that its development was slow, and that it aimed at simplicity.

At the present day there are three great groups, running almost

[1] See Thielmann, in *Archiv f. lat. Lexikogr.* ii. 48 seq.

parallel from N.E. to S.W., e.g. Catalanian on the coast of the Mediterranean, akin to Provençal, Spanish in the centre, Galician-Portuguese on the Atlantic. From the historical point of view one part stands by itself as Gothic-Romance, the other as Suevo-Romance. But the national and linguistic history of the times and countries we are dealing with is still very obscure. The difference between the two idioms is chiefly one of phonetics, while in their morphology and vocabulary they do not greatly differ. Spanish may be described as a language which favours vowels at the expense of consonants, and which therefore shows, more than other Romance languages, a weakening even of initial consonants. It changes voiced stops first to fricatives, then to mere noises or "aitches" which finally disappear altogether, and *s* before a consonant or finally, becomes *h* (through a middle stage *š*) and is finally lost. The preferential treatment of vowels, however, entailed not a single change except that *h* was changed to the diphthong *ue* to set all else were preserved, *e.g. dies (decem), tiempo (tempus), bueno (bonus), fuerte (fortis)*; but *haver (habere), lid (lile), corona (corona), humo (fumus)*. The weakness of the initial sound is shown in *enero (ianuarius), hazer (facere), llamar (clamare* with a transitional **clyamar), llaga (plaga)*, &c. The written language has no sign for voiced ploisives between vowels, but *-atho* or *-ao* is spread over nearly the whole region.

In contrast to Spanish, Portuguese has a strong pronunciation of initial sounds, and so does not go beyond *janeiro, fazer*, and changes *cl* (with transitional form *cly, ky*), and also *pl* (via *ply, py*) to *ch, e.g. chamar, chaga*. On the other hand, it has a careless articulation of vowels and consonants, and consequently no diphthongs. In unaccented vowels are weakened, as finals almost to vanishing point. It shows further a fusion of nasals with the preceding vowel, so as to form a nasal vowel, and this new nasality takes the colour of the preceding vowel, *e.g.* mas *mantho*, but *mantho, nos commemos uma*, otherwise before a vowel the nasal finally disappears; *cheio* and *cheia*, from *plenus, plena*. Similarly *l* was lost between vowels, e.g. *ceo (caelum)*; before consonants it became *i*, or *u, e.g. outro (ulterus), coitado (caitadus)*. Between vowels *n* was also wrong, in between vowels, and these are sometimes made fricatives. In relation to the somewhat careless articulation we note a marked reaction on accented vowels by the final vowel (*e.g. novo* has a close vowel, *nova* an open one), and also by following consonants: *i* velarizes, *s* palatalizes preceding sounds, hence *estas* pronounced *istas*, "thou art," with reduced *i*, but *devedor (debitor)*, "debtor," with reduced *e*. Lastly, the Portuguese words is not sharp—the interaction of initial sounds and finals being very striking. *Deveder* has a dissive *d, a devedor* has a fricative; *istas* has a breathed *-s*, but *istas nos ceus*, "thou art in heaven," has a voiced *-s*; *seja*, "be," has a reduced *a*; *seja o nome*, but *o nome*, but *seja o nome* is pronounced *sej o nome*, with an open *o* from *a+o*, &c.

The separation of Gaul took place likewise in the second half of the 5th century, when the Visigoths had settled down in the south, the Burgundians in the east, and the Franks in the north. This type of language that was evolved here is distinct from Spanish primarily and principally in the loss of final vowels except *a*, or, when the formation of the word was incompatible with this loss, in a weakening of it. On the whole declension is more conservative. Nowhere are the old case-endings so clearly preserved as in this region, *e.g. reis*, "king," but *la rei fille (regi filia)*, "the king's daughter"; *veil le rei, videi regem"; danel le rei, " donat (dat) rei*. These are the modes of expression, and they have till far into the literary period. But at an early stage there was a breach between the Franks of the north and the Burgundians of the east on the one hand, and the Visigoths of the south on the other. For while the latter (the Visigoths) retained the old system of accented vowels, the former changed *ĕ* to a diphthong *ie, ŏ* became *uo, we*, and moreover *ĕ* and *ĭ* became *ei, ŏ* and *ŭ* became *ou*; *a* was changed to *a*, assuming that these vowels were long in accordance with the Latin pronunciation, *e.g.*—

	Lat. debere	nepote	pede	mola	pratu
North Fr. devoir	nevout	piet	muele	pret
South Fr. dever	nebot	pe	mola	prat

The northern group, moreover, weakened the consonants still further. *D* and *g*, secondary consonants from *t* and *c*, disappear like the primary ones, and thus *pratellus* becomes *preau*, S. Fr. *pradel*; *advocatus* becomes *avoué*, S. Fr. *avogat*; a secondary *p* (from *b*) becomes *v*, as we see by the form which replaces *nepote* above. If we are right in ascribing this to the effort to stress the accented vowel at the expense of the other constituents of the word, we may take this to be connected with the weakening of *a* where final, and between two consonants, *e.g.* N. Fr. *aimt* from *amat*, as against S. Fr. *ama*; or in one case *armëure* (Mod. Fr. *armure*), in the other *armadura*, from *armatura*.

Parallel to the preservation of *-s* on the one hand, and the close following of the old flexions on the other, we find the type *membra* preserved at first, though not spreading, whereas the *tempora*-type is abandoned. In the verb the variety in Latin perfect forms is still fairly well preserved, though there is a distinct extension of the *u*-perfect and the *dedi*-perfect. As we might expect, the vocabulary seems to be strongly coloured by Germanic elements of Frankish, Burgundian and Gothic origin.

The Raetic dialects, in their prehistoric phase, are less clear than others. Their contact, at an age nearing the Carolingian, with the French of the south-east in Valais seems to have caused a similar process of growth, especially as they change *e* and *o* into the diphthongs *ei* and *ou*, leaving at the same time the consonants more intact. At an early stage the inroads of the migrating nations cut off Raetia from the Po valley, and the pressure of the German arms severed its union with the Romance-speaking nations of the west. Thus isolated it was free to follow its own course. This language also preserved at first the three cases and the type *membra*, the latter being developed later freely in use as a collective plural. But its further development was checked by the Lombards and Venetians.

But the most difficult problems are those that arise in Italy. Though one may say generally that the dialects of the region of the Alps, the Riviera of Liguria, belong to the types of north and western Romance, that is to say that the breathed plosives between vowels become voiced, yet they approach the typically Italian groups by their loss of *-s*. This means that when the whole Italian peninsula was separated from Gaul as waste from Iberia (after the close of the 5th century) and became again one homogeneous whole, the forms without *s* found their way into the north of Italy only slowly, so that *s* has remained in the west, *i.e.* in Piedmont, in monosyllabic words to this day, *e.g.* "thou hast," *as*, "thou are"; the same rule prevailed in older times in the east, in Venice, and there the *s* was also preserved (in questions) in polysyllabic words, *e.g. vensi-tu*, "comest thou?"; and the old form maintained itself in Istria, Genoese in the singular, "art thou?" The loss of *s* and consequently of the case-endings of nouns, "art thou?" The loss of *s* and consequently of the case-endings of nouns, "art thou?" The loss of *s* and consequently of the case-endings of nouns

of Gothic is the change of *ē* to *i*, so that it has names ending in *-mir*. Of these we find no trace whatever in Italy, on the contrary we find *Gundimar, Ildamar*, &c. Then we have abbreviated forms in fam. *e.g. Gaudasco, Albizzo*, &c., which are characteristically barbaric but not Gothic ones in *-ila*. There is no parallel to all this in the Iberian peninsula. As we have already said, the Gothic contribution to the vocabulary is very slight. But on the other hand in the 11th century the great majority of proper names is Gothic, *e.g. Alfonsus (Hadusfonsus), Gundomiras, Recimirus*, &c.; or *Recila, Fafila*, or *Elvira*, O. Port. *Gelvira*, Goth. **Gailavira*, and scores of others, all proving the great influence of Gothic.

And lastly, France possesses the largest number of Germanic elements in its vocabulary, due to the Frankish race. Frankish is Gothic; refer to house-building; *gudcher* from *waskyan, broder* from **brusdan*, point to the occupations of women, and *danser* from *dinsan* and O. Fr. *treschier*, " to dance," from *treikan*, " to thresh," i.e. their unsurmounted. Norse work is probably denoted further in *rouir, rotjan*, and E. Frank. *naisier, natjan*, " to net "; the same remark applies to the dyeing of cloths (Fr. *touaille*, Engl. " towel, " from *thwahila*), and ribbons (*bande* from *binda*) with *guède*, " woad," and other colouring matters, whence we have, *e.g., brun, bleu, blond, blanc*.

But while the vocabulary has had its accessions drawn from various races, the proper names show the same rules as in Italian, *i.e.* Frankish gains the supremacy, and has a certain relation to various tendencies in the developments of civilization. And under this head the most important point is the really enormous influence which France (both south and north) has exercised on all the Romance countries, just as she has on the literature—a fact hitherto which has hitherto not been duly recognized. The first traces go back to the invasions of Charlemagne already mentioned. To instance only one, we have *schiavono*, " justice, alderman," which cannot be derived directly from the German, as is shown by the *v*. The second important period is the age of chivalry and the literary tendencies centring round it. A word like *budriere*, " baldric," is derived from Fr. *baudrier*, not directly from Germanic *Baldrich*; Ital. *banda* goes back to Fr. *bande*, and this to Germ. *binda*; Ital. *giallo* is not from *galbinus* but from O. Fr. *jalne* (Mod. Fr. *jaune*), derived from that word, &c. But it seems that in one of the prehistoric periods the Tuscan vocabulary was strongly affected by forms of the Gallo-Roman type. Whereas in the Iberian peninsula, in Sardinia, in south Italy, Rumania and Rhaetia *dies* survives, in O. Fr. *di* has been almost completely ousted by *jour*, but in Tuscan and the Italian literary language we find *giorno* and *di* by my side. Thus *pensare* is derived from Latin *salutare* from O. Fr. *saluer*. On the whole, Portuguese seems to possess more of these Gallicisms than Spanish, history supplying a simple explanation.

Italy too yielded its contributions, especially in the 15th and 16th centuries, many military terms (noble and ignoble), *e.g.* French *carogne* and *canaille; poignard*, " dagger," from Ital. *pugnale*, instead of O. Fr. *poignel*; but *pugnale* from *pugnus*, " fist," and many others that have become common property. But the influence of the Iberian peninsula on the contrary was not so strong as to be more than sporadic; the Sicilian and Neapolitan vocabularies alone are more closely akin to it, which is most easily explained on the ground of their political and commercial relations.

As to the Romance languages beyond Europe we have but little to say. There is a distinction to be made between Creole and genuine Romance. Belonging to the latter we have the French of Canada, the Spanish of Central and South America, the Portuguese of the Brazils. Speaking generally we may say that the particular languages retained the form of the language in the 16th and 17th centuries, that is to say that of the time of the immigrations, and that they developed along the lines already established. Thus in Mexican Spanish the use of *d, g*, between vowels, of *s* before consonants and as a final, has been carried further than in the mother-country. There are no proved traces of any noticeable influence from the languages of the natives.

LITERATURE.—The real founder of scientific Romance philology and linguistics is Friedrich Diez, in his *Grammatik der romanischen Sprachen* (3 vols., Bonn, 1836–42), and *Etymologisches Wörterbuch der romanischen Sprachen* (3 vols., 1852). All questions concerning Romance philology and the historic grammar of the different Romance languages are treated in G. Gröber's *Grundriss der romanischen Philologie* (2nd ed., Strassburg, 1906), and in W. Meyer-Lübke's *Grammatik der romanischen Sprachen* (4 vols., Leipzig, 1890–1900): *Einführung in die romanische Sprachwissenschaft* (2nd ed., Heidelberg, 1909). The principal magazines devoted to the subject are *Zeitschrift für romanische Philologie* (ed. Gröber; since 1877); *Zeitschrift für romanische Sprache und Literatur* (ed. Behrns; since 1879); *Romanische Forschungen* (ed. Vollmöller; since 1885); *Archiv für das Studium der neueren Sprachen* (since 1846); *Romania* (ed. G. Paris and P. Meyer; since 1872); *Archivio glottologico italiano* (ed. G. I. Ascoli; since 1873). The great development of Romanic philology after Diez is due principally to A. Tobler, G. Gröber, W. Förster and H. Suchier in Germany; A. Mussafia (d. 1905), H. Schuchardt in Austria; G. Paris (d. 1905), P. Meyer in France; G. I. Ascoli (d. 1907), and F. d'Ovidio in Italy.

(W. M.-L.)

ROMAN DE LA ROSE, a French poem dating from the 13th century. The first part was written about 1230 by Guillaume de Lorris (*q.v.*), whose work formed the starting-point, about forty years later, for the more extensive section written by Jean de Meun (*q.v.*). Guillaume de Lorris wrote an allegory, possibly of an adventure of his own, which is an artistic and beautiful presentment of the love philosophy of the troubadours. In a dream the Lover visits a park to which he is admitted by Idleness. In the park he finds Pleasure, Delight, Cupid and other personages, and at length the Rose. Welcome grants him permission to kiss the Rose, but he is driven away by Danger, Shame, Scandal, and especially by Jealousy, who entrenches the Rose and imprisons Welcome, leaving the Lover disconsolate. The story, thus left incomplete by its inventor, was finished in 19,000 lines by Jean de Meun, who allows the Lover to win the Rose, but only after a long siege and much discourse from Reason, the Friend, Nature and Genius. In the second part, however, the story is entirely subsidiary to the display of the author's encyclopaedic knowledge, to picturesque and poetic digressions, and to violent satire in the manner of the fabliaux against the abuse of power, against women, against popular superstition, and against the celibacy of the clergy. The length of the work and its heterogeneous character proved no bar to its enormous popularity in the middle ages, attested by the 200 MSS. of it which have survived.

The *Romaunt of the Rose* was translated into English by Chaucer (see the prologue to the *Legende of Good Women*), but the English version (of which, extending to about one-third of the whole work, which has come down to us (see an edition by Dr Max Kaluza, Chaucer Society, 1891), is generally admitted to be by another hand. For a list of books on the vexed question of the authorship of the English translation see G. Körting, *Grundriss der engl. Lit.* (Münster, 1905, 4th ed. p. 184). A Flemish version by Hein van Aken appeared during Jean de Meun's lifetime, and at the beginning of the 14th century a free imitation, in the form of a series of sonnets, *Il Fiore* (2 vols., 1864), by Folgore da Crossadenari (pseudonym for Pierre Marteau), with a translation into modern French (Orleans, 5 vols., 1878–80), and a critical edition by E. Langlois, author of *Origines et sources du Roman de la Rose* (Paris, 1890). There is a modern English version by F. S. Ellis (Temple Classics, 2 vols., 1900).

ROMAN EMPIRE, LATER. The reign of Constantine the Great forms the most deep-reaching division in the history of Europe. The external continuity is not broken, but the principles which guided society in the Greek and Roman world are replaced by a new order of ideas. The emperor-worship, which expressed a belief in the ideal of the earthly empire of Rome, gives way to Christianity; this is the external side of

a mental transformation, which we can trace for 300 years before in visible processes of decay and growth, had reached a crisis.

Besides the adoption of Christianity, Constantine's reign is marked by an event only second in importance, the shifting of the centre of gravity of the Empire from the west to the east by making Byzantium a second capital, a second Rome. The foundation of Constantinople (*q.v.*) determined the subsequent history of the state; it established permanently the division between the eastern and western parts of the Empire —a principle already introduced—and soon exhibited, though not immediately, the preponderance of the eastern half. The eastern provinces were the richest and most resourceful, and only needed a Rome in their midst to proclaim this fact; and further, it was eastward that the Empire fronted, for here was the one great civilized state with which it was in constant antagonism. Byzantium was refounded on the model of Rome, had its own senate, and presently a *praefectus urbi*. But its character was different in two ways: it was Christian and it was Greek. From its foundation New Rome had a Christian stamp; it had no history as the capital of a pagan empire. There was, however, no intention of depressing Rome to a secondary rank in political importance; this was brought about by the force of circumstances.

The Christian Roman Empire, from the first to the last Constantine, endured for 1130 years, and during that long period, which witnessed the births of all the great modern nations of Europe, experienced many vicissitudes of decline and revival. In the 5th century it lost all its western provinces through the expansion of the Teutons; but in the 6th asserted something of its ancient power and won back some of its losses. In the 7th it was brought very low through the expansion of the Saracens and of the Slavs, but in consequence of internal reforms and prudent government in the 8th century was able before the end of the 9th to initiate a new brilliant period of power and conquest. From the middle of the 11th century a decline began; besides the perpetual dangers on the eastern and northern frontiers, the Empire was menaced by the political aggression of the Normans and the commercial aggression of Venice; in its capital was taken and its dominions dismembered by Franks and Venetians in 1204. It survived the blow for 250 years, as a shadow of its former self.

During this long life its chief political rôle was that of acting as a defender of Europe against the great powers of western Asia. While it had to resist a continuous succession of dangerous enemies on its northern frontier in Europe—German, Slavonic, Finnic and Tatar peoples—it always considered that its front was towards the east, and that its gravest task was to face the powers which successively inherited the dominion of Cyrus and Darius. From this point of view we might divide the external history of the Empire into four great periods, each marked by a struggle with a different Asiatic power: (1) with Persia, ending *c.* 630 with the triumph of Rome; (2) with the Saracens, who ceased to be formidable in the 11th century; (3) with the Seljuk Turks, in the 11th and 12th centuries; (4) with the Ottoman Turks, in which the Roman power went down.

Medieval historians, concentrating their interest on the rising states of western Europe, often fail to recognize the position held by the later Empire and its European prestige. Up to the middle of the 11th century it was in actual strength the first power in Europe, except in the lifetime of Charles the Great, and under the Comneni it was still a power of the first rank. But its political strength does not express the fulness of its importance. As the heir of antiquity it was confessedly superior in civilization, and it was supreme in commerce. Throughout the whole period (to 1204) Constantinople was the first city in the world. The influence which the Empire exerted upon its neighbours, especially the Slavonic peoples, is the second great rôle which it fulfilled for Europe—a rôle on which perhaps the most speaking commentary is the doctrine that the Russian Tsar is the heir of the Roman Caesar.

The Empire has been called by many names- Greek, Byzantine, Lower (Bas-empire), Eastern (or East-Roman). All these have a certain justification as descriptions, but the only strictly correct name is *Roman* (as recognized in the title of Gibbon's work). The continuity from Augustus to Constantine XI. is unbroken; the emperor was always the Roman emperor; his subjects were always Romans (Ῥωμαῖοι: hence *Romaic*—Modern Greek). "Greek Empire" expresses the fact that the state became predominantly Greek in character, owing to the loss first of the Latin provinces, afterwards of Syria and Egypt; and from the middle of the 6th century Greek became the official language. "*Lower* Empire" (*Later* is preferable) marks the great actual distinction in character between the development before Constantine (Haut-empire) and after his adoption of Christianity. "Byzantine" sums up in a word the unique Graeco-Roman civilization which was centred in New Rome. *Eastern* is a term of convenience, but it has been used in two senses, not to be confused. It has been used, *loosely*, to designate the eastern half of the Empire during the 80 years or so (from 395) when there were two lines of emperors, ruling formally as colleagues but practically independent, at Rome and Constantinople; but though there were two emperors, as often before, there was only one Empire. It has also been used, justifiably, to distinguish the true Roman Empire from the new state founded by Charles the Great (800), which also claimed to be the Roman Empire: *Eastern* and *Western Empire* are from this date forward legitimate terms of distinction. But between the periods to which the legitimate and illegitimate uses of the term "Eastern Empire" apply lies a period of more than 300 years, in which there was only one Empire in any sense of the word.

A chronological table of the dynasties will assist the reader of the historical sketch which follows.

Succession of Emperors arranged in Dynasties.

1. CONSTANTINIAN DYNASTY.—A.D. 324–363.
   Emperors (founder of dynasty, Constantius I., 305–306): Constantine I. (306–337, sole emperor since), 324–337.
   In west—Constantine II., 337–340; Constans, 337–350.
   In east—Constantius II., 337– .
   Sole emperors: Constantius II., 350–361; Julian, 361–363.
   INTER-DYNASTY.—Jovian, 363–364.
2. VALENTINIANEAN DYNASTY.—A.D. 364–392.
   Emperors:
   In west—Valentinian I., 364–375; Gratian, 367–383; Valentinian II., 375–392.
   In east—Valens, 365–378 (Theodosius I., 379–392).
3. THEODOSIAN DYNASTY.—A.D. 392–457.
   Emperors: Theodosius I. (379), 392–395.
   In east—Arcadius, 395–408; Theodosius II., 408–450; Marcian, 450–457.
   In west—Honorius, 395–423; Constantius III., 422; Valentinian III., 425–455; (non-dynastic) Maximus, 455; Avitus, 455–456.
4. LEONINE DYNASTY.—A.D. 457–518.
   Emperors:
   In east—Leo I., 457–474; Leo II., 474; Zeno, 474–491; Anastasius I., 491–518.
   In west—non-dynastic, Majorian, 457–461; Severus, 461–465; (Leo I. sole emperor, 465–467); Anthemius, 467–472; Olybrius, 472; Glycerius, 473–474; Julius Nepos, 474–480; (usurper, Romulus Augustulus, 475–476).
5. JUSTINIANEAN DYNASTY.—A.D. 518–602.
   Emperors: Justin I., 518–527; Justinian I., 527–565; Justin II., 565–578; Tiberius II., 578–582; Maurice, 582–602.
   INTER-DYNASTY.—Phocas, 602–610
6. HERACLIAN DYNASTY.—A.D. 610–711.
   Emperors: Heraclius, 610–641; Constantine III., 641; Heracleonas, 641–642; Constans II., 642–668; Constantine IV. (Pogonatus) 668–685; Justinian II. (Rhinometus), 685–695; (non-dynastic) Leontius, 695–698 and Tiberius III. (Apsimar), 698–705; Justinian II. (restored), 705–711.
   INTER-DYNASTY.—Philip Bardanes, 711–713; Anastasius II., 713–716; Theodosius III., 716–717.
7. ISAURIAN (SYRIAN) DYNASTY.—A.D. 717–802.
   Emperors: Leo III., 717–740 (alias, 41); Constantine V. (Copronymus), 740–775; Leo IV. (Khazar), 775–780; Constantine VI., 780–797; 797–802.
   INTER-DYNASTY.—Nicephorus I., 802–811; Stauracius (son of Nicephorus), 811; Michael I. (Rhangabé, father-in-law of Stauracius), 811–813; Leo V. (Armenian), 813–820.
8. PHRYGIAN OR AMORIAN DYNASTY.—A.D. 820–867.
   Emperors: Michael II. (Stammerer), 820–829; Theophilus, 829–842; Michael III. (Drunkard), 842–867.
9. MACEDONIAN DYNASTY.—A.D. 867–1057.
   Emperors: Basil I. (Macedonian), 867–886; Leo VI. (philosopher) and Alexander, 886–912; Constantine VII.

(Porphyrogennetos), 912–959; Romanus I. (Lecapenus), 920–944; Romanus II., 959–963; Basil II. (Bulgaroctonus) and Constantine VIII., 963–1025; (non-dynastic) Nicephorus II. (Phocas), 963–969, and John Zimisces, 969–976; Constantine VIII., alone, 1025–1028; Romanus III. (Argyros), 1028–1034; Michael IV. (Paphlagonian), 1034–1041; Michael V. (Calaphates) 1041–1042; Constantine IX. (Mononmachus), 1042–1054, and Theodora, 1054–1056; Michael VI. (Stratioticus), 1056–1057.

INTER-DYNASTY.—Isaac I. (Comnenus), 1057–1059; Constantine X. (Ducas), 1059–1067; Michael VII (Parapinaces), Andronicus and Constantine XI., 1067; Romanus IV. (Diogenes), 1067–1071; Michael VII., alone, 1071–1078; Nicephorus III. (Botaneiates), 1078–1081.

10. COMNENIAN DYNASTY.—A.D. 1081–1204.
Emperors: Alexius I. (nephew of Isaac I.), 1081–1118; John II., 1118–1143; Manuel I., 1143–1180; Alexius II., 1180–1183; Andronicus I., 1183–1185; Isaac II. (Angelus), 1185–1195; Alexius III. (Angelus), 1195–1203; Isaac II. and Alexius IV., 1203–1204.

INTER-DYNASTY.—Alexius V. (Murtzuphlus), 1204.
Capture of Constantinople and dismemberment of the Empire by the Venetians and Franks, A.D. 1204–1205.

11. LASCARID DYNASTY.—A.D. 1206–1259.
Emperors: Theodore I. (Lascaris), 1206–1222; John III. (Vatatzes or Batatzes), 1222–1254; Theodore II. (Lascaris), 1254–1259.

12. PALAEOLOGIAN DYNASTY.—A.D. 1259–1453.
Emperors: Michael VIII. (Palaeologus), 1259–1282; Andronicus II. (Elder), 1282–1328; Andronicus III. (Younger), 1328–1341; John V., 1341–1391; (non-dynastic), John (Cantacuzenus), 1347–1355; Manuel II., 1391–1425; John VI., 1425–1448; Constantine XI., or XII. (Dragases), 1448–1453.

Historical Sketch.—Diocletian's artificial experiment of two Augusti and two Caesars had been proved a failure, leading to twenty years of disastrous civil wars; and when Constantine the Great (*q.v.*) destroyed his last rival and restored domestic peace, he ruled for the rest of his life with undivided sway. But he had three sons, and this led to a new partition of the Empire after his death, and to more domestic wars, Constans first annexing the share of Constantine II. (340) and becoming sole ruler of the west, to be in turn destroyed by Constantius II., who in 350 remained sole sovereign of the Empire. Having no children, he was succeeded by his cousin, Julian the Apostate (*q.v.*). This period was marked by wars against the Germans, who were pressing on the Rhine and Danish frontiers, and against Persia. Julian lost his life in the eastern struggle, which was then terminated by a disadvantageous peace. But the German danger grew graver, and the battle of Adrianople, in which the Visigoths, who had crossed the Danube in consequence of the coming of the Huns (see GOTHS and HUNS), won a great victory, and the emperor Valens perished (378), announced that the question between Roman and Teuton had entered on a new stage. Theodosius the Great saved the situation for the time by his Gothic pacification. The efforts of a series of exceptionally able and hard-working rulers preserved the Empire intact throughout the 4th century, but the dangers which they weathered were fatal to their weaker successors. On the death of Theodosius the decisive moment came for the expansion of the Germans, and they took the tide at the flood. There were three elements in the situation. Besides the Teutonic peoples beyond the frontier there were dependent people who had settled within the Empire (as Visigoths in Moesia, Vandals in Pannonia), and further there were the semi-Romanized Germans in the service of the Empire, some of whom had risen to leading positions (like Merobaudes and Stilicho). A Germanization of the Empire, or part of it, in some shape was inevitable, but, if the rulers of the 5th century had been men of the same stamp as the rulers of the 4th, the process might have assumed a different form. The sons of Theodosius were both incapable; and in their reigns the future of the state which was divided between them was decided. The dualism between the east (under Arcadius) and the west (under Honorious) developed under the rule of these brothers into antagonism verging on hostility. The German danger was averted in the east, but it led in a few years to the loss of many of the western provinces, and at the end of ninety years the immediate authority of the Roman Emperor did not extend west of the Adriatic. The reign of Honorius saw the abandonment of Britain, the establishment of the Visigothic kingdom in Aquitaine, the occupation of a great part of Spain by Vandals and Sueves (Suebi). Under Valentinian III. the Vandals founded their kingdom in North Africa, the Visigoths shared Spain with the Sueves, the Burgundian kingdom was founded in S.E. Gaul. The last Roman possession in Gaul passed to the Franks in 486 (see GOTHS; VANDALS; FRANKS). It is significant that the chief defender of the Empire against the Germans who were dismembering it were men of German race. Stilicho, who defended Italy against Alaric, Aëtius, whose great work was to protect the imperial possessions in Gaul, and Ricimer. It was also a German, Fravitta, who played a decisive part in suppressing a formidable Gothic movement which menaced the throne of Arcadius in 399–400. It was characteristic of this transformation of Europe that the Germans, who were imbued with a profound reverence for the Empire and its prestige, founded their kingdoms on Roman soil in the first instance as "federates" of the Emperor, on the basis of formal contracts, defining their relations to the native provincials; they seized their dominions not as conquerors, but as subjects. The double position of Alaric himself, as both king of the Visigoths and a *magister militum* of the Empire is significant of the situation.

The development of events was complicated by the sudden growth of the third great power, which, reaching from the Rhine to the Caucasus, from the Danube to the Baltic, might be compared in the extent of its nominal supremacy, but in nothing else, to the empires of Rome and Persia. The Huns, whose first appearance had precipitated the Germans on the Empire, now retarded for some years the process of German expansion, while they failed in their own attacks upon the Empire. On Attila's death (453) his realm collapsed, and his German vassals (Ostrogoths, &c.) founded important kingdoms on its ruins.

After the death of Valentinian III., the worst of his house, the Theodosian dynasty expired in the west, and the authority of the western emperors who succeeded him in rapid succession reached little beyond Italy. For most of this period of twenty years the general Ricimer, of German birth, held the scales of power in that peninsula, setting up and pulling down emperors. After his death the western throne was no longer tenable. First there was a usurpation; the general Orestes set up his child-son Romulus Augustulus against the legitimate Augustus, Julius Nepos, who was acknowledged by the eastern emperor; but this temporary government was overthrown (476) by a Germanic military revolution headed by Odoacer, who appropriated part of the soil to his German soldiers and founded an Italian kingdom under the nominal supremacy of the emperor at Constantinople, who, however unwilling, recognized his position (after the death of Julius Nepos).

The escape of the eastern provinces from the fate of the western illustrates the fact that the strength of the Empire lay in the east. These provinces were more populous and presented greater obstacles to the invaders, who followed the line of least resistance. But it was of immense importance that throughout this period the Empire was able to preserve a practically unbroken peace with its great eastern rival. The struggle with Persia, terminated in 364 by the peace of Jovian, was not renewed till the beginning of the 6th century. It was of greater importance that the rulers pursued a discreet and moderate policy, both in financial administration and in foreign affairs; and the result was that at the end of a hundred years the diminished Empire was strong and consolidated. Theodosius II. was a weak prince, but his government was ably conducted by Anthemius, by his sister Pulcheria and by the eunuch Chrysaphius. His reign was important for the Armenian question. Theodosius I. had committed the error of consenting to a division of this buffer state in the Roman and Persian spheres of influence, Persia having much the larger. The

Sassanid government tried to suppress the use of the Greek language. But the government of Theodosius II. officially supported the enterprise of translating the Bible into Armenian (Mesrob had just invented the Armenian alphabet), and this initiated the production of an abundant literature of translations from the Greek, which secured the perpetual connexion of Armenia with European culture, and not with Oriental. This reign is also distinguished by the building of the great landwalls of Constantinople, by the foundation of a university there and by the collection of the imperial laws in the Codex Theodosianus, which is a mine of material for the social condition of the Empire. It reveals to us the decline of municipal liberty, the decay of the middle classes in the West, the evils of the oppressive fiscal system and an appalling paralysis of Roman administration which had once been so efficient; it shows how the best-intentioned emperors were unable to control the governors and check their corruption; and discloses a disorganization which facilitated the dismemberment of the Empire by the barbarians.

In the reign of Zeno it seemed probable that an Ostrogothic kingdom would be established in the Balkan peninsula, but the danger was diverted to Italy (see GOTHS). The kingdom which Theodoric founded there was, in its constitutional aspect, a continuation of Odoacer's régime. He, like Odoacer and Alaric, held the double position of a German king and a Roman official. He was *magister militum* as well as *rex*. His powers were defined by capitulations which were arranged with the emperor Anastasius and loyally observed. The right of legislation was reserved to the emperor, and Theodoric never claimed it; but for all practical purposes he was independent.

In the 6th century the emperor Justinian, whose talents were equal to his ambitions, found himself, through the financial prudence of his predecessors, in a position to undertake the reconquest of some of the lost western provinces. The Vandal power had declined, and Africa was won back in one campaign by Belisarius in 533. The conquest of Italy was far more difficult. Begun by Belisarius in 535, it was not completed till 554, by Narses. A portion of southern Spain was also won from the Visigoths, so that the Romans again commanded the western straits. Justinian, possessed by large ideas and intoxicated with the majesty of Rome, aspired to be a great conqueror, a great lawgiver, a great pontiff, a great diplomatist, a great builder, and in each of these spheres his reign holds a conspicuous place in the annals of the Empire. His legal work alone, or the building of Santa Sophia was enough to ensure him immortal fame. But deep shadows balance the splendour. The reconquest of Africa was thoroughly justified and advantageous, but Italy was bought at a ruinous cost. In the first place, the Persian empire was at this time ruled by one of its greatest kings, Chosroes I. (*q.v.*), who was far from peacefully inclined. Justinian was engaged in a long Persian and a long Gothic war at the same time, and the state was unequal to the strain. In the second place, it was all-important for his western policy to secure the goodwill of the Italian provinces and the Roman bishop, and for this purpose he involved himself in an ecclesiastical policy (see below) which caused the final alienation of the Syrian and Egyptian provinces. The reconquest of the West was purchased by the disunion of the East. Thirdly, the enormous expenses of the Italian and Persian wars, augmented by architectural undertakings, caused a policy of financial oppression which hung as a cloud over all the brilliance of his reign, and led to the decline which ensued upon his death. Nor is it to be forgotten that he had at the same time to fulfil the task of protecting the Danube against the Germans, Slavs and Bulgarians who constantly threatened the Illyrian provinces. He spared no expense in building forts and walls. Justinian's name will always be associated with that of the gifted Theodora, an actress of doubtful fame in her early life, who shared his throne. Their mosaic portraits are preserved in the contemporary church of San Vitale at Ravenna. She possessed great political influence, and the fact that she was a heretic (monophysite), while Justinian was devoted to orthodoxy, did not mar their harmony, but only facilitated the policy of extending secret favour to the heretics who were publicly condemned, and enabled the left hand to act without the knowledge of the right. The events of the half-century after Justinian's death exhibited the weakness to which his grandiose policy had reduced the Empire. It was attacked on the west, on the north and on the east, and at all points was unequal to coping with its enemies. (1) Italy fell a victim to the Lombards (*q.v.*), and in a few years more than half of the peninsula had passed under their sway. (2) The Avars, a Hunnic people who had advanced from the Caspian, took possession of Pannonia and Dacia, and formed an empire, consisting of Slavonic and Bulgarian subjects, which endured for about sixty years. Their chief occupation was to invade the Illyrian peninsula and extort tribute and ransoms from the emperors. So far as the Avars themselves were concerned, these incursions had no permanent significance, but the Slavs who overran the provinces did more than devastate. These years saw the beginning of the Slavonic settlements which changed the ethnical character of the peninsula, and thus mark the commencement of a new period. Slavs occupied Moesia and a large part of Macedonia, even close to Thessalonica, which they besieged; they penetrated southward into Greece and made large settlements in the Peloponnesus (see GREECE, *History*, "Roman period," *ad fin.*). They occupied the north-western provinces, which became Croatia and Servia, as well as Dalmatia except some of the coast towns. In the northern part of the peninsula the Slavonic element remained dominant, but in Greece it was assimilated to the Greek (after the 9th century) and has left little record of itself except in place names. (3) The Empire was simultaneously engaged in the perennial strife with Persia. A short interval of peace was secured when the emperor Maurice assisted Chosroes II. to dethrone a usurper, but after Maurice's death (602) the final and mortal struggle began (see PERSIA, *History*, section viii. "The Sassanian Empire"). Throughout the incompetent reign of Phocas the eastern provinces were overrun by the Persians, as the Illyrian were overrun by the Slavs. The unpopular rule of this cruel usurper was terminated in 610 by the intervention of the governor of Africa, whose son Heraclius sailed to Constantinople and, welcomed by an influential party, met with little resistance. Phocas, murderer of Maurice, was murdered by the people, and the victor was crowned emperor to find himself in presence of a desperate situation. Antioch, Damascus and many other great cities were captured by the Persians; and in 614 Jerusalem was destroyed and the Holy Cross, along with the patriarch, carried off to Ctesiphon. This event produced a profound sensation in Christendom. In 616 Egypt was conquered. The army had fallen into utter disorder under Phocas, and Heraclius so deeply despaired of saving Constantinople that he thought of transferring the imperial capital to Carthage. But the extreme gravity of the situation seems to have wrought a moral change among his subjects; the patriarch Sergius was the mouthpiece of a widespread patriotic feeling, and it was not least through his influence that Heraclius performed the task of creating a capable army. His efforts were rewarded in a series of brilliant campaigns (622–28), which, in the emphasis laid on the contrast between Christianity and fire-worship and on the object of recovering the Cross, had the character of crusades. Heraclius recovered his provinces and held Persia at his mercy (decisive battle at Nineveh, end of 627).

This war is remarkable for the attempt of the Persians to take Constantinople (626) in conjunction with the Avars and Slavs. Soon afterwards the Avar power began to decay, and the Slavs and Bulgarians shook off their yoke. It seemed as if the Roman government would now be able to regain the control in the Illyrian lands which it had almost entirely lost. It seems probable that Heraclius came to terms with the Slavs—Croatians and Servians—in the north-west; their position was regularized, as vassals of the Empire. But fate allowed no breathing-time to do more; the darkest hour had hardly passed when a new storm-cloud, from an unexpected quarter, overspread the heavens.

At this point we have to note that the Hellenic element in the state had definitely gained the upper hand before the end of the 6th century, so that henceforward the Empire might be described as Greek. Justinian's mother-tongue was Latin, and he was devoted to the Latin traditions of Rome, but even he found it necessary to publish his later laws in Greek, and from his reign Greek was the official language.

Many of the Latin official terms were already represented by Greek equivalents (*ὕπατος = consul*, *ἔπαρχος = praefectus*, &c.), but they were preserved in great numbers, transliterated and often corrupted (*e.g.* *κόμης*, *μάγιστρος*, *δοῦξ*, *φίσκος = a secretis*, *ἀγγελλάριος*, *πραιπόσιτος*, *κυαίστωρ = quaestor*, *σάκρον = sacrarium*, *βρέβιον*, *βρίκιον = obsequium*). 'Ρήξ, *rex*, was always used of barbarian potentates, *βασιλεύς* being reserved as = the emperor (but also applied to the Persian king). In military drill many Latin words of command continued to be used.

It is to be noted that the year 630 marks the beginning of a period of literary (and artistic) sterility in the Greek world (see GREEK LITERATURE, section *Byzantine*).

With the rise of Islam (see CALIPHATE; MAHOMET) two universal religions, for the first time, stood face to face, each aspiring to win the universe. The struggle therefore which then began was not only a new phase of the "Eternal Question," the strife between Europe and Asia, but was one in which the religious element was fundamental. Fire-worship was only a national religion and did not present the danger of Islam. The creation of the political power of the Mahommedans was so sudden that it took the world by surprise. Bostra, the fortress of Roman Arabia, fell into their hands in 634, and before the death of Heraclius in 641 they had conquered Syria and all Egypt, except Alexandria, which opened its gates to them in 643. The religious alienation of the Syrian and Egyptian peoples from Constantinople, expressing as it did a national sentiment antagonistic to the Greeks, was an important political factor in the Mahommedan (as in the prcvious Persian) conquest. Thus the Mahommedans definitely cut the Empire short in the East, as the Germans had cut it short in the West; Egypt was never recovered, Syria only for short periods and partially, while the integrity of Asia Minor was constantly menaced and Cilicia occupied for many generations. By their conquest of Persia the Caliphs succeeded to the position of the Sassanids; this led to the conquest of Armenia (*c.* 654); while, in the West, Africa was occupied in 647 (though the conquest was not completed till the capture of Carthage and other strong places in 698). Thus within twenty years from the first attack the Empire was girt about by the new aggressive p wer from the precincts of the Caucasus to the western Mediterranean.

Fortunately Constans II., grandson of Heraclius, was a man of eminent ability and firmness. The state owed to him the preservation of Asia Minor, and the creation of a powerful fl-et (see below) which protected the Aegean coasts and islands against the naval power of which the Mahommedans created. He was responsible for completing a new, efficient military organization, which determined the lines of the administrative reforms of Leo III. (see below). In his last years he turned his eyes to Italy and Africa. He dreamed of restoring Old Rome as the centre of the Empire. But he did not succeed in recovering south Italy from the Lombards (Duchy of Beneventum), and having visited Rome he took up his residence in Syracuse, where he was assassinated, having lost two fleets which he sent against the Arabs of Africa. The strain lasted for another fifty years. Constantinople sustained two great sieges, which stand out as crises, for, if in either case the enemy had been successful, the Empire was doomed.

The first siege was in 673–77, under the caliph Moawiya; his fleet blockaded the capital for five years, but all its efforts were frustrated by the able precautions of Constantine IV.; "Greek fire" (see below) played an important part in the defence; and the armada was annihilated on the voyage back to Syria by storms and the Roman fleet. The second crisis was at the accession of Leo III., when the city was besieged by land and sea by Suleiman for a year (717–18), and Leo's brilliant defence, again aided by Greek fire, saved Europe. This crisis marks the highest point of Mahommedan aggression, which never again caused the Empire to tremble for its existence.

The Heraclian dynasty, which had fallen on evil times and rendcred inestimable services to the Empire, came to an end in anarchy, which was terminated by the elevation of the Syrian (commonly called Isaurian) Leo III., whose reign opens a new period. His reforming hand was active in every sphere of government, but the ill-fame which he won by his iconoclastic policy obscured in the memory of posterity the capital importance of his work. His provincial organization was revolutionary, and his legislation departed from the Roman tradition (see below). From his reign to the middle of the 10th century the continuous warfare by land with the Caliphs consisted of marauding expeditions of each power into the other's territory, captures of fortresses, guerilla fighting, but no great conquests or decisive battles. The efficiency of the army was carefully maintained, but the neglect of the navy led to the losses of Crete (conquered by Moslem adventurers from Spain 826) and Sicily (conquered by the Saracens of Africa), Panormus taken 832, Syracuse 878 (see SICILY). The Africans also made temporary conquests, including Bari, in south Italy. This period saw the loss of the exarchate of Ravenna to the Lombards (750), the expansion of the Frankish power under Pippin and Charlemagne in Italy, and in close connexion therewith the loss of Old Rome.

The inconoclast emperors pursued a moderate foreign policy, consolidating the Empire within its contracted limits; but under the "Macedonian" dynasty, which was of Armenian descent, it again expanded and became the strongest power in Europe. The 9th century also witnessed a revival of learning and culture which had been in eclipse for 200 years. The reign of Basil I. was marked by an energetic policy in south Italy, where his forces co-operated with the western emperor Louis II. The Saracens were expelled from their strongholds, Bari recovered, Calabria saved, and the new province (Theme) of Longibardia formed. This secured the entrance to the Adriatic, and the increase of dominion here at the expense of the Lombards was a compensation for the loss of Sicily. Leo VI. did much for reorganizing the navy, but his reign was not fortunate; Saracen pirates plundered deeply in the Aegean and under the able renegade Leo of Tripolis, captured Thessalonica and carried off countless captives (904). But a great tide of success began fifty years later. Nicephorus Phocas won back Crete (961) as general of Romanus II., and then as emperor recovered Cilicia and North Syria (with Antioch) 968. Cyprus was also recovered. The tide flowed on under his equally able successor, John Zimisces (of Armenian race) and under Basil II.; these reigns mark the decisive victory of the Empire in the long struggle with the Saracens, whose empire had been broken up into separate states. The eastern frontier was strengthened by the active policy of Basil II. in Armenia, which was more fully incorporated in the Empire under Constantine IX.

The reign of Basil II. marks the culmination of the power of the Eastern Empire, for it also witnessed the triumphant conclusion of another conflict which had lasted almost as long. In the reign of Constantine IV. the Bulgarians (see BULGARIA) had founded a kingdom in Lower Moesia, reducing the Slavonic tribes who had occupied the country, but less than two centuries sufficed to assimilate the conquerors to the conquered, and to give Bulgaria the character of a Slavonic state. The reign of Constantine V. was marked by continuous war with this enemy, and Nicephorus I. lost his life in a Bulgarian campaign. This disaster was followed up by Prince Krum, who besieged Constantinople in 815. His death was followed by a long peace. Prince Boris was converted to Christianity (reign of Michael III.); a metropolitan see of Bulgaria was founded, dependent on the patriarch of Constantinople; and the civilization of the Bulgarians, and beginnings of their literature, were entirely under Byzantine influence. The conversion was contemporary with the work of the two missionaries Cyril and Methodius, who (while the field of their personal activity was in Great Moravia and

Pannonia) laid the south-eastern Slavs under a deep debt by inventing the Glagolitic (*q.v.*), *not* the so-called "Cyrillic" alphabet (based on Greek cursive) and translating parts of the Scriptures into Slavonic (the dialect of the Slavs of Macedonia). The most brilliant period of the old Bulgarian kingdom was the reign of Simeon (893–927), who extended the realm westward to the shores of the Adriatic and took the title "Tsar [*i.e.* Caesar] of Bulgaria and autocrator of the Romans." The aggression against the Empire which marked his ambitious reign ceased under his successor Peter, who married a daughter of Romanus I., and the Bulgarian Patriarchate founded by Simeon was recognized at Byzantium. But the Byzantine rulers only waited for a favourable time to reduce this formidable Slavonic state. At length Zimisces subjugated eastern Bulgaria and recovered the Danube frontier. But while Basil II. was engaged in contending with rivals, the heroic Samuel (of the Shishmanid family) restored the Bulgarian power and reduced the Servians. After a long and arduous war of fourteen years Basil (called the "Bulgar-slayer") subdued all Bulgaria western and eastern (1018). He treated the conquered people with moderation, leaving them their political institutions and their autocephalous church, and to the nobility their privileges. Some Bulgarian noble families and members of the royal house were incorporated in the Greek nobility; there was Shishmanid blood in the families of Commenus and Ducas. Greek domination was now established in the peninsula for more than 150 years. The Slavs of Greece had in the middle of the 9th century been brought under the control of the government.

In the reign of Basil II. the Russian question also was settled. The Russian state (see RUSSIA) had been founded before the middle of the 9th century by Norsemen from Sweden, who were known in eastern Europe as Russians ("Rôs), with its centres at Novgorod and Kiev. They did for the eastern Slavs what the Bulgarians had done for the Slavs of Moesia. The Dnieper and Dniester gave them access to the Euxine, and the Empire was exposed to their maritime attacks (Constantinople was in extreme danger in 860 and 941), which recall the Gothic expeditions of the 3rd century. In 945 a commercial treaty was concluded, and the visit of Princess Olga to Byzantium (towards the end of the reign of the learned emperor Constantine VII., Porphyrogennetos) and her baptism seemed a pledge of peace. But Olga's conversion had no results. Sviatoslav occupied Bulgaria and threatened the Empire, but was decisively defeated by Zimisces (971), and this was virtually the end of the struggle. In 988 Prince Vladimir captured Cherson, but restored it to the emperor Basil, who gave him his sister Anna in marriage, and he accepted Christianity for himself and his people. After this conversion and alliance, Byzantium had little to fear from Kiev, which came under its influence. One hostile expedition (1043) indeed is recorded, but it was a failure. Much about the same time that the Russians had founded their state, the Magyars (see HUNGARY; the Greeks called them Turks) migrated westward and occupied the regions between the Dnieper and the Danube, while beyond them, pressing on their heels, were another new people, the Petchenegs (Patzinaks). The policy of Byzantium was to make use of the Magyars as a check on the Bulgarians, and so we find the Romans (under Leo VI.) and the Magyars co-operating against the tsar Simeon. But Simeon played the same game more effectively by using the Petchenegs against the Magyars, and the result was that the Magyars before the end of the 9th century were forced to move westward into their present country, and their place was taken by the Petchenegs. From their new seats the Magyars could invade the Empire and threatened the coast towns of Dalmatia. The conquest of Bulgaria made the Petchenegs immediate neighbours of the Empire, and during the 11th century the depredations of these irreclaimable savages, who filtered into the Balkan peninsula, constantly preoccupied the government. In 1064 they were driven from the Dniester regions into Little Walachia by the Kumans (or Polovtsi), a people of the same ethnical group as themselves. They were crushingly defeated by Alexius Comnenus in 1091, and exterminated by John Comnenus in 1123.

In the Macedonian period a grave domestic question troubled the government. This was the growth of the large estates of the rich nobles of Asia Minor, at the expense of small properties, to an excess which was politically and economically dangerous. The legislation against the evil began under Romanus I. and was directed to the defence of the poor against the rich, and to protecting the military organization which was based on holdings of land to which the obligation of military service was attached. There was also danger in the excessive influence of rich and powerful families, from which the great military officers were drawn, and which were extensively related by alliances among themselves. The danger was realized in the struggle which Basil II. had to sustain with the families of Sclerus and Phocas. Various kinds of legislation were attempted. Under Romanus I. alienation of property to the large landowners was forbidden. Nicephorus Phocas, whose sympathies were with the aristocracy to which he belonged, holding that there had been enough legislation in favour of the poor, sought to meet the difficulty of maintaining a supply of military lands in the future by forbidding further acquisitions of estates by the Church. Basil II. returned to the policy of Romanus, but, with much greater severity, resorting to confiscation of some of the immense private estates; and he endeavoured to keep down the aristocrats of Asia Minor by very heavy taxation. Through the recovery of the Balkan provinces he gained in Europe a certain political counterpoise to the influence of Asia Minor, which had been preponderant since the seventh century. Asia Minor meant the army, and opposition to its influence expressed itself in the 11th century in a fatal anti-military policy, which is largely responsible for the conquests of a new enemy, the Seljuk Turks, who now entered into the inheritance of the Caliphs (see CALIPHATE *ad fin.* and SELJUKS). Constantinople was haunted by the dread of a military usurpation. An attempt of the military hero George Maniaces (who had made a remarkable effort to recover Sicily) to wrest the crown from Constantine IX. had failed; and when Isaac Commenus, who represented the military aristocrats of Asia Minor, ascended the throne, he found himself soon compelled to abdicate in the face of opposition. The reign of Constantine X., of the rival family of Ducas, marked the culmination of this antagonism. The senate was filled with men of the lower classes, and the military budget was ruthlessly cut down. This policy reduced the army and stopped the supply of officers, since there was no longer hope of a profitable career. The emperor thought to meet dangers from external enemies by diplomacy. The successes of the Seljuks (after the fall of the great Armenian fortress of Anî in 1064) at length awoke the government from its dream of security. The general Romanus Diogenes was proclaimed emperor. He had to create an army and to train it; he did not spare himself, but it was too late. He was defeated and captured by Alp Arslan on the decisive field of Manzikert (1071). Released by the sultan, who honoured his bravery, he was deposed in favour of Michael Ducas, and falling into the hands of his enemies, was blinded. The east and centre of Asia Minor were thus lost; the Seljuk kingdom of Rûm was founded; Nicaea was captured by the Turks in 1080. The provinces which escaped the Seljuk occupation were thoroughly disorganized, a prey to foreign and native adventurers and usurpers (see SELJUKS).

Thus in the 'seventies of the 11th century the Empire seemed through incompetence and frivolity to have been brought to the verge of dissolution. The disorder was terminated by the accession of the extraordinarily able statesman Alexius Comnenus (1081), who effected a reconciliation with the rival family of Ducas, established a strong government and founded a dynasty. He had to deal with three great dangers—the Seljuks, the Petchenegs (see above), and in the west the Normans. The Normans had wrested from East Rome its possessions in South Italy (1041–71; see NORMANS)—succeeding where German emperors had failed—and throughout the Comnenian period

the Empire was threatened by their projects of conquest beyond the Adriatic, projects which aimed at Constantinople itself.

Four great attempts against the Empire were made by the Normans; they were unsuccessful, but they heralded the Western conquest of 1204. (1) Expedition of Robert Guiscard, 1081–85, repelled by Alexius with help of Venice (2). Bohemond's expedition, 1105–7, foiled by the able strategy of Alexius; (3) the invasion of Greece by Roger of Sicily, 1147; Venice supported Manuel Comnenus, and the Normans were driven from Corfù, 1149; (4) the expedition of William II. of Sicily, 1185, who succeeded in capturing Thessalonica; the invaders were defeated at Demetritsa, but they gained the islands of Cephallenia and Zacynthus.

The two most important events in the reign of Alexius were the prices which he paid for help against his enemies. (1) He was obliged (1084) to grant to Venice (which had become independent of the Empire in the 9th century; see VENICE), in return for her naval aid against the Normans, commercial privileges which practically made the Empire commercially dependent on the Republic. (2) He sought auxiliary forces in western Europe to help him against the Seljuks; the answer of the pope and Latin Christendom was the First Crusade—a succour very different from that which he desired. Through his tact and discretion, the state was safely steered through the dangers with which the disorderly hosts of barbarous allies menaced it, and the immediate results were salutary; large parts of Asia Minor, including Nicaea, were restored to the Empire, which was thus greatly strengthened in the East while the Turks were weakened (see CRUSADES). But for this help Byzantium might not have survived the transient strength and brilliance which it displayed under Manuel. In Asia Minor the crusaders kept the terms of their agreement to restore to the emperor what had belonged to him; but on capturing Antioch (1098) they permitted the Norman Bohemond to retain it, in flagrant violation of their oaths; for to Antioch if to any place the emperor had a right, as it had been his a few years before. This was in itself sufficient to cause a breach between Byzantium and the Latin kingdom of Jerusalem (founded 1099). But otherwise the new political situation created by the Crusade was dangerous, ultimately fatal, to the Empire. For its lands and seas became a highway from western Europe to the Latin colonies in Syria; the Byzantine government was forced to take precautions to protect itself against the crusading expeditions which travelled to the Holy Land; and these precautions were regarded by the western powers as a hindrance to the sacred objects of the crusades. The bitter religious antagonism between the Greek and Latin Christians increased the mutual distrust and the danger.

The history of the new relations between East and West dating from the First Crusade is closely connected with the history of the futile attempts at bringing about a reunion between the Greek and Latin Churches, which had severed communion in 1054 (see below). To heal the schism and bring the Greek Church under the domination of Rome was a principal object of papal policy from Gregory VII. forward. The popes alternated between two methods for attaining this, as circumstances dictated: namely, a peaceful agreement—the policy of union; or an armed occupation of the Empire by some western power (the Normans)—the policy of conquest. Their views varied according to the vicissitudes of their political situation and their struggles with the western emperors. The eastern emperors were also constantly preoccupied with the idea of reconciliation, constantly negotiating with a view to union; but they did not care about it for its own sake, but only for political advantages which it might bring, and their subjects were bitterly opposed to it. Manuel Comnenus during the first part of his reign was the close friend and ally of the western emperor Conrad III., but after Conrad's death, he formed the ambitious plan of realizing in Europe a sovereignty like that of Justinian, and hoped to compass it in conjunction with Rome, the enemy of the Hohenstaufen. His forward policy carried war into Italy; he seized Ancona. But his strength was unequal to such designs. His Latin sympathies, no less than his financial extravagance, made him highly unpopular at home; and the national lack of sympathy with his Western policy was exhibited—after the revolution which overthrew his son Alexius and raised his cousin Andronicus I. to the throne—by the awful massacre of the Latin residents at Constantinople in 1182, for which the expedition of William of Sicily (see above) and the massacre of the people of Thessalonica was the revenge. The short reign of the wicked and brilliant Andronicus was in all respects a reaction, prudent, economical and popular. His fall was due to the aristocracy against whom his policy was directed, and the reign of Isaac Angelus undid his efforts and completed the ruin of the state. Oppressive taxation caused a revolt of the Bulgarian and Walachian population in the European provinces; the work of Zimisces and Basil was undone, and a new Bulgarian kingdom was founded by John Asen—a decisive blow to the Greek predominance which the Macedonian emperors seemed to have established.

In the fatal year 1204 the perils with which the eastward expansion of western Christendom (the Crusades, and the commercial predominance and ambitions of Venice) had long menaced the Empire, culminated in its conquest and partition. It was due to a series of accidents that the cloud burst at this moment, but the conditions of such a catastrophe had long been present. Isaac Angelus was dethroned by his brother Alexius III., and his son escaped (1201) to the west, where arrangements were being made for a new crusade, which Venice undertook to transport to the Holy Land. The prince persuaded Philip of Swabia (who had married his sister) and Boniface of Montferrat to divert the expedition to Byzantium, in order to restore his father and himself to the throne, promising to furnish help to the Crusade and to reconcile the Greek Church with Rome; Venice agreed to the plan; but Pope Innocent III., the enemy of Philip, forbade it. Isaac and his son, Alexius IV., were restored without difficulty in 1203, and the crusading forces were prepared to proceed to Palestine, if Alexius had performed his promises. But the manner of this restoration, under Latin auspices, was intensely unpopular; he was not unwilling, but he was unable, to fulfil his pledges; and a few months later he was overthrown in favour of one who, if an upstart, was a patriot, Alexius V. Then the Crusaders, who were waiting encamped outside the city, resolved to carry out the design which the Normans had repeatedly attempted, and put an end to the Greek Empire. The leaders of the Fourth Crusade must be acquitted of having formed this plan deliberately before they started; it was not conceived before 1204. They first arranged how they would divide the Empire amongst themselves (March); then they captured the city, which had to endure the worst barbarities of war. In partitioning the Empire, which was now to become the spoil of the conquerors, the guiding mind was the Venetian leader, the blind doge, Henry Dandolo. He looked to the interests of Venice from the narrowest point of view, and in founding the new Latin Empire, which was to replace the Greek, it was his aim that it should be feeble, so as to present no obstacles to Venetian policy. The Latin Empire of Romania was a feudal state. The kingdom of Jerusalem, whose emperor was overlord of all the princes who established themselves on Greek territory; under his own immediate rule were Constantinople, southern Thrace, the Bithyniau coast, and some islands in the Aegean. But he was hampered from the beginning by dependence on Venice, want of financial resources, and want of a fleet; the feudal princes, occupied with their separate interests, gave him little support in his conflict with Greeks and Bulgarians; at the end of ten years the worthless fabric began rapidly to decline, and the efforts of the popes, for whom it was the means of realizing Roman supremacy in the East, were unavailing to save it from the extinction to which it was doomed in its cradle.

The original Act of Partition (which gave ¼ of the Byzantine territory to the future emperor, ¾ to Venice, the remaining ¾ the Crusaders) could hardly be carried out strictly, as the territory was still to be won. The most important vassal state was the kingdom of Thessalonica, including Thessaly, which was assigned to Boniface of Montferrat. But it was conquered by the Greeks of Epirus in 1222. The chief of the territories taken by Venice

was Crete. For the Latin states in Greece and the Aegean see GREECE. The first Latin emperor, Baldwin of Flanders, was captured and put to death by the Bulgarians in 1205. He was succeeded by his brother Henry, an able statesman, after whose death (1216) the decline began.

Three Greek states emerged from the ruin of the Roman Empire. A member of the Comnenian house had founded an independent state at Trebizond, and this empire survived till 1461, when it was conquered by the Ottomans. A relation of the Angeli maintained in Europe an independent Greek state known as the Despotate of Epirus. But the true representative of the imperial line was Theodore Lascaris, who collected the Byzantine aristocracy at Nicaea and was elected emperor in 1206. He and his successors advanced surely and rapidly against the Latin Empire, both in Europe and Asia. It was a question whether Constantinople would fall to the Walacho-Bulgarians or to the Greeks. But an astute diplomat and general, the emperor Michael Palaeologus, captured it in 1261. His object was to recover all the lost territory from the Latins, but he was menaced by a great danger through Charles of Anjou, who had overthrown the rule of the Hohenstaufens in the two Sicilies, and determined to restore the Latin kingdom of Romania. To avert this peril, Michael negotiated with Pope Gregory X.; he was ready to make every concession, and a formal union of the Churches was actually brought about at the council of Lyons in 1274. The emperor had the utmost difficulty in carrying through this policy in face of clerical opposition; it aroused disgust and bitterness among his subjects, and it was undone by his successor. Meanwhile the pope had with difficulty bridled Charles of Anjou; but in Martin IV. he found a more pliable instrument, and in 1282 he made vast preparations for an expedition against the Greek Empire. It was saved by the Sicilian Vespers (see SICILY), to be the prey of other powers.

The end of the 13th century saw the rise of the Ottoman power in Asia and the Servian in Europe. The Empire was assisted by a band of Spanish mercenaries (the Catalan Grand Company; see GREECE, *History*, "Byzantine Period") against the advance of the Ottoman Turks in Asia Minor; they distinguished themselves by saving Philadelphia (1304). In 1326 Brusa (Prusa) became the Ottoman capital, while on the other side the Servians (crushing the Bulgarians in 1330) were gradually closing in on Byzantium. Stephen Dushan (1331–1355) Servia attained the height of her power. The enemies were strengthened by the domestic struggles within the Empire, first between Andronicus II. and his son, then between John VI. and the usurper Cantacuzenus. But before the fate of Byzantium was settled the two enemies on its flanks came face to face. In 1387 the Servian power was crushed on the field of Kossovo by the Ottomans (who had crossed the Hellespont in 1360 and taken Philippopolis in 1363). Sultan Bayezid I. won Philadelphia, the last Asiatic possession of the Empire, and conquered Trnovo, the Bulgarian capital, in 1393. Constantinople was now surrounded. The Ottoman power was momentarily eclipsed, and the career of conquest checked, by the Mongol invasion of Timur and the great defeat which it sustained in the battle of Angora (1402). Mahomet I. found it necessary to ally himself with the emperor Manuel. But the pause was brief. Murad II. took Adrianople, and tried (1422) to take Constantinople.

It was small compensation that during this time the Palaeologi had been successful against the Franks in Greece. The situation was desperate. The Turks were in possession of the Balkan peninsula, threatening Hungary; there was no chance of rescue, except from western Europe. John VI. and Manuel had both visited the West in search of help. The jeopardy of the Empire was the opportunity of Rome, and the union of the Churches became the pressing question. It was taken up earnestly by Pope Eugenius IV., and the result was the Decree of Union at the council of Florence in 1439. The emperor and the higher clergy were really in earnest, but the people and the monks did not accept it, and the last agony of Byzantium was marked by ecclesiastical quarrels. Eugenius IV. preached a crusade for the rescue of the Empire, and in 1443 an army of Hungarians and Poles, led by the Hungarian king, won a victory over Murad, which was more than avenged in the next year on the memorable field of Varna. The end came nine years later under Murad's successor, Mahommed II. An army of about 150,000 blockaded the city by land and sea, and Mahommed began the siege on the 7th of April. The emperor Constantine XI., Palaeologus, on whom the task of the forlorn defence devolved (and whose position was all the more difficult because he was alienated from his subjects, having embraced the Latin rite), can have had little more than 8000 men at his disposal; he received no help from the Western powers; but an experienced Genoese soldier of fortune, John Justiniani, arrived with two vessels and 400 cuirassiers and aided the emperor with his courage and advice. The resident foreigners, both Venetians and Genoese, loyally shared in the labours of the defence. The final storm of the land walls took place on the night of the 29th of May. All looked to Justiniani for salvation, and when he, severely wounded, retired from the wall to have his wound looked to, a panic ensued. The enemy seized the moment, and the Janissaries in a final charge rushed the stockade which had been constructed to replace a portion of the wall destroyed by the Turkish cannon. This decided the fate of the city. Constantine fell fighting heroically. Soon after sunrise (May 30) the Mahommedan army entered Constantinople (Stambul = *'s τὴν πόλιν*, "the city"), which was in their eyes the capital of Christendom.

The ultimate responsibility for this disaster is generally imputed to the political adventurers who dismembered the Empire in 1204. It may indeed be said that at that time the Byzantine state seemed already stricken with paralysis and verging to dissolution, and it was menaced by the re-arisen power of Bulgaria. But more than once before (in the 7th century and in the 11th) it had recovered its strength when it was weak and in dire peril; and, considering what the emperors of Nicaea and Michael VIII. accomplished, it seems probable that, if there had been no Fourth Crusade, it might have so revived and consolidated its forces in the course of the 13th century, as to be able to cope successfully with the first advances of the Ottomans. The true statement is that the Fourth Crusade was only an incident (not in itself decisive) in a world-movement which doomed the Eastern Empire to extinction—namely, the eastward movement of western Europe which began in the 11th century with the rise of the Normans and the First Crusade. Henceforward the Empire was a middle state, pressed between expanding forces on the east and on the west, and its ultimate disappearance was inevitable.

Church and State.—In making the state Christian, Constantine made the Church a state institution, and therefore under imperial control. Caesaro-papism was the logical consequence. The sacerdotium was united with the imperium in the person of the monarch as in the pagan state. The Church acquiesced, and yet did not acquiesce, in this theory. When a heretical emperor sought to impose his views, champions of ecclesiastical freedom never failed to come forward. At the very beginning Athanasius fought for the independence of the Church against the emperor Constantius. But the political principle which Constantine had taken for granted, and which was an indispensable condition of his adoption of Christianity, was fully recognized when Theodosius I., and, notwithstanding protests from time to time, was permanent. It is significant that Constantinople, which had become a second Rome politically, with its senate and capitol, became then a second Rome ecclesiastically, and that the elevation of the see of Constantinople to patriarchal rank next to the Roman see was due to Theodosius (381), who gave a permanent form to the dualism of the Empire. The patriarch became a state minister for religion. The character of the Church as a state institution is expressed above all in the synods. The general councils are not only summoned by the emperor, but are presided over by him or by his lay deputies. The order of the proceedings is modelled on that of the senate. The emperor or his representative not only keeps order but conducts the deliberations and intervenes in the theological debates. It has been erroneously thought that at the council of Chalcedon (451) the legate of Pope Leo presided; but the

acts of that assembly teach us otherwise; the privilege which the Roman legates possessed was that of voting first (the right of the *princeps senatus*). The first general council at which a churchman presided was the seventh (at Nicaea, 787), at which the emperor (or empress) deputed, not a layman, but the patriarch Tarasius to preside. The resolutions of these ecclesiastical state-councils did not become the law of the Empire till they were confirmed by imperial edicts.

The emperors, in their capacity as heads of the Church, did not confine themselves to controlling it by controlling the councils. They soon began to issue edicts dealing with theology, by virtue of their own authority. It has been said that the council of Chalcedon closed an epoch of "parliamentary constitutionalism"; a general council was not summoned again for more than one hundred years, though the Empire during that period was seething with religious disunion and unrest. The usurper Basiliscus in his short reign set an example which his successors were not slow to follow. He issued an edict quashing the decision of Chalcedon. Zeno's *Henōtikon* (see below) a few years later was the second and more famous example of a method which Justinian largely used, and of which the *Ecthesis* of Heraclius, the *Type* of Constans II. and the iconoclastic edicts of Leo III. are well-known instances. It was a question of political expediency (determined by the circumstances, the intensity and nature of the opposition, &c.) whether an emperor supported his policy or not by an ecclesiastical council.

The emperor was always able to control the election of the patriarch, and through him he directed the Church. Sometimes emperor and patriarch collided; but in general the patriarchs were docile instruments, and when they were refractory they could be deposed. There were several means of resistance open to a patriarch, though he rarely availed himself of them. His participation in the ceremony of coronation was indispensable, and he could refuse to crown a new emperor except on certain conditions, and thus dictate a policy (instances in 812, Michael I.; 969, John Zimisces). There was the power of excommunication (Leo VI. was excommunicated on account of his fourth marriage). Another means of resistance for the Church was to invoke the support of the bishop of Rome, who embodied the principle of ecclesiastical independence and whose see admittedly enjoyed precedence and primacy over all the sees in Christendom. Up to the end of the 8th century he was a subject of the emperor, and some emperors exerted their ecclesiastical control over Rome by drastic measures (Justinian and Constans II.). But after the conquest of Italy by Charles the Great, the pope was outside the Byzantine domination; after the coronation of Charles in 800 he was associated with a rival empire; and when ecclesiastical controversies arose in the East, the party in opposition was always ready to appeal to him as the highest authority in Christendom. Under the iconoclastic emperors the image-worshippers looked to him as the guardian of orthodoxy.

As to the ecclesiastical controversies which form a leading feature of Byzantine history, their political significance alone concerns us. After the determination of the Arian controversy in 381 new questions (as to the union of the divine and human elements in the person of Christ: one or two natures?) arose, and it may seem surprising that such points of abstruse theology should have awakened universal interest and led to serious consequences. The secret was that they masked national feelings; hence their political importance and the attention which the government was forced to bestow on them. The reviving sense of nationality (anti-Greek) in Syria and in Egypt found expression in the 5th century in passionate monophysitism (the doctrine of one nature): theology was the only sphere in which such feelings could be uttered. The alienation and dissension which thus began had fatal consequences, smoothing the way for the Saracen conquests of those lands; the inhabitants were not unwilling to be severed politically from the Empire. This ultimate danger was at first hardly visible. What immediately troubled the emperors in the first half of the 5th century was the preponderant position which the see of Alexandria occupied, threatening the higher authority of Constantinople. The council of Chalcedon, called by Marcian, an able statesman, was as much for the purpose of ending the domination of Alexandria as of settling the theological question. The former object was effected, but the theological decision of the council was fatal, it only sealed and promoted the disunion. The recalcitrant spirit of Syria and Egypt forced Zeno, thirty years later, to issue his Henōtikon, affirming the decisions of previous councils but pointedly ignoring Chalcedon. This statesman-like document secured peace in the East for a generation. Rome refused to accept the Henōtikon, and when Justinian resolved to restore imperial supremacy in the Western kingdoms, conciliation with Rome became a matter of political importance. For the sake of this project, the unity of the East was sacrificed. The doctrine of Chalcedon was reasserted, the Henōtikon set aside; New Rome and Old Rome were again hand in hand. This meant the final alienation of Egypt and Syria. The national instinct which had been alive in the 5th century grew into strong national sentiment in the 6th. One of the chief anxieties of Justinian's long and busy reign was to repair the mischief. Deeply interested himself in matters of dogma, and prepared to assert to its fullest extent his authority as head of the Church, he has been called "the passionate theologian on the throne"; but in his chief ecclesiastical measures political considerations were predominant. His wife Theodora was a monophysite, and he permitted her to extend her protection to the heretics. He sought new formulae for the purpose of reconciliation, but nothing short of repudiation of the Chalcedon acts would have been enough. The last great efforts for union were made when the Saracens invaded and conquered the dissident provinces. A new formula of union was discovered (One Will and One Energy). This doctrine of monothelism would never have been heard of but for political exigencies. The Egyptians and Syrians would perhaps have accepted this compromise; but it was repudiated by the fanatical adherents of Chalcedon. Heraclius sought to impose the doctrine by an edict (Ecthesis, 638), but the storm, especially in Italy and Africa, was so great that ten years later an edict known as the Type was issued by Constans forbidding all disputation about the number of wills and energies. Constans was a strong ruler, and maintained the Type in spite of orthodox opposition throughout his reign. But the expediency of this policy passed when the Saracens were inexpugnably settled in their conquests, and in his successor's reign it was more worth while to effect a reconciliation with Rome and the West. This was the cause of the 6th Ecumenical Council which condemned monothelism (680–681).

In the Hellenic parts of the Empire devotion to orthodoxy served as a chrysalis for the national sentiment which was to burst its shell in the 10th century. For the Greeks Christianity had been in a certain way continuous with paganism. It might be said that the old deities and heroes who had protected their cities were still their guardians, under the new form of saints (sometimes imaginary) and archangels, and performed for them the same kind of miracles. Pagan idolatry was replaced by Christian image-worship, which by the Christians of many parts of Asia Minor, as well as by the Mahommedans, was regarded as simply polytheism. Thus in the great iconoclastic controversy, which distracted the Empire for nearly 120 years, was involved, as in the monophysitic, the antagonism between different racial elements and geographical sections. Leo III., whose services as a great deliverer and reformer were obscured in the memory of posterity by the ill-fame which he won as an iconoclast, was a native of Commagene. His first edict against the veneration of pictures evoked riots in the capital and a revolt in Greece. The opposition was everywhere voiced by the monks, and it is not to be overlooked that for many monks the painting of sacred pictures was their means of existence. Leo's son Constantine V. pursued the same policy with greater rigour, meeting the monastic resistance by systematic persecution, and in his reign a general council condemned image-worship

(753). Iconoclasm was supported by the army (*i.e.* Asia Minor), and a considerable portion of the episcopate, but it was not destined to triumph. When the Athenian Irene, wife of Leo IV., came to power after her husband's death, as regent for her son Constantine VI., she secured the restoration of the worship of icons. The Iconoclastic Council was reversed by the 7th Ecumenical Council of 787. The iconoclastic party, however, was not yet defeated, and (after the neutral reign of Nicephorus I.) came again to the helm in the reigns of the Armenian Leo V. and the first two Phrygian emperors, Michael II. and Theophilus. But the Empire was weary of the struggle, and on the death of Theophilus, who had been rigorous in enforcing his policy, iconworship was finally restored by his widow Theodora (843), and the question was never reopened. This was a triumph for the Greek element in the Empire; the "Sunday of orthodoxy" on which iconoclasm was formally condemned is still a great day in the Greek Church.

The ablest champions who wielded their pens for the cause of icons, defending by theological arguments practices which really had their roots in polytheism, were in the early stage John of Damascus and in the later Theodore (abbot of the monastery of Studium at Constantinople). The writings of the iconoclasts were destroyed by the triumphant party, so that we know their case only from the works of their antagonists.

In this struggle the Greeks and Latins were of one mind; the image-worshippers had the support of the Roman see. When the pope resisted him, Leo III. confiscated the papal estates in Sicily and Calabria, and the diocese of Illyricum was withdrawn from the control of Rome and submitted to the patriarch of Constantinople. But when iconoclasm was defeated, there was no question of restoring Illyricum, nor could there be, for political reasons; since the iconoclastic schism had, with other causes, led to the detachment of the papacy from the Empire and its association with the Frankish power. By the foundation of the rival Roman Empire in 800 the pope had definitely become a subject of another state. No sooner had the iconoclastic struggle terminated than differences and disputes arose between the Greek and Latin Churches which finally led to an abiding schism, and helped to foster the national self-consciousness of the Greeks. A strife over the patriarchal chair between Ignatius (deposed by Michael III. and supported by Rome) and Photius the learned statesman who succeeded him, strained the relations with Rome; but a graver cause of discord was the papal attempt to win Bulgaria, whose sovereign Boris had been baptized under the auspices of Michael III. (*c.* 865), and was inclined to play Old Rome against New Rome. Photius stood out as the champion of the Greeks against the claim of the Roman see, and his patriarchate, though it did not lead to a final breach, marks the definite emancipation of the Greeks from the spiritual headship of Rome. This is the significance of his encyclic letter (867), which formulated a number of differences in rite and doctrine between the Greek and Latin Churches, differences so small that they need never have proved a barrier to union, if on one side there had been no question of papal supremacy, and if the Greek attitude had not been the expression of a tenacious nationality. There was a reconciliation about 900, but the Churches were really estranged, and the open and ultimate breach which came in 1054, when the influence of the Cluny movement was dominant at Rome (Leo IX. was pope and Michael Cerularius patriarch), sealed a disunion which had long existed. Subsequent plans of reunion were entertained by the emperors merely for political reasons, to obtain Western support against their foes, or to avert (through papal influence) the aggressive designs of Western princes. They were doomed to futility because they were not seriously meant, and the Greek population was entirely out of sympathy with these political machinations of their emperors. The Union of Lyons (1274) was soon repudiated, and the last attempt, the Union of Florence in 1439, was equally hollow (though it permanently secured the union of the Rumanians and of the Ruthenians). Part of the historical significance of the relations between the Greek and Latin Churches lies in the fact that they illustrate, and promoted by way of challenge, the persistence of Greek national self-consciousness.

The emperors legislated against paganism and against heresy, not merely under ecclesiastical pressure, but because they thought religious uniformity politically desirable. Theodosius the Great, a Spaniard, with no sympathy for Hellenic culture, set himself the task of systematically eradicating pagan institutions and customs. Though his persecution accomplished much, paganism was far from being extinct either in the East or in the West in the 5th century. Not only did heathen cults survive in many remote districts, but the old gods had many worshippers among the higher classes at Rome, Constantinople, Antioch, Alexandria and Athens. The most distinguished Greek literati of that period were non-Christian. Justinian, who united theological enthusiasm with belief in the ideal of uniformity and, like Theodosius, was cut of sympathy with Hellenism ("Hellen" now came to mean "pagan"), persecuted polytheism more earnestly and severely than his predecessors. His measures created a panic among the higher classes at Byzantium, of whom many, as he suspected, were addicted to the ancient religion. He instituted a regular inquisition, exacted oaths of orthodoxy from all officials and teachers, and closed the philosophical schools of Athens. Missionaries (and it is remarkable that he employed monophysite heretics) were sent to abolish the old heathen worship which survived in many parts of Asia Minor where Christianity had hardly penetrated. By the end of the 6th century formal paganism had practically disappeared.

In Asia Minor, especially in the east, there were many dissident communities which asserted independence of the Church of Constantinople and of all ecclesiastical traditions, founding their doctrines directly on the Bible. Most important of these heretics were the Paulicians (*q.v.*), a dualistic sect whom the Church regarded as Manichaeans.

The Autocracy and its Constitutional Forms.—With Diocletian the Principate of Augustus had become undisguisedly an absolute monarchy, and this constitution prevailed to the end. There is virtually no constitutional history in the proper sense of the term in the later Roman Empire, for there was neither evolution nor revolution. The monarchical system remained in all its essential points unchanged, and presents a remarkable example of an autocracy of immense duration which perfectly satisfied the ideas of its subjects. No attempt was made to alter it,—to introduce, for instance, a limited monarchy or a republican government; all revolts and conspiracies were aimed at the policies of particular autocrats, not at autocracy itself; generally they only represented sectional antagonisms and personal ambitions. The emperors inherited a deeply rooted instinct of legality as a tradition from Old Rome; and this respect for law which marked their acts, along with the generally good administration of justice, was a palladium of the monarchy. They were supreme in legislation, as well as in the administrative and judicial spheres; but they were on the whole moderate in wielding legislation as an instrument of policy.

There were, however, recognized constitutional principles which it would have been impossible for the emperor to override.

(1) The elective principle, inherited from the Republic, was never changed. A new emperor had to be elected by the senate and acclaimed by the people. The succession never became automatic. But even Augustus had indirectly introduced the dynastic principle. Theodosius the Great, by causing his two sons, Arcadius and Honorius, to be elected Augusti in their infancy, practically elevated the dynastic idea into a constitutional principle; henceforward it was regarded as in the regular course that the son born to a reigning sovereign should in his infancy be elected Augustus. Thus the election, though always an indispensable form, was only a reality when a dynasty came to an end.

(2) When the position of Christianity was assured by the failure of Julian's reaction, it was evident that profession of that religion would henceforward be a necessary qualification for election to the throne. This was formally and constitutionally recognized when the coronation of the emperor by the patriarch was introduced in 457, or perhaps in 450.

(3) The sovereignty of the emperor was personal and *not territorial*. In this respect it always retained the character which it had inherited as the offspring of a Roman magistracy. Hence no Roman territory could be granted by the emperor to another power. For instance, the Western emperor Conrad III. could promise to hand over Italy to Manuel Comnenus as the dowry of his wife, but it would have been constitutionally illegal for Manuel to have made such a promise to any foreign prince; an Eastern emperor had no right to dispose of the territory of the state. Tendencies towards a territorial conception begin indeed to appear (partly under Western influence) in the time of the Palaeologi, especially in the custom of bestowing appanages on imperial princes.

(4) While the senate of Rome generally lost its importance and at last became a mere municipal body, the new senate of Constantine preserved its position as an organ of the state till the fall of Constantinople. For the imperial elections it was constitutionally indispensable, and it was able sometimes to play a decisive part when the throne was vacant—its only opportunity for independent action. The abolition, under Diocletian's system, of the senatorial provinces deprived the senate of the chief administrative function which it exercised under the Principate; it had no legislative powers; and it lost most of its judicial functions. It was, however, still a judicial court; it tried, for instance, political crimes. In composition it differed from the senate of the Principate. The senators in the 4th century were chiefly functionaries in the public service, divided into the three ascending ranks of *clarissimi*, *spectabiles*. *illustres*. The majority of the members of the senatorial order lived in the provinces, forming a provincial aristocracy, and did not sit in the senate. Then the two lower ranks ceased to have a right to sit in the senate, which was confined to the *illustres* and men of higher rank (Patricians). The senatorial order must therefore be distinguished from the senate in a narrower sense; the latter finally consisted mainly of high ministers of state and the chief officials of the palace. It would be a grave mistake to underrate the importance of this body, through an irrelevant contrast with the senate of the Republic or even of the Principate. Its composition ensured to it great influence as a consultative assembly; and its political weight was increased by the fact that the inner council of imperial advisers was practically a committee of the senate. The importance of the senate is illustrated by the fact that in the 11th century Constantine X., in order to carry out a revolutionary, anti-military policy, found it necessary to alter the composition of the senate by introducing a number of new men from the lower classes.

(5) The memory of the power which had once belonged to the *populus Romanus* lingered in the part which the inhabitants of New Rome, and their representatives, played in acclaiming newly elected emperors, and in such ceremonies as coronations. In the 6th century the factions (" demes ") of the circus, Blues and Greens, appear as political parties, distract the city by their quarrels, and break out in serious riots. On one occasion they shook the throne (" Nika " revolt, 532). The emperors finally quelled this element of disturbance by giving the factions a new organization, under " demarchs " and " democrats," and assigning them a definite quasi-political *locus standi* in the public ceremonies in the palace and the capital. The duty of providing *panem et circenses* was inherited from Old Rome; but the free distribution of bread cannot be traced beyond the 6th century (had the loss of the Egyptian granary to do with its cessation?), while the spectacles of the hippodrome lasted till the end. Outside the capital the people took little interest in politics, except when theology was concerned; and it may be said generally that it was mainly in the ecclesiastical sphere that public opinion among the masses, voiced by the clergy and monks, was an influence which made itself felt.

The court ceremonial of Constantinople, which forms such a market contrast to the ostentatiously simple establishments of Augustus and the Antonines, had in its origin a certain constitutional significance. It was introduced by Aurelian and Diocletian, not, we must suppose, from any personal love of display, but rather to dissociate the emperor from the army, at a time when the state had been shaken to its foundations by the predominance of the military element and the dependence of the emperor on the soldiers. It was the object of Diocletian to make him independent of all, with no more particular relation to the army than to any other element in the state; the royal court should be inaccessibility of the ruler was calculated to promote this object. The etiquette and ceremonies were greatly elaborated by Justinian, and were diligently maintained and devcloped. The public functions, which included processions through the streets to various sanctuaries of the city on the great feast-days of the Church, supplied entertainment of which the populace never wearied; and it did not escape the wit of the rulers that the splendid functions and solemn etiquette of the court were an effective means of impressing the imagination of foreigners, who constantly resorted to Constantinople from neighbouring kingdoms and dependencies, with the majesty and power of the Basileus.

The imperial *dignity* was collegial. There could be two or more emperors (*imperatores*, *basileis*) at the same time; edicts were issued, public acts performed, in their joint names. Through the period of dualism, in the 4th and 5th centuries, when the administration of the Eastern provinces was generally separate from that of the West, the *imperium* was also collegial. But after this period the system of divided authority came to an end and was never renewed. There was frequently more than one emperor, not only in the case of a father and his sons, or of two brothers, but also in the case of a minority, when a regent is elected emperor (Romanus I.; cf. Nicephorus II. and John Zimisces). But one colleague always exercised the sole authority, was the real monarch, the " great " or the " first " Basileus; the others were only sleeping partners. Under the Comneni a new nomenclature was introduced; a brother, *e.g.*, who before could have become the formal colleague of the ruler, received the title of *Sebastocrator* (Sebastos was the Greek equivalent of Augustus).

Legislation.—The history of the legislation of the Eastern Empire is distinguished by three epochs associated with the names of (1) Justinian, (2) Leo III., (3) Basil I. and Leo VI.

(1) The Justinianean legislation (see JUSTINIAN) is thoroughly Roman in spirit, and inspired by pious adhesion to the traditions of the past; but it admitted modifications of the older law in accordance with tendencies which had been long since making themselves felt: consideration is accorded to principles of humanity in the laws affecting persons, and to the principle of public interest in the laws relating to things. Justinian not only sanctioned changes which time had brought about, like the mitigation of the strict *patria potestas* and the greater independence of wives, but himself made a revolutionary change in the law of succession to property, abolishing inheritance by *agnatio* or relationship through males, and substituting inheritance by blood relationship whether through males or females.

(2) Justinian's reign was followed by a period in which juristic studies decayed. The seventh century, in which social order was profoundly disturbed, is a blank in legal history, and it would seem that the law of Justinian, though it had been ordered into Greek, was not destined to be studied or understood. Practice at least was modified by principles in accord with the public opinion of Christian society and influenced by ecclesiastical canons. In a synod held at Constantinople in the reign of Justinian II. numerous rules were enacted, differing from the existing laws and based on ecclesiastical doctrine and Mosaic principles, and these were sanctioned as laws of the realm by the emperor. Thus Church influence and the decline of Hellenism, which had been checked from becoming predominantly Greek, determined the character of the ensuing legislative epoch under the auspices of Leo III., whose law book (A.D. 740), written in Greek, marks a new era and reflects the changed character of the community. Leo's so-called Selected Laws " and generally known as the *Ecloga*, it may be described as a Christian law book. In regard to the *patria potestas* increased facilities are given for emancipation from paternal control when the son comes to years of discretion, and the parental is for certain extent replaced by a *parental* control over minors. The law of guardianship is considerably modified. The laws of marriage are transformed under the influence of the Christian conception of matrimony; the institution of *concubinatus* is abolished. Impediments to marriage on account of consanguinity and of spiritual relationship are multiplied. While Justinian regarded marriage as a contract, and therefore, like any other contract, dissoluble at the pleasure of the parties, Leo III. accepted the Church view that it was an indissoluble bond. Ecclesiastical influence is written

large in the criminal law, of which a prominent feature is the substitution of mutilation of various kinds for the capital penalty. Death is retained for some crimes, such as murder and high treason; other offences were punished by amputation (of hand, nose, &c.). This system (justified by the passage in the New Testament, "If thine eye offend thee," &c.), though to modern notions barbaric, seemed a step in the direction of leniency; and it may be observed that the tendency to avoid capital punishment increased, and we are told that in the reign of John Comnenus it was never inflicted. (The same spirit, it may be noted, is apparent in the usual, though by no means invariable, practice of Byzantine emperors to render dangerous rivals or members of a deposed dynasty innocuous by depriving them of eyesight or forcing them to take monastic orders, instead of putting them to death.) The Church, which had its own system of penalties, exercised a great influence on the actual administration of criminal law, especially through the privilege of asylum (recognized by Justinian, but with many reserves and restrictions), which was granted to Christian churches and is admitted without exceptions in the *Ecloga*.

(3) The last period of legislative activity under Basil I. and Leo VI. represents a reaction, in a certain measure, against the *Ecloga* and a return to Justinian. The *Ecloga* had met practical needs, but the Isaurian and Phrygian emperors had done nothing to revive legal study. To do so was the aim of Basil, and the revival could only be based on Justinianean law books or their Greek representatives. These books were now treated somewhat as Justinian and his lawyers had treated their own predecessors. A handbook of extracts from the Institutes, Digest and Code was issued in 879 (ὁ πρόχειρος νόμος, "the law as it is"), to fulfil somewhat the same function as the Institutes. Then a collection of all the laws of the Empire was prepared by means of two commissions, and completed under Leo VI. It was entitled the *Basilika*. In many points (in civil, but not in criminal, law) the principles of the *Ecloga* are set aside in favour of the older jurisprudence. Thus the Justinianean ordinances on the subject of divorce were revived, and throughout mediaeval Greece, although framing its code it took the Napoleonic for its model, professes theoretically to base its civil law on the edicts of the emperors as contained in the *Hexabiblos* of Harmenopulos.

Administration.—Three principles underlay the administrative reform of Diocletian: the separation of civil from military functions; the formation of small provincial units; and the scalar structure which deepened on the interposition of the vicar of a diocese and the praetorian prefect between the provincial governor and the emperor. This system lasted unchanged for three and a half centuries. The few unimportant alterations that were made were in harmony with its spirit, until the reign of Justinian, who introduced certain reforms that pointed in a new direction. We find him combining some of the small provinces into large units, undermining the scalar system by doing away with some of the dioceses and vicars, and placing in some cases military and civil authority in the same hands. The chief aim of Diocletian in his general reform had been to secure central control over the provincial governments; the object of Justinian in these particular reforms was to remedy corruption and oppression. These changes, some of which were soon cancelled, would hardly in themselves have led to a radical change; but they prepared the way for an administrative revolution, brought about by stress of external necessities. In the 7th century all the energies of the Empire, girt about by active enemies, were centred on war and defence; everything had to give way to military exigencies; and a new system was gradually introduced which led ultimately to the abolition of the old. The change began in Italy and Africa, at the end of the 6th century, where operations against the Lombards and the Berbers were impeded by the friction between the two co-ordinate military and civil authorities (masters of soldiers, and praetorian prefects). The military governors were made supreme with the title of *exarchs*, "viceroys"; the civil authority was subordinated to them in case of collision, otherwise remaining unaltered. The change is an index of the dangerous crisis through which these provinces were passing. In the East similar circumstances led to similar results. The Saracen danger hanging imminent over Asia Minor imposed a policy of the same kind. And so before the end of the 7th century we find the Empire divided into six great military provinces, three in Europe and three in Asia: (1) Exarchate of *Africa*, (2) Exarchate of *Italy*, (3) Strategia of *Thrace*, (4) County of *Opsikion* (= *obsequium*), including Bithynia, Honorias, Paphlagonia, parts of Hellespontus and Phrygia, (5) Strategia of the *Anatolikoi*, most of west and central Asia Minor, (6) Strategia of the *Armeniakoi*, eastern Asia Minor. In addition to these there was a naval circumscription, (7) the Strategia of the *Karabisianoi* (from *κάραβος*, a vessel), including the southern coastland of Asia Minor, and the Aegean (see below under *Navy*).

The bands of the old prefecture of Illyricum were not included in the system, because this part of the Empire was then regarded as a lost position. On the contrary, here military powers were committed to the Prefect of Illyricum, whose actual sphere extended little beyond Thessalonica, which was surrounded by Slavonic tribes.

The Eastern changes, perhaps initiated by Heraclius, but probably due mainly to Constans II., did not interfere with the civil administration, except in so far as its heads were subordinated to the military commanders. But Leo III., who as a great administrative reformer ranks with Augustus and Diocletian, did away with the old system altogether. (1) Reversing Diocletian's principle, he combined military and civil powers in the same hands. The strategos or military commander became also a civil governor; his higher officers (turmarchs) were likewise civil functionaries. (2) The scalar principle disappeared, including both the vicars and the praetorian prefect of the East (some of whose functions were merged in those of the prefect of the city); no authority interposed between the strategi and the emperor. (3) The new provinces, which were called *themes* (the name marks their military origin: *thema* = corps), resembled in size the provinces of Augustus, each including several of the Diocletian divisions. This third and last provincial reform has, like its predecessors, its own history. The list of themes in the 11th century is very different from that of the 8th. The changes were in one direction—the reduction of large provinces by cutting off parts to form smaller themes, a repetition of the process which reduced the provinces of Augustus. Hence the themes came to vary greatly in size and importance. Leo himself began the process by breaking up the Anatolic command into two themes (Anatolic and Thracesian). The principle of splitting up was carried out systematically by Leo VI. (emperor also responsible for a new ecclesiastical division of the Empire).

The development will be exhibited by a list of the themes in the middle of the 10th century. A. Asia: (1) Opsikion, (2) Optimaton, (3) Paphlagonia, (4) Bukellarian]=old Opsikion; (5) Anatolic, (6) Thracesian, (7) Samos (naval), (8) Cappadocia, (9) Seleucia (= Anatolic); (10) Armeniac, (11) Colonea, (12) Sebastea, (13) Charsianon, (14) Chaldia, (15) Mesopotamia] =old Armeniac; (16) Cibyrrhaeot, (17) Aegean (= Dodekanesos). B. Europe: (1) Thrace, (2) Macedonia, (3) Strymon, (4) Thessalonica, (5) Hellas, (6) Peloponnesus, (7) Nicopolis, (8) Dyrrhachium, (9) Longibardia, (10) Cephallenia, (11) Cherson.

It is interesting to note that up to Leo VI. the district between Constantinople and the wall of Anastasius formed a separate theme or government, entitled the Wall (τὸ τεῖχος) or the Ditch (ὁ τάφρος). Leo VI. united it with the theme of Thrace.

In the central administration, the general principles seem to have remained unchanged; the heads of the great administrative bureaux in Constantinople retain the *palatine* character which belonged to most of them from the beginning. But there were many changes in these offices, in their nomenclature and the delimitation of their functions. There are great differences between the administrative corps in the 5th, in the 10th and in the 15th centuries. We can hardly be wrong in conjecturing that, along with his provincial reform, Leo III. made a rearrangement of the central bureaux; the abolition of the Praetorian Prefecture of the East entailed, in itself, modifications. But minor changes were continually being made, and we may note the following tendencies: (1) Increase in the number of ministers directly responsible to the emperor, (*a*) subordinate offices in the bureaux being raised to the rank

of independent ministries; (*b*) new offices being created and old ones becoming merely titular. (2) Changes in nomenclature; substitution of Greek for Latin titles. (3) Changes in the relative importance and rank of the high officials, both civil and military.

The Prefect of the City (ἔπαρχος) controlled the police organization and administration of justice in the capital; he was vice-president of the imperial court of justice, and, when the office of Prefect of the East was abolished, he inherited the functions of that dignitary as judge of appeals from the provinces. But the *praefectus vigilum*, commander of the city guards, who was subordinate to him, became an independent officer, entitled Drungary of the Watch, and in the 11th century superseded him as vice-president of the imperial court. We are told that in the last years of the Empire the Prefect of the City had no functions at all; but his office survives in the *Shehr-imaneti*, "city prefecture," of the Ottomans, in whose organization there are many traces of Byzantine influence.

Instead of the Quaestor of the Sacred Palace, whose duty was to draft the imperial laws and rescripts, we find in the 9th century a quaestor who possesses certain judicial and police functions and is far lower in the hierarchy of rank. It has been supposed that the later quaestor really inherited the duties of another officer, the *quaestor*, who was instituted by Justinian. In the latest period the quaestor, if he still existed as a name, had no functions.

The Master of Offices, who supervised the bureaux in the palace and was master of court ceremonies, also performed many functions of a minister of foreign affairs, was head of the imperial post (*cursus*), and of the corps of *agentes in rebus* or Imperial Messengers. This ministry disappeared, probably in the 8th century, but the title was retained as a dignity at all events till the end of the 9th. The most important functions, pertaining to foreign affairs, were henceforward performed by the Logothete of the Post (λογοθέτης τοῦ δρόμου). In the 12th century this minister was virtually the chancellor of the Empire; his title was changed to that of Great Logothete by Andronicus II.

The two financial ministers, *comes sacrarum largitionum* and *comes rei privatae*, continued to the end under the titles λογοθέτης τοῦ γενικοῦ (General Logothete) and ὁ ἐπὶ τοῦ ἰδικοῦ (Anastasius added a third, the Count of the Sacred Patrimony, but he was afterwards suppressed). But in the 9th century we find both these ministers inferior in rank to the *Sacellarius*, or private pursekeeper of the emperor. Besides these there was a fourth important financial department, that of the military treasury, under a Logothete.

The employment of eunuchs as high ministers of state was a feature of the Byzantine Empire from the end of the 4th century. It is laid down as a principle (A.D. 900) that all offices are open to them, except the Prefecture of the City, the quaestorship, and the military posts which were held by "Domestics." There were then eight high posts which could only be held by eunuchs, of which the chief were the parakoimômenos and the provestiarios (keeper of the wardrobe).

An emperor who had not the brains or energy to direct the affairs of the state himself, necessarily committed the task of guiding the helm to some particular minister or court dignitary who had gained his confidence. Such a position of power was outside the constitution, and was not associated with any particular office; it might be held by an ecclesiastic or a eunuch; it had been held by the eunuchs Eutropius and Chrysaphius in the reigns of Arcadius and Theodosius II. respectively. In later times, such a first minister came to be denoted by a technical term, ὁ παραδυναστεύων. This was the position, for instance, of Stylianus, the father-in-law of Leo VI. Most of the emperors between Basil II. and Alexius Comnenus were under the influence of such ministers.

The orders of rank (which must be distinguished from titles of office) were considerably increased in later times. In the 4th and 7th centuries there were the three great classes of the *illustres*, *spectabiles* and *clarissimi*; and above the *illustres* a small, higher class of patricians. In the 9th century we find an entirely different system; the number of classes being largely augmented, and the nomenclature different. Instead of epithets like *illustres*, the names are titles which had designated offices; "patrician" alone survives. The highest rank is now (1) the magistroi; then come the patricians in two classes: (2) proconsular patricians, (3) respectable patricians; below these (4) protospatharioi; (5) dishypatoi (=*bis consules*); (6) spatharokandidatoi; (7) spathariοi; and other lower ranks. Particular ranks do not seem now to have been inalienably attached to particular offices. The strategos of the Anatolic Theme, *e.g.*, might be a patrician or only a protospathar. Whoever was promoted to one of these ranks received its insignia from the emperor's hand, and had to pay fixed fees to various officials, especially to the palace eunuchs.

In the provinces ordinary justice was administered by judges (κριταί) who were distinct from the governors of the themes, and inherited their functions from the old provincial governors of Diocletian's system. In Constantinople higher and lower courts of justice sat regularly and frequently. The higher tribunals were those of the Prefect and the Quaestor, before whom different kinds of cases came. Appeals reached the emperor through the bureau of Petitions (τῶν δεησέων); he might deal with the case immediately; or might refer it to the imperial court of appeal, of which he was president; or else to the special court of the Twelve Divine Judges (θεῖοι δικασταί), which was instituted by Justinian.

While the administration of justice was one of the best features of the Eastern Empire, its fiscal system, likewise inherited from the early Empire, was one of its worst. If the government had been acquainted with the principles of public economy, which have not been studied till comparatively recent times, a larger revenue might have been raised without injuring the prosperity of the inhabitants. Taxes were injudiciously imposed and oppressively collected. The commerce of the Empire was one of its great sources of strength, but the government looked on the merchants as a class from which the utmost should be extorted. The chief source of revenue was the land. The main burdens which fell upon the landed proprietors throughout the whole period were the land tax proper and the *annona*. The land tax (*capitatio terrena*=the old *tributum* of the imperial, *stipendium* of the senatorial, provinces) was based, not on the yearly produce, but on the capital of the proprietor, the character and value of the land being taken into account. In later times this seems to have become the καπνικόν, or hearth tax. The *annona* was an additional impost for supporting the army and imperial officials; it was originally paid in produce. In later times, we meet it under the name of σιτωνία or συνωνή. The province was divided into fiscal districts, and the total revenue to be derived from each was entered in a book of assessment. The assessment was in early times revised every fifteen years (the "indiction" period), but subsequently such revisions seem to have been very irregular. The collection of the taxes was managed through the curial system, while it lasted (till 9th century?). The decurions, or municipal councillors, of the chief town in each district were responsible for collecting and delivering the whole amount, and had to make good the sums owed by defaulters. This system of collective responsibility pressed very heavily on the decurions, and helped to cause their decay in the Western provinces. After the abolition of the curial organization, the principle of collective responsibility remained in the form of the ἐπιβολή or additional charge; that is, if a property was left without an owner, the taxes for which it was liable became an extra charge on the other members of the district (οἱ ὁμόκηποι). The taxes were collected by *praktores*, who were under the General Logothete. The peasant proprietors were also liable to burdens of other kinds (corvées), of which the most important was the furnishing of horses, vehicles, postboys, &c., for the state post (see ANGARIA).

The history of landed property and agrarian conditions in the Eastern Empire still awaits a thorough examination. It may be noted that individual hereditary proprietorship was always the rule (on crown and monastic lands as well as in other cases), and that the commonly supposed extensive existence of communities possessing land in common is based on erroneous interpretation of documents. When imperial lands were granted to monasteries or as fiefs (τρόποι) to individuals, the position and rights of the peasant proprietors on the estates were not changed, but in many

cases the imposts were paid to the new master instead of to the fisc. In the 4th, 5th and 6th centuries the cultivators were attached to the soil (*coloni, ascripticii*; see SERFDOM), in the interests of the fiscus; it has been supposed, on insufficient grounds, that this serfdom was abolished for a time by Leo III., though it is probable that the condition of the peasants was largely changed by the invasions of the 7th century. In any case the system of compulsory attachment of peasants to their lands remained in force, and the class of adscripticii (ἀνεπάνορφοι) existed till the latest times. The chief sources for agrarian conditions are, besides the imperial laws, monastic records, among which may be mentioned as specially valuable those of the Monastery of Lemboi near Smyrna.

Army and Navy.—The general principle of the military defence of the Empire in the 4th century consisted in large forces stationary on the frontiers, and reserve forces, stationed in the interior provinces, which could be moved to any point that was in danger. Thus the army was composed of (1) the *limitanei*, frontier-troops (under *duces*), and (2) reserve forces (under *magistri militum*) of two denominations, (*a*) *palatini* and (*b*) *comitatenses*. The limitanei were the more numerous; it has been estimated that if they numbered about 350,000, the comitatenses and palatini together amounted to less than 200,000. It is to be noted that for the old legion of 6000 men a smaller legion of 1000 had been substituted, and that the proportion of cavalry to infantry was small. In the 6th century the fundamental principles of the system were the same; but the cavalry had become a much more important branch of the service, and in the wars of Belisarius the *foederati*, barbarian mercenaries of various races, commanded by their own chiefs, played a great rôle. The peasants of Illyria and Thrace, the mountaineers of southern Asia Minor still supply an important part of the army, but the number of barbarians (Heruli, Vandals, Goths, Slavs, Arabs, &c.) is much larger. Solidity and a corresponding want of mobility characterized at this time both cavalry and infantry; their great merit was straight and rapid shooting: Belisarius ascribed his success in Italy to the excellence of the archery. It is remarkable with what small forces (not more than 25,000) the first conquest of Italy was achieved, though Belisarius was far from being a military genius and the discipline in his army was flagrantly defective.

Frontier Defence.—Justinian carried out on the frontiers and in the exposed provinces a carefully calculated and expensive system of defensive works. Fortified towns along the *limes* were connected by intervening forts, and at some distance behind was a second line of more important fortresses more strongly garrisoned, which furnished both a second line of defence and a refuge for the inhabitants of the open country. There was an elaborate system of signals by which the garrisons of the front stations could announce not only the imminence of a hostile invasion, but the number and character of the enemy. In North Africa there are abundant remains of the forts of the 6th and 7th centuries, displaying the military architecture of the period and the general frontier system. The typical fortress had three defences: the wall flanked by square towers of three storeys; at a few yards' distance a second wall of stone; and outside a deep foss about 20 yds. wide, with vertical sides, filled with water, and along its edge a rampart of earth.

We have already seen how the disasters and losses of the 7th century led to a radical change in the military organization, and how the Empire was divided into themes. The preponderant influence which Asia Minor won and retained till the 11th century is reflected in the military establishments which were developed on the Asiatic provinces. The *strategos* of a large theme commanded a corps of 10,000 and the scheme of the divisions and subordinate commands has a remarkable resemblance to the organization of some of the armies of modern Europe.

The recorded scheme was probably not uniform in all the themes, and varied at different periods. The *Thema* (corps) consisted of 2 *turmai* (brigades) under *turmarchai*; the turma of 5 *banda* (regiments), each under a *bandophorus*; the banda of 2 *drungi* (*drungarkhiai* (companies) under a *komētes* (captain). The pentarkhia, containing 200 men, had 5 subdivisions under *pentekontarkhai* (lieutenants); and there was a smaller unit of ten men under the *dekarkhes* (corporal). The total strength in the 9th century was 120,000; in Justinian's time it was reckoned at 150,000.

Distinct from the military forces (θέματα) of the provinces were the forces (τάγματα) stationed in or near the capital. The most important of these were the Scholae and the Excubitores. The Scholarian troops were in early times under the Master of Offices, but subsequently their chief officer, the Domestic of the Schools, became the highest military commander in the Empire next to the Strategos of the Anatolic Theme. In war, when the emperor did not assume the chief command himself, he might entrust it to any commander, and he often entrusted it to the Domestic. In the 11th century, after the conquest of Bulgaria, there were two Domestics, one for the east and one for the west, and under Alexius Comenus the Domestic of the Scholae was called the Great Domestic. Under the Palaeologi the Great Domestic was superior in rank to all other ministers.

Besides the Scholarians, and the Excubitores (who had been organized in the 5th century), there were the regiments of the Hikanatoi, the Arithmos and the Numeroi. The Numeroi were foot-soldiers. The Optimatoi, also infantry, properly belonged to the same category, though they were constituted as a theme. It is to be observed that the names of corporations of Constantinople were partly organized as militia, and were available for purposes of defence.

The great difference between this Byzantine army and that of the earlier Empire is that in strength (for the Roman legions of the West) lay entirely in cavalry, which the successors of Heraclius and the Isaurian emperors developed to great perfection. The few contingents of foot were quite subsidiary. The army was free from the want of discipline which was so notable in the 6th century; it was maintained in Asia Minor, which was the great recruiting ground, by a system of military holdings of land (an extension of the old Roman system of assigning lands in the frontier districts to federate barbarians and to veterans). The conditions of the marauding expeditions and guerilla warfare, continuously carried on against and by the Saracens in the 8th, 9th and 10th centuries, were carefully studied by generals and tacticians, and we possess the theory of the Byzantine methods in a treatise composed by the emperor Nicephorus Phocas, and edited by one of his pupils. Every detail of an inroad into Saracen territory is regulated.

In the 8th and 9th centuries there was a system of signals by which an approaching Saracen incursion was announced to Constantinople from the Cilician frontier. The news was flashed across Asia Minor by eight beacon fires. The first beacon was at Lulon (which commanded the pass between Tyana and the Cilician gates), the last on Mt. Auxentius in Bithynia. When this fire appeared, a light was kindled in the pharos of the imperial palace at Constantinople. The system was discontinued in the reign of Michael III., probably after the capture of Lulon by the enemy in 860, and was not renewed, though Lulon was recovered in 879. It should be noted that this famous telegraphic system was only an application on a large scale of the frontier signalling referred to above.

The loss of a great part of Asia Minor to the Seljuks, and the disorganization of the provinces which they did not overrun, seriously weakened the army, and the emperors had recourse more and more to foreign mercenaries and barbarian auxiliaries. The employment of Scandinavians had begun in the 10th century, and in 988 was formed the Varangian guard, a chiefly Anglo-Saxon adventurous. In the arsenal of Venice are two lions, which were transported from the Peiraeus, inscribed with obscure Runic characters, carved perhaps by Scandinavians in the army of Basil II. Under Michael IV. (1034–1041) the Norwegian prince Harald Hardrada (described by a Greek writer as "Araltes, son of the king of Varangia") fought for the Empire in Sicily and in Bulgaria. But in the latter part of the 11th century foreign mercenaries greatly increased in numbers and importance.

The note of the Byzantine army was efficiency, and nowhere is the immeasurable superiority of the civilization of the Eastern Empire to the contemporary states of Europe more apparent. The theory of military science was assiduously studied; under constant practice, interpreting and correcting theories, safeguarded it against pedantry; and a class of magnificent staff officers were trained, who in the 10th century were the terror of the enemy. The particular tactics of the various foes whom they had to meet were critically studied. We have a series of military text-books, from the time of Anastasius I. to that of Basil II., in which we can learn their principles and methods. In this army there was plenty of ambition, and distinction aroused personal pride, but no love of fighting for fighting's sake, nor the spirit which in western Europe developed into chivalry. The Byzantines despised such ideas as characteristic of barbarians who had physical strength and no brains. The ideal was the good general, as Leo VI. shows in his treatise on Tactics, was in their opinion not to win a great battle, but to attain success without the risks and losses of a great battle. The same author criticizes the military character of the Franks, laying as tribute to their fearless courage the remark that their want of discipline, the haphazard nature of their array and order of battle, their eagerness to attack before the word was given, their want of faculty for strategy or tactical combinations, their incapacity for operations on difficult ground, the ease with which they could be deceived by simple artifices, their carelessness in pitching camps, and their lack of a proper intelligence department. These criticisms, borne out by all we know of feudal warfare, illustrate the contrast between a western host, with its three great "battles," rushing headlong at the foe, and the Byzantine army, with its large number of small units, co-operating in perfect harmony, under a commander of genius, who was trained in military science, had a definite plan in his head, and could rely on all his subordinates for strict and intelligent obedience.

Under the early Empire, as Rome had no rival in the Mediterranean, it was natural that the navy and naval theory should be neglected. When Constantine the Great decided to besiege Byzantium by sea, both he and his opponent Licinius had to create fleets for the struggle. Even when the Vandals in Africa made transmarine conquests and became a naval power, the Romans did not seriously address themselves to building an efficient navy and securing their own thalassocracy; the Vandals arrested their career and their expeditions against Africa failed. And even when the Vandal power was in its decline and Belisarius set forth on his successful expedition of conquest, his fears for the safety of his squadron in case he should be attacked at sea show us to suspect that the fleet of the enemy was superior to the Roman. The conquest of Africa secured for Justinian the undisputed command of the Mediterranean, but he did nothing for the naval establishment. It was not till the Saracens, aspiring to conquer and the Mediterranean, became a naval power that the Roman Empire was forced, in a struggle for its being, to organize an efficient fleet. This, as we saw, was the work of Constans II., and we saw what it achieved. In this first period (*c.* 650-720) the naval forces, designated as the *Karabisianoi*, were placed under the command of an admiral, with title of *strategos*. They consisted of two geographical divisions, each under a drungarios: the province of the Cibyrrhaeots (probably united from the smaller Cibyra in Pamphylia) which included the southern coast districts of Asia Minor, and the Aegean province, which embraced the islands and part of the west coast of Asia Minor. The former was the more important; the marines of this province were the hardy descendants of the sailors, whose unconquered had taxed the resources of the Roman government in the last years of the Republic. It was a new principle to impose the burden of naval defence on the coast and island districts. Distinct from these fleets, and probably organized on different principles, was the Imperial contingent stationed at Constantinople. Leo III. changed the naval administration, abolishing the supreme command, and making the Cibyrrhaeot and Aegean provinces separate independent themes under *strategoi*. The drungarios of the fleet became a subordinate. There was a danger lest a commander of the whole navy should become over powerful (indicated in the political rôle played by the navy before Leo's accession); but apart from this, the general reforms of Leo, which united civil and military powers in the same hands, naturally placed the commanders of the two branches of the navy on a new footing, by making them provincial governors. In this and the following reigns, the readiness of the people to neglect the fleet; the burden of the government was concentrated on the army. For a time this policy was prosecuted with impunity, since the Omayyad dynasty was growing weak, and then under the Abbasids, who transferred the capital from Damascus to Baghdad, the sea-power of the caliphate declined. But the neglect of the fleet was avenged in the 9th century, when Crete and Sicily were wrested from the Empire, the loss of south Italy was imminent, and Moslem squadrons sailed in the Tyrrhenian. Losses and dangers which led to the reorganization of the navy under Basil I. and Leo VI. After this reform we find the navy consisting of two main contingents: the imperial fleet (stationed at Constantinople), and the provincial fleets, three in number, (*a*) Aegean theme, (*b*) Aegean theme, (*c*) theme of Samos. A small distinct contingent was supplied by the Mardaites who natives of Mt. Lebanon, had been transplanted (partly to Pamphylia, partly to Epirus, the Ionian Islands, and Peloponnesus). The imperial fleet seems to have consisted of about 100 warships manned by 23,000 marines (the same men fought and rowed); the provincial fleets of 77 warships manned by 17,000. When the fleets acted together, the admiral in supreme command for the time was called the "drungarios of the naval forces." The warships (*δρόμωνες*, "dromonds") were mainly biremes, but there were also uniremes, built for speed, called "galleys" (*γαλαῖαι*). Pyrotechnic was an important element in the naval establishment; the manufacture of the terrible explosive known as *liquid* or *marine fire* (see GREEK FIRE) was carefully guarded as a state secret.

The navy, active and efficient in the 10th century, is described by a military and therefore unprejudiced officer of the 11th as the glory of Romania. But towards the end of the 11th century it declined, the main cause being the disorganization of the naval provinces of Asia Minor, which, as we saw, was a result of the Seljuk conquest of the interior. This decline had important indirect consequences; it led to the dependence of the Empire on the Venetian navy in the struggle with the Norman power, and for this helpful service exacted commercial privileges, injured Byzantine commerce and opened the door to the preponderant influences of the Venetians in eastern trade. In the period of the Palaeologi the imperial navy, though small, was active; and the importance which it possessed for the state is illustrated by the high rank at court which the admiral (who in the 11th century had received the title of Great Duke, *μέγας δούξ*) then occupied; the only minister who was superior to him was the Great Domestic.

Diplomacy.—In protecting the state against the barbarians who surrounded it, diplomacy was a weapon as important in the eyes of the Byzantine government as soldiers or fortifications. The peace on the frontiers was maintained not only by strong military defences, but by more or less skilful management of the frontier peoples. In the later Empire this kind of diplomacy, which we may define as the *science of managing the barbarians*, was practised as a fine art; its full development was due to Justinian. Its methods fall under three general heads. (1) One people was kept in check by means of another. The imperial government fomented rivalry and hatred among them. Thus Justinian kept the Gepidae in check by the Lombards, the Kuturgurs by the Utigurs, the Huns by the Avars. (2) Subsidies were given to the peoples on the frontiers, in return for which they undertook to defend the frontier adjacent to them, and to supply fighting men when called upon to do so. The chiefs received honours and decorations. Thus the Berber chiefs on the African border received a staff of silver, encrusted with gold, a silver diadem, white cloak, embroidered tunic, &c. More important potentates were invested with a costlier dress. In these investitures precedence was carefully observed. The chiefs thus received a definite position in the Empire, and the rich robes, with the ceremony, appealed to their vanity. In some cases they were admitted to posts in the official hierarchy,—being created Patricians, Masters of soldiers, &c. They were extremely fond of such honours, and considered themselves half-Romans. Another mode of winning influence was to marry barbarian princes to Roman wives, and rear their sons in the luxury of the palace. Dissatisfied pretenders, defeated candidates for a kingship, were welcomed at Constantinople. Thus there were generally some princes, thoroughly under Byzantine influence, who at a favourable opportunity could be imposed on their compatriots. Throughout Justinian's reign there was a constant influx of foreign potentates to Constantinople, and he overwhelmed them with attentions, pompous ceremonies and valuable presents. (3) Both these methods were already familiar to the Roman government, although Justinian employed them far more extensively and systematically than any of his predecessors. The third method was new and characteristic. The close connexion of religion and politics at Constantinople prepares us to find that Christian propaganda should go hand-in-hand with conquest, and that the missionary should co-operate with the soldier. The missionary proved an excellent agent. The typical procedure is as follows. In the land which he undertakes to convert, the missionary endeavours to gain the confidence of the king and influential persons, and makes it a special object to enlist the sympathies of the women. If the king hesitates, it is suggested that he should visit New Rome. The attraction of this idea is irresistible, and when he comes to the capital, the pomp of his reception, the honours shown him by the emperor and the splendour of the religious ceremonies overcome his last scruples. Thenceforward imperial influence is predominant in his dominion; priests become his advisers; a bishop is consecrated, dependent on the patriarch of Constantinople; and the barbarians are transformed by the penetration of Byzantine ideas. By the application of these various means, Justinian established Roman influence in Nubia, Ethiopia and South Arabia, in the Caucasian regions, and on the coast of the Euxine. The conversion of the Lazi (of Colchis) was specially notable, and that of the Sabiri, who were politically important because they commanded the eastern pass of the Caucasus known as the Caspian Gates. It will be observed that the great prestige of the Empire was one of the conditions of the success of this policy.

The policy had, of course, its dangers, and was severely criticized by one of Justinian's contemporaries, the historian Procopius. Concessions encouraged greater demands; the riches of the Empire were revealed. It was a system, of course, which could not be permanently successful without military power behind it, and of course it was not infallible; but in principle it was well-founded, and proved of immeasurable value. Less prejudiced writers than Procopius fully admit the far-sightedness and dexterity of the emperor in his diplomatic activity. A full account of it will be found in Diehl's *Justinien*.

In the 10th century we have again the means of observing how the government conducted its foreign policy on carefully

thought out **principles**. The Empire was then exposed to constant danger from Bulgaria, to inroads of the Magyars, and to attacks of the Russians. The key to the diplomatic system, designed to meet these dangers, was the cultivation of friendly relations with the Petchenegs, who did not menace the provinces either by land or sea and could be incited to act against Russians, Bulgarians or Magyars. The system is explained in the treatise (known as *De administrando imperio*) composed by the emperor Constantine Porphyrogennetos (*c.* 950). The series of these northern states was completed by the kingdom of the Khazars (between the Caucasus and the Don), with which the Empire had been in relation since the time of Heraclius, who, to win its co-operation against Persia, promised his daughter in marriage to the king. Afterwards the Khazars gave two empresses to New Rome (the wives of Justinian II. and Constantine V.). Their almost civilized state steered skilfully between the contending influences of Islam and Christianity, and its kings adopted the curious means of avoiding suspicion of partiality for either creed by embracing the neutral religion of the Jews. Commercial and political relations with the Khazars were maintained through the important outpost of the Empire at Cherson in the Crimea, which had been allowed to retain its republican constitution under a president (πρωτεύων) and municipal board (ἄρχοντες), though this freedom was limited by the appointment of a *strategos* in 833, a moment at which the Khazars were seriously threatened by the Petchenegs. The danger to be feared from the Khazars was an attack upon Cherson, and it seems probable that this was a leading consideration with Leo III. when he wedded his son Constantine V. to a Khazar princess. In the 9th century it was an object of the government to maintain the Khazars (whose army consisted mainly of mercenaries) against the Petchenegs; and hence, if it should become necessary to hold the Khazars in check, the principle was to incite against them not the Petchenegs, but other less powerful neighbours, the Alans of the Caucasus, and the people of "Black Bulgaria" on the middle Volga (a state which survived till the Mongol conquest).

For this systematic diplomacy it was necessary to collect information about the peoples whom it concerned. The ambassadors sent to the homes of barbarous peoples reported everything of interest they could observe. Of these Priscus's famous graphic account of the embassy which he accompanied to the court of Attila. We possess an account of an embassy sent to the Turks in Central Asia in the second half of the 6th century, derived from an official report. Peter the Patrician in Justinian's reign drew up careful reports of his embassies to the Persian court. When foreign envoys came to Constantinople, information was elicited from them as to the history and domestic politics of their own countries. It can be shown that some of the accounts of the history and customs of neighbouring peoples, stored in the treatise of Constantine Porphyrogennetos referred to above (furnishing numerous facts not to be found anywhere else), were derived from barbarian ambassadors who visited Constantinople, and taken down by the imperial secretaries. We may conjecture with some probability that the famous system of the *Relazioni*, which the Venetian government required from its ambassadors, goes back originally to Byzantine practice.

BIBLIOGRAPHY.—1. General works: Gibbon's *Decline and Fall of the Roman Empire*; Finlay's *History of Greece* (ed., Tozer; vols. i.-iv., 1877); Hopf, *Geschichte Griechenlands* in Ersch and Gruber's *Encyklopädie* (1 Sekt., vols. lxxxv., lxxxvi., 1876–78)); Hertzberg, *Geschichte der Byzantiner und des osmanischen Reiches bis gegen Ende des 16 Jahrhunderts* (1883); Παραστατικὸν χρονικὸν τῆς Ἑλληνικῆς Φυλῆς (5 vols., 2nd ed., 1887–88); Oman, *The Byzantine Empire* (1892) (a popular sketch); Gelzer, *Abriss der byzantinischen Kaisergeschichte*, in Krumbacher's *Geschichte der byzantinischen Litteratur* (ed. ii., 1897) (a summary but original outline). 2. Works dealing with special periods, or branches of the subject: Schiller, *Geschichte der römischen Kaiserzeit* (vol. ii., 1887) (Diocletian to Theodosius the Great); Hodgkin, *Italy and her Invaders* (8 vols., 1879–99) (to A.D. 800); Bury, *History of the Later Roman Empire*, A.D. 395–800 (2 vols., 1889); Diehl, *Justinien* (1901); Diehl, *L'Afrique byzantine* (1896); Pernice, *L'Imperatore Eraclio* (1905); Rambaud, *L'Empire grec au dixième siècle* (1870); Schlumberger, *Nicéphore Phocas* (1 vol.) and *L'Epopée byzantine* (3 vols.. 1890–1905; 4 vols., finely illustrated, covering the period 960–1057); Gay, *L'Italie méridionale et l'empire byzantin, 867–1071* (1904); Neumann, *Die Weltstellung des byzantinischen Reiches vor den Kreuzzügen* (1894); Meliarakes, Ἱστορία τοῦ Βασιλείου τῆς Νικαίας καὶ τοῦ βιοτικοῦ τῆς Ἠπείρου (1898); Gerland, *Geschichte des lateinischen Kaiserreiches von Konstantinopel* (part i., 1905); Fallmerayer, *Geschichte der Kaisertums Trapezunt* (1827); Norden, *Das Papsttum und Byzanz* (1903); Pears, *The Fall of Constantinople, being the story of the Fourth Crusade* (1885), and *The Destruction of the Greek Empire* (1903).

(J. B. B.)

ROMANES, GEORGE JOHN (1848–1894), British biologist, was born at Kingston, Canada, on the 20th of May 1848, being the third son of the Rev. George Romanes, D.D., professor of Greek at the university of that town. He was educated in England, going in 1867 to Gonville and Caius College, Cambridge. He early formed an intimate friendship with Charles Darwin, whose theories he did much during his life to popularize and support. When studying under Sir J. Burdon Sanderson at University College, London, in 1874–76, he began a series of researches on the nervous and locomotor systems of the Medusae and Echinodermata, which provided him with material for his Croonian lecture in 1876. Subsequently he continued the inquiry, partly in conjunction with Professor Alexander Ewart, and the results were published in *Jelly-fish, Star-fish, and Sea-urchins* (1885). Meantime he had been also devoting his attention to broader problems of biology. In 1881 he published *Animal Intelligence*, and in 1883 *Mental Evolution in Animals*, in which he traced the parallel development of intelligence in the animal world and in man. He followed up this line of argument in 1888 with *Menial Evolution in Man*, in which he maintained the essential similarity of the reasoning processes in the higher animals and in man, the highest of all. In 1892 he brought out an *Examination of Weismannism*, in which he upheld the theory of the hereditability of acquired characters. In 1890 he left London and settled at Oxford, where he founded a lecture similar to the "Rede" of Cambridge, to be delivered annually on a scientific or literary topic. In 1893 he published the first part of *Darwin and after Darwin*, a work dealing with the development of the theory of organic evolution, and based on lectures, which he delivered as Fullerian professor of physiology at the Royal Institution in 1888–91; a second part appeared in 1895 after his death, which occurred at Oxford on the 23rd of May 1894.

Romanes was awarded the Burney prize at Cambridge in 1873 for an essay on "Christian Prayer and General Laws." Five years later, under the pseudonym "Physicus," he issued *A Candid Examination of Theism*, in which he showed himself out of accord with orthodox religious beliefs. In 1882 he published an article on the "Fallacy of Materialism," and in his Rede lecture of 1885 he appeared as a monist. Subsequently his views again changed in the direction of orthodoxy, as is shown by his *Thoughts on Religion*, written shortly before his death and published in 1895.

His *Life and Letters*, by his widow, appeared in 1896.

ROMANIN, SAMUELE (1808–1861), Venetian historian, was born of a poor Jewish family at Trieste. Being left an orphan at an early age, he provided for his younger brothers and sister by giving French and German lessons. In 1821 he settled in Venice, where he afterwards translated Hammer-Purgstall's *Geschichte des osmanischen Reiches* into Italian. He next published his own *Storia dei Popoli Europei* (Venice, 1843–44). He taught in a private school and was sworn interpreter in German to the courts of justice; on the expulsion of the Austrians in 1848 he was appointed professor of history by the provisional government, and he lectured on Venetian history at the Ateneo Veneto. In 1852 he began to publish his monumental *Storia documentata di Venezia*, but although he finished the work, carrying it down to the fall of the republic in 1798, he did not live to see the publication completed, as he died of apoplexy on the 9th of September 1861; among his papers were found all the documents which were to be added,

and the index. The tenth and last volume was issued in 1861.

After Romanin's death his lectures on Venetian history were published in two volumes (Florence, 1875). Among his minor works we may mention: *Gli Inquisitori di Stato di Venezia* (Venice, 1858), *Bajamonte Tiepolo e le sue ultime vicende* (Venice, 1851), and *Venezia nel 1789* (Venice, 1860).

ROMAN LAW.[1] The term "Roman law" is indefinite and ambiguous, being used in more than one sense. First, in a wide sense, it comprehends the totality of the laws of the Roman state, which were observed by its subjects during about thirteen centuries, from Romulus to Justinian. In a second and stricter meaning it indicates the law as consolidated by Justinian or, in other words, the law contained in the *Corpus Juris Civilis*, which is the name that has been given since the 16th century to Justinian's legislative works as a whole, and distinguishes them from the *Corpus Juris Canonici*. In this acceptation it is equivalent to, and is often called, "civil law" as contrasted with canon law. In a third and loose sense Roman law embraces, in addition to the *Corpus Juris*, the interpretations of it after Justinian by medieval and modern courts, jurists and commentators adapting it to the customs and laws of their own countries and times. The German expression, for example, *modernes* (or *heutiges*) *römisches Recht*, indicates the Roman law as it was applied in Germany in modern times. Such medieval and modern interpretation, however, is also sometimes expressed, in English usage at least, by the term "civil law" as contrasted with native or common law; writers in this field being usually styled civilians rather than Romanists. It is to the Roman law in the first of the above-mentioned three significations that the present article is devoted.

Necessity for historic treatment.

To give a proper sketch of Roman law it must be treated historically. Nearly all systems of positive law are the product more or less of an historic development, but the Roman has this great advantage over other systems, that it was at all times a homogeneous body complete in itself. For the Romans were comparatively little indebted to other peoples for their jurisprudence, and, when they did borrow legal ideas and institutions from others, they generally transformed or modified these in adapting them to their own native system, so that they became substantially Roman. Moreover, the various stages of progress of the law from its genesis to its maturity and ultimate consolidation can be traced in unbroken continuity. Beginning in 753 B.C., the traditionally accepted date of the foundation of Rome, it continued its course till the death of Justinian in A.D. 565. Allowing for the first three centuries being without historic evidence, we have at least an authenticated evolution of about 1000 years. Of no other system of law, ancient or modern, can anything like the same thing be said.

As to the proper method of historic treatment there have been different opinions. Without going into these, it is enough to say that the subject may be treated from two sides, viz. on the one side in relation to the external sources of the law, including therein the political and social conditions and the various constitutional changes at different periods affecting the development of the law, as well as the modes in which the law manifested itself and the legal literature from which our knowledge of it is derived; on the other side it may be treated in relation to the several departments or institutions of the law in view of their development or changes through time or circumstance, such as marriage, slavery, property, and so forth. This corresponds to what Leibnitz described as *external* and *internal* history respectively, terms which are now rather out of vogue. Of course it is possible to treat the historic sources of the law, constitutional and literary, independently of the doctrines, and this is now often done; but unless both are discussed the field of Roman law is not covered. Both the external and the internal history, however, may be treated together or in a measure interwoven, and it is in this way that the subject is treated in the following pages. But constitutional events affecting the law are only noticed very summarily, details about these being given in separate articles.

Division into historic epochs.

Modern writers on the history of the Roman law have as a rule, for the purpose of systematic treatment, divided the subject into definite historic periods. Gibbon, in the 44th chapter of his *Decline and Fall of the Roman Empire*, seems to have been the first to suggest this mode of treatment, though the particular periods of division he selected (being based on an artificial symmetry of about three hundred years each) are not satisfactory.[2] In the present article, the division made by Muirhead in his article in the 9th edition of this Encyclopaedia into five historic epochs has been left unaltered. These are: (1) the regal period; (2) the *jus civile*, representing the period from the establishment of the Republic until the subjugation of central and southern Italy; (3) the *jus gentium* and *jus honorarium*, representing the latter half of the Republic; (4) the *jus naturale* and maturity of Roman jurisprudence, representing the period of the Empire until the beginning of the reign of Diocletian; (5) the period of codification, *i.e.* from Diocletian to Justinian. Not that there is any sharp or fundamental division between these or, indeed, between any historic epochs. The law is a unity: it has its roots in the past and grows with the nation itself, and, like it, decays; there is no break in its continuity. The division is made merely for convenient treatment of the subject.

It must be kept in view that our knowledge of Roman customs and laws earlier than the XII. Tables and even for some time after them cannot be based on strict historical evidence; it is almost entirely traditional and conjectural, and different writers will take different views according to the relative value they place upon this or that piece of presumptive evidence.

It is only the private law that is dealt with in the present article.

I. The Regal Period

i. *The People and the Law.*

The Beginnings of the State.—The early Romans were not different from other Indo-European communities in their essential characteristics. The tribe, the clan, the family, the individual: each of these appears in course of development prior to the XII. Tables. Putting aside much of the traditional accounts of Livy, Dionysius, and other ancient historians, regarding the foundation of Rome and its early political and social life, as mythical, modern critical historians are none the less agreed that in the earliest period of their existence as a settled community the Romans were subjected to the government of a king (*rex*), with a council of elders (*senatus*) and an assembly of burghers (*comitia curiata*).

It used to be a somewhat common opinion that the primitive Romans were a sort of amalgam of three different races—Latin, Sabine and Etruscan. This opinion is mainly based upon the tradition that the state was originally formed by a union of three tribes called Ramnes, Tities and Luceres; the Ramnes being of the Latin race, the Tities of the Sabine and the Luceres of the Etruscan. Attempts have even been made to find in the Roman laws and institutions traces of the influence of each of these races, and especially of the first two—*patria potestas* and *manus*, for example, being attributed to the Latin or dominant race; adoption and confarreation to the Sabine; forms and ceremonial (such as lictors, fasces, &c.) to the Etruscan.[3] But this attractive theory of union of three races, apart from the suspicion of a symbolic trichotomy (*tres tribus*) due to later times, is based on no substantial evidence;[4] many of the

[1] This article represents a recast of the article contributed to the 9th edition of the *Encyclopaedia* by the late Professor Muirhead. A large part of that article has been retained by the present writer, and the plan of arrangement, though altered in some respects, has been adhered to in the main.

[2] See as to historic epochs Muirhead, *Hist. Introd. to the Law of Rome* (2nd ed. by Goudy, 1899), p. 421.

[3] See Muirhead, *Historical Introduction* (2nd ed., 1899), pp. 3–5, and authorities there cited.

[4] Some writers deny the existence of the tribes altogether, but this goes too far. See Brunsand Lenel in Holtzendorff's *Encyklopädie d. Rechtswissenschaft*, i. p. 86*.

institutions attributed to the Sabines and Etruscans were, as Mommsen and others have shown, common to all peoples of Greek-Italian stock, and could not be strange to the Latins. We must hold that the Romans were essentially a Latin race, though influenced by a considerable admixture with Sabine and, to a lesser degree, Etruscan races (see ROME).

Patricians, Clients and Plebeians.—But whatever their ethnographic descent, it is pretty certain that the Roman civitas was in the earliest period an organization that was patriarchal in its essence, but in which there was to be distinguished, on the one hand, a dominant class enjoying all the rights of citizenship, and, on the other, a semi-servile or quasi-vassal class excluded from such rights. The former class were called *patricii* or *Quirites*;[1] the latter were called *clientes* and (later) *plebeii*.

Division of the people.

Patricians.—There was part of the law of Rome that even in the Empire was known by the name of *jus Quiritium*, and this in the regal period was the only law. The patricians at first were the *Quirites*, and prior at least to the time of Servius Tullius they alone enjoyed rights under this law. From their number the council of elders was selected; they alone could take part in the curiate comitia; they alone could contract a lawful marriage and make a testament; in a word, all the peculiar institutions of early Rome were for their benefit alone.

Patricians.

But these rights and prerogatives they enjoyed as members of *gentes* or clans, the clans being aggregations of families bearing a common name and theoretically at least tracing their descent from a common ancestor. These clans, of which there were normally three hundred altogether according to a rather doubtful tradition, were organized constitutionally in curies. Of the curies, again, there were thirty in all, there being probably ten in each of the three tribes, organized primarily for military and secondarily for political and religious purposes. Though for the federation of the *curiae* and *gentes* Rome required a common ruler and common institutions, religious, military and political, yet it was long before such federation into a state displaced entirely the separate institutions of the several *gentes*. Every clan had its own cult peculiar to its own members. It had its common property and its common burial-place. It probably had some common council or assembly, for we read not only of special gentile customs, but of gentile statutes and decrees. Tradition records instances of wars waged by individual *gentes*, indicating that they had the right to require military service alike from their members and dependants. Widows and orphans of deceased clansmen were under the guardianship of the *gens* or of some particular member of it to whom the trust was specially confided. If a clansman left no descendants, his property passed to his fellow-gentiles. Finally, its members were always entitled to rely upon its assistance, to have maintenance when indigent, to be ransomed from captivity, and to be avenged when killed or injured.

The gentes.

Along with the gentiles there were in Rome from the earliest period other persons known by the name of *clientes* (clients). Their origin is wholly unknown. Some of them may have been the original inhabitants of Rome and their descendants, but more probably they were mostly immigrants from other communities or citizens of conquered towns whom the Romans were unable or unwilling to treat as slaves. Some may have been slaves to whom liberty *de facto* had been given. Following a custom familiar both to Latins and Sabines, such persons were placed under the protection of the heads of patrician families. The relationship was hereditary on both sides, and known as that of patron and client. The client[2] became a dependent member of his patron's clan—not *gentilis* but *gentilicius*. His patron had to provide him with what was necessary for his sustenance and that of his family; and, as ownership or possession of lands increased in extent, it was probably not unusual for the patron or his *gens* to give him during pleasure a plot of land to cultivate for himself. The patron had, moreover, to assist him in his transactions with third parties, and obtain redress for him when injured. The client, on the other hand, had to maintain his patron's interests by every means in his power. But the advantage must have been chiefly on the side of the client, who, without becoming a citizen, obtained directly the protection of his patron and his clan, and indirectly that of the state. A large number of clients attached themselves to and received protection from the king as patron—"royal clients," as Cicero calls them.

Clients.

The plebeians (*plebs*, from πλῆθος, meaning crowd), as distinguished from the clients, must be regarded as a heterogeneous mass of non-gentile freemen. It used to be the prevailing opinion among modern writers, following the Roman historians, that the plebeians existed as a body since the very beginning of the city. They were thought to be mainly composed of immigrants and refugees who, while being allowed personal liberty, declined to submit themselves to a patron. But recently a theory of Mommsen, based on solid philological and other grounds, has obtained wide adhesion and tends to become the dominant one. Mommsen's view is that at first there were only two classes in the community, the patricians and clients, or, in other words, that the only plebeians were the clients who, as such, possessed only quasi-liberty (*Halbfreiheit*), and that it was not till after a century or two that the practice of voluntary clientage began to decay and the class of plebeian freemen arose. This was partly due to *gentes* dying out, so that the clients attached to them were left without patrons; partly to the numbers of foreigners at Rome (through transplantation of the inhabitants of conquered cities and otherwise) having become so large that they felt themselves sufficiently powerful to do without protection; and partly to other causes.[3]

Plebeians.

However this be, it is generally admitted that, during the latter part of the present epoch at least, plebeians existed as a body composed of individuals of mixed races not united by any gentile organizations of their own nor attached to any Roman *gentes*. Tradition attributes to Numa the formation of gilds or societies of craftsmen, such as potters, carpenters, gold- and silver-smiths (*collegia opificum*) at Rome, eight or nine in number. This, though probably a myth as regards Numa, may be taken as slight evidence of the creation among the plebeians of associations for trade and other purposes, that to some extent compensated them for the want of gentile organization. These gilds seem to have had a common cult and a common council to arrange disputes and consolidate customs. Between the brethren (*sodales*) there was a bond of close alliance and interdependence, each owing duty to the other similar to what might be claimed from a guest or a kinsman.

The Regulatives of Public and Private Order.—It would be absurd to expect any definite *system of law* in those early times. What passed for it was a composite of *fas*, *jus* and *boni mores*, whose several limits and characteristics it is extremely difficult to define. This may to some extent be accounted for by the fact that much of what was originally within the domain of *fas*, once it had come to be enforced by secular tribunals, and thus had the sanction of human authority, was no longer distinguishable from *jus*; while it may be that others of its behests, once pontifical punishments for their contravention had gone into desuetude, sank to nothing higher than precepts of *boni mores*.

[1] The derivation of the name is uncertain, and ancient writers differed about it. It probably comes either from *quiris*, a Sabine word for a spear, or from *curia*. The derivation from *Cures* is inadmissible. See Mommsen, *Röm. Staatsrecht* (1887, 1888), iii. 1, p. 5 n.

[2] The derivation of *cliens* from *cluere* indicates the relationship—one who is called on, who hearkens. The theory that clientage arose from the voluntary subjection of poorer citizens to the rich is an hypothesis supported by no satisfactory authority.

[3] Mommsen, *Staatsrecht*, iii. 1, pp. 66 seq. and pp. 127 seq. For a different view, Karlowa, *Röm. Rechtsgeschichte*, i. 62. Cf. Cuq, *Instit. jurid. des Romains* (2nd ed., 1904–8), i. 11–12.

By *fas*[1] was understood the will of the gods, the laws given by heaven for men on earth, much of it regulative of ceremonial, but a by no means insignificant part embodying rules of conduct. It appears to have had a wider range than *jus*. It forbade that a war should be undertaken without the prescribed fetial ceremonial, and required that faith should be kept even with an enemy when a promise had been made to him under sanction of an oath. It enjoined hospitality to foreigners, because the stranger guest was presumed, equally with his entertainer, to be an object of solicitude to a higher power. It punished murder, for it was the taking of a god-given life; the sale of a wife by her husband, for she had become his partner in all things human and divine; the lifting of a hand against a parent, for it was subversive of the first bond of society and religion,—the reverence due by a child to those to whom he owed his existence; incestuous connexions, for they defiled the altar; the false oath and the broken vow, for they were an insult to the divinities invoked; the displacement of a boundary or a landmark, not so much because the act was provocative of feud, as because the march-stone itself, as the guarantee of peaceful neighbourhood, was under the guardianship of the gods. Some breaches of *fas* were expiable, usually by a peace-offering to the offended god; others were inexpiable. When an offence was inexpiable, the punishment was usually what is called *sacratio capitis*, excommunication and outlawry of the offender. The precepts of the *fas* therefore were not mere exhortations to a blameless life, but closely approached to laws, whose violation was visited with punishments none the less effective that they were religious rather than civil. *Fas.*

The derivation of the word *jus* is disputed. The usual derivation is from the Sanskrit, *ju*, to "join, bind or unite," from which some deduce as its signification "that which binds," "the bond of society," others "that which is regular, orderly or fitting." Bréal identifies it with the *jos* or *jaus* of the Vedas, and the *jaes* or *jaos* of the Zend-Avesta—words whose exact meaning is controverted, but which he interprets as "divine will or power."[2] If Bréal's definition can be adopted we obtain a very significant interpretation of the words addressed by the presiding magistrate to the assembled comitia in asking them whether they assented to a law proposed by him,—*Velitis, jubeatis, Quirites*, &c., "Is it your pleasure, Quirites, and do you hold it as the divine will, that," and so on. As legislation by the comitia of the curies and centuries was regarded as a divine office, and their vote might be nullified by the fathers on the ground that there had been a defect in the *auspicia*, and the will of the gods consequently not clearly ascertained, this explanation of Bréal's seems not without support,—*vox populi vox dei*. If it be right, then the main difference between *fas* and *jus* was that the will of the gods, which both embodied, was in the one declared by inspired and in the other by merely human agency. *Jus.*

This *jus* might be the result either of traditional and inveterate custom (*jus moribus constitutum*) or of statute (*lex*).[3] As to the customs, it can well be believed that at the outset they were far from uniform; that not only the customs of the three original tribes but those also of the different *gentes* varied, and that they only gradually approximated, and in course of time consolidated into a general *jus Quiritium*. Of legislation there was, so far as is known, practically almost nothing

What went by the name of *boni mores* (as distinct from *jus moribus constitutum*) must also be regarded as one of the regulatives of public and private order Part of what fell within their sphere might also be expressly regulated by *fas* or *jus*; but there was much that was only gradually brought within the domain of these last, and even down to the end of the Republic not a little that remained solely under the guardianship of the family tribunal or the censor's *regimen morum*. The functions of those who took charge of *boni mores* were twofold: sometimes they restrained by publicly condemning—though they could not prevent—the ruthless and unnecessary exercise of legal right, as, for example, that of the head of the house over his dependants, and sometimes they supplied deficiencies in the law by requiring observance of duties that could not be enforced by any legal process. Dutiful service, respect and obedience from inferiors to superiors, chastity, and fidelity to engagements, express or implied (*fides*), were among the *officia* that were thus inculcated, and whose neglect or contravention not only affected the reputation, but often entailed punishments and disabilities, social, political or religious. It was the duty of those in authority to enforce their observance by such *animadversio* as they thought proper—the *paterfamilias* in his family, the *gens* among its members, the king in relation to the citizens generally; and many a wrong was prevented not by fear of having to make reparation to the party injured but by the dread of the penalties that would follow conduct unbecoming an upright citizen. *Boni mores.*

That the bulk of the law during the regal period was customary is universally admitted, and that no laws were committed to writing prior to the XII. Tables is generally believed. Yet the jurist Pomponius, a contemporary of Hadrian, speaks of certain laws enacted by the comitia of the curies, which he calls *leges regiae* and which, he says, were collected by one Sextus Papirius, a prominent citizen in the reign of Tarquinius Superbus, under the name of *Jus Papirianum*.[4] We are also told by Paul that this work was commented on by a certain Granius Flaccus,[5] who was, it is supposed, of the time of Julius Caesar or Augustus. No remains of this *Jus Papirianum* are extant, but we have a considerable number of so-called *leges regiae* cited by Livy, Dionysius and others, which contain rules of the private law relating almost entirely to matters of *fas* and which appear to have been enacted under the kings We are also told by Servius, the commentator on Virgil, that there was a work known to Virgil called *de Ritu Sacrorum*, in which *leges regiae* were collected.[6] The authenticity of these laws, however, is disputed, and the question is one of difficulty. Some modern writers of high authority (*e.g.* Mommsen) hold that the *Jus Papirianum* is an apocryphal compilation made from pontifical records about the close of the Republic.[7] It has even been attributed (the suggestion was first made apparently by Gibbon) to Granius Flaccus himself. Nevertheless, the internal evidence from the character and language of the laws themselves (apart from the weight that must be given to the testimony of Pomponius, Servius and other ancient writers) is favourable to their great antiquity, and it is best to accept the view that the *leges regiae* are authentic remains of laws of the regal period. This does not, however, involve the belief that they were collected by Papirius, nor that they were enactments of the *comitia curiata*, as Pomponius says. They seem rather to have been regulations made by the king at his own hand. *Leges regiae.*

[1] Bréal derives *fas* from the Greek θέμις. It signifies the divinely inspired word. Bréal et Bailly, 101.

[2] *Nouv. rev. hist.* (1883), p. 605. But see J. Schmidt in Mommsen, *Staatsrecht*, iii. 310 n.

[3] For the distinction between *jus* and *lex*, see Mitteis, *Römisches Privatrecht* (1908), i. 30 seq. There is some controversy about the etymology of the word *lex*. See Bréal, *l.c.* p. 610; Schmidt in Mommsen, *S.R.* iii. 308 n. While *lex* is often used like *jus* to express law generally, it early acquired two distinct meanings, viz. (1) an obligation of any kind expressly incorporated in a private deed (*lex privata*), as in the phrases *lex mancipii, lex contractus*, &c.; (2) a comitial enactment, hence occasionally called *lex publica* (Gaius, i. 3 and ii. 104). But by the jurists of the Republic this latter meaning was extended so as to cover all laws resulting from the will of the people, including, for example, plebiscites and even senatorial or proconsular ordinances (*leges datae*).

[4] *Dig.* i. 2. 2, § 2 and § 36. In the latter passage Papirius is given the praenomen Publius.

[5] *Dig.* i. 16, 144.

[6] Serv., *in Aeneid*, 12, 836, cited in Bruns, *Fontes*, p. 3.

[7] It has been suggested that a work of the jurist Manilius mentioned by Pomponius (*Dig.* i. 2. 2, § 39) is its source (*Zeitschrift d. Sav. Stift.* xxiv. 220).

or perhaps old-established customs formulated by the higher pontiffs and ascribed to the kings.[1]

It is also stated by Dionysius that under Servius Tullius various laws, fifty in number, dealing with contracts and delicts, were enacted in the comitia of the curies.[2] But we have no corroboration of this, and recent writers are now generally agreed in regarding the statement as a legend.

ii. *Reforms of Servius Tullius.*

It is generally agreed that towards the end of the regal period, and connected with the king traditionally called Servius Tullius, a great reform of the constitution took place, which exercised much influence on the subsequent development of the law. No doubt there is a good deal of myth attached to the name of Servius, who seems to have been regarded by later Romans as a popular monarch, like Alfred by the English, but the main features of the traditional account of the constitutional reforms of this period may be taken as based on fair presumptive evidence. That all of them indeed were evolved from one brain is hardly credible, and that some of them were in observance *de facto* before being made constitutionally binding is very likely.

The design attributed to Servius was that of altering the old constitution in order to promote an advance towards equality between patricians and plebeians. He is credited with having desired, on the one hand, to ameliorate the position of the *plebs* and, on the other, to make them bear a proportionate share of the burdens of the state—in particular, to serve in the army and contribute to the war tax *(tributum)*. He effected this by giving them qualified rights of citizenship, not indeed by admitting them into the gentile organizations, but by creating a new political assembly of a distinctly military character in which they as well as the gentiles could take part. The so-called Servian reforms may be roughly summarized under the following four heads, viz. (1) a division of the Roman territory within the city walls into four local wards called *tribus* (to which a number of tribes outside the city—*tribus rusticae*—were afterwards in course of time added); (2) the establishment of a register of the citizens *(census)* which was to contain, in addition to a record of the strength of their families, a statement of the value of their lands, with the slaves and cattle employed in their cultivation, and which was to be revised periodically; (3) a division of the people, as appearing in the census, into five classes for military purposes, determined by the value of their holdings in land and its appurtenances, with a subdivision of each class into so-called *centuriae*; (4) the creation of a new assembly with legislative power called *comitia centuriata*, in which the vote was to be taken by *centuriae*. While it may be an open question how far these reforms, and particularly the institution of the centuriate comitia, were actually due to Servius, or only a result of his arrangements, the whole conception of the new constitution is obviously of early date and indicative of considerable statesmanship.

The plebeians were thereby made constitutionally part of the *populus Romanus*; they became citizens *(Quirites)*.[3] They got *connubium* and also *connubium* in fact; their marriages *inter se* were recognized as legal marriages. Rights and duties

[1] See Clark, *Hist. of Rom. Law* (1906), i. 16–19; Kipp, *Geschichte d. Quellen* (1903), pp. 24–25. The most comprehensive treatise on these royal laws, which also contains references to the earlier literature, is that of Voigt, *Über die Leges Regiae* (Leipzig, 1876). An exhaustive collection of them, including numerous references to royal institutions by Livy, Dionysius and others, is given in Bruns, *Fontes Juris*, 6th ed. i. 1 seq. Another collection is in Girard, *Textes*, 3rd ed. pp. 3 seq.

[2] Dion. iv. 10, 13.

[3] The view of some recent writers that the plebeians had at all times participated in the *jus Quiritium* and were admitted to the curiate comitia and even had gentile rights (see Lenel in Holtzendorff's *Encyklopädie d. Rechtswissenschaft*, 6th ed. i. 90 nn. 1, 2, and authorities there cited), must be decidedly negatived. Not only does it render the whole tradition about the Servian reforms untrustworthy, but the accounts of the struggles between patricians and plebs in the early Republic are left largely without meaning

were so far to be measured by each citizen's position as a holder of lands; the amount of land (including slaves and cattle appurtenant thereto)[4] held by him on quiritarian title was to determine the nature of the military service he was to render, the tribute he was to pay, and his right to take part in the new political assembly. It is indeed probable that a good while before Servius the conception of individual ownership of lands and things necessary for their cultivation had been reached, and that such ownership was recognized not only among the gentiles, but also *de facto* even more largely among the plebeians. The common lands of the *gentes* had become split up, to a considerable extent, among families and individuals. However this be, the creation of the *census* ensured, as far as possible, certainty of title, as it was declared that no transfers of property enrolled in it would be recognized unless made by public conveyance with observance of certain prescribed formalities.[5] The form of conveyance thus legally sanctioned was called originally *mancupium*, afterwards *mancipium*, and at a still later period *mancipatio*, while the lands and other things that were to pass by it came to be known as *res mancipii* (or *mancipi*). Hence arose a distinction of great importance in the law of property (which lasted till Justinian formally abolished it), between *res mancipi* and *res nec mancipi*; the former being transferable only by mancipation or surrender in court, the latter by simple delivery (see *infra*, p. 541).

iii. *Institutions of the Private Law.*

Law of the Family.[6]—The word *familia* in Roman law had at once a more extensive and a more limited meaning than it has in its English form. Husband, wife and children did not necessarily constitute an independent family among the Romans, as with us, nor were they all necessarily of the same one. Those formed a family who were all subject to the power—originally *manus*,[7] later *potestas* or *jus*—of the same head (*paterfamilias*). The *paterfamilias* was himself a member of the family only in the sense in which a king is a member of the community over which he rules. He might have a whole host dependent on him, wife and sons and daughters, and daughters-in-law and grandchildren by his sons, and possibly remoter descendants related through males; so long as they remained subject to him they constituted his family, that was split up only on his death or loss of citizenship. But if his wife had not passed *in manum* (a result apparently unknown among the patricians at this period), she did not become a member of his family: she remained a member of the family in which she was born, or, if its head were deceased or she had been emancipated, she constituted a family in her own person. Both sons and

The patrician family.

[4] Modern writers are not agreed as to whether movable *res mancipi* were included with lands in the valuation of property for fixing the classes.

[5] Or else by *cessio in jure*, though this may not have been before the XII. Tables, and it was in any case of very limited operation.

[6] On tribal family and matriarchate among the Romans in prehistoric times, consult Westermarck, *History of Human Marriage* (London, 1891); Post, *Grundriss der ethnologischen Jurisprudenz* (1894), i. 174–160. *Familia* and family are used in this section solely to designate the group of free persons subject by birth, marriage or adoption to the same *paterfamilias*. Strictly the word *familia* meant the household and all belonging to it. It had also the following principal meanings: (1) a *gens* or branch of a *gens* (group of families in the stricter sense); (2) the whole body of agnatic kinsmen (*familia communi jure*); (3) the family estate or *patrimonium*, as in the provisions of the XII. Tables about intestate successions, the *adgnatus proximus familiam habet*; (4) the family slaves collectively, as in the phrase *familia rustica*. See Mommsen, *Staatsr.* iii. 10 n. 16 n. 22; Rivier, *Précis du droit de famille romain* (Paris, 1891), § 1.

