PREFACE;

A BIOGRAPHICAL SKETCH
OF
A. D. PHILIDOR.

ALL Chess-players, who have attained a certain degree of excellence in the game, know how essentially necessary to improvement is the study of the different books that have been written on the subject; particularly to such as have not the opportunity of frequent practice with scientific players. Indeed, we might as rationally expect to make a good mathematician without tasking the student with the problems of EUCLID or EULER, as suppose that any one who is not in the habit of continually playing Chess, can ever become even

moderately skilful, without devoting some time to the examination of the various openings, and intricate combinations of the pieces, which are to be found in the works of the first masters.

In this age of useful knowledge and cheap editions, no apology can be necessary for presenting **PHILIDOR** in the shape of a pocket volume. To the very numerous class of Chess-players, who prefer playing over games which are conducted even to the fatal checkmate, to the writings of such authors as do not carry the student beyond the different modes of opening the combat, **PHILIDOR'S ANALYSIS** will always be considered one of the most valuable studies of the science—while to Chess-players in general, it is highly important that they should have it in their power to compare the style of play adopted by this celebrated Frenchman, with the more modern developments of the art, as practised by the first writers and players of our own time and country.

In comparing, however, PHILIDOR'S ANALYSIS OF CHESS with other volumes on the same subject, it should be always borne in mind, that PHILIDOR had not the same opportunities of borrowing from previous writers that more recent authors have so fully availed themselves of. The excellent treatises of LOLLI and PONZIANI were not written till after the first publication of our Analysis, and there was no preceding book, except SALVIO'S, from which much information could have been gleaned.—PHILIDOR has, therefore, the peculiar merit of being always original, if not always correct—his work abounds with instructive positions, and is deservedly entitled to the reputation in which it is held, as having been the production of one of the greatest Chess-players that ever lived;—a player who never met with his equal among the first masters of the game, in every country he ever visited.

ANDRÉ DANICAN PHILIDOR was born at

Dreux, near Paris, in 1726. His grandfather was celebrated as an oboe player at the court of LOUIS XIII. An Italian, named PHILIDOR, was much admired by the king for his superior performance on the same instrument; and, on his departure for Italy, LOUIS gave M. DANICAN the *sobriquet* of PHILIDOR, which was ever afterwards appended to the family name.—Our author's father and several of his brothers were musicians in the bands of LOUIS XIV. and LOUIS XV.

At six years of age PHILIDOR was admitted into the choir of the Chapel Royal at Versailles; where, being obliged to attend daily, he first began to play Chess. There were about eighty musicians always in waiting: and cards not being allowed in the sanctuary, they had a long table inlaid with a number of Chess-boards; with which they amused themselves during their leisure time.—It does not appear that PHILIDOR ever studied Chess from books, though we know that he was

acquainted with the writings of **SALVIO** and other authors ; but such early and incessant practice as he enjoyed was quite sufficient to supersede the necessity of pursuing any other mode of acquiring the game, particularly when grafted on the genius of a **PHILIDOR**.

PHILIDOR must have been a good musician at a remarkably early age, for when only eleven years old, he composed a motette, which was performed in the Chapel, and which was so much admired by **LOUIS XV.** that he gave our precocious author five louis, which encouraged the child to go on with his composing. When he had attained his fourteenth year, he left the Chapel, and was then reputed as being the most skilful Chess-player of the whole band. At this time several musical compositions of his were performed at the Concert Spirituel, and favorably received by the Parisians, as being the productions of a boy who was already master of the sciences of harmony and Chess. As

a teacher of music PHILIDOR might now have established himself in a lucrative connexion, but he applied so closely to Chess, as entirely to neglect those pupils whom the kindness of his friends had procured for him; he consequently lost his scholars, but attached himself to his favorite study with increased perseverance. The best Chess-player then in France was M. DE KERMUR, SIRE DE LEGALLE, and young PHILIDOR sought every opportunity of receiving his instructions; by which he improved so essentially, that in three years he played as well as his master.

MONS. DE LEGALLE happening once to ask him whether he had ever tried to play without seeing the board, PHILIDOR replied, that as he had calculated moves, and even whole games at night in bed, he thought he could do it, and immediately played a game in this manner with the ABBÉ CHENARD, which he readily won, without being confused or hesitating on any of the moves.

This was a circumstance much talked of in Paris, and he frequently repeated the same method of playing.

PHILIDOR then finding he could readily play a single game, undertook to go through two games at once, without looking over the boards. Of this feat, which was performed in a public café, the following account is given in the *Encyclopédie Française* :—

“ We had at Paris a youth of eighteen, who played two games of Chess at the same time, without seeing either of the boards ; beating two gentlemen, to either of whom, he, though a first-rate player, could only give the knight when looking over the pieces. We add a circumstance of which we were eye-witnesses :—in the middle of one of these games a false move was designedly made, which after a great number of moves he discovered, and placed the piece where it ought

to have been at first. This young man, the son of a musician of repute, is named M. PHILIDOR; he himself is a great musician, and perhaps the best player at Polish Draughts there ever was or ever will be¹. We quote this as a most extraordinary example both of memory and imagination."

