

KINDNESS

Lester Del Rey

The wind eddied idly around the corner and past the secluded park bench. It caught fitfully at the paper on the ground, turning the pages, then picked up a section and blew away with it, leaving gaudy-colored comics uppermost. Danny moved forward into the sunlight, his eyes dropping to the children's page exposed.

But it was no use; he made no effort to pick up the paper. In a world where even the children's comics needed explaining, there could be nothing of interest to the last living homo sapiens—the last normal man in the world. His foot kicked the paper away, under the bench where it would no longer remind him of his deficiencies. There had been a time when he had tried to reason slowly over the omitted steps of logic and find the points behind such things, sometimes successfully, more often not; but now he left it to the quick, intuitive thinking of those about him. Nothing fell flatter than a joke that had to be reasoned out slowly.

Homo sapiens! The type of man who had come out of the caves and built a world of atomic power, electronics and other old-time wonders—thinking man, as it translated from the Latin. In the dim past, when his ancestors had owned the world, they had made a joke of it, shortening it to homo sap, and laughing, because there had been no other species to rival them. Now it was no longer a joke.

Normal man had been only a "sap" to homo intelligens— intelligent man—who was now the master of the world. Danny was only a left-over, the last normal man in a world of supermen, hating the fact that he had been born, and that his mother had died at his birth to leave him only loneliness as his heritage.

66

He drew farther back on the bench as the steps of a young couple reached his ears, pulling his hat down to avoid recognition. But they went by, preoccupied with their own affairs, leaving only a scattered bit of conversation in his ears. He turned it over hi his mind, trying senselessly to decode it.

Impossible! Even the casual talk contained too many steps of logic left out. Homo intelligens had a new way of thinking, above reason, where all the long, painful steps-of logic could be jumped instantly. They could arrive at a correct picture of the whole from little scattered bits of information. Just as man had once invented logic to replace the trial-and-error thinking that most animals have, so homo intelligens had learned to use intuition. They could look at the first page of an old-time book and immediately know the whole of it, since the little tricks of the author would connect in their intuitive minds and at once build up all the missing links. They didn't even have to try—they just looked, and knew. It was like Newton looking at an apple falling and immediately seeing why the planets circled the sun, and realizing the laws of gravitation; but these new men did it all the time, not just at those rare intervals as it had worked for homo sapiens once.

Man was gone, except for Danny, and he too had to leave this world of supermen. Somehow, soon, those escape plans must be completed, before the last of his little courage was gone! He stirred restlessly, and the little corns in his pocket set up a faint jingling sound. More charity, or occupational therapy! For six hours a day, five days a week, he worked in a little office, painfully doing routine work that could probably have been done better by machinery. Oh, they assured him that his manual skill was as great as theirs and that it was needed, but he could never be sure. In their unfailing kindness, they had probably decided it was better for him to live as normally as they could let him, and then had created the job to fit what he could do.

Other footsteps came down the little path, but he did not look up, until they stopped. "Hi, Danny! You weren't at the Library, and Miss Larsen said, pay day, weather, and all, I'd find you here. How's everything?"

Outwardly, Jack Thorpe's body might have been the twin of Danny's own well-muscled one, and the smiling face above it bore no distinguishing characteristics. The mutation that changed man to superman had been within, a quicker, more complex relation of brain cell to brain cell that had no outward signs. Danny nodded at Jack, drawing over reluc-

tantly to make room on the bench for this man who had been his playmate when they were both too young for the difference to matter much.

He did not ask the reason behind the librarian's knowledge of his whereabouts; so far as he knew, there was no particular pattern to his coming here, but to the others there must be one. He found he could even smile at their ability to foretell his plans.

"Hi, Jack! Fine. I thought you were on Mars."

Thorpe frowned, as if an effort were needed to remember that the boy beside him was different, and his words bore the careful phrasing of all those who spoke to Danny. "I finished that, for the time being. I'm supposed to report to Venus next. They're having trouble getting an even balance of boys and girls there, you know. Thought you might want to come along. You've never been Outside, and you were always bugs about those old space stories, I remember."

"I still am, Jack. But—" He knew what it meant, of course. Those who looked after Mm behind the scenes had detected his growing discontent, and were hoping to distract him with this chance to see the places his father had conquered in the heyday of his race. But he had no wish to see them as they now were, filled with the busy work of the new men; it was better to imagine them as they had once been, rather than see reality. And the ship was here; there could be no chance for escape from those other worlds.