[7] The word *manus*, though in progress of time used technically to express the power (hand) of a husband over his wife *in familia*, was originally the generic term for all the rights exercised, not only over the things belonging but also over the persons subject to the head of the house—as seen, for example, in the words "manumission" and "emancipation." Cf. *Inst.* i. 5 pr. It should be observed that among uncivilized peoples there is always a very small vocabulary, and the same word often has to do duty in several senses—*e.g. familia, mancipium, nexum, caput.*

daughters on emancipation ceased to be of the family of the *paterfamilias* who had emancipated them. A daughter's children could never as such be members of the family of their maternal grandfather; for children born in lawful marriage followed the family of their father, while those who were illegitimate ranked from the moment of birth as *patresfamilias* and *matresfamilias*.

Marriage.

With the early Romans, as with the Hindus and the Greeks, marriage was a religious duty a man owed alike to his ancestors and to himself. Believing that the happiness of the dead in another world depended on their proper burial and on the periodical renewal by their descendants of prayers and feasts and offerings for the repose of their souls, it was incumbent upon him above all things to perpetuate his race and his family cult. The Romans were always strictly monogamous. In taking to himself a wife, he was about to detach her from her father's house and make her a partner of his family mysteries. With the patrician at least this was to be done only with divine approval, ascertained by *auspicia*. His choice was limited to a woman with whom he had *connubium* (ἐπιγαμία) or right of intermarriage. This was a matter of state arrangement; and in the regal period Roman citizens could have it outside their own bounds only with members of states with which they were in alliance, and with which they were connected by the bond of common religious observances. A patrician citizen, therefore, if his marriage was to be reckoned lawful (*justae nuptiae*), had to wed either a fellow-patrician or a woman who was a member of an allied community. In either case it was essential that she should be outside his sobrinal circle, *i.e.* more remote in kinship than the sixth degree. The ceremony was a religious one, conducted by the chief pontiff and the flamen of Jupiter, in presence of ten witnesses, representatives probably of the ten curies of the bridegroom's tribe, and was known as *farreum* or *confarreatio*. Its effect was to dissociate the wife entirely from her father's house, and to make her a member of her husband's; for confarreate marriage involved *in manum conventio*, the passage of the wife into her husband's "hand" or power, provided he was himself *paterfamilias*; if he was not, then, though nominally in his hand, she was really subject like him to his family head. Any property she had of her own—which was possible only if she had been independent before marriage—passed to him as a matter of course; if she had none, her *paterfamilias* usually provided her a dowry (*dos*), which shared the same fate. In fact, so far as her patrimonial interests were concerned, she was in much the same position as her children; and on her husband's death she had a share with them in his inheritance as if she had been one of his daughters. In other respects *manus* conferred more limited rights than *patria potestas*; for Romulus is said to have ordained that, if a man put away his wife except for adultery or one or two other grave offences, he forfeited his estate half to her and half to Ceres, while if he sold her he was to be given over to the infernal gods.[1]

Patria potestas.

Patria potestas was the name given to the power exercised by a father, or by his *paterfamilias* if he was himself *in potestate*, over the issue of such *justae nuptiae*. The Roman jurists boasted that it was a right enjoyed by none but Roman citizens; and it certainly was peculiar to them in this sense, that nowhere else, except perhaps among the Latin race from which they had sprung, did the paternal power attain such an intensity. The omnipotence of the *paterfamilias* and the condition of utter subjection to him of his children *in potestate* became greatly modified in the course of centuries; but originally the children, though in public life on an equality with the house-father, in private life, and so long as the *potestas* lasted, were subordinated to him to such an extent as, according to the letter of the law, to be in his hands little better than his slaves. They could have nothing of their own: all they earned was his; and, though it was quite common when they grew up for him to give them *peculio*, "cattle of their own," to manage for their own benefit, these were only *de facto* theirs, but *de jure* his. For offences committed by them outside the family circle, for which he was not prepared to make amends, he had to surrender them to the injured party, just like slaves or animals that had done mischief. If his right to them was disputed, he used the same action for its vindication that he employed for asserting his ownership of his field or his house: if they were stolen, he proceeded against the thief by an ordinary action of theft; if for any reason he had to transfer them to a third party, it was by the same form of conveyance that he used for the transfer of things inanimate. Nor was this all; for, according to the old formula recited in that sort of adoption known as adrogation, he had over them the power of life and death, *jus vitae necisque*.

Domestic relations.

The *manus* and the *patria potestas* represent the masterful aspects of the patrician's domestic establishment. Its conjugal and parental ones, however, though not so prominent in the pages of the jurists, are not to be lost sight of. The patrician family in the early history of the law was governed as much by *fas* as by *jus*. The husband was priest in the family, but wife and children alike assisted in its prayers, and took part in the sacrifices to its lares and penates. As the Greek called his wife the house-mistress, δέσποινα, so did the Roman speak of his as *materfamilias*,[2] the house-mother. She was treated as her husband's equal. As for their children, the *potestas* was so tempered by the natural sense of parental duty on the one side and filial affection on the other that in daily life it was rarely felt as a grievance; while the risk of an arbitrary exercise of the domestic jurisdiction, whether in the heat of passion or under the impulse of justifiable resentment, was

Adrogation and adoption.

It might happen that a marriage was fruitless, or that a man saw all his sons go to the grave before him, and that the *paterfamilias* had thus to face the prospect of the extinction of his family and of his own descent to the tomb without posterity to make him blessed. To obviate so dire a misfortune, he resorted to the practice of adoption, so common in India and Greece. If it was a *paterfamilias* that he adopted, the process was called adrogation (*adrogatio*); if it was a *filiusfamilias* it was simply *adoptio*. The latter, unknown probably in the earlier regal period, was, as we first know it, a somewhat complicated conveyance of a son by his natural parent to his adopter, the purpose of course being expressed; its effect was simply to transfer the child from the one family to the other. But the former was much more serious, for it involved the extinction of one family that another might be perpetuated. It was therefore an affair of state. It had to be approved by the pontiffs, who probably had to satisfy themselves that there were relatives of the adrogatee to attend to the *manes* of the ancestors whose cult he was renouncing; and on their favourable report it had to be sanctioned by a vote of the curies, as it involved the deprivation of his *gens* of their possible right of succession to him and possible prejudice to creditors through *capitis deminutio*. If it was sanctioned, then the *adrogatus*, from being himself the head of a house, sank to the position of a *filiusfamilias* in the house of his adopting parent; if he had had wife or children subject to him, they passed with him into his new family, and so did everything that belonged to him and that was capable of transmission from one person to another. The adopting parent acquired *potestas* over the adopted child exactly as if he were the issue of his body; while the latter enjoyed in his new family the same rights exactly that he would have had if he had been born in it.

[1] See Plutarch, *Rom.* 22; Marquardt, *Röm. Alterth.* v. 7. The question whether a husband could in early law sell his wife is one on which modern writers are not agreed. The better opinion is that he could not do so if the marriage was by confarreation. Apart from the *lex regia* above mentioned, it would have been inconsistent with her dignity as *materfamilias*. There is certainly no trace of its having been done. In marriages by coemption and *usus*, on the other hand, it is not improbable that it was allowed, though here also there is no evidence of it.

[2] *Materfamilias* is used in the texts in two distinct senses—(1) as a woman *sui juris*, *i.e.* not subject to any family head; and (2) as a wife *in manu mariti*.

guarded against by the rule which required in grave cases the *paterfamilias* to consult in the first place the near kinsmen of his child, maternal as well as paternal. Even the incapacity of the children of the family to acquire property of their own cannot in those times have been regarded as any serious hardship; for, though the legal title to all their acquisitions was in the house-father during his life, yet in truth they were acquired for and belonged to the family as a whole, and he was little more than a trustee to hold and administer them for the common benefit.

The *patria potestas*, unless the *paterfamilias* voluntarily put an end to it, lasted as long as he lived and retained his status. The marriage of a son, unlike that of a daughter passing into the hand of a husband, did not release him from it, nor did his children become subject to him so long as he himself was *in potestate*. On the contrary, his wife passed on marriage into the power of her father-in-law, and their children as they were born fell under that of their paternal grandfather; and the latter was entitled to exercise over his daughters-in-law and grandchildren the same rights that he had over his sons and unmarried daughters. But there was this difference, that, when the *pater-familias* died, his sons and daughters who had remained *in potestate* and his grandchildren by a predeceased son instantly became their own masters (*sui juris*), whereas grandchildren by a surviving son simply passed from the *potestas* of their grandfather into that of their father.

Guardianship of tutors.

The acquisition of domestic independence by the death of the family head frequently involved the substitution of the guardianship of tutors (*tutela*) for the *potestas* that had come to an end. This was so invariably in the case of females *sui juris*, no matter what their age: they remained under guardianship until they had passed by marriage *in manum mariti*. It was only during pupillarity, however, that males required tutors, and their office came to an end when puberty was attained. It is improbable that during the regal period a testamentary appointment of tutors by a husband or parent to wife or children was known in practice. In the absence of it the office devolved upon the *gens* to which the deceased *paterfamilias* belonged.

Plebeian family.

Family Organization among the Plebeians.—If perfect identity of customs cannot be assumed to have existed amongst the patrician *gentes* in the regal period of Rome, far less can it be supposed to have existed amongst the heterogeneous population (Latins, Etruscans, Greeks, &c.) of which the *plebs* was constituted. Nevertheless, contiguity of residence and community of interests tend inevitably to unify customs and cause dissimilarities to disappear, and the plebeians must have not only gradually brought their own customs into unison *inter se*, but adapted them at the same time in many respects to those of the patricians. Even to those of non-Latin race *manus* over their wives and *potestas* over their children would become a desideratum. Though the plebeians seem to have been always excluded from confarreation, and their matrimonial unions must have been at first informal and irregular from the point of view of the *Quirites*, two civil modes of acquiring marital *manus* were available to them after they obtained citizenship, viz. *coemptio* and usage. Some writers hold that neither of these modes was legally recognized prior to the XII. Tables.[1] This may be so, but it is improbable. As the plebeians obtained by the Servian constitution full capacity for quiritarian ownership, it was at once open to them to adapt the modes sanctioned for acquiring property to the acquisition of marital *manus*. *Coemptio* was just a simple adaptation of mancipation above referred to (see also *infra*, p. 540). It was, as we may infer from what we know of it at a later time, a sale of the woman to the man *per aes et libram* for a nominal price. The price being fictitious, a piece of copper (*rauduscum*) was used to represent it, and this was handed over to the seller, who would ordinarily be the woman's *paterfamilias*, or, if she were *sui juris*, her gentile tutor. The nuncupatory words used in the ceremony have unfortunately not been preserved; necessarily, of course, they varied from those of an ordinary mancipation of property.[2] Though called by the jurists a mode of constituting marriage, *coemptio*, as we know it, was strictly a mode of creating *manus*; for, though usually contemporaneous with, it might, as Gaius informs us, follow the marriage at any distance of time, and was not dissolved by divorce, but required a separate act of remancipation. Students of comparative law have observed that in *coemptio* there are clear traces of earlier bride purchase, so common even nowadays among uncivilized tribes, where a real price in cattle or sheep, and not a mere nominal one, has to be paid for the bride. *Usus*, on the other hand, was a mode of acquiring marital *manus* by possession of the woman as wife for a certain period of time—long cohabitation.[3] Whether this was recognized by the law prior to the XII. Tables depends probably upon whether usucaption, as a mode of acquiring property, was settled by custom earlier than the Tables. Some writers, however, think it older than *coemptio*, and as a *de facto* relation prolonged cohabitation as man and wife must have existed from very early times. Comparative historians with good reason trace in *usus* the relics of primitive bride capture. Both coemption and *usus*, from the time they were first recognized by the *jus Quiritium*, undoubtedly created *patria potestas* and agnatic rights.

Property in land.—Patrician class.

Law of Property.—The history of the early Roman community, like many other primitive communities, is marked by the disintegration of the *gentes* and the growth of individual property. Yet the distribution of land—one of the puzzling problems of their history. The Servian constitution apparently classified the citizens and determined their privileges, duties and burdens according to the extent of their lands; and yet we know nothing for certain of the way in which these were acquired. All is conjectural. We have indeed a traditional account of a partition by Romulus of the little territory of his original settlement into three parts, one of which was devoted to the maintenance of the state and its institutions, civil and religious, the second (*ager publicus*) to the use of the citizens and profit of the state, and the third (*ager privatus*) subdivided among his followers. Varro and Pliny relate that to each *paterfamilias* among his followers he assigned a homestead (*heredium*) of two jugera, equal to two acres, and a quarter. These *heredia* were to be held by him and his heirs for ever (*quae heredem sequerentur*); Pliny adding that to none did the king give more. This can only be accepted as a partially correct account of what may have taken place at some early period during the kingly régime. There can be little doubt that a portion of the Roman territory, gradually augmented through new conquests, was early reserved by the state as *ager publicus*; that is sufficiently attested by the complaints made for centuries by the plebeians of its monopolization by the patricians. It is also probable that *heredia* (*i.e.* plots of land within the city) may have been granted to the heads of the gentile families, many of whom would be living in *pagi* on their respective gentile lands outside the city. Such *heredia* became family property, administered by the head of the *familia*, the *paterfamilias*, but inalienable by him. In this respect the position would be very similar to what existed among the ancient Germans and exists to-day in India among the Hindus. Even late in the Republic, when the idea of

[1] See as to *coemptio*, Cuq, *Institutions juridiques*, 2nd ed., i. p. 62.

[2] One or two writers of the later Empire (*e.g.* Servius, in *Georg.* i. 31) describe *coemptio* as a mutual purchase, the man and woman taking alternately the position of *emptor* and using nuncupatory words as such; but this seems to be a misapprehension and not consistent with what Gaius says. See the arguments in favour of it in Muirhead, *Historical Introduction*, 2nd ed. pp. 414–415. Girard, *Manuel*, 4th ed. p. 150, gives a probable explanation of the mistake of these late authors.

[3] It would thus cure defects in a coemption just as usucaption did defects in mancipation.

[4] See Giraud, *Recherches sur le droit de propriété chez les Romains* (Aix, 1838); Macé, *Histoire de la propriété &c., chez les Romains* (Paris, 1851); Hildebrand, *De antiquissimae agri Romani distributionis fide* (Jena, 1862); Cuq, *Instit. jurid.*, 2nd ed., vol. i. pp. 72 seq.; Beaudouin, *La Limitation des fonds de terre* (1894), pp. 259 seq.

individual ownership was paramount, it was still considered a disgrace for a man to alienate his *heredium*. But though the existence of monogamous families seems to imply private ownership to some extent, yet, as formerly indicated, a large part of the Roman territory at, and for a good while after, the foundation of the city must have been gentile lands held by the separate clans for the use of their members. The fact that the majority of the rural tribes bore the names of well-known patrician *gentes* favours the conclusion that even in the later regal period a good many of the clans still held lands in their collective capacity. It was at some uncertain time before Servius that there began to be a break-up of these gentile lands and their appropriation by individual members. Under the influence of this movement lands were acquired and held by families and individuals to a large extent. A patrician's holding must have been sometimes pretty large so as to enable him to make grants (so often alluded to by ancient writers) to his clients, but we have no means of estimating the normal size. The *heredia* were small; even during the Republic there is some evidence (*e.g.* the traditional story about Cincinnatus) that seven jugera were regarded as the normal extent of a patrician's holding for his own and his family's use. On the other hand, twenty jugera are commonly supposed to have been the qualification for enrolment in the first of the Servian classes. Of course it must be kept in view that a patrician did not necessarily hold all his lands by gratuitous assignation or concession either from the state or from his *gens*; purchase from the former was by no means uncommon, and it may have been on his purchased lands that his clients were usually placed. Those dependants were also probably employed in large numbers upon those parts of the *ager publicus* which were occupied by the patricians and were in historic times known as *possessiones*. These, of course, were not the property of their occupants; it was the lands acquired by assignation or purchase that were alone, apart from the *heredia*, regarded as theirs *ex jure Quiritium*.

Property in land among plebeians.

The traditional accounts of the early distribution of lands among the plebeians are even, if possible, more vague than those regarding the patricians. They had apparently become holders *de facto* of land in large numbers before the Servian reforms. But they can have attained that position only by gradual stages. While their earliest grants of land, probably from the kings, can only have been during pleasure, latterly, as they increased in number and importance, they were allowed to have permanent possession. That those who had means also acquired lands by purchase from the state may be taken for granted. The distinction between *de facto* possession and ownership was at best a very vague one at this period, and, like the holders of provincial lands in later times, the plebeians might have the benefits of ownership without ownership. The result of the Servian constitution was to convert this *de facto* property or permanent possession into quiritarian ownership.[1]

Property in movables.

There are some writers who maintain that in the regal period, prior to the Servian reforms, though after the collective ownership of the *gentes* had begun to disintegrate, there was no private property in movables. This proposition can at most be accepted only in a qualified sense. If it be meant that movables generally were not then recognized as objects of quiritarian *dominium* which could be vindicated by any real action, it may be admitted. But otherwise the distinction between *meum* and *tuum* must have been well recognized, *de facto* at least. Men must have been in the habit of transferring things from one to another by simple delivery in respect of barter, sale or otherwise, and any violent or "theftuous" appropriation of things in a man's occupation would be punished by magisterial authority or by ordinary self-redress by the injured party. A sort of ownership in possession must at least have been recognized for movables generally.[2]

But apart from this, we must believe that certain kinds of movables, viz. those which have been described as appurtenant to land and necessary for its cultivation—which with land formed the real objects, as distinct from the personal subjects, of the *familia*—were treated from the time of Romulus downwards, as *in manu* of the *patresfamilias*. These were the *res mancipi* already referred to. Quiritarian ownership in them, as we have seen, was recognized both for patricians and plebs by the Servian constitution, periodical registration of them in the census and transference by the quasi-public act of mancipation having probably required. Earlier even than with lands, the conception of private ownership, it has been said, connected itself with them.[3]

Mancipation.

A short explanation may now be given of the ceremony of mancipation and the nature of *res mancipi*.

Mancipation is described by Gaius, with particular reference to the conveyance of movable *res mancipi*, as a pretended sale in presence of not less than five citizens as witnesses and a *libripens* holding a pair of copper scales. The transferee, with one hand on the thing being transferred, and using certain words of style, declared it his by purchase with a piece of copper (which he held in his other hand) and the scales (*hoc aere aeneaque libra*); and simultaneously he struck the scales with the *as*, which he then handed to the transferrer as figurative of the price. The principal variation when it was an immovable that was being transferred was that the mancipation did not require the whole of the spot: the land was simply defined by its known name in the valuation roll. Although in the time of Gaius only a fictitious sale—in fact the formal conveyance upon a relative contract—yet it was not always so. Its history is very simple. The use of the scales fixes its introduction at a time when coined money was not yet current, but raw copper nevertheless had become a standard of value and in a manner a medium of exchange. That, however, was not in the first days of Rome. Then, and for a long time, the values were estimated in cattle or sheep, the latter were imposed in them, and the deposits in the *legis actio sacramento* (*infra*, p. 549) took the same form. The use of copper as a substitute for them in private transactions was probably derived from Etruria. But, being only raw metal of foreign coins, it could be made available for loans or payments only when weighed in the scales: it passed by weight, not by tale. There is no reason for supposing that the weighing was a solemnity, that it had any significance beyond the obvious purpose of enabling parties to ascertain that a vendor or borrower was getting the amount of copper for which he had bargained.

It was this practice of everyday life in private transactions that Servius apparently adopted as the basis of his mancipatory conveyance, engrafting on it one or two new features intended to give it publicity and, as it were, state sanction, and thus render it more serviceable in the transfer of censuable property. Instead of the parties themselves using the scales, a quasi-impartial bystander, probably an official, was required to undertake the duty, and at least five citizens were required to attend as witnesses, who were to be the vouchers to the census officials of the regularity of the procedure. Whether they were intended as representatives of the five classes in which Servius had distributed the population, and thus virtually of the state, is disputed, though the fact that, in later times the parties appealed to them for their testimony, they were addressed not as *testes* but as *Quirites* lends some colour to this view.[4] Servius is also credited with the introduction of rectangular pieces of copper of different but carefully adjusted weights, stamped by his authority with various devices (*aes signatum*), which are

[1] On this question of land-holding among the early patricians and plebeians, consult Cuq, *Institutions juridiques des Romains*, 2nd ed., vol. i. pp. 73–76; Bourcart (French translation of Muirhead's *Historical Introduction*), p. 580, and authorities there cited.

[2] The position of the plebeians in this respect did not differ from that of the patricians.

[3] Mancipation seems to have been a very ancient mode of conveyance. The use of the balance in barter or sale was known to the ancient Egyptians at least as early as 2000 B.C., as may be seen on reliefs in the temple of Dehr-el-Bahri in Upper Egypt. The derivation of *mancipium* (*mancipatio*) from *manu capere*, to take with the hand, is given by Gaius and by Festus; but the fact that at all times in its history the acquirer had to lay his hand on the thing being acquired, during the ceremony, if a movable. So where several things were being mancipated in a lot, this had to be done to each separately. With lands and other immovables it was different: they might be mancipated in absence, which goes some way to prove that mancipation must have been extended to them at a later period. The derivation of *mancipatio* given by Muirhead (*Historical Introduction*, 2nd ed., pp. 59 seq.) from *manuum capere, i.e.* to acquire power (*manus*), is open to the objection that it places the abstract idea of power before the concrete symbol of it. Cf. Cuq, *Institutions juridiques*, 2nd ed., i. p. 80 n.

[4] See Gai. ii. § 104.

usually supposed to have been intended to take the place of the raw metal (*aes rude*) formerly in use, and so facilitate the process of weighing; but there is more reason for thinking they were cast and stamped as standards to be put into the scale, while the raw metal whose weight was to be ascertained was put into the other.

Instead, therefore, of being a fictitious sale, as Gaius describes it, and as it became after the introduction of coined money in the 4th century of the city, the mancipation, as regulated by the Tables, was an actual completed sale in the strictest sense of the term. What were the precise words of style addressed by the transferee to the transferrer, or what exactly the form of the ceremonial, we know not; but, as each piece of money, even of the time when some thousands of pounds, perhaps of copper, were being weighed would have been an intolerable burden upon the five citizens convoked to discharge a public duty, it may be surmised that it early became a convenience to have the pieces of money handed beforehand, and then to reweigh, or pretend to reweigh, before the witnesses only a single little bit of metal (*raudusculum*), which the transferee then handed to the transferrer as "the first pound and the last," and thus representative of the whole.[1] And where no real price was intended, as in constituting a *dos* or in coemption, a *rauduscul*um would also be employed. Whatever may have been its form, however, its effect was instant exchange of property against a price weighed in the scales. The resulting obligation on the vendor to maintain the title of the vendee, and the qualifications that might be superinduced on the conveyance by agreement of parties —the so-called *leges mancipii*—will be considered below in connexion with the provisions of the Tables to which the subject (infra, p. 542).

The things included in the class of *res mancipi* were lands and houses held on Quiritarian title, together with rights of way and aqueduct, slaves, and the following domestic beasts of draught or burden, viz. oxen, horses, mules and donkeys; all others were *res nec mancipi*. Many theories have been propounded to account for the distinction between these two classes of things, and to explain the principle of selection that admitted oxen and horses into the one, while relegated such animals as sheep and swine to the other. But there is really little difficulty. Under the arrangement of Servius, what was to determine the nature and extent of a citizen's political qualifications, military duties and financial burden was apparently the amount of his property, and other lands, if he had any), and what may be called its appurtenances—the slaves that worked for the household, the slaves and beasts of draught and labour that worked on the farm, all of which lived and worked in common with the free members of the *familia*. But the cattle a man depastured on the public meadows were no more *res mancipi* than his sheep, a fact which, though ultimately in the latter Empire lost sight of, was still understood in the time of Gaius.[2] To say that the things classed as *res mancipi* were selected for that distinction by Servius because they were what were essential to a family engaged in agricultural pursuits would be to fall short of the truth. They *constituted* the *familia* in the sense of the family estate proper; whereas the herds and flocks, and everything else belonging to the *paterfamilias*, fell under the denomination of *pecunia*. So the words are to be understood perhaps in the well-known phraseology of the mancipation formula, *familia pecuniaque tua esto*.

Res mancipi.

The public solemnity of *mancipatio* thus sanctioned as a mode of transferring a Quiritarian right of property, for which *manus* was probably as yet the only descriptive word in use, was not long in being adapted to and utilized for other transactions in which other kinds of *manus* were sought to be acquired. These new adaptations, if confined at first for the most part to plebeians, were also soon made use of by the patricians, perhaps before as well as after the XII. Tables, which only contain part of the then current law. Such were, for example, coemption (as explained above), emancipation and adoption of *filiifamilias*, and *mortis causa* alienation of a *familia* and *nexum*.

Law of Succession.—The legal order of succession during the regal period was extremely simple. It was this. on the death of a *paterfamilias* his patrimony devolved upon those of his descendants in *potestate* who by that event became *sui juris*, his widow (being *loco filiae*) taking an equal share with them, and no distinction being made between movables and immovables. Such persons were styled self-heirs (*sui heredes*). Failing widow and children, his patrimony went to his *gens*. The notion that between the descendants and the *gens* came an intermediate class under the name of agnates does not seem well founded as regards the regal period; the succession of agnates as such seems to have been first legally recognized by the XII. Tables, probably to meet the case of the plebeians, who, having no *gentes*, were without legal heirs in default of children.[4]

Succession amongst the patricians.

The later jurists more than once refer to the perfect equality of the sexes in the matter of succession in the ancient law.[5] But it was rather nominal than real. A daughter who had passed into the hand of a husband during her father's lifetime of course could have no share in the latter's inheritance, for she had ceased to be a member of his family. One who was *in potestate* at his death, and thereby became *sui juris*, did become his heir, unless he had prevented such a result by testamentary arrangements; but even then it was in the hands of the *gens* to prevent risk of prejudice to themselves. For she could not marry, and so carry her fortune into another family, without their consent as her guardians; neither could she without their consent alienate any of the more valuable items of it; nor, even with their consent, could she make a testament disposing of it in prospect of death. Her inheritance, therefore, was hers in name only; in reality it was in the hands of her guardians.

The primogeniture or legal preference of one member of the family over the others there is not the faintest trace. And yet we are told of *heredia* remaining in a family for many generations—a state of matters that would have been impossible had every death of a *paterfamilias* necessarily involved a splitting up of the family estate. It is conceivable that this was sometimes prevented by arrangement amongst the heirs themselves; and the practice of every now and then drafting the younger members of families to colonies diminished the number of those who had a claim to participate. But the simplest plan of avoiding the difficulty was for the *paterfamilias* to regulate his succession by testament; and this we probably had recourse to, not so much for instituting a stranger heir when a man had no issue—according to patrician notions his duty then was to perpetuate his family by adopting a son—as for partitioning the succession when he had more children than one.

Testaments.

There were two sorts of testaments made use of by the patricians of the regal period—that made in the *comitia* of the curies (*test. calatis comitiis*) and that made in the presence of the army (probably represented for this purpose by a few comrades) on the eve of battle (*test. in procinctu factum*). The first at least—and the second was just a substitute for it on an emergency—was far from being an independent exercise of the testator's *voluntas*. For, though in course of time, and under the sanction of the *uti legassit ita jus esto* of the XII. Tables, the curies may have become merely the recipients of the oral declaration by the testator of his last will, in order that they might testify to it after his death, it is impossible not to see in the comitial testament what must originally have been a legislative act, whereby the testator's peers, for reasons which they and the presiding pontiffs thought sufficient, sanctioned in the particular case a departure from the ordinary rules of succession. The pontiffs were there to protect the interests of religion, and the curies to protect those of the *gens*; and it is hardly conceivable that a testament could have been sanctioned by them which so far set at nought old traditions as to deprive a *filiusfamilias* of his birthright, at least in favour of a stranger.

[1] The conjecture is suggested by the words of style in the *solutio per aes et libram*, Gai. iii. §§ 173, 174. There were some debts from which a man could be effectually discharged only by payment (latterly in coin) by copper and scales in the presence of a *libripens* and the usual five witnesses. In the words addressed to the creditor by the debtor making payment these occurred—*hanc tibi libram primam postremamque expendo* ("I weigh out to you this the first and the last pound"). The idea is manifestly archaic, and the words, taken strictly, are quite inappropriate to the transaction in the form it had assumed long before the time of Gaius.

[2] Gai. ii. 15; Ulpian, *Frag.* xix. 1.

[3] Gai. ii. 104. By the time of the XII. Tables the sharp distinction between these two terms is tending to disappear.

[4] It is quite true, however, that from the first the order of succession was agnatic; for it was those only of a man's children who were agnate that had any claim to his inheritance; and the *gens* was, theoretically at least, just a body of agnates. The supposed mention of agnates in a law attributed to Numa is a conjecture of P. J. Huschke's (in *Analecta litteraria*, Leipzig, 1826, p. 375). The law is preserved in narrative by Servius, *In Virg. Eclog.* iv. 43, which runs thus: "In Numae legibus cautum est, ut si quis impudico occidisset hominem, pro capite occisi et natis ejus in cautione (Scalig. concione) offerret arietem." Huschke's substitution of *agnatis* for *et natis* is all but universally adopted; but, even were it necessary, it need mean nothing more than his children *in potestate* or his *gens*.

[5] The Voconian law of 169 B.C. avowedly introduced something new in prohibiting a man of fortune from instituting a woman, even his only daughter, as his testamentary heir; but even it did not touch the law of intestacy. See Girard, *Manuel*, 4th ed. p. 816.

It may safely be assumed that by custom at all events the children of a plebeian usually took his estate on his death intestate. But, as he was not a member of a *gens*, there was no provision for the devolution of his succession on failure of children. The want of them he could not supply by adrogation, as he had for long, it is thought, no access to the assembly of the curies; and it is doubtful if adoption of a *filiusfamilias* was known before the XII. Tables. If therefore, as seems probable, the XII. Tables first introduced the succession of agnates, a plebeian unsurvived by children was necessarily heirless, that is to say, heirless in law. But custom seems to have looked without disfavour on the appropriation of his *heredium* by an outsider: a brother or other near kinsman would naturally have the earliest opportunity, and, if he maintained his possession of it in the character of heir for a reasonable period, fixed by the XII. Tables at a year, the law dealt with him as heir, and in course of time the pontiffs imposed upon him the duty of maintaining the family *sacra*. This was probably the origin, and a very innocent and laudable one, of the *usucapio pro herede*, which Gaius condemns as an infamous institution, and which undoubtedly lost some of its *raison d'être* once the right of succession of agnates had been introduced.

Succession amongst the plebeians.

There is no trace of testamentary succession among the *plebs* prior to the Servian constitution, nor is it in the least degree likely that there was any such. Primitive communities are slow to realize the conception of private testament, and the plebeians could not at this period make a public one either *calatis comitiis* or *in procinctu*. But not long after their admission to citizenship there is reason to conjecture that mancipation was employed by them, not indeed to make a testament instituting an heir and taking effect only on the testator's death, but to make a conveyance of a whole patrimony *mortis causa*. The transaction took the form of an absolute acquisition, in exchange for a price (usually nominal), of the transferrer's *familia*,[1] by a friend, technically called *familiae emptor*, on trust to distribute, on the transferrer's death and according to his instructions, whatever the transferee was not authorized to retain for himself. The transferrer may also have had power to reserve in the mancipation a usufruct of the estate while he lived.[2] Like so many other of the transactions of the early law, it was legally unprotected so far as the third parties were concerned whom the transferrer meant to benefit; they could only trust to the *fides* of the transferee. This *mortis causa* alienation, whatever the date of its introduction, was the forerunner of the so-called testament *per aes et libram*, to be afterwards described (*infra*, p. 543).

Mortis causa conveyance by mancipation.

Contract and its Breach.—To speak of a law of obligations in connexion with the regal period, in the sense in which the words were understood in the later jurisprudence, would be a misapplication of language. It would be going too far to say, however, as is sometimes done, that before the time of Servius Rome had no conception of contract; for men must have bought and sold, or at least bartered, from earliest times—must have rented houses, hired labour, made loans, carried goods and been parties to a variety of other transactions inevitable amongst a people engaged to any extent in pastoral, agricultural or trading pursuits. It is true that a patrician family with a good establishment of clients and slaves had within itself ample machinery for supplying its ordinary wants, and was thus to a great extent independent of outside aid. But there were not many such families. There must therefore have been contracts and some customary rules to regulate them, though these were presumably very imperfect. In many cases, such as those alluded to, one of the parties at least must have trusted to the good faith of the other. What was his guarantee, and what remedy had he for breach of engagement?

Contract and its breach.

His reliance in the first place was on the probity of the party with whom he was dealing—on the latter's reverence for Fides, and the dread he had of the disapprobation of his fellows should he prove false, and of the penalties, social, religious or pecuniary, that might consequently be imposed on him by his *gens* in the case of a patrician, by his gild in the case of a craftsman, or by the king in the case of any other plebeian.[3] If the party who had to rely on the other's good faith was not satisfied with his promise and the grasp of the right hand that was its seal,[4] he might require his solemn oath (*jusjurandum*); and it can hardly be doubted that, whatever may have been the case at a later period, in the time of the earlier kings he who forswore himself was amenable to pontifical discipline. If he preferred a more substantial guarantee, he took something in pledge or pawn from the other contractor; and, though he had no legal title to it, and so could not recover it by judicial process if he lost possession, yet so long as he retained it he had in his own hand a *de facto* means of enforcing performance. Upon performance he could be forced to return it or suffer a penalty—not by reason of obligation resulting from a contract of pledge, for the law as yet recognized none, but because, in retaining it after the purpose was served for which he had received it, he was committing theft and liable to its punishment. At this stage breach of contract, as such, does not seem to have founded any cause of action for damages in reparation before the tribunals; but it is not improbable that, where actual loss had been sustained, the injured party was permitted to resort immediately to self-redress by seizure of the wrong-doer or his goods. Self-help was according to the spirit of the time—not self-defence merely in presence of imminent danger, but active measures for redress of wrongs already completed.

There was one contract, however, notorious in after years under the name of *nexum*, that must have received legal sanction soon after the Servian reforms, though probably, like mancipation of property itself, known in practice earlier. In the XII. Tables it is apparently referred to as an existing institution. In its normal character it was a loan of money; or rather of the raw copper that as yet was all that stood for money. How far in its original use it was accompanied by any formalities beyond the weighing of it in a pair of scales (which was rather substance than form) we know not; and what right it conferred on the creditor over his debtor who failed to repay can be only matter of speculation. Apparently the result of the Servian reforms was the regulating and ensuring the publicity of the contract and making the creditor's right of self-redress by apprehension (*manus injectio*) and imprisonment, &c., of his debtor conditional on the observance of the prescribed formalities of the *nexum*. The character and effects, however, of this the earliest independent contract of the *jus civile*, are much disputed and will be explained below on p. 545 seq.

Contract "per . . . aes et libram."

Public and Private Offences and their Punishment.—For anything like a clear line of demarcation between crimes and civil injuries we look in vain in regal Rome. Offences against the state itself, such as trafficking with an enemy for its overthrow (*proditio*) and treasonable practices at home (*perduellio*) were matter of state prosecution and punishment from the first. But in the case of those that primarily affected an individual or his estate there was a halting between, and to some extent a confusion of, the three systems of private vengeance, sacral

Offences and their punishment.

[1] The *familia*, as the collective name for a man's lands and mancipable appurtenances, became itself capable of mancipation. The conveyance was universal. There would be, it is thought, nothing discreditable in a man's conveying his *heredium* in this form.

[2] For a different view cf. Maine, *Ancient Law*, ed. Pollock, pp. 214 seq.

[3] Such as debarment from gentile or gild privileges, exclusion from right of burial in the gentile or gild sepulchre, fines in the form of cattle and sheep, &c.

[4] Some of the old writers (*e.g.* Liv. i. 21, § 4, xxiii. 9, § 3; Plin. *H. N.* xviii. 15; Serv. in *Aen.* xi. 687) say that the seat of Fides was in the right hand, and that to give it (*promittere dextram*—is this the origin of the word "promise"?) in making an engagement was emphatically a pledge of faith. See a variety of texts illustrating the significance of the practice, and testifying to the regard paid to Fides before foreign influences and example had begun to corrupt men's probity and trustworthiness, in Lasaulx, *Ueber d. Eid bei d. Römern* (Würzburg, 1844), p. 5 seq.; Danz, *Der sacrale Schutz im röm. Rechtsverkehr* (Jena, 1857), pp. 139, 140. Cf. Pernice, *Labeo*, vol. ii. (2nd ed., Halle), p. 459 seq.

atonement and public or private penalty.[1] These may be said to have followed in sequence but overlapped each other. The same sequence is observable in the history of the laws of other nations, the later system gradually gaining ground upon the earlier and eventually superseding it.[2] The remarkable thing in Rome is that private vengeance should so long not only have left its traces but continued to be an active power. According to tradition it was an admitted right of the *gens* or kinsmen of a murdered man in the days of Numa; a law of his is said to have provided that, where a homicide was due to misadventure, the offering to them of a ram should stay their hands (*supra*, p. 533). And this seems to have been also prescribed in the XII. Tables (VIII., *24*). To avenge the death of a kinsman was more than a right: it was a religious duty, for his *manes* had to be appeased; and so strongly was this idea entertained that, even long after the state had interfered and made murder a matter of public prosecution, a kinsman was so imperatively bound to set it in motion that if he failed he was not permitted to take anything of the inheritance of the deceased. The talion we read of in the XII. Tables is also redolent of the *vindicta privata*, although practically it had become no more than a means of enforcing reparation. And even the nexal creditor's imprisonment of his defaulting debtor (*infra*, p. 551), which was not abolished until the 5th century of the city, may not unfittingly, in view of the civilities that often attended it, be said to have savoured more of private vengeance than either punishment or procedure in reparation.

Expiatio, *supplicium*, *sacratio capitis*, all suggest offences against the gods rather than against either an individual or the state. But it is difficult to draw the line between different classes of offences, and predicate of one that it was a sin, of another that it was a crime and of a third that it was but civil injury. They ran into each other in such a way that is somewhat perplexing. Apparently the majority of those specially mentioned in the so-called *leges regiae* and other records of the regal period were regarded as violations of divine law, and the punishments appropriate to them determined upon that footing. Yet in many of them the prosecution was left to the state or to private individuals. It is not clear, indeed, that there was any machinery for public prosecution except in treason and murder—the former because it was essentially a state offence, the latter because it was comparatively early deemed expedient to repress the blood-feud, which was apt to lead to deplorable results when clansmen and neighbours appealed to their arms to settle disputes.

Take some of those offences whose sanction was *sacratio capitis*. Breach of duty resulting from the fiduciary relation between patron and client, maltreatment of a parent by his child, exposure or killing of a child by its father contrary to certain rules, the ploughing up or removal of a boundary stone, the slaughter of a plough-ox—all these were capital offences; the offender, by the formula *sacer esto*, was devoted to the infernal gods. Festus says that, although the rules of divine law did not allow the body to be offered as a sacrifice to the deity he had especially offended (*nec fas est eum immolari*), yet he was so utterly beyond the pale of the law and its protection that any one might kill him with impunity. But, as the *sacratio* was usually coupled with forfeiture of the offender's estate or part of it to religious uses, it is probable that steps were taken to have the outlawry or excommunication judicially declared, though whether by the pontiffs, the king or the curies does not appear; such a declaration would, perhaps, involve the private avenger of the incensed god of the chance of future question as to whether or not the citizen he had slain was *sacer* in the eye of the law.

That there must have been other wrongful acts that were regarded in early Rome as deserving of punishment or penalty of some sort, besides those visited with death, sacration or forfeiture of estate, total or partial, cannot be doubted; no community has ever been so happy as to know nothing of thefts, robberies and assaults. The XII. Tables contained numerous provisions in reference to them; but it is extremely probable that, down at least to the time of Servius Tullius, the manner of dealing with them rested on custom, and was in the main self-redressing, restraint by the intervention of the king when it appeared to him that the injured party was going beyond the bounds of fair reprisal, and frequently bought off with a composition. When the offence was strictly within the family or the *gens*, it was for those who exercised jurisdiction over those bodies to judge of the wrong and prescribe and enforce the penalty.

Jurisdiction and Procedure.—Of the course of justice, whether in criminal or civil matters, during the regal period we know little that can be relied on. Ancient writers speak of the king as having been generally supreme in both. But this can be accepted only with considerable reservation. For the *paterfamilias*, aided by a council in cases of importance, was judge within the family—his jurisdiction sometimes excluding that of the state, at other times concurring with it, and not to be stayed even by an acquittal pronounced by it. He alone was competent in any charge against a member of the family for a crime or offence against the domestic order—adultery or unchastity of wife or daughter, unnatural behaviour to parents, breach of duty, the like. Death, slavery, banishment, expulsion from the family, imprisonment, chains, stripes, withdrawal of *peculium*, were all at his command as punishments; and it may readily be assumed that in imposing them he was freer to take account of moral guilt than an outside tribunal. The indications of criminal jurisdiction on the part of the *gens* are slight; but its organization was such that it is difficult not to believe that it must occasionally have been called on to exercise such functions. And it must not be lost sight of that, as murder seems to have been the only crime in regard to which private revenge was absolutely excluded, the judicial office of the kings must have been considerably lightened, public opinion approving and not condemning self-redress so long as it was kept within the limits set by usage and custom.

Early course of justice.

The boundary between civil and criminal jurisdiction, if it existed at all, was extremely shadowy. Theft and robbery, for example, if one may conclude from the penalties long held in the Republic jurisprudence, were regarded not as public but as private wrongs; and yet when a thief was caught in the act of theft by night he might be slain, and when by day might be scourged and thereafter sold as a slave. But in both cases it may also be assumed that a practice, afterwards formally sanctioned by the XII. Tables—that of the thief compounding for his life or freedom—was early admitted, and the right of self-redress thus made much more beneficial to the party wronged than when nothing was attained but vengeance on the wrongdoer. In assaults, non-manifest thefts, and other minor wrongs, self-interest would in like manner soon lead to the general adoption of the practice of compounding; what was originally a matter of option in time came to be regarded as a right; and with it there would be occasional difficulty in settling the amount of the composition, and consequent necessity of an appeal to a third party. Here ought to be the origin of the king's jurisdiction in matters of this sort. He was the natural person to whom to refer such a dispute; for he alone, as supreme magistrate, had the power to use coercion to prevent the party wronged insisting on his right of vengeance, in lieu of a tender by the wrongdoer of what had been declared to be sufficient reparation. But that self-redress was not stayed if the reparation found due was withheld; as the party wronged was still entitled at a subsequent period to proceed against the wrongdoer by apprehending and imprisoning him, it cannot reasonably be doubted that such also was the practice of the regal period.

The king as judge.

How far the kings exercised jurisdiction in questions of quiritarian right, such as disputes about property in land, we have by no means obvious. Within the family, of course, such questions were impossible, though between clansmen they may have been settled by the *gens* or its chief. The words of style used in the sacramental real action (*infra*, p. 548) suggest that there must have been a time when the spear was the arbiter, and when the contending parties, backed possibly by their clansmen or friends, were actual combatants, and victory decided the right. Such a procedure could not long survive the institution of a state. At Rome there seems to have been very early substituted for it what from its general complexion one would infer was a submission of the question of right to the pontiffs as the repositories of legal lore. Their proper functions, being advisory, they had to bring what was a question of purely civil right within their jurisdiction, by engrafting on it a sacral element, viz. by requiring each of the parties to make oath to the verity of his contention; and the point dealt in from then decided was not the truth of the oaths was false and therefore to be made atonement for. In substance, however, it was a finding on the real question at issue; and the party in whose favour it was pronounced was free to make it effectual if necessary by self-redress in the ordinary way.

Of Servius, Dionysius says—using, as he often does, language more appropriate to the republican than to the regal period—that he drew a line of separation between public and private judicial processes, and that, while he retained the former in his own hands, he referred the latter to private judges, and regulated the procedure to be followed in causes brought before them.[3] Something of the sort was absolutely necessary. He was enormously increasing the number of the citizens,—that is to say, of

Servian reforms.

[1] See Rein, *Das Criminalrecht der Römer* (Leipzig, 1844), pp. 24 seq.; Clark, *Early Roman Law: Regal Period* (London, 1872), pp. 34 seq.; Mommsen, *Strafrecht*, pp. 6, 36, 900.

[2] Probably every offence at first was an act attributable to the whole family or clan, and it was upon them or by them and not upon the individual wrong-doer or by the injured party that vengeance was taken.

[3] Dion. Hal. iv. 25.

those who were to enjoy in future the privileges of quiritarian right, —and multiplying the sources of future disputes that would have to be determined by the tribunals. The nature of the jurisdiction created by him, if any, to meet the new aspect of things is much controverted. He has been credited with the institution of the collegiate courts of the *Centumviri* and the *Decemviri* (*stlitibus judicandis*) as well as the private judge (*unus judex*), but the arguments in support of this view are not strong, and, of course, based wholly on presumptions. However, it will be convenient to say a few words about each of these courts here.

Centumviral court.

The centumviral court.[1] is often referred to by Cicero, and the range of its jurisdiction in his time seems to have included every possible question of *manus* in the old sense of the word—status of individuals, property and its easements, and inheritance whether testate or intestate. By the time of Gaius the only matters apparently that were in practice brought before it were questions of inheritance by the *jus civile*, though theoretically it was still competent in all real actions, and the lance, the emblem of quiritarian right generally, was still its ensign. During the later Republic the *Centumviri* formed a quasi-corporate body of private judges selected originally from the tribes (afterwards from the ordinary list of *judices*) annually by the urban praetors.[2] Some writers identify the centumviral court with the Romulian senate of 100; others attribute its institution to Servius Tullius and hold that it was a plebeian court at first; others make it contemporaneous with the XII. Tables; others bring it down to the 6th century of the city; while the weight of recent authority is in favour of the view that it is not later than the beginning of the 7th century. The arguments in support of these several views cannot be gone into here. It is enough to say that we have no positive proof of its existence earlier than the 7th century, though presumptions are in favour of its having been somewhat earlier. In the exercise of their office the *Centumviri* acted more independently than private judices ventured to do, and even introduced some considerable reforms into the law.

Decemviral court.

There was a court at Rome during the Republic called the *Decemviri stlitibus judicandis*.[3] These decemvirs in historic times constituted a quasi-corporate body of judicial magistrates, whose duty it was to try certain kinds of actions, especially those relating to personal liberty. During the Principate, while ceasing to act as a separate court, they presided over the divisions into which the centumviral court had been under Augustus divided. Their origin is quite unknown. Pomponius indeed says that they were originally created soon after the institution of the peregrin praetorship in 242 B.C. for this very purpose of presiding over centumviral cases,[4] but this statement is generally discredited and, if true, the practice of so using them must quickly have gone into disuse. Those writers who attempt to trace back the centumvirs to the regal period give, as a rule, a like antiquity to the *Decemviri stlitibus judicandis*. On the other hand, some authorities identify them with the *decemviri sacris faciundis* mentioned by Livy[5] as having been declared by the *lex Valeria-Horatia* to be as sacrosanct as the tribunes of the *plebs*. But these latter judices seem to have been a purely plebeian court which early went into desuetude, and there is really no evidence of identity.

"Judices" and "arbitri."

So far back as historic evidence goes we find that actions were tried and judgments pronounced by *judices* and *arbitri*. There originally was more than a single judge (*unus* or *unicus judex*) appointed to try a case, but there might be more than one arbiter, and frequently there were three. All kinds of actions, even a sacramental action *in rem*, could be brought before the *unus judex*, but especially appropriate to him were all personal claims of alleged indebtedness, whether arising out of a legal or illegal act, denied either *in toto* or only as to the amount. Matters of that sort involved as a rule no general principle of law but rather mere disputes as to facts, which could well be decided by a single individual. There is much more reason for crediting Servius with the institution of the single judge (the arbiters may have been a creation of the XII. Tables) than with either of the collegiate courts. If we believe that in the early regal period the king acting with the pontiffs kept all jurisdiction in his own hands, it is plain that this must have become a practical impossibility after the admission of the plebeians to citizenship. For the trial of disputed facts it would be necessary to delegate jurisdiction, and the earliest *judices* may have been the king's commissioners for such cases. If this be right, it was the beginning of a system that bore wondrous fruit in after years, and that, as will be shown in the sequel, helped the praetors to build up, through the *formulae*, the whole body of equity.

Civil procedure.

Under the kings it is not improbable that several of the *legis actiones*, more or less undeveloped, were already in use, but the nature of these actions will be more conveniently considered later on (*infra*, p. 566).

II. The Jus Civile

(From the establishment of the Republic until the subjugation of central and southern Italy.)

i. *Constitutional Events affecting the Law.*

Nature of "Jus Civile."

Jus Civile contrasted with Jus Quiritium.—The term *jus civile*, as used to designate this chapter, though almost synonymous with, may be taken as somewhat more comprehensive than, *jus Quiritium*. It is a term of later origin than the latter. *Jus Quiritium* was based entirely on old custom and legislation, finding, one might say, its culmination in the XII. Tables; whereas in the *jus civile*, as here understood, there appears the element of doctrinal interpretation of both statute and custom—the magistrates and jurists (particularly the pontiffs) adding much to the earlier law by introducing into it this element. We can say that the *jus civile* in this sense is *jus Quiritium* as developed by interpretation. It is as yet, however, little influenced, as was the more comprehensive *jus civile* of later periods, by the elements of *jus gentium* and equity. Still nowhere, we must note, are the terms *jus Quiritium* and *jus civile* placed in contrast by the jurists; they were each *jus proprium civium Romanorum*. In the classical law the term *jus Quiritium* seems to be used principally in formulae framed in accordance with old custom.

Historic evidence.

Though our information regarding the present period is less legendary than that of the kings, it is still far from being completely authentic, as no original documents belonging to it are extant. There is little dispute among critics that Rome was sacked and burned by the Gauls about 387 B.C. or a few years later, and it is probable that the original pontifical annals (*annales maximi*) upon which Livy and other Roman historians have presumably based their narratives of early history were destroyed at that time along with all other written records. What credence, then, we may give to the ancient historical narratives, for the period of the Republic antecedent to this event, depends largely upon how far the pontifices managed to have their lost records restored. In any case, however, there is sufficient presumptive evidence to warrant belief in such prominent events of the early Republic as the creation of two annually elected patrician consuls, with *potestas* similar to that of the kings, the creation of tribunes of the *plebs*, the enactment of the decemviral code, and periodic struggles between patricians and *plebs*, the one to keep and the other to gain political power. To know the exact dates of these events is relatively of little importance.

Legislation in Favour of the Plebs.—In their uphill battle for social and political equality the plebeians conquered stage by stage. The more important of their successes may here just be mentioned, with all reserve as to credibility, in the order of their traditional dates. By the *lex Valeria* (*de provocatione*) of 509 B.C. it was provided that no Roman citizen should be deprived of life, liberty or citizenship (*i.e.* suffer *poena capitis*), or be scourged, by any magistrate within the city, without an appeal (*provocatio*) to the *comitia centuriata*. This statute was often referred to by later Romans as a sort of Magna Carta; Livy calls it *unicum praesidium libertatis*. In 494 or 471 B.C. the tribunes of the *plebs* were created with right of intercession, and about the same time plebeian *aediles* and *judices decemviri* (the latter to act as judges or arbiters in litigations); the persons of all these officials being declared inviolable during their tenure of office. About 471 B.C. the *concilium plebis* became legislatively recognized, the tribunes

were elected in it, and its resolutions (*plebiscita*) became directly binding on plebeians. The XII. Tables, twenty years later, were the fruit of the agitation of the plebeians for a revision and written embodiment of the law. In 449 plebiscita were—subject presumably to *auctoritas patrum*—declared by the *lex Valeria-Horatia* binding on the whole *populus*, while about the same time, or perhaps a little earlier, the patrician-plebeian *comitia* of the tribes was instituted.[1] By the *lex Canuleia* of 445 B.C. intermarriage between patricians and plebeians was sanctioned. Repeated protests by the plebeians against the monopolization of the public domain land by members of the higher order resulted in the definite admission of their right to participate in its occupation by one of the Licinian laws of 367 B.C. The long course of cruel oppression of insolvents (mainly plebeians) by their patrician creditors was put an end to by the Poetilian law about 326 B.C., depriving nexal contract of its privileges and generally prohibiting the use of chains and fetters on persons incarcerated for purely civil debt. By the Hortensian law of about 287 B.C. plebiscita were declared binding (presumably without *auctoritas patrum*) on the whole body of citizens. And from 421 B.C., when one of their number first reached the regular state magistracy as quaestor, down to 252 B.C., when one was elected *pontifex maximus*, the plebeians gradually vindicated their right as citizens to share in all the honours of the state. There is also evidence that plebeians were early in the Republic admitted to the senate and also to the *comitia curiata*.

Legislative bodies.

The legislative bodies during the present period were thus three in number: the *comitia* of the centuries, the *concilium plebis* and the *comitia tributa*. As to the *comitia* of the curies, it seems to have hardly concerned itself with general legislation, but met merely to confer *imperium* on the higher magistrates and to sanction testaments and adrogations of the gentiles. The legislation of the centuries dealt for the most part (though the XII. Tables were enacted by it) with questions affecting public and constitutional rather than private interests. It could be convened only by a magistrate having military *imperium*, *i.e.* at first only the consuls, for the reason that it was theoretically a military assembly met for civil purposes (*exercitus civilis*). It is called in the XII. Tables *comitiatus maximus*. Its procedure was cumbrous and ill-adapted for legislation. As to the relation of the *concilium plebis* to the *comitia tributa* there is much controversy. The old opinion which identified them is now generally abandoned. According to Mommsen[2] they differed in the following points: (1) The *comitia* was an assembly of the whole people voting in tribes instead of centuries, while the *concilium* was an assembly of the *plebs* alone; (2) the *comitia* was always convoked and presided over by a patrician magistrate (often the praetor), while the *concilium* had to be convoked and presided over by a plebeian official (usually a tribune); (3) in the *comitia* auspices had to be taken beforehand, but not in the *concilium*; (4) an enactment of the *comitia* was a *lex* binding on all the *populus*, while an enactment of the *concilium* was a plebiscitum binding only on the *plebs*. It is, however, not possible to take Mommsen's view that plebiscita were not binding on the whole *populus* prior to the *lex Hortensia*, without disregarding distinct statements of Livy as to the *lex Valeria-Horatia* and the *lex Publilia*.[3] But whatever the relation of these two legislative assemblies to each other may have been originally, it is certain that the Hortensian law equalized them so far as their effects were concerned, and, looking to the small number of patricians compared with the *plebs*, it would probably be a matter of indifference in which assembly the vote was taken. The greater part of the legislation dealing with the private law in the later Republic consisted of plebiscita.

[1] There is diversity of opinion about this. Mommsen thinks the *comitia tributa* was earlier than the XII. Tables, and that the *lex Valeria-Horatia* applied to it. See next note.

ii. *The XII. Tables.*

Causes of their Enactment.—The change from monarchy to republic brought of itself no benefit to the *plebs*, but rather the reverse. One of their chief complaints was against the administration of justice. They complained that they were kept in ignorance of the laws, and that in particular the consuls used their magisterial punitive powers (*coercitio*) unfairly and with undue severity when a plebeian was the object of them. The state of matters gradually became so intolerable that in the year 462 B.C., according to the ancient tradition, a proposal for a statute was made by C. Terentilius Arsa, one of the tribunes, by which a commission should be appointed to draw up a code of laws in writing. He carried a rogation in the *concilium plebis* to this effect. The senate at first strenuously resisted, but after a few years was induced to give way, and its assent to the proposal was obtained.

Compilation of the XII. Tables.

Tradition records that the first practical step towards its realization was the despatch of a mission to Athens, to study the laws of Solon and collect any materials that might be of service in preparing the projected code. On the return of the commissioners in 452 B.C. all the magistracies were suspended, and a body of ten patricians, called *decemviri legibus scribundis*, was appointed with consular powers, under the presidency of Appius Claudius, for the express purpose of putting the laws into shape. Before the end of the ensuing year (451) the bulk of the code was ready and was at once passed into law by the *comitia* of the centuries and published on ten tables (whether of brass or wood is doubtful), which were set up in the Forum. Next year, owing to additions being found necessary, the decemvirate was renewed, with, however, a change of membership (some plebeians being chosen), and in the course of a few months it had completed the supplemental matter. On the downfall of the decemvirate, these new laws, after being duly accepted by the *comitia*, were published on two other tables, thus bringing the number up to twelve. The code then received the official name of *Lex XII. Tabularum*.

Authenticity.

The foregoing account of the enactment of the Tables is an attempt to summarize what is stated by Livy and other Roman writers on the subject. Though inconsistent and sometimes even contradictory about details, these writers are on the main facts in concordance. Until a few years ago, the fact of the publication of such a code about the date above given had been accepted by modern historians, even the most iconoclastic, without question; unlike the *leges regiae*, the XII. Tables had always been regarded as authentic. But in his *History of Rome*, published in 1898, Professor Pais of Turin[4] emitted the view that the decemviral code was really a private compilation made about the year 304 B.C. by Cn. Flavius, the scribe of Appius Claudius the censor, and probably at the latter's instigation; or, in other words, that it was just the so-called *Jus Flavianum* which all writers had hitherto regarded as a work dealing with the styles of *legis actiones* and the calendar of court days. In Pais's view the annalists, in accordance with a habit of theirs, duplicated the same event by counterfeiting an earlier Appius Claudius, &c., in order to magnify the antiquity and authority of the laws collected by Flavius, while the whole account of the decemviral legislation was invented by them. More recently Professor Lambert of Lyons has attempted by similar arguments to prove that the XII. Tables were a private compilation of customs already in observance, and of sacerdotal and other rules already in circulation, made about 197 B.C. by the jurist Aelius Paetus, and were in fact identical with the *Tripertita* or *Jus Aelianum*, which had always heretofore been supposed to contain merely a recension of the Tables with an interpretation and commentary.[5] This is not the place to discuss these theories. Though of course incapable of positive disproof, the weight

[5] *Nouvelle Revue historique* (1902), xxvi. 149 seq.; *Revue générale du droit*, nos. 5 et 6; *Mélanges*, Appleton (1903), pp. 126 seq.

of presumptive evidence is against them; they have hitherto found little or no support from other Romanists, and they have, in our opinion, been sufficiently refuted on philological and other grounds by Girard[1] and others.[2]

Sources.

There were provisions in the Tables that were almost literal renderings from the legislation of Solon; and others bore a remarkable correspondence to laws in observance in Greece, but they may have been original enough to be borrowed. By far the greater proportion of them, however, were native and original,—not that they amounted to a general formularization of the hitherto floating customary law, for, notwithstanding Livy's eulogium of them as the "fountain of the whole law, both private and public," it seems clear that many branches of it were dealt with in the Tables only incidentally, or with reference to some point of detail. The institutions of the family, the fundamental rules of succession, the solemnities of such transactions as mancipation, *nexum*, and testaments, the main features of the order of judicial procedure, and so forth,—of all of these a general knowledge was presumed, and the decemvirs thought it unnecessary to define them. What they had to do was to take the law equal for all, to remove every chance of arbitrary dealing by distinct specification of penalties and precise declaration of the circumstances under which rights should be held to have arisen or been lost, and to make such amendments as were necessary to meet the complaints of the plebeians and prevent their oppression in the name of justice. Probably very little of the customary law, therefore, was introduced into the Tables, that was already universally recognized, and not complained of as being unequal, defective or oppressive. Only one or two of the laws ascribed to the kings (assuming their greater antiquity) reappeared in them; yet the omission of the rest did not mean their repeal or imply the loss of their validity, for a law in force continues still in force during the Empire, and are founded on by Justinian in his *Digest*. Neither apparently were any of the statutes of the Republic anterior to the Tables specified in them, although for long afterwards many a law had to submit to prosecution under these laws and to suffer the penalties they imposed.

Remains.

The original Tables are said to have been destroyed when Rome was sacked and burned by the Gauls in the year 387 B.C., when probably at once reproduced, and transcripts of them in more or less modernized language must have been abundant if, as Cicero says was still the case in his youth, the children were required to commit them to memory as a part of their education.[3] This renders all the more extraordinary the fact that the remains of them are so fragmentary and their genuineness in many cases so debateable. They were embodied, as above mentioned, in the *Tripertita* and Sextus Ælius Paetus in the year 197 B.C., and probably republished them in somewhat modernized language and from whose work, it is thought, all later writers took their contents. They must have formed the basis of all the writings on the *jus civile* down to the time of Hadrian, which saw the end of the use of the praetor's edicts as a text; and they were the subjects of monographs even by authors later than Sulpicius, amongst them by M. Antistius Labeo in the early years of the Empire, and by Gaius, probably in the reign of Antoninus Pius. Yet a copy more or less so are all that can be collected of their provisions in what profess to be the *ipsissima verba* of the Tables, though in a form in most cases more modern than what we encounter in other remains of archaic Latin of the 4th century in the city. These are contained principaly in the writings of Cicero, the *Noctes Atticae* of Aulus Gellius, and the treatise *De verborum significatione* of Festus; the two latter dealing with them rather as matters of antiquarian curiosity than as rules of positive law. There are also many allusions to particular provisions in the pages of Cicero, Varro, Gellius and the elder Pliny, as well as in those of Gaius, Paul, Ulpian and other ante-Justinian jurists; but these are not to be implicitly relied on, as we have reason for that they frequently represent the (sometimes divergent) glosses of the interpreters rather than the actual provisions of the statute. Reconstruction has therefore been a work of difficulty, and the results far from satisfactory, that of the latest editor, Voigt, departing very considerably from the versions generally current during the last half-century.[4]

General characteristics.

In form the laws contained in the Tables were of remarkable brevity, terseness and pregnancy, with something of a rythmical cadence that must have greatly facilitated their retention in the memory. Rarely, if ever, were they more than barely embodied permissive; they were nearly all in the imperative mood, sometimes entering into minute detail but generally running on broad lines, surmounting instead of removing difficulties. Their application might cause hardship in individual instances, as when a man was held to the letter of what he had declared in a *nexum* or mancipation, even though he had done so under error or influenced by fraudulent misrepresentations; the decemvirs admitted no exceptions, preferring a hard-and-fast rule to any qualifications that might cause uncertainty. The system as a whole is one of *jus* as distinguished from *fas*. In the royal laws execration (*sacratio capitis, sacer esto*) was a common sanction; in the Tables it occurs only in a few and simple cases, and then with reference to an offence that could be committed only by a patrician,—material loss caused by a patron to his client (*patronus, si cienti fraudem faxsit, sacer esto*). In all other cases the idea that a crime was an offence against public order, for which the community was entitled in self-protection to inflict punishment on the criminal, is prominent. Hanging and beheading, flogging to death, burning at the stake, throwing from the Tarpeian rock,—such are secular penalties that are met with in the Tables; but often, though not invariably, the hanging and so forth is at the same time declared a tribute to some deity to whom the goods of the criminal are forfeited (*consecratio bonorum*). The Tables also recognize the system of self-help.

The *manus injectio* of the third Table—the execution done by a creditor against his debtor—was probably in essence the same procedure as under the kings, but with the addition of some regulations intended to prevent its abuse. Perhaps a third taken in fact as the same procedure seems to have been sanctioned; it was lawful to kill him on the spot if the theft was nocturnal, or even when it was committed during the day if he used arms in resisting his apprehension. According to Cicero there was a proviso in these words: "si telum manu fugit magis quam jecit, arietem subicito"; this is perhaps just a re-enactment in illustrative language of the law attributed to Numa, that for homicide by misadventure "if the weapon have sped from the hand rather than been cast"—a ram was to be tendered as a peace-offering to the kinsmen of him who had been slain. The original purpose must have been to stay the blood revenge, but in the Tables the right seems to have been extended to stay the prosecution which it was incumbent on the kinsmen of a murdered man to institute. So with talionic penalties: "si membrum rupit ni cum eo pacit, talio esto"—such, according to Gellius, were the words of the law of the Tables; but they undoubtedly recognize talion, "an eye for an eye, a tooth for a tooth"; while at the same time regulating it by enabling the injured man to bring an action and sanctioning a money recompense (*Wergeld*) in lieu of it.[5]

Interpretation of the Tables.

The structure of the provisions of the Tables was not such as to enable the plain citizen to apply them to concrete cases, or to know how to claim the benefit of them in the tribunals, without some sort of professional advice. Supposing, however, that no sooner was the decemviral legislation published than the necessity was felt for its interpretation, and for the preparation by skilled hands of styles of actions by which its provisions might be made effectual. Both of these duties fell to the pontiffs as the only persons who, in the state of civilization of the period, were well qualified to give the assistance required; and Pomponius adds that the college annually appointed one of its members to be the adviser of private parties and of the *judices* in these matters. The *interpretatio*, commenced by the pontiffs and continued by the jurists during the Republic, which, Pomponius says, was regarded as part of the *jus civile*, was not confined to explanation of the words of the statute, but was in some cases their expansion, in others their

also Muirhead, *Historical Introduction* (2nd ed., 1899), and Wordsworth, *Fragments and Specimens of Early Latin* (Oxford, 1874), pp. 253 seq. The last-named writer in a subsequent part of his volume (pp. 502–381) has added notes, historical, philological and exegetical, which constitute a valuable commentary on the Tables as a whole. Voigt's two volumes, under the title of *Geschichte und System des Civil-und-Civilprocesses, Procedures der XII. Tafeln nebst deren Fragmenten* (Leipzig, 1883), contain an exposition of the whole of the earlier *jus civile*, whether embodied in the Tables or not. The history of them occupies the first hundred pages or thereby of the first volume; his restorations, his comparisons and allusions—a good deal fuller than any earlier one and supported by an imposing array of authorities, which, however, often rest on arbitrary assumptions—is in the same volume, pp. 693–737.

[1] Erman, *Z. d. Sav. Stift.* (1903), xxiii. 450; Lenel, *Z. d. Sav. Stift.* (1905), xxvi. 498.

[2] The decemvirs may have obtained them either from Magna Graecia or from Etruria, as the story of a mission to Athens is improbable.

[3] There is little doubt that *talio* was actually enforced under the decemviral code, just as it was under the Jewish and Mahommedan codes, and as we see it among semi-civilized communities (e.g. the Abyssinians) at the present day. See Code of Hammurabi, pp. 90–91; Leviticus xxiv. 20; Lane, *Modern Egyptians*, p. 94. Many references are given by Lenel in *Z. d. Sav. Stift.* xxiv. 509.

[4] In the tables it occurs only in the most simple and elementary form, and then with reference to an offence that could be committed only by a patrician,—material loss caused by a patron to his client (*patronus, si cienti fraudem faxsit, sacer esto*). In all other cases the idea that a crime was an offence against public order, for which the community was entitled in self-protection to inflict punishment on the criminal, is prominent. Hanging and beheading, flogging to death, burning at the stake, throwing from the Tarpeian rock,—such are secular penalties that are met with in the Tables; but often, though not invariably, the hanging and so forth is at the same time declared a tribute to some deity to whom the goods of the criminal are forfeited (*consecratio bonorum*). The Tables also recognize the system of self-help.

[5] The *manus injectio* of the third Table—the execution done by a creditor against his debtor—was probably in essence the same procedure as under the kings, but with the addition of some regulations intended to prevent its abuse. Perhaps a third taken in fact as the same procedure seems to have been sanctioned; it was lawful to kill him on the spot if the theft was nocturnal, or even when it was committed during the day if he used arms in resisting his apprehension. According to Cicero there was a proviso in these words: "si telum manu fugit magis quam jecit, arietem subicito"; this is perhaps just a re-enactment in illustrative language of the law attributed to Numa, that for homicide by misadventure "if the weapon have sped from the hand rather than been cast"—a ram was to be tendered as a peace-offering to the kinsmen of him who had been slain. The original purpose must have been to stay the blood revenge, but in the Tables the right seems to have been extended to stay the prosecution which it was incumbent on the kinsmen of a murdered man to institute. So with talionic penalties: "si membrum rupit ni cum eo pacit, talio esto"—such, according to Gellius, were the words of the law of the Tables; but they undoubtedly recognize talion, "an eye for an eye, a tooth for a tooth"; while at the same time regulating it by enabling the injured man to bring an action and sanctioning a money recompense (*Wergeld*) in lieu of it.[5]

limitation, and in many the deduction of new doctrines from the actual *jus scriptum*, and their development and exposition. An event that did much to diminish the influence of the pontiffs in connexion with it was the divulgement in the year 304 B.C., as already mentioned, by Cn. Flavius, of a formulary of actions and a calendar of lawful and unlawful days, which got the name of *Jus Flavianum*. The practice adopted in the beginning of the 6th century by Tiberius Coruncanius, the first plebeian chief pontiff, of giving advice in law in public had a still greater effect in popularizing it; and the *Tripertita* or *Jus Aelianum*, some fifty years later—a collection that included the Tables, the *interpretatio* and the current styles of actions—made it as much the heritage of the laity as of the pontifical college.

Subsequent Legislation.—Of legislation during the 4th and 5th centuries that affected the private law we have but scanty record. The best-known enactments are the Canuleian law of 445 B.C. above mentioned; the Genucian, Marcian and other laws about usury and the rate of interest; the Poetilian law of 326 B.C. abolishing imprisonment of nexal debtors by their creditors; the Silian law, probably not long afterwards, which introduced a new form of process for actions of debt; and the Aquilian law about 287 B.C., which amended the decemviral provisions for actions of damages for culpable injury to property, and continued to regulate the law on the subject even in the books of Justinian.

Subsequent legislation.

iii. *Development of the Substantive Institutions of the Law.*

The Citizen and his "Caput."—The early law of Rome was essentially personal, not territorial. A man enjoyed the benefit of its institutions and of its protection, not because he happened to be within Roman territory, but because he was a citizen,—one of those by whom and for whom its law was established. The theory of the early Romans was that a man sojourning within the bounds of a foreign state was at the mercy of the latter and its citizens, that he himself might be dealt with as a slave, and all that belonged to him appropriated by the first comer; for he was outside the pale of the law. Without some sort of alliance with Rome a stranger had no right to claim protection against maltreatment of his person or attempt to deprive him of his property; and even then, unless he belonged to a state entitled by treaty to the international judicial remedy of *recuperatio*, it was by an appeal to the good offices of the supreme magistrate, or through the intervention of a citizen to whom he was allied by the (frequently hereditary) bond of *hospitium*, and not by means of any action of the *jus civile* set in motion by himself. A non-citizen—originally *hostis*, and afterwards usually called *peregrinus*[1]—in time came to be regarded as entitled to all the rights recognized by so-called *jus gentium* as belonging to a freeman, and to take part as freely as a Roman in any transaction of the *jus gentium*; but that was not until Rome, through contact with other nations and the growth of trade and commerce, had found it necessary to modify her jurisprudence by the adoption of many new institutions of a more liberal and less exclusive character than those of the *jus civile*.

The citizen and his "caput."

A citizen's civil personality was technically his *caput*. The extent of it depended on his family status. It was only among citizens that the supremacy of the *paterfamilias* and the subjection of those *in manu*, *potestate* or *mancipio* were recognized—only among them therefore that the position of an individual in the family was of moment. While in public life a man's supremacy or subjection in the family was immaterial, in private life it was the *paterfamilias* alone who enjoyed full jural capacity. Those subject to him had a more limited personality; and, so far as capacity to take part in transactions of the *jus civile* was concerned, it was not inherent in them but derived from their *paterfamilias*: they were the agents of his will, representatives of his *persona* in every act whereby a right was acquired by them for the family to which they belonged.

Whenever a citizen either ceased altogether to be a member of a Roman family or passed, either permanently or temporarily, into subjection to some *paterfamilias* outside his own family,[2] there was technically *capitis minutio* or *deminutio*. To harmonize with the gradually established conception of jural personality in non-citizens, and perhaps also from their partiality for tripartite divisions, the jurists about the end of the Republic divided *capitis deminutio* into three degrees, viz. *maxima*, *media* and *minima*—a division unknown to lawyers of an earlier period when *civitas* was theoretically identified with *libertas*. When a citizen forfeited his freedom, his *capitis deminutio* was said to be *maxima*; he lost all capacity, whether under the *jus civile* or the *jus gentium*. When, retaining freedom, he went into exile or joined a Latin colony, or otherwise became a peregrin, the loss (*deminutio*) of his capacity was only *media* or *minor*; it was his rights and privileges under the *jus civile* that alone were affected. When both freedom and citizenship remained, and there was produced merely the severance of connexion with a particular family (*familiae mutatio*), the loss was said to be *minima*. Illustrations of *c. d. minima* present themselves in the case of a *paterfamilias* becoming *filiusfamilias* by adrogation, or a *materfamilias* passing into the hand of a husband by confarreation or coemption; in both these he or she who had been *sui juris* thereby became *alieni juris*. It was immaterial whether the change was from a higher family position to a lower, or from a lower to a higher,[3] or to the same position in the new family that had been held in the old—as when a *filiusfamilias* was transferred by his father into the *potestas* of an adopter, or when the *filiifamilias* of a person giving himself in adrogation passed with him into the *potestas* of the adrogator: in every case there was *capitis minutio*. It was not the change of family position that caused it, but the subjection to a new *potestas*. Thus the civil personality of Titius while a *filiusfamilias* in the *potestas* of Sempronius, *e.g.* the expectancy of succession, the agnatic relationships, the derivative capacity for being a party to a mancipation or a *sponsio* that resulted from the relationship, all came to an end through the subjection to a new *paterfamilias*, temporary or permanent. He might acquire another and independent capacity on becoming *sui juris* by emancipation, or another derivative capacity on passing into the *potestas* of Maevius by adoption; but while subject to a new *paterfamilias* his old personality *quoad civilia* was extinguished. This is what some of the jurists mean when they say that *capitis deminutio* was civil death.[4]

"Capitis deminutio."

An important consequence of *minima capitis deminutio* was that it not only extinguished *patria potestas* where it existed, but severed the bond of agnation between the *capite minutus* and all those who had previously been related to him as agnates. There was no longer any right of succession between them on intestacy; their reciprocal prospective rights of tutory were terminated, and the *minutio* of either tutor or ward put an end to a subsisting guardianship, assuming always that it was a *tutelo legitima* or agnatic *cura furiosi*. Very remarkable, yet quite logical, was the doctrine that the *minutio* extinguished the claims of creditors of the *minutus*; their debtor, the person with whom they had contracted, was civilly dead, and dead without an heir, and therefore there was no one against whom an action of the *jus civile* could be directed in order to enforce payment. But equity eventually provided a remedy, by

[1] Neither "alien" nor "foreigner" is an adequate rendering of *peregrinus*. For *peregrini* included not only citizens of other states, independent or dependent, but also ἀτέλειs,—men who could not call themselves citizens (*cives*) at all, as, for example, the *deditícii* whom Rome had vanquished and whose civic organization she had destroyed, offenders sent into banishment, &c., and also, until Caracalla's general grant of the franchise, the greater portion of her provincial subjects.

[2] This is Mommsen's theory. See *Staatsrecht*, iii. 1. p. 8.

[3] Children who became *sui juris* by their parent's death, as they came under no new *potestas*, were not regarded as *capite minuti*.

[4] Owing to the ill-defined views among the Roman jurists themselves regarding the nature of *cap. dem.* various theories more or less divergent have been maintained about it by modern writers, of none of which can it be said that it has been generally accepted. Mommsen's theory, above adopted, seems to present fewest difficulties. See the subject discussed and authorities cited by Goudy in 2nd edition of Muirhead's *Historical Introduction*, pp. 422–27.

giving the creditors a praetorian action in which the *minutio* was held as rescinded, and which the new *paterfamilias* was bound to defend on pain of having to give up all the estate he had acquired through the adrogation or *in manum conventio*. In other respects also the strict effects of this *capitis minutio* were attenuated or done away with by the jurists of the Empire, *e.g.* as regards personal servitudes.

The Law of the Family Relations.—So far as appears no serious inroad was made by the XII. Tables on the law affecting husband and wife, unless in the recognition of the legality of so-called "free" marriages, *i.e.* entered into without any solemnity, and not involving that subjection of the wife to the husband (*manus*) which was a necessary consequence of the patrician confarreation and plebeian coemption. These latter were left untouched, while on the other hand acquisition of marital *manus* through *usus* was fully recognized. As formerly mentioned, it had become a practice with some of the plebeians to tie the marriage bond rather loosely in the first instance, possibly in consequence of objection by the women (as became quite general even among patricians at a later period) to renounce their independence and right to retain their own property and earnings, but more probably because taking a woman to be merely the mother of children (*matrimonium*) had been practically forced upon them before coemption had been introduced as a means of making the less lawful wife, and so they had become in a manner habituated to it. But the idea that, as a man might acquire the ownership of a thing to which his legal title was defective by prolonged possession of it, so he might acquire *manus* over the woman with whom he had thus informally united himself by prolonged cohabitation with her as his wife had probably matured and become customary law. The Tables accepted it; all that was needed was to define the conditions under which *manus* should be held to have been superinduced, and the wife converted from a doubtful *uxor* into a lawful *materfamilias*. Hence the provision that, if a woman, married neither by confarreation nor coemption, desired to retain her independence, she must each year absent herself for three consecutive nights from her husband's house (*trinoctialis usurpatio*)—twelve months' uninterrupted cohabitation being required to give him that power over her which would have been created instantly had the marriage been accompanied by either of the recognized solemnities.

Law of family relations.

Amongst the fragments of the Tables so industriously collected there is none that refers to a wife's marriage portion (*dos*); but it is hardly conceivable that it was as yet unknown. Justinian says that in ancient times it was regarded as a donation to the husband with his wife, rather than as a separate estate that was to be used by him while the marriage lasted but to revert to her or her representatives on its dissolution. And it is easy to see that, where there was *manus*, the wife becoming a member of her husband's family and everything of hers becoming his, such must originally have been its character.[1] But even then, when a man gave his daughter (*filiafamilias*)—who could have nothing of her own—in marriage, and promised her husband a portion with her, there must have been some process of law for compelling him to pay it; and Voigt's conjecture that an *actio dictae dotis* was employed for the purpose has something in its favour.[2] As regards divorce, Cicero alludes vaguely but in a provision in the Tables about a man depriving his wife of the house-keys and turning her out of doors, with some such words as "take what is thine and get thee gone." This can only refer to free or non-*manus* marriages, but even for hand marriages, while recognizing grounds (but not by what were competent, the statement of the historians is that they were few and far between until the 6th century of the city, and that, until the same date, any man who turned his wife away, however serious the ground, was, by recognition of the family council, was liable to penalties at the hands of the censors.[3]

Of the two or three provisions of the Tables known to us that affected details of the *patria potestas*, which itself was assumed to be so well established by customary law as to need no statutory sanction or definition, one was in the words "si pater (familias) ter filium venum duuit, a patre filius liber esto." This came to be construed by the pontifical lawyers as meaning that so powerful was the bond of the *potestas* over a son that it could not be completely loosed until the father had three times gone through the process of fictitious sale by which emancipation was effected. But the conception of the law seems to indicate that its original purpose must have been rather to impose a penalty on the father and confer a benefit on a son *in potestate*, by declaring him *ipso jure* free from it on a certain event, than to place difficulties in the way of his emancipation. "If a house-father have thrice sold his son, the latter shall be free from his father." It reads as if the intention were to rescue the son from what, by its frequent repetition, was suggestive of a total absence of parental affection rather than of filial disobedience to constitute a ground for it. Its object have been to restrain the practice, which did not wholly disappear even in the late Empire, of men selling their sons or giving them to their creditors in security of loans—such sales or pledges, as the Twelve Tables, however, effected only by an actual transfer of the child *per aes et libram* as a free bondman (*in mancipii causa*), accompanied by, in the case of a loan, a pact for reconveyance when the loan was repaid? Whatever its ratio, however, and whatever the earlier practice, it was upon this law that the interpreting pontiffs based the rules for adoptions and emancipations of *filiifamilias*. The usual procedure in adoptions was as follows: The natural father mancipated his son to a friend for a nominal price and the latter then immediately him, the son thereupon reverting into his father's *potestas*. This was repeated a second time with the same result. After the third sale (*patria potestas* being extinguished) the purchaser remancipated to the parent. In the latter's hands the son was now *in causa mancipii*, and so in a position in which he could be permanently transferred to the adopter. This was effected by an *in jure cessio*, in which the magistrate decreed that the son was his (*filiusfamilias*), and in which judgment was at once given in his favour on the natural parent's admission or tacit acquiescence. A similar method was followed in emancipation of a *filius*, except that of course there was no *cessio in jure*, the parent instead thereof manumitting the son immediately after the reconveyance to him. Neither in adoption nor emancipation, however, was remancipation to the *paterfamilias* essential, though it was usual, and in the case of emancipation carried with it important rights of succession and tutory. For during Sabine and grandchildren the pontifical jurists by a casuistic interpretation of the said law held one mancipation to be in all cases enough to extinguish the *patria potestas*.

The nature of the relation between master and slave, like that of *manus* and *patria potestas*, seems also to have been too notorious to require exposition in the Tables. We find recorded only two references to it, one dealing with the case of a slave who had a confidential commentary gift of money (*statu liberi*), the other with noxal surrender (*noxae deditio*). The provision about noxal surrender was not limited to a slave; it was apparently to the effect that, if a member of a man's family (*familiaris*, *i.e.* a son or a daughter *in potestate* or a slave) committed a delict, or did injury to, property belonging to a third party, or a domestic animal belonging to one man did harm to another, the father of the delinquent child, or the owner of the slave or animal, should either surrender him or it to the person injured or make reparation in damages. In course of time the surrender came to be regarded as a means of avoiding the primary obligation of making reparation. The comparative unsophisticated recognizes in the enactment of the Tables a modified survival of the ancient right of an injured party to have the delinquent *corpus*—man, beast or thing—given up to him to wreak his revenge upon it privately, the modification consisting in the alternative of compensation. The operation of the noxal surrender, failing reparation, had gone out of use in the case of daughters *in potestate* before the time of Gaius, and in the case of sons before that of Justinian; but it was still sanctioned so far as slaves and domestic animals were concerned even in that emperor's legislation.

Gentile guardianship.

Guardianship and the Introduction of the Order of Agnates.—So long as Rome was patrician the *gens* apparently charged itself with the guardianship of a clansman's orphan pupil children and his widow and unmarried daughters above pupillarity after his decease (*tutela*), as well as with that of male members of his family who were *sui juris*, but above the age of pupillarity, when they chanced to be lunatic, imbecile, prodigal or helplessly infirm (*cura, curatio*). The *gens* in council, in all probability, appointed one of its members to act as tutor or curator as the case might be, itself prescribed his duties, and itself called him to account for any failure in his administration.

But, as this gentile tutory could not be extended to the plebeians, among whom some law of guardianship was as much required as among their fellow-citizens of the higher order, the decemvirs found it expedient to devise a new one of universal application. The Tables contained no express authority for testamentary nomination of tutors to the widow

[1] See Cicero, *Top.* iv. 23.

[2] Voigt, *XII. Tafeln*, ii. p. 486. It has not, however, received any support from more recent writers.

[3] See Esmein, *Mélanges*, pp. 23 seq.

of the testator, or to his pupil children and grown-up unmarried daughters; but such appointment, if unknown previously, was soon held to be justified by a liberal interpretation of the very inclusive provision, "uti legassit suae rei, ita jus esto." In the absence of testamentary appointment the nearest male agnates of lawful age were to be tutors. This tutory of agnates was an invention of the decemvirs, just as was the agnates' right of succession on intestacy. The plebeians had no *gentes*, at least until a much later period; so, to make the law equal for all, it was necessary to introduce a new order of heirs and tutors. "Tutores . . . ex lege XII. Tabularum introducuntur . . . agnati" is the very notable language of Ulpian. And his words are very similar in speaking of their right of succession; for, while he says of testamentary inheritances no more than that they were *confirmed* by the XII. Tables, he explains that the *legitimae hereditates* of agnates and patrons were *derived* from them.[1] The phrases *legitima cognatio*, *legitima hereditas*, *legitimi heredes*, *tutela legitima*, *tutores legitimi* themselves proclaim the origin of agnation, agnatic inheritance and agnatic tutory; for, though the word *legitimus* might be applied to any institution based on statute, yet in the ordinary case it indicated one introduced by the XII. Tables, the law of laws.

Guardianship of agnates.

A man's agnates, in the strict sense, were those of his collateral kinsmen who were subject to the same *patria potestas* as himself, or would have been had the common ancestor been still alive. A man's sons and daughters *in potestate*, therefore, whether the relationship was by birth or adoption, and his wife *in manu* (being *filiae loco*) were each other's agnates. But a wife not *in manu* was not their agnate; nor were children who had been emancipated or otherwise *capite minuti* the agnates of either their brothers and sisters or their mother *in manu*. A man was an agnate of his brother's children, assuming always that there had been no *capitis deminutio* on either side; but he was not an agnate of his sister's children, for they were not *ejusdem familiae*: they were agnates of their father's family, not of their mother's. In like manner, and again assuming the absence of *minutio capitis*, the children of brothers were each other's agnates, but not the children of a brother and a sister or of two sisters. Brothers and sisters were agnates of the second degree; a man and his brother's children were of the third, the children of two brothers (*patrueles*) of the fourth, and so on,—it being a condition, however, that the kinship should always result either from lawful marriage or from adoption in one or other of its forms.

When, therefore, a man died leaving pupil male descendants or unmarried female descendants who by his death became *sui juris*, they got their brothers of lawful age as their tutors; if he was survived but by wife, and she had been *in manu*, her sons, or it might be stepsons, acted for her in the same capacity; in either case they took office as the nearest qualified male agnates. If the widow had no sons or stepsons of full age, and the children consequently no qualified brothers, the tutory devolved on the agnates next in order,—*i.e.* the brothers german and consanguinean of the deceased husband and father; for they were agnates of the third degree. And so with agnates of the fourth and remoter degrees.[2] Failing agnates who could demonstrate their propinquity, the tutory passed to the *gens* when the ward happened to belong to one. This is nowhere expressly stated; but Cicero gives what he represents to be an enactment of the Tables, making the fellow-gentiles of a lunatic his guardians on failure of agnates; and analogy seems to justify the extension of the same rule to the case of sane pupil and female wards.[3]

The curatory of minors above pupillarity was of much later date than the Tables. The only curatories they sanctioned were those of lunatics (*furiosi*) and spendthrifts (*prodigi*). A lunatic was committed to the care of his agnates, and, failing them, of his fellow-gentiles; and a few words in Festus seem to suggest that arrangements had to be made by them for his safe custody.

Mancipation and the Law of Property.—In the early law, as we have seen, there was no technical word for ownership of things: it was an element of the house-father's *manus*. In time, although it is impossible to say when, the word *dominium* came into use, but, so far as can be discovered, it did not occur in the XII. Tables, and must have been of later introduction. In those days, when a man asserted ownership of a thing, he was content to say, "It is mine," or "It is mine according to the law of the Quirites." It is said by some jurists of eminence that under the law of the Tables what afterwards came to be called "dominium ex jure Quiritium" was competent only in the case of *res mancipi*—of a man's house and farm, and things appurtenant thereto, as slaves and animals with which he worked them. There is much to be said for this hypothesis, but it is so far contradicted by Ulpian and Paul, who tell us that *tigna juncta* (that is, building materials, vine stakes and the like, which undoubtedly were *res nec mancipi*) were exceptionally excluded from vindication. On the other hand, these texts may be explained as mere deductions by interpretation at a later time of the words "ne solvito" of the XII. Tables.[4] At any rate it is pretty certain that before the close of the present period *res nec mancipi* as well as *res mancipi* could be held in quiritarian ownership.

Ownership in "res mancipi" and "res nec mancipi."

The modes in which these two classes of things might be acquired in property were various. But there was this important difference: that, while a natural mode of acquisition sufficed in the case of *res nec mancipi*, some civil one was necessary for the derivative acquisition, at all events, of *res mancipi*. The most important were mancipation, surrender in court, usucapion and bequest as singular modes, and inheritance, *in manum conventio*, adrogation and purchase of a confiscated estate, as universal ones. All of these, with the exception of mancipation, applied equally to *res mancipi* and *res nec mancipi*. But there was, in addition, for *res nec mancipi*, what was the commonest of all the modes of transferring things of this class, simple tradition. If the transfer of these was by the owner, with the intention of passing the property, then the simple delivery of possession (*traditio*) was enough, unless indeed it was in virtue of a sale; in which latter case the ownership remained with the vendor, notwithstanding the change of possession, until the price was paid or security given for it.[5] Only mancipation, surrender in court and usucapion, however, need be noticed at present.

Mancipation.

The origin of the distinction between mancipable and non-mancipable things, and of the form of conveyance by mancipation applicable to the first, has been explained (*supra*, p. 529).[6] Originally mancipation was not the imaginary sale that it does speaks of, but as real a sale as could well be conceived—the weighing in scales, held by an official, of the raw metal that was to be the consideration for the transfer of a *res mancipi*, and the handing of it by the transferee to the transferrer, with the solemn declaration that thereby and therewith the thing in question became his in quiritary right. On the introduction of coined money weighing became unnecessary. The price was counted out before the ceremony, or sometimes left to be done afterwards; and though, in that spirit of conservatism that was so marked in the adhesion

[1] Ulp. *Frag.* xxvii. 5, "legitimae hereditatis jus . . . ex lege Duodecim Tabularum descendit." This derivation of agnatic inheritance from the XII. Tables was specially noticed by Danz in his *Gesch. d. röm. Rechts* (2nd ed., Leipzig, 1871–73), ii. 95, but is generally ignored.

[2] To determine the degree of propinquity between two persons it was necessary to count the generations upwards from the first to the common ancestor and downwards from him to the second. Consequently brothers were related in the second degree, uncle and nephew in the third, first cousins in the fourth, and so on.

[3] See Gai. i. 165.

[4] *Dig.* xlvii. 3, 1 pr. and xlvi. 3, 98, § 8. See Cuq, *Inst. Jurid.* 2nd ed. i. 91 n.; and on *tignum junctum* in general, Girard, *Manuel de droit romain*, 4th ed. p. 330.

[5] Our only authority for attributing this fundamental rule to the XII. Tables is Justinian's *Institutes*, ii. 1, § 41, where there is clear evidence of a Tribonianism. The rule undoubtedly must have been applied to *res mancipatae* in the Tables, and possibly its extension to tradition of *res nec mancipi* may have been due to interpretation. See Girard, *ut supra*, p. 288; cf. Cuq, *Institutions Jurid.* i. p. 87.

[6] Literature: Leist, *Mancipation und Eigenthumstradition* (Jena, 1865); Jhering, *Geist. d. röm. Rechts*, vol. ii. § 46; Bechmann, *Der Kauf nach gemeinem Recht* (Erlangen), i. pp. 47–302; Voigt, *XII. Tafeln*, vol. i. § 22, vol. ii. §§ 84–88; Kalowa, *Röm. Rechtsgesch.* ii. pp. 363–81.

to time-honoured forms after their *raison d'être* was gone, the scale-bearer and the scales were still retained as indispensable elements of the mancipation, yet the scales were simply touched by the purchaser with a *raudusculum* or bar of copper, in order that he might be able to recite the old formula: "I say that this slave is mine in quiritary right, and that by purchase (for such and such a price) with these scales and this bit of copper." And that one coin, says Gaius, was then handed by the transferee to the transferer as if it were in fact the price of the purchase (*quasi pretii loco*). Thus transformed, the mancipation was undoubtedly an imaginary sale; for the real price might have been paid weeks or months before, or might not be paid until weeks or months afterwards. The mancipation had become nothing more than a conveyance, and in this form it continued down to the end of the 3rd century of the Empire to be the appropriate mode of transfer of a *res mancipi*, or at least of securing to the transferee what such a thing a complete legal title (*dominium ex jure quiritium*). After that, however, it seems gradually to have gone into disuse, being inapplicable to lands out of Italy that did not enjoy what was called *jus Italicum*; and long before the time of Justinian it had practically disappeared.

The effects of a mancipation, provided the price had been paid or security given for it, were that the property passed instantly to the purchaser, and that the transferer was held to warrant the transferee against eviction from the moment the price was received. In the absence of either payment or sureties for it, the title still remained with the vendor, so that it was in his power, by means of a real action, to get back anything called in *actio auctoritatis*. But this *ipso jure* obligation did not arise when the mancipation was either really or fictitiously gratuitous (*nummo uno*),—really, in the case of donations, &c., fictitiously, when, on purpose to exclude the warranty, the recital of the transferee was that the price was a single sesterce.

The right of a vendee to sue an *actio auctoritatis* arose only when eviction resulted from a decree in a regular judicial process at the instance of a third party disputing his title, and was conditional on his having done all that was necessary on his part to bring his vendor (*auctor*) into the field to defend his own interests. And the duration of the *auctoritas* was limited by the Tables to two years in the case of lands and houses, to one year in the case of other things. As possession for those periods was sufficient to cure any defect in the vendee's title, it was but reasonable that with their expiry the vendor's liability on his warranty should be held to end.

By a provision of the Tables in the very inclusive terms, "cum nexum faciet mancipiumque, uti lingua nuncupassit, ita jus esto," the importance of mancipation was immensely increased; for any sort of qualification governing the transaction might be thereby introduced upon it, and the range of its application thus greatly extended. Such qualifications were spoken of as *leges mancipii*,—self-imposed terms, conditions or qualifications of the conveyance and, as integral parts of the transaction *per aes et libram*, they partook of its binding character and were law between the parties. The matter of oral declaration might be the acreage of lands, their freedom from burdens or right to easements, reservation of a usufruct, undertaking to recovery on a certain event, or what not, so long as it did not express a term or condition; the result was just so many obligations created *per aes et libram*, whose contravention or denial (Cicero tells us) was punished with a twofold penalty.[1] Ordinarily the words spoken in the hearing of the witnesses fixed the beginning and the end of the liability; it was enough that they were literally complied with, however much the other party might be injured by something inconsistent with their spirit, or which they did not know the precaution of which ought to have been taken, or which should be made matter of declaration. But there was an exception (although not introduced until long after the Tables) in the case of that particular mancipatory agreement which was known by the name of *fiducia*, *i.e.* where the mancipation was to secure debt in security or to a friend for safe custody, and the engagement was to return the thing mancipated, in the one case when the debt secured by it was paid and in the other on demand. In such cases the transferee took the conveyance more in the transferer's interest than his own; he became a sort of trustee, entitled to be treated with consideration, and neither mulcted in a twofold penalty when his inability to recovery was due to no fault of his, nor forced to recovey until relieved of charges incurred by him in reference to the property. Accordingly it became the practice to import into the mancipation a reference to *fides*—"fidi fiduciae causa meum esse aio," with explanation of the purpose, conditions, &c., of the *fiducia*, even, this explanation as a rule went into the nuncupatory words, forming a relative *lex mancipii*, but in a separate agreement or *pactum fiduciae*. This pact then became enforceable not by ordinary *legis actio*, as part of the mancipation, but separately by actions of good faith alone. It gave rise to an *actio fiduciae* which some writers think was just an application of the *legis actio per judicis postulationem*, but which more probably was originally an action *in factum* granted by the urban praetor by virtue of his equitable jurisdiction. In any case it was one of the earliest instances of an action *inter cives* based on principles of good faith. The fiduciary clause had the effect of freeing alike the right of the vendor and the obligation of the vendee from the hard-and-fast lines of the *jus strictum*, and subordinating them to the principles of *bona fides*.[2]

Surrender in court.

Of the civil modes of acquiring property on singular title applicable to both *res mancipi* and *res nec mancipi* surrender in court (*in jure cessio*) was just a *res vindicatio* arrested in its initial stage. The parties, cedent and cessionary, having previously arranged the terms of transfer—sale, donation or otherwise—appeared before the magistrate; the cession-ary, taking the position of plaintiff, declared the thing his in quiritary right; the cedent, as defendant, was asked what he had to say in answer; and, on his admission or silence, the magistrate at once pronounced a decree (*addictio*) which completed the transfer, but which might be subject to a fiduciary reservation or deduction of usufruct, &c., in favour of the cedent. It was resorted to for constitution of servitudes, both real and personal, and transfer of such rights as *patria potestas*, tutory-at-law of a woman, or an agnatic inheritance that had already opened, than for conveyance of property. For it was not only inconvenient, inasmuch as it required the parties to appear before the supreme magistrate in Rome, and could not be carried through by any one under power (as mancipation might), but it had also the serious disadvantage that it did not give *ipso jure* immediate right to the title by the cedent in the event of eviction or give rise to an action *de modo agri*. Nor did it, like mancipation and tradition, make payment of the price a condition precedent of the transfer of property. The reason was that in form the right of the cessionary flowed from a magisterial decree: "Since you say the thing is yours, and the cedent does not say it is his, I declare it yours," and not from any act or word of the cedent's, who was passive in the matter.

Usu-caplon.

Usucapion,[3] regulated by the XII. Tables, but not improbably recognized previously in a vague and uncertain way, converted uninterrupted possession (*usus*) into quiritary property by efflux of time. The provision in the Tables, as given by Cicero, was to this effect: "usus auctoritas fundi biennium est, ceterarum rerum omnium annuus est." The relation in which the words *usus* and *auctoritas* stand to each other has been a subject of much discussion; the prevailing opinion amongst modern civilians is that the two words should be taken disjunctively, the first alone referring to usucapion, and the second to the warranty of title incumbent on the vendor in a mancipation, and that both were limited to two years in the case of lands (and, by extensive interpretation, houses), and to one year in the case of anything else. In the later jurisprudence the possession required to be based on a sufficient title and the possessor to be in good faith. But the decemviral code, as is now generally admitted, contained no such requirements; any citizen occupying immovables or holding movables as his own, provided they were usucaptible and he had not taken them theftously, acquired a quiritary right in two years or one, as the case might be, simply on the strength of his possession. Originally, therefore, it was simply the conversion of *de facto* possession, no matter how acquired so long as not by theft, into legal ownership when prolonged for the statutory period,—too often the maintenance of might at the cost of right. But in time it came to be regarded rather as a remedy for some defect of title, arising either from irregularity of conveyance or incapacity of the party from whom a transfer had been taken; and with the progress of

[1] Cic. *de Off.* iii. 16, § 65. Some writers, *e.g.* Girard, *Manuel de droit romain*, p. 550, n. 5, take the view that, apart from the *actio auctoritatis*, it was only where the extent of the land was misstated (*actio de modo agri*) that the penalty of a twofold was *ipso jure* incurred. But this puts a gloss on Cicero's language.

[2] There is much diversity of opinion about *fiducia*. See Oertmann, *Fiducia im röm. Privatrecht* (Berlin, 1890); Girard, *Manuel*, 4th ed. pp. 519–23; Sohm, *Institutionen* (Eng. trans., 2nd ed.), pp. 63–65.

[3] Literature: Stintzing, *Das Wesen von* bona fides *und* titulus *in d. röm. Usucapionslehre* (Heidelberg, 1852); Schirmer, *Die Grundidee d. Usucapion im röm. Recht* (Berlin, 1855); Pernice, *Labeo*, 2nd ed. ii. 328 seq.; Voigt, *XII. Tafeln*, ii. § 91, Karlowa, *Röm. R.G.* ii. 387 seq.; Esmein, "Sur l'histoire de l'usucapion," *Mélanges* (1886), pp. 171 seq.

jurisprudence it developed into the carefully regulated positive prescription which has to a greater or less extent found a place in every modern system.

The conception of the abstract notion of a real right in (or over) the property of another person (*jus in re aliena*) is not to be looked for at so early a period in the history of the law as that now under consideration. The rural servitudes of way and water were no doubt very early recognized, for they ranked as *res mancipi*, and the XII. Tables contained various regulations in reference to the former. Usufruct, too, was probably not unknown; but the urban praedial scrvitudes bear the impress of a somewhat later jurisprudence. Pignorate and hypothecary rights were certainly unknown as rights protected by action.[1] Between private parties the only thing legally recognized of the nature of a real security was the *fiducia* that is described above. Approaching more nearly to the modern idea of a mortgage was the security *praedibus praediisque* required by the state from those indebted to it in assurance of their obligations. Here there was the double guarantee of sureties (*praedes*) and mortgages of lands of theirs (*praedia subsignata*); but how they were dealt with when the debtor made default is by no means clear.

Jura in re aliena.

Changes in the Law of Succession.—The two forms of testament of the regal period, viz., that made in the *comitia* of the curies and that by soldiers on the eve of battle, still remained in use in the early Republic; though before the end of the Republic they were displaced by the general adoption of that executed with the copper and scales (*testamentum per aes et libram*). It seems to be the general opinion that it was to the first two alone that the words applied which stood in the forefront of the provisions of the XII. Tables about inheritance: "uti legassit suae rei, ita jus esto." Whether resort was to the *comitia* or to the army, the testator's own will in the matter was henceforth to be supreme. There was to be no more reference to the pontiffs as to the expediency of the testament in view of the interests of the family *sacra* and of creditors of the testator's; from legislators, sanctioning a departure from the ordinary rules of succession, the assembled Quirites became merely witnesses—recipients of the oral declaration of the testator's will in regard to his inheritance.[2]

Forms of testiment.

Testament per aes et libram.

The testament with the copper and the scales is depicted by Gaius as a written instrument. But he presents it in what might be described as the third stage of its history. Its probable origin has been explained (*supra*, p. 534). It was originally not a testament but only a makeshift for one. A plebeian was not qualified in the regal period to make a testament in the *comitia*; so, instead, he transferred his estate to a friend on whom he could rely, with instructions how to distribute it on his death. The transferee was called *familiae emptor*, because the conveyance was in form a mancipation for a nominal price.

It is not at all unlikely that the same device may occasionally have been resorted to by a patrician who had neglected to make a regular testament, and was seized with mortal illness before he had an opportunity of appealing to the curies.[3] But such a disposition was not a testament, and may not have been so called. A testament was the nomination of a person as the testator's heir. It made the person instituted as fully the representative of the testator after his death as his heir-at-law would have been had he died intestate. The original *mortis causa* mancipation that opened the way for the testament *per aes et libram* conferred upon the *familiae emptor* no such character. Gaius says that he stood in place of an heir (*heredis loco*), inasmuch as he had such of an heir's rights and duties as the *familiae venditor* had it in his power to confer and impose; but the transaction was but a conveyance of estate, with a limitation of the right of the grantee. It has been argued that, as the law did not recognize conditional mancipation, the conveyance must have operated as a complete and immediate divestiture of the grantee. But this does not follow. For it was quite competent for a man, in transferring property by mancipation, to reserve to himself a life interest; and apparently it was equally competent for him to postpone delivery of possession without infringing the rule that the mancipation itself could not be *ex certo tempore*. So far as one can see, therefore, there was nothing to prevent the grantee in the conveyance (or quasi-testamentary bargaining that it was to retain the possession till his death; and, as the *familia* was an aggregate of estate (*universitas rerum*) which retained its identity notwithstanding any change in its component elements, he must in such case have been as free to operate on it while he survived, as if he had never conveyed it by mancipation.

Cicero incidentally remarks[4]—what indeed the nature of the transaction of itself very distinctly suggests—that the true testament with the copper and the scales had its statutory warrant, not in the *uti legassit suae rei* of the XII. Tables, but in the provision contained in the words: "cum nexum faciet mancipiumque, uti lingua nuncupassit, ita jus esto." Reflection on the import and comprehensiveness of these words led the pontifical interpreters to the conclusion that there was nothing in them to prevent the direct institution of an heir in the course of the *verba muncupata* engrafted on a mancipation. From the moment this view was adopted and put in practice the *familiae mancipatio* ceased to be a transfer of the testator's estate to the *familiae emptor*; the latter's purchase was now for form's sake only, though still an indispensable form since it was by it alone that, according to the letter of the statute, imparted efficacy to the *nuncupatio*. But it was the *nuncupatio*—the oral declaration addressed to the witnesses—that really contained the testamentary disposition, *i.e.* the institution of an heir, with such other provisions as the testator thought fit to embody in it. This was the second stage in the history of the testament *per aes et libram*. The third was marked by the introduction of tablets in which the testamentary provisions were set out in writing, and which the testator displayed to the witnesses, folded and tied up in the usual manner, declaring that they contained the record of his last will.

Gaius narrates the words spoken by the *familiae emptor* and addressed to the testator as follows: "Your estate and belongings (*familia pecuniaque tua*), be they mine by purchase with this bit of copper and these copper scales, subject to your instructions, but in my keeping, that so you may lawfully make your testament according to the statute (*quo tu jure testamentum facere possis secundum legem publicam*)." The meaning of the words "in my keeping (*endo custodelam meam*)" is not quite obvious; they are probably remnants of an older style, but may be due to a clerical error of the writer of the Verona MS. Certain is that they no more imported a real custody than a real property in the *familiae emptor*; for the testator remained so entirely master of his estate that the very next day if he pleased he might mancipate it anew to a different purchaser, and nuncupate another testamentary writings. The mancipation by the testator was in these terms: "As is written in these tablets so do I give, so do I legate, so do I declare my will; therefore, Quirites, grant me your testimony"; and, adds Gaius, "whatever the testator had set down in the tablets in his testamentary acts he was regarded as declaring and confirming by this general statement." To the appeal of the testator the witnesses responded by giving their testimony in words which unfortunately are not preserved; and then the testament was sealed by testator, officials and witnesses, the seals being outside according to the early fashion.[4]

Although this testament with the copper and the scales was justified in the first instance by the provision of the XII. Tables as to the effect of nuncupative wills annexed to a mancipation, yet in course of time it came to be subordinated to that other one which dealt directly with testamentary dispositions: *uti legassit suae rei, ita jus esto.* Upon the words *uti legassit* the widest possible meaning was put by the interpreters: not only was a testator held entitled on the strength of them to appoint tutors to wife and children, to enfranchise slaves and make bequests to legatees, but he might

[1] Hypothecary rights were unknown until near the end of the Republic. But Festus (*s.v.* "Nancitor"; see Bruns, *Fontes*, 6th ed., iii. 16) speaks of a provision in the Cassian league between Rome and the Latin states of the year 262 U.C.—"Si quid pignoris nanciscitur, sibi habeto"—which may suggest that the Romans at this period were not altogether unacquainted with pledge or pawn of movables as a transaction of some value *de facto* if not *de jure*.

[2] See Girard, *Manuel de droit romain*, 4th ed. p. 800. On the "uti legassit" law of the Tables see *ibid.* p. 782, and cf. Cuq, *Institutions Juridiques*, 2nd ed. pp. 124–125.

[3] The *comitia*, Gaius tells us (ii. § 102), met only twice a year to sanction testaments. In Mommsen's view, *Röm. Chronologie* (1859), pp. 241 seq., these days were the 24th of March and the 24th of May.

[4] Cic. *De Orat.* i. 57, § 245.

[5] On the above passage of Gaius, see Sohm, *Inst.* § 99.

even disinherit a child in his *potestas* (*suus heres*) in favour of a stranger, so long as he did so in express terms. Institution of a stranger, without specific mention of the *suus heres*, however, was fatal, if the latter was a son; for without express disherison (*exheredatio*) his father could not deprive him of the interest he had in the family property as in a manner one of its joint owners. It can hardly be supposed that disherison was contemplated by the compilers of the Tables; it was foreign to the traditional conception of the family and the family estate. But it was a right whose concession could not be resisted when claimed as embraced in the *uti legassit*, although generally discountenanced, and as far as possible restrained by the strictness of the rules imposed on its exercise.

In the absence of a testament, or on its failure from any cause, the succession opened to the heirs *ab intestato*. So notoriously were the *sui heredes* entitled to the first place—and that not so much in the character of heirs as of persons now entering upon the active exercise of rights hitherto existing, though in a manner dormant—that the compilers of the XII. Tables thought it superfluous expressly to declare it. "If a man die intestate, leaving no *suus heres*, his nearest agnate shall have his estate. If the agnate also fail, his gentiles shall have it." It has been pointed out, in dealing with the tutory of agnates, that the notion of agnation, as a bond distinct from that which connected the gentile members of a clan, was due to the decemvirs. They had to devise a law of intestate tutory and succession suitable alike to the patricians who had *gentes* and to the plebeians who had none. To put the latter in exactly the same position as the former was beyond their power; for they had to face the fact that the plebeians had no gentile institutions, and to create them was impossible. The difficulty was overcome by accepting the principle of agnation upon which the patrician *gens* was constructed, and establishing an agnatic circle of kinsmen (perhaps at first limited to the sixth degree) to which the *gens* as a collective body should be postponed in the case of the patricians, and which should come in place of it in the case of the plebeians. It was not perfect equalization, but the nearest approach to it that the circumstances permitted. The difference was that, when the agnates of a plebeian intestate failed, his inheritance was vacant; whereas, on failure of those of a patrician, there was devolution to his *gens* in its collective capacity. Two "interpretations" put upon the statute had an important bearing on this contrast, viz. (1) that, the nearest agnates in existence declined the succession, those next in degree were not allowed to take it; and (2) that no female agnate could take it more remote than a sister of the deceased intestate. The division among two or more agnates was always *per capita*, not *per stirpes*.

Intestate succession.

The order of intestate succession thus established by the XII. Tables, which prevailed until amended by the praetors probably in the 8th century of the city, was first to the *sui heredes* of the deceased, next to his nearest agnate or agnates, and finally, if the deceased was a patrician, to his *gens*.[1] His *sui heredes*, speaking broadly, were those of his descendants in his *potestas* when he died who by that event (or even after it, but before his intestacy became manifest) became *sui juris*, together with his wife in *manu* (wife, as regarded his succession, was reckoned as a daughter); but they did not include children whom he had emancipated or daughters who had passed *in manum* of a husband. Emancipated children did not even come in as agnates on failure of *sui*; for emancipation severed the tie of agnation as well as that of *potestas*. For the same reason no kinsman who had been emancipated, and so cut off from the family tree, could claim as an agnate; for those only were agnates who were subject to the same *patria potestas*, or would have been had the common family head been still alive.

Position of heirs.

The opening of a succession (technically *delatio hereditatis*) in favour of *sui heredes*, whether in virtue of a testamentary institution or by operation of law on intestacy, at once invested them with the character, rights and responsibilities of heirs. No acceptance was necessary, nor, according to the rules of the *jus civile*, was any declinature competent. They had been all along in a manner joint owners with their parent of the family estate, which by his death had become, nominally at least, an inheritance; and, as he had not thought fit to terminate their interest in it by emancipating or disinheriting them, they were not now allowed to disown it. Hence they were spoken of as necessary heirs (*heredes sui et necessarii*). A slave, too whom his owner had instituted in his testament with gift of liberty was a necessary heir: he could not decline, and was invested with the character of heir the moment the testator died. So with stranger institutes or agnates taking on intestacy: they were free to take or reject the inheritance as they saw fit; consequently, an act of acceptance (*aditio*) was necessary on their part to make them heirs.

This was a formal declaration before witnesses, which got the name of *cretio*.[2] It was not unusual for a testator, in instituting an heir, to require that he should make a formal declaration of acceptance within a limited time, failing which his right should pass to a substitute, who in turn was required to enter within a certain time; and so on with any number of substitutes, the series ending with one of his slaves, who became heir without liberty, and thus saved the testator from the disgrace of *post mortem* bankruptcy in the event of the inheritance proving insolvent. The *uti legassit* of the Tables, as interpreted by the pontiffs, conferred upon a testator very great latitude of testamentary disposition, even to the extent of disherison of *sui heredes*. This was a course, however, that was probably rarely resorted to unless when a child had been guilty of gross ingratitude, or when the parent had reason to believe his estate was insolvent and desired to protect his children from the responsibilities of inheritance. Usually his *sui*, if he had any, would be his institutes, and the purpose of the testament either to apportion the estate amongst them as he thought expedient, or to give him an opportunity of appointing substitutes, bestowing legacies, or enfranchising slaves. On intestacy the *sui* took equally but *per stirpes*; that is to say, grandchildren by a son who had predeceased or been emancipated, but who themselves had been retained in their grandfather's *potestas*, took amongst them the share to which their father would otherwise have been entitled, instead of taking equal shares with their surviving uncles. It was by no means unusual, when the whole inheritance descended to several heirs to hold it in common for many years as quasi partners (*consortes*); but any one of them was entitled at any moment to claim a partition which was effected judicially, by an arbitral procedure introduced by the XII. Tables, termed *a judicium* (or *arbitrium*) *familiae erciscundae*. Where two or more strangers were instituted testamentarily, whether to equal or unequal shares, if one of them failed either by predecease or declinature his share accrued *ipso jure* to the others; for it was a rule that early became proverbial that a man could not die partly testate and partly intestate. There was the same accrual among agnates on intestacy; and both they and stranger testamentary institutes had the same action for division of the inheritance that was made use of by *sui heredes*.

Usucapio pro herede.

According to Gaius it was as a stimulus to heirs to enter as soon as possible to an inheritance that had opened to them, and thus make early provision alike for satisfying the claims of creditors of the deceased and attending to his family *sacra*, that the law came to recognize the somewhat remarkable institution of usucapion or prescriptive acquisition of the inheritance in the character of heir (*usucapio pro herede*). Such usucapion was impossible—there was no room for it—if the deceased had left *sui heredes*; for the inheritance vested in them the moment he died. But, if there were no *sui heredes*, then any person taking possession of the property that had belonged to the deceased, and holding it for twelve months without interruption, thereby acquired it as if he were heir: in fact, according to the views then held, he acquired the inheritance itself. Gaius characterizes it as a dishonest acquisition, inasmuch as the usucapient knew that what he had taken possession of was not his. But, as already explained, the usucapion of the XII. Tables did not require *bona fides* on the part of the usucapient; he might acquire ownership though he knowingly possessed what did not belong to him, so long as he did not appropriate it theftuously, *i.e.* knowing that it belonged to another. But an inheritance unappropriated by an heir who had nothing more than a right to claim it belonged in strictness to no one; and it was open, therefore, to whoever in person took possession of it with a view to usucapion in the character of heir. There can be little doubt that on the completion of his possession he was regarded as heir just as fully as if he had taken under testament or as next-at-law on intestacy—that is to say, that he was held responsible to creditors of the deceased and required to charge himself with the family *sacra*. Gaius does not say as much; but both the Coruncanian and the Mucian edict[3] imposed the latter burden upon him who had usucapied by possession the greater part of a deceased person's estate; and it is but reasonable to suppose that the burden of debts must in like manner have fallen on the usucapient or usucapients in proportion to the shares they had taken of the deceased's property.

[1] This was for freeborn citizens; for freedmen, the patron (or his children *in potestate*) took the place of the nearest agnates.

[2] Gai. ii. 164–173.

[3] Cic. *de leg.* ii. 48, 49.

The Law of Obligations.—In his *Liber Aureorum* Gaius says obligations arise from either contract or delict, or miscellaneous causes (*variae causarum figurae*). But those arising from contract fill a place in the later jurisprudence vastly greater than those arising from delict. In the XII. Tables it was different. In them delicts were much more prominent than contracts—wrongs entitling the sufferer to demand the imposition of penalties upon the wrong-doer that in most cases covered both reparation and punishment. The disproportion in the formulated provisions in reference to the two sources of obligation, however, is not surprising. For, first of all, the purpose of the decemviral code was to remove uncertainties and leave as little as possible to the arbitrariness of the magistrates. In nothing was there more room for this than in the imposition of penalties; and, as different offences required to be differently treated, the provisions in reference to them were necessarily multiplied. In the next place, the intercourse that evokes contract was as yet very limited. Agriculture was the occupation of the great majority; of trade and commerce there was little; coined money had hardly begun to be used as a circulating medium. Lastly, the safeguards of engagement then lay to a great extent in the sworn oath or the plighted faith, of which the law (*jus*) hardly yet took cognisance, but which found a protection quite as potent in the religious and moral sentiments that had so firm a hold on the people.

Law of obligations.

Contract in general.

It may be asked—If a man purchased sheep or store cattle, a plough, a toga, a jar of wine or oil, had he no action to compel delivery, the vendor no action for payment of the price? Did the hire of a horse or the loan of a bullock create no obligation? Was partnership unknown, and deposit, and pledge, and suretyship in any other form than that of *vadimonium*? One can have no hesitation in answering that, as transactions of daily life, they must all have been more or less familiar. It does not follow, however, that they were already regulated by law and protected by the ordinary remedies. Indeed, historical jurists are pretty well agreed that not only the real contracts of loan (*mutuum* and *commodatum*), deposit, and pledge, but also the consensual ones of sale, location, partnership, and mandate, and the verbal one of suretyship, were as yet barely recognized by law. The law recognized conveyance but hardly contract. Sale was the offspring of barter—of instant exchange of one thing for another. With such instant exchange there was no room for obligation to deliver on either side. The substitution of coined money for the raw metal can hardly have effected any radical change: the ordinary practice of those early times must still have been ready-money transaction—an instant exchange of ware for price; and it can only have been when, for some reason or other, that arrangement was exceptionally for delivery or payment at a future date, say next market day, that obligation was held to have been created. Was that obligation enforceable by the civil tribunals?

Some jurists held that it was—that all contracts were the *jus spontium* contracts outside the protection of judicial remedies, although by a simpler procedure than that resorted to for enforcement of the contracts of the *jus civile*. But two provisions in the XII. Tables seem to prove that it was not so enforceable when they were drawn up. The first is that already referred to as recorded by Justinian—that, where a thing was sold and delivered, the property, nevertheless, was not to pass until the price had been paid or sureties (*vades*) for it accepted by the vendor. Far from being a recognition of the obligatory nature of the transaction, this provision is really a recognition of the inability of the law to enforce payment of the price by the vendee; it is a declaration that, on the latter's failure to pay, the vendor, protected by any personal caution, should be entitled to get back the thing sold as still his own, no matter in whose hands he found it. The second related to the case of a person who had bought a victim for sacrifice, but had failed to pay for it. A real action for its revindication by the seller after it had been consumed on the altar was out of the question; so he was authorized by the Tables, by the process of *pignoris capio*, at his own hand to appropriate in satisfaction a sufficient equivalent out of the belongings of the purchaser, against whom he had no personal action.

It was a principle of the law of Rome through the whole of its history, though in course of time subject to an increasing number of exceptions, that mere agreement between two persons did not give him in whose favour it was conceived a right to demand its enforcement. To entitle a man to claim the intervention of the civil tribunals to compel implement of an engagement undertaken by another, it was necessary (subject to those exceptions) either that it should be clothed in some form prescribed or recognized by the law, or that it should be accompanied or followed by some relative act which rendered it something more than a mere interchange of consent. Under the jurisprudence of the XII. Tables the formalities required to elevate an agreement to the rank of contract and make it civilly obligatory sometimes combined ceremonial act and words of style, sometimes did not go beyond words of style, but in all cases took place before witnesses. *Dotis dictio*, the undertaking of a parent to provide a dowry with his daughter whom he was giving in marriage, and *vadimonium*, the guarantee of a surety for the due fulfilment of the undertaking either of a party to a contract or a party to a litigation (some think only the latter), probably required nothing more than words of style before persons who could if necessary bear witness to them; whereas an engagement incident to a mancipation, or an undertaking to repay borrowed money, required in addition a ceremony with the copper and the scales. This undertaking to repay arose from the contract of *nexum*, which was, it is thought, older than the Tables; both it and the verbal contract by *sponsio* or stipulation, which was younger, require here further consideration.

Requisites of binding contract.

The Nexal Contract.[1]—The tumults and seditions so frequent in Rome during the first two centuries of the Republic are as frequently attributed by ancient writers to the abuses of the law of debt as to any other cause, social or political. The circumstances of the poorer plebeian such as to make it almost impossible to avoid borrowing. Their scanty means were dependent on the regular cultivation of their little acres, and on each operation of the agricultural year being performed in proper rotation and at the proper season. But this was every now and again interfered with by wars which detained them from home at seed-time or harvest, practically rendering their farms unproductive, and leaving them and their families in straits for the commonest necessaries of life.

Causes of plebeian borrowing.

The practice of lending *per libram* was doubtless of great antiquity—indeed, the intervention of the scales was a necessity when money or what passed for it had to be weighed instead of counted; and not improbably old custom conceded to a lender who had thus made an advance in the presence of witnesses some very summary and stringent remedy against a borrower who failed in repayment. How, after the Servian reforms, it was subjected to much the same formalities as were required for mancipation has been shown already. With the introduction of a coinage the transaction, instead of being *per libram* simply, became one *per aes et libram*; the scales were touched with a single piece, representing the money which had already been or was about to be paid, a formula recited whereby the obligation of repayment was imposed on the borrower, and an appeal made to the witnesses for their testimony. Unfortunately this formula is nowhere preserved. Huschke assuming that the lender was the only speaker, formulates it thus—"quod ego tibi mille libras hoc aere aeneaque libra nexas dedi, eas tu mihi quasi unum jure nexi dare damnas esto"—"whereas with this copper coin and these copper scales I have given thee a thousand *asses*, be thou therefore bound *jure nexi* to repay them to me a year hence." The phrase *damnas esto*, like the rest of the formula, is unsupported by any conclusive authority;

Contract in general.

Nexal contract.

[1] The modern literature on the subject of *nexum* is very large and the views of many of it are discordant. The fundamental work is that of Huschke, *Über d. Recht des Nexum* (Leipzig, 1846). Danz (*Gesch. d. röm. Rechts*, ii. 2nd ed., 1873, § 146) gives a list of the more important writings about it and a *résumé* of the principal theories. To this list, which comes down to 1870, may be added Bekker, *Die Aktionen des röm. Privatrechts*, i. (Berlin, 1871), c. 1; Brinz, "Der Begriff *obligatio*," in Grünhut's *Zeitschr.* i. (1874), 11 seq.; and Voigt, *XII. Tafeln*, i. §§ 63–65; Girard, *Manuel*, 4th ed. pp. 476–482; Schlossmann, *Nexum* (1904); Mitteis, "Über das Nexum," *Ztsch. d. Sav. Stift.* xxii. 96 seq., and xxv. 282–283; Mommsen, *Ztsch. d. Sav. Stift.* xxiii. 348 seq.; Lenel, *Z. d. S. S.* xxiii. 84 seq.; Bekker, *Z. d. S. S.* xxiii. 11–23 and 429–430; Kübler, *Z. d. S. S.* xxv. 254 seq.; Senn. *Nouv. Rev. hist.* (1905), pp. 49 seq.

but, as it is in harmony with the formula which is given by Gaius for dissolving an obligation of this kind, and with that most frequently employed in the Republic for imposing by a public act liability to pay a fixed and definite sum, it may not be wide of the mark.

What was the effect of this procedure? The question is one not easily answered. Brinz expressed the opinion that the creditor was entitled in virtue of the *nexum* to take his debtor into custody at any time when he considered security or course necessary for his own protection, even before the conventional term of repayment—that the debtor was in bonds, virtually a pledge, from the very first, and the tightness or looseness of them a matter in the discretion of his creditor.[1] Voigt holds that the *nexum* did not give the creditor any peculiar hold over his debtor, and that on the latter's failure to repay an ordinary action was necessary, to be followed by the usual proceedings in execution if judgment was in favour of the former. These views may be said to be the two extremes; and between them lie a good many others, more or less divergent. The difficulty of arriving at a conclusion is caused to some extent by the ambiguity of the words *nexus* and *nexum*. The transaction itself was called *nexum* and occasionally also *nexus*; the money advanced was *nexum aes* (hence *nexi, i.e. aeris, datio*); the bond was *nexus* (of the fourth declension); and the debtor on whom the bond was laid was also *nexus* (of the second). All this is simple enough. But we find the word *nexus* employed by the historians as almost synonymous with *vinctus*—to denote the condition of a debtor put in fetters by his creditor. That might be the condition either of a mortal borrower or of an insolvent judgment-debtor. The former in such a case was doubly *nexus*: he was at once in the bonds of legal obligation and in those of physical constraint. In many passages in which Livy and others speak of the matter it is extremely difficult, sometimes impossible, to be sure in which sense they use the word. It is therefore not surprising that there should be considerable diversity of opinion on the subject.[2]

Sir Henry Huschke, the great majority of writers—Voigt,[3] Lenel and Mitteis are distinguished exceptions—concur in opinion that the nexal contract entitled the creditor, after expiry of thirty days from the conventional date of repayment of the loan, to proceed against his debtor by *manus injectio* without any antecedent action or judgment, and failing settlement to detain him, and put him to servile labour, and subject him to servile treatment, until the loan was repaid. The parallel of such a course is to be met with amongst many ancient nations—Greeks, Scandinavians, Germans, &c.[4] And it was not altogether unreasonable. If a borrower had already exhausted all available means of raising money, had sold or mortgaged everything he possessed of any value, what other course was open to him in his necessity except to impledge himself? That the creditor should have been entitled to realize the right he had thus acquired without the judgment on it of a court of law is equally intelligible. It was just a case of regulated self-help. That such a proceeding as is here described out in the presence of the five citizen witnesses and *libripens*, who were witnesses alike of the acknowledgment of indebtedness and of the tacit engagement of the debtor. The only valid objection against this view is that it assumes the creditor's having apprehension of his debtor in execution was that the indebtedness no longer existed—that the loan had been repaid. But a nexal debt could be legally discharged only by *nexi liberatio*, which also was a solemn procedure *per aes et libram* in the presence of five citizen witnesses. What need for a judicial inquiry in the presence of facts so notorious? A creditor would rarely be daring enough to proceed to *manus injectio* if his loan had been repaid; if he did, the testimony of the witnesses to the discharge would at once procure the release of his alleged debtor. It was probably to give opportunity for such proof, if there was occasion for it, that the XII. Tables required that a creditor who had apprehended a nexal debtor should bring him into court before carrying him off into detention.

Whether there was room for a *vindex* and for a magisterial adjudication of the debtor after sixty days, the power to kill or sell into slavery after addiction, are disputed questions, but there seems no good reason for distinguishing a nexal from a *judicatus* debtor in these respects. Untenable is the notion at any rate that the security for the mere custody of the person of a *nexus*, or that by arrest he was in a worse position than one condemned for a judgment debt, of whom Quintilian states distinctly that he still retained his position in the census and in his tribe. Many a time when the exigencies of the state required it, were the *nexi* temporarily released in order to obey a call to arms—to fulfil the duty incumbent on them as citizens. The nexal debtor's position after arrest in regard to his family rights is obscure. If originally they shared his nexal condition, this did not long continue to be the law. If he was a house-father he seemingly still retained his *manus* over his wife and *potestas* over his children. Their earnings legally belonged to him, and did not fall to his creditor. It was the body of his debtor that the creditor was entitled to, and too often he wreaked his vengeance on it by way of punishment; there was as yet no machinery for attaching the debtor's goods in substantial reparation for the loss caused by his breach of contract.

Poetilian law.

The abuses to which this system of personal execution gave rise were great. Livy tells us that in the year 428 U.C. (326 B.C.) a more than ordinarily flagrant outrage committed by a creditor upon one of his sons[5] *nexi*, who had given himself up as responsible for a loan contracted by his deceased father, roused the populace to such a pitch of indignation as to necessitate instant remedial legislation. The result was the Poetilian law (*Lex Poetilia Papiria*). So far as can be gathered from the meagre accounts of it we possess, it contained at least these three provisions—(1) that fetters and neck, arm or foot blocks should in future be applied only in pursuance of sentence or imprisonment for crime or delict; (2) that no one should ever again be the *nexus* of his creditor in respect of borrowed money; and (3) that all existing *nexi* should be released. The first was intended to prevent unnecessary restraint upon judgment-debtors; the second gave over to their creditors. The second did not necessarily abolish the contract of loan *per aes et libram*, but only what had hitherto been an *ipso jure* consequence of it—the creditor's right to incarcerate his debtor without either the consent or the intervention of a magistrate. For the future, execution was to be done against a borrower only as a judgment-debtor formally made over to his creditor by magisterial decree, and under the restrictions and limitations imposed by the Poetilian law. There was very nearly in fact a disuse of nexal obligation; once it was deprived of its distinctive processual advantages it rapidly gave place to the simpler engagement by stipulation usually enforceable *per condictionem*. As for the release of the thus-only *nexi*, Livy and Dionysius mention nothing of any condition annexed to the boon the statute conferred upon them; but Varro limits it to those *qui bonam copiam jurarunt*—those apparently who were able to declare on oath that they had done their best and could do no more to meet their creditors' claims.[6] Such a limitation can hardly be called unreasonable, even were we to assume—as probably we ought to do—that the release spoken of was only from the bonds of physical restraint, not from those of nexal obligation.

Stipulation.

Introduction of the Stipulation.[6]—Few events in the history of the private law were followed by more far-reaching consequences than the introduction of the stipulation. It exercised an enormous influence on the law of contract; for by means of it there was created a unilateral obligation that in time became adaptable to almost every conceivable undertaking by one man in favour of another. By the use of certain words of style in the form of question and answer any lawful agreement could thereby be made not only the meaning of these words, however, is disputed. See Greenidge, *Infamia*, 206, and authorities there cited.

[1] Brinz, in Grünhut's *Zeitschr.* i. 22. He likens the position of the *nexus* to that of a thing—land, say—mortgaged to a creditor in security of a claim. Such security the Roman jurists constantly speak of as *res obligata*, and sometimes as *res nexa*. As Brinz observes, the thing was *obligata* from the first, and continued so as long as the debt it secured was unpaid, even though the creditor found it unnecessary to reduce it into possession or interfere with it in any way.

[2] As to the use of the terms *nexum* and *nexus* by the classical jurists, see Roby, *Roman Private Law* (1902), vol. ii. pp. 296 seq.

[3] He holds that the obligation created *nexo* did not impose any immediate liability on the borrower in the lender could not, as without judicial intervention, but that the latter required to proceed against the former in ordinary course, by what he calls an *actio pecuniae nuncupatae*. Mitteis, *ut supra*, supports, to a considerable extent, Voigt's views as to the necessity of further proceedings after the nexal contract, and rejects the notion of non-judicial *manus injectio*, but regards the *actio pecuniae nuncupatae* as non-existent. Cf. Mitteis, *Röm. Privatrecht* (1908), pp. 137 seq. According to Lenel, *Z. d. Sav. Stift.* 84 seq., there never existed any nexal contract of loan, and the whole doctrine on the subject has therefore no solid foundation.

[4] See authorities in Brinz's paper in Grünhut's *Zeitschr.* i. 25. The Greek phrase was ἐπὶ σώματι δανείζειν. There is a curious style in Marculfus (*Form.* ii. 27), in which a borrower engages that, until he shall have repaid his loan, his creditor shall have right to his services so many days a week, and shall have power to inflict corporal punishment if there be dilatoriness in rendering them.

[5] Literature: Geneist, *Die formellen Verträge d. röm. Rechts* (Berlin, 1845), pp. 113 seq.; Heimbach, *Die Lehre vom Creditum* (Leipzig, 1849); Danz, *Der sacrale Schutz im röm. Rechtsverkehr* (Jena, 1857), pp. 102–142, 236 seq.; Schlesinger, *Zur Lehre von den Formalcontracten* (Leipzig, 1858), § 2; Voigt, *Jus. nat., &c., d. Röm.* vol. ii. § 33, vol. iv. Beilage xix.; Bekker, *Aktionen*, i. 382–401; Bethmann, *Die Stipulation* (Rostock, 1878); Voigt, *Röm. Rechtsgeschichte*, § 7; Girard, *Manuel*, 483 seq.; Karlowa, *Röm. Rechtsgeschichte*, ii. 699 seq.

morally but legally binding, so that much which previously had no other guarantee than a man's sense of honour now passed directly under the protection of the tribunals. Stipulations became the complement of engagements which without them rested simply on good faith, as when a vendor gave his stipulatory promise to his vendee to guarantee peaceable possession of the thing sold or its freedom from faults, and the vendee in turn gave his promise for payment of the price. The question and answer in the form prescribed by law made the engagement fast and sure. Hence the generic name of the contract; for Paul's derivation of it from *stipulum*, "firm" (which itself comes from *stipes*, a stock), is to be preferred to that of Varro and Festus from *stips* (money), or to a late and rather fanciful one from *stipula* (a straw). It was round the stipulation that the jurists grouped most of their disquisitions upon the general doctrines of the law of contract—capacity of parties, requisites of consent, consequences of fraud, error and intimidation, effects of conditions and specifications of time, and so forth. It may well be said, therefore, that its introduction marked an epoch in the history of the law.

There is, however, no certainty either as to the time or as to the manner of its introduction. So far as appears, it was unknown at the time of the compilation of the XII. Tables, at least in private life; one of the first unmistakable allusions to it is in the Aquilian law of about 287 B.C. The mention of it in that enactment, however, is with regard to a phase of it which cannot have been reached for many years after it had come into use; and the probability is that it originated before the middle of the 5th century of the city, in the first stationary recognition being in the Silian law introducing the *legis actio per condictionem* (*infra*, p. 550). In its earliest days it bore the name not of *stipulatio* but of *sponsio*, for the reason that the interrogatory of the party becoming creditor was invariably formulated with the word *spondes*—e.g. *centum dare spondes?*—while the answer was simply *spondeo*.

Its origin.

There has been much speculation as to the origin of the contract. Modern criticism has three theories: (1) that it was the verbal remnant of the *nexum*, after the business with the copper and the scales had gone into disuse; (2) that it was evolved out of the custom of *jusjurandum* or *sponsio* in the great altar of Hercules and the appeal to Fides (*supra*, p. 534); (3) that it was imported from Latium, which it had reached from some of the Greek settlements farther south. The last view is the most probable, though there is much to be said also in favour of the second. Joseph Verrius Flaccus, as quoted by Festus, connects it with the Greek σπένδειν and σπονδή; and Gaius incidentally observes that it was said to be of Greek origin. A libation (σπονδή) is frequently referred to by Homer and Herodotus in accompaniment of the ratification of other solemn covenants—a common offering by the parties to the gods which imparted sanctity to the transaction. Leist[2] is of opinion that the practice passed into Sicily and Lower Italy, but that gradually the libations and other religious features were dropped, although the word σπονδή was retained in the sense of an engagement that bound parties just as if the old ritual had been observed, and that it travelled northward into Latium and thence to Rome under the name of *sponsio*, being used in the first instance in public life for the conclusion of treaties, and afterwards in private life for the conclusion of contracts. The meaning of *spondes* as a question by a creditor to his debtor (although latterly, we may well believe, unknown to them) thus came to be: "Do you engage as solemnly as if the old ceremonial were gone through between us?" There are many examples of such simplification of terms, none more familiar than when a man says, "I give you my oath upon it," without either himself or his individual addressed thinking it necessary that the form should be gone through.

Its nature.

It is not a little remarkable that the use of the words *spondes* and *spondeo* in contracting were, down at least to the time of Gaius, confined in Rome to Roman citizens. The *sponsio* as a form of contract was essentially *juris civilis*. So at first were the later and less solemn forms of stipulation—*promittisne? promitto, fideipromittisne? fideipromitto*. Gaius speaks of these latter, along with such simple forms as *dabisne? dabo faciesne? faciam*, as *juris gentium*, *i.e.* binding even between Romans and peregrins. Such they became eventually, but peregrins probably could not make use of the stipulation until a good while after the *lex Silia*. Yet although *juris civilis*, both the *sponsio* and the later forms were from the first free from many of the impediments of the earlier *actus legitimi*. No witnesses were required to assist at them; and they were always susceptible of qualification by conditions and terms. It was long, however, before parties had much latitude in their choice of language; *spondeo* was so peculiarly solemn that no equivalent could be admitted; and even the later styles may be said to have remained stereotyped until well on in the Empire. And it was the use of the words of style that made the contract. It was formal, not material; that is to say, action lay upon the promise the words embodied, apart from any consideration whether or not value had been given for it. In time this serious disadvantage was abated by praetorian exceptions and otherwise, as will be noted below. Originally the stipulation was employed only in regard to engagements whose terms were in every respect definite and certain, and was enforced by the *legis actio per condictionem*, or sometimes possibly by *actio sacramento in personam*. But in time it came to be employed in engagements that were from the first indefinite. This seems to have been due to the intervention of the praetors, and to have received special impetus after the system of the *legis actiones* had begun to give place to that *per formulas*. The remedy in such a case was not spoken of as a *condiction* but as an *actio ex stipulatu*.

iv. *The Actions of the Law.*

The Legis Actiones generally.[3]—We owe to Gaius the only connected (though, owing to the state of the Verona MS., rather fragmentary) account possessed of the *legis actiones*, as the system of judicial procedure was called which prevailed in Rome down to the substitution of that *per formulas* by the Aebutian and Julian laws—the first either in the 6th or early in the 7th century of the city, and the second in the age of Augustus. He tells us that as *genera agendi* or generic forms of process they were five in number, each taking its name from its characteristic feature, viz. (1) *sacramento*, (2) *per judicis postulationem*, (3) *per condictionem*, (4) *per manus injectionem*, and (5) *per pignoris capionem*. The third was unknown in the decemviral period, and was introduced by the Silian law formerly mentioned. The other four were all more or less regulated by the XII. Tables, but must in some form have been anterior to them. It is utterly impossible, however, to say of any one of them, apart from the *condictio*, at what time it was introduced, or what was the *ratio* (*lex*) by which it was sanctioned; it may well be that they were not of statutory introduction at all, but were called *legis actiones* simply because recognized and indirectly confirmed by the Tables. In character and purpose each of the five had its peculiarities. The first three were directly employed for determining a question of right or liability, which, if persistently disputed, inevitably resulted in a judicial inquiry. The fourth and fifth might possibly result in judicial intervention; but primarily they were proceedings in execution, in which the party moving in them worked out his own remedy. As regards their comparative antiquity, there is much to be said for the opinion of Jhering and Bekker that *manus injectio*, as essentially nothing more than regulated self-help, must have been the earliest of the five, and that the *legis actio sacramento* and the *judicis postulatio* must have been introduced in aid of it, and to prevent too hasty resort to it where there was room for doubt upon questions either of fact or law.

[1] See the arguments in favour of this theory in Girard, *Manuel*, 4th ed. pp. 484 sqq.

[3] The literature on the subject is very voluminous, great part of it in periodicals. Amongst the leading works are those of Keller, *Der röm. Civilprocess u. die Actionen* (6th ed. by Wach, Leipzig, 1883), §§ 12–21; Bethmann-Hollweg, *Der röm. Civilprocess* (3 vols., Bonn, 1864–1866), the first volume of which is devoted to the *legis actiones*; Buonamici, *Delle Legis Actiones nell' antico diritto romano* (Pisa, 1868); Bekker, *Die Aktionen d. röm. Privatrechts* (2 vols., Berlin, 1871–1873), particularly vol. i. pp. 18–74; Karlowa, *Der röm. Civilprocess zur Zeit d. Legisactionen* (Berlin, 1872); Padeletti, "Le Legis Actiones," in the *Archivio Giuridico* (1875), xvii. 321 sqq.; Schultze, *Privatrecht u. Process in ihrer Wechselbeziehung* (Freiburg, 1883), i. 439-532, in which some novel and not unimportant views are presented; Jobbé-Duval, *Etudes sur l'histoire de la procédure civile chez les Romains* (1896), vol. i.; Girard, *Organisation judiciaire*, i. 15–20, 56–104, 167–252.

In the three judicial *legis actiones* the first step was the *in jus vocatio* or procedure for bringing the respondent into court, minutely regulated by the provisions of the first of the XII. Tables. This was not done by any officers of the law: there was no writ of summons of any sort; the party moving in the contemplated litigation had himself to do what was needed. If the defendant did not appear, there could be no decree by default. Once before the magistrate (consul or praetor), the plaintiff stated his contention. If admitted or not disputed by the defendant, the magistrate at once pronounced his decree, leaving the plaintiff to work out his remedy as the law prescribed. But, if the case presented was met either with a denial or counter-claim, the magistrate remitted it for trial either to a collegiate tribunal or to one or more private citizens as judges or arbiters. The act of remit was technically *litis contestatio* or *ordinatio judicii*, the first so named because originally the parties called upon to bear witness to the issue that was thereby to be presented for trial. This was the ordinary practice under both the system of the *legis actiones* and that of the *formulae*, and continued to exist until the time of Diocletian. In the first stage the proceedings were said to be *in jure*, and the duties of the magistrate in reference to them were part of his *jurisdictio*; in the second they were said to be *in judicio*, those presiding in it being styled *judices*. All that the judge or judges had to do was to pass judgment on the question remitted to them. They were "right-declarers" only, not "right-enforcers." If their judgment was for the plaintiff, and he failed to obtain an amicable settlement, he had himself to make it operative by subsequent proceedings by *manus injectio*, and that under the eye of the magistrate who remitted.

From an enumeration in Cicero of a variety of causes proper to the centumviral court the conclusion seems warranted that it was its peculiar province to decide questions of quiritary right in the strictest acceptation of the word. They were all primarily in his time real actions (*vindicationes*)—claims of property in land or of servitudes over it, of right as heir under a testament or in opposition to it, or claims of tutorship and succession *ab intestato* as against gentile, and so forth. It was a numerous court of Quirites, determining by its vote the question of quiritary right submitted to it. Many such questions in course of time, and possibly at first of express consent of parties, came to be referred to a single judge or arbiter, and notably claims of inheritance under or in opposition to a testament, were still frequently remitted to the centumviral court even in the classical period. Personal actions, however, do not appear ever to have fallen within its competence: they were usually sent to a single judge—a private citizen—selected by the parties, but appointed by the magistrate, and to whom the latter administered an oath of office. But, in a few cases in which an action involved not so much a disputed question of fact as the exercise of skill and discretion in determining the nature and extent of a right that in the abstract was not denied, the remit was to a plurality of private judges or arbiters, usually three.

The Legis Actio Sacramento.[1]—The characteristic feature of this *legis actio*, as described by Gaius, was that the parties, after a somewhat dramatic performance before the magistrate, each challenged the other to stake a certain sum, the amount of which was fixed by the Tables, and which was to abide the issue of the inquiry by the court or judge to whom the cause was eventually remitted. This stake fell to religious uses, and was called *sacramentum aureum*, *sacramenti*, and *poena sacramenti*. The formal question the court had to determine was—whose stake had been justified, whose not (*cujus sacramentum justum*, *cujus injustum*); the first was returned to the staker, the second forfeited originally to sacred and afterwards to public uses. But the decision on this formal question necessarily involved a judgment on the matter actually in dispute, and, if it was for the plaintiff, entitled him, failing an amicable arrangement, to take ulterior steps for making it effectual. The procedure was still employed in the time of Gaius in the few cases that continued to be referred to the centumviral court, but otherwise it had been long in disuse.

Sacramento.

Gaius explains that it was resorted to both in real and personal actions. Unfortunately the MS. of his Institutes is defective in the passage in which he described its application to the latter. We possess the greater part of his account of the *actio in rem* as employed to raise and determine a question of ownership; but his illustration is of vindication of a slave, and not so interesting or instructive as the proceedings for vindication of land. These, however, can be reconstructed with tolerable certainty with the aid derived from other sources, especially from Cicero, Varro and Gellius.

The parties appeared before the magistrate, each carrying a rod (*festuca*) representing his spear (*quiritare hasta*), the symbol, as Gaius says, of quiritarian ownership. The first word was spoken by the raiser of the action, and addressed to his opponent: "I say that the land in question [describing it sufficiently for identification] is mine in quiritary right (*meum esse ex jure quiritium*); wherefore I require you to go there and join issue with me in presence of the magistrate (*in jure manum conserere*)." Thereupon, according to the earliest practice, the magistrate and the parties, accompanied by their friends and backers, proceeded to the ground for the purpose: the court was transferred from the forum to the land itself. As distances increased, however, and the engagements of the consuls multiplied, this became inconvenient. Instead of it, the parties went to the spot without the magistrate, but on his command, and there joined issue in the presence of their seconds, who had been ordered to accompany them, and who probably, from their position at the due distance, were sometimes on the merits. Still later the procedure was further simplified by having a turf or sod brought from the place beforehand, and deposited a few yards from the magistrate's chair; and, when he ordered the parties to go to the ground and join issue, they merely brought forward the turf and set it before him, and proceeded to make their formal vindications upon it, as representing the whole land in dispute.

The ritual was as follows: The raiser of the action, addressing his adversary, again confirmed his ownership, but this time with the significant addition: "As I have asserted my right by word of mouth, look you, so do I now with my *vindicta*"; and therewith he touched the turf with his rod, which was called *vindicta* when employed for this purpose. The magistrate then asked the other party whether he meant to counter-vindicate. If he replied in the negative or made no response, there was instant decree (*addictio*) in favour of the first party, and the proceedings were at an end. If, however, he counter-vindicated, it was by repeating the same words and going through the same form as his adversary: "I say that the land is mine in quiritary right, and I too lay my *vindicta* upon it." The verbal and symbolical vindication and counter-vindication completed what was technically the *manus consertio*. The parties were now in this position: each had asserted his ownership, and had figuratively had recourse to arms in maintenance of his contention. But the matter was to be settled judicially, so the magistrate once more interposed and ordered both to withdraw from the land. The dialogue was then resumed, the vindicant demanding to know from his opponent upon what ground he (*quando*) had counter-vindicated. In the altercation in Gaius he avoided the question and pleaded the general issue: "I have done as is my right in laying my *vindicta* on the land." But there can be little doubt that in certain circumstances the counter-vindicant would deem it expedient to disclose his title. This was very necessary where he attributed his right to a conveyance upon which two years' possession had not yet followed; in such a case he had to name his author (*auctorem laudare*) if he desired to preserve recourse against the latter on the warranty implied in the mancipation. That probably entailed a suspension of the proceedings to allow of the author's citation for his interest; and on their resumption, if he appeared and admitted his *auctoritas*, it was formally made a part of the action.

The proceedings had now reached the stage at which the sacrament came into play. The first challenge came from the vindicant, "Since you have vindicated unrightfully, I challenge you with a sacrament of 500 asses," to which the counter-vindicant responded, "And I you." This was technically the *sacramento provocatio*. The magistrate thereupon remitted the matter for trial to the centumviral court, or to a single judge, having declared what exactly was the question put in issue which the court or judge was to decide. The parties then called upon the bystanders to be witnesses of the magistrate's remit, this appeal to witnesses being, as is generally held, the *litis contestatio*.[2] At the same time, according to Gaius's account of the procedure, the magistrate required sureties from the parties for the eventual payment by him who was unsuccessful of the sacrament he had offered to

[2] But see Colassak, *Die* Litis *contestation* (1889), pp. 69 sqq., for a different view.

stake, and which became a forfeit to the exchequer. (The original practice probably was for the stake to be deposited by both parties in the hands of the pontiffs before they were heard by the judge or judges; after judgment that of the unjust cause was restored to him, while that of the loser was retained for religious uses.) The magistrate also made arrangements for the interim possession of the land by one or other of the litigants (but preferably, it is thought, by the possessor), taking security from him that, if he should ultimately unsuccessful, it should be returned to his opponent, along with all the fruits and profits drawn in the interval. At the trial, as both parties were vindicants, there must have been a certain burden of proof upon both; but what that burden was we cannot say, must have been required to establish in the first instance that the thing he claimed had at some time been his; and then, but probably not till then, the counter-vindicant would have to prove a later title in his person sufficient to exclude that of his opponent. The proceedings, as already observed, necessarily involved a finding on the main question; but in form it was a declaration as to the sacrament: that of the party who prevailed was declared to be just, and that of his unsuccessful opponent unjust.

Looking at this ritual as a whole, the conviction is irresistible that it could not have been so devised by one brain. It reveals and combines three distinct stages in the history of procedure—appeal to arms and self-help, appeal to the gods and the spiritual power, appeal to the civil magistrate and his judicial office. As Gellius says, the real and substantial fight for might, that in olden days had been maintained at the point of the spear, had given place to a civil and forensic contest in which words were the weapons, and which was to be settled by the interposition of the praetor. But this does not explain the *sacramentum*. Various theories have been proposed to account for it. According to Gaius, it was much more than the money at issue that was the stake of the parties, which was forfeited originally to sacred and afterwards to public uses by him who was unsuccessful, as a penalty for his rashly running into litigation; and substantially the same explanation is given by Festus in one of his definitions of the word. But this is far from satisfactory, for it involves the apparent absurdity of declaring that a penalty imposed by law could be just in the case of the party who was in the right, and unjust in the case of him who was in the wrong. Varro's explanation quoted in Festus—" a thing is said to be done *sacramento* when the sanction of an oath is interposed "—than lends support to the opinion that there was a time when parties to a question of right were required to take an oath to the effect of their respective assertions; and they were also required concurrently to deposit five bullocks or five sheep, according to the nature or value of the thing in dispute, to abide the issue of the inquiry,[1] that the question for determination was whose oath was just and whose unjust; and this theory was found to have sworn unjustly forfeited his cattle or sheep as a *piamentum*—a peace-offering to the outraged deity—while the other party reclaimed his from the repository in which they had been detained in the interval. Words made an opportunity doubtless by the priests to get some profit for their temples.

The writers who adopt this view are far from being unanimous as to details. But there seems to be enough to render it more than probable that, at an intermediate stage between the *vera sokida via* of ancient times and the *civili lege festucaque* of which Gellius and Gaius depict, there was a procedure by appeal to the gods through means of oaths of verity sworn by the parties, in the manner and with the consequences that have been indicated. That in time it should have been dropped out of the ritual is quite in the order of things. Its tendency was to become a mere form, imposing no real restraint on reckless litigation. The restraint was rather in the dread of forfeiture of the sacramental cattle, sheep or money that would ensue on conviction that an oath had been unjust.

could be insisted on—as, for example, for damages for breach of a warranty of acreage of lands sold, or of their freedom from burdens. If it could, then probably the question raised and dealt with *sacramento* was the abstract one of liability—Was the warranty given, and has it failed?—the sum due in respect of the breach being left to be dealt with in a subsequent arbitral process (*arbitrium liti aestimandae*).

The Legis Actio per Judicis Postulationem.[1]—The defects of the Verona MS. have deprived us of Gaius's account of this *legis actio*. There is little elsewhere that can with any certainty be said to bear upon it. The most important is a note in Valerius Probus—*T.PRI.A.V.P.T.I.*), which is generally interpreted—*te, praetor, judicem arbitrumve postulo uti des*. This petition to the magistrate to appoint a judge, arbiter or arbiters (as the case might be) in all probability was part of the procedure in the action, and that from which it derived its distinctive name. Beyond this all is conjecture, alike as to the nature and form of the action and the cases to which it was applicable. Gaius says of the *legis actio sacramento* that it was general, and that it was the procedure that was to be resorted to where no other was prescribed by statute. There are, however, nowhere indications of an express instruction that proceedings in any particular case were to be *per judicis postulationem*.

Per judicis postulationem.