In 1745, PHILIDOR went to Holland with SIGNOR LANZA, whose daughter, though only thirteen years of age, was already celebrated as a fine pianoforte player. The famous GEMINIANI was to meet them at Rotterdam, and the party united were to give a series of concerts. SIGNORINA LANZA, however, being indisposed, remained with

¹ PHILIDOR's skill in Polish Draughts is rather over-rated by the writers of this article, as we know that although a first-rate, he was not equal to M. LE BLONDE, and several other great players of that day.—In a voluminous collection of critical ends of games at Polish Draughts (published by DUFOUR, Paris, 1808), I find six ingenious positions of PHILIDOR's composition.

her mother at Paris; and at Rotterdam they received the melancholy news of her death. The concert scheme being thus put an end to, PHILIDOR was left in a foreign country almost pennyless. He now found a temporary resource in his skill at Polish Draughts (a game as well then as now universally played throughout Holland), and supported himself by his knowledge of Chess and Draughts during the twelvemonth he remained among the Dutch.

Our author paid his first visit to England in 1747.—The principal Chess-club in London at that time held their meetings at Old Slaughter's Coffee-House, in St. Martin's-lane. SIR ABRAHAM JANSSEN was then the best player in England, and indeed the best player PHILIDOR ever met with excepting M. DE LEGALLE, as the Baronet could win one game out of four, without taking odds of PHILIDOR. After SIR A. JANSSEN the best players were PHILIP STAMMA of Aleppo

(who wrote a clever book on Chess), MR. CUNNINGHAM, LORD SUNDERLAND, LORD GODOLPHIN, LORD ELIBANK, MR. CARGYLL, DR. BLACK, DR. COWPER, and MR. SALVADOR. During his stay in London this year, PHILIDOR played a match of ten games with STAMMA, giving him the move, allowing the drawn games to be considered as won by STAMMA, and betting five to four on each game. With these immense odds in his favor, the Syrian won only two games, of which one was drawn.—PHILIDOR returned to Holland in the following year, where he composed his treatise under the title of *ANALYSE DU JEU DES ECHECS*. At Aix-la-Chapelle he was advised by LORD SANDWICH to visit Eyndhoven, a village between Bois-le-duc and Maestricht, where the British army was encamped. PHILIDOR there played Chess with the DUKE OF CUMBERLAND, who not only subscribed himself for a number of copies of the work, but procured a great many other subscribers. PHILIDOR'S ANALYSIS

was first published in the French language, in London, 1749, and has been since translated and reprinted in almost every capital in Europe.

In 1751, while PHILIDOR was at Windsor with the DUKE OF CUMBERLAND, he introduced DR. BLACK, who kept a school at Chiswick, as a first-rate player to the DUC DE MIREPOIX, the French ambassador. The duke, who was a passionate admirer of Chess, was so gratified with the doctor's society and style of play, that he generously obtained for him a living worth 200*l.* a year, which was in the gift of GEORGE II. This year PHILIDOR went to Berlin, by invitation of the *soi-disant* philosopher, FREDERICK of Prussia, who saw him play Chess several times at Potsdam, but did not encounter him himself. There was a MARQUIS DE VARENNES and another gentleman, who played *even* with the king, and of these PHILIDOR could win, giving the knight. He remained at Berlin a short time, and then went

to PRINCE WALDECK's at Arolsen, where he stayed eight months; and after paying a visit of three weeks to the Court of the LANDGRAVE of Hesse-Cassel, returned to London, where he remained some time, continuing to cultivate his musical talent with increased success, and with the approbation of the best judges, including the immortal HANDEL. It is to be regretted that PHILIDOR never visited Italy; he would there have found Chess-players worthy of contending with; and how interesting to the present generation would have been a collection of games actually played between PHILIDOR and PONZIANI, or ERCOLE DEL RIO!

PHILIDOR returned to Paris in 1755, with the intention of devoting himself entirely to music; and solicited the appointment of Master of the Chapel Royal, where two new motettes of his composition were performed; but as the Queen preferred the old school of music, he was unsuc-

cessful in his application ; consoling himself, however, with the compliments he received from the first professors and amateurs of the musical art. About this time he played a match at Chess with M. DE LEGALLE, and had the pleasure of conquering his old master¹.

In 1759, PHILIDOR's first musical drama, entitled *BLAISE LE SAVETIER*, was performed at the Opera Comique with so much success that he wisely abandoned church music, and applied himself wholly to writing for the stage ; producing a succession of new operas, which established his reputation as a clever musician. It would be foreign to our work to give a list of these compositions, which comprise more than twenty-five complete operas, and numerous other musical publications.

¹ At the respected age of eighty-five, M. DE LEGALLE was still the best player in France, always excepting PHILIDOR.

