"Mind Control with Silent Sound and Super Computers."

The mind-altering mechanism is based on a subliminal carrier technology: the Silent Sound Spread Spectrum (SSSS), sometimes called "S-quad" or "Squad". It was developed by Dr. Oliver Lowery of Norcross Georgia and is described in US Patent #5,159,703, "Silent Subliminal Presentation System", dated October 27th 1992.

The Abstract for the patent reads: "A silent communications system in which non-aural carriers, in the very low or very high audio-frequency range or in the adjacent ultrasonic frequency spectrum are amplitude- or frequency-modulated with the desired intelligence and propagated acoustically or vibrationally, for inducement into the brain, typically through the use of loudspeakers, earphones, or piezoelectric transducers.

The modulated carriers may be transmitted directly in real time or may be conveniently recorded and stored on mechanical, magnetic, or optical media for delayed or repeated transmission to the listener." According to literature by Silent Sounds, Inc., it is now possible, using supercomputers, to analyze human emotional EEG patterns and replicate them, then store these "emotion signature clusters" on another computer and, at will, "silently induce and change the emotional state in a human being".

Silent Sounds, Inc. states that it is interested only in positive emotions, but the military is not so limited. That this is a US Department of Defense project is obvious. Edward Tilton, President of Silent Sounds, Inc., says that about S-quad in a letter dated December 13, 1996: "AI schematics, however, have been classified by the US Government and we are not allowed to reveal the exact details... we make tapes and CDs for the German Government, even the former Soviet Union countries! All with the permission of the US State Department, of course... The system was used throughout Operation Desert Storm (Iraq in the First Gulf War) quite successfully."

Weapons that are barred from use against the worst enemies are very soon used against citizens by the local police departments.

CLONING THE EMOTIONS WITH SUPER COMPUTERS the graphic illustration, "Induced Alpha to Theta Biofeedback Cluster Movement", which accompanies the literature, is labeled "#AB 116-394-95 UNCLASSIFIED" and is an output from "the world's most versatile and most sensitive electroencephalograph (EEG) machine". It has a gain capability of 200,000, as compared to other EEG machines in use which have gain capability of approximately 50,000. It is software-driven by the "fastest of computers" using a noise-nulling technology similar to that used by nuclear submarines for detecting small objects underwater at extreme range.

The purpose of all this high technology is to plot display a moving cluster of periodic brainwave signals. The illustration shows an EEG display from a single individual, taken of left and right hemispheres simultaneously. By using these computer-enhanced EEGs, scientist can identify and isolate the brain's low-amplitude "emotion signature clusters", synthesize them and store them on another computer. In other words, by studying the subtle characteristic brainwave patterns that occur when a subject experiences a particular emotion, scientists have been able to identify the concomitant brainwave pattern and can now duplicate it. These clusters are then placed on the Silent Sound [TM] carrier frequencies and will silently trigger the occurrence of the same basic emotion in another human being! Imagine what the governments could do with that.

There is a lot more involved here than simple subliminal sound systems. There are numerous patented technologies which can be piggybacked individually or collectively onto a carrier frequency to elicit all kinds of effects. One is direct microwave induction into the brain of the subject, limited to short-range operations. The other, as described above, utilizes ordinary radio and television carrier frequencies (Those frequencies freed up by the HDTV all digital conversion and sold off by the FCC to multinational corporations in 2009). Far from necessarily being used as a weapon against a person, the system does have limitless positive applications. However, the fact that the sounds are subliminal makes them virtually

Untitled

undetectable and possibly dangerous to the general public.

In more conventional use, the Silent Sounds Subliminal System (SSSS) might utilize voice commands, e.g. , as an adjunct to security systems. Beneath the musical broadcast that you hear in stores and shopping malls may be a hidden message which exhorts against shoplifting. (Also in the grocery stores and department stores there are messages to buy certain products that are harmful to senior citizens and children) And while voice commands alone are powerful, when the subliminal presentation system carries cloned emotional signatures, the result is overwhelming.

KGB Psychotronics; This technology did not spring up overnight. It has a long history of development and denials of development by the US Government and probably half of the other governments of the world as well. We know that the former Soviet Union was actively engaged in this type of research (Since 1903). In a previous article we reported that during the 1970's the Soviet KGB developed a Psychronic Influence System (PIS) that was used to turn soldiers into programmable 'human weapons'. The system employed a combination of high frequency radio-waves and hypnosis. The PIS project was begun in response to a similar training scheme launched in the US by President Carter, according to Yuri Malin, former security adviser to USSR President Gorbachev.

In 1975 the (United Nations) General Assembly considered a draft first proposed by the Soviet Union: (Actually the United Nations General Assembly prohibit any form of manipulation of a human being) "Prohibition of the Development and Manufacture of New Types of Weapons of Mass Destruction and New Systems of Such Weapons". In 1979 the Soviet Union added a list of some types of potential weapons of mass destruction: Radiological weapons (using radioactive materials [depleted uranium] which could produce harmful effects similar to those of a nuclear explosion- Particle beam weapons, based on charged or neutral particles , to affect biological targets. Infrasonic acoustic radiation weapons- Electromagnetic weapons operating at certain radio-frequency radiations which could have injurious effects on human organs (including the brain and mind control).

The secrecy involved in the development of the electromagnetic mind-altering technology reflects the tremendous power that is inherent in it. To put it bluntly, whoever controls this technology can control the minds of men- all men (and all women, and all animals, all insects, all birds, all reptiles).

There are documents that the (Hijacked) US government has plans to extend the range of this technology to envelop all peoples, all countries. This can be accomplished, is being accomplished, by utilizing the nearly completed HAARP project for overseas areas and the GWEN network now in place in the US. The US Government (Now fully controlled by the mega corporations, bankers, secret societies, CIA the NSA and more) denies all of this.

Dr. Michael Persinger is a Professor of Psychology and Neuroscience at Laurentian University, Ontario Canada; "Temporal lobe stimulation," he said, "can evoke the feeling of a presence, disorientation, and perceptual irregularities. It can activate images stored in the subject's memory, including nightmares and monsters that are normally suppressed. " Dr Persinger wrote an article a few years ago, titled "On the Possibility of Directly Accessing Every Human Brain by Electromagnetic induction of Fundamental Algorithms". The abstract reads: "Contemporary neuroscience suggests the existence of fundamental algorithms by which all sensory transduction is translated into an intrinsic, brain-specific code. Direct stimulation of these codes within the human temporal or limbic cortices by applied electromagnetic patterns may require energy levels which are within the range of both geomagnetic activity and contemporary communication networks. A process which is coupled to the narrow band of brain temperature could allow all normal human brains to be affected by a sub-harmonic whose frequency range at about 10 Hz (10 cycles a second) would only vary by 0.1 Hz (0.1 cycles a second). He concludes the article with this: "Within the last two decades a potential has emerged which was improbable, but which is now marginally feasible. This potential

Untitled

is the technical capability to influence directly the major portion of the approximately six billion brains of human species, without mediation through classical sensory modalities, by generating neural information within a physical medium within which all members of the species are immersed.