While it is impossible with certainty to trace the history of this procedure to its first beginnings, yet the impression is general that it must have originated in the regal period. It is commonly held to have been applicable to the divisory actions, and some others triable by arbiters as directed by the XII. Tables. Some eminent writers hold that it was employed in certain actions in which equitable considerations were allowed to be taken into account by the judge (*e.g.* the *actio fiduciae*), and generally in so-called *jurgia* as contrasted with *lites*. But this theory has many difficulties to contend with. It has no support from any ancient writer, and it leads to the result that the courts by *legis actiones* had power to take into consideration questions of *bona fides*, which is not only in contradiction with what Gaius says (iv. 11), but inconsistent with their character.[2]

The Legis Actio per Condictionem.[3]—This, the youngest "action of the law," was introduced, Gaius says, by the Silian law as a means of recovering a liquid money debt (*certa pecunia*), and afterwards made available by the Calpurnian law for enforcing personal claims (as distinguished from real rights) for anything else definite and certain (*omnis res certa*), and in both its forms, therefore, essentially an action of debt. The date of both enactments is matter of controversy, although there is no question that the Silian was the earlier. Gaius says of it that its purpose was far from obvious, as there was no difficulty in recovering money either by a sacramental action or one *per judicis postulationem*. But it is probable, as above stated, that money due under a special contract was recoverable by neither of these processes, but by the much more summary one of *manus injectio*, a procedure which would be practically put an end to by the Poetilian law of 326 B.C. We are disposed to regard the *lex Silia* and the new procedure it authorized as a result of the change made by this last-mentioned statute. To have put off a creditor for money lent either with a sacramental action or one *per judicis postulationem*, would have been to deprive him of the advantages of *manus injectio* to a greater extent than was called for. At any rate, it seems to have been provided by the Silian law that, when a man disputed his liability for what was called *pecunia certa credita*, and forced his creditor to litigation, the plaintiff was entitled, if he pleased, to require from him an engagement to pay one-third more by way of penalty in the event of judgment being against him, while the *soi-disant* creditor had similarly to undertake to pay as penalty the same amount in case of judgment in favour of the alleged debtor. Those engagements (*sponsio et restipulatio tertiae partis*) were not allowed in every case in which a definite sum of money was claimed *per condictionem*, but only when it was technically *pecunia credita*. In Cicero's time *creditum* might arise either from loan, stipulation or literal contract (*expensilatio*); but the last dated probably at soonest from the beginning of the 6th century, and stipulation apparently was a result of the Silian law itself, so that the *pecunia credita* of this enactment can have referred only to borrowed money. The same phrase, according to Livy, was employed in the Poetilian law; it was thereby enacted, he says, that for *pecunia creditа* the goods, not the body of the debtor, ought to be taken in execution. A connexion, therefore, between the Poetilian law and the disuse of the *nexum* on the one hand, and the Silian law and the introduction of the *legis actio per condictionem* on the other, can hardly be ignored, and raises a probability that the latter statute was a consequence of the former, and was passed immediately or soon after the year 326 B.C. In the action on the Calpurnian law, it is probable that there was no penalty of a third part on either side. A peculiarity of the *legis actio per condictionem* is that the plaintiff could when before the magistrate refer the case to the defendant's oath (*juramentum necessarium*). Taking the oath involved absolution. refusal involved condemnation.

Per condictionem.

Little is known of the procedure in this *legis actio*, for, in consequence of the loss of a leaf in the Verona MS., we are without part of Gaius's account of it. It got its distinctive name, he says, from the *condictio* or requisition made by the plaintiff on the defendant, whom he had brought into court in the usual way, to attend again on the expiry of thirty days to have a judge appointed. The proceedings on the reappearance of the parties on the thirtieth day (provided a settlement had not been arrived at in the interval) varied according as the action was (1) for a definite sum of money falling within the category of *pecunia credita*, or (2) for other definite sum of money or a definite thing or quantity of things. In the action for *pecunia credita* the *sponsio et restipulatio tertiae partis* were exchanged; and it is probable that, if either party refused on the judge's command so to oblige himself towards the other, judgment was at once pronounced in favour of the latter without any remit to a *judex*. How the issue was adjusted when the sponsion and restipulation were duly given we are not informed, but, judging by analogy from the procedure in an action for breach of interdict under the formular system, and on the broader ground that there must have been machinery for a condemnation of the plaintiff on his restipulation in the event of his being found in the wrong, it may reasonably be concluded that there were in fact three concurrent issues sent to the same *judex*—the first on the main question, the second on the defendant's sponsion and the third on the plaintiff's restipulation. When a sum of money other than *pecunia credita* or a thing or quantity of things other than money was sued for, those subsidiary issues were unnecessary if the view above expressed be correct.

As Baron has demonstrated, it was not the usual practice to introduce any words explanatory of the ground of indebtedness when the action was either for money (other than *pecunia credita*) or for a thing or quantity of things. It might be loan, or bequest, or sale, or purchase, or delict, or unjustifiable enrichment, or any *causa* or *causae*; it would have to be stated of course before the judge; but in the initial stage before the praetor and in the issue all that was necessary was the averment that the defendant was owing such a sum of money or such a thing. It was for the judge to determine whether or not in accordance with equitable and, in certain cases, that non-delivery was due to the fault of the defendant; the plaintiff, however, was bound to make his averment good to the letter of his claim. In the event of the plaintiff being successful in an action for *certa pecunia* but delay was made by the defendant in satisfying the judgment, execution followed in ordinary form. How the matter was arranged in an action on the Calpurnian law for a *certa res* is not so obvious. What the plaintiff sought was specific delivery or damages, and by some the option is entertained that he formulated his claim alternatively. Of this there is no evidence; and Gaius's statement that under the system of the *legis actiones* condemnation was always in the *ipsa res*, *i.e.* the specific thing sued for, leads to the assumption that a judgment for the plaintiff, on which specific implement failed, must have been followed by an *arbitrium liti aestimandae* for assessment of the damages in money, and that execution proceeded thereon as if the judgment had been for a sum of money in the first instance. The general opinion, however, is that the judge to whom the issue was remitted

assessed the damages himself and as a matter of course—that the instruction to him was *quanti res erit, tantam pecuniam condemnato.*

The Legis Actio per Manus Injectionem.[1]—This "action of the law" was ordinarily employed as a means of execution against the body of a judgment-debtor or one who had confessed liability in the first stage of a process. But, in certain cases, it is conjectured, it was thought proper that a creditor should have a more summary remedy than was afforded by a sacramental action or one *per judicis postulationem*, and he was allowed to apprehend his debtor without any antecedent judgment or confession; in which cases, if the debtor disputed liability, the question could be tried only in proceedings at his instance, or sometimes at that of a third party on his behalf, for a stay of execution. It will simplify matters, however, to confine our attention to it in the meantime as a means of execution against the body of a judgment-debtor.

Per manus injectionem.

Gaius's description of it is very general; for details we are indebted principally to the *Noctes Atticae* of Aulus Gellius, in an account which he gives (put into the mouth of Caecilius Africanus, a well-known jurist of about the same time as Gaius, and a contemporary of his own) of the provisions of the XII. Tables in reference to it. Africanus is made to say that according to his belief (*opinor*) the words of the statute were these: "For admitted money debts and in causes that have been regularly determined by judgment (*aeris confessi rebusque jure judicatis*) there shall be thirty days' grace. After that there may be *manus injectio*. The apprehending creditor shall then bring his debtor before the magistrate. If he still fail to satisfy the judgment, and no *vindex* come forward to relieve him, his creditor may carry him home and put him in chains. He may live at his own cost; if not, his creditor must give him daily a pound of spelt, or more if he please." Africanus continues *narrative*: "There is still room for the parties to come to terms; but, if they did not, the debtor was kept in chains for sixty days. Towards the end of that time he was brought before the praetor in the *comitium* on three consecutive market-days, and the amount of the judgment-debt proclaimed on each occasion. After the third proclamation *capite poenas dabat*"—what these words mean will be considered in the sequel—"or else he was sent across the Tiber to be sold to a foreigner. And this capital penalty, sanctioned in the hope of deterring men from unfaithfulness to their engagements, was one to be dreaded because of its atrocity and of the ugly terms with which the decemvirs thought proper to invest it. For, if it was to more creditors than one that the debtor had been adjudged, they might, if they pleased, cut up and divide his body. Here are the words of the statute—*' Tertiis nundinis partis secanto. Si plus minusve secuerunt, se fraude esto.'* "

Such is Gellius's account of the provisions of the XII. Tables in reference to this *legis actio*, and he is to a considerable extent corroborated by Quintilian, Tertullian and Dio Cassius. But it is to be borne in mind that he does not vouch for its accuracy; the Tables were already in his time matter of antiquity, and even the jurists knew little about them beyond what was still in observance. That he has reproduced them only partially seems almost beyond question; for in another place he himself quotes a couple of sentences that are to all appearance from the same context. We have to face, therefore, the extreme probability that the record is incomplete and the possibility besides that it is not literally accurate. There is room for error, consequently, in both directions as to the nature and effect of the procedure in its main features may be gathered from the texts as they stand with reasonable certainty.

It was competent only after thirty days from the date of judgment or confession.[2] It was apprehension of the debtor by the creditor himself,—in its first stage, at least, an act of pure self-help. The debtor had at once to be brought before the magistrate, in order that his creditor might solemnly go through the required formalities before he could carry him away and provisionally confine him in the domestic lock-up. It was this appearance before the magistrate that made it a *legis actio*. Such a course, however, was avoided either (1) by instant payment or other implement of the judgment or arrangement with the creditor, or (2) by the intervention of a *vindex* or champion. The position taken by the latter was not that either of a surety or of an attorney for the *judicatus* demanding a rehearing of the case: he appeared rather as a controverter on his own name of the right of the creditor to proceed further with his execution, on the ground that the judgment was invalid. This might necessitate an action between the *vindex* and the creditor, in which the former was plaintiff, but to which the debtor was not a party. The effect of the *vindex* was liable for double the amount of the original debt, as a penalty on him for having improperly interfered with the course of justice; his interference was treated as a delict, but on payment he had presumably relief against the original debtor who had been liberated through his intervention. Failing a *vindex* and failing payment, the creditor took his debtor home and incarcerated him, dealing with him for sixty days in the manner above described. On their expiry, without any arrangement, there was a magisterial decree (*addictio*) awarding the debtor to his creditor.

Addictio confer upon the creditor ? The debtor, says Gellius, "capite poenas dabat," which he interprets with the usage that his creditor might put him to death, the alternative being his sale as a slave beyond the Tiber. There is, however, a diversity of opinion among the modern writers as to the true meaning of these words. While some hold, and rightly is it thought, that they admit this interpretation correctly, others object to it as extravagant. It is objected to by Muirhead on the ground, *inter alia*, of its incredible severity in the case of petty debtors. He holds that *capite poenas dabat* meant simply that the debtor "paid the penalty with his person," in contradistinction to "his money," and was thus merely used in opposition to *bona*. Even more numerous are the writers who object to Gellius's statement that the body of the *addictus* when killed might be cut in pieces where there were several creditors. They hold that the words *partis secanto* of the Tables referred not to the body but to the belongings of the debtor,—that when there were concurrent creditors they shared his *familia* amongst them.[3] But these views are, it is thought, somewhat modern refinements. *Poenas capitis* always implies either death, slavery or deprivation of citizenship; there is nothing more astonishing in a creditor's right to kill his debtor than in a father's right to kill his child; and a comparative law gives many instances, of a parallel kind, of the harshness of primitive law for defaulting debtors. The *partis secanto* was probably a relic of earlier times, and Gellius admits that he never heard or read of a dissection having taken place.

The cruelties and indignities to which creditors subjected both their judgment and nexal debtors led, as above noticed, to many a commotion in the first two centuries of the Republic. The latter were probably much more numerous than the *judicati*, and, being in great part the victims of innocent misfortune, it was the sufferings they endured at the hands of relentless creditors that so often roused the sympathies and indignation of the populace. But the judgment-debtors had suffered along with them; and some of the provisions of the Poetilian law of 326 B.C., already mentioned, were meant to protect the former against the needless and unjustifiable severity that had characterized their treatment by their creditors. The *manus injectio* itself was not abolished, nor the possible intervention of a *vindex*; neither were the *domum ductio* that followed on the provisional imprisonment with the light chains authorized by the Tables while it lasted; nor apparently was the formal *addictio* of the debtor to his creditor when the sixty days had expired without arrangement. But after addiction, if it was for nothing more than civil debt, there were to be no more dungeons and stripes, fetters and foot-blocks; the creditor was to treat his debtor and his industry as a source of profit that would in time diminish and possibly extinguish his indebtedness, rather than as an object upon which he might perpetrate any cruelty by way of punishment. Although the edict of P. Rutilius of 107 B.C. provided a creditor with machinery for debtors, but this view has, it is thought, insurmountable objections to overcome.

Schriften* (1850), ii. 396 seq.; Hoffmann, *Die Forderu u. Sanaten, nebst Anhang über d. altröm. Schuldrecht* (Vienna, 1866), pp. 54 seq.; Vainberg, *Le nexum et la contrainte par corps en droit Rom.* (Paris, 1874), pp. 36 seq.; Voigt, *XII. Tafeln*, vol. i. §§ 63–65; Jhering (as on p. 548), pp. 190 seq., 322 seq.; Uhe, *Institutions juridiques*, 2nd ed. i. 141 seq.; Schlossmann, *Altrömisches Schuldrecht* (1904); Kleineidam, *Personalexekution der XII. Tafeln* (1904).

[2] In his *Historical Introduction*, 2nd ed. pp. 192–193, Muirhead maintains that the "*aeris confessi*" of the Tables refers to nexal

[3] For a fuller explanation, see Muirhead, *Hist. Introduction*, 2nd ed. pp. 198 seq., and authorities there cited. See also Kleineidam, *Personalexekution*, pp. 235 seq. Lenel must be added to those writers who think that "*partis secanto*," &c., refers to the goods of the debtor (*Zeitschr. d. Sav. Stift.* xxvi. pp. 507–509).

attaching the estate of his debtor, he had still the alternative of incarceration. This might be avoided under the Julian law of *cessio bonorum* by the debtor's making a complete surrender of his goods to his creditor; but, failing such surrender, incarceration continued to be resorted to even under the legislation of Justinian. During the Empire, of course, it was not by *manus injectio* that the incarceration was affected; for it went out of use with the definitive establishment of the formular system of procedure.

It was as directed against judgment and nexal debtors that *manus injectio* was of most importance and chiefly made its mark in history. But there were other cases in which it was resorted to under special statutory authority, where a remedy seemed advisable more sharp and summary than that by ordinary action. In some of these it was spoken of as *manus injectio pro judicato* (*i.e.* as if upon a judgment), in others as simple *manus injectio* (*manus injectio pura*). In the first the arrestee was not allowed to dispute his alleged indebtedness in person; he could do so only through a *vindex*; and if no one intervened for him in that character he was carried off and dealt with by his arresting creditor as if a judgment had been obtained against him. In the second he was not required to find a *vindex*, but might himself dispute the verity of the charge made against him, under penalty, however, as is generally supposed (though it is disputed), of a duplication of his liability if he failed in his contention. By a *Lex Vallia*, passed in the latter half of the 6th century of the city, this *manus injectio pura* was substituted for that *pro judicato* in all cases in which the ground of arrest was neither judgment nor so-called *depensum*, *i.e.* payment by a surety or other party on account of the true debtor, who failed to relieve the former within six months of such payment.[1]

Per pignoris capionem.

The Legis Actio per Pignoris Capionem.[2]—In the ritual of the *actio sacramenti* the *vis civilis et festucaria* was a reminiscence of the *vera solida vis* with which men settled their disputes about property in the earliest infancy of the commonwealth. *Manus injectio* was a survival from times when the wronged was held entitled to lay hands upon the wrongdoer, and himself subject him to punishment; custom and legislation intervened merely to regulate the conditions and mode of exercise of what essentially was still self-help. In *pignoris capio* self-help was likewise the dominant idea. It may be fairly enough described by the English legal term distress—the taking by one man of property belonging to another in satisfaction of or in security for a debt due by the latter which he had failed to pay. The seizure, however, did not proceed upon any judgment, nor did it require the warrant of a magistrate; it might be resorted to even in the absence of the debtor, and on a *dies nefastus*; but it required to be accompanied by certain words of style, spoken probably in the presence of witnesses. It was only in a few exceptional cases that it was competent, in some by force of custom, in others by statute, nearly all of which seem to be given by Gaius,[3] and all of them being of a military, religious or fiscal character. What was the procedure, and what its effects, are far from certain. Jhering, founding on some expressions of Cicero's, conjectures that, whether the debt was disputed or not, the distrainer could neither destroy nor sell nor definitely appropriate his *pignus* without magisterial authority,—that in every case he was bound to institute proceedings in justification of his caption, and to take in them the position of plaintiff. The idea is ingenious, and puts the *pignoris capio* in a new and interesting light. It makes it a summary means of raising a question of right for whose judicial arbitrament no other process of law was open,—with the additional advantage that it secured instant satisfaction to the raiser of it in the event of the question being determined in his favour. If against him, the inevitable result, in substance at least, must have been a judgment that he had no right to retain his pledge, with probably a finding that he was further liable to its owner in the value of it, as a punishment for his precipitancy.[4]

Judicial or Quasi-Judicial Procedure outside the Legis Actiones.—Whatever may have been the extent of the field covered by the actions of the law, they did not altogether exclude other judicial or quasi-judicial modes of procedure. The supreme magistrate was frequently called upon to intervene in matters brought under his cognizance by petition or complaint, in which his aid was sought not so much to protect a vested right of property or action as to maintain public order, or to prevent the occurrence or continuance of a state of matters that might prove prejudicial to family or individual interests. The process was not an action, with its stages *in jure* and *in judicio*, but an inquiry (*cognitio*) conducted from first to last by the magistrate himself; and his finding, unless it was a dismissal of the complaint or petition, was embodied in an order (*decretum*, *interdictum*) which it was for him to enforce by such means as he thought fit,—*manu militari*, or by fine or imprisonment. Some jurists are disposed to give a very wide range to this magisterial intervention. One of its most important manifestations was in connexion with disputes about the occupancy of the public domain of Rome. These did not belong in property to the occupants, in that an action founded on ownership was out of the question. But, as the occupancy was not only recognized but sanctioned by the state, it was right, indeed necessary—in the interest of public order, that it should be protected against disturbance. In the measures resorted to for its protection Niebuhr recognized the origin of the famous possessory interdict *uti possidetis*; and, although opinions differ as to whether praetorian edict on the ground of negligence or a breach of the peace was what primarily influenced the magistrate's intervention, there is, apart from some distinguished exceptions, a pretty general accord in accepting this view. Another illustration of this magisterial intervention is to be found in the interdiction of a spendthrift,—a decree depriving of his power of administration a man who was squandering his family estate and reducing his children to penury; a third presents itself in the removal of a tutor from office on the ground of negligence or malfeasance in administration, on complaint made to the magistrate by any third party in what was called *postulatio suspecti tutoris*; and a fourth in the putting of a creditor in possession of the goods of an insolvent debtor,—which must have become common even before the general bankruptcy regulations of the Rutilian edict. These are to be taken merely as examples of this magisterial intervention, which manifested itself in very various directions; and it is easy to see how largely such proceedings might be utilized for remedying the grievances of persons who, from defect of complete legal title, want of statutory authority, or otherwise, were not in a position to avail themselves of the "actions of the law."

Use of the Valerio-Horatian Laws.

In one of the Valerio-Horatian laws consequent on the second secession of the plebeians there was mention of ten judges (*judices decemviri*), whose persons were declared as inviolable as those of the tribunes of the people and the plebeian aediles. These were, it is generally supposed, a body of judges appointed to decide on remit from a tribune or aedile in questions arising between members of the plebeian body. We are without details as to the institution of this plebeian judicatory, the questions that fell under its cognizance, the forms of process employed, the law administered by it, and the effect of its judgments. It is not much referred to by the historians; and its decadence has been attributed to the fact that the praetor *Hostilius* of 285 B.C. made the *nundinae* into court-days (*dies fasti*), and so made it possible for the country folk coming to the city to market to carry on their processes before the praetor. It has also been identified by some writers[5] with the *decemviri stlitibus judicandis*, whose jurisdiction has been already noticed (*supra*, p. 546).

Procedure outside the Legis actiones.

As all in a manner exercising judicial or quasi-judicial functions must also be mentioned the pontiffs, the consuls, and afterwards the censors as *magistri morum*, the chiefs of the *gentes* within the several corporations, and heads of families within their households. While it may be the fact that with the enactment of the XII. Tables the jurisdiction of the pontiffs[6] was materially narrowed,

[1] On *manus injectio pro judicato* and *pura*, see Gaius, iv. 22–25.

Tafeln*, i. 502 seq.; Girard, *Manuel*, pp. 977 seq.; Wlassak, *Processgesetze*, i. 252 seq. For a comparative view, see Maine, *Early Institutions*, pp. 275 seq.; Jenks, *Law and Politics in the Middle Ages*, pp. 263 seq.

[3] For a case not mentioned by Gaius, see Girard, *Textes*, 3rd ed. p. 122; Bruns. *Fontes*. 5th ed. p. 12.

[4] Cf. Gaius, iv. § 32. This would be according to the spirit of the early system, which endeavoured to check reckless or unfounded litigation by penalities,—*e.g.* forfeiture of the *summa sacramenti* and duplication of the value of unrestored property and rents in the sacramental procedure; duplication of the value of the cause when judgment was against the defendant in an action upon an engagement embodied in a *lex mancipii* or *lex nexi*; duplication against a *vindex* who interfered ineffectually in *manus injectio* against a judgment-debtor's adjudication against an heir who refused without judicial compulsitor to pay a legacy bequeathed *per damnationem*; the addition of one-third more by way of penalty where a debtor was found liable in an *actio certae creditae pecuniae* (Gai. iv. 171), &c.

[5] See Voigt, *Röm. Rechtsgeschichte*, i. Beilage i.; *contra*, Wlassak, *Processgesetze*, i. 144 seq.

[6] See Cauvet, *Le droit pontifical chez les anciens Romains* (Caen, 1869); Bouché-Leclercq, *Institutes de l'ancienne Rome* (Paris, 1871); Marquardt, *Röm. Staatswerwalt.* iii. 290 seq.

it certainly did not disappear,—witness the famous case in which Cicero made before them the oration of which he was so proud, *Pro domo sua*. The action of the consuls and afterwards of the censors as guardians of public morals, and the social and political disqualifications and pecuniary penalties with which they visited persons who had been guilty of perjury or gross perfidy, did not a little to foster fidelity to engagements. Through the same agency the exercise of a variety of rights whose abuse could not be made matter of action—the husband's power over his wife, the father's over his children—was controlled and kept within bounds. It was not on light grounds, indeed, that the majesty of the *paterfamilias* within the household could be called in question; it was only when he forgot that in the exercise of serious discipline within his family he was bound to act judicially. For he also was a judge *—iudex domesticus*, as he is often called, though in all cases of gravity he was required to invoke the advice of his kinsfolk in a family council. On him lay the duty of controlling his family; if he failed to do so he was himself in danger of censorial animadversion.[1]

Reciperatio.

Between citizens and foreigners with whom Rome was in alliance by a treaty (temporary or permanent) conferring reciprocal rights of action, the proceedings took the form known as *reciperatio* or *recuperatio*.[2] The action was probably always raised in the *forum contractus*. According to the common opinion the magistrate ordinarily presiding there heard what parties had to say in plaint and defence, and then put into a simple formula the points of fact arising on them, authorizing the recuperators to whom the matter was remitted to find for plaintiff or defendant according to circumstances. The recuperators were generally three, sometimes five, sometimes perhaps still more numerous, but always in odd number; but whether the nationality of both parties required to be represented we are not told. Expedition being in most cases a matter of importance, recuperators were required to give judgment within ten days, and the number of witnesses was usually limited to ten. How execution proceeded upon it, if it were for the plaintiff, does not clearly appear; Voigt, founding on a few words in Festus, concludes it must have been by something like *pignoris capio*. This recuperatory procedure in time came to be resorted to in processes *de libertate* and even in some litigations where both parties were citizens. There are numerous instances of the latter in Cicero; and it is remarkable that in the praetorian actions *ex delicto* the remit was usually not to a *iudex* but to recuperators. The explanation may be in the comparative summariness of the remedy.

III. The Jus Gentium and Jus Honorarium

(Latter half of the Republic.)

i. *Influences that operated on the Law.*

Influx of foreigners.

Growth of Commerce and Influx of Foreigners.—While it may be admitted that commerce was beginning to take root in Rome in the 5th century, yet it was not until the 6th that it really became of importance. The campaigns in which Rome was engaged until the end of the First Punic War absorbed all its energies. But after that time the influx of strangers, and their settlement in the city for purposes of trade, became very rapid—not only of Latins and other allies, but Greeks, Carthaginians and Asiatics. To them and the regulation of their affairs the *jus civile*—the law peculiar to Rome and its citizens—was applicable only if they were members of allied states to which *commercium* and *recuperatio* were guaranteed by treaty. But many were not in this favoured position; and even those who were soon found the range of Roman modes of acquiring property and contracting obligations too narrow for their requirements. Hence a *jus gentium* was gradually developed[3] which very early in its history drove treaty covenants for *recuperatio* out of use; its application may for a time have been limited to transactions between non-citizens or between citizens and non-citizens, but it was eventually accepted in the dealings of citizens *inter se* and became part and parcel of the *jus Romanorum*. Gaius and Justinian speak of it as "the common law of mankind," "the law in use among all nations"; but the language must not be taken too literally. The Roman *jus gentium* was not built up by the adoption of one doctrine or institution after another that was found to be generally current elsewhere. In the earliest stages of its recognition it was "an independent international private law, which, as such, regulated intercourse between peregrins or between peregrins and citizens on the basis of their common *libertas*";[4] during the Republic it was purely empirical and free from the influence of scientific theory, but its extensions in the early Empire were a creation of the jurists—a combination of comparative jurisprudence and rational speculation. To say that it was *de facto* in observance evcrywhere is inaccurate; on the contrary, it was Roman law, built up by Roman jurists, though called into existence through the necessities of intercourse with and among non-Romans.

It may be a little difficult for a modern jurist to say with perfect precision what were the doctrines and institutions of the *jus gentium* as distinguished from the *jus civile*. But the distinction was quite familiar to the Romans, as witness, for example, the statement of Marcian, in reference to the ἀνδλιδες, that they enjoyed all the rights competent to a man under the former, but none of those competent to him under the latter.

The peregrin praetor.

Institution of the Peregrin Praetorship.—The praetorship,[5] as already mentioned, was an institution of the Licinian laws of the year 367 B.C. (see Praetor). Down to the end of the 5th century of the city the praetor so appointed superintended single-handed the administration of justice, alike between citizens and foreigners. But with the altered condition of things in the beginning of the 6th century, and the influx of strangers which has already been alluded to, the work seems to have been found too onerous for a single magistrate, and a second praetor was created. The date is generally assumed to have been about the year 242 B.C.; Pomponius says distinctly that the creation of the new office was rendered necessary by the increase of the peregrin population of Rome, and that the new magistrate got the name of *praetor peregrinus* because his principal duty was to dispense justice to this foreign element. After the subjugation of Sicily and Sardinia the number of the praetors was increased to four and after the conquest of Spain to six; Sulla raised the number to eight, and Caesar eventually to sixteen. But all the later creations were for special purposes; the ordinary administration of justice within the city was left with the representatives for the time of the two earliest, who came to be usually distinguished as *praetor qui inter cives jus dicit* (or *urbanus*) and *praetor qui inter cives et peregrinos jus dicit* (or *peregrinus*). It would be going too far to speak of the latter as the principal author of the *jus gentium*; for a large proportion of the actions for enforcing *jus gentium* rights were civil, not honorary—a fact which proves that the rights they were meant to protect and enforce had their origin in the *jus civile*, although moulded to the new requirements by such constitutive and the agency of the jurists. But even in this view the peregrin praetor must have had a powerful influence in giving shape and consistency to the rising jurisprudence, by means of the formulae he adjusted for giving it practical effect.

Reforms of Aebutian law.

Simplification of Procedure and Introduction of New Remedies under the Aebutian Law.—The lex *Aebutia* is only twice mentioned by ancient writers (once by Aulus Gellius and once by Gaius), and we know neither its precise date nor its specific provisions. And yet, to judge by its effects, it must have been one of the most important pieces of legislation in the latter half of the Republic, for Gellius speaks of it as having given the death-blow to many of the institutions of the XII. Tables, and Gaius couples it with two Julian laws of the time of Augustus as

[1] On *Judex domesticus*, see Greenidge, *Legal Procedure in Cicero's Time*, pp. 376 seq.

[4] Voigt, *Jus nat.* ii. 661. He distinguishes the *jus civile*, *jus gentium* and *jus naturale* as the systems which applied respectively to the citizen, the freeman and the man.

[5] See Labatut, *Histoire de la Prêture* (Paris, 1868); Mommsen, *Staatsrecht*, ii. 176 seq.; Karlowa, *Röm. Rechtsgeschichte*, i. 217 seq.; Girard, *Organisation judiciaire*, i. 160 seq., and on the peregrin praetorship in particular, pp. 206 seq.

the statutory instrument whereby the formular system of procedure was substituted for that *per legis actiones*. Its date was probably about the end of the 6th or beginning of the 7th century of the city. Girard, who has examined the question with great care, places it in the first third of the 7th century,[1] and, though his reasoning is not quite conclusive, it largely refutes the arguments of older writers, who in many cases put the date a century and more earlier. It is the opinion of Wlassak[2] that it was a piece of tentative legislation, and that it was regarded as temporary wise abolished the actions of the law but merely made the formulary procedure alternative to them, according as the praetor, on the representation of the parties, might determine in each case; formulae, in his view, as long first made compulsory, subject to a few exceptions, by the Julian laws. This is a probable theory and is now adopted by many recent writers. The main purpose of the statute seems to have been to empower the urban praetor to adapt existing remedies to altered circumstances, and *inter alia* to fashion new actions on the *jus civile* for the use of the peregrins, to whom the *legis actiones* were rarely, if at all, available. But, whatever may have been its actual provisions, the result was the adoption of a procedure which gradually supplanted that by the actions of the law, which was much more plant than the latter, and whose characteristic was this—that, instead of the issue being declared by word of mouth by the parties, and requiring as a rule to embody with perfect accuracy the exact statutory provision on which it was based, it was formulated in writing under the direction of the praetor, in the shape of an instruction to the judge to inquire into the merits of the dispute, with power to condemn or acquit according to his finding. This process necessarily involved accomplishing such an innovation, not only because the existing procedure was directly prescribed by statute, but also among other reasons because the *legis actiones* were favourites of the pontifical colleges (being open probable to them), and would not lightly the magistrates to dispense with them would have been opposed by these powerful bodies. It is now the dominant opinion among modern writers, and it seems based on reasoning which cannot be gainsaid, that even prior to the *lex Aebutia* written formulae were employed in practice, particularly if not exclusively in the peregrin praetor's court, and that one of the objects of the statute was to legalize similar procedure in civil actions.[3] All such formulae granted by the peregrin praetor must of course have been *in factum* conceptae. Unless them, on this view it is difficult to see by what means the rights and obligations of peregrins in their transactions *inter se* or with citizens could have been enforced, as civil actions, save perhaps in exceptional cases where by treaty or employed were *commercii*, were not open to them. Written instructions to the recuperators or other judges for trying suits in which a peregrin was a party would be a practical necessity, for these judges would have to decide according to *jus gentium*, whose rules would probably be unknown to them, and their instructions would therefore have to be precise and definite. Verbal instructions would have led to miscarriages of justice. From this point of view we can understand the peregrin praetor became the primary organ in developing *jus gentium*. But there is some reason for holding that the urban praetor had also, before the Aebutian law, occasionally exercised his imperium by granting actions *in factum*, and in this way perhaps enforced a number of contracts and other obligations in which elements of equity and good faith were present and which the *jus civile* left remediless. Actions of this kind among *cives* would be in the nature of *arbitria* accepted voluntarily by the parties. The latter view certainly explains several apparent anomalies in the later law, for which no other good explanation can be found, as, for instance, the fact that in deposit and commodate actions *in factum* as well as *in jus* might be brought. Also the *actio in factum* for enforcing a contract of *fiducia* can in this way be explained. It also serves to throw light upon the development of some of the *bonae fidei* contracts.[4]

Effects of provincial administration.

Provincial Conquests.—The growth of commerce and the enormous increase of wealth, which made great capitalists and enabled them through the agency of freedmen and slaves to carry on trade on a scale hitherto unknown, and which thus helped to foster the *jus gentium*, were no doubt due in a large measure to provincial conquests. But these operated also in other directions. The officials who proceeded to the conquered provinces as governors found themselves face to face with laws and institutions in many respects differing from their own. Political considerations dictated how far these were to be respected, how far subverted. In some provinces, more especially the Eastern ones, it was thought unnecessary to do more than supplement the existing system by the importation of doctrines of the *jus gentium* and the procedure of the praetor's edicts; while in others, in which it was deemed expedient to destroy as rapidly as possible all national feeling and every national rallying point, a Romanizing of all their institutions was resorted to, even to the extent of introducing some of the formal transactions which previously had been confined to citizens. But in either case there was a reflex action. The native institution had to be studied, its advantages and disadvantages balanced, the means considered of adapting it to the praetorian procedure, and the new ideas so presented as to make them harmonize as far as possible with the old. All this was a training of no small value for those who, on their return to Rome, were to exercise an influence on legislation and the administration of law. They brought back with them not merely an experience they could not have obtained at home, but sometimes a familiarity with foreign institutions that they were very willing to acclimatize in Italy. Rome thus enriched its law from the provinces, deriving from them its emphyteutic tenure of land, its hypothec, its Rhodian law of general average and a variety of other features that were altogether novel. They were sanctioned by tacit recognition, by edicts of the praetors and in other ways; but, in whatever way received, they were indirectly fruits of provincial conquest.

Influence of literature and philosophy.

Spread of Literature and Philosophy.—The effect on Roman civilization of the addiction of educated men in the later Republic to literature and philosophy is a matter for consideration connected with Roman general history. It is not proposed to consider here the question how far specific doctrines of Roman law bear the impress of the influence of the schools, especially that of the Stoics; it is a subject much too large to be disposed of in a few lines. The matter is mentioned simply for the sake of noting that the spirit of critical inquiry aroused and fostered by literary and philosophical study, seriously and conscientiously undertaken, contributed greatly to promote a new and healthy jurisprudence because very marked in the time of Cicero—the desire to subordinate form to substance, the word spoken to the will it was meant to manifest, the abstract rule to the individual case to which it was proposed to apply it. This was the first effort of what may be called equity to temper and keep within the bounds the rigour of the *jus strictum*. The praetors, the judges and the jurisconsults all had their share in it. Although modern jurists are prone to speak of praetorian equity as if it were something apart, yet the same spirit was leavening the law in all directions and in the hands of all who had to deal with it, the difference being that the form and publicity of the edict gave to its applications by the praetors a more extensive and enduring effect than was found in the decisions of private *judices* or the opinions of counselling jurisconsults.

Decline of religion and morals.

Decline of Religion and Morals.—It would be equally out of place to enlarge here on the causes and manifestations of that decline in religious sentiment and public and private virtue which was fraught with such disastrous results in the later days of the Republic. The private law was influenced by it to a considerable extent, alike in those branches which regulated the domestic relations and those which dealt with property and contract.

The ever-increasing disregard of the sanctity of the marriage tie is one of those features in the history of the period which strikes even the most unobservant. While from the first the law had denounced causeless separation and visited it with penalties, in principle it maintained the perfect freedom of cohabitation on the part of the husband. With the simple and frugal habits of the first five centuries of Rome, and the surveillance of the *consilium domesticum*, the recognition of this principle produced no evil results; family misunderstandings were easily smoothed over, and divorces were of rare occurrence. But during the 6th and 7th centuries of the Republic a change to looser morals took place, and the family council lost much of its control. This was doubtless largely due to the decay of hand marriages, wives consequently remaining outside their husband's *familia* and often holding

[4] These points are well stated by Mitteis, *Röm. Privatrecht* (1908), pp. 39 seq.; see authorities cited by him in note 2, p. 39. *Contra*, Girard, *Z. d. Sav. Stift.* xxix. 154–158.

[5] It is one that was discussed with much greater fervour a century ago than it is now. Of the later literature may be mentioned—Van Vollenhoven, *De exigua vi quam philosophia Graeca habuit in efformanda jurisprudentia Romana* (Amsterdam, 1834); Ratjen, *Hat die Stoische Phil. bedeutenden Einfluss gehabt, &c.?* (Kiel, 1839); Voigt, *Jus. nat., &c.*, vol. i. §§ 49–51; Laferrière, *De l'influence du Stoïcisme sur la doctrine des jurisconsultes Romains* (Paris, 1860); Hildenbrand, *Gesch. u. System d. Rechts- und Staats-Philosophie* (Leipzig, 1860), vol. i. §§ 141, 142. The earlier literature is given in Hildenbrand, p. 203.

property of their own. With increasing luxury and licentiousness divorce became common.[1]

This looseness of the marriage bond, as was naturally to be expected, had its effect on the other family relations. The right of children to take their father's inheritance began to be lightly esteemed. The law—or rather the interpretation put upon the *uti legassit* of the XII. Tables—had empowered him testamentarily to disinherit them, or in instituting them to limit their right to a mere fraction of the inheritance; but it was assumed that this power would be exercised with discretion and only when justified by circumstances. But in the later days of the Republic, amid the slackened ties of domestic life, paternal as well as conjugal duty seems to have often been lost sight of, and children were disinherited or cut off with a nominal share of the inheritance in order that a stranger might be enriched. This led to the recognition by the centumviral court, without apparently any legislative enactment or praetor's edict to warrant it, of what was called the *querela inofficiosi testamenti*—challenge of a testament by a child whose natural claims had been capriciously and causelessly disregarded. While the practice may for a time have been hesitating and uncertain, yet early in the empire, through means of this *querela*, the rule came to be established that every child was entitled, notwithstanding the terms of his father's testament, to at least a fourth (*portio legitima, quarta legitima*) [2] of what would have come to him had his parent died intestate, unless it appeared that the latter had had adequate grounds for excluding him or limiting him to a smaller share. A parent might in like manner challenge an undutiful testament made by his child to his prejudice; and ultimately in certain cases so might brothers and sisters *inter se*.

The decline of morals had an equally marked effect on the transactions of daily life, calling for precautions and remedies that had not been found requisite in the hey-day of the *πίστις τῶν Ῥωμαίων*. Men no longer relied on each other's good faith unless backed by stipulations, securities (*cautiones*) and guarantees. The Rutilian bankruptcy arrangements and the *actio Pauliana* for setting aside alienations in fraud of creditors indicate a laxity in mercantile dealings that is perhaps an inevitable consequence of the growth of trade and commerce. But, that such remedies as, for example, the *exceptio rei venditae et traditae* or the *exceptio non numeratae pecuniae* should have been found necessary—the one an answer to a vendor (with the price in his pocket) who attempted to dispossess his vendee because some of the formalities of conveyance had been neglected, the other an answer to an action on a bond for repayment of money that by some accident had never been advanced—proves that the law had now to encounter fraud in all directions, and that *Graeca fides* had to a great extent displaced the old Roman probity.

ii. *Factors of the Law.*

Legislation.—It cannot be said that during the period of nearly two centuries and a half embraced within the present epoch the private law owed much to legislation. The vast majority of the enactments of the time referred to by the historians dealt with constitutional questions, municipal and colonial government, agrarian arrangements, fiscal policy, sumptuary prohibitions, criminal and police regulations, and other matters that affected the public law rather than the private. Those of the latter class mentioned by Gaius and Ulpian in their institutional works barely exceed a score in number; and of these not above half a dozen can be said to have exercised a permanent influence on the principles (as distinguished from the details) of the law. Most of them were enactments of the *concilium plebis* or of the *comitia* of the tribes, to which ordinary legislation had passed as more readily convened and more easily worked than the *comitia* of the centuries.

Legislation.

Edicts of the Magistrates.[3]—The practice of propounding edicts was very ancient, and had been followed by kings and consuls long before the institution of the praetorship. It was one of the most obvious ways of exercising the *imperium* with which the supreme magistrate was invested—to lay an injunction upon a citizen and enforce his obedience, or to confer upon him some advantage and maintain him in its enjoyment. It was one of the ways in which public order was protected where there had been no invasion of what the law regarded as a right, and where consequently, there was no remedy by action. That the earlier edicts of the praetors were of this character—issued, that is to say, with reference to particular cases, and what afterwards came to be called *edicta repentina* or *prout res incidit posita*—there is little reason to doubt. In time a series of edicts appeared which got the name of *edicta perpetua* (or *perpetuae jurisdictionis causa proposita*)—announcements by the praetor, published on his album (as the white boards displayed for the purpose in the forum were called), of the remedy he would be prepared to grant on the application of any one alleging that the state of facts contemplated had arisen. The next year's praetor was free to adopt the edicts of his predecessor or not; but it was usual for him to do so if they had been found beneficial in practice, he adding to them new provisions suggested by demands made upon past praetors for *edicta repentina*, but which they had not generalized, or even proposing for acceptance some remedy entirely of his own devising. As each new praetor entered upon office he announced his jurisdictional programme—his *lex annua*, as it was called from this particular point of view, by far the greater part of it *tralaticium*, *i.e.* transmitted from his predecessors, and only a few paragraphs, diminishing in number as time progressed, representing his own contributions. And so it went on in the first years of the Empire, until the praetorian function was eclipsed by the imperial; and at last, after having, by instruction of Hadrian, been subjected to revision, and consolidated along with the Aedilian Edicts, by Salvius Julianus, into what was as will be noticed below, sanctioned as binding on the whole Empire. The term "Edict" is applied both to the single edicts and also to the whole body of them together.

Magistrates' edicts.

There is some reason for supposing that the edict attained considerable proportions in the time of Cicero; for he mentions that, whereas in his youth the XII. Tables had been taught to the boys in school, in his later years these were neglected, and young men devoted instead to the praetor's edicts for their first lessons in law. Of a few of them the date and authorship are known with tolerable precision; but of the history of the majority, including some of the most important, such as those introducing *restitutio in integrum* and the grant of bonâ fidei possessio, nothing is known. They and the like, and those revolutionizing the law of succession, we are to a great extent in the dark. It was one of the great advantages the edicts had over legislative enactments that they might be dropped, recast or amended by a new praetor accordingly to his judgment of public requirements. For the edict was *viva vox juris civilis*—intended to aid, supplement and correct it in accordance with the ever-changing estimate of public necessities; and this would have been impossible had its provisions from the first been as stereotyped as they became by the consolidation in the time of Hadrian.

The edict seems to have contained two parts—the first what may be called the edicts proper, and the second styles of actions, &c., whether derived from the *jus civile* or from the *jus praetorium*. The styles or formulae for civil actions were published without any corresponding edict; for praetorian actions styles were published appropriate to their corresponding edicts. There were also independent formulae for interdicts, processual stipulations, &c. The contents of the edicts proper were in detail very various, but all devoted to an exposition of the ways in which the praetor meant to exercise his jurisdiction during his year of office. They were not didactic or dogmatic formulations of law, but rather announcements of what remedy he would grant in such and such circumstances, or direct orders to do or prohibitions against doing certain things. A party coming to an action or interdict of course; it might be that of them did so not of right, as he would have done had his claim had a statutory or customary foundation, but of grace—on the strength of the praetor's promise to grant him what he claimed and exercise his grant either in the ordinary or extraordinary form. Were action had to be raised and concluded within the particular praetor's year of office—a rule which in time, by abuse, was converted into the somewhat different one that a purely praetorian action (*i.e.* not originally of the *jus civile*) had to be raised within a year of the occurrence to which it referred.

As already observed, the praetor's edicts proceeded upon lines of equity; that is to say, they were directed against the strictness and formalism of the jurisprudence of the XII. Tables. Such may be said to have been the general tendency of the edicts as a whole.

[1] Voigt, *Die Lex Maenia de dote* (Weimar, 1866), attributes to a *lex Maenia* of 168 B.C. the creation of the *judicium de moribus* which superseded the family council as a divorce court by providing a penal action on divorce. The existence, however, of a statute for this purpose has not been proved, and is discredited by most recent writers. See Czylharz, *Das römische Dotalrecht* (Giessen, 1870).

[2] From this the legitim of children recognized by most continental countries nowadays is derived.

[3] See Lenel, *Beiträge zur Kunde des praetorischen Edicts* (Stuttgart, 1878), and the introductory chapters in his *Edictum Perpetuum* (Leipzig, 2nd ed., 1907); Karlowa, *Röm. Rechtsgesch.* vol. i. § 60; Voigt, *Röm. Rechtsgesch.* §§ 19, 20

But it was the tendency of the whole jurisprudence of the time, and by no means peculiar to the praetorian creation. Nowhere in the texts are the practors spoken of as the mouthpieces of equity as distinguished from law. Such a distinction recurs frequently in Cicero; he identifies *aequitas* with the spirit of a law or agreement, and *jus* with its letter, but it is in order to sing the praises not of the practors but of the pleaders who maintained the former as against the latter, and of the judges who were persuaded by their arguments. Much of what was contained in the edict might quite as well have been embodied in statute, and we know that in time statute came to its aid; witness a very remarkable provision of it—"I will give *bonorum possessio* as may be enjoined by statute, whether comitial enactment or senatusconsult."

Of the edicts of the peregrin praetor and their relation to that of his urban colleague little is known. That they differed in some respects there can be no doubt, for the *lex Aebutia* (*q.v.*) of 513 for settling the government of Cisalpine Gaul the magistrates are directed, with reference to a certain action, to formulate it in the way prescribed in the edict of the peregrin praetor. The latter, therefore, must to some extent have been in advance of that of the urban praetor, probably in this respect, that, being prepared primarily for the regulation of questions affecting non-citizens, it more thoroughly than the other avoided formalities that were competent only to citizens, and thus to a greater extent simplified procedure. The edicts of the provincial governors must have varied according to circumstances, being in all cases composites of provisions, more or less numerous, borrowed from the edicts of the praetors and additions suggested by the peculiar necessities of different provinces for which they were framed (*provinciale genus edicendi*). As for those of the curule aediles, who amongst other duties were charged with the supervision of markets, their range was very limited; their most important provisions had reference to open sales of slaves, horses and cattle, and containing regulations about the duties of vendors exposing them, and their responsibility for latent faults and vices. They also had cognisance of certain delicts committed in the streets and markets. As with praetors had no *imperium* their restricted *jus edicendi* may have been conferred on them by custom or statute.

Consuetude, Professional Jurisprudence and Res Judicatae.—Great as may be the difficulty experienced by philosophical jurists in defining the ground of the authority of consuetudinary law, there is no room to dispute the importance of its contributions to every system of jurisprudence, ancient and modern. The men who first drew, accepted and endorsed a bill of exchange did as much for the law as any lawgiver has ever accomplished. They may or may not have acted on the advice of jurists; but, whether they began a practice which grew into custom, and as such was recognized by the tribunals as a law-creating one—one conferring rights and imposing obligations. There is much of this—far more probably than is commonly imagined—in the history of every system of law.

Consuetudinary law.

In Rome the process was sometimes wonderfully expeditious; witness what Justinian narrates of the introduction and recognition of testamentary trusts and of codicils to last wills, both in the time of Augustus. It can hardly be doubted that the literal contract *per expensilationem* originated in the same way, probably in the end of the 5th or the beginning of the 6th century of the city. The keeping of domestic account-books may have been enjoined and enforced by the censors; but it was a custom, and neither statute nor praetor's edict, that made an entry in them to another person's debit creative of a claim against the latter for *certa pecunia creditia*, that might be made effectual by an action under the Silian law. It must have been in exactly the same way that *mutuum*, formless loan of money, came to be regarded as the third variety of *certa credita pecunia*, and to be held recoverable under the same action. True, this could not have been attained without the co-operation of the *judices*. But then each case was a suit tried by a single private citizen, whose office ended with his judgment, and who was untrammelled by the authority of any *series rerum judicatarum*.[1] He had simply to decide whether in his view expensilation or formless loan created such an obligation as could be sued for by the action *judicem dari oportere*. There may for a time have been a divergent practice, contradictory findings, as Cicero says there were in his day upon the question whether *aequitas* or *jus strictum* was to be applied to the determination of certain matters; but the universal unanimity of judicial opinion in one direction was but the expression of the general sentiment of the citizens, of whom the *judices* were the representatives.

These are but examples of the way in which consuetudinary law was constructed. It required the combined action of the laity and the *judices*, both at times acting under professional advice; in some cases even that of the praetors was necessary. It would have been impossible, for instance, to have introduced the consensual contracts into the Roman system and determined what were the obligations they imposed on either side, without magisterial co-operation in framing the formulae into which they were to be submitted to the judges. Taking the action on sale as an illustration, the formula substantially was this: "It being averred that the defendant sold such or such a thing to the plaintiff, whatever, judge, it shall appear that the defendant ought in good faith to give to or do for the plaintiff in respect thereof, in the money equivalent thereof condemn the defendant; otherwise, acquit him." It is very manifest that the free hand here given to the judge must immensely have facilitated the reception of customary doctrine into the law. The judge was to a great extent the spokesman of the forum; his judgment was formed in accordance with current public opinion, which he had ample opportunity of gauging; it was the reflection of that general sentiment which, in the language of more than one writer, is the source of all customary law. And so in an action for establishing a right of property in a *res nec mancipi*. The formula was very simple: "If it appear that such or such a thing belongs to the plaintiff in quiritary right, then, judge, whatever be its value for the plaintiff, in that condemn the defendant; should it appear otherwise, acquit him." The primary duty of a judge on such a remit was to determine whether the title on which the plaintiff founded his pretensions gave him a right that came to property; and it can hardly be disputed that it was by the decisions of a series of judges, in a series of such actions, that the long list of natural modes of acquiring property given by Justinian under technical names was gradually brought into view. Those decisions, authoritative upon questions of a vendor, direct or indirect, or upon the sufficiency of a title founded on by a party averring a right of property by natural acquisition, doubtless were in many cases arrived at under professional advice, and were in all cases overruled in judgments for that does not in the least deprive the doctrine deduced from them of its character of customary law. It was not until the Empire that the opinions of the jurists submitted to a judge (*responsa prudentium*) were invested with binding authority, barring the power of the judge deferred to them, it may perhaps because he regarded them as in consonance with well-qualified public opinion; and what a series of such judgments *in this sort* built upon; and what a series of such judgments *in this sort* built upon; and what a series in the strictest sense a law based on consuetude.

As regards the professional jurists in particular it has already been observed that, according to the testimony of the Roman historians, law was at one time a monopoly of the pontiffs, at least to the middle of the 5th century of the city. Livy goes so far as to speak of it as *in penetralibus pontificum repositum*, —among the secrets of the pontifical college. It was so practically during the whole of that period. But after the publication of the XII. Tables this could be the case only in a qualified sense, the pontiffs becoming the official interpreters of that which in the letter was patent to the world. The *Jus Flavianum*, with its formulary of actions, and the cases cited by Cn. the practice of giving advice in law in public adopted by Tib. Coruncanius in the beginning of the 6th century, and the Tripertita (also called *Jus Aelianum*), embodying the current *interpretatio*, some fifty years later, are the first of a long series of legal treatises to patricians monopoly.[2] From this time onwards there was a series of jurists (*jurisconsulti, jurisperiti, jurisprudentes* or *prudentes*, as they were styled), gradually increasing in number and eminence, of whom a list is given by Pomponius, and many of whom are signalized in Cicero, particularly in his *Orator* and *Brutus*. They occupied themselves in giving advice to clients (see PATRON AND CLIENT), teaching, pleading at the bar, framing styles of contracts, testaments, and various other deeds of a legal character, or writing commentaries or shorter treatises on different branches of the law.[3]

Professional prudence.

Publician edict.

iii. *Substantive Changes in the Law during the Period.*

The Publician Edict.—There were necessarily many changes during the period in the law of property and of minor real rights, several of them of no mean importance. The *Tripertita* mentions of all was that effected by the Publician Edict,[4] indirectly recognizing the validity (1) of what Theophilus calls bonitarian ownership as an actual though inferior ownership of *res mancipi*, and (2) of what got the name of *bonae fidei possessio*

[1] It was not until the Empire that a "series rerum perpetuo similiter judicatarum," a uniform series of precedents, was held to be law. During the Republic a judge was much freer, and not only entitled but bound to decide according to his own notion of what was right, taking the risk of consequences if his judgment was knowingly contrary to law.

[2] There is some doubt whether the *Jus Aelianum* mentioned by Pomponius (*Dig.* i. 2, 2, 7) was not an independent collection of accident from Sextus Aelius Paetus Catus's *Tripertita* mentioned (*Dig.* i. 2, 2, 38). See Bremer, *Jurispr. Ante-Hadriana* (1896), i. p. 15.

Rechtsgesch.* i. § 61; Roby, *Introd. to Digest*, chaps. vii. and viii.; Jörs, *Röm. Rechtswissenschaft* (1888), vol. i.; Bremer, *Jurispr. Antehadriana*, vol. i.

[4] See Ribéreau, *Théorie de la* in bonis habere *ou de la propriété prétorienne* (Paris, 1867); Huschke, *Das Recht der Publicianischen Klage* (Stuttgart, 1874); Schulin (rev. Huschke), in the *Krit. Vierteljahrschrift*, xviii. (1876), 526 seq.; Lenel, *Beiträge zur Kunde d. praetorischen Edicts*: I. *Das Public. Ed.* (Stuttgart, 1878); Appleton, *Histoire de la propriété prétorienne* (Paris, 1889);

as a fictitious ownership of either *res mancipi* or *res nec mancipi*, valid against all the world except the true *dominus*. The accounts we possess of this edict are somewhat inconsistent and even contradictory; the explanation must be that it went through a process of amendment and expansion at the hands of successive praetors, and that eventually it may have had more than one section, without our always being able to say to which of them the criticism of a particular commentator is directed. But there is no doubt as to the general tendency—of the defects it was meant to correct and of the way in which the correction was accomplished.

One of the defects was this: if a man had taken a transfer of *res mancipi* from its rightful owner, but simply by acquire *dominium ex jure Quiritium*, and the transferrer remained undivested. The result was that the latter was in law entitled to raise the *rei vindicatio* and the transferee whose money he might have in his pocket, while if a third party had obtained possession of the thing, but in such a way as not to be amenable to an interdict, the transferee could have no effectual vindication against him, as he was not in a position to prove *dominium ex jure Quiritium*. The first difficulty was overcome by the *exceptio rei venditae et traditae*, also a praetorian remedy, and probably older than the Publician; to the transferrer's vindication on the strength of his unextinguished quiritary right the transferee pleaded sale and delivery as an effectual praetorian defence. But, when a third party was in possession, and the transferee by simple delivery had to take the initiative, the position was more complicated. Such third party might be in perfect good faith; he might even have acquired from the original transferrer and fortified his acquisition with a formal conveyance. But that was no sufficient reason in equity why he should be allowed to defeat the prior right of the original transferee, who, if he had possessed for the requisite period of usucapion before the third party came upon the scene would have cured the defect of the informal delivery and acquired an unassailable quiritary right. So the praetor announced in his edict that if a man who had been and represented that he had bought a *res mancipi* from its owner, and had had it delivered to him, but had lost possession within the period of usucapion, he (the praetor) would allow him a vindicatory embodying a fiction of completed usucapion (*infra*), with which he might proceed either against the transferrer or any third party withholding the thing in question.

Domitian bonitarium.

The publication of such an edict and the formula of the action based upon it (which, though of praetorian origin, was in many respects dealt with as just a variety of the *rei vindicatio*) had almost the same effect as if the legislature had directly enacted that in future delivery of a *res mancipi* by mancipation of a sale or some good cause would confer a right of ownership in it even before usucapion had been completed. Till completed, however, the transferee was not quiritary owner: the thing in question was only *in bonis*, "of his belongings," had the legal term; he had possessed *nec-nudum jus Quiritium*—remained in the transferrer; it was only with the completion of the usucapion that it became the transferee's *pleno jure*. The inevitable result of the recognition of this tenure *in bonis* was that mancipation and cessio in jure, which in all cases as an unnecessary formality; and the marvel is that it continued to hold its ground at all. The explanation may be that it afforded a substratum for and gave force of law to the *verba nuncupata* that accompanied the *negotium per aes et libram*; and, although none of these might quite well be thrown into the form of stipulations, yet there were others that it may have been thought safer to leave to take effect under the provisions of the earlier law.

Bonae fidei possessio.

The second case that called for the Publician Edict—whether as originally published or by an amendment of it cannot be determined—was that of the *bona fide* transferee of a thing by purchase or other sufficient title who, having lost possession of it before usucapion, found to his surprise that usucapion had not been its owner, that no ownership therefore had been transmitted to him (the transferee), and that consequently he was not in a position to raise a vindication with its averment of *dominium ex jure Quiritium*.[1] As against the true owner, whose property had been disposed of by a stranger behind his back, there would be no equity in such an action, and the owner was given an effectual *exceptio justi dominii*; but as against all the world except the true owner (and perhaps a person who was *in causa usucapiendi*), his "better right" was recognized by the practor, who accorded to him a vindication proceeding on a fiction of completed usucapion, for usucapion would cure the defect of *his* title, just as it did that of the bonitarian owner. In this way the praetors introduced the principle of *bonae fidei possessio* which was worked out with much skill by the jurists of the early Empire, and which assumed very large proportions in the Justinianian law when the term of prescription had been greatly extended, and the difficulty of proving property (as distinguished from *bona fide* possession) consequently very much increased. The Publician action was also in time made applicable in modified form to servitudes and other real rights as much as to property.

Changes in law of contract.

Development of the Law of Contract.[2]—It is impossible within the limits of an article such as this to indicate a tithe of the amendments that were effected on the law of obligations during the period whose distinguishing features were the rise of a *jus gentium* and the construction of the praetor's edict. In every branch of it there was an advance not by steps but by strides—in that of obligations arising from contract, of those arising from delict, and of those arising from facts and circumstances, such as unjustifiable enrichment at another person's cost.[3] The law of suretyship, in its three forms of *sponsio, fidepromissio*, and *fidejussio*, received considerable attention, and formed the subject of a series of legislative enactments for limiting a surety's liability; and the agency, which was hardly admitted in Rome, had a valuable contribution from the praetorian edict in the recognition of a man's liability, more or less qualified, for the contractual debts of his *filisfamilias* and slaves, as also, and without qualification, for the debts properly contracted of persons, whether domestically subject to him or not, who were managing a business on his account, or whom he had placed in charge of a ship belonging to him. The development of the law in the matter of obligations generally was greatly facilitated by the praetorian simplification of procedure and the introduction of new forms of actions—the instruction to a judge, "Whatever in respect thereof the defendant ought to give to or do for the plaintiff, in that condemn him," preceded by a statement of the cause of action, giving wide scope for the recognition of new sources of liability.

Stipulatio.

The origin of the verbal contract of stipulation and its actionability under the Julian and Calpurnian laws have already been explained. It was theoretically a formal contract, *i.e.* creative of obligation on the strength of the formal question and answer interchanged by the parties, even though the material ground of debt might underlie it; but in time it became the practice to introduce words—in the single word *ecte* was enough—excluding liability in case of malpractice (*clausula doli*); and finally even that became unnecessary when the praetors had introduced the general *exceptio doli*, pleadable as an equitable defence to any personal action. And it was essentially productive only of unilateral obligation, *i.e.* the respondent in the interrogatory alone incurred liability; if mutual obligations were intended it was necessary that each should promise for his own part, with the result that two contracts were executed which were entirely independent. Originally the only words that could be employed were *spondesne* on the one side, *spondeo* on the other; and in this form the stipulation was confined to *peregrini* and not open to citizens (non-citizens enjoying *commercium*?). In time the words *promittis? promitto*, came to be used alternatively. They were, eventually at least, competent to peregrins as well as to citizens, although that was not the case before until stipulation had become of daily use amongst the former in the still simpler phraseology *dabis? dabo, facies? facium*. Originally competent only for the creation of an obligation to pay a definite sum of money, and afterwards one to deliver any of a specific thing other than money, the scope came in time, by the simplification of the words of interrogatory and response and especially by the substitution of the conditions of the formular system for the *legis actiones* of the Silian and Calpurnian laws, and the introduction of the *actio ex stipulatu* in cases of indefinite promise—to be adaptable to any sort of unilateral engagement, whether initiated by it or only confirmed. It was of immense service too outside the ordinary range of contract in what were called necessary (in contradistinction to voluntary) stipulations, of which a variety of illustrations are given *infra*, p. 569. In all directions advantage was taken of it to bind a man by formal contract either to do or to refrain from doing what in many cases he might already be bound *ipso jure* to do or to abstain from doing, and that because of the simplicity of the remedy—an action on

[1] This case is the only one alluded to by Justinian (*Inst.* iv. 6, 4). He had abolished the distinction between quiritarian and bonitarian property, which had, he says, become in practice a mockery (Cod. vii. 25), and so it was unnecessary for him to mention the other. Lenel, in the second edition of his *Edictum Perpetuum*, i. p. 164, gives strong reasons for holding that there was from the beginning only one edict and one formula which was applied alike to bonitary ownership and *bona fide* possession. Cf. Appleton, *l.c.* i. p. 49. For the different theories, see Girard, *Textes*, 3rd ed. pp. 137–38. What was the nature of the so-called *actio Publiciana recissoria* in which completed usucapion was feigned not to have taken place, seems doubtful. *Inst.* iv. 6, §§ 3, 5. See Cuq, *Inst. Jurid.* vol. ii. 2nd ed. p. 722 n.; Lenel, *Edict. Perpet.* pp. 117–19.

[2] See Bekker, *Aktionen*, i. c. 5–8, and App. D, E, F and vol. ii. c. 15, 16; Voigt, *Jus naturale*, &c., vol. iii. §§ 106–24, and vol. iv. App. xix., xxi.

[3] Such obligations—usually imposing the duty of restitution of unjustifiable gains—filled a considerable space in the practice and doctrine of the period, and early gave rise to a variety of brocards, *e.g.* "Nemo cum alterius damno lucrari debet," "Nemo damnum sentire debet per lucrum alterius," &c.

Lenel, *Palingenesia*, ii. pp. 511 seq.; Girard, *Manuel*, 4th ed. pp. 348 seq.; Lenel *Edict. Perpet.* and ed. 164, and references in n. to there.

his stipulation—that would lie against him in the event of his failure.

A second form of contract that came into use to a considerable extent in the latter half of the Republic is what is commonly called the literal contract, or, as Gaius phrases it with greater accuracy, the *nomen transscripticium*.[1] Notwithstanding the prolific literature of which it has been the subject, it must be admitted that in many points our knowledge of it is incomplete and uncertain. The prevalent opinion, formed before the discovery of the Verona MS. had made known Gaius's description of it, and almost universally adhered to ever since, is that such contracts were created by entries in the account-books which the censors insisted that all citizens of any means should keep with scrupulous regularity. They are often alluded to by the lay writers; but the text principally relied on is what remains of Cicero's speech for the player Roscius. From the tenor of the arguments in that case, and incidental remarks elsewhere, the conclusion has been formed that a citizen who made an entry in his *codex*—whether of the nature of a cash-book or a ledger is much disputed—to the debit of another, thereby made the latter his debtor for a sum recoverable by an *actio certae creditae pecuniae*. Gaius in his description of the contract does not mention the *codices*; but his account is not inconsistent with the notion that the entries (*nomina*) of which he speaks were made in them. He says that these entries were of two sorts, *nomina arcaria* and *nomina transscripticia*. The former were entries of cash advances; and of them he observes that they did not create obligation, but only served as evidence of one already created by payment to and receipt of the money by the borrower. These entries were posted periodically (usually each month) from a day-book (*adversaria*), and there were distinct pages in the codex for what was thus paid out of the *arca* (*expensum*) and what was paid in. Of the *nomina transscripticia* Gaius says that there were two varieties, the entry transcribed from thing to person and that transcribed from one person to another, and that both of them were not probative merely but creative of obligation. The first was effected by a debit to the debtor and a credit to his debtor (B) the liquidated amount of what the latter was already owing as the price of something purchased, the rent of a house leased, the value of work done, or the like; and then on the opposite page of the codex debiting him with the same sum as creditor. The second was effected by A transcribing B's debt in a similar way to the debit of a third party (C), hitherto a debtor of B's, and who consented to the transaction—A, at the same time crediting B with the sum thus looked against C, and B in his books both crediting C with it (*acceptilatio*) and marking it as paid to A (*expensilatio*). These *nomina transscripticia* were purely fictitious entries so far as any passing of money was concerned, though they had to be made by the distinction (*iussus*) of the person made chargeable as debtor. Corresponding entries in the debtor's own codex, though usual, do not seem to have been necessary.

All this at first sight seems just a series of bookkeeping operations. But it was much more than that for the Roman citizens who first had recourse to it. There was a time, as formerly stated, when sale, and lease and the like, so long as they stood on their own merits, received no legal recognition at all; and even when it might be binding as a duty to Fides or (as moderns would say) in the forum of conscience; to found an action at law it required to be clothed in some form approved by the *jus civile*. The *nexum* may possibly have been one of the forms; and the *mancipium* was being fictitiously dealt with as borrower of the price or rent due under his purchase or lease; the stipulation was another, the obligation to pay the price or rent being made legally binding by its embodiment in formal question and answer. But interposition of competent only between persons who were face to face, whereas expensilation was competent also as between persons at a distance from each other. This of itself gave expensilation—which, originally at least, was a mere *negotium juris civilis* as the *sponsio*—one advantage over stipulation. But it had also a further advantage, which was not affected by the subsequent recognition of the real and consensual contracts as productive of legal obligation on their own merits, namely, that the liquidated prescription of debts from one person to another to be effected. This last must have been of infinite convenience in commerce, not only by enabling traders to dispense with a reserve of coin, but by obviating the risks attending the transit of money over long distances. It was this that led, as Theophilus says was the case, to the conversion even of stipulatory obligations into book-debts; it was not that thereby the creditor obtained a tighter hold over his debtor, but that an obligation so obtained from or in which in a sense was negotiable and therefore more valuable. But in other respects it was much more restricted than stipulation. Thus it only applied to money debts; it did not admit of conditions (though it did admit of a term); and it was never available to peregrins, though the Sabinians proposed that transcription *a re in personam* should be binding on them.

Literal contract.

The evolution of the four purely consensual contracts—sale, location-conduction, partnership and mandate—ranks as one of the most interesting chapters in the whole history of the law. But, as it is impossible in such an article as this to attempt to mark the successive stages in the progress of all of them, we shall confine ourselves to sale. The others could not and could not follow identically the same course: location ran most nearly parallel with sale; but partnership and mandate, from their nature, not only started at a different point from the other two, but reached the same goal with them—that of becoming productive of obligation simply on the strength of consent interchanged by the parties—by paths that were sometimes far apart. Nevertheless, a sketch of the history of the origin of the contract of sale may be sufficient to indicate generally some of the milestones that were successively passed by all four.[2]

Consensual contracts.

Going back as far as history carries us, we meet with it under the names of *emptio* and *venditio*, but meaning no more than barter; the terms originally signified "to take" and "to take" or "to give" (*accipere*). Sheep and cattle (*pecus*, hence *pecunia*) may for a time have been a very usual article of exchange on one side, and then came raw metal weighed in the scales. But it was still exchange, the instant delivery of a thing against an instantaneous delivery of so many pounds weight of copper on the other. With the reforms of Servius Tullius, as we have seen, came the distinction between *res mancipi* and *res nec mancipi*, and with it a regulated mancipation of the former. It was still barter; but along with it arose an obligation on the part of the transferrer of the *res mancipi* to warrant the transferee against eviction—a warranty that was implied in the mancipation. Whether this rule obtained from the first, or was the growth of custom it is impossible to say; but it is probable that it was the XII. Tables which fixed that the measure of the transferrer's liability to the transferee in the event of eviction should be double the amount of the price. Equally impossible is it to say when the practice arose of embodying declarations, assurances and so forth in the mancipation (*leges mancipii*), which were held binding on the strength of the *negotium juris civilis* in which they were clothed. They received statutory sanction in the XII. Tables, in the words already referred to more than once—"cum nexum faciet mancipiumque, uti lingua nuncupassit, ita jus esto," which means in effect "whatever shall by word of mouth be declared by the parties in the course of a transaction *per aes et libram* in definition of its terms shall be law as between them."

Contracts of sale.

The substitution, by or soon after the decemvirs, of coined money, that was to be counted, for rough metal that had been weighed, converted the object of barter in some part into price, and thus distinguished from article of purchase (*merx*) on the other; and sale thus became distinct from barter. In contemplation of the separation of the mancipation and the price-paying, and the transition of the former into a merely formal conveyance, parties were aware that, mancipation notwithstanding, the property of what was sold should not pass to the purchaser until the price had been paid or security by sureties (*vades*) given for it to the vendor; and it was probably by the interposition of the praetor that, at a very early date, the rule—that until the price was paid no liability for eviction should attach to the transferrer (or *auctor*). The reason perhaps of the provision on this point in the XII. Tables was that a vendor who had mancipated or delivered a thing sold by him before receiving the price had no action to enforce payment of the latter; and in such circumstances it was thought but right to give him the opportunity of getting back the thing itself by a real action. It might be, however, that the price had been paid, and that yet the vendor refused to mancipate. It was long, apparently, before the purchaser could in such a case compel him to do so. After the introduction of the *legis actio per conditionem* he (the purchaser) had undoubtedly the power to recover the money on the ground of the vendor's unjustifiable enrichment—that the latter had got it for a consideration which had failed (*causa data, causa non secuta*); and it is possible that before that he had a similar remedy *per judicis postulationem* et *per actionem in factum*.

Down to this point, therefore, say the beginning of the 6th century, there were several obligations consequent on sale of a *res mancipi*; but not one of them arose directly out of the sale itself,

Bearbeit. des röm. Rechts*, i. (1841), 93 seq.; Gneist, *Die formellen Verträge d. röm. Rechts* (Berlin, 1845), 321 seq.; Danz, *Gesch. d. röm. Rechts*, ii. 42 seq. (where there is a résumé of the principal of the older theories); Buonamici, in the *Archivio Giuridico*, xvi. (1876), 3 seq.; Gide, *Etudes sur la monnaie à Paris*, 1879, 3 seq.; Voigt, "Über die Bankiers," &c., in *Abhandl. d. K. Sächs. Gesellschaft d. Wissenschaften* (1887), x. 515 seq., and adverse review of this work by Niemeyer in *Z. d. Sav. Stift.* (1890), xi. 312 seq.; Karlowa, *Röm. R. G.* ii. 746–57; Mitteis, *Z. d. Sav. Stift.* xix. 230 seq.

[2] The literature on the history of the contract of sale is profuse, but mostly scattered in periodicals and much of it fragmentary. It may be enough to refer to Bechmann, *Der Kauf nach Gemeinem Recht* (3 vols., 1876, 1884 and 1905); Karlowa, *Röm. R. G.* ii. pp. 611–32; Girard, *Nouv. Rev. historique* (1883), pp. 539 and in his *Manuel*, 4th ed. pp. 533 seq.

or could be enforced simply on the ground that it had taken place. The vendor was bound to support the purchaser in any action by a third party disputing his right, and to repay him the price twofold in the event of a third party's success; and he was bound, moreover to make good to him any loss he had sustained through a deficiency of acreage he had guaranteed, non-existence of servitudes he had declared the lands enjoyed, existence of others from which he had stated they were free,[1] incapability of the land for labour for which he was vouched fit, and so on. But breaches of these obligations were probably all regarded as of a delictual character; the obligations were binding, not in virtue of the sale *per se*, but of the transaction *per aes et libram* superinduced thereupon, and, if the vendor had at any time to return the price on failure to manicipate what he had sold, it was not because he had committed a breach of contract, but because he had unjustly enriched himself at the purchaser's expense.

In sales of *res nec mancipi*, just as in those of *res mancipi*, a vendor who had been incautious enough to deliver his wares before he had been paid, or had got stipulatory security for the price, or had converted it into a book-debt, might recover them by a real action if payment was unduly delayed; while the purchaser who had paid in advance but failed to get delivery might also get back his money from the vendor on the plea of unwarrantable enrichment. But as mancipation was, as is generally supposed, incompetent for carrying the property, some other machinery had to be resorted to than that of the copper and the scales for imposing upon the vendor an obligation of warranty against eviction, defects and so forth. What it was is a question that has occasioned among modern jurists. It may be that, until trade began to assume considerable proportions, and when a transaction was between citizens, a purchaser was content to rely partly on the honesty of his vendor, partly on the latter's knowledge that a flaw in the title of an article sold left it what he sold belonged to another,[2] and partly on the maxim common in all ages and climes, *caveat emptor*. When it was one between a citizen and a peregrin, a different set of rules of conduct and of operation, as between them disputes were settled by actions *in factum* before recuperators, whose decisions were arrived at very much on considerations of natural equity. On the whole, while admitting it to be quite unintelligible that the urban praetors, with the influence of *jus gentium*, granted *arbitria* for enforcing obligations of parties in sales *inter cives* even a good while prior to the *lex Aebutia*, the balance of evidence, we think, is in favour of the view that it was the popularization of the stipulation that facilitated the development of sale into a *bonae fidei* contract.

Confirmatory stipulations.

We read of a *satisdatio secundum mancipium*, a *stipulatio habere licere* and a *stipulatio duplae*. The nature of the first is obscure; it seems to have been a guarantee that the urban praetors, and probably to have been the guarantee of a *sponsor* for the liabilities imposed upon the vendor by the transaction *per aes et libram* and the *verba nuncupata* that were covered by it. The stipulation *habere licere* is mentioned by Varro, in a collection of styles of sales of sheep, cattle, &c., some of which he says were abridgments of those of M. Manilius, who was consul in the year 149 B.C. It was the guarantee of the vendor of a *res nec mancipi*, or even occasionally of a *res mancipi* upon which mancipation, that the purchaser should be maintained in possession of what he had bought; it entitled him to reparation on eviction, measured not by any fixed standard but according to the loss he had sustained. It cannot have been a stipulation framed on the model of the *Lex Aebutia* and the formulation by the praetor of the *actio ex stipulatu*. The *stipulatio duplae* was one binding the vendor for double the price in case of eviction, and was entered into not only where no mancipation took place or one which for any reason might be challengeable for invalidity, but also where valuable *res nec mancipi* were sold.

The idea of the *stipulatio duplae* may have been borrowed from the *duplum* incurred by a vendor on the eviction of a purchaser acquiring a thing by mancipation; for one of its earliest manifestations was in the edict of the curule aediles, who insisted on it from persons selling slaves, probably because the dealers were for the most part foreigners, and therefore unable to complete their sales *per aes et libram*. Judging from Varro, it was a form of stipulation against eviction that in his time was used only in sales of slaves, although he adds that by agreement of parties it might be inserted in any sale.

There was also stipulated for in sales the object sold. We learn from Varro—what is also indicated in various passages of Plautus—that the vendor at the same time and in the body of the same stipulation *duplae* guaranteed that the sheep or cattle he was selling were healthy and of a healthy stock and free from faults, and that the latter had not done any mischief for which their owner could be held liable in a noxal action; and similarly that a slave sold was healthy and not chargeable for any theft or other offence for which the purchaser might have to answer. If any of these guarantees turned out fallacious, the purchaser had an *actio ex stipulatu* against the vendor: "Whereas the plaintiff got from the defendant a stipulation that certain sheep he bought from him were healthy, &c. [repeating the words of guarantee], and that he, the plaintiff, should be free to hold them (*habere licere*), whatever it shall appear that the defendant ought in respect thereof to give to or do for the plaintiff, in the value thereof, judge, condemn him otherwise acquit him." It was in connection with this form that *the actio empti* in its original shape was just a simplification of the *actio ex stipulatu* on a vendor's guarantees; the stipulations to which we have been alluding had become such ordinary accompaniments of sale as to be matters of legal presumption, the result being that the words "whereas this plaintiff *bought* from the defendant the sheep about which the action has arisen" were substituted in the *demonstratio* (as the introductory clause of the formula was called) for the detailed recital of what had been stipulated. Bekker justifies this by reference to the language of Varro, who seems to include under the words *empto, venditio* not merely the agreement to buy and sell but also the stipulations that usually went with it.

Origin of actio empti.

The introduction of an *actio empti* in this shape, however, was far from the recognition of sale as a purely consensual contract. If the price was not paid at once, the purchaser gave his stipulatory promise to pay it, or got a friend in whom the vendor placed more reliance to do so for him, or else the vendor made a book-debt of it; and, if it had to be sued for, it was in all these cases by a *condictio certae pecuniae* and not by an action on the sale. If the price was paid but the thing purchased not delivered, the only remedy open to the purchaser was to get back his money by the same condiction, unless, indeed, the guarantee *habere licere* was held to cover delivery, in addition to the case the purchaser claims damages in the *actio ex stipulatu* under the name of *actio empti*. But this *actio empti*, whether raised on the ground of non-delivery, eviction or breach of some other warranty, was really an action on the verbal contracts that usually accompanied the sale—as *strictum jus* action in which the judge could not travel beyond the letter of the engagements of the purchaser. In the latter years of the Republic, and probably a little before the time of Q. Mucius Scaevola, it was a *bonae fidei* action. Cicero had the clearest grounds for bringing cases of friendship may have been sufficient to induce it, such as the defeat of a claim for damages for eviction on the ground that the stipulatory guarantee had been accidentally overlooked. Ulpian says: "As the *stipulatio duplae* is a thing universal observance, action on the ground of eviction will lie *ex empto* if perchance the vendor of a slave have failed to give his stipulatory guarantee, for everything that is of general custom and practice ought to be in view of the judge in an *bonae fidei judicium*."[3]

Real contracts.

Very little was required to convert the *stricti juris actio empti*, really nothing more than an *actio ex stipulatu*, into a *bonae fidei* one—simply the addition by the praetor of the words "on consideration of good faith and dealing" to the "whatever the defendant ought to give to or do for the plaintiff." The effect, however, was immeasurable—not that it did away with the practice of stipulatory guarantees, for Varro wrote after the time of Q. Mucius (who speaks of them as usual), and Ulpian as a *bonae fidei* one—references to them are abundant in the pages of the classical jurists; but it rendered them in law unnecessary. It made sale a purely consensual contract in which, in virtue of the simple agreement to buy and sell, all the obligations on either side that usually arose out it were held embodied without express formulation or (still less) stipulatory or literal engagement. And, in instructing the judges to take in every case between buyer and seller suing *ex empto* or *ex vendito* on principles of good faith, it really empowered them to go far beyond "general custom and practice," and to take cognisance of everything that in fairness and equity and common sense ought to influence their judgment, as to what was due freely to do justice between the parties in any and every question that might directly or indirectly arise out of their relation as seller and buyer.[4]

The history of the four nominate real contracts—*mutuum* (*i.e.* loan of money or other fungible), *commodatum* (*i.e.* loan of things not to be returned specifically), deposit and pledge—is even more obscure than that of the consensual ones.[5] Down to the time of the Postilian law loan of money, corn, &c., was usually contracted *per aes et libram*; and it is probable that on the subsequent disuse of the *nexum* the

[1] Cicero says (*De Off.* iii. 16, § 65) that, though by the XII. Tables it was enough if a vendor *per aes et libram* made good his positive assurances (*uti lingua nuncupassit, ita jus esto*), the jurists held him responsible for reticence about burdens or defects he ought to have revealed, and liable for a *poena dupli* exactly as if he had guaranteed their non-existence.

obligation on a borrower to repay the money or corn advanced to him was made actionable, under the Silian and Calpurnian laws respectively, by a stipulation contemporaneous with the loan. With the rise of *jus gentium* loan became actionable on its own merits—that is to say, the advance and receipt of money as a loan of itself laid the borrower under a *stricti juris* obligation to repay it, even though no stipulatory engagement had intervened; the *res*—in this case the giving and receiving *mutui causa*—completed the contract. The obligation to repay was now as much actionable and enforceable, where the loan was of money, by the same action—*certae pecuniae creditae*—as stipulation and literal contract; and so strictly was it construed that interest on the loan was not claimable along with it, the *res* given and received being the full measure of the obligation of repayment. The other three—commodate, deposit and pledge—became independent real contracts much later than *mutuum*, possibly not all at the same time, and none of them apparently until well into the Christian era. All of them, of course, had been long known as transactions of daily life; the difficulty is to say when they first became actionable in the urban praetor's court (for in transactions with peregrins actions *in factum* would doubtless be generally), and under what guises.

It is impossible within the space at our command to criticize the various theories entertained of their vicissitudes, for they necessarily vary to some extent in regard to each. We must content ourselves, therefore, with the simple statement that eventually, and within the period with which we are now dealing, they came to be recognized as independent real contracts, the *res* by which they were completed being the transfer of a thing by one person to another for a particular purpose, on the understanding that it was to be returned when that purpose was served. And it is to be noted that, while *mutuum* transferred the property of the money lent, the borrower being bound to return it, yet equally in all these bailments to do so was due to a cause for which in fairness he could not be held responsible. Consequently the actions on these three contracts, differing from that on *mutuum*, were all *bonae fidei*, the judge being vested with discretionary powers to determine what was fair and equitable in each individual case.

Praetorian Amendments on the Law of Succession.—The most important change in the law of succession during the latter half of the Republic was due to praetors, who, by interfering in cases where the technical name of *bonorum possessio*,[1] what was really beneficial enjoyment of the estate of a deceased person without the legal title of inheritance. There is much to be said to the conduct of the long series of praetors in regard to it which we find in the Julian consolidation of the Edict were the work of a succession of praetors, some of them probably not under the Republic but under the Empire; but it will be convenient to give here a general view of the subject as a whole—disregarding the consideration that some of its features may not have been given to it within the period now under notice.

Praetorian bonorum possessio.

Testamentary.

Justinian, speaking of the origin of *bonorum possessio*, observes that in promising it to a petitioner the praetors were not always actuated by the same motives; in some cases their object was to facilitate the application of the rules of the *jus civile*, in some to amend their application according to what they believed to be the spirit of the XII. Tables, in others, again, to set them aside as inequitable.[2] It is not unreasonable to assume that it was with the purpose of aiding the *jus civile* that the first step was taken in what gradually became a momentous reform; and it is probable that the step was the announcement by some praetor that, where there was dispute as to an inheritance, and a testament was presented to him bearing not fewer seals than were required by law, he would give possession of the goods of the deceased to the heir named in it. In this as in what stands there is nothing but a regulation of possession of the *bona* of the inheritance pending the question of legal right. Just as between two parties contending about the ownership of a specific thing in a *rei vindicatio* the praetor first settled the question of interim possession, so did he promise to do here when a question was about to be tried about the right to an inheritance (*si de hereditate ambigitur*). It was a provisional arrangement merely, and very necessary in view of the state of the law which permitted a third party, apart from any pretence of title, to step in and complete a *usucapio pro herede* by a year's possession of the effects of the inheritance. Even at this early stage the Edict was closed it was not necessarily more than a provisional grant; for, if heirs-at-law of the deceased appeared and proved that, although the testament bore on the outside the requisite number of seals, yet on the fact some solemnity of execution, such as the *praesidial venditio* or *testamenti nuncupatio*, had been omitted, the grantee had to yield them up the possession that had been given him pending inquiry. It was only by a rescript of Antoninus Pius that it was declared that a plea by the heir-at-law of invalidity of a testament on the ground of defect of formalities of execution might be defeated by an *exceptio doli*, on the principle that it was contrary to good faith to set aside the wishes of a testator on a technical objection that was purely formal. Thus was the *bonorum possessio secundum tabulas*, *i.e.* in accordance with a testament, from being originally one in aid of the *jus civile*, in course of time converted into one in contradiction of it. That the motives and purposes of the long series of praetors who built up the law of *bonorum possessio* must have varied in progress of years is obvious; and, once the machinery had been invented, nothing was easier than to apply it to new ideas. The praetor could not make a man heir—that lay entirely with the deceased; but he could give, or withhold, his consent, the substantial advantages of inheritance, and protect him in their enjoyment by praetorian remedies. He gave him possession of the goods of the deceased, with summary remedies for ingathering them, which, once in the hands, were liable in his quiritary right on the expiry of the period of usucaption; and subsequently, by interpolation into the formula of a fiction of heirship, he gave him actutal personal actions against debtors of the deceased, rendering him liable in the same way to the deceased's creditors.

Another variety of the *bonorum possessio* was that *contra tabulas*—in opposition to the terms of a testament. If a testator had neither instituted nor expressly disinherited a son who was one of his *sui heredes*, then his testament was a nullity, and the child passed over had no need of a praetorian remedy. Where *sui heredes* other than sons were passed over the *jus civile* upheld the will but allowed them inchoate rights with the effect of entitling by a sort of accrual. But the Edict went further; for, if the institute was a stranger, *i.e.* was not a person in the *potestas* of the testator with the child passed over, then, on the petition of the latter, the praetor gave him and any other child coming with him into possession of the whole estate of the deceased as on intestacy, the institute being left with nothing more than the empty name of heir. Another application of the *bonorum possessio contra tabulas* was to the case of emancipated children of a testator. These by the *jus civile* was not required to institute or disinherit them; for by their emancipation they had ceased to be *sui heredes*, and had lost that interest in the family estate which was the reason why they had to be mentioned in the testament of a father *in potestate*. The praetor—although probably not until the empire, and when the doctrines of the *jus naturale* were being more freely recognized—put them on the same footing as unemancipated children, requiring that they also should either institute or disinherit them, by granting them *bonorum possessio* if they were not. It was *contra tabulas* in the sense that it displaced the instituted heirs either wholly or partially—wholly when the institutes were not children of the deceased, partially when they were. In the latter case, at least when not were affected by it, the grant of *bonorum possessio* was under the equitable condition that the grantees should collate or bring into partition all their own acquisitions since their emancipation.

Contra tabulae.

The next variety of *bonorum possessio* was that granted *ab intestato*. The rules of the *jus civile* in reference to succession on intestacy were, as we have seen, extremely strict and artificial. They admitted neither emancipated children nor agnates who had undergone *capitis deminutio*; they admitted no female agnate more remote than a sister; if the nearest agnate or agnates declined, the right did not pass to those of the next degree; mere cognates, kinsmen of the deceased who were not agnates, e.g. *consortes* or others related to him through females and agnates *capite minuti*, were not admitted at all; while a wife had no share unless she had been *in manu* of the deceased and therefore *filiae loco*. All these rules the praetors expanded, and so far paved the way for the revolution in the law of intestate succession which was accomplished by Justinian.

Ab intestato.

They established four orders or classes of heirs. (1) Displacing the *sui heredes* of the *jus civile*, they gave the first place to descendants (*liberi*), including in the term all those whom the deceased would have been bound either by the *jus civile* or the Edict to institute or disinherit had he made a will, *i.e.* his wife *in manu*, sons whether emancipated or not, daughters whether *in manu* or emancipated, the representatives of sons who had predeceased him, and adopted children in his potestas. (2) On failure

[1] For a *résumé* of the principal theories (down to 1870) about the origin of *bonorum possessio*, see Dare, *Geschichte d. rom. Rechts*, vol. ii. § 176. Of the later literature it is enough to mention Leist, in the first 4 vols. of his continuation of Glück's *Pandecten-Commentar* (Erlangen, 1870–1879); Sohm, in his *Inst. d. r. R.* (Eng. trans., 2nd ed.), p. 509 seq.; Schmidt, in *Z. d. Sav. Stift.* xvii. 324 seq.

[2] *Inst.* iii. 9 pr. and § 1.

[3] Cic., *In Verr.* II. i. 45, § 117. He says (writing in 70 B.C.) that an edict to that effect was already *tralaticium*, *i.e.* had been adopted year after year by a series of praetors. Gaius (ii. 119) speaks of seven at least as the requisite number of seals; *i.e.* probably those of the *libripens* and the five citizen witnesses, and that of the *antestatus*, whose functions are not well understood, but whose official designation appended to his name so regularly in inscriptions as to leave no doubt that his was originally the seventh.

of *liberi* the right to petition for *bonorum possessio* opened to the nearest collateral agnates of the intestate, under their old name of *legitimi heredes*. (3) Under the *jus civile*, on failure of agnates (and of the *gens* to which there was one), the succession was vacant and fell to the fisc, unless perchance it was usucapted by a stranger possessing *pro herede*. The frequency of such vacancies was much diminished by the recognition by the praetors of the right of cognates to claim *bonorum possessio* in the third place. Who they had primarily in view under the name of "cognates" it is impossible to say. The epithet is most frequently applied by modern writers to kinsmen related through females; but in the strict sense it included all kinsmen without exception, and in a more limited sense all kinsmen not entitled to claim as agnates. There were included amongst them therefore—although it is very probable that the list was not made up at once, but from time to time by the acts of a long series of praetors—not merely kinsmen related through females (who were not agnates), but also agnates of a remoter degree who were excluded as such because the nearest agnates in existence had declined, *personæ* who had been agnates but by reason of *capitis minutio* had lost that character, female agnates more distantly related than sisters, and children of the intestate who at the time of his death were in an adoptive family. All these took according to proximity, but not beyond the sixth degree and the children of a second cousin in the seventh. (4) Finally, the claim passed to the survivor of husband and wife, assuming always that their marriage had not involved *manus*. This list constituted the praetorian order of succession to intestacy among emphoru citizens. The praetorian order of succession to freedmen and *emancipati* was necessarily different, the patron or quasi-patron taking the place of agnates; but it is too detailed and complex to be gone into here.

Praetorian order of intestate succession.

All these *bonorum possessiones* had to be formally petitioned for. In that *ab intestato* descendants were allowed a year for doing so, while other persons were limited to 100 days, the period for those entitled in the second place beginning when that of those entitled in the first had expired, and so on. The grant was always made at the risk of the petitioner; nothing was assured him by it; it might turn out real and substantial (*cum re*) or merely nominal (*sine re*), according as the grantee could or could not maintain under consideration; and we have had occasion more than once to observe how greatly it facilitated the development of the institutions of property and contractual obligation. But as the change was only completed in the early Empire it will be more convenient to defer explanation of the nature of the new procedure in the meantime.

Law of procedure.

IV. The Jus Naturale and Maturity of Roman Jurisprudence

(The Empire until the time of Diocletian.)

i. *Characteristics and Formative Agencies of the Law during the Period.*

Characteristics generally and Recognition of a Jus Naturale in particular.—The first three centuries of the Empire witnessed the perfection of Roman jurisprudence and the commencement of its decline. During that time the history of the law presents no such great landmarks as the enactment of the XII. Tables, the commencement of a praetor's edict, the recognition of simple consent as creative of a contractual bond, or the introduction of a new system of judicial procedure; the establishment of a class of patented jurists speaking as in a sense the mouthpieces of the prince, and the admission of all the free subjects of the Empire to the privileges of citizenship, are about the only isolated events to which one can point as productive of great and lasting results. There were, indeed, some radical changes in particular institutions, such as the caduciary legislation of Augustus, intended to raise the tone of domestic morality and increase fruitful marriages, and the legislation of the same emperor and his immediate successor for regulation of the status of enfranchised slaves; but these, although of vast importance in themselves, and the first of them influencing the current of the law for centuries, yet left upon it no permanent impression. It was by much less imposing efforts that it attained the perfection to which it reached under the sovereigns of the Severan house—a steady advance on the lines already marked out in the latter years of the Republic. The sphere of the *jus Quiritium* became more and more circumscribed, and one after another of the formalities of the strict *jus civile* was abandoned. The *manus* of the husband practically disappeared; the *patria potestas* of the father lost much of its significance by the recognition, notwithstanding it, of the possibility of a separate and independent estate in the child (*peculium castrense*); slaves might be enfranchised to a certain extent by informal manumission; *res mancipi* constantly passed by simple tradition, the right of the transferee being secured by the Publician action; servitudes and other real rights informally constituted were maintained as effectual *iuitione praetoris*; an heir's acceptance of a succession could be accomplished by any indication of his intention, without observance of the formal *cretio* of the earlier law; and many of the incidental bargains incident to consensual contract, but varying their natural import, that used to be embodied in words of stipulation, came to be enforceable on the strength of formless contemporaneous agreements.

Characteristics of the jus naturale.

The preference accorded by the magistrates and jurists and judges to the *jus gentium* over the *jus civile* is insufficient to account for these and many other changes in the same direction, as well as for the ever-increasing tendency evinced to subordinate word and deed to the *voluntas* from which they arose. They are rather to be attributed to the striving on the part of many after a higher ideal, to which has been given the name of *jus naturale*.[1] It is sometimes said that the notion of a *jus naturale* as distinct from the *jus gentium* was peculiar to Ulpian, and that it found no acceptance with the Roman jurists generally. But this is inaccurate. Justinian, indeed, has excerpted in the *Digest* and put in the forefront of his *Institutes* a passage from an elementary work of Ulpian's, in which he speaks of a *jus naturale* that is common to man and the lower animals, and which is substantially instinct. This is a law of nature of which it is quite true that we find no other jurist taking account, and it may be attributed to a habit, specially noticeable in Ulpian's writings, of making tripartite classification. But though the classical jurists are undoubtedly indistinct in their conceptions about the matter, many of them refer again and again to *jus naturale* in the sense of law based on natural reason; and Gaius is the only one (Justinian following him) who definitely, though not consistently, makes it synonymous with *jus gentium*. There can be no question that the latter was much more largely imbued with precepts of natural law than was the *jus civile*, but it seems incorrect to say that natural law and *jus gentium* were identical; it is enough to cite but one illustration, pointed out again and again in the texts: while the one admitted the legality of slavery, the other denied it. While the *jus civile* studied the interests only of citizens, and the *jus gentium* those of freemen irrespective of nationality, the law of nature had theoretically a much wider range and took in mankind within its purview. The doctrine of the *jus gentium* agreed in this respect with that of the *jus civile*—that a slave was nothing but a chattel; yet we find the latter, when tinctured with the *jus naturale*, recognizing many rights as competent to a slave, and even conceding that he might be debtor or creditor in a contract, although his obligation or claim could be given effect to only indirectly, since he could neither sue nor be sued.[2]

Voigt thus summarizes the characteristics of this speculative Roman *jus naturale*:—(1) its potential universal applicability to all men, (2) among all peoples, (3) at all times, and (4) its correspondence with the innate conviction of right (*innere Rechtsüberzeugung*).[1] Its propositions, as gathered from the pages of the jurists of the period, he formulates thus:—(1) recognition of the claims of blood (*sanguinis vel cognationis ratio*); (2) duty of faithfulness to engagements—*is*

[1] See Voigt, *Das Jus naturale . . . der Römer*, particularly vol. i. §§ 52–64, 89–96; Maine, *Ancient Law*, chap. iii.

[2] Ulp. in *Dig.* xliv. 7 *fr.* 14. [3] Voet. *l. c.* p. 304.

natura debet . . . cujus fidem seculi sumus; (3) apportionment of advantage and disadvantage, gain and loss, according to the standard of equity; (4) supremacy of the *voluntatis ratio* over the words or form in which the will is manifested.[1] It was regard for the first that, probably pretty early in the principate, led the praetors to place emancipated children on a footing of equality with unemancipated in the matter of succession, and to admit to succession collateral kindred through females as well as those related through males; and that, in the reigns of Hadrian and Marcus Aurelius respectively, induced the senate to give a mother a preferred right of succession to her children, and *vice versa*. It was respect for the second that led to the recognition of the validity of what was called a natural obligation,—one that, because of some defect of form or something peculiar in the position of the parties, was ignored by the *jus civile* and incapable of being made the ground of an action for its enforcement, yet might be pleaded as a bar to indirectly by other equitable remedies. Regard for the third was nothing new in the jurisprudence of the period; the Republic had already admitted it as a principle that a man was not to be unjustifiably enriched at another's cost, and the praetor, however, gave it a wider application than before, and used it as a key to the solution of many a difficult question in the domain of the law of contract. As for the fourth, it was one that had to be applied with delicacy: for the *voluntas* must not in equity be preferred to its manifestation to the prejudice of other parties who in good faith had acted upon the latter. We have many evidences of the skilful way in which the matter was handled, speculative opinion being held in check by considerations of individual interest and general utility.

A remark of Voigt's on the subject is well worthy of being kept in view, that the risk which arose from the setting up of the precepts of a speculative *jus naturale*, as resulting from the study of the *jus civile*, was greatly diminished through the position held by the jurists of the early Empire. Their *jus respondendi* made them in a sense legislative organs of the state, so that, in introducing principles of the *jus naturale* into *quotidiana et humana*, they did the same moment defined them and gave them the force of law. They were, he says, "philosophers in the sphere of law, searchers after the ultimate truth; but, while they—usually in reference to a concrete case—sought out the rules to be applied which had not been found, they combined with the freedom from constraint of speculation, the life-freshness of practice, and the power of assuring the operativeness of their abstract propositions."[2]

Position and character of jurists.

Influence of Constitutional Changes.—The changes in the constitution aided not a little the current of the law. Men of foreign descent reached the throne and recruited the senate, sometimes proud indeed of their historic traditions of Rome, but yet in most cases free from prejudice in favour of institutions that had nothing to recommend them but their antiquity. Military life, for obvious reasons, had not the same attractions as during the Republic, so many more men of ambition might aspire; the *comitia* soon ceased to afford an outlet for public eloquence; so that men of education and position had all the more inducement to devote themselves to the consideration and regulation of the rules of the law. This was greatly encouraged by the action of Augustus in creating a class of, so to say, patented jurists privileged to give answers *ex auctoritate principis* to questions submitted to them by the litigants and judges. It was further developed by Hadrian's reorganization of the imperial privy council, wherein a large proportion of the seats were assigned to jurists of distinction. Several of the emperors had lawyers amongst their most intimate and trusted friends. Last, but not least, the office of praetorship was, in fact, the highest next the throne, was filled by them; Papinian, Ulpian and Paul all held it in their time. Jurisprudence, therefore, was not merely an honourable and lucrative profession under the new arrangements, but a passport to places of importance in the state; and till the death of Alexander the ranks of the jurists never failed to be recruited by men of position and ability.

Extension of citizenship to whole Empire.

Extension of Citizenship to the Empire generally.—It was in the year A.D. 212 that Caracalla published the Constitution conferring citizenship on all the free inhabitants of the Empire. Far-reaching as were its consequences, the primary purpose was purely fiscal. The *lex Visesimaria*, passed under Augustus, had imposed a tax of 5% on testamentary inheritances and bequests, except where the whole succession was worth less than a certain sum or the heir or legatee was a *heres domesticus* of the deceased. This was continued by his successors and was very profitable, thanks to the propensity of the well-to-do classes for single blessedness, followed by testamentary distribution of their fortunes amongst their friends. But it affected only the successions of Roman citizens, so that the great mass of the provincials escaped it. Caracalla, being needy, not only increased it temporarily to 10%, but widened the area of its operation by elevating all his free subjects to the rank of citizens. The words of Ulpian regarding the constitution are very inclusive,—"in orbe Romano qui sunt . . . cives Romani effecti sunt";[3] but there is considerable diversity of opinion as to their meaning, caused partly by the fact that peregrins are still mentioned by some of Caracalla's successors, and there can be little doubt that among others it did not apply to Junian Latins or *peregrini dediticii*. Limit the constitution, however, as we may, there can be no question of its immense importance. By conferring citizenship on the provincial peregrins it subjected them in their legal relations to the law of Rome, and qualified them for taking part in many transactions both *inter vivos* and *mortis causa* which previously had been incompetent for them. It did away with the necessity for regarding *jus gentium* as something distinct from *jus civile*. The principles and doctrines of *jus gentium*, it is true, survived and were expanded and elaborated as freely and successfully as ever; but they were so dealt with as part and parcel of the civil law of Rome, which had ceased to be Italian and had become imperial.

Enactments under Augustus about marriage;

Legislation of Comitia and Senate.—Augustus, clinging as much as possible to the form of republican institutions, thought it expedient not to break with the old practice of submitting legislative proposals to the vote of the *comitia* of the tribes. Some of the *leges* of his reign were far from insignificant. Besides various measures for the amendment of the criminal law, &c., there were three sets of enactments of considerable importance which owed their authorship to him: the first to improve domestic morality and encourage fruitful marriage, the second to abate the evils that had arisen from the too lavish admission of liberated slaves to the privileges of citizenship, and the third to regulate procedure in public prosecutions and private litigations.

about manumission.

The first set included the *lex Julia de adulteriis et de fundo dotali* of 18 B.C. and the *lex Julia et Papia Poppaea* of A.D. 9—the two luminous matrimonial laws which were usually cited as the *lex de maritandis ordinibus* (18 B.C.) seems to have been incorporated, and which for two or three centuries exercised such an influence as to be regarded as one of the sources of Roman law almost as much as the XII. Tables or Julian's consolidated Edict. It was often spoken of as the *lex Caducaria*, one of its most remarkable provisions being that unmarried persons (within certain ages and under certain qualifications) should forfeit entirely anything they might by will or otherwise have a claim to, and that married but childless persons should similarly forfeit one-half, the lapsed provisions (*caduca*) going to the other persons named in the will who were qualified in terms of the statute, and failing them to the fisc. However well intended, the language of Juvenal and others raises doubts whether the law did not really do more harm than good. By the Christian emperors many of its provisions were repealed as inconsistent with the New Testament views of celibacy, &c., while others fell into disuse; and in the Justinian books hardly a trace is left of its distinctive features.

Judiciary laws.

The second set included the Fufia-Caninian law of the year 2 B.C., the Aelia-Sentian law of A.D. 4, and the Junia-Norban law of the year A.D. 19—the last it is thought passed in the reign of Tiberius, but probably planned by Augustus.[4] The Aelia-Sentian law regulated the matter of manumission, with the result that a slave who was not that even at death, according to circumstances minutely described, become either (1) a citizen, or (2) a freedman with the possibility of attaining citizenship by a process indicated in the statute, or (3) a freedman who, because of his having undergone certain punishments for grave offences, was forbidden to reside within a hundred miles of Rome and denied the hope of ever becoming a citizen (*libertus dediticius*). The Junian law was passed in order to define more precisely the status in the intermediate of those freedmen who had not the ability of citizenship. It did so by assimilating them, to a large extent, to the colonial Latins, denying to them the rights of a citizen proper so far as concerned family and succession, but conceding to them all the patrimonial rights of a citizen and the fullest power of dealing with their belongings so long as not *mortis causa* and to the prejudice of their patrons. This was the Junian Latinity so prominent in the pages of Gaius, but of which our limits exclude any detailed description.

The third set of enactments referred to included the two *leges Juliae judiciariae*, of which we know but little. They were probably enacted in the year 17 B.C. One *lex Julia* seems to have dealt with *judicia publica* and another with cessions of bonds in private litigations. Gaius, however, seems to refer to two *leges Juliae judiciorum privatorum*, and it is the opinion of Wlassak, who had made the subject peculiarly his own, that the second of these was enacted for municipalities outside Rome and was in similar terms to the first. It was these two last-mentioned judiciary statutes that, as Gaius tells us, completed the work of the Aebutian law in substituting the formular system for that

[1] Voigt, *l.c.* pp. 321–323.

[2] Voigt, *l.c.* p. 341.

[3] Ulp. in *Dig.* i. 5 fr. 17. As to the effects of this *constitutio Antonina*, see Mitteis, *Reichsrecht und Volksr.*, c. vi.

[4] There is a long-standing controversy as to the date of this *lex Junia*, some writers placing it earlier than the *lex Aelia-Sentia*. See Girard, *Manuel*, 4th ed., p. 124, and authorities cited in Muirhead. *Hist. Introduction*, 286 n. 7 and 317 n. 6.

of *legis actiones*. The one regulating procedure in private suits at Rome must have been a somewhat comprehensive statute, as a passage in the *Vatican Fragments* refers to a provision of its 27th section; and our ignorance of its contents therefore, beyond one or two trifling details, is the more to be regretted. The opinion of Wlassak, already referred to, is that the judiciary laws made procedure by formulae compulsory, while the Aebutian law had left it optional. In all cases remitted to a *unus judex* or three praetorian judges a formula was to be henceforth compulsory; a *legis actio* could no longer be tried before private judges but only exceptionally by the centumviral court.[1]

Legislation of Senate.

From the time of Tiberius onwards it was the senate that did the work of legislation, for the simple reason that the *comitia* were no longer fit for it. And very active it seems to have been. This may have been due to some extent to the fact that so many political jurists, and consequently so many of the points in which the law required amendment, pos-

sessed seats in the imperial council, where the drafts of the senatus-consults were prepared. It was the senatusconsults that were the principal statutory factors of what was called by both emperors and jurists the *jus novum*—law that departed often very widely from the principles of the old *jus civile*, that was much more in accordance with those of the Edict, and that to a great extent might have been introduced through its means had not the authority of the praetors been overshadowed by that of the prince. In the end of the 2nd and the beginning of the 3rd century the supremacy of the latter in the senate became rather too pronounced, men quoting the *oratio* in which he had submitted a draft of law instead of the resolution which gave it legislative effect. No doubt such projects must have been carefully considered beforehand in the imperial council, and rarely stood in need of further discussion; but the ignorance of the formal act that followed it tended unduly to emphasize the share borne in it by the sovereign, and made it all the easier for the emperors after Severus Alexander to dispense altogether with the time-honoured practice.

Julian's Edictum.

The Consolidated Edictum Perpetuum.—The edicts of the praetors, which had attained very considerable proportions before the fall of the Republic, certainly received some additional accretions in the early Empire. But those magistrates did not long enjoy the same independence as of old; there was a greater *imperium* than theirs in the state, before which they hesitated to lay hands on the law with the boldness of their predecessors. They continued as before to publish annually an edict on taking office which that had been handed down to them through generations; but their own additions were soon almost limited to mere amendments rendered necessary by the provisions of some senatusconsult that affected the *jus honorarium*. These ceased to be laid not long after *jurisdictio* which they had been in the time of Cicero; the emperor, if any one, was now entitled to the epithet; the annual edict had lost its *raison d'être*. Hadrian apparently was of opinion that the time had come for writing it "finally," and giving it another and more enduring and authoritative shape, binding on all future magistrates. He accordingly, it is said, commissioned Salvius Julianus to revise it—or Julian, when urban praetor, may have done so at his own hand with the approval—and Julian, as we know, set gave it binding force. It did not, however, become statute law; the distinction between *jus civile* and *jus praetorium* still continued.

The revised Edict unfortunately, like the XII Tables, is no longer extant. It is only by very slight account we have of the revision—a line or two in Eutropius and Aurelius Victor, and a few lines in two of Justinian's prefaces to the Digest. We may assume from what we find there that it consisted of a consolidation and codification of the edicts of the urban praetor took place, but the question remains how far Julian consolidated with them those of the peregrin praetor and other officials who had contributed to the *jus honorarium*. Those of the curule aediles, we are told, were included; Justinian says that they formed the last part of Julian's work; they formed, in fact, a sort of addendum to it. There is reason to believe that so much of the edicts of the provincial governors as differed from those of the urban praetor were also incorporated in it, and those of the peregrin praetors, in so far as they contained available matter not embodied in those of their urban colleagues or the provincial governors, were dealt with in the same way.[2] The consolidation got the name of *Edictum Perpetuum*, and was somewhat different from that formerly imputed to *edicta perpetua* as distinguished from *edicta repentina*; it became perpetual in the English sense of the word. Sanctioned by senatusconsult and by the emperor, it became a closed chapter so far as the praetors were concerned, although it continued for a time to hold its place on their album with its formularies of actions, they had no longer any power to alter or even perhaps make additions to it. Having ceased to be a mere efflux of their *imperium* and become a type prescribed by statute, its interpretation and amendment were no longer in their hands but in the hands of the emperor.

The Julian Edict was not divided into parts or books like Justinian's Digest but only into titles, which were perhaps numbered and certainly were rubricated. Since the publication of Lenel's great work, noted below, modern Romanists are agreed that the formularies of actions it contained were distributed in their appropriate places throughout the work and not collected together in one place as used to be supposed. Thus a formula based on the civil law (*e.g.* on the *rei vindicatio*) appeared by itself (*i.e.* without any article) as a separate head or subdivision of the title appropriate to it; while formulae based on the praetor's *imperium* (*e.g.* that of the praetorian action *de dolo*) were placed under their respective edicts. The general arrangement of the whole remains, it is not difficult to discover, as we have documentary evidence to a certain extent in writings which have come down to us. These are principally (1) the Digest of Justinian, in the prefaces to which we are told expressly that it followed the order of the Edict except in certain places specially noticed; (2) the Code of Justinian; (3) the extracts from divers commentaries on the Edict by the classical jurists principally preserved in the Digest. As the inscriptions of these extracts contain the name of the author, the work and the particular book from which they are taken, they have proved of great help towards understanding the arrangement—especially the commentaries of Ulpian and Paul on the urban Edict and the commentary of Gaius on the provincial edict. Lenel has shown that Julian's plan of arrangement was neither logical nor symmetrical, but adhered in great measure to the old order (tralatitious) of the urban praetors. The following fourfold division of the subject-matter is, according to Lenel (partially following Rudorff), clearly ascertainable: first, a series of titles dealing with the preliminary steps in all actions such as jurisdiction, summons, intervention of procurators and the like; secondly, a series dealing mainly with matters of ordinary procedure or rather with actions granted principally in accordance with statute (*judicia legitima*) as *petitio hereditatis*, *rei vindicatio*, &c.; third, titles dealing with actions resting principally on the praetor's *imperium* (*judicia imperio continentia*); fourth, execution of judgments, including bankruptcy, &c. These four parts were followed by a kind of appendix containing in three titles the separate styles of interdicts, exceptions and praetorian stipulations. Finally, the edicts of the curule aediles, with their formulae also consolidated, were added at the end of the work. From the fragments of the jurists preserved by Justinian (principally from the three above-mentioned commentaries, but also to an important extent from Julian himself in his *Digesta*) repeated attempts have been made in modern times to reproduce the Edict in its entirety. Most of these are mere transcripts with attempted reconstructions of passages in Justinian's Digest and of little value. The only really scientific and worthy critical efforts are those of Rudorff in 1869, and, above all, of Lenel in 1883.[3]

Responses of Patented Counsel (*juris publicandi*).

The Responses of Patented Counsel.—The right of responding under imperial authority (*jus respondendi ex auctoritate principis*), first granted by Augustus as advice to those to consult them. What it did was to give an authoritative character to the response, so that the judge who had asked for it and to whom it was presented—for the judges were but private persons—was in most of them allowed to act practically bound to adopt it as if it had emanated from the emperor himself. It may be that Augustus was actuated by a political motive—that he was desirous by this concession to attach lawyers of eminence to the new régime, and prevent the recurrence of the evils experienced during the Republic from the too great influence of patrons. But, whatever may have prompted his action in the matter, its beneficial consequences for the law can hardly be overrated. The power of the lawyers who received the coveted right to the patented counsel to influence current doctrine not speculatively merely but positively (*jura condere*), and so to leaven their interpretations of the *jus civile* and *jus honorarium* with the principles of natural law as to give a new complexion to the system.

Instead of giving his opinion like the unlicensed jurist by word of mouth, either at the request of the judge or at the instance of one of the parties, the patented counsel, who did not require to

[1] Wlassak, *Processgesetze*, i. 191 sqq., and ii. 221 sqq.

[2] It may be, however, that the edicts of the peregrin praetors and provincial governors were independently codified. See Girard, *Manuel élémentaire*, 4th ed. 53–4. An attempt recently made by von Velsen, *Z. d. Sav. St.* xxi. (1900), 73 sqq., to identify the *edictum provinciale* with that of Hadrian as separate from the time of Augustus is far from convincing and has received no support from other writers. See Kipp, *Gesch. d. Quellen*, p. 123 n.

[3] Rudorff, *De jurisdictione edictum: edicti perpetui quae reliqua sunt* (Leipzig, 1869), and rev. by Brinz in the *Krit. Vierteljahrschrift* (1870), xi. 471 sqq.; Lenel, *Das Edictum Perpetuum: ein Versuch zu dessen Wiederherstellung* (Leipzig, 1883), 2nd ed., 1907 (French ed. translation by Peltier, 2 vols., 1901–3). The last gained the "Savigny Foundation Prize" offered by the Munich Academy in 1882 for the best restitution of the formulae of Julian's Edict, but goes far beyond the limited subject prescribed; see Brinz's report upon it to the Academy in the *Sitzungsber. d. Sav. Stift.* (1883), vol. iv. *Röm. Abtheil.* 164 sqq. See Karlowa, *Röm. Rechtsgesch.* i. 678–721; Krüger, *Gesch. d. Quellen*, 84 sqq.

give his reasons, reduced it to writing and sent it to the court under seal. Augustus does not seem to have contemplated the possibility of conflicting responses being tendered from two or more jurists equally privileged. It was an awkward predicament for a judge to be placed in. Hadrian solved the difficulty by declaring that in such a case the judge should be entitled to use his own discretion.[1] That on receiving a response with which he was dissatisfied he could go on calling for others until he got one to his mind, and then pronounce judgment in accordance with it on the ground that there was difference of opinion, is extremely unlikely. The more probable explanation of Hadrian's rescript is, that the number of patented responding jurists was very limited, that a judge, if he desired their assistance, was required by this rescript to consult them all (*quorum omnium si*, &c.); that, if they were unanimous, but only then, their opinion had force of statute (*legis vicem optinet*); and that when they differed the judge must decide for himself.

Constitutions of the Emperors.[2]—Gaius and Ulpian concur in holding that every imperial constitution, whether in the shape of rescript, decree or edict, had the force of statutes. It may be that by the time of Ulpian that was the prevailing opinion; but modern criticism is disposed to regard the dictum of Gaius, written in the time of Antoninus Pius, as coloured by his Asiatic notions, and not quite accurate so far at least as the edicts were concerned. Apart from executive laws (*leges datae*), the early imperial edicts were theoretically rather part of the *jus honorarium*. As supreme magistrate the emperor had the same power of *edicendi* as praetors had before him, and used it as they did to indicate some course of action he meant to adopt and follow or some relief he proposed to grant. His edicts were as a rule drawn up in writing in the imperial council and publicly notified in all parts of the Empire. His edicts, like course in respect of his *imperium*, was much greater than that of the praetors had been; for his authority endured for life, and extended over the whole Empire and every department of government. But in principle, it is thought, his successor on the throne was no more bound to adopt any of his edicts than a praetor was to adopt those of his predecessors. That it was not unusual for an edict to be renewed, and that it occasionally happened that the renewal was not by the immediate successor of its original author, are manifest from various passages in the texts. Sometimes, when its utility had stood the test of years, it was transmuted into a senatusconsult; but it proves itself that an edict per se was not law in the effect of statute. But their adoption by a succession of two or three sovereigns, whose reigns were of average duration, may have been held sufficient to give them the character of consuetudinary law; and, by a not unnatural process, reflecting public opinion may have come to impute force of statute to the edict itself rather than to the *longa consuetudo* that followed on it, thus paving the way for the assertion by the sovereigns of the later Empire of an absolute right of legislation, and for the recognition of the *lex edictalis* as the only form of statute.

Edicts of Emperors.

The imperial rescripts and decrees (*rescripta, decreta*) apparently acquired force of law (*legis vicem obtinent*) pretty early in the Empire, but their legislative power was not theoretically limited to the lifetime of the prince from whom they had proceeded. But they were not directly acts of legislation. In both the emperor theoretically did no more than authoritatively interpret existing law; but the boundary between interpretation and new law, sometimes difficult to define, was not always closely adhered to. Thus the *decretum Marci*, penalizing procedure by self-help, and the *epistula Hadriani*, introducing the *beneficium competentiae* among co-sureties, are instances of authoritative interpretation. The rescript was strictly a written answer by the emperor to a petition, either by an official or a private party, for an instruction as to how the law was to be applied in any particular case to the facts as set forth; which answer was in a separate writing it was usually spoken of as an *epistula*; when noted at the foot of the application its technical name was *subscriptio*. But sometimes also general orders of the emperors addressed to some official and intended for a person in a particular community were classed under the head of rescripts. The decree was the emperor's ruling, orally announced, in a case submitted to him judicially; it might be when it had been brought before him in the first instance *extra ordinem*, or when it had been remo ved by *supplicatio* from an inferior court in its earliest stage, or when it came before him by appeal. Such decrees were duly recorded and kept *apud acta*. It was theoretically as a judge that the emperor pronounced his decree, though in practice he sometimes went beyond the case in hand, evolving new doctrines. Proceeding as it did from the fountain of the authoritative interpretation, the decree had a value far beyond that of the sentence of an inferior court (which was law only as between the parties), and formed a precedent which governed all future cases involving the same question. Those rescripts and decrees constituted from of the most important sources of the law during the first three centuries of the Empire, and were elaborated with the assistance of the most eminent jurists of the day, the rescripts being the special charge of the master of the rolls, *magister libellorum*. Even to the time of the abdication of Diocletian they were almost the only channel of the *jus scriptum* that remained.

Rescripts and Decrees.

A fourth class of imperial constitutions were the so-called *mandata*. These, however, were mainly in the nature of instructions by the emperors to individual imperial officials, similar to edicts, and dealt with public law for the most part.

Mandata.

Professional Jurisprudence.—The present period of legal history is by modern writers sometimes called "the classical age of jurisprudence," though that term is more usually and correctly restricted to the years between Hadrian and the close of Severus Alexander's reign. It has been called "classical," on the analogy of the Augustan age of literature, from the celebrity of the jurists who flourished during it and the scientific pre-eminence of their works. For accounts of the great jurists, see articles GAIUS, &c., and also H. J. Roby's *Introduction to the Study of Justinian's Digest* and Professor Kuntze's *Rechtsgeschichte*. For an account of the extant remains of their writings, such as the Institutes of Gaius, the Rules of Ulpian, the Sentences of Paul and a variety of other works, reference may be made to Muirhead's *Historical Introduction to the Private Law of Rome*, where a brief account of the jurists is also given.[3]

The Jurists.

ii. *Substantive Changes in the Law.*

Concession of Peculiar Privileges to Soldiers.—While the period with which we are dealing saw the substantial disappearance of the distinction between citizen and peregrin, it witnessed the expansion of another—that between soldiers and civilians (*milites, pagani*). The most remarkable effluxes of the *jus militare* (as it is sometimes called) were the military testament and the *castrense peculium*. The first was practically exempted from all the rules of the *jus civile* and the praetors' edict alike as to the form and substance of last wills. It might be in writing, by word of mouth, by the unspoken signs perhaps of a dying man; all that was required was the *voluntas* so manifested as not to be mistaken. More extraordinary still—it was sustained even though its provisions ran counter to the most cherished rules of the common law. Contrary to the maxim that no man could dispense with the institution of an heir or die partly testate and partly intestate, a soldier might dispose of part of his estate by testament with or without nomination of an heir, and leave the rest to descend to his heirs *ab intestato*. Contrary also to the maxim *semel heres semper heres*, he might give his estate to A for life or a term of years, or until the occurrence of some event, with remainder to B. Contrary to the general rule, a Latin or peregrin, or an unmarried or married but childless person, might take an inheritance or a bequest from a soldier as freely as could a citizen with children. His testament, in so far as it disposed only of *bona castrensia*, was not affected by *capitis deminuio minima*. It was not invalidated by praeterition of *sui heredes*, nor could they challenge it because they had less under it than their "legitim"; nor could the instituted heir claim a Falcidian fourth, even though nine-tenths of the succession had been assigned to legatees. Finally, a later testament did not nullify an earlier one, if it purported to be a testament of the soldier testator that they should be read together.

Military Testaments.

[5] Edited by Goudy, 1889, §§ 61–65. See also Krüger, *Geschichte d. Quellen*, §§ 1–17; Lenel, *Palingenesia Juris Civilis* (2 vols., Leipzig, 1888–89), a work which contains all the texts of the ante-Justinian jurists, as contained in the Digest and other sources, arranged systematically, with valuable critical and explanatory notes, excluding the Institutes of Gaius, Paul's Sentences and Ulpian's Rules.

All this is remarkable, manifesting a spirit very different from that which animated the common law of testaments. True, it was a principle with the jurists of the classical period that the *voluntatis ratio* was to be given effect to in the interpretation of testamentary writings; but that was on the condition that the requirements of law as to form and substance had been scrupulously observed. But in the military testament positive rules were made to yield to the *voluntas* in all respects: the will was almost absolutely unfettered. Roman law in this matter gave place to natural law. One would have expected the influence of so great a change to have manifested itself by degrees in the ordinary law of testaments; yet it is barely visible. In a few points the legislation of Constantine, Theodosius II, and Justinian relaxed the strictness of the old rules; but there was never any approach to the recognition of the complete supremacy of the *voluntas*. In the *Corpus Juris* the contrast between the *testamentum militum* and the *testamentum paganorum* is always marked as in the days of Trajan. The latter was still a privileged deed, whose use was confined to a soldier actually on service, and if he received an honourable discharge, for twelve months after his retirement.

The *peculium castrense* had a wider influence; for it was the first of a series of amendments that vastly diminished the importance of the *patria potestas* on its patrimonial side. It had its origin in a constitution of Augustus granting to *filiifamilias* on service the right to dispose by testament of what they had acquired in the active exercise of their profession (*quod in castris adquiserant*).[1] But it soon went much further. Confined at first to *filiifamilias* on service, the privilege was soon extended by Hadrian to those who had obtained honourable discharge. The same emperor allowed them not merely to test on their *peculium castrense*, but to manumit *inter vivos* slaves that formed part of it; and by a little stretch of language the jurists recognized the right even to dispose of it onerously or gratuitously *inter vivos*. In the 3rd century the range of it was extended so as to include not only the soldier's pay and prize, but all that had come to him, directly or indirectly, in connexion with his profession—his outfit, gifts made to him during his service, legacies from comrades and so on. All this was in a high degree subversive of the doctrines of the common law. It may almost be called revolutionary; for it involved in the first place the recognition of the right of a human *alieni juris* to make a testament as if he were *sui juris*, and in the second place the recognition of a separate estate in a *filiusfamilias* which he might deal with independently of his *paterfamilias*, which could not be touched by the creditors, and which, if he died, was not even bound to collate (or bring into hotch-pot) on claiming a share of his father's succession. The radical right of the parent, however, was rather suspended than extinguished; for, if the soldier died intestate, the right of the *paterfamilias* revived: he took his son's belongings, not as his heir appropriating an inheritance, but as his *paterfamilias* reclaiming a *peculium*.[2]

Peculium Castrense.

The Family.—The legislative efforts of the jurists to encourage marriage, to which persons of position showed a remarkable distaste, have already been mentioned. The relation of husband and wife still in law required no more for its creation than deliberate exchange of nuptial consent; but in practice in certain cases some act indicative of change of life, such as the bride's home-coming to her husband's house, was regarded as the criterion of completed marriage.[3] But it was rarely accompanied with pomp. So repugnant was subjection to marital power to ladies that they declined to submit to confarreate nuptials; and so great consequently became the difficulty of finding persons qualified by confarreate birth to fill the higher priesthoods that early in the Empire it had to be decreed that confarreation should in future be productive of *manus* only *quoad sacra*, and should not make the wife a member of her husband's family. *Manus* by a year's uninterrupted cohabitation was long out of date in the time of Gaius; and, although that by coemption still existed in the 4th century, it was almost unknown by the end of the period. Husband and wife therefore had their separate estates, the common establishment being maintained by the husband, with the assistance of the revenue of the wife's dowry—an institution which received much attention at the hands of the jurists, and was to some extent regulated by statute. Divorce (either of common consent or by *repudium* by either spouse) was unfortunately very common; it was lawful even without any assignable cause; when blame attached to either spouse, he or she suffered deprivation to some extent of the nuptial provisions, but there were no other penal consequences.

Family Relations.

Not only in the case of a *filiusfamilias* who had adopted a military career, but in all cases of *peculium*, there was manifested a strong tendency to place restrictions on the exercise of the *patria potestas*. This was due in a great degree to the hold that the principles of natural law were gaining within the Roman system, perhaps due to the fact that the emperors, having succeeded to the censorial *regimen morum*, allowed these principles freely to influence their edicts and rescripts. Exposure of an infant was still apparently allowed; but a parent was no longer permitted, even a soldier, a father of household judge, to put his son to death or cruelly ill-treat him; in fact his prerogative was limited to moderate chastisement, the law requiring, in the case of a grave offence that merited severer punishment, that he should bring his child before the competent magistrate. His right of sale, in like manner, was permitted only when he was in great poverty and unable to maintain them, while their impignoration by him was prohibited under pain of banishment.

Even in the ordinary case of a son who was not a *paterfamilias* was still recognized as in law the owner of all the earnings and other acquisitions of his children *in potestate*; but the old rule still remained that for their civil debts he was not liable beyond the amount of the fund he had advanced to them or dealt with *ad facio* their own (*peculium profecticium*), except when he had derived advantage from their contract or had expressly or by implication authorized them to enter into it as his agents. To the party with whom he had contracted a *filiusfamilias* was himself liable as fully as if he had been a *paterfamilias*, with one exception, namely, when his debt was for borrowed money; in that case, with some very reasonable qualifications, it was declared by the well-known Macedonian senatusconsult (of the time of Vespasian) that the lender should not be entitled to recover payment, even after his borrower had become *sui juris* by his father's death. Between a father and his emancipated son there was, and always had been, perfect freedom of contract; but it was now held between a father and his soldier son in any matter relating to the *peculium castrense*, even though the son was *in potestate*. What is still more remarkable is that the new sentiment which was operating on the *jus civile* introduced the possibility of mutual obligations between *paterfamilias* and *filiusfamilias* even in reference to the *peculium profecticium*, which, though incapable of direct enforcement by action, was yet to some extent recognized and given effect to indirectly.

In the matter of guardianship the tutory of pupils was carefully maintained and the law in regard to it materially amended during the period under review (particularly by a senatusconsult generally referred to as the *Oratio divi Severi*, prohibiting alienation of the ward's property without judicial authority), while women above the age of pupillarity gradually disappeared.[4] The guardianship or curatory (*cura*) of minors above pupillarity owed its establishment as a general doctrine to Marcus Aurelius. The Plaetorian law[5] of the middle of the 6th century of the city had indeed imposed penalties on those taking undue advantage of the inexperience of minors, *i.e.* persons *sui juris* under the age of twenty-five, and from that time the praetors were in the habit of granting *restitutio in integrum* in cases of lesion and appointing curators to act with such persons for the protection of their interests in particular affairs. But it was Marcus Aurelius that first made curatory a permanent official office, to which ordinary guardians under ward attained majority. The powers, duties and responsibilities of such curators became a matter for careful and elaborate definition and regulation by the jurists, whose exposition indeed of the law of guardianship generally, whether of pupils or minors, has found wide acceptance in modern systems of jurisprudence.

Law of Successions.

The Law of Succession and particularly Testamentary Trusts.—There were far more positive changes in the law of succession than on either that of property or that of obligations. The rise and progress of the military testament has already been explained. The testament of the common law was still ostensibly that *per aes et libram*; but the practice of *mancipium familiae* had become a mere form. The persons named as heirs in any testamentary instrument that bore outside the requisite number of seals led, from the time of Antoninus Pius, to the frequent neglect of the time-honoured formalities of the *familiae mancipatio* and *nuncupatio*. *Testamenta tabulares*, it was held, formerly mentioned, declaring that an heir-at-law should no longer be entitled to dispute the last wishes of a testator on the technical ground of non-compliance with the purely formal requirements of the law, that practically established what Justinian calls the praetorian testament.

One of the commonest provisions in the testaments of the period was the *fideicommissum*,—a request by the testator to his heir to enter on the inheritance and thereafter denude wholly or partially in favour of a third party. It was introduced in the time of Augustus by (it is said by Theophilus) a testator who had married a peregrin wife, and desired thus indirectly to give to his peregrin children the succession which they could not receive, but could neither take *ab intestato* nor as his direct testamentary heirs.[6] He probably soon found imitators, and their number must have rapidly multiplied once the emperor, shocked at the perfidy of a trustee

[1] *Inst.* ii. 12 pr.

[2] This was altered by Justinian's 118th Novel, under which a *paterfamilias* taking any part of a deceased son's estate did so as his heir; see *infra*, p. 573.

[3] Some writers take the view that such act was always essential. See Girard, *Manuel*, 4th ed. p. 151.

[4] *Dig.* xxvii. 9 fr. 1, § 2.

[5] Also sometimes called *lex Laetoria*. See, *e.g.* reference to a recently discovered papyrus in *Z. d. Sav. Stift.* xxii. 170.

[6] *Fideicommissa*, an informal requests to heirs or legatees to hand over what they received to third parties, were known earlier than Augustus, but had no legal force.

who had failed to comply with the request of his testator, indicated his approval of the new institution by remitting the matter to the consuls of the day, with instructions to do in the circumstances what they thought just. So quickly did the jurist busy itself in public favour, and so numerous did the questions become as to the construction and fulfilment of testamentary trusts, that under Claudius it was found necessary to institute a court specially charged with their adjudication—that of the *praetor fideicommissarius*.

The employment of a trust as a means of benefiting those who were under disqualifications as heirs or legatees, as, for example, persons who had *no testamenti factoni*, women incapacitated by the Voconian law, unmarried and childless persons by the Julian law, incapacitated by the Julian and Papia-Poppaean law, and so on, was in time prohibited by statute; but that did not affect its general popularity. For, whether what was contemplated was a transfer of the universal *hereditas* or an aliquot part of it (*fideicommissary hereditatis*), or only of some particular thing (*fideicommissum rei singularis*), a testamentary trust had various advantages over either a direct institution or a direct bequest (*legatum*). Still the imposition upon the heir of a trust in favour of a beneficiary, whether it required him to denude of the whole or only a part of the inheritance, did not in theory deprive him of his character of heir or relieve him of the responsibilities of the position; and at common law therefore he was entitled to decline the succession, often to the great prejudice of the beneficiary. In order to avoid such a mischance, and at the same time to regulate their relations *inter se* and towards debtors and creditors of the testator, it became the practice for the parties to enter into such voluntary arrangements about the matter; but these were to some extent rendered superfluous by two senatusconsults, the Trebellian in the time of Nero and the Pegasian in that of Vespasian, which not only secured the beneficiary against the treachery of the heir—the impossibility of the inheritance, but also protected the latter from all risk of loss where he was trustee and nothing more, and enabled the former to treat directly with debtors and creditors of the testator and himself ingather the outstanding assets of the inheritance.

It was one of the advantages of a trust-bequest, whether universal or singular, that it might be conferred in a codicil, even though unconfirmed by any relative testament. The codicil (*codicilli*), also an invention of the time of Augustus, was a deed of a very simple nature. Though in the later Empire it required to be formally attested by at least five witnesses, it was at first quite informal. It was inappropriate either for disherison of *sui* or institution of an heir: but it confirmed by implication either prior or subsequent, in its date, it might contain direct bequests, manumissions, nominations of tutors, and the like, and whether confirmed or unconfirmed might, as stated, be utilized as a vehicle for trust-gifts. Latterly it was held operative, even in the absence of a testament, the trusts contained in it being regarded as burdens on the heir-at-law.

The most important changes in the law of intestate succession during the period were those accomplished by the Tertullian and Orphitian senatusconsults, traits of that respect for the precepts of natural law which in so many directions was modifying the doctrines of the *jus civile*. The first was passed in the reign of Hadrian, the second in the year 178, under Marcus Aurelius. By the former the mother of the Tertullian senatusconsult a mother and her child by a marriage that was unaccompanied with *manus* stood related to each other only as cognates, being in law members of different families; consequently their inheritance of succession to each other was confined to postponed to that of their respective agnates. The purpose of the senatusconsult was to prefer a mother to all agnates of her deceased child except father and brother and sister; father and brother excluded her; but with a sister of the deceased, and in the absence of father or brother, she shared equally. While there can be little doubt that it was considerations of natural law that dictated this amendment, yet its authors were too timid to justify it on the abstract principle of common humanity, and so they confined its application to women who had the *jus liberorum*, *i.e.* to women of free birth who were mothers of three children and freedwomen who were mothers of four, thus making it ostensibly a reward of fertility. The Orphitian senatusconsult was the counterpart of the Tertullian. It gave children, whether legitimate or illegitimate, a right of succession to their mother in preference to all her agnates; and subsequent constitutions extended the principle, admitting lawful children to the inheritance of their maternal grandparents but also to that of their paternal grandmother.

iii. *Judicial Procedure.*

The Formular System.[1]—The ordinary procedure during the greater part of the first three centuries of the Empire was still two-staged; it commenced before the praetor (*in jure*) and was concluded before a judge or judges (*in judicio*).

Formular System.

But the *legis actiones* had from a few exceptions given place to praetorian formulae. Under the sacramental system parties, and particularly the plaintiff, had themselves to formulate in statutory or traditional words of style the matter in controversy between them; and as they formulated, so did it go for trial to the tribunal or court or *judex* with whom not infrequent result that it was then all too late discovered that the real point in the case had been missed. Under the formular system parties were free, to represent their plaint and defence to the praetor in any words they pleased, the plaintiff asking for a formula and generally indicating the style on the *album* that he thought would suit his purpose, and the defendant demanding when necessary an exception, *i.e.* a plea in defence, either praetorian or statutory, that, without traversing the facts or the law of the plaintiff's case, avoided his demand on grounds of equity or public policy or the like. It was for the praetor to consider and determine whether the action or exception should or should not be granted, and, if granted, whether it should be accordingly or otherwise exhibited on the assumption of requiring a modification of it. The result he embodied in a written and signed appointment of a judge, whom he instructed what he had to try, and empowered to pronounce a finding either condemning or acquitting the defendant. This writing was the formula.

Although it was not until the early Empire that this system of civil procedure attained its full development, yet it had begun between one and two centuries before the fall of the Republic. Latius ascribes its introduction and definitive establishment to the *lex Aebutia* and two judiciary laws of the time of Augustus, formerly mentioned (*supra*, pp. 98, 124). The Aebutian law, of which unfortunately we know very little, is generally supposed to have introduced the praetor and the formula as a simpler form of action for causes already cognizable *per legis actionem*, (2) to devise forms of action to meet cases not cognizable under the older system, and (3) themselves to formulate the issue and reduce it to writing. Gaius says as much, so also does Cicero, and it is sometimes assumed. There were formulae employed by the peregrin praetor before it and also perhaps something analogous thereto by the urban praetor. There were also formulae of a kind employed both in the procedure *per judicia postulationem* and in that *per conditionem*. The difference between the latter and the *formulae* of the Aebutian system was that they were in part mere echoes of the statutory words of style uttered by the plaintiff, and that they were not written but spoken to the hearing of witnesses.

A large proportion of the personal actions of the formular system were evolved out of the *legis actio per condictionem*. The sequence of operations may have been something like this. Taking the simplest form of it, the *condictio certae pecuniae* under the Silian law, the first step was to drop the formal *condictio* from which it derived its character of *legis actio*, thus avoiding a delay of thirty days; the plaintiff stated his demand in informal words, and, if the defendant denied indebtedness, the praetor straightway formulated a written appointment of and instruction to a judge, embodying in it the issue in terms substantially the same as those he would have employed under the earlier procedure—"Titius shall be judge. Should it appear that N. N. ought to pay (*dare oportere*) 50,000 sesterces to A. A., in that sum condemn N. N. to A. A.;[2] should it so not appear, acquit him." Next to this in importance the *legis actio per conditionem*, because what had made it *legis actio* was gone, but the *condictio certae pecuniae* of the formular system. The *condictio triticaria* of the same system ran on the same lines: "Titius be judge. Should it appear that N. N. ought to give A. A. a thousand bushels of wheat, or be the value of the slave, in that condemn N. N. to A. A.," and so on. In each of these examples the formula included only two of the four principal clauses that might find place in it—an "intention" and a "condemnation." The matter of claim in both cases was certain,—so much money in one, a slave in the other; but, while in the first the condemnation also was certain, in the second it was uncertain. What if the claim also was uncertain,—say a share in N. N.'s profits of a joint adventure bought by speculation? It was perhaps competent for the plaintiff to specify a definite sum, and claim that as due to him; but it was very hazardous, for unless he was able to prove the debt to the last sesterce he lost his case. To obviate the risk of such failure the praetors devised the *actio ex stipulatu*, whose formula commenced with a "demonstration" or indication of the cause of action, and whose "intention" referred to it and was conceived indefinitely: "Titius be judge. Whereas A. A. stipulated with N. N. for a share of the profits of a joint adventure, whatever in respect thereof N. N. ought to give to or do (*dare facere oportet*) A. A., in the money amount

Its application to Personal Actions.

[1] See Keller (as on p. 547, n.), §§ 23–43; Bethmann-Hollweg (as in same note), vol. ii. §§ 81–87; Bekker (as in same note), vol. i. chaps. 4–7, vol. ii. chaps. 15, 19, 20; Baron, *Gesch. d. röm. Rechts* (Berlin, 1884), vol. i. §§ 202–215.

[2] In the typical Roman styles of actions the plaintiff was usually called Aulus Agerius and the defendant Numerius Negidius.

thereof condemn N. N.," and so on.[1] Once this point was attained further progress was comparatively easy, the way being open for the construction of formulae upon illiquid claims arising from transactions in which the practice of stipulation gradually dropped out of use, till at last the *bonae fidei judicia* were reached, marked by the presence in the "intention" of the words *ex fide bona*— "whatever in respect thereof N. N. ought in good faith to give to or do for A. A."

In the case of real actions the transition from the *legis actiones* to the formulae followed a different course. The Aebutian law, while sanctioning the competency of formulae, did not interfere with the procedure *per sacramentum* when reference was to be to the centumviral court on a question of quiritarian right. In the time of Cicero that court was apparently still in full activity (*supra*), but by that of Gaius, owing, it is supposed, to the Julian laws having rendered formulae in most cases compulsory, it was rarely resorted to except for trial of questions of inheritance. In his time questions of property were raised either *per sponsionem* or *per formulam petitoriam*. The procedure by sponsion may be regarded as a sort of bridge between the sacramental proccss and the petitory *vindicatio*. In it the question of real right was determined only indirectly. The plaintiff required the defendant to give him his stipulatory promise to pay a nominal sum of twenty-five sesterces in the event of the thing in dispute being found to belong to the former; and at the same time the defendant gave sureties for its transfer to the plaintiff, with all fruits and profits, in the same event. The formula then was adjusted, and remitted to the judge raised *ex facie* only the simple question whether the twenty-five sesterces were due or not: the action was in form a personal, not a real one, and was therefore appropriately remitted to a single *judex* instead of to the centumviral tribunal. The judgment in question could be reached only through means of a finding (*sententia*) on the question of real right; if it was for the plaintiff, he did not claim the amount of the sponsion, but the thing which had been found to be his; and, if the defendant delayed to deliver it, with its fruits and profits, the plaintiff had recourse against the latter's sureties. The petitory formula was undoubtedly of later introduction and much more straightforward. Like the *condictio per pecuniam certam* it contained only "intention" and "condemnation." It ran thus: "Titius be judge. Should it appear that the slave Stichus, about whom this action has been raised, belongs to A. A. in quiritary right, then, unless the slave be restored, whatever he is worth, in that you will condemn N. N. to A. A.; should it not so appear, you will acquit him."

Its application to real actions.

The formulae given above, whether applicable to real or personal actions, are so many illustrations of the class known as formulae *in jure civili* or *in jus conceptae*. The characteristic of such a formula was that it contained in the "intention" such phrases as the following—*ejus esse ex jure Quiritium, dare oportere*,[2] *sestertium x millia dare oportere*, or *damnum decidere oportere*.[3] Such words were employed where the right to be vindicated or the obligation to be enforced had its sanction directly in the *jus civile* whether in the shape of statute, consuetude or interpretation. Where, on the other hand, the right or obligation had its sanction solely from the praetor's edict, special formulae had to be framed. The actions employed in such cases were *actiones juris honorarii*, and these either *actiones in factum* or *actiones ficticiae*. The first were adaptations of actions of the *jus civile* to cases that did not properly fall within them; the second were actions entirely of praetorian devising, for the protection of rights or redress of wrongs unknown to the *jus civile*.[4]

Formulae in jus and in factum conceptae.

Actiones utiles.

Utilis actio may be translated as analogous or adapted action, *i.e.* analogous to a direct action. Where a direct action was inapplicable to particular cases or persons, according to the terms of a *lex*, edict, &c., the praetor frequently adapted the statute, &c., to such cases and persons by granting an *actio utilis*. He did so where he thought them to be within the spirit though not the letter of the law. He effected his object commonly by a modification of the regular formula either objectively, as by adding, or omitting, or altering words, or subjectively by transposing names of parties. But sometimes also the adaptation was made by the introduction of a legal fiction into the terms of a formula, and in this case the action was called *actio fictitia* or simply *fictitia*. The *actiones utiles* might, therefore, be of two kinds, ordinary and fictitious. Those of common occurrence early became stereotyped in the Edict and even got special names.

Ordinary.

Illustrations of an ordinary *actio utilis*, in the formula was objectively modified, refcrence may be made to the numerous actions for wrongful damage to property under the *lex Aquilia*. Thus this statute in its first chapter used the term *occidere*, which means killing by a physical act of violence (*corpore corpori*), but to meet cases of killing without violence (*e.g.* by poison) the praetors simply substituted the words *mortis causam praestare* for *occidere* in the formula. As illustrations of an ordinary *actio utilis* with subjective transposition of names, we may mention the *actio Rutiliana* applicable to a purchaser of the bankrupt estate of a living debtor, the action by an assignee of a debt against the debtor, and the action of a procurator suing for himself in his own name. In these illustrations of bankruptcy, the principal respectively appeared in the *intentio*, while the plaintiff's name was inserted in the *condemnatio*.

Actiones fictitiae.

Resort to a fiction is sometimes said to be a confession of weakness, and deservedly criticized accordingly. But every amendment on the law is an admission of defect in what is being amended; and it was in sympathy with the spirit of Roman jurisprudence, when it found an action too narrow in its definition, to include cases within the scope of it rather than, to fall within it, rather by feigning that the new case was the same as the old, to bring it within the scope of the existing and familiar action, than to cause disturbance by either altering the definition of the law or introducing an entirely new remedy. A *bonorum possessor* held a position unknown to the *jus civile*; he was not an heir, and therefore not entitled offhand to employ the actions competent to an heir, either for recovering the property of the deceased or proceeding against his debtors. The praetor could have had no difficulty in devising new actions to meet his case; but he preferred the simpler expedient of adapting to it an heir's actions, by introducing into them the formula that he was an heir; so he did with the *bonorum emptor* or purchaser of a deceased bankrupt's estate at the sale of it in mass by his creditors. A peregrin could not sue or be sued for the penalties imposed for theft or culpable damage by quiritary law, for the XII Tables and the Aquilian law applied only to citizens; but he could both sue and be sued under cover of a fiction of citizenship. A man who had acquired a *res mancipi* on a good title, but without taking a conveyance by mancipation or cession in court, if he was dispossessed before he had completed his usucapion, could not sue a *rei vindicatio* for its recovery, for he was not in a position to affirm that he was quiritarian owner; neither, for the same reason, could a man who in good faith and on sufficient title had acquired property by conveyance, sue who is in a position to alienate it. But in both cases the praetor granted him what was in effect a *rei vindicatio* proceeding on a fiction of completed usucapion—the Publician action referred to on p. 556. These are examples of *actiones fictitiae* based on the *jus civile* adapted by this very simple expedient to cases to which otherwise they would have been inapplicable, and forming one of the most important varieties of the *actiones utiles*.

Quite different was the course of procedure in the *actiones in factum*, whose number and varieties were practically unlimited, although for the most part granted in pursuance of the praetor's permission in the edict that founded each and was formulated in would make a remit to a *judex* (*judicium dabo*),[5] and formulated in accordance with the relative skeleton styles also published on the *album*. A great number of them came to be known by special names, as, for example, the *actio de dolo*, *actio negotiorum gestorum*, *actio hypothecaria*, *actio de pecunia constituta*, *actio vi bonorum raptorum*, *actio de superficie*, &c.—the generic name *actio in factum* being usually confined to the innominate ones. Their formulae, unlike those *in jus conceptae*, submitted no question of legal right for the

Actiones in factum.

---

[1] This *actio ex stipulatu* used to be regarded as nothing more than a variety of the *condictio incerti*. It is doubtful, however, whether in the *condictiones incerti* (*e.g.* the *condictio furtiva*) there was any *demonstratio*. See Girard, *Manuel*, p. 614 n. 2 and 3 and authorities there cited.

[2] Employed in the divisory actions, *i.e.* for dividing common property, partitioning an inheritance, or settling boundaries; the demand was that the judge should adjudicate (or assign) to each of the parties such a share as he though just. See Lenel, *Edict. Perpet.* 2nd ed. pp. 202, 205.

[3] Employed in certain actions upon delict, where the old penalties of death, slavery or talion had been changed, by the praetor's authority, been transmuted into money payments, and the defendant consequently called upon to pay penal damages. According to Lenel, *Ed. Perp.* 2nd ed. p. 287, the form *dare facere praestare oportere* was probably used in actions in rem.

[4] These latter have an analogy to the English "action on the case." In a few instances there was both civil and praetorian remedy for the same wrong; for Gaius observes (iv. 47) that in commodate and deposit failure of the borrower or depositary to return the thing lent to or deposited with him gave rise to actions that might be formulated either *in jus* or *in factum*. In the same section he gives the styles of *actiones depositi in jus* and *in factum conceptae*: their comparison is instructive. The formula *in factum* must almost certainly have been the earlier and shows, it is thought,

[5] Examples: "Si quis negotia alterius . . . gesserit, judicium eo nomine dabo" (*Dig.* iii. 5, 3, pr.); "Quae dolo malo facta esse dicentur, si de his rebus alia actio non erit et justa causa esse videbitur, judicium dabo" (*Dig.* iv. 3, 1, § 1); "Nautae caupones stabularii quod cujusque salvum fore receperint, nisi restituent, in eos judicium dabo" (*Dig.* iv. 9, 1, pr.); "Quod quis commodasse dicetur, de eo judicium dabo" (*Dig.* xiii. 6, 1, pr.).

consideration of the judge, but only a question of fact, proof of which was to be followed by a condemnation. That of the *actio de dolo*, for example, ran thus: "Titius be judge. Should it appear that, through the fraud of N. A., he was induced to convey and cede possession to him of his farm (describing it), then, unless on your order N. N. restores it, you will condemn him in damages to A. A.; if it shall not so appear, you will acquit him." Actions *in factum* might be *utiles* as well as direct; *e.g. actio quasi-Serviana* or *hypothecaria* was *utilis*, being based on analogy to the *actio Serviana*.

Our limits do not admit of any explanation of the purpose, form, or effect of the prescriptions, exceptions, replications, &c., that were engrafted on a *formula* when required; or of the ways in which the "condemnation" was occasionally "taxed" by the praetor, so as to prevent the award of extravagant damages; or of the consequences of defects in the formulas; or of the procedure *in jure* before it was adjusted, or *in judicio* afterwards; or of appeal for review of the judgment by a higher tribunal; or of execution (which was against the estate of the judgment-debtor, and took the form of incarceration only when his goods could not be attached). Our main object has been to show how elastic was this procedure, and how the praetorian *formulae*, in conjunction with the relative announcements in the edict, supplied the vehicle for the introduction into the law of innumerable rules of new doctrine. The system was fully developed before Julian's consolidation of the Edict; and the statutory recognition which the latter then obtained, though it stopped the praetor's power of amending the law, did nothing to impair the efficiency of the procedure by *formula*.

Procedure extra Ordinem.[1]—The two-staged procedure, first *in jure* and then *in judicio*, constituted the *ordo judiciorum privatorum*. Early in the Empire, however, it became the practice in certain cases to abstain from adjusting a *formula* and making a remit to a *judex*, and to leave the cause in the hands of the magistrate from beginning to end. In these cases, speaking generally, the magistrate acted as an administrative official. Such cases did not necessarily come before the ordinary judicial praetors; on the contrary, they were committed as a rule to special officials (*e.g.* consuls) who were appointed to decide them by the emperors. This kind of procedure was adopted sometimes because the law enjoined it, sometimes rested rather on moral than on legal right, and sometimes in order to avoid unnecessary disclosure of family misunderstandings. Thus, the earliest questions that were raised about testamentary trusts were sent for consideration and disposal to the ordinary praetor, in the existing state of jurisprudence, it was thought incompetent for a beneficiary to maintain in reference to the heir (who had only been *requested* to comply with the testator's wishes) that he was bound in law to grant him *clare oportere* his bequest. Had the difficulty arisen at an earlier period, and in the heyday of the constructive energy of the praetors, they would probably have solved it with an *actio in factum*. As it was, it fell to the emperors to deal with it, and they adopted the method of *extraordinaria cognitio*, the jurisdiction which they in the first instance conferred on the consuls being before long confided to a magistrate specially designated for it,—the *praetor fidei commissarius*. Questions between heirs and legatees largely swelled the number, began to be dealt with *extra ordinem*, the cognition being entrusted by Marcus Aurelius to a *praetor tutelaris*; while fiscal questions in which a private party was interested went to a *praetor fisci*, whose creation was also by him. Claims for support between parents and child or patron and freedman rested on natural duty rather than on legal right; they could not therefore well be made the subject-matter of a *judicium*, and consequently, for default to the consuls or the city prefect, and in the provinces to the governor. Questions of status, especially of freedom or slavery, at least from the time of Marcus Aurelius, were also disposed of *extra ordinem*; and so were claims by physicians, advocates and public teachers for their *honoraria*, and by officials for their salaries, the Romans refusing to admit that these could be recovered by an ordinary action of location. In all those extraordinary cognitions the procedure began with a *cognitio* preliminary to the issuing of a decree of an *in jus vocatio* of the party complained against; it was for the magistrate to require the attendance of the latter (*evocatio*) if he thought the complaint relevant. The decision was a *judicatum* or *decretum* according to circumstances.

Procedure extra ordinem.

Jural Remedies flowing directly from the Magistrate's Imperium.[2]—Great as were the results for the law of the multiplication and simplification of *judicia* through the formular system, it may be questioned whether it did not benefit the law as much from the direct intervention of the praetors and other magistrates in certain cases in virtue of the *imperium* with which they were invested. This manifested itself principally in the form (1) interdicts; (2) praetorian stipulations; (3) *missio in possessionem*; and (4) *in integrum restitutio*. All these had been in common use during the Republic.

Direct magisterial intervention.

1. The interdicts[3] have already been referred to as in use under the régime of the formulary, but their number and scope were vastly increased under that of the *jus praetorium*. The characteristic of the developed procedure by interdict was this—that in it the praetor reversed the ordinary course of things, and, instead of waiting for an inquiry into the facts alleged by a complainer, provisionally assumed them to be true and pronounced an order upon the respondent, which he was bound either to obey or show to be unjustified. The order pronounced might be either restitutory, exhibitory (in both cases usually spoken of in the texts as a *decretum*), or prohibitory:—restitutory, when, for example, the respondent was ordained to restore something he was alleged to have taken possession of by violent means, to remove obstructions which he had placed in the channel of a river, and the like; exhibitory, when he was ordained to produce something he was unwarrantably detaining, *e.g.* the body of a freeman he was holding as his slave, or a will in which the complainer alleged that he had an interest; prohibitory, as, for example, that he should not disturb the *status quo* of possession as between the complainer and himself, that he should not interfere with a highway, a watercourse, the access to a sepulchre, and so forth. If the respondent obeyed the order pronounced in a restitutory or exhibitory decree, there was an end of the matter. But frequently, and perhaps more often than not, the interdict was only the commencement of a litigation; facilitated by sponsions and restipulations, in which the questions had to be resolved (1) whether the interdict or injunction was justified, (2) whether there had been breach of it, and, (3) if so, what damages were due in consequence. The procedure therefore was often anything but summary.

Interdicta.

Possessory interdicts uti possidetis and *utrubi* in particular it was extremely involved, due to some extent to the fact that they were double interdicts (*interdicta duplicia*), *i.e.* addressed indifferently to both parties. Gaius says, but, as most modern writers think, erroneously, that they had been devised exclusively to a litigation about ownership, and for the purpose of deciding which of the parties, as possessor, was to have the advantage of standing on the defensive in the *rei vindicatio*.[4] That they were so used in his time, as late as that of Justinian, cannot be doubted; but it is amazing that they should have been, for they were much more cumbrous than the *vindicatio* to which they led up. Take the interdict *uti possidetis*, which applied to immovables, as *utrubi* did to moveables. Both were prohibitory. The praetor addressed them to this effect: "I forbid that one of you two who does not possess the house in question to use force in order to prevent the other who is in possession, provided he is so neither by clandestine or violent exclusion of the first, nor in virtue of a grant from him during pleasure, from continuing to possess as at present." It is manifest that this decided nothing; it was no more than a prohibition of disturbance of the *status quo*; it left the question entirely open which of the parties that was in possession, and which that was forbidden to interfere. The manner of its explication was somewhat singular. Each of the parties was bound at once to commit what in the case of one of them must have been a breach of the interdict, by a species of violence offered to the other (*vis ex conventu*);[5] each of them was thus in a position to say to the other: "We have both used force; but it was you alone that did it in defiance of the interdict, for it is I that am in possession." The interim enjoyment of the house was then awarded to the highest bidder, who gave his stipulatory promise to pay rent to his adversary in the event of the latter being successful in the long-run; penal sponsions and restipulations were entered into upon the question which of them had committed a breach of the interdict; and on these, four in number, *formulae* were adjusted and sent to a *judex* for trial. If the procedure could not thus be explicated, because only one of the parties declined to take part in the *vis ex conventu*, or the bidding, or the sponsions and restipulations, he was assumed to be in the wrong, and, by what was called a secondary interdict, required to yield up his possession or detention and to abstain from disturbing the other in the meantime.[6] Whatever we may think of the action system of the Romans in the period of the classical jurisprudence, one cannot help wondering at a

[1] See Keller-Wach, *Civilprocess*, § 81; Bethmann-Hollweg, *Röm. Civilprocess*, vol. ii. § 122; Bekker, *Aktionen*, vol. ii. chap. 23; Baron, *Gesch. d. röm. Rechts*, vol. i. § 220.

