

**There's NO Covid-19!**

**And there's NO New "Mutant" strain of Covid-19!**

**It's Just More Booga Booga!**

**Lorraine Day, M.D.**

**The following is a LIE!**

**"Canada confirms first two cases of mutant COVID strain from the UK: Fears grow that super-infectious virus is already spreading through North America after doctors said travel restrictions were imposed too late"**

There is NO WAY they can do this medically or scientifically.  
These lies are made out of thin air.

The article continues:

Health officials in Canada say that **modelling** and epidemiological **studies** suggest that the COVID-19 variant first identified in the UK can spread easier and faster, but there is **no evidence that it is more likely to cause severe illness**.

There is also no evidence to suggest that the vaccines approved by the Canadian government will be any less effective against the new variant.

Notice the article says “modeling studies.” That means they are just playing around with a computer with a bunch of figures they took off the top of their head. These figures have NO relationship to reality!

Notice that they say (at the top of this article) that the mutant is “Super-infectious” but in the next quote from the article it says, “there is no evidence that it is more likely to cause severe illness.”

Also, notice below that the Government will “Use media to increase the sense of Personal Threat.”

**Government to “Use media to increase sense of Personal Threat”**

**Appendix B: APEASE evaluation grid for options to rapidly increase general social distancing**

Option	Evaluation criteria (APEASE)					
	Acceptability	Practicability	Effectiveness	Affordability	Spill-over effects	Equity
1. Provide clear, precise, credible guidance about specific behaviours	HIGH	HIGH	HIGH IF ACCOMPANIED BY OTHER OPTIONS	HIGH	POSITIVE	UNCERTAIN
2. Use media to increase sense of personal threat	HIGH	HIGH	HIGH IF ACCOMPANIED BY OTHER OPTIONS	HIGH	COULD BE NEGATIVE	UNCERTAIN
