

What Are They Doing With the Swabs?

**Never before, in the history of Medicine,
have they EVER tested for ANY disease
with swabs forced into the Posterior Nasal Sinus**

- 1) Certainly they are attempting to bypass the Blood Brain Barrier by implanting nano particles in close proximity to the brain, so they can pass through the porous bony cribriform plate (that separates the posterior nasal sinus from the brain)
- 2) Certainly they can implant any chemical they wish in an area that can easily affect the brain
- 3) But are they also trying to damage the amygdala, an area on each side of the brain, posterior to the nasal sinuses that is responsible for the Fight or Flight Reaction, that every doctor learns about in medical school – the area of the brain that is responsible for fear and submission?

**Is the “Test” the First Step
in creating Fear and Submission,
so Americans will literally
Line Up to Take the Kill Shot?**

The amygdala when bruised, made slaves in Egypt more guillable and submissive to authority.