[2] Keller-Wach, *Röm. Civilprocess*, §§ 74-80; Bethmann-Hollweg, *Röm. Civilprocess*, vol. ii. §§ 98, 119-121; Bekker, *Akt.* vol. ii. chaps. 16-18; Baron, vol. i. §§ 216-219. Procedure in these cases is also sometimes included under the term *cognitio extraordinaria*.

[3] In addition to the authorities in last note, see K. A. Schmidt, *Das Interdiktenverfahren d. Röm. in geschichtl. Entwickelung* (Leipzig, 1853); Machélard, *Théorie des interdits en droit romain* (Paris, 1864); Gariis, *Röm. Besitzschutz*, Ubelohde, *Die Interdicte d. röm Rechts*, 1889-96 (in Glück's *Pandecten Serie d. Bücher*, 43 and 44); Jobbé-Duval, *La Procédure civile chez les Romains* (1896), i. pp. 207 seq.

[4] If that had been their original purpose, they must have been unknown as long as a *rei vindicatio* proceeded *per sacramentum*; for in the sacramental real action both parties vindicated, and both consequently were at once plaintiffs and defendants.

[5] So Gaius calls it; it was probably the same thing as the *vis moribus facta* referred to by Cicero, *Pro Caec.* 1, § 2, 8, § 22.

procedure so cumbrous and complex as that of their possessory interdicts.

2. A praetorian stipulation[1] was a stipulatory engagement imposed upon a man by a magistrate or judge, in order to secure a third party from the chance of loss or prejudice through some act or omission either of him from whom the engagement was exacted or of some other person for whom he was responsible. Although called praetorian, because the form in which such stipulations were exigible were set forth in the Edict, there can be no question that they originated in the *jus civile*; in fact, they were just a means of assuring to a man in advance the benefit of an action of the *jus civile* whereby he might obtain reparation for any injury suffered by him through the occurrence of the act or omission contemplated as possible. They were enforced nearly always by granting or refusing an action or by *missio in possessionem*. Ulpian classifies them (rather illogically) as *cautionales*), judicial and common. The first were purely precautionary, and quite independent of any action already in dependence between the party moving the magistrate to exact the stipulation and him on whom it was desired to impose it. There were many varieties of them, connected with all branches of the law—for example, the *cautio damni infecti*, security against damage to a man's property in consequence, say, of the ruinous condition of his neighbour's house, the *cautio fructuaria* that property usufructed should revert unimpaired to the owner on the expiry of the usufructuary's life interest, the aedilian stipulation against faults in a thing sold, and so forth. In all these cases the stipulation or *cautio* was a guarantee against future loss or injury, usually corroborated by sureties, and made effectual by an action on the stipulation in the event of loss or injury resulting. Judicial stipulations, according to Ulpian's classification, were those imposed by a judge in the course and with reference to an action in dependence between him, as, for example, the *cautio judicatum solvi* (that the defendant would satisfy the judgment), the *cautio de dolo* (that a thing claimed in the action would not be fraudulently impaired in the meantime) and many others. Common to them all was that either he imposed by a magistrate apart from any depending action or by a judge in the course of one, such as that taken from a tutor or curator for the faithful administration of his office, or from a procurator that his principal would ratify what he did.

Praetorian stipulations.

3. *Missio in possessionem* was the putting of a person in possession provisionally in the first instance, either of the whole estate of another (*missio in bona*) or of particular things belonging to him (*missio in rem*). The former was by far the more important. It was resorted to as a means of execution not only against a judgment-debtor but also against a man who fraudulently kept out of the way and avoided summonses to an action, or who, having been duly summoned, would not do what was expected on the part of a defendant; against the estate of a person deceased to which no heir would enter, thus leaving creditors without a debtor from whom they could enforce payment of their claims; and also against the estate that had belonged to a person who had undergone *capitis deminutio*, if the family head to whom he had subjected himself refused to be responsible for his debts. *Missio in rem* was granted, for example, to a man refused to give *cautio damni infecti*; the applicant was then put in possession of the ruinous property for his own protection.

Missio in possessionem.

4. *In integrum restitutio*,[2] reinstatement of an individual, on grounds of equity, in the position which he occupied before some occurrence which had resulted to his prejudice and for which no other legal remedy existed was one of the most remarkable manifestations of the exercise of magisterial *imperium*. It was not that the individual in question directly by action or indirectly by exception, obtained a judgment that either rendered what had happened comparatively harmless or gave him compensation in damages for the loss he had sustained from it, but that the magistrate—and it could only be the praetor, the urban or praetorian prefect, a provincial governor or the emperor himself—at his own hand pronounced a decree that as far as possible restored the *status quo ante*. It was not enough, however, to entitle a man to this extraordinary relief, that he could show that he had been taken advantage of to his hurt, and that no other adequate means of redress was open to him; he required in addition to be able to found on some subjective ground of restitution, such as minority, or, if he was of full age, intimidation which could not be resisted, mistake of fact, fraud, absence or the like. It required also to be applied for within a limited period—originally an *annus utilis*, but under Justinian a *quadriennium*—counting from the time the party was in a position to make the application. What should be held to amount to a sufficient ground of restitution, either objective or subjective, was at first left very much to the discretion of the magistrate; but even here practice and jurisprudence in time fixed the lines within which he ought to confine himself, and made the principles of *in integrum restitutio* as well settled almost as those of the *actio quod metus causa* or the *actio de dolo*.

In integrum restitutio.

V. The Period of Codification (Diocletian to Justinian.)

i. *Historical Events that Influenced the Law.*

Supremacy of the Emperors as Sole Legislators.—From the time of Diocletian onwards the making of the law was exclusively in the hands of the emperors. The senate still existed, but shorn of all its old functions alike of government and legislation.[3] The responses of patented jurists were a thing of the past. It was to the imperial consistory alone that men looked for interpretation of old law or promulgation of new.

Emperors sole legislators.

In the reign of Diocletian rescripts were still abundant; but the constitutions in the Theodosian and Justinianian Codes from the time of Constantine downwards are mostly of a wider scope, and of the class known as general or edictal laws (*leges generales edictales*). It would be wrong, however, to infer that rescripts had ceased; for Justinian's Code contains various regulations as to their form, and the matter is dealt with again in one of his Novels. The reason why so few are preserved is that they were no longer authoritative except for the parties to whom they were addressed. This was expressly declared by the emperors Arcadius and Honorius in 398 in reference to those they issued in answer to applications for advice from officials; and it is not unreasonable to assume that a limitation of the same sort had been put at an earlier date on the authority of those addressed to private parties. There is of opinion that the enactment of Honorius and Arcadius applied equally to *decreta*, for the reason that during this period matters of litigation did not come under the cognisance of the emperors except on appeal, and that under the new arrangements of Constantine the judgment of affirmance or reversal was embodied in a rescript addressed to the magistrate from whom the appeal had been taken. The rule of Arcadius and Honorius was renewed in 425 by Theodosius and Valentinian, who qualified it, however, to this extent—that, if it contained any distinct indication that the doctrine it laid down was meant to be of general application, then it was to be received as an edict or *lex generalis*. To this Justinian adhered in so far as rescripts in the old sense of the word were concerned; but he declared that his judgments (*decreta*) should be received everywhere as laws of general application, and so should any interpretation given by him of a *lex generalis*, even though elicited by the petition of a private party. The imperial edicts, adjusted in the consistory, were usually addressed to the people, the senate or some official, civil, military or ecclesiastical, according to the nature of their subject-matter.

Influence of Christianity.—A disposition has sometimes been manifested to credit nascent Christianity with the humaner spirit which began to operate on some of the institutions of the law in the first century of the Empire, but which in a previous section we have ascribed to the infiltration into the *jus civile* of doctrines of the *jus naturale*, the product of the philosophy of the Stoa. The teaching of Seneca did quite as much—nay, far more—to influence it then than the lessons that were taught in the little assemblies of the early converts. It would be a bold thing to say that, had Christianity never gained its predominance, that spirit of natural right would not have continued to animate the course of legislation, and to evolve, as years progressed, most of those amendments in the law of the family and the law of succession that were amongst the most valuable contributions of the imperial constitutions to the private law. It may well be that that spirit was intensified and rendered more active with the growth of Christian belief; but not until the latter had been publicly sanctioned by Constantine, and more especially after Theodosius declared it to be the religion of the state, do we meet with incontestable records of its influence. We find it, in certain cases in favour of the church and its property, and of its privileges as a legatee; in those conferring or imposing on the bishops a supervision of charities and charitable institutions, and a power of interference in matters of spousal and in the legitimation *per subsequens matrimonium* of children born of concubines; in the introduction of a mode of manumitting slaves *in facie ecclesiae*; and

Christianity—Its influence.

[3] There was a senate both at Constantinople and at Rome during the later Empire. In his History, Zosimus, iii. 11, says: [Τοιαῦτα] ἔδοκει μὲν τῇ πόλει [Κωνσταντινουπόλει] γερουσίαν ἔχειν ὁστερ τῇ Ρώμῃ. Both senates were addressed by the emperors on matters of legislation. See *Cod.* Theod. vi. 2.

[4] See Troplong, *De l'influence du christianisme sur le droit civil des Romains* (Paris, 1843, and subsequently); Merivale, *The Conversion of the Roman Empire* (Boyle Lectures for 1864) (London, 1864), particularly lect. iv.; Allard, *Le Christianisme et l'empire romain* (2nd ed., Paris, 1897).

in the recognition of the efficacy of certain acts done in presence of two or three of the clergy and thereafter recorded in the church registers; in the disabilities as to marriage and succession with which heretics and apostates were visited, and in a variety of minor matters. Of greater importance were three features for which it was directly responsible—the repeal of the caduciary provisions of the Papia-Poppaean law, the penalties imposed upon divorce, and the institution of the *episcopalis audientia*.

The purpose of the caduciary law was to discourage celibacy and encourage fruitful marriages; but legislation in such a spirit could not possibly be maintained when celibacy had come to be inculcated as a virtue, and as the peculiar characteristic of a holy life. The penalties alike of *orbitas* and *coelibatus* were abolished by Constantine in the year 320. The legislation about divorce, from the first of Constantine's enactments on the subject down to those of Justinian, forms a miserable chapter in the history of the law. The first of the emperors who busied himself with the matter, undoing the ill-advised work of his predecessors and substituting legislation of his own quite as complicated and futile, thought of interfering with the old principle that divorce ought to be as free as marriage and independent of the sanction or decree of a judicial tribunal. Justinian was the first who, by one of his Novels, imposed a condition on parties to a divorce of common accord (*communi consensu*), namely, that they should both enter a convent where they should be nuli; but, so distasteful was this to popular feeling, and so little conducive to improvement of the tone of morals within the conventual precincts, that it was repealed by his successor. The legislation of Justinian's predecessors and the bulk of his own Novellæ laid down practical repudiations, imposing penalties, personal and patrimonial (1) upon the author of a repudiation on some ground the law did not recognize as sufficient—and the lawful grounds varied almost from reign to reign—and (2) upon the party who abandoned a spouse prior to a repudiation that was justifiable. The bishop's court (*episcopale judicium, episcopalis audientia*) had its origin in the practice of the primitive Christians, in accordance with the apostolic precept, of submitting their differences one with another to the decision of men of faith, usually a presbyter or bishop, who acted as arbiter. On the state recognition of Christianity the practice obtained legislative sanction. Constantine giving the bishop's court concurrent jurisdiction with the ordinary civil courts, both parties having chosen the former, and by a later enactment (whose authenticity, however, is open to some doubt) going so far as to empower one of the parties to a suit to remove it to the ecclesiastical tribunal against the will of the other. He also declared that the judgments were to be enforced by the civil courts.[1] For various reasons, advantage was taken of this power of resorting to the bishop to an extent which seriously interfered with the proper discharge of the ordinary functions, so that in 398 Arcadius in the Eastern Empire judged it expedient to revert to Constantine's original rule, and, at least as regarded laymen, to limit the right of resort to the episcopal judicatory to cases in which both parties consented. The same thing was done by Valentinian in the Western Empire in 452. It is impossible to say with any approach to exactitude what effect this intervention of the clergy as judges in ordinary civil causes—for they had no proper jurisdiction—had on the administration of the law. But it can hardly have been without some influence in still further promoting the tendency to subordinate act and word to will and intention, to deal leniently with technicalities, and to ignore the rules of the *jus civile* with equity and considerations of natural right.

Abandonment of the Formular System of Procedure.[2]—The formular system, with its remit from the praetor to a sworn *judex* who was to try the case, was of infinite advantage to the law; for the judgment was as a rule that of a free and independent citizen, untrammelled by officialism, fresh from some centre of business, chosen by, and in full sympathy with, the parties between whom he had to decide. Such a system was incompatible with the autocratic government of Diocletian and Constantine; and it is with no surprise that we find the former of these sovereigns instructing the provincial governors that in future, unless when prevented by the imperial constitutions, or (save for a later constitution of Julian's, when the matter was of trifling importance), they were not to remit them but were themselves to hear the causes brought before them from first to last, as had previously been the practice in the *extraordinariae cognitiones*. That a remit in the excepted cases was not, as formerly, to a private citizen, but to what was called a *judex pedaneus*, who acted as an inferior substitute of the magistrate and was probably a matriculated member of the local bar; and for a time his delegated authority was embodied in a *formula* after the old fashion. But even this exceptional use of it did not long survive, for an enactment by the two sons of Constantine, conceived in terms the most comprehensive, declared fixed styles to be but traps for the unwary, and forbade their use in any legal act whatever, whether contentious or voluntary. The result was, not only the formal disappearance of the distinction between the proceedings *in jure* and *in judicio* (*judicium* receiving a more extensive meaning) but the practical (though not formal) disappearance also of the distinctions between actions *in jus* and *in factum*, and between *actiones directae* and *actiones utiles*, the conversion of the interdict into an *actio ex interdicto*, admission of the possibility of amendment of the pleadings, condemnation in the specific thing claimed, if in existence, instead of its pecuniary equivalent, and execution accordingly by the aid of officers of the law.

New methods of procedure.

Under the new system a process was full from first to last intervention by officials. The *jus vocandi* in the XII. Tables —the procedure by which a plaintiff himself brought his adversary into court—became a thing of the past. So also did the *vadimonium*. In the earlier part of the period the proceedings commenced with the *litis denuntiatio* introduced in the time of Marcus Aurelius and remodelled by Constantine; but under Justinian (though probably begun before his reign) the initial step was what was called the *libellus conventionis*. This was a short and precise written statement addressed by the plaintiff to the court, explaining (but without detail) the nature of the action he proposed to raise and the claim he was making, which was accompanied by a formal undertaking to proceed with the cause and follow it out to judgment, payment of the penalty of loss and double costs to the defendant if the judge was satisfied of the relevancy of the libel, he pronounced an interlocutor (*interlocutio*) ordaining its service on the respondent; this was done by an officer of the court, who cited him to appear on a day named, usually at a distance not more than two months. The defendant, through the officer, had to put in an answer (*libellus contradictionis*), at the same time giving security for the proper maintenance of the defence and eventual satisfaction of the judgment. Failing this, the defendant was debarred three days after the case was heard and decree given in his absence. On the day appointed the parties or their procurators were first heard on any dilatory pleas, such as defect of jurisdiction; if none were offered, or these stated repelled, the parties proceeded to expound their respective grounds of action and defence, each finally making oath of his good faith in the matter (*juramentum calumniae*), and their counsel doing the same.

From this point, which marked the *litis contestatio* or joinder of issue, the procedure was much the same as that *in judicio* under the formular system. Evidence was taken and judgment given. But in all cases in which the thing claimed was that a particular thing should be given or restored, and the plaintiff desired to have the thing itself rather than damages, execution might be specific and effected through officers of the law (*manu militari*). Where, on the other hand, the condemnation was in money, as was the usual course, where performance was not made, was for the judge, through his officers, to take possession of such things belonging to the defendant as were thought sufficient to satisfy the judgment (*pignus in causa judicati captum*), and these eventually sold publicly if the defendant still refused to pay; the *missio in bona* of the classical period was not resorted to except in the case of insolvency.

Valentinian's law of citations.

The Valentinian Law of Citations.[3]—This famous enactment, the production of Theodosius (II.), tutor of the youthful Valentinian III., was issued from Ravenna in the year 426, and was addressed to the Roman senate. It ran thus:—

"We accord our approval of all the writings of Papinian, Paul, Gaius, Ulpian and Modestine, conceding to Gaius the same authority that is enjoyed by Paul, Ulpian and the rest, and sanctioning the citation of all his works. We ratify also the jurisprudence (*scientia*) of those earlier writers whose treatises and statements of the law that one shall prevail which is reported into their own works,—Scaevola, for example, and Sabinus, and Julian, and Marcellus,—and of all others whom they have been in the habit of quoting as authorities (*omnisumque quos illi celebrarunt*), provided always, of course, that the manuscripts which contain that the texts of those earlier jurists are verified by collation of manuscripts.[4] If divergent *dicta* be adduced, that party shall prevail who has the greatest number of authorities on his side; if the number on each side be the same, that one shall prevail which has the support of Papinian; but, whilst he, most excellent of them all, is to be preferred to any other single authority, he must yield to any two. (Paul's and Ulpian's notes on his writings, however, as already enacted, are to be disregarded.) Where opinions are equal, and none entitled to preference, we leave it to the discretion of the judge which he shall adopt."

[1] The truth of this as well as the previous rule depends on the authenticity of a Sirmondian constitution. See Cuq, *Inst. Jurid.* ii. p. 868.

(1867), pp. 161 seq., 329 seq.; Wieding, in same journal, vol. xi. (1870), pp. 228 seq.; Bekker, *Aktionen*, vol. ii. chaps. 23, 24; Cuq, *Inst. Jurid.* 2nd ed. ii. pp. 875 seq.

[3] *Theod. Cod.* i. 4, 3; Puchta, in the *Rhein, Museum f. Jurisprud.* vol. v. (1832), pp. 141 seq., and *Verm. Schriften* (Leipzig, 1851), p. 284 seq.; Karlowa, *Röm. Rechtsgesch.* vol. i. pp. 933 seq.; Sohm, *Inst.* § 21, nn. 1 and 2, and authorities there cited.

[4] There is, however, a good deal of doubt as to what is meant by the words *collatione codicum* in this Edict. See Sohm as in preceding note, and authorities cited by him.

This constitution has always been regarded as a signal proof of the lamentable condition into which jurisprudence had sunk in the beginning of the 5th century. Constantine, a hundred years earlier, had condemned the notes of Ulpian and Paul upon Papinian. There were no longer any living jurists to lay down the law (*jura condere*); and, if it was to be gathered from the writings of those who were dead, it was perhaps as well that the use of them should be regulated. The Valentinian law proceeded so far in the same direction. It decide a selection of the jurisconsults of the past whose works alone were to be allowed to be cited,—Papinian, Paul, Ulpian and Modestine, the four latest patented counsel of any distinction; Gaius, of authority previously only in the schools, but whose writings were now approved universally, notwithstanding that he had never possessed the *jus respondendi*; and all the earlier jurists whose dicta these five had accepted. But it went yet a step further, for it declared all of them, with the exception of Papinian, to be of the same authority, and degraded the function of the judge in most cases—so far at least as a question of law was concerned—to the purely arithmetical task of counting up the names which the industry of the advocates on either side had succeeded in adducing in support of these respective contentions. It is probable that, from the days of Hadrian down to Severus Alexander, when the emperor in his council had to frame a rescript or a decree, its tenor would be decided by the vote of the majority; but there was after argument and counter-argument, which must in many cases have modified first impressions. Taking the votes of dead men, who had not heard each other's reasons for their opinions, was a very different process. It may have been necessary at the time; but it was only because a living jurisprudence had no existence,—because the constructive talent of the earlier Empire had entirely disappeared.

ii. *Ante-Justinian Collections of Statutes and Jurisprudence.*

Codification of statutes.

Of cardinal importance for this period were the collections of imperial constitutions made prior to Justinian. There were three of these, viz. the Gregorian, the Hermogenian and the Theodosian. The first two being the work of private hands, though they afterwards received statutory sanction from Theodosius II., the third being due to that emperor himself.

Gregorian Code.

Codex Gregorianus.—This was a collection of imperial constitutions from Hadrian to Diocletian, made by a certain Gregorius about the end of the 3rd century (*a.* 295?), who, in Mommsen's opinion[1] was at that time a professor at the law school of Beirut.

Hermogenian Code.

Only fragments of it have come down to us, which are found chiefly from Alaric's Breviary, the *Lex Romana Burgundionum*, the *Consultatio*, the *Collatio* and the Vatican Fragments mentioned below; but it was a work of considerable size, divided into books and titles.

Codex Hermogenianus.—This, like the Gregorian, was published in the Eastern Empire, apparently at the end of the 3rd century, but at any rate not later than the year 324. As, however, it contains a constitution of the year 365 there must have been subsequent additions. Only fragmentary notices of it are extant, obtained from the same sources as the Gregorian. Its author was a certain Hermogenianus (perhaps the jurist of that name cited in the Digest), and the work seems to have been intended as a sort of supplement to the Gregorian Code. It was a smaller work than the latter, being divided only into titles, and, unlike it, contains no pre-Diocletian constitutions. It has, however, a great number of contemporaneous ones, issued by Diocletian especially during the years 293 and 294. It was from this work and that of Gregorius that Justinian obtained the constitutions contained in his Code for the period prior to Constantine, and from the language he has used about his Code it would seem that they had been regarded in the courts before his time as the only authoritative record of constitutions during the period covered by them.

Theodosian Code.

Codex Theodosianus.—In the year 429 the emperor Theodosius nominated a commission of nine persons to collect the constitutions issued by the emperors from Constantine to his own reign. From the terms of the edict appointing them he seems to have intended to initiate the preparation of a body of law which, if his scheme had been carried into execution, would have rendered that of Justinian unnecessary. In a constitution about ten years later he explains the motives that had actuated him: that he saw with concern the poverty-stricken state of jurisprudence and how few men there were who, notwithstanding the prizes that awaited them, were able to make themselves familiar with the whole range of law; and that he attributed it very much to the multitude of books and the large mass of statutes through which the law was dispersed, and which it was next to impossible for any ordinary mortal to master. His scheme was eventually to compile one single code from materials derived alike from the writings of the jurists, the Gregorian and Hermogenian collections of rescripts, and the constitutions from the time of Constantine downwards. His language leaves little doubt that it was his intention to have this general code carefully prepared, so as to make it a complete exponent of the existing law, which should take the place of everything, statutory or jurisprudential, of an earlier date. The collection of constitutions which he directed his commissioners meantime to prepare, and which they did accomplish even those that were merely of historical interest (provided only it was made clear how later enactments had affected them), was to be the first step in the execution of his project. For some reason or other nothing followed upon this enactment, and in 435 a second commission of sixteen persons was nominated to collect the constitutions, but nothing was said in their instructions about anything ulterior. They were directed, however, to deal with their material in a systematic way, as by arranging the constitutions chronologically under definite titles, separating, where necessary, any constitutions dealing with more than one matter into parts, so as to bring each matter under its proper title, and with power otherwise to make such omissions, additions and alterations as seemed good to them for the same object. Their work was completed in less than three years and published at Constantinople early in the year 438, with the declaration that it should take effect from the 1st of January following, and a copy was sent to Valentinian, who published it in the senate at Rome and declared that it should come into force in the West from the 12th of January 439. The arrangement is in sixteen books, subdivided into titles with rubrics in which the constitutions are as a rule (though not consistently) placed in chronological order. They cover the whole field of law, private and public, civil and criminal, fiscal and administrative, military and ecclesiastical. The private law is contained in the first five books. This code was usually called in later documents "Theodosianus," without *codex* adjectives. All constitutions since Constantine not contained in it were abrogated. The manuscripts in which it has come down to us are very defective, but many lacunae have been filled up from other sources, especially from Alaric's Breviary. Unfortunately the lacunae are principally in the books relating to the private law.[2]

Post-Theodosian Novels.

Novellae Post-Theodosianae.—The imperial constitutions subsequent to the publication of the *Theodosianus* got the name of Novels or *Novellae* (*sc.* *leges*). There were three collections of these, all made in the Western Empire, and they are generally known as post-Theodosian Novels. The first collection containing edicts of Theodosius himself, sent by him to Valentinian III. in 447, was published by the latter emperor in the following year. The second collection contained in addition to edicts of Theodosius some edicts of Marcian and other emperors of the East, and also some of Valentinian, Maiorian and other emperors of the West. The third collection was published in abridged form in Alaric's Breviary. These collections are not extant, but from Alaric's Breviary, with additions from manuscript sources, modern editions of the Novels have been prepared.[3] There are also in existence collections of constitutions, issued between the years 331 and 425, nearly all relating to church matters, first published by T. Sirmondus in 1631, and now known as the Sirmondian Constitutions.[4]

Jurisprudential collections.

Besides the collections of statutes already mentioned there were a number of juristic works of this period, containing both statute law (*leges*) and common law (*jus*) in combination, made by private individuals. Of these the following, which has come down to us in a more or less imperfect condition, are the most important:—

Collatio.

The *Collatio Legum Mosaicarum et Romanarum*[5]—or, as its title bears, *Lex Dei quam praecipit Dominus ad Moysen*—is a parallel of divine and human law, especially in the matter of delicts and punishments, the former drawn from the Pentateuch, and the latter from the works of Gaius, Papinian, Paul, Ulpian, and

[1] Mommsen suggests (*Z. d. Sav. Stift.*, 1889, x. pp. 345 seq.) that the name *codex* (meaning a volume) was given to them because, instead of being written on papyrus rolls, they were originally written in the form of *tabulae publicae* and bound together as a parchment volume. Private collections of Constitutions had been made even earlier than Gregorian (*e.g.* by Papirius Justus).

[2] *Z. d. Sav. Stift.* xxii. pp. 139 seq.

[3] Mommsen, *Z. d. Sav. Stift.* (1889), x. pp. 347 seq.; Kipp, *Gesch. d. Quellen*, pp. 78–79. The fragments of both this and the Gregorian Code, edited by Krüger, are given in the *Collectio Juris Antej.* by K. M. and S., vol. iii. pp. 236–245.

[4] There have been several editions of the Theodosian Code. That of J. Gothofredus, published after his death in 1653 (ed. with additions by Ritter in 7 vols., Leipzig, 1736–41), is a work of monumental learning and still indispensable on account of its commentary. But the latest and best edition is that of Mommsen, being the last work from the pen of that great master. It has been published at Berlin in 1905 under the title, *Theodosiani libri xvi. cum constitutionibus Sirmondianis et leges novellae ad Theodosianum pertinentes ediderunt Th. Mommsen et Paulus M. Meyer: I. Theodosiani libri xvi. cum constitutibus Sirmondianis edidit, adsumpto apparatu P. Krueger, Th. Mommsen* (1905).

[5] These Novels, so far as preserved, have been published as a second part of Mommsen's edition of the Theodosian Code. *II. Leges ad Theodosianum pertinentes edidit adjutore Th. Mommseno Paulus M. Meyer* (1905).

[6] These are contained in the Mommsen-Meyer edition of the *Theodosianus*.

[7] *Collectio Juris Anlejustiniani*, by Krüger and Mommsen, iii. pp. 107 seq.; Girard, *Textes*, pp. 543 seq.; Krüger, *Quellen*, pp. 302 seq.

Modestine, rescripts from the Gregorian and Hermogenian Codes, and one later general enactment. Its date is probably soon after the year 390, but its authorship is unknown.[1]

Vatican fragments.

Fragmenta Vaticana.[2]—These fragments, discovered by Cardinal Angelo Mai in a palimpsest in the Vatican in 1821, seem to have formed part of a book of practice, compiled in the Western Empire and of considerable dimensions. The extant fragments of the Title in which it was dealt with treat of sale, usufruct, dowries, donations, tutories and processional agency, and have been extracted from the writings of Papinian, Paul the Ulpian, an unknown work on interdicts, and the imperial constitutions prior to Theodosius, the latest of which is of the year 372. Its antiquity is therefore probably about the same as that of the *Collatio*.[3]

Consultatio.

The Consultatio.[4]—The so-called *Veteris cujusdam Jurisconsulti Consultatio* was first published in 1577 by Cujas, from whom it gets its name. It is a collection of answers by an advocate, supported by citations of texts (*consultationes*) upon questions of law submitted for his opinion by a solicitor, and is of value for the extracts it contains from Paul's Sentences and the three above-mentioned codes. It is thought to have been written in Gaul in the end of the 5th or beginning of the 6th century.

Syro-Roman Law-Book.

Syro-Roman Law-Book.—This was a sort of manual of Roman law drawn up in the East, apparently in the Greek language, at an uncertain date, but some time between Theodosius and Justinian. Translations of it into Syriac, Arabic and Armenian have come down to us, and it would seem that the work in these translations was greatly made use of in legal practice in the East (especially in the ecclesiastical Courts) for several centuries, having in some places more authority attached to it than had the Digest and Code of Justinian. As a specimen of Roman law it is of little value, as it misunderstands or varies from that law in many respects, but it is of importance as showing how firmly Hellenic law and customs maintained themselves in the East during the decay of the Roman Empire.

Light has also been thrown upon the ante-Justinian law by the numerous papyri documents, mostly in Greek, that have been in recent years recovered in Egypt (especially by Grenfell and Hunt) and elsewhere.[5] Mitteis, Girard and others have done much to elucidate these, by numerous publications. But to give anything like a consecutive account of them would occupy much space and cannot be attempted here.[6]

Romano-Barbarian Codes.

Romano-Barbarian Codes (Leges Romanae).[7]—Besides the collections of statutes and juristic law mentioned in this section, there were several official collections made prior to Justinian in Western Europe, after it had fallen under the dominion of Gothic and other chiefs. There are three of these which require special notice—each of them compiled from documentary sources of ante-Justinian law. Though of considerable use in explicating difficulties and filling up lacunae in the earlier law sources, they must be used with caution for that purpose, as they contain not a few corruptions of the original texts. They are:—

Edict of Theoderic.

1. *Edictum Theoderici.*[8]—This was compiled at the instance of Theoderic, king of the Ostrogoths, not long after the year 500 (not later than 511 A.D.). Theoderic after he had conquered Italy desired to be representative of the emperor and always acknowledged his suzerainty. He did not aim at being an independent legislator, and his Edict is therefore of limited scope and in no proper sense a code. Its materials were mainly drawn, without however indication given, from the writings of Paul, the Gregorian, Hermogenian and Theodosian Codes, and the post-Theodosian Novels. Divided into 155 chapters, with no systematic arrangement, it touches upon all branches of the law, public and private, but especially criminal law and procedure. Though it contains a certain infusion of Gothic law and was professedly intended to apply to all Theoderic's subjects, both Goths and Romans, it seems nevertheless generally admitted that this idea cannot have been fully realized, and that in some matters with which it deals, *e.g.* the law of the family, Gothic customs must still have continued to prevail for Gothic subjects.

West Gothic Code.

2 The *Lex Romana Wisigothorum* or *Breviarium Alarici* or *Alaricianum*[11] (both of these titles are modern) was a much more ambitious and important collection than the one last mentioned, though less original. It was compiled by a commission appointed by Alaric II., king of the Western Goths, with approval of the bishops and nobles, and published at Aire in Gascony in the year 506. The compilers selected their material partly from the *leges* (imperial constitutions after Diocletian) and partly from the *vetus jus* (juristic law), taking what they considered appropriate, without materially altering the text of their authorities except in the way of excision of passages that were obsolete or superseded. For the *leges* they utilized some 400 of the 3400 enactments (according to Haenel's estimate) of the Theodosian Code and about 30 of the Post-Theodosian Novels; for the *jus* they made use of Paul's Sentences, Gaius's Institutes (in a corrupt form) and Papinian's Responses (abridged from books already known, and adapted to the law of, the 5th century), the first book of Papinian's Responses (a single *responsum*), and the Gregorian and Hermogenian Collections (which were treated as *jus*). All of these, except Gaius (for the reason mentioned), were accompanied by *interpretationes* (*i.e.* for the most part explanatory adaptations of the passages to the existing practice) which were largely borrowed from books in current use for purposes of instruction, and which resemble the interpretation of the Tit. Tubles in that they are often not much explanatory of the text as qualificative or corrective. The Breviary exercised great influence in western Europe; and there is no question that, until the rise of the Bologna school in the end of the 11th century, it was from it more than from the Code of Justinian that western Europe, other than Italy, acquired its scanty knowledge of Roman law.

The Burgundian Code.

3. The *Lex Romana Burgundionum*[12]—to which erroneously, after the 9th century, owing to a mistake of a MS. transcriber, the name *Papianus* (a contraction of *Papinianus*) was given. It is a collection which King Gundobad, when publishing his code of native law (*Lex Gundobada*) for his native subjects, had promulgated as competent for the use of his Roman subjects. It was published probably before his death in 516. It deals with private law, criminal law and procedure, distributed through forty-seven titles, and is arranged much in the same order as the Breviary, from which it has a few extracts. Its statutory Roman sources are the same as those of the Breviary; its juristic sources are Paul's Sentences and a work of Gaius of which we cannot say with certainty that it is his Institutes. It also contains some *interpretationes* of the same character as those in the Breviary, but whether taken directly from the latter or not is disputed. After the conquest of the Burgundian kingdom by the Franks his code ceased to have any distinct authority, but was used in the courts as a sort of supplement to the Breviary, being often bound in the same volume with the latter.

Justinian's codification.

iii. *Justinian's Legislation.*

Justinian's Collections and his own Legislation.—The history of Justinian outside his legislative achievements, and his collections in detail, are dealt with in the article JUSTINIAN I. Ambitious to carry out a reform more complete even than that which Theodosius had planned but failed to execute, he took the first step towards it little more than six months after the death of his uncle Justin, in the appointment of a commission to prepare a collection of statute law (*leges*), among which he included the rescripts of the Gregorian and Hermogenian Codes, which were commonly at this period described as *jus*. It was published in April 529; and in rapid succession there followed his Fifty Decisions

[1] For opinions as to its author, see Girard, *l.c.* p. 543. He must have been an ecclesiastic.

[2] *Collatio Jur. Antej.* iii. pp. 1 seq. (ed. Mommsen); Karlowa, *Röm. R.G.* i. pp. 969 seq.; Krüger, *Quellen*, pp. 298–302.

[3] Mommsen, however (*Collectio*, iii. p. 11), thinks it was compiled about the time of Constantine.

(529–531), his Institutes[1] (November 21, 533), his Digest of excerpts from the writings of the jurists (December 16, 533),[2] and the revised edition of his Code, in which he incorporated his own legislation down to date (November 16, 534).[3] From that time down to his death in 565 there followed a series of Novels (*novellae constitutiones*), mostly in Greek, which were never officially collected, and of which probably some have been lost.[4]

His own enactments.

Taking his enactments in the Code and his Novels together, we have of Justinian's own legislation not far short of 600 constitutions. Diocletian's contributions to the Code are more than twice as numerous; but most of them professed to be nothing more than short declaratory statements of pre-existing law, whereas Justinian's, apart from his Fifty Decisions, were mostly reformatory enactments, many of those in the Novels as long as an average act of parliament, and often dealing with diverse matters under the same rubric. They cover the whole field of law, public and private, civil and criminal, secular and ecclesiastical. It cannot be said that they afford pleasant reading: they are so disfigured by redundancy of language, involved periods and nauseous self-glorification. But it cannot be denied that many of those which deal with the private law embody reforms of great moment and of most salutary tendency. The emperor sometimes loved to pose as the champion of the simplicity and even-handedness of the early law, at others to denounce it for its subtleties; sometimes he allowed himself to be influenced by his own extreme asceticism, and now and again we detect traces of subservience to the imperious will of his consort; but in the main his legislation was dictated by what he was pleased to call *humanitas* so far as the law of persons was concerned, and by *naturalis ratio* and public utility so far as concerned that of things. The result was the eradication of almost every trace of the old *jus Quiritium*, and the substitution for it, under the name of *jus Romanum*, of that cosmopolitan body of law which has contributed so largely to almost every modern system.

Law of family relations.

Changes in the Law of the Family.—With the Christian emperors, from Constantine downwards, almost the last traces disappeared of the old conception of the *familia* as an aggregate of persons and estate subject absolutely to the power and dominion of its head. *Manus*, the power in a husband over his wife and her belongings, was a thing of the past; both stood now on a footing of equality before the law; perhaps it might be more accurate to say, at least with reference to the Justinianian legislation, that the wife was the more privileged of the two in respect both of the protection and the indulgence she enjoyed there. With *manus* the old confarreation and coemption had ceased, marriage needing nothing more than simple interchange of consent, except as between persons of rank (*illustres*) or when the intention was to legalize previous issue; in the latter case a written marriage settlement (*instrumentum dotale*) was required, and in the former both such a settlement and a marriage in church before the bishop and at least three clerical witnesses, who granted and signed a certificate of the completed union. The legislation of the Christian emperors on the subject of divorce, largely contributed to by Justinian in his Novels, has already been referred to. In regard to the *dos*, many new provisions were introduced, principally for curtailing the husband's power of dealing with it after the marriage lasted, enlarging the right of the wife and her heirs in respect of it, and simplifying the means of recovering it from the husband or his heirs when the marriage was dissolved. Between the time of Constantine and that of Theodosius and Valentinian a new form of matrimonial settlement became established. It became apparently a legally sanctioned practice for a man to make (apart from ordinary marriage presents) a settlement on his intended wife either by actual transfer or by promise of a provision which was to remain his property (though without the power of alienation) during the marriage, but to pass to her on his predecease or on divorce by his fault. This got the name of *donatio ante nuptias*, or sometimes, as being a sort of countcrpart for the *dos*, *antipherna*. There was some important legislation about it by the two last-mentioned emperors, Leo and Justin followed suit; and Justinian, in his Code and Novels, published five or six enactments for its regulation. The general result was that, wherever a *dos* was given or promised on the part of the wife, there a *donatio* of equal amount was to be constituted on the part of the husband; that, if one was increased during the marriage, a corresponding increase was to be made to the other; that it might be constituted or increased after the marriage without infringing the rule prohibiting donations between husband and wife, which caused Justinian to change its name to *donatio propter nuptias*; that the wife might demand its transfer to her (to the same extent as she could that of the *dos*) on her husband's insolvency, but under obligation to apply its income to the maintenance of the family; and that on the dissolution of the marriage by her husband's death or by a divorce for which he was in fault, she had an hypothec and other ample remedies for reducing it into possession.[5]

The change in the complexion of the relations between husband and wife under the Christian emperors, however, was insignificant when compared with that which had overtaken the relation between parent and child. Justinian in his Institutes reproduces the boast of Gaius that nowhere else but in the latter such power over his children as was exercised by a Roman *paterfamilias*. True it is that the *patria potestas* in name still held a prominent place in the Justinianian collections; but it had been shorn of most of the prerogatives that had characterized it in the earlier period. To expose a newborn child was forbidden under penalties. To take the life of a grown-up one—unless it was a daughter slain with her paramour in the act of adultery—was murder; for the domestic tribunal, with the judicial power of life and death in the *paterfamilias* as its head, had long disappeared.

Further, a parent could no longer sell his child save only when the child was an infant and he in such extreme poverty as to be unable to support it. Even the right to make a noxal surrender of his son to a party who had suffered from the latter's delict had silently become obsolete; so greatly had altered sentiment, in sympathy with legislation, regarded the power of the *paterfamilias* over those in his *potestas*. This *noxae deditio* was formally abolished by Justinian. All that remained of the *patria potestas*, in short, in the Justinianian law was little more than would be sanctioned in most modern systems as natural emanations of the parental relationship.

Thus he had right of moderate chastisement for offences (for the infliction of graver punishments he had to apply to the magistrate), of testamentary nomination of guardians, of pupillary substitution (enlarged by Justinian), of withholding consent from the marriage of a child, but subject in this last case to magisterial intervention if used unreasonably.

How the right of the *paterfamilias* over the earnings and acquisitions of his children was progressively recognized in the *peculium castrense* has been shown in a previous page. But the modification was carried to such an extent by the Christian emperors as finally to negative the father's ownership altogether, except as regarded acquisitions that were the outcome of funds or labour given to his child for his separate use (*peculium profecticium*). Of some of the child's acquisitions (*bona adventicia*) his father had, down to the time of Justinian, the life interest and right of administration; but by his legislation even this privilege of the *paterfamilias* was abolished, and all a child's belongings except his *peculium profecticium* were recognized as his own in death as well as in life, so that if any of them should be intestate his intestacy it should only be by title of inheritance and in the absence of descendants.

In every other branch of the law of the family the same reforming spirit was manifested. Adoption of *filiisfamilias* was no longer followed in all cases by a change of family for the adoptee, but only when either the adopter was in fact one of his ancestors in whose

[1] The best edition is that of Krüger, forming vol. ii. of the *Corpus Juris* by Mommsen, Krüger and Schoell, vol. i., and also published separately.

[2] The best edition is that of Mommsen, *Digesta Justiniani* (2 vols., Berlin, 1870), and also vol. i. of the stereotype edition of the *Corpus Juris* mentioned in preceding note. A new and handier edition, however, based on that of Mommsen, by Bonfante and several other Italian professors, is now in course of publication. Books I.–XXVIII. were published up to 1908 (Milan). A photographic facsimile of the Florentine MS. of the Digest is also in course of publication in Italy. Fascicoli I.–VI. have already (1908) appeared (Rome, 1902–7).

[3] The best edition is that of Krüger, forming vol. ii. of the *Corpus Juris* last mentioned.

[4] The best edition is that of Schoell, completed by Kroll in 1895, and forming vol. iii. of the *Corpus Juris* last mentioned. It contains the Greek texts, Latin Vulgate and a Latin translation more correct than the Vulgate.

[5] See Esmein, *Mélanges*, pp. 58–70; Mitteis, *Reichsrecht und Volksrecht in d. Östl. Provinz.*, deals with its history, pp. 256–312. Though beneficial on the whole, the regulations of Justinian on this matter rather too great an interference with the freedom of marriage settlements.

potestas he had never been, such as a paternal or maternal grandfather, when there was a natural *potestas* to underlie and justify the civil one—or when an ancestor gave in adoption a grandchild who was in his *potestas* but would not become *sui juris* by his death. The mode of strict adoption also was simplified, the old procedure by sales and manumissions, which degraded the child too much to the level of a slave, was abolished. The modes of legitimation of children born of a concubine, especially that by subsequent marriage of the parents, first introduced by Constantine, were regulated, and the extent of the rights of the legitimated issue carefully defined. Emancipation was simplified in a similar way to that of strict adoption. Tutory at law was opened to the pupil's nearest agnate, whether on the father's side or the mother's; and the mother herself, or the child's grandmother, might be allowed, under certain conditions, to act as its guardian. Slavery was often converted into the milder condition of colonate; but, even where this did not happen, the rights of owners were not allowed to be abused; for slaves were permitted to claim the protection of the magistrate, and cruelty by a master might result in his being deprived of his human property. Kinship that had arisen between two persons when one or both were slaves (*servilis cognatio*) was recognized as creative not only of disabilities but of rights. The modes of manumission were multiplied, and the restriction of the legislation of the early empire abolished; and a freedman rises at once to be a citizen, Junian Latinity and dediticiary being no longer recognized.

Amendments on the Law of Property and Obligation.—In the law of property the principal changes of the Christian Empire were the simplification of the forms of conveyance.

Law of property.

of the colonate, the introduction and regulation of emphyteusis and the remodelling of the law of prescription. Simplification of the forms of conveyance was necessary only in the case of *mancipia*, for *res mancipi* had been practically *nec mancipi*. From the Theodosian Code it is apparent that movable *res mancipi* usually passed in the same way from very early in the period, and that for the mancipation of lands and houses—for *in jure cessio* had disappeared with the formulary system—*solemnes traditiones*, or written instrument and delivery following thereon, and both before witnesses, had been gradually substituted. Of this there is no trace in the Justinianian Code. For Justinian abolished all remains of the distinction between *res mancipi* and *res nec mancipi*, between full ownership, bonitarian ownership and *nudum jus Quiritium*, placing movables and immovables on a footing of perfect equality so far as their direct conveyance was concerned. But, as regarded the possession required of an agent to confer any effect in the conveyance, he made a marked difference between immovables and movables. For, amalgamating the old positive usucaption of the *jus civile* with the negative "prolonged possession" (*longi temporis possessio*) that had been first introduced for immovables in the provinces (probably by the provincial edict), and afterwards by rescripts of Caracalla for movables,[1] he declared that possession on a sufficient title and in good faith during the future made the possessor legal owner of the thing possessed by him, provided that the possession of himself and his author had endured uninterruptedly for three years in the case of a movable, and in the case of an immovable for ten years if the agent were present in the province resident in the same province, or for twenty if he resided in another one.

The same causes that led to the colonate induced the introduction of emphyteusis,[2]—an institution which had already existed in some

Emphyteusis.

of the Eastern provinces when independent, and which came to be utilized first by the emperors, then by the church, and afterwards by municipalities and private landowners, for bringing into cultivation the large tracts of provincial land belonging to them which were unproductive and unprofitable through want of supervision on the spot. Its nature and conditions (which bore a certain similarity to the earlier *jus in agro vectigali* of the Western Empire, with which it was ultimately fused, and to hereditary leases sometimes granted in the early Empire) were carefully defined by Zeno and amended by Justinian. The *emphyteuta*, as the grantee of the right was ultimately called, did not become owner; the granter still remained *dominus*, all that the grantee enjoyed being a *jus in re aliena*, or a limited and transferable to be distinguishable from ownership. It conferred upon him and his heirs a perpetual right in the lands included in the grant, in consideration of a fixed annual payment to the lord (*canon*) and due observance of conventional and statutory conditions; but he was not entitled to abandon it, nor able to free himself of the obligations he had undertaken, without the lord's consent. The latter was entitled to hold the grant forfeited if the *canon* fell into arrear for three years (in church lands for two), or if the land-tax fell into arrear for the same period, or if the *emphyteuta* allowed the lands to deteriorate, or if he attempted to alienate them (*alienare meliorationes* as the text says) without observance of statutory requirements. These were that he should intimate an intended alienation and the name of the intended alienee to the lord, so that the latter, before giving his assent, might satisfy himself that he would not be a loser by the transaction; and, if the alienation was to be by sale, he had to state the price fixed, so as to give the lord the opportunity of exercising his statutory right of pre-emption at the same figure. If those requirements were complied with, and the lord (himself declining to purchase) stated no reasonable objection to the proposed alienee, he was not entitled to resist the alienation, provided a payment (*laudemium*) was made to him of 2% of the sale price of the value of the lands in consideration of his enforced consent.

The changes in the law of obligation were more superficial than those in the law of property, and consisted principally in the simplification of formalities and in some cases in their entire abolition. To describe them, however, would carry us into details which would here be out of place.

Obligations.

Changes in the Law of Succession.—The changes made in the law of succession by Justinian's Christian predecessors, especially Theodosius II. and Anastasius, were far from insignificant;

Testamentary succession.

but his own were in some directions positively revolutionary. The testament *per aes et libram* of the *jus civile* probably never obtained any firm footing in the East; for it was only by Caracalla's constitution conferring citizenship on all his free subjects that provincials generally acquired *testamenti factio*; and by that time a testament bearing externally the requisite number of seals had been recognized as sufficient for a grant of bonitarian and unchallengeable by the heirs-at-law, even though they were able to prove that neither *familiae mancipatio* nor *testamenti nuncupatio* had intervened. Hence the universal adoption of what Justinian found the Theodosian testament. The lowest, unexpensive and unreliable reform at the hands of the emperors, notably Theodosius II. and Valentinian III., in the requirement (in the ordinary case) of signature by the testator and subscription by the witnesses, thereby becoming what Justinian finally left it—a private document. There was much hesitating legislation on the subject before the law was finally established as it stands in the Justinianian books; and even at the last we find it encumbered with many exceptions and reservations. Of these the most important were the seals of divine rescripts, a parent among his children, testaments made in time of plague, testaments made before a magistrate and recorded in books of court, testaments entrusted to the safe keeping of the emperor, and so forth. Codicils had become finally of importance as, in the absence of a testament, to be dealt with as imposing a trust on the heir-at-law; it was therefore thought expedient to deny effect to them unless attested by at least five witnesses. And a most important step in advance was taken by Justinian in the recognition of the validity of an oral *mortis causa* trust; for he declared that, if it should be represented to a competent judge that a person on his death-bed had by word of mouth directed his heir to give something to the complainant, the heir should be required either on his oath to deny the averment or to give or pay what was claimed.[3]

The Justinian Novel.

In the matter of intestacy there had been long a halting between two opinions—a desire still further to amend the law in the direction taken by the praetors and by the legislation of Claudius, Nero, Vespasian, Hadrian and Pius, and yet a hesitancy about breaking altogether from the time-hallowed principle of agnation. Justinian in his Code went far beyond his predecessors, making a mother's right of succession independent altogether of the *jus liberorum*; extending that of a daughter or sister to her descendants, without any deduction in favour of agnates thus excluded; admitting emancipated collaterals and their descendants as freely as if there had been no *capitis deminutio minima*; applying to agnates the same *successio graduum* that the praetors had allowed to cognates, and so forth. But it was by his Novels, especially the 118th and 127th, that he revolutionized the system, by eradicating agnation altogether (except as regards adopted children) and settling the canons of descent—which were the same for real and personal estate—solely on the basis of blood kinship, whether through males or females, and whether crossed or not by a *capitis deminutio*. First came descendants of the intestate, male and female alike, taking *per capita* if all were of the same degree, *per stirpes* if of different degrees. Failing descendants, the successions passed to the nearest ascendants, and concurrently with them, to brothers and sisters of full blood (*germani*) and (by Nov. 127) the children of any that had predeceased. Where there were ascendants alone, one-half of the succession went to the paternal line and one-half to the maternal; where there were brothers and sisters, or only brothers and sisters, the division was made equally *per capita*; when children of a deceased brother or sister participated it was *per stirpes*. In the third class came brothers and sisters of half blood and their children, and grandchildren of brothers and sisters german; the division here was on the same principle as in the second class. The fourth class included all other collaterals according to propinquity, apparently to the remotest degree, and without distinction between full and half blood;

R. G.* ii. pp. 1268 seq. The name comes from the obligation imposed upon the grantees to make plantations (ἐμφυτεύειν).

[3] *Inst.* ii. 23, § 12.

but among those the nearest in degree excluded the more remote, and when all were of the same degree they took *per capita*.

A reform effected by Justinian by his 115th Novel ought not to pass unnoticed; for rendered superfluous till the old rules about disherison and preterition of a testator's children, practically abolished *bonorum possessio contra tabulas* as regards freeborn persons and established the principle that a child had, as a general rule, an inherent right to succeed equally to one of his father's heirs in a certain share at all events of his succession, and that a parent had the same right in the succession of his child if the latter had died without issue. The enactment enumerated certain grounds upon which alone it should be lawful for a parent to disinherit his child or a child his parent, declaring that in every case of disherison the reason of it should be stated in the testament, but giving leave to the person disinherited to dispute and disprove the facts upon the testament was opened. A child who had not been disinherited—and one improperly disinherited was eventually in the same position—was not instituted to some share, however small, of his parent's *hereditas*, he was entitled to have the testament declared null in so far as the institutions in it were concerned, thus opening the succession to himself and the other heirs-at-law, but without affecting accessory provisions, such as bequests, nominations of tutors, &c.; and if (the share to which he was instituted was less than his legitimate *legitima de debita portio*) he was entitled to an action in supplement. The legitim, which under the practice of the centumviral court had been one-fourth of the share to which the child would have been entitled *ab intestato*, had been raised by Justinian's 18th Novel to one-third, basis, and one-half where there were five or more entitled to participate. He did not allow challenge of the will to be excluded, as in the earlier *querela inofficiosi testamenti*, because the testator had made advances to the child during his lifetime, or had given him a legacy quantitatively equalled the legitim; his idea was that a child was entitled to recognition by his parent *as one of his heirs*, and that to deny him this position without statutory grounds was to put upon him an indignity which the law would not inflict.

The 115th Novel.

Their fate in the East.

Amongst the other beneficial changes effected by Justinian may be mentioned the assimilation so far as possible of *hereditas* and *bonorum possessio*, and the right of the heir-at-law to enter, without formal petition for a grant of it; the equiparation of legacies and singular trust-gifts, and the application of some of their rules to *mortis causa* donations; the extension of the principle of "representation" to every case without exception, so that, if he died within the time allowed him for considering whether or not he would accept (*tempus deliberandi*), his power of acceptance or decinature passed to *his* heirs, to be exercised by them within what remained of the time; and the privilege of entry under inventory (*cum beneficio inventarii*), which limited the heir's responsibilities and rendered unnecessary the nine or twelve months of deliberation; and the application of the principle of collation to descendants generally, so that they were bound to throw into the mass of the succession before its partition every advance they had received from their parent in anticipation of their shares.

Other changes.

iv. *The Justinianian Law-Books.*

Their Use in the Courts and in the Schools.—Although the Institutes were primarily intended to serve as a text-book in the schools, it was expressly declared that it and the Digest and the Code should be regarded as just so many parts of one great piece of legislation and all of equal authority. Partly, although Digest and Code were but collections of common law and legislation that had proceeded originally from many different hands, yet they were to be treated with the same respect as if they had been the work of Justinian himself. But, while everything within them was to be held as law, nothing outside them was to be looked at, not even the volumes from which they had been collected; and so far did this go that, after the publication in 534 of the revised Code, nothing but the first edition of the Fifty Decisions were allowed to be referred to. If a case arose for which no precedent was to be found, the emperor was to be resorted to for his decision, as being outside his collections the only fountain of the law. Of these the framework of Justinian forbade the use, by means of conventional abbreviations (*sigla*) in making transcripts, visiting an offender with the penalties of falsification (*crimen falsi*). Literal translations into Greek were authorized, and indeed were necessary for many of his subjects; so were indexes and *summaria*, i.e. summaries of parallel passages, texts or individual titles. Commentaries and general summaries were forbidden under heavy penalties, as an interference with the imperial prerogative of interpretation.[1] But these prohibitions do not seem to have been enforced, as we have accounts and remains not only of translations but of commentaries, notes, abridgments, excerpts and general summaries even in Justinian's lifetime. These, it is true, were mostly by professors (*antecessores*), and their productions may have been intended primarily for educational purposes; but they soon passed into the hands of the practitioners and were used without scruple in the courts. A Greek *Paraphrase of the Institutes*, usually attributed to Theophilus, a professor in Constantinople and one of Justinian's commissioners, has been supposed to have been used by him in his prelections. It embodies much more historical matter than is to be found in the Institutes in basic contains a good many inaccuracies and its value has been very differently rated by different critics. Its latest editor, Ferrini, who puts a high estimate on it, is of opinion that the original of it was a reproduction in Greek of lectures drawn up at Beirut, which was remodelled after the plan of Justinian's Institutes, and had the new matter of this latter work subsequently incorporated in order to adapt it to the altered conditions; but he denies that there is any sufficient authority for ascribing it to Theophilus. In the East its institutes remained as it was really based on a redaction of Gaius, its historical explanations will be received with all the more confidence.[2]

Fate of the Justinianian Books in the East.—The literary work initiated in the preceding section was continued throughout the 6th century. But the next three were comparatively barren, the only thing worth noting being the Ἐκλογὴ τῶν νόμων ἐν συνόψει γενομένη of Leo the Isaurian in 740, professedly an abstract of the whole Justinianian law amended and rearranged; but it was repealed by Basil the Macedonian on account of its imperfections and its audacious departure from the law it pretended to summarize. The last-named emperor, followed by his son Leo the Philosopher, set themselves in the end of the 9th and beginning of the 10th centuries to the production of an authoritative Greek version of the whole of the Justinianian collections and legislation, omitting what had since become obsolete, excising an abstract of the whole Justinianian law, and introducing legislation as they thought merited preservation. The result was the *Basilica* (Τὰ Βασιλικά, *sc.* νόμιμα), which was completed and published in the reign of Leo, though begun in the reign of Basil, who published a sort of institutional manual entitled Πρόχειρος νόμος which was revised and republished by Leo under the name of Ἐπαναγωγὴ τοῦ νόμου. The *Basilica*[3] consists of sixty books, subdivided into titles, following generally the plan of the Justinianian Code, but with the whole law on particular subjects arranged consecutively, whether from Institutes, Digest, Code or Novels (see article BASILICA). Leo's son, Constantinus Porphyrogenitus, made an addition to it in the shape of an additional commentary of its collected law contained in the 11th-century jurists, the so-called Παραγραφαὶ τῶν παλαιῶν, which is now spoken of as the *scholia* to the *Basilica*, and has done good exegetical service for modern civilians. Later annotations by Greek jurists of both the 12th and 13th century are also called *scholia* but of less value. The *Basilica* retained its statutory authority until the fall of the Byzantine Empire in 1453. But long before that it had fallen into neglect in practice; and though nearly the whole of it and a great part of its collected have come down to us, yet not a complete copy of it exists. Its place was taken by epitomes and compendia, the last being the Ἑξάβιβλος of Constantinus Harmenopoulos about 1345,[4] a miserable epitome of the epitomes of epitomes, as Ferrini calls it, but one that, owing to the vicissitudes of the centuries, and finally received statutory authority in the modern kingdom of Greece in the year 1835, in place of the *Basilica*, which had been sanctioned thirteen years before, in 1822.[4]

Their fate in the East.

Fate in the West.—Before the year 1000 the Bologna school it was to a much greater extent from the Romano-Barbarian codes than from the books of Justinian that central and western Europe, apart from Italy, derived their acquaintance with Roman law. Theoderic's Edict can have had little influence outside Justinian's recovery of Italy, and the Romano-Burgundian law was no doubt gradually displaced by Alaric's Breviary after Burgundy had fallen into the hands of the Franks; but the Breviary held found its way in all directions in France and Germany, penetrating even into England, mainly through the agency of the church. There must, however, have been other repertories of Roman law in circulation (and among others probably either Gaius's Commentaries or Julian's Digest), as witness a quotation made in Paris in the end of the 7th century, mentioned by Savigny as preserved by Mabillon, in which the testator uses the old formula of the *jus civile*,—"*ita do, ita lego, ita testor, ita vos Quirites testimonium mihi perhibete*," words that are not to be found either in the Visigothic or the Justinianian collections. We know that in his pragmatic sanction of the year 554, Justinian even accorded his imperial sanction to the *jura* and *leges*, *i.e.* the Digest and Code, which he says he had long before transmitted to Italy, at the same time declaring that his Novels were to be of the same authority there as in the East. Two years after this came Julian's Latin epitome of the Novels (a private work by a Constantinopolitan professor), not improbably prepared by command of the emperor himself. That Justinian's works soon came

Their fate in the West.

Justinianian law-books.

[1] Const. *Deo Auctore*, § 12; *Tanta*, § 21.

[3] Ed. Heimbach, 6 vols. with Latin translation (and in 1846 a supplement by Zachariae a Lingenthal), Leipzig, 1833–70. A new supplement forming vol. 7, by Ferrini and Mercati, was published in 1897.

[4] For the history of Byzantine law subsequent to Justinian, see Zachariae, *Geschichte des Griechisch.-Röm. Rechts* (3rd ed., 1892), and *Historia juris Graeco-Romani* (1839); Mortreuil, *Histoire du droit byzantin* (3 vols., 1843–46).

to some extent into use in Italy is beyond question; for there is preserved in Marini's collection the testament of one Mannanes, executed at Ravenna in the reign of Justinian's immediate successor Justin II., in which the requirements of both Code and Novels are scrupulously observed. Of other monuments of the same period that prove their currency in Italy several are referred to by Savigny in the second volume of his *History of the Roman Law in the Middle Ages*, among which may be mentioned the Turin gloss of the Institutes, which Fitting ascribes to about the year 545,[1] and two little pieces known as the *Dictatum de consiliariis* and the *Collectio de tutoribus*.[2] The invasion of the Lombards, the disturbance they caused in Italy for two centuries, and the barrier they erected between it and the rest of Europe militated against the spread of the Justinianian law northwards; but it was taught (from the 6th to the 11th century) without much interruption at law schools in Rome, and also at Ravenna, to the end of the period (which (have this is doubtful) the school (*studium*) of Rome, revived by Justinian, is said to have been transferred in the 11th century. By the Lombards, as their savagery toned down, the Roman law was so far recognized that they allowed it to be applied to the Romans living within their territory, and it is said even to have been taught in Pavia, which they had established as their capital. Their overthrow by Charlemagne opened an outlet for it beyond Italy; and there is evidence that in the 9th century Justinian's works, or some of them, were already circulating in the hands of the clergy in various parts of Europe. Yet there are few remains of any literature of this period indicating much acquaintance with them. The only writings worth mentioning are the *Libri feudorum*, consisting of a collection of the first eight books of the Code, ascribed to the 7th century; the Lombardic *Quaestiones ac Monita* containing observations on the Germanic and Roman laws with texts drawn from the Institutes, the Digest, the Code and Julian's Epitome, and supposed to have been written early in the 11th century; the so-called *Brachylogus*,[3] in large part a sort of abbreviated revision of Justinian's Institutes, but with references also to his other books, which Fitting and others hold to have been written before Irnerius (perhaps about) possibly by a pupil of Irnerius, about the very beginning of the 12th century; and the *Petri Exceptiones legum Romanorum*, a similar systematic exposition of the law in four books, probably written in the 11th century but earlier than Irnerius. Savigny has the *Brachylogus* and the *Petrus* were mainly compiled from pure Justinianian sources.

Apart from these remains a word may here be said about the work of the glossarists.[4] It was at the very end of the 11th century that at the law school of Bologna, then under the patronage of the celebrated Irnerius, the study of Roman law began somewhat suddenly to attract students from all parts of Europe. Partly no doubt because (than Justinian's Code) the action of the clergy, the parts of the Justinianian legislation that had hitherto been in ordinary use were the Institutes, the Code and the Novels. The first, from its elementary character, had naturally commended itself: the Code and the Novels, as containing the main legislation on matters ecclesiastical, were in many respects charters of the church's privileges, and were prized accordingly; but the Digest, as being the work of pagan jurists, had been looked on askance and practically little studied. The Code and Novels, moreover, with their modicum of wheat concealed in a great quantity of chaff, offered little attraction to laymen of intelligence; and, when under the guidance of Irnerius their attention was first concentrated on the Digest, it was to them as a book of new revelation. Dogmatic and exegetic teaching of the *Corpus Juris* in all its parts was actively begun, and a new school arose called the glossarists (*glossatores*), of whom Irnerius has always been rightly regarded as the founder. The first teacher, who is said to have been trained both in logic and rhetoric and to have afterwards studied and taught law at Rome before coming to Bologna, was more than a glossator. He was also the first of the medievalists to treat the law in a scientific way. In his *Summa Codicis* (a work attributed to him by Fitting on evidence which seems almost conclusive) he produced for his contemporaries and successors an independently planned and so far systematic manual of the subject-matter of the Code, omitting the last three books. The subject was treated in full relation to the other parts of the *Corpus Juris*, but follows in general the titles of the Code. The glossators got their name from the *glossae*, i.e. marginal and interlinear annotations (both grammatical and doctrinal) with which they furnished the texts of the *Corpus Juris* which were in their hands. They also wrote *summae*, *casus*, *brocarda*, &c., for use both in the courts and the schools, and occasionally special treatises. They confined their work entirely to the *Corpus Juris*, being almost wholly ignorant of the history of the law. Beginning with Irnerius, the school lasted for about a century and a half, and ended with Franciscus Accursius, who died in 1260 after having made a systematic but summarized collection of the glosses of his predecessors, which was afterwards known as the *Glossa Ordinaria* or "The Great Gloss." Among the more famous representatives of the school (other than Irnerius) were, in the 12th century, Bulgarus, Martinus, Jacobus and Hugo, known as the *quatuor doctores*, and Accursius the last; these may be added Placentinus and Vacarius of the 12th and Azo and Odofredus of the 13th century. The Digest, as used by the glossarists, was divided into three parts, known as *Digestum Vetus* (books i. to xxiv. tit. 2), *Infortiatum* (xxiv. tit. 3 to xxxviii.), and *Digestum Novum* (books 39 to the end). The manuscripts of these, as used by the glossarists, are called the Vulgate (*lectio Vulgate*), to distinguish them from the Florentine Manuscript (*lectio Pisana*), on which, indeed (or on the same original source as it), they were probably all primarily based, but from which, as far at least as book 33, they varied in numerous readings. The historical explanation of the cause of this just-mentioned threefold division is given by Mommsen in the preface to his larger edition of the Digest, to which it will be sufficient to refer.[5] The whole *Corpus Juris* was by the glossarists distributed into five volumes, viz. the three just named; a fourth, containing the first nine books of the Code; and the fifth, called *volumen parvum*, containing the Institutes, the Liber Feudorum (at first in Latin (known as the *Authenticum*[6]); and the last three books of the Code.

The glossarists.

The success of the Accursian gloss was rather detrimental to scientific development of the law. It became a sort of code in itself which both in the schools and the courts tended to supersede the texts of Justinian. The intelligent study of the Sources was neglected while lawyers devoted themselves to subtle distinctions and endless divisions of subject-matter. It led to the application during the 14th and 15th centuries of the methods of scholasticism to the Roman law. The authors of this scholastic jurisprudence, which prevailed for during the greater part of these centuries, have been called post-glossators and *scribentes* or commentators. Their most noted representative was Bartolus (1314–1357), after whom they were often called Bartolists. This school, however (mainly Italian), did much toward developing a harmonious system of modern law in Italy based on the Roman, and thereby facilitated the reception of Roman law in Germany and other countries.[7]

In the 16th century a new start or, so to say, second renaissance was given to the Roman law. The study of classical antiquities, so active on the side of literature, extended to jurisprudence also. The juridical writings which had been handed down from the Romans ceased to be regarded purely as positive law, binding according to the letter, but as a part of ancient tradition whose spirit as well as form must be examined by the light of the past. Among the pioneers in this new method, to whom the name of Humanists has been given, must be specially mentioned Alciatus (1492–1540), Cujacius (1522–1590) and Hotomanus (1524–1591). Their influence has passed away, and with these jurists began what has been called the modern Roman law, to describe which, however, is entirely beyond the province of this article.

(H. Go.)

ROMANOS, called ὁ μελῳδός, Greek hymn-writer, "the Pindar of rhythmic poetry," was born at Emesa (Homs) in Syria. From the scanty notices of his life we learn that he resided in Constantinople during the reign of the emperor Anastasius.[8] Having officiated as a deacon in the church of the Resurrection at Berytus, he removed to Constantinople, where he was attached to the churches of Blachernae and Cyrus. According to the legend, when he was asleep in the last-named church, the Virgin appeared to him and commanded him to eat a scroll. On awaking (it was Christmas Day), he immediately mounted the pulpit, and gave forth his famous hymn on the Nativity. Romanos is said to have composed more than 1000 similar hymns or *contakia* (Gr. κοντάκιον, "scroll") celebrating the festivals of the ecclesiastical year, the lives of the saints and other sacred subjects—on the death of a monk (extremely impressive); the last judgment; the treachery of Judas; the martyrdom of St Stephen; Simeon

[5] See *Summa Codicis* of Irnerius by Fitting (Berlin, 1894). Two other works attributed to Irnerius, called respectively *Quaestiones de Sublilitatibus Juris* &c. and *Tres quae de Aequitate*, have been edited by the same author. See also Fitting, *Z. d. Sav. Stift.* xvi. pp. 1 seq.

[6] See *Institutiones*, § 27, and authorities there cited.

[7] On the question whether Anastasius I. (491–518) or II. (713–716) is meant, see Krumbacher, who is in favour of the earlier date.

Stylites; paschal and pentecostal hymns. The MS. of the hymns, written by his own hand, was said to have been preserved in the church of Cyrus, in which he was buried and celebrated as a saint on the 1st of October. Prof. C. Krumbacher, who has edited the works of Romanos from the best (the Patmos) MSS., regards him as the greatest poet of the Byzantine age, and perhaps the greatest ecclesiastical poet of any age.

Editions: J. B. Pitra, *Analecta Sacra*, i. (1876), containing 29 poems, and *Sanctus Romanus Melodorum Princeps* (1888), with three additional hymns from the monastery of St John in Patmos. See also Pitra's *Hymnographie de l'Eglise grecque* (1867); C. Krumbacher, *Geschichte der byzantinischen Litteratur* (1897); and HYMNS.

ROMANOV, the name of the Russian imperial dynasty, regnant in the male line from 1613 to 1730, and thenceforward in the female line. The Romanovs descended from Andrei, surnamed Kobyla, who is said to have come to Moscow from Prussia about 1341 to enter the service of the grand-duke Semen (d. 1353). His son Feodor, surnamed Koschka, was the ancestor of the families of Suchovo-Kobylin, Kalytschev and Scheremetjev, as well as of the Romanovs. Feodor's grandson, Sakhariya Ivanovich, was a boyar of Vasilii V., grand-duke of Moscow at intervals between 1425 and 1462, and the family took its name from his grandson Roman, whose daughter Anastasia Romanovna married the tsar Ivan the Terrible. Her brother Nikita Romanovich married the princess Eudoxia Alexandrovna, a descendant of Andrei Jaroslavovich, grand-duke of Susdal-Vladimir (d. 1264), and in this way the Romanovs were linked up with the ancient royal house of Rurik. The Romanovs suffered heavily in the disorders following on the death of Ivan. Some were executed and others exiled. Nikita's son Feodor (the archimandrite Philaret) was banished, but was recalled by the false Demetrius. In 1610 he was imprisoned by the king of Poland, but his piety and virtues led to the election of his son, Mikhail Feodorovich Romanov, to the throne of the tsars in 1613. Philaret became patriarch of Moscow in 1619, and supported his son's government until his death in 1634. Mikhail was seventeen when he began his reign, and died in 1645. He was succeeded by his son Alexis, whose three sons, Feodor III., Ivan II. and Peter I. (the Great), inherited the throne. After the two years' reign of Peter's widow, Ekaterina Alekseivna Skavronska (Catherine I.), his grandson, Peter Alekseivich (Peter II.), succeeded. He died in 1730, and the succession devolved on the family of Ivan II., on his daughter Anna (1730–40) and his great-grandson Ivan III., and in 1741 on Elizabeth, daughter of Peter the Great. Peter's elder daughter, Anna, had married Charles Frederick of Holstein-Gottorp, and with the accession of her son, Peter III., in 1762 begins the present reigning dynasty of Holstein-Gottorp or Oldenburg-Romanov.

ROMAN RELIGION. In tracing the history of the religion of the Roman people we are not, as in the case of Greece, dealing with separate, though interacting, developments in a number of independent communities, but with a single community which won its way to the headship first of Latium, then of Italy and finally of a European empire. But this very fact of its ever-extending influence, coupled with an absence of dogmatism in belief, which made it at all times ready and even anxious to adopt foreign customs and ideas, gave its religion a constantly shifting and broadening character, so that it is difficult to determine the original essentials. By the time when Latin literature begins, the genuine Roman religion had already been overlaid by foreign cults and modes of thought, by the classical period it was—except in formal observance—practically buried and to a large extent fossilized. But the comparative study of religions has suggested the lines of reconstitution and the careful analysis of survivals embedded in literature and the evidence of monumental remains, and in particular of the old calendars, has enabled modern scholars to make good progress in the task of separating the elements due to different periods and influences.

The Roman people were of Aryan stock, a section of a host of invaders from the north, who overran and settled in the Italian peninsula. They preserved traces of their original nationality not merely in the general cast of their religious thought, but in certain common features such as the worship of the hearth (Vesta) and of the sky-divinity (Jupiter) (see GREEK RELIGION). But the development of their religion was arrested at an earlier stage than that of the Greeks: with them—at any rate in the genuine Roman period—Animism never passed into Anthropomorphism; they stopped at the conception of the "spirit" without reaching that of the "god." Their belief might be described as a polydemonism rather than a polytheism, or more correctly, to avoid altogether the intrusion of foreign notions, as a "multinuminism."

In the cult and ritual of Rome there are enshrined many survivals from a very early form of religious thought prior to the development of the characteristic Roman attitude of mind.

Fetishism.

Fetishism—the belief in the magic or divine power of inanimate objects—is seen in the cult of stones, such as the *silex* of Jupiter (Iuppiter), which plays a prominent part in the ceremonial of treaty-making, and the *lapis* used in the ritual of the *aqualicium*, a process, probably magic in origin, designed to produce rain after a long drought. The boundary-stones between properties (*termini*) were also the objects of cult at the annual festival of the Terminalia, and here the "god Terminus," the symbolic boundary-stone, shares with Jupiter the great temple on the Capitol. Tree-worship (*q.v.*) again is a constantly recurring feature, seen, for instance, in the permanently sacred character of the *ficus Ruminalis* and the *caprificus* of the Campus Martius, and above all in the oak of *Iuppiter Fereirius*, on which the *spolia opima* were hung after a victory. Nor did Roman fetishism stop short at natural objects. The household was always the centre of religious cult, and certain objects in the house—the door, the hearth, the store-cupboard (*penus*)—seem always to have had a sacred significance, and so became the objects and later the sites of the domestic worship. Of the cult of animals there is just sufficient trace to show that it must formerly have had its place in religious rite; the animals, once the objects of worship, appear in later times as the attributes of divinities, for instance, the sacred wolf and woodpecker of Mars.

But Fetishism must very early have developed into Animism, the feeling of the sacredness of the object into the sense of an indwelling spirit. In the animistic attitude we have indeed the true background of the genuine Roman religion; but its characteristic and peculiar development is a kind of "higher Animism," which can associate the "spirit" not merely with visible and tangible objects, but with states and actions in the life of the individual and the community. No doubt the later *indigitamenta* ("bidding-prayers") which give us detailed lists of the spirits which preside over the various actions of the infant, or the stages in the marriage ceremony, or the agricultural operations of the farmer, are due in a large measure to deliberate pontifical elaboration, but they are a true indication of the Roman attitude of mind, which reveals itself continually in the analysis of the cults of the household or the festivals of the agricultural year.

Animism.

The "powers" (*numina*, not *dei*), which thus become the objects of worship, are spirits specialized in function and limited in sphere. They are not conceived of in any anthropomorphic form, their sex even may often be indeterminate ("sive mas, sive femina" is the constantly recurring formula of prayer), but the sphere of action of each is clearly marked and an appeal to a spirit outside his own special sphere would never even be thought of. Locality thus becomes an important point in the conception of the *numen*: the household spirits must be worshipped at the door, the hearth, the store-cupboard, and the external spirits of the fields and countryside have their sacred hill-tops or groves. But the *numen* has no form of sensuous representation, nor does he need a house to dwell in: statue and temple are alien to the spirit of Roman religion. Nor are the *numina*, not being anthropomorphic, capable of relation

to one another: hence there is no Roman mythology. Yet, all-powerful in their individual spheres of action, they can influence the fortunes of men and can enter into relations with them. The primary attitude of man to the *numina* seems clearly to be one of fear, which survives prominently in the "impish" character of certain of the spirits of the countryside, such as Faunus and Inuus, and is always seen in the underlying conception of *religio*, a sense of awe in the presence of a superhuman power, a fit the practical mind of the Roman gives this relation a legal turn: the *ius sacrum*, which regulates the dealings of men with the divine powers, is an inseparable part of *ius publicum*, the body of civil law, and the various acts of worship, prayer and thanksgiving are conceived of under the legal aspect of a contract. The base-notion is that the spirits, if they are given their due, will make a return to man: the object of the recurring annual festivals is to propitiate them and forestall any hostile intervention by putting, as it were, man in debt to man—more rarely to express gratitude for benefits received.

Ritual.

In such a religion exactness of ritual must play a large part—so large, indeed, that many modern critics have been misled into regarding the Roman religion as a mere network of formalities without any background of genuine religious feeling. This formalism shows itself in many ways. It is necessary in the first place to make quite certain that the right deity is being addressed: hence it is well to invoke all the spirits who might be concerned, and even to add a general formula to cover omissions: here we have the ritual significance of the *indigitamenta*. Place, again, as we have seen, was an essential element even in the conception of the *numen*, and is therefore all-important in ritual. So, too, in the character of the offering: male victims must be sacrificed to male deities; female victims to goddesses: white animals are the due of the *di superi*, the gods of the upper world, black animals of the gods below. Special deities, moreover, will demand special victims, while the more rustic *numina*, such as Pales (*q.v.*), should be given milk and millet cakes rather than a blood-offering. All-important, too, is the order of ceremonial and the formula of prayer: a mistake or omission or an unpropitious interruption may vitiate the whole ritual, and though such misfortunes may occasionally be expiated by the additional offering of a *piaculum*, in more serious cases the whole ceremony must be recommenced *ab initio*. Herein lies the importance of the priesthood: the priest is not, as in other religions, the mediator between god and man, but on the other hand for the purpose of state-worship the chosen representative of the whole people, on the other the repository of tradition and ritual lore.

House-hold worship.

This conception of the nature of the *numina* and man's relation to them is the root notion of the old Roman religion, and the fully-formed state cult of the *di indigetes* even at the earliest historical period, must have been the result of long and gradual development, of which we can to a certain extent trace the stages. The original settlement on the Palatine, like its neighbour on the Quirinal, was an agricultural community, whose unit both from the legal and religious point of view was not the individual but the household. The household is thus at once the logical starting-point of religious cult, and throughout Roman history the centre of its most real and vital activity. The head of the house (*pater-familias*) is the natural priest and has control of the domestic worship: he is assisted by his sons as acolytes (*camilli*) and deputes certain portions of the ritual to his wife and daughters and even to his bailiff (*vilicus*) and his bailiff's wife. The worship centres round certain *numina*, the spirits indwelling in the sacred places of the original round hut in which the family lived. Janus, the god of the door, comes undoubtedly first, though unfortunately we know but little of his worship in the household, except that it was the concern of the men. To the women is committed the worship of the "blazing hearth," Vesta, the natural centre of the family life, and it is noticeable that even to Ovid (*Fast.* vi. 291–92) the conception of Vesta was still material and not anthropomorphic. The Penates (*q.v.*) were the *numina* of the store-cupboard, at first vague and animistic, but later on, as the definite *deus*-notion was developed, identified with certain of the other divinities of household or state religion.

Lar and Genius.

To these *numina* of the sacred places must be added two other important conceptions, that of the *Lar familiaris* and the *Genius*. The *Lar familiaris* has been regarded[1] as the embodiment of all the family dead and his cult facilities a consumption of doles of the ancestor-worship, but a more probable explanation regards him as one of the Lares (*q.v.*; *numina* of the fields worshipped at the *compita*, the places where properties marched) who had special charge of the house or possibly of the household servants (*familia*); for it is significant that his worship was committed to the charge of the *vilica*. The *Genius* is originally the "spirit of developed manhood," the *numen* which is attached to every man and represents the sum total of his mental and bodily faculties as the *Juno* does of the woman: each individual worships his own *Genius* on his birthday, but the household-cult is concerned with the *Genius* of the *pater-familias*. The established worship of the household then represents the various members of the family, living and dead, as units of the domestic activity; but we find also in the ordinary religious life of the family a more direct connexion with morality and a greater religious sense than in any other part of the Roman cult. The family meal is sanctified by the offering of a portion of the food to the household *numina*: the chief events in the individual life, birth, infancy, puberty, marriage, are all marked by religious ceremonial, in some cases of a distinctively primitive character. The dead, too, though it is doubtful whether in early times they were actually worshipped, at any rate have a religious commemoration as in some sense still members of the family.

Agricultural worship.

The next stage in the logical development of the state religion should naturally be found in the worship of the *gens*, the aggregate of households belonging to one clan, but our information about the gentile worship is so scanty and uncertain[2] that we cannot make practical use of it. It is more profitable to turn from the life of the household to the outdoor occupations of the fields, where the early Roman settler met with his neighbours to celebrate the various stages of the agricultural year in religious ceremonies which afterwards became the festivals of the state calendar. Here we have a series of celebrations representing the occupations of the successive seasons, addressed sometimes to *numina* who developed later on into the great gods of the state, such as Jupiter, Mars or Ceres, sometimes to vaguer divinities who remained always indefinite and rustic in character, such as Pales and Consus. Sometimes again, as in the case of the Lupercalia (*q.v.*), the attribution is so indefinite that it is hard to discover who was the special deity concerned; in other cases, such as those of the Robigalia and the Meditrinalia, the festival seems at first to have been addressed generally to any interested *numina* and only later to have developed an eponymous deity of its own. Roughly we may distinguish three main divisions of the calendar year, the festivals of Spring, of the Harvest and of Winter, preserving on the whole their peculiar characteristics. (1) In the Spring (it must be remembered that the old Roman calendar began the year with March) we have ceremonials of anticipation and prayer for the crops to come: prominent among them are the *Fordicidia*, with its symbolic slaughter of pregnant cows, addressed to Tellus, the *Cerealia*, a prayer-service to Ceres for the corn-crop, and the most important of the rustic celebrations of lustration and propitiation, the *Parilia*, the festival of Pales. To these must be added the *Ambarvalia* (*q.v.*), the lustration of the fields, a movable feast (and therefore not found in the calendars) addressed at first to Mars in his original agricultural character (see MARS). (2) Of the Harvest festivals the most significant are the twin celebrations on August 21st and 25th to the divinity-pair Consus and Ops, who are both concerned with the storing of the year's produce, and two mysterious vintage festivals, the *Vinalia Rustica* and the *Meditrinalia*, connected originally with Jupiter. (3) The Winter festivals are less homogeneous in character, but we may distinguish among them certain undoubtedly agricultural celebrations, the *Saturnalia* (at first connected with the sowing of the next year's crop, but afterwards overlaid with Greek ceremonial), and a curious repetition of the harvest festivals to Consus and Ops.

[1] *e.g.* by De Marchi.

[2] See, however, De Marchi, *Il Culto Privato di Roma Antica*, vol. ii.

In passing to the religion of the state we are clearly entering on a later period and a more developed form of society. The loose aggregation of agricultural households gives place to the organized community with new needs and new ideals, and at the same time in religious thought the old vague notion of the *numen* is almost universally superseded by the more definite conception of the *deus*—not even now quite anthropomorphic, but with a much more clearly realized personality. We find then two prominent notes of the state influence, firstly, the adaptation of the old ideas of the household and agricultural cults to the broader needs of the community, especially to the new necessities of internal justice between citizens and war against external enemies, and secondly the organization of more or less casual worship into something like a consistent system. Adaptation proceeds at first naturally enough on the lines of analogy. As Janus is in the household the *numen* of the door, so in the state he is the god associated with the great gate near the corner of the forum: the Penates have their analogy in the *Di Penates populi Romani Quiritium* by whom the magistrates take their oath on entering office, the *Lar familiaris* in the *Lares Praestites* of the community, and the *Genius* in the new notion of the *Genius populi Romani* or *Genius urbis Romae*. But the closest and most curious analogy is seen in the case of Vesta. The Vesta of the state is in fact the king's hearth, standing in close proximity to the *Regia*, the king's palace; the Vestal Virgins, who have charge of the sacred fire, are the " king's daughters," and as such even in republican times were in the *manus* of the *pontifex maximus*, who was the successor of the king on the legal side of his religious duties, as the *rex sacrorum* was on the sacrificial side. But adaptation meant also reflection and the widening of old conceptions under the influence of thought and even of abstract ideas. Thus, the simple reflection that the door is used for the double purpose of entrance and exit leads to the notion of the Janus of the state as *bifrons* (" two-faced "): the thought of the door as the first part of the house to which one comes, produces the more abstract idea of Janus as the " god of beginning," in which character he has special charge of the first beginnings of human life (*Consevius*), the first hour of the day, the Calends of the month and the first month of the year in the later calendar: for the same reason his name takes the first place in the *indigitamenta*. But development proceeds also on broader and more important lines. Jupiter in the rustic cult was a sky-god concerned mainly with the wine festivals and associated with the sacred oak on the Capitol. Now he develops a twofold character: as the receiver of the *spolia opima* he becomes associated with war, especially in the double character of the slayer of rout (*Stator*) and the giver of victory (*Victor*), in which last capacity he later gives birth to an offshoot in the abstract conception of the goddess Victoria. As the sky-god again he is appealed to as the witness of oaths in the special capacity of the *Dius Fidius*, producing once more an abstract offshoot in the goddess Fides. In these two conceptions, justice and war, lie the germs of the later idea of Jupiter as the embodiment of the life of the Roman people both in their internal organization and in their external relations. In much the same manner Mars takes on in addition to his agricultural character the functions of war-god, which in time completely superseded the earlier idea. Finally, we must notice, as the sign of the synoecismus of the two settlements, the inclusion of the Colline deity, Quirinus, apparently the Mars of the originally rival community. In these three deities, Jupiter, Mars, Quirinus, we have the great triad of the earliest stage of the state religion.

State religion.

Organization showed itself in the fixing of the annual calendar and the development of the character and functions of the priesthood, and as we should expect, in a new conception of the legal relation of the gods to the state. In the earlier stage—whose notions of course still persist alongside of the state religion —each household has its own relations to its *numina*: now the state approaches the gods through its duly appointed representatives, the magistrates and priests. Their presence is typical of that of the whole people, and the private citizen is required to do no more on festival days than a ceremonial abstinence from work. It is obvious that the state religion has a less direct connexion with morality and the religious sense than the worship of the household, but it has its ethical value in a sense of discipline and a consecration of the spirit of patriotism.

The later stages represent not the spontaneous development of the genuine Roman religion, but its alteration and supersession by new cults and ideas introduced from foreign sources. Authorities are generally agreed in recognizing three periods:—(1) from the end of the Regal epoch to the second Punic War, when Rome was influenced by other peoples in Italy, with whom she was brought into contact by commerce or war; (2) from the second Punic War to the end of the Republic, when contact with Greek and oriental sources and the growth of literature revolutionized religious notions and led to a philosophic scepticism; (3) the Imperial epoch, opening with a revival of old religious notions and later marked by the official worship of the deified emperors and the wide influence of oriental cults.

External influences.

(1) By the end of the regal period Rome had ceased to be a mere agricultural community and had developed into a city-state. There had consequently grown up within the state a large artisan class, excluded from the old patrician *gentes* and therefore from the state cult: at the same time the beginnings of commerce had opened relations with neighbouring peoples. The consequence was the introduction of certain new deities, the *di novensides*, from external sources, and the birth of new conceptions of the gods and their worship. We may distinguish three main influences, to a certain extent chronologically successive. (*a*) Tradition has assigned to the last three kings of Rome a connexion with the mysterious people of Etruria, and their influence at this period though not very definite was certainly extensive. To them, possibly *Etruria.* through the mediation of Falerii, a Latin town on the Etruscan border, was due the introduction of Minerva, who, as the goddess of handicraft and protectress of the artisan gilds, was established in a temple on the Aventine. Soon, however, she found her way also to the Capitol, and there a new Etruscan triad, Jupiter, Juno and Minerva, possibly going back from Etruria to Greece, was enshrined in a magnificent new temple built by Etruscan workmen and decorated in the Etruscan manner. In this temple the deities were worshipped by iniaga, and on its dedication day, September 13th, at the novel festival of the *epulum Jovis*, the images were adorned and set out as partakers of the feast, a proceeding wholly foreign to the native Roman religion (see further ETRURIA, § *Religion*). (*b*) Secondly, as we should expect from the closer relations with her neighbours of Latium, and, as a sign of the Latin league which resulted, the cult of Diana was brought from Aricia and established on the Aventine as the " communue Latinorum *Latium.* Dianae templum " (Varro, *Ling. Lat.* v. 43). about the same time was built the temple of Jupiter Latiaris on the Alban mount, its resemblance in style to the new Capitoline temple pointing to Juno Sospes and Juno Regina, Venus and Fortuna Primigenia, a goddess of childbirth who came from Praeneste. (*c*) Later on in the same period contact with the cities of Magna Graecia brought about the wide-reaching introduction of the Sibylline books. Whatever may be their origin and they came from Cumae—they were placed in the Capitoline temple under the care of a special commission of two (*duoviri sacris faciundis*, later *decemviri* and *quindecimviri*), and their " oracles," which were referred to in times of great national stress, recommended the introduction of foreign cults. In 493 B.C., at a time of serious famine, they ordered the building of a temple to the Greek triad Demeter, Dionysus and Persephone, who were identified with the old Roman divinities Ceres, Liber and Libera. Later Apollo must have come with or before the books themselves, though his temple was not built till 433 B.C.: Mercury followed, the representative of *Ἑρμῆς Ἐριθαῖος*, Asclepius was brought from Epidaurus to the Tiber island in 293 B.C., and Dis and Proserpina, with their strange chthonic associations and night ritual, probably from Tarentum in 249 B.C. With new deities came new modes of worship: the *graecus ritus*, in which, contrary to Roman usage, the worshipper's head was unveiled, and the *lectisternium* (*q.v.*), an elaborate form of the " banquet of the gods." In this period, then, we find first a legitimate extension of cults corresponding to the needs of the growing community, and secondly a religious restlessness and a consequent tendency to more dramatic forms of worship.

Magna Graecia.

(2) The two chief notes of the next period are superstition and scepticism: both the populace and the educated classes lose faith in the old religion, but they supply its place in different ways. The disasters of the early part of the second Punic War revealed an unparalleled religious nervousness: portents and prodigies were announced from all quarters, it was felt that the divine anger was on the state, yet there was no belief in the efficacy of the old methods for restoring the *pax deum*. Accordingly recourse is had, under the direction of the Sibylline books, to new forms of appeal for the divine help, the general vowing of the *ver sacrum* and the elaborate Greek *lectisternium* after Trasimene in 217 B.C., and the human sacrifice in the forum after Cannae in the following year. The same spirit continues to show itself in the almost reckless introduction of Greek deities even within the walls of the *pomoerium* and their ready identification with gods of the old religion, whose cult they in reality supersede. Thus we find new temples dedicated to Iuventas = Hebe (207 B.C.), Diana = Artemis (179 B.C.), Mars = Ares (138 B.C.), and find even such unexpected identifications as that of the Bona Dea (*q.v.*)—a cult title of the ancient Fauna, the female counterpart of the countryside *numen Faunus*—with a Greek goddess of women, Damia. At the same time the new acquaintance with Greek art introduces the making of cult statues, in which the identified Greek type is usually adopted without regard to the native characteristics of the corresponding Roman. *Greek deities.*

Oriental deities. The cult of Bacchus, which was suppressed by decree of the Senate in 186 B.C., and later on were established the cults of Ma of Phrygia, introduced by Sulla and identified with Bellona, the Egyptian Isis, whose cult Pompey set on foot, the pirates, even the Persian Mithras (*q.v.*). In all these more emotional rituals, the populace sought expression for the religious emotions which were not satisfied by the cold worship of the older deities. private worship that it had to be suppressed by decree of

Meanwhile a corresponding change was taking place in the attitude of the educated classes owing to the spread of Greek literature. The knowledge of Greek mythology, to which they were thus introduced, set poets and antiquarians at work in a field wholly foreign to the Roman religious spirit, the task of creating by analogy anthropomorphic mythology. This they accomplished partly by the popular process of adoption and identification, partly by imitative creation. In this way grew up the "religion of the poets," whose falseness and shallowness was patent even to contemporary thinkers. But more important was the influence of philosophy, which led soon enough to a general scepticism among the upper classes. Its first note is struck by Ennius in his translation of the Sicilian rationalist Euhemerus, who explained the origin of the gods as apotheosized mortals. In the last century of the Republic the two later Greek schools of Epicureanism and Stoicism laid hold on Roman society. The influence of Epicureanism was wholly destructive to religion, but on the whole very widespread: Stoicism became the creed of the educated classes and produced several attempts, notably those of Scaevola and Varro, at a reconciliation of philosophy and popular religion, in which it was maintained that the latter was in itself untrue, but its presentation of a higher truth suited to the capacity of the popular mind. Such a theory was bound to be fatal, as it makes religion at once a mere instrument of statecraft. *Scepticism.*

The result on the old religion was twofold. On the one hand, worship passed into formalism and formalism into disuse. Some of the old cults passed away altogether, others survived in name and form, but were wholly devoid of any real meaning: the ritual of learning of a Varro could not tell their intention or the character of the deity with whom they were concerned. The old priesthood, and in particular the *flaminia*, came to be regarded as tiresome restrictions on political life and were consequently, from 87 to 11 B.C., the office of *flamen Dialis* was vacant. On the other hand, as the result in part of the theory of Stoicism, religion passed into the hands of the politicians: cults were encouraged or suppressed from political motives, membership of the college of pontifices became, though now conferred by popular vote, was sought for its social and political advantages, and augury was debased till it became the meanest tool of the politician. In the general wreck of the old religion, little survived but the household cult, protected by its own genuineness and vitality.

(3) The revival of Augustus, which marks the opening of the last stage, was perhaps the most remarkable phenomenon in the whole story. It was no doubt very largely political, a part of his plan for the general renaissance of Roman life, which was to centre no longer round the abstract notion of the state, but round the persons of an imperial house. But it was genuinely religious, in that he saw that no revival could be effective which did not appeal to the deeper sentiments of the populace. It was thus his business to revitalize the old forms with a new and more vigorous content. His new palace on the Palatine he intended to be primarily the seat of the Julian family and the cults associated with it, and secondarily the centre of the new popular religion. With this object he consecrated there his new temple of Apollo (28 B.C.), associated for long with the Julian house, and adopted by Augustus as his special patron at Actium, and transferred to its keeping the Sibylline books, thus marking the new headquarters of the Graeco-Roman religion. Similar in purpose was his inspiration of the *ludi saeculares* in 17 B.C., in which a day celebration was added to the old *τανυξίς*, and Apollo and Diana deliberately set up as a counterpart to the Capitoline Jupiter and Juno: Horace's hymn, written for the festival is a good epitome of Augustus's religious intentions. In the same spirit he established a new shrine of Vesta Augusta within the palace, a private cult at first, but destined to be a serious rival of the ancient worship in the forum. A more characteristic action was the building of a great temple at the end of his own new forum to Mars Ultor,—Mars, the ancestor of the Julian *gens*, as of the Roman people itself, and now to be worshipped as the avenger of Caesar's murderers. Nor did he hesitate to avail himself of the popular outburst, which immediately after the murder had consecrated the site of Caesar's cremation with a *bustum*, to erect on the spot a permanent temple to his adopted father, under the definitely religious title of *divus Julius*. No doubt he also did much generally to revive the ancient cults: he rebuilt, as he tells us himself, eighty-two temples which had fallen into disrepair, he re-established the old priesthoods, filling once more the office of *flamen Dialis* and reviving such bodies as the Sodales Titii (see FRATRES ARVALES) and the Fratres Arvales (*q.v.*), but the revival attached itself primarily to these four cults, and their tendency was unmistakable. Originally, no doubt, Augustus designed to attract religious feeling generally to the reigning house, but it was inevitable that the more personal cults should tend to it. The dedication of Julius Caesar was one important step: another was the natural prominence in the palace of the cult of the *Genius* of the emperor himself. As the palace cults became national, the worship of the lares and genius bound up with them naturally Augustus and Livia's celebration at the *compita* together with the worship of the old Lares. But here he and the wiser of his successors drew the line, and though under oriental influence divine honours were paid to the living emperor outside Italy, they were never permitted officially in Rome. In the succeeding centuries Augustus's intentions were realized with a fullness which he would hardly have wished, and the cult of the imperial house practically superseded the state religion as the official form of worship.

With this last period the story of Roman religion really draws to a close. For, though the form of the old cults was long preserved and even Antoninus Pius was honoured by the inscription for his care of the ancient rites of religion, the vital spirit was almost gone. In the popular mind the hosts of exciting oriental cults, which in the 3rd and 4th centuries of the Empire filled Rome with the rites of mysticism and initiation, held undisputed sway; and with the more educated a revived philosophy, less accurate perhaps in thought, but more satisfying to the religious conscience, gave men a clearer monotheistic conception, and a notion of individual relations with the divine in prayer and even of consecration. It was with these elements—fiercely antagonistic because so closely allied in character—that the battle of Christianity was really fought, and though, after its official adoption, the old religion survived for as "paganism," and died hard at the end, it was really doomed from the moment when the Augustan revival had taken its irrecoverable bias in the direction of the emperor-worship. *Imperial religion.*

ROMANS, a town of south-eastern France, in the department of Drôme, 12½ m. N.E. of Valence on the railway to Grenoble. Pop. (1906) town, 13,304; commune, 17,622. Romans stands on an eminence on the right bank of the Isère, a fine stone

bridge uniting it with Bourg-de-Peage (pop. 4668) on the other side of the river. Both towns owe their prosperity to their situation in the most fertile part of the valley of the Isère. The present parish church belonged to an abbey founded in 837 by St Bernard, bishop of Vienne. The principal portal is a fine specimen of 12th-century Romanesque, and the lower part of the nave is of the same period; the choir and the transept are striking examples of the style of the 13th century.

Romans has a tribunal of commerce and a communal college. Its industries include tanning, leather-dressing and shoe-making, silk-spinning, hat-making, absinthe-distilling and oil-refining. There is trade in walnuts, walnut-oil, silk, cattle, &c.

ROMANS, EPISTLE TO THE. In this book of the New Testament, the apostle Paul begins, after a brief pregnant introduction (i. 1–7), by explaining that he had hitherto been prevented from carrying out his cherished project of visiting the church of Rome, whose faith was world-wide (i. 8 f.). Meanwhile, he outlines the gospel which he preached as an exhibition of God's righteousness, *ἐκ πίστεως εἰς πίστιν*. This forms the leading theme of the epistle.

Both Gentile (i. 18–32) and Jew (ii. 1, iii. 20)[1] alike have missed this righteousness up till now, but the revelation of God in Jesus Christ (iii. 21–31) had brought the divine boon within reach of all. The condition of its reception was not nationality but faith. Hence, as Paul stops for a moment to observe (iv. 1–25), the Jew cannot claim any preference; Abraham himself, before circumcision and the law came into force, was a man of faith, and consequently all believers (not all legal Jews, iv. 16) are the true descendants of Abraham.[2] Returning to the blissful results of this *δικαιοσύνη* revealed in Jesus Christ (v. 1–11), Paul proceeds to contrast these with the sombre effects produced in humanity by the fall of Adam. Life had now triumphed over death, grace over sin (v. 12 f.). But the supersession of the law, which was bound up with the régime of sin and death, does not mean the relaxation of the moral bond. On the contrary (vi. 1 f.), the reception of God's grace and spirit implies the death of the believer to sin. The struggle of the soul[3] between the thwarting power of sin and the ethical demands of the law (vii. 1 f.) cannot be ended happily save by the interposition of Jesus Christ, whose Spirit guarantees a sound life in this world and life eternal in the world to come (viii. 1–22 f.).

The splendid and unfettered[4] prospects of faith, which thus break on the apostle's vision, only serve to deepen his distress in one direction.[5] As a theologian and as a patriot, he is confronted with the problem of Israel's rejection and repudiation of a boon to which their own history, as he read it, clearly pointed. Reverting to the thought of ii. 17 f. and iv. 1, Paul now essays, in ix.–xi., to show how this unbelief of Israel is to be reconciled with the justice and the promises of God. The logic is unconvincing, as in Gal. iii. 6 (cf. Rom. ii. 28–29), that mere physical descent could not entitle a Jew to the promises. Besides (ix. 14–29), no Jew has the right to challenge God's sovereign freedom. If God determines to extend the purport of faith to the Gentiles, no one can accuse Him of injustice.[6] The rejection of the Jews is their own fault, due to their obstinacy and legalism (ix. 30–x. 21). Finally, Paul tries to see this fact of Israel's unbelief in the light of a wide religious philosophy of history; it (xi. 1–10) cannot be anything but a temporary and partial (xi. 11–24)[6] phase: the future will clear up the present; the final result will be the inclusion of all Israel in the heritage of the messianic kingdom of Christ. The prospect of this consummation stirs him to an outburst of adoration, with which the whole section ends (xi. 33–36).[7]

Applying the thought of God's mercy to the obligations of believing men (xii. 1–2), Paul proceeds now to sketch the ethical duties of Christians in the church (xii. 3–21), in society, and in the state (xiii. 1–7). Love is the supreme law (xiii. 8–10), and the nearness of the end the supreme motive to morality (xiii. 11–14). These considerations are still before Paul's mind as he descends from general counsels to a special problem of practical ethics, raised by the varying attitude of Christians at Rome towards food offered to idols (xiv. 1 f.). After laying down the principle of individual responsibility, he appeals for charity and mutual consideration (xiv. 13–xv. 6), and for Christian forbearance.[8] Finally, he exhorts all, Gentile and Jewish Christians alike (xv. 8–13), to unite in thanksgiving for God's mercy to them in Christ.

In a brief epilogue, the apostle justifies himself for having thus addressed the Roman Christians. He alleges (xv. 14 f.) his apostolic vocation and informs them of his future movements. With an appeal for their prayers and a brief benediction, the epistle then closes (xv. 30–33). It ends as it began (i. 8 f.) with the apostle's hope and plan of visiting Rome on a subsequent missionary tour.[9]

Rom. xvi. contains a separate note (1–23), together with a doxology (25–27). The former came from Paul's pen, but it did not belong originally to this epistle.[10] In all likelihood it is a letter of commendation for Phoebe[11] which includes vers. 1–23 (so *e.g.* Weizsäcker, Mangold, Gifford and Jülicher), though most break it off at ver. 20 (so Eichhorn, Ewald, Schulz, Lünan, Weiss, Lipsius, von Soden, &c.), while others do not begin it until ver. 3 (so *e.g.* Ewald, Schürer, Reuss and Mangold: *Der Römerbrief*, pp. 136 f.). Vers. 21–23 might indeed follow xv. 33, but it is not Paul's way to add salutations after a final Amen, and the passage connects as well with xvi. 20, though it may have lain originally (Jülicher) between 16 and 17. The main reasons[12] for conjecturing that this section was addressed separately, not to Rome but to a city like Ephesus, lie in its contents. Paul was as yet a stranger to Rome, and it is extremely difficult to suppose that he already knew so many individuals there. The earlier tone of Romans shows that he was writing as a comparative stranger to strangers. Any touches of familiarity with the local circumstances (as in xiv.–xv.) are no more than might have percolated to him through hearing and

Critical problems.

botanically in his allegory. For a defence of his accuracy, see W. M. Ramsay's *Pauline and other Studies* (1907), 219 f.

[6] The whole method of dialectic in this section, see Bishop Gore's paper in *Studia Biblica* (Oxford, 1885). The literature to 1907 is summarized in H. J. Holtzmann's *Neutest. Theologie*, ii. pp. 171 f., one of the most significant essays being that of Beyschlag on *Das Judenthum und Jesus' Stellung zu Israel* (*Beginnings of Christianity*, i. pp. 315 f.) sums up his discussion by remarking that the idea of Jesus of history is simply non-existent for St Paul when he treats apologetic problems of this nature. No mention whatever is made of him in the three chapters devoted to the fate of Israel's fate. The literal text of the Septuagint seems to be the only decisive authority, and that is so sacred and almighty, that, whenever it comes into collision with the human conscience, the latter is silenced when the voice of revelation speaks."

[7] The weaker minority probably were a Jewish-Christian circle (cf. Riggenbach in *Studien und Kritiken*, 1893, pp. 649–678). For the religious aspect of vegetarianism in these and other circles, see Lobstein's *Schmiedlitz's Christian Life in the Primitive Church* (1904), pp. 125 f., 396 f.

[8] It was a sufficient reason for writing to the Romans that Paul was expecting to visit them, but was obliged once more to postpone the event to which he had long looked forward. There was nothing in the circumstances of the church that required his intervention, and, as he was therefore free to choose his subject, he wrote out of the fullness of his heart that grand defence of the gospel which, though shaped by the conditions of the time, is animated by the timeless Spirit, and has proved to be a possession for ever" (Drummond, p. 246).

[9] For the literature, cf. the present writer's *Historical New Testament* (1901), pp. 209–213. The hypothesis has won very wide acceptance, but several editors and critics (including Harnack, Zahn, and Clemen) remain unconvinced. Cf. also Wabnitz in *Revue de théologie et des quest. religieuses* (1900), 461–469.

[10] See functions, and especially the conclusion of *Der Brau in den ersten Jahrhunderten der christlichen Kirche* (1902), pp. 45 f.

[11] Cf. Lucht (*Über die beiden letzten Kapitel des Römerbriefes*, 1871, pp. 126 f.), with Weizsäcker's brilliant pages in his *Apostolic Age*, i. pp. 379 f.).

[12] Cf. Lucht (*Über die beiden letzten Kapitel des Römerbriefes*, 1871, pp. 126 f.), with Weizsäcker's brilliant pages in his *Apostolic Age*, i. pp. 379 f.).

report; they do not imply the presence of friends upon the spot who kept him supplied with information. On the other hand, the circle of people addressed in xvi. 1–23, with its wealth of individual colour and personal detail, presupposes a sphere where Paul had worked for long. He can appeal to these Christians. He can speak sharply with authority to them. Now, as he wrote from Corinth, the only other city which answers to this description is Ephesus, the centre of Paul's long Asiatic mission. With that city and district several of the names in xvi. 1–23 are more or less directly connected, *e.g.* Epaenetus (5), Aquila and Priscilla (3), who were at Ephesus immediately before Romans was written (Acts xviii. 18, 26; cf. 1 Cor. xvi. 19), and apparently were there (cf. 2 Tim. iv. 19) not long afterwards. These are the first people mentioned in the note, nor is there any likelihood that they or the rest of Paul's friends[1] had made a sudden migration to the capital. Doubtless, there was fairly constant communication between Rome and the provinces, and in the course of time these friends may have gradually followed the apostle thither. Hence it is not remarkable that almost all the names mentioned in this note have been found by archaeologists (cf. Lightfoot's *Philippians*, pp. 171 f.) within the Roman *Corpus Inscriptionum*. Most of them, anyhow, are fairly common throughout the Roman world (cf. Lietzmann, p. 73), whilst half are to be found in the Greek *Corpus Inscriptionum* for Asia Minor (*e.g.* Epaenetus, Hermes, Hermas).[2] Furthermore, the sharp warning against errorists and heretics (xvi. 17–20) suits Rome at this period much better aptly than Ephesus (cf. 1 Cor. xvi. 8–9; Acts xx. 29 f.; Rev. ii. 2 f.), where trouble of this kind was in the air. Controversy against false teachers is conspicuously absent from Romans. Nor is it possible to regard (with Zahn) such counsels as merely prophylactic; they are too definite and pointed. They imply the existence of a community with which Paul was personally acquainted, and to which he felt himself bound and free to address keen, authoritative reproaches.

The textual phenomena of the doxology (xvi. 25–27), which occurs in some MSS. after xiv. 23, are sufficiently strange; they suggest that the epistle must have passed through a certain process of editing, during the 2nd century, previous to its final incorporation in the canon of the epistles. It may further be conjectured that the epistle does not lie before the modern reader in the precise shape in which it left Paul and his amanuensis at Corinth. Opinions, indeed, vary on the doxology. Either it is authentic but irrelevant, added by Paul as a postscript, or it is unauthentic,[4] due to some copyist who added it as a suitable finale at the close. In the Pauline canon Romans originally occupied the last place. It would therefore be natural that a note like that of xvi. 1–23 should be put in here, especially if this canon was drawn up at Rome, whither Phoebe probably travelled eventually. The doxology would then be shifted from after xiv. 23 or inserted for the first time for ecclesiastical purposes. The material conditions of such a process are lucidly stated by Dr C. R. Gregory in his *Canon and Text of the New Testament* (1907), pp. 319 f.

The problems presented by the structure of these chapters[5] cannot be solved adequately by the mere hypothesis, worked out variously by critics like Paulus, Griesbach (*Curarum in historiam textus Graeci epistolarum Pauli spec.* i. pp. 45 f.), Eichhorn and Flatt, that they are a series of postscripts or afterthoughts, much less by the conjecture that, in whole or in part, they are unauthentic (Baur, Volkmar, &c.). The only tenable line of argument, in the present state of criticism, is to regard their phenomena as due to compilation, at the time when the canon (perhaps of Paul's epistles) was first formed. If the hypothesis already outlined is set aside, it is open to the critic to regard large portions of the canonical Romans as having originally occupied a separate setting,[6] or to ascribe the textual variations to the exigencies of church reading after the formation of the canon (which might explain the absence of *ἐν Ῥώμῃ* in i. 7, 15, and the duplicate position of the doxology).[7]

Any uncertainty as to the literary structure of the epistle naturally renders it hazardous to infer the character of the Christians who are addressed, but it may be said that the results of the long debate on this point are converging upon the belief that the predominant class in the local church or churches were Gentile Christians, while proselytes must have swelled the ranks to no inconsiderable degree. Since Weizsäcker wrote, the older view of Baur (cf. his *Paul*, Eng. tr. i. pp. 321 f.) has steadily lost ground. Zahn is now its main supporter, and his contentions are not convincing. Even were ix.–xi. taken as the kernel of the epistle, its obvious motive is to be found in the need of explaining to Gentile Christians the reasons for Israel's apparent rejection, and passages like i. 5 f., 13, xi. 13, xv. 15 f., are, if not decisive, at any rate superior to any references which can be urged fairly on the opposite side. To a church of this kind, in the capital of the Empire, Paul writes out his gospel more fully than in any other of his extant epistles. It is the essence of the gospel that he treats, and that is the revelation of God's righteousness to man by faith in Jesus Christ. Neither sacraments nor organization come within his purview. Even eschatology lies quite in the background. Paul writes of the inspired " (Denney, p. 582). Proofs of its Pauline authorship are led fully by Zahn (*Einleitung in das N.T.* § 21 f.) and Jacquier (*Histoire des livres du N.T.*, 1903, pp. 271 f.); cf. also Bacon in *Journal of Biblical Literature* (1899), pp. 184 f. The entire data of xv.–xvi. are discussed fully by Lightfoot and Hort, in the former's *Biblical Essays* (pp. 287 f.) and in the latter's admirable volume (*Romans and Ephesians*), as well as in Sanday and Headlam's edition (pp. lxxxv. f.).

[9] Ryder (*Journal of Biblical Literature*, 1898, pp. 184 f.) suggests that xv.–xvi. 24 form a letter or part of a letter written not by Paul but by his amanuensis, Tertius, to his friends at Rome, c. A.D. 64, previous to the Neronian persecution.

[6] So J. Weiss (in *Theologische Studien*, 1897, pp. 182 f.), as well as those who, like Renan (*S. Paul*, lxiii–lxxv), find different editions (by the canonical compiler), one consisting of Thessalonica (i.–iv. 23, xvi. 25–27), one for Ephesus (i.–xiv., xvi. 1–20) and one for Rome (i.–xi., xv.), or who, like Lightfoot (*Biblical Essays*), see a double recension, the original draft having been meant for Rome (i.–xvi. 23), the latter being, like Ephesians, a circular epistle.

[7] The epistle was so systematic in treatment and wide in scope that it lent itself readily to this " catholicizing " manipulation; thus the fact that xv.–xvi. are very rarely quoted in primitive tradition may be due to their fullness of local detail, which would have less interest for the later church. But the question of course arises, May not the epistle, in whole or in part, have originally been more of a treatise in epistolary form than at first sight appears? For various suggestions as to the problem of i. 7 see Harnack in *Zeitschrift für die neutest. Wissenschaft* (1902), 83–86; R. Steinmetz (*ibid.*, 1908, 177 f.); and Schmiedel in *Hibbert Journal* (1903), pp. 537 f.

[1] Erbes (*Zeitschrift für Kirchengeschichte*, 1901, 224–231) makes xvi. 1–16a a note forwarded by Paul to Rome during his last voyage thither, in order to advise some of the local Christians of his arrival (Acts xx. 3), but this theory is no improvement upon that of Semler, who regarded xvi. 3–16 as designed for Paul's friends outside Rome, to introduce the bearers of the larger epistle. The point of such hypotheses is to explain how the note came to be attached to Romans, but this can be shown otherwise (cf. Deissmann's *Licht vom Osten*, 1908, pp. 164, 201). Eichhorn (*Einleit. in das N.T.* iii. 243 f.) regarded xvi. 1–20 as addressed to Corinth, while Schenkel viewed it as designed for all the churches which Phoebe was to visit.

[2] In the Ephesian *Acts of Johannes* (c. A.D. 160) the house of Andronicus (Rom. xvi. 7 ?) is one centre of Christian activity. E. H. Gifford (pp. 27–30) evades the difficulty by taking xvi. 3–20 as part of a second letter written by Paul after, not before, his release from imprisonment.

[3] The most recent and radical analyses are those of Spitta (*Urchristentum*, iii. 1902) and Völter (*Paulus u. seine Briefe*, 1905). The former detects a short letter, xv. 14–xvi. 23, written after Acts xxviii. 30, during a tour of the Gentile churches (A.D. 63–64), and another (i.–xi. 10, xv. 14–33) written to believing Jews in order to justify the Gentile mission and afterwards edited for Gentile readers with the addition of xi. 11 f., xv. 8 f., &c. Völter begins (p. 13) by distinguishes an original letter (in i. 1, 5*b*–7, 8–17, v. 1–12, 15–19, 21, vi. 1–13, 16–23, xii.–xv. 6, xv. 14–16, 23*b*–33, xvi. 21–24) from editorial additions, and also from still later accretions in ii. 14–15, iii. 23–26, vii. 25*b*, xi. 11 f., xv. 7–13, 17–23*a*, xvi. 1 f., 25 f. Spitta's views are properly set aside by Feine and Bahnsen (*Protest. Monatshefte*, 1902, 331 f.) amongst others.

[4] It suggests a stereotyped form (cf. Mangold, *Der Römerbrief*, 44–81, and Holtzmann, *Einleit. Gal. Brief*, 307–313). " In spite of the vindication of the style word by word, the impression it bears upon the mind is hardly Pauline. It seems artificial rather than

heart of the gospel with all his heart, and while a certain controversial[1] element inevitably enters into his exposition—since he is writing with his eye on the Roman Church—any such considerations are quite subordinate to his dominating aim.

The epistle dates itself. Paul is on his way to Jerusalem with the moneys collected from the Macedonian and Achaian churches (xv. 19–32), and, after his visit to the Jewish capital, he proposes to visit the church of Rome *en route* for a mission in Spain. The situation corresponds to that outlined in Acts xx. 2–3. Paul probably despatched the epistle from Corinth. This conclusion would be put almost beyond doubt were Rom. xvi. regarded as an integral part of the original epistle, since in that case Timothy and Sosipater (xvi. 21) would be with Paul as in Acts xx. 4, like Gaius (xvi. 23) and Erastus, both of whom were Corinthians (1 Cor. i. 14; 2 Tim. iv. 20). Phoebe of Cenchreae, the seaport of Corinth, would also be the bearer of the epistle (xvi. 1). But even apart from the evidence of ch. xvi., the tone of the epistle (especially of xv. 19 f.) indicates that Paul regards his work in the eastern provinces as done, and now turns to the West. It is just possible, of course, that the epistle was written from some other town, perhaps in Illyricum (so H. E. G. Paulus), but the facilities of communication point to Corinth.[2]

LITERATURE.—The albest recent editions of the Greek text have been those of B. Weiss (in Meyer's commentary, 9th ed. 1899, thorough and all-round), R. A. Lipsius (*Hand-Commentar*, 2nd ed. 1892), H. Oltramare (Paris, 1881–82), Sanday and Headlam (*Internat. Crit. Comm.* 5th ed. 1905, strong in philology and external criticism), and Denney (*Expositor's Greek Testament*, 1901, a masterpiece of theological exposition), to which the Roman Catholic commentaries of A. Schäfer (Münster, 1891) and Cornely (Paris, 1896) may be added. The patristic and medieval literature is summarized by Sanday and Headlam (*op. cit.* pp. xcviii. f.), and a conspectus of the vast later work may be found in W. P. Dickson's translation of Meyer (Edinburgh, 1873–74). The editions of Tholuck (1842), Moses Stuart (3rd ed. 1876), Godet (1879–80, Eng. trans. 1888), E. H. Gifford (*Speaker's Commentary*, 1881) and Philippi (4th ed. Frankfort, 1902) are of special value logical value, Godet's for its delicate exegesis and Gifford's for its adequacy of treatment; so, from its own point of view, is F. Delitzsch's *Brief an die Römer aus dem griech. Urtext in das Hebräische übersetzt, und aus Talmud und Midrasch erläutert* (1870), with which may be classed the earlier works of Reiche (*Versuch einer ausführl. Erklärung*, &c., 1833–34) and C. F. A. Fritzsche (1836–43). Since Dean Alford (1852), the freshest English editors have been Dr David Brown (Glasgow, 1861), Moule (*Cambridge Bible*, 1879), C. J. Vaughan (7th ed. 1890), B. Jowett (3rd ed. 1894), J. Agar Beet (9th ed. 1901) and Garvie (*Century Bible*, 1901). Fülicher's notes in *Die Schriften des N T.* (1907), though written from a different standpoint, resemble Denney's in their conciseness and penetration. Lietzmann's edition, again, is slight and philological (*Handbuch zum Neuen Testament*, 1907). Lightfoot's posthumous fragment (*Notes on Epistles of St Paul*, 1895, pp. 237–308) unfortunately breaks off at vii. 25. In addition to the above, monographs already cited in the course of this article, the essays of H. E. G. Paulus (*De originibus Pauli epist. ad Rom.*, Jena, 1801), Lorenz (*Der Römerbrief*, 1884), Grafe (*Über Veranlassung und Zweck der R.*, 1881), G. B. Stevens (*The Pauline Theology*, 1892) and Dorr (*Der Römerbrief*, 1903) and A. Robertson (Hastings' *Dict. of Bible*, iv. 295–306) may be specially mentioned out of a large crowd, together with G. Semeria's monograph, *Il pensiero di S. Paolo nella lettera ai Romani* (Rome, 1903). Holsten's position is stated in a series of articles in the *Jahrbuch für protest. Theologie* (1879), pp. 95 f., 314 f., 680 f., Pfleiderer's in *Das Urchristentum* (2nd ed. i. 149 f., Eng. tr. *Primitive Christianity*, i. pp. 211 f.) and Hilgenfeld's in his own *Zeitschrift für die wissensch. Theologie* (1892), pp. 296–347. The more literary and historical discussions are chronicled in C. Clemen's *Paulus*, i. 85 f., ii. 238 f., with which the English reader may compare R. J. Knowling's *The Testimony of St Paul to Christ* (1905), pp. 60 f., 311 f., 465 f. On Marcion's text of the epistle cf. Zahn's *Geschichte des N.T. Kanons*, ii. pp. 515–521; on the early reception of the epistle in the church, Gregory's *Canon and Text of the N.T.* (1907), pp. 192 f., and Leipoldt's *Geschichte des neut. Kanons* (1907), i. pp. 77 f., 188 f., 192 f., 209 f. (J. MT.)

[1] Not, however, in the sections bearing on the Law. "It has been customary to explain this feature of the epistle by the fact of its having been written to a church with which Paul had no personal relations, and this may count for something. But there is a deeper and a worthier reason for the contrast in tone between this epistle and those written to the Galatian and Corinthian churches. The whole situation is changed. Then Paul was fighting for existence with his back to the wall; now he writes as one conscious that the cause of Gentile Christianity is safe" (A. B. Bruce, *St Paul's Conception of Christianity*, 1894, p. 96).

[2] This is carefully worked out by Paley in his *Horae Paulinae* (ed. Birks, 1825), pp. 8 f.

ROMANSHORN, an important commercial town in the Swiss canton of Thurgau. It is situated on the west shore of the lake of Constance, and by rail is 5½ m. N.E. of Zürich, 12½ m. S.S.E. of Constance, and 10 m. N.W. of Rorschach. In 1900 its population was 4577, mostly German-speaking, while there were 3093 Protestants to 1478 Romanists. Originally a small fishing village, it belonged to the abbot of St Gall from 1432 to 1798, when it became part of the canton of Thurgau. In 1856 the railway from Romanshorn to Zürich was opened, and this vastly increased the commercial importance of Romanshorn. Nowadays it is the centre of a great transit trade, as it communicates, by means of the lake, with the principal towns on its shores. The corn trade and that in timber are among the most important, while there are many industrial establishments. It is essentially a modern commercial centre.

ROMANUS, the name of four East Roman emperors.

ROMANUS I. (Lecapenus), who shared the imperial throne with Constantine VII. (*q.v.*) and exercised all the real power from 919 to 944, was admiral of the Byzantine fleet on the Danube when, hearing of the defeat of the army at Achelous (917), he resolved to sail for Constantinople. After the marriage of his daughter Helena to Constantine he was first proclaimed "basileopater" in 919 and soon after crowned colleague of his son-in-law. His reign, which was uneventful, except for an attempt to check the accumulation of landed property, was terminated by his own sons, Stephen and Constantine, who in 944 carried him off to the island of Prote and compelled him to become a monk. He died in 948.

ROMANUS II. succeeded his father Constantine VII. in 959 at the age of twenty-one, and died—poisoned, it was believed, by his wife, Theophano—in 963. He was a pleasure-loving sovereign, but showed judgment in the selection of his ministers. The great event of his reign was the conquest of Crete by Nicephorus Phocas.

ROMANUS III. (Argyrus), emperor 1028–1034, was an undistinguished Byzantine patrician, who was compelled by the dying emperor Constantine IX. to marry his daughter Zoe and to become his successor. He showed great eagerness to make his mark as a ruler, but was mostly unfortunate in his enterprises. He spent large sums upon new buildings and in endowing the monks, and in his endeavour to relieve the pressure of taxation disorganized the finances of the state. In 1030 he resolved to retaliate upon the incursions of the Moslems on the eastern frontier by leading a large army in person against Aleppo, but by allowing himself to be surprised on the march sustained a serious defeat at Azaz near Antioch. Though this disaster was retrieved by the successful defence of Edessa by George Maniakes and by the defeat of a Saracen fleet in the Adriatic, Romanus never recovered his popularity. His early death was supposed to have been due to poison administered by his wife.

See J. B. Bury in the *English Historical Review* (1889), pp. 53–57; G. Schlumberger, *L'Épopée byzantine* (Paris, 1905), iii. pp. 56–158.

ROMANUS IV. (Diogenes), emperor 1068–1071, was a member of a distinguished Cappadocian family, and had risen to distinction in the army, when he was convicted of treason against the sons of Constantine X. While waiting execution he was summoned into the presence of the empress regent, Eudocia Macrembolitissa, whom he so fascinated that she granted him a free pardon and shortly afterwards married him. After his coronation he carried on three successful campaigns against the Saracens and Seljuk Turks, whom he drove beyond the Euphrates; in a fourth he was disastrously defeated by Alp Arslan on the banks of the Araxes and taken prisoner. After releasing himself by the promise of a large ransom and the conclusion of a peace, he turned his arms against the

pretender Michael VII., but was compelled after a defeat to resign the empire and retire to the island of Prote, where he soon died in great misery. It was during this reign that, by the surrender of Bari (1071), the Byzantine empire lost its last hold upon Italy.

See J. G. C. Anderson in the *Journal of Hellenic Studies* (1897), pp. 36–39. On all the above see also J. B. Bury's edition of Gibbon's *Decline and Fall*. (M. O. B. C.)

ROME (*Roma*), the capital of the modern kingdom of Italy, in the province of Rome, on the river Tiber, 17 miles N.E. from its mouth on the Mediterranean. As formerly the centre of the ancient Roman republic and of the Roman empire, and the headquarters of the Christian Church, Rome is unique among historical cities, and its antiquarian interest far surpasses that of any other locality in the world. In the following account the general subject of Rome is treated broadly under two aspects, themselves subdivided. These are:—(1) the topography and growth of the city of Rome, the evolution of which is traced from the earliest times to the present, and (2) Roman history, *i.e.* the political and social history of the Roman republic, empire and medieval commune.

The nine or ten hills and ridges on which the city stands are formed of masses of tufa or conglomerated sand and ashes thrown out by neighbouring volcanoes now extinct, but active down to a very recent period. One group of these volcanoes is that around Lago Bracciano, while another, still nearer to Rome, composes the Alban Hills. That some at least of these craters have been in a state of activity at no very distant period has been shown by the discovery at many places of broken pottery and bronze implements below the strata of tufa or other volcanic deposits. Traces of human life have even been found below that great flood of lava which, issuing from the Alban Hills, flowed towards the site of Rome, only stopping about 3 miles short, by the tomb of Cecilia Metella.

The superficial strata on which Rome is built are of three main kinds: (1) the plains and valleys on the left bank of the Tiber are covered, as it were, by a sea of alluvial deposits, in the midst of which (2) the hills of volcanic origin rise like so many islands; and (3) on the right bank of the river, around the Janiculan and Vatican Hills, are extensive remains of an ancient sea-beach, conspicuous in parts by its fine golden sand and its deposits of greyish white potter's clay. From its yellow sand the Janiculan has been sometimes known as the Golden Hill, a name which survives in the church on its summit called S. Pietro in Montorio (Monte d'Oro). In addition to these three chief deposits, at a few places, especially in the Aventine and Pincian Hills, under-strata of travertine crop out—a hard limestone rock, once in solution in running water, and deposited gradually as the water lost its carbonic-acid solvent, a process still rapidly going on at Terni, Tivoli and other places in the neighbourhood. The conditions under which the tufa hills were formed have been very various, as is clearly seen by an examination of the rock at different places. The volcanic ashes and sand of which the tufa is composed appear in parts to lie just as they were showered down from the crater; in that case it shows but little sign of stratification, and consists wholly of igneous products. In parts time and pressure have bound together these scoriae into a soft and friable rock; in other places they still lie in loose sandy beds and can be dug out with the spade. Other masses of tufa again show signs either of having been deposited in water, or else washed away from their first resting-place and redeposited with visible stratifications; this is shown by the water-worn pebbles and chips of limestone rock, which form a conglomerate bound together by the volcanic ashes into a sort of natural cement. A third variety is that which exists on the Palatine Hill. Here the shower of red-hot ashes has evidently fallen on a thickly growing forest, and the burning wood, partly smothered by the ashes, has been converted into charcoal, large masses of which are embedded in the tufa rock. In some places charred branches of trees, their form well preserved, can be easily distinguished. The so-called "wall of Romulus" is built of this conglomerate of tufa and charred wood; a very perfect section of the branch of a tree is visible on one of the blocks by the Scalae Caci.

So great have been the physical changes in the site of Rome since the first dawn of the historic period that it is difficult now to realize what its aspect once was. The Forum Romanum, the Velabrum, the great Campus Martius (now the most crowded part of modern Rome), and other valleys were once almost impassable marshes or pools of water (Ov. *Fasti*, vi. 401; Dionys. ii. 50). The draining of these valleys was effected by means of the great cloacae, which were among the earliest important architectural works of Rome (Varro, *Ling. Lat.* iv. 149). Again, the various hills and ridges were once more numerous and very much more abrupt than they are now. At an early period, when each hill was crowned by a separate village fort, the great object of the inhabitants was to increase the steepness of its cliffs and render access difficult. At a later time, when Rome was united under one government, the very physical peculiarities which had originally made its hills so populous, through their natural adaptability for defence, became extremely inconvenient in a united city, where architectural symmetry and splendour were above all things aimed at. Hence the most gigantic engineering works were undertaken: tops of hills were levelled, whole ridges cut away, and gentle slopes formed in the place of abrupt cliffs. The levelling of the Velia and the excavation of the site for Trajan's forum are instances of this. The same works were continued in the middle ages, as when in the 14th century an access was made to the Capitoline Arx[1] from the side of the Campus Martius; up to that time a steep cliff had prevented all approach except from the side of the Forum.

Finally, after Rome had become the capital of united Italy, in the last quarter of the 19th century, an extensive government plan (*piano regulatore*) was gradually carried out, with the object of reducing hills and valley to a uniform level and constructing wide boulevards on the chessboard method of a modern American city. The constant fires which have at times devastated Rome have been a powerful agent in obliterating the natural contour of the ground; and the accumulated rubbish from this and other causes has in some places overlaid the ground to a depth of 40 ft., notably in the valleys.

The Ancient City

The chief building materials used in ancient Rome may be enumerated as follows: (1) *Tufa*, the "*ruber et niger tophus*" of Vitruvius (ii. 7), varying in colour from warm brown to yellow or greyish green (called *capellaccio*). The Aventine, Palatine and Capitoline Hills contained quarries of the tufa, much worked at an early period (see Liv. xxvi. 27, xxxix. 44, and Varro, *L.L.* iv. 151). It is a very bad "weather-stone," but stands well if protected with stucco (Plin. *H.N.* xxxvi. 166). (2) *Lapis Albanus*, from Alba Longa, of volcanic origin, a conglomerate of ashes, gravel and fragments of stone; its quarries are still worked at Albano and Marino. This is now called *peperino*, from the black scoriae, like peppercorns, with which the brown conglomerate mass is studded. (3) *Lapis Gabinus*, from Gabii, very similar to the last, but harder and a better weather-stone; it contains large lumps of broken lava, products of an earlier eruption, and small pieces of limestone. According to Tacitus (*Ann.* xv. 43), it is fire-proof, and this is also the case with the Alban stone. Lapis Gabinus is now called *sperone*. (4) *Silex* (mod. *selce*), a lava from the now extinct volcanoes in the Alban Hills, used for paving roads; when broken into small pieces and mixed with lime and pozzolana it formed an immensely durable concrete. It is dark grey, very hard and breaks with a slightly conchoidal fracture (Plin. *H.N.* xxxvi. 135; Vitr. ii. 7), but does not resemble what is now called *silex* or flint. (5) *Lapis Tiburtinus* (travertine), the chief quarries of which are at Tibur (Tivoli) and other places along the river Anio; a hard pure carbonate of lime, of a creamy white colour, deposited from running or dripping water in a highly

Building materials.

[1] By the great flight of marble steps up to S. Maria in Ara Coeli.

stratified form, with frequent cavities and fissures lined with crystals. As Vitruvius (ii. 5) says, it is a good weather-stone, but is soon calcined by fire. If laid horizontally it is very strong, but if set on end its crystalline structure is a great source of weakness, and it splits from end to end. Neglect on the part of Roman builders of this important precaution in many cases caused a complete failure in the structure. This was notably the case in the rostra. (6) *Pulvis Puteolanus* (pozzolana), so called from extensive beds of it at Puteoli—a volcanic product, which looks like red sandy earth, and lies in enormous beds under and round the city of Rome. When mixed with lime it forms a very strong hydraulic cement, of equal use in concrete, mortar or undercoats of stucco. It is to this material that the concrete walls of Rome owe their enormous strength and durability, in many cases far exceeding those of the most massive stone masonry. Vitruvius devotes a chapter (bk. ii. ch. 6) to this very important material.

Bricks were either sun-dried (*lateres crudi*) or kiln-baked (*lateres cocti, testae*). The remarks of Vitruvius (ii. 3) seem to refer wholly to sun-dried bricks, of which no examples now exist in Rome. It is important to recognize the fact that among the existing ancient buildings of Rome there is no such thing as a brick wall or a brick arch in the true sense of the word; bricks were merely used as a facing to concrete walls and arches and have no constructional importance.[1] Concrete (*opus caementicium*, Vitr. ii. 4, 6, 8), the most important of all the materials used, is made of rough pieces of stone, or of fragments of marble, brick, &c., averaging from about the size of a man's fist, embedded in cement made of lime and pozzolana—forming one solid mass of enormous strength and coherence. Stucco, cement and mortar (*tectorium, opus albarium* and other names) are of many kinds; the ancient Romans especially excelled in their manufacture. The cement used for lining the channels of aqueducts (*opus signinum*) was made of lime mixed with pounded brick or potsherds and pozzolana; the same mixture was used for floors under the "nucleus" or finer cement on which the mosaic or marble paving-slabs were bedded, and was called *caementum ex testis tunsis*. For walls, three or four coats of stucco were used, often as much as 5 in. thick altogether; the lower coats were of lime and pozzolana, the finishing coats of powdered white marble (*opus albarium*) suitable to receive painting. Even marble buildings were usually coated with a thin layer of this fine white stucco, nearly as hard and durable as the marble itself—a practice also employed in the finest buildings of the Greeks—probably because it formed a more absorbent ground for coloured decoration; stone columns coated in this way were called "*columnae dealbatae*" (Cic. *In Verr.* ii. 1, 52 seq.). For the kinds of sand used in mortar and stucco, Vitruvius (ii. 4) mentions sea, pit and river sand, saying that pit sand is to be preferred.

Marble appears to have come into use about the beginning of the 1st century B.C. Its introduction was at first viewed with great jealousy, as savouring of Greek luxury. The orator Crassus was the first to use it in his house on the Palatine, built about 92 B.C.; Cicero, when he had only six small columns of Hymettian marble, he was for this luxury nicknamed the "Palatine Venus" by the stern republican M. Brutus (Plin. *H.N.* xxxvi. 7). The temporary wooden theatre of the aedile M. Aemilius Scaurus, built in 58 B.C., appears to have been the first building in which marble was more largely used; its 360 columns and the lower order of its scena were of Greek marble (see Plin. *H.N.* xxxvi. 5, 50). In a very few years, under the rule of Augustus, marble became very common.[2]

Decorative materials.

Of white statuary marble four principal varieties were used. (1) *Marmor Lunense*, from Luna, near the modern Carrara (Strabo, v. p. 222), is of many qualities, from the purest creamy white and the finest grain to the coarser sorts disfigured with bluish grey streaks. (Ex., the eleven Corinthian columns in the Borsa.) . (2) *Marmor Hymettium*, from Mount Hymettus, near Athens, is coarser in grain than the best Luna marble and is usually marked with grey or blue striations (Strabo ix. p. 399). (Ex., the forty-two columns in the nave of S. Maria Maggiore and the columns in S. Pietro in Vincoli.) (3) *Marmor Pentelicum*, from Mount Pentelicus, also near Athens, is very fine in grain and of a pure white; it was more used for architectural purposes than for statues, though some sculptors preferred it above all others, especially Phidias and Praxiteles. (Ex., the bust of the young Augustus in the Vatican.) (4) *Marmor Parium*, from the Isle of Paros, is very beautiful, though coarse in texture, having a very crystalline structure. (Ex., the nineteen columns of the round temple in the Forum Boarium.)

Nine chief varieties of coloured marbles were used in Rome. (1) *Marmor Numidicum* (mod. *giallo antico*; Plin. *H.N.* v. 22), from Numidia and Libya, hence also called *Lybycum*, is of a rich yellow, deepening sometimes into pink. Enormous quantities of it were used, especially for columns, wall-linings and pavements. (Ex., seven columns on the arch of Constantine, taken from the arch of Trajan; the eighth column is in the Lateran basilica.) (2) *Marmor Carystium* (mod. *cipollino*), from Carystus in Euboea (Strabo x. p. 446), has alternate wavy strata of white and pale green—the "undosa Carystos" of Statius (*Silv.* i. 5, 34). From its well-defined layers like an onion (*cipolla*) is derived its modern name. (Ex., columns in the temple of Antoninus and Faustina.) (3) *Marmor Phrygium* or *Synnadicum* (mod. *pavonazzetto*), from Synnada in Phrygia (Strabo xii. p. 577; Juv. Sat. vi. 197; Tibull. iv. 3, 13), is a slightly translucent marble, with rich purple markings, veining on a creamy ground. It was fabled to be stained with the blood of Atys (Stat. *Silv.* i. 5, 37). (Ex., twelve fluted columns in S. Lorenzo fuori le Mura, and four columns in the apse of S. Paolo fuori, saved from the ancient nave of the basilica, burnt in 1823.) (4) *Marmor Lesium* (probably the modern *porta santa*), from Iasus, is mottled with large patches of dull red, olive green and white. The "holy doors" of the four great basilicas are framed with it, hence its modern name. (Ex., the fluted frieze of the hemicycle of the Rostra and four columns in S. Agnese fuori le Mura). (5) *Marmor Chium* (probably the modern *Africano*), from Chios, is similar in the variety of its markings to the *portasanta*, but much more brilliant in tint. (Ex., a great part of the pavement of the Basilica Julia and two large columns in the centre of the façade of St Peter's.). (6) *Marmor Taenarium* (mod. *rosso antico*), from Taenarum in Laconia (Strabo viii. p. 367; Pliny, *H.N.* xxxvi. 138), is a very close-grained marble, of a fine dark purple blood. As a rule it does not occur in large pieces, but was much used for small cornices and other mouldings in interiors of buildings. Its quarries in Greece are still worked. (The largest pieces known are the fourteen steps to the high altar of S. Prassede and two columns nearly 12 ft. high in the Rospigliosi Casino dell' Aurora.) (7) The name *Marmor Taenarium* is also applied by the ancients to a black marble (*nero antico*) now no longer quarried. It is mentioned by Pliny (*H.N.* xxxvi. 134) in connexion with the Phrygian and Celtic marbles; see also Prop. iii. 2, 9, and Plin. *H.N.* xxxvi. 135. (Ex., two columns in the choir of S. Giovanni in Laterano.) (8) *Lapis Atracius* (*verde antico*), found at Atrax in Thessaly, was one of the favourite materials for decorative architecture; it is not exactly a marble (*i.e.* a calcareous stone) but a variety of "precious serpentine," with patches of white and brown on a brilliant green ground. It seldom occurs in large masses. (The finest known specimens are the two fine columns beside the niches of the nave of the Lateran basilica.) (9) The hard oriental alabaster, the "onyx" or "alabastrites" of Pliny (*H.N.* xxxvi. 59, xxxvii. 109); its chief quarries were on the Nile near Thebes,[3] in Arabia and near Damascus. In Pliny's age it was a great rarity; but in later times it was introduced in large quantities, and fragments of a great many columns have been found on the Palatine, in the baths of Caracalla and elsewhere. It is semi-transparent and beautifully marked with concentric nodules and wavy strata. An immense number of other less common marbles have been found, including many varieties of breccia, whose ancient names are unknown.[4]

Coloured marbles.

Granites and basalts.

From the latter part of the 1st century B.C. hard stones—granites and basalts—were introduced in great quantities. The basalts—"basanites" of Pliny (xxxvi. 58)—are very refractory, and can only be worked by the help of emery or diamond dust. The former was obtained largely at Naxos; diamond-dust drills are mentioned by Pliny (*H.N.* xxxvii. 200). The basalts are black, green and brown, and are usually free from spots or markings; examples of all three exist, but are comparatively rare. The variety called "porphyry" was used in enormous quantities. It is the "porphyrites" of Pliny (*H.N.*

[1] In less solid constructions than those which have survived until modern times bricks were doubtless used by themselves.

[2] The oft-quoted boast of Augustus (Suet. *Aug.* 29) that he "found Rome of brick and left it of marble" has probably much truth in it, if for "brick" we read "peperino and tufa." In the time of Augustus burnt brick was very little used, the usual wall-facings being *opus quadratum* of tufa or peperino, and *opus reticulatum* of tufa only.

[3] These Nile quarries were worked during the 19th century, and many blocks were imported into Rome for the rebuilding of S. Paolo fuori le Mura.

[4] On the subject of Roman marbles, see Corsi, *Delle pietre antiche* (ed. 3, 1845), and Pullen, *Handbook of Roman Marbles* (London, 1894); also Brindley in *Transactions of the Royal Institute of British Architects* (1887). A collection of specimens, originally formed by Corsi, is preserved in the museum at Oxford.

xxvi. 57), and was brought from Egypt. It has a rich red ground, covered with small specks of white felspar; hence it was also called "leptopsephos." A large number of columns of it exist, and it was much used for pavements of *opus Alexandrinum*. A rich green porphyry or basalt was also largely used, but not in such great masses as the red porphyry. It has a brilliant green ground covered with rectangular light green crystals of felspar. This is the *lapis Lacedaemonius* (wrongly called by the modern Romans "serpentino"), so named from its quarries in Mount Taygetus in Lacedaemonia (Paus. iii. 21, 4; Plin. *H.N.* xxxvi. 55; Juv. xi. 175). It appears to have been mostly used for pavements and panels of wall linings. The granites used in Rome came mostly from near Philae on the Nile (Plin. *H.N.* xxxvi. 63). The red sort was called *lapis pyrrhopoecilus* and the grey *lapis psaronius*. The columns in the Basilica Ulpia are a fine example of the latter; both sorts are used for the columns of the portico and front of the temple of Saturn in the Forum. Gigantic ships were specially made to carry the obelisks and other great monoliths (Plin. *H.N.* xxxvi. 2, 67).

Architectural styles.

The style of architecture employed in ancient Rome (see ARCHITECTURE, section *Roman*, and ROMAN ART) may be said to have passed through three stages—the Etruscan, the Greek and the Roman. During the first few centuries of the existence of the city, both the methods of construction and the designs employed appear to have been purely Etruscan. The earliest temples were either simple cellae without columns, or else, in the case of the grander temples, such as that of Capitoline Jupiter, the columns were very widely spaced (araeostyle), and consequently had entablatures of wooden beams. The architectural decorations were more generally in gilt bronze or painted terra-cotta than in stone, and the paintings or statues which decorated the buildings were usually the work of Etruscan artists.[1] The Greek influence is more obvious; it is found in the period following the Second Punic or Hannibalic War, and almost all the temples of the earlier imperial age are Greek, with certain modifications, not only in general design but in details and ornaments. Greek architects were largely employed, such as Apollodorus of Damascus, who designed Trajan's forum and other buildings; on the other hand, a Roman, Cossutius, was employed on the building of the Olympieum at Athens, in the 2nd century B.C. Roman architects such as Vitruvius and C. Mucius in the 1st century B.C., Severus and Celer under Nero, and Rabirius under Domitian, were Greek by education, and probably studied at Athens (see Vitr. vii. *Praef.*; Hirt, *Gesch. d. Baukunst*, ii. p. 257).[2] The Romans, however, though far below the Greeks in artistic originality, were very able engineers, and this led to the development of a new and more purely Roman style, in which the restrictions imposed by the use of the stone lintel were put aside and large spaces were covered with vaults and domes cast in semi-fluid concrete, a method which had the enormous advantage of giving the arched form without the constant thrust at the springing which makes true arches or vaults of wide span so difficult to deal with. The enormous vaults of the great thermae, the basilica of Constantine, and the like, cover their spaces with one solid mass like a metal lid, giving the form but not the principle of the arch, and thus allowing the vault to be set on walls which would at once have been thrust apart had they been subjected to the immense leverage which a true arched vault constantly exerts on its imposts.[3] This is a very important point, and one which is usually overlooked, mainly owing to the Roman practice of facing their concrete with bricks, which (from an examination of the surface only) appear to be a principal item in the construction. The walls of the Pantheon, for example, are covered with tiers of brick arches, and many theories have been invented as to their use in distributing the weight of the walls. But a recognition of the fact that these walls are of concrete about 20 ft. thick, while the brick facing averages scarcely 6 in. in thickness, clearly shows that these "relieving arches" have no more constructional use as far as concerns the pressure than if they were painted on the surface of the walls. The same applies to the superficial use of brick in all arches and vaults. Although, however, the setting of the concrete rendered the brick facing superfluous, it played its part in sustaining the fluid mass on its centring during the process of solidification.

Opus quadratum.

At first tufa only was used in *opus quadratum*, as we see in the so-called wall of Romulus. Next the harder peperino began to be worked: it is used, though sparingly, in the "Servian" wall, and during the later Republic appears to have been largely employed for exterior walls or points where there was heavy pressure, while other parts were built of tufa. Thirdly, travertine appears to have been introduced about the 2nd century B.C., but was used at first for merely ornamental purposes, very much as marble was under the Empire; after about the middle of the 1st century A.D. travertine began to be largely used for the solid mass of walls, as in the temple of Vespasian and the Colosseum. The tufa or peperino blocks were roughly 2 (Roman) ft. thick in regular courses (the "isodomum" of Vitruvius) by 2 ft. across the bed, and under the Republic often exactly 4 ft. long, so that two blocks set endways ranged with one set lengthways. They were arranged in alternate courses of headers and stretchers, so as to make a good bond; this is the "emplecton" of Vitruvius (ii. 8). The so-called Tabularium of the Capitol is a good example of this. The harder and more valuable travertine was not cut in this regular way, but pieces of all sizes were used, just as they happened to come from the quarry, in order to avoid waste: blocks as much as 15 by 8 ft. were used, and the courses varied in thickness—the "pseudisodomum" of Vitruvius. When tufa or peperino was mixed with the travertine, it was found necessary to range with the irregular courses of the latter.

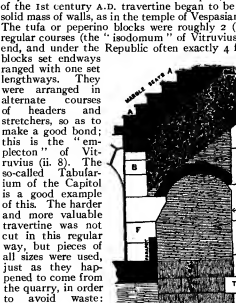

FIG. 1.—Example of Construction in which many materials are used; upper part of one of the inner radiating walls under the cunei of the Colosseum. A, A. Marble seats on brick and concrete core, supported on vault made of pumice-stone concrete (C). B. Travertine arch at end of raking vault (C). D. One of the travertine piers built in flush with the tufa wall to give it extra strength. E, E. Wall of tufa concrete faced with triangular bricks, carrying the vaults of pumice concrete which support the marble seats. F. Travertine pier at end of radiating wall. G. Brick-faced arch of concrete to carry floor of passage. H, H. Tufa wall, *opus quadratum*. I, J, J. Line of steps in next bay. K, K. Surface arches of brick, too shallow to be of any constructional use, and not meant for ornament, as the whole is covered; they only face the wall (which is about 4 ft. thick) to the average depth of 4 in.

It is interesting to note the manner in which the Roman builders mixed their different materials according to the weight they had to carry. While tufa was frequently used for the main walls, peperino (*e.g.* in the "Servian" wall on the Aventine) or travertine (*e.g.* in the forum of Augustus and the temple of Fortuna Virilis, so called) was inserted at points of special pressure, such as piers or arches (see fig.). The Colosseum is a particularly elaborate example of this mixed construction with three degrees of pressure supported by three different materials.

[1] Pliny (*H.N.* xxxv. 154), quoting Varro, says that the decorations in painting and sculpture of the temple of Ceres near the Circus Maximus were the work of the first Greek artists employed in Rome, and that before that (*c.* 493 B.C.) "all things in temples were Etruscan." Vitruvius (iii. 3) says, "Ornantque signis fictilibus aut aereis inauratis eorum fastigia Tuscanico more, uti est ad Circum Maximum Cereris, et Herculis Pompeiani, item Capitolii" (cf. iv. 7, vi. 3).

[2] The frequent use of engaged columns is a peculiarity of Roman architecture, but it is not without precedent in Greek buildings of the best period, *e.g.* in the temple of Zeus at Agrigentum. Surface enrichments over the mouldings were used far more largely by the Romans than by the Greeks.

[3] In the beautiful drawings of Choisy (*L'Art de bâtir chez les Romains*, Paris, 1873) the structural importance of the brick used in vaults and arches is very much exaggerated.

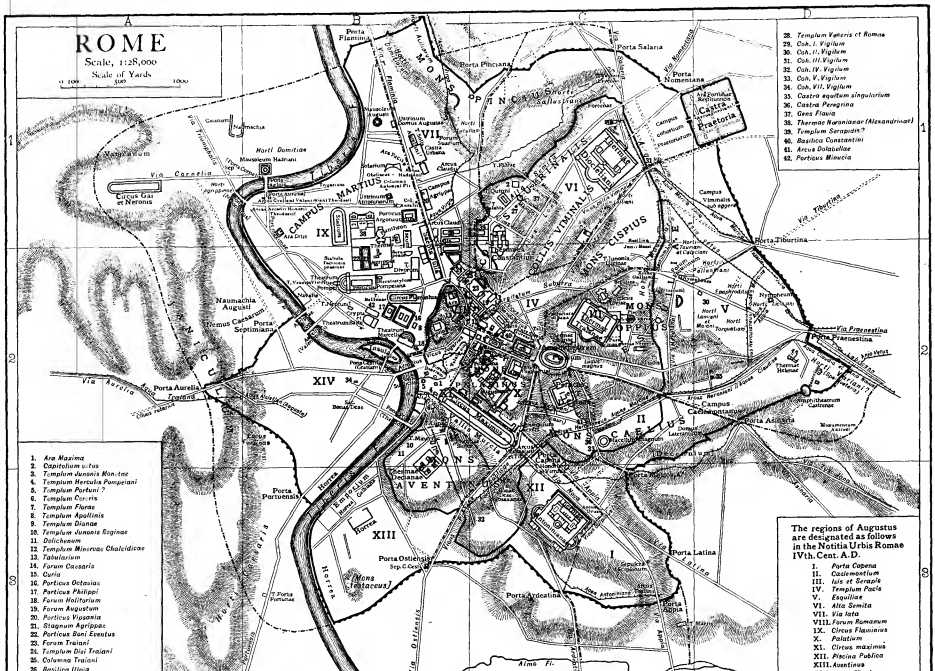

Fig. 7.—PLAN OF ANCIENT ROME.

The use of mortar with *opus quadratum* is a sign of a comparatively early date. It occurs, *e.g.* in the "Servian" wall on the Aventine and in the Tabularium. Under the Empire massive blocks, whether of tufa, travertine, marble, are set without any mortar. It must, however, be observed that in these early instances the "mortar" is but a thin stratum of lime, little thicker than stout paper, used not as a cement to bind the blocks together, but simply to give the joints a smoothly fitting surface. The actual binding together was done by clamps and dowels, as well as by the mass and weight of the great blocks used. Except in the earliest masonry, each block was very carefully fastened, not only to the next blocks on the same course, which was done with double dove-tailed dowels of wood, but also to those above and below with stout iron clamps, run with lead (Vitr. ii. 8).[1] In more ornamental marble work bronze clamps were often used. Concrete is rarely found in connexion with *opus quadratum*; part of the "Servian" wall on the Aventine received a backing of concrete at a relatively late period. Up to the 1st century B.C. it was faced with *opus incertum*—small irregularly shaped blocks of tufa, 3 to 6 in. across, with pointed ends driven into the concrete while it was soft, and worked smooth on the face only (see fig. 2). From the beginning of the 1st century B.C. *opus reticulatum*,[2] formed of rectangular tufa prisms laid in a regula pattern like a net (whence the name), is found. It is very neat in appearance, and is often fitted with great care, though it was generally covered with stucco. The so-called "house of Livia" on the Palatine is a good example of the earlier sort, when the quoins were made of small rectangular blocks of tufa. Under the Empire brick quoins came into use (as may be seen, *e.g.* in the so-called palace of Caligula). Though in Rome *opus reticulatum* was almost always made of tufa, in the neighbourhood of the city it was sometimes of peperino or even lava, where these materials were found on the spot.

Opus reticulatum.

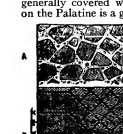

FIG. 2.—Concrete Wall faced with (A) Opus Incertum and (B) Opus Reticulatum. C shows the section, similar in both.

FIG. 3.—Section of Concrete Wall, showing the use of bricks merely as a facing.