Jack nodded quickly, with the almost telepathic understanding of his race. "Of course. Suit yourself, fellow. Going up to the Heights? Miss Larsen says she has something for you."

"Not yet, Jack. I thought I might look at—drop by the old Museum."

"Oh." Thorpe got up slowly, brushing his suit with idle fingers. "Danny!"

"Uh?"

"I probably know you better than anyone else, fellow, so —" He hesitated, shrugged, and went on. "Don't mind if I jump to conclusions; I won't talk out of turn. But best of luck—and good-by, Danny."

He was gone, almost instantly, leaving Danny's heart stuck in his throat. A few words, a facial expression, probably some childhood memories, and Danny might as well have revealed his most cherished secret hope in shouted words! How many others knew of his interest in the old ship in the Museum and his carefully-made plot to escape this kindly, charity-filled torture world?

He crushed a cigarette under his heel, trying to forget the thought. Jack had played with him as a child, and the others hadn't. He'd have to base his hopes on that and be even more careful never to think of the idea around others. In the mean-time, he'd stay away from the ship! Perhaps in that way Thorpe's subtle warning might work in his favor—provided the man had meant his promise of silence.

Danny forced his doubts away, grimly conscious- that he dared not lose hope in this last desperate scheme for independence and self-respect; the other way offered only despair and listless hopelessness, the same empty death from an acute inferiority complex that had claimed diminishing numbers of his own kind and left him as the last, lonely specimen. Somehow, he'd succeed, and in the meantime, he would go to the Library and leave the Museum strictly alone.

There was a throng of people leaving the Library as Danny came up the escalator, but either they did not recognize him with his hat pulled low or sensed his desire for anonymity and pretended not to know him. He slipped into one of the less used hallways and made his way toward the Historic Documents section, where Miss Larsen was putting away the reading tapes and preparing to leave.

But she tossed them aside quickly as he came in and smiled up at him, the rich, warm smile of her people. "Hello, Danny! Did your friend find you all right?"

"Mm-hmm. He said you had something for me."

"I have." There was pleasure in her face as she turned back toward the desk behind her to come up with a small wrapped parcel. For the thousandth time, he caught himself wishing she were of his race and quenching the feeling as he realized what her attitude must really be. To her, the small talk from his race's past was a subject of historic interest, no more. And he was just a dull-witted hangover from ancient days. "Guess what?"

But in spite of himself, his face lighted up, both at the game and the package. "The magazines! The lost issues of Space Trials?" There had been only the first installment of a

story extant, and yet that single part had set his pulses throbbing as few of the other ancient stories of his ancestor's conquest of space had done. Now, with the missing sections, life would be filled with zest for a few more hours as he followed the fictional exploits of a conqueror who had known no fear of keener minds.

"Not quite, Danny, but almost. We couldn't locate even a trace of them, but I gave the first installment to Bryant Ken-

ning last week, and he finished it for you." Her voice was apologetic. "Of course the words won't be quite identical, but Kenning swears that the story is undoubtedly exactly the same in structure as it would have been, and the style is duplicated almost perfectly!"

Like that! Kenning had taken the first pages of a novel that had meant weeks and months of thought to some ancient writer and had found in them the whole plot, clearly revealed, instantly his! A night's labor had been needed to duplicate it, probably—a disagreeable and boring piece of work, but not a difficult one! Danny did not question the accuracy of the duplication, since Kenning was their greatest historical novelist. But the pleasure went out of the game.

He took the package, noting that some illustrator had even copied the old artist's style, and that it was set up to match the original format. "Thank you, Miss Larsen. I'm sorry to put all of you to so much trouble. And it was nice of Mr. Kenning!"

Her face had fallen with his, but she pretended not to notice. "He wanted to do it—volunteered when he heard we were searching for the missing copies. And if there are any others with pieces missing, Danny, he wants you to let him know. You two are about the only ones who use this division now; why don't you drop by and see him? If you'd like to go tonight—"

"Thanks. But I'll read this tonight, instead. Tell him I'm very grateful, though, will you?" But he paused, wondering again whether he dared ask for tapes on the history of the asteroids; no, there would be too much risk of her guessing, either now or later. He dared not trust any of them with a hint of his plan.

Miss Larsen smiled again, half winking at him. "Okay, Danny, I'll tell him. 'Night!"

