January 2, 2019

Dear [Name]

Thank you for taking the time to contact me with your concerns. As your Representative for the Sixth Congressional District of Minnesota, your views are very important to me and I appreciate the opportunity to respond.

As you know, a project has recently been proposed by a group of Harvard scientists called Stratospheric Controlled Perturbation Experiment, which would explore solar radiation management and would work to solar engineer the Earth's temperature by partially blocking the sun's rays. Scientists have begun experimenting on a small scale in Arizona.

I firmly believe Congress should support scientific advancement and innovation. However, there must be protocol and safety scientists must consider as well. By providing support, but reducing a heavy-hand, innovation is able to flourish. Rest assured, should any legislation relating to geoengineering come before me for a vote in the future, I will keep your thoughts in mind.

Your input is vital to assist me in carrying out my duties as your Congressman. If you have any other questions or concerns, please do not hesitate to contact me or my staff at the Otsego district office at (763) 241-6848 or the Washington, D.C. office at (202) 225-2331.

Sincerely,

Tom Emmer  
Member of Congress