Of concrete walls faced with burnt bricks no dated example earlier than the middle of the 1st century B.C. is known. The facing consisted at first of triangular fragments of tiles (*tegulae*), broken for the purpose and more or less irregular in shape and size, but from the latter part of the 1st century A.D. onwards triangular bricks were specially manufactured for wall-facings. This shape was adopted in order to present a large surface on the face with little expenditure of brick, and also to improve the bond with the concrete behind (see fig. 4). Even party walls of small rooms are not built solid, but have a concrete core faced with brick triangles about 3 in. long. In order to support the facing until the concrete was set, the Roman builders used a wooden framing covered with planks on the inside. Sometimes the planks were nailed outside the wooden uprights, as was done with unfaced concrete walls, and then a series of grooves appear in the face of the brickwork. Walls faced with *opus reticulatum* must have been supported temporarily in the same way.

Brick facing.

The character of the brick facing is a great help towards determining the date of Roman buildings. In early work the bricks are thick and the joints thin, while in later times the reverse is the case, so that brickwork of the time of Severus and later has more bricks to the foot than that of the Flavian period.

The length of the bricks as it appears on the face is no guide to the date, since one or more of the sharp points of the brick triangles were frequently broken off before they were used. Moreover, varieties both in quality of workmanship and size of the bricks often occur in work of the same date. In the remains of Nero's Golden House great varieties appear, and some of the walls in the inferior rooms are faced with very irregular and careless brickwork. Special care and neatness were employed in the rare cases when the wall was not to be covered with stucco, which in the absence of marble was usually spread over both inside and outside walls. All these circumstances make great caution necessary in judging of dates; fortunately after the 1st century A.D., and in some cases even earlier, stamps impressed on bricks, and especially on the large tiles used for arches, give clearer indications. The reason of the almost universal use of smooth facings either of *opus reticulatum* or of brick over concrete walls is a very puzzling question; for concrete itself forms an excellent ground for the stucco coating or backing to the marble slabs, while the stucco adheres with difficulty to a smooth facing, and is very liable to fall away. The modern practice of raking out the joints to form a key was not employed by the Romans, but before the mortar was hard they studded the face of the wall with marble plugs and iron or bronze nails driven into the joints, so as to give a hold for the stucco—a great waste both of labour and material.[4] The quality of the mortar varies according to its date: during the 1st and 2nd centuries it is of remarkable hardness—made of lime with a mixture of coarse pozzolana of a bright red colour; in the 3rd century it began to be inferior in quality and the pozzolana used under the later Empire is brown instead of red.

Concrete was at first always made of lumps of tufa; then travertine, lava, broken bricks and even marble were used, in fact all the rubbish and fragments of the mason's yard. Under the Empire the concrete used was made with travertine or lava for foundations, with tufa or broken bricks for walls, and with tufa or pumice-stone (for the sake of lightness) for vaults. Massive walls were cast in a mould: upright timbers, about 6 by 7 in. thick and 10 to 14 ft. long, were set in rows on each face of the future wall; planks 9 to 10 in. wide were nailed to them, so as to form a case, into which the semi-fluid mass of stones, lime and pozzolana was poured. When this was set the timbers were removed and refixed on the top of the concrete wall; then fresh concrete was poured in; and this process was repeated till the wall was raised to the required height. Usually such cast-work was only used for foundations and cella walls, the upper parts being faced with brick; but in some cases the whole wall to the top was cast in this way and the brick facing omitted. In strength and durability no masonry, however hard the stone or large the blocks, could ever equal these walls of concrete when made with hard lava or travertine, for each wall was one perfectly coherent mass, and could only be destroyed by a laborious process like that of quarrying hard stone from its native bed. Owing to this method of building the progress of the work from day to day can often be traced by a change in the look of the concrete. About 3 ft. appears to have been the average amount of wall raised in a day.

Concrete walls and vaults.

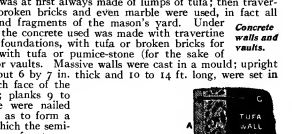

FIG. 4.—Example of Marble Lining, from the Cella of the Temple of Concord. A. Slabs of Phrygian marble. B. Plinth moulding of Numidian "giallo." C. Slab of cipollino (Carystian marble). D. Paving of porta santa. E and F. "nucleus" and "rudus" of concrete bedding. G, G. Iron clamps run with lead to fix marble lining. H. Bronze clamp. I. Cement backing.

Marble linings were fixed very firmly to the walls with long clamps of metal, hooked at the end so as to hold in a hole made in the marble slab. Fig. 4 gives an example, of the time of Augustus, fixed against a stone wall. The blocks were usually marked in the quarry with a number, and often with the names of the reigning emperor and the overseer of the quarry. These quarry-marks are often of great value as indications of the date of a building or statue.[5] Metropolitan

Marble linings, &c.

[1] The expansion of the iron through rust, which caused the stone to split, has frequently been a great source of injury to Roman walls, as well as the practice, common in the middle ages, of breaking into the stones in order to extract the metal.

[2] These two kinds of stone facings are mentioned thus by Vitruvius (ii. 8), "*reticulatum*, quo nunc [reign of Augustus] omnes utuntur, et antiquum, quod *incertum* dicitur."

[3] Some of the bricks are as much as 2½ in. thick, while 1½ in. is the usual maximum for Roman bricks.

[4] The Roman method of applying stucco to walls with a wooden "float" exactly as is done now, is shown in a painting from Pompeii (see *Ann. Inst.*, 1881, pl. H.).

[5] See Bruzza, in *Ann. Inst.* (1870), pp. 106–204; Hirschfeld, *Die kaiserlichen Verwaltungsbeamten* (1905), pp. 162 ff.

building acts, not unlike those of modern London, were enacted by several of the emperors. These fixed the materials to be used, thickness of walls, minimum width of streets, maximum height allowed for houses, &c. After the great fire in Nero's reign, A.D. 64, an act was passed requiring the lower storeys of houses to be built with fire-proof materials, such as peperino or burnt brick.

Enormous accumulations of statues and pictures enriched Rome during its period of greatest splendour. In the first place, numerous statues of the republican and even of the regal period were religiously preserved at a time when, from their archaic character, they must have been regarded rather as objects of sacred or archaeological interest than as works of art (Plin. *H.N.* xxxiv. 15 ff., xxxv. 19 ff.). Secondly came the large Graeco-Roman class, mostly copies of earlier Greek works, executed in Rome by Greek artists. To this class belongs most of the finest existing sculpture preserved in the Vatican and other museums. Thirdly, countless statues and pictures were stolen from almost every important city in Greece, Magna Graecia, Sicily and western Asia Minor. These robberies began early, and were carried on for many centuries. The importations included works of art by all the chief artists from the 5th century downwards. Long lists are given by Pliny (*H.N.* xxxiii.–xxxvi.), and pedestals exist with the names of Praxiteles, Timarchus, Polyclitus, Bryaxis and others. These accumulated works of sculpture were in all materials—gold and ivory (Suet. *Tit.* 2), of which seventy-four are mentioned in the catalogue of the Breviarium, many hundreds or even thousands of silver[1] (Plin. *H.N.* xxxiii. 151 f.), while those of gilt bronze and marble must have existed in almost equally large numbers (Paus. viii. 46). Nor were the accumulated stores of Greek paintings much inferior in number; not only were easel pictures by Zeuxis, Apelles, Timanthes and other Greek artists taken, but even mural paintings were carefully cut off their walls and brought to Rome secured in wooden frames (Plin. *H.N.* xxxv. 173, and compare *ibid.* 154).

Ancient works of art.

The roads were made of polygonal blocks of lava (*silex*), neatly fitted together and laid on a carefully prepared bed, similar to that used for mosaic paving (see MOSAIC and ROADS). Roads thus made were called *viae stratae*. A good specimen of Roman road-making, in which the blocks were fitted together with the utmost accuracy, is to be seen in a portion of the Clivus Capitolinus in front of the temple of Saturn (see fig. 5, which also shows the massive travertine curb which bordered the road; sometimes the curb was of lava). In 1901 the late and badly laid pavement of the Sacra Via on the ascent of the Velia was removed, and the earlier paving laid bare at a lower level. The original pavement of the Nova Via was exposed in 1904. Other well-preserved *viae stratae* are those leading up to the Palatine from the Summa Sacra Via and that which follows the curved line of shops in Trajan's forum.

Roads.

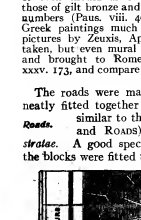

FIG. 5.—Example of Early Basalt Road by the Temple of Saturn on the Clivus Capitolinus. A. Travertine paving B. Polygonal basalt blocks. C. Concrete bedding. D. Rain-water gutter. The curb shown is taken from another part of the road.

The following is a list of the chief roads which radiated from Rome:—(1) Via Appia issued from the Servian Porta Capena and the Aurelian P. Appia; from it diverged (2) Via Latina, which issued from the Aurelian P. Latina; (3) Via Labicana and (4) Via Tiburtina issued from the Servian P. Esquilina; from (3) diverged (5) Via Praenestina at the double arch of the Claudian aqueduct, now P. Maggiore, while (4) passed through the Aurelian P. Tiburtina; (6) Via Nomentana and (7) Via Salaria issued from the Servian P. Collina and passed respectively through the Aurelian P. Nomentana and P. Salaria; (8) Via Flaminia issued from the Servian P. Fontinalis, and was called Via Lata for the first half-mile or more, then passed through the Aurelian P. Flaminia; (9) Via Aurelia, from the Transtiberine P. Aurelia; (10) Via Portuensis, from the Transtiberine P. Portuensis; (11) Via Ostiensis, from the Servian P. Trigemina and the Aurelian P. Ostiensis; (12) Via Ardeatina, from the Servian P. Naevia and the Aurelian P. Ardeatina.

Remains of Prehistoric Rome.

It is evident from recent discoveries that the site of Rome was inhabited at a very early period.[2] Flint implements and remains of the Bronze Age have been found on the Aventine and elsewhere; and from the Early Iron Age onwards we have a continuous archaeological record, owing to the discovery of ancient burial-places. In 1902 a very early necropolis was brought to light at the S.E. corner of the temple of Antoninus and Faustina, some 17 ft. below the level of the Forum. The graves contain either the ashes of cremated bodies placed in a large vessel (*dolio*), or skeletons buried either in a simple trench (*fossa*), a tufa sarcophagus or a tree-trunk. The cremation graves are the earlier, and none are later than the 6th century, while the oldest may be of the 9th; the pottery and other objects placed in the graves belong to the Early Iron Age. It is clear that this cemetery is earlier than the union of the Palatine and Quirinal settlements in one city (see below, p. 759). Other early cemeteries have been discovered on the Quirinal and Esquiline, which were in use from the beginning of the Iron Age down to the beginning of the historic period. The large necropolis on the Esquiline is cut in two by the "Servian" wall, which is evidently of later date. The later tombs contain objects of Etruscan, Phoenician and Greek manufacture.

Ancient fortifications.

There is no doubt that the earliest settlement bearing the name of Rome was on the Palatine hill,[3] which was both easy of defence and possessed the means of communication with its neighbours in the proximity of the Tiber. The name *Roma* is said to mean "river," but this is uncertain. The Palatine is roughly square in outline, and the Roman antiquarians sometimes applied the name Roma Quadrata to the earliest settlement; but the term seems more properly to have applied to a sanctuary connected with the foundation of the city. The ideal boundary of the city was formed by the Pomerium (Varro, *L.L.* v. 143; Liv. i. 44; Dionys. i. 88), whose original course is traced by Tacitus (*Ann.* xii. 24). It passed along the foot of the hill (*per ima montis Palatini*), the angle-points being given by the Ara Maxima in the Forum Boarium, the Ara Consi in the Circus Maximus, the Curiae Veteres (near the arch of Constantine) and the Sacellum Larum (at the N. angle). But this was of course not a defensible site, and the extent of the fortified city can only be determined by the traces of its early walls. These enable us to fix its line along the whole valley of the Velabrum, on the west of the hill, and along the valley of the Circus Maximus as far as the so-called Paedagogium, about half-way on the south side.

The Palatine city.

Considerable remains of this fortification exist near the west angle of the hill. These show that the natural strength given by the cliff was increased by artificial means. The wall was set neither at the top nor at the foot of the hill, but more than half-way up, its level running for a short distance round being cut in the rock on which the base of the wall stood. Above that the hill was cut away into a cliff, not quite perpendicular but slightly "battering" inwards, to give greater stability to the wall, which was built up against it, like a retaining wall, reaching to the top of the cliff, and probably a few feet higher. The stones used in this wall are soft tufa, a warm brown in colour, and full of masses of charred wood. The cutting to form the steep cliff probably supplied the stone material for the wall; and ancient quarries afterwards used as reservoirs for water, exist in the mass of rock on which the so-called temple of Jupiter Victor stands. It has been asserted that these tufa blocks are not cut but split with wedges; this, however, is not the case. Tufa does not split into rectangular masses, but

[1] Eighty silver statues of Augustus, some equestrian and some in quadrigae, are mentioned in the *Mon. Anc.* 4, 51.

[2] On the prehistoric remains of Rome and Latium, see Pinza in *Monumenti antichi pubblicati per cura della reale Accademia dei Lincei*, vol. xv., 1905; also Comm. Boni's reports on the necropolis adjoining the Forum in the *Notizie degli scavi*, and Modestor, *Introduction à l'histoire romaine* (Paris, 1907).

[3] The "primacy of the Palatine" has been disputed by Carter (*Amer. Jour. Arch.*, 1908, p. 181), who thinks that the first *city* was that of the Four Regions (see below) formed by the Etruscan kings.

would be shattered to pieces by a wedge; moreover, distinct tool-marks can be seen on all the blocks whose surface is well preserved and in the quarries themselves. Chisels from one-fourth to three-fourths of an inch in width were used, and also a pronged pick or hammer. The wall is about 10 ft. thick at the bottom, and increases in thickness above as the scarped cliff against which it is built recedes. It is built of blocks laid in alternate courses of headers and stretchers, varying in thickness from 2 to 24 in., in height from 3 to 5 ft. and in width from 19 to 22 in. These blocks are carefully worked on their beds, but the face is left rough, and the vertical joints are in some cases open, spaces of nearly 2 in. being left between block and block; in other cases the vertical joints are worked true and close like the beds. No mortar was used. At two points on the side of the Velabrum winding passages are excavated in the tufa cliff, the entrance to which was once closed by the outer wall. One of these is now (or was before water in abundance was brought to the Palatine on aqueducts) was used as a reservoir to collect surface water, probably for use in case of siege; circular shafts for buckets are cut downwards through the rock from the top of the hill. A similar rock-cut cistern with vertical shafts, of very early date, exists at Alba Longa. Opposite the church of S. Teodoro a series of buttresses belonging to the early wall exists, partly concealed by a long line of buildings of the later years of the Republic and the early Empire, to make room for which the greater part of the then useless wall was pulled down, and only fragments left here and there, where they could be worked into the walls of the later houses.

The age of the walls here described cannot be determined with certainty; but their resemblance to the remains of the "Servian" wall, especially in the system of "headers and stretchers" and the dimensions of the blocks, makes it certain that they do not differ greatly in date from that work. The same remark for which the great part of the then useless wall was pulled down, and only fragments left here and there, where they could be worked into the walls of the later houses.

The age of the walls here described cannot be determined with certainty; but their resemblance to the remains of the "Servian" wall, especially in the system of "headers and stretchers" and the dimensions of the blocks, makes it certain that they do not differ greatly in date from that work. The same rough care for which the greater

traversed by the fortification. Where the wall followed the face of the cliffs, as for instance on the Capitol and Quirinal, it was raised on an artificial shelf after the fashion employed on the Palatine (*vide supra*). In other places where the slope was gentler, the wall was formed of rubble with revetments of opus quadratum, *e.g.* on the Aventine; finally, where the ground was flat, as on the plateau of the Esquiline, a ditch was dug and an embankment formed by the upcast; this *agger*, as it was called, was then faced with retaining walls of opus quadratum. The length of the agger on the Esquiline is put by Dionysius (ix. 68) at 7 stadia, which agrees, roughly speaking, with the discoveries made in 1876–1879, when the railway station was built and the line laid over it. The total length of the wall was about 4225 ft., the thickness of wall and agger about 50 ft., while the ditch was 100 Roman ft. in width and 30 in depth. There is, however, a difference in technique between the inner and outer retaining walls of the agger. The former are built of large granite tufa in blocks of irregular size, while in the outer brown tufa is employed and the blocks are of standard size, two headers ranging with each stretcher. Between the railway station and the Dogana the fine tufa piece of the front wall remains, with traces of the Porta Viminalis and of the lower back wall. Unfortunately the whole of the bank or agger proper has been removed, and the rough back of the great retaining wall exposed. Both tufa and peperino are used, the latter in restored parts; the blocks vary in length, but average in depth the usual 2 Roman ft. The railway cutting, which has destroyed a great part of the agger, showed clearly the section of the whole work: the strata of different kinds of soil which appeared on the sides of the foss appeared again in the agger, but more than this they naturally would be in the process of digging out and heaping up. Dionysius (ix. 68) states the length of the agger to have been 7 stadia—that is, about 4200 ft.—which agrees (roughly speaking) with the actual discoveries. Originally agger and foss were flat at bottom of the foss and another along its edge; the latter existed in imperial times. But the whole foss appears to have been filled up, probably at the time when Servius built over it and afterwards built upon; houses of mixed brick and opus reticulatum still exist against the outside of the great wall, which was itself used as the back wall of these houses, so that we now see painted stucco of the time of Hadrian covering parts of the wall of the kings. Another row of houses seems to have faced the road mentioned above as running along the upper edge of the foss, thus forming a long street. As early as the time of Augustus a very large part of the wall of the kings had been pulled down and built over, so that even then its circuit was difficult to trace (Dionys. iv. 13). A very curious series of masons' marks exists on stones of the agger wall (as well as on those of some other early buildings). They are deeply incised, usually on the ends of the blocks, and average from 10 to 14 in. in length: some are single letters or monograms; others are numbers, *e.g.* ↓, the numeral 50. Fig. 6 shows the chief forms from the Palatine and Esquiline.[1]

Masons' marks.

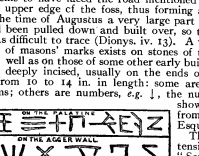

FIG. 6.—Masons' Marks on Early Walls.

There are also extensive remains of the "Servian" wall on the Aventine, in the Via di Porta S. Paolo. Here the wall has a backing of concrete, and the upper portion is built with blocks of peperino, set in mortar and bevelled at the edges. These

are unmistakable signs that the wall has undergone restcration. This portion is pierced by an arch about 9½ ft. high, which probably served as an embrasure for a military engine. Finally, where the wall skirts the bank of the Tiber it is built in two sections—a foundation about 2 metres in height and 3 in width, which forms a landing-stage, and an upper wall, 6 metres high, which retains the bank. It is built of peperino, and is probably later than the rest of the fortification.

The age of this wall is uncertain, but it has been rendered exceedingly probable that it belongs to the 4th century B.C. The evidence for this is derived from the comparison of other fortifications in central Italy, from the measurements of the blocks employed, which presuppose the later Roman foot of 296 millimetres, and from the character of the alphabet from which the masons' marks are taken.[2] Livy (vi. 32) speaks of a contract entered into by the censors of 378 B.C. for the construction of a wall of opus quadratum, and this probably refers to the older portions of the existing wall, which was built owing to the fear of a second Gallic invasion.[3]

The Servian city did not include what is now the most crowded part of Rome, and which under the Empire was the most architecturally magnificent, namely, the Campus Martius, which was probably to a great extent a marsh. It was once called Ager Tarquiniorum, but after the expulsion of the Tarquins was named Campus Martius from an altar to Mars, dating from prehistoric times (Liv. ii. 5).

Of that wonderful system of massive arched sewers [4] by which, as Dionysius (iii. 68) says, every street of Rome was drained into the Tiber, considerable remains survive. What is probably this great sewer, big enough (he says) for a loaded hay-cart to pass along. The mouths of two other similar but smaller cloacae are still visible in the great quay wall near the Cloaca Maxima, and a whole network of sewers exists under a great part of the Servian city. Some of these are not built with arched vaults, but have triangular tops formed of courses of stone on level beds, each projecting over the one below—a primitive method of construction, employed in the Tullianum and in the wall of tufa and peperino which lined the Tiber at the mouth of the Cloaca Maxima is also of early date. In later all along the bank of the Campus Martius, having lost its importance as a line of defence, had frequent flights of stairs built against it, descending to the river. Some of these are shown in one of the fragments of the marble plan (see Jordan, *F.U.R. Prog.* 169). In 1879 a travertine block was dredged up inscribed P. BARBIVS . BARBA . AED . CVR . GRADOS . REFECIT, dating from the 1st century B.C. This records the repair of one of these river stairs.[4]

Cloacae.

Great quay wall.

Tullianum and Carcer.

The Tullianum is the earliest of the existing buildings of Rome. Imprisonment as a punishment was unknown to Roman law, and hence the Carcer, where criminals were detained pending trial, was of small dimensions. Its remains are preserved beneath the church of S. Giuseppe dei Falegnami, and below them is the Tullianum, a dungeon where executions took place. It is partly cut in the tufa rock of the Capitoline hill and partly built of 2-ft. blocks of tufa, set with thin beds of pure lime mortar in courses projecting over each other. Its name is derived, not from Servius Tullius, as Varro (iv. 151) asserts but from an early Latin word, *tullus*, a spring of water; its original use was probably that of a cistern or well. It was closed by a conical vault, arched in shape, but not constructed on the arch—very like the so-called "treasury of Atreus" at Mycenae, and many early Etruscan tombs. When the upper room with its arched vault, also of tufa, was built the upper part of the cone seems to have been removed, and a flat stone floor (a *lacus* or *robur* construction) substituted.[5] That its use as a cistern was abandoned is shown by the cloaca which leads from it, through the rock, to a branch of the Cloaca Maxima. This horrible place was used as a dungeon, prisoners being lowered through a hole in the vault, which is the only access. The present stairs are modern. The two chambers are vividly described by Sallust (*Cat.* 55). The entrance to the upper prison was on the left of the stairs leading up from the Forum to the Clivus Argentarius, the road to the Forum Boarium (see Fig. 1, General Plan of Ancient Rome). Lentulus and the Catiline conspirators, as well as Jugurtha, Vercingetorix and other prisoners of importance were killed or starved to death in this fearful dungeon, which is called τὸ βάραθρον by Plutarch (*Mor.* 554, xii.). According to a doubtful tradition of the Catholic Church, St Peter was imprisoned in the Tullianum. The name Mamertine prison is of medieval origin. On the front wall the prison was restored in the reign of Tiberius A.D. 22, and bears the inscription on a projecting string-course—C. VIBIVS . C . F . RVFINVS . M . COCCEIV[S . M . F . NERVA]COS . EX . S. C.[6] The floor of the upper prison is about 16 ft. above the level of the Forum. The Capitol was approached from the Carcer by a flight of steps—Scalae Gemoniae—on which

[1] See Bruzza, *Ann. Inst.* (1876), 72; Jordan, *Topographie*. i. 250; Richter, *Uber antike Steinmetzseichen* (1885).

[2] See Richter in the work quoted above, and *Beiträge zur römischen Topographie* (Berlin, 1893); also Delbrück, *Der Apollotempel auf dem Marsfelde in Rom*, pp. 14 ff.

[3] For earlier studies of the Servian wall consult Nibby and Gell, *Le Mura di Roma* (1820); Piale, *Porte del Recinto di Servio* (1833); Becker, *De Romae Muris* (Leipzig, 1842); Lanciani, *Ann. Inst.* (1871), p. 40, *Mon. Inst.* ix. pl. xxvii.; Borsari, "Le mura e porte di Servio," *Boll. Comm. Arch.* (1895), pp. 12 ff.

[4] See Liv. i. 38, 56; Dionys. iv. 44.

[5] In the upper part of its course the Cloaca Maxima was restored in some places, under the Empire, with a vault of brick-faced concrete; at the entrance to the Forum a large bend was made when the Basilica Aemilia was extended westwards in 34 B.C.

[6] A great quay wall with arched cloaca, similar in style to those in Rome, exists at the mouth of the river Marta near Tarquinii, and similar constructions are found in other Etruscan cities.

[7] Livy (i. 33) mentions the "carcer . . . ædificatus antea loco haud sane procul a foro, ut esset in oculis pœna conspectus metusque vicinia foro," and also speaks (xxxiv. 44) of an "inferiorem carcerem," and at xxix. 22 of a criminal being put in the Tullianum.

[8] Consules suffecti for A.D. 22.

the bodies of criminals were exposed;[1] Pliny (*H.N.* viii. 145) calls it the "stairs of sighs" (*gradus gemitorii*).

Forum Romanum and Adjacent Buildings.

The Forum Romanum or Magnum, as it was called in late times to distinguish it from the imperial fora, occupies a valley which extends from the foot of the Capitoline hill to the north-west part of the Palatine. Till the construction of the great cloacae it was, at least in wet seasons, marshy ground, in which were several pools of water. In early times it was bounded on two sides by rows of shops and houses, dating from the time of the first Tarquin (Liv. i. 35). The shops on the south-west side facing the Sacra Via, where the Basilica Julia afterwards was built, were occupied by the Tabernae Veteres.[2] The shops on the northern side, being occupied by silversmiths, were called Tabernae Argentariae, and in later times, when rebuilt after a fire, were called Tabernae Novae (see Liv. xxvi. 27, xl. 51).[3] An altar to Saturn (Dionys. i. 34, vi. 1), traditionally set up by the companions of Hercules, and an altar to Vulcan, both at the end towards the Capitol, with the temple of Vesta and the Regia at the opposite end, were among the earliest monuments grouped around the Forum. The Lacus Curtius vanished, as Varro says (*L.L.* v. 148–49), probably with other stagnant pools, when the cloacae were constructed (Liv. i. 38, 56).[4] Another pool, the Lacus Servilius, near the Basilica Julia, was preserved in some form or other till the imperial period. Under Sulla it was used as a place to expose the heads of many persons murdered in his proscriptions (Cic. *Rosc. Am.* 32, 89; Seneca, *De Prov.* 3, 7). The Volcanal was an open area, so called from the early altar to Vulcan, and was (like the Comitium) a place of public meeting, at least during the regal period.[5] It was raised above the Comitium, and was a space levelled on the lower slope of the Capitoline hill behind the arch of Severus; the foundations of the altar were discovered in 1898. It was probably much encroached upon when the temple of Concord was enlarged in the reign of Augustus. Fig. 8 gives a carefully measured plan of the Forum, showing the most recent discoveries.

Unlike the fora of the emperors, each of which was surrounded by a lofty wall and built at one time from one design, the architectural plan of the Forum Romanum was a slow growth. The marshy battlefield of the early inhabitants of the Capitol and Palatine became, when the ground was drained by the great cloacae, under a united rule the most convenient site for political meetings, for commercial transactions, and for the pageants of rich men's funerals, *ludi scenici*, and gladiatorial games.[6] For these purposes a central space, though but a small one, was kept clear of buildings; but it was gradually occupied in a somewhat inconvenient manner by an ever-accumulating crowd of statues and other honorary monuments. On three sides the limits of this open space are marked by paved roads, faced by the stately buildings which gradually took the place of the simple wooden tabernae and portico of early times. The Comitium[7] was a level space in front of the Curia; the construction of both is ascribed to Tullus Hostilius. For the position of the Comitium and the Curia[8] see plan of Forum (fig. 8). Varro (*L.L.* v. 155-56) gives the following account of the buildings which were grouped along the northern angle of the Forum:—

"Comitium ab eo quod coibant eo comitiis curiatis et litium causa. Curiae duorum generum, nam et ubi curarent sacerdotes res divinas, ut Curiae Veteres, et ubi senatus humanas, ut Curia Hostilia, quod primum aedificavit Hostilius rex. Ante hanc Rostra; quojus loci id vocabulum, quod ex hostibus capta fixa sunt rostra. Sub dextra hujus a Comitio locus substructus, ubi nationum subsisterent legati qui ad senatum essent missi. Is Graecostasis appellatus a parte ut multa. Senaculum supra Graecostasim, ubi Aedis Concordiae et Basilica Opimia. Senaculum vocatum, ubi senatus, aut ubi seniores consisterent."

The curia or senate-house passed through many vicissitudes.[9] At first called Curia Hostilia, from its founder Tullus Hostilius (Liv. i. 30), it lasted till 52 B.C., when it was burnt at the funeral of Clodius, and was then rebuilt by Julius Caesar, and from his *gens* called Curia Cornelia (Dio Cass. xl. 50). It was again rebuilt by Julius Caesar, and dedicated by Augustus (29 B.C.) under the name of the Curia Julia, as recorded in the inscription of the pediment:—CVRIAM . ET . CONTINENS . EI . CHALCIDICVM . . . FECI. Little is known about the adjoining buildings called the Athenaeum and Chalcidicum; Dion Cassius (li. 22) mentions the group. In the reign of Domitian the Curia Julia was restored (Procop. Aquit. p. 571), and it was finally rebuilt by Diocletian. The existing church of S. Adriano is the Curia of Diocletian, though of course much altered, and with its floor raised about 20 ft. above the old level. The level of the entrance was raised in the middle ages, and again in 1654. Sixteenth-century drawings and engravings show the lower level. The ancient bronze doors now at the end of the nave of the Lateran basilica originally belonged to this building, and were removed thence by Alexander VII. The brick cornice, and marble consoles, covered with enriched mouldings in stucco, and the sham marble facing, also of stucco, if compared with similar details in the baths of Diocletian, leave no doubt as to this being a work of his time, and not, as was at one time assumed, one of Pope Honorius I. (A.D. 625–38) who consecrated it as the church of S. Adriano. *Curia.*

From the Curia a flight of steps led down to the Comitium (Liv. i. 36), a space consecrated as a *templum* according to the rules of augury (Cic. *De Or.* iii. 3) and used for the meetings of the *Comitia Curiata*, and for certain religious ceremonies performed, after the fall of the monarchy, by the *rex sacrificulus*. It contained ancient monuments and relics, such as the *ficus ruminalis*, and the supposed tomb of Romulus, whose site was marked in later times by a "black stone" (*lapis niger*). Facing the Curia stood the platform from which speakers addressed the people, adorned in 338 B.C. with the beaks of the ships captured from the Antiates in the naval victory of Antium and hence called the rostra. Caesar determined to remove the rostra from the Comitium to the Forum, and this plan was carried out after his murder. From the original rostra Cicero delivered his *Second* and *Third Catiline Orations*, and they filled in the were the scene of some of the most important political struggles of Rome, such as the enunciation of their laws by the Gracchi. Beside the Comitium another monument was conspicuously adorned with beaks of ships, to commemorate the same victory at Antium. This was the Columna Maeniana, so called in honour of Maenius (Plin. *H.N.* xxxiv. 20, vii. 212). The Columna Duilia was a similar monument, erected in honour of the victory of C. Duilius over the Punic fleet in 260 B.C. A fragment of it with inscription (restored in imperial times) is preserved in the Capitoline Museum.[10] Columns such as these were called *columnae rostratae*. *Original rostra.*

In 1899–1900 the site of the Comitium—which was considerably reduced in extent by the Julian basilica and the rostra—was excavated by Commendatore Boni, in some parts as far as the virgin soil.[11] Remains of walls and pavements of various periods (some very early) were discovered; some of the walls, there is no doubt, supported a platform of the early rostra, which in fig. 9 from which project two moulded bases of tufa (A, B) on which the lions may well have stood, on either side of a block (C) which might serve as an altar. Beside this tomb (if such it be) stood the trunk of a tufa column (E) and a rectangular *stele* (F) which bears on all its faces an inscription written alternately upwards and downwards, so that only the ends of the lines can be read. That it is the earliest specimen of the Latin language is undoubted; and it certainly mentions the *rex*. But after the expulsion of the kings the *rex*

[1] See Tac. *Hist.* iii. 74, 85; Suet. *Vit.* 17.

[2] See Livy (xliv. 16), who mentions a house of P. Africanus, "pone veteres ad Vortumni signum," which was bought by T. Sempronius to clear the site for the Basilica Sempronia in 169 B.C. This basilica was afterwards absorbed in the Basilica Julia.

[3] Hence these two sides of the Forum are frequently referred to in classical writings as "sub veteribus" and "sub novis."

[4] In later times it was an enclosed space containing an altar; it is described by Ovid (*Fast.* vi. 403) according to one tradition it marked the spot where Curtius's self-immolation filled up the chasm which had opened in the Forum (see Dionys. ii. 41). (See below.)

[5] See Dionys. ii. 50, vi. 67; Plin. *H.N.* xvi. 236; Plut. *Quaes. Rom.* 47.

[6] The first gladiatorial show in Rome was given in 264 B.C. in the Forum Boarium by D. Junius Brutus at his father's funeral (Liv. *Epit.* xvi.), the first in the Forum Romanum in 216 B.C. (Liv. xxiii. 30). See also (*Fast.* xxxi. 50, xli. 28; and Suet. *Caes.* 39; *Aug.* 43; and *Tib.* 7.

[7] On the Comitium see Detlefsen, *Ann. Inst.* (1860), pp. 128 ff., and the works mentioned below, note 11.

[8] Livy (xliv. 24) indicates their relative positions by the phrase "comitium vestibulum Curiae."

[9] On the Curia and its vicissitudes see Lanciani, *L'Aula e gli Uffici del Senato Romano* (1883).

[10] The column itself is a copy made by Michelangelo; it is at the foot of the stairs of the Palazzo dei Conservatori.

[11] The discoveries of Comm. Boni have given rise to much discussion. Of the numerous articles, &c., which have appeared it will suffice to name Pierpont, *Comitium, Rostra, Grab des Romulus* (1904), and Pinza, *Il Comizio romano nell' età repubblicana* (1905); see Huelsen, *The Roman Forum*, pp. 110 ff.

inserted either in place of or at the sides of the shattered piers. These later additions, apparently of the 3rd and 4th centuries, are omitted in fig. 8 for the sake of clearness. In or about A.D. 470 the façade of the ruins was prolonged northwards by an addition in very poor brickwork, apparently to celebrate a naval victory over the Vandals.

At the northern end of the curved platform there is a cylindrical structure of concrete faced with brick and lined with thin marble slabs: it is in three stages, each diminishing in size, and appears to be an addition of about the time of Severus.

Umbilicus and Milliarium.

This is usually identified with the Umbilicus Romae, or central point of the city, mentioned in the *Notitia* and the Einsiedeln MS. (Jordan, *Topographie der Stadt Rom*, ii. 65).

Near the rostra, below the temple of Saturn, stood the Milliarium Aureum, a marble column sheathed in gilt bronze and inscribed with the names and distances of the chief towns on the roads which radiated from the thirty-seven gates of Rome (Plin. *H.N.* iii. 66). It was set up by Augustus in 20 B.C., and its position "sub aede Saturni" is indicated by Tacitus (*Hist.* i. 27; see schol. on Suet. *Otho*. 6, and Plut. *Galba*, 24). The Miliarium is mentioned in the *Notitia* (reg. viii.) as being near the Vicus Jugarius. Its precise position cannot be determined. Fragments of a marble cylinder and cornice with floriated reliefs, now lying in front of the temple of Saturn, probably belonged to this monument; they were found in 1835 near the supposed site.

Temple of Saturn.

The position of the temple of Saturn is indicated in *Mon. Ancr.* (see below, n. 6) and shown on the marble plan, and is also identified by various passages in ancient writers. Varro (*L. L.* v. 42[1]) speaks of it as being "*in faucibus Capitolii*" (cf. Dionys. *Ant.* ii. 115) says that it is in front of the Clivus Capitolinus, and near the temple of Concord (see Plate VIII.). It was built against a steep slope or outlying part of the Capitoline hill (cf. Dionys. i. 34) on the site of a primitive altar to Saturn, after whom the Capitoline hill was originally called Mons Saturnius. The public treasury was part of this temple (Serv. *Ad Aen.* ii. 116, and Macrob. *Sat.* i. 8). The original temple is said by Varro (ap. Macrob. i. 8) to have been built by the Pelasgians, and dedicated to Ops Consiva, the first dictator, 498 B.C.; but Dionysius (vi. 1) and Livy (ii. 21) attribute it to the consuls A. Sempronius and M. Minucius in 497 B.C. It was rebuilt on a larger scale by L. Munatius Plancus in 42 B.C. (Suet. *Cæs.* 29). The only part remaining of this date is the very lofty podium of massive travertine blocks, and part of the lower course of Athenian marble, with which the whole was faced. In the 16th century a piece of the marble facing was found inscribed L. PLANCVS . L . F . COS . ITER . CENS . DE . MANIB . (*C.I.L.* vi. 1316). The erection of the six granite columns in the front and two at the sides, with their clumsily patched entablature, bearing the inscription SENATVS . POPVLVSQVE . ROMANVS . INCENDIO . CONSVMPTVM . RESTITVIT, belongs to the last rebuilding in the time of Diocletian. Some of these fine columns are evidently earlier than this rebuilding, but were refixed with rude care and haste. One of the columns is set wrong way up, and the whole work is of the most careless sort. Part of the inscription, once inlaid with bronze, recording this latest rebuilding, still exists on the entablature. On the Forum side the temple is flanked by the Vicus Jugarius, and the Vicus Capitolinus (see below) wound the front of the great flight of steps leading up to the cella, and then turns along the north-west side of the temple.[2] The

Vicus Jugarius.

Vicus Jugarius (see fig. 8), part of the basalt paving of which is now exposed, was so called (see Festus, ed. Müller, p. 104) from an altar to Juno Juga, the guardian of marriage. Starting from the Forum, it passed between the temple of Saturn and the Basilica Julia, then close under the cliff of the Capitoline (see Jordan, *Topographie der Stadt Rom*, i. 2, Carmentalis. It was spanned at its commencement by a brick-faced arch lined with marble, the lower part of which exists, and is not earlier than the 3rd or 4th century.[3] At this end of the Forum the arch of Tiberius was built beside the Senate House, as erected in A.D. 12 to commemorate the recovery of the standards lost by Varus.[4] The concrete foundation has recently been exposed.

Basilica Julia.

The Basilica Julia[5] occupies a great part of the south-west side of the Forum, and lying, as it does, between the Vicus Jugarius and the Vicus Tuscus. It was begun by Julius Cæsar, who dedicated it when still unfinished, on the 26th of September 46 B.C., completed by Augustus, and again rebuilt by him after a fire, as is recorded in *Mon. Anc.* 4, 13,[6] in an important passage which gives its complete early history. It consisted of a central hall with aisles, galleries and clerestory, surrounded on three sides by a colonnade in two storeys approached by steps; on the S.W. a row of rooms or tabernae took the place of the colonnade. The central nave was paved with richly coloured oriental marbles, namely pavonazzetto, cipollino, giallo and africano. The covered aisles are paved with large slabs of white marble.[7] Many *tabulae lusoriae*, or gambling boards, are scratched on this marble paving (cf. Cic. *Phil.* ii. 23).[8] Low marble cancelli, with moulded plinth, closed the otherwise open arches on the basilica; many fragments exist, and one pier of the sub-plinth is still *in situ*. This basilica held four law-courts, which in important cases held joint sessions. Trajan and other emperors held law-courts there (Dio Cass. lxxxviii. 10). An inscription found near the Cloaca Max. (*C.I.L.* 1658) records a restoration by Honorius Severus in A.D. 199, after a fire; it was again burnt in 283 and restored by Diocletian. These fires had destroyed nearly all the fine marble arches of Augustus; and Diocletian rebuilt it mostly with brick or travertine piers, portions of which remain.[9] A final restoration is recorded in inscriptions discovered at various times from the 16th century onwards, as being carried out by Gabinius Vettius Probianus, praefect of the city in 377; one of these is on a pedestal which now stands in the Vicus Jugarius. Suetonius (*Cal.* 37) mentions that it was one of Caligula's amusements to throw money to the people below from the roof of this basilica, which formed a link in the bridge by which this maniac connected the Palatine with the Capitolium.

Vicus Tuscus.

The Vicus Tuscus passes behind the Sacra Via between the Basilica Julia and the temple of Castor to the Velabrum and Circus Maximus; its basalt paving has been exposed at many points along its whole line. A very early statue of Vortumnus stood in this street, a little to the west of the Basilica Julia, where part of its pedestal was found in 1549 inscribed VORTVMNVS TEMPORIBVS DIOCLETIANI . ET . MAXIMIANI . . . (*C.I.L.* vi. 804;[10] see also Pseudo-Ascon, *Ad Cic. Verr.* ii. 1, 59). The Vicus Tuscus was also lined with tabernae, from shops of booksellers (see Schol. ad Hor. *Sat.* ii. 3, 228, and *Ep.* ii. 1, 269). It is the street along which processions passed, mentioned by Cicero (*Verr.* ii. 1, 59) as extending *a signo Vertumni in Circum Maximum*.

Temple of Castor.

The temple of Castor[11] was built, or rebuilt, by L. Metellus, *i.e.* Castor and Pollux—on the south-east side of the Vicus Tuscus was founded to commemorate the apparition in the Forum of the Dioscuri, announcing the victory of Aulus Postumius at the Lake Regillus, 496 B.C. It was dedicated in 484 B.C., and by the son of A. Postumius (Liv. ii. 20, 42; Dionys. vi. 13; Ov. *Fasti*. i. 706). In 119 B.C. it was restored by the consul L. Caecilius Metellus Dalmaticus (Ascon. *In. Cic. Pro Scaur.* 45). It was finally rebuilt in the reign of Augustus by Tiberius and Drusus, A.D. 6 (Suet. *Tib.* 20; Ov. *Fast.* i. 705; Dio Cass. lv. 8, 27); the three existing Corinthian columns and piece of entablature, all very delicately and gracefully in detail, and of the finest workmanship, in Pentelic marble, belong to a still later restoration under Trajan or Hadrian. One point rises Roman timidity in the use of a lintel: the frieze is jointed so as to form a flat arch, quite needlessly, with the object of relieving the architrave of its weight. The cella is hexastyle, with only eleven columns on the sides, is shown in fig. 8. It had a lofty podium, faced with marble and decorated with a heavy cornice and pilasters, one under each column. The podium has an interesting concrete core, the construction was also of Roman buildings of the best period. Solid tufa walls, 8 ft. thick, are built under the whole of the cella and the front row of columns, while the columns of the sides rest on spurs of similar walling, projecting at right angles from the main cella; the rest of the part immediately under the columns is of travertine, and the spurs are united and strengthened laterally by massive flat arches, also of travertine. Between the foundations of the columns were chambers used as offices, &c. With the exception of a small portion under the front columns from the Vicus Tuscus, the entire podium is filled up by a solid mass of concrete, made of broken tufa, pozzolana and lime, the whole forming a lofty platform, about 22 ft. high, solid as a rock, on which the columns and upper structure are erected. The podium contains

---

[1] Below the temple of Saturn the Clivus Capitolinus is carried on an arched substructure of somewhat irregular *opus reticulatum*. This has been described (but without much probability) as the *rostra* of Caesar.

[2] A portion of these streets with part of the temple of Saturn and the Basilica Julia is shown on fragments of the marble plan (see Plate VIII.).

[3] One side of this gate was built against one of the marble piers of the Basilica Julia, a perfect print of which still exists in the concrete of the gate, though the marble pier itself has disappeared. The other side of the gate abutted against the marble-lined podium of the temple of Saturn.

[4] See Tac. *Ann.* ii. 41, who says it was *propter aedem Saturni*.

[5] See Suet. *Aug.* 29; Gerhard, *Bas. Giulia*, &c. (1823); and Visconti, *Escavasione della Bas. Giulia* (1872).

[6] "Forvm . Ivlivm . et . basilicam . qvae . fvit . inter . aedem . Castoris . et . aedem . Saturni . coepta . profligatavqe . opera . a. patre. meo. perfeci. et. eandem. basilicam. consvmptam. incendio . amplato . eivs . solo . svi . ivssv . nomini . filiorvm . inchoav . et . si . vivvs . non . perfecissem . perfici . ab . haeredibvs . [meis . ivssvli." The *filii* here referred to are Augustus's grandsons, Gaius and Lucius, adopted by him in 17 B.C. (see Dio Cass. lvi. 27).

[7] Three medieval brine-kilns were found by Canina within this basilica, which accounts for the scantiness of the existing remains.

[8] A few have inscriptions, *e.g.* "Vinces . gaudes: perdes . plangis."

[9] The whole building has unhappily been much falsified by needless restoration.

[10] A drawing of this pedestal, which is now lost, with MS. note by Ligorio, exists in *Cod. Vat.* 3439, fol. 46.

[11] The temple of Castor is shown on two fragments of the marble plan, and its position is also indicated by the passage in the *Mon. Anc.* quoted above (note 6).

a few remains[1] of the earliest temple, built of blocks of grey-green tufa. Two fragments of mosaic, with simple lozenge pattern in white marble and basalt, still exist in the cella of this temple. The level of the mosaic, which probably belonged to the rebuilding of Tiberius, lies considerably below that of the later floor, which seems to date from Hadrian's reign. It has all the characteristics of early mosaic—very small tesserae fitted with great accuracy, like the early mosaic in the Regia. The temple of Castor was often used as a meeting-place for the senate, and its lofty podium formed a tribunal for orations.[2] The Fons or Lacus Juturnae (see Ov. *Fast.* i. 705, and Dionys. vi. 13), at which the Dioscuri were fabled to have watered their horses, was beside their temple; rebuilding of the present was discovered in 1900–1. The Lacus itself, a basin 16½ ft. square and 6½ ft. deep, is immediately opposite the three standing columns of the temple; in the centre is a base of *opus reticulatum*, which supported statues of the Dioscuri, and with reliefs, together with other sculptures, has been found close by, and a few yards off is a small chapel or *aedicula*, intended for a statue of Juturna, and in front of it a well-curb (*puteal*) of white marble, set up by the aedile M. Barbatius Pollio in the reign of Augustus.

Close to the temple of Castor, at the angle of the Forum, stood the arch of Augustus, set up in 20 B.C. to commemorate the recovery of the standards taken from Crassus by the Parthians.

Arch of Augustus.

Its foundations were discovered in 1898; it had three bays, and rested on the pavement of a street which before the time of Augustus formed the E. boundary of the Forum.

On the other side of the Sacra Via stand the remains of the temple of Divus Julius, erected by Augustus, though little beyond the concrete core is left, its plan can be fairly well made out from the voids in the concrete, which show the position of the tufa foundations under the walls and columns (as in the temple of Castor). The temple itself, a hexastyle prostyle building, with close intercolumniation (Vitr. iii. 2), stood on a lofty podium with a curved recess in the front between two flights of stairs (see Plate VIII.). The wall which now fills up the recess is a late addition. In 1898 the base of a large altar was discovered in the niche, doubtless that mentioned by Appian (*Bell. Civ.* ii. 148). The podium, which projects in front of the temple itself, was adorned with the beaks (rams' heads) of ships taken at Actium (Dio Cass. li. 19), and hence it was called the Rostra Julia, to distinguish it from the other rostra described above. Both were used for the funeral orations in honour of Augustus (Suet. *Aug.* 100; see also Dio Cass. lvi. 34). Besides the concrete core and the curved tufa wall of the recess, little now exists except a small bit of the mosaic of the cella floor and some fragments of the cornice and pediment, of fine Greek marble. This temple is represented on coins of Augustus and Tiberius.

Temple of Divus Julius.

The temple of Vesta, founded according to tradition by Numa,[3] stands at the southern angle of the Forum on the ancient line of the Sacra Via (Ov. *Trist.* iii. 1, 28). No shrine in Rome was equal in sanctity to this little circular building, which contained the sacred fire and the relics on which the welfare and even the existence of Rome depended. The original building was destroyed in 390 B.C. by the Gauls; it was burnt again in 241 B.C., again in the great fire of A.D. 64, and then in the reign of Commodus; after this it was rebuilt by Severus, to whose age belong the fragments of columns, cornice and other architectural features now lying around the ruined podium. With the aid of coins[4] and a relief preserved in the Uffizi at Florence[5] it is possible to make a sufficiently accurate restoration of the temple.[6] It consisted of a circular cella, surrounded by eighteen columns, with screens between them; the circular podium, about 10 ft. high, still exists mainly of concrete faced with some portions of tufa blocks, which may belong to the original structure. Recent excavations have disclosed a pit (*favissa*) in the middle of the podium, where the ashes of the sacred fire were temporarily stored. In the time of Pliny (*H.N.* xxxiv. 7) the tholus or dome over the cella—symbolizing the canopy of heaven (Ov. *Fast.* vi. 276)—was covered with Syracusan bronze. Its position near the temple of Castor is mentioned by Martial (iv. 73).

Temple of Vesta.

The Regia, or office of the *pontifex maximus*, was on the Sacra Via, close by the temple of Vesta. It also was traditionally founded by Numa, and used as his dwelling-house; it was destroyed in 390 B.C. by the Gauls, and was again burnt in 210 B.C. (Liv. xxvi. 27), when the temple of Vesta narrowly escaped. Ovid (*Trist.* iii. 1, 28) describes this end of the Forum thus:—

Regia.

"Haec est a sacris quae via nomen habet,
Hic locus est Vestae, qui Pallada servat et ignem,
Hic fuit antiqui Regia parva Numae."

It was again damaged by fire in 148 B.C. and 36 B.C., after which it was rebuilt in marble by Cn. *Lu...* Domitius Calvinus, and the outer walls inscribed with the lists of consuls and triumphs (*fasti consulares et triumphales*) of which many fragments have been recovered. Recent excavations have brought to light the tufa foundations of the republican building, including a round substructure, which may have supported the *sacrarium Martis*, in which were preserved the *ancilia* or sacred shields and spears (Gell. iv. 6), and an underground cistern, which has been brought into connexion with the shrine of Ops Consiva (Varro, *L.L.* v. 64). The official residence of the *pontifex maximus* was not the Regia, but the *domus publica*; when Augustus succeeded to the office, he conveyed a part of his residence on the Palatine to the state in order to satisfy the claims of tradition, and presented the *domus publica* to the vestals.

The excavations of 1883–84 laid bare remains of this very interesting building, and showed that it was a large house extending close up to the Atrium Vestae; its orientation corresponded with that of the Regia. The existing remains are of several dates—first, walls of soft tufa, part possibly of the earliest building; second, walls of hard tufa, of rather later date; and lastly, concrete walls faced with brick, decorated with painted stucco, and columns of travertine, also stuccoed and painted,[8] with a large quantity of fine mosaic of that early sort which has very small tesserae put together with great accuracy. These valuable remains were preserved in spite of the erection of later buildings over them, because the levels of the later floors were higher than those of the Regia, and thus covered and protected the mosaics and lower parts of the walls and columns.

Atrium Vestae.

The Atrium Vestae, or house of the vestals, like the temple, was many times burnt and rebuilt. The existing building, which was excavated in 1883–84 and more completely in 1901, seems to have been built after the great fire of A.D. 64, and to have been restored or enlarged several times—by the Flavian emperors, who added the colonnaded cryptoporticus, which built the tablinum and other rooms at the end; the Antonines, and Septimius Severus, who restored the whole after the fire of A.D. 192.[9] It consists of a large atrium or quadrangle with columns of cipolino, at one end of which is the tablinum, with three small rooms on each side of it—probably for the six vestals. A bathroom, bakehouse, servants' offices, and some rooms lined with rich marbles extend along the south-west side. This extensive building is set against the side of the Palatine, which is used as an admirable lower storey. Thus the level of the first upper floor is nearly the same as that of the Nova Via, on which it faces, about 23 ft. above the ground floor. The upper floor is in part well preserved; it contains a large suite of baths and other rooms, which were probably the sleeping apartments of the vestals. All the better rooms and the baths are lined with polished marbles, many of great beauty and rarity; the floors are mostly mosaic of tessellated work. The paving of the tablinum was a beautiful specimen, of the time of Hadrian, in opus sectile. Many places alterations and clumsy patchings of the 4th and 5th centuries are apparent. A number of statues of the chief vestal, or *virgo vestalis maxima*, with inscribed pedestals, were found in the atrium, mostly of the 3rd century, though a few are earlier; these are of especial interest as illustrating the sacerdotal dress of the vestals.[10] Nothing but the Nova Via separates the Atrium Vestae from the imperial palace (see Plin. *Ep.* viii. 19; Aul. Gell. i. 12), which extends over the site of the Lucus Vestae—"qui a Palatii radice in Novam Viam devexus est" (Cic. *De Div.* i. 45). A curious octagonal structure in the middle of the atrium looks very much like the well-head of a flower-bed, and it is possible that this miniature garden was made by the vestals when the Lucus Vestae ceased to exist. By the main entrance from the Forum stood a small aedicula—a large pedestal, at the angles of which were columns supporting an entablature.[11] It no doubt contained a statue of Vesta, there being none within the temple. It is of the time of Hadrian. Gratian confiscated the house and endowments of the vestals in A.D. 382, but the atrium continued to be partly inhabited for many centuries later by imperial or papal officials.[12] In September 1884 a road was

[1] On these see Delbrück, *Das Capitolium von Signia* (1903), p. 22; *Der Apollotempel auf dem Marsfelde* (1903), p. 14; van Buren in *Class. Rev.* xx. pp. 77 ff.

[2] The front of the podium was decorated with ships' beaks. One of the mad acts of Caligula was to make the temple of Castor into the vestibule of his palace by breaking a door through the back of the cella (Suet. *Cal.* 22).

[3] Another legend attributes its founding to Romulus.

[4] On the coins see Dressel, *Zeitschr. für Numismatik* (1899), 20 ff.

[5] Lanciani, *L'Atrio di Vesta* (1884), pl. xix.

[6] See Huelsen, *The Roman Forum*, p. 190, fig. 108.

[7] See Jordan, *Vesta und die Laren* (Berlin, 1865); and Auer in the *Denkschriften der Wiener Akademie* (1888), ii. 209 ff.

[8] The columns were crimson, the travertine rain-water gutter bright blue, and the inner walls had simple designs in panels of leaf ornament and wreaths.

[9] A full account of the Atrium Vestae and its successive restorations is given in Miss E. B. Van Deman's *Atrium Vestae* (1909).

[10] The most important of these have been removed to the Museo delle Terme.

[11] The front is inscribed **SENATVS . POPVLVSQVE . ROMANVS . PECVNIA . PVBLICA . FACIENDAM . CVRAVIT.**

[12] In the excavations of December 1883 a pot was found in the north corner containing 830 silver pennies of English kings of the 9th and 10th centuries—Alfred the Great, Edward I., Aethelstan, Eadmund I., and others. A list of these is given by De Rossi in Lanciani's work, *L'Atrio di Vesta* (Rome, 1884). None are later

discovered leading up past the tablinum end of the atrium 'from the Sacra Via to the Nova Via. In about the 4th century this road appears to have been blocked up at the Nova Via end by a building which adjoined the Atrium Vestae.

At the north-east corner of the Forum stood the arch of Q. Fabius Maximus, consul in 121 B.C., called Allobrogicus from his victory over the Allobroges (Schol. on Cic., *In Verr., Actio* i. 7); Liv. *Ep.* lvi.; Plin. *H.N.* vii. 166). It marked the extreme limit of the Forum in this direction (Cic. *Pro Planc*, 7, 17), as the rostra did at the other end. Remains of this arch were dug up and mostly destroyed in 1546, near the temple of Fustina; on one of the fragments then discovered was inscribed Q. FABIVS. Q. F. MAXSVMVS. AED. CVR. REST. (Dessau, *Inscr. Lat. Sel.* 430). About twenty-five other fragments were found in 1882.[1]

Arch of Fabius.

The temple of Faustina the elder stands at the east angle of the Forum, facing the later line of the Sacra Via. It is prostyle hexastyle, and has monolithic columns of cipollino and a rich entablature of Greek marble, with graceful reliefs of griffins and candelabra on the frieze.[2] The walls are of massive peperino, once lined with marble. On the front is inscribed DIVO. ANTONINO. ET. DIVAE. FAVSTINAE. EX. S. C. This temple, built by Antoninus Pius in memory of his wife, who died in 141, was after his death dedicated also to him, and the first line was then added (*Vita Ant. Pii*, 6). In the Middle Ages it was consecrated as the church of S. Lorenzo in Miranda, and a great part of its cella has been destroyed. The front is now excavated to the original level. This temple is shown on the reverse of several coins of Antoninus Pius; some have the legend DEDICATIO AEDIS.

Temple of Faustina.

The space between the north-west end of the Forum and the Tabularium is occupied by a range of important buildings (see Plate VIII.). The chief of these is the temple of Concord (see Festus, ed. Müller, p. 347) shown on a fragment of the marble plan, founded by Camillus in 366 B.C. (Plut. *Cam.* 42), and restored by Opimius after the death of Gracchus (121 B.C.). It was afterwards rebuilt by Tiberius out of the spoils gained in Germany; it was rededicated by Tiberius in A.D. 10 in his own name and that of his brother Drusus (who had died in A.D. 9) (Suet. *Tib.* 20; Dio, Lix. iv. 25). It is shown with unusual minuteness on the reverse of a first brass of Tiberius. The existing remains[3] are of the rebuilding by Tiberius, and show that it was unusual in plan, having a large cella much wider than its depth, and a very large pronaos with deep wings. Its position is an interesting example of the Roman use of many different materials. The lower part of the walls was of massive tufa blocks, the upper part of the cella of travertine; and the low wall, within the supported ranges of internal columns, was of mixed concrete, tufa and travertine. The whole was lined with marble, white outside, and rich oriental marbles inside (see fig. 4), which were also used for the pavement. The doorway is made in imitation of Greek work in Pentelic marble, in which a bronze caduceus (emblem of Mercury) was inlaid. Between the internal columns of the cella stood rows of statues; and the temple also contained a large collection of pictures, engraved gems, gold and silver vases, and other works of art, mostly the work of ancient Greek artists (see Plin. *H.N.* xxxiv. 19, xxxv. 36, 40, xxxvi. 67, xxxvii. 2). 'On the apex of the pediment was a group of three figures embracing; the tympanum was filled with sculptured statues here set in the order of their rank, though now only the podium and the lower part of the cella wall exist, with foundations of the great flight of steps, many rich fragments both of the Corinthian entablature and of the internal caps and bases are preserved in the Tabularium, and some of the marble lining is still *in situ*. The Einsiedeln MS. gives part of the inscription of the front—S. P. Q. R. AEDEM. CONCORDIAE. VETVSTATE. COLLAPSAM. IN. MELIOREM. FACIEM. OPERE. ET. CVLTV. SPLENDIDIORE. RESTITVERVNT' (*C.I.L.* vi. 89).[4]

Temple of Concord.

The temple of Vespasian stands close by that of Concord, abutting on the Tabularium in a similar way, and blocking up a doorway at the foot of a long flight of steps (see fig. 1). It consists of a nearly square cella with prostyle hexastyle portico of the Corinthian order; three of the columns are still standing, with their rich entablature, the frieze of which is sculptured with sacred instruments. The walls are of enormous blocks of travertine with strong iron clamps, the whole was lined with white Pentelic marble outside, and inside with coloured oriental marbles. There was an internal range of columns, as in the temple of Concord. This temple was begun by Titus in A.D. 80, against the wish of his father Vespasian, and finished by Domitian, who dedicated it to Vespasian and Titus. The inscription on the entablature, given in the Einsiedeln MS., records a restoration by Severus and Caracalla—DIVO. VESPASIANO. AVGVSTO. S. P. Q. R. IMPP. CAESS. SEVERVS. ET. ANTONINVS. PII. FELICC. AVGG. RESTITVERVNT; part of the last word only now exists.

Temple of Vespasian.

In the narrow space between the temples of Concord and Vespasian (only about 7 ft. in width) a small brick and concrete edifice stands against the Tabularium. In it was found an inscribed base dedicated to Faustina the younger by one of the *viatores* (messengers) of the quaestors, who probably had their office here.

Porticus Deorum Consentium.

The next building is the Porticus Deorum Consentium, a colonnade in two wings which join at the obtuse angle, with a row of small rooms or shrines partly cut into the tufa rock of the hill behind. This conjunction of twelve deities was of Etruscan origin; they were six of each sex and were called Consentes Dei Complices (Liv. viii. 29, and *De Rust*, i. 1).[5] The columns are of cipollino with Corinthian caps; on the frieze is an inscription recording a restoration by Vettius Agorius Praetextatus, praefect of the city in A.D. 367. Under the marble platform in front of the small rooms, the brick facing of which is perhaps of the Flavian period.

Arch of Severus.

The arch of Severus stands by the rostra, across the road on the north-east side of the Forum; the remains of the ancient travertine arch abutment that originally stood were surmounted by a much different line, and was probably altered to make room for this great arch, which was accessible only by steps, and was not used for ordinary traffic. It was built in A.D. 203, after victories in Parthia, and was originally set up in honour of Severus and his two sons M. Aurelius Antoninus (Caracalla) and Geta. Caracalla, after murdering Geta, erased his name from all monuments to his honour in Rome. Representations of the arch on coins of Severus show that its attic was surmounted by a group of bronze drawn by six horses, in which stood Severus crowned by Victory; at the sides were statues of Caracalla and Geta, with an additional statue at each angle. The arch, except the base, which is of marble-lined travertine, is built of massive blocks of Pentelic marble, and has large crowded reliefs of victories in the East, showing much decadence from the best period of Roman art.

Central space of Forum.

The central space of the Forum, with its main line of travertine, much patched at various dates; it appears to have been marked out into compartments with incised lines (see Plate VIII.), the use of which is not known. There are also square bases on which probably were placed the statues of Gallus et plutei covered with reliefs, discovered in 1872, stand on the north side. The rough travertine plinth on which they have been set is evidently of late date. Each of these marble screens has (on the inside) reliefs of a fat bull, boar and ram, divided one with sacrificial wreaths and vittae—the suovetaurilia. On the outside are scenes in the life of Trajan: in both cases the emperor is speaking from the rostra. On one we also see him seated on a *suggestus* instituting a charity for destitute children in A.D. 107—a scene similar to one shown in one of his first brasses with the legend ALIM[ENTA] ITALIAE;[6] at the other end the emperor stands on the rostra, on which the two tiers of beaks are shown; he is addressing a crowd of citizens. In the background is shown a long line of arches of the Basilica Julia, with (on the left) what is probably the temple of Castor and the arch of Augustus. On the right are the statue of Victory and the sacred fig-tree.[7] On the other slab a crowd of officials are bringing tablets and piling them in a heap to be burnt. This records the remission by Trajan of some arrears of debt due to the imperial treasury (Auson. *Grat. Act.* 32). The background here represents again the Basilica Julia, with (on the right) the Ionic temple of Saturn and the Corinthian temple of Vespasian. Between them is an arch, which may be that of Tiberius.[8] On the left the

than 946, and a bronze fibula inlaid with silver with the name of Pope Marinus II. (942–46) makes it seem probable that this hoard was concealed during his pontificate.

[1] *Not. degli Scavi*, 1882, p. 178.

[2] This finely sculptured frieze is almost an exact copy of that on the temple of Apollo at Miletus.

[3] The size of the earlier and smaller temple is indicated by the rough blocks of the face of the wall of the Tabularium, close against which the temple stands. When the Tabularium was built it was not thought worth while to dress to a smooth face that part of its wall which was concealed by the then existing temple of Concord.

[4] Little is known of the Basilica Opimia, which probably adjoined the earlier temple of Concord, and the existing building appears also to have occupied the site of the Senaculum (see Festus, ed. Müller, p. 347). For various existing scenes which took place in the temple of Concord and its steps, see Cic. *Phil.* vi. 8; Sallust, *Bell. Cat.* 49. Another temple of Concord, built in 216 B.C., stood on the Capitoline Arx (Liv. xxii. 33, xxiii. 21); and a bronze aedicula of Concord in the Area Volcani is mentioned by Festus, built by the great temple. This was dedicated by Cn. Flavius, 305 B.C. (see Liv. ix. 46); according to Pliny (*H.N.* xxxiii. 19) it stood "in Graecostasi, quae tunc supra Comitium erat." Both these were probably only small shrines.

[5] Twelve gilt statues are mentioned by Varro.

[6] Cohen, vol. ii. 303–5.

[7] This is not the *ficus ruminalis* in the Comitium, but another mentioned by Livy (*H.N.* xv. 20) in the middle of the Forum.

[8] As it seems to be on a higher level, it may indicate the Tabularium.

fig-tree and the statue of Marsyas are repeated. Other explanations of these reliefs have been given, but the above appears the most probable. Towards the other end of the Forum are remains of a large concrete pedestal. It may possibly have supported an equestrian statue of Constantine, which was still standing in the 8th century. A smaller foundation, laid bare by Comm. Boni's excavations in 1905, is thought by him to have supported the equestrian statue of Q. Marcius Tremulus, the conqueror of the Hernici, set up before the temple of Castor in B.C. 305 (Liv. ix. 43).

The seven cubical brick and concrete structures, once faced with marble, which line the Sacra Via are not earlier than the time of Diocletian. They are probably the pedestals of honorary columns such as those shown in the relief on Constantine's arch, mentioned above. The column erected in honour of the tyrant Phocas by Smaragdus in the eleventh year of his exarchate (608) is still standing. It is a fine marble Corinthian column, stolen from some earlier building; it stands on rude steps of marble and tufa. The name of Phocas is erased from the inscription; but the date shows that this monument was to his honour. In the 4th century, or perhaps even later, a long brick and concrete building faced with marble was built along the whole south-east end of the Forum, probably a row of shops. They were destroyed by Comm. Rosa's order. Two columns—one of pavonazzetto, the other of grey granite—were set up on two of the brick bases in 1899.

In 1902 a network of passages (*cuniculi*) was discovered about 3 ft. beneath the pavement of the Forum. These have tufa walls and concrete vaults; they are about 8 ft. high and 5 ft. broad. At the intersections of the passages are small chambers, 12 in the centre, of which are travertine blocks with sockets for windlasses. The construction of the passages seems to date from the time of Julius Caesar, and it is thought that they were used for scenic purposes when games were given in the Forum.

In 1903 a large concrete foundation was found, partly blocking the E. end of one of the *cuniculi*. There can be no doubt that this once supported the colossal equestrian statue of Domitian described by Statius (*Silv.* i. 1. 21 ff.), which was destroyed after the Flavian dynasty. Embedded in the concrete was a cist of massive travertine blocks which was found to contain five archaic vases similar to those from the early necropolis (*infra*, p. 608). One held a nugget of quartz containing pure gold. It is uncertain whether these were buried here for ritual purposes or were the contents of an early tomb found in digging the foundations. Near this monument there were found in 1904 remains of an enclosure of irregular shape, which once contained an altar. This must have been the altar which in imperial times represented the Lacus Curtius (Ov. *Fast.* vi. 403). Beside this were found some remains of a structure of imperial date which Comm. Boni identified with the Tribunal at which justice was administered by the emperors.[1]

Palatine Hill or Palatium.

In addition to the early walls described above, only a few remains now exist earlier in date than the later years of the republic; these are mostly grouped near the Scalae Caci (see fig. 10, in Plan), and consist of small cellae and other structures of unknown use.[2] They are partly built of the soft tufa used in the "wall of Romulus," and partly of hard grey tufa so called. Various names, such as the "Auguratorium" and "Rostratum Auguratorium," have been given to these very ancient remains, but with little reason. On thing is certain, that the buildings were respected and preserved even under the empire, and were probably regarded as sacred relics of the earliest times.

Remains of more than one temple of the republican period exist near this west angle of the Palatine. The larger of these (see Plan) has been called conjecturally the temple of Jupiter Victor (Liv. x. 29; Ov. *Fast.* iv. 899). It stands on a levelled platform of tufa rock, the lower part of which is excavated into quarry chambers, used in later times as water reservoirs. Two ancient well-shafts lined with tufa communicate with these subterranean hollows. Extensive foundations of hard tufa exist in the valley afterwards covered by the Flavian palace (see Plan, "Foundations of the Domus Augustana "). The masonry is in parts of republican date, and was used to support the Flavian palace. Not far from the top of the Scalae Caci are the massive remains of a large cella, nothing of which now exists except the concrete core faced with *opus incertum* in alternate layers of tufa and peperino. It was probably once lined with marble. By it a noble colossal seated figure of Jupiter was found, in Greek marble, well modelled, a work of the 1st century A.D. The head and arms are missing, but the figure is probably rightly called a statue of Cybele; and inscriptions dedicated to Magna Mater have been found close to the temple. Augustus in the *Monumentum Ancyranum* (4, 8) records AEDEM. MATRIS. MAGNAE. IN. PALATIO. FECI; and there can be little doubt that this is the temple in question. Some interesting early architectural fragments are lying near this temple; they consist of drums and capitals of Corinthian columns, and part of the cornice of the pediment, cut in peperino, and thickly coated with hard white stucco to imitate marble. Between this and the temple of Jupiter Victor are extensive remains of a large portico with tufa piers and travertine piers, also republican in date. The use and name of this building are unknown.

Temple of Jupiter Victor.

Statue of Cybele.

Remains of extensive lines of buildings in early *opus reticulatum* exist on the upper slopes of the Palatine, all along the Velabrum side, and on the south-west side as far as the so-called Paedagogium. These buildings are constructed on the ruins of the wall of Romulus, a great part of which has been cut away to make room for them; their base is at the foot of the substruction, and is cut away in the side of the hill; their top reached originally above the upper level of the summit. They are of various dates, and cannot be attributed to any known buildings. Part is apparently of the time of the emperor Tiberius, and no doubt belongs to the Domus Tiberiana mentioned by Suetonius (*Tib.* 5; Tac. *Hist.* i. 27, iii. 71); this palace covered a great part of the south-west end of the hill. The latter side is a very interesting and well-preserved private house built wholly of *opus reticulatum*, which formed part of the imperial property, and was respected when the later palaces were built. The discovery of lead-pipes bearing the inscription TIBERIVS. AVG (*C.I.L.* xv. 7264) has led to the conjecture that the house was that bequeathed to Livia by her first husband, Tib. Claudius Nero. At the north-west end is a small atrium, out of which open three rooms commonly called the *tablinum* and *alae*, as well as a *triclinium*, all decorated with good paintings of mythological and domestic scenes, probably the work of Greek artists, as inscriptions in Greek occur, *e.g.* ΕΡΜΗC, under the figure of Hermes, in a picture representing his deliverance of Io to Argus.[3] This suite of rooms was a later addition to the house. The south-east portion was three storeys high, and is divided into a great number of very small rooms, mostly bedrooms. The house is built in a sort of hole against the side of an elevation, so that the upper floor behind is level with the ground-level. The difficulties caused by this is counteracted and kept off the paintings by a lining of flange-tiles over the external walls, under the stucco, thus forming an air-cavity all over the surface. From the back of the house, at the upper level, a long subterranean passage leads towards the Flavian palace, and then, turning at right angles and passing by the foundations of the so-called temple of Jupiter Victor, issues in the ancient tufa building mentioned above. Another crypto-porticus starts near this house and communicates with the long semi-subterranean passage by which the palaces of Caligula and Domitian are connected. It is ornamented with very beautiful stucco reliefs of cupids, beasts and foliage, once painted and gilt. Some hold that the house was that of Germanicus, into which the soldiers who killed Caligula in the long crypto-porticus escaped, as described by Josephus (*Ant. Jud.* xix. 1; see also Suet. *Cal.* 58).

House of Livia.

Palace of Augustus and Area Apollinis.

The temple of the Sacra Via a road led to the Area Palatina in the centre of the hill. Here was the sanctuary called *Roma quadrata*, containing the *mundus*, a pit in which the instruments used in the founding of the city were deposited. To the east was the Area Apollinis, the open space in front of the temple of Apollo, through lofty propylaea into a very extensive peristyle or porticus, with columns of Numidian giallo; the temple was of white Luna marble. In the centre of this enclosure stood the great octostyle peripteral temple of Apollo Palatinus. The splendour of its architecture and the countless works of art in gold,

[1] Authorities on the Forum; For the earlier literature of the subject it will suffice to refer to Jordan, *Topographie der Stadt Rom*, i. 2, 1871-1871, and, in English, to Nichols, *The Roman Forum* (1877). By far the best account based on the recent discoveries of Comm. Boni is Huelsen, *The Roman Forum* (Eng. trans. from the 2nd German edition, by J. B. Carter, 1906), in which references are given. The official reports of excavations by Comm. Boni appear at intervals in the *Notizie degli Scavi*, and are largely concerned with the ancient necropolis. Huelsen publishes reports in the *Römische Mittheilungen* which are of value.

[2] Our knowledge of these remains has been considerably increased by excavations in this region begun in 1907, which form the subject of a series of reports in the *Notizie degli Scavi*; their significance is discussed by Pinza in the *Annali della Società degli ingegneri ed architetti Italiani* for that year, cf. Ashby in *Classical Quarterly* (1908), p. 145 ff. It is almost too much to hope that the difficult problems raised by these discoveries will ever be solved; meanwhile it may be noted (i) that abundant traces of a primitive settlement (pottery, foundations of huts, &c.) have come to light near the W. angle of the hill; (ii) that walls of various epochs have been found which may have belonged to a system of fortification, though this cannot be demonstrated; (iii) that a considerable piece of walling built with regularly laid tufa blocks was found an inhumation-grave containing pottery of the 4th century B.C.

[3] It has recently been argued by Pinza that this is the temple of Apollo built by Augustus.

See Jahn, *Ber. d. sächs. phil. Ges.* xxii., xxiii.; Mau, *Geschichte der Wandmalerei*, pl. ix.; Renier, *Les Peintures du Palatin* (Paris, 1870).

silver, ivory, bronze and marble, mostly the production of the best Greek artists, which adorned this magnificent group of buildings, must have made it the chief glory of this splendid city. This temple was begun by Augustus in 36 B.C., after his naval victory over Sextus Pompeius, and dedicated on the 9th of October 28 B.C.[2] A glowing account of the splendours of these buildings is given by Propertius (ii. 2, iii. 31). Inside the cella were statues of Apollo between Latona and Diana by Scopas, Cephisodotus and Timarchus respectively (Plin. *H.N.* xxxvi. 24, 25, 32); beneath the base of the group were preserved the Sibylline books. The pediment had sculpture by Bupalus and Archermus of Chios (Plin. *H.N.* xxxvi. 13), and on the apex was Apollo in a quadriga of gilt bronze. The double door was covered with ivory reliefs of the death of the Niobids and the defeat of the Gauls at Delphi. The Ancyran inscription records that Augustus melted down eighty silver statues of himself and with the money[3] purchased gifts to stand in this temple, dedicating them both in his own name and in the names of the original donors of the statues.[3] The Sibylline books were preserved under the statue of Apollo (Suet. *Aug.* 31); and within the cella were vases, tripods and statues of gold and silver, with a collection of engraved gems dedicated by Marcellus (see Plin. *H.N.* xxxvii. 11, xxxiv. 14). In the portico was a large library, with separate departments for Latin and Greek literature,[4] and a large hall where the senate occasionally met (Tac. *Ann.* iii. 37). Round the portico, between the Numidian marble columns, were statues of the fifty Danaids, and opposite them their fifty bridegrooms on horseback (see Schol. on Pers. ii. 56). In the centre, before the steps of the temple, stood an altar surrounded by a wall, on which Horace and Ovid (Prop. iii. 31, 5). In the centre of the Palatine stood the palace of Augustus, built in the years following 36 B.C., and renewed after a fire in A.D. 3. It contained a small temple of Vesta (*C.I.L.* i.[2] p. 317), dedicated on the Ides of April 12 B.C., when Augustus was elected *pontifex maximus*. Augustus's building was completely transformed by later emperors, but the name *domus Augustana* was retained in official use. The Area Apollinis and its group of buildings suffered in the fire of Nero, and were restored by Domitian. The whole was finally destroyed in the great fire of 363 (Ammian. xxiii. 3, 3), but the Sibylline books were saved.

To the north-west of the Area Palatina stood the Domus Tiberiana, a palace built by Tiberius on substructures of concrete which crown the north-west slope of the hill and form a platform now occupied by the Farnese gardens, overlooking the Forum Romanum.

Domus Tiberiana.

Caligula is said to have added to this palace on the side towards the Forum, making the temple of Castor into a vestibule, and to have connected it with the Capitol by a bridge whose piers were found by the workmen of Augustus and the Basilica Iulia; but this was destroyed after his death. At a later time the palace was extended so as to include the northern angle of the Palatine, which had once been covered with private houses. Among these were Cicero's villa, Catilina's, Catullus, Q. Hortensius, Scaurus, Crassus (Plin. *H.N.* xxvi. 3, 24), whose house was afterwards bought by Cicero.[5] Many other wealthy Romans had houses on this part of the Palatine. The part now existing is little more than the gigantic substructure built on the principle of keeping the hill to the level of the top of the hill. The lowest parts of these face the Nova Via, opposite the Atrium Vestae, and many storeys of small vaulted rooms built in mixed brick and *opus reticulatum* rise one above the other to the highest levels.[6] The upper part extends over the Clivus Victoriae, supported on lofty arches so as to leave the road unblocked; many travertine or marble stairs lead to the upper rooms, some starting from the Nova Via, others from the Clivus Victoriae. A large proportion of these substructures consist of little rooms, some with no means of lighting, others with scanty borrowed light. Many small rooms and stairs scarcely 2 ft. wide can only have been used by slaves. The ground floors on the Nova Via and the Clivus Victoriae appear to have been shops, ranging from three wide openings, with travertine sills, grooved for the wooden fronts with narrow doors, which Roman shops seem always to have had—very like those now used in the East. The upper and principal rooms were once richly decorated with marble linings, columns and mosaics; but little of these now remains. The upper part of the palace, that above the Clivus Victoriae, is faced wholly with brickwork, no *opus reticulatum* being used as in the lower portions by the Nova Via. This marks a difference of date, and this is confirmed by the occurrence of brick stamps of the 2nd century A.D.

The next great addition to the buildings of the Palatine was the magnificent suite of state apartments built by Domitian, over a deep natural valley running across the hill (see Plan). The valley was filled up and the whole of the new palace raised to a considerable height above the natural soil. Remains of a house, decorated with painting and rich marbles, exist under Domitian's peristyle, partly destroyed by the foundations of cast concrete which cut right through it. The floor of this house shows the original level, far below that of the Flavian palace. This building is connected with the palace of Caligula by a branch subterranean passage leading into the earlier crypto-porticus. It consists of a block of state-rooms, in the centre of which is a large open peristyle, with columns of oriental marble, at one end of which is the grand triclinium with magnificent paving of opus sectile in red and green basalt and coloured marbles, a piece of which is well preserved; next to the triclinium, on which the floor of this house shows the original level, far below that of the Flavian palace. This building is connected with the palace of Caligula by a branch subterranean passage leading into the earlier crypto-porticus. It consists of a block of state-rooms, in the centre of which is a large open peristyle, with columns of oriental marble, at one end of which is the grand triclinium with magnificent paving of opus sectile in red and green basalt and coloured marbles, a piece of which is well preserved; next to the triclinium, on which the doors and large windows, is a nymphaeum or room with marble-lined fountain and recesses for plants and statues. On the opposite side of the peristyle is a large throne-room, the walls of which were adorned with rows of pavonazzetto and giallo columns and large marble niches, in which were colossal statues of porphyry and basalt; at one side of this is the basilica, with central nave and apse and narrow aisles, over which were galleries. The apse, in which was the emperor's throne, is screened off by open marble cancelli, a part of which still exists. It is of great interest as showing the origin of the Christian basilica (see BASILICA).[7] On the other side of the throne-room is the lararium, with altar and pedestal for a statue; next to this is the grand vestibule, which led to the upper rooms, now destroyed. The whole building, both floor and walls, was covered with the richest oriental marbles. Outside were colonnades or porticus,— on one side of cipollino, on the other of travertine, the latter stuccoed and painted. The magnificence of the whole, crowded with fine Greek sculpture and covered with polished marbles of the most brilliant colours, is difficult now to realize; a glowing description is given by Statius (*Silv.* iv. 11, 18; see also Plut. *Popicc.* 15, and Mart. viii. 36). Doors were arranged in the throne-room and basilica so that the emperor could slip out unobserved and reach by a staircase (*g* on Plan) the crypto-porticus which communicates with Caligula's palace. The vault of this passage was covered with mosaic of mixed marble and glass, a few fragments of which still remain; its walls were lined with rich marbles: it was lighted by a series of windows in the springing of the vault. This, as well as the Flavian palace, appears to have suffered more than once from fire, and in many places important restorations of the time of Severus, and some as late as the 4th century, are evident. In 1720–28 extensive excavations were made here for the Farnese duke of Parma, and immense quantity of statues and marble architectural fragments were discovered, many of which are now at Naples and elsewhere. Among them were sixteen beautiful fluted columns of pavonazzetto and other fragments of the basilica, and an immense mosaic still of Pentelic marble, now used for the high altar of the Pantheon; these all came from the throne-room. The excavations were carried on by Bianchini, who published a book on the subject.[8]

Flavian Palace.

Domus Gelotiana.

The Domus Gelotiana, to the south of the Palatine, towards the Circus Maximus, are considerable remains of buildings set against the early wall and covering one of its projecting spurs, consisting in a series of rooms with a long Corinthian colonnade. The rooms were partly vaulted and partly flat-roofed, painted with painted stucco, on which are incised a number of interesting inscriptions and rude drawings. Here, in 1856, was found the celebrated caricature of the Crucified Christ, now in the Kircherian.[9] A rude inscription CORINTHVS . EXIT . DE . PEDAGOGIO suggests that this building was at one time used as a school, perhaps for the imperial slaves.[10] A number of soldiers' names also occur, *e.g.* HILARVS . MI . V . D . M . *milites venatores domini nostri*(?), the name are in mixed Latin and Greek characters. After one pair of names is inscribed PEREG, showing that they belonged to the corps called *frumentarii* stationed in the Castra Peregrinorum on the Caelian. Most of these inscriptions appear to be as early as the 1st century A.D.[11] These interesting graffiti have in great part perished during the last few years. Some inscriptions found in the larger rooms seem to indicate that the imperial wardrobe had a place in them.

To the south of the Flavian state-rooms, on the side of the hill overlooking the Circus, was a building with a central peristyle ("Palace of Domitian" on Plan), which was excavated in 1775 and

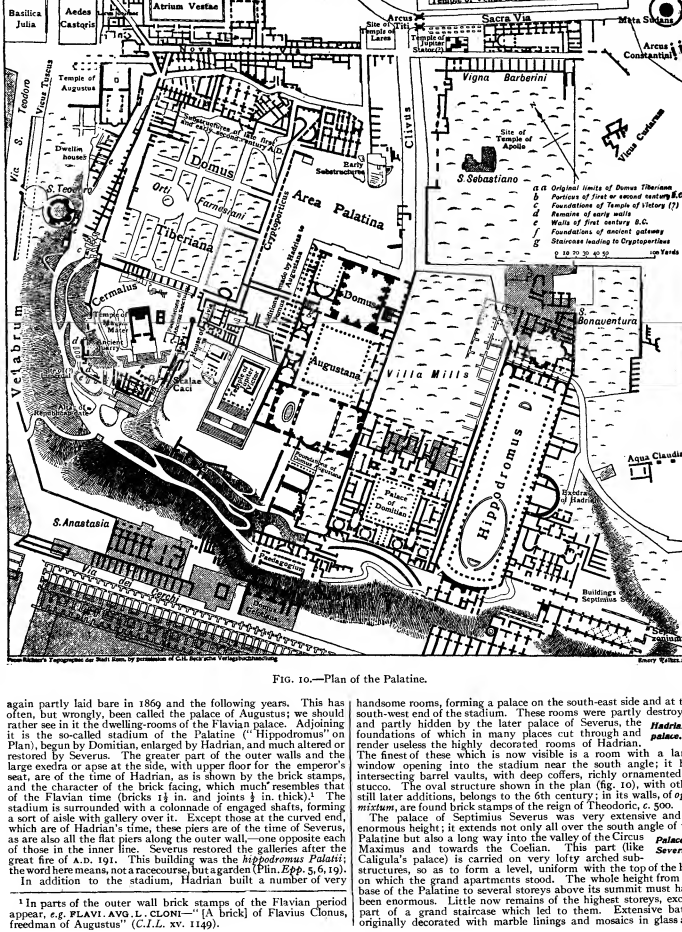

FIG. 10.—Plan of the Palatine.

again partly laid bare in 1869 and the following years. This has often, but wrongly, been called the palace of Augustus; we should rather see in it the dwelling-rooms of the Flavian palace. Adjoining it is the so-called stadium of the Palatine ("Hippodromus" on Plan), begun by Domitian, enlarged by Hadrian, and much altered or restored by Severus. The greater part of the outer walls and the large exedra or apse at the side, with upper floor for the emperor's seat, are of the time of Hadrian, as is shown by the brick stamps, and the character of the brick facing, which much resembles that of the Flavian time (bricks 1¼ in. and joints ½ in. thick).[1] The stadium is surrounded with a colonnade of engaged shafts, forming a sort of aisle with gallery over it. Except those at the curved end, which are of Hadrian's time, these piers are of the time of Severus, as are also all the flat piers along the outer wall,—one opposite each of those in the inner line. Severus restored the galleries after the great fire of A.D. 191. This building was the *hippodromus Palatii*; the word here means, not a racecourse, but a garden (Plin. *Epp.* 5, 6, 19).

In addition to the stadium, Hadrian built a number of very handsome rooms, forming a palace on the south-east side and at the south-west end of the stadium. These rooms were partly destroyed and partly hidden by the later palace of Severus, the foundations of which in many places cut through and render useless the highly decorated rooms of Hadrian. The finest of these which is now visible is a room with a large window opening into the stadium near the south angle; it has intersecting barrel vaults, with deep coffers, richly ornamented in stucco. The oval structure shown in the plan (fig. 10), with other still later additions, belongs to the 6th century; in its walls, of *opus mixtum*, are found brick stamps of the reign of Theodoric, *c.* 500. ***Hadrian's palace.***

The palace of Septimius Severus was very extensive and of enormous height; it extends not only all over the south angle of the Palatine but also a long way into the valley of the Circus Maximus and towards the Coelian. This part (like Caligula's palace) is carried on very lofty arched substructures, so as to form a level, uniform with the top of the hill, on which the grand apartments stood. The whole height from the base of the Palatine to several storeys above its summit must have been enormous. Little now remains of the highest storeys, except some fine brick vaulting which led to them. Extensive baths, originally decorated with marble linings and mosaics in glass and ***Palace of Severus.***

[1] In parts of the outer wall brick stamps of the Flavian period appear, *e.g.* FLAVI. AVG. L. CLONI—"[A brick] of Flavius Clonus, freedman of Augustus" (*C.I.L.* xv. 1149).

marble, cover a great part of the top of the hill. These and other parts of the Palatine were supplied with water by an aqueduct built by Nero in continuation of the Claudian aqueduct, some arches of which still exist on the slope of the Palatine ("Aqua Claudia" on Plan) (see Spart. *Sept. Sev.* 24). One of the main roads up to the Palatine passes under the arched substructures of Severus, and near this, at the foot of the hill, at the south angle, Septimius Severus built an outlying part of his palace, a building of great splendour called the Septizodium,[1] or House of the Seven Planets. Part of the Septizodium existed as late as the reign of Sixtus V. (1585–90), who destroyed it in order to use its marble decorations and columns in the new basilica of St. Peter; drawings of it are given by Du Pérac, *Vestigi di Roma* (1575), pl. 13, and in other works of that century.[2]

Velia and Germalus.

The name Palatium seems to have originally denoted the southern height of the Palatine hill, while the summit overlooking the Velabrum was called Cermalus, and the saddle connecting the Palatine and the Esquiline on which the temple of Venus and Rome and the arch of Titus now stand bore the name Velia.[3] It is evident that this was once higher than it is now; a great part of it was cut away when the level platform for the temple of Venus and Rome was formed. The foundations of part of Nero's palace along the road between this temple and the Esquiline are exposed for a depth of 30 ft. in height, showing a corresponding lowering of the level here, and the bare tufa rock, cut to a flat surface, is visible on the site of Hadrian's great temple; that the Velia was once much loftier is also indicated by the story of the removal of Valerius Publicola's dwelling.[4]

Arch of Titus.

The arch of Titus, erected in memory of that emperor's subjugation of the Jews, but not completed until after his death, stands at the point where the Sacra Via crosses the Velia; it is possible that it once stood further to the east and was removed to its present position when the temple of Venus and Rome was built. The well-known reliefs of the archway depict the Jewish triumph and the spoils of the Temple. In the middle ages the arch was converted into a fortress by the Frangipani; their additions were removed and the arch restored in its present shape in 1821.

Sacra Via.

On the Velia and the adjoining Summa Sacra Via were the temples of the Lares and Penates which Augustus rebuilt.[5] The "Aedes Larum" is probably distinct from the "Sacellum Larum" mentioned by Tacitus (*Ann.* xii. 24) as one of the points in the line of the original pomerium. The temple of Jupiter Stator, traditionally vowed by Romulus during his repulse by the Sabines (*Liv.* i. 12), stood near the Porta Mugonia, and therefore near the road leading up to the Palatine Sacra Via.[6] On the south-east of the arch of Titus (Plan) are the remains of a concrete podium which may have belonged to this temple in its latest form; and Comm. Boni discovered (in 1907) some early tufa walling close to the above-named arch which he recognized as the foundations of the same.

Temple of Jupiter Stator.

Temple of Victory.

The temple of Victory, which gave its name to the Clivus Victoriae; this temple stood on the site of a prehistoric altar (Dionys. i. 32), and was more than once rebuilt, e.g. by L. Postumius, 294 B.C. (*Liv.* x. 29). In 193 B.C. an aedicula to Victory was built near it by M. Porcius Cato (*Liv.* xxxv. 9). Remains of the temple and a dedicatory inscription were found in 1728[7] not far from the church of S. Teodoro on the south side of Palatine, with Corinthian columns of Numidian giallo antico. The Sacra Via started at the Sacellum Streniae, an unknown point on the Esquiline, probably in the valley of the Colosseum (Varro, *L.L.* v. 47), in the quarter called Cirolia. Theme (and probably at later times) passed round part of the Colosseum to the slope leading up to the arch of Titus on the Velia; this piece of its course is lined on one side by remains of private houses, and farther back, against the cliff of the Palatine, are the substructures of the Flavian Palace. From the arch of Titus or Summa Sacra Via the original line of the road has been altered, probably when the temple of Venus and Rome was built by Hadrian. Its later course passed at a sharp angle from the arch of Titus to the front of Constantine's basilica, and on past the temple of Faustina. It is uncertain whether the continuation of this road to the arch of Severus was in later times called the Sacra Via or whether it rejoined its old line along the Basilica Julia by the cross-road in front of the Aedes Julii. Its original line past the temple of Vesta was completely built over in the 3rd and 4th centuries, and clumsily fitted pavements of marble and travertine occupy the place of the old basalt blocks.[8] The course of the Nova Via[9] (see Plan) along the north-east slope of the Palatine[10] was exposed in 1882–84. According to Varro (*L.L.* vi. 59) it was a very old road. It led up from the Velabrum, probably winding along the slope of the Palatine, round the north angle above the church of S. Maria Antiqua. The rest of its course, gently ascending towards the arch of Titus, is now exposed, as are also the stairs which connected it with the Clivus Victoriae at the northern angle of the Palatine; a continuation of these stairs led down to the Forum.[11]

Velabrum.

The extent of the once marshy Velabrum (Gr. *Ἑλος*) is not known, though part of its site is indicated by the church of S. Giorgio in Velabro; Varro (*L.L.* vi. 24) says, "extra urbem antiquum fuit, non longe a porta Romanula." It was a district full of shops (Plaut. *Capt.* 489; Hor. *Sat.* ii. 3, 30). The Vicus Tuscus on its course from the Forum to the Circus skirted the Velabrum (Dionys. v. 26), from which the goldsmiths' arch was an entrance into the Forum Boarium.

From the S.W. end of the Velabrum the Clivus Victoriae rose in a gradual ascent along the slope of the Palatine and returned westward round the northern angle.

Capitoline Hill[12]

The Capitoline hill, once called Mons Saturnius (Varro, *L.L.* v. 42), consists of two peaks, the Capitolium and the Arx,[13] with an intermediate valley (Asylum). The older name of the Capitolium was Mons Tarpeius (Varro, *L.L.* v. 41). Livy (i. 10) mentions the founding of a shrine to Jupiter Feretrius on the Capitolium by Romulus;[14] this summit was afterwards occupied by the great triple temple dedicated to Jupiter, Juno and Minerva, a triad of deities worshipped under the names of Tinia, Thalna and Menerva in every Etruscan city. This great temple was (Liv. i. 38, 53) founded by Tarquin I., built by his son Tarquin II., and dedicated by M. Horatius Pulvillus, consul suffectus in 509 B.C.[15] It was built in the Etruscan style, of peperino stuccoed and painted (Vitr. iii. 3), with wooden architraves, wide intercolumniations and painted terra-cotta statues.[16] It was rebuilt many times; the original temple lasted till it was burnt in 83 B.C.; it was then rebuilt in marble by Sulla, with Corinthian columns stolen from the temple of Olympian Zeus in Athens (Plin. xxxvi. 4, 5), and was completed and dedicated by Q. Lutatius Catulus, whose name appeared on the front. Augustus, although he restored it at great expense (*Mon. Anc.* 4, 9), did not introduce his name by the side of that of Catulus. It was again burnt by the Vitellian rioters in A.D. 70, and rebuilt by Vespasian in 71.[17] Lastly, it was burnt in the three days' fire of Titus's reign[18] and rebuilt with columns of Pentelic marble by Domitian; the gilding alone of this last rebuilding is said to have cost $2\frac{1}{2}$ millions sterling (Plut. *Publ.* 15). Extensive substructures of tufa have been exposed on the eastern peak; in 1875 a fragment of a fluted column was found, of such great size that it could only have belonged to the temple of Jupiter; and a few other architectural fragments have been discovered at different times. The western limit of the temple was determined in 1865, its eastern limit in 1875, and the S.E. angle in 1896.

Temple of Jupiter Capitolinus.

[1] The form Septizonium is also found.

[12] See Rodocanachi, *Le Capitole romain* (1903; Eng. trans., 1906).

[13] The first-named was the southern, the second the northern summit.

[14] This is the earliest temple mentioned in Roman history. It was rebuilt by Augustus (*Mon. Anc.* 4, 5).

[15] See Plut. *Publ.* 14; *C.I.L.* i. p. 487; Liv. ii. 8. Dionys. v. 35 wrongly gives 507 B.C.

[16] Plin. xxxv. 157; see Tac. *Hist.* iii. 72; Val. Max. v. 10.

[17] Suet. *Vit.* 15, and *Vesp.* 8; cf. Tac. *Hist.* iv. 53, and Dio Cass. lxvi. 10.

[18] Suet. *Dom.* 5; Dio Cass. lxvi. 24.

It appears that the figures given by Dionysius (iv. 61) for the area are slightly too large. The true measurements were 188 × 204 Roman ft.[1] The temple is represented on many coins, both republican and imperial; these show that the central cella was that of Jupiter, that of Minerva on his right and of Juno on his left. The door was covered with gold reliefs, which were stolen by Stilicho (*c.* 400; Zosim. v. 38), and the gilt bronze tiles (cf. Plin. xxxiii. 57) on the roof were partly stripped off by Geiseric in 455 (Procop. *Bell. Vand.* i. 5), and the rest by Pope Honorius I. in 630 (Marliani, *Topogr.* ii. 1).[2] Till 1348, when the steps up to Ara Coeli were built, there was no access to the Capitol from the back; hence the three ascents to it mentioned by Livy (iii. 7, v. 26–28) and Tacitus (*Hist.* iii. 71–72) were all from the inside of the Servian circuit. Even on this inner side it was defended by a wall, the gates in which are called "Capitolii fores" by Tacitus. Part of the outer wall at the top of the tufa rock, which is cut into a smooth cliff, is visible from the modern Vicolo della Rupe Tarpeia; this cliff is traditionally called the Tarpeian rock, but that must have been on the other side towards the Forum, from whence it was visible, as is clearly stated by Dionysius (vii. 35, viii. 78).[3] Another piece of the ancient wall has been exposed, about half-way up the slope from the Forum to the Arx. It is built of soft yellow tufa blocks, five courses of which still remain in the existing fragment. The large temple of Juno Moneta ("the Adviser") on the Arx, built by Camillus in 384 B.C., was used as the mint; hence *moneta* = "money" (Liv. vi. 20).

A large number of other temples and smaller shrines stood on the Capitoline hill, a word used broadly to include both the Citadel and the Arx.[4] Among these were the temple of Honos and Virtus, built by Marius, and the temple of Fides, founded by Numa, and rebuilt during the First Punic war. Both these were large enough to hold meetings of the senate. The temples of Mars Ultor (*Mon. Anc.* 4, 5) and Jupiter Tonans (Suet. *Aug.* 29; *Mon. Anc.* 4, 3) were built by Augustus. Other shrines existed to Venus Victrix Ops, Jupiter Custos, and Concord—the last under the Arx (Liv. xxii. 33)—and many others, as well as a triumphal arch in honour of Nero, and a crowd of statues and other works of art (see Plin. H.N. xxxiii. 9, xxxiv. 38, 39, 40, 43, 44, 79, xxxv. 69, 100, 108, 157), so that the whole hill must have been a mass of architectural and artistic magnificence.

Tabularium.

The so-called Tabularium[5] occupies the central part of the side towards the Forum; it is set on the tufa rock, which is cut away to receive its lower storey. It derives its name from an inscription which remained until the 14th century (*C.I.L.* vi. 1314); whilst all public departments had their *tabularia*, this was a central Record Office, where copies of laws, treaties, &c., were preserved. It was built by Catulus, who was the first builder of the great temple of Jupiter (Tac. *Hist.* iii. 72; Dio Cass. xliii. 14), consul in 78 B.C. Its outer walls are of sperone, its inner ones of tufa; the Doric arcade has capitals, imposts and entablature of travertine. Above the arcade was a gallery of portholes, with a Corinthian colonnade, of which a few architectural members have been found. The columns appear to have belonged to the 1st century A.D. A road paved with basalt passes through the building along this arcade, entered at one end from the Clivus Capitolinus, and at the other probably from the Gradus Monetae, a flight of steps leading from the temple of Concord and the Forum up to the temple of Juno Moneta on the Arx. The entrance from the Clivus Capitolinus is by a wide flat arch of peperino beautifully jointed; the inner end wall has been mostly destroyed. The back of this building overlooked the Asylum or depression between the two peaks. From this higher level a long steep staircase of sixty-seven steps descends towards the Forum; the doorway at the foot of these stairs has a flat arch, with a circular relieving arch over; it was blocked up by the temple of Vespasian. Great damage was done to this building by the additions of Boniface VIII. and Nicholas V., as well as by its being used as a salt store, by which the walls were much corroded.[6]

The Imperial Fora.

Forum Julium.

The Forum Julium (see fig. 11, Plan), with its central temple of Venus Genetrix, was begun, about 54 B.C., by Julius (who dedicated it in an unfinished state in 46), and completed by Augustus.[7] Being built on a crowded site it was somewhat cramped, and the ground cost nearly a hundred million sesterces.[8] Part of its circuit wall, with remains of five arches, exists in the Via dei Fori Imperiali, and behind is a row of small vaulted rooms, probably shops or offices. The arches are slightly cambered with travertine springers and keys; the rest, with the circular relieving arch over, is of tufa; it was once lined with slabs of marble, the holes for which exist. Foundations of the circuit wall exist under the houses towards S. Adriano, but the whole plan has not been made out. In the centre of the Forum stood the temple of Venus Genetrix, whose remains were seen and described by Palladio (*Arch.* iv. 31). This temple was vowed by Caesar at the battle of Pharsalus.[9]

Forum of Augustus.

The forum of Augustus (see fig. 11) adjoined that of Julius on its north-east side; it contained the temple of Mars Ultor, built to commemorate the vengeance taken on Caesar's murderers at Philippi, 42 B.C. (Ov. *Fast.* v. 575 seq.).[10] It was surrounded with a massive wall of peperino, over 100 ft. high, with travertine string-courses and cornice; a large piece of this wall still exists, and is one of the most imposing relics of ancient Rome. Against it are remains of the temple of Mars, three columns of which, with their entablature and marble ceiling of the peristyle, are still standing; it is Corinthian in style, very richly decorated, and built of fine Luna marble. The cella is of peperino, lined with marble; and the lower part of the lofty circuit wall seems also to have been lined with marble on the inside of the forum. The large archway by the temple (*Arco di Pantani* as it traverses Palladio (*Arch.* iv.) and other writers of the 16th century give plans of the temple and circuit wall, showing much more than now exists. The temple, which was octastyle, with nine columns and a pilaster on the end, occupied the centre, and on each side was the circuit wall formed two large semicircular apses, decorated with tiers of niches for statues.[11]

Forum Pacis.

The Forum Pacis, built by Vespasian, was farther to the south-east; the only existing piece, a massive and lofty wall of mixed tufa and peperino, with a travertine archway, is opposite the end of the basilica of Constantine. The arch opened into the so-called Templum Sacrae Urbis, a rectangular building surrounded by a portico, and was built, whose north wall was decorated with a marble plan of the city of Rome (see below, p. 608). The original plan was probably burnt with the whole group of buildings in this forum in 191, in the reign of Commodus (Dio Cass. lxxii. 24); but a new plan was made, and the building repaired in concrete and brick by Severus. The north end wall, with the clamps for fixing the marble plan, still exists, as does also the other (rescored) end wall with its arched windows towards the forum; one hundred and sixty-nine fragments of the plan were found in 1563 at the foot of the wall to which they were fixed, and are now preserved in the Capitoline Museum; drawings of seventy-four pieces now lost are preserved in the Vatican[12] (*Cod. Vat.* 3439). The whole of these fragments were published by Jordan, *Forma Urbis Romae* (Berlin, 1874). Other fragments have since been brought to light, and the whole series was rearranged in the Palazzo dei Conservatori in 1903. The circular building at the end facing on the Sacra Via is an addition built over Maenius's tribunal or house of his defied son Romulus; like the other buildings of Maxentius, it was rededicated and inscribed with the name of his conqueror

[1] See *Bull. Comm. Arch.* iii. (1875), p. 165; *Mon. Inst.* v. pl. xxxvi., x. pl. xxxi.; Jordan, *Topographie der Stadt Rom*, i. 2, 69; *Notizie degli Scavi*, 1896, p. 161, 1897, p. 30; Richter, "Der kapitolinische Jupitertempel und der italische Fuss," in *Hermes* (1887), p. 17.

[2] The pediment is shown on a relief now lost, but extant in the 16th century and reproduced in drawings of that date. It has been recently proved to have decorated the Forum of Trajan (Wace in *Papers of the B.S.R.* iv. p. 240, pl. xx.). The front of the temple is shown on one of the reliefs of Marcus Aurelius now in the Palazzo dei Conservatori (*Papers of the B.S.R.* iii. pl. xxvi.).

[3] See Rodocanachi, *The Roman Capitol*, p. 50. A graceful account of the legend of Tarpeia is given by Propertius, *Eleg.* iv. 4.

[4] A structure of great sanctity, dating from prehistoric Etruscan times, was the Auguraculum, an elevated platform upon the Arx, from which the signs in the heavens were observed by the augurs (see Festus, ed. Müller, p. 18).

[5] On the Tabularium see Delbrück, *Hellenistische Bauten in Latium*, i. (1907), pp. 23–46.

[6] The Porta Pandana ("ever-open gate") gave access from the Area Capitolina, upon which the temple of Jupiter stood, to the Tarpeian rock.

[9] See Dio Cass. xliii. 22; Appian, *Bell. Civ* ii. 102; Vitr. iii. 3; Plut. *Caes.* 60.

[10] The Sibyllan inscription records—**IN.PRIVATO.SOLO.[EMP]TO. MARTIS.ULTORIS.TEMPLVM .FORVMQVE.AVGVSTVM.EX. [MANI]BIIS.FECI.** See Suet. *Aug.* 29, 56; Dio Cass. lvi. 27; Plin. *H.N.* xxxvi. 102, xxxv. 94, xxxiv. 48, vii. 183, where many fine Greek works of art are mentioned as being in the forum of Augustus.

[11] Those of Roman leaders and generals, from Aeneas and Romulus to Augustus. See Borsari, *Foro d'Augusto*, &c. (1884).

[12] An interesting description of this discovery is given by Vacca, writing in 1594 (see Schreiber in *Jordan, Forchs. Gesellsch. der Wissenschaften*, 1881). The scale is roughly 1 to 250.

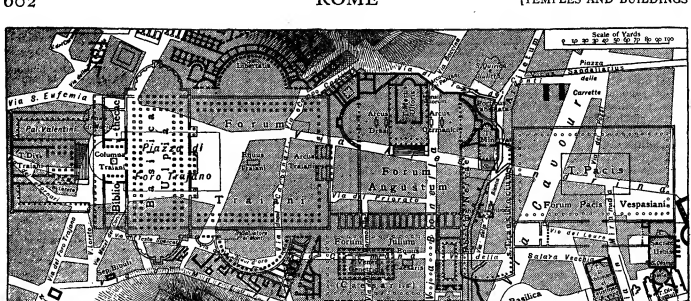

FIG. 11.—Imperial Fora.

Constantine.[1] The original building of Vespasian was probably an archive and record office; it was certainly not a temple. The fine bronze doors at the entrance to the temple of Romulus are much earlier than the building itself, as are also the porphyry columns and very rich entablature which ornament this doorway. Pope Felix IV. (526–30) made the double building into the church of SS. Cosmo e Damiano, using the circular domed temple of Romulus as a porch.[2] The chief building of Vespasian's forum was the Templum Pacis,[3] dedicated in 75, one of the most magnificent in Rome, which contained a very large collection of works of art.

The forum of Nerva (see fig. 11) occupied the narrow strip left between the fora of Augustus and Vespasian; being little more than a richly decorated street, it was called the Forum Transitorium or Forum Palladium, from the temple to Minerva which it contained. It was begun by Domitian, and dedicated by Nerva in 97 (see Suet. *Dom.* 5; Mart. i. 2, 8). Like the other imperial fora, it was surrounded by a peripteral wall, not only lined with marble but also decorated with rows of Corinthian columns supporting a rich entablature with sculptured frieze. Two columns and part of this wall still exist; on the frieze are reliefs of weaving, fulling and various arts which were under the protection of Minerva. A great part of the temple existed till the time of Paul V., who in 1606 destroyed it to use the remains for the building of the Acqua Paola.[4] In the reign of Severus Alexander a series of colossal bronze statues, some equestrian, were set round this forum; they represented all the previous emperors who had been deified, and by each was a bronze column inscribed with his *res gestae* (*Hist. Aug.; Sev. Alex.* 28).

Forum of Nerva.

The forum of Trajan with its adjacent buildings was the last and, at least in size, the most magnificent of all; it was in progress from 113 to 117, at least. A great spur of hill, which connected the Capitoline with the Quirinal, was cut away to make a level site for this enormous group of buildings. It consisted (see fig. 11) of a large dipteral peristyle, with curved projections, lined with shops on the side. That against the slope of the Quirinal, three storeys high, still partly exists. The main entrance was through a triumphal arch (Dio Cass. lxviii. 29). Aurei of Trajan show this arch and other parts of his forum.[5] The opposite side was occupied by the Basilica Ulpia (Jordan, *F.U.R.* ii. 25, 26), part of which, with the column of Trajan, is now visible; none of the columns, which are of grey granite, are *in situ*, and the whole restoration is misleading. Part of the rich paving in oriental marble is genuine. This basilica contained two large libraries (Dio Cass. lxviii. 16; Aul. Gell. xi. 17).

Forum of Trajan.

The Columna Cochlis (so called from its spiral stairs) is, including capital and base, 97 ft. 9 in. high,[6] *i.e.* 100 Roman ft.; its pedestal has reliefs of trophies of Dacian arms, and winged Victories. On the shaft are reliefs arranged spirally in twenty-three tiers scenes of Trajan's victories, containing about 2500 figures. Trajan's ashes were buried in a gold urn under this column (Dio Cass. lxviii. 16); and on the summit was a colossal gilt bronze statue of the emperor, now replaced by a poor figure of St Peter, set there by Sixtus V.[7] Beyond the column stood the temple of Trajan completed by Hadrian; its foundations exist under the buildings at the north-east side of the modern piazza, and many of its granite columns have been found. This temple is shown on coins of Hadrian.[8] The architect of this magnificent group of buildings was Apollodorus of Damascus (Dio Cass. lxix. 4), who also designed many buildings in Rome during Hadrian's reign.[9] In addition to the five imperial fora, and the Forum Magnum, Boarium and Holitorium mentioned above, there were also smaller markets for pigs (Forum Suarium), bread (Forum Pistorium) and fish (Forum Piscarium), all of which, with some others, popularly but wrongly called fora, are given in the regionary catalogues.

Trajan's column.

Temple of Trajan.

Other Temples, &c.

Besides the temples mentioned in previous sections remains of many others still exist in Rome. The circular temple by the Tiber, in the Forum Boarium (Plate No. 5), formerly thought to be that of Vesta, is possibly that of Portunus, the god of the harbour (Varro, *L.L.* vi. 19). Its design is similar to that of the temple of Vesta in the forum (fig. 8), and, except the entablature and upper part of the cella, which are gone, it is well

Other temples.

[1] For accounts of this group of buildings, see De Rossi, *Bull. Arch. Crist.* (1867), pp. 66 ff.; and Lanciani, *Bull. Comm. Arch. Rom.* (1882), pp. 29 ff.

[2] "Hic (Felix) fecit basilicam SS. Cosmae et Damiani . . . in Via Sacra, juxta Templum Urbis Romae" (*Lib. Pont., Vita S. Felicis IV.*). By the last words the basilica of Constantine is meant.

[3] Statues by Pheidias and Lysippus existed in the Forum Pacis as late as the 6th century (Procop. *Bell. Goth.* iv. 21).

[4] Drawings of it are given by Du Pérac and Palladio (*Arch.* iv. 8).

[5] See Aul. Gell. xiii. 25, 2; and Amm. Marc. xvi. 10, 15.

[6] Its pedestal is inscribed, "Senatus Populusque Romanus Imp. Caesari Divi Nervae F. Nervae Trajano Aug. Germ. Dacico Pontif. Maximo Trib. Pot. XVII. (*i.e.* A.D. 113) Imp. VI. Cos. VI. P. P. ad declarandum quantae altitudinis mons et locus tantis operibus sit egestus." This would seem to indicate the height of the hill removed to form the site, and is so explained by Dion Cass. (lxviii. 16). It is impossible that the saddle connecting the Quirinal with the Capitoline hill can have been 100 ft. in height (Brocchi, *Suolo di Roma*, p. 133), but it may be that the cliff of the Quirinal was cut back to a slope reaching to a point about 72 ft. high; thus the statement of the inscription is only exaggerated. Comm. Boni has found the remains of a road beneath the pavement of the Forum, near the column, and believes that the inscription refers to the *height* of the buildings. Comparetti refers more to the mass of marble quarried to build the forum; Sogliano to the mass of ruins and rubbish carted away; Mau to the Servian *agger* between the Capitol and Quirinal (see *Rom. Mitth.*, 1907, 187 ff.).

[7] For the reliefs, see Cichorius, *Die Reliefs der Trajanssäule* (1896–1900); Petersen, *Trajans dakische Kriege* (1899–1903); Stuart Jones, *Papers of the B. R. S.*, vol. v. From their lofty position they are now difficult to see, but originally must have been very fairly visible from the galleries on the colonnades which once surrounded the column.

[8] See Aul. Gell. xi. 17, 1; *Hist. Aug. Hadr.* 19; and compare Pausanias (v. 12, 6; x. 5, 11), who mentions the gilt bronze roofs of Trajan's forum.

[9] See Richter and Grifi, *Ristauro del Foro Trajano* (1839).

preserved. It may date from the 2nd century B.C. The neighbouring Ionic temple, popularly called of Fortuna Virilis, is of special interest from its early date, probably the end of the 3rd century B.C. The complete absence of marble and the very sparing use of travertine, combined with the simple purity of its design, indicate an early date.[1] It has a prostyle tetrastyle portico of travertine, and a short cella of tufa with engaged columns; the bases of these and of the angle columns are of travertine. The frieze has reliefs of bull's ox skulls and garlands. The whole was originally stuccoed and painted so that the different stones used would not show. Fig. 12 gives the plan, showing the hard travertine used at the points of greatest pressure, while the main walls with the basement mouldings

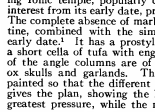

FIG. 12.—So-called Temple of Fortuna Virilis.

The black shows tufa; the shading travertine.

of the weaker and softer tufa. The dedication of this temple is doubtful, but it is probably either that of Fortuna or of Mater Matuta, both of which were destroyed by fire in 213 B.C. and restored in the following year. The church of S. Maria in Cosmedin (Plan, No. 4) which has been identified with that of Hercules built by Pompey *ad Circum Maximum* (Vitr. iii. 2, 5; Plin. *H.N.* xxxiv. 57). The temple stands close to the carceres of the Circus Maximus, in the Forum Boarium. The church was built up in a church did not, however, belong to a temple, but to a porticus. Within the walls of S. Niccolò in Carcere in the Forum Holitorium (Plan, No. 18) are preserved remains of three small hexastyle peripteral temples, two Ionic and one Tuscan, set close together side by side.[2] A fragment of the marble plan includes part of this group. The Tuscan temple is built of travertine, the others of tufa and peperino, with travertine at the points of greatest pressure. They are probably those of Janus *ad Theatrum Pompei* dedicated by C. Duilius in the First Punic War (Tac. *Ann.* ii. 49); of Spes, built by A. Atilius Calatinus, of about the same date (Tac. *Ann.* ii. 49); and of Juno Sospita, dedicated by C. Cornelius Cethegus in 197 B.C. (Liv. xxxiv. 53). Near the Forum Holitorium are extensive remains of the large group of buildings included in the Porticus Octaviae (Plan, No. 16), two of which, dedicated to Juno Regina and Jupiter Stator, with part of the enclosing porticus and the adjoining temple of Hercules Musarum, are shown on a fragment of the marble plan. The Porticus Octaviae, a large rectangular space enclosed by a double line of columns, was built in honour of Octavia by her brother Augustus on the site of the Porticus Metelli, completed in 146 B.C. This temple can not be confounded with the neighbouring Porticus Octavia founded by Cn. Octavius, the conqueror of Perseus (Liv. xlv. 6, 42), in 168 B.C., and which still bore the same name by Augustus, as is recorded in the Ancyran inscription. The whole group was one of the most magnificent in Rome, and contained a large number of works of art by Pheidias and other Greek sculptors. The existing portico, which was the main entrance into the precinct, is a restoration of the time of Severus in 203. Under the rule of S. Angelo in Pescheria and the houses behind it conceal extensive remains of the porticus and its temples (see *Ann. Inst.*, 1861, p. 241, 1868, p. 108; and Cavaliari, *I. Portici di Ottavia*, 1861).[3]

Porticus Octaviae.

Remains of a large peripteral Corinthian temple are built into the side of the Borsa (formerly the Custom House). Eleven marble columns and their rich entablature are still *in situ*, with the surrounding part of the wall of peperino; in 1878 a piece of the end wall of the cella was discovered, and, under the houses near, part of a large peribolus wall, also of peperino, forming an enclosure with columns all round the temple made by the Antonines (see *Bull. Com. Arch. Rom.* vi. pl. iv., 1878). This temple has commonly been identified with that of Neptune (Dio Cass. lxvi. 24), built by Agrippa, and surrounded by the Porticus Argonautarum (Dio Cass. liii. 27; Mart. iii. 20, 11); but it clearly dates, at least in its present form, from the 2nd century A.D., and is not improbably the temple of Hadrian, mentioned in the *Notitia* as being near this spot.

Temple of Neptune.

The temple of Venus and Rome on the Velia (see fig. 8) was the largest in Rome; it was peripteral, decastyle and, with ten Corinthian columns of Greek marble at the ends, and probably twenty at the sides; it had an outer colonnade round the peribolus of about 180 columns of polished granite. Of these only a few fragments now exist; for several centuries the whole area of this building was used as a quarry, while the residue of the marble was burnt into lime on the spot in kilns built of broken fragments of the porphyry columns. A considerable part of the two cellae with their apses, set back to back, still exists; in each apse was a colossal seated figure of the deity, and along the side walls of the cellae were rows of porphyry columns and statues in niches. The vault is deeply coffered with stucco enrichments formerly painted and gilt. The roof was covered with tiles of gilt bronze, which were taken by Pope Honorius I. (625–38) to cover the basilica of St Peter's. These were stolen by the Saracens during their sack of the Leonine city in 846. The emperor Hadrian himself designed this magnificent temple, which was partially completed in 135; the design was criticized severely by the architect Apollodorus (Dio Cass. lxix. 4; *Vita Hadr.* 19). The temple was probably finished by Antonius Pius; it was partly burned in the reign of Maximius, who began its restoration which was carried on by Constantine. The existing remains of the two cellae are mainly of Hadrian's time, but contain patches of the later restorations. Between the south angle of this temple and the arch of Constantine stand the remains of a fountain, usually known as the Meta Sudans. This was a tall conical structure in a large circular basin, all lined with marble. From its brick facing it appears to be a work of the Flavian period.

Temple of Venus and Rome.

That part of the Caelian hill which is near the Colosseum is covered with very extensive remains—a great peribolus of brick-faced concrete, apparently of Flavian date, and part of a massive travertine arcade in two storeys, similar to that of the Colosseum; most of the latter has been removed for the sake of the stone, but a portion still exists under the monastery and campanile of SS. Giovanni e Paolo. There can be no reasonable doubt that these substructions carried the temple of, Claudius, built by Vespasian (Suet. *Vesp.* 9).

Buildings on the Caelian, Esquiline and Quirinal.

The so-called temple of Minerva Medica (" Nympheum " on Plan) on the eastern slope of the Esquiline (so named from a statue found in it) is a curiously planned building, with a central decagonal hall, probably belonged to the palace of Gallienus (263–68). Somewhat similar ruins beside the neighbouring basilica of S. Croce formed part of the Sessorium, a palace on the Esquiline. The remains on the Quirinal, in the Colonna gardens, with massive marble entablatures richly sculptured were formerly thought to belong to Aurelian's great temple of the Sun, but it now appears certain that they belong to the very extensive thermae of Constantine, part of the site of which is now occupied by the Quirinal palace and neighbouring buildings.[4]

Private Buildings.

The excavations of recent years have brought to light, and in many cases destroyed, a large number of private buildings; these discoveries are recorded in the *Notizie degli Scavi* and the *Bull. Comm. Arch. Rom.* The extensive cutting away of the Tiber bank for the new embankment exposed numerous private houses near the Ripetta, elaborately decorated with marble, fine wall-paintings, and stucco reliefs, equal in beauty to any works of the kind that have ever been found. These are now exhibited in the Museo delle Terme, but the houses themselves have been entirely destroyed. The large buildings on the Quirinal and Esquiline quarters has also exposed many fine buildings. Some remains on the Esquiline have been supposed (without much probability) to belong to the villa of Maecenas. A very remarkable vaulted room, decorated with paintings on plaster and landscapes in fresco, has been shown to be a greenhouse;[5] at one end is an apse with a series of step-like stages for flowers. This one room has been preserved, though the rest of the villa has been destroyed; it is on the road leading from S. Maria Maggiore to the Lateran. The walls are a very fine specimen of tufa *opus reticulatum*, unmixed with brick, evidently of the early imperial period. Among the numerous buildings discovered in the Horti Sallustiani near the Quirinal was a very fine house of the republican age, in concrete faced with brick and *opus reticulatum*. It had a central circular domed hall, with many rooms and staircases round it, rising four storeys high. This house was set in the valley against a cliff of the Quirinal, so that the third floor is level with the upper part of the hall. It is nearly on the line of the Servian wall, which stood here at a higher level on the edge of the cliff. This park was laid out by the historian Sallust, and remained in the possession of his family until the reign of Tiberius, when it became imperial property; it was used as a residence by Nero (Tac. *Ann.* xiii. 47) and other emperors till the 4th century.[6] In 1884, near the Porta S. Lorenzo, a long line of houses was discovered during the making of a new road. Some of these were of *opus reticulatum* of the 1st century B.C.; others had the finer kind of

[1] Fiechter (*Röm. Mitth.*, 1906, pp. 220 ff.) has endeavoured to show that the temple in its present form dates from the 1st century B.C.

[2] For drawings of them, see the list given by Huelsen in Jordan, *Topographie*, i. 3, 511, note 11.

[3] The remains of the Porticus Octaviae have been more completely exposed by the demolition of the Ghetto.

[4] See Palladio (*Terme dei Romani*, London, 1732), who gives the plan of this enormous building, now wholly hidden or destroyed.

[5] *Bull. Inst.* (1875), 89–96; see also *Bull. Comm. Arch.* (1874), 137 ff., pls. xi.–xvii.

[6] During excavations made here in 1876, lead pipes were found inscribed with the name of the estate, the imperial owner (Severus Alexander), and the plumber who made them—ORTORVM SALLVSTIANOR . IMP . SEVER . ALEXANDRI . AVG . NAEVIVS . MANES . FECIT . (*C.I.L.* xv. 7249).

brick-facing, probably of the time of Nero; all had been richly decorated with marble linings and mosaics. The line of the street was parallel to that of the later Aurelian wall, which at this part was built against the back of this row of houses. At the same time, behind the line of houses were uncovered fine peperino and tufa piers of the aqueduct rebuilt by Augustus, one arch of which forms the Porta S. Lorenzo. These interesting remains have all been completely destroyed. A fine house of the end of the 1st century A.D., with richly decorated walls, was exposed in June 1884 against the slope of the Quirinal, near the Palazzo Colonna; it was immediately destroyed to make room for new buildings.

Praetorian camp.

The praetorian camp was first made permanent and surrounded with a strong wall by the emperor Tiberius (Suet. *Tib.* 37). Owing to the camp being included in the line of the Aurelian wall, a great part of it still survives; it is a fine specimen of early imperial brick-facing. The wall is only 12 to 14 ft. high, and has thinly scattered battlements, at intervals of 20 ft. The north-east gate (*Porta Principalis Destra*) is well preserved; it had a tower on each side, now greatly reduced in height, in which are small windows with arched heads moulded in one slab of terra-cotta. The brick-facing is very neat and regular,—the bricks being about 1¼ in. thick, with ¼-in. joints. On the inside of the wall are rows of small rooms for the guards. Part of the Porta Praetoria also remains. This camp was dismantled by Constantine, who removed its inner walls; the outer ones were left because they formed part of the Aurelian circuit. The present wall is nearly three times the height of the original camp wall. The upper part was added when Aurelian included it in his general circuit wall round Rome. The superior neatness and beauty of Tiberius's brick-facing make it easy to distinguish where the walls and the gates of later emperors begins. Owing to the addition of the later wall it requires some care to trace the rows of battlements which belong to the camp.

The Pantheon is the most perfect among existing classical buildings in Rome. The inscription on the frieze of the portico (M AGRIPPA . L . F . COS . TERTIVM . FECIT) refers to a building erected by Agrippa during his third consulship, B.C., consecrated to the divinities of the Julian house (Mars, Venus, etc.) under the name Pantheum ("all-holy"); cf. Dio Cass. liii. 27; Plin. *H.N.* xxxvi. 43. It was sometimes used as the meeting-place of the Fratres Arvales before they began to meet in the temple of Dea Dia (Henzen, 5041). Pliny mentions the sculpture by the Athenian Diogenes which adorned it, and its capitals and dome covering of Syracusan bronze (xxxiv. 7). It was long supposed that the present rotunda was the Pantheon of Agrippa; but this was destroyed by fire in the time of A.D. 80 (Dio. 7, 2; Hieron. Abr. 2127); and recent investigations have shown that the rotunda is a work of Hadrian's reign, bricks of that period having been found in all parts of the building. Excavations have made it probable that the site of the present one was previously occupied by an open piazza, whose pavement of coloured marbles has been discovered beneath the flooring, and that Agrippa's Pantheon covered the present piazza and faced southward. The present portico has been constructed of sixteen granite shafts Agrippa's portico had ten columns in the front. The ceiling of the portico too was of bronze, supported by hollow bronze girders,[1] which remained till Urban VIII. melted them to make cannon for S. Angelo; the bronze weighed 450,000 lb. The bronze tiles of the roof were stolen long before by Constans II., in 663, but on their way to Constantinople they were seized by the Saracens. The portico has eight columns on the front and three on the sides, all granite monoliths except the restored one on the west side—sixteen in all. Its capitals are Corinthian, of white marble; the tympanum (*δερὸς*) of the pediment was filled with bronze reliefs of the battle of the gods and the giants.[2] The walls of the circular part, nearly 20 ft. thick, are of solid tufa concrete, lightened with bricks. The original dome, 142 ft. 6 in. in span, is cast in concrete made of pumice-stone-pozzolana and lime; being one solid mass, it covers the building like a shell, free from any lateral thrust at the haunches. On the face of the concrete is a system of superimposed relieving arches in brick. These no longer possess any constructive value, but were designed to preserve the stability of the dome whilst the concrete became firmly set. Round the central opening or hypaethrum still remains a ring of enriched cofferings in brick. The original only bit left of the bronze which once covered the whole dome. The lower storey of the circular part and the walls of the projecting portico were covered with slabs of Greek marble; a great part of this latter still remains, crushed with Corinthian capitals and fragments of sculptured ornament. The two upper storeys of the drum were covered outside with hard stucco of pounded marble. Inside the whole was lined with a great variety of rich oriental marbles. This magnificent interior, divided into two orders by an entablature supported on columns and pilasters, has much injured by alteration.[3] About 608 the Pantheon was given by Phocas to Boniface IV., who consecrated it as the church of S. Maria ad Martyres. In 1881–82 the destruction of a row of houses behind the Pantheon exposed remains of a grand hall with richly sculptured entablature on Corinthian columns, part of the great thermae of Agrippa, which extend beyond the Via della Ciambella. A great part of the thermae appears from the brick stamps to belong to an extensive reconstruction in the reign of Hadrian[4] (see BATHS).

Thermae of Agrippa.

Close by the Pantheon is the church of S. Maria sopra Minerva, which stands (as its name records) on or near the site of a temple to Minerva Chalcidica (Plin. *H.N.* xxxvi. 24), probably built by Pompey the Great, *c.* 60 B.C. (Plin. *H.N.* vii. 97), and restored by Domitian. Adjoining this were temples to Isis and Serapis, a cult which became very popular in Rome in the time of Hadrian; large quantities of sculptured, Egypto-Roman in style, have been found on this site at many different times.[5]

Several of the barracks (*excubitoria*) of the various cohorts of the *vigiles* or firemen have been discovered in various parts of Rome. That of the first cohort (Plan, No. 29) is buried under the Palazzo Savorelli; that of the second (Plan, No. 30) was on the Esquiline, near the so-called temple of Minerva Medica; that of the third (Plan, No. 31) was near the baths of Diocletian. The most perfect is that of the seventh cohort (Plan, No. 34), near S. Crisogono in Trastevere, a handsome house of the 2nd century, decorated with mosaic floors, wall-paintings, &c.[6]

Firemen's barracks.

The excavations made in exposing the ancient church of S. Clemente have brought to light many remains of different periods; drawings are given by Mullooly, *St Clement and his Basilica* (1869), and De Rossi, *Bull. Arch. Crist.* (1863), 28.

Golden House of Nero.

Some remains exist of the Golden House of Nero, which, including its parks, lakes, &c., covered a very large space of ground, extending from the Palatine, over the Velia and the site of the temple of Venus and Rome, to the Esquiline, filling the great valley between the Caelian and the Esquiline where the Colosseum stands. The reaching from the Esquiline to the great reservoir now called the "Sette Sale." No other extravagances or cruelties of Nero appear to have offended the Roman people so much as the erection of this enormous palace, which must have blocked up many important streets and occupied the site of a whole populous quarter. It was partly to make restitution for this enormous theft of land that Vespasian and Titus destroyed the Golden House and built the Colosseum and Thermae of Titus on part of its site. Adjoining the baths of Titus were those built on a much larger scale by Trajan. Under the substructions of these extensive remains of the Golden House still exist;[7] and at one point is a lower part of the streets and foundations remain of one of the numerous houses destroyed by Nero to clear the site. The great bronze colossus of Nero, 120 ft. high (Suet. *Nero*, 31), which stood in one of the porticus of the Golden House, was moved by the architects Decrianus and Celer, with head and rays, to those of Apollo (Helios), on to the Velia; and it was moved again by Hadrian, when the temple of Rome was built, on to the base which still exists near the Colosseum. Several coins show this colossus by the side of the Colosseum.

Saepta Julia.

Under the Palazzo Doria, the church of S. Maria in Via Lata, and other neighbouring buildings extensive remains exist of a great porticus, with long rows of travertine piers; this building is designated on the fragments of the plan with the words SAEPT . . . LIA. This must be the Saepta Julia, begun by Julius Caesar, and completed by Agrippa in 27 B.C., as the voting place for the Comitia Centuriata, divided into enclosures or apartments, one for each century, a building contained rostra, and was also used for gladiatorial shows. Under the later empire it became a bazaar and resort of slave-dealers.

That curiously planned building on the Esquiline, in the new Piazza Vittorio Emmanuele, where the fragments of Marble Plan were placed (see Du Pérac, *Vestigj*, pl. 27), is one of the numerous castella or reservoirs from which the water of the various aqueducts was distributed in the quarters they were meant to supply, and may perhaps be identified with the Nymphaeum Alexandri built

[1] A drawing of this interesting bronze work, by G. A. Dosio, is preserved in the Uffizi at Florence (No. 1021).

[2] On the architrave is cut an inscription recording the restoration of the Pantheon by Severus in 202.

[3] The bronze door is not in its present form antique, having been recast by order of Pius IV.

[4] The plan of this whole group, including the Pantheon, is given by Palladio (*op. cit.*). The recent discoveries are given by Lanciani, *Not. d. Scavi* (1882), p. 357, with a valuable plan. See also Geymüller, *Documents inédits sur les Thermes d'Agrippa* (Lausanne, 1883); Bertolini and Armellini, *Le Terme di Agrippa*; *Baukunst der Römer*, ed. 2, pp. 550 ff.; Rivoira, *Rivista di Roma* (1910), p. 412.

[5] See Lanciani in *Bull. Comm. Arch. Rom.* (1883), and Marucchi, *ibid.* (1896); Fea, *Miscell.* cclv. 112. Part of the Serapeum is shown on fragments of the marble plan, which have been pieced together by Huelsen (Jordan, *Topographie der Stadt Rom.* i. 3, pl. xi.).

[6] See Visconti, *La stazione della Coorte VII. de' Vigili* (1867).

[7] See De Romanis, *Le antiche camere esquiline* (1822). It should be noted that the rooms said to have belonged to the baths of Titus really decorated the Golden House, over which the baths of Titus and Trajan were built.

by Severus Alexander at the termination of his Alexandrine aqueduct, opened in 225 (see *Hist. Aug. Sev. Alex.* 25). But the marble trophies now set at the top of the Capitoline steps bear a quarry mark which shows them to be of the time of Domitian: it consists of the following inscription, now not visible, as it is cut on the under part—IMP · DOM · AVG · GERM · PER · CHREZ · LIB · ✻ CŌ · !

Circuses.

Places of Amusement.

The Circus Maximus (see CIRCUS) occupied the Vallis Murcia[1] between the Palatine and the Aventine. Its first rows of seats, which were of wood, are said to have been made under the Tarquins (Liv. i. 26, 35; Dionys. iii. 68). Permanent carceres were set up in 329 B.C. and restored in 174 B.C. (Liv. viii. 20, xli. 27). In the reign of Julius Caesar it was rebuilt with (for the first time) lower seats of stone (Plin. *H.N.* xxxvi. 102) the upper being still of wood (Suet. *Caes.* 39); Dionysius (iii. 68) describes it as it was after this rebuilding. It was further enamended with marble by Augustus, Claudius and other emperors. The wooden part was burnt in the great fire of Nero, and again under Domitian; it was considerably enlarged by Trajan, and lastly it was restored by Constantine. In its last state it had a marble façade with three exterior tiers of arches with engaged columns, and (inside) sloping tiers of marble seats, supported on concrete raking vaults (Plin. *Paneg.* 51). A great part of these vaults existed in the 16th century, and is shown by Du Pérac. It is said by Pliny (*H.N.* xxxvi. 102)—if the text be not corrupt—to have held 250,000 spectators, while the Regionary Catalogues give the number of seats as 485,000; but Huelsen has shown (*Bull. Comm. Arch.*, 1894, 221 ff.) that the latter figure represented standing room, moreover, the interpreted, not of the number of spectators, but of the length of the tiers expressed in feet. The end with the carceres was near the church of S. Maria in Cosmedin.[2] Some of its substructures, with remains of nearly two tufa structures on the Palatine side, still exist below the church of S. Anastasia (see Plan of Palatine). The obelisk now in the Piazza del Popolo was set on the spina by Augustus, and that now in the Lateran piazza by Constantius II. The Circus Flaminius in the Campus Martius was built in 221 B.C. by the C. Flaminius Nepos who was killed at the Trasimene Lake in 217 B.C.; remains of the structure existed until the 16th century, when they were destroyed to build the Palazzo Mattei. In the middle ages its long open area was used as a rope-walk, hence the name of the church called S. Caterina dei Funari, which occupies part of its site.[4] The circus of Caligula and Nero was at the foot of the Vatican Hill (Plin. *H.N.* xxxvi. 74). The modern sacristy of St Peter's stands over part of its site. The obelisk in its spina remained standing *in situ* till it was moved by Fontana[5] for Sixtus V. to its present site in the centre of the piazza. The great stadium, foundations of which exist under most of the houses of the Piazza Navona (Agonalis), was especially below S. Agnese, is that built by Domitian and restored by Severus Alexander. That it was a stadium and not a circus is shown by the fact that its starting end is at right angles to the sides and not set diagonally, as was always the case with the carceres of a circus. Remains of the tufa and brick foundations of a spina. The best preserved circus is that built by Maxentius in honour of his deified son Romulus, by the Via Appia, 2 m. outside the walls *ef* Rome. It was attributed to Caracalla till 1825, when an inscription recording its true dedication was found.[6]

The first permanent naumachia was that constructed by Augustus between the foot of the Janiculan hill and the Tiber. The naumachia of Domitian was pulled down and the materials used to restore the Circus Maximus (Suet. *Dom.* 5); it was perhaps restored by Trajan, for the remains of a naumachia built of *opus reticulatum* mixed with brick have been discovered near the mausoleum of Hadrian.

The first stone theatre in Rome was that built by Pompey in 55–52 B.C. (see THEATRE: *Roman*); it contained a temple to Venus *Theatres.* Victrix, and in front of it was a great porticus, called Pompeia Hecatostyli from its hundred columns. This is said on the marble plan.[7] Considerable remains of the foundations exist between the Piazza dei Satiri, which occupies the site of the scena, and the Via de' Giubbonari and Via del Paradiso. Adjoining this was the *porticus Pompeiana*, which contained the curia of Pompey, where Caesar was murdered, after which it was walled up. The colossal statue, popularly supposed to be that of Pompey, at the feet of which Caesar died,[8] now in the Palazzo Spada, was found in 1553 near the theatre. This theatre was restored by Augustus (*Mon. Anc.* 4, 9); in the reign of Tiberius it was burnt, and its rebuilding was completed by Caligula, and was again burnt in A.D. 80, and restored by Titus. According to Pliny (*H.N.* xxxvi. 115), it held 40,000 spectators; the Regionary Catalogues give the number 17,580. Huelsen estimates its capacity at 9000–10,000 spectators. In 1864 the colossal gilt bronze statue of Dercules, now in the Vatican, was found near the site of the theatre of Pompey, carefully concealed underground. The theatre of Marcellus is much more perfect; complete foundations of the cunei exist under the Palazzo Savelli, and part of the external arcade is well preserved. This is built of travertine in two orders, Tuscan and Ionic, with delicate details, very superior to those of the Colosseum, the arcade of which is very similar to this in general design. This theatre was begun by J. Caesar, and finished by Augustus in 13 B.C., who dedicated it in the name of his nephew Marcellus.[9] It was restored by Vespasian (Suet. *Vesp.* 19). Foundations also of the theatre dedicated by Cornelius Balbus in 13 B.C. (Suet. *Aug.* 29; Dio Cass. liv. 25) exist under the Chiesa dei Cenci; and in the Via dei Calderai there is a small portion of the external arcade of a porticus (Plan, No. 42); the lower storey has travertine arches with engaged columns, and the upper has brick-faced pilasters. This has been supposed to be the *Crypta Balbi* mentioned in the Regionary Catalogues, but is more probably the *Porticus Minucia*, built in 110 B.C. An interesting account of the temporary theatre of M. Aemilius Scaurus, erected in 58 B.C., is given by Pliny (*H.N.* xxxvi. 5, 113). The same writer mentions an almost incredible building, which consisted of two wooden theatres made to revolve on pivots, so that the two together made an amphitheatre; this was erected by C. Curio in 50 B.C. (*H.N.* xxxvi. 116).

Amphitheatres.

The first stone amphitheatre in Rome was that built by Statilius Taurus in the reign of Augustus. (For the Colosseum and the Amphitheatrum Castrense, see AMPHITHEATRE; for the Baths, see that article.)

Arches, Columns, Tombs and Bridges.

Arches.

The earliest triumphal arches were the two erected by L. Stertinius (196 B.C.) in the Forum Boarium and in the Circus Maximus, out of spoils gained in Spain.[10] In the later years of the Republic there were many of these erected. The arch of Titus and Vespasian on the Summa Sacra Via was erected by Domitian to commemorate the conquest of Judaea by Titus in his father's reign. Reliefs inside the arch represent the triumphal procession—Titus in a chariot, and on the other side soldiers bearing the golden candlestick, trumpets and table of prothesis, taken from the Jewish temple. The central part only of this monument is original; the sides were restored in 1823.[11] Another arch in honour of Titus, erected previously to A.D. 80) in the Circus Maximus; its inscription is given in the Einsiedeln MS. (*C.I.L.* vi. 944). A plain travertine arch near the supposed palace of Commodus on the Caelian is inscribed with the names of the Consul Publius Cornelius Dolabella (A.D. 10) and of the *Fratres Arvales*, C. Julius Silanus. It may have originally been used to carry the Aqua Marcia; in later times the Aqua Claudia passed over it. The so-called arch of Drusus by the Porta Appia also carries the specus of an aqueduct—that built by Claudius in his great aqueduct. Its composite capitals show, however, that it is later than the time of Drusus, and it was very possibly the work of Trajan. Adjoining the church of S. Giorgio in Velabro a rich though coarsely decorated marble archway with flat lintel still exists—part of the Fasti, inscription records, in honour of Severus and his sons by the argentarii (bankers and silversmiths) and other merchants of the Forum Boarium in 204. A formed an entrance from the Forum Boarium into the Velabrum. The figure of Geta in the reliefs and his name have been erased by Caracalla; the sculpture is poor both in design and execution (see *Bull. Inst.*, 1867, p. 217, and 1871, p. 233). Close by is a quadruple arch, set at the intersection of two roads, such as was called by the

[1] See Bruzza, in *Ann. Inst.* (1870), and Lenormant, *Trophées de Marius*, Blois (1842). This once magnificent building, with the marble trophies in their place, is shown with much minuteness on a bronze medallion of Severus Alexander (see Froehner, *Médaillons de l'empire*, Paris, 1878, p. 169).

[2] So called from a prehistoric altar to the Dea Murcia (Venus); Varro, *L.L.* v. 154.

[3] Part of it is shown on a fragment of the marble plan (see Jordan, *F.U.R.*); it is represented on a bronze medallion of Gordian III., with an obelisk on the spina and three metae at each end; in front are groups of wrestlers and boxers (see Grueber, *Rom. Med.* pl. xli., London, 1874).

[4] The remains extant in the 16th century were described by Ligorio, *Libro delle Antichità* (1553), p. 17.

[5] See his *Trasportazione dell' Obelisco Vat.* (1590).

[7] Plut. *Pom.* 52; Dion Cass. xxxix. 38; Tac. *Ann.* xiv. 20.

[8] See Fea, *Rom. Ant.* lxviii. 57, for an account of its discovery.

[9] See Fea, *Rom. Ant.* lxvii. 54, 22: "Theatrum . ad . aedem. Apollinis . in . solo . magna . parte . a . privatis . empto . feci . quod . svb . nomine . M . Marcelli . generi . [me]i . esset." The temple of Apollo here named was one of the most ancient and highly venerated in Rome; it was dedicated to the Delphic Apollo in 431 B.C. (see Tac. *Hist.* iii. 72); meetings of the Senate were held in it; and it contained many fine works of art—an ancient cedar-wood statue of Apollo (Plin. *H.N.* xiii. 11) and the celebrated statues of the slaughter of the Niobids by Praxiteles or Scopas (Plin. *H.N.* xxxvi. 28), of which many ancient copies exist.

[10] Liv. xxxiii. 27.

[11] This arch is the earliest known example of the so-called Composite order, a modification of Corinthian in which the capitals combine Ionic volutes with Corinthian acanthus leaves; in other respects it follows the Corinthian order.

Romans an arch of Janus Quadrifrons. Though partly built of earlier fragments, it is late in style, and may be the Arcus Constantini mentioned in the XIth region. The finest existing arch is that by the Colosseum erected by Constantine. Its vows, however, little of its beauty to that artistically degraded period. Not only most of its reliefs but its whole design and many of its architectural features were stolen from an earlier arch erected by Trajan as an entrance to his forum (see above). The arch of Claudius, built A.D. 43 to commemorate his supposed victories in Britain, stood across the Via Lata (modern Corso) in the Piazza Sciarra. Its exact position is shown in *Bull. Comm. Arch. Rom.*, 1878, pl. iv. Its remains were removed in the middle of the 16th century,[1] and nothing now is left but half its inscription, preserved in the garden of the Barberini palace. It is shown on both aurei and denarii of Claudius, with an attic inscribed **DE BRITANNIS,** and surmounted by a quadriga and trophies. A little to the N. of the Piazza Colonna was the arch popularly called the Arco di Portogallo, destroyed in 1665, whose reliefs are now in the Palazzo dei Conservatori. They appear to date from the reign of Hadrian, but may have been used at a later time to decorate this arch. An arch also stood opposite S. Marta in Via Lata until 1498, which was probably erected by Diocletian in A.D. 303. The central part of the once triple arch of Gallienus still exists on the Esquiline; it took the place of the ancient Porta Esquilina of the Servian wall. It is built of travertine, is simple in design, with coarse details, and has an inscription on its attic. The two side arches and pediment over the centre existed in the 16th century, and are shown in the Mantuan oil-painting at Rome,[2] and in several MS. sketches of the same century. The inscription (*C.I.L.* vi. 1106) records that it was erected in honour of Gallienus and his wife Salonina by Aurelius Victor.[3]

The column of Antoninus Pius was a monolith of red granite, erected after his death by his adopted son M. Aurelius and L. Verus. One fragment of it is preserved in the Vatican with an interesting quarry incription, recording that it was cut in the ninth year of Trajan's reign, under the supervision of Dioscurus and the quarry foreman Atticus. The rest of its fragments were used by Pius VI. to repair the obelisk of Monte Citorio, set up by Augustus in the Campus Martius as the gnomon of a sondial (Plin. *H.N.* xxxvi. 72). The marble pedestal of the Antonine column is now in the Vatican. Its reliefs represent the apotheosis of Faustina and Antoninus Pius, and the *decursio equitum* which formed part of the funeral ceremony. This and the column of M. Aurelius were both surmounted by colossal portrait statues of gilt bronze. The column of M. Aurelius is very similar in style and design to that of Trajan. Its spiral reliefs represent victories in Germany from 171–175, arranged in twenty tiers. Like the column of Trajan, it is exactly 100 Roman ft. high, without the pedestal. The pedestal was originally much higher than at present, but is now partly buried; it is shown by Gamucci, Du Pérac and other 16th-century writers. This column stood in front of a temple to M. Aurelius, and within a great peribolus, forming a forum similar to that of Trajan, though much smaller; the remains of the temple, amongst other buildings, probably form the elevation now called Monte Citorio.[4]

Columns.

For the catacombs, see CATACOMBS; for obelisks, see OBELISK and EGYPT.

The prehistoric cemeteries of Rome are described above (*Prehistoric Rome*). Few tombs exist of the Roman period earlier than the 1st century B.C., probably owing to the great extension of the city beyond the Servian limits, which thus obliterated the earlier burial-places. The tomb of the Cornelii Scipiones is the most important of early date which still exists. It is excavated in the tufa rock at the side of the Via Appia, outside the Porta Capena. Interments of the Scipio family went on here for about 400 years, additional chambers and passages being excavated from time to time. The peperino sarcophagus of Lucius Cornelius Scipio Barbatus (Liv. x. 12), consul 298 B.C., is now in the Vatican; its inscription, in rude Saturnian verse, is one of the most important existing specimens of early Latin epigraphy. Many other inscribed slabs were found in the 17th century, covering the *loculi* in which lay the bodies of later members of the Via Appia, outside the Porta Capena. Interments of the Scipio family went on here for about 400 years, additional chambers and passages being excavated from time to time. The peperino sarcophagus of Lucius Cornelius Scipio Barbatus (Liv. x. 12), consul 298 B.C., is now in the Vatican; its inscription, in rude Saturnian verse, is one of the most important existing specimens of early Latin epigraphy. Many other inscribed slabs were found in the 17th century, covering the *loculi* in which lay the bodies of later members of the Via Appia, outside the Porta Capena. The tomb are modern copies.[5] This burial-place of the Scipios is unlike those of other families, owing to the gens Cornelia keeping up the early custom of interment without burning; thus stone sarcophagi or loculi (rock-cut recesses) were required instead of mere ingenholes to hold the cinerary urns. The tomb of M. Bibulus, a few yards outside the Porta Fontinalis, and remains of two recently discovered during the destruction of the Aurelian towers at the Porta Salara, date from about the middle of the 1st century B.C., as does also the curious tomb of the baker Eurysaces outside the Porta Maggiore. In 1863 an interesting tomb of the Sempronia gens[6] was discovered on the Quirinal, below the royal palace, near the site of the Porta Salutaris. It is of travertine, with a rich entablature and frieze sculptured with the Greek honeysuckle ornament (see *Bull. Comm. Arch.*, 1876, 126, pl. xii.). This also is of the last years of the republic.

Tombs.

The mausoleum of Augustus, built 28 B.C., stood in the north part of the Campus Martius, between the Tiber and the Via Flaminia. It was a massive cylindrical structure of concrete, faced with *opus reticulatum*; according to Strabo, this was faced with "white stone," *i.e.* travertine; inside was a series of radiating chambers, in plan like a wheel. On the top was a great mound of earth planted with trees and flowers (Str. v. 3. 8; Suet. *Aug.* ii. 3). In the middle ages it was converted into a fortress by the Colonna, which was destroyed in 1167. In the 16th century the central portion was occupied by a garden.[7] Only the bare core exists now, with its fine *opus reticulatum*, best seen in the court of the Palazzo Valdambrini. The inside is concealed by modern seats, being now used as a concert-hall (Anfiteatro Chorea). The sepulchral inscription in honour of Augustus, engraved on two bronze columns at the entrance, has perished to us by its early destruction, but we have an almost incredible amount of building: in addition to the long list of buildings mentioned by name Augustus says, **DVO. ET. OCTAGINTA. TEMPLA. DEVM. IN. VRBE. CONSVL. SEXTVM. REPECI.** The first building mentioned in the mausoleum of Augustus was that of M. Claudius Marcellus (died 23 B.C.), and it continued to be the imperial tomb till the death of Nerva, A.D. 98, after whose interment there was no more room.

Mausolea.

The mausoleum of Hadrian, built by that emperor as a substitute for that built by Augustus, and dedicated in A.D. 138 by his successor, was a large circular building on a square podium; its walls, of enormous thickness, were of tufa faced with Parian marble and surrounded by a colonnade of sixty columns of the same marble. It was of the greatest magnificence. The splendour of the whole is described by Procopius (*Bell. Goth.* i. 22), who mentions its siege by the Goths, when the defenders hurled statues on to the heads of the enemy. In the 7th century the Exarch Smaragdus dismantled the upper part on its summit, and all through the middle ages it served as a papal fortress. The interior chambers are still well preserved, but its outside has been so often wrecked and refaced that little of the original masonry is visible.

Several of the grander sepulchral monuments of Rome were built in the form of pyramids. One of these still exists, included in the Aurelian wall, by the Porta Ostiensis. It is a pyramid of concrete, 118 feet high, faced with blocks of white marble, and contains a small chamber decorated with painted stucco. An inscription in large letters on the marble records that it was built as a tomb for C. Cestius, a praetor, tribune of the people, and septemvir of the epulones (officials who supervised banquets in honour of the gods). It was erected, according to Cestius's will, by his executors, in the space of 330 days. It dates from the time of Augustus (Falconieri in Nibby, *Roma Antica*, iv. p. 1, ed. 1818–20). Another similar pyramid, popularly known as the tomb of Romulus, stood between the mausoleum of Hadrian and the basilica of St Peter. It was destroyed in the close of the 15th century during the rebuilding of the long bridge which connects the former building with the Vatican.

Sepulchral pyramids.

The earliest bridge was a wooden drawbridge called the Pons Sublicius from the piles (*sublicae*) on which it was built. The oldest existing important part of the defence of Rome from the Aventine to the Porta Flumentana (see plan of Servian wall, fig. 8), no permanent bridges were made till the Romans were strong enough not to fear attacks from without. The Pons Sublicius had a sacred character, and was always restored in wood, even in the imperial period.[10] Its exact site is doubtful, but it must be placed some distance below the Ponte Rotto. The first stone bridge was begun in 179 B.C. and completed in 142 B.C., when the conquest of Etruria and the defeat of the Cimbrian hordes put an end to wars of invasion; it was called the Pons Aemilius, after the pontifex maximus[11] M. Aemilius Lepidus, its founder. It was also called Pons

Bridges.

[2] Reproduced by De Rossi in his *Piante di Roma Anteriori al Sec. XVI.* (1879).

[3] See Bellori, *Veteres Arcus* (1690), showing some now destroyed: and Rossini, *Archi Trionfali* (1832).

[4] On the Antonine column see Petersen in Amelung's *Katalog der vaticanischen Sculpturen*, i. p. 883; on that of M. Aurelius see *Die Marcussäule*, by Petersen, v. Domaszewski and Calderini (Munich, 1896).

[5] The inscriptions are given in *C.I.L.* i. 29–39—vi. 1284–94. On the earlier ones see Woelfflin, *Münchener Sitzungsberichte* (1892), 188 ff.

[6] This is shown by an inscription (*C.I.L.* vi. 26152) found on the site in the 17th century.

[7] See Du Pérac's *Vestigj*, pl. 36, which shows the garden on the top.

[8] On the mausoleum of Hadrian, see Borgatti, *Castel S. Angelo* (1890).

[9] Near the tomb of Cestius is that extraordinary mound of potsherds called Monte Testaccio. These are mostly fragments of large amphorae, not piled up at random, but carefully stacked, with apertures at intervals for ventilation. It has been shown by Dressel (*Ann. dell' Inst.*, 1878, 118 ff.; *C.I.L.* xv. p. 492) that damaged or imperfect vessels were thus disposed of.

[10] See Varro, *L.L.* v. 83; Ov. *Fast.* v. 622; Tac. *Hist.* i. 86; *Vita Antonini Pii*, 8.

[11] The bridges were specially under the care of the pontifex maximus, at least till the later years of the republic (Varro, *l. L.* v. 83).