Outside, with the cool of evening beginning to fall, Danny found his way into the untraveled quarters and let his feet guide him. Once, as a group came toward him, he crossed the street without thinking and went on. The package under his arm grew heavy and he shifted it, torn between a desire to find what had happened to the hero and a disgust at his own sapiens brain for not knowing. Probably, in the long run, he'd end up by going home and reading it, but for the moment he was content to let his feet carry him along idly, holding most of his thoughts in abeyance.

Another small park was in his path, and he crossed it slowly, the babble of small children voices only partly heard

until he came up to them, two boys and a girl. The supervisor, who should have had them back at the Center, was a dun shape in the far shadows, with another, dimmer shape beside her, leaving the five-year-olds happily engaged in the ancient pastime of getting dirty and impressing each other.

Danny stopped, a slow smile creeping over his lips. At that age, their intuitive ability was just beginning to develop, and their little games and pretenses made sense, acting' on him like a tonic. Vaguely, he remembered his own friends of that age beginning uncertainly to acquire the trick of seeming to know everything, and his worries at being left behind. For a time, the occasional flashes of intuition that had always blessed even homo sapiens gave him hope, but eventually the supervisor had been forced to tell him that he was different, and why. Now he thrust those painful memories aside and slipped quietly forward into the game.

They accepted him with the easy nonchalance of children who have no repressions, feverishly trying to build their sand-castles higher than his; but in that, his experience was greater than theirs, and his judgment of the damp stuff was surer. A perverse glow of accomplishment grew inside him as he added still another story to the towering structure and built a bridge, propped up with sticks and leaves, leading to it.

Then the lights came on, illuminating the sandbox and those inside it and dispelling the shadows of dusk. The smaller of the two boys glanced up, really seeing him for the first time. "Oh, you're Danny Black, ain't you? I seen your pi'ture. Judy, Bobby, look! It's that man—"

But their voices faded out as he ran off through the park and into the deserted byways again, clutching the package to him. Fool! To delight in beating children at a useless game, or to be surprised that they should know him! He slowed to a walk, twitching his lips at the thought that by now the supervisor would be reprimanding them for their thoughtlessness. And still his feet went on, unguided.

It was inevitable, of course, that they should lead him to the Museum, where all his secret hopes centered, but he was surprised to look up and see it before him. And then he was glad. Surely they could read nothing into his visit, unpremeditated, just before the place closed. He caught his breath, forced his face into lines of mere casual interest, and went inside, down the long corridors, and to the hall of the ship.

She rested there, pointed slightly skyward, sleek and immense even in a room designed to appear like the distant

reaches of space. For six hundred feet, gleaming metal formed a smooth frictionless surface that slid gracefully from the blunt bow back toward the narrow stern with its blackened ion jets.

This, Danny knew, was the last and greatest of the space liners his people had built at the height of their glory. And even before her, the mutation that made the new race of men had been caused by the radiations of deep space, and the results were spreading. For a

time, as the log book indicated this ship had sailed out to Mars, to Venus, and to the other points of man's empire, while the tension slowly mounted at home. There had never been another wholly sapient-designed ship, for the new race was spreading, making its greater intelligence felt, with the invert-matter rocket replacing this older, less efficient ion rocket which the ship carried. Eventually, unable to compete with the new models, she had been retired from service and junked, while the War between the new and old race passed by her and buried her under tons of rubble, leaving no memory of her existence.

And now, carefully excavated from the old ruins of the drydock where she had lain so long, she had been enthroned in her state for the last year, here in the Museum of Sapient History, while all Danny's hopes and prayers had centered around her. There was still a feeling of awe in him as he started slowly across the carpeted floor toward the open lock and the lighted interior.

"Danny!" the sudden word interrupted him, bringing him about with a guilty start, but it was only Professor Kirk, and he relaxed again. The old archaeologist came toward him, his smile barely visible in the half-light of the immense dome. "I'd about given you up, boy, and started out. But I happened to look back and see you. Thought you might be interested in some information I just came onto today."

"Information about the ship?"

"What else? Here, come on inside her and into the lounge —I have a few privileges here, and we might as well be comfortable. You know, as I grow older, I find myself appreciating your ancestors' ideas of comfort, Danny. Sort of a pity our own culture is too new for much luxuriousness yet." Of all the new race, Kirk seemed the most completely at ease before Danny, partly because of his age, and partly because they had shared the same enthusiasm for the great ship when it had first arrived.

Now he settled back into one of the old divans, using his immunity to ordinary rules to light a cigarette and pass one

to the younger man. "You know all the supplies and things in the ship have puzzled us both, and we couldn't find any record of them? The log ends when they put the old ship up for junking, you remember; and we couldn't figure out why all this had been restored and restocked, ready for some long voyage to somewhere. Well, it came to light in some further excavations they've completed. Danny, your people did that, during the War; or really, after they'd lost the War to-us!"