Lapideus, to distinguish it from the wooden Sublician bridge. The modern Ponte Rotto represents this bridge; but the existing arches are mainly medieval. An ancient basalt-paved road still exists, leading to the bridge from the Forum Boarium. The Pons Fabricius united the city and the island (Insula Tiberina).[1] The bridge derived its name from L. Fabricius, a curator viarum in 62 B.C; its inscription, twice repeated, is L . FABRICIVS . C . F . CVR . VIAR . FACIVNDVM . COERAVIT . Like the other existing bridges, it is built of great blocks of peperino and tufa, with a massive facing of travertine on both sides. Corbels to support centering were built in near the springing of the arches, so that they could be repaired or even rebuilt without dividing or interrupting the river-bed. The well-preserved Pons Cestius, probably named after L. Cestius, praefectus urbi in 46 B.C., unites the island and the Janiculan side; on the marble parapet is a long inscription recording its restoration in 370 by Gratian, Valentinian, and Valens.[2] The next bridge, Ponte Sisto, is probably on the site of an ancient bridge called in the *Notitia* Pons Aurelius. Marliano gives an inscription (now lost) which recorded its restoration in the time of Hadrian. About 100 yards above this bridge have been found the remains of sunken piers, which are proved by an inscription (*C.I.L.* vi. 31545) to have belonged to the Pons Agrippae, not otherwise known. The Pons Aelius was built in 134 by Hadrian, to connect his mausoleum with the Campus Martius; it is still well preserved, and is now called the Ponte S. Angelo (see Dante, *Inferno*, xviii. 28–33). It had eight arches, of which the three in the centre were higher than the rest, so that the road sloped on both sides. The material is peperino, with travertine facings. Its inscription, now lost, is given in the Einsiedeln MS.—IMP. CAESAR . DIVI . TRAIANI . PARTHICI . FILIVS . DIVI . NERVAE . NEPOS . TRAIANVS . HADRIANVS . AVG . PONT . MAX . TRIB . POT . VIIII . COS . III . P . P . FECIT . The Pons Aelius is shown on coins of Hadrian. A little below it are the foundations of another bridge, probably the Pons Neronianus of the *Mirabilia*, called also Vaticanus, built probably by Nero as a way to his Vatican circus and the Horti Agrippinae. At the foot of the Aventine, near the Marmorata, are the remains of piers which seem to have belonged to the Pons Probi, mentioned in the *Notitia*. It is uncertain whether this bridge is to be identified with the Pons Theodosii, which was built in A.D. 381–387 (Symm. *Ep.* 4, 70, 2; 5, 76, 3), and is mentioned in the *Mirabilia*.[3]

Regiones of Augustus.

In spite of the extensive growth of the city under the republic no addition was made to the four regiones of Servius till the reign of Augustus, who divided the city and its suburbs into fourteen regiones. The lists in the *Notitia* and *Curiosum* are the chief aids in determining the limits of each, which in many cases cannot be done with any exactness (see Preller, *Die Regionen der Stadt Rom* (1846) and Urlich's *Codex Topographicus* (Würzburg, 1871)). Each regio was divided into vici or parishes, each of which formed a religious body, with its aedicula larum, and had magistri victorum. The smallest regio (No. II.) contained seven vici, the largest (No. XIV.) seventy-eight.

Augustan regiones.

The list is as follows:—

I. *Porta Capena*, a narrow strip traversed by the Appian Way; it extended beyond the walls of Aurelian to the brook Almo.
II. *Caelimontium*, the Caelian Hill.
III. *Isis et Serapis*, included the valley of the Colosseum and the adjoining part of the Esquiline.
IV. *Templum Pacis*, included the Velia, part of the Cispius, most of the Suburra, the fora of Nerva and Vespasian, the Sacra Via, and also buildings along the north-east side of the Forum Magnum.
V. *Esquiliae*, north part of the Esquiline and the Viminal.
VI. *Alta Semita*, the Quirinal as far as the praetorian camp.
VII. *Via Lata*, the valley bounded on the west by the Via Lata, and by the neighbouring hills on the east.
VIII. *Forum Romanum*, also included the imperial fora and the Capitoline hill.
IX. *Circus Flaminius*, between the Tiber, the Capitol, and the Via Flaminia.
X. *Palatium*, the Palatine hill.
XI. *Circus Maximus*, the valley between the Palatine and the Aventine, with the Velabrum and Forum Boarium.
XII. *Piscina Publica*, the eastern part of the Aventine, and the districts south of and beyond the Via Appia, including the site of Caracalla's thermae.
XIII. *Aventinus*, the hill, and the bank of the Tiber below it.
XIV. *Trans Tiberim*, the whole district across the river and the Tiber Island.[4]

The walls of Aurelian (see fig. 7), more than 12 m. in circuit, enclosed almost the whole of the regiones of Augustus, the greater part of which were then thickly inhabited. This enormous work was begun in 271, to defend Rome against sudden attacks of the Germans and other northern races when the great armies of Rome were fighting in distant countries.[5] After the death of Aurelian the walls were completed by Probus in 280, and about a century later they were restored and strengthened by the addition of gate-towers under Arcadius and Honorius (A.D. 403), in place of the earlier gateways of Aurelian; this is recorded by existing inscriptions on three of the gates.[6] At many periods these walls suffered much more from the attacks of the Goths (Procop. *Bell. Goth.* iii. 22, 24), and were restored by Theodoric (about 500), by Belisarius (about 560), and by various popes during the 8th and 9th centuries, and in fact all through the middle ages. A great part of the Aurelian wall still exists in a more or less perfect state; but it has wholly vanished where it skirted the river, and a great part of its trans-Tiberine course is gone. The best-preserved pieces are between Porta Pinciana and Porta Salaria (in which breaches have lately been made for streets), and between the Lateran and the Amphitheatrum Castrense. The wall, of concrete, has the usual brick-facing and is about 12 ft. thick, with a guard's passage formed in its thickness. Fig. 13 shows its plan: on the inside the

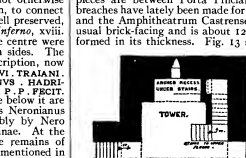

FIG. 13.—Aurelian's Wall; plan showing one of the towers and the passage in thickness of wall.

passage has tall open arches, which look like those of an aqueduct, and at regular intervals of about 45 ft. massive square towers are built, projecting on the outside of the wall, in three storeys, the top storey rising above the top of the wall. The height of the wall varies according to the contour of the ground; in parts it was about 60 ft. high outside and 40 inside. Necessaria, supported on two travertine corbels, projected from the top of the wall on the outside beside most of the towers. The Einsiedeln MS. gives a description of the complete circuit, counting fourteen gates, as follows:—

Porta S. Petri (at the Pons Aelius, destroyed); P. Flaminia (replaced by P. del Popolo); P. Pinciana (in use); P. Salaria (now P. Salara); P. Nomentana (replaced by P. Pia); P. Tiburtina (now P. S. Lorenzo); P. Praenestina (now P. Maggiore); P. Asinaria (replaced by P. San Giovanni); P. Metrovia or Metroni (closed); P. Latina (closed); P. Appia (now P. S. Sebastiano); P. Ostiensis (now P. S. Paolo). On the Janiculan side, P. Portuensis (destroyed); P. Aurelia (now Porta San Pancrazio). Besides these there was a gate, now closed (Porta Chiusa), to the south of the Castra Praetoria; and in all probability a gate on the right bank of the Tiber, replaced by the modern Porta Settimiana.

These existing gates are mostly of the time of Honorius; each is flanked by a projecting tower, and some are double, with a second pair of towers inside. Several have grooves for a portcullis (*cataracta*) in the outer arch. The handsomest gate is the P. Appia, with two massive outer towers, three stages high, the upper semicircular in plan. Many of the gates of Honorius have Christian symbols in their inscriptions. A general design on all these gates is much the same—a central archway, with a row of windows over it and two flanking towers, some square, others semicircular in plan. In many of the gates older materials are used, blocks of tufa, travertine, or marble. The doors themselves were sheeted with iron, and studs are let into a hole in the threshold, the upper into projecting corbels.

At many points along the line of the Aurelian wall older buildings form part of the circuit—near the Porta Asinaria a large piece of

[1] Livy (ii. 5) gives the fable of the formation of this island from the Tarquins' corn, cut from the Campus Martius and thrown into the river.

[2] The two stone bridges connecting the island with the right and left banks took the place of earlier wooden structures.

[3] See Mayerhöfer, *Die Brücken im alten Rom*, 1883.

[4] The text of the Regionary Catalogues is printed by Richter, *Topographie der Stadt Rom*,[2] pp. 371 ff.

[5] *Vita Aurel.* 21, 39; Zosimus, i. 37, 49; Eutrop. ix. 15.

[6] The inscriptions run thus: S. P. Q. R. IMPP . CAESS . D. D. INVICTISSIMIS . PRINCIPIBVS . ARCADIO . ET . HONORIO . VICTORIBVS . AC . TRIVMPHATORIBVS . SEMPER . AVGG . OB . INSTAVRATIOS . PORTAS . ET . TVRRES . AGGERTIS . IMMENSIS . PERDERIBVS—the rest refers to honorary statues erected to commemorate this work.

the Domus Lateranorum, a house of the 3rd century which gave its name to the Lateran basilica, and a little farther on, by S. Croce in Gerusalemme, the Amphitheatrum Castrense; the latter, of about the end of the 1st century A.D., has two tiers of arches and engaged columns of moulded brick on the outside. Between the P. Praenestina and the P. Tiburtina comes a large castellum of the Aqua Tepula. The Praetorian Camp forms a great projection near the P. Nomentana. Lastly, the angle near the Porta Flaminia, at the foot of the Pincian Hill, is formed by remains of a lofty and enormously massive building, faced with fine *opus reticulatum* of the 1st century B.C. Owing to the sinking of the foundation this is very much out of the perpendicular, and was known as the "*massa tortus*" at a very early time.[1] What this once important building was is uncertain. Two archways which form gates in the Aurelian wall are of much earlier date. The Porta Maggiore consists of a grand division of the aqueducts Anio Novus and Claudia built in travertine. The Porta S. Lorenzo enclosed a single travertine arch, built by Augustus where the aqueduct carrying the Aqua Marcia, Tepula, and Julia crossed the Via Tiburtina. The inner gateway, built of massive travertine blocks by Honorius, was pulled down by Pius IX., in 1868.[2]

Bibliography of Ancient Roman Topography.—Amongst ancient writers special mention is due to Varro (*De Lingua Latina*), Dionysius of Halicarnassus (*Antiquitates Romanae*), Ovid (*Fasti*), Vitruvius (*De Architectura*), Pliny the Elder (*Naturalis Historia*), Frontinus (*De Aquis*) and the remains of ancient commentaries on Virgil, Horace, &c. The inscriptions found in the city of Rome are contained in vol. VI. of the *Corpus Inscriptionum Latinarum*. Many of them are of the highest importance for Roman topography, *e.g.* the *Basis Capitolina*, preserved in the Palazzo dei Conservatori, a pedestal which once supported a statue of Hadrian, dedicated in A.D. 136 by the townsmen of five regions: on the sides are inscribed the names of the vici and their officials. Vol. XV. of the *C.I.L.* contains the inscriptions stamped on tiles and water-pipes, which are likewise of great importance. The *Monumentum Ancyranum* (*Res gestae Divi Augusti*, ed. Mommsen, 1883) reproduces the bronze tablets set up by Augustus on his mausoleum at Rome, and contains a list of the buildings which he erected or restored. The marble plan of Rome (*Forma urbis Romae*, ed. Jordan, 1874; the more recently discovered fragments have only been published in periodicals) dates from the reign of Septimius Severus, who restored the building to which it belonged after the fire of 191 B.C. The plan which it replaced was executed by order of Vespasian. The scale was generally 1: 250; it was oriented with S.E. at the top, N.W. at the bottom. Buildings are of course frequently represented on coins and works of art, and these may often be identified with existing remains.

In the reign of Constantine the Great there was compiled a catalogue of the principal buildings of Rome, arranged according to the fourteen regions of Augustus. This has been preserved in two recensions, one made in A.D. 334 and known as the *Notitia*, the second in or about A.D. 357, and known as the *Curiosum urbis Romae*. These are called the Regionary Catalogues, and contain, besides lists of buildings, statistics as to the number of vici, domus, insulae, &c., in each region, which are of great value. (See Preller, *Regionen der Stadt Rom*, Jena, 1846.)

In the middle ages, guide-books were written for the use of pilgrims visiting Rome. Besides giving the routes for the principal churches and cemeteries, they mention many buildings and give current legends regarding them. The earliest is the *Itinerary of Einsiedeln*, a MS. of the 8th century preserved in the monastery of Einsiedeln in Switzerland (see C. Huelsen, *L'Itinerario di Einsiedeln*, 1908). In the 12th century was compiled the *Mirabilia urbis Romae*, which became the foundation of later guide-books. The last recension is contained in a MS. of the early 15th century. These and other medieval documents are printed in Urlichs' *Codex Topographicus Urbis Romae* (1871). The *Ordo Benedicti Canonici* (see Jordan, *Topographie*, II. 1, 646, and Lanciani, *Monumenti Antichi*, I. 437), which gives the vicus of papal processions, belongs also to the 12th century, and was perhaps written by the author of the *Mirabilia*. The *Liber Pontificalis* (ed. Duchesne, Paris, 1886; ed. Mommsen, in *Monumenta Germaniae historica*, vol. I.), which gives the biographies of the early popes and was continued throughout the middle ages, is of value as illustrating the transition from pagan to Christian Rome.

Several early views and plans of Rome exist, beginning with the painting by Cimabue in the upper church of S. Francesco at Assisi (1275). A collection of these was published by Ciacconi, *Piante, iconografiche e prospettiche di Roma anteriori al secolo XVI.* (1879). Many others have since come to light. (See Huelsen in *Bull. Comm. Arch.*, 1892, p. 38).

In Italian and other libraries are preserved large numbers of plans and drawings from ancient remains by the architects of the 15th and later centuries, *e.g.* Bramantino, Fra Giocondo, the members of the families of Sangallo and Peruzzi, Pirro, Ligorio. Palladio, &c. These are of immense value, since the monuments which they drew have to a large extent been destroyed. Unfortunately they are not always trustworthy, especially those of Ligorio. The drawings at Florence have been indexed by Ferri; amongst recent publications may be noted those of Egger (*Escorialensis* by Egger (Vienna, 1905), and of a sketch-book, probably by A. Coner, in the Soane Museum by Dr Ashby, in *Papers of the British School at Rome*, vol. ii. (1903). Amongst the printed works of the early Italian architects may be mentioned Palladio, *Architettura* (Venice, 1542), and *Terme dei Romani* (London, 1732); Serlio, *Architettura* (Venice, 1545), and Labacco, *Architettura ed Antichità*, (Rome 1557). Engravings of ancient remains in Rome have been published in great numbers since the 16th century; the most important of the earlier collections are the *Speculum Romanae Magnificentiae*, a series extending over many years in the 16th century, and Du Pérac's *Vestigi di Roma* (1575). To the 18th century belong the etchings of Piranesi, published in several volumes, and still reproduced from the copper-plates by the Calcografia.

The literature of Roman topography would in itself form a large library; the best bibliographical guide is Mau's *Katalog der Bibliothek der k. deutschen archäologischen Institutes in Rom* (1900). The earliest modern work which can be called scientific is Flavio Biondo's *Roma instaurata*, written under Eugenius IV. (1431–1447), first dated edition, 1479. Biondo's work was based on the study of the ancient literary authorities, and was followed in his method and results by the scholars of the 15th and early 16th centuries, *e.g.* Pozzo, Leo Battista Alberti and Andrea Fulvio.. In the 16th century the study of ancient remains took its place beside that of ancient literature. Marliani, who published Rome in the first edition of his *Antiquae urbis Romae topographia* (1538), issued a second edition in 1544, which contained plans and illustrations. For more than a century his book formed the foundation upon which such writers as Panvinio, Ciacconio, Donati, Nardini, &c., raised their works. Unfortunately the Regionary Catalogues were largely interpolated during this period, and published in this form by Panvinius. In 1666 Famiano Nardini's *Roma antica* appeared, based upon the interpolated version of the Regionary Catalogues; this was productive of disastrous errors, many of which remained uncorrected until our own time. Nardini was followed in the 18th century by such writers as Piranesi and Venuti; the most important works of this period were those produced by excavators such as Bianchini (*Il palazzo dei Cesari*, 1738), or independent students of the monuments such as Raphael Fabretti (*De Columna Trajana*, 1683; *De Aquis et Aquaeductibus Veteris Romae*, 1680). The 19th century Winckelmann revived interest in ancient, including Roman, art (especially by his *Geschichte der Kunst des Alterthums*, 1764), and his follower, Carlo Fea, inaugurated the era of systematic excavation, especially in connexion with the Forum. In 1829 there was founded the international *Instituto di Corrispondenza Archeologica* (which in 1874 became the *Kaiserlich deutsches archäologisches Institut*); in 1830–42 was issued the *Beschreibung der Stadt Rom*, by Bunsen and others, which for the present time formed the standard current since Nardini's time were corrected. To the same period belong the magnificently illustrated works of Luigi Canina (*Indicazione di Roma antica*, 1830; *Esposizione topografica*, 1842; *Architettura antica di Roma*, 1834–44; *Edifizi di Roma antica*, 1848–56), the value of which is impaired by their inaccuracy and the imaginative character of the restorations.

The books on Roman topography written in the early 19th century such as those of Dionysius Ashby, which pursued the uncritical methods of Nardini; from 1830 onwards, however, we find a series of writers whose work shows the influence of the new criticism. Such were Becker (*Topographie der Stadt Rom*, 1843), Sir Wm. Gell (*The Topography of Rome and its Vicinity*, 1834), H. Humbert and Braun (*Ruinen und Museen Roms*, 1854), Reber (*Die Ruinen Roms*, 1862) and T. H. Dyer (*The City of Rome*, 1864).

Since 1870, when excavations were begun on the Palatine at the instance of Napoleon III., under the direction of P. Rosa, the discovery of ancient remains has made constant progress, and the results have been incorporated in a number of works, of which only the most important can be named here. These are: Jordan, *Topographie der Stadt Rom im Alterthum*, of which three vols. (I. 1, 2, and II.) appeared in 1871–85, and a third (I3) was written after Jordan's death by C. Huelsen and published in 1907; Lanciani, *Forma urbis Romae* (1893–1901), and *Ancient Rome* (3 vols., 1883–90); the works of Lanciani, especially *Ruins and Excavations of Ancient Rome* (1897) and *Storia degli Scavi* (in progress!); O. Richter, *Topographie der Stadt Rom* (ed. 2, 1901); Middleton, *The Remains of Ancient Rome* (2 vols., 1892). A short handbook may be found in S. B. Platner's *Topography and Monuments of Ancient Rome* (Boston, 1904). For the study of recent discoveries (besides the special works referred to in the course of this article) the following periodicals are the most important: *Notizie degli Scavi*, published by the Accademia dei Lincei since 1876; *Bullettino della Commissione Archeologica comunale di Roma* (from 1872); *Mittheilungen des k. deutschen archäologischen Instituts*

[1] Cf. Procop. *Bell. Goth.* i. 23.

[2] On the walls of Aurelian, see (in addition to the general works mentioned in the bibliography) Nibby and Gell, *Le Mura di Roma* (1820); Quarenghi, *Le Mura di Roma* (1880); and especially Homo, *Essai sur le règne de l'empereur Aurélien* (Paris, 1904), IV.e partie, ch. ii., "L'Enceinte de Rome."

(from 1886); *Papers of the British School at Rome* (from 1903). Brief reports of discoveries are published by Dr T. Ashby in the *Classical Review*.

All previous archaeological maps of Rome have been superseded by Lanciani's *Formae urbis Romae*, in 46 sheets (Milan, 1893–1902). The best recent maps are those in Kiepert's *Formae orbis antiqui*, sheets 21 and 22. Kiepert and Huelsen's *Formae urbis Romae antiquae* date from 1896; they are accompanied by a *Nomenclator topographicus*. Homo, *Lexique de topographie romaine* (1900), is also useful. (J. H. M.; H. S. J.)

CHRISTIAN ROME

From the 4th to the 12th Century

The era of church building in Rome may be said to begin with the reign of Constantine and the peace of the church. Before then Christian worship was conducted with various degrees of secrecy either in private houses or in the catacombs (q.v.), according as the reigning emperor viewed the sect with tolerance or dislike. The type of church which in the beginning of the 4th century was adopted with certain modifications from the pagan basilica, though varying much in size, had little or no variety in its general form and arrangement. One fixed model was strictly adhered to for many centuries, and, in spite of numberless alterations and additions, can be traced in nearly all the ancient churches of Rome. It is fully described and illustrated in the article BASILICA.

Construction.

The walls of these early churches were mostly built of concrete, faced with brick, left structurally quite plain, and decorated only with painted stucco or glass mosaics—especially (outside and internally) in the gable-end over the face of its arch, and (externally) on the east or entrance wall, the top of which was often built in an overhanging curve to keep off the rain. The windows were plain, with semicircular arches, and were filled with pierced marble screens, or in some cases with slabs of translucent alabaster; the latter was the case at S. Lorenzo fuori le Mura, and examples of the former still exist in the very early church formed in the rooms of some thermae on the Esquiline (possibly those of Trajan), below the 6th-century church of S. Martino ai Monti. Almost the only bit of external architectural ornament was the eaves cornice, frequently (as at the last-named church) formed of marble cornices stolen from earlier classical buildings. Internally the nave columns, with their capitals and bases, were usually taken from some classical building, and some churches are perfect museums of fine sculptured caps and rich marble shafts of every material and design.[1] At first the nave had no arcades, but was plain, supporting a horizontal entablature, as in old St Peter's, S. Clemente, and S. Maria Maggiore, but afterwards, in order to widen the intercolumniation, simple round arches of narrow span were introduced, thus requiring fewer columns. The roof was of open timber and kingpost construction, left open, but decorated with painting or metal plates. The floor was paved either with coarse mosaic of large tesserae (as at S. Pudentiana) or with slabs of marble stripped from ancient buildings. A later development of this plan added a small apse containing an altar at the end of each aisle, as in S. Maria in Cosmedin and S. Pietro in Vincoli.[2]

Circular churches.

The type of church above described was used as a model for by far the majority of early churches not only in Rome, but also in England, France, Germany, and other Western countries. Another form was, however, occasionally used in Rome, which appears to have been derived from the round temples of pagan times. This is a circular building, usually domed and surrounded with one or more rings of pillared aisles. To this class belong the combined church and mausoleum of Costanza (see fig. 14) and that of SS. Marcellinus and Petrus, both built by Constantine, the former to hold the tomb of his daughter Constantia (or Constantina) and Helena, the latter that of his mother Helena. The latter is on the Via Labicana, about 2 m. outside Rome; it is a circular domed building, now known as the Torre Pignattara, from the *pignatte* or amphorae built into the concrete dome to lighten it. The mausoleum of S. Costanza, close by S. Agnese fuori, is also domed, with circular aisle, or rather ambulatory, the vault of the latter decorated with mosaic of classical style (see MOSAIC, fig. xvii., p. 885). The red porphyry sarcophagi, sculptured richly with reliefs, from these mausolea are now in the Vatican. On a much larger scale is the church of S. Stefano Rotondo on the Coelian, built by Pope Simplicius (468–482), with a double ring of pillared aisles, the outer one of which was pulled down and a new enclosure wall built by Nicholas V. Other round churches are S. Teodoro (by the Vicus Tuscus), restored in the 8th century, and S. Bernardo, which is one of the domed halls of Diocletian's thermae, consecrated as a church in 1598.

Space will not allow any individual description of the very numerous and important churches in Rome which are built on the basilican plan. The principal examples are these:—S. Pudentiana, traditionally the oldest in Rome, restored in 398; S. Clemente, restored under Siricius (384–399), now forming the crypt of an upper church built in the 12th century; S. Sabina, 5th century; S. Vitale, 5th century, founded by Innocent I. (401–417); S. Martino ai Monti, *c.* 500; S. Balbina, 6th century; church of Ara Coeli, founded by Gregory the Great (590–604) as S. Maria in Capitolio; S. Giorgio in Velabro, rebuilt by Leo II. (682–683); S. Cesareo, 8th century; S. Maria in Via Lata, restored by Sergius I. (687–701); S. Crisogono, rebuilt in 731 by Gregory III.; S. Maria in Cosmedin; S. Pietro in Vincoli, and S. Giovanni ad Portam Latinam, rebuilt *c.* 772 by Adrian I.; S. Maria in Dominica, rebuilt by Paschal I. (817–824), who also rebuilt S. Cecilia in Trastevere and S. Prassede; S. Marco, rebuilt by Gregory IV. in 833; S. Maria Nuova, rebuilt by Nicholas I. (858–867), now called S. Francesca Romana; the church of the SS. Quattro Coronati, rebuilt by Paschal II. about 1113; and S. Maria in Trastevere, rebuilt by Innocent II. in 1130.[4]

FIG. 14.—Church and Mausoleum of Costanza. A, Recess for altar. B, Porphyry slab in floor where the tomb stood. C, Modern altar. D, D, Slabs of white marble, part of ancient paving. E, E, Recesses with mosaics. F, F, Ambulatory with mosaic vault.

Though the apses[3] and classical columns of the naves in these churches were built at the dates indicated, yet in many cases it is difficult to trace the existence of a stucco vault. The alterations and additions of many centuries have frequently almost wholly concealed the original structure. Except at S. Clemente, the early choir, placed as shown in fig. 26, has invariably been destroyed; the walls have often been broken through by the addition of rows of chapels; and the whole church, both within and without, has been overlaid with the most incongruous architectural features in stucco or stone. The open roof is usually concealed either by a wooden panelled ceiling or by a stucco vault. The throne[4] and marble benches in the apse have usually given place to more modern wooden fittings, to suit the later position of the choir, which has always been transferred from the nave to the apse. In many cases the mosaics of the apse and the columns of the nave are the only visible remains of the once simple and stately original church.[5]

Era of the Cosmati.

From 1200 to 1450; and the Papal Palaces

The 10th and 11th centuries in Rome were extraordinarily barren in the production of all branches of the fine arts, even that of architecture; and it was not till the end of the 12th that any important revival began. The 13th century was, however, one of great artistic activity, especially in when an immense number of beautiful works, especially in marble enriched with mosaic, were produced in Rome. This revival, though on different lines, was very similar to the rather later one which took place at Pisa (see PISANO), and, like that, was in great part due to the great artistic talents of one family,—the Cosmati,[6] which, for four or five generations, produced skilful architects, sculptors and mosaicists.

[1] S. Lorenzo and S. Agnese fuori, S. Maria in Trastevere, Ara Coeli, and numberless other churches are very rich in this respect.

[2] See Heinrich Holtzinger, *Die altchristliche Architektur* (Stuttgart, 1889–99); Dehio and von Bezold, *Die kirchliche Baukunst des Abendlandes* (Stuttgart, 1884–99).

[3] This list does not include the great basilicas of Rome, for which see BASILICA. On the churches of Rome see Armellini, *Le chiese di Roma* (2nd ed. 1891); Tuker and Malleson, *Handbook to Christian and Ecclesiastical Rome* (1900); Marucchi, *Basiliques et églises de Rome* (1902); Frothingham, *Monuments of Christian Rome* (1910).

[4] The interior of S. Maria in Cosmedin has in recent years been restored according to primitive tradition.

[5] On the Cosmati see Boito, *Architettura del Medio Evo* (Milan, 1880, pp. 117–182); Clausse, *Les Marbriers romains et le mobilier presbytéral* (Paris, 1897); Crowe and Cavalcaselle, *History of Painting in Italy* (ed. Douglas, 1903), ch. iii.

The first member of the family of whom we have knowledge was Lorenzo, who, with his son Jacopo, made the ambones of S. Maria in Ara Coeli and an altar-canopy (ciborium) in SS. Apostoli. Jacopo decorated the door of S. Saba in 1205 and, together with his son Cosma (who gave his name to the family), that of S. Tommaso in Formis; the father and son worked together at Civita Castellana in 1210. Cosma made a ciborium for SS. Giovanni e Paolo in 1235, and worked with his sons Luca and Jacopo at Anagni and Subiaco during the first half of the 13th century. So far the inscriptions enable us to trace the relationships of the Cosmati with certainty; it is not so clear whether the Cosma above mentioned is to be identified with the mosaicist employed in the chapel of the Sancta Sanctorum belonging to the old Lateran palace which was rebuilt by Nicholas III. (1277–1280). This Cosma was, however, almost certainly the father of Giovanni, the last of the family, who made the tomb of Cardinal Durand (1296) in S. Maria sopra Minerva, Cardinal Rodriguez in S. Maria Maggiore, and Stefano de' Surdi in S. Balbina. Another artist who seems to have belonged to this family, Deodato, made the ciborium of S. Maria in Cosmedin and (probably) of S. John Lateran; he is probably identical with the *Deodatus filius Cosmati* who, together with another Jacopo, executed a pavement at S. Jacopo alla Lungara. A large number of other works of this school, but unsigned, exist in Rome. These are mainly altars and baldacchini, choir-screens, paschal candlesticks, ambones, tombs, and the like, all enriched with sculpture and glass mosaic of great brilliance and decorative effect.

Besides the more mechanical sort of work, such as mosaic patterns and architectural decoration, they also produced mosaic pictures and sculpture of very high merit, especially the recumbent effigies, with angels standing at the head and foot, in the tombs of Ara Coeli, S. Maria Maggiore, and elsewhere. One of their finest works is in S. Cesareo; this is a marble altar richly decorated with mosaic in sculptured panels, and (below) two angels drawing back a curtain (all in marble) so as to expose the open grating of the confessio.

Besides the Cosmati, other artists, such as Paulus Romanus and his sons in the 12th century, and Petrus Oderisius in the 13th, contributed to the revival of art. The beautiful cloisters of S. Paolo fuori le Mura, begun by "Magister Petrus," and those of S. John Lateran, the work of Vassalletus, are the finest architectural works of this school. In the latter part of the 13th century we find the sculptor Arnolfo del Cambio at work in Rome. His altar-canopy at S. Paolo fuori le Mura (1285) seems to have been imitated by the Cosmati in their latest works; his tomb of Cardinal de Braye (d. 1282) at Orvieto also shows his close connexion with that school. Another artist of the same period, Petrus Oderisius, worked in England; the shrine of the Confessor at Westminster (1269) was made by him.

The earlier works of the Cosmati are Romanesque in style, but in the 13th century Gothic elements were introduced, especially in the elaborate altar-canopies, with their geometrical tracery. In detail, however, they differ widely from the pure Gothic of northern countries. The richness of effect which the English or French architect obtained by elaborate and carefully worked mouldings was produced in Italy by the beauty of polished marbles and jewel-like mosaics,—the details being mostly rather coarse and often carelessly executed.

Chiefly to the 13th century belong the large number of beautiful campanili, which are the most conspicuous relics of the medieval period in Rome. The finest of these are attached to the churches of S. Francesca Romana, SS. Giovanni e Paolo, and S. Maria Maggiore. Others belong to the basilicas of S. Lorenzo fuori le Mura and S. Croce in Gerusalemme, and to S. Giorgio in Velabro, S. Maria in Cosmedin, S. Alessio, S. Giovanni ad Portam Latinam, S. Cecilia, S. Crisogono, and S. Pudentiana. They occupy various positions with regard to the church, being all later additions; that of SS. Giovanni e Paolo stands at some distance from it. In design they are very similar, consisting of many stages, divided by brick and marble cornices; in the upper storeys are from two to four windows on each side, with round arches supported on slender marble columns. They are decorated with brilliantly coloured *ciotole* or disks of earthenware, enamelled and painted in green or turquoise blue, among the earliest existing specimens of the so-called majolica (see CERAMICS). Sometimes disks or crosses made of red or green porphyry are inlaid in the walls. In most cases on one face of the top storey is a projecting canopied niche, which once contained a statue or mosaic picture. The walls are built of fine neat brickwork. The largest and once the handsomest of all, that of S. Maria Maggiore, has string-courses of enamelled and coloured terra-cotta.[1] The slender columns of the windows have often proved insufficient to support the weight, and so many of the arches are built up.[2]

Campanili.

Though but little used for churches, the Gothic style, in its modified Italian form, was almost universally employed for domestic architecture in Rome during the 13th and 14th centuries. Tufa[3] or brick was used for the main walls, the lowest storey being often supported on an arcade of pointed arches and marble columns. The windows were usually formed of large marble slabs with trefoil-shaped heads or cusped arches. As a rule the upper storeys projected slightly over the lower wall, and were supported on small ornamental mashicolations. The top storey frequently had an open loggia, with rows of pointed arches. When vaulting was used it also was of the pointed form, usually in simple quadripartite bays, with slightly moulded groin-ribs. The finest existing specimen of this style is the palace built about 1300 by Boniface VIII. (Benedetto Gaetani), enclosing the tomb of Cecilia Metella on the Via Appia, with a graceful little chapel within the precincts of the castle. This building is well worthy of study; the remaining part is well preserved. Many houses of this period, though generally much injured by alterations, still exist in Rome. They are mostly in out-of-the-way alleys, and, not being mentioned in any books, are seldom examined. The Ghetto (now destroyed) and the quarter near the Ponte Rotto contained many of these interesting buildings, but all as some of the most complete are in the Trastevere district, but most have disappeared owing to the wholesale destruction of old streets. Among those which may possibly escape for a while is the 13th-century house where Giulio Romano lived, near the Palazzo di Venezia, and the Albergo del Orso, at the end of the Via di Tordinona, of the same period, which was an inn in the 16th century and is one still; this has remains of a fine upper loggia, with rich cornices in moulded terra-cotta; the lowest storey has pointed vaulting resting on many pillars. Another graceful but less stately house exists, though sadly mutilated, opposite the entrance to the atrium of S. Cecilia in Trastevere.[4] Few now remain of the once numerous lofty towers built by the turbulent Roman barons for purposes of defence. The finest, the Torre della Milizie on the Viminal, was built in the 13th century by the sons of Petrus Alexius; of about the same date is the Torre dei Conti, near the forum of Augustus, built by Marchione of Arezzo; both these were once much higher than they are now; they are very simple and noble in design, with massive walls faced with neat brickwork.

Domestic architecture.

Till the 14th century the Lateran was the usual residence of the pope; this was once a very extensive building, covering four times its present area. The original house is said to have belonged to the senator Plautius Lateranus in the reign of Nero; but the existing part on the line of the Aurelian wall is of the 3rd century. This house, which had become the property of the emperors, was given by Constantine as a residence for S. Sylvester; it was very much enlarged at many periods during the next ten centuries; in 1308 a great part was burnt, and in 1586 the ancient palace was completely destroyed by Sixtus V., and the present palace built by Domenico Fontana. The Cappella Sancta Sanctorum (see list of Cosmati works) is the only relic of the older palace.[5]

Lateran Palace.

[1] This campanile was restored and enriched in 1376.

[2] See De Montault, *Les Cloches de Rome* (Arras, 1874).

[3] For many centuries wall-facing of small tufa stones was used, *e.g.* in the medieval part of the Capitol; this was called "opera saracinesca" from its supposed adoption from the Saracens; it is largely employed in the walls and towers of the Leonine city, built by Leo IV. (847–855) to defend the Vatican basilica and palace against the inroads of the Moslem invaders. The greater part of this wall is now destroyed and built over, but a long piece with massive circular towers well preserved exists in the gardens of the Vatican.

[4] The house of Crescentius, popularly called the "house of Rienzi," near the Ponte Rotto, is perhaps the sole relic of the domestic architecture of an earlier period—the 12th century. Its architectural decorations are an extraordinary mixture of marble fragments of the most miscellaneous sort, all taken from classical buildings; it has an inscription over the doorway, from which we learn that it was the property of "Crescentius, son of Nicolaus."

[5] See Rohault de Fleury, *Le Latran au moyen âge* (Paris, 1877).

The present palace has never been used as a papal residence; in the 18th century it was an orphan asylum, and is now a museum of classical sculpture and early Christian remains.

The Vatkan.

The Vatican palace originated in a residence built by Symmachus (498–514) adjoining the basilica of S. Peter. This was rebuilt by Innocent III. (*c.* 1200) and enlarged by Nicholas III. (1277–80). It did not, however, become the fixed residence of the popes till after the return from Avignon in 1377. In 1415 John XXIII. connected the Vatican and the castle of S. Angelo by a covered passage carried on arches. But little of the existing palace is older than the 15th century; Nicholas V. in 1447 began its reconstruction on a magnificent scale, and this was carried on by Sixtus IV. (Sistine chapel), Alexander VI. (Torre Borgia), Julius II. and Leo X. (Bramante's cortile and Raphael's Loggie and Stanze), and Paul III. (Sala Regia and Cappella Paolina by Antonio da Sangallo). Sixtus V. and his successors built the lofty part of the palace on the east of Bramante's cortile. The Scala Regia was built by Bernini for Urban VIII. and Alexander VII., the Museo Pio-Clementino under Clement XIV. and Pius VI., the Braccio Nuovo under Pius VII., and lastly the grand stairs up to the cortile were added by Pius IX.[1]

The Quirinal.

The Quirinal palace, now occupied by the king of Italy, is devoid of architectural merit. It stands on the highest part of the hill, near the site of the baths of Constantine. This palace was begun in 1574, under Gregory XIII., by Flaminio Ponzio, and was completed by Fontana and Maderna under subsequent popes.

Ecclesiastical Gothic.

The only important church in Rome which is wholly Gothic in style is S. Maria sopra Minerva, the chief church of the Dominican order. This was not the work of a Roman architect, but was designed by two Dominican friars from Florence—Fra Ristori and Fra Sisto—about 1280, who were also the architects of their own church of S. Maria Novella. It much resembles the contemporary churches of the same order in Florence, having wide-spanned pointed arches on clustered piers and simple quadripartite vaulting. Its details resemble the early French in character.[2] It contains a large number of fine tombs; among them that of Durandus, bishop of Mende (the author of the celebrated *Rationale divinorum officiorum*), by Giovanni Cosma, *c.* 1300, and the tomb of Fra Angelico, the great Dominican painter, who died in Rome, 1455. The most elaborate specimen of ecclesiastical Gothic in Rome is that part of S. Maria in Ara Coeli which was rebuilt about 1300, probably by one of the Cosmati, namely, the south aisle and transept. During the 14th century (chiefly owing to the absence of the popes at Avignon) the arts were neglected at Rome, and a period of decadence set in. The sculptured effigy and reredos of Cardinal d'Alençon (d. 1403) in S. Maria in Trastevere, executed by a certain Paulus Romanus, is a fair example of the works produced during this period; the effigy is a very clumsy and feeble copy of the fine recumbent figures of the Cosmati.

Florentine Period, c. 1450–1550.

The long period of almost complete artistic inactivity in Rome was broken in the 15th century by the introduction of a number of foreign artists, chiefly Florentines, who during this and the succeeding century enriched Rome with an immense number of magnificent works of art. The dawn of this brilliant epoch may be said to have begun with the arrival of Fra Angelico (see FIESOLE) in 1447, invited by Nicholas V. to paint the walls of his small private chapel in the Vatican dedicated to S. Lorenzo.

Florentine and Lombard sculptors.

In the latter half of the 15th century a large number of sculptured tombs (as well as tabernacles, altar frontals, reredoses and the like) were made for Roman churches by sculptors from Tuscany and north Italy. The earliest of these tombs is that of Eugenius IV. (d. 1447) in S. Salvatore in Lauro, by Isaia da Pisa. It presents the typical form of a life-sized recumbent effigy resting on a richly ornamented sarcophagus over which is a canopy decorated with reliefs and statuettes. The type was brought to perfection by the Florentine Mino da Fiesole (see MINO DI GIOVANNI), who worked in Rome under Pius II. and succeeding popes, being assisted in some cases by another artist of almost equal skill, Giovanni Dalmata. A Lombard sculptor, Andrea Bregno, came to Rome under Paul II. and worked there until the closing years of the century; his tomb is in S. Maria Sopra Minerva. The works of these artists and their followers are to be found in a great number of churches, notably S. Maria del Popolo.[3]

Bramante.

The architecture no less than the sculpture of the latter part of the 15th century was mainly the work of Florentines, especially of Baccio Pontelli, who is said by Vasari to have built S. Maria del Popolo, S. Agostino,[4] and S. Cosimato in Trastevere. He also was the architect of S. Pietro in Montorio, erected in 1500 for Ferdinand and Isabella of Spain. Other buildings were carried out by another Florentine, Giuliano da Majano. The Palazzo di Venezia, begun for Cardinal Barbo, afterwards Paul II., about 1455, a very massive and stately building of medieval character, was built by Giuliano da Sangallo and Francesco di Borgo San Sepolcro.

During the latter part of the 15th and the first few years of the succeeding century Rome was enriched with a number of buildings by Bramante (*q.v.*), one of the greatest architects the world has ever seen. He combined the delicacy of detail and the graceful lightness of the Gothic style with the measured stateliness and rhythmical proportions of classic architecture. Though he invariably used the round arch and took his mouldings from antique sources, his beautiful cloisters and loggie are Gothic in their general conception. Moreover, he never committed the prevalent blunder of the 16th century, which was a fruitless attempt to obtain magnificence by mere size in a building, without multiplying its parts. His principal works in Rome are the Palazzo della Cancelleria, built for Cardinal Riario (1495–1505), with its stately church of S. Lorenzo in Damaso; the so-called Palazzo di Bramante in the Governo Vecchio, built in 1500; and the Palazzo Giraldi, near St Peter's, once the residence of Cardinal Wolsey, built in 1503. He also built the cortile of S. Damaso in the Vatican, the toy-like tempietto in the cloister of S. Pietro in Montorio (1502), and the cloisters of S. Maria della Pace (1504).[5] In 1503 Bramante was appointed architect to St Peter's, and made complete designs for it, with a plan in the form of a Greek cross. The piers and arches of the central dome were the only parts completed at the time of his death in 1514, and subsequent architects did not carry out his design.[6]

Peruzzi.

Baldassare Peruzzi (*q.v.*), of Siena was one of the most talented architects of the first part of the 16th century; the Villa Farnesina and the Palazzo Massimi alle Colonne are from his designs. His later works bear traces of that decadence in taste which soon began, unfortunately to be rapidly growing love for the dull magnificence of the pseudo-classic style. This falling off in architectural taste was due to Michelangelo (*q.v.*) more than to any other one man. His cortile of the Farnese palace, though a work of considerable masculine beauty, was the first stages towards that lifeless scholasticism and blind following of antique forms which were the destruction of architecture as a real living art, and in the succeeding century produced so much that is almost brutal in its coarseness and neglect of all true principles of proportion and scale. During the earlier stage, however, of this decadence, and throughout the 16th century, a large number of fine palaces and churches were built in and near Rome by various able artists, such as the Villa Madama by Raphael, part of the Palazzo Farnese by Antonio da Sangallo the younger, S. Giovanni de' Fiorentini by J. Sansovino, and many others.[7]

(J. H. M.; H. S. J.)

LATER DEVELOPMENT

The transformation of Roman architecture after the 16th century was marked by the abandonment of classical models. The works of Michelangelo were too grand to be accused of exceeding the extreme limits of good taste, but his scholars and imitators exaggerated his manner, and the *barocco* style,

[1] See Letarouilly, *Le Vatican et le basilique de St Pierre à Rome* (Paris, 1882).

[2] The absence of a triforium is one of the chief reasons why the large Gothic churches of Italy are so inferior in effect to the cathedrals of France and England.

[3] On Mino da Fiesole, see Gnoli in *Archivio Storico dell' Arte* (1890–91); on Giovanni Dalmata, Fabriczy in *Jahrb. der preuss-Kunstammlungen* (1901); on Andrea Bregno, Steinmann in the same periodical, vol. xx.; many of the monuments are drawn in Tcsi, *Raccolta di monumenti sacri e sepolcrali scolpiti a Roma* (1853).

[4] These two churches were the first in Rome built with domes after the classical period.

[5] The upper storey of the latter is varied by having horizontal lintels instead of arches on the columns.

[6] See Geymüller, *Projets primitifs pour le basilique de St Pierre à Rome* (Paris, 1875–85).

[7] A valuable account of Raphael's architectural works is given by Geymüller, *Raffaello a Architettura* (Milan, 1884). Drawings of many of the finest palaces of Rome are given in the fine work by Letarouilly, *Édifices de Rome moderne* (Brussels, 1856–66).

which had its cradle in Rome, was soon adopted throughout Italy. Vignola, (1507–1573) had done his best to bind the arts of building to strictly classic rules, but in spite of his efforts the degeneration made progress during his own lifetime and under Carlo Maderna (1556–1630), and proceeded still more rapidly under Bernini (1598–1680). The characteristics of the *barocco* are the reckless abuse of curves and extravagantly broken lines, of contorted columns, twisted tympanums and highly exaggerated ornaments; yet we must confess that many monuments of this period of art exhibit such exuberant life, such contrasts of relief and shadow, and such a wonderful combination of variety and solidity as cannot fail to please the many, even now, by the magnificence of their general effect. In Rome, the numerous works of Bernini, Borromini, Maderna, Rainaldi, Salvi, Fuga, Longhi and others bear witness to the gifted activity of Italian architects during that period, if genius necessarily creates, those men showed more of it than their predecessors who adhered to the classic and revered the teachings of Vitruvius. Degeneration is tolerated and sometimes even pleases, under the name of transformation, but there is nothing to be said for the real decay which marks the 18th century. It was not universal at first, for it is by nature a slow process; such men as A. Galilei, Specchi, Peparelli, Marchionni, Morelli, Camporese and Piranesi left works not altogether without value; but the outrageous abuse of ornament increased with every year, and was made more and more evident by the clumsy heaviness of the pillars and pilasters that supported the whole. The refined purity of the Renaissance disappeared as completely as the delicate grace and exquisite ornamentation of the Cosmatesque period. Many works of the greatest beauty were destroyed outright, and many more were disfigured and often wholly hidden by horrible stucco constructions and decorations; or, on a larger scale, by the application of hideous stone façades to churches of which the simple good taste had delighted generations of mankind. The deformation of the noble old Lateran basilica is a conspicuous instance of such deeds; another is Santa Maria Maggiore, and the false fronts plastered upon San Marcello and Santa Maria in Via Lata, both in the Corso, give a very clear idea of what was generally done. Of the series of old churches suffered quite as much, and even the frescoes of early masters were not spared; those by Pinturicchio in the third chapel (south) of S. Maria del Popolo were covered with wretched stucco ornaments, only removed in 1850, and numberless works of art by Giotto and other early painters were wilfully destroyed.

Archi-tecture.

The decline of architecture continued in the 19th century, notwithstanding the laudable efforts of Valadier and a few other painstaking imitators, who produced the so-called "academic neo-classic" reaction; among them may be noted the names of Canina, Poletti, Sarti and Azzurri. The futility of their works invited the feeble eclecticism which soon afterwards became so general that the architecture of the period is wholly without individuality, good or bad. The chief architectural work of the 19th century was the rebuilding of the great basilica of S. Paolo fuori le Mura, burnt in 1823, in a style of cold splendour which is anything but devotional in its general effect. The pillars are huge monoliths of grey granite from the Alps; the confessio and transepts are lined with rosso and verde antico from quarries then recently rediscovered in Greece, and with Egyptian alabaster and lapis lazuli and malachite adorn the bases of the columns round the high altar in lavish profusion. Thirty years were required for the rebuilding of the frigidly magnificent edifice, which was reconsecrated in 1854. The east façade displays a quantity of gaudy mosaics, and the projected quadriportico is wanting. The belfry is nothing but a steeple, and has an unfortunate resemblance to a lighthouse. In extenuation of the result it must be admitted that the original building had been totally destroyed by fire, but no such excuse can be found for the barbarous assault on Christian art which was perpetrated by Francesco Vespignani in the extension of the Lateran basilica. This work was begun under Pius IX. and finished under Leo XIII.; it involved the destruction of the ancient tribune and its ambulatory, the only parts of the church which had so far escaped complete disfigurement, and the priceless mosaics (1290), among the most beautiful in Rome, were taken down and replaced in the new apse in a sadly mutilated and restored form. (For the interesting discoveries made in excavating for the new foundations, see *Ann. Ist.* 1877, p. 332.)

The Vatican contains the largest collection in the world of Greco-Roman and Roman sculpture, with a few specimens of true Hellenic art. It is also very rich in Greek vases and in objects from Etruscan tombs; this latter division is called the Museo Gregoriano. There is also an Egyptian museum which contains a few important curiosities. In the great library are preserved a number of early Christian bullaces and other rare objects from the catacombs, as well as many fine specimens of later Christian art—church plate and jewels. The picture gallery, though not as large as some of the private collections in Rome, contains few inferior pictures. The Lateran palace, still, like the Vatican, in the possession of the pope, contains a fine collection of classical sculpture, but is most remarkable as a museum of Christian antiquities. The two capitoline museums are very rich in classical sculpture, bronzes, coins, pottery and the contents of early Etruscan and Latin tombs. A large hall has been added, and is filled with sculptures found in Rome since 1870, of which the arrangement was completed on the occasion of King Edward VII.'s visit. The picture gallery contains a few fine specimens and a large number of inferior works. The new Museo delle Terme has been formed in the great cloister of S. Maria degli Angeli, to hold the numerous fine examples of classical painting and sculpture found in the Tiber during the excavations for the new embankment, and in other places in Rome. The university of Rome possesses fine collections of minerals, fossils and other geological specimens, and examples of ancient marbles used in the buildings of Rome. A Museo Artistico Industriale has been formed in a monastery in the Capo le Case, to contain medieval works of art. It is, however, a matter for regret that the few medieval works which Rome possesses should be scattered in three small collections, namely, the one last mentioned, the Capitoline and the Castle of Angelo, where an attempt is being made to form a real medieval museum; many objects, too, are dispersed throughout the city, and will doubtless disappear unless they are better protected. The Museo Kircheriano contains an unrivalled collection of prehistoric objects of stone, bronze, iron and pottery, found in Italy and the Italian islands, and more particularly a number of ancient Latian urns, *capanne* and the like. The collection of *ars graeae* is the finest yet made; and the museum also contains a large quantity of interesting classical antiquities of various kinds. Another branch is the Ethnological Museum. Unfortunately all these museums are badly adapted for purposes of study, being neither well arranged nor yet catalogued. The Museo Baracco, presented to the city in 1905 by the senator of that name, contains some ancient sculptures of great value. The Museum of Etruscan and Faliscan antiquities in the Villa Giulia, near Porta del Popolo, is of considerable importance, as is also the Borgia Museum in the Propaganda palace, the latter for its ancient geographical curiosities. The museum of plaster casts in the Testaccio quarter contains reproductions of the principal ancient sculptures possessed by foreign museums.

Galleries and collections.

Among the private collections of pictures the Borghese is unrivalled. The next in importance is that in the Doria palace, which, however, like most Italian collections, contains a large proportion of very inferior pictures. The Corsini picture gallery, bought by the government, is chiefly rich in the works of the Bolognese and other third-rate painters, but also possesses a fine collection of engravings and other objects. There are a few good paintings in the Sciarra gallery, but the Sciarra gallery no longer exists. There are some good pictures by Raphael and Guido Reni in the Academy of St Luke; the Galleria d'Arte Moderna is a collection of modern paintings acquired by the government.

Private collections.

The largest private collection of sculpture is that of the Villa Albani, which, among a large mass of inferior Roman sculpture, contains a few gems of Greek art. The original Albani collection was stolen and brought to Paris by Napoleon I., and was there dispersed; one relief, the celebrated Antinous, is the only piece of sculpture from the original collection which was sent back from Paris. This is in the collection of Prince Torlonia, which contains several very fine works, but unfortunately the whole number are much injured and falsified by restorations. The casino in the Borghese gardens possesses a great quantity of sculpture, mostly third-rate Roman works, the most important of which, however, are executed in precious marbles. The small collection which formerly existed in the Villa Ludovici has been bought by the government and removed to the Museo delle Terme; it contained a few works of Greek sculpture of great value, the most important being the Pergamene group representing the suicide of a Gaulish chief, a Medusa's head in relief and a male terminal figure. Giustiniani collection, which was considerable, is now dispersed, but many private residences, such as the Colonna palace, still contain collections of sculpture and painting of a secondary order.

The principal libraries in Rome are, for old and modern works, the Biblioteca Vittorio Emanuele and the library of the German Archaeological Institute; for manuscripts and early books, the Angelica, the Casanatense, the Alessandrina and the Chigi libraries; but none of them can be compared with that of the Vatican, which now contains also the former library of the Barberini. Mention must also be made of the Corsiniana, now belonging to the Accademia dei Lincei. The Biblioteca Sarti, beside the Academy of S. Luke, contains works on art.

Libraries.

THE MODERN CITY

Great changes in the municipal and social conditions of Rome followed the occupation of the city by the Italians (20th September 1870), and the rapid increase of population due to immigration from other parts of Italy. It is a mistake, however, to attribute all the works undertaken and executed since 1870 to the initiative of the new government. The first plan for modernizing and improving Rome was that of Pope Julius II., who aimed at the enlargement of the lower city on both sides of the Tiber. The modern Via Giulia shows in part what he meant to do. Following him, Sixtus V. did his best to develop the upper part of the city by laying out the Via Sistina, from the Trinità dei Monti to S. Maria Maggiore and Porta S. Giovanni. Almost in our own time a plan for the improvement of the city was made, under the direction of Mgr. de Merode, during the reign of Pius IX.; and although but a small portion of the projected changes were carried out under the pope, the general scheme was in most respects satisfactory, and proved a good foundation for further extensive developments. He was able to complete the construction of the beautiful ascent to S. Pietro in Montorio, as well as that which leads up to the Quirinal Palace; and the Via Nazionale, which was to have been called Via De Merode, was also begun. His plan did not include, however, the destruction of villas such as the Ludovisi, nor the wholesale removal of trees, which is so greatly to be deplored. These acts of barbarism were the consequences of the reckless speculations in land and buildings that accompanied and followed the active and excellent work done by the municipality, and might have been checked by vigorous and timely action of the government. As it was, a number of the most important Roman families were ruined. At the outset, and as soon as political circumstances admitted the consideration of such matters, the municipality set to work; and though a comprehensible love of the picturesque has caused many persons to regret the result, altogether or in part, it is not to be denied that the improvements carried out have been of the highest advantage to the city, and that the work is in many instances of creditable solidity.

Two principal problems presented themselves. The more important was the confinement of the Tiber in such a manner as to render impossible the serious floods which had from time to time inundated the city, often causing great damage to property and rendering the lower streets more or less impassable. There were floods which almost reached the level of the first storey near San Carlo in the Corso, and it was common to see the great Piazza Navona and the neighbourhood of the Pantheon full of water for days together during the winter. The interruption of traffic can be imagined, and the damage to property was serious. The other urgent matter was one of which the government of Pius IX. had been partially aware, namely, the necessity for opening better thoroughfares between different parts of the city. In the middle ages the population of Rome had dwindled to twenty or thirty thousand inhabitants, who lived huddled together about the strongholds of the barons, and the modern city had slowly grown again upon the exiguous foundation of a medieval town. The need for changing this condition of things, which had been felt under Pius IX., became overwhelmingly apparent as the population rapidly increased. That which under a continuance of the old government might have been done by degrees during a long period, had to be accomplished in the shortest possible time, with means which, though considerable, were far from adequate, and in the face of opposition by many holders of real estate, the most important of whom were conservatively attached to the papal government, and resisted change for no other reason. In what was now done it is necessary to distinguish clearly between the work undertaken and carried out by the municipality, under considerable pressure of circumstances, and that which was done in the way of private speculation. The first was on the whole good, and has proved enduring; the second was in many cases bad, and resulted in great loss. As soon as the opening of such streets as the Via Nazionale and the Via Cavour, the widening and straightening of the Via dell' Angelo Custode, now the Via del Tritone Nuovo, and similar improvements, such as the construction of new bridges over the Tiber, had demonstrated that the value of property could be doubled and quadrupled in a short time, and as soon as the increase of population had caused a general rise in rents, owners of property awoke to the situation of affairs, and became as anxious as they had at first been disinclined to improve their estates by wholesale building.

The most important and expensive work executed by the government with the assistance of the municipality was the construction of the embankments along the Tiber. Though damaged by the great flood of December 1900, their truly Roman solidity saved the city from the disastrous consequences of a wide inundation. It is impossible not to admire them, and not to feel respect for a people able to carry out such a plan in such a manner and in so short a time, in the face of such great difficulties. But so far as the life of the city was concerned, the cutting of new streets and the widening of old ones produced a more apparent immediate result. The opening of such a thoroughfare as the Via Nazionale could not but prove to be of the greatest value. It begins at the Piazza delle Terme, in which the principal railway station is situated, and connects the upper part of the city by a broad straight road, and then, by easy gradients, with the Forum of Trajan, the Piazza dei Santi Apostoli and the Piazza di Venezia, whence, as the Corso Vittorio Emanuele, it runs through the heart of the old city, being designed to reach St Peter's by a new bridge of the same name, near the bridge of S. Angelo. It is true that, in order to accomplish this, the Villa Aldobrandini had to be partially destroyed, but this is almost the only point which lovers of beauty can regret, and in compensation it opened to full view the famous palace of the Massimo family, the imposing church of S. Andrea della Valle, and the noble pile of the Cancelleria, one of the best pieces of architecture in Rome. Another great artery is the Via Cavour, which was intended to connect the railway station with the south-western part of Rome, descending to the Forum, and thence turning northwards to reach the Piazza di Venezia on the east side of the monument to Victor Emanuel II. These are only examples of what was done, for it would be impossible to give a just idea of the transformation of the city. Rome is now divided clearly into two parts, the old and the new, of which the old is incomparably the more artistic and the more beautiful, as it will always remain the more interesting. Among the works carried out by the government and municipality the fine tunnel under the Quirinal Hill (completed in 1902) deserves mention; it forms a connecting channel for the traffic between the streets at the north end of the old city, the Corso, Babuino, &c., and the upper part of Rome, including the Via Nazionale and the Esquiline. Another difficult undertaking, successfully completed in April 1908, was the construction of the enormous causeway and bridge which now unite the Pincio with the Villa Borghese, or, as it is now called, the Villa Umberto Primo, to the immense advantage of the public. In the same year the building for the new law courts was finished; it stands near S. Angelo, and presents, on the whole, an imposing appearance, though overloaded with clumsy stone ornamentation.

It is unnecessary to mention a number of public buildings and government offices which have little architectural merit, but we cannot overlook such a magnificent group of buildings devoted to scientific purposes as the Policlinico, on the Macas, which is admittedly one of the finest hospitals in Europe, and the military

hospital on the Coelian. The rebuilding of the Palazzo del Parlamento is only second to the enormous monument of Victor Emanuel II. The majority of the buildings erected by individuals and corporations since 1870 present no original or characteristic features, and the best of them are copies or imitations of well-known models. The Cassa del Risparmio, in the Corso, reproduces a Florentine palace; the Palazzo Negroni, near the Piazza Nicotia, is modelled on the Cancelleria and the Palazzo Giraud; many of the large residences in the new quarters beyond the Tiber are fairly good copies of palaces in the Florentine style, though the magnificent carved stone of earlier centuries is disadvantageously replaced by stucco, a material which lasts tolerably well in the mild climate of Rome. Opposite the beautiful and severe Palazzo di Venezia, what might have been a faultless reproduction of it is marred by tasteless ornament. Finally, so far as the construction of new streets is concerned, which lovers of the picturesque so greatly deplore, it must be admitted that they have been rendered necessary by the great increase of traffic and population, and it should be remembered that after the 16th century the wisest of the popes did their best to open up the city by widening and straightening the thoroughfares.

Municipal Administration.—After the taking of Rome, those persons who remained loyal to Pius IX. took no part whatever in public affairs, and the municipal administration was entirely in the hands of the monarchists. The expression "nè eletti nè elettri," meaning that Catholics are to be neither voters nor candidates, which came to be regarded as a sort of rule of the party, was invented at that time by an epigrammatic journalist, and it seems at first to have been applied also to municipal matters, whereas it was later understood to refer only to parliamentary elections. Leo XIII. encouraged the formation of a Catholic party in the municipal administration, and the municipal government drifted largely into the hands of Catholics, though circumstances make it necessary that the Syndic (Mayor) should always be a royalist. Between 1870 and the end of the century the socialist party had no great influence in Rome, which can never be a city of manufacturing interests. For purposes of municipal government the division of the city into districts has been modified, but the old division into fourteen rioni is adhered to in principle, the new quarters of Castro Pretorio and the Esquiline having been included in the first Rione, which still bears the name of "Monti." The municipality consists of a mayor and eighty communal councillors, of whom a large proportion were for many years members of the aristocracy. Later, however, the three democratic parties, known as the monarchist, socialist and republican, united to form a popular coalition, and succeeded in completely excluding the conservative, aristocratic and Catholic elements.

Population.—The population in 1870 was 226,022, as against 462,743 in 1901 (communal population). It therefore more than doubled in thirty years. The increase, however, did not take place at a regular rate, owing to the changes in the rates of immigration and emigration. The largest increase was in 1870, reaching 22,186; the next most important in 1884, 1885, 1886, 1887, in which years it constantly remained near 20,000. The least increase in later years was 4417 in 1901. The garrison of Rome is about 10,000 men. Careful inquiry has placed it beyond doubt that there are in Rome about the same number of ecclesiastics of all orders, including about 1500 students in the theological seminaries. The average birth-rate is lower in Rome than in the majority of great cities. The number of births increased after 1870 very nearly in proportion with the increase of population.

Climate and Hygiene.—The climate of Rome is mild and sunny, but the variation in temperature between day and night is very great. December and February appear to be the coldest months, the thermometer then averaging 47° F.; the greatest heat, which averages 75°, is felt in July and August. The surrounding Campagna is still not all habitable during the summer, though the dangerous malaria has been checked by the planting of numerous eucalyptus trees. A remarkable instance of the effect produced upon the marshy soil by these plantations may be studied at the Trappist monastery of the Tre Fontane, situated on the Via Ardeatina, about 4 m. from Rome. Whereas in former times it was almost always fatal to spend the whole summer there, the monks have so far dried the soil by means of the eucalyptus that they reside in the monastery throughout the year. The municipality has everywhere made strenuous efforts to reduce the mortality due to malaria; in 1890, 14% of all the deaths in Rome and the Campagna were attributed to this cause; in 1905 the proportion had dropped to 3%. Very large sums have been expended in a scientific system of drainage and sub-drainage on both sides of the Tiber, and the use of wire gauze mosquito nets for the doors and windows of the humblest habitations in the Campagna has contributed much to the present satisfactory result. The hygienic conditions of Rome itself have greatly improved, largely through the ceaseless efforts of Commendatore Baccelli, a distinguished man of science, who repeatedly held office in the Italian Ministry. The publication of exceedingly accurate graphic tables in February 1900 shows the following facts. Ninety per 1000 deaths occurred in 1871 from typhoid (the so-called "Roman fever"), and the average has now fallen to a low constant. Deaths from small-pox, formerly of alarming frequency, can be said not to occur at all, and their numbers diminished suddenly after the introduction of compulsory vaccination.

Charities and Education.—A great number of small charitable institutions for children and old people have been founded, which are organized on the most modern principles, and in many of these charitable persons of the upper classes give their individual assistance to the poor. There are also private hospitals for diseases of the eye, in which poor patients are lodged and treated without payment. There are two hospitals entirely maintained by private resources, where infants are treated whose mothers fear to send them to a public hospital, or in cases refused by the latter as not being serious enough for admission. Of course, the numbers of the poor greatly increased with the growth of population, especially after the failure of building speculations between 1888 and 1890, though great efforts were made by the municipality to send all persons then out of employment back to their homes. One of the difficulties under which Rome labours is that while it attracts the population of the country, as other capitals do, it possesses no great mechanical industries in which the newcomers can be employed. Even the modern small industries in the populous quarters of the poor met with little success. Before 1870 a society was formed, which has since greatly developed as an intelligent private enterprise, to provide the poor with sanitary tenements; but its success is much hampered by the absence of employment, which again is partly due to the heavy taxation of small industries. A number of trade schools are also maintained by private funds, such as the Instituto degli Artigianelli, managed by the Fratelli della Dottrina Cristiana, and the Ricovero pel Riscatto Abbandonati (Home for friendless children), which is under lay management and has flourishing workshops. The character of official charities has certainly improved in principle, so far as their educational and moral scope are concerned; for whereas in former times the limited number of the poor made individual and almost paternal relief possible, that form of charity had a pauperizing influence. If anything, the present tendency is to go too far in the opposite direction, and to require too many formalities before any relief is granted; and while the union of the principal charities under a central management on advanced theories improved the methods of administration, it destroyed numerous small sources of immediate relief in which the poor had a personal right to apply, and was in that way productive of hardship. At the same time, however, mutual benefit societies (*società di mutuo soccorso*) have been organized in great numbers by the different crafts and professions, and are chiefly distinguishable by the political parties to which they belong. It is characteristic of the modern Roman people that the most widely different elements subsist without showing any signs of amalgamating, yet without attacking each other. Some of these societies are exclusively clerical in character, others are merely conservative, some consist of monarchists, and some of avowed republicans.

Popular education is principally in the hands of the municipality, but besides the public schools there are numerous religious institutions attended by the children of the lower classes; they follow the curriculum prescribed by the government, and are under the constant supervision of municipal inspectors, both as regards their teaching and their hygiene. The pope also expends large sums in the maintenance of the people's schools, managed entirely by laymen, and also under government inspection. For education of the higher grade, besides the regular lyceums and gymnasiums, there are many private schools similarly designed and from which pupils can present themselves for the regular government examinations,

the privilege of conferring certificates and degrees having been allowed only to very few private institutions.

Society.—After 1870 both the aristocracy and the middle classes were divided into hostile factions, each of which maintained a press of its own and rallied round representative individuals. So far as the middle classes were concerned, the common interest of commercial operations soon concentrated political differences. The aristocracy, however, kept rigidly aloof from all speculations for a time, and maintained its traditional attitude of contemptuous superiority, to which the middle class answered with its profound hatred. This state of things lasted about ten years, until the time of the great building speculations, at the murder of noble families were tempted, and in which they soon found themselves hopelessly involved, and brought into close contact with the middle class. The two classes thus became necessary to each other, and the result was a more and solitary diminution of prejudice, soon leading to alliances by marriage, which would formerly have seemed impossible, but which the redistribution of wealth rendered mutually advantageous. The appearance at social gatherings of an official element, now exclusively taken from the middle class, also tended to reduce inequalities of caste. Yet it must be admitted that the parties composing Roman society were drawn together mechanically, rather than fused into anything really homogeneous. It is worth mentioning that the Jewish element, which is very strong in business, in journalism, and in the administrations, had made no attempt to enter Roman society. Rome and Genoa are practically the only Italian cities in which Israelites are rigidly excluded from social intimacy, and are only met on official occasions. (M. Cr.)

Ancient History

I. *The Beginnings of Rome and the Monarchy.*

Both the city and the state of Rome are represented in tradition as having been gradually formed by the fusion of separate communities. The original settlement of Romulus is said to have been limited to the Palatine Mount. With this were united before the end of his reign the Capitoline and the Quirinal; Tullus Hostilius added the Caelian, Ancus Martius the Aventine; and finally Servius Tullius included the Esquiline and Viminal, and enclosed the whole seven hills with a stone wall. The growth of the state closely followed that of the city. To the original Romans on the Palatine were added successively the Sabine followers of King Tatius, Albans transplanted by Tullus, Latins by Ancus, and lastly the Etruscan comrades of Caeles Vibenna. This tradition is supported by other and more positive evidence. The race of the Luperci on February 15 was in fact a purification of the boundaries of the "ancient Palatine town,"[1] the "square Rome" of Ennius;[2] and the course taken is that described by Tacitus as the "pomoerium" of the city founded by Romulus.[3] On the Esquiline, Varro mentions an "ancient city" and an "earthen rampart,"[4] and the festival of the Septimontium is evidence of a union between this settlement and that on the Palatine.[5] The fusion of these "Mounts" with a settlement on the Quirinal "Hill" is also attested by trustworthy evidence,[6] and in particular the line taken by the procession of the Arvals represents the enlarged boundaries of these united communities.[7] Lastly, the Servian agger still remains as a witness to the final enclosure of the various settlements within a single ring-wall. The united community thus formed was largely of Latin descent. Indications of this are not wanting even in the traditions themselves: King Faunus, who rules the Aborigines on the Palatine, is Latin; "Latini" is the name ascribed to the united Aborigines and Trojans; the immediate progenitors of Rome are the Latin Lavinium and the Latin Alba. Much evidence in the language, the religion, the institutions and the civilization of early Rome points to the same conclusion. The speech of the Romans is from the first Latin,[8] though showing many traces of contact with the neighbouring dialects of the Sabines and Volscians and also of Etruscans; the oldest gods of Rome—Saturn, Jupiter, Juno, Diana—are all Latin; "rex," "praetor," "dictator," "curia," are Latin titles and institutions.[9] The primitive settlements, with their earthen ramparts and wooden palisades planted upon them out of reach both of human foes and of the malaria of the swampy low grounds, are only typical of the mode of settlement which the conditions of life dictated throughout the Latian plain.[10] But tradition insists on the admixture of at least two non-Latin elements, a Sabine and an Etruscan. The question as regards the latter will be more fully discussed hereafter; it is enough to say here that while the evidence of nomenclature (Schulze, *Geschichte der Lat. Eigennamen*, Leipzig, 1904, p. 579, with the modifications suggested in the *Classical Review*, December 1907) shows that many Etruscan *gentes* were settled within the bounds of the early city, there is no satisfactory evidence that there was any large Etruscan strain in the Roman blood.[11] With the Sabines it is otherwise. That union of the Palatine and Quirinal settlements which constituted so decisive a stage in the growth of Rome is represented as having been in reality a union of the original Latins with a band of Sabine invaders who had seized and held not only the Quirinal Hill, but the northern and nearest peak of the Capitoline Mount. The tradition was evidently deeply rooted. The name of the god *Quirinus*, from which that of the Quirinal Hill itself presumably sprang, was popularly connected with the Sabine town of Cures.[12] The ancient worships connected with it were said to be Sabine.[13] One of the three old tribes, the Tities, was believed to represent the Sabine element;[14] the second and the fourth kings are both of Sabine descent. By the great majority of modern writers the substance of the tradition, the fusion of a body of Sabine invaders with the original Latins, is accepted as historical; and even Mommsen allowed its possibility, though he threw back the time of its occurrence to an earlier period than that of the union of the two settlements.[15] We cannot here enter into the question at length, but some fairly certain points may be mentioned. The probability of Sabine raids and a Sabine settlement, possibly on the Quirinal Hill, in very early times may be admitted. The incursions of the highland Apennine tribes into the lowlands left a large place in early Italian history. The Latins were said to have originally descended from the mountain glens near Reate.[16] The invasions of Campania and of Magna Graecia by Sabine (more correctly Safine) tribes are matter of history (see SAMNITES), and the Sabines themselves are represented as a restless highland people, ever seeking new homes in richer lands.[17] In very early days they appear on the borders of Latium, in close proximity to Rome, and Sabine forays are familiar and frequent occurrences in the old legends. But beyond these general considerations recent inquiry enables us to advance to some few definite conclusions. (1) It may now be regarded as established beyond question that the patrician class at Rome sprang from a race other than that of the plebeians.

The Sabines in Rome.

[11] The existence of a Tuscan quarter (*Tuscus vicus*) in early Rome may point to nothing more than the presence in Rome of Etruscan artisans and craftsmen. See ETRURIA, § *Language*.

[12] Varro, *L.L.* v. 51.

[13] Ibid. v. 74; Schwegler i. 248 seq. [14] Ibid. v. 55; Livy i. 13.

[15] Mommsen, *R.G.* i. 43. Schwegler (*R.G.* i. 478) accepted the tradition of a Sabine settlement on the Quirinal, and considered that in the united state the Sabine element predominated. Volquardsen (*Rhein. Mus.* xxviii. 559) believed in a complete Sabine conquest; and so did Zöller (*Latium u. Rom*, Leipzig, 1878), who, however, placed it after the expulsion of the Tarquins.

[16] Cato ap. Dionys. ii. 48, 49.

[17] Ibid. ii. 48, 49. For the institution of the "ver sacrum" see Schwegler, *Röm. Gesch.* i. 240; Nissen, *Templum* iv.

This was long ago recognized by Schwegler (see his *Römische Geschichte*, passim) on the sufficient ground of the great religious cleavage between the two orders. Such jealousy of mutual contact in religious matters as is apparent all through the history of the city very rarely, if ever, springs from any other source than a real difference of race. This point was developed by Professor W. Ridgeway in his *Who were the Romans?* (London, 1908), where he points out (*a*) that the deities tended by the three greater or patrician flamens, namely, Dialis, Martialis, Quirinalis, were all closely connected with the Sabines; (*b*) further, that the patrician form of marriage, the highly religious ceremony called *Confarreatio*, differed entirely from the other forms, *Usus* and *Coemptio*, which there is reason to attribute to a plebeian origin; (*c*) that the arms, especially the round shield, carried by the first class in the originally military constitution of Servius Tullius (see below), are characteristic of the warriors of Central Europe in the Early Iron and Bronze Age, whereas those of the remaining classes can be shown to have been in general use during the immediately preceding period in the Mediterranean lands.

For other archaeological evidence separating the patricians from the plebeians, and connecting the patricians closely with the Sabines the reader must be referred to Ridgeway's essay. It is, however, well to make special mention here of the tradition, which is given by Livy (ii. 16. 4), and is undated but not the less probable for being a non-annalistic tradition, preserved in the *gens* itself, of the prompt welcome given to the Sabine Appius Claudius, the founder of the haughtiest of all the Roman noble families, by the patricians of Rome and his immediate admission to all their political privileges. Ridgeway points out that this implies, at that early time, a substantial identity of race.

On the linguistic side of the question it is well to mention for clearness' sake that this Safine or patrician class marked its ascendancy all over Central and Southern Italy, from the 6th century B.C. onwards, by its preference for forming ethnic names with the suffix *-no-* which it frequently imposed also upon the communities whom it brought under its influence. *Sabini* (earlier *Safini*), *Romani*, *Latini*, *Sidicini*, *Aricini*, *Marrucini*, and the like are all names formed in this way (see further SABINI).

2. It may also now be regarded as certain that what we may call the Lower or Earlier Stratum (or Strata) of population in Rome, themselves spoke a language which was a truly Indo-European as the language of their Safine conquerors. In the article VOLSCI will be found evidence for the conclusion that the language of what has been there entitled the Co-Folk was not less certainly Indo-European, and in some respects probably a less modified form of Indo-European, than that of the Safines. A number of the names formed with the *-co-* suffix and with the *-ati-* suffix (which is frequent in the same districts) contain unmistakably Indo-European words such as *Graviscae*, *Marica*, *dea Marica*, *Volsci*, *Casinates*, *Soracte*, *Interamnites*, *Auxumates*. The fusion of this earlier population with the patricians is far easier to imagine when it is recognized that the two parties spoke kindred though by no means identical languages. It is the essentially Indo-European character of the early inhabitants of the Latin plain which has led many scholars to doubt that there was any racial distinction at all between patricians and plebeians, but the increasc of knowledge of the dialects spoken in the different regions of Italy has now enabled us to judge this question with very much fuller evidence.

3. There arises, however, the important question or questions as to the origin, or at least the ethnic connexions of this earlier stratum. The task of the historic inquirer will not be completely performed until at least some further progress has been made in connecting this earlier population of the western coast of Italy, on the one hand, with one or more of the early races (see SICULI, VENETI, LIGURIA, PELASGIANS) whom tradition declares to have once inhabited the soil of Latium; and on the other, with the people or peoples whom archaeological research reveals to us as having left behind them different strata of remains, all earlier than the Iron or Roman Age, both in Latium and in other parts of Italy. Professor Ridgeway has taken a short way with these problems which may prove to be the true one; he classes together as Ligurian all pre-Safine inhabitants of Italy save such elements as, like the Etruscans, can be shown to have invaded it over sea (see ETRURIA, § *Language*). This is one of the most promising fields of investigation now open to scholars, but in view of the confused and mutilated shape in which the traditions current in ancient times have come down to us, it demands an exceedingly careful scrutiny of the archaeological and the linguistic evidence, and exceedingly cautious judgment in combining them. The point of outstanding importance is to determine whether the earlier Indo-European population is to be regarded as having been in Italy from the beginning of human habitation. Archaeologists generally like W. Helbig (*Die Italiker der Poebene*) and more recently B. Modestov (*Introduction à l'histoire romaine*, Paris, 1907) have been inclined to regard the Ligurians as the most primitive population of Italy, but to distinguish them sharply from the people who built the Lake Settlement and Pile Dwellings, which appear (with important variations of type):—(1) in the western half of the valley of the Po; (2) in the eastern half of the same; (3) in Picenum; (4) in Latium; and (5) as far south as Tarentum. One of the most important points in the identification is the question of the method of burial employed at different epochs by the different communities. (See the works already cited, with that of O. Montelius, *La Civilisation primitive en Italie*.)

The populus Romanus.

The *populus Romanus*, we are told, divided into three tribes, Ramnes, Tities and Luceres,[1] and into thirty curiae. The three names, as Schulze has shown (*Lat. Eigennamen*, p. 580), are neither more nor less than the names of three Etruscan *gentes* (whether or not derived from Safine or Latin originals), and the tradition is a striking result of the Etruscan domination in the 6th century B.C.,[2] which we shall shortly consider. *The people.*

Of far greater importance is the division into *curiae*. In Cicero's time there were still curies, curial festivals and curiate assemblies, and modern authors are unquestionably right in regarding the curia as the keystone of the primitive political system. It was a primitive association held together by participation in common *sacra* and possessing common festivals, common priests and a common chapel, hall and hearth. As separate associations the curiae were probably older than the Roman state, but,[3] however this may be, it is certain that of this state when formed they constituted the only effective political subdivisions. The members of the thirty curiae form the *populus Romanus*, and the earliest known condition of Roman citizenship is the *communio sacrorum*, partnership in the curial *sacra*. Below the curia there was no further political division, for there is no reason to believe that the curia was ever formally subdivided into a fixed number of *gentes* and families.[4]

The king.

At their head was the *rex*, the ruler of the united people. The Roman "king" is not simply either the hereditary and patriarchal chief of a clan, the priestly head of a community bound together by common *sacra*, but the elected magistrate of a state, but a mixture of all three.[5] In

[1] The tradition connecting the Ramnes with Romulus and the Tities with Tatius is as old as Ennius (Varro, *L.L.* v. 55). The best authorities on the question, earlier than Schulze's epoch-making treatise, are Schwegler i. 505, and Volquardsen, *Rhein. Mus.* xxxiii. 538.

[2] They are traditionally connected only with the senate of 300 *patres*, with the primitive legion of 3000, with the vestal virgins, and with the augurs (Varro, *L.L.* v. 81, 89, 91; Livy x. 6; Festus 344; Mommsen i. 41, 74, 75; Genz, *Patricisch. Rom*, 90).

[3] It is possible that the curiae were originally connected with separate localities; cf. such names as Foriensis, Veliensis (Fest. 174; Gilbert i. 213).

[4] Niebuhr's supposition of ten *gentes* in each curia has nothing in its favour but the confused statement of Dionysius as to the purely military δεκάδες (Dionys. ii. 7; cf. Müller, *Philologus*, xxxiv. 96).

[5] Rubino, Genz and Lange insisted on the hereditary patriarchal character of the kingship, Ihne on its priestly side, Schwegler on its elective. Mommsen came nearest to the view taken in the text, but

later times, when no "patrician magistrates" were forthcoming to hold the elections for their successors, a procedure was adopted which was believed to represent the manner in which the early kings had been appointed.[1] In this procedure the ancient privileges of the old *gentes* and their elders, the importance of maintaining unbroken the continuity of the *sacra*, on the transmission and observance of which the welfare of the community depended, and thirdly the rights of the freemen, are all recognized. On the death of a king, the *auspicia*, and with them the supreme authority, revert to the council of elders, the *patres*, as representing the *gentes*. By the *patres* an *interrex* is appointed, who in turn nominates a second; by him, or even by a third or fourth *interrex*, a new king is selected in consultation with the *patres*. The king-designate is then proposed to the freemen assembled by their curiae for their acceptance, and finally their formal acceptance is ratified by the *patres*, as a security that the *sacra* of which they are the guardians have been respected.[2] Thus the king is in the first instance selected by the representatives of the old *gentes*, and they ratify his appointment. In form he is nominated directly by a predecessor from whose hands he receives the *auspicia*. But it is necessary also that the choice of the *patres* and the nomination of the *interrex* should be confirmed by a solemn vote of the community.

It is useless to attempt a precise definition of the prerogatives of the king when once installed in office. Tradition ascribes to him a position and powers not unlike resembling those of the heroic kings of Greece. He rules for life, and he is for the sole ruler, unfettered by written statutes. He is the supreme judge, settling all disputes and punishing wrongdoers even with death. All other officials are appointed by him. He imposes taxes, distributes lands and erects buildings. Senate and assembly meet only when he convenes them, and meet for little else than to receive communications from him. In war he is absolute leader,[3] and finally he is also the religious head of the community. It is his business to consult the gods on its behalf, to offer the solemn sacrifices and to announce the days of the public festivals. Hard by his house was the common hearth of the state, where the vestal virgins cherished the sacred fire.

By the side of the king stood the senate, or council of elders. In the descriptions left us of the Greek senate, as in those of the *rex*, we can discover traces of a transition from an earlier state of things when Rome was only an assemblage of clans or village communities, allied indeed, but each still ruled by its own chiefs and headmen, to one in which these groups have been fused into a single state under a common ruler. On the one hand the senate appears as a representative council of chiefs, with inalienable prerogatives of its own, and claiming to be the ultimate depositary of the supreme authority and of the *sacra* connected with it. The senators are the *patres*; they are taken from the leading *gentes*; they hold their seats for life; to them the *auspicia* revert on the death of a king; they appoint the *interrex* from their own body, are consulted in the choice of the new king,[4] and their sanction is necessary to ratify the vote of the assembled freemen. On the other hand, they are no longer supreme. They cannot appoint a king but with the consent of the community, and their relation to the king when appointed is one of subordination. Vacancies in their ranks are filled up by him, and they can but give him advice and counsel when he chooses to consult them.

The senate.

The popular assembly of united Rome in its earliest days was that in which the freemen met and voted by their curiae (*comitia curiata*[5]). The place of assembly was in the Comitium at the north-east end of the Forum,[6] at the summons and under the presidency of the king or, failing him, of the *interrex*. By the *rex* or the *interrex* the question was put, and the voting took place *curiatim*, the curiae being called up in turn. The vote of each curia was decided by the majority of individual votes, and a majority of the votes of the curiae determined the final result. But the occasions on which the assembly could exercise its power must have been few. Their right to elect magistrates was apparently limited to the acceptance or rejection of the king proposed by the *interrex*. Of the passing of laws, in the later sense of the term, there is no trace in the kingly period. Dionysius's statement[7] that they voted on questions of war and peace is improbable in itself and unsupported by tradition. They are indeed represented, in one instance, as deciding a capital case, but it is by the express permission of the king and not of right.[8] Assemblies of the people were also, and probably more frequently, convened for other purposes. Not only did they meet to hear the proclamation of the appointment of the high days and holidays for each month, and to witness such solemn religious rites as the inauguration of a priest, but their presence (and sometimes their vote) was further required to authorize and attest certain acts, which in a later age assumed a more private character. The disposal of property by will[9] and the solemn renunciation of family or gentile *sacra*[10] could only take place in the presence of the assembled freemen, while for adoption[11] (*adrogatio*) not only their presence but their formal consent was necessary.

The assembly.

A history of this early Roman state is out of the question. The names, dates and achievements of the first four kings are all too unsubstantial to form the basis of a sober narrative;[12] a few points only can be considered as fairly well established. One excepted, being event- less enough ascribed to King Numa, tradition represents the first kings as incessantly at war with their immediate neighbours. The details of these wars are no doubt mythical; but the implied condition of continual struggle, and the narrow range within which the struggle is confined, may be accepted as true. The picture drawn is that of a small community, with a few square miles of territory, at deadly feud with its nearest neighbours, within a radius of some 12 m. round Rome. Nor, in spite of the repeated victories with which tradition credits Romulus, Ancus and Tullus, does there seem to have been any real extension of Roman territory except towards the sea. Fidenae remains Etruscan; the Sabines continue masters up to the Anio; Praeneste, Gabii and Tusculum are still untouched; and on this side it is doubtful if Roman territory, in spite of the possible destruction of Alba, extended to a greater distance than the sixth milestone from Rome.[13] But along the course

Rome under the kings.

[1] Cic. *De Leg.* iii. 3; Livy iv. 7.

[2] "Patres auctores facti," Livy i. 22; "patres fuere auctores," ibid. i. 32. In 336 B.C. (Livy viii. 12) the Publilian law directed that this sanction should be given beforehand, "ante initum suffragium," and thus reduced it to a meaningless form (Livy i. 17). It is wrongly identified by Schwegler with the "lex curiata de imperio," which in Cicero's day followed and did not precede election. According to Cicero (*De Rep.* ii. 13, 21), the proceedings included, in addition to the "creation" by the *comitia curiata* and the sanction of the *patres*, the introduction by the king himself of a *lex curiata* conferring the *imperium* and *auspicia*; but this theory, though generally accepted, is probably an inference from the practice of a later time, when the *creatio* had been transferred to the *comitia centuriata*.

[3] For the references, see Schwegler i. 646 seq.

[4] If the analogy of the *rex sacrorum* is to be trusted, the "king" could only be chosen from the ranks of the *patricii*. Cic. *Pro Domo*, 14; Gaius i. 122.

[5] Cic. *De Rep.* ii. 13; Dionys. ii. 14, &c.

[6] Varro, *L.L.* v. 155. For the position of the Comitium, see Smith, *Dict. Geog.*, *s.v.* "Roma," and Jordan, *Topog. d. Stadt Rom.* (Petersen).

[7] Dionys. *l.c.* [8] Livy i. 26; Dionys. iii. 22.

[9] Gaius ii. 101. [10] Gell. xv. 27.

[11] Gell. v. 19. "Comitia praebentur, quae curiata appellantur." Cf. Cic. *Pro Domo*, 13, 14; and see ROMAN LAW.

[12] By far the most complete criticism of the traditional accounts of the first four kings will be found in Schwegler's *Röm. Geschichte*, vol. i.; compare also Ihne's *Early Rome* and Sir G. C. Lewis's *Credibility of Early Roman History*. More recently, E. Pais (*Storia d'Italia*) has subjected the early legends to learned and often suggestive criticism, but without attaining very solid results.

[13] The *Ager Crustuminus*, 5 m. from Rome (Livy ii. 39), is regarded by Schwegler (i. 585) and by Mommsen (i. 45) as marking the Roman frontier towards Latium. Cf. Ovid. *Fast.* ii. 681; Strabo 230, "μεταξὺ γοῦν τοῦ πάμπαν καὶ τοῦ ἕκτου λίθου . . . τόπος ἄφρουρος . . . ὅριον τῆς τότε Ῥωμαίων γῆς."

of the Tiber below the city there was a decided advance. The fortification of the Janiculum; the building of the *pons sublicius*, the foundation of Ostia and the acquisition of the salt-works near the sea may all be safely ascribed to this early period. Closely connected, too, with the control of the Tiber from Rome to the sea was the subjugation of the petty Latin communities lying south of the river; and the tradition of the conquest and destruction of Politorium, Tellenae and Ficana is confirmed by the absence in historical times of any Latin communities in this district.

With the reign of the fifth king Tarquinius Priscus a marked change takes place. The traditional accounts of the last three kings not only wear a more historical air than those of the first four, but they describe something like a transformation of the Roman city and state. Under the rule of these latter kings the separate settlements are for the first time enclosed with a rampart of colossal size and extent.[1] The low grounds are drained, and a forum and circus elaborately laid out; on the Capitoline Mount a temple is erected, the massive foundations of which were an object of wonder even to Pliny.[2] To the same period are assigned the redivision of the city area into four new districts and the introduction of a new military system. The kings increase in power and surround themselves with new splendour. Abroad, too, Rome suddenly appears as a powerful state ruling far and wide over southern Etruria and Latium. These startling changes are, moreover, ascribed to kings of alien descent, who one and all mastered the throne in the teeth of established constitutional forms. Finally, with the expulsion of the last of them—the younger Tarquin—comes a sudden shrinkage of power. At the commencement of the Republic Rome is once more a comparatively small state, with hostile and independent neighbours at her very doors. It is impossible to doubt the conviction that the true explanation of this phenomenon is to be found in the supposition that Rome during this period passed under the rule of powerful Etruscan lords.[3] In the 7th and 6th centuries B.C., and probably earlier still, the Etruscans appear as ruling widely outside the limits of Etruria proper. They were supreme in the valley of the Po until their power there was broken by the irruption of Celtic tribes from beyond the Alps, and while still masters of the plains of Lombardy they established themselves in the rich lowlands of Campania, where they held their ground until the capture of Capua by the Samnite highlanders in 423 B.C. It is on the face of it improbable that a power which had extended its sway from the Alps to the Tiber, and from the Liris to Surrentum, should have left untouched the intervening stretch of country between the Tiber and the Liris. And there is abundant evidence of Etruscan rule in Latium.[4] According to Dionysius there was a time when the Latins were known to the Greeks as Tyrrhenians, and Rome as a Tyrrhenian city.[5] When Aeneas landed in Italy the Latins were at feud with Turnus (Turrhenos? Dionys. i. 64) of Ardea, whose close ally was the ruthless Mezentius, prince of Caere, to whom the Latins had been forced to pay a tribute of wine.[6] Cato declared the Volsci to have been once subject to Etruscan rule,[7] and Etruscan remains found at Velitrae,[8] as well as the second name of the Volscian Anxur, Tarracina (the city of Tarchon), confirm his statement. Nearer still to Rome is Tusculum, with its significant name, at Praeneste we have a great number of Etruscan inscriptions and bronzes, and at Alba we hear of a prince Ταρχέτιος,[9] lawless and cruel like Mezentius, who consults the "oracle of Tethys in Tyrrhenia." Thus we find the Etruscan power encircling Rome on all sides, and in Rome itself a tradition of the rule of princes of Etruscan origin. The Tarquinii come from south Etruria; their name can hardly be anything else than the Latin equivalent of the Etruscan Tarchon, and is therefore possibly a title (= "lord" or "prince") rather than a proper name.[10] Even Servius Tullius was identified by Tuscan chroniclers with an Etruscan "Mastarna."[11] Again, what we are told of Etruscan conquests does not represent them as moving, like the Sabellian tribes, in large bodies and settling down *en masse* in the conquered districts. We hear rather of military raids led by ambitious chiefs who carve out principalities for themselves with their own good swords, and with their followers rule oppressively over alien and subject peoples.[12] And so at Rome the story of the Tarquins implies not a wave of Etruscan immigration so much as a rule of Etruscan princes over conquered Latins.

The Tarquins.

The achievements ascribed to the Tarquins are not less characteristic. Their despotic rule and splendour contrast with the primitive simplicity of the native kings. Only Etruscan builders, under the direction of wealthy and powerful Etruscan lords, could have built the great cloaca, the Servian wall, or the Capitoline temple,—monuments which challenged comparison with those of the emperors themselves. Nor do the traces of Greek influence upon Rome during this period[13] conflict with the theory of an Etruscan supremacy; on the contrary, it is at least possible that it was thanks to the extended rule and wide connexions of her Etruscan rulers that Rome was first brought into direct contact with the Greeks, who had long traded with the Etruscan ports and influenced Etruscan culture.[14]

The Etruscan princes are represented, not only as having raised Rome for the time to a commanding position in Latium and lavished upon the city itself the resources of Etruscan civilization, but also as the authors of important internal changes. They are represented as favouring new men at the expense of the old patrician families, and as reorganizing the Roman army on a new footing, a policy natural enough in military princes of alien birth, and rendered possible by the additions which conquest had made to the original community. From among the leading families of the conquered Latin states a hundred new members were admitted to the senate, and these *gentes minorum* ranked as patrician, and became known as *gentes minorum*.[15] The changes in the army begun, it is said, by the elder Tarquin and completed by Servius Tullius were more important. The basis of the primitive military system had been three tribes, each of which furnished 1000 men to the legion and 100 to the cavalry.[16] Tarquinius Priscus, we are told, contemplated the creation of three fresh tribes and three additional centuries of horsemen with new names,[17] though in face of the opposition offered by the old families he contented himself with simply doubling the strength without altering the names of the old divisions.[18] But the change attributed to Servius Tullius went far beyond this. His famous distribution of all freeholders (*assidui*) into tribes, classes and centuries,[19] though subsequently adopted with modifications as the basis of the

The Servian reforms.

political system, was at first exclusively military in its nature and objects.[1] It amounted, in fact, to the formation of a new and enlarged army on a new footing. In this force, excepting in the case of the centuries of the horsemen, no regard was paid either to the old clan divisions or to the semi-religious, semi-political curiae. In its ranks were included all freeholders within the Roman territory, whether members or not of any of the old divisions, and the organization of this new army of *assidui* was not less independent of the old system with its clannish and religious traditions and forms. The unit was the *centuria* or company of 100 men; the *centuriae* were grouped in "classes" and drawn up in the order of the phalanx.[2] The centuries in front were composed of the wealthier citizens, whose means enabled them to bear the cost of the complete equipments necessary for those who were to bear the brunt of the onset. These centuries formed the first class. Behind them stood the centuries of the second and third classes, less completely armed, but making up together with those of the first class the heavy-armed infantry.[3] In the rear were the centuries of the fourth and fifth classes, recruited from the poorer freeholders, and serving only as light-armed troops. The entire available body of freeholders was divided into two equal portions, a reserve corps of *seniores* and a corps of *juniores* for active service. Each of these corps consisted of 85 centuries or 8500 men, *i.e.* of two legions of about 4200 men each, the normal strength of a consular legion under the early Republic.[4] It is noticeable also that the heavy-armed centuries of the three first classes in each of these legions represented a total of 3000 men, a number which agrees exactly with the number of heavy-armed troops in the legion as described by Polybius. Attached to the legions, but not included in them, were the companies of sappers and trumpeters. Lastly, to the six centuries of horsemen, which still retained the old tribal names, twelve more were added as a distinct body, and recruited from the wealthiest class of citizens.[5] The four "tribes" also instituted by Servius were probably intended to serve as the bases for the levy of freeholders for the new army.[6] As their names show, they corresponded with the natural local divisions of the city territory.[7]

The last of these Etruscan lords to rule in Rome was Tarquin the Proud. He is described as a splendid and despotic monarch.

Fall of the monarchy. His sway extended over Latium as far south as Circeii. Aristodemus, tyrant of Cumae, was his ally, and kinsmen of his own were princes at Collatia, at Gabii, and at Tusculum. The Volscian highlanders were chastised, and Signia with its massive walls was built to hold them in check. In Rome itself the Capitoline temple and the great cloaca bore witness to his power. But his rule pressed heavily upon the Romans, and at the last, on the news of the foul wrong done by his son Sextus to a noble Roman matron, Lucretia, the indignant people rose in revolt. Tarquin, who was away besieging Ardea, was deposed; sentence of exile was passed upon him and upon all his race; and the people swore that never again should a king rule in Rome. Freed from the tyrant, they chose for themselves two yearly magistrates who should exercise the supreme authority, and thus the Republic of Rome was founded. Three times the banished Tarquin strove desperately to recover the throne he had lost. First of all the men of Veii and Tarquinii marched to his aid, but were defeated in a pitched battle on the Roman frontier. A year later Lars Porsena, prince of Clusium, at the head of all the powers of Etruria, appeared before the gates of Rome, and closely besieged the city, until, moved by the valour of his foe, he granted honourable terms of peace and withdrew.[8] Once again, by Lake Regillus, the Romans fought victoriously for their liberty against Tarquin's son-in-law Mamilius, prince of Tusculum, and chief of the Latin name. Mamilius was slain; Tarquin in despair found a refuge at Cumae, and there soon afterwards died.

So, in brief, ran the story of the flight of the kings, as it was told by the chroniclers whose story Livy reports, though with explicit and repeated notes of reserve. Its details are most of them fabulous; it is crowded with inconsistencies and improbabilities; there are no trustworthy dates; the names even of the chief actors are probably fictitious, and the hand of the improver, Greek or Roman, is traceable throughout.[9] But there is no room for doubting the main facts of the emancipation of Rome from the rule of alien princes and the final abolition of the kingly office. (H. F. P.; R. S. C.)

II. *The Republic.*

PERIOD A: 509–265 B.C.[10]—(*a*) *The Struggle between the Orders.*—It is characteristic of Rome that the change from monarchy to republic[11] should have been made with the least possible disturbance of existing forms. The title of king was retained, though only as that of a priestly officer (*rex sacrorum*) to whom some of the religious functions of the former kings were transferred. The two annually elected consuls, or *praetores*,[12] were regarded as joint heirs of the full kingly authority, and as holding the *imperium*, and the correlative right of taking the auspices, by direct transmission from the founder of the city. They were, it is true, elected or designated by a new assembly, by the army of landholders voting by their centuries or wards (*comitia centuriata*), and to this body was given also the right of passing laws; nevertheless it was still by a vote of the thirty curiae (*lex curiata*) that the supreme authority was formally conferred on the magistrates chosen by the centuries of landholders, and both the choice of magistrates and the passing of laws still required the sanction of the patrician senators (*patrum auctoritas*).[13] Nor, lastly, were the legal prerogatives of the senate altered, although it is probable that before long plebeians were admitted to seats, if not to votes, and though its importance was gradually increased by the substitution of an annual magistracy for the lifelong rule of a single king. But the

245–189 A.U.C.

[1] This is recognized by Mommsen, Genz and Soltau, as against Niebuhr, Schwegler and Ihne. Even in the later *comitia centuriata* the basis of the originally military character of the organization are unmistakable.

[2] The century ceased to represent companies of one hundred when this whole organization ceased to be military and became exclusively political.

[3] The property qualification for service in the first class is given at 100,000 asses (Livy), for the second at 70,000, third 50,000, fourth 25,000, fifth 11,000. It was probably originally a certain number of cows, afterwards translated into terms of money: cf. W. Ridgeway, *The Origin of Coinage and Metallic Currency* (Cambridge, 1892), p. 391. The same scholar, in his *Who were the Romans?* p. 17, has pointed out the ethnical meaning of the varieties of armature in the early army.

[4] Polyb. vi. 20; Mommsen, *Röm. Trib.* 132 seq.

[5] Livy i. 43. Dionys. (iv. 18) and Cic. (*De Rep.* ii. 22) ascribe the whole eighteen to Servius. But the six older centuries remained distinct, as the "sex suffragia" of the *comitia centuriata*; Cic. *De Rep.* ii. 22.

[6] Dionys. iv. 14, *εἰς τὰς καταγραφὰς τῶν στρατιωτῶν*.

[7] Livy i. 43. The four were Palatina, Suburana, Exquilina, Collina.

[8] The consuls were originally styled *praetores* is stated by Varro, *ap. Non.* p. 23, and Liv. iii. 55; cf. Cic. *Legg.* viii. 3, 8. When additional praetors were created, the two originally appointed were called *praetores maximi* and hence *στρατηγοὶ ὕπατοι* or simply *ὕπατοι* in Greek.

[9] The view of the *patrum auctoritas* here adopted is that taken by T. Mommsen (*Forsch.* i.).

[10] The traditional account of early republican history, given in annalistic form by Livy, has been subjected to severe criticism in recent times, notably by Pais in his *Storia di Roma*, vols. i. and ii. It is true that the dearth of contemporary documents, especially for the period before the sack of Rome by the Gauls (390 B.C.), must have led to the filling of gaps by episodes drawn mainly from popular traditions, and it is therefore impossible to guarantee the accuracy of the narrative in details. Nevertheless, the general truth of the story of Rome's early wars and constitutional growth cannot be seriously impugned.

[11] Schwegler (ii. 92) suggests that the dictatorship formed an intermediate step between the monarchy and the consulate; cf. Ihne, *Röm. Forsch.* 42.

[12] The view of the *patrum auctoritas* here adopted is that taken by T. Mommsen (*Forsch.* i.).

abolition of the monarchy brought with it a change of the utmost importance in the actual working of the constitution. Though the distinction between patricians and plebeians was at least as old as the state itself, it is not until the establishment of the Republic that it plays any part in the history of Rome. No sooner, however, was the overshadowing authority of the king removed than a struggle commenced between the two orders which lasted for more than two centuries. It was in no sense a struggle between a conquering and a conquered class, or between an exclusive citizen body and an unenfranchised mass outside its pale. Patricians and plebeians were equally citizens of Rome, sprung of the same race and speaking the same tongue (but see above).[1] The former were the members of those ancient *gentes* which had possibly been once the "chiefly" families in the small communities which preceded the united state, and which claimed by hereditary right a privileged position in the community. Only patricians could sit in the council of *patres*, and hence probably the name given to their order.[2] To their representatives the supreme authority reverted on the death of the king; the due transmission of the *auspicia* and the public worship of the state gods were their special care; and to them alone were known the traditional usages and forms which regulated the life of the people from day to day. To the *plebs* (the multitude, πλῆθος) belonged all who were not members of some patrician *gens*, whether independent freemen or attached as "clients"[3] to one of the great families. The plebeian was a citizen, with civil rights and a vote in the assembly of the curies, but he was excluded by ancient custom from all share in the higher honours of the state, and intermarriage with a patrician was not recognized as a properly legal union[4] (see PATRICIANS).

The revolution which expelled the Tarquins gave the patricians, who had mainly assisted in bringing it about, an overwhelming ascendancy in the state. The *plebs* had indeed gained something. Not only is it probable that the strictness of the old tie of clientship had somewhat relaxed, and that the number of the *clientes* was smaller and their dependence on patrician patrons less complete, but the ranks of the *plebs* had, under the later kings, been swelled by the admission of conquered Latins, and the freeholders among these had with others been enrolled in the Servian tribes, classes and centuries. The establishment of the Republic invested this military levy of landholders with political rights as an assembly, for by their votes the consuls were chosen and laws passed, and it was the plebeian landholders who formed the main strength of the *plebs* in the struggle that followed. But these gains were greater in appearance than in reality. The plebeian landholders commanded only a minority of votes in the *comitia centuriata*. In their choice of magistrates they were limited to the patrician candidates nominated by patrician presiding magistrates, and their choice required confirmation not only by the older and smaller assembly of the curiae, in which the patricians and their clients predominated, but also by the patrician *patres*. They could only vote on laws proposed by patrician consuls, and here again the subsequent sanction of the *patres* was necessary. The whole procedure of the *comitia* was in short absolutely in the hands of their patrician presidents, and liable to every sort of interruption and suspension from patrician pontiffs and augurs (for details see further COMITIA and SENATE).

But these political disabilities did not constitute the main grievance of the *plebs* in the early years of the Republic. What they fought for was protection for their lives and liberties, and the object of attack was the despotic authority of the patrician magistrates. The consuls wielded the full *imperium* of the kings, and against this "consular authority" the plebeian, though a citizen, had no protection and no appeal, nor were matters improved when for the two consuls was substituted in some emergency a single, all-powerful, irresponsible dictator.

The history of this struggle between the orders opens with a concession made to the *plebs* by one of the consuls themselves, a concession possibly due to a desire to secure the allegiance of the plebeian landholders, who formed the backbone of the army. In the first year of the Republic, according to the received chronology, P. Valerius Publicola or Poplicola carried in the *comitia centuriata* his famous law of appeal.[5] It enacted that no magistrate, saving only a dictator, should execute a capital sentence upon any Roman citizen unless the sentence had been confirmed on appeal by the assembly of the centuries. But, though the "right of appeal" granted by this law was justly regarded in later times as the greatest safeguard of a Roman's liberties, it was by no means at first so effective a protection as it afterwards became. For not only was the operation of the law limited to the bounds of the city, so that the consul in the field or on the march was left as absolute as before, but no security was provided for its observance even within the city by consuls resolved to disregard it.[6]

Lex Valeria de provocatione.

It was by their own efforts that the plebeians first obtained any effectual protection against magisterial despotism. The traditional accounts of the first secession are confused and contradictory,[7] but its causes and results are tolerably clear. The seceders were the plebeian legionaries recently returned from a victorious campaign. Indignant at the delay of the promised reforms, they ignored the order given them to march afresh against Volsci and Aequi, and instead entrenched themselves on a hill across the Anio, some 3 m. from Rome, and known afterwards as the Mons Sacer. The frightened patricians came to terms, and a solemn agreement (*lex sacrata*)[8] was concluded between the orders, by which it was provided that henceforth the plebeians should have annual magistrates of their own called tribunes (*tribuni plebis*), members of their own order, who should be authorized to protect them against the consuls,[9] and a curse was invoked upon the man who should injure or impede the tribune in the performance of his duties.[10] The number of tribunes was possibly at first two, then five; before 449 B.C. it had been raised to ten.

The first secession and the tribunate.

The tribunate is an institution which has no parallel in history. The tribune was not, and, strictly speaking, never became, a magistrate of the Roman people. His one proper prerogative was that of granting protection to the oppressed plebeian against a patrician officer. This prerogative (*jus auxilii*) was secured to him, not by the ordinary constitution, but by a special compact between the orders, and was protected by the ancient oath (*vetus jusjurandum*),[11] which invoked a curse upon the violator of a tribune. This exceptional and anomalous right the tribunes could only exercise in person, within the limits of the "pomoerium," and against individual acts of magisterial oppression.[12] It was only gradually that it expanded into a wide power of interference with the whole machinery of government, and was supplemented by the legislative powers which rendered the tribunate of the last century B.C. so formidable (see TRIBUNE).

But from the first the tribunes were for the *plebs* not only protectors but leaders, under whom they organized themselves in opposition to the patricians. The tribunes convened assemblies of the *plebs* (*concilia plebis*), and carried resolutions on questions of interest to the order. This incipient

Lex Publilia.

[1] This is the view taken by the present writer, as against Schwegler and others. For Ridgeway's theory, see above.

plebeian organization was materially advanced by the Publilian law of 471 B.C.,[1] which appears to have formally recognized as lawful the plebeian *concilia*, and established also the tribune's right *cum plebe agere*, *i.e.* to propose and carry resolutions in them. These assemblies were *tributa*, or, in other words, the voting in them took place not by curies or centuries but by tribes. In them, lastly, after the Publilian law, if not before, the tribunes were annually elected.[2] By this law the foundations were laid both of the powerful *concilia plebis* of later days and also of the legislative and judicial prerogatives of the tribunes. The patricians maintained indeed that resolutions (*plebiscita*) carried by tribunes in the *concilia plebis* were not binding on their order, but the moral weight of such resolutions, whether they affirmed a general principle or pronounced sentence of condemnation on some single patrician, was no doubt considerable. *263.*

The next stage in the struggle is marked by the attempt to substitute a public written law for unwritten usage.

292. The proposal of C. Terentilius Arsa (462 B.C.) to appoint a plebeian commission to draw up laws restricting the powers of the consuls[3] was resolutely opposed by the patricians, but after ten years of bitter party strife a compromise was effected. A commission of ten patricians was appointed, who should frame and publish a code of law binding equally on both the orders. These decemviri were to be the sole and supreme magistrates for the year, and the law of appeal was suspended in their favour.[4] The code which they promulgated, the famous XII. Tables, owed little of its importance to any novelties or improvements contained in its provisions. For the most part it seems merely to have reaffirmed existing usages and laws (see ROMAN LAW). But it imposed, as it was intended to do, a check on the arbitrary administration of justice by the magistrates. With the publication of the code the proper work of the decemvirs was finished; nevertheless, for the next year a fresh decemvirate was elected, and it is conceivable that the intention was permanently to substitute government by an irresponsible patrician "council of ten" for the old constitution.[5] However this may have been, the tyranny of the decemvirs themselves was fatal to the continuance of their power. We are told of a second secession of the *plebs*, this time to the Janiculum, and of negotiations with the senate, the result of which was the enforced abdication of the decemvirs. The *plebs* joyfully chose for themselves tribunes, and in the *comitia centuriata* two consuls were created. But this restoration of the old régime was accompanied by legislation which made it an important crisis in the history of the struggle between the orders. With the fall of the decemvirate this struggle enters upon a new phase. The tribunes appear as at once more powerful and more strictly constitutional magistrates; the plebeian *concilia* take their place by the side of the older assemblies; and finally this improved machinery is used not simply in self-defence against patrician oppression but to obtain complete political equality. This change was no doubt due in part to circumstances outside legislation, above all to the expansion of the Roman state, which swelled the numbers and added to the social importance of the *plebs* as compared with the dwindling forces of the close corporation of patrician *gentes*. Still the legislation of 449 clearly involved more than a restoration of the old form of government. The Valerio-Horatian laws, besides reaffirming the right of appeal and the inviolability of the tribunes, improved the position of the plebeian assemblies by enacting that *plebiscita* passed in them, and, as seems probable, approved by the *patres*, should be binding on patricians as well as plebeians.[6] *The Decemvirate.* *Valerio-Horatian laws.*

[2] For theories as to the original mode of appointing tribunes see Mommsen, *Forsch.* i. 185, *Staatsr.* ii. 274 sqq.

[3] Livy iii. 9. [4] Ibid. iii. 32.

[5] On the disputed question of the date of the XII. Tables see Pais, *Storia di Roma*, vol. i. chap. iv., and Greenidge, *Eng. Hist. Review* (1905), pp. 1 sqq.

[6] Livy iii. 55, "quum veluti in controverso jure esset, tenerenturne By this law the tribunes obtained a recognized initiative in legislation. Henceforth the desired reforms were introduced and carried by tribunes in what were now styled *comitia tributa*, and, if sanctioned by the *patres*, became laws of the state. From this period, too, must be dated the legalization at any rate of the tribune's right to impeach any citizen before the assembly of the tribes.[7] Henceforward there is no question of the tribune's right to propose to the *plebs* to impose a fine, or of the validity of the sentence when passed. The efficiency of these new weapons of attack was amply proved by the subsequent course of the struggle. Only a few years after the Valerio-Horatian legislation came the *lex Canuleia*, itself a *plebiscitum* (445 B.C.), by which mixed marriages between patricians and plebeians were declared lawful, and the social exclusiveness of the patriciate broken down. In the same year with this measure, and like it in the interests primarily of the wealthier plebeians, a vigorous attack commenced on the patrician monopoly of the consulate, and round this stronghold of patrician ascendancy the conflict raged until the passing of the Licinian laws in 367. The original proposal of the tribune Gaius Canuleius, in 445, that the people should be allowed to elect a plebeian consul was evaded by a compromise. The senate resolved that for the next year, in the stead of consuls, six military tribunes with consular powers should be elected,[8] and that the new office should be open to patricians and plebeians alike. The consulship was thus for the time saved from pollution, as the patricians phrased it, but the growing strength of the *plebs* is shown by the fact that in fifty years out of the seventy-eight between 444 and 366 they succeeded in obtaining the election of consular tribunes rather than of consuls. *Lex Canuleia.* *309.* *Leges Liciniae Sextiae.* *357.* *310-88.*

Despite, however, these discouragements, the patricians fought on. Each year they strove to secure the creation of consuls rather than consular tribunes, and failing this strained every nerve to secure for their own order at least a majority among the latter. Even the institution of the censorship (435), though rendered desirable by the increasing importance and complexity of the census, was, it is probable, due in part to their desire to discount beforehand the threatened loss of the consulship by diminishing its powers.[9] Other causes, too, helped to protract the struggle. Between the wealthier plebeians, who were ambitious of high office, and the poorer, whose minds were rather on allotments of land, there was a division of interest of which the patricians were not slow to take advantage, and to this must be added the pressure of war. The death struggle with Veii and the sack of Rome by the Gauls absorbed for the time all the energies of the community. In 377, however, two of the tribunes, C. Licinius Stolo (see LICINIUS STOLO, GAIUS) and L. Sextius, came forward with proposals which united all sections of the *plebs* in their support. Their proposals were as follows:[10] (1) that consuls and not consular tribunes be elected; (2) that one consul at least should be a plebeian; (3) that the priestly college, which had the charge of the Sibylline books, should consist of ten members instead of two, and that of these half should be plebeians; (4) that no single citizen should hold in occupation more than 500 acres of the common lands, or pasture upon them more than 100 head of cattle and 500 sheep; (5) that all landowners should employ a certain amount of free as well as slave labour on their estates; (6) that interest already paid on debts should be deducted from the principal, and the remainder paid off in three years. The three last proposals were obviously intended to meet the *319.* *377.*

patres plebiscitis legem comitiis centuriatis tulere, ut quod tributim plebs jussisset populum teneret, qua lege tribunitiis rogationibus telum acerrimum datum est." What were the precise conditions under which a *plebiscitum* became law can only be conjectured. The control of the *patres* over legislation certainly remained effective until 287 B.C. (See below.)

[7] After the decemvirate, the tribunes no longer pronounce capital sentences. They propose fines, which are confirmed by the *comitia tributa*.

[8] Livy iv. 6; cf. Mommsen, *Staatsrecht*, ii. 181.

demands of the poorer plebeians, and to secure their support for the first half of the scheme. Ten years of bitter conflict followed, but at last, in 367 B.C., the Licinian rogations became law, and one of their authors, L. Sextius, was created the first plebeian consul. For the moment it was some consolation to the patricians that they not only succeeded in detaching from the consulship the administration of civil law, which was entrusted to a separate officer, *praetor urbanus*, to be elected by the *comitia* of the centuries, with an understanding apparently that he should be a patrician, but also obtained the institution of two additional aediles (*aediles curules*), who were in like manner to be members of their own order.[1] With the opening of the consulship, however, the issue of the long contest was virtually decided, and the next eighty years witnessed a rapid succession of plebeian victories. Now that a plebeian consul might preside at the elections, the main difficulty in the way of the nomination and election of plebeian candidates was removed. The proposed patrician monopoly of the new curule aedileship was almost instantly abandoned. In 356 the first plebeian was made dictator; in 350 the censorship, and in 337 the praetorship were filled for the first time by plebeians; and lastly, in 300, by the *lex Ogulnia*, even the sacred colleges of the pontiffs and augurs, the old strongholds of patrician supremacy, were thrown open to the *plebs*.[2] The patricians lost also the control they had exercised so long over the action of the people in assembly. The *patrum auctoritas*, the sanction given or refused by the patrician senators to laws and to elections, had hitherto been a powerful weapon in their hands. But in 339 a law of Q. Publilius Philo, a plebeian dictator, enacted that this sanction should be given beforehand to laws enacted in the *comitia centuriata*,[3] and a *lex Maenia* of uncertain date extended the rule to elections in the same assembly. Livy ascribes to the same Publilius a law emancipating the *concilium plebis* from the control of the *patres*; but this seems in reality to have been effected by the famous *lex Hortensia*, carried by another plebeian dictator.[4] Henceforward the *patrum auctoritas* sank into a meaningless form, though as such it still survived in the time of Livy. From 287 onwards it is certain that measures passed by the *plebs*, voting by their tribes, had the full force of laws without any further conditions whatsoever. The legislative independence of the plebeian assembly was secured, and with this crowning victory ended the long struggle between the orders.

Lex Hortensia. 467.

(*b*) *Conquest of Italy.*—Twelve years after the passing of the *lex Hortensia*, King Pyrrhus, beaten at Beneventum, withdrew from Italy, and Rome was left mistress of the peninsula. The steps by which this supremacy had been won have now to be traced.[5]

The expulsion of the Tarquins from Rome, followed as it seems to have been by the emancipation from Etruscan supremacy of all the country between the Tiber and the Liris, entirely altered the aspect of affairs. North of the Tiber the powerful Etruscan city of Veii, after a vain attempt to restore the Tarquins, relapsed into an attitude of sullen hostility towards Rome, which, down to the outbreak of the final struggle in 407, found vent in constant and harassing border forays. The Sabines recommenced their raids across the Anio; from their hills to the south-east the Aequi pressed forward as far as the eastern spurs of the Alban range, and ravaged the low country between that range and the Sabine mountains; the Volsci overran the coast-lands as far as Antium, established themselves at Velitrae and even wasted the fields within a few miles of Rome. But the good fortune of Rome did not leave her to face these foes single-handed, and it is a significant fact that the history of the Roman advance begins, not with a brilliant victory, but with a timely alliance. According to Livy, it was in 493, only a few years after the defeat of the prince of Tusculum at Lake Regillus, that a treaty was concluded between Rome and the Latin communities of the Campagna.[6] The alliance was in every respect natural. The Latins were the near neighbours and kinsmen of the Romans, and both Romans and Latins were just freed from Etruscan rule to find themselves as lowlanders and dwellers in towns face to face with a common foe in the ruder hill tribes on their borders. The exact terms of the treaty cannot, any more than the precise circumstances under which it was concluded, be stated with certainty (see LATIUM), but two points seem clear. There was at first a genuine equality in the relations between the allies; Romans and Latins, though combining for defence and offence, did so without sacrificing their separate freedom of action, even in the matter of waging wars independently of each other.[7] But, secondly, Rome enjoyed from the first one inestimable advantage. The Latins lay between her and the most active of her foes, the Aequi and Volsci, and served to protect her territories at the expense of their own. Behind this barrier Rome grew strong, and the close of the Aequian and Volscian wars left the Latins her dependents rather than her allies. Beyond the limits of the Campagna Rome found a second ally, hardly less useful than the Latins, in the tribe of the Hernici ("the men of the rocks"), in the valley of the Trerus, who had equal reason with the Romans and Latins to dread the Volsci and Aequi, while their position midway between the two latter peoples made them valuable auxiliaries to the lowlanders of the Campagna.

League with the Latins and Hernicans. 261.

347.

The treaty with the Hernici is said to have been concluded in 486,[8] and the confederacy of the three peoples—Romans, Latins and Hernicans—lasted down to the great Latin war in 340. Confused and untrustworthy as are the chronicles of the early wars of Rome, it is clear that, notwithstanding the acquisition of these allies, Rome made but little way against her foes during the first fifty years of the existence of the Republic. In 474, it is true, an end was put for a time to the harassing border feud with Veii by a forty years' peace, an advantage due not so much to Roman valour as to the increasing dangers from other quarters which were threatening the Etruscan states.[9] But this partial success stands alone, and down to 449 the raids of Sabines, Aequi and Volsci continue without intermission, and are occasionally carried up to the very walls of Rome.

268. 414. 280. 305.

Very different is the impression left by the annals of the next sixty years (449–390). During this period there is an unmistakable development of Roman power on all sides. In southern Etruria the capture of Veii (396) virtually gave Rome the mastery as far as the Ciminian forest. Sutrium and Nepete, "the gates of Etruria," became her allies and guarded her interests against any attack from the Etruscan communities to the north, while along the Tiber valley her suzerainty was acknowledged as far as Capena and Falerii. On the Anio frontier we hear of no disturbances from 449 until some ten years after the sack of Rome by the Gauls. In 446 the Aequi appear for the last time before the gates of Rome. After 418 they disappear from Mount Algidus, and in the same year the communications of Rome and Latium with the Hernici in the Trerus valley were secured by the capture and colonization of Labicum. Successive invasions, too, broke the strength of the Volsci, and in 393 a Latin colony was founded as far south as Circeii: in part, no doubt, these Roman successes were due to the improved condition of

affairs in Rome itself, consequent upon the great reforms carried between 450 and 442; but it is equally certain that now, as often afterwards, fortune befriended Rome by weakening, or by diverting the attention of, her opponents. In particular, her rapid advance in southern Etruria was facilitated by the heavy blows inflicted upon the Etruscans during the 5th century B.C. by Celts, Greeks and Samnites. By the close of this century the Celts had expelled them from the rich plains of what was afterwards known as Cisalpine Gaul, and were even threatening to advance across the Apennines into Etruria proper. The Sicilian Greeks, headed by the tyrants of Syracuse, wrested from them their mastery of the seas, and finally, on the capture of Capua by the Samnites in 423, they lost their possessions in the fertile Campanian plain. These conquests of the Samnites were part of a great southward movement of the highland Sabellian peoples, the immediate effects of which upon the fortunes of Rome were not confined to the weakening of the Etruscan power. It is probable that the cessation of the Sabine raids across the Anio was partly due to the new outlets which were opened southwards for the restless and populous hill tribes which had so long disturbed the peace of the Latin lowlands. We may conjecture, also, that the growing feebleness exhibited by Volsci and Aequi was in some measure caused by the pressure upon their rear of the Sabellian clans which at this time established themselves near the Fucine lake and along the course of the Liris.

364-312.

Decline of Etruscan power.

331.

But in 390, only six years after the great victory over the ancient rival Veii, the Roman advance was for a moment checked by a disaster which threatened to alter the course of history in Italy, and which left a lasting impress on the Roman mind. In 391 a Celtic horde left their newly won lands on the Adriatic, and, crossing the Apennines into Etruria, laid siege to the Etruscan city of Clusium (Chiusi). Thence, provoked, it is said, by the conduct of the Roman ambassadors, who, forgetting their sacred character, had fought in the ranks of Clusium and slain a Celtic chief, the barbarians marched upon Rome. On July the 18th of 390 B.C., only a few miles from Rome, was fought the disastrous battle of the Allia. The defeat of the Romans was complete, and Rome lay at the mercy of the foe. But in characteristic fashion the Celts halted three days to enjoy the fruits of victory, and time was thus given to put the Capitol at least in a state of defence. The arrival of the barbarians was followed by the sack of the city, but the Capitol remained impregnable. For seven months they besieged it, and then in as sudden a fashion as they had come they disappeared. The Roman chroniclers explain their retreat in their own way, by the fortunate appearance of M. Furius Camillus with the troops which he had collected, at the very moment when famine had forced the garrison on the Capitol to accept terms. More probably the news that their lands across the Apennines were threatened by the Veneti, coupled with the unaccustomed tedium of a long siege and the difficulty of obtaining supplies, inclined the Celts to accept readily a heavy ransom as the price of their withdrawal. But, whatever the reason, it is certain that they retreated, and, though during the next fifty years marauding bands appeared at intervals in the neighbourhood of Rome, and even once penetrated as far south as Campania (361–60), the Celts never obtained any footing in Italy outside the plains in the north which they had made their own.

Sack of Rome by the Gauls.

363.

364.

393-94.

Nor, in spite of the defeat on the Allia and the sack of the city, was Rome weakened except for the moment by the Celtic attack. The storm passed away as rapidly as it had come on. The city was hastily rebuilt, and Rome dismayed the enemies who hastened to take advantage of her misfortunes by her undiminished vigour. Her conquests in southern Etruria were successfully defended against repeated attacks from the Etruscans to the north. The creation in 387 of four new tribes (Stellatina, Sabatina, Tromentina, Arnensis) marked the final annexation of the territory of Veii and of the lands lying along the Tiber valley.

Annexation of southern Etruria.

387.

A few years later Latin colonies were established at Sutrium and Nepete for the more effectual defence of the frontier, and finally, in 353, the subjugation of South Etruria was completed by the submission of Caere (*q.v.*) and its partial incorporation with the Roman state as a "municipium sine suffragio"—the first, it is said, of its kind.[1]

401.

Next to the settlement of southern Etruria, the most important of the successes gained by Rome between 343 B.C. were those won against her old foes the Aequi and Volsci, and her old allies the Latins and Hernicans. The Aequi indeed, already weakened by their long feud with Rome, and hard pressed by the Sabellian tribes in their rear, were easily dealt with, and after the campaign of 389 we have no further mention of an Aequian war until the last Aequian rising in 304. The Volsci, who in 389 had advanced to Lanuvium, were met and utterly defeated by Camillus, the conqueror of Veii, and this victory was followed up by the gradual subjugation to Rome of all the lowland country lying between the hills and the sea as far south as Tarracina. Latin colonies were established at Satricum (385), at Setia (379), and at Antium and Tarracina some time before 348. In 358 two fresh Roman tribes (Pomptina and Publilia) were formed in the same district.[2]

390 and

Successes against Aequi and Volsci.

364-411.

365.

450.

369, 375, 406, 396.

Rome had now nothing more to fear from the foes who a century ago had threatened her very existence. The lowland country, of which she was the natural centre, from the Ciminian forest to Tarracina, was quiet, and within its limits Rome was by far the strongest power. But she had now to reckon with the old and faithful allies to whose loyal aid her present position was largely due. The Latini and Hernici had suffered severely in the Aequian and Volscian wars; it is probable that not a few of the smaller communities included in the league had either been destroyed or been absorbed by larger states, and the independence of all alike was threatened by the growing power of Rome. The sack of Rome by the Celts gave them an opportunity of reasserting their independence, and we are consequently told that this disaster was immediately followed by a temporary dissolution of the confederacy, and this again a few years later by a series of actual conflicts between Rome and her former allies. Between 383 and 358 we hear of wars with Tibur, Praeneste, Tusculum, Lanuvium, Circeii and the Hernici. But in all Rome was successful. In 382 Tusculum was fully incorporated with the Roman state by the bestowal of the full franchise;[2] in 358, according to both Livy and Polybius, the old alliance was formally renewed with Latini and Hernici. We cannot, however, be wrong in assuming that the position of the allies under the new league was far inferior to that accorded them by the treaty of Spurius Cassius.[4] Henceforth they were the subjects rather than the equals of Rome, a position which it is evident that they accepted much against their will, and from which they were yet to make one last effort to escape.

Re-organization of the Latin league.

371-96.

372.

396.

We have now reached the close of the first stage in Rome's advance towards supremacy in Italy. By 343 B.C. she was already mistress both of the low country stretching from the Ciminian forest to Tarracina and Circeii and of the bordering highlands. Her own territory had largely increased. Across the Tiber the lands of Veii, Capena and Caere were nearly all Roman, while in Latium she had carried her frontiers to Tusculum on the Alban range and to the southernmost limits of the Pomptine district. And this territory was protected by a circle of dependent allies and colonies reaching northward to Sutrium and Nepete, and southward to Sora on the upper Liris, and to Circeii on the coast. Already, too, she was beginning to be recognized as a power outside the

411.

limits of the Latin lowlands. The fame of the capture of Rome by the Celts had reached Athens, and her subsequent victories over marauding Celtic bands had given her prestige in South Italy as a bulwark against northern barbarians. In 354 she had formed her first connexions beyond the Liris by a treaty with the Samnites, and in 348 followed a far more important treaty with the great maritime state of Carthage.[1]

400.

406.

Rome had won her supremacy from the Ciminian forest to the Liris as the champion of the comparatively civilized communities of the lowlands against the rude highland tribes which threatened to overrun them, and so, when her legions first crossed the Liris, it was in answer to an appeal from a lowland city against invaders from the hills. While she was engaged in clearing Latium of Volsci and Aequi, the Sabellian tribes of the central Apennines had rapidly spread over the southern half of the peninsula. Foremost among these tribes were the Samnites, a portion of whom had captured the Etruscan city of Capua in 423, the Greek Cumae in 420, and had since then ruled as masters over the fertile Campanian territory. But in their new homes the conquerors soon lost all sense of relationship and sympathy with their highland brethren. They dwelt in cities, amassed wealth, and inherited the civilization of the Greeks and Etruscans whom they had dispossessed;[2] above all, they had before long to defend themselves in their turn against the attacks of their older kinsmen from the hills, and it was for aid against these that the Samnites of Campania appealed to the rising state which had already made herself known as the bulwark of the lowlands north of the Liris, and which with her Latin and Hernican allies had scarcely less interest than the Campanian cities themselves in checking the raids of the highland Samnite tribes.

Advance beyond the Liris, and the Samnite Wars.

331, 334.

The Campanian appeal was listened to. Rome with her confederates entered into alliance with Capua and the neighbouring Campanian towns, and war was formally declared (343) against the Samnites.[3] While to the Latins and Hernicans was entrusted apparently the defence of Latium and the Hernican valley against the northerly members of the Samnite confederacy, the Romans themselves undertook the task of driving the invaders out of Campania. After two campaigns the war was ended in 341 by a treaty, and the Samnites withdrew from the lowlands, leaving Rome the recognized suzerain of the Campanian cities which had sought her aid.[4]

First Samnite War.

411.

413.

There is no doubt that the check thus given by Rome to the advance of the hitherto invincible Sabellian highlanders not only made her the natural head and champion of the low countries, south as well as north of the Liris, but also considerably added to her prestige. Carthage sent her congratulations, and the Etruscan city of Falerii voluntarily enrolled herself among the allies of Rome. Of even greater service, however, was the fact that for fifteen years the Samnites remained quiet, for this inactivity, whatever its cause, enabled Rome triumphantly to surmount a danger which threatened for the moment to wreck her whole position. This danger was nothing less than a desperate effort on the part of nearly all her allies and dependants south of the Tiber to throw off the yoke of her supremacy. The way was led by her ancient confederates the Latini, whose smouldering discontent broke into open flame directly the fear of a Samnite attack was removed. From the Latin Campagna and the Sabine hills the revolt spread westward and southward to Antium and Tarracina, and even to the towns of the Campanian plain, where the mass of the inhabitants at once repudiated the alliance formed with Rome by the ruling class. The struggle was sharp but short. In two pitched battles[5] the strength of the insurrection was broken, and two more campaigns sufficed for the complete reduction of such of the insurgent communities as still held out. The revolt crushed, Rome set herself deliberately to the task of re-establishing on a new and firmer basis her supremacy over the lowlands, and in doing so laid the foundations of that marvellous organization which was destined to spread rapidly over Italy, and to withstand the attacks even of Hannibal. The old historic Latin league ceased to exist, though its memory was still preserved by the yearly Latin festival on the Alban Mount. Most if not all of the common land of the league became Roman territory;[6] five at least of the old Latin cities were compelled to accept the Roman franchise[7] and enter the pale of the Roman state. The rest, with the Latin colonies, were ranked as Latin allies of Rome, but on terms which secured their complete dependence upon the sovereign city. The policy of isolation, which became so cardinal a principle of Roman rule, was now first systematically applied. No rights of *conubium* or *commercium* were any longer to exist between these communities. Their federal councils were prohibited, and all federal action independent of Rome forbidden.[8]

Settlement of Latium.

The Latin War.

In Campania and the coast-lands connecting Campania with Rome, a policy of annexation was considered safer than that of alliance. Of the two frontier posts of the Volsci, Antium and Velitrae, the former was constituted a Roman colony, its long galleys burnt and their prows set up in the Forum at Rome, while the walls of Velitrae were razed to the ground, its leading men banished beyond the Tiber, and their lands given to Roman settlers. Farther south on the route to Campania, Fundi and Formiae were, after the precedent set in the case of Caere, declared Roman and granted the civil rights of Roman citizenship, while lastly in Campania itself the same status was given to Capua, Cumae, and the smaller communities dependent upon them.[9] During the ten years from 338 to 328 the work of settlement was steadily continued. Tarracina, like Antium, was made a Roman colony. Privernum, the last Volscian town to offer resistance to Rome, was subdued in 330, part of its territory allotted to Roman citizens, and the state itself forced to accept the Roman franchise. Lastly, to strengthen the lines of defence against the Sabellian tribes, two colonies with the rights of Latin allies were established at Cales (334) and at Fregellae (328). The settlement of the lowlands was accomplished. As a single powerful and compact state with an outer circle of closely dependent allies, Rome now stood in sharp contrast with the disunited and degenerate cities of northern Etruria, the loosely organized tribes of the Apennines, and the decaying and disorderly Greek towns of the south.

and of Campania.

416-26.

424.

420, 426.

The strength of this system was now to be tried by a struggle with the one Italian people who were still ready and able to contest with Rome the supremacy of the peninsula. The passive attitude of the Samnites between 342 and 327 was no doubt largely due to the dangers which had suddenly threatened them in South Italy. But the death of Alexander of Epirus, in 332,[10] removed their only formidable opponent there, and left them free to turn their attention to the necessity of checking the steady advance of Rome. In 327, the year after the ominous foundation of a Roman colony at Fregellae, a pretext for renewing the struggle was offered them. The

[10] Livy viii. 3, 17, 24.

Cumaean colony of Palaeopolis[1] had incurred the wrath of Rome by its raids into her territory in Campania. The Samnites sent a force to defend it, and Rome replied by a declaration of war. The two opponents were not at first sight unequally matched, and had the Sabellian tribes held firmly together the issue of the struggle might have been different. As it was, however, the Lucanians to the south actually joined Rome from the first, while the northern clans, Marsi, Vestini, Paeligni, Frentani, after a feeble and lukewarm resistance, subsided into a neutrality which was exchanged in 304 for a formal alliance with Rome. An even greater advantage to Rome from the outset was the enmity existing between the Samnites and the Apulians, the latter of whom from the first joined Rome and thus gave her a position in the rear of her enemy and in a country eminently well fitted for maintaining a large military force. These weaknesses on the Samnite side were amply illustrated by the events of the war.

450.

The first seven or eight years were marked by one serious disaster to the Roman arms, the defeat at the Caudine Forks (321), but, when in 318 the Samnites asked for and obtained a two years' truce, Rome had succeeded not only in inflicting several severe blows upon her enemies but in isolating them from outside help. The Lucanians to the south were her allies. To the east, in the rear of Samnium, Apulia acknowledged the suzerainty of Rome, and Luceria, captured in 320, had been established as a base of Roman operations. Finally the hitherto north-to-Rome had easily overcome the feeble resistance of the Vestini and Frentani, and secured through their territories a safe passage for their legions to Apulia. On the renewal of hostilities in 316, the Samnites, bent on escaping from the net which was being slowly drawn round them, made a series of desperate efforts to break through the lines of defence which protected Latium and Campania. Sora and Fregellae on the upper Liris were captured by a sudden attack; the Ausones in the low country near the mouth of the same river were encouraged to revolt by the appearance of the Samnite army; and in Campania another army, attracted by rumours of disturbance, all but defeated the Roman consuls under the very walls of Capua. But these efforts were unavailing. Sora and Fregellae were recovered as quickly as they had been lost, and the frontier there was strengthened by the establishment of a colony at Interamna. The Ausones were punished by the confiscation of their territory, and Roman supremacy further secured by the two colonies of Suessa and Pontia (312). The construction of the famous Via Appia,[2] the work of the censor Appius Claudius Caecus, opened a safe and direct route to Campania, while the capture of Nola deprived the Samnites of their last important stronghold in the Campanian lowlands. The failure of these attempts broke the courage even of the Samnites. Their hopes were indeed raised for a moment by the news that Etruria had risen against Rome (310), but their daring scheme of effecting a union with the Etruscans was frustrated by the energy of the Roman generals. Five years later (305) the Romans revenged a Samnite raid into Campania by an invasion of Samnium itself. Arpinum on the frontier was taken, and at last, after a twenty-two years' struggle, the Second Samnite War was closed by a renewal of the ancient treaty with Rome (304).[3]

433, 436.

434.

438.

449.

450.

450-56.

The six years of peace which followed (304–298) were employed by Rome in still further strengthening her position. Already, two years before the peace, a rash revolt of the Hernici[4] had given Rome a pretext for finally annexing the territory of her ancient allies. The tribal confederacy was broken up, and all the Hernican communities, with the exception of three which had not joined the revolt, were incorporated with the Roman state as municipia, with the civil rights of the Roman franchise. Between the Hernican valley and the frontiers of the nearest Sabellian tribes lay what remained of the once formidable people of the Aequi. In their case, too, a revolt (304) was followed by the annexation of their territory, which was marked in this case by the formation there (301) of two Roman tribes (Aniensis and Teretina).[5] Not content with thus carrying the borders of their own territory up to the very frontiers of the Sabellian country, Rome succeeded (304) in finally detaching from the Sabellian confederacy all the tribes lying[6] between the north-east frontier of Latium and the Adriatic Sea. Henceforward the Marsi, Paeligni, Vestini, Marrucini and Frentani were enrolled among the allies of Rome, and not only swelled her forces in the field but interposed a useful barrier between her enemies to the north in Etruria and Umbria and those to the south in Samnium, while they connected her directly with the friendly Apulians. Lastly, as a security for the fidelity at least of the nearest of these allies, colonies were planted in the Marsian territories at Alba Fucentia (303) and at Carsioli (298). A significant indication of the widening range of Rome's influence in Italy, and of the new responsibilities rapidly pressing upon her, is the fact that when in 302 the Spartan Cleonymus landed in the territory of the Sallentini, far away in the south-east, he was met and repulsed by a Roman force.[7]

450.

453.

451, 456.

452.

Six years after the conclusion of the treaty which ended the Second Samnite War, news arrived that the Samnites were harassing the Lucanians. Rome at once interfered to protect her allies. Samnium was invaded in force, the country ravaged and one stronghold after another captured. Unable any longer to hold their own in a position where they were hedged round by enemies, the Samnite leaders turned as a last hope to the communities of northern Etruria, to the free tribes of Umbria and to the once dreaded Celts. With a splendid daring they formed the scheme of uniting all these peoples with themselves in a last desperate effort to break the power of Rome.

Third Samnite Wars. 298–90–456–64.

For some forty years after the final annexation of southern Etruria (351 B.C.) matters had remained unchanged in that quarter. Sutrium and Nepete still guarded the Roman frontier; the natural boundary of the Ciminian forest was still intact; and up the valley of the Tiber Rome had not advanced beyond Falerii, a few miles short of the most southerly Umbrian town Ocriculum. But in 311, on the expiry, apparently of the long truce with Rome, concluded in 351, the northern Etruscans, alarmed no doubt by the rapid advances which Rome was making farther south, rose in arms and attacked Sutrium. The attack, however, recoiled disastrously upon the heads of the assailants. A Roman force promptly relieved Sutrium, and its leader, Q. Fabius Rullianus, without awaiting orders from home, boldly plunged into the wilds of the Ciminian forest, and crossing them safely swept with fire and sword over the rich lands to the north. Then turning southward he met and utterly defeated the forces which the Etruscans had hastily raised in the hopes of intercepting him at the Vadimonian Lake.[8] This decisive victory ended the war. The Etruscan cities, disunited among themselves, and enervated by long years of peace, abandoned the struggle for the time, paid a heavy indemnity and concluded a truce with Rome (309–8). In the same year the promptitude of Fabius easily averted a threatened attack by the Umbrians, but Rome proceeded nevertheless to fortify herself in her invariable fashion against future dangers on this side, by an alliance with Ocriculum, which was followed ten years later (299) by a colony at Nequinum,[9] and an alliance with the Picentes, whose position in the rear

of Umbria rendered them as valuable to Rome as the Apulians had proved farther south.

Fourteen years had passed since the battle on the Vadimonian Lake, when the Samnites appeared on the borders of Etruria and called on the peoples of northern Italy to rise against the common enemy. Their appeal, backed by the presence of their troops, was successful. The Etruscans found courage to face the Roman legions once more; a few of the Umbrians joined them; but the most valuable allies to the Samnites were the Celts, who had for some time threatened a raid across the Apennines, and who now marched eagerly into Umbria and joined the coalition. The news that the Celts were in motion produced a startling effect at Rome, and every nerve was strained to meet this new danger. While two armies were left in southern Etruria as reserves, the two consuls, Q. Fabius Maximus Rullianus and P. Decius Mus the younger, both tried soldiers, marched northwards up the valley of the Tiber and into Umbria at the head of four Roman legions and a still larger force of Italian allies. At Sentinum, on the further side of the Apennines, they encountered the united forces of the Celts and Samnites, the Etruscans and Umbrians having, it is said, been withdrawn for the defence of their own homes. The battle that followed was desperate, and the Romans lost one of their consuls, Decius, and more than 8000 men.[1] But the Roman victory was decisive. The Celts were annihilated, and the fear of a second Celtic attack on Rome removed. All danger from the coalition was over. The Etruscan communities gladly purchased peace by the payment of indemnities. The rising in Umbria, never formidable, died away, and the Samnites were left single-handed to bear the whole weight of the wrath of Rome. During four years more, however, they desperately defended their highland homes, and twice at least, in 293 and 292, they managed to place in the field a force sufficient to meet the Roman legions on equal terms. At last, in 290, the consul M'.Curius Dentatus finally exhausted their power of resistance. Peace was concluded, and it is significant of the respect inspired at Rome by their indomitable courage that they were allowed to become the allies of Rome, on equal terms and without any sacrifice of independence.[2]

Battle of Sentinum, 295–459.

461, 462.

464.

Between the close of the Third Samnite War and the landing of Pyrrhus in 281 B.C. we find Rome engaged, as her wont was, in quietly extending and consolidating her power. In southern Italy she strengthened her hold on Apulia by planting on the borders of Apulia and Lucania the strong colony of Venusia.[3] In central Italy the annexation of the Sabine country (290) carried her frontiers eastward to the borders of her Picentine allies on the Adriatic.[4] Farther east, in the territory of the Picentes themselves, she established colonies on the Adriatic coast at Hadria and Castrum (285–83).[5] North of the Picentes lay the territories of the Celtic Senones stretching inland to the north-east borders of Etruria, and these too now fell into her hands. Ten years after their defeat at Sentinum (285–84) a Celtic force descended into Etruria, besieged Arretium and defeated the relieving force despatched by Rome. In 283 the consul L. Cornelius Dolabella was sent to avenge the insult. He completely routed the Senones. Their lands were annexed by Rome, and a colony established at Sena on the coast. This success, followed as it was by the decisive defeat of the neighbouring tribe of the Boii, who had invaded Etruria and penetrated as far south as the Vadimonian Lake, awed the Celts into quiet, and for more than forty years there was comparative tranquillity in northern Italy.[6]

473.

464.

469–71.

In the south, however, the claims of Rome to supremacy were now to be disputed by a new and formidable foe. At the close of the Third Samnite War the Greek cities on the southern coast of Italy found themselves once more harassed by the Sabellian tribes on their borders, whose energies, no longer absorbed by the long struggles in central Italy, now found an attractive opening southward. Naturally enough the Greeks, like the Capuans sixty years before, appealed for aid to Rome (283–82), and like the Capuans they offered in return to recognize the suzerainty of the great Latin Republic. In reply a Roman force under C. Fabricius Luscinus marched into south Italy, easily routed the marauding bands of Lucanians, Bruttians and Samnites, and established Roman garrisons in Locri, Croton, Rhegium and Thurii. At Tarentum, the most powerful and flourishing of the Greek seaports, this sudden and rapid advance of Rome excited the greatest anxiety. Tarentum was already allied by treaty (301) with Rome, and she had now to decide whether this treaty should be exchanged for one which would place her, like the other Greek communities, under the protectorate of Rome, or whether she should find some ally able and willing to assist in making a last stand for independence. The former course, in Tarentum, as before at Capua, was the one favoured by the aristocratic party; the latter was eagerly supported by the mass of the people and their leaders. While matters were still in suspense, the appearance, contrary to the treaty, of a Roman squadron off the harbour mouth caused the controversy. The Tarentines indignant at the insult, attacked the hostile fleet, killed the admiral and sank most of the ships. Still Rome, relying probably on her partisans in the city, tried negotiation, and an alliance appeared likely after all, when suddenly the help for which the Tarentine democrats had been looking appeared, and war with Rome was resolved upon (281–80).[7]

War with Pyrrhus, 281–75 = 473–79.

471–72.

453.

473–74.

King Pyrrhus,[8] whose timely appearance seemed for the moment to have saved the independence of Tarentum, was the most brilliant of the military adventurers whom the disturbed times following the death of Alexander the Great had brought into prominence. High-spirited, generous and ambitious, he had formed the scheme of rivalling Alexander's achievements in the East, by winning for himself an empire in the West. He hoped not only to unite under his rule the Greek communities of Italy and Sicily, but to overthrow the great Phoenician state of Carthage—the natural enemy of Greeks in the West, as Persia had been in the East. Of Rome it is clear that he knew little or nothing; the task of ridding the Greek seaports of their barbarian foes he no doubt regarded as an easy one; and the splendid force he brought with him was intended rather for the conquest of the West than for the preliminary work of chastising a few Italian tribes, or securing the submission of the unwarlike Italian Greeks. He defeated the Roman consul, M. Valerius Laevinus, on the banks of the Liris (280), and gained the support of the Greek cities as well as that of numerous bands of Samnites, Lucanians and Bruttians. But, to the disappointment of his new allies, Pyrrhus showed no anxiety to follow up his advantage. His heart was set on Sicily and Africa, and his immediate object was to come to terms with Rome. But though he advanced as near Rome as Anagnia (279), nothing could shake the resolution of the senate, and in the next year (278) he again routed the legions at Asculum (Ascoli), but only to find that the indomitable resolution of the enemy was strengthened by defeat. He now crossed into Sicily, where, though at first successful, he was unable to achieve any lasting result. Soured and disappointed, Pyrrhus returned to Italy (276) to find the Roman legions steadily moving southwards, and his Italian allies disgusted by his desertion of their cause. In 275 the decisive battle of the war was fought at Beneventum. The consul, M'. Curius Dentatus, the conqueror of Samnium, gained a complete victory,

and Pyrrhus, unable any longer to face his opponents in the field, and disappointed of all assistance from his allies, retreated to disgust to Tarentum and thence crossed into Greece.[1]

482. A few years later (272) Tarentum was surrendered to Rome by its Epirot garrison; it was granted a treaty of alliance, but its walls were razed and its fleet handed over to Rome. In 270 Rhegium also entered the *484.* ranks of Roman allies, and finally in 269 a single *485.* campaign crushed the last efforts at resistance in Samnium. Rome was now at leisure to consolidate the position she had won. Between 273 and 263 three new colonies *481, 491.* were founded in Samnium and Lucania—Paestum *481, 486,* in 273, Beneventum in 268, Aesernia in 263. In *491.* central Italy the area of Roman territory was increased *486.* by the full enfranchisement (268) of the Sabines,[2] and of their neighbours to the east, the people of Picenum. To guard the Adriatic coast colonies were established *486.* at Ariminum (268), at Firmum and at Castrum *490.* Novum (264), while to the already numerous maritime colonies was added that of Cosa in Etruria.[3]

Rome was now the undisputed mistress of Italy. The limits of her supremacy to the north were represented roughly by a *Rome the mistress of Italy.* line drawn across the peninsula from the mouth of the Arno on the west to that of the Aesis on the east.[4] Beyond this line lay the Ligurians and the Celts; all south of it was now united as "Italy" under the rule of Rome.

But the rule of Rome over Italy, like her wider rule over the Mediterranean coasts, was not an absolute dominion over conquered subjects. It was in form at least a confederacy under Roman protection and guidance; and the Italians, like the provincials, were not the subjects, but the "allies and friends" of the Roman people.[5] In the treatment of these allies Rome consistently followed the maxim, *divide et impera*. In every possible way she strove to isolate them from each other, while binding them closely to herself. The old federal groups were in most cases broken up, and each of the members united with Rome by a special treaty of alliance. In Etruria, Latium, Campania and Magna Graecia the city state was taken as the unit; in central Italy where urban life was non-existent, the unit was the tribe. The northern Sabellian peoples, for instance—the Marsi, Paeligni, Vestini, Marrucini, Frentani—were now constituted as separate communities in alliance with Rome. In many cases, too, no freedom of trade or intermarriage was allowed between the allies themselves, a policy afterwards systematically pursued in the provinces. Nor were all these numerous allied communities placed on the same footing as regarded their relations with Rome herself. To begin with, a sharp distinction was drawn between *The Latins.* the "Latini" and the general mass of Italian allies. The "Latins" of this period had little more than the name in common with the old thirty Latin peoples of the days of Spurius Cassius. With a few exceptions, such as Tibur and Praeneste, the latter had either disappeared or had been incorporated with the Roman state, and the Latins of 268 B.C. were almost exclusively the "Latin colonies," that is to say, communities founded by Rome, but composed of men of Roman blood, and whose only claim to the title "Latin" lay in the fact that Rome granted to them some portion of the rights and privileges formerly enjoyed by the old Latin cities under the Cassian treaty.[6] Though nominally allies, they were in fact offshoots of Rome herself, bound to her by community of race, language and interest, and planted as Roman garrisons among alien and conquered peoples. The Roman citizen who joined a Latin colony lost his citizenship—to have allowed him to retain it would no doubt have been regarded as enlarging too rapidly the limits of the citizen body; but he received in exchange the status of a favoured ally. The member of a Latin colony had the right of *commercium* and down to 268[7] *486.* of *connubium* also with Roman citizens. Provided they left sons and property to represent them at home, they were free to migrate to Rome and acquire the Roman franchise. In war-time they not only shared in the booty, but claimed a portion of any land confiscated by Rome and declared "public." These privileges, coupled with their close natural affinities with Rome, successfully secured the fidelity of the Latin colonies, which became not only the most efficient props of Roman supremacy, but powerful agents in the work of Romanizing Italy. Below the privileged Latins stood the Italian allies; and here again we know generally that there *The Italian allies.* were considerable differences of status, determined in each case by the terms of their respective treaties with Rome. We are told that the Greek cities of Neapolis and Heraclea were among the most favoured;[8] the Bruttii, on the other hand, seem, even before the Hannibalic War, to have been less generously treated. But beyond this we have no detailed information.

Rome, however, did not rely only on this policy of isolation. Her allies were attached as closely to herself as they were clearly separated from each other, and from the first she took every security for the maintenance of her own paramount authority. Within its own borders, each ally was left to manage its own affairs as an independent state.[9] The badges which marked subjection to Rome in the provinces—the resident magistrate and the tribute—were unknown in Italy. But in all points affecting the relations of Italy with another, in all matters of the general interests of Italy and of foreign policy, the decision rested solely with Rome. The place of a federal constitution, of a federal council, of federal officers, was filled by the Roman senate, assembly and magistrates. The maintenance of peace and order in Italy, the defence of the coasts and frontiers, the making of war or peace with foreign powers, were matters the settlement of which Rome kept entirely in her own hands. Each allied state, in time of war, was called upon for a certain contingent of men, but, though its contingent usually formed a distinct corps under officers of its own, its numerical strength was fixed by Rome, it was brigaded with the Roman legions, and was under the orders of the Roman consul.[10] This supremacy of Rome throughout the peninsula was confirmed and justified by the fact that Rome herself was now infinitely more powerful than any one of her *The Roman state.* numerous allies. Her territory, as distinct from that of the allied states, covered something like one-third of the peninsula south of the Aesis. Along the west coast it stretched from Caere to the southern borders of Campania. Inland, it included the former territories of the Aequi and Hernici, the Sabine country, and even extended eastward into Picenum, while beyond these limits were outlying districts, such as the lands of the Senonian Celts, with the Roman colony of Sena, and others elsewhere in Italy, which had been confiscated by Rome and given over to Roman settlers. Since the first important annexation of territory after the capture of Veii (396) twelve new tribes had been formed,[11] and this *358;* number of male citizens registered at the census had risen from 152,000 to 290,000.[12] Within this enlarged Roman

[11] Four in South Etruria (387), two in the Pomptine territory (358), two in Latium (332), two in the territory of the southern Volsci and the Ager Falernus (313), two in the Aequian and Hernican territory (299). The total of thirty-five was completed in 241 by formation of the Velina and Quirina, probably in the Sabine and Picentine districts, enfranchised in 268. See Beloch, 32.

[12] Livy, *Epit.* xvi.; Eutrop. ii. 18; Mommsen, *Hist. of Rome*, ii. 55 n.; Beloch, cap. iv. pp. 77 seq.

state were now included numerous communities with local institutions and government. At their head stood the Roman colonies (*coloniae civium Romanorum*), founded to guard especially the coasts of Latium and Campania.[1] Next to these eldest children of Rome came those communities which had been invested with the full Roman franchise, such, for instance, as the old Latin towns of Aricia, Lanuvium, Tusculum, Nomentum and Pedum. Lowest in the scale were those which had not been considered ripe for the full franchise, but had, like Caere, received instead the *civitas sine suffragio*, the civil without the political rights.[2] Their members, though Roman citizens, were not enrolled in the tribes, and in time of war served not in the ranks of the Roman legions but in separate contingents. In addition to these organized town communities, there were also the groups of Roman settlers on the public lands, and the dwellers in the village communities of the enfranchised highland districts in central Italy.

Colonies and municipia.

The administrative needs of this enlarged Rome were obviously such as could not be adequately satisfied by the system which had done well enough for a small city state with a few square miles of territory. The old centralization of all government in Rome itself had become an impossibility, and the Roman statesmen did their best to meet the altered requirements of the time. The urban communities within the Roman pale, colonies and *municipia*, were allowed a large measure of local self-government. In all we find local assemblies, senates and magistrates, to whose hands the ordinary routine of local administration was confided, and, in spite of differences in detail, *e.g.* in the titles and numbers of the magistrates, the same type of constitution prevailed throughout.[3] But these local authorities were carefully subordinated to the higher powers in Rome. The local constitution could be modified or revoked by the Roman senate and assembly, and the local magistrates, no less than the ordinary members of the community, were subject to the paramount authority of the Roman consuls, praetors and censors. In particular, care was taken to keep the administration of justice well under central control. The Roman citizen in a colony or *municipium* enjoyed, of course, the right of appeal to the Roman people in a capital case. We may also assume that from the first some limit was placed to the jurisdiction of the local magistrate, and that cases falling outside it came before the central authorities. But an additional safeguard for the equitable and uniform administration of Roman law, in communities to many of which the Roman code was new and unfamiliar, was provided by the institution of prefects (*praefecti juri dicundo*),[4] who were sent out annually, as representatives of the Roman praetor, to administer justice in the colonies and *municipia*. To prefects was, moreover, assigned the charge of those districts within the Roman pale where no urban communities, and consequently no organized local government, existed. In these two institutions, that of municipal government and that of prefectures, we have already two of the cardinal points of the later imperial system of government.

Prefects.

Lastly, the changes which the altered position and increased responsibilities of Rome had effected in her military system[5] tended to weaken the intimate connexion between the Roman army in the field and the Roman people at home, and thus prepared the way for that complete breach between the two which in the end proved fatal to the Republic. It is true that service in the legion was still the first duty and the highest privilege of the fully qualified citizen. But this service was gradually altering in character. Though new legions were still raised each year for the summer campaigns, this was by no means always accompanied, as formerly, by the disbandment of those already on foot, and this increase in the length of time during which the citizen was kept with the standards had, as early as the siege of Veii, necessitated a further deviation from the old theory of military service—the introduction of pay.[6] Moreover, while in the early days of the Republic the same divisions served for the soldier in the legion and the citizen in the assembly, in the new manipular system,[7] with its three lines, no regard was paid to civic distinctions, but only to length of service and military efficiency, while at the same time the more open order of fighting which it involved demanded of each soldier greater skill, and therefore a more thorough training in arms than the old phalanx. One other change resulted from the new military necessities of the time, which was as fruitful of results as the incipient separation between the citizen and the soldier. Under the early Republic, the chief command of the legions rested with the consuls of the year. But, as Rome's military operations increased in area and in distance from Rome, a larger staff became necessary, and the inconvenience of summoning home a consul in the field from an unfinished campaign became intolerable. The remedy found, that of prolonging for a further period the imperium of the consul, was first applied in 327 B.C. in the case of Q. Publilius Philo,[8] and between 327 and 264 instances of this *prorogatio imperii* became increasingly common. This pronouncement, originally an occasional and subordinate one, was destined to become first of all the strongest force in the Republic, and ultimately the chief prop of the power of the Caesars.

The military system.

The Proconsulate.

427–90.

PERIOD B: ROME AND THE MEDITERRANEAN STATES, 265–146 B.C.—(*a*) *Conquest of the West.*—Though marked out by her geographical position as the natural centre of the Mediterranean, Italy had hitherto played no active part in Mediterranean politics, but, now that she was for the first time united, it was felt throughout the Mediterranean world that a new power had arisen, and Rome, as the head and representative of Italy, found herself irresistibly drawn into the vortex of Mediterranean affairs. Egypt sought her alliance, and Greek scholars began to interest themselves keenly in the history, constitution, and character of this Latin Republic which had so suddenly become famous. But Rome looked naturally westward rather than eastward. The western coasts of the peninsula were the most fertile and populous and wealthy; and it was in this direction that the natural openings for Italian commerce were to be found. It was, however, precisely on this side that Rome had serious ground for anxiety. Carthage was now at the height of her power. Her outposts were threateningly near to Italy in Sardinia and in Sicily, while her fleets swept the seas and jealously guarded for the benefit of Carthage alone the hidden treasures of the West. In the east of Sicily, Syracuse still upheld the cause of Greek independence against the hereditary foe of the Greek race; but Syracuse stood alone, and her resources were comparatively small. What Rome had to fear was the establishment, and that at no distant date, of an absolute Carthaginian domination over the Western seas—a domination which would not only be fatal to Italian commerce, but would be a standing menace to the safety of the Italian coasts.

489–608.

It was above all things essential for Rome that the Carthaginians should advance no farther eastward. But already in 272 Tarentum had almost fallen into their grasp, and seven years later Rome was threatened with the establishment of Carthaginian rule at Messana, within sight of the Italian coast. The intervention of both powers in a quarrel between the Mamertines, a body of Campanian mercenaries who had occupied Messana, and Hiero II.

First Punic War, 265–41–489–513.

[1] Ostia, Antium, Tarracina, Minturnae, Sinuessa, and, on the Adriatic, Sena and Castrum Novum.

[2] To both these classes the term *municipia* was applied.

[3] For details, see Beloch, *Ital. Bund*, caps. v., vi., vii. The enfranchised communities in most cases retained the old titles for their magistrates, and hence the variety in their designations.

[4] For the *praefecti*, see Mommsen, *Hist. of Rome*, ii. 49, 67, and *Staatsr.* ii. 608; Beloch, 130–33.

[5] Mommsen, *Hist. of Rome*, ii. 72 seq.; Livy viii. 8; Polyb. vi. 17–42.

[6] Livy iv. 59.

[7] This system was probably introduced in order to meet the charge of the Celtic swordsmen, but it was perfected during the Samnite wars. See Marquardt, *Staatswerw.* iii. 350 seq.; Daremberg-Saglio, *Dictionnaire des antiquités, s.v.* "Legio" (Cagnat).

[8] Livy viii. 23, "ut pro consule rem gereret quod debellatum esset."

of Syracuse, led to the outbreak of war between Rome and Carthage in 264 B.C. The military history of the struggle which followed is treated in the article PUNIC WARS; it will suffice to note here that the war lasted until 241 B.C., when the Carthaginians were compelled to cede Sicily and the Lipari islands to Rome, and to pay an indemnity of 3200 talents (about £800,000). *490.*

The struggle was one in which both Rome and Carthage were serving an apprenticeship in a warfare the conditions of which were unfamiliar to both. The Roman legions were foes very unlike any against which the Carthaginian leaders had ever led their motley array of mercenaries, while Rome was called upon for the first time to fight a war across the sea, and to fight with ships against the greatest naval power of the age. The novelty of these conditions accounts for much of the vacillating and uncertain action observable on both sides. It is possible that Hamilcar had already made up his mind that Rome must be attacked and crushed in Italy, but his government attempted nothing more than raids upon the coast. There are indications also that some in the Roman senate saw no end to the struggle but in the destruction of Carthage; yet an invasion of Africa was only once seriously attempted, and then only a half-hearted support was given to the expedition. But these peculiarities in the war served to bring out in the clearest relief the strength and the weakness of the two contending states. The chief dangers for Carthage lay obviously in the jealousy exhibited at home of her officers abroad, in the difficulty of controlling her mercenary troops, and in the ever-present possibility of disaffection among her subjects in Libya—dangers which even the genius of Hannibal failed finally to surmount. Rome, on the other hand, was strong in the public spirit of her citizens, the fidelity of her allies, the valour and discipline of her legions. What she needed was a system which should make a better use of her splendid materials than one under which her plans were shaped from day to day by a divided senate, and executed by officers who were changed every year, and by soldiers most of whom returned home at the close of each summer's campaign.

The interval between the First and Second Punic Wars was employed by both Rome and Carthage in strengthening their respective positions. The eastern end of Sicily was still left under the rule of Hiero as the ally of Rome, but the larger western portion of the island became directly subject to Rome, and a temporary arrangement seems to have been made for its government, either by one of the two praetors, or possibly by a quaestor.[1] Sardinia and Corsica had not been surrendered to Rome by the treaty of 241, but three years later (239), on the invitation of the Carthaginian mercenaries stationed in the islands, a Roman force occupied them; Carthage protested, but, on the Romans threatening war, she gave way, and Sardinia and Corsica were formally ceded to Rome, though it was some seven or eight years before all resistance on the part of the natives themselves was crushed. *513, 515.* *527.*

In 227, however, the senate considered matters ripe for the establishment of a separate administration in her oversea possessions. In that year two additional praetors were elected; to one was assigned the charge of western Sicily, to the other that of Sardinia and Corsica,[2] and thus the first stones of the Roman provincial system were laid. Of at least equal importance for the security of the peninsula was the subjugation of the Celtic tribes in the valley of the Po. These, headed by the Boii and Insubres and assisted by levies from the Celts to the westward, had in 225 alarmed the whole of Italy by invading Etruria and penetrating to Clusium, only three days' journey from Rome. Here, however, their courage seems to have failed them. They retreated northward along the Etruscan coast, until at Telamon their way was barred by the Roman legions, returning from Sardinia to the defence of Rome, while a second consular army hung upon their rear. Thus hemmed in, the Celts fought desperately, *529.*

[1] Marquardt, *Staatswerw.* i. 243; Mommsen, *Hist. of Rome*, ii. 209; Appian, *Sic.* 2.
[2] Livy, *Epit.* xx.

but were completely defeated and the flower of their tribesmen slain. The Romans followed up their success by invading the Celtic territory. The Boii were easily reduced to submission. The Insubres, north of the Po, resisted more obstinately, but by 222 the war was over, and all the tribes in the rich Po valley acknowledged the supremacy of Rome. The conquered Celts were not enrolled among the Italian allies of Rome, but were treated as subjects beyond the frontier. Three colonies were founded to hold them in check—Placentia (218) and Cremona in the territory of the Insubres, Mutina (183) in that of the Boii; and the great northern road (Via Flaminia) was completed as far as the Celtic border at Ariminum. *532.*

On the Adriatic coast the immediate interests of Rome were limited to rendering the sea safe for Italian trade. It was with this object that, in 229, the first Roman expedition crossed the Adriatic, and inflicted severe chastisement on the Illyrian pirates of the opposite coast.[3] This expedition was the means of establishing for the first time direct political relations between Rome and the states of Greece proper, to many of which the suppression of piracy in the Adriatic was of as much importance as to Rome herself. Alliances were concluded with Corcyra, Epidamnus, and Apollonia; and embassies explaining the reasons which had brought Roman troops into Greece were sent to the Aetolians, the Achaeans, and even to Athens and Corinth. Everywhere they were well received, and the admission of the Romans to the Isthmian games[4] (228) formally acknowledged them as the natural allies of the free Greek states against both barbarian tribes and foreign despots. Meanwhile Carthage had acquired a possession which promised to compensate her for the loss of Sicily, Sardinia and Corsica. The genius of her greatest citizen and soldier, Hamilcar Barca, had appreciated the enormous value of the Spanish peninsula, and conceived the scheme of founding there a Carthaginian dominion which should not only add to the wealth of Carthage, but supply her with a base of operations for a war of revenge with Rome. The conquest of southern and eastern Spain, begun by Hamilcar (236–28) and carried on by his kinsman Hasdrubal (228–21), was completed by his son Hannibal, who, with all his father's genius, inherited also his father's hatred of Rome, and by 219 the authority of Carthage had been extended as far as the Ebro (see SPAIN, *History*). Rome had not watched this rapid advance without anxiety, but, probably owing to her troubles with the Celts, she had contented herself with stipulating (226) that Carthage should not carry her arms beyond the Ebro, so as to threaten Rome's ancient ally, the Greek Massilia (mod. Marseilles), and with securing the independence of the two nominally Greek communities, Emporiae and Saguntum,[5] on the east coast. *525.* *526.* *525–26.* *526–33.* *535.* *528.*

But these precautions were of no avail against the resolute determination of Hannibal, with whom the conquest of Spain was only preliminary to an attack upon Italy, and who could not afford to leave behind him in Spain a state allied to Rome. In 219, therefore, disregarding the protests of a Roman embassy, he attacked and took Saguntum, an act which, as he had foreseen, rendered a rupture with Rome inevitable, while it set his own hands free for a further advance.

For the details of the war which followed, the reader may be referred to the articles PUNIC WARS, HANNIBAL, and SCIPIO. From the outbreak of hostilities until the crowning victory of Cannae in 216 Hannibal's career of success was unchecked; and the annihilation of the Roman army in that battle was followed by the defection of almost the whole of southern Italy, with the exception of the Latin colonies and the Greek coast towns. In 215, moreover, Philip V. of Macedon formed an alliance with Hannibal and threatened to invade Italy; in 214 Syracuse revolted, and in 212 the Greek cities in S. Italy went over to Hannibal. But the indomitable spirit *Second Punic War, 218–1– 536–53.* *538.* *539.* *540.*

of the Romans asserted itself in the face of these crushing misfortunes. In 212 Syracuse was recovered; in 211 Capua fell after a long siege which Hannibal failed to raise, even by his famous march up to the gates of Rome, and in the same year a coalition was formed in Greece against Philip V. of Macedon, which effectually paralysed his offensive action. Hannibal was now confined to Lucania and Bruttium; and his brother Hasdrubal, marching from Spain to join him, was defeated and slain on the river Metaurus (207). The war in Italy was now virtually ended, for, though during four years more Hannibal stood at bay in a corner of Bruttium, he was powerless to prevent the restoration of Roman authority throughout the peninsula. Sicily was once more secure; and finally in 206, the year after the victory on the Metaurus, the successes of the young P. Scipio in Spain (211–6) were crowned by the complete expulsion of the Carthaginians from the peninsula. On his return from Spain Scipio eagerly urged an immediate invasion of Africa. The senate hesitated; but Scipio gained the day. He was elected consul for 205, and given the province of Sicily, with permission to cross into Africa if he thought fit. Voluntary contributions of men, money, and supplies poured in to the support of the popular hero; and by the end of 205 Scipio had collected in Sicily a sufficient force for his purpose. In 204 he crossed to Africa, where he was welcomed by the Numidian prince Massinissa, whose friendship he had made in Spain. In 203 he twice defeated the Carthaginian forces, and a large party at Carthage were anxious to accept his offer of negotiations. But the advocates of resistance triumphed.

542, 543. *547.* *548.* *543–48.* *549.* *550.* *551.*

Hannibal was recalled from Italy, and returned to fight his last battle against Rome at Zama, where Scipio, who had been continued in command as proconsul for 202 by a special vote of the people, won a complete victory. The war was over. The Roman assembly voted that the Carthaginian request for peace should be granted, and entrusted the settlement of the terms to Scipio and a commission of ten senators. Carthage was allowed to retain her territory in Africa; but she undertook to wage no wars outside Africa, and none inside without the consent of Rome. She surrendered all her ships but ten triremes, her elephants, and all prisoners of war, and agreed to pay an indemnity of 10,000 talents in fifty years. The Numidian Massinissa (*q.v.*) was rewarded by an increase of territory, and was enrolled among the "allies and friends" of the Roman people.

552.

The battle of Zama decided the fate of the West. The power of Carthage was broken and her supremacy passed to Rome. Henceforth Rome had no rival to fear westward of Italy, and it rested with herself to settle within what limits her supremacy should be confined and what form it should take. For the next fifty years, however, Rome was too deeply involved in the affairs of the East to think of extending her rule far beyond the limits of the rich inheritance which had fallen to her by the defeat of Carthage; but within this area considerable advance was made in the organization and consolidation of her rule. In Sicily and Spain, the immediate establishment of a Roman government was imperatively necessary, if these possessions were not either to fall a prey to internal anarchy, or be recovered for Carthage by some second Hamilcar. Accordingly, we find that in Sicily the former dominions of Hiero were at once united with the western half of the island as a single province,[1] and that in Spain, after nine years of a provisional government (206–197), two provinces were in 197[2] definitely established, and each, like Sicily, assigned to one of the praetors for the year, two additional praetors being elected for the purpose. But here the resemblance between the two cases ends. From 201 down to the outbreak of the Slave War in 136 there was unbroken peace in Sicily, and its part in the history is limited to its important functions in supplying Rome with corn and in provisioning and clothing the Roman legions.[3] It became every year a more integral part of Italy; and a large proportion even of the land itself passed gradually into the hands of enterprising Roman speculators. The governors of the two Spains had very different work to do from that which fell to the lot of the Sicilian praetors. The condition of Spain required that year after year the praetors should be armed with the consular authority, and backed by a standing force of four legions, while more than once the presence of the consuls themselves was found necessary. Still, in spite of all difficulties, the work of pacification proceeded. To M. Porcius Cato, the censor, and to Tiberius Sempronius Gracchus (praetor and propraetor, 180–79), father of the two tribunes, is mainly due the credit of quieting the Celtiberian tribes of central Spain, and the government of Gracchus was followed by thirty years of comparative tranquillity. The insurrection headed by Viriathus in 149 was largely caused by exactions of the Roman magistrates themselves, while its obstinate continuance down to the capture of Numantia, in 133, was almost as much the result of the incapacity of the Roman commanders.[4] But the re-settlement of the country by Scipio Africanus the younger in that year left all Spain, with the exception of the highland Astures and Cantabri in the north-west, finally and tranquilly subject to Rome. Roman traders and speculators flocked to the seaport towns and spread inland. The mines became centres of Roman industry; the Roman legionaries quartered in Spain year after year married Spanish wives, and when their service was over gladly settled down in Spain in preference to returning to Italy. The first Roman communities established outside Italy were both planted in Spain, and both owed their existence to the Roman legions.[5]

553. *618.* *The West under Roman rule.* *631.* *Sicily and Spain.* *553.* *548–57.*

In Africa there was no question at first of the introduction of Roman government by the formation of a province (see AFRICA, ROMAN). Carthage, bound hand and foot by the treaty of 201, was placed under the jealous watch of the loyal prince of Numidia, who himself willingly acknowledged the suzerainty of Rome. But it was impossible for this arrangement to be permanent. Every symptom of reviving prosperity at Carthage was regarded at Rome with feverish anxiety, and neither the expulsion of Hannibal in 195 nor his death in 183 did much to check the growing conviction that Rome would never be secure while her rival existed. It was therefore with grim satisfaction that many in the Roman senate watched the increasing irritation of the Carthaginians under the harassing raids and encroachments of their favoured neighbour Massinissa, and waited for the moment when Carthage should, by some breach of the conditions imposed upon her, supply Rome with a pretext for interference. At last in 151 came the news that Carthage, in defiance of treaty obligations, was actually at war with Massinissa. The anti-Carthaginian party in the senate, headed by M. Porcius Cato, eagerly seized the opportunity, and war was declared, and nothing short of the destruction of their city itself was demanded from the despairing Carthaginians. The demand was refused, and in 149 the siege of Carthage begun. During the next two years little progress was made, but in 147 P. Cornelius Scipio Aemilianus, grandson by adoption of the conqueror of Hannibal, was, at the age of thirty-seven, and though

only a candidate for the aedileship, elected consul, and given the command in Africa. In the next year (146) Carthage was taken and razed to the ground. Its territory became the Roman province of Africa, while Numidia, now ruled by the three sons of Massinissa, remained as an allied state under Roman suzerainty, and served to protect the new province against the raids of the desert tribes (see CARTHAGE).

608.

In Italy itself the Hannibalic war had been followed by important changes. In the north the Celtic tribes paid for their sympathy with Hannibal by the final loss of all separate political existence. Cispadane Gaul, studded with colonies and flooded with Roman settlers, was rapidly Romanized. Beyond the Padus (Po) in Polybius's time Roman civilization was already widely spread. In the extreme north-east the Latin colony of Aquileia, the last of its kind, was founded in 181, to control the Alpine tribes, while in the north-west the Ligurians were held in check by the colony of Luna (180), and by the extensive settlements of Roman citizens and Latins made on Ligurian territory in 173.[1] In southern Italy the depression of the Greek cities on the coast, begun by the raids of the Sabellian tribes, was completed by the repeated blows inflicted upon them during the Hannibalic struggle Some of them lost territory,[2] all suffered from a decline of population and loss of trade; and their place was taken by such new Roman settlements as Brundusium (Brindisi) and Puteoli (Pozzuoli).[3] In the interior the southern Sabellian tribes suffered scarcely less severely. The Bruttii were struck off the list of Roman allies, and nearly all their territory was confiscated.[4] To the Apulians and Lucanians no such hard measure was meted out; but their strength had been broken by the war, and their numbers dwindled; large tracts of land in their territories were seized by Rome, and allotted to Roman settlers, or occupied by Roman speculators. That Etruria also suffered from declining energy, a dwindling population, and the spread of large estates is clear from the state of things existing there in 133. It was indeed in central Italy, the home of the Latins and their nearest kinsmen. and in the new Latin and Roman settlements throughout the peninsula that progress and activity were henceforth concentrated.

(b) Rome in the East, 200–133.—Ever since the repulse of Pyrrhus from Italy, Rome had been slowly drifting into closer contact with the Eastern states. With one of the three great powers which had divided between them the empire of Alexander, with Egypt, she had formed an alliance in 273, and the alliance had been cemented by the growth of commercial intercourse between the two countries.[5] In 228 her chastisement of the Illyrian pirates had led naturally enough to the establishment of friendly relations with some of the states of Greece proper. In 214 the alliance between Philip V. and Hannibal, and the former's threatened attack on Italy, forced her into war with Macedon, at the head of a coalition of the Greek states against him, which effectually frustrated his designs against herself; at the first opportunity, however (205), she ended the war by a peace which left the position unchanged. The results of the war were not only to draw closer the ties which bound Rome to the Greek states, but to inspire the senate with a genuine dread of Philip's restless ambition, and with a bitter resentment against him for his union with Hannibal. The events of the next four years served to deepen both these feelings. In 205 Philip entered into a compact with Antiochus III. of Syria for the partition between them of the dominions of Egypt,[6] now left by the death of Ptolemy Philopator to the rule of a boy-king. Antiochus was to take Coele-Syria and Phoenicia, while Philip claimed for his share the districts subject to Egypt on the coasts of the Aegean and the Greek islands. Philip no doubt hoped to be able to secure these unlawful acquisitions before the close of the Second Punic War should set Rome free to interfere with his plans. But the obstinate resistance offered by Attalus of Pergamum and the Rhodians upset his calculations. In 201 Rome made peace with Carthage, and the senate had leisure to listen to the urgent appeal for assistance which reached her from her Eastern allies. With Antiochus indeed the senate was not yet prepared to quarrel; but with Philip the senate had no thoughts of a peaceful settlement. Their animosity against him has been deepened by the assistance he had recently rendered to Carthage. Always an unsafe and turbulent neighbour, he would, if allowed to become supreme in the Aegean, prove as dangerous to her interests in the East as Carthage had been in the West. To cripple or at least to stay the growth of Philip's power was in the eyes of the senate a necessity; but it was only by representing a Macedonian invasion of Italy as imminent that they persuaded the assembly, which was longing for peace, to pass a declaration of war[7] (200).

554.

The war began in the summer of 200 B.C., and though the landing of the Roman legions in Epirus was not followed, as had been hoped, by any general rising against Philip, yet the latter had soon to discover that, if they were not enthusiastic for Rome, they were still less inclined actively to assist himself. Neither by force nor by diplomacy could he make any progress south of Boeotia. The fleets of Pergamum and Rhodes, now the zealous allies of Rome, protected Attica and watched the eastern coasts. The Achaeans and Nabis of Sparta were obstinately neutral, while nearer home in the north the Epirots and Aetolians threatened Thessaly and Macedonia. His own resources both in men and in money had been severely strained by his constant wars,[8] and the only ally who could have given him effective assistance, Antiochus, was fully occupied with the conquest of Coele-Syria. It is no wonder then that, in spite of his dashing generalship and high courage, he made but a brief stand. T. Quinctius Flamininus (consul 198), in his first year of command, defeated him on the Aous, drove him back to the pass of Tempe, and in the next year utterly routed him at Cynoscephalae. Almost at the same moment the Achaeans, who had now joined Rome, took Corinth, and the Rhodians defeated his troops in Caria.[9] Further resistance was impossible; Philip submitted, and early the next year a Roman commission reached Greece with instructions to arrange terms of peace. These were such as effectually secured Rome's main object in the war, the removal of all danger to herself and her allies from Macedonian aggression.[10] Philip was left in possession of his kingdom, but was degraded to the rank of a second-rate power, deprived of all possessions in Greece, Thrace and Asia Minor, and forbidden, as Carthage had been in 201, to wage war without the consent of Rome, whose ally and friend he now became.

Second Macedonian War, 200–197—554–57.

556.

553.

The second point in the settlement now effected by Rome was the liberation of the Greeks. The "freedom of Greece" was proclaimed at the Isthmian games amid a scene of wild enthusiasm,[11] which reached its height when two years later (194) Flamininus withdrew his troops even from the "three fetters of Greece"—Chalcis, Demetrias and Corinth.[12] There is no reason to doubt that, in acting thus, not only Flamininus himself, but the senate and people at home were influenced, partly at any rate, by feelings of genuine

sympathy with the Greeks and reverence for their past. It is equally clear that no other course was open to them. For Rome to have annexed Greece, as she had annexed Sicily and Spain, would have been a flagrant violation of the pledges she had repeatedly given both before and during the war; the attempt would have excited the fiercest opposition, and would probably have thrown the Asiatic as well as the European Greeks into the arms of Antiochus. But a friendly and independent Greece would be at once a check on Macedon, a barrier against aggression from the East, and a promising field for Roman commerce. Nor while liberating the Greeks did Rome abstain from such arrangements as seemed necessary to secure the predominance of her own influence. In the Peloponnese, for instance, the Achaeans were rewarded by considerable accessions of territory; and it is possible that the Greek states, as allies of Rome, were expected to refrain from war upon each other without her consent.[1]

Antiochus III. of Syria, Philip's accomplice in the proposed partition of the dominions of their common rival, Egypt, returned from the conquest of Coele-Syria (198) to learn first of all that Philip was hard pressed by the Romans, and shortly afterwards that he had been decisively beaten at Cynoscephalae. It was already too late to assist his former ally, but Antiochus resolved at any rate to lose no time in securing for himself the possessions of the Ptolemies in Asia Minor and in the Aegean, which Philip had claimed, and which Rome now pronounced free and independent. In 197–96 he overran Asia Minor and crossed into Thrace.[2] But Antiochus was pleasure-loving, irresolute, and no general, and it was not until 192 that the urgent entreaties of the Aetolians, and the withdrawal of the Roman troops from Greece, nerved him to the decisive step of crossing the Aegean; even then the force he took with him was so small as to show that he completely failed to appreciate the nature of the task before him.[3] At Rome the prospect of a conflict with Antiochus excited great anxiety, and it was not until every resource of diplomacy had been exhausted that war was declared,[4] and the real weakness which lay behind the once magnificent pretensions of the "king of kings" was revealed.

War with Antiochus, 192–89: 562–65.

587–88.

562.

Had Antiochus acted with energy when in 192 he landed in Greece, he might have won the day before the Roman legions appeared. As it was, in spite of the warnings of Hannibal,[5] who was now in his camp, and of the Aetolians, he frittered away valuable time between his pleasures at Chalcis and useless attacks on petty Thessalian towns. In 191 Glabrio landed at the head of an imposing force; and a single battle at Thermopylae broke the courage of Antiochus, who hastily recrossed the sea to Ephesus, leaving his Aetolian allies to their fate. But Rome could not pause here. The safety of her faithful allies, the Pergamenes and Rhodians, and of the Greek cities in Asia Minor, as well as the necessity of chastising Antiochus, demanded an invasion of Asia. A Roman fleet had already (191) crossed the Aegean, and in concert with the fleets of Pergamum and Rhodes worsted the navy of Antiochus.

562.

563.

564.

In 190 the new consul L. Scipio, accompanied by his famous brother, the conqueror of Africa, led the Roman legion for the first time into Asia. At Magnesia ad Sipylum, in Lydia, he met and defeated the motley and ill-disciplined hosts of the great king.[6] For the first time the West, under Roman leadership, successfully encountered the forces of the East, and the struggle began which lasted far on into the days of the emperors. The terms of the peace which followed the victory at Magnesia tell their own story clearly enough. There is no question, any more than in Greece, of annexation; the main object in view is that of securing the predominance of Roman interests and influence throughout the peninsula of Asia Minor, and removing to a safe distance the only eastern power which could be considered dangerous.[7] The line of the Halys and the Taurus range, the natural boundary of the peninsula eastward, was established as the boundary between Antiochus and the kingdoms, cities and peoples now enrolled as the allies and friends of Rome. This line Antiochus was forbidden to cross; nor was he to send ships of war farther west than Cape Sarpedon in Cilicia. Immediately to the west of this frontier lay Bithynia, Paphlagonia and the immigrant Celtic Galatae, and these frontier states, now the allies of Rome, served as a second line of defence against attacks from the east. The area lying between these "buffer states" and the Aegean was organized by Rome in such a way as should at once reward the fidelity of her allies and secure both her own paramount authority and safety from foreign attack. Pergamum and Rhodes were so strengthened—the former by the gift of the Chersonese, Lycaonia, Phrygia, Mysia and Lydia, the latter by that of Lycia and Caria—as not only amply to reward their loyalty, but to constitute them effective props of Roman interests and effective barriers alike against Thracian and Celtic raids in the north and Syrian aggression in the south. Lastly, the Greek cities on the coast, except those already tributary to Pergamum, were declared free, and established as independent allies of Rome.

Settlement of western Asia.

In a space of little over eleven years (200–189) Rome had broken the power of Alexander's successors and established throughout the eastern Mediterranean a Roman protectorate.

554–65.

It was in the western half of this protectorate that the first steps in the direction of annexation were taken. The enthusiasm provoked by the liberation of the Greeks had died away, and its place had been taken by feelings of dissatisfied ambition or sullen resentment. Internecine feuds and economic distress had brought many parts of Greece to the verge of anarchy, and, above all, the very foundations of the settlement effected in 197 were threatened by the reviving power and aspirations of Macedon. Loyally as Philip had aided Rome in the war with Antiochus, the peace of Magnesia brought him nothing but a fresh humiliation. He was forced to abandon all hopes of recovering Thessaly, and he had in addition to see the hated king of Pergamum installed almost on his borders as master of the Thracian Chersonese. Resistance at the time was unavailing, but from 189 until his death (179) he laboured patiently and quietly to increase the internal resources of his own kingdom,[8] and to foment, by dexterous intrigue, feelings of hostility to Rome among his Greek and barbarian neighbours. His successor, Perseus, his son by a left-handed alliance, continued his father's work. He made friends among the Illyrian and Thracian princes, connected himself by marriage with Antiochus IV. of Syria and with Prusias of Bithynia, and, among the Greek peoples, strove, not without success, to revive the memories of the past glories of Greece under the Macedonian leadership of the great Alexander.[9] The senate could no longer hesitate. They were well aware of the restlessness and discontent in Greece; and after hearing from Eumenes of Pergamum, and from their own officers, all details of Perseus's intrigues and preparations, they declared war.[10] The struggle, in spite of Perseus's courage and the incapacity at the outset of the Roman commanders, was short and decisive. The sympathy of the Greeks with Perseus, which had been encouraged by the hitherto passive attitude assumed by Rome, instantly evaporated on the news that the Roman legions were on their way to Greece. No assistance came from Prusias of Antiochus, and Perseus's only allies were the Thracian king Cotys and the Illyrian Genthius. The victory gained by L. Aemilius Paullus at Pydna (168) ended the war.[11] Perseus became the prisoner of Rome, and as such died in Italy a few years later.[12] Rome had begun the war with the

fixed resolution no longer of crippling but of destroying the Macedonian state. Perseus's repeated proposals for peace during the war had been rejected; and his defeat was followed by the final extinction of the kingdom of Philip and Alexander.[1] Macedonia, though it ceased to exist as a single state, was not, however, definitely constituted a Roman province.[2] On the contrary, the mistake was made of introducing some of the main principles of the provincial system—taxation, disarmament and the isolation of the separate communities—without the addition of the element most essential for the maintenance of order—that of a resident Roman governor. The four petty republics now created were each autonomous, and each separated from the rest by the prohibition of *commercium* and *conubium*, but no central controlling authority was substituted for that of the Macedonian king. The inevitable result was confusion and disorder, resulting finally (149–48) in the attempt of a pretender, Andriscus, who claimed to be a son of Perseus, to resuscitate the ancient monarchy.[3] On his defeat in 148 the senate declared Macedonia a Roman province, and placed a Roman magistrate at its head.[4]

605–8. Macedonia a Roman province.

From 189 to the defeat of Perseus in 168 no formal change of importance in the status of the Greek states had been made by Rome. The senate, though forced year after year to listen to the mutual recriminations and complaints of rival communities and factions, contented itself as a rule with intervening just enough to remind the Greeks that their freedom was limited by its own paramount authority, and to prevent any single state or confederacy from raising itself too far above the level of general weakness which it was the interest of Rome to maintain. After the victory at Pydna, however, the sympathy shown for Perseus, exaggerated as it seems to have been by the interested representations of the romanizing factions in the various states, was made the pretext for a more emphatic assertion of Roman ascendancy. All those suspected of Macedonian leanings were removed to Italy, as hostages for the loyalty of their several communities,[5] and the real motive for the step was made clear by the exceptionally severe treatment of the Achaeans, whose loyalty was not really doubtful, but whose growing power in the Peloponnese and independence of language had awakened alarm at Rome. A thousand of their leading men, among them the historian Polybius, were carried off to Italy (see Polybius). In Aetolia the Romans connived at the massacre by their so-called friends of five hundred of the opposite party. Acarnania was weakened by the loss of Leucas, while Athens was rewarded for her unambitious loyalty by the gift of Delos and Samos.

Affairs in Greece. 565–87.

But this somewhat violent experiment only answered for a time. In 148 the Achaeans rashly persisted, in spite of warnings, in attempting to compel Sparta by force of arms to submit to the league. When threatened by Rome with the loss of all that they had gained since Cynoscephalae, they madly rushed into war.[6] They were easily defeated, and a "commission of ten," under the presidency of L. Mummius, was appointed by the senate thoroughly to resettle the affairs of Greece.[7] Corinth, by orders of the senate, was burnt to the ground and its territory confiscated. Thebes and Chalcis were destroyed, and the walls of all towns which had shared in the last desperate outbreak were razed to the ground. All the existing confederacies were dissolved; no *commercium* was allowed between one community and another. Everywhere an aristocratic type of constitution, according to the invariable Roman practice, was established, and the payment of a tribute imposed. Into Greece, as into Macedonia in 167, the now familiar features of the provincial system were introduced—disarmament, isolation and taxation. The Greeks were still nominally free, and no separate province with a governor of its own[8] was established, but the needed central control was provided by assigning to the neighbouring governor of Macedonia a general supervision over the affairs of Greece. From the Adriatic to the Aegean, and as far north as the river Drilo and Mount Scardus, the whole peninsula was now under direct Roman rule.[9]

Settlement of Greece. 146–608.

587.

Beyond the Aegean the Roman protectorate worked no better than in Macedonia and Greece, and the quarrels and disorders which flourished under its shadow were aggravated by its longer duration and by the still more selfish view taken by Rome of her responsibilities.[10] At one period indeed, after the battle of Pydna, it seemed as if the more vigorous, if harsh, system then initiated in Macedon and Greece was to be adopted farther east also. The levelling policy pursued towards Macedon and the Achaeans was applied with less justice to Rome's two faithful and favoured allies, Rhodes and Pergamum. The former had rendered themselves obnoxious to Rome by their independent tone and still more by their power and commercial prosperity. On a charge of complicity with Perseus they were threatened with war, and though this danger was averted[11] they were forced to exchange their equal alliance with Rome for one which placed them in close dependence upon her, and to resign the greater possessions in Lycia and Caria given them in 189. Finally, their commercial prosperity was ruined by the establishment of a free port at Delos,[12] and by the short-sighted acquiescence of Rome in the raids of the Cretan pirates. With Eumenes of Pergamum no other fault could be found than that he was strong and successful; but this was enough. His brother Attalus was invited, but in vain, to become his rival. His turbulent neighbours, the Galatae, were encouraged to harass him by raids. Pamphylia was declared independent, and favours were heaped upon Prusias of Bithynia. These and other annoyances and humiliations had the desired effect. Eumenes and his two successors—his brother and son, Attalus II. and Attalus III.—contrived by dint of studious humility and dexterous flattery to retain their thrones, but Pergamum (q.v.) ceased to be a powerful state, and its weakness, added to that of Rhodes, increased the prevalent disorder in Asia Minor. During the same period we have other indications of a temporary activity on the part of Rome. The frontier of the protectorate was pushed forward to the confines of Armenia by alliances with the kings of Pontus and Cappadocia beyond the Halys. In Syria, on the death of Antiochus Epiphanes (164), Rome intervened to place a minor, Antiochus Eupator, on the throne, under Roman guardianship.[13] In 168 Egypt formally acknowledged the suzerainty of Rome,[14] and in 163 the senate, in the exercise of this new authority, restored Ptolemy Philometor to his throne, but at the same time weakened his power by handing over Cyrene and Cyprus to his brother Euegertes.[15]

The Roman protectorate in Asia. 189–46 – 565–608.

590. 586. 591.

But this display of energy was shortlived. From the death of Eumenes in 159 down to 133 Rome, secure in the absence of any formidable power in the East, and busy with affairs in Macedonia, Africa and Spain, relapsed into an

inactivity the disastrous results of which revealed themselves in the next period, in the rise of Mithradates of Pontus, the spread of Cretan and Cilician piracy, and the advance of Parthia.

Both the western and eastern Mediterranean now acknowledged the suzerainty of Rome, but her relations with the two were from the first different. The West fell to her as the prize of victory over Carthage, and, the Carthaginian power broken, there was no hindrance to the immediate establishment in Sicily, Sardinia, Spain, and finally in Africa, of direct Roman rule. To the majority, moreover, of her western subjects she brought a civilization as well as a government of a higher type than any before known to them. And so in the West she not only formed provinces but created a new and wider Roman world. To the East, on the contrary, she came as the liberator of the Greeks; and it was only slowly that in this part of the Empire her provincial system made way. In the East, moreover, the older civilization she found there obstinately held its ground. Her proconsuls governed and her legions protected the Greek communities, but to the last the East remained in language, manners and thought Greek and not Roman.

PERIOD C: THE PERIOD OF THE REVOLUTION (146–49 B.C.).—In the course of little more than a century, Rome had become the supreme power in the civilized world. By all men, says Polybius, it was taken for granted that nothing remained but to obey the commands of the Romans.[1] For the future the interest of Roman history centres in her attempts to perform the two Herculean tasks which this unique position laid upon her,—the efficient government of the subject peoples, and their defence against the barbarian races which swarmed around them on all sides. They were tasks under which the old republican constitution broke down, and which finally overtaxed the strength even of the marvellous organization framed and elaborated by Augustus and his successors.

608–705.

Although in its outward form the old constitution had undergone little change during the age of war and conquest from 265 to 146,[2] the causes, both internal and external, which brought about its fall had been silently at work throughout. Its form was in strictness that of a moderate democracy. The patriciate had ceased to exist as a privileged caste,[3] and there was no longer any order of nobility recognized by the constitution. The senate and the offices of state were in law open to all,[4] and the will of the people in assembly had been in the most explicit and unqualified manner declared to be supreme alike in the election of magistrates, in the passing of laws, and in all matters touching the *caput* of a Roman citizen. But in practice the constitution had become an oligarchy. The senate, not the assembly, ruled Rome, and both the senate and the magistracies were in the hands of a class which, in defiance of the law, arrogated to itself the title and the privileges of a nobility.[5] The ascendancy of the senate is too obvious and familiar a fact to need much illustration here. It was but rarely that the assembly was called upon to decide questions of policy, and then the proposal was usually made by the magistrate in obedience to the express directions of the senate.[6] In the enormous majority of cases the matter was settled by a *senatus consultum*, without any reference to the people at all. The assembly decides for war or peace,[7] but the conduct of the war and the conditions of peace are matters left to the senate (*q.v.*). Now and then the assembly confers a command upon the man of its choice, or prolongs the *imperium* of a magistrate,[8] but, as a rule, these and all questions connected with foreign affairs are settled within the walls of the senate-house.[9] It is the senate which year after year assigns the commands and fixes the number and disposition of the military forces,[10] directs the organization of a new province,[11] conducts negotiations, and forms alliances. Within Italy, though its control of affairs was less exclusive, we find that, besides supervising the ordinary current business of administration, the senate decides questions connected with the Italian allies, sends out colonies, allots lands, and directs the suppression of disorders. Lastly, both in Italy and abroad it managed the finances.[12] Inseparably connected with this monopoly of affairs to the exclusion of the assembly was the control which in practice, if not in theory, the senate exercised over the magistrates. The latter had become what Cicero wrongly declares they were always meant to be, merely the subordinate ministers of the supreme council,[13] which assigned them their departments, provided them with the necessary equipment, claimed to direct their conduct, prolonged their commands, and rewarded them with triumphs. It was now at once the duty and the interest of a magistrate to be *in auctoritate senatus*, "subject to the authority of the senate," and even the once formidable *tribuni plebis* are found during this period actively and loyally supporting the senate, and acting as its spokesmen in the assembly.[14]

Constitutional changes, 265–146–489–608.

Ascendancy of the senate.

The causes of this ascendancy of the senate are to be found firstly in the fact that the senate was the only body capable of conducting affairs in an age of incessant war. The voters in the assembly, a numerous, widely scattered body, could not readily be called together, and when assembled were very imperfectly qualified to decide momentous questions of military strategy and foreign policy. The senate, on the contrary, could be summoned in a moment,[15] and included in its ranks all the skilled statesmen and soldiers of the commonwealth. The subordination of the magistrates was equally the result of circumstances, for, as the numbers of the magistrates, and also the area of government, increased, some central controlling power became absolutely necessary to prevent collisions between rival authorities, and to secure a proper division of labour, as well as to enforce the necessary concert and co-operation.[16] No such power could be found anywhere in the republican system but in the senate, standing as it necessarily did in the closest relations with the magistrate, and composed as it was increasingly of men who were or had been in office.

Its causes.

Once more, behind both senate and magistrates, lay the whole power and influence of the new nobility.[17] These *nobiles* were essentially distinct from the older and more legitimate patrician aristocracy. Every patrician was of course noble, but the majority of the "noble families" in 146 were not patrician but plebeian.[18] The title had been gradually appropriated, since the opening of the magistracies, by those families whose members had held curule office, and had thereby acquired the *ius imaginum*. It was thus in theory within the reach of any citizen who could win election even to the curule aedileship, and, moreover, it carried with it no legal privileges whatsoever. Gradually,

The nobiles.

534.

545.

608.

[1] Polyb. iii. 4.

[2] The most important change was the assimilation of the division by classes and centuries with that by tribes, a change possibly due to the censorship of Gaius Flaminius in 220 (Mommsen, *Staatsr.* iii. 270). On this point see COMITIA.

[3] A few offices of a more or less priestly character were still filled only by patricians, *e.g. rex sacrorum, flamen Dialis*. A plebeian first became *curio maximus* in 209 (Livy xxvii. 8).

[4] The *lectio senatus* was in the hands of the censors, but whether before Sulla's time their choice was subject to legal restrictions is doubtful (see SENATE).

[5] Mommsen, *Hist. of Rome*, iii. 7; Lange, *Röm. Alterth.* ii. 1 ff.

[6] "Ex auctoritate senatus." The *lex Flaminia agraria* of 232 was an exception (Cic. *De senect.* 4; Polyb. ii. 21). In 167 B.C. a praetor brought the question of war with Rhodes directly before the assembly, but this was condemned as unprecedented (*novo malogue exemplo*, Liv. xlv. 21).

[18] *E.g.* Livii, Sempronii, Caecilii, Licinii, &c.

however, the ennobled plebeian families drew together, and combined with the older patrician *gentes* to form a distinct order. Office brought wealth and prestige, and both wealth and prestige were liberally employed in securing for this select circle a monopoly of political power, and excluding new men.[1] Already by the close of the period it was rare for any one but a noble to find his way into high office or into the senate. The senate and magistrates are the mouthpieces of this order, and identified with it in policy and interest. Lastly, it must be allowed that both the senate and the nobility had to some extent justified their power by the use they made of it. It was their tenacity of purpose and devoted patriotism which had carried Rome through the dark days of the Hannibalic War. The heroes of the struggle with Carthage belonged to the leading families; the disasters at the Trasimene Lake and at Cannae were associated with the blunders of popular favourites.

Weakness of the senatorial government.

From the first, however, there was an inherent weakness in this senatorial government. It had no sound constitutional basis, and with the removal of its accidental supports it fell to the ground. Legally the senate had no positive authority. It could merely advise the magistrate when asked to do so, and its decrees were strictly only suggestions to the magistrate, which he was at liberty to accept or reject as he chose.[2] It had, it is true, become customary for the magistrate not only to ask the senate's advice on all important points, but to follow it when given. But it was obvious that if this custom were weakened, and the magistrates chose to act independently, the senate was powerless. It might indeed anathematize[3] the refractory official, or hamper him if it could by setting in motion against him a colleague or the tribunes, but it could do no more, and these measures failed just where the senate's control was most needed and most difficult to maintain—in its relations with the generals and governors of provinces abroad. The virtual in-

608.

dependence of the proconsul was before 146 already exciting the jealousy of the senate and endangering its supremacy.[4] Nor again had the senate any legal hold over the assembly. Except in certain specified cases, it rested with the magistrate to decide whether any question should be settled by a decree of the senate or a vote of the assembly.[5] If he decided to make a proposal to the assembly, he was not bound except by custom to obtain the previous approval of the senate,[6] and the constitution set no limits to the power of the assembly to decide any question whatsoever that was laid before it.

587.

From 167, at least, onwards, there were increasing indications that both the acquiescence of the people in senatorial government and the loyalty of the magistrates to the senate were failing. The absorbing excitement of the great wars had died away; the economic and social disturbance and distress which they produced were creating a growing feeling of discontent; and at the same time the senate provoked inquiries into its title to govern by its failure any longer to govern well. In the East there was confusion; in the West a single native chieftain defied the power which had crushed Carthage. At home the senate was becoming more and more simply an organ of the nobility, and the nobility were becoming every year more exclusive, more selfish, and less capable and unanimous.[7]

621-705.

But if the senate was not to govern, the difficulty arose of finding an efficient substitute, and it was this difficulty that mainly determined the issue of the struggles which convulsed Rome from 133 to 49. As the event showed, neither the assembly nor the numerous and disorganized magistracy was equal to the work; the magistrates were gradually pushed aside in favour of a more centralized authority, and the former became only the means by which this new authority was first encouraged in opposition to the senate and finally established in a position of impregnable strength. The assembly which made Pompey and Caesar found out too late that it could not unmake them.

Effects of conquest on Roman society: the new wealth.

It is possible that these constitutional and administrative difficulties would not have proved so rapidly fatal to the Republic had not its very foundations been sapped by the changes which followed more or less directly on the conquests of the 3rd and 2nd centuries B.C. For the opening of the world to Rome, and of Rome to the world, produced a radical change in the structure of Roman society. The subjugation of the Mediterranean countries, by placing at the disposal of Rome the vast natural resources of the West and the accumulated treasures of the East, caused a rapid rise in the standard of wealth and a marked change in its distribution. The Roman state was enabled to dispense with the direct taxation of its citizens[8] since it derived all the revenue which it needed from the subject countries. But the wealth drawn from the provinces by the state was trifling in amount compared with that which flowed into the pockets of individual citizens. Not only was the booty taken in war largely appropriated by the Roman commanders and their men, but a host of money-makers settled upon the conquered provinces and exploited them for their profit. The nobles engaged in the task of administration, the contractors (*publicani*) who farmed the revenues, and the "men of business" (*negotiatores*) who, as money-lenders, merchants or speculators, penetrated to every corner of the Empire, reaped a rich harvest at the expense of the provincials. Farming in Italy on the old lines became increasingly laborious and unprofitable owing to the importation of foreign corn and foreign slaves,[9] and capitalists sought easier methods of acquiring wealth. If this had meant that capital was expended in developing the natural resources of the provinces, the result would have been to increase the prosperity of the countries subject to Rome; but it was not so. The Roman *negotiatores*, who were often merely the agents of the great families of Rome, drained the accumulated wealth of the provinces by lending money to the subject communities at exorbitant rates of interest. Cicero, for example, found when governor of Cilicia that M. Junius Brutus had lent a large sum to the people of Salamis in Cyprus at 48% compound interest; and we cannot suppose that this was an exceptional case. Such practices as these, together with the wasteful and oppressive system of tax-farming, and the deliberate extortions carried on by senatorial governors, reduced the flourishing cities of the Greek East, within the space of two generations, to utter economic exhaustion.

Accentuation of class distinctions.

But the reaction of the same process on Rome herself had far more important consequences. The whole structure of Roman society was altered, and the equality and homogeneity which had once been its chief characteristics were destroyed. The Roman nobles had not merely ceased, as in old days, to till their own farms; they had found a means of enriching themselves beyond the dreams of avarice,

[1] Livy xxii. 34, "plebeios nobiles . . . contemnere plebem, ex quo contemni a patribus desierint, conpisse"; cf. Sall. *Jug.* 41, "paucorum arbitrio belli domique agitabatur; penes eosdem aerarium, provinciae, magistratus." Mommsen, *Hist. of Rome*, iii. 15 n. The number of new families ennobled dwindles rapidly after 200 B.C.; Willems, *Le Sénat de la république romaine*, i. 366 seq. (Paris, 1878).

[2] The senators' whole duty is "sententiam dicere." The senator was asked "quid censes?" the assembly "quid velitis jubeatis?" Cf. also the saving clause, "Si eis videretur" (*sc.* consulibus, &c.) in Scta., *g.* Cic. *Phil.* v. 19, 53.

[3] By declaring his action to be "contra rempublicam." The force of this anathema varied with circumstances. It had no legal value.

[4] Livy xxxviii. 42, of Cn. Manlius Vulso in Asia, 189 B.C.; cf. also the position of the two Scipios.

[5] Hence the same things, *e.g.* founding of colonies, are done in one year by a Sctum., in another by a *lex*; cf. Cic. *De rep.* ii. 32, 56; *Phil.* i. 2, 6, of Antony as consul, "mutata omnia, nihil per senatum, omnia per populum."

[6] There was no legal necessity, before Sulla's time, for getting the *senatus auctoritas* for a proposal to the assembly.

[7] See generally Mommsen, *Hist. of Rome*, i. bk. iii. cap. 6; Lange, *Röm. Alterth.* vol. ii.; Ihne, bk. v. cap. i. The first law against bribery at elections was passed in 181 B.C. (Livy xl. 19), and against magisterial extortion in the provinces in 149 (*Lex Calpurnia de pecuniis repetundis*). The senators had special seats allotted to them in the theatre in 194 B.C.; Livy xxxiv. 44, 54.

[8] The *tributum* was no longer levied after 167 B.C. (Cic. *Off.* ii. 22; Plin. *H.N.* xxxiii. 56).

[9] See, however, p. 637, note 1 and reff.

and when they returned from the government of a province it was to build sumptuous villas, filled with the spoils of Greece and Asia, to surround themselves with troops of slaves and dependents, and to live rather as princes than as citizens of a republic. The *publicani* and *negotiatores* formed a second order in the state, which rivalled the first in wealth and coveted a share in its political supremacy; while the third estate, the *plebs urbana*, was constantly increasing in numbers and at the same time sinking into the condition of an idle proletariat. The accentuation of class distinctions is indeed inevitable in a capitalist society, such as that of Rome was now becoming. But the process was fraught with grave political danger owing to the peculiarities of the Roman constitution, which rested in theory on the ultimate sovereignty of the people, who were in practice represented by the city mob. To win the support of the *plebs* became a necessity for ambitious politicians, and the means employed for this end poisoned the political life of Rome. The wealth derived from the provinces was freely spent in bribery,[1] and the populace of Rome was encouraged to claim as the price of its support a share in the spoils of empire.

It was not only the structure and composition of Roman society that underwent a transformation. The victory of Rome in her struggle for supremacy in the Mediterranean basin had been largely due to the powerful conservative forces by which her institutions were preserved from decay. Respect for the *mos majorum*, or ancestral custom, imposed an effective check on the desire for innovation. Though personal religion, in the deeper sense, was foreign to the Roman temperament, there was a genuine belief in the gods whose favour had made Rome great in the past and would uphold her in the future so long as she trod in the old paths of loyalty and devotion. Above all, the healthy moral traditions of early Rome were maintained by the discipline of the family, resting on the supreme authority of the father—the *patria potestas*—and the powerful influence of the mother, to whom the early training of the child was entrusted.[2] Finally, the institution of the censorship, backed as it was by the mighty force of public opinion, provided a deterrent which prevented any flagrant deviation from the accepted standard of morals. All this was changed by the influence of Greek civilization, with which Rome was first brought face to face in the 3rd century B.C. owing to her relations with Magna Graecia. At first the results of contact with the older and more brilliant culture of Hellas were on the whole good. In the 2nd century B.C., when constant intercourse was established with the communities of Greece proper and of Asia Minor, "philhellenism" became a passion, which was strongest in the best minds of the day and resulted in a quickened intellectual activity, wider sympathies and a more humane life. But at the same time the "new learning" was a disturbing and unsettling force. The Roman citizen was confronted with new doctrines in politics and religion, and initiated into the speculations of critical philosophy.[3] Under the influence of this powerful solvent the fabric of tradition embodied in the *mos majorum* fell to pieces; a revolt set in against Roman discipline and Roman traditions of self-effacement, and the craving for individual distinction asserted itself with irresistible vehemence. As it had been in the days of the "Sophistic" movement at Athens, so it was now with Rome; a higher education, which, owing to its expense, was necessarily confined to the wealthier classes, interposed between the upper and lower ranks of society a barrier even more effectual than that set up by differences of material condition, and by releasing the individual from the trammels of traditional morality, gave his ambition free course. The effect on private morals may be gauged by the vehemence with which the reactionary opposition, headed by M. Porcius Cato (consul, 195 B.C.; censor, 184 B.C.), inveighed against the new fashions, and by the list of measures passed to check the growth of luxury and licence, and to exclude the foreign teachers of the new learning.[4] It was all in vain. The art of rhetoric, which was studied through the medium of Greek treatises and Greek models, furnished the Roman noble with weapons of attack and defence of which he was not slow to avail himself in the forum and the senate-house. In the science of money-making, which had been elaborated under the Hellenistic monarchies, the Roman capitalists proved apt pupils of their Greek teachers. Among the lower classes, contact with foreign slaves and freedmen, with foreign worships and foreign vices, produced a love of novelty which no legislation could check. Even amongst women there were symptoms of revolt against the old order, which showed itself in a growing freedom of manners and impatience of control,[5] the marriage tie was relaxed,[6] and the respect for mother and wife, which had been so powerful a factor in the maintenance of the Roman standard of morals, was grievously diminished. Thus Rome was at length brought face to face with a moral and economic crisis which a modern historian has described in the words: "Italy was living through the fever of moral disintegration and incoherence which assails all civilized societies that are rich in the manifold resources of culture and enjoyment, but tolerate few or no restraints on the lawless struggle of contending appetites." In this struggle the Roman Republic perished, and personal government took its place. The world had outgrown the city-state and its political machinery, and as the notions of federalism (on any large scale) and representative government had not yet come into being, no solution of the problem was possible save that of absolutism. But a far stronger resistance would have been opposed to political revolution by the republican system had not public morals been sapped by the influences above described. Political corruption was reduced to a science[7] for the benefit of individuals who were often faced with the alternatives of ruin or revolution;[8] there was no longer any body of sound public opinion to which, in the last resort, appeal could be made; and, lurid before the final catastrophe took place, Roman society itself had become, in structure and temper, thoroughly unrepublican.

The new learning and manners.

559,570.

The first systematic attack upon the senatorial government is connected with the names of Tiberius and Gaius Gracchus (*q.v.*), and its immediate occasion was an attempt to deal with no less a danger than the threatened disappearance of the class to which of all others Rome owed most in the past.[9] The small landholders throughout the greater part of Italy were sinking deeper into ruin under the pressure of accumulated difficulties. The Hannibalic war had laid waste their fields and thinned their numbers, nor when peace returned to Italy did it bring with it any revival of prosperity. The heavy burden of military service still pressed ruinously upon them,[10] and in addition they were called upon to compete with the foreign corn

The Gracchi, 133–21 – 621–33.

[1] From 181 B.C. onwards a succession of laws *de ambitu* were passed to prevent bribery, but without effect.

[2] Cf. Tacitus's account of Cornelia, the mother of the Gracchi, and Aurelia, the mother of Julius Caesar, in the dialogue *De oratoribus*, c. 28.

[3] It is to be noted that these subjects were, generally speaking, taught by freedmen or slaves.

[4] In 161 B.C. a decree of the senate was passed against "philosophi et rhetores Latini, uti Romae ne essent" (Gell. xv. 11). In 155 B.C. the philosopher Carneades was expelled from Rome (Plut. *Cato*. 22).

[5] The elder Cato complained of this as early as 195 B.C. (Liv. xxxiv. 2).

[6] Divorce was unknown at Rome until 231 B.C. (Dionys. ii. 25). In the last century of the Republic it was of daily occurrence.

[7] In the Ciceronian period the lower classes of Rome, with whom the voting power in the *comitia* rested, were openly organized for purposes of bribery by means of *collegia* and *sodalicia*, nominally religious bodies.

[8] Caesar had accumulated debts amounting to £800,000 by the time of his praetorship. Catiline and his fellow-bankrupts, amongst whom were several women, including a certain Sempronia who, as we are told by Sallust, "danced and played better than an honest woman need do," hoped to bring about a cancelling of debts (*novae tabulae*).

[9] For authorities, see under GRACCHUS.

[10] To Spain alone more than 150,000 men were sent between 196 and 169 (Ihne iii. 319); compare the reluctance of the people to declare war against Macedon in 200 B.C., and also the case of Spurius Ligustinus in 171 (Livy, xlii. 34).

imported from beyond the sea, and with the foreign slave-labour purchased by the capital of wealthier men.[1] Farming became unprofitable, and the hard laborious life with its scanty returns was thrown into still darker relief when compared with the stirring life of the camps with its opportunities of booty, or with the cheap provisions, frequent largesses and gay spectacles to be had in the large towns. The small holders went off to follow the eagles or swell the proletariat of the cities, and their holdings were left to run waste or merged in the vineyards, oliveyards and above all in the great cattlefarms of the rich, and their own place was taken by slaves. The evil was worst in Etruria and in southern Italy; but everywhere it was serious enough to demand the earnest attention of Roman statesmen. Of its existence the government had received plenty of warning in the declining numbers of able-bodied males returned at the census,[2] in the increasing difficulties of recruiting for the legions,[3] in servile outbreaks in Etruria and Apulia,[4] and between 200 and 160 a good deal was attempted by way of remedy. In addition to the foundation of twenty colonies,[5] there were frequent allotments of land to veteran soldiers, especially in Apulia and Samnium.[6] In 180, 40,000 Ligurians were removed from their homes and settled on vacant lands once the property of a Samnite tribe,[7] and in 160 the Pomptine marshes were drained for the purpose of cultivation.[8] But these efforts were only partially successful. The colonies founded in Cisalpine Gaul and in Picenum flourished, but of the others the majority slowly dwindled away, and two required recolonizing only eight years after their foundation.[9] The veterans who received land were unfitted to make good farmers; and large numbers, on the first opportunity, gladly returned as volunteers to a soldier's life. Moreover, after 160 even these efforts ceased, and with the single exception of the colony of Auximum in Picenum (157) nothing was done to check the spread of the evil, until in 133 Tiberius Gracchus, on his election to the tribunate, set his hand to the work.

The remedy proposed by Gracchus[10] amounted in effect to the resumption by the state of as much of the "common land" as was not held in occupation by authorized persons and conformably to the provisions of the Licinian law,[11] and the distribution in allotments of the land thus rescued for the community from the monopoly of a few. It was a scheme which could quote in its favour ancient precedent as well as urgent necessity. Of the causes which led to its ultimate failure something will be said later on; for the present we must turn to the constitutional conflict which it provoked. The sense in the first identified itself with the interests of the wealthy occupiers, and Tiberius found himself forced into a struggle with that body, which had been no part of his original plan. He fell back on the legislative sovereignty of the assembly; he resuscitated the half-forgotten powers of interference vested in the tribunate in order to paralyse the action of the senatorial magistrates, and finally lost his life in an attempt to make good one of the weak points in the tribune's position by securing his own re-election for a second year. But the conflict did not end with his death. It was renewed on a wider scale, and with a more deliberate aim by his brother Gaius, who on his election to the tribunate (123) at once came forward as the avowed enemy of the senate.[12] The latter suddenly found its control of the administration threatened at a variety of points. On the invitation of the popular tribune the assembly proceeded to restrict the senate's freedom of action in assigning the provinces.[13] It regulated the taxation of the province of Asia[14] and altered the conditions of military service.[15] In home affairs it inflicted two serious blows on the senate's authority by declaring the summary punishment of Roman citizens by the consuls on the strength of a *senatus consultum* to be a violation of the law of appeal,[16] and by taking out of the senate's hands the control of the newly established court for the trial of cases of magisterial misgovernment in the provinces.[17] Tiberius had committed the mistake of relying too exclusively on the support of one section only of the community; his brother endeavoured to enlist on the popular side every available ally. The Latins and Italians had opposed an agrarian scheme which took from them land which they had come to regard as rightfully theirs, and gave them no share in the benefit of the allotments.[18] Gaius not only removed this latter grievance,[19] but ardently supported and himself brought forward the first proposals made in Rome for their enfranchisement.[20] The indifference of the city populace, to whom the prospect of small holdings in a remote district in Italy was not a tempting one, was overcome by the establishment of monthly doles of corn at a low price.[21] Finally, the men of business—the publicans, merchants and money-lenders—were conciliated by the privilege granted to them of collecting the tithes of the new province of Asia, and placed in direct rivalry with the senate by the substitution of men of their own class as judges in the "quaestio de repetundis," in place of senators.[22] The organizer of this concerted attack upon the position of the senate fell, like his brother, in a riot.

Tiberius Gracchus.

Gaius Gracchus. 631.

The agrarian reforms of the two Gracchi had little permanent effect.[23] Even in the lifetime of Gaius the clause in his brother's law rendering the new holdings inalienable was repealed, and the process of absorption recommenced. In 118 a stop was put to further allotment of occupied land by the consul Philippus, in 111 the whole position of the agrarian question was altered by a law which converted all land still held in occupation into private land.[24] The old controversy as to the proper use of the lands of the community was closed by this act of alienation. The controversy in future turns, not on the right of the poor

Failure of the attempt at agrarian reform. 636. 643.

citizens to the state lands, but on the expediency of purchasing other lands for distribution at the cost of the treasury.[1]

But, though the agrarian reform failed, the political conflict it had provoked continued, and the lines on which it was waged were in the main those laid down by Gaius Gracchus. The sovereignty of the assembly continued to be the watchword of the popular party, and a free use of the tribunician powers of interference and of legislation remained the most effective means of accomplishing their aims.

Ten years after the death of Gaius the *populares* once more summoned up courage to challenge the supremacy of the senate; but it was on a question of foreign administration that the conflict was renewed. The course of affairs in the client state of Numidia since Micipsa's death in 118 had been such as to discredit a stronger government than that of the senate.[2] In defiance of Roman authority, and relying on the influence of his own well-spent gold, Jugurtha had murdered both his legitimate rivals, Hiempsal and Adherbal, and made himself master of Numidia. The declaration of war wrung from the senate (112) by popular indignation had been followed by the corruption of a consul[3] (111) and the crushing defeat of the proconsul Albinus.[4] On the news of this crowning disgrace the storm burst, and on the proposal of the tribunes a commission of inquiry was appointed into the conduct of the war.[5] But the popular leaders did not stop here. Q. Caecilius Metellus, who as consul (109) had succeeded to the command in Numidia, was an able soldier but a rigid aristocrat; and they now resolved to improve their success by entrusting the command instead to a genuine son of the people. Their choice fell on Gaius Marius (see MARIUS), an experienced officer and administrator, but a man of humble birth, wholly illiterate, and one who, though no politician, was by temperament and training a hater of the polished and effeminate nobles who filled the senate.[6] He was triumphantly elected, and, in spite of a decree of the senate continuing Metellus as proconsul, he was entrusted by a vote of the assembly with the charge of the war against Jugurtha (*q.v.*).[7]

Marius, 119–109–636–84.

636.

642.

643.

645.

Jugurtha was vanquished; and Marius, who had been a second time elected consul in his absence, arrived at Rome in January 104, bringing the captive prince with him in chains.[8] But further triumphs awaited the popular hero. The Cimbri and Teutones were at the gates of Italy; they had four times defeated the senatorial generals, and Marius was called upon to save Rome from a second invasion of the barbarians.[9] After two years of suspense the victory at Aquae Sextiae (102), followed by that on the Raudine plain (101), put an end to the danger by the annihilation of the invading hordes; and Marius, now consul for the fifth time, returned to Rome in triumph. There the popular party welcomed him as a leader with all the prestige of a successful general. Once more, however, they were destined to a brief success followed by disastrous defeat. Marius became for the sixth time consul;[10] of the two popular leaders Glaucia became praetor and Saturninus tribune. But Marius and his allies were not statesmen of the stamp of the Gracchi; and the laws proposed by Saturninus had evidently no serious aim in view other than that of harassing the senate. His corn law merely reduced the price fixed in 123 for the monthly dole of corn, and the main point of his agrarian law lay in the clause appended to it requiring all senators to swear to observe its provisions.[11] The laws were carried, but the triumph of the popular leaders was short-lived. Their recklessness and violence had alienated all classes in Rome; and their period of office was drawing to a close. At the elections fresh rioting took place, and Marius as consul was called upon by the senate to protect the state against his own partisans. Saturninus and Glaucia surrendered, but while the senate was discussing their fate they were surrounded and murdered by their opponents.

650.

652.

653.

Saturninus and the Appulean laws.

631.

The popular party had been worsted once more in their struggle with the senate, but none the less their alliance with Marius, and the position in which their votes placed him, marked an epoch in the history of the revolution. The transference of the political leadership to a consul who was nothing if not a soldier was at once a confession of the insufficiency of the purely civil authority of the tribunate and a dangerous encouragement of military interference in political controversies. The consequences were already foreshadowed by the special provisions made by Saturninus for Marius's veterans, and in the active part taken by them in the passing of his laws. Indirectly, too, Marius, though no politician, played an important part in this new departure. His military reforms[12] at once democratized the army and attached it more closely to its leader for the time being. He swept away the last traces of civil distinctions of rank or wealth within the legion, admitted to its ranks all classes, and substituted voluntary enlistment under a popular general for the old-fashioned compulsory levy. The efficiency of the legion was enormously raised at the cost of a complete severance of the ties which bound it to the civil community and to the civil authorities.

Military reforms of Marius.

The next important crisis was due partly to the rivalry which had been growing more bitter each year between the senate and the commercial class, and partly to the long-impending question of the enfranchisement of the Italian allies. The *publicani*, *negotiatores* and others, who constituted what was now becoming known as the equestrian order (see EQUITES), had made unscrupulous use of their control of the courts and especially of the *quaestio de repetundis* against their natural rivals. the official class in the provinces. The threat of prosecution before a hostile jury was held over the head of every governor, legate and quaestor who ventured to interfere with their operations in the provinces. The average official preferred to connive at their exactions; the bolder spirits paid with fines and even exile for their courage. In 92 the necessity for a reform was proved beyond a doubt by the scandalous condemnation of P. Rutilius Rufus,[13] ostensibly on a charge of extortion, in reality as the reward of his efforts to check the extortions of the Roman equites in Asia. The difficulties of the Italian question were more serious. That the Italian allies were discontented was notorious. After nearly two centuries of close alliance, of common dangers and victories, they now eagerly coveted as a boon that complete amalgamation with Rome which they had at first resented as a dishonour. But, unfortunately, Rome had grown more exclusive in proportion as the value set upon Roman citizenship increased. During that early period feelings of hope and disappointment had rapidly succeeded each other; Marcus Fulvius Flaccus, Gaius Gracchus, Saturninus, had all held out promises of relief—and nothing had yet been done. On each occasion they had crowded to Rome, full of eager expectation, only to be harshly ejected from the city by the consul's orders.[14] The justice of their claims could hardly be denied, the danger of continuing to ignore them was obvious—yet the difficulties in the way of granting them were formidable in the extreme, and from a higher than a merely selfish point of view there was much

to be said against the revolution involved in so sudden and enormous an enlargement of the citizen body.

Marcus Livius Drusus (*q.v.*), who as tribune gallantly took up the task of reform, is claimed by Cicero[1] as a member of that party of the centre to which he belonged himself. Noble, wealthy and popular, he seems to have hoped to be able by the weight of his position and character to rescue the burning questions of the day from the grasp of extreme partisans and to settle them peacefully and equitably. But he, like Cicero after him, had to find to his cost that there was no room in the fierce strife of Roman politics for moderate counsels. His proposal to storm the law courts excited the equestrian order and their friends in the senate to fury. The agrarian and corn laws which he coupled with it[2] alienated many more in the senate, and roused the old anti-popular party feeling; finally, his known negotiations with the Italians were eagerly misrepresented to the jealous and excited people as evidence of complicity with a widespread conspiracy against Rome. His laws were carried, but the senate pronounced them null and void.[3] Drusus was denounced in the senate house as a traitor, and on his way home was struck down by the hand of an unknown assassin. His assassination was the signal for an outbreak which had been secretly prepared for some time before. Throughout the highlands of central and southern Italy the flower of the Italian peoples rose as one man.[4] Etruria and Umbria held aloof; the isolated Latin colonies stood firm; but the Sabellian clans, north and south, the Latinized Marsi and Paeligni, as well as the Oscan-speaking Samnites and Lucanians, rushed to arms. No time was lost in proclaiming their plans for the future. A new Italian state was to be formed. The Paelignian town of Corfinium was selected as its capital and re-christened with the proud name of Italica. All Italians were to be citizens of this new metropolis, and here were to be the place of assembly and the senate house. A senate of 500 members and a magistracy resembling that of Rome completed a constitution which adhered closely to the very political traditions which its authors had most reason to abjure.

Marcus Livius Drusus, 91–663.

The Social War, 90–89 – 664–65.

Now, as always in the face of serious danger, the action of Rome was prompt and resolute. Both consuls took the field;[5] with each were five legates, among them the veteran Marius and his destined rival L. Cornelius Sulla, and even freedmen were pressed into service with the legions. But the first year's campaign opened disastrously. In central Italy the northern Sabellians, and in the south the Samnites, defeated the forces opposed to them. And though before the end of the year Marius and Sulla in the north, and the consul Caesar himself in Campania, succeeded in inflicting severe blows on the enemy, and on the Marsi especially, it is not surprising that, with an empty treasury, with the insurgents' strength still unbroken, and with rumours of disaffection in the loyal districts, opinion in Rome should have turned in the direction of the more liberal policy which had been so often scornfully rejected and in favour of some compromise which should check the spread of the revolt, and possibly sow discord among their enemies. Towards the close of the year 90 the consul L. Julius Caesar (killed by Fimbria in 87) carried the *lex Julia*,[6] by which the Roman franchise was offered to all communities which had not as yet revolted; early in the next year (89) the Julian law was supplemented by the *lex Plautia Papiria*, introduced by two of the tribunes, M. Plautius Silvanus and C. Papirius Carbo Arvina, which enacted that any citizen of an allied community then domiciled in Italy might obtain the franchise by giving in his name to a praetor in Rome within sixty days. A third law (*lex Calpurnia*), apparently passed at the same time, empowered Roman magistrates in the field to bestow the franchise there and then upon all who were willing to receive it. This sudden opening of the closed gates of Roman citizenship was completely successful, and its effects were at once visible in the diminished vigour of the insurgents. By the end of 89 the Samnites and Lucanians were left alone in their obstinate hostility to Rome, and neither, thanks to Sulla's brilliant campaign in Samnium, had for the moment any strength left for active aggression.

664.

Lex Julia and lex Plautia Papiria.

665.

665.

The termination of the Social War brought with it no peace in Rome. The old quarrels were renewed with increased bitterness, and the newly enfranchised Italians themselves complained as bitterly of the restriction[7] which robbed them of their due share of political influence by allowing them to vote only in a specified number of tribes. The senate itself was distracted by violent personal rivalries—and all these feuds, animosities and grievances were aggravated by the widespread economic distress and ruin which affected all classes.[8] Lastly, war with Mithradates VI. had been declared; it was notorious that the privilege of commanding the force to be sent against him would be keenly contested, and that the contest would lie between the veteran Marius and L. Cornelius Sulla.[9]

Marius and Cinna.

It was in an atmosphere thus charged with the elements of disturbance that P. Sulpicius Rufus as tribune[10] brought forward his laws. He proposed—(1) that the command of the Mithradatic war should be given to Marius, (2) that the new citizens should be distributed through all the tribes, (3) that the freedmen should no longer be confined to the four city tribes, (4) that any senator owing more than 2000 denarii should lose his seat, (5) that those exiled on suspicion of complicity with the Italian revolt should be recalled. These proposals inevitably provoked a storm, and both sides were ominously ready for violent measures. The consuls, in order to prevent legislation, proclaimed a public holiday. Sulpicius replied by arming his followers and driving the consuls from the forum. The proclamation was withdrawn and the laws carried, but Sulpicius's triumph was short-lived. From Nola in Campania, where lay the legions commanded by him in the Social War, Sulla advanced on Rome, and for the first time a Roman consul entered the city at the head of the legions of the Republic. Resistance was hopeless. Marius and Sulpicius fled,[11] and Sulla, summoning the assembly of the centuries, proposed the measures he considered necessary for the public security, the most important being a provision that the sanction of the senate should be necessary before any proposal was introduced to the assembly.[12] Then, after waiting in Rome long enough to hold the consular elections, he left for Asia early in 87.

P. Sulpicius Rufus, 88–666.

667.

Sulla had conquered, but his victory cost the Republic dear. He had first taught political partisans to look for final success, not to a majority of votes in the forum or campus, but to the swords of the soldiery. The lesson was well learnt. Shortly after his departure L. Cornelius Cinna as consul revived the proposals of Sulpicius;[13] his colleague, Gnaeus Octavius, at the head of an armed force fell upon the new citizens who had collected in crowds to vote,

and the forum was heaped high with the bodies of the slain.[1] Cinna fled, but fled, like Sulla, to the legions. When the senate declared him deposed from his consulship, he replied by invoking the aid of the soldiers in Campania in behalf of the violated rights of the people and the injured dignity of the consulship, and, like Sulla, found them ready to follow where he led. The neighbouring Italian communities, who had lost many citizens in the recent massacre, sent their new champion men and money;[2] while from Africa, whither he had escaped after Sulla's entry into Rome, came Marius with 1000 Numidian horsemen. The senate had prepared for a desperate defence, but fortune was adverse, and after a brief resistance they gave way. Cinna was acknowledged as consul, the sentence of outlawry passed on Marius was revoked and Cinna and Marius entered Rome with their troops. Marius's thirst for revenge was gratified by a frightful massacre, and he lived long enough to be nominated consul for the seventh time. But he held his consulship only a few weeks. Early in 86 he died, and for the next three years Cinna ruled Rome. Constitutional government was virtually suspended. For 85 and 84 Cinna nominated himself and a trusted colleague as consuls.[3] The state was, as Cicero[4] says, without lawful authority.[5] One important matter was carried through—the registration in all the tribes of the newly enfranchised Italians,[6] but beyond this little was done. The attention of Cinna and his friends was in truth engrossed by the ever-present dread of Sulla's return from Asia. The consul Lucius Valerius Flaccus had been consul with Marius in 100 B.C.), sent out to supersede him, was murdered by his own soldiers at Nicomedia.[7] In 85 Sulla, though disowned by his government, concluded a peace with Mithradates.[8] In 84, after settling affairs in Asia and crushing Flaccus's successor, C. Flavius Fimbria, he crossed into Greece, and in the spring of 83 landed at Brundusium with 40,000 soldiers and a large following of *émigré* nobles. Cinna was dead,[9] murdered like Flaccus by his mutinous soldiers; his most trusted colleague, Cn. Papirius Carbo, was commanding as proconsul in Cisalpine Gaul; and the resistance offered to Sulla's advance was slight. At Capua, Sulla routed the forces of one consul, Gaius Norbanus; at Teanum the troops of the other went over in a body to the side of the outlawed proconsul. After a winter spent in Campania he pressed forward to Rome, defeated the younger Marius (consul, 82) near Praeneste, and entered the city without further opposition. In north Italy the success of his lieutenants, Q. Caecilius Metellus Pius (son of Metellus Numidicus), Cn. Pompeius and Marcus Crassus, had been fully as decisive. Cisalpine Gaul, Umbria and Etruria had all been won for Sulla, and the two principal leaders on the other side, Carbo and Norbanus, had each fled, one to Rhodes, the other to Africa. Only one foe remained to be conquered. The Samnites and Lucanians whom Cinna had conciliated, and who saw in Sulla their bitterest foe, were for the last time in arms, and had already joined forces with the remains of the Marian army close to Rome. The decisive battle was fought under the walls of the city, and ended in the complete defeat of the Marians and Italians (battle of the Colline Gate).[10]

669.

The return of Sulla, 83–671.

672.

For a period of nearly ten years Rome and Italy had been distracted by civil war. Sulla was now called upon to heal the divisions which rent the state asunder, to set in working again the machinery of civil government and above all so to modify it as to meet the altered conditions, and to fortify it against the dangers which visibly threatened it in the future. The real charge against Sulla[11] is not that he failed to accomplish all this, for to do so was beyond the powers even of a man so able, resolute and self-confident as Sulla, armed though he was with absolute authority and backed by overwhelming military strength and the prestige of unbroken success. He stands convicted rather of deliberately aggravating some and culpably ignoring others of the evils he should have tried to cure, and of contenting himself with a party triumph when he should have aimed at the regeneration and confirmation of the whole state. His victory was instantly followed, not by any measures of conciliation, but by a series of massacres, proscriptions and confiscations, of which almost the least serious consequence was the immediate loss of life which they entailed.[12] From this time forward the fear of proscription and confiscation recurred as a possible consequence of every political crisis, and it was with difficulty that Caesar himself dissipated the belief that his victory would be followed by a Sullan reign of terror. The legacy of hatred and discontent which Sulla left behind him was a constant source of disquiet and danger. In the children of the proscribed, whom he excluded from holding office, and the dispossessed owners of the confiscated lands, every agitator found ready and willing allies.[13] The moneyed men of the equestrian order were more than ever hostile to the senatorial government, which they now identified with the man who cherished towards them a peculiar hatred,[14] and whose creatures had hunted them down like dogs. The attachment which the new Italian citizens might in time have learnt to feel for the old republican constitution was nipped in the bud by the massacres at Praeneste and Norba, by the harsh treatment of the ancient towns of Etruria, and by the ruthless desolation of Samnium and Lucania.[15] Quite as fatal were the results to the economic prosperity of the peninsula. Sulla's confiscations, following on the civil and social wars, opened the doors wide for a long train of evils. The veterans whom he planted on the lands he had seized[16] did nothing for agriculture, and swelled the growing numbers of the turbulent and discontented.[17] The "Sullan men" became as great an object of fear and dislike as the "Sullan reign."[18] The *latifundia* increased with startling rapidity—whole territories passing into the hands of greedy partisans.[19] Wide tracts of land, confiscated but never allotted, ran to waste.[20] In all but a few districts of Italy the free population finally and completely disappeared from the open country; and life and property were rendered insecure by the brigandage which now developed unchecked, and in which the herdsmen slaves played a prominent part. The outbreaks of Spartacus in 73, and of Catiline ten years later, were significant commentaries on this part of Sulla's work.[21] His constitutional legislation, while it included many useful administrative reforms, is marked by as violent a spirit of partisanship, and as apparently wilful a blindness to the future. The re-establishment on a legal basis of the ascendancy which custom had so long accorded to the

senate was his main object. With this purpose he had already, when consul in 88, made the *senatus auctoritas* legally necessary for proposals to the assembly. He now as dictator[1] followed this up by crippling the power of the magistracy, which had been the most effective weapon in the hands of the senate's opponents. The legislative freedom of the tribunes was already hampered by the necessity of obtaining the senate's sanction; in addition, Sulla restricted their wide powers of interference (*intercessio*) to their original purpose of protecting individual plebeians,[2] and discredited the office by prohibiting a tribune from holding any subsequent office in the state.[3] The control of the courts (*quaestiones perpetuae*) was taken from the equestrian order and restored to the senate.[4] To prevent the people from suddenly installing and keeping in high office a second Marius, he re-enacted the old law against re-election,[5] and made legally binding the custom which required a man to mount up gradually to the consulship through the lower offices.[6] His increase of the number of praetors from six to eight,[7] and of quaestors to twenty,[8] though required by administrative necessities, tended, by enlarging the numbers and further dividing the authority of the magistrates, to render them still more dependent upon the central direction of the senate. Lastly, he replaced the pontifical and augural colleges in the hands of the senatorial nobles, by enacting that vacancies in them should, as before the *lex Domitia* (104), be filled up by co-optation.[9] It cannot be said that Sulla was successful in fortifying the republican system against the dangers which menaced it from without. He accepted as an accomplished fact the enfranchisement of the Italians,[10] but he made no provision to guard against the consequent reduction of the *comitia* to an absurdity,[11] and with them of the civic government which rested upon them, or to organize an effective administrative system for the Italian communities.[12] Of all men, too, Sulla had the best reason to appreciate the dangers to be feared from the growing independence of governors and generals in the provinces, and from the transformation of the old civic militia into a group of professional armies, devoted only to a successful leader, and with the weakest possible sense of allegiance to the state. He had himself, as proconsul of Asia, contemptuously and successfully defied the home government, and he, more than any other Roman general, had taught his soldiers to look only to their leader, and to think only of booty.[13] Yet, beyond a few inadequate regulations, there is no evidence that Sulla dealt with these burning questions, the settlement of which was among the greatest of the achievements of Augustus.[14] One administrative reform of real importance must, lastly, be set down to his credit. The judicial procedure first established in 149 for the trial of cases of magisterial extortion in the provinces, and applied between 149 and 81 to 12 cases of treason and bribery, Sulla extended so as to bring under it the chief criminal offences, and thus laid the foundations of the Roman criminal law.[15]

666. 650. 605-673.

The Sullan system stood for nine years, and was then overthrown—as it had been established—by a successful soldier. It was the fortune of Cn. Pompeius, a favourite officer of Sulla, first of all to violate in his own person the fundamental principles of the constitution re-established by his old chief, and then to overturn it. In Spain the Marian governor Q. Sertorius (see SERTORIUS) had defeated one after another of the proconsuls sent out by the senate, and was already in 77 master of all Hither Spain. To meet the crisis, Pompey, who was not yet thirty, and had never held even the quaestorship, was sent out to Spain with proconsular authority.[16] Still Sertorius held out, until in 72 he was fully murdered by his own officers. The native tribes with had loyally stood by him submitted, and Pompey early in 71 returned with his troops to Italy, where, during his absence in Spain, an event had occurred which had shown Roman society with startling plainness how near it stood to revolution. In 73 Spartacus,[17] a Thracian slave, escaped with seventy others from a gladiators' training school at Capua. In an incredibly short time he found himself at the head of 70,000 runaway slaves, outlaws, brigands and impoverished peasants, and for two years terrorized Italy, routed the legions sent against him, and even threatened Rome. He was at length defeated and slain by the praetor, M. Licinius Crassus, in Apulia. Crassus itself the various classes and parties hostile to the Sullan system had, ever since Sulla's death in 78, been incessantly agitating for the repeal of his most obnoxious laws, and needed only

Over-throw of the Sullan constitution. 70-684. 677. 681. 683. 681. 676.

[1] For Sulla's dictatorship as in itself a novelty, see App. i. 98; Plut. *Sulla*, 33; Cic. *Ad Att.* 9, 15; Cic. *De Legg.* i. 15, 42.

[2] Cic. *De Legg.* iii. 9, 22, "injuriae faciendae potestatem ademit, auxilii ferendi reliquit." Cf. Cic. *Verr.* i. 60, 155; Livy, *Epit.* lxxxix.

[3] Cic. *Pro Cornel.* fr. 78; Ascon. *In Corn.* pp. 59, 70; Appian i. 100.

[4] Vell. ii. 32; Tac. *Ann.* xi. 22; Cic. *Verr. Act.* i. 13, 37.

[5] App. *B.C.* i. 100; cf. Livy vii. 42 (342 B.C.), "ne quis eundem magistratum intra decem annos caperet."

[6] The custom had gradually established itself. Cf. Livy xxxii. 7. The "cursus ordo magistratuum" legalized by Sulla was—quaestorship, praetorship, consulate; App. i. 100.

[7] Pompon. *De orig. juris* (*Dig.* i. 2, 2, 32); Vell. ii. 89. Compare also Cicero, *In Pison.* 15, 35 with Cic. *Pro Milone*, 15, 39. The increase was connected with his extension of the system of *quaestiones perpetuae*, which threw more work on the praetors as the magistrates in charge of the courts.

[8] Tac. *Ann.* xi. 22. The quaestorship henceforward carried with it the right to be called up to the senate. By increasing the number of quaestors, Sulla provided for the supply of ordinary vacancies in the senate and restricted the censors' freedom of choice in filling them up. Fragments of the *lex Cornelia de XX quaestoribus* survive. See *C.I.L.* i. 108; Bruns, *Fontes juris Romani* (ed. 6), p. 91.

[9] Dio xxxvii. 37; Ps. Ascon. 102 (Orelli). He also increased their numbers; Livy, *Epit.* lxxxix.

[10] He did propose to deprive several communities which had joined Cinna of the franchise, but the deprivation was not carried into effect; Cic. *Pro domo*, 30, 79.

[11] The inadequacy of the *comitia* as a representative body was increased by the unequal distribution of the new citizens amongst the thirty-five tribes, each of which formed a single voting unit. Some tribes represented only a thinly populated district in the Campagna with one or two outlying communities, others included large and populous territories. See Mommsen, *Staatsr.* iii. 187; *Hermes*, xxiii. 101 sqq.

[12] Sulla does not appear to have passed any general municipal law; the necessary resettlement of the local constitutions after the Social War was seemingly carried out by commissioners. The fragment of a municipal charter found at Tarentum (*Ephem. epigr.* ix. 1, Dessau, *Inscr. Lat. sel.* 6086) is probably a specimen of such *leges datae*.

[13] Sall. *Cat.* 11. "L. Sulla exercitum, quem sibi fidum faceret, contra morem majorum luxuriose nimisque liberaliter habuerat."

[14] There was a *lex Cornelia de provinciis ordinandis*, but only two of its provisions are known; (1) that a magistrate sent out with the *imperium* should retain it till he re-entered the city (Cic. *Ad Fam.* i. 9, 25), a provision which increased rather than diminished his freedom of action; (2) that an outgoing governor should leave his province within thirty days after his successor's arrival (Cic. *Ad Fam.* iii. 6, 3). A *lex Cornelia de majestate* existed, it is true, a definition of treason evidently framed in the light of recent experience. The magistrate was forbidden "exire de provincia, educere exercitum, bellum sua sponte gerere, in regnum injussu populi ac senatus accedere" (Cic. *Pis.* 21, 50. Sulla also added then to the long list of laws dealing with extortion in the provinces. But the danger lay, not in the want of laws, but in the want of security for their observance by an absolutely autocratic proconsul. The present writer cannot agree with those who would include among Sulla's laws one retaining consuls and praetors in Rome for their year of office and then sending them out to a province. This was becoming the common practice before 81. After 81 it is invariable. Praetors, as needed for the judicial work, and invariable but for two exceptions in the case of consuls; but nowhere is there a hint that there had been any legislation on the subject, and there are indications that it was convenience and not law which maintained the arrangement. Mommsen, *Hist. of Rome*, iv. 118 sqq.; Marquardt, *Staatsverw.* i. 518; cf. also Cic. *Att.* 8, 15; "consules, quibus more majorum concessum est vel omnes adire provincias."

[15] For this, the most lasting of Sulla's reforms, see Mommsen, *Hist. of Rome*, iv. 127 sqq.; Rein, *Criminal-Recht*; Zumpt, *Criminal-Prozess d. Römer*; Greenidge, *Legal Procedure of Cicero's Time*, p. 415 sqq.

[16] Plut. *Pomp.* 17; Livy, *Epit.* xci. For Pompey's earlier life, see POMPEY.

[17] For the Slave War, see SPARTACUS.

a leader in order successfully to attack a government discredited by failure at home and abroad. With the return of Pompey from Spain their opportunity came. Pompey, who understood politics as little as Marius, was anxious to obtain a triumph, the consulship for the next year (70), and as the natural consequence of this an important command in the East. The opposition wanted his name and support, and a bargain was soon struck. Pompey and with him Marcus Licinius Crassus, the real conqueror of Spartacus, were elected consuls, almost in the presence of their troops, which lay encamped outside the gates in readiness to assist at the triumph and ovation granted to their respective leaders. Pompey lost no time in performing his part of the agreement. The tribunes regained their prerogatives.[1] The "perpetual courts" (*quaestiones perpetuae*) were taken out of the hands of the senatorial judices, who had outdone the equestrian order in scandalous corruption,[2] and finally the censors, the first since 86 B.C., purged the senate of the more worthless and disreputable of Sulla's partisans.[3] The victory was complete; but for the future its chief significance lay in the clearness with which it showed that the final decision in matters political lay with neither of the two great parties in Rome, but with the holder of the military authority. The tribunes ceased to be political leaders and became lieutenants of the military commanders, and the change was fatal to the dignity of politics in the city. Men became conscious of the unreality of the old constitutional controversies, indifferent to the questions which agitated the forum and the curia, and contemptuously ready to alter or disregard the constitution itself when it stood in the way of interests nearer to their hearts.

Pompey as consul. *684.*

When his consulship ended, Pompey impatiently awaited at the hands of the politicians he had befriended the further gift of a foreign command. He declined an ordinary province, and from the end of 70 to 67 he remained at Rome in a somewhat affectedly dignified seclusion.[4] But in 67 and 66 the laws of Gabinius and Manilius gave him all and more than all that he expected (see POMPEY). By the former he obtained the sole command for three years against the Mediterranean pirates.[5] He was to have supreme authority over all Roman magistrates in the provinces throughout the Mediterranean and over the coasts for 50 miles inland. Fifteen legati, all of praetorian rank, were assigned to him, with two hundred ships, and as many troops as he thought desirable. The Manilian law transferred from Lucullus and Glabrio to Pompey the conduct of the Mithradatic War in Asia, and with it the entire control of Roman policy and interests in the East.[6] The unrepublican character of the position thus granted to Pompey, and the dangers of the precedent established, were clearly enough pointed out by such moderate men as Q. Lutatius Catulus, the "father of the senate," and by the orator Hortensius—but in vain. Both laws were supported, not only by the tribunes and the populace, but by the whole influence of the *publicani* and *negotiatores*, whose interests in the East were at stake.

Gabinian and Manilian laws. *684-87.* *687, 688.*

Pompey left Rome in 67. In a marvellously short space of time he freed the Mediterranean from the Cilician pirates and established Roman authority in Cilicia itself. He then crushed Mithradates, added Syria to the list of Roman provinces, and led the Roman legions to the Euphrates and the Caspian, leaving no power capable of disputing with Rome the sovereignty of western Asia.[7] He did not return to Italy till towards the end of 62. The interval was marked in Rome by the rise to political importance of Caesar and Cicero, and by Catiline's attempt at revolution. As the nephew of Marius and the son-in-law of Cinna, Caesar possessed a strong hereditary claim to the leadership of the popular and Marian party.[8] He had already taken part in the agitation for the restoration of the tribunate; he had supported the Manilian law; and, when Pompey's withdrawal left the field clear for other competitors, he stepped at once into the front rank on the popular side.[9] He took upon himself, as their nearest representative, the task of clearing the memory and avenging the wrongs of the great popular leaders, Marius, Cinna and Saturninus. He publicly reminded the people of Marius's services, and set up again upon the Capitol the trophies of the Cimbric War. He endeavoured to bring to justice, not only the ringleaders in Sulla's bloody work of proscription, but even the murderers of Saturninus, and vehemently pleaded the cause of the children of the proscribed. While thus carrying on in genuine Roman fashion the feud of his family, he attracted the sympathies of the Italians by his efforts to procure the Roman franchise for the Latin communities beyond the Po, and won the affections of the populace in Rome and the immediate neighbourhood by the splendour of the games which he gave as curule aedile (65), and by his lavish expenditure upon the improvement of the Appian Way. But these measures were with him only means to the further end of creating for himself a position such as that which Pompey had already won; and this ulterior aim he pursued with an audacious indifference to constitutional forms and usages. His coalition with Crassus, soon after Pompey's departure, secured him an ally whose colossal wealth and wide financial connexions were of inestimable value, and whose vanity and inferiority of intellect rendered him a willing tool. The story of his attempted *coup d'état* in January 65 is probably false,[10] but it is evident that by the beginning of 63 he was bent on reaping the reward of his exertions by obtaining from the people an extraordinary command abroad, which should secure his position before Pompey's return; and the agrarian law proposed early that year by the tribune P. Servilius Rullus had for its object the creation, in favour of Caesar and Crassus, of a commission with powers so wide as to place its members almost on a level with Pompey himself.[11] It was at this moment when all seemed going well, that Caesar's hopes were dashed to the ground by Catiline's desperate outbreak, which not only discredited every one connected with the popular party, but directed the suspicions of the well-to-do classes against Caesar himself, as a possible accomplice in Catiline's revolutionary schemes.[12]

Caesar. *684.* *689.* *691.*

The same wave of indignation and suspicion which for the moment checked Caesar's rise carried Marcus Tullius Cicero to the height of his fortunes. Cicero, as a politician, has been equally misjudged by friends and foes. That he was deficient in courage, that he was vain, and that he attempted the impossible, may be admitted at once. But he was neither a brilliant and unscrupulous adventurer nor an aimless trimmer, nor yet a devoted champion merely of senatorial

Cicero. *687, 692.*

[1] The exact provisions of Pompey's law are nowhere given; Livy, *Epit.* xcvii., "tribuniciam potestatem restituerunt." Cf. Vell. ii. 30. A *lex Aurelia*, in 75, had already repealed the law disqualifying a tribune for further office; Cic. *Corn.* fr. 78.

[2] This was the work of L. Aurelius Cotta, praetor in this year. The judices were to be taken in equal proportions from senators, equites and *tribuni aerarii*. For the latter and for the law generally, see Lange, *R. Alt.* iii. 193; Greenidge, *Legal Procedure of Cicero's Time*, pp. 443 sqq.; and article AERARIUM. Compare also Cicero's language, *In Verr., Act.* i. 1. The prosecution of Verres shortly preceded the *lex Aurelia*.

[3] Livy, *Epit.* xcviii. Sixty-four senators were expelled. Cf. Plut. *Pomp.* 22.

[4] Vell. ii. 31; Plut. *Pomp.* 23.

[5] Plut. *Pomp.* 25; Dio xxxvi. 6; Livy, *Epit.* c.

[6] Cic. *Pro Lege Manilia*; Dio xxxvi. 25; Plut. *Pomp.* 30.

[7] See POMPEY and MITHRADATES.

[8] For his early life, see CAESAR.

[9] Prof. Beesly has vainly endeavoured to show that Catiline and not Caesar was the popular leader from 67 to 63. That this is the inference intentionally conveyed by Sallust, in order to screen Caesar, is true, but the inference is a false one.

[10] The story is so told by Suetonius, *Jul.* 8. In Sallust, *Cat.* 18, it appears as an intrigue originating with Catiline, and Caesar's name is omitted.

[11] Cic. *Agr.* ii. 6, 15, "nihil aliud actum nisi ut decem reges constituerentur."

[12] That Caesar and Crassus had supported Catiline for the consulship in 65 is certain, and they were suspected naturally enough of favouring his designs in 63, but their complicity is in the highest degree improbable.

ascendancy.[1] He was a representative man, with a numerous following, and a policy which was naturally suggested to him by the circumstances of his birth, connexions and profession, and which, impracticable as it proved to be, was yet consistent, intelligible and high-minded. Born at Arpinum, he cherished like all Arpinates the memory of his great fellow-townsman Marius, the friend of the Italians, the saviour of Italy and the irreconcilable foe of Sulla and the nobles. A "municipal" himself, his chosen friends and his warmest supporters were found among the well-to-do classes in the Italian towns.[2] Unpopular with the Roman aristocracy, who despised him as a *peregrinus*,[3] and with the Roman populace, he was the trusted leader of the Italian middle class, "the true Roman people," as he proudly styles them. It was they who carried his election for the consulship[4] (63), who in 58 insisted on his recall from exile,[5] and it was his influence with them which made Caesar so anxious to win him over in 49. He represented their antipathy alike to socialistic schemes and to aristocratic exclusiveness, and their old-fashioned simplicity of life in contrast with the cosmopolitan luxury of the capital.[6] By birth, too, he belonged to the equestrian order, the foremost representatives of which were indeed still the *publicani* and *negotiatores*, but which since the enfranchisement of Italy included also the substantial burgesses of the Italian towns and the smaller "squires" of the country districts. With them, too, Cicero was at one in their dread of democratic excesses and their social and political jealousy of the *nobiles*. Lastly, as a lawyer and a scholar, he was passionately attached to the ancient constitution. His political ideal was the natural outcome of these circumstances. He advocated the maintenance of the old constitution, but not as it was understood by the extreme politicians of the right and left. The senate was to be the supreme directing council,[7] but the senate of Cicero's dreams was not an oligarchic assemblage of nobles, but a body freely open to all citizens, and representing the worth of the community.[8] The magistrates, while deferring to the senate's authority, were to be at once vigorous and public-spirited; and the assembly itself which elected the magistrates and passed the laws was to consist, not of the "mob of the forum," but of the true Roman people throughout Italy.[9] For the realization of this ideal he looked, above all things, to the establishment of cordial relations between the senate and nobles in Rome and the great middle class of Italy represented by the equestrian order, between the capital and the country towns and districts. This was the *concordia ordinum*, the *consensus Italiae*, for which he laboured.[11]

691, 696.
705.

Cicero's election to the consulship for 63 over the heads of Caesar's nominees, Antonius and Catiline, was mainly the work of the Italian middle class, already rendered uneasy both by the rumours which were rife of revolutionary schemes and of Caesar's boundless ambition, and by the numerous disquieting signs of disturbance noticeable in Italy. The new consul vigorously set himself to discharge the trust placed in him. He defeated the insidious proposals of Rullus for Caesar's aggrandizement and assisted in quashing the prosecution of Gaius Rabirius (*q.v.*). But with the consular elections in the autumn of 63 a fresh danger arose from a different quarter. The "conspiracy of Catiline" (see CATILINE) was not the work of the popular party, and still less was it an unselfish attempt at reform; Catiline himself was a patrician, who had held high office, and possessed considerable ability and courage; but he was bankrupt in character and in purse, and two successive defeats in the consular elections had rendered him desperate. To retrieve his broken fortunes by violence was a course which was only too readily suggested by the history of the last forty years, and materials for a conflagration abounded on all sides. The danger to be feared from his intrigues lay in the state of Italy, which made a revolt against society and the established government only too likely if once a leader presented himself, and it was such a revolt that Catiline endeavoured to organize. Bankrupt nobles like himself, Sullan veterans and the starving peasants whom they had dispossessed of their holdings, outlaws of every description, the slave population of Rome, and the wilder herdsmen-slaves of the Apulian pastures, were all enlisted under his banner, and attempts were even made to excite disaffection among the newly conquered people of southern Gaul and the warlike tribes who still cherished the memory of Sertorius in Spain. In Etruria, the seat and centre of agrarian distress and discontent, a rising actually took place headed by a Sullan centurion, but the spread of the revolt was checked by Cicero's vigorous measures. Catiline fled from Rome, and died fighting with desperate courage at the head of his motley force of old soldiers, peasants and slaves. His accomplices in Rome were arrested, and, after an unavailing protest from Caesar, the senate authorized the consuls summarily to put them to death.

The conspiracy of Catiline, 63–691.

The Catilinarian outbreak had been a blow to Caesar, whose schemes it interrupted, but to Cicero it brought not only popularity and honour, but, as he believed, the realization of his political ideal. But Pompey was now on his way home,[12] and again as in 70 the political future seemed to depend on the attitude which the successful general would assume; Pompey himself looked simply to the attainment by the help of one political party or another of his immediate aims, which at present were the ratification of his arrangements in Asia and a grant of land for his troops. It was the impracticable jealousy of his personal rivals in the senate, aided by the versatility of Caesar, who presented himself not as his rival but as his ally, which drove Pompey once more, in spite of Cicero's efforts, into the camp of what was still nominally the popular party. In 60, on Caesar's return from his propraetorship in Spain, the coalition was formed which is known by the somewhat misleading title of the First Triumvirate.[13] Pompey was ostensibly the head of this new alliance, and in return for the satisfaction of his own demands he undertook to support Caesar's candidature for the consulship. The wealth and influence of Crassus were enlisted in the same cause, and the *publicani* were secured by a promise of release from their bargain for collecting the taxes of Asia. Cicero was under no illusions as to the significance of this coalition. It scattered to the winds his dreams of a stable and conservative republic. The year 59 saw the republic powerless in the hands of three citizens. Caesar as consul procured the ratification of Pompey's acts in Asia, granted to the *publicani* the relief refused by the senate, and carried an agrarian law of the new type, which provided for the purchase of lands for allotment at the cost of the treasury and for the assignment of the rich *ager Campanus*.[14] But Caesar aimed at more than the carrying of laws in the teeth of the senate or any party victory in the forum. An important military command was essential to him. An obedient tribune, P. Vatinius, was found, and by the *lex Vatinia* he was given for five years the command of Cisalpine Gaul and Illyricum, to which

Return of Pompey from Asia.

[6] Cic. *Pro Quinctio*, 8, 31; *Pro Cluentio*, 46, 153.

[7] Cic. *In Verr.* ii. 73; *De Pet. Cons.* i. He shared with them their dislike of Sulla, as the foe of their order; *Pro Cluentio*, 55, 151.

[8] *De Legg.* iii. 12.

[9] *Pro Sestio*, 65, 136; *De Legg.* iii. 4.

[10] *Pro Sestio*, 45.

[11] *Ad Att.* i. 18.

[12] For the history of the next eighteen years, the most important ancient authority is Cicero in his letters and speeches.

[13] Misleading because the coalition was unofficial. The "triumvirs" of 43 were actual magistrates, "IIIviri reipublicae constituendae causa."

[14] For the *lex Julia Agraria* and the *lex Campana*, see Dio Cass. xxxviii. 1; App. *B.C.* ii. 10; Suet. *Jul.* 20; Cic. *Ad Att.* ii. 16, 18.

was added by a decree of the senate Transalpine Gaul also.[1] This command not only opened to him a great military career, but enabled him, as the master of the valley of the Po, to keep an effective watch on the course of affairs in Italy.

Early the next year the attack upon himself which Cicero had foreseen was made. P. Clodius (*q.v.*) as tribune brought forward a law enacting that any one who had put a Roman citizen to death without trial by the people should be interdicted from fire and water. Cicero, finding himself deserted even by Pompey, left Rome in a panic, and by a second Clodian law he was declared to be outlawed.[2] With Caesar away in his province, and Cicero banished, Clodius was for the time master in Rome. But, absolute as he was in the streets, and recklessly as he paraded the policy of the Gracchi by violent attacks on the senate, his tribunate merely illustrated the anarchy which now inevitably followed the withdrawal of a strong controlling hand. A reaction speedily followed. Pompey, bewildered and alarmed by Clodius's violence, at last bestirred himself. Cicero's recall was decreed by the senate, and early in August 57 in the *comitia centuriata*, to which his Italian supporters flocked in crowds, a law was passed revoking the sentence of outlawry passed upon him.

Banishment and recall of Cicero. 58–57 = 696–97.

Intoxicated by the acclamations which greeted him, and encouraged by Pompey's support, and by the salutary effects of Clodius's excesses, Cicero's hopes rose high.[3] With indefatigable energy he strove to reconstruct a solid constitutional party, but only to fail once more. Pompey was irritated by the hostility of a powerful section in the senate, who thwarted his desires for a fresh command and even encouraged Clodius in insulting the conqueror of the East. Caesar became alarmed at the reports which reached him that the repeal of his agrarian law was threatened and that the feeling against the coalition was growing in strength; above all, he was anxious for a renewal of his five years' command. He acted at once, and in the celebrated conference at Luca (56) the alliance of the three self-constituted rulers of Rome was renewed. Cicero succumbed to the inevitable and withdrew in despair from public life.

Renewal of the coalition. 65–698.

698.

699.

Pompey and Crassus became consuls for 55. Caesar's command was renewed for another five years, and to each of his two allies important provinces were assigned for a similar period—Pompey receiving the two Spains and Africa, and Crassus Syria.[4] The coalition now divided between them the control of the empire. For the future the question was, how long the coalition itself would last. Its duration proved to be short. In 53 Crassus was defeated and slain by the Parthians at Carrhae, and in Rome the course of events slowly forced Pompey into an attitude of hostility to Caesar. The year 54 brought with it a renewal of the riotous anarchy which had disgraced Rome in 58–57. Conscious of its own helplessness, the senate, with the eager assent of all respectable citizens, dissuaded Pompey from leaving Italy; and he accordingly left his provinces to be governed by his legates. But the anarchy and confusion only grew worse, and even strict constitutionalists like Cicero talked of the necessity of investing Pompey with some extraordinary powers for the preservation of order.[5] At last in 52 he was elected sole consul, and not only so, but his provincial command was prolonged for five years more, and fresh troops were assigned him.[6] The rôle of "saviour of society" thus thrust upon Pompey was one which flattered his vanity, but it entailed consequences which it is probable he did not foresee, for it brought him into close alliance with the senate, and in the senate there was a powerful party who were resolved to force him into heading the attack they could not successfully make without him upon Caesar. It was known that the latter, whose command expired in March 49, but who in the ordinary course of things would not have been replaced by his successor until January 48, was anxious to be allowed to stand for his second consulship in the autumn of 49 without coming in person to Rome.[7] His opponents in the senate were equally bent on bringing his command to an end at the legal time, and so obliging him to disband his troops and stand for the consulship as a private person, or, if he kept his command, on preventing his standing for the consulship. Through 51 and 50 the discussions in the senate and the negotiations with Caesar continued, but with no result. On 1st January 49 Caesar made a last offer of compromise. The senate replied by requiring him on pain of outlawry to disband his legions. Two tribunes who supported him were ejected from the senate-house, and the magistrates with Pompey were authorized to take measures to protect the republic. Caesar hesitated no longer; he crossed the Rubicon and invaded Italy. The rapidity of his advance astounded and bewildered his foes. Pompey, followed by the consuls, by the majority of the senate and a long train of nobles, abandoned Italy as untenable, and crossed into Greece.[8] At the end of March Caesar entered Rome as the master of Italy. Four years later, after the final victory of Munda (45), he became the undisputed master of the Roman world.[9]

The task which Caesar had to perform was no easy one. It came upon him suddenly; for there is no sufficient reason to believe that Caesar had long premeditated revolution, or that he had previously aspired to anything more than such a position as that which Pompey had already won, a position unrepublican indeed, but accepted by republicans as inevitable.[10] War was forced upon him as the alternative to political suicide, but success in war brought the responsibilities of nearly absolute power, and Caesar's genius must be held to have shown itself in the masterly fashion in which he grasped the situation, rather than in the supposed sagacity with which he is said to have foreseen and prepared for it. In so far as he failed, his failure was mainly due to the fact that his tenure of power was too short for the work which he was required to perform. From the very first moment when Pompey's ignominious retreat left him master of Italy, he made it clear that he was neither a second Sulla nor even the reckless anarchist which many believed him to be.[11] The Roman and Italian public were written about this time, which was based upon his hopes of what Pompey might prove to be; *Ad Att.* viii. 11; August. *De civ. Dei*, v. 13.

[1] Suet. *Jul.* 22; Dio Cass. xxxviii. 8; App. *B.C.* ii. 13; Plut. *Caes.* 14.

[2] Both laws were carried in the *concilium plebis*. The first merely reaffirmed the right of appeal, as the law of Gaius Gracchus had done. The second declared Cicero to be already by his own act in leaving Rome "interdicted from fire and water"—a procedure for which precedents could be quoted. Clodius kept within the letter of the law.

[3] Cicero's speech *Pro Sestio* gives expression to these feelings; it contains a passionate appeal to all good citizens to rally round the old constitution. The acquittal of Sestius confirmed his hopes. See *Ad Q. Fr.* ii. 4.

[4] Livy, *Epit.* cv.; Dio Cass. xxxix. 33. For Cicero's views, see *Ep. ad Fam.* i. 9; *Ad Att.* iv. 5.

[5] A dictatorship was talked of in Rome; Plut. *Pomp.* 54; Cic. *Ad Q. Fr.* iii. 8. Cicero himself anticipated Augustus in his picture of a *princeps civitatis* sketched in a lost book of the *De republica*,

[6] Plut. *Pomp.* 54; App. *B.C.* ii. 24.

[7] For the rights of the question involved in the controversy between Caesar and the senate, see Mommsen, *Rechtsfrage zw. Caesar und d. Senat*; Guiraud, *Le Différend entre César et le Sénat* (Paris, 1878), and the article CAESAR.

[8] Cicero severely censures Pompey for abandoning Italy, but strategically the move was justified by the fact that Pompey's strength lay in the East, where his name was a power, and in his control of the sea. Politically, however, it was a blunder, as it enabled Caesar to pose as the defender of Italy.

[9] For the Civil Wars, see CAESAR; CICERO; and POMPEY.

[10] On this, as on many other points connected with Caesar, divergence has here been ventured on from the views expressed by Mommsen in his brilliant chapter on Caesar (*Hist. of Rome*, bk. v. cap. xi.). Too much stress must not be laid on the gossip retailed by Suetonius as to Caesar's early intentions.

[11] Cicero vividly expresses the revulsion of feeling produced by Caesar's energy, humanity and moderation on his first appearance in Italy. Compare *Ad Att.* vii. 11. with *Ad Att.* viii. 13.

first startled by the masterly rapidity and energy of his movements, and then agreeably surprised by his lenity and moderation. No proscriptions or confiscations followed his victories, and all his acts evinced an unmistakable desire to effect a sober and reasonable settlement of the pressing questions of the hour; of this, and of his almost superhuman energy, the long list of measures he carried out or planned is sufficient proof. The "children of the proscribed" were at length restored to their rights,[1] and with them many of the refugees[2] who had found shelter in Caesar's camp during the two or three years immediately preceding the war; but the extreme men among his supporters soon realized that their hopes of *novae tabulae* and grants of land were illusory. In allotting lands to his veterans, Caesar carefully avoided any disturbance of existing owners and occupiers,[3] and the mode in which he dealt with the economic crisis produced by the war seems to have satisfied all reasonable men.[4] It had been a common charge against Caesar in former days that he paid excessive court to the populace of Rome, and now that he was master he still dazzled and delighted them by the splendour of the spectacles he provided, and by the liberality of his largesses. But he was no indiscriminate flatterer of the mob. The popular clubs and gilds which had helped to organize the anarchy of the last few years were dissolved.[5] A strict inquiry was made into the distribution of the monthly doles of corn, and the number of recipients was reduced by one-half;[6] finally, the position of the courts of justice was raised by the abolition of the popular element among the judices.[7] Nor did Caesar shrink from the attempt, in which so many had failed before him, to mitigate the twin evils which were ruining the prosperity of Italy—the concentration of a pauper population in the towns, and the denudation and desolation of the country districts. His strong hand carried out the scheme so often proposed by the popular leaders since the days of Gaius Gracchus, the colonization of Carthage and Corinth. Allotments of land on a large scale were made in Italy; decaying towns were reinforced by fresh drafts of settlers; on the large estates and cattle farms the owners were required to find employment for a certain amount of free labour; and a slight and temporary stimulus was given to Italian industry by the reimposition of harbour dues upon foreign goods.[8]

The reform of the calendar, which is described elsewhere,[9] completes a record of administrative reform which entitles Caesar to the praise of having governed well, whatever may be thought of the validity of his title to govern at all. But how did Caesar deal with what was after all the greatest problem which he was called upon to solve, the establishment of a satisfactory government for the Empire? One point indeed was already settled. Some centralization of the executive authority was indispensable, and this part of his work Caesar thoroughly performed. From the moment when he seized the moneys in the treasury on his first entry into Rome[10] down to the day of his death, he recognized no other authority but his throughout the Empire. He alone directed the policy of Rome in foreign affairs; the legions were led, and the provinces governed, not by independent magistrates but by his "legates";[11] and the title *Imperator* which he adopted was intended to express the absolute and unlimited nature of the *imperium* he claimed, as distinct from the limited spheres of authority possessed by republican magistrates.[12] In so centralizing the executive authority over the Empire at large, Caesar was but developing the policy implied in the Gabinian and Manilian laws, and the precedent he established was closely followed by his successors. It was otherwise with the more difficult question of the form under which this new executive authority should be exercised and the relation it should hold to the republican constitution. We must be content to remain in ignorance of the precise shape which Caesar intended ultimately to give to the new system. The theory that he contemplated a revival of the old Roman kingship[13] is supported by little more than the popular gossip of the day, and the form under which he actually wielded his authority can hardly have been regarded by so sagacious a statesman as more than a provisional arrangement. This form was that of the dictatorship; and in favour of the choice it might have been urged that the dictatorship was the office naturally marked out by republican tradition as the one best suited to carry the state safely through a serious crisis, that the powers it conveyed were wide, that it was as dictator that Sulla had reorganized the state, and that a dictatorship had been spoken of as the readiest means of legalizing Pompey's protectorate of the Republic in 53– 52. The choice nevertheless was a bad one. It was associated with those very Sullan traditions from which Caesar was most anxious to sever himself; it implied necessarily the suspension for the time of all constitutional government; and, lastly, the dictatorship as held by Caesar could not even plead that it conformed to the old rules and traditions of the office. The "perpetual dictatorship" granted him after his crowning victory at Munda (45) was in contradiction in terms and a repudiation of constitutional government which excited the bitterest animosity.[14] *701-2.* *709.*

A second question, hardly less important, was that of the position to be assigned to the old constitution. So far as Caesar himself was concerned, the answer was for the time sufficiently clear. The old constitution was not formally abrogated. The senate met and deliberated; the assembly passed laws and elected magistrates; there were still consuls, praetors, aediles, quaestors and tribunes; and Caesar himself, like his successors, professed to hold his authority by the will of the people. But senate, assembly and magistrates were all alike subordinated to the paramount authority of the dictator; and this subordination was, in appearance at least, more direct and complete under the rule of Caesar than under that of Augustus. Caesar was by nature as impatient as Augustus was tolerant of established forms; and, dazzled by the splendour of his career of victory and by his ubiquitous energy and versatility, the Roman public, high and low, prostrated themselves before him and heaped honours upon him with a reckless profusion which made the existence of any authority by the side of his own an absurdity.[15] Hence under Caesar the old constitution was repeatedly disregarded, or suspended in a way which contrasted unfavourably with the more respectful attitude assumed by Augustus. For months together Rome was left without any regular magistrates, and was governed like a subject town by Caesar's prefects.[16] At other time a tribune was seen exercising authority outside the city bounds and invested with the *imperium* of a praetor.[17] At the elections, candidates appeared before the people backed by a written recommendation from the dictator, which was equivalent to a command.[18] Finally, the senate itself was

transformed out of all likeness to its former self by the raising of its numbers to 900, and by the admission of old soldiers, sons of freedmen and even "semi-barbarous Gauls."[1] But, though Caesar's high-handed conduct in this respect was not imitated by his immediate successors, yet the main lines of their policy were laid down by him. These were—(1) the municipalization of the old republican constitution, and (2) its subordination to the paramount authority of the master of the legions and the provinces. In the first case he only carried further a change already in progress. Of late years the senate had been rapidly losing its hold over the Empire at large. Even the ordinary proconsuls were virtually independent potentates, ruling their provinces as they chose, and disposing absolutely of legions which recognized no authority but theirs. The consuls and praetors of each year had since 81 been stationed in Rome, and immersed in purely municipal business; and, lastly, since the enfranchisement of Italy, the *comitia*, though still recognized as the ultimate source of all authority, had become little more than assemblies of the city populace, and their claim to represent the true Roman people was indignantly questioned, even by republicans like Cicero. The concentration in Caesar's hands of all authority outside Rome completely and finally severed all real connexion between the old institutions of the Republic of Rome and the government of the Roman Empire. But the institutions of the Republic not merely became, what they had originally been, the local institutions of the city of Rome; they were also subordinated even within these narrow limits to the paramount authority of the man who held in his hands the army and the provinces. Autocratic abroad, at home he was the chief magistrate of the commonwealth; and this position was marked, in his case as in that of those who followed him, by a combination in his person of various powers, and by a general right of precedence which left no limits to his authority but such as he chose to impose upon himself. During the greater part of his reign he was consul as well as dictator. In 48, after his victory at Pharsalia, he was given the *tribunicia potestas* for life,[2] and after his second success at Thapsus the *praefectura morum* for three years.[3] As chief magistrate he convenes and presides in the senate, nominates candidates, conducts elections, carries laws in the assembly and administers justice in court.[4] Finally, as a reminder that the chief magistrate of Rome was also the autocratic ruler of the Empire, he wore even in Rome the laurel wreath and triumphal dress, and carried the sceptre of the victorious imperator.[5]

673.

706.

Nor are we without some clue as to the policy which Caesar had sketched out for himself in the administration of the Empire, the government of which he had centralized in his own hands. The much-needed work of rectifying the frontiers[6] he was forced, by his premature death, to leave to other hands, but within the frontiers he anticipated Augustus in lightening the financial burdens of the provincials,[7] and in establishing a stricter control over the provincial governors,[8] while he went beyond him in his desire to consolidate the Empire by extending the Roman franchise[9] and admitting provincials to a share in the government.[10] He completed the Romanization of Italy by his enfranchisement of the Transpadane Gauls,[11] and by establishing throughout the peninsula a uniform system of municipal government, which under his successors was gradually extended to the provinces.[12]

On the eve of his departure for the East, to avenge the death of Crassus and humble the power of Parthia, Caesar fell a victim to the wounded pride of the republican nobles; and between the day of his death (March 15, 44) and that on which Octavian defeated Antony at Actium (September 2, 31) lies a dreary period of anarchy and bloodshed.[13]

Attempted restoration of the republic, 44–43–710–11.

710.

723.

For a moment, in spite of the menacing attitude of Caesar's self-constituted representative Marcus Antonius (Mark Antony), it seemed to one man at least as if the restoration of republican government was possible. With indefatigable energy Cicero strove to enlist the senate, the people, and above all the provincial governors in support of the old constitution. But, though his eloquence now and again carried all before it in senate-house and forum, it was powerless to alter the course of events. By the beginning of 43 civil war had recommenced; in the autumn Antony was already threatening an invasion of Italy at the head of seventeen legions. Towards the end of October Antony and his ally M. Aemilius Lepidus coalesced with the young Octavian, who had been recently elected consul at the age of twenty, in spite of senatorial opposition; and the coalition was legalized by the creation of the extraordinary commission for the "reorganization of the commonwealth" known as the "Second Triumvirate."[14] It was appointed for a period of five years, and was continued in 37 for five years more.[15] The rule of the triumvirs was inaugurated in the Sullan fashion by a proscription, foremost among the victims of which was Cicero himself.[16] In the next year the defeat of M. Junius Brutus and C. Cassius Longinus at Philippi, by the combined forces of Octavian and Antony, destroyed the last hopes of the republican party.[17] In 40 a threatened rupture between the two victors was avoided by the treaty concluded at Brundusium. Antony married Octavian's sister Octavia, and took command of the eastern half of the empire; Octavian appropriated Italy and the West; while Lepidus was forced to content himself with Africa.[18] For the next twelve years, while Antony was indulging in dreams of founding for himself and Cleopatra an empire in the East, and shocking Roman feeling by his wild excesses and his infatuation of oriental magnificence,[19] Octavian was patiently consolidating his power. Lepidus his fellow-triumvir was in 36 ejected from Africa and banished to Circeii, while Sextus Pompeius, who had since his defeat at Munda maintained a semi-piratical ascendancy in the western Mediterranean, was decisively defeated in the same year, and his death in 35 left Octavian sole master of the West. The inevitable trial of strength between himself and Antony was not long delayed. In 32 Antony openly challenged the hostility of Octavian by divorcing Octavia in favour of the beautiful and daring Egyptian princess, with whom, as the heiress of the Ptolemies, he aspired to share the empire of the Eastern world. By a decree of the senate Antony was declared deposed from his command, and war was declared against Queen Cleopatra.[20] On 2nd of September 31 was fought the battle of Actium.[21] Octavian's victory was complete. Antony and Cleopatra committed suicide (30), and the Eastern provinces submitted in 20. Octavian returned to Rome to celebrate his triumph and mark the end of the long-continued anarchy

by closing the temple of Janus;[1] at the end of the next year he formally laid down the extraordinary powers which he had held since 43, and a regular government was established. *711.*

III. *The Empire.*

PERIOD I.: THE PRINCIPATE, 27 B.C.–A.D. 284—(a) *The Constitution of the Principate.*—The conqueror of Antonius at Actium, the great-nephew and heir of the dictator Caesar, was now summoned, by the general consent of a world wearied out with twenty years of war and anarchy,[2] to the task of establishing a government which should as far as possible respect the forms and traditions of the Republic, without sacrificing that centralization of authority which experience had shown to be necessary for the integrity and stability of the Empire. It was a task for which Octavian was admirably fitted. To great administrative capacity and a quiet tenacity of purpose he united deliberate caution and unfailing tact; while his bourgeois birth[3] and genuinely Italian sympathies enabled him to win the confidence of the Roman community to an extent impossible for Caesar, with his dazzling pre-eminence of patrician descent, his daring disregard of forms and his cosmopolitan tastes.

The new system which was formally inaugurated by Octavian in 28–27 B.C.[4] assumed the shape of a restoration of the republic under the leadership of a *princeps*.[5] Octavian voluntarily resigned the extraordinary powers which he had held since 43, and, to quote his own words, "had transferred over the republic to the control of the senate and people of Rome."[6] The old constitutional machinery was once more set in motion; the senate, assembly and magistrates resumed their functions;[7] and Octavian himself was hailed as the "restorer of the commonwealth and the champion of freedom."[8] It was not so easy to determine what relation he himself, the actual master of the Roman world, should occupy towards this revived republic. His abdication, in any real sense of the word, would have simply thrown everything back into confusion. The interests of peace and order required that he should retain at least the substantial part of his authority;[9] and this object was in fact accomplished, and the rule of the emperors founded, in a manner which has no parallel in history. Any revival of the kingly title was out of the question, and Octavian himself expressly rejected the dictatorship.[10] Nor was any new office created or any new official title invented for his benefit. But by senate and people he was invested according to the old constitutional forms with certain powers, as many citizens had been before him, and so took his place by the side of the lawfully appointed magistrates of the republic; —only, to mark his pre-eminent dignity, as the first of them all, the senate decreed that he should take as an additional cognomen that of "Augustus,"[11] while in common parlance he was henceforth styled *princeps*, a simple title of courtesy, familiar to republican usage, and conveying no other idea than that of a

The Augustan system. 28–27 – 726–27.

[8] Ovid, *Fasti*, i. 589. On a coin of Asia Minor Augustus is styled "libertatis P. R. vindex." The 13th of January, 27 B.C., was marked in the calendar as the day on which the republic was restored (*C.I.L.* i. p. 384).

[9] Dio Cassius describes Augustus as seriously contemplating abdication (lii. 1; liii. 1–11); cf. Suet. *Aug.* 28.

[10] Suet. *Aug.* 52; *Mon. Anc.* i. 31.

[11] *Mon. Anc.* vi. 16, 21–23.

recognized primacy and precedence over his fellow-citizens.[12] The ideal sketched by Cicero in his *De Republica*, of a constitutional president of a free republic, was apparently realized; but it was only in appearance. For in fact the special prerogatives conferred upon Octavian gave him back in substance the autocratic authority he had resigned, and as between the restored republic and its new *princeps* the balance of power was overwhelmingly on the side of the latter.

711, 721. The settlement of 27–727. 727.

Octavian had held the *imperium* since 43; in 33, it is true, the powers of the triumvirate had legally expired, but he had continued to wield his authority, as he himself puts it,[13] "by universal consent." In 27 he received a formal grant of the *imperium* from the senate and people for the term of ten years, and his *provincia* was defined as including all the provinces in which military authority was required and legions were stationed.[14] He was declared commander-in-chief of the Roman army, and granted the exclusive right of levying troops, of making war and peace, and of concluding treaties.[15] As consul, moreover, he not only continued to be the chief magistrate of the state at home, but took precedence, in virtue of his *majus imperium*, over the governors of the "unarmed provinces," which were still nominally under the control of the senate. Thus the so-called "restoration of the republic" was in essence the recognition by law of the personal supremacy of Octavian, or Augustus, as he must henceforth be called.

The re-settlement of 23–731. 723.

In 23 an important change was made in the formal basis of Augustus's authority. In that year he laid down the consulship which he had held each year since 31, and could therefore only exert his *imperium pro consule*, like the ordinary governor of a province. He lost his authority as chief magistrate in Rome and his precedence over the governors of senatorial provinces. To remedy these defects a series of extraordinary offices were pressed upon his acceptance; but he refused them all,[16] and caused a number of enactments to be passed which determined the character of the principate for the next three centuries.[17] Firstly, he was exempted from the disability attaching to the tenure of the *imperium* by one who was not an actual magistrate, and permitted to retain and exercise it in Rome. Secondly, his *imperium* was declared to be equal with that of the consuls, and therefore superior to that of all other holders of that power. Thirdly, he was granted equal rights with the consuls of convening the senate and introducing business, of nominating candidates at elections,[18] and of issuing edicts.[19] Lastly, he was placed on a level with the consuls in outward rank. Twelve lictors were assigned to him and an official seat between those of the consuls themselves (Dio liv. 10).

Tribunicia potestas.

Thus the proconsular authority[20] was for the first time admitted within the walls of Rome; but Augustus was too cautious a statesman to proclaim openly the fact that the power which he wielded in the city was the same as that exercised in camps and provinces by a Roman military commander. Hence he sought for a title which should disguise the nature of his authority, and found it in the

[12] The explanation of *princeps* as an abbreviated form of *princeps senatus* is quite untenable. For its real significance, see Mommsen, *Staatsrecht*, ii. 774; Pelham, *Journ. of Phil.* vol. viii. i. 18 not an official title.

[13] *Mon. Anc.* 6, 14, "per consensum universorum."

[14] Dio liii. 12; Suet. *Aug.* 47. [15] Dio, *l.c.*

[16] He was offered the dictatorship, a life-consulship, a "cura legum et morum." It is stated by Suetonius (*Aug.* 53) and Dio (liv. 10) that he accepted the last named; but this is disproved by his own language in the *Mon. Anc.* (i. 31); cf. Pelham, *Journ. of Philol.* xvii. 47.

[17] Dio liii. 32. Part of the law by which the rights essential to the principate were conferred upon Vespasian is extant; see Rushforth, *Latin Historical Inscriptions*, No. 70 (the *Lex de imperio Vespasiani*).

[18] Tac. *Ann.* i. 81. [19] *Lex de imperio*, ll. 17–21.

[20] The term *proconsulare imperium*, which we find used, *e.g.*, by Tacitus, was not employed in republican times, and Augustus himself speaks of his *consulare imperium* (*Mon. Anc.* 2, 5, 8).

"tribunician power," which had been conferred upon him for life in 36, and was well suited, from its urban and democratic traditions, to serve in Rome as "a term to express his supreme position."[1] From 23 onwards the *tribunicia potestas* appears after his name in official inscriptions, together with the number indicating the period during which it had been held (also reckoned from 23); it was in virtue of this power that Augustus introduced the social reforms which the times demanded;[2] and, though far inferior to the *imperium* in actual importance, it ranked with or even above it as a distinctive prerogative of the emperor or his chosen colleague.[3]

718.

731.

731.

The *imperium* and the *tribunicia potestas* were the two pillars upon which the authority of Augustus rested, and the other offices and privileges conferred upon him were of secondary importance. After 23 he never held the consulship save in 5 and 2 B.C., when he became the colleague of his grandsons on their introduction to public life. He permitted the triumvir Lepidus to retain the chief pontificate until his death, when Augustus naturally became *pontifex maximus* (12 B.C.).[4] He proceeded with the like caution in reorganizing the chief departments of the public service in Rome and Italy. The *cura annonae*, *i.e.* the supervision of the corn supply of Rome, was entrusted to him in 22 B.C.,[5] and this important branch of administration thus came under his personal control; but the other boards (*curae*), created during his reign to take charge of the roads, the water-supply, the regulation of the Tiber and the public buildings, were composed of senators of high rank, and regarded in theory as deriving their authority from the senate.[6]

749, 752.

742.

732.

Such was the ingenious compromise by which room was found for the master of the legions within the narrow limits of the old Roman constitution. Augustus could say with truth that he had accepted no office which was "contrary to the usage of our ancestors," and that it was only in dignity that he took precedence of his colleagues. Nevertheless, as every thinking man must have realized, the compromise was unreal, and its significance was ambiguous. It was an arrangement avowedly of an exceptional and temporary character, yet no one could suppose that it would in effect be otherwise than permanent. The powers voted to Augustus were (like those conferred upon Pompey in 67 B.C.) voted only to him, and (save the *tribunicia potestas*) voted only for a limited time; in 27 he received the *imperium* for ten years, and it was afterwards renewed for successive periods of five, five, ten and ten years.[7] In this way the powers of the principate were made coextensive in time with the life of Augustus, but there was absolutely no provision for hereditary or any other form of succession, and various expedients were devised in order to indicate the destined successor of the *princeps* and to bridge the gap created by his death. Ultimately Augustus associated his stepson Tiberius with himself as co-regent. The *imperium* and the *tribunicia potestas* were conferred upon him, and he was thus marked out as the person upon whom the remaining powers of the principate would naturally be bestowed after the death of his stepfather. But succeeding emperors did not always indicate their successors so clearly, and, in direct contrast to the maxim that "the king never dies," it has been well said that the Roman principate died with the death of the *princeps*.[8]

687.

727.

In theory, at least, the Roman world was governed according to the "maxims of Augustus" (Suet. *Ner.* 10), down to the time of Diocletian. Even in the 3rd century there is still in name at least, a republic, of which the emperor is in strictness only the chief magistrate, deriving his authority from the senate and people, and with prerogatives limited and defined by law. The case is quite different when we turn from theory to practice. The division of authority between the republic and its chief magistrate became increasingly unequal. Over the provinces the *princeps* from the first ruled autocratically; and this autocracy reacted upon his position in Rome, so that it became every year more difficult for a ruler so absolute abroad to maintain even the fiction of republican government at home. The republican institutions, with the partial exception of the senate, lose all semblance of authority outside Rome, and even as the municipal institutions of the chief city of the empire they retain but little actual power. The real government even of Rome passes gradually into the hands of imperial prefects and commissioners, and the old magistracies become merely decorations which the emperor bestows at his pleasure. At the same time the rule of the *princeps* assumes an increasingly personal character, and the whole work of government is silently concentrated in his hands and in those of his own subordinates. Closely connected with this change is the different aspect presented by the history of the empire in Rome and Italy on the one hand and in the provinces on the other. Rome and Italy share in the decline of the republic. Political independence and activity die out; their old pre-eminence and exclusive privileges gradually disappear; and at the same time the weight of the overwhelming power of the *princeps*, and the abuses of their power by individual *principes*, press most heavily upon them. On the other hand, in the provinces and on the frontiers, where the imperial system was most needed, and where from the first it had full play, it is seen at its best as developing or protecting an orderly civilization and maintaining the peace of the world.

Changes in the constitution of the principate.

The decay of the republican institutions had commenced before the revolutionary crisis of 49. It was accelerated by the virtual suspension of regular government between 49 and 28; and not even the diplomatic deference towards ancient forms which Augustus displayed availed to conceal the unreality of his work of restoration. The *comitia* received back from him "their ancient rights" (Suet. *Aug.* 40), and during his lifetime they continued to pass laws and to elect magistrates. But after the end of the reign of Tiberius we have only two instances of legislation by the assembly in the ordinary way,[9] and the law-making of the empire is performed either by decrees of the senate or by imperial edicts and constitutions. Their prerogative of electing magistrates was, even under Augustus, robbed of most of its importance by the control which the *princeps* exercised over their choice by means of his rights of nomination and commendation, which effectually secured the election of his own nominees.[10] By Tiberius this restricted prerogative was still further curtailed. The candidates for all magistracies except the consulship were thenceforward nominated and voted for in the senate-house and by the senators,[11] and only the formal return of the result (*renuntiatio*) took place in the assembly (Dio lviii. 20). And, though the election of consuls was never thus transferred to the senate, the process of voting seems to have been silently abandoned. In the time of the younger Pliny we hear only of the nomination of the candidates and of their formal *renuntiatio* in the Campus Martius.[12] The *princeps* himself as long as the Principate lasted, continued to receive the *tribunicia potestas* by a vote of the assembly, and was thus held to derive his authority from the people.[13]

Decay of republican institutions.

This almost complete effacement of the *comitia* was largely due to the fact that they had ceased to represent anything but the populace of Rome, and the comparatively greater vitality shown by the old magistracies is mainly attributable to the value they continued to possess in the eyes of the Roman upper class. But, though they were eagerly sought (Plin. *Epp.* ii. 9, vi. 6), and conferred on their holders considerable social distinction, the magistrates ceased, except in name, to be the popularly chosen executive officers of the Roman state. In the administration of the empire at large they had no share, if we except the subordinate duties still assigned to the quaestor in a province. In Rome, to which their sphere of work was limited, they were overshadowed by the dominant authority of the *princeps*, while their range of duties was increasingly circumscribed by the gradual transference of administrative authority, even within the city, to the emperor and his subordinate officials. And their dependence on the *princeps* was confirmed by the control he exercised over their appointment. For all candidates the approval, if not the commendation, of the *princeps* became the indispensable condition of success, and the *princeps* on his side treated these ancient offices as pieces of preferment with which to reward his adherents or gratify the ambition of Roman nobles. The dignity of the office, too, was impaired by the practice, begun by Caesar and continued by Augustus and his successors, of granting the insignia to men who had not held the actual magistracy itself.[1] The consulship was still the highest post open to the private citizen, and consular rank a necessary qualification for high office in the provinces;[2] but the actual consuls have scarcely any other duties than those of presiding in the senate and occasionally executing its decrees, while their term of office dwindles from a year to six and finally to two months.[3] In the age of Tacitus and the younger Pliny, the contrast is striking between the high estimate set on the dignity of the office and the frankness with which its limited powers and its dependence on the emperor are acknowledged.[4] The praetors continued to exercise their old jurisdiction with little formal change down at least to the latter half of the second century, but only as subordinate to the higher judicial authority of the emperor.[5] The aediles retained only such petty police duties as did not pass to one or another of the imperial prefects and commissioners. The tribunat.: fared still worse, for, by the side of the *tribunicia potestas* wielded by the *princeps*, it sank into insignificance.[6] The quaestorship suffered less change than any other of the old offices. It kept its place as the first step on the ladder of promotion, and there was still a quaestor attached to each governor of a senatorial province, to the consuls in Rome, and to the *princeps* himself.[7]

The senate alone among republican institutions retained some importance and influence, and it thus came to be regarded as sharing the government of the Empire with the *princeps* himself. It nominally controlled the administration of Italy and of the "public provinces," whose governors it appointed. It is to the senate, in theory, that the supreme power reverts in the absence of a *princeps*. It is by decree of the senate that the new *princeps* immediately receives his powers and privileges,[8] though he is still supposed to derive them ultimately from the people. After the cessation of all legislation by the *comitia*, the only law-making authority, other than that of the *princeps* by his edicts, was that of the senate by its decrees.[9] Its judicial authority was co-ordinate with that of the emperor, and at the close of the 1st century we find the senators claiming, as the emperor's "peers," to be exempt from his jurisdiction.[10] But in spite of the outward dignity of its position, and of the deference with which it was frequently treated, the senate became gradually almost as powerless in reality as the *comitia* and the magistracies. The senators continued indeed to be taken as a rule from the ranks of the wealthy, and a high property qualification was established by Augustus as a condition of membership; but this merely enabled the emperors to secure their own ascendancy by subsidizing those whose property fell short of the required standard, and who thus became simply the paid creatures of their imperial patrons.[11] Admission to the senate was possible only by favour of the emperor, both as controlling the elections to the magistracies, which still gave entrance to the curia, and as invested with the power of directly creating senators by *adlectio*, a power which from the time of Vespasian onwards was freely used.[12] As the result, the composition of the senate rapidly altered. Under Augustus and Tiberius it still contained many representatives of the old republican families, while prestige and ancestral traditions were some guarantee for their independence. But this element soon disappeared. The ranks of the old nobility were thinned by natural decay and by the jealous fears of the last three Claudian emperors. Vespasian[13] flooded the senate with new men from the municipal towns of Italy and the Latinized provinces of the West. Trajan and Hadrian, both provincials themselves, carried on the same policy, and by the close of the 2nd century even the Greek provinces of the East had their representatives in the senate. Some, no doubt, of these provincials, who constituted the great majority of the senate in the 3rd century, were men of wealth and mark, but many more were of low birth, on some rested the stain of a servile descent, and all owed alike their present position and their chances of further promotion to the emperor.[14] The procedure of the senate was as completely at the mercy of the *princeps* as its composition. He was himself a senator and the first of senators;[15] he possessed the magisterial prerogatives of convening the senate, of laying business before it, and of carrying *senatus consulta*;[16] above all, his tribunician power enabled him to interfere at any stage, and to modify or reverse its decisions. The share of the senate in the government was in fact determined by the amount of administrative activity which each *princeps* saw fit to allow it to exercise, and this share became steadily smaller. The jurisdiction assigned it by Augustus and Tiberius was in the 3rd century limited to the hearing of such cases as the emperor thought fit to send for trial, and these became steadily fewer in number. Its control of the state treasury, as distinct from the imperial *fiscus*, was in fact little more than nominal, and became increasingly unimportant as the great bulk of the revenue passed

The Senate.

into the hands of the emperor. Even in Rome and Italy its control of the administration was gradually transferred to the prefect of the city, and after the reign of Hadrian to imperial officers (*juridici*) charged with the civil administration.[1] The part still played by its decrees in the modification of Roman law has been dealt with elsewhere (see SENATE), but it is clear that these decrees did little else than register the expressed wishes of the emperor and his personal advisers.

Centralization of authority: the imperial service.

The process by which all authority became centralized in the hands of the *princeps* and in practice exercised by an organized bureaucracy[2] was of necessity gradual; but it had its beginnings under Augustus, who formed the equestrian order (admission to which was henceforth granted only by him) into an imperial service, partly civil and partly military, whose members, being immediately dependent on the emperor, could be employed on tasks which it would have been impossible to assign to senators (see EQUITES). From this order were drawn the armies of "procurators"—the term was derived from the practice of the great business houses of Rome—who administered the imperial revenues and properties in all parts of the empire. Merit was rewarded by independent governorships such as those of Raetia and Noricum, or the command of the naval squadrons at Misenum and Ravenna; and the prizes of the knight's career were the prefectures of the praetorian guard, the corn-supply and the city police, and the governorship of Egypt. The household offices and imperial secretaryships were held by freedmen, almost always of Greek origin, whose influence became all-powerful under such emperors as Claudius.[3] The financial secretary (*a rationibus*) and those who dealt with the emperor's correspondence (*ab epistulis*) and with petitions (*a libellis*) were the most important of these.

Outward splendour.

This increase of power was accompanied by a corresponding elevation of the *princeps* himself above the level of all other citizens. The comparatively modest household and simple life of Augustus were replaced by a more than regal splendour, and under Nero we find all the outward accessories of monarchy present, the palace, the palace guards, the crowds of courtiers, and a court ceremonial. In direct opposition to the republican theory of the principate, members of the family of the *princeps* share the dignities of his position. The males bear the cognomen of Caesar, and are invested, as youths, with high office; their names and even those of the females are included in the yearly prayers for the safety of the *princeps*;[4] their birthdays are kept as festivals; the praetorian guards take the oath to them as well as to the *princeps* himself. The logical conclusion was reached in the practice of Caesarworship,[5] which was in origin the natural expression of a widespread sentiment of homage, which varied in form in different parts of the empire and in different classes of society, but was turned to account by the statecraft of Augustus to develop something like an imperial patriotism. The official worship of the deified Caesar, starting from that of the "divine Julius," gave a certain sanctity and continuity to the regular succession of the emperors, but it was of less importance politically than the worship of "Rome and Augustus," first instituted in Asia Minor in 29 B.C., and gradually diffused throughout the provinces, as a symbol of imperial unity. It must be observed that living emperors were not officially worshipped by Roman citizens; yet we find that even in Italy an unauthorized worship of Augustus sprang up during his lifetime in the country towns.[6]

The frontiers.

On the accession of Augustus, there could be little doubt as to the nature of the work that was necessary, if peace and prosperity were to be secured for the Roman world. He was called upon to justify his position by rectifying the frontiers and strengthening their defences, by reforming the system of provincial government, and by reorganizing the finance; and his success in dealing with these three difficult problems is sufficiently proved by the prosperous condition of the empire for a century and a half after his death. To secure peace it was necessary to establish on all sides of the empire really defensible frontiers; and this became possible now that for the first time the direction of the foreign policy of the state and of its military forces was concentrated in the hands of a single magistrate. To the south and west the generals of the republic, and Caesar himself, had extended the authority of Rome to the natural boundaries formed by the African deserts and the Atlantic Ocean, and in these two directions Augustus's task was in the main confined to the organization of a settled Roman government within these limits. In Africa the client state of Egypt was ruled by Augustus as the successor of the Ptolemies, and administered by his deputies (*praefecti*), and the kingdom of Numidia (25 B.C.) was incorporated with the old province of Africa. In Spain the hill-tribes of the north-west were finally subdued and a third province, Lusitania, established.[7] In Gaul Augustus (27 B.C.) established in addition to the "old province" the three new ones of Aquitania, Lugdunensis and Belgica,[8] which included the territories conquered by Julius Caesar. Towards the north the republic had left the civilized countries bordering on the Mediterranean with only a very imperfect defence against the threatening mass of barbarian tribes beyond them. The result[9] of Augustus's policy was to establish a protecting line of provinces running from the Euxine to the North Sea, and covering the peaceful districts to the south,—Moesia (A.D. 6), Pannonia (A.D. 9), Noricum (15 B.C.), Raetia (15 B.C.) and Gallia Belgica. Roman rule was thus carried up to the natural frontier lines of the Rhine and the Danube. It was originally intended to make the Elbe the frontier of the empire; but after the defeat of P. Quintilius Varus (A.D. 9) the forward policy was abandoned. Tiberius recalled Germanicus as soon as Varus had been avenged; and after the peace with Maroboduus, the chief of the Marcomanni on the upper Danube, in the next year (A.D. 17), the defensive policy recommended by Augustus was adopted along the whole of the northern frontier. The line of the great rivers was held by an imposing mass of troops. Along the Rhine lay the armies of Upper and Lower Germany, consisting of four legions each; eight more guarded the Danube and the frontiers of Pannonia and Moesia. At frequent intervals along the frontier were the military colonies, the permanent camps and the smaller intervening *castella*. Flotillas of galleys cruised up and down the rivers, and Roman roads opened communication both along the frontiers and with the seat of government in Italy.

North.

The East.

In the East, Rome was confronted with a well-organized and powerful state whose claims to empire were second only to her own. The victory of Carrhae (53 B.C.) had encouraged among the Parthians the idea of an invasion of Syria and Asia Minor, while it had awakened in Rome a genuine fear of the formidable power which had so suddenly arisen in the East. Caesar was at the moment of his death preparing to avenge the death of Crassus by an invasion of Parthia, and Antony's schemes of founding an Eastern empire which should rival that of Alexander included the conquest of the kingdom beyond the Euphrates. Augustus, however, adhered to the policy which he recommended to his successors of "keeping the empire within its bounds"; and the Parthians, weakened by internal feuds and dynastic quarrels, were in no mood for vigorous action. Roman pride was satisfied by the restoration of the standards taken at Carrhae. Four legions guarded the line of the Euphrates, and, beyond the frontiers of Pontus and

[9] See especially Mommsen, *Provinces*, i. caps. 4 and 6.

Cappadocia, Armenia was established as a "friendly and independent ally."[1]

Next in importance to the rectification and defence of the frontiers was the reformation of the administration, and the restoration of prosperity to the distracted and exhausted provinces. The most serious defect of the republican system had been the absence of any effective control over the Roman officials outside Italy. This was now supplied by the general proconsular authority vested in the emperor. The provinces were for the first time treated as departments of a single state, while their governors, from being independent and virtually irresponsible rulers, became the subordinate officials of a higher authority.[2] Over the *legati* of the imperial provinces the control of the emperor was as complete as that of the republican proconsul over his staff in his own province. They were appointed by him, held office at his good pleasure, and were directly responsible to him for their conduct. The proconsuls of the senatorial provinces were in law magistrates equally with the *princeps*, though inferior to him in rank; it was to the senate that they were as of old responsible; they were still selected by lot from among the senators of consular and praetorian rank. But the distinction did not seriously interfere with the paramount authority of the emperor. The provinces left nominally to the senate were the more peaceful and settled districts in the heart of the empire, where only the routine work of civil administration was needed, and where the local municipal governments were as yet comparatively vigorous. The senatorial proconsuls themselves were indirectly nominated by the emperor through his control of the praetorship and consulship. They wielded no military and only a strictly subordinate financial authority, and, though Augustus and Tiberius, at any rate, encouraged the fiction of the responsibility of the senatorial governors to the senate, it was in reality to the emperor that they looked for direction and advice, and to him that they were held accountable. Moreover, in the case of all governors this accountability became under the empire a reality. Prosecutions for extortion (*de pecuniis repetundis*), which were now transferred to the hearing of the senate, are tolerably frequent during the first century of the empire; but a more effective check on maladministration lay in the appeal to Caesar from the decisions of any governor, which was open to every provincial, and in the right of petition. Finally, the authority both of the legate and the proconsul was weakened by the presence of the imperial procurator, to whom was entrusted the administration of the fiscal revenues; while both legate and proconsul were deprived of that right of requisitioning supplies which, in spite of a long series of restrictive laws, had been the most powerful instrument of oppression in the hands of republican governors.

Administrative reforms in the provinces.

The financial reforms of Augustus[3] are marked by the same desire to establish an equitable, orderly and economical system, and by the same centralization of authority in the emperor's hands. The institution of an imperial census, or valuation of all land throughout the empire, and the assessment upon this basis of a uniform land tax, in place of the heterogeneous and irregular payments made under the republic, were the work of Augustus, though the system was developed and perfected by the emperors of the 2nd century and by Diocletian. The land tax itself was directly collected, either by imperial officials or by local authorities responsible to them, and the old wasteful plan of selling the privilege of collection to *publicani* was henceforward applied only to such indirect taxes as the customs duties. The rate of the land tax was fixed by the emperor, and with him rested the power of remission even in senatorial provinces.[4] The effect of these reforms is clearly visible in the improved financial condition of the empire. Under the republic the treasury had been nearly always in difficulties, and the provinces exhausted and impoverished. Under the emperors, at least throughout the 1st century, in spite of a largely increased expenditure on the army, on public works, on shows and largesses, and on the machinery of government itself, the better emperors, such as Tiberius and Vespasian, were able to accumulate large sums, while the provinces show but few signs of distress. Moreover, while the republic had almost entirely neglected to develop the internal resources of the provinces, Augustus set the example of a liberal expenditure on public works, in the construction of harbours, roads and bridges, the reclamation of waste lands, and the erection of public buildings.[5] The crippling restrictions which the republic had placed on freedom of intercourse and trade, even between the separate districts of a single province, disappeared under the empire. In the eyes of the republican statesmen the provinces were merely the estates of the Roman people, but from the reign of Augustus dates the gradual disappearance of the old pre-eminence of Rome and Italy. It was from the provinces that the legions were increasingly recruited; provincials rose to high rank as soldiers, statesmen and men of letters,[6] and the methods of administration, formerly distinctive of the provinces, were adopted even in Rome and Italy. From Augustus himself, jealous as he was of the traditions and privileges of the Roman people, date the rule of an imperial prefect[7] in the city of Rome, the division of Italy into *regiones* in the provincial fashion, and the permanent quartering there of armed troops.[8]

Financial reforms.

Liberal policy towards the provinces.

Italy and the provinces under the empire.

Augustus founded a dynasty which occupied the throne for more than half a century after his death. The first and by far the ablest of its members was Tiberius (A.D. 14–37). He was undoubtedly a capable and vigorous ruler, who enforced justice in the government of the provinces, maintained the integrity of the frontiers and husbanded the finances of the empire, but he became intensely unpopular in Roman society, and was painted as a cruel and odious tyrant. His successor, Gaius (A.D. 37–41), generally known as Caligula, was the slave of his wild caprices and uncontrolled passions, which he indulged in manifest insanity. He was followed by his uncle, Claudius (A.D. 41–54), whose personal uncouthness made him an object of derision to his contemporaries, but who was by no means devoid of statesmanlike faculties. His reign left an abiding mark on the history of the empire, for he carried forward its development on the lines intended by Augustus. Client-states were absorbed, southern Britain was conquered, the Romanization of the West received a powerful impulse, public works were executed in Rome and Italy, and the organization of the imperial bureaucracy made rapid strides. Nero (A.D. 54–68), the last of the Julio-Claudian line, has been handed down to posterity as the incarnation of monstrous vice and fantastic luxury. But his wild excesses scarcely affected the prosperity of the empire at large; the provinces were well governed, and the war with Parthia led to a compromise in the matter of Armenia which secured peace for half a century.[9]

The Julio-Claudian line.

[1] Mommsen, *Provinces*, cap. 9. Armenia, however, long continued to be a debatable ground between Rome and Parthia—passing alternately under the influence of one or the other.

[2] For the provincial reforms of Augustus, see Marquardt, *Staatsverw.*, i. 344 sqq.

[3] Marquardt, ii. 204 sqq.; Hirschfeld, *Verwaltungsbeamten*, 55 sqq.

[4] Tac. *Ann.* ii. 47.

[5] Suet. *Aug.* 18, 47.

[6] Jung, *Die romanischen Landschaften* (Innsbruck, 1881); Budinsky, *Die Ausbreitung d. lateinischen Sprache* (Berlin, 1881).

[7] The *praefectus urbi*, unlike the other imperial prefects, was always a senator. He commanded the three *cohortes urbanae*, which preserved order in the city, and possessed a power of jurisdiction which tended to increase in importance. The office, which was only temporary under Augustus, became a permanent one under his successor.

[8] Besides the *cohortes urbanae* mentioned above, the nine regiments of the imperial guard (*cohortes praetorianae*) were quartered in Rome. The guards were not at first concentrated but billeted in Rome and the neighbouring towns; the praetorian barracks on the Esquiline were built under Tiberius (Tac. *Ann.* iv. 2). Augustus also formed the quasi-military police force of the *vigiles* (in seven cohorts), which performed the duties of a fire brigade and night watch. Police duties in those parts of Italy which were subject to brigandage were performed by *stationes militum* (Suet. *Aug.* 32).