Danny's back straightened. The War was a period of history he'd avoided thinking about, though he knew the outlines of it. With homo intelligent Increasing and pressing the older race aside by the laws of survival, his people had made a final desperate bid for supremacy. And while the new race had not wanted the War, they had been forced finally to fight back with as little mercy as had been shown them; and since they had the tremendous advantage of the new intuitive thinking, there had been only thousands left of the original billions of the old race when its brief course was finished. It had been inevitable probably,

from the first mutation, but it was not something Danny cared to think of. Now he nodded, and let the other continue.

"Your ancestors, Danny, were beaten then, but they weren't completely crushed, and they put about the last bit of energy they had into rebuilding this ship—the only navigable one left them—and restocking it. They were going to go out somewhere, they didn't know quite where, even to another solar system, and take some of the old race for a new start, away from us. It was their last bid for survival, and it failed when my people learned of it and blasted the docks down over the ship, but it was a glorious failure, boy! I thought you'd want to know."

Danny's thoughts focused slowly. "You mean everything on the ship is of my people? But surely the provisions wouldn't have remained usable after all this time?"

"They did, though; the tests we made proved that conclusively. Your people knew how to preserve things as well as we do, and they expected to be drifting in the ship for half a century, maybe. They'll be usable a thousand years from now." He chucked his cigarette across the room and chuckled in pleased surprise when it fell accurately into a snuffer. "I stuck around, really, to tell you, and I've kept the papers over at the school for you to see. Why not come over with me now?"

"Not tonight, sir. I'd rather stay here a little longer."

Professor Kirk nodded, pulling himself up reluctantly. "As

you wish ... I know how you feel, and I'm sorry about their moving the ship, too. We'll miss her, Danny!"

"Moving the ship?"

"Hadn't you heard? I thought that's why you came around at this hour. They want her over in London, and they're bringing one of the old Lunar ships here to replace her. Too bad!" He touched the walls thoughtfully, drawing his hands down and across the rich nap on the seat. "Well, don't stay too long, and turn her lights out before you leave. Place'll be closed in half an hour. 'Night, Danny."

" 'Night, Professor." Danny sat frozen on the soft seat, listening to the slow tread of the old man and the beating of his own heart. They were moving the ship, ripping his plans to shreds, leaving him stranded in this world of a new race, where even the children were sorry for him.

It had meant so much, even to feel that somehow he would escape, some day! Impatiently, he snapped off the lights, feeling closer to the ship in the privacy of the dark, where no watchman could see his emotion. For a year now he had built his life around the idea of taking this ship out and away, to leave the new race far behind. Long, carefully casual months of work had been spent in learning her structure, finding all her stores, assuring himself bit by bit from a hundred old books that he could operate her.

She had been almost designed for the job, built to be operated by one man, even a cripple, in an emergency, and nearly everything was automatic. Only the problem of a destination had remained, since the planets were all swarming with the others, but the ship's log had suggested the answer even to that.

Once there had been rich men among his people who sought novelty and seclusion, and found them among the larger asteroids; money and science had built them artificial gravities and given them atmospheres, powered by atomic-energy plants that should last forever. Now the rich men were undoubtedly dead, and the new race had abandoned such useless things. Surely, somewhere among the asteroids, there should have been a haven for him, made safe by the very numbers of the little worlds that could discourage almost any search.

Danny heard a guard go by, and slowly got to his feet, to go out again into a world that would no longer hold even that hope. It had been a lovely plan to dream on, a necessary dream. Then the sound of the great doors came to his ears,

closing! The Professor had forgotten to tell them of his presence! And—!

All right, so he didn't know the history of all those little worlds; perhaps he would have to hunt through them, one by one, to find a suitable home. Did it matter? In every other way, he could never be more ready. For a moment only, he hesitated; then his hands fumbled with the great lock's control switch, and it swung shut quietly in the dark, shutting the sound of his running feet from outside ears.

The lights came on silently as he found the navigation chair and sank into it. Little lights that spelled out the readiness of the ship. "Ship sealed . . . Air Okay . . . Power, Automatic . . . Engine, Automatic. . . ." Half a hundred little lights and dials that told the story of a ship waiting for his hand. He moved the course plotter slowly along the tiny atmospheric map until it reached the top of the stratosphere; the big star map moved slowly out, with the pointer in his fingers tracing an irregular, jagged line that would lead him somewhere toward the asteroids, well away from the present position of Mars, and yet could offer no clue. Later, he could set the analyzers to finding the present location of some chosen asteroid and determine his course more accurately, but all that mattered now was to get away, beyond all tracing, before his loss could be reported.

Seconds later his fingers pressed down savagely on the main power switch, and there was a lurch of starting, followed by another slight one as the walls of the Museum crumpled before the savage force of the great ion rockets. On the map, a tiny spot of light appeared, marking the ship's changing position. The world was behind him now, and there was no one to look at his efforts in kindly pity or remind him of his weakness. Only blind fate was against him, and his ancestors had met and conquered that long before.

A bell rang, indicating the end of the atmosphere, and the big automatic pilot began clucking contentedly, emitting a louder cluck now and then as it found the irregularities in the unorthodox course he had charted and swung the ship to follow. Danny watched it,

satisfied that it was working. His ancestors may have been capable of reason only, but they had built machines that were almost intuitive, as the ship about him testified. His head was higher as he turned back to the kitchen, and there was a bit of a swagger to his walk.

The food was still good. He wolfed it down, remembering that supper had been forgotten, and leafing slowly through

the big log book which recorded the long voyages made by the ship, searching through it for each casual reference to the asteroids, Ceres, Palas, Vesta, some of the ones referred to by nicknames or numbers? Which ones?

But he had decided by the time he stood once again in the navigation room, watching the aloof immensity of space; out here it was relieved only by the tiny hot pinpoints that must be stars, colored, small and intense as no stars could be through an atmosphere. It would be one of the numbered planetoids, referred to also as "The Dane's" in the log. The word was meaningless, but it seemed to have been one of the newer and more completely terranized, though not the very newest where any search would surely start.

He set the automatic analyzer to running from the key number in the manual and watched it for a time, but it ground on slowly, tracing through all the years that had passed. For a time, he fiddled with the radio, before he remembered that it operated on a wave form no longer used. It was just as well; his severance from the new race would be all the more final.

Still the analyzer ground on. Space lost its novelty, and the operation of the pilot ceased to interest him. He wandered back through the ship toward the lounge, to spy the parcel where he had dropped and forgotten it. There was nothing else to do.

And once begun, he forgot his doubts at the fact that it was Kenning's story, not the original; there was the same sweep to the tale, the same warm and human characters, the same drive of a race that had felt the mastership of destiny so long ago. Small wonder the readers of that tune had named it the greatest epic of space to be written!

Once he stopped, as the analyzer reached its conclusions and bonged softly, to set the controls on the automatic for the little world that might be his home, with luck. And then the ship moved on, no longer veering, but making the slightly curved path its selectors found most suitable, while Danny read further, huddled over the story hi the navigator's chair, feeling a new and greater kinship with the characters of the story. He was no longer a poor Earthbound charity case, but a man and an adventurer with them!

His nerves were tingling when the tale came to its end, and he let it drop onto the floor from tired fingers. Under his hand, a light had sprung up, but he was oblivious to it, until a crashing gong sounded over him, jerking him from the

chair. There had been such a gong described in the story. ...

And the meaning was the same. His eyes made out the red letters that glared accusingly from the control panel: RADIATION AT TEN O'CLOCK HORIZ—SHIP INDICATED!

Danny's fingers were on the master switch and cutting off all life except pseudogravity from the ship as the thought penetrated. The other ship was not hard to find from the observation window; the great streak of an invert-matter rocket glowed hotly out there, pointed apparently back to Earth— probably the Callisto!

For a second he was sure they had spotted him, but the flicker must have been only a minor correction to adjust for the trail continued. He had no knowledge of the new ships and whether they carried warning signals or not, but apparently they must have dispensed with such things. The streak vanished into the distance, and the letters on the panel that had marked it changing position went dead. Danny waited until the fullest amplification showed no response before throwing power on again. The small glow of the ion rocket would be invisible at the distance, surely.

Nothing further seemed to occur; mere was a contented purr from the pilot and the faint sleepy hum of raw power from the rear, -but no bells or sudden sounds. Slowly, his head fell forward over the navigator's table, and his heavy breathing mixed with the low sounds of the room. The ship went on about its business as it had been designed to do. Its course was charted, even to the old landing sweep, and it needed no further attention.

That was proved when the slow ringing of a bell woke Danny, while the board blinked in tkne to it: Destination! Destination! Destination Reached!