[9] For an estimate of the Julio-Claudian Caesars, based on the results of recent research, see Pelham in *Quarterly Review* (April

The fall of Nero and the extinction of the "progeny of the Caesars" was followed by a war of succession which revealed the military basis of the Principate and the weakness of the tie connecting the emperor with Rome. Galba, Otho, Vitellius and Vespasian represented in turn the legions of Spain, the household troops, the army of the Rhine, and a coalition of the armies of the Danube and the Euphrates; and all except Otho were already *de facto* emperors when they entered Rome. The final survivor in the struggle, Vespasian (A.D. 69–79), was a man of comparatively humble origin, and as the Principate ceased to possess the prestige of high descent it became imperatively necessary to remove, as far as possible, the anomalies of the office and to give it a legitimate and permanent form. Thus we find an elaborate and formal system of titles substituted for the personal names of the Julio-Claudian emperors, an increasing tendency to insist on the inherent prerogatives of the Principate (such as the censorial power), and an attempt to invest Caesarism with an hereditary character, either by natural descent or by adoption, while the worship of the *Divi*, or deified Caesars, was made the symbol of its continuity and legitimacy. The dynasty of Vespasian and his sons (Titus, A.D. 79–81, Domitian, A.D. 81–96) became extinct on the murder of the last named, whose high-handed treatment of the senate earned him the name of a tyrant; his successor, Nerva (A.D. 96–98), opened the series of "adoptive" emperors (Trajan, A.D. 98–117, Hadrian, 117–38, Antoninus Pius, 138–61, Marcus Aurelius, 161–80) under whose rule the empire enjoyed a period of internal tranquillity and good government. Its boundaries were extended by the subjugation of northern Britain (by Agricola, A.D. 78–84; see BRITAIN, § *Roman*), by the annexation of the districts includcd in the angle of the Rhine and Danube under the Flavian emperors, and by the conquest of Dacia (the modern Transylvania) under Trajan (completed in A.D. 106). Trajan also annexed Arabia Petraea and in his closing years invaded Parthia and formed provinces of Armenia, Mesopotamia and Assyria; but these conquests were surrendered by his successor, Hadrian, who set himself to the task of consolidating the empire and perfecting its defences. To him is due the system of permanent *limites* or frontier fortifications, such as the wall which protected northern Britain and the palisade which replaced the chain of forts established by the Flavian emperors from the Rhine to the Danube.[1] The construction of these defences showed that the limit of expansion had been reached, and under M. Aurelius the tide began to turn. A great part of his reign was occupied with wars against the Marcomanni, Quadi, Sarmatians, &c., whose irruptions seriously threatened the security of Italy. Henceforth Rome never ceased to be on the defensive.

The Flavian and Antonine emperors.

Condition of the provinces.

Within the frontiers the levelling and unifying process commenced by Augustus had steadily proceeded. A tolerably uniform provincial system covered the whole area of the empire. The client states had one by one been reconstituted as provinces, and even the governments of Italy had been in many respects assimilated to the provincial type. The municipal system had spread widely; the period from Vespasian to Aurelius witnessed the elevation to municipal rank of an immense number of communities, not only in the old provinces of the West, in Africa, Spain and Gaul, but in the newer provinces of the North, and along the line of the northern frontier; and everywhere under the influence of the central imperial authority there was an increasing uniformity in the form of the local constitutions, framed and granted as they all were by imperial edict.[2] Throughout the empire again the extension of the Roman franchise was preparing the way for the final act by which Caracalla assimilated the legal status of all free-born inhabitants of the empire,[3] and in the west and north this was preceded and accompanied by the complete Romanizing of the people in language and civilization. Yet, in spite of the internal tranquillity and the good government which have made the age of the Antonines famous, we can detect signs of weakness. It was in this period that the centralization of authority in the hands of the *princeps* was completed; the "dual control" established by Augustus, which had been unreal enough in the 1st century, was now, though not formally abolished, systematically ignored in practice. The senate ceased to be an instrument of government, and became an imperial peerage, largely composed of men not qualified by election to the quaestorship but directly ennobled by the emperor.[4] The restricted sphere of administration left by Augustus to the old magistracies was still further narrowed; their jurisdiction, for example, tended to pass into the hands of the Greek officers appointed by Caesar—the prefect of the city and the prefect of the guards. The complete organization of Caesar's own administrative service, and its recognition as a state bureaucracy, was chiefly the work of Hadrian, who took the secretaryships out of the hands of freedmen and entrusted them to procurators of equestrian rank.[5] All these changes, practical and in some degree beneficial, as they were, brought with them the attendant evils of excessive centralization. Though these were hardly felt while the central authority was wielded by vigorous rulers, yet even under Trajan, Hadrian and the Antonines we notice a failure of strength in the empire as a whole, and a corresponding increase of pressure on the imperial government itself. The reforms of Augustus had given free play to powers still fresh and vigorous. The ceaseless labours of Hadrian were directed mainly to the careful husbanding of such strength as still remained, or to attempts at reviving it by the sheer force of imperial authority. Among the symptoms of incipient decline were the growing depopulation, especially of the central districts of the empire, the constant financial difficulties, the deterioration in character of the local governments in the provincial communities,[6] and the increasing reluctance exhibited by all classes to undertake the now onerous burden of municipal office.

Spread of the municipal system.

Extension of the Roman franchise.

It is to such facts as these that we must look in passing a final judgment on the imperial government, which is admittedly seen in its best and most perfect form in the Antonine period. In our review of the conditions which brought about the fall of the Roman Republic, we saw that the collapse of the city-state made Caesarism inevitable, since the extension of federal and representative institutions to a world-empire lay beyond the horizon of ancient thought. The benefits which Caesarism conferred upon mankind are plain. In the first place, the Roman world, which had hitherto not been governed in the true sense of the word, but exploited in the interests of a ruling clique, now received an orderly and efficient government, under which the frightful ravages of misrule and civil strife were repaired. The financial resources of the empire were husbanded by skilled and, above all, *trained* administrators, to whom the imperial service offered a *carrière ouverte aux talents*; many of these were Greeks, or half-Greek Orientals, whose business capacity formed an invaluable asset hitherto

[1] On the *limes imperii*, see Pelham, "A Problem of Roman Frontier Policy" (*Transactions of the Royal Historical Society*, 1906), and Kornemann, "Die neueste Limesforschung" (*Klio*, 1907, pp. 73 ff.). The *limes* connecting the Rhine with the Danube has been systematically excavated in recent years; for the results see *Der obergermanisch-rätische Limes* (Heidelberg, 1894–), and *Der römische Limes in Österreich* (Vienna, 1900–).

[5] *Vit. Hadr.* 21. Besides Hirschfeld's *Verwaltungsbeamten* reference may be made to Liebenam, *Die Laufbahn der Procuratoren* (Jena, 1886), and Schurz, *De mutationibus in imperio Romano ordinando ab imperatore Hadriano factis* (Bonn, 1883).

[6] This led to the appointment of the *curatores* and *correctores* in the 2nd century. The younger Pliny was one of these imperial commissioners, and his correspondence with Trajan throws much light on the condition of the provinces.

neglected. Augustus caused an official survey of the empire to be made, and a scientific census of its resources was gradually carried out and from time to time revised; thus the balance of revenue and expenditure could be accurately estimated and adjusted, and financial stability was established. The system of tax-farming was gradually abolished and direct collection substituted; commerce was freed from vexatious restrictions, and large customs-districts were formed, on whose borders duties were levied for revenue only. The government took even more direct measures for the encouragement of industry and especially of agriculture. The most remarkable of these were the "alimentary" institutions, originally due to Nerva and developed by succeeding emperors. Capital was advanced at moderate rates of interest to Italian landowners on the security of their estates, and the profits of this system of land-banks were devoted to the maintenance and education of poor children. The foundation of colonies for time-expired soldiers, who received grants of land on their discharge, contributed something to the formation of a well-to-do agricultural class; and although the system was not successful in lower Italy, where economic decline could not be arrested, there can be no doubt that central and northern Italy, where the vine and olive were largely cultivated, and manufacturing industries sprang up, enjoyed a considerable measure of prosperity. The extension of the Roman municipal system to the provinces, and the watchful care exercised by the imperial government over the communities, together with the profuse liberality of the emperors, which was imitated by the wealthier citizens of the towns, led to the creation of a flourishing municipal life still evidenced by the remains which in districts such as Asia Minor or Tunis stand in significant contrast with the desolation brought about by centuries of barbaric rule. Mommsen[1] has, indeed, expressed the opinion that "if an angel of the Lord were to strike the balance whether the domain ruled by Severus Antoninus were governed with the greater intelligence and the greater humanity at that time or in the present day, whether civilization and national prosperity generally had since that time advanced or retrograded, it is very doubtful whether the decision would prove in favour of the present."

But there is another side to the picture. The empire brought into being a new society and a new nationality, due to the fusion of Roman ideas with Hellenic culture, beside which other elements, saving only, as we shall see, those contributed by the Oriental religions, were insignificant. This new nationality grew in definition through the gradual disappearance of distinctions of language and manners, the assimilating influence of commercial and social intercourse, and the extinction of national jealousies and aspirations. But the cosmopolitan society thus formed was compacted of so many disparate elements that a common patriotism was hard to foster, and doubly hard when the autocratic system of government prevented men from aspiring to that true political distinction which is attainable only in a self-governing community. It is true that there was much good work to be done, and that much good work was done, in the service of the emperors; true, also, that the *carrière ouverte aux talents* was in large measure realized. Distinctions of race were slowly but steadily effaced by the grant of citizen rights to provincials and by the manumission of slaves; and the career open to the Romanized provincial or the liberated slave might culminate in the highest distinctions which the emperor could bestow. In the hierarchy of social orders—senate, *equites* and *plebs*—ascent was easy and regular from the lower grade to the higher; and the more enlightened of the emperors—especially Hadrian—made a genuine endeavour to give a due share in the work of government to the various subject races. But nothing could compensate for the lack of self-determination, and although during the first century and a half of imperial rule a flourishing local patriotism in some degree filled the place of the wider sentiment, this gradually sank into decay and became a pretext under cover of which the lower classes in the several communities took toll of their wealthier fellow-citizens in the shape of public works, largesses, amusements, &c., until the resources at the disposal of the rich ran dry, the communities themselves in many cases became insolvent, and the inexorable claims of the central government were satisfied only by the surrender of financial control to an imperial commissioner. Then the organs of civic life became atrophied, political interest died out, and the whole burden of administration, as well as that of defence, fell upon the shoulders of the bureaucracy, which proved unequal to the task.

In a world thus governed the individual was thrown more and more upon his own resources—the pursuit of wealth[2] and pleasure, or the satisfaction of intellectual interests. Under the rule of the Caesars much was done for education. Julius Caesar bestowed Roman citizenship on "teachers of the liberal arts"; Vespasian endowed professorships of Greek and Latin oratory at Rome;[3] and later emperors, especially Antoninus Pius, extended the same benefits to the provinces. Local enterprise and munificence were also devoted to the cause of education; we learn from the correspondence of the younger Pliny that public schools were founded in the towns of northern Italy. But though there was a wide diffusion of knowledge under the empire, there was no true intellectual progress. Augustus, it is true, gathered about him the most brilliant writers of his time, and the debut of the new monarchy coincided with the Golden Age of Roman literature; but this was of brief duration, and the beginning of the Christian era saw the triumph of classicism and the first steps in the decline which awaits all literary movements which look to the past rather than the future. Political oratory could not exist under an absolute ruler; public life furnished no inspiring theme to poet or historian; and literature became didactic or imitative, while rhetoric degenerated into declamation. It is true that for some time both literature and philosophy maintained an alliance with the old republican aristocracy and voiced the undercurrent of opposition to the empire; but both had ceased to be irreconcilable before the time of Hadrian. Under his rule classicism gave way to the archaism of which Fronto and Apuleius furnish the most notable examples, and which preferred Cato and Ennius to Cicero and Virgil. But this return to the past was not followed by any renewed creative energy. It was a confession of weakness and little more; and the widely diffused culture of the Antonine period, though outwardly brilliant, had no progressive energy and presented but a feeble resistance to the dissolving forces of barbarism.

To strike the balance of loss and gain in the field of morals is an exceedingly difficult task. The denunciations of the satirists, especially of Juvenal, might lead us to believe that an appalling state of depravity existed in the society of the early empire; but satirists notoriously paint in glaring colours for literary effect, and whatever may be said of the morality of Rome—which was probably no better and no worse than that of any cosmopolitan capital—there were sound and healthy elements in plenty amongst the population of Italy and the provinces. Doubtless the craving for amusement—especially for the shows of the amphitheatre and the chariot-races of the circus—infected the idle masses of the populace in Rome and the larger towns, and was fostered by the policy of despotism, which always aims at securing cheap popularity with the proletariat; but the tendency of the time, not only in the higher ranks, but also amongst humbler folk, was towards a broader humanity and a more serious view of life and its problems. Greek philosophy, especially the Stoic system, in order to appeal to the practical Roman intelligence, found itself obliged to elaborate a rule of conduct, and in many

[1] *Provinces*, i. p. 5.

[2] Immense fortunes were accumulated under the early empire, especially by imperial freedmen, such as Pallas, who is said to have possessed the equivalent of £3,000,000 sterling; and there were instances of extravagant luxury, which was encouraged by Nero. But we are told that there was a return to simpler habits of life under the Flavian dynasty.

[3] Quintilian occupied the chair of Latin rhetoric, and received the *ornamenta consularia*.

households the philosopher, generally a Greek, played the part of a director of consciences. The influence of these doctrines is shown in the humane provisions of the civil law as elaborated in the Antonine period, which did much to mitigate the lot of the slave and to smooth the process by which freedom might be attained.[1] Above all, a religious movement which drew its motive power not from Greek philosophy, but from Oriental mysticism, carried the human race far from its old moorings, and culminated in the triumph of Christianity. All the Eastern cults—whether of Cybele, of Isis, of the Syrian Baalim or of the Persian Mithras—had this in common, that they promised to their adherents redemption from the curse of the flesh and a glorious immortality after death; and this fact gave them an irresistible attraction for the disillusioned and overburdened subjects of the emperors. The religion of Mithras, whose doctrines were specially suited to the military temperament, made its way wherever the armies of the empire were stationed, and seemed likely at one moment to become universal; but it was forced to yield to Christianity, which refused to tolerate any rival, faced the empire with a claim to absolute dominion in the spiritual sphere, and at length made that claim good (see ROMAN RELIGION; MITHRAS; GREAT MOTHER OF THE Gods).

Marcus Aurelius died in 180, and the reign of his worthless son, Commodus (A.D. 180–93), was followed by a century of war and disorder, during which nothing but the stern rule of soldier emperors saved the empire from dissolution. The first and ablest of these was Septimius Severus (193–211), whose claims were disputed by Clodius Albinus in the West, and by Pescennius Niger in the East; in these struggles rival Roman forces, for the first time since the accession of Vespasian, exhausted each other in civil war.[2] Severus emphasized strongly the military character of the Principate; he abstained from seeking confirmation for his authority from the senate, and deprived that body of most of the share in the government which it still retained; he assumed the title of proconsul in Rome itself, made the prefect of the guard the vicegerent of his authority, and heaped privileges upon the army, which, although they secured its entire devotion to his family, impaired its efficiency as a fighting force and thus weakened Rome in face of the barbarian invader.[3] He succeeded in founding a short-lived dynasty, which ended with the attempt of the virtuous but weak Alexander (222–35) to restore the independence of the senate. This led to a military reaction, and the elevation of the brutal Maximinus, a Thracian peasant, to the throne. The disintegration of the empire was the natural result; for the various provincial armies put forward their commanders as claimants to the purple. A hundred ties bound them closely to the districts in which they were stationed; their permanent camps had grown into towns, they had families and farms; the unarmed provincials looked to them as their natural protectors, and were attached to them by bonds of intermarriage and by long intercourse. Now that they found themselves left to repel by their own efforts the invaders from without, they reasonably enough claimed the right to ignore the central authority which was powerless to aid them, and to choose for themselves *imperatores* whom they knew and trusted. These "tyrants," as they were called when unsuccessful, sprang up in ever-increasing numbers, and weakened Rome's power of resistance to the new enemies who were threatening her frontiers—the Alamanni and Franks, who broke through the German *limes* in 236; the Goths, who crossed the Danube in 247, raided the Balkan provinces, and defeated and slew the emperor, Decius, in 251, and the restored Persian kingdom of the Sassanidae (see PERSIA), whose rulers laid claim to all the Asiatic possessions of Rome and in 260 captured Antioch and made the emperor, Valerian, a prisoner. During the reign of Gallienus, the son of Valerian (260–68), the evil reached its height. The central authority was paralysed; the Romanized districts beyond the Rhine were irrevocably lost; the Persians were threatening to overrun the Eastern provinces; the Goths had formed a fleet of 500 sail which harried Asia Minor and even Greece itself, where Athens, Corinth, Sparta and Argos were sacked; and the legions on the frontiers were left to repel the enemies of Rome as best they could. A provincial empire was established by M. Cassianius Latinius Postumus in Gaul and maintained by his successors, M. Piavonius Victorinus and C. Pius Esuvius Tetricus.[4] Their authority was acknowledged, not only in Gaul and by the troops on the Rhine, but by the legions of Britain and Spain; and under Postumus at any rate (259–69) the existence of the Gallic Empire was justified by the repulse of the barbarians and by the restoration of peace and security to the provinces of Gaul. On the Danube, in Greece and in Asia Minor none of the "pretenders" enjoyed more than a passing success. In the Far East, the Syrian Odaenathus, prince of Palmyra[5] (*q.v.*), though officially only the governor of the East (*dux Orientis*) under Gallienus, drove the Persians out of Asia Minor and Syria, recovered Mesopotamia, and ruled Syria, Arabia, Phoenicia, Cappadocia and Bithynia with all the independence of a sovereign. Odaenathus was murdered in 266. His young son Vaballathus (Wahab-allath) succeeded him in his titles, but the real power was vested in his widow Zenobia, under whom not only the greater part of Asia Minor but even the province of Egypt was forcibly added to the dominions governed by the Palmyrene prince, who ceased to acknowledge the supremacy of Rome.

The empire from 180–284.

Reign of Gallienus, 260–268.

Odaenathus and Zenobia at Palmyra.

Gallienus was murdered at Milan in 268, and after the brief reign of Claudius II. (A.D. 268–70), who checked the advance of the Goths, Aurelian (270–75) restored unity to the distracted empire. Palmyra was destroyed and Zenobia led a prisoner to Rome (in 273) and in the next year the Gallic empire came to an end by the surrender of Tetricus. Aurelian, it is true, abandoned the province of Dacia, but the defences of the Danube were strengthened, and in 276 Probus repulsed the Franks and Alamanni, who had been pressing on the Rhine frontier for some forty years. Finally, Carus (282) recovered Armenia and Mesopotamia from the Persians and restored the frontier fixed by Septimius Severus.

Restoration of unity by Aurelian, 273.

Although any serious loss of territory had been avoided, the storms of the 3rd century had told with fatal effect upon the general condition of the empire. The "Roman peace" had vanished; not only the frontier territories, but the central districts of Greece, Asia Minor, and even Italy itself, had suffered from the ravages of war, and the fortification of Rome by Aurelian was a significant testimony to the altered condition of affairs. War, plague and famine had thinned the population and crippled the resources of the provinces. On all sides land was running waste, cities and towns were decaying, and commerce was paralysed. Only with the greatest difficulty were sufficient funds squeezed from the exhausted taxpayers to meet the increasing cost of the defence of the frontiers. The old established culture and civilization of the Mediterranean world rapidly declined, and the mixture of barbaric rudeness with Oriental pomp and luxury which marked the court, even of the better emperors, such as Aurelian, was typical of the general deterioration, which was accelerated by the growing practice of settling barbarians on lands within the empire, and of admitting them freely to service in the Roman army.

State of the empire at the close of the 3rd century.

[1] The massacre of the slaves of Pedanius Secundus, who had been murdered by some person unknown (Tac. *Ann.* xiv. 42), was, it is true, decreed by the senate; but it was a highly unpopular act, and is chiefly significant as showing that the senatorial aristocracy was out of harmony with the spirit of the time.

PERIOD II.: THE DOMINATE, A.D. 284–476.—(*a*) *From the Accession of Diocletian to the Death of Theodosius* (A.D. 284–395).

The reforms of Diocletian and Constantine.

The work of fortifying the empire alike against internal sedition and foreign invasion, begun by Aurelian and Probus, was completed by Diocletian and Constantine the Great, whose system of government, novel as it appears at first sight, was in reality the natural and inevitable outcome of the history of the previous century.[1] Its object was twofold, to give increased stability to the imperial authority itself, and to organize an efficient administrative machinery throughout the empire. In the second year of his reign Diocletian associated Maximian with himself as colleague, and six years later (293) the hands of the two "Augusti" were further strengthened by the proclamation of Constantius and Galerius as "Caesares." Precedents for such an arrangement were to be found in the earlier history of the Principate[2]; and it divided the burdens and responsibilities of government, without sacrificing the unity of the empire; for, although to each of the Augusti and Caesars a separate sphere was assigned, the Caesars were subordinate to the higher authority of the Augusti, and over all his three colleagues Diocletian claimed to exercise a paramount control. It also reduced the risk of a disputed succession by establishing in the two Caesars the natural successors to the Augusti, and it satisfied the jealous pride of the rival armies by giving them *imperatores* of their own. The distribution of power between Diocletian and his colleagues followed those lines of division which the feuds of the previous century had marked out. The armies of the Rhine, the Danube and of Syria fell to the lot respectively of Constantius, Galerius and Diocletian, the central districts of Italy and Africa to Maximian.[3]

Augusti and Caesares.

Altered character of the Imperial authority.

In the new system the imperial authority was finally emancipated from all constitutional limitation and control and the last traces of its republican origin disappeared. The emperors from Diocletian onwards were autocrats in theory as well as in practice. This avowed despotism Diocletian, following in the steps of Aurelian, heaped round with all the pomp and majesty of Oriental monarchy. The final adoption of the title *dominus*, the diadem on the head, the robes of silk and gold, the replacement of the republican salutation of a fellow-citizen by the adoring prostration even of the highest in rank before their lord and master, were all significant marks of the new regime.[4] In the hands of this absolute ruler was placed the entire control of an elaborate administrative machinery. Most of the old local and national distinctions, privileges and liberties which had once flourished within the empire had already disappeared under the levelling influence of imperial rule, and the process was now completed.

Levelling policy of Diocletian.

Degradation of Italy and Rome.

Roman citizenship had, since the edict of Caracalla, ceased to be the privilege of a minority. Diocletian finally reduced Italy and Rome to the level of the provinces: the provincial land-tax and provincial government were introduced into Italy,[5] while Rome ceased to be even in name the seat of imperial authority.[6] Throughout the whole area of the empire a uniform system of administration was established, the control of which was centred in the imperial palace.[7] Between the civil and military departments the separation was complete. At the head of the former were the praetorian prefects,[8] next below them the *vicarii*, who had charge of the *dioceses*; below these again the governors of the separate provinces (*praesides, correctores, consulares*),[9] under each of whom was a host of minor officials. Parallel with this civil hierarchy was the series of military officers, from the *magistri militum*, the *duces*, and *comites* downwards.[10] In both there is the utmost possible subordination and division of authority. The subdivision of provinces, begun by the emperors of the 2nd century, was systematically carried out by Diocletian, and each official, civil or military, was placed directly under the orders of a superior; thus a continuous chain of authority connected the emperor with the meanest official in his service. Finally, the various grades in these two imperial services were carefully marked by the appropriation to each of distinctive titles, the highest being that of *illustris*, which was confined to the prefects and to the military *magistri* and *comites*, and to the chief ministers.[11]

The new administrative system.

Effects of these reforms.

There can be little doubt that on the whole these reforms prolonged the existence of the empire, by creating a machinery which enabled the stronger emperors to utilize effectively all its available resources, and which even to some extent made good the deficiencies of weaker rulers. But in many points they failed to attain their object. Diocletian's division of the imperial authority among colleagues, subject to the general control of the senior Augustus, was effectually discredited by the twenty years of almost constant conflict which followed his own abdication (305–23). Constantine's partition of the empire among his three sons was not more successful in ensuring tranquillity, and in the final division of the East and West between Valens and Valentinian (364) the essential principle of Diocletian's scheme, the maintenance of a single central authority, was abandoned. The "tyrants," the curse of the 3rd century, were far from unknown in the 4th. The system, moreover, while it failed altogether to remove some of the existing evils, aggravated others. The already overburdened financial resources of the empire were strained still further by the increased expenditure necessitated by the substitution of four imperial courts for one, and by the multiplication in every direction of paid officials. The gigantic bureaucracy of the 4th century proved, in spite of its undoubted services, an intolerable weight upon the energies of the empire.

Constantine the Great.

Diocletian and Maximian formally abdicated their high office in 305. Nineteen years later Constantine I., the Great, the sole survivor of six rival emperors, united the whole empire under his own rule. His reign of fourteen years was marked by two events of first-rate importance,—the recognition of Christianity as the religion of the

[1] See Gibbon (ed. Bury), ii. chap. xvii. 158 ff.; Marquardt, *Staatsverw.* i. pp. 81, 336, 337, ii. 217 seq.; Madvig, *Verf. d. Röm. Reichs*, i. 585; Böcking, *Notitia dignitatum* (Bonn, 1853); Hodgkin, *Italy and her Invaders* (ed. 2), bk. i. chap. xii.; Preuss, *Diocletian* (Leipzig, 1869); Seeck, *Untergang der antiken Welt*, vols. i., ii. (1897–1902).

[2] Mommsen, *Staatsrecht*, ii. 1168 seq. Verus was associated with Marcus Aurelius as Augustus; Severus gave the title to his two sons. The bestowal of the title "Caesar" on the destined successor dates from Hadrian. Mommsen, *op. cit.* 1139.

[3] The division was as follows:—(1) Diocletian—Thrace, Egypt, Syria, Asia Minor; (2) Maximian—Italy and Africa; (3) Galerius—Illyricum and the Danube; (4) Constantius—Britain, Gaul, Spain. See Gibbon, i. 354; Aurelius Victor, c. 39.

[4] Murel. Victor, 39; Eutrop. ix. 26.

[5] Marquardt, *Staatsverw.* i. 233 ff. Italy, together with Sicily, Sardinia and Corsica, was divided into 17 provinciae. Each had its own governor; the governors were subject to the two *vicarii* (*vic. urbis, vic. Italiae*), and they in turn to the prefect of Italy, whose prefecture, however, included as well Africa and Western Illyricum.

[6] The seats of government for Diocletian and his three colleagues were Mediolanum, Augusta Treverorum, Sirmium, Nicomedia.

[7] For these last, see Gibbon, ii. chap. xvii. p. 188; cf. also *Notitia Dignitatum* and Böcking's notes.

[8] At first the number of these varied and there was no fixed division of provinces between them; but by the close of the 4th century there were four prefectures, viz. Orient, Illyricum, Italia, Gallia, to which must be added the prefectures of Rome and Constantinople. See Mommsen in *Hermes*, xxxvi. 294 ff.

[9] There were 12 dioceses and 101 provinces; cf., in addition to the authorities mentioned above, Bethmann-Hollweg, *Civil-Prozess*, iii.; Kuhn, *Die städtische und bürgerliche Verfassung des römischen Reichs* (1877).

[10] The army was completely remodelled, and the old frontier garrisons (now called *Limitanei*) were supplemented by a field force attached to the persons of the Augusti and Caesares, and hence called *Comitatenses*. The change was accompanied by the subdivision of the old legions into units of about 2000 men. For these reforms see Seeck, *Untergang der antiken Welt*, bk. iii. chap. v.; Mommsen in *Hermes*, xxiv. 225 ff.

[11] The grades were as follows: *illustres, spectabiles, clarissimi, perfectissimi, egregii*. For the other insignia, see Madvig, ii. 590, and the *Notitia Dignitatum*.

empire, and the building of the new capital at Byzantium.

Recognition of Christianity. The alliance which Constantine inaugurated between the Christian church and the imperial government, while it enlisted on the side of the state one of the most powerful of the new forces with which it had to reckon, imposed a check, which was in time to become a powerful one, on the imperial authority. The establishment of the new

Constantinople. "City of Constantine" as a second Rome paved the way for the final separation of East and West by providing the former for the first time with a suitable seat of government on the Bosphorus. The death of Constantine in 337 was followed, as the abdication of Diocletian had been, by the outbreak of quarrels among rival Caesars. Of the three sons of Constantine who in 337 divided the empire between them, Constantine the eldest fell in civil war against his brother Constans; Constans himself was, ten years afterwards, defeated and slain by Magnentius; and the latter in his turn was in 353 vanquished by Constantine's only surviving son Constantius.

Constantius II., 351-63. Thus for the second time the whole empire was united under the rule of a member of the house of Constantine. But in 355 Constantius granted the title of Caesar to his cousin Julian and placed him in charge of Gaul, where the momentary elevation of a tyrant, Silvanus, and still more the inroads of Franks and Alamanni, had excited alarm. But Julian's successes during the next five years were such as to arouse the jealous fears of Constantius. In order to weaken his suspected rival the legions under Julian in Gaul were suddenly ordered to march eastward against the Persians (360). They refused; and when the order was repeated, replied by proclaiming Julian himself emperor and Augustus. Julian, with probably sincere reluctance, accepted the position, but the death of Constantius in 361 saved the empire from the threatened civil war. Julian's attempted restoration of pagan and in especial of Hellenic worships had no more permanent effect than the war which he courageously waged against the multitudinous abuses which had grown up in the luxurious court of Constantius.[1] But his vigorous administration in Gaul undoubtedly checked the barbarian advance across the Rhine, and postponed the loss of the Western provinces; on the contrary, his campaign in Persia, brilliantly successful at first, ended in his own death (363), and his successor, Jovian, immediately surrendered the territories beyond the Tigris won by Diocletian seventy years before. Jovian died on the 17th of February 364; and on the 26th of February Valentinian was acknowledged as emperor of the army at Nicaea. In obedience to the wish of the soldiers that he should associate a colleague with himself, he conferred the title of Augustus upon his brother Valens, and the division of the empire was at last effected,—Valentinian became emperor of the West, Valens of the East. Valentinian maintained the integrity of the empire until his death (in 375), which deprived the weaker Valens of a trusted counsellor and ally, and was followed by a serious crisis on the Danube. In 376 the Goths, hard pressed by their new foes from the eastward, the Huns, sought and obtained the protection of the Roman Empire. They were transported across the Danube and settled in Moesia, but, indignant at the treatment they received, they rose in arms against their protectors. In 378 at Adrianople Valens was defeated and killed, and the victorious Goths advanced eastward to the very walls of Constantinople. Once more, however, the danger passed away. The skill and tact of Theodosius, who had been proclaimed emperor of the East by Gratian,[2] conciliated the Goths; they were granted an allowance, and in large numbers entered the service of the Roman emperor. The remaining years of Theodosius's reign (382–95) were mainly engrossed by the duty of upholding the increasingly feeble authority of his western colleague against the attacks of pretenders. Maximus, the murderer of Gratian (383), was at first recognized by Theodosius as Caesar, and left in undisturbed command of Gaul, Spain and Britain; but, when in 386 he proceeded to oust Valentinian II. from Italy and Africa, Theodosius marched westward, crushed him, and installed Valentinian as emperor of the West. In the very next year, however, the murder of Valentinian (392) by Arbogast, a Frank, was followed by the appearance of a fresh tyrant in the person of Eugenius, a domestic officer and nominee of Arbogast himself. Once more Theodosius marched westward, and near Aquileia decisively defeated his opponents. But his victory was quickly followed by his own illness and death (395), and the fortunes of East and West passed into the care of his two sons Arcadius and Honorius.

(b) *From the Death of Theodosius to the Extinction of the Western Empire (395–476).*—Through more than a century from the accession of Diocletian the Roman Empire had succeeded in holding at bay the swarming hordes of barbarians. But, though no province had yet been lost, as Dacia had been lost in the century before, and though the frontier lines of the Rhine and the Danube were still guarded by Roman forts and troops, there were signs in plenty that a catastrophe was at hand.

Fall of the Western Empire.

The writers who deal with the 4th century we have one long series of laments over the depression and misery of the provinces.[3] To meet the increased expenditure necessary to maintain the legions, to pay the hosts of officials, and to keep up the luxurious splendour of the imperial courts, not only were the taxes raised in amount, but the most oppressive and inquisitorial methods were adopted in order to secure for the imperial treasury every penny that could be wrung from the wretched taxpayer. The results are seen in such pictures as that which the panegyrist Eumenius[4] draws of the state of Gaul (306–12) under Constantine, in the accounts of the same province under Julian fifty years later, in those given by Zosimus early in the 5th century, and in the stringent regulations of the Theodosian code, dealing with the assessment and collection of the taxes. Among the graver symptoms of economic ruin were the decrease of population, which seriously diminished not only the number of taxpayers, but the supply of soldiers for the legions;[5] the spread of infanticide; the increase of waste lands whose owners and cultivators had fled to escape the tax collector; the declining prosperity of the towns; and the constantly recurring riots and insurrections, both among starving peasants, as in Gaul,[6] and in populous cities like Antioch.[7] The distress was aggravated by the civil wars, by the rapacity of tyrants, such as Maxentius and Maximus, but above all by the raids of the barbarians, who seized every opportunity afforded by the divisions or incapacity of the emperors to cross the frontiers and harry the lands of the provincials. Constantine (306–12), Julian (356–60) and Valentinian I. (364–75) had each to give a temporary breathing-space to Gaul by repelling the Franks and Alamanni. Britain was harassed by Picts and Scots from the north (367–70), while the Saxon pirates swept the northern seas and the coasts both of Britain and Gaul. On the Danube the Quadi, Sarmatae, and above all the Goths, poured at intervals into the provinces of Pannonia and Moesia, and penetrated to Macedon and Thrace. In the East, in addition to the constant border feud with Persia, we hear of ravages by the Isaurian mountaineers, and by a new enemy, the Saracens.[8]

Distress of the provinces in the 4th century.

[1] In especial against the overweening influence of the eunuchs, an influence at once greater and more pernicious than even that of the imperial freedmen in the days of Claudius.

Even more ominous of coming danger was the extent to which the European half of the empire was becoming barbarized.

Barbarians within the empire.

The policy which had been inaugurated by Augustus himself of settling barbarians within the frontiers had been taken up on a larger scale and in a more systematic way by the Illyrian emperors of the 3rd century, and was continued by their successors in the 4th. In Gaul, in the provinces south of the Danube, even in Macedon and Italy, large barbarian settlements had been made —Theodosius in particular distinguishing himself by his liberality in this respect. Nor did the barbarians admitted during the 4th century merely swell the class of half-servile *coloni*. On the contrary, they not only constituted to an increasing extent the strength of the imperial forces, but won their way in ever-growing numbers to posts of dignity and importance in the imperial service. Under Constantine the palace was crowded with Franks.[1] Julian led Gothic troops against Persia, and the army with which Theodosius defeated the tyrant Maximus (388) contained large numbers of Huns, and Alans, as well as of Goths. The names of Arbogast, Stilicho and Rufinus are sufficient proof of the place held by barbarians near the emperor's person and in the control of the provinces and legions of Rome; and the relations of Arbogast to his nominee for the purple, Eugenius, were an anticipation of those which existed between Ricimer and the emperors of the latter half of the 5th century.

Barbaric invasions.

It was by barbarians already settled within the empire that the first of the series of attacks which finally separated the western provinces from the empire and set up a barbaric ruler in Italy were made, and it was in men of barbarian birth that Rome found her ablest and most successful defenders. The Visigoths whom Alaric led into Italy had been settled south of the Danube as the allies of the empire since the accession of Theodosius. But, like the Germans of the days of Caesar, they wanted land for their own, and Alaric himself aspired to raise himself to the heights which had been reached before him by the Vandal Stilicho at Ravenna and the Goth Rufinus at Constantinople. The jealousy which existed between the rulers of the western and eastern empires furthered his plans. In the name of Arcadius, the emperor of the east, or at least with the connivance of Arcadius's minister Rufinus, he occupied the province of Illyricum, and from thence ravaged Greece, which, according to the existing division of provinces, belonged to the western empire. Thence in 396 he retreated before Stilicho to Illyricum, with the command of which he was now formally invested by Arcadius; he thus gained a base of operations against Italy.[2] In 400 he led his people, with their wives and families, their wagons and treasure, to seek lands for themselves south of the Alps. But in this first invasion he penetrated no farther than the plains of Lombardy, and after the desperate battle of Pollentia (402 or 403) he slowly withdrew from Italy, his retreat being hastened by the promises of gold freely made to him by the imperial government. Not until the autumn of 408 did Alaric again cross the Alps. Stilicho was dead; the barbarian troops in Honorius's service had been provoked into joining Alaric by the anti-Teutonic policy of Honorius and his ministers, and Alaric marched unopposed to Rome. The payment of a heavy ransom, however, saved the city. Negotiations followed between Alaric and the court of Ravenna. Alaric's demands were moderate, but Honorius would grant neither lands for his people nor the honourable post in the imperial service which he asked for himself. Once more Alaric sat down before Rome, and the citizens were forced to agree to his terms. Attalus, a Greek, the prefect of the city, was declared Augustus, and Alaric accepted the post of commander-in-chief. But after a few months Alaric formally deposed Attalus, on account of his incapacity, and renewed his offers to Honorius. Again they were declined, and Alaric marched to the siege and sack of Rome (410).[3] His death followed hard on his capture of Rome. Two years later (412) his successor Ataulf led the Visigoths to find in Gaul the lands which Alaric had sought in Italy. It is characteristic of the anarchical condition of the west that Ataulf and his Goths should have fought for Honorius in Gaul against the tyrants,[4] and in Spain against the Vandals, Suebi and Alani; and it was with the consent of Honorius that in 419 Wallia, who had followed Ataulf as king of the Visigoths, finally settled with his people in south-western Gaul and founded the Visigothic monarchy.[5]

Alaric and the Visigoths.

The Visigoths in Gaul.

It was about the same period that the accomplished fact of the division of Spain between the three barbarian tribes of Vandals, Suebi and Alani was in a similar manner recognized by the paramount authority of the emperor of the west.[6] These peoples had crossed the Rhine at the time when Alaric was making his first attempt on Italy. A portion of the host led by Radagaisus[7] actually invaded Italy, but was cut to pieces by Stilicho near Florence (405); the rest pressed on through Gaul, crossed the Pyrenees, and entered the as yet untouched province of Spain.

Vandals, Suebi and Alani in Spain.

Honorius died in 423. With the single exception of Britain,[8] no province had yet formally broken loose from the empire. But over a great part of the west the authority of the emperors was now little more than nominal; throughout the major part of Gaul and in Spain the barbarians had settled, and barbarian states were growing up which recognized the supremacy of the emperor, but were in all essentials independent of his control.

Death of Honorius, 423.

The long reign of Valentinian III. (423–55) is marked by two events of first-rate importance—the conquest of Africa by the Vandals[9] and the invasion of Gaul and Italy by Attila. The Vandal settlement in Africa was closely akin in its origin and results to those of the Visigoths and of the Vandals themselves in Gaul and Spain. Here, as there, the occasion was given by the jealous quarrels of powerful imperial ministers. The feud between Boniface, count of Africa, and Aëtius, the "master-general" or "count of Italy," opened the way to Africa for the Vandal king Gaiseric (Genseric), as that between Stilicho and Rufinus had before set Alaric in motion westward, and as the quarrel between the tyrant Constantine and the ministers of Honorius had paved the way for the Vandals, Suebes and Alans into Spain. In this case, too, land-hunger was the impelling motive with the barbarian invader, and in Africa, as in Gaul and Spain, the invaders' acquisitions were confirmed by the imperial authority which they still professed to recognize. In 429 Gaiseric, king of the Vandals, crossed with his warriors, their families and goods, to the province of Africa, hitherto almost untouched by the ravages of war. Thanks to the quarrels of Boniface and Aëtius, their task was an easy one. The province was quickly overrun. In 435[10] a formal treaty secured them in the possession of a large portion of the rich lands which were the granary of Rome, in exchange for a payment probably of corn and oil. Carthage was taken in 439, and by 440 the Vandal kingdom was firmly established.

Valentinian III., 423–55.

Vandal conquest of Africa.

[10] Prosper 659; Ranke iv. (1) 282.

Eleven years later (451) Attila invaded Gaul, but this Hunnish movement was in a variety of ways different from those of the Visigoths and Vandals. Nearly a century had passed since the Huns first appeared in Europe, and drove the Goths to seek shelter within the Roman lines. Attila was now the ruler of a great empire in central and northern Europe and, in addition to his own Huns, the German tribes along the Rhine and Danube and far away to the north owned him as king. He confronted the Roman power as an equal; and, unlike the Gothic and Vandal chieftains, he treated with the emperors of east and west as an independent sovereign. His advance on Gaul and Italy threatened, not the establishment of one more barbaric chieftain on Roman soil, but the subjugation of the civilized and Christian West to the rule of a heathen and semi-barbarous conqueror. But the Visigoths in Gaul, Christian and already half Romanized, rallied to the aid of the empire against a common foe. Attila, defeated at Châlons[1] by Aëtius, withdrew into Pannonia (451). In the next year he overran Lombardy, but penetrated no farther south, and in 453 he died. With the murder of Valentinian III. (455) the western branch of the house of Theodosius came to an end, and the next twenty years witnessed the accession and deposition of nine emperors.

Attila and the Huns.

Battle of Châlons.

Under the three-months' rule of Maximus, the Vandals under Gaiseric invaded Italy and sacked Rome. From 456–72 the actual ruler of Italy was Ricimer, the Suebi. Of the four emperors whom he placed on the throne, Majorian (457–61) alone played any imperial part outside Italy.[2] Ricimer died in 472, and two years later a Pannonian, Orestes, attempted to fill his place. He deposed Julius Nepos and proclaimed as Augustus his own son Romulus. But the barbarian mercenaries in Italy determined to secure for themselves a position there such as that which their kinsfolk had won in Gaul and Spain and Africa. Their demand for a third of the lands of Italy was refused by Orestes,[3] and they instantly rose in revolt. On the defeat and death of Orestes they proclaimed their leader, Odoacer the Rugian,[4] king of Italy. Romulus Augustulus laid down his imperial dignity, and the court at Constantinople was informed that there was no longer an emperor of the West.[5]

Sack of Rome by the Vandals.

Ricimer supreme in Italy.

Orestes, the Pannonian.

Romulus Augustulus.

The installation of a barbarian king in Italy was the natural climax of the changes which had been taking place in the West throughout the 5th century. In Spain, Gaul and Africa barbarian chieftains were already established as kings. In Italy, for the last twenty years, the real power had been wielded by a barbarian officer. Odoacer, when he decided to dispense with the nominal authority of an emperor of the West, placed Italy on the same level of independence with the neighbouring provinces. But the old ties with Rome were not severed. The new king of Italy formally recognized the supremacy of the one Roman emperor at Constantinople, and was invested in return with the rank of "patrician," which had been held before him by Aëtius and Ricimer. In Italy too, as in Spain and Gaul, the laws, the administrative system and the language remained Roman.[6] But the emancipation of Italy and the Western provinces from direct imperial control, which is signalized by Odoacer's accession, has rightly been regarded as marking the opening of a new epoch. It made possible in the West the development of a Romano-German civilization; it facilitated the growth of new and distinct states and nationalities; it gave a new impulse to the influence of the Christian church, and laid the foundations of the power of the bishops of Rome.

King Odoacer.

AUTHORITIES.—I. REPUBLICAN PERIOD: *Ancient Sources.*—The writing of history, like other branches of literature, was a late growth amongst the Romans, and it is very difficult to determine how far authentic records were preserved of the earlier republican period. It seems that the calendars issued yearly by the pontifices and posted on the walls of the Regia were inscribed with brief notices of important events (" digna memoratu . . . domi militiaeque terra marique gesta per singulos dies," Serv. *Ad Aen.* i. 373); these tabulae were preserved and edited in 80 books by P. Mucius Scaevola (*pontifex maximus*, 130–?114 B.C.) under the name of *Annales Maximi*. The *Commentarii* preserved in the archives of the various priestly colleges and official boards (*e.g.* consuls and censors), which appear to have consisted mainly of instructions as to official procedure, doubtless furnished historical material in the shape of precedents and decisions. It is hard to say how much of this documentary evidence survived the burning of Rome by the Gauls; the fact that the earliest solar eclipse mentioned in the *Annales Maximi* was that of the 5th of June, 351 B.C., casts doubt on the completeness of the earlier records.

Many modern scholars have supposed that these meagre official records were supplemented by—(*a*) popular poetry, more or less legendary in content; (*b*) family chronicles, the substance of which was worked up into the funeral orations (*laudationes funebres*) pronounced at the grave of distinguished Romans. The existence of the former class of documents is, however, quite unsupported by evidence; as to family tradition, we cannot say more than that it has probably left a deposit in the accounts of republican history handed down to us, and caused the exploits of the members of illustrious houses to be exaggerated in importance.

Setting aside the works of Greek historians who incidentally touched on Roman affairs, such as Hieronymus of Cardia, who wrote of the wars of Pyrrhus as a contemporary, and Timaeus of Tauromenium (*c.* 345–250 B.C.), who treated the history of Sicily and the West down to 272 B.C., the earliest writers on Roman history

[1] For the battle of Châlons, see Gibbon iv. 463; Hodgkin ii. 124 *n.* 6, 140, where the topography is discussed.

[2] Majorian was the last Roman emperor who appeared in person in Spain and Gaul.

[3] Hodgkin ii. 520.

[4] The nationality of Odoacer is a disputed point. Hodgkin ii. 516; Ranke iv. (1) 372.

[5] Gibbon iv. 54 seq.; Jung 66 seq.; Bryce, *Holy Roman Empire*, 24–33. See also ROMAN LAW.

[6] Gibbon iv. 54 seq.; Jung 66 seq.; Bryce, *Holy Roman Empire*, 24–33. See also ROMAN LAW.

were Q. Fabius Pictor[1] and L. Cincius Alimentus, who lived during the Second Punic War and wrote in Greek. We are told by Dionysius that they treated the earlier history summarily, but wrote more fully of their own times. They were followed in their use of the Greek language by C. Acilius introduced a Greek embassy to the senate, 155 B.C.) and A. Postumius Albinus (consul, 151 B.C.). In the meantime, however, M. Porcius Cato the Elder (234–149 B.C.), the leader of the national party at Rome and a vigorous opponent of Greek influence, had treated of Roman antiquities in his *Origines*. This work was not purely annalistic, but treated of the ethnography and customs of the Italian peoples, &c. Cato founded no school of antiquarian research, but his use of the Latin language as the medium of historical writing was followed by the annalists of the Gracchan period, L. Cassius Hemina, L. Calpurnius Piso (consul, 133 B.C.), C. Sempronius Tuditanus (consul, 129 B.C.), Cn. Gellius, Vennonius, C. Fannius (consul, 122 B.C.), and L. Caelius Antipater.[2] By these writers some attempt was made to apply canons of criticism to the traditional accounts of early Roman history, but they did little more than rationalize the more obviously mythical narratives; they also followed Greek literary models and introduced speeches, &c., for artistic effect. Where they wrote as contemporaries, however, *e.g.* Fannius in his account of the Gracchan movement, their works were of the highest value. About the beginning of this period Polybius (*q.v.*) had published his history, which originally embraced the period of the Punic wars, but was afterwards continued to 146 B.C. His influence was not fully exerted upon Roman historians until the close of the 2nd and early part of the 1st century B.C., when a school of writers was created which aimed, with practical purpose, endeavouring to trace the motives of action and to point a moral for the edification of their readers. To this school belonged Sempronius Asellio, Claudius Quadrigarius, Valerius Antias and L. Licinius Macer (d. 66 B.C.). Their works were very diffuse, rhetorical and inaccurate; Livy complains of the gross exaggerations of Valerius (whom he followed blindly in his earlier books), and Macer seems to have drawn much of his material from sources of very doubtful authenticity. Contemporary history was written by Cornelius Sisenna (119–67 B.C.), and the work of Polybius was continued to 86 B.C. by the Stoic Posidonius (*c.* 135–45 B.C.), a man of encyclopaedic knowledge. From the Gracchan period onwards the memoirs, speeches and correspondence of many prominent statesmen were often published; of these no specimens are extant until we come to the Ciceronian period, when the Speeches and Letters of Cicero (*q.v.*) and the Commentaries of Julius Caesar (*q.v.*)—the latter continued to the death of the Alexandrine War by other hands—form invaluable evidence for the history of their times. We possess examples of historical pamphlets with a strong party colouring in Sallust's tracts on the Jugurthine War and the conspiracy of Catiline. During the same period Roman antiquities, genealogy, chronology, &c., were exhaustively treated by M. Terentius Varro (116–27 B.C.) (*q.v.*) in his *Antiquitates* (in 41 books) and other works. Cicero's friend, M. Pomponius Atticus, also compiled a chronological table which was widely used, and the latter's friend (*q.v.*) wrote a series of historical biographies which have come down to us.

In the Augustan age the materials accumulated by previous generations were worked up by compilers whose works are in some cases preserved. The work of Livy, covered the history of Rome from its foundation to 9 B.C. in 142 books; of these only 35 are preserved in their entirety, while the contents of the rest are known in outline from an epitome (*periochae*) and from the compendia of Florus and later authors. Diodorus Siculus (native of Agyrium in Sicily) followed the earlier annalists in the sections of his *Universal History* (down to Caesar) which dealt with Roman affairs; Dionysius of Halicarnassus (*q.v.*), in his *Roman Archaeology* (published in 7 B.C.), treated early Roman history in a more ambitious and rhetorical style, with greater fulness than Livy, whose work he seems to have used. Universal histories were also written in the Augustan age by Nicolaus of Damascus, a *protégé* of Herod the Great, and Trogus Pompeius, whose work is known to us from the epitome of Justin (2nd century A.D.). Juba, the learned king of Mauretania installed by Augustus, wrote a History of Rome as well as antiquarian works. Strabo (*q.v.*), whose *Geography* is certain, is the author of a continuation of Polybius's history (to 27 B.C.). The learning of the time was enshrined in the encyclopaedia of Verrius Flaccus, of which we possess part of Festus's abridgment (2nd century A.D.), together with an Epitome by Paulus the Deacon (8th century, Charlemagne). An official list of the consuls and other chief magistrates of the republic was inscribed on the walls of the Regia (rebuilt 36 B.C.), followed somewhat later by a similar list of *triumphatores*; the former of these is known as the *Fasti Capitolini* (*C.I.L.I.*², 1 sqq.), since the fragments which have been recovered are preserved in the Palace of the Conservatori on the Capitol. The Forum of Augustus (see ROME, section *Archaeology*) was decorated with statues of famous Romans, on the bases of which were inscribed short accounts of their exploits; some of these *elogia* are preserved (cf. Dessau, *Inscr. Lat. sel.* 50 sqq.).

Amongst writers of the imperial period who dealt with republican history the most important are Velleius Paterculus, whose compendium of Roman history was published in A.D. 30; Plutarch (*c.* A.D. 45–125), in whose biographies much contemporary material was worked up; Appian, who wrote under the Antonines and described the wars of the republic under geographical headings (partly preserved) and the civil wars in five books, and Dio Cassius (*q. infra*), of whose history only that portion which deals with events from 69 B.C. onwards is extant. The date of Granius Licinianus, whose fragments throw light on the earlier civil wars, is not certain.

The evidence of inscriptions (*q.v.*) and coins (*q.v.*) begins to be of value during the 150 years of the republic. A series of laws and *senatus consulta* (beginning with the *Senatus consultum de Bacchanalibus*, 189 B.C.) throws light on constitutional questions, while the coins struck from about 150 B.C. onwards bear types illustrative of the traditions preserved by the families to which the masters of the mint (*III viri monetales*) belonged.

MODERN AUTHORITIES.—The principles of historical criticism may be said to have been formulated by Giambattista Vico (*q.v.*), whose *principi di scienza nuova* were published in 1725. The credibility of the traditional account of Roman republican history was called in question by Louis de Beaufort (*Dissertation sur l'incertitude des cinq premiers siècles de l'histoire romaine*, 1738); but the modern critical movement dates from Niebuhr, two volumes of whose *Römische Geschichte* appeared in 1811–12 (the third was published after his death in 1832, his lectures in 1846). The early history of Rome was fully treated by Niebuhr's follower, F. C. A. Schwegler, whose *Römische Geschichte* in 3 vols. (1853–58) was continued to 27 B.C. in 2 vols. (1872–73). A reaction against the negative criticism of Niebuhr was headed by J. Rubino, who showed in his *Untersuchungen über römische Verfassung und Geschichte* (1839) that the growth of the Roman constitution might be traced with some approach to certainty by the analysis of institutions. It was left for Theodor Mommsen (*Römische Geschichte*, 1st ed., 1854–56; Eng. trans. new ed. in 5 vols., 1894; *Römische Forschungen*, 1864–79; *Römisches Staatsrecht*, 1st ed., 1872–75 [in the *Handbuch der römischen Alterthümer* of Marquardt]; 3rd ed. 1887) and continued under the supervision of J. Marquardt); *Römisches Strafrecht*, 1899, and many other works) to reduce Roman constitutional history to a science. Mommsen substituted for the detailed criticism of the traditional narrative a picture of the growth of Italian civilization based on linguistic, literary and monumental evidence. W. Ihne (*Römische Geschichte*, 8 vols., 1868–90) dealt more fully with the course of events as related by ancient historians. G. Lange's *Römische Alterthümer* (1856–71), 3 vols., treated constitutional history in a narrative form. In more recent times Eduard Meyer has treated of early Italian history in his *Geschichte des Alterthums*, vols. ii.–v. (1893–1902); and Ettore Pais, in his *Storia di Roma*, vols. i.–iii. (1898–99), has subjected the traditional history of Roman history down to the Samnite wars to a searching and in many cases exaggerated criticism. De Sanctis, in his *Storia dei Romani* (2 vols., 1907) (down to the establishment of the Roman hegemony in Italy), combines radical criticism of tradition with a constructive use of archaeological and other evidence. Heitland's *Roman Republic* (3 vols., 1909) is a fresh and independent work. The last century of the republic has been the subject of many books (see refs. in text and biographical articles). W. Drumann (*Geschichte Roms*, 1834–44; new ed. by Groebe in progress) gave an exhaustive biographical account of the contemporaries of Caesar and Cicero; A. H. J. Greenidge's *History of Rome from* 133 to 104 B.C. (1904) was unfortunately cut short by the author's early death in 1906; G. Ferrero's *Grandezza e Decadenza di Roma* (in progress, Eng. trans. of vols. i., ii., 1907; iii.–v., 1909) is ambitious but unsound.

II. IMPERIAL PERIOD: *Ancient Sources*.—The memoirs of Augustus as well as those of his contemporaries (Messalla, Agrippa, Maecenas, &c.) and successors (Tiberius, Agrippina the younger, &c.) have perished, but we possess the *Res gestae divi Augusti* inscribed on the walls of his temple at Ancyra (ed. Mommsen, 1883). Few historical works were produced under the earlier Julio-Claudian emperors; Cremutius Cordus lost his life under Tiberius for the freedom with which his opinion of the triumvirs was expressed. Aufidius Bassus wrote the history of the civil wars and early empire, perhaps down to A.D. 49, and this was continued by Pliny the Elder (*q.v.*) in 31 books, probably to the accession of Vespasian.[3] These works, together with those of Fabius Rusticus, a friend of Seneca, and Cluvius Rufus, a senator and governor of Hispania under Nero, are authorities used by Tacitus (*q.v.*), whose *Annals* (properly called *ab excessu divi Augusti*) and *Histories*, when complete, carried the story of the empire down to A.D. 96.[4] Tacitus wrote under Trajan, upon whom the younger Pliny pronounced his *Panegyric*; Pliny's correspondence with Trajan about the affairs of Bithynia, which he administered in A.D. 111–13, is of great historical value. Suetonius (*q.v.*), who was for some time secretary of state to Hadrian, wrote biographies of the emperors from Julius to Domitian, which contain much interesting gossip. Arrian, a Bithynian Greek promoted by Hadrian

[1] For these writers see further under ANNALISTS and LIVY.

[2] Caelius's work dealt only with the Second Punic War.

[3] The *Jewish Antiquities* and *Jewish War* of Josephus (*q.v.*), composed under the Flavian dynasty, are of great value for the events of the writer's time.

[4] The *Histories* (A.D. 69–96) were written before the *Annals*.

to important posts, wrote on Rome's policy and wars in the East. Appian (*v. supra*) dealt with the wars waged under the early empire in the closing books of his work, which have not been preserved. Dio Cassius, a Bithynian who attained to the dignity of a second consulship as the colleague of Severus Alexander, wrote a history of Rome to the death of Elagabalus in 80 books. We possess only epitomes and excerpts of the portion dealing with events from A.D. 46 onwards, except for parts of the 78th and 79th books, in which Dio's narrative of contemporary events is especially valuable. Herodian, a Syrian employed in the imperial service, wrote a history of the emperors from Commodus to Gordian III., which as the work of a contemporary is not without value, though the author had no historical insight. L. Marius Maximus compiled biographies of the emperors from Nerva to Elagabalus which, like those of Suetonius, contained much worthless gossip. His work was amongst the sources used in the compilation of the *Scriptores Augustae* (see below AUGUSTAN HISTORY), upon which we are obliged to rely for the history of the 3rd century A.D. This work consists in a series of lives of the emperors (including most of the pretenders to that title) from Hadrian to Carinus, professedly written by six authors, Spartianus, Vulcacius Gallicanus, Capitolinus, Lampridius, Trebellius Pollio, and Vopiscus, under Diocletian and Constantine. Modern criticism has shown that (at least in its present form) it is a compilation made towards the close of the 4th century; it is not even certain that any of the above-named writers really existed, and the documents inserted in the text are palpable forgeries. The earlier biographies, however, contain much authentic information, which seems to have been derived from contemporary sources, such as the fragments of Dexippus, an Athenian who successfully defended his native town against the Goths, throw much light on the barbaric invasions of the 3rd century. Under Diocletian and his successors (A.D. 284–337) were delivered twelve *Panegyrics* by Eumenius and other court rhetoricians which possess slight historical value. The history of the final struggle between church and empire is told from the Christian point of view by the author of the *De mortibus persecutorum* (perhaps Lactantius), and by Eusebius, bishop of Caesarea: Eusebius's *Ecclesiastical History* and *Life of Constantine* give an *ex parte* version of the events which they relate; the first of two tracts published under the name of the eponymous Valesius furnishes a brief contemporary narrative of the period 305–37, without Christian prepossessions; while the lost work of Praxagoras treated the history of Constantine from the pagan standpoint. The most important historian of the 4th century was Ammianus Marcellinus, a native of Antioch and an officer in the imperial guard, who continued the work of Tacitus (in Latin) to the death of Valens. We possess the last eighteen books of his history which cover the years A.D. 353–78. Two compendia of imperial history pass under the name of Aurelius Victor, the *Caesares*, or lives of the emperors from Augustus to Julian, and the *Epitome de Caesaribus* (not by the same author,) which goes down to Theodosius I. Similar works are the *Breviarium* of Eutropius, secretary of state (under Valens) to Julian and still more brief epitome of Festus. The writings of the Emperor Julian and of the rhetoricians Libanius, Themistius and Eunapius—the last-named continued the history of Dexippus to A.D. 404—are of great value for the history of the 4th century A.D. The writers of the pagans, while the Christian version of events is given by the three orthodox historians Socrates, Sozomen and Theodoret, and the Arian Philostorgius, all of whom wrote in the 5th century. An imperial official, Zosimus, writing in the latter half of the 5th century, gave a sketch of imperial history to A.D. 410; the latter part is valuable, being based on contemporary writings, *e.g.* those of the Egyptian Olympiodorus, of whose work some fragments are preserved. The bishops Synesius of Cyrene, Palladius, who lived under Arcadius and Theodosius II., furnish valuable information as to their own times; while the fragments of Priscus tell us much of Attila and the Hunnish invasions. Mention must also be made of the poets and letter-writers of the 4th and 5th centuries—Ausonius, Claudian, Symmachus, Paulinus of Nola, Sidonius Apollinaris, Prudentius, Merobaudes and others—from whose writings much historical information is derived. Cassiodorus, the minister of Theodoric, wrote a history of the Goths, transmitted us in the *Historia Golhorum* of Jordanes (*c.* A.D. 550), which gives an account of the earlier barbaric invasions.

Several chronological works were compiled in the 4th and 5th centuries. It will suffice to name the Chronology of Eusebius (to A.D. 324), translated by Jerome and carried down to A.D. 378; the Chronicle of Prosper Tiro, based on Jerome and continued to A.D. 455; the *Chronographia of A.D. 354*, an illustrated calendar containing miscellaneous information; and the works based on the so-called *Chronica Constantinopolitana* (not preserved), such as the *Fasti* of Hydatius (containing valuable notices of the period A.D. 379–468). Some minor chronological works such as the *Chronicon Ravennae* are published in Mommsen's *Chronica Minora*. The *Chronicon Paschale*, primarily a table giving the cyle of Easter celebrations, was compiled in the 7th century A.D.

The Codex of Law, especially the *Codex Theodosianus* (A.D. 438) and the Code of Justinian, as well as the Army List of the early 5th century, known as the *Notitia Dignitatum*, possess great historical value. For the inscriptions of the empire, which are of incalculable importance as showing the working of the imperial system in its details, see INSCRIPTIONS; the coins (*q.v.*) also throw much light on the dark places of history in the lack of other authorities. Egyptian papyri are not only instructive as to legal, economic and administrative history, but also (by the formulae employed in their dating) contribute to our general knowledge of events. The *Zeitschrift für Papyrusforschung*, edited by U. Wilcken, gives an account of progress in this branch of study.

MODERN AUTHORITIES.—Tillemont's *Histoire des empereurs* (6 vols., 1690–1738), supplemented by his *Mémoires pour servir à l'histoire ecclésiastique*, a laborious and erudite compilation, furnished Gibbon with material for his *Decline and Fall of the Roman Empire* (1776–1788), which has never been superseded as a history of the entire imperial period, and has been rendered adequate for the purposes of the modern reader by Professor J. B. Bury's edition (1897–1900). The history of the empire has yet to be written in the light of recent discoveries. Mommsen's fifth volume (Eng. tr., as *Provinces of the Roman Empire*, 1886) is not a narrative, but an account of Roman culture in the various provinces. C. Merivale's *History of the Romans under the Empire* (8 vols., 1850–62, to Marcus Aurelius) is literary rather than scientific. H. Schiller's *Geschichte der römischen Kaiserzeit* (1883–88) is a useful handbook. For the later period we have Bury's *History of the Later Roman Empire* (1889), beginning from A.D. 395, and T. Hodgkin's *Italy and her Invaders* (6 vols., 1880–99), which tells the story of the barbaric invasions at great length. The imperial constitution is described by Mommsen in the second volume of his *Staatsrecht* (*v. supra*); divergent views will be found in Marquardt's *Römische Staatsverwaltung* and *Römische Privatverfassung* (1884–91); the working of the imperial bureaucracy is treated by O. Hirschfeld, *Die römischen Verwaltungsbeamten* (1905). The *Prosopographia Imperii Romani*, compiled by Dessau and Klebs (1897–98), is a mine of information, as is the new edition of Pauly's *Realencyklopädie der classischen Alterthumswissenschaft* (in progress). Von Domaszewski's *Geschichte der römischen Kaiser* (2 vols., 1909) is popularly written and gives no references to authorities. See further the articles on individual emperors and provinces.

A general history of Rome to the barbarian invasions, popular in character and richly illustrated, was written in French by Victor Duruy (Eng. tr. 6 vols., 1883–86). The 2nd, 3rd and 4th vols. of Leopold von Ranke's *Weltgeschichte* deal with Roman history. An outline of Roman history is given by B. Niese in the 3rd vol. of Müller's *Handbuch der klassischen Alterthumswissenschaft* (3rd ed., 1906). A. H. J. Greenidge's *Roman Public Life* (1901) is an excellent guide to Roman institutions. The principal authorities on Roman chronology are: Ideler, *Handbuch der mathematischen und technischen Chronologie* (1825–26); Fynes-Clinton, *Fasti Romani* (1845) (a continuation of the same author's *Fasti Hellenici*, 1830–41, which goes down to A.D. 14); Fischer, *Römische Zeittafeln* (1846); Mommsen, *Römische Chronologie* (2nd ed., 1859); Matzat, *Römische Chronologie* (1883–84) and *Römische Zeittafeln* (1889); Holzapfel, *Römische Chronologie* (1885); Soltau, *Römische Chronologie* (1889); Unger, "Römische Zeitrechnung" in the 1st vol. of Müller's *Handbuch der klassischen Alterthumswissenschaft* (2nd ed., 1892). Goyau's *Chronologie de l'empire romain* (Paris, 1891) is a useful handbook.

(H. S. J.)

IV. *The Roman Republic in the Middle Ages*

The history of the Roman commune as distinguished from the papacy during the middle ages has yet to be written, and only by the discovery of new documents can the difficulties of the task be completely overcome. Although very different in its origin, the Roman Republic gradually assumed the same form as the other Italian communes, and with almost identical institutions. But, owing to the special local conditions amid which it arose, it maintained a distinct physiognomy and character. The deserted Campagna surrounding the city checked any notable increase of trade or industry, and prevented the establishment of the gilds on the solid footing that elsewhere made them the basis and support of the commune. There was also the continual and oppressive influence of the empire, and, above all, the presence of the papacy, which often appeared to absorb the political vitality of the city. At such moments the commune seemed annihilated, but it speedily revived and reasserted itself. Consequently there are many apparent gaps in its history, and we have often extreme difficulty in discovering the invisible links connecting the visible fragments.

Even the aristocracy of Rome had a special stamp. In the other republics, with the exception of Venice, it was feudal, of German origin, and in perpetual conflict with the popular and commercial elements which sought its destruction. The history of municipal freedom in Italy lay in this struggle. But the infiltration of Teutonic and feudal elements broke up the

ancient aristocracy of Rome, gave it a special character and left it at the mercy of the people. Then the popes, by the bestowal of lucrative offices, rich benefices and vast estates, and, above all, by raising many nobles to the purple, introduced new blood into the Roman aristocracy, and endued it with increasing strength and vitality. Always divided, always turbulent, this irrepressible body was a continual source of discord and civil war, of permanent confusion and turmoil. Amidst all these difficulties the commune struggled on, but never succeeded in preserving a regular course or administration for long. What with continual warfare, attacks on the Capitol and consequent slaughter, pillage and incendiarism, it is no wonder that so few original documents are left to illustrate the history of the Roman Republic. Nor have chroniclers and historians done much to supply this want, since, in treating of Roman affairs, their attention is mainly devoted to the pope and the emperor. Nevertheless, we will attempt to connect in due order all the facts gleaned from former writers and published records.

The removal of the seat of the empire to Constantinople effected a radical change in the political situation of Rome; nor was this change neutralized by the formation of the weak Western empire soon to be shattered by the Germanic invasions. But we still find Roman laws and institutions; and no sign is yet manifest of the rise of a medieval municipality. The earliest germ of this new type of municipality is seen during the barbarian invasions. Of these we need only enumerate the four most important—those of the Goths, Byzantines (who, however, were not mere barbarians but civilized and corrupt), Lombards and Franks. The Gothic rule merely superimposed upon the Roman social order a Teutonic stratum, that never penetrated beneath its surface. The Goths always remained a conquering army; according to the German custom, they took possession of one-third of the vanquished territory, but, while forbidding the Romans to bear arms, left their local administration intact. The senate, the curiae, the principal magistrates, both provincial and municipal, the prefect of the city, and the Roman judges enforcing the enactments of the Roman law, were all preserved. Already, under the empire, the civil power had been separated from the military, and this separation was maintained. Hence there was no visible change in the constitution of the state. Only, now there were conquered and conquerors. All real and effective power was on the side of brute force, and the Goths alone bore arms. In every province they had their *comites*, or heads of the army, who had judicial power over their countrymen, especially in criminal cases. Here, then, was a combination of civil and military jurisdiction altogether contrary to Roman ideas. Nor can it be denied that the *comites*, as chiefs of the armed force, necessarily exerted a direct or indirect influence on the civil and administrative power of the provinces, and especially upon the collection of the imposts. The civil arm, being virtually subordinate to the military, suffered unavoidable change. Notwithstanding the praise lavished on Theodoric, the kingdom founded by him in Italy had no solid basis. It was composed of two nations differing in race and traditions and even in religion, since the Goths were Arians and the Romans Catholics. The latter were sunk in degeneracy and corruption; their institutions were old and decrepit. It was necessary to infuse new life into the worn-out body. This was difficult, perhaps impossible; and at any rate Theodoric never attempted the task. Little wonder then if the Gothic kingdom succumbed to the Byzantine armies from Constantinople.

The Goths.

The wars of Belisarius and Narses against the Goths lasted twenty years (535–55 A.D.), caused terrible slaughter and devastation in Italy, and finally subjected her to Constantinople. In place of a Gothic king she was now ruled by a Greek patrician, afterwards entitled the exarch, who had his seat of government at Ravenna as lieutenant of the empire. In the chief provincial cities the ruling counts were replaced by dukes, subordinate to the exarch; and the smaller towns were governed by military tribunes. Instead of dukes, we sometimes find *magistri militum*, apparently of higher rank. The *praefectus praetorio* of Italy, likewise a dependent of the exarch, was at the head of the civil administration. The pragmatic sanction (554), promulgating the Justinian code, again separated the civil from the military power, which was no longer allowed to intervene in the settlement of private disputes, and, by conferring on the bishops the superintendence of and authority over the provincial and municipal government, soon led to the increase of the power of the church, which had already considerable influence.

The Byzantine rule.

The new organization outwardly resembled that of the Goths: one army had been replaced by another, the counts by dukes; there was an exarch instead of a king; the civil and military jurisdictions were more exactly defined. But the army was not, like that of the Goths, a conquering nation in arms; it was a Graeco-Roman army, and did not hold a third of the territory which was now probably added to the possessions of the state (*fisc*). The soldiery took its pay from Constantinople, whence all instructions and appointments of superior officers likewise proceeded. In Rome we find a *magister militum* at the head of the troops. The Roman senate still existed, but was reduced to a shadow. Theodoric had left it intact until he suspected it of hostile designs and dealings with the Byzantines, but then began to persecute it, as was proved by the wretched fate of Boethius and Symmachus. Nevertheless the senate survived, added the functions of a *curia* or municipal council to those of a governmental assembly, and took part in the election of the pope—already one of the chief affairs of Rome. So many senators, however, were slaughtered during the Byzantine War that it was commonly believed to be extinct. The pragmatic sanction, conferring on senate and pope the superintendence of weights and measures in Italy, might seem a convincing proof to the contrary, although, In the general chaos, now that Rome was a mere provincial city, constantly exposed to attack, we may imagine to what the senate was reduced.

The Lombards.

All Roman institutions were altered and decayed; but their original features were still to be traced, and no heterogeneous element had been introduced into them. The first dawn of a completely new epoch can only be dated from the invasion of the Lombards (568–72). Their conquest of a large portion of Italy was accompanied by the harshest oppression. They abolished all ancient laws and institutions, and not only seized a third of the land, but reduced the inhabitants almost to slavery. But, in the unsubdued parts of the country—namely, in Ravenna, Rome and the maritime cities—a very different state of things prevailed. The necessity for self-defence and the distance of the empire, now too worn out to render any assistance, compelled the inhabitants to depend solely on their own strength. Thus, certain maritime cities, such as Naples, Amalfi, Pisa and Venice, soon attained to a greater or less degree of liberty and independence.

The popes.

This is the moment in which ancient society seems to disappear completely and a new one begins to rise. Ancient customs disappear, Christian processions take the place of the ancient games, ancient temples are transformed into churches and dedicated to new saints. If Roman tradition in Italy can ever be said to have been completely broken, this could only be during the Longobard domination. It is certain, however, that soon the elements of ancient culture began to revive once more.

Gregory I.

A special state of things now arose in Rome. We behold the rapid growth of the papal power and the continual increase of its moral and political influence. This had already begun under Leo I., and been further promoted by the pragmatic sanction. Not only the superintendence but often the nomination of public functionaries and judges was now in the hands of the popes. And the accession to St. Peter's chair of a man of real genius in the person of Gregory I., surnamed the Great, marked the beginning of a new era. By force of individual character, as well as by historic

necessity, this pope became the most potent personage in Rome. Power fell naturally into his hands; he was the true representative of the city, the born defender of church and state. His ecclesiastical authority, already great throughout Italy, was specially great in the Roman diocese and in southern Italy. The continual offerings of the faithful had previously endowed the church with enormous possessions in the province of Rome, in Sicily, Sardinia and other parts. The administration of all this property soon assumed the shape of a small government council in Rome. In the middle ages the owner of the land was also master of the men who cultivated it, and exercised political authority as well; these administrators therefore protected and succoured the oppressed, settled disputes, nominated judges and controlled the ecclesiastical authorities. The use made by the pope of his revenues greatly contributed to the increase of his moral and political authority. When the city was besieged by the Lombards, and the emperor left his army unpaid, Gregory supplied the required funds and thus made resistance possible. And, when the defence could be no longer maintained, he alone, by the weight of his personal influence and the payment of large sums, induced the Lombards to raise the siege. He negotiated in person with Agilulph, and was recognized by him as the true representative of the city. Thus Rome, after being five times taken and sacked by the barbarians, was, on this occasion, saved by its bishop. The exarch, although unable to give any help, protested against the assumption of so much authority by the pope; but Gregory was no usurper; his attitude was the natural result of events. "For twenty-seven years"—so wrote this pontiff to the imperial government of Constantinople—"we lived in terror of the Longobards, nor can I say what sums we had to pay them. There is an imperial treasurer with the army at Ravenna; but here it is I who am treasurer. Likewise I have to provide for the clergy, the poor and the people, and even to succour the distress of other churches."

The Roman commune.

It was at this moment that the new Roman commune began to take shape and acquire increasing vigour owing to its distance from the seat of the empire and its resistance to the Lombard besiegers. Its special character was now to be traced in the preponderance of the military over the civil power. A Roman element had penetrated into the army, which was already possessed of considerable political importance. The prefect of Rome loses authority and seems almost a nullity compared with the *magister militum*. Hardly anything is heard of the senate. "Quia enim Senatus deest, populus interiit," exclaims Gregory in a moment of despair. The popes now make common cause with the people against the Lombards on the one hand and the emperor on the other. But they avoid an absolute rupture with the empire, lest they should have to face the Lombard power without any prospect of help. Later, when the growing strength of the commune becomes menacing, they remain faithful to the empire in order not to be at the mercy of the people. It was a permanent feature of their policy never to allow the complete independence of the city until they should be its sole and absolute masters. But that time was still in the future. Meanwhile pope and people joined in the defence of their common interests.

This alliance was cemented by the religious disputes of the East and the West. First came the Monothelite controversy regarding the twofold nature of Christ. Later a long and violent struggle ensued, in which the people of Rome and of other Italian cities sided so vigorously with the popes that John VI. (701–5) had to interpose in order to release the exarch from captivity and prevent a definitive rupture with the empire. Then (710–11) Ravenna revolted against the emperor, organized its armed population under twelve flags, and almost all the cities of the exarchate joined in a resistance that was the first step towards the independence of the Italian communes. A still fiercer religious quarrel then broke out concerning images. Pope Gregory II. (715–31) opposed the celebrated edict of the iconoclastic emperor Leo the Isaurian. Venice and the Pentapolis took up arms in favour of the pope, and elected dukes of their own without applying to the emperor. Again public disorder rose to such a pitch that the pope was obliged to check it lest it should go too far.

The duchy of Rome.

In the midst of these warlike tumults a new constitution, almost a new state, was being set up in Rome. During the conflict with Philippicus, the Monothelite and heretical emperor who ascended the throne in 711, the *Liber Pontificalis* makes the first mention of the duchy of Rome (*ducatus Romanae urbis*), and we find the people struggling to elect a duke of their own. In the early days of the Byzantine rule the territory appertaining to the city was no greater than under the Roman Empire. But, partly through the weakness of the government of Constantinople, and above all through the decomposition of the Italian provinces under the Lombards, who destroyed all unity of government in the peninsula, this dukedom was widely extended, and its limits were always changing in accordance with the course of events. It was watered by the Tiber, and stretched into Tuscia to the right, starting from the mouth of the Marta, by Tolfa and Bleda, and reaching as far as Orte. Viterbo was a frontier city of the Lombards. On the left the duchy extended into Latium as far as the Garigliano. It spread very little to the north-east and was badly defended on that side, inasmuch as the duchy of Spoleto reached to within fourteen miles of the Salara gate. On the other side, towards Umbria, the river Nera was its boundary line.

The separation of the civil constitution of the commune.

The constitution of the city now begins to show the results of the conditions amid which it took shape. The separation of the civil from the military power has entirely disappeared. This is proved by the fact that, after the year 600, there is no further mention of the prefect. His office still survived, but with a gradual change of functions, until, in the 8th century, he once more appears as president of a criminal tribunal. The constitution of the duchy and of the new republic formed during the wars with the Lombards and the exarch was substantially of an aristocratico-military nature. At its head was the duke, first appointed by the emperor, then by the pope and the people, and, as his strength and influence grew with those of the commune, he gradually became the most respected and powerful personage in Rome. The duke inhabited the palace of the Caesars on the Palatine Hill, and had both the civil and the military power in his hands; he was at the head of the army, which, being composed of the best citizens and highest nobility of Rome, was a truly national force. This army was styled the *felicissimus* or *florens exercitus Romanus* or also the *militia Romana*. Its members never lost their citizen stamp; on the contrary they formed the true body of the citizens. We find mention of other *duces* in Rome, but these were probably other leaders or superior officers of the army. Counts and tribunes are found in the subject cities bound to furnish aid to the capital. In fact during the pontificate of Sergius II. (844), when the duchy was threatened by a Saracenic invasion, they were requested to send troops to defend the coast, and as many soldiers as possible to the city.

The different classes of society in Rome.

At that time the inhabitants of Rome were divided into four principal classes—clergy, nobles, soldiers and simple citizens. The nobles were divided into two categories, first the genuine *optimates*, *i.e.* members of old and wealthy families with large estates, and filling high, and often hereditary, offices in the state, the church and the army. These were styled *proceres* and *primates*. The second category comprised landed proprietors, of moderate means but exalted position, mentioned as *nobiles* by Gregory I., and constituting in fact a numerous petty nobility and the bulk of the army. Next followed the citizens, *i.e.* the commercial class, merchants and craftsmen, who, having as yet no fixed organization and but little influence, were simply designated as *honesti cives*. These, however, were quite distinct from the plebeians, *plebs*, *vulgus populi*, *viri humiles*, who in their turn ranked above bondsmen and slaves. The *honesti cives* did not

usually form part of the army, and were only enrolled in it in seasons of emergency. Nevertheless the army was not only national, but became increasingly democratic, so that in the 10th century it included every class of inhabitants except churchmen and slaves. At that period we sometimes find the whole people designated as the *exercitus*, those actually under arms being distinguished as the *militia exercitus Romani*. This again was divided into bands or "numbers," *i.e.* regiments, and also, in a manner peculiar to Rome, into *scholae militum*. These *scholae* were associations derived from antiquity, gaining strength and becoming more general in the middle ages as the central power of the state declined. There were *scholae* of notaries, of church singers, and of nearly every leading employment; there were *scholae* of foreigners of diverse nationalities, of Franks, Lombards, Greeks, Saxons, &c. Even the trades and crafts began to form *scholae*. These were at first very feeble institutions, and only later gained importance and became gilds. As early as the 8th century there were *scholae militum* in the army, which was thus doubly divided. But we have no precise definition of their functions. They were *de facto* corporations with separate property, churches and magistrates of their own. The latter were always *optimates*, and guarded the interests of the army. But the real chiefs of the bands or *numeri* were the *duces* or tribunes, and under the Franks the latter became *comites*. These chiefs were styled *magnifici consules, optimates de militia*, often too *judices de militia*, since, as was the custom of the middle ages, they combined political and judicial as well as military authority. The title of consul was now generally given to superior officers, whether civil or military. The importance of the *scholae militum* began to decline in the 10th century; towards the middle of the 12th they disappeared altogether, and, according to Felix Papencordt, were last mentioned in 1145. It is probable that the *scholae militum* signified local divisions of the army, corresponding with the city wards, which were twelve in number during the 10th and 11th centuries, then increased to thirteen, and occasionally to fourteen. It is certain that from the beginning the army was distributed under twelve flags; after the *scholae* had disappeared, we find it classified in districts, which were subdivided into companies. The division of cities into quarters, *sestieri* or *rioni*, corresponding with that of the army, and also with that of the municipal government, was the common practice of Florence, Siena and almost all the Italian communes. But, while usually losing importance as the gilds acquired power, in Rome the insignificance of the gilds added to the strength of the *regioni* or *rioni*, which not only became part of the army but finally grasped the reins of government. This was a special characteristic of the political constitution of the Roman commune.

Scholae militum.

We now come to a question of weightier import for all desiring to form a clear idea of the Roman government at that period. What had become of the senate? It had undoubtedly lost its original character now that the empire was extinct. But, after much learned discussion, historical authorities are still divided upon the subject. Certain Italian writers of the 18th century—Vendettini, for example—asserted with scanty critical insight that the Roman senate did not disappear in the middle ages. The same opinion backed by much learned research was maintained by the great German historian Savigny. And Leo, while denying the persistence of the curia in Lombard Italy, adhered to Savigny's views as regarded Rome. Papencordt did the same, but held the Roman senate to be no more than a curia. This judgment was vigorously contested, first by Hegel and Giesebrecht, then by Gregorovius. These writers believe that after the middle of the 6th century the senate had a merely nominal existence. According to Gregorovius its last appearance was in the year 579. After that date it is mentioned in no documents, and the chroniclers are either equally silent or merely allude to its decay and extinction. In the 8th century, however, the terms *senator, senatores, senatus* again reappear. We find letters addressed to Pippin, beginning thus: *Omnis senatus atque universi populi generalitas*. When Leo III. returned from Germany he was met by *tam proceres clericorum cum omnibus clericis, quamque optimates et senatus, cunctaque militia* (see Anastasius, in Muratori, vol. iii. 198c). But it has been noted that the senate was never found to act as a political assembly; on occasions when it might have been mentioned in that capacity we hear nothing of it, and only meet with it in ceremonials and purely formal functions. Hence the conclusion that the term *senator* was used in the sense of noble, *senatus* of nobility, and no longer referred to an institution but only to a class of the citizens. Even when we find that the emperor Otto III. (who sought to revive all the ancient institutions of Rome) addressed an edict to the "consuls and senate of Rome," and read that the laws of St Stephen were issued *senatus decreto*, the learned Giesebrecht merely remarks that no important changes in the Roman constitution are to be attributed to the consuls and senate introduced by Otto III. Thus for the next glimpse of the senate we must pass to the 12th century, when it was not only reformed, as some writers believe, but entirely reconstituted.

The senate in the middle ages.

But in this case a serious difficulty remains to be disposed of. Gregorovius firmly asserts that the nobles acquired great power between the 7th and 10th centuries, not only filling the highest military, judicial and ecclesiastical offices, "but also directing the municipal government, presumably with the prefect at their head." He further adds: "Notwithstanding the disappearance of the senate, it is difficult to suppose that the city was without governing magistrates, or without a council." Thus, after the 7th century, the *optimates* at the head of the army were also at the head of the citizens, and "formed a communal council in the same manner in which it was afterwards formed by the *banderesi*."[1] Now, if the nobles were called *senatores* and the nobility *senatus*, and if this body of nobles met in council to administer the affairs of the republic, there is no matter for dispute, inasmuch as all are agreed that the original senate must have had a different character from the senate of the middle ages. And, since the absence of all mention of a prefect after the 7th century is not accepted as a proof of his non-existence, and we find him reappear under another form in the 8th century, so the silence as to the senate after the year 579, the last mentioned, and it in the 8th century, and its reappearance in the 12th as a firmly reconstituted body reasonably lead to the inference that, during that time, the ancient senate had been gradually transformed into the new council. Its meetings must have been held very irregularly, and probably only in emergencies when important affairs had to be discussed, previously to bringing them before the parliament or general assembly of the people. Historians are better agreed as to the significance of the term *consul*. At first this was simply a title of honour bestowed on superior magistrates, and retained that meaning from the 7th to the 11th century, but then became—as in other Italian cities—a special title of the chief officers of the state.

The consuls.

During this period the Roman constitution was very simple. The duke, commanding the army, and the prefect, presiding over the criminal court, were the chiefs of the republic; the armed nobility constituted the forces, filled all of superior offices, and occasionally met in a council called the senate, although it had, as we have said, no resemblance to the senate of older times. In moments of emergency a general parliament of the people was convoked. This constitution differed little from that of the other Italian communes, where, in the same way, we find all the leading citizens under arms, a parliament, a council, and one or more chiefs at the head of the government.

But Rome had an element that was lacking elsewhere. We have already noted that, in the provinces, the administrators of church lands were important personages, and exercised during the middle ages, when there was no exact division of power, both judicial and political functions. It was very natural that the heads of this vast administration resident in Rome should have a still higher standing, and in fact, from the

[1] Gregorovius, *Geschichte*, vol. ii. pp. 427–28 and note (2nd ed.).

6th century, their power increased to such an extent that in the times of the Franks they already formed a species of papal cabinet with a share and sometimes a predominance in the affairs of the republic. There were seven principal administrators, but two of them held the chief power—the *primicerius notariorum* and the *secundicerius*, *i.e.* the first and under secretaries of state. When, on the constitution of the new empire, these ministers were declared to be palatine or imperial as well as papal officials, the *primicerius* and the *secundicerius* were also in waiting on the emperor, who sat in council with them when in Rome. Next came the *arcarius*, or treasurer; the *sacellarius*, or cashier; the *protoscriniarius*, who was at the head of the papal chancery; the *primus defensor*, who was the advocate of the church and administered its possessions. Seventh and last came the *nomenclator*, or *adminiculator*, who pleaded the cause of widows, orphans and paupers. There were also some other officials, such as the *vestiarius*, the *vicedominus* or steward, the *cubicularius* or major-domo, but these were of inferior importance. They were ecclesiastics, but not bound to be in priest's orders. The first seven were those specially known as *proceres clericorum* and oftener still as *judices de clero*, since they speedily assumed judicial functions and ranked among the chief judges of Rome. But as ecclesiastics they did not give decisions in criminal cases. Thus Rome had two tribunals, that of the *judices de clero*, or *ordinarii*, presided over by the pope, and that of the *judices de militia*, leaders of the army, dukes and tribunes, also bearing the generic title of consuls. First appointed by the exarch and then frequently by the pope, these decided both civil and criminal cases. In the latter they were sole judges under the presidency of the prefect.

Judices de clero.

The pope was thus at the head of a large administrative body with judicial and civil powers that were continually on the increase, and, in addition to his moral authority over Christendom, was possessed of enormous revenues. So in course of time he considered himself the real representative of the Roman Republic. Gregory II. (715–31) accepted in the name of the republic the submission of other cities, and protested against the conquest by the Lombards of those already belonging to Rome. He seemed indeed to regard the territory of the duchy as the patrimony of the church. The duke was always at the head of the army, and, officially, was always held to be an imperial magistrate. But the empire was now powerless in Italy. Meanwhile the advance of the Lombards was becoming more and more threatening; they seized Ravenna in 751, thus putting an end to the exarchate, and next marched towards Rome, which had only its own forces and the aid of neighbouring cities to rely upon. To avoid being crushed by the brute force of a foreign nation unfit to rule, and only capable of oppression and pillage, it was necessary to make an energetic stand.

The popes and the papal power.

Accordingly, the reigning pope, Stephen II. (752–57), appealed to Pippin, king of the Franks, and concluded with that monarch an alliance destined to inaugurate a new epoch of the world's history. The pope consecrated Pippin king of the Franks, and named him *patricius Romanorum*. This title, as introduced by Constantine, had no longer the ancient meaning, but now became a sign of lofty social rank. When, however, it was afterwards conferred on barbarian chieftains such as Odoacer and Theodoric, and then on the representative of the Byzantine empire in Italy, it acquired the meaning of a definite dignity or office. In fact, the title was now given to Pippin as defender of the church, for the pope styled him at the same time *patricius Romanorum* and *defensor* or *protector ecclesiae*. And the king pledged himself not only to defend the church but also to wrest the exarchate and the Pentapolis from the Lombards and give them to Rome, or rather to the pope, which came to the same thing. This was considered as a restitution made to the head of the church, who was also the representative of the republic and the empire. And, to preserve the character of a restitution, the famous "donation of Constantine" was invented during this period (752–77). Pippin brought his army to the rescue (754–55) and fulfilled his promise. The pope accepted the donation in the name of St Peter, and as the visible head of the church. Thus in 755 central Italy broke its connexion with the empire and became independent; thus was inaugurated the temporal power of the papacy, the cause of so much subsequent warfare and revolution in Rome.

The popes appeal to the Franks for aid.

Donation of Pippin.

Its first consequences were speedily seen. In 767 the death of Paul I. was followed by a fierce revolt of the nobles under Duke Toto (Theodoro) of Nepi, who by violent means raised his brother Constantine to the chair of St Peter, although Constantine was a layman and had first to be ordained. For more than a year the new pontiff was a pliable tool in the hands of Toto and of the nobles. But the genuine papal faction, headed by a few *judices de clero*, asked the aid of the Lombards and made a formidable resistance. Their adversaries were defeated, tortured and put to death. Toto was treacherously slain during a fight. The pope was blinded and left half dead on the highway. Fresh and no less violent riots ensued, owing to the public dread lest the new pope, Stephen III. (768–72), elected by favour of the Lombards, should give them the city in return. But Stephen went over to the Franks, whom he had previously deserted, and his successor, Adrian I. (772–95), likewise adhered to their cause, called the city to arms to resist King Desiderius and his Lombard hordes, and besought the assistance of Charlemagne. This monarch accordingly made a descent into Italy in 773, and not only gained an easy victory over Desiderius, but destroyed the Lombard kingdom and seized the iron crown. Entering Rome for the first time in 774, he confirmed and augmented the donation of Pippin by the addition of the dukedom of Spoleto. He returned several times to Italy and Rome, making new conquests and fresh concessions to Adrian I., until the death of the latter in 795.

Charlemagne in Italy.

The position of Rome and of the pope is now substantially changed. Duke, prefect, militia and the people exist as heretofore, but are all subordinate to the head of the church, who, by the donations of Pippin and Charlemagne, has been converted into a powerful temporal sovereign. Henceforth all connexion with Byzantium is broken off, but Rome is still the mainspring of the empire, the Roman duchy its sole surviving fragment in Italy, and the pope stands before the world as representative of both. And, although it is difficult to determine how this came about, the pope is now regarded and regards himself as master of Rome. In the year 772 he entrusts the *vestiarius* with judicial powers over the laity, ecclesiastics, freemen and slaves *nostrae Romanae reipublicae*. He writes to Charlemagne that he has issued orders for the burning of the Greek ships employed in the slave trade, "in our city of Civita Vecchia" (Centumcellae), and he always speaks of Rome and the Romans as "our city," "our republic," "our people." The donations of Pippin and Charlemagne are restitutions made to St Peter, the holy church and the republic at the same time. It is true that Charlemagne held the supreme power, had an immensely increased authority and actively fulfilled his duties as *patricius*. But his power was only occasionally exercised in Rome; it was the result of services rendered to the church, and of the church's continual need of his help; it was, as it were, the power of a mighty and indispensable ally. The pope, however, was most tenacious of his own authority in Rome, made vigorous protest whenever rebels fled to Charlemagne or appealed to that monarch's arbitration, and contested the supremacy of the imperial officials in Rome. Yet the pope was no absolute sovereign, nor, in the modern sense of the term, did any then exist. He asserted supremacy over many lands which continually rebelled against him, and which, for want of an army of his own, he was unable to reduce to obedience without others' help. Neither did the republic acknowledge him as its head. It profited by

The papacy, the republic and the Franks.

the growing power of the pope, could not exist without him, respected his moral authority, but considered that he usurped undue power in Rome. This was specially the feeling of the nobles, who had hitherto held the chief authority in the republic, and, being still the leaders of the army, were by no means willing to relinquish it. The Roman nobles were very different from other aristocratic bodies elsewhere. They were not as they pretended, descendants of the Camilli and the Scipios, but neither were they a feudal aristocracy, inasmuch as the Teutonic element had as yet made small way among them. They were a mixture of different elements, national and foreign, formed by the special conditions of Rome. Their power was chiefly derived from the high offices and large grants of money and land conferred on them by the popes; but, as no dynasty existed, they could not be dynastic. Every pope aggrandized his own kindred and friends, and these were the natural and often open adversaries of the next pontiff and his favourites. Thus the Roman nobility was powerful, divided, restless and turbulent; it was continually plotting against the pope, threatening not only his power, but even his life; it continually appealed to the people for assistance, stirred the militia to revolt and rendered government an impossibility. Hence, notwithstanding his immense moral authority, the pope was the effective head neither of the aristocracy, the army nor of the as yet unorganized lower classes. The lord of vast but often insubordinate territories, the recognized master of a capital city torn by internecine feud and plots against himself, he needed the support of an effective force for his own preservation and the maintenance of the authority proffered him from all quarters. Hence the necessity of creating an empire of the West, after having snapped every link with that of the East. Thus the history of Rome is still, as in the past, a history of continual strife between pope, emperor and republic; and the city, while imbibing strength from all three, keeps them in perpetual tumult and confusion.

Leo III. (796–816) further strengthened the ties between Charlemagne and the church by sending the former a letter with the keys of the shrine of St Peter and the banner of Rome. Charlemagne had already joined to his office of patrician the function of high justice. The new symbols now sent constituted him *miles* of Rome and general of the church. The pope urged him to despatch an envoy to receive the oath of fealty, thus placing himself, the representative of the republic, in the subordinate position of one of the bishops who had received the immunities of counts. Of all these arrangements took place without the slightest reference to the senate, the army or the people. Much resentment was felt, especially by the nobles, and a revolution ensued headed by the *primicerius* Paschalis and the *secundicerius* Campulus, and backed by all who wished to liberate the city from the papal rule. During a solemn procession the pope was attacked and barbarously maltreated by his assailants, who tried to tear out his eyes and tongue (799). He was thrown into prison, escaped and overtook Charlemagne at Paderborn, and returned guarded by ten of the monarch's envoys, who condemned to death the leaders of the revolt, reserving, however, to their sovereign the right of final judgment. Charlemagne arrived in December 800, and as high justice assembled a tribunal of the clergy, nobles, citizens and Franks; he pronounced Leo to be innocent, and confirmed the capital sentence passed on the rebels. But through the intercession of the pope, who dreaded the wrath of the nobles, this was presently commuted into perpetual exile. And finally on Christmas day, in St Peter's, before an assemblage of Roman and Frankish lords, the clergy and the people, the pontiff placed the imperial crown on Charlemagne's head and all proclaimed him emperor.

Charlemagne crowned emperor.

Thus the new emperor was elected by the Romans and consecrated by the pope. But he was their real master and supreme judge. The pope existed only by his will, since he alone supplied the means for the maintenance of the temporal power, and already pretended to the right of controlling the papal elections. Yet Charlemagne was not sovereign of Rome; he possessed scarcely any regalia there, and was not in command of the army; he mainly represented a principle, but this principle was the law which is the basis of the state. The pope still nominated the Roman judges, but the emperor or his *missi* presided over them, together with those of the pope, and his decision was appealed to in last resort. During the Carolingian times no mention is found of the prefect, and it would seem that his office was filled by the imperial *missus*, or legate, the *judices de clero* and *judices de militia*. The power of the pope was now entangled with that of the republic on the one hand and that of the empire on the other. The consequent confusion of sacred and secular functions naturally led to infinite complications and disputes.

The death of Charlemagne in 814 was the signal for a fresh conspiracy of the nobles against the pope, who, discovering their design, instantly put the ringleaders to death, and was severely blamed by Louis for this violation of the imperial prerogative. While the matter was under discussion the nobles broke out in fiercer tumults, both in Rome and the Campagna. At last, in 824, the emperor Lothair came to re-establish order in Rome, and proclaimed a new and noteworthy constitution, to which Pope Eugenius II. (824–27) gave his oath of adherence. By this the partnership of pope and emperor in the temporal rule of Rome and the states of the church was again confirmed. The more direct power appertained to the pope; the supreme authority, presidence of the tribunals, and final judgment on appeal to the emperor. The new constitution also established the right of contending parties to select either the Roman or the Teutonic code for the settlement of their disputes. During the Carolingian period it is not surprising that the commune should have been, as it were, absorbed by the church and the empire. In fact, it is scarcely mentioned in history throughout that time. And when, no longer sustained by the genius of its founder, the Frankish empire began to show signs of dissolution, the popes, finding their power thereby strengthened, began to assume many of the imperial attributes. Soon, however, as a natural consequence of the loss of the main support of the papacy, the nobles regained vigour and were once more masters of the city. Teutonic and feudal elements had now largely penetrated into their organization. The system of granting lands, as when churches and convents, as benefices according to feudal forms, became more and more general. It was vain for the popes to offer opposition, and they ended by yielding to the current. The fall of the Frankish empire left all Italy a prey to anarchy, and torn by the faction fights of Berengar of Friuli and Guido of Spoleto, the rival claimants to the crowns of Italy and the empire. The Saracens were advancing from the south, the Huns from the north; the popes had lost all power; and in the midst of this frightful chaos a way was opened for the rise of the republics. Anarchy was at its climax in Rome, but the laity began to overpower the clergy to such an extent that the *judices de militia* prevailed over the *judices de clero*. For a long time no imperial *missi* or legates had been seen, and the papacy was incredibly lowered. The election of the popes had positively fallen into the hands of certain beautiful women notorious for their evil life and depravity. The aristocracy alone gained strength; now freed from the domination of the emperor, it continually wrested fresh privileges from the impotent pontiffs, and became organized as the ruling force of the republic. Gregorovius, notwithstanding his denial of the continuation of the senate after the 6th century, is obliged to acknowledge that it appeared to have returned to life in the power of this new baronage. And, although this body was now permeated with the feudal principle, it did not discard its ancient traditions. The nobles claimed to be the main source of the empire; they wished to regain the dignity and office of *patricius*, and to make it, if possible, hereditary in some of their families. Nothing is known of their system of organization, but it seems

Decline of the empire.

Renewed power of the aristocracy.

that they elected a chief bearing the title of *consul, senator, princeps Romanorum,* who was officially recognized by the pope, as a *patricius* presided over the tribunals, and was the head of the commune.

Theophylact was one of the first to assume this dignity. His wife Theodora, known as the *senatrix,* was one of the women then dominating Rome by force of their charms and licentiousness. She was supposed to be the concubine of Pope John X. (914–28), whose election was due to her influence. Her daughter Marozia, in all things her worthy rival, was married to Alberic, a foreign mercenary of uncertain birth who rose to a position of great influence, and, although an alien, played a leading part in the affairs of the city. He helped to increase the power of Theophylact, who seemingly shared the rule of the city with the pope. In the bloody war that had to be waged against the Saracens of southern Italy, and at the defeat of the latter on the Garigliano (916), Theophylact and Alberic were the Roman leaders, and distinguished themselves by their valour. They disappeared from the scene after this victory, but Marozia retained her power, and bore a son, Alberic, who was destined to greater deeds. The pope found himself caught in this woman's toils, and struggled to escape, but Marozia, gaining fresh influence by her marriage with Hugo, margrave of Tuscany, imprisoned the pontiff himself in the castle of St Angelo (928). This fortress was the property of Marozia and the basis of her strength. The unfortunate John died within its walls. Raised to the chair by Theodora, he was deposed and killed by her daughter. The authority of the latter reached its culminating point in 931, when she succeeded in placing her son John XI. on the papal throne. On the death of her second husband she espoused Hugh of Provence, the same who in 928 had seized the iron crown at Pavia, and now aspired to the empire. Dissolute, ambitious and despotic, he came to Rome in 932, and, leaving his army outside the walls, entered the castle of St Angelo with his knights, instantly began to play the tyrant, and gave a blow to Alberic his stepson, who detested him as a foreign intruder. This blow proved the cause of a memorable revolution; for Alberic rushed from the castle and harangued the people, crying that the time was come to shake off the tyrannous yoke of a woman and of barbarians who were once the slaves of Rome. Then, putting himself at the head of the populace, he closed the city gates to prevent Hugh's troops from coming to the rescue, and attacked the castle. The king fled; Marozia was imprisoned, Alberic proclaimed lord of the Romans, and the pope confined to the Lateran in the custody of his own brother. Rome was again an independent state, a republic of nobles. Rid of the temporal dominion of emperor and pope, and having expelled the foreigners with great energy and courage, it chose Alberic for its chief with the title of *princeps atque omnium Romanorum senator.* The tendency of the Roman Republic to elect a supreme authority, first manifested in the case of Theophylact, was repeated in those of Alberic, Brancaleone, Crescenzio, Cola di Rienzo and others. One of the many causes of this tendency may be traced to the conception of the new empire of which Rome was the original and enduring fountainhead. As Rome had once transferred the empire from Byzantium to the Franks, so Rome was surely entitled to reclaim it. The imperial authority was represented by the office of patrician, now virtually assumed by Alberic. That he gave the name of Octavian to his son is an additional proof of this fact. In the Eternal City the medieval political idea has always the aspect of a resurrection or transformation of classic antiquity. This is another characteristic of the history of the Roman commune.

The revolt of the Romans. Alberic at the head of the commune.

Alberic's strength was due to his connexion with the nobility, to his father's valiant service against the Saracens at the battle of Garigliano, and to the militia under his command, on which everything depended amid the internal and external dangers now threatening the new state. As yet no genuine municipal constitution was possible in Rome, where neither the people nor the wealthy burghers engaged in industry and commerce had any fixed organization. All was in the hands of the nobles, and Alberic, as their chief, frequently convened them in council, although obliged to use pressure to keep them united and avoid falling a prey to their disputes. Hence the whole power was concentrated in his grasp; he was at the head of the tribunals as well as of the army. The *judices de clero* and *judices de militia* still existed, but no longer met in the Lateran or the Vatican, under the presidency of emperor and pope or their *missi.* Alberic himself was their president; and, a still more significant fact, their sittings were often held in his private dwelling. There is no longer any mention of prefect or *patricius.* The papal coinage was inscribed with Alberic's name instead of the emperor's. His chief attention was given to the militia, which was still arranged in *scholae,* and it is highly probable that he was the author of the new division of the city into twelve *regions,* with a corresponding classification of the army in as many regiments under twelve flags and twelve *banderesi,* one for every region. The organization of the *scholae* could not have been very dissimilar, but doubtless Alberic had some important motive for altering the old method of classification. By means of the armed regions he included the people in the forces. It is certain that after his time we find the army much changed and far more democratic. It was only natural that so excellent a statesman should seek the aid of the popular element as a defence against the arrogance of the nobles, and it was requisite to reinforce the army in order to be prepared for the attacks threatened from abroad. This change effected, Alberic felt prepared for the worst, and began to rule with energy, moderation and justice. His contemporaries award him high praise, and he seems to have been exempt from the vices of his mother and grandmother.

In 933 Hugh made his first attack upon the city, and was repulsed. A second attempt in 936 proved still more unfortunate, for his army was decimated by a pestilence. Thoroughly disheartened, he not only made peace, but gave his daughter in marriage to Alberic, thus satisfying the latter's desire to ally himself with a royal house. But this union led to no conciliation with Hugh. For Alberic, finding his power increased, marched at the head of his troops to consolidate his rule in the Campagna and the Sabine land. On the death of his brother, Pope John XI., in 936, he controlled the election of several successive popes, quelled a conspiracy formed against him by the clergy and certain nobles instigated by Hugh, and brilliantly repulsed, in 941, another attack by that potentate. At last, however, this inveterate foe withdrew from Rome, being summoned to the north by the victories of his rival Berengarius. But Alberic, after procuring the election of various popes who were docile instruments of his will, experienced a check when Agapetus II. (946–55), a man of firmness and resource, was raised to the papal throne. The fortunes of Berengarius were now in the ascendant. In 950 he had seized the iron crown, and ruled in the Pentapolis and the exarchate. This being singularly painful to the pope, he proceeded to make alliance with all those enemies of Berengarius preferring a distant emperor to a neighbouring and effective sovereign, with the Roman nobles who were discontented with Alberic, and with all who foresaw danger, even to Rome, from the extended power of Berengarius. And Agapetus recurred to the old papal policy, by making appeal to Otto I., whose rule in Germany was distinguished by a prestige almost comparable with that of Charlemagne.

Otto immediately responded to the appeal and descended into Italy; but his envoys were indignantly repulsed by Alberic, and, being prudent as well as firm, he decided to wait a more opportune moment for the accomplishment of his designs. Meanwhile Alberic died in 954, and the curtain fell on the first great drama of the Roman Republic. He had reigned for twenty-two years with justice, energy and prudence; he had repelled foreign invaders, maintained order and authority. He seems, however, to have realized that the aspect of affairs was about to change, that the work he had accomplished would be exposed to new dangers. These dangers, in fact, had already begun with the accession of an enterprising pope to the Holy

See. The name of Octavian given by Alberic to his son leads to the inference that he meant to make his power hereditary. But, suddenly, he began to educate this son for the priesthood, and, assembling the nobles in St Peter's shortly before his death, he made them swear to elect Octavian as pope on the decease of Agapetus II. They kept their word, for in this way they freed themselves from a ruler. Possibly Alberic trusted that both offices might be united, and that his son would be head of the state as well as the church. But the nobles knew this to be a delusion, especially in the case of a nature such as Octavian's. The lad was sixteen years old when his father died, received princely honours until the death of Agapetus, and was then elected pope with the name of John XII. He had inherited the ungoverned passions of his grandmother Marozia and great-grandmother Theodora, but without their intelligence and cunning. His palace was the scene of the most scandalous licence, while his public acts were those of a baby tyrant. He conferred a bishopric on a child of ten, consecrated a deacon in a stable, invoked Venus and Jupiter in his games, and drank to the devil's health. He desired to be both pope and prince, but utterly failed to be either. Before long, realizing the impossibility of holding in check Berengarius, who still ruled over the exarchate, he sought in 960 the aid of Otto I., and promised him the imperial crown. Thus the new ruler was summoned by the son of the man by whom he had been repulsed. Otto vowed to defend the church, to restore her territories, to refrain from usurping the power of the pope or the republic, and was crowned on the 2nd of February 962 with unheard-of pomp and display.

Otto I., crowned emperor.

Accordingly, after being extinct for thirty-seven years, the empire was revived under different but no less difficult conditions. The politico-religious unity founded by Charlemagne had been dissolved, partly on account of the heterogeneous elements of which it was composed, and partly because other nations were in course of formation. Now too the feudal system was converting the officers of the empire into independent princes, and the new spirit of communal liberty was giving freedom to the cities. Otto once more united the empire and the church, Italy and Germany, in order to combat these new foes. But the difficulties of the enterprise at once came to light. John XII., finding a master in the protector he had invoked, now joined the discontented nobles who were conspiring with Berengarius against the emperor. But the latter hastened to Rome in November 963, assembled the clergy, nobles and heads of the people, and made them take an oath never again to elect a pope without his consent and that of his son. He also convoked a synod presided over by himself in St Peter's, which judged, condemned and deposed Pope John and elected Leo VIII. (863–65), a Roman noble, in his stead. All this was done at the direct bidding of the emperor, who thus deprived the Romans of their most valued privilege, the right of choosing their own pope. But the people had now risen to considerable importance, and, for the first time, we find it officially represented in the synod by the plebeian Rusta, surnamed Imperiola, together with the leaders of the militia, which had also become a popular institution since Alberic's reign. It was no longer easy to keep the lower orders in subjection, and by their junction with the malcontent nobles they formed a very respectable force. On the 3rd of January 964 they sounded the battle-peal and attacked the Vatican, where the emperor was lodged. The German knights repulsed them with much slaughter, and this bloodshed proved the beginning of an endless feud. Otto departed in February, and John XII., as the chosen pope of the Romans, returned with an army of followers and compelled the defenceless Leo VIII. to seek safety in flight. Soon afterwards Leo was deposed and excommunicated by a new synod, and many of his adherents were cruelly murdered. But on the 14th of May 964 John suddenly expired; the Romans, amid violent struggles and tumults, resumed their rights, elected Benedict V., and procured his consecration in spite of the emperor's veto. Otto now appeared at the head of an army, committed fresh slaughter, besieged the city, reduced it by famine, and, after holding a council which deposed Benedict and sent him a prisoner to Hamburg, restored Leo VIII. to the papal throne.

Rising importance of the people.

But, although the emperor thus disposed of the papacy at his will, his arbitrary exercise of power roused a long and obstinate resistance, which had no slight effect upon the history of the commune. Leo VIII. died in 965, and the imperial party elected John XIII. (965–72). Upon this the nobles of the national party joined the people and there was a general revolt. The nobles were led by Pietro, prefect of Rome. As we have noted, this office seemed to be extinct during the Carolingian rule, but we again meet with it in 955, after an interval of a century and a half. The leaders of the people were twelve *decarconi*, a term of unknown derivation, but probably indicating chiefs of the twelve regions (*dodecarchi, dodecarconi, decarconi*). The new pope was seized and confined, first in the castle of St Angelo, then in a fortress in the Campagna. But the emperor quickly marched an army against Rome, and this sufficed to produce a reaction which recalled the pope (November 966), sent the prefect into exile, and put several of the rebellious nobles to death. And shortly after the emperor sacked the city. Many Romans were exiled, some tortured, others, including the twelve *decarconi*, killed. John XIII. died in 972 and Otto in 973.

Another revolution.

All these events clearly prove how great a change had now taken place in the conditions of Rome. The people (*plebs*) had made its appearance upon the stage; the army had become democratic; the twelve regions were regularly organized under leaders. Opposed to them stood the nobles, headed by the prefect, also a noble, precisely as in Florence the nobles and the podestà were later opposed to the gilds and the people. So far, it is true, nobles and people had made common cause in Rome; but this harmony was soon to be interrupted. The feudal spirit had made its way among the Roman aristocrats, had split them into two parties and diminished their strength. It was now destined to spread, and, as it was always vigorously detested and opposed by the people elsewhere in Italy, so the same consequence was inevitable in Rome. Another notable change, and a subject of unending controversy, had also occurred in the administration of justice. So far there were in *judices dativi* known as ordinary or palatine judges, and the *judices de militia*, also styled *consules* or *duces*. These judges generally formed a court of seven, three being *de clero*, four *de militia*, or vice versa, under the presidency of the papal or imperial *missi*. In criminal cases the *judices de militia* had the prefect or the imperial *missus* for their president. But there was a third order of judges called *pedanei*, *a consulibus creati*. It seems clear that the *duces*, being *distributi per judicatus*, found themselves isolated in the provinces, and to obtain assistance nominated these *pedanei*, who were legal experts. In Rome, with its courts of law, they were less needed, but possibly in those sections of the city where cases of minor importance were submitted to a single magistrate reference was made to the *pedanei*. But many changes were made under the Franks, and when the edict of Lothair (824) granted free choice of either the Roman or Germanic law, and the *duces* were replaced by *comites* and *gastaldiones*, chiefly of German origin, the use of legal experts became increasingly necessary. And the custom of employing them was the more easily diffused by being already common among the Franks, whose *scabini* were legal experts acting as judges, though not qualified to pass sentence. Thus the *pedanei* multiplied, came to resemble the *scabini*, and were designated *judices dativi* (*a magistratu dati*) or simply *dativi*. These were to be found in the exarchate in 838, but not in Rome until 961, when the *judices de militia* had ceased to exist. The great progress of the German legal procedure may then have contributed to the formation of the new office.

Judices dativi.

Meanwhile Pope John XIII. had been succeeded by Benedict VI. (973–74) and Otto I. by his son Otto II., a youth

of eighteen married to the Byzantine princess Theophano. Thereupon the Romans, who had supported the election of another pope, and were in no awe of the new emperor, rose to arms under the command of Crescenzio, a rich and powerful noble. They not only seized Benedict VI. by force, but strangled him in the castle of St Angelo. The national and imperial parties then elected several popes who were either exiled or persecuted, and one of them was said to be murdered. In 985 John XV. was elected (985–96). During this turmoil, the national party, composed of nobles and people, led by Giovanni Crescenzio, son of the other Crescenzio mentioned above, had taken complete possession of the government. This Crescenzio assumed the title of patrician, and sought to imitate Alberic, although far his inferior in capacity. Fortunately for him, the reigning pope was a detested tyrant, and the emperor a child entirely guided by his mother. But the new emperor Otto III. was backed by a powerful party, and on coming to Rome in 996 was able, although only aged fifteen, to quell the rebellion, oust Crescenzio from public life, and elect as successor to John XV. his own cousin, Pope Gregory V. (996–99). But this first German pope surrounded himself with compatriots, and by raising them to lofty posts even in the tribunals excited a revolt that drove him from the throne (29th September 999). Crescenzio, being master of the castle of St Angelo, resumed the title of patrician or consul of the Romans, expelled the German judges, reconstituted the government, prepared his troops for defence, and created a new pope. But the following year Otto III. came to Rome, and his party opened the gates to him. Although deserted by nearly all his adherents, Crescenzio held the castle valiantly against its besiegers. At last, on the 29th of April 998, he was forced to make terms, and the imperialists, violating their pledges, first put him to torture and then hurled him from the battlements. Gregory V. dying shortly after these events, Sylvester II., another native of southern France, who had been tutor to the emperor Otto III., was raised to the papacy (999–1003).

Giovanni Crescenzio.

Thus Otto III. was enabled to establish his mastery of Rome. But, as the son of a Greek mother, trained amid Greek influences, his fantastic and contradictory nature seemed only to grasp the void. He wished to reconstitute a Romano-Byzantine empire with Rome for his capital. His discourse always turned on the ancient republic, on consuls and senate, on the might and grandeur of the Roman people; and his edicts were addressed to the senate and the people. The senate is now constantly mentioned, and its heads bear the title of consuls. The emperor also gave renewed honour to the title of patrician, surrounded himself with officials bearing Greek and Roman designations, and raised the prestige of the prefect, who, having now almost the functions of an imperial vicar, bore the eagle and the sword as his insignia. Nevertheless Otto III. was thoroughly German, and during his reign all Germanic institutions made progress in Rome. This was particularly the case with feudalism, and Sylvester II. was the first pope to treat it with favour. Many families of the feudal barons now arose. The Crescenzii held sway in the Sabine hills, and Praeneste and Tusculum were great centres of feudalism in the 11th century. The system of feudal benefices was recognized by the church, which made grants of lands, cities and provinces in the feudal manner. The bishops, like feudal barons, became actual counts. And, in consequence of these changes, when the emperor, as head of the feudal system, seeks to impose his will upon the church (which has also become feudal) and control the papal elections, he is met by the great question of the investitures, a question destined to disturb the whole world. Meanwhile the Roman barons were growing more and more powerful, and were neither submissive nor faithful to the emperor. On the contrary, they resented his attitude as a master of Rome, and, when he subjected Tivoli to the Holy See, attacked both him and the pope with so much vigour as to put both to flight (16th February 1001). Thereupon Rome again became a republic, headed by Gregory of Tusculum, a man of a powerful family claiming descent from Alberic.

Otto III.

By the emperor's death in January 1002 the race of the Ottos became extinct, the papacy began to decline, as at the end of the Carolingian period, and the nobles, divided into an imperial and a national party, were again predominant. They reserved to themselves the office of patrician, and, electing popes from their own ranks, obtained enlarged privileges and power. At the time when Ardoin, marquis of Ivrea, profiting by the extinction of the Ottos and the anarchy of Germany, was stirring Italy in the vain hope of constituting a national kingdom, the Roman Republic was being consolidated under another Giovanni Crescenzio, of the national faction. He was now elected patrician; one of his kinsmen was invested with the office of prefect, and the new pope John XVIII. (1003–9) was one of his creatures. Although the power of Henry of Bavaria was then gaining ascendancy in Germany, and giving strength to the imperialist nobles, Crescenzio still remained supreme ruler of the city and the Campagna. Surrounded by his judges, the senators and his kinsman the prefect, he continued to dispense justice in his own palace until his death in 1012, after ten years' rule. And, Pope Sergius IV. having died the same year, the counts of Tusculum compassed the election of Benedict VIII. (1012–24), one of their own kin. This pope expelled the Crescenzii, changed the prefect and restored the title of patrician for Henry II., whom he consecrated emperor on the 14th February 1014. A second Alberic, bearing the title of "eminentissimus consul et dux," was now at the head of the republic and dispensed *placita* in the palace of his great ancestor, from whom the counts of Tusculum were also descended.

The second Giovanni Crescenzio.

The new emperor endeavoured to re-establish order in Rome, and strengthen his own authority together with that of the pope. But the nobles had in all things the upper hand. They were regularly organized under leaders, held meetings, asserted their right to nominate both pope and emperor, and in fact often succeeded in so doing. Even Henry II. himself was obliged to secure their votes before his coronation. The terms senate and senator now recur still more frequently in history. Nevertheless, Benedict VIII. succeeded in placing his own brother, Romano, at the head of the republic with the title of "consul, dux and senator," thus making him leader of the nobles, who met at his bidding, and chief of the militia and the tribunals. The prefect still retained his authority, and the emperor was by right supreme judge. But, a violent revolt breaking out, the emperor only stayed to suppress it and then went to Germany in disgust. The pope, aided by his brother, conducted the government with energy; he awed the party of Crescenzio, and waged war against the Saracens in the south. But he died in 1024, and in the same year Henry II. was succeeded by Conrad II. There was now beheld a repetition of the same strange event that had followed the death of Alberic, and with no less fatal consequences. Benedict's brother Romano, head of the republic, and still retaining office, was, although a layman, elected pope. He took the name of John XIX. (1024–33), and in 1027 conferred the imperial crown on Conrad the Salic, who, abolishing the Lothairian edict of 824, decreed that throughout Rome and its territory justice should be henceforth administered solely by the Justinian code. Thus, notwithstanding the spread of feudalism and Germanic procedure, the Roman law triumphed through the irresistible force of the national character, which was already manifested in many other ways.

Henry II.

Meanwhile John XIX. was succeeded by his nephew, Benedict IX. (1033–45), a lad of twelve, who placed his own brother at the head of the republic. Thus church and state assumed the aspect of hereditary possessions in the powerful house of the counts of Tusculum. But the vices and excesses of Benedict were so monstrous that the papacy sank to the lowest depth of corruption; there followed a series of tumults

and reactionary attempts, and so many conflicting elections that in 1045 three popes were struggling for the tiara in the midst of scandal and anarchy. The streets and neighbourhood of Rome swarmed with thieves and assassins; pilgrims were plundered; citizens trembled for their lives; and a hundred petty barons threatened the rival popes, who were obliged to defend themselves by force. This state of things lasted until Henry III. came to re-establish order. He appointed a synod to depose the three popes, and then, with the consent of the wearied and anarchy-stricken Romans, assuming the right of election, proposed a German, Clement II., who was consecrated at Christmas 1046. Henry III. was then crowned, and also took the title of patrician. Thus the emperor was lord over church and state. This, however, stirred both people and pope against him, and led to the terrible contest of the investitures, although for the moment the Romans, being exhausted by past calamities, seemed not only resigned but contented.

Hildebrand and the question of investiture.

In fact, the idea of reform and independence was already germinating in the church and was soon to become tenacious and irresistible. Hildebrand was the prompter and hero of this idea. He sought to abolish the simony and concubinage of the priesthood, to give the papal elections into the hands of the higher ecclesiastics, and to emancipate the church from all dependence on the empire. Henry III. procured the election of four German popes in succession, and Hildebrand was always at hand to inspire their counsels and dominate them by his strength of intellect and still greater strength of will. But the fourth German pope, Victor II., died in 1057, and Henry III. had been succeeded in 1056 by the young Henry IV. under the regency of a weak woman, the empress Agnes. Hildebrand seized this favourable moment for trying his strength and procured the election of Stephen IX. (1057–58), a candidate he had long had in view. Stephen, however, died in 1058; the nobles instantly rose in rebellion; and Gregory of Tusculum, who had assumed the patriciate, caused an incapable cousin to be named pope (Benedict X.). Upon this Hildebrand postponed his design of maintaining the papacy by the help of Italian potentates and had recourse to the empress. In a synod held at Siena with her consent Benedict was deposed and Nicholas II. (1059–61) elected in his stead. This pope entered Rome escorted by the troops of Godfrey of Tuscany, and, when also assured of help from Naples, assembled a council of one hundred and thirteen bishops (1059), who condemned the deposed pontiff and renewed the prohibition of simony and concubinage among the priesthood. Finally Nicholas instituted the college of cardinals, entrusting it with the election of the pope, who was in future to be chosen from its ranks. The assent of the clergy and people was left purely formal. The decree also contained the proviso—"saving the honour and reverence due to the emperor"; but this too was an empty expression.

The new decree was a master-stroke of Hildebrand's genius, for by means of it he placed the papal election in the hands of a genuine ecclesiastical senate and gave a monarchical form to the church. Backed by the Normans who were in Rome, and whose commander, Richard of Capua, did not scruple to strike off the heads of many recalcitrant nobles, Hildebrand and the pope could now pursue their work of reform. Nevertheless the nobles again revolted on the death of Nicholas II. in 1061, and declared their purpose of restoring to Henry IV. the patriciate and right of election; but Hildebrand, by speedily convoking the cardinals, procured the election of Alexander II. (1061–73). This pope, although friendly to the empire, did not await the imperial sanction, but, protected by the Romans, at once entered the Lateran and put some other riotous nobles to death. The German bishops, however, elected Honorius II., who had the support of the barons. Thus the city was split into two camps and a deadly civil war ensued, terminating, despite the vigorous resistance of the nobility, in the defeat of Honorius II. But the nobles persevered in the contest and were the real masters of Rome. By conferring the patriciate on the emperor, as their feudal chief, they hoped to organize themselves under the prefect, who now, with greatly increased authority, presided over both the civil and criminal courts in the absence of the pope's representative. In a general assembly the Romans elected their prefect, whose investiture was granted by the emperor, while the pope elected another. Thus disorder was brought to a climax.

Gregory VII.

Alexander died on the 21st April 1073, and thereupon Hildebrand was at last raised to the chair as pope Gregory VII. (1073–85). He reconfirmed his predecessors' decrees, dismissed all simoniacal and non-celibate priests, and then in a second council (1075) forbade the clergy to receive investiture at the hands of laymen. No bishop nor abbot was again to accept ring or crozier from king or emperor. Now, as ecclesiastical dignities included the possession of extensive benefices, privileges and feudal rights, this decree gave rise to tremendous dispute and to fierce contest between the empire and the church. The nobles took a very decided part in the struggle. With Cenci, their former prefect, at their head, they rose in revolt, assailed the pope on Christmas day 1075, and threw him into prison. But their fear of the popular wrath compelled his speedy release; and he then decreed the excommunication and deposition of the emperor who had declared him deposed. That monarch afterwards made submission to Gregory at Canossa (1077), but, again turning against him, was again excommunicated. And in 1081 he returned to Italy bringing the antipope Clement III., and besieged Rome for forty days. Assembling the nobles in his camp, he there arranged a new government of the city with prefect and senate, palatine judges and other magistrates, exactly similar to the existing government within the walls. He then took his departure, returned several times in vain, but at last forced his way into the city (March 1084) and compelled Gregory VII. to seek refuge in the castle of St Angelo. The emperor was then master of Rome, established the government he had previously arranged and, calling a parliament of nobles and bishops, procured the deposition of Gregory and the consecration of Clement III., by whom he was crowned in 1084. He then attacked and seized the Capitol, and assaulted the castle in order to capture the pope. But Robert Guiscard brought his army to the rescue. Emperor and antipope fled; the city was taken, the pope liberated and Rome reduced to ruin by fire and pillage. Upon this Gregory VII., broken with grief, went away with the Normans, and died at Salerno on the 25th May 1085. He had separated the church from the people and the empire by a struggle that, as Gregorovius says, disturbed the deep sleep of the middle ages.

Paschal II. and the nobles.

Pope Paschal II. (1099–1118) found himself entirely at the mercy of the tyrannous nobles who were alike masters of Rome, of its government, and its spiritual lord. As they were divided among themselves, all the pope could do was to side with one party in order to overcome the other. With the help of his own nephew Gualfredo, the prefect Pietro Pierleone, and the Frangipani, he was able to keep down the Corsi, and hold the Colonna in check. Being compelled to repair to Benevento in 1108, he left Gualfredo to command the militia, Tolomeo of Tusculum to guard the Campagna, and the consuls Pierleone and Leone Frangipani, together with the prefect, in charge of the government. The consulship was no longer a mere title of honour. The consuls seem to have been elected, as at Ravenna, in imitation of those of the Lombard cities, and were at the head of the nobles and senate. The expressions "praefectus et consules," "de senatoribus et consulibus," are now of frequent occurrence. We have no precise knowledge of the political organization of the city at this moment; but it was an aristocratic government, similar to that originally formed in Florence, as Villani tells us, with a senate and consuls. The nobles were so completely the masters that the pope, in spite of having trusted them

with the government, could only return to Rome with the aid of the Normans. Being now absorbed in the great investiture question, he had recourse to a daring plan. He proposed to Henry V. that the bishops should resign all property derived from the crown and depend solely on tithes and donations, while the empire should resign the right of investiture. Henry seemed disposed to accept the suggestion, but, suddenly changing his mind, took the pope prisoner and forced him to yield the right of investiture and to give him the crown (1111). But the following year the party of reform annulled in council this concession, which the pope declared to have been extorted by force. By the death of Countess Matilda in 1115 and the bequest of her vast possessions to the Holy See, the pope's dominions were greatly enlarged, but his authority as a ruler was nowise increased. Deeds of violence still continued in Rome; and then followed the death of the prefect Pietro. The nobles of the imperial party, joined with the people, wished to elect Pietro's son, also nephew to Tolomeo of Tusculum, who then held the position of a potent imperial margrave, had territories stretching from the Sabine mountains to the sea, was the dictator of Tusculum, master of Latium and consul of the Romans. The pope opposed this election to the best of his strength; but the nobles carried the day, and their new prefect received investiture from the emperor. Upon this the pope again quitted Rome, and on his return, two years later, was compelled to shut himself up in the castle of St Angelo, where he died in 1118.

New power of the people.

The popes were now the sport of the nobles whom they had aggrandized by continual concessions for the sake of peace. And peace seemed at hand when Innocent II. (1130–43), after triumphing over two antipopes, came to terms with Roger I., recognized him as king of Sicily, and gained his friendship and protection. But now still graver tumults took place. In consequence of the division of the nobles neither party could overcome its foes without the aid of the people, which thus became increasingly powerful. Throughout upper and central Italy the cities were being organized as free and independent communes on a democratic basis. Their example soon followed in the ancient duchy of Rome and almost in the immediate neighbourhood of the city. Even Tivoli was converted into a republic. This excited the deepest jealousy in the Romans, and they became furious when this little city, profiting by its strong position in the Tenes one valley, not only sought to annex Roman territory, but darcd to offer successful resistance to the descendants of the conquerors of the world. In 1141 Tivoli openly rebelled against the mother city, and the pope sent the Romans to subdue it. They were not only repulsed, but ignominiously pursued to their own gates. Afterwards, returning to the assault in greater numbcrs, they conquered the hostile town. Its defenders surrendered to the pope, and he immediately concluded a treaty of peace without consulting either the people or the republic. The soldiery, still flushed with victory, were furious at this slight. They demanded not only submission of Tivoli to the Roman people, but also permission to demolish its walls and dwellings and expel its population. Innocent II. refused consent to these excesses, and a memorable revolution ensued by which the temporal power of the papacy was entirely overthrown.

Popular revolution. Reconstruction of senate and republic.

In 1143 the rebellious people rushed to the Capitol, proclaimed the republic, reconstituted the senate, to the almost entire exclusion of the nobles, declared the abolition of the temporal power, issued coin inscribed to the senate, the people and St Peter, and began to reckon time from the day of the restoration of liberty. Arnold of Brescia was not, as bas been incorrectly stated, the author of this revolution, for he had not yet arrived in Rome. It was the outcome of an historic necessity —above all, of the renewed vigour of the people and its detestation of the feudal aristocracy. This body, besides being divided into an imperial and a national party, had almost excluded from the government the powerful baronage of the Campagna and the provinces. Also, as we have before noted, the Roman aristocracy was by no means an exclusive caste. Between the great aristocrats and the people there stood a middle or new nobility, which made common cause with the people, whose chief strength now lay in the army. This, divided into twelve and then into thirteen or fourteen regions, assembled under its banners all arm-bearing citizens. Thus the *exercitus* was also the real *populus Romanus*, now bent on the destruction of the temporal power. This purpose, originating in the struggle of the investitures, was the logical and inevitable result of the proposals of Paschal II., which, despite their rejection, found a loud echo in Italy. Lucius II. (1144–45) tried to withstand the revolution by seeking Norman aid and throwing himself into the arms of the feudal party, but this only precipitated the course of events. The people, after having excluded nearly all aristocrats from the senate, now placed at its head the noble Giordano dei Pierleoni, who had joined the revolutionary party. They named him patrician, but without prejudice to the authority of the empire, still held by them in respect, and also conferred on him the judicial powers appertaining to the aristocratic and imperial office of prefect. The pope was requested to resign the temporal power, the regalia and every other possession, and content himself with the tithes and offerings of the faithful according to the scheme of Paschal II. He indignantly refused, marched at the head of the nobles against the Capitol, but was violently repulsed, and received a blow on the head from a stone, which is supposed to have occasioned his speedy death on the 15th February 1145. Eugenius III. was then elected (1145–53), but soon had to fly to Viterbo in quest of armed assistance, in consequence of the senate's resolve to prevent his consecration by force until he recognized the new state of things in the Eternal City.

Arnold of Brescia.

It was at this moment that Arnold of Brescia arrived in Rome. His ideas, already well known in Italy, had inspired and promoted the Roman revolution, and he now came to determine its method and direction. Born at Brescia in the beginning of the 12th century, Arnold had studied in France under the celebrated Abelard, who had instructed him in theology and philosophy, inspired him with a great love for antiquity, and stimulated his natural independence of mind. On returning to his native land he assumed the monkish habit, and proved the force and fervour of his character by taking part in all struggle for liberty. And, together with political reform, he preached his favourite doctrine of the necessary renunciation by the clergy of all temporal wealth. Expounded with singular eloquence, these doctrines had a stirring effect on men's minds, spread throughout the cities of northern Italy, and were echoed on all sides. It seems undoubted that they penetrated to Rome and helped to promote the revolution, so that Arnold was already present in spirit before he arrived there in person. It is known that at the Lateran council of 1130 Innocent II. had declared these doctrines to be inimical to the church and enjoined silence on their author. And, as at that time the party hostile to liberty was triumphant in Brescia, Arnold left his native place, crossed the Alps and returned to France, where other struggles awaited him. He professed no anti-Catholic dogmas,—only maintaining that when the pope and the prelacy deviated from the gospel rule of poverty they should not be obeyed, but fearlessly opposed. In France, finding his master, Abelard, exposed to the persecutions of St Bernard, he assumed his defence with so much ardour that St Bernard directed the thunders of his eloquence against the disciple as well as the master, saying of the former, "He neither eats nor drinks, suffers hunger, and, being leagued with the devil, only thirsts for the blood of souls." In 1142 we find Arnold a wanderer in Switzerland, and then, suddenly reappearing in Italy, he arrived in Rome.

Three different elements entered into his nature and inspired his eloquence—an exalted and mystic temperament, a great and candid admiration for classic antiquity added to an equal admiration for republican freedom independent of the church

and the empire, and a profound conviction, derived from the Vaudois and Paterine doctrines, that the church could only be purified by the renunciation of temporal wealth. Finding Rome already revolutionized in accordance with his own ideas, he immediately began to preach there. His mystic exhortations against the riches of the church had an inflammatory effect, while his classical reminiscences aroused the enthusiasm of the Romans, and his suggestion that they should imitate the republican institutions of upper Italy met the necessities of the time that had created the revolution. He urged the reconstitution of the ancient senate and senatorial order, which indeed was already partially accomplished, and of the ancient equestrian order, and the reconstruction and fortification of the Capitol. His proposed senate was a body somewhat resembling the communal councils of upper Italy, his equestrian order a mounted force composed of the lesser nobility, since at Rome, as elsewhere, the lower classes had neither time nor means to form part of it. All his suggestions were accepted; the citizens laboured strenuously on the fortification of the Capitol. The pope soon beheld the revolution spread beyond the walls, and several cities of the state proclaimed their independence. The barons of the Campagna profited by the opportunity to act as independent sovereigns. Thus the whole domain of the church was threatened with dissolution. The pope marched towards Rome with his newly gathered army, but hoped to come to terms. The Romans in fact recognized his authority, and he in his turn recognized the republic. The office of patrician was abolished, and seems to have been replaced by that of gonfalonier, and the prefect, answering to the podestà of the other republics, was revived. The senators received investiture from the pope, who returned to Rome at Christmas 1145.

There public now seems to have been fully constituted. The senate was drawn from the lower classes and the petty nobility, and this was the special characteristic of the new revolution. In 1144 there were fifty-six senators, probably four to each of the fourteen regions, but the number often varied. By the few existing documents of the period we notice that the senators were divided into *senatores consiliarii* and ordinary senators. The former constituted a smaller council, which, like the *credenza* or lesser council found in other cities, consulted with the head or heads of the republic on the more urgent and secret affairs of the state. And, conjointly with the rest of the senators, it formed the greater council. Thus classic traditions were identified with new republican usages, and the commonwealth of Rome resembled those in other parts of Italy. But, of course, every republic had special local customs of its own. So the Roman senate had judicial as well as political attributes, and there was a *curia senatus* composed of senators and legal experts.

As was easily to be foreseen, the agreement with the pope was of short duration. The revolution could not be checked; the Romans desired independence, and their spiritual lord fled to France, whence, in 1147, he proclaimed a new crusade, while the Romans were employed in demolishing Tivoli, banishing its inhabitants, and waging war on other cities. Giordano Pierleone was gonfalonier and head of the republic, and Arnold, supported by the popular favour and the enthusiasm of the lower clergy, was preaching with even greater fervour than before. But the pope now re-entered Italy, proclaimed Arnold a schismatic, and then advancing to Tusculum assembled an army in order to attack Rome. In this emergency the Romans applied to Conrad III., the first emperor of the house of Hohenstaufen; and their urgent letters are clearly expressive of Arnold's theories and his medley on ancient and modern, sacred and profane, ideas. "Rome," so they said, "is the fountain of the empire confided to you by the Almighty, and we seek to restore to Rome the power possessed by her under Constantine and Justinian. For this end we conquered and destroyed the strongholds of the barons who, together with the pope and the Normans, sought to resist us. These are now attacking us on all sides. Haste to Rome, the capital of the world, thus to establish thy imperial sway over the Italian and German lands."

After long hesitation the king of the Romans at last replied to these appeals, stating that he would come "to re-establish order, reward the faithful, and punish the rebellious." These words promised ill. In fact Conrad had already arranged terms with the pope; but his life came to an end on the 15th of February 1152.

He was succeeded by Frederick I. surnamed Barbarossa, who took no notice of the numerous letters urging him to come and receive the empire from the Roman people, which alone had the right of conferring it. In accordance with his design of subduing all the independent cities, he made an agreement with the pope, in which he vowed to give no truce to the Romans, but subject them to their spiritual lord, whose temporal power should be restored. The pope, on his side, promised to crown him emperor. Thereupon the people again rose to arms, and Arnold broke off all negotiations with Eugenius III. The senate was reorganized, formed of one hundred members, and, according to the old Roman precedent, had two consuls, one for internal and the other for external affairs. Frederick was a daring statesman, a valiant soldier in command of a powerful army, and was no friend of half measures. Accordingly the nobles ventured on reaction. Finally, to increase the gravity of the situation, an English pope, Adrian IV., was elected (1154–59), who was also a man of strong and resolute temper. In fact, even before being able to take possession of the Lateran, he requested the Romans to banish Arnold, who, with greater eloquence than ever, was directing his thunders against the papacy. These utterances increased the wrath of Adrian, who, encouraged by the knowledge that Frederick and his host were already in Italy, at last launched an interdict against Rome. It was the first time that a pope had ventured to curse the Eternal City. The interdict put a summary stop to the religious life of the inhabitants. Men's minds were seized with a sudden terror, and a fierce tumult broke out. Thereupon the senators, whose opposition to the pope was less courageous than that of the fallen magnates, prostrated themselves at his feet and implored pardon. But Adrian demanded the expulsion of Arnold before consenting to raise the interdict. Arnold was therefore obliged to leave Rome. After having for nine years preached successfully in favour of liberty, and been the moving spirit of the new revolution, the new constitution, he was now abandoned by all, and forced to wander from castle to castle, in the hope of reaching some independent city capable of shielding him from the fierce enmity of the pope. Meanwhile Frederick I. had achieved his first victories in Lombardy, and, leaving ruined cities and bloodshed in his track, was rapidly advancing towards central Italy. The pope sent three cardinals to him, with a request for the capture and consignment of Arnold, who had taken refuge in the castle of the Visconti of Campagnatico. Frederick without delay caused one of the Visconti to be seized and kept prisoner until Arnold was given up, and then consigned the latter to the papal legates. The pope in his turn gave the reformer into the hands of the prefect, Pietro di Vico, who immediately hanged his prisoner, burnt his body at the stake and cast his ashes into the Tiber. The execution took place in June 1155. The exact date and place of it are unknown; we only know that Arnold met his fate with great serenity and firmness.

Frederick I.

Arnold's execution.

But the Romans who had so basely deserted their champion would not give up their republic. Their envoys went to meet Frederick near Sutri, and made an address in the usual fantastic style on the privileges of the Roman people and its sole right to confer the imperial crown. But Frederick indignantly cut short their harangue, and they had to depart full of rage. He then continued his march, and, entering Rome on the 18th of June 1155, was forthwith crowned in St Peter's by the pope. Thereupon the Romans rushed to arms, and made a furious attack on the Leonine city and the imperial camp. A desperate battle went on throughout the day; and the knights proved that the equestrian order instituted at Arnold's suggestion was no empty

sham. About a thousand Romans perished by the sword or by drowning, but their fellow-citizens made such determined preparations to continue the struggle that Frederick, on the 19th of June, hastily retreated, or rather fled, and was escorted as far as Tivoli by the pope and the cardinals. After all, the temporal power of the papacy was not restored, and the republic still survived in the form bestowed on it by Arnold of Brescia.

The republic still remains.

Its existence was in truth favourable rather than injurious to Frederick, whose aim was to rule over Rome and treat the bishops as his vassals. He had not yet discerned that his best policy would have been to use the republic as a lever against the pope. The latter, with keener acumen, while remaining faithful to the feudal party in Rome, made alliance with the communes of Lombardy and encouraged them in their resistance to the emperor. Adrian IV. died in 1159, and the national party elected Alexander III. (1159–81), who energetically opposed the pretensions of Frederick, but, having to struggle with three antipopes successively raised against him by the imperial party, was repeatedly driven into exile. During these schisms the senate quietly carried on the government, administered justice, and made war on some neighbouring cities and barons. An army comprising many nobles of the national party marched against Tusculum, but found it defended by several valiant officers and a strong band of German soldiery, who, on the 29th of May 1167, inflicted on the Romans so severe a defeat that it is styled by Gregorovius the Cannae of the middle ages. Shortly afterwards the emperor arrived in Rome with his antipope Paschal III., and Alexander had to fly before him to Benevento. Then, at last, Frederick came to terms with the republic, recognized the senate, which accepted investiture at his hands, re-established the prefecture as an imperial office, and bestowed it on Giovanni, son of Pietro di Vico. He then hastily departed, without having advanced outside the Leonine city.

Meanwhile Pope Alexander continued the crafty policy of Adrian and with better success, for the Lombard cities had now formed a league and inflicted a signal defeat on the emperor at Legnano on the 29th of May 1176. One of the results of this battle was the conclusion of an agreement between the pope and the emperor, the latter resigning his pretensions on Rome and yielding all that he had denied to Adrian. And by the treaty of Venice (1st of August 1177) the antipope was forsaken, Alexander III. recognized and hailed as the legitimate pontiff, and the prefect of Rome again nominated by the pope, to whom the emperor restored the temporal power, acknowledging him the independent sovereign of Rome and of the ecclesiastical state, from Acquapendente to Ceprano. Frederick's troops accompanied the pope to Rome, where the republic was forced to make submission to him. But, proudly conscious as it still was of its strength, its surrender wore the aspect of a voluntary concession, and its terms began with these words: "Totius populi Romani consilio et deliberatione statutum est," &c. The senators, elected yearly in September, had to swear fealty to the pope, and a certain proportion of nobles was included in their number. On his return to Rome, Alexander received a solemn welcome from all, but he had neither extinguished nor really subdued the republic. On the contrary, men's minds were more and more inflamed by the example of freedom displayed in the north of Italy. He died on the 30th of August 1181. The fact that between 1181 and 1187 there were three popes always living in exile proves that the republic was by no means crushed. During the same period another blow was inflicted on the papacy by the marriage of Henry VI., son and successor to Frederick I., with Constance, sole heiress of the Norman line in Naples. For thus the kingdom was joined to the empire, and the popes were more than ever in the latter's power. On the 20th of December 1187 Clement III. (1187–91), being raised to the pontificate, made a solemn agreement with the government of the Capitol before coming to Rome. And this peace or *concordia* had the air of a treaty between potentates of equal importance. Rome confronted the pope from the same standpoint from which the Lombard cities had confronted the emperor after Legnano. This treaty, the basis of the new constitution, was confirmed on the last day of May 1188 (Anno XLIV. of the senate). It begins with these words: "Concordia inter Dominum Papam Clementem III. et senatores populumque Romanum super regalibus et aliis dignitatibus urbis." The pope was recognized as supreme lord, and invested the senators with their dignity. He resumed the privilege of coinage, but allowed one-third of the issue to be made by the senate. Almost all the old pontifical rights and prerogatives were restored to him. The pope might employ the Roman militia for the defence of his patrimony, but was to furnish its pay. The rights of the church over Tivoli and Tusculum were confirmed; but the republic reserved to itself the right of making war on those cities, and declared its resolve to dismantle and destroy the walls and castle of Tusculum. In this undertaking the pope was to co-operate with the Romans, even should the unhappy city make surrender to him alone.

Agreement between the republic and the pope.

From all this it is clear that the church had been made independent of the empire, and that the republic, despite its numerous concessions, was by no means subject to the church. The pope, in fact, had obtained liberty of election, and Frederick I., by resigning the investiture of the prefect, had virtually renounced his claim to imperial power in Rome. The republic had no patrician nor any other imperial magistrate, and preserved its independence even as regarded the pope, who merely granted investiture to magistrates freely chosen by the people, and had no legislative nor administrative power in the city. His temporal dominion was limited to his great possessions, to his regalia, to a supreme authority that was very indefinite, and to a feudal authority over the barons of the Campagna and many cities of a state that seemed ever on the point of dissolution. The senate continued to frame laws, to govern, and to administer justice. The army carried on the wars of the republic, as we see by the tragic fate of Tusculum, which was razed to the ground on the 19th of April 1191. Thus the powerful counts of Tusculum disappeared; they sought refuge in the Campagna, and according to all probability the no less potent family of the Colonna sprang from their line. In consequence of these events, the nobles realized that the papacy sought to reduce them to vassalage. And, seeing that the republic remained firmly established and able to help them, they began to adhere to it and succeeded in obtaining admission to the new senate. In fact, whereas since 1143 plebeians and petty nobles had prevailed in its ranks, nobles of ancient descent are now found outnumbering the knights and burghers. But in 1191 this state of things caused a sudden popular outbreak which abolished the aristocratic senate and gave the headship of the republic to a single senator, *summus senator*, named Benedetto "Carissimus" or "Carus Homo" or "Carosomo," of unknown, but undoubtedly plebeian, origin. During the two years he remained in office this personage stripped the pope of his revenues, despatched *justitiarii* even to the provinces, and with the aid of the parliament and other popular assemblies promulgated laws and statutes. But he was overthrown by a counter-revolution, and Giovanni Capoccio of the party of the nobles became senator for two years, and had been succeeded by one of the Pierleoni when, in 1197, a fresh revolution re-established a senate of fifty-six members, chiefly consisting of feudal barons in high favour with Henry VI., who had revived the imperial faction in Rome. But this emperor's life ended the same year as the pope's, in 1198, and the new pontiff, Innocent III. (1198–1216), began to make war on the nobles, who were again masters of the republic. Their leader was the prefect Pietro di Vico. Owing to the revolution of 1143, most of the prefectorial attributes were now vested in the senate; nevertheless, Pietro still retained a tribunal of police both within and without the

Rome independent of the empire.

The nobles re-enter the senate.

Popular revolution and counter-revolution of the aristocracy.

city. But his main strength was derived from the vast possessions of the Vico family, in which the office of prefect now became hereditary. Very soon, however, these prefects of Vico were chiefly regarded as the great feudal lords of Tuscia, and the independent municipal office lost its true character. Then the popes made a point of according great pomp and dignity to this nominal prefect, in order to overshadow the senator, who still represented the independence of the republic and had assumed many of the attributes wrested from the prefect.

The office of prefect becomes hereditary.

But Innocent III., dissatisfied with this state of things, contrived by bribing the people to arrogate to himself the right of electing the senator, who had now to swear fealty and submission to the pope, and also that of nominating the provincial *justitiarii*, formerly chosen by the government of the Capitol. This was a deadly blow to the republic, for the principal rights of the people—*i.e.* the election of pope and emperor, prefect and senate—were now lost. The general discontent provoked fresh revolutions, and Innocent III. employed all his political dexterity to ward off their effects. But shortly afterwards the people made a loud outcry for a senate of fifty-six members; and the pope, again making a virtue of necessity, caused that number to be chosen by twelve *mediani* specially named by him for the purpose. Even this did not calm the popular discontent, which was also stirred by other disputes. The consequence was that when, six months later, the pope again elected a single senator the Romans rose to arms, and in 1204 formed a government of *Buoni Uomini* in opposition to that created by the pope. But an amicable arrangement being concluded, the pope once more nominated fifty-six senators; and when, soon after, he again reduced them to one, the people were too weary to resist (1205). Thus the Capitol was subdued, and Innocent III. spent his last years in tranquillity.

Innocent III. elects the senate.

On the 22nd of November 1220 Honorius III. (1216–27) conferred the imperial crown on Frederick II., who confirmed to the church the possession of her former states, of those bequeathed to her by Countess Matilda, and even of the March of Ancona. But it was soon seen that he sought to dominate all Italy, and was therefore a foe to be dreaded. The successor of Honorius, Pope Gregory IX. (1227–41), was speedily insulted and put to flight by the Ghibelline nobles, whose courage had revived, and the republic began to subdue the Latian cities on its own account. Peace was several times made and unmade by pope and people; but no enduring harmony was possible between them, since the former wished to subject the entire state to the church, and the latter to escape from the rule of the church and hold sway over "the universal land from Ceprano to Radicofani" formerly belonging to the duchy. Accordingly, the Roman people now appointed judges, imposed taxes, issued coin, and made the clergy amenable to secular tribunals. In 1234 the senator Luca Savelli published an edict declaring Tuscia and Campania territories of the republic, and sent judges thither to exact an oath of obedience. He also despatched the militia to the coast, where it occupied several cities and erected fortresses; and columns were raised everywhere inscribed with the initials S. P. Q. R. The pope, unable to prevent but equally unable to tolerate these acts, fled from Rome, hurling his anathema against Savelli, "et omnes illos consiliarios urbis quorum consilio," &c. The Romans sacked the Lateran and the houses of many cardinals, and marched on Viterbo, but were driven back by the papal troops. When Savelli left office and Angelo Malabranca was elected in his stead, the people made peace and submission in 1235, and were obliged to give up their pretensions of subjecting the clergy to ordinary tribunals and the urban territory to the republic. Thus matters were virtually settled on the footing established by Innocent III., thanks to the aid given to the pope by Frederick II., who had been one of the promoters of the rebellion.

The republic regains independence.

The republic submits to the people.

It may appear strange that, at this period of their history, the Romans, after showing such tenacious adherence to the republic and senate, should have accepted the rule of a single senator without rushing to arms, and passed and repassed from one form of government to another with such surprising indifference. But on closer examination it is plain that these changes were greater in appearance than reality. We have already seen, in treating of Carosomo, how the single senator convoked the pèople in parliament to pass sanction on the laws. But, whenever there is only one senator, we also continually meet with the expression "consilium vel consilia urbis." It is evident that when, instead of laws to be approved in parliament by a simple placet or rejected by a non placet, matters requiring consideration had to be discussed, the senator convoked a much smaller council, consisting only of the leaders of the people. These leaders were the heads of the twelve or thirteen regions of the guilds, now becoming organized and soon to be also thirteen in number, and of the militia. As in the other Italian republics, all these associations had been formed in Rome.

Formation of the greater and lesser councils.

The senator therefore held consultation with the leading men of the city; and, although, especially at first, these meetings were rather loosely organized, it is clear that they took the form of two councils—one numerous (*consiglio maggiore*), the other limited (*consiglio minore* or *speciale*), co-operating with and forming part of the first. Such was the prevailing custom throughout Italy at the time when Roman institutions most nearly resembled those of the other republics. We already know that, from the date of Arnold's reforms, the senate, with its junta of counsellors, had been divided into two parts, forming when united a species of greater council. Therefore the transition from a senate divided into two parts to the greater and lesser councils must have been very easy and natural. And, seeing that later, when the nomination of a single senator had become a constant practice, the meetings of the two councils are frequently mentioned without the slightest remark or hint as to their origin, it is clear that they had been gradually formed and long established. Not long after the revolution of 1143 the grandees sought to enter the senate; and the popes themselves, partly from dread of the people and partly to aggrandize their own kindred, contributed to build up the power of a new and no less turbulent nobility. This class, arising between the 12th and 13th centuries, was composed of families newly created by the popes, together with remnants of the old aristocracy, such as the Frangipani, Colonna, &c. These nobles, regaining possession of the senate, so completely eliminated the popular element that, when the popes again opposed them, and, obtaining from the parliament the right of electing the senators, adopted the expedient of appointing one only, the senator was always chosen from the ranks of the nobles. And then the people, unable and unwilling to renounce republican forms, replaced their suppressed senate by a greater and a lesser council. This was an easy task—a natural consequence of the fact that the people now began to constitute the real strength of the republic. Later, with an increasing detestation for their nobility, the Romans decreed that the single senator should be of foreign birth, and, as we shall see, chose Brancaleone in the middle of the 13th century.

The Roman statutes.

Thus, after a long series of frequent changes and revolutions, the Roman republic became a commonwealth, with an increasing resemblance to those of the other Italian cities. The people were organized and armed, the gilds almost established, the two councils gradually constituted, and the aristocracy, while retaining special local characteristics, assumed its definitive shape. It is not surprising to find that Rome, like other Italian cities, now possessed statutes of its own. There has been much controversy on this point. Certain writers had alluded to a statute of 1246. As no one, however, could discover any statute of that date, others decided that it had never existed. A statute of 1363

was recently published by Professor Camillo Re, who asserted it to be the first and most ancient that Rome had possessed. But the still more recent researches of Messrs La Mantia and Levi prove that Professor Re's assertions were somewhat too bold. There is certain evidence of a *statutum senatus* existing between 1212 and 1227, of a *statutum vel capitulare senatoris vel senatus* of 1235, followed in 1241 by a *statutum urbis*. This brings us very near to the statute of 1246 mentioned by Vitale and others. So it is well ascertained that, in the first half of the 13th century, Rome possessed statutes at large composed of older limited statutes. The consuls of the trade gilds were from 1267 regular members of the councils; and the merchants' gild held general meetings in 1255. Its statutes were confirmed in 1296 by the senator Pandolfo Savelli, and the compilation of these, published in 1880 by Signor Gatti, refers to 1317.

Frederick II. and the pope.