He shut off everything, rubbing the sleep from his eyes, and looked out. Above, there was weak but warm sunlight streaming down from a bluish sky that held a few small clouds suspended close to the ground. Beyond the ship, where it lay on a neglected sandy landing field, was the green of grass and the wild profusion of a forest. The horizon dropped off sharply, reminding bun that it was only a tiny world, but otherwise it might have been Earth. He spotted an unkempt hangar ahead and applied weak power to the underjets, testing until they moved the ship slowly forward and inside, out of the view of any above.

Then he was at the lock, fumbling with the switch. As it

opened, he could smell the clean fragrance of growing things, and there was the sound of birds nearby, A rabbit hopped leisurely out from underfoot as he stumbled eagerly out to the sunlight, and weeds and underbrush had already spread to cover the buildings about him. For a moment, he sighed; it had been too easy, this discovery of a heaven on the first wild try,

But the sight of the buildings drove back the doubt. Once, surrounded by a pretentious formal garden, this had been a great stone mansion, now falling into ruins. Beside it and further from him, a smaller house had been built, seemingly from the wreckage. That was still whole, though ivy had grown over it and half covered the door that came open at the touch of his fingers.

There was still a faint glow to the heaters that drew power from the great atomic plant that gave this little world a perpetual semblance of Earthliness, but a coating of dust was everywhere. The furnishings, though, were in good condition. He scanned them, recognizing some as similar to the pieces in the Museum, and the products of his race. One by one he studied them—his fortune, and now his home!

On the table, a book was dropped casually, and there was a sheet of paper propped against it, with what looked like a girl's rough handwriting on it. Curiosity carried him closer, until he could make it out, through the dust that clung even after he shook it.

Dad:

Charley Summers found a wrecked ship of those things, and came for me. We'll be living high on 13. Come on over, if your jets will make it, and meet your son-in-law.

There was no date, nothing to indicate whether "Dad" had returned, or what had happened to them. But Danny dropped it reverently back on the table, looking out across the landing strip as if to see a worn old ship crawl in through the brief twilight that was falling over the tiny world. "Those things" could only be the new race, after the War; and that meant that here was the final outpost of his people. The note might be ten years or half a dozen centuries old—but his people had been here, fighting on and managing to live, after Earth had been lost to them. If they could, so could he!

And unlikely though it seemed, there might possibly be more of them out there somewhere. Perhaps the race was still

surviving in spite of time and trouble and even homo intelli-gens.

Danny's eyes were moist as he stepped back from the door and the darkness outside to begin cleaning his new home. If any were there, he'd find them. And if not—

Well, he was still a member of a great and daring race that could never know defeat so long as a single man might live. He would never forget that.

Back on Earth, Bryant Kenning nodded slowly to the small group as he put the communicator back, and his eyes were a bit sad in spite of the smile that lighted his face. "The Director's scout is back, and he did choose "The Dane's'. Poor kid. I'd begun to think we waited too long, and that he never would make it. Another six months—and he'd have died like a flower out of the sun! Yet I was sure it would work when Miss Larsen showed me that story; with its mythical planetoid-paradises. A rather clever story, if you like pseudohistory. I hope the one I prepared was its equal."

"For historical inaccuracy, fully its equal." But the amusement in old Professor Kirk's voice did not reach his lips. "Well, he swallowed our lies and ran off with the ship we built him. I hope he's happy, for a while at least."

Miss Larsen folded her things together and prepared to leave. "Poor kid! He was sweet, in a pathetic sort of way. I wish that girl we were working on had turned out better; maybe this wouldn't have been necessary then. See me home, Jack?"

The two older men watched Larsen and Thorpe leave, and silence and tobacco smoke filled the room. Finally Kenning shrugged and turned to face the professor.

"By now he's found the note. I wonder if it was a good idea, after all? When I first came across it in that old story, I was thinking of Jack's preliminary report on Number 67, but now I don't know; she's an unknown quantity, at best. Anyhow, I meant it for kindness."

"Kindness! Kindness to repay with a few million credits and a few thousands of hours of work—plus a lie here and there—for all that we owe the boy's race!" The professor's voice was tired, as he dumped the contents of his pipe into a snuffer, and strode over slowly toward the great window that looked out on the night sky. "I wonder sometimes, Bryant, what kindness Neanderthaler found when the last one came to die. Or whether the race that will follow us when the

darkness falls on us will have something better than such

kindness."

The novelist shook his head doubtfully, and there was silence again as they looked out across the world and toward the stars.