PHILIDOR continued to follow up his success in music for about seven years; and then, emboldened by his increasing popularity, aimed at an entire change of the national musical taste; and accordingly composed a tragic opera called ERNE-LINDA, PRINCESS OF NORWAY, with recitations and airs after the Italian manner. This piece was got up at the Opera Comique; and, notwithstanding the cabals of the nobility, who were bigoted to the old style of music (so ably satirized by JEAN JACQUES ROUSSEAU), and the no less important opposition of the principal singers and dancers, the piece ran eight successive nights before it dropped. LOUIS XV. was so well pleased with this opera, that he rewarded the composer with the *munificent* pension of twenty-five louis; which was regularly paid during the life of the monarch.

PHILIDOR came to England for the fourth time in 1769; and as in the interim Chess had become extremely fashionable here, he found a new club

instituted at the Salopian Coffee-house, where he frequently played. Five years afterwards another club was established, next door to the Thatched House Tavern in St. James's-street, which lasted many years¹. Soon after the beginning of this latter club several of the members made a subscription among themselves, in order to remunerate PHILIDOR for the time he lost in attending their meetings. The best players in this club, and at that time in London, were COUNT BRUHL, the HON. H. CONWAY², LORD HARROWBY, MR. BOWDLER, and MR. JENNINGS. In playing

¹ It is surprising, that considering how much Chess is now played, or attempted to be played, every endeavour to establish a Chess-club on a large scale at the west end of the town, should have so completely failed. Perhaps the chief reason of this is to be traced to the fact of the most devoted admirers of the game, being those who cannot afford high subscriptions. Surely it would answer the purpose of some enterprising man to open a handsome Chess "Salon" on very moderate terms of admission—something like the best Cigar Divans, without their Havannah atmosphere.

² Afterwards LORD HENRY SEYMOUR.

over the board, the Pawn and two moves, or the Knight in exchange for the two first moves, constituted the fair odds between these gentlemen and their invincible visitor.

The first match recorded as having been played in public by PHILIDOR, without seeing the board, was in 1782, when he played two games in this manner at once; the following paragraphs are curious, as showing the sensation produced in the Chess world by this interesting and then novel exhibition.

Extract from the MORNING POST of May 28, 1782.—“The celebrated MONS. PHILIDOR, whose unrivalled excellence at the game of Chess has been long distinguished, invited the members of the Chess-club, and the amateurs in general of that arduous amusement, to be present on Saturday last at a spectacle of the most curious kind, as it was to display a very wonderful faculty of the

human mind, which faculty, however, is perhaps at present exclusively his own.

“ In consequence of this invitation, thirty gentlemen and three ladies attended M. PHILIDOR at PARSLOE’s in St. James’s-street, where, in their presence, with his eyes closed, he contended with two gentlemen at the same time, who had each a Chess-board, and who may be deemed among the first players in Europe next himself¹. COUNT BRUHL was his adversary at one board, and MR. BOWDLER at the other, and to each was allowed the first move.—The games lasted one hour and forty minutes.

¹ And yet with this conclusive evidence to the contrary, I have heard it asserted that these gentlemen were not first-rate players.—Latterly PHILIDOR could only give COUNT BRUHL the Pawn and Move, but as he was then long past sixty years of age, it may fairly be presumed that his extraordinary faculties were somewhat dimmed.—COUNT BRUHL was at this time decidedly the best player in England after PHILIDOR.

“ The game with the COUNT was drawn, and MR. BOWDLER won the other, owing to the exact similarity in the two openings, for if the games had less resembled each other, M. PHILIDOR would have preserved a more distinct recollection.

“ The idea of the intellectual labour that was passing in the mind of M. PHILIDOR suggested a painful perception to the spectator, which however was quite unnecessary, as *he seldom paused half a minute*, and seemed to undergo little mental fatigue, being somewhat jocose through the whole, and uttering occasionally many diverting pleasantries. The whole passed in the French language.

“ When the intrinsic difficulty of the game is considered, as well as the great skill of his adversaries, who of course conducted it with the most subtle complications, this exertion seems absolutely miraculous, and certainly deserves to

be recorded as a proof at once interesting and astonishing, of the power of human intelligence."

Extract from THE WORLD, of the same date.— After a very similar account of this match, the editor proceeds thus : " This brief article is the record of more than sport and fashion ; it is a phenomenon in the history of man, and so should be hoarded among the best samples of human memory, till memory shall be no more.

" The ability of fixing on the mind the entire plan of two Chess-tables, with the multiplied vicissitudes of two-and-thirty pieces in possible employment upon each table, that a man should maintain the two games at once, without seeing either, but merely from the report of move after move upon both ; and this, contending not with bad and inexperienced play, but with two of the best and most practised players in Europe ; all this makes up a wonder of such magnitude as

could not be credited, perhaps would not be credible, without repeated experience of the fact."

" This has been had from MONS. PHILIDOR again and again, but never with more struggle, for his antagonists were COUNT BRUHL and MR. BOWDLER. They never were more excellent: how much resource there was, and guarded enterprise, may be imagined from the time they took in playing. During the whole of that period the memory of this astonishing man was never for a moment absent nor confused:—he made not one mistake."

With all this great applause, it does not appear that PHILIDOR was ever so far rewarded for his persevering energy in the cause of Chess as to become, in a pecuniary point of view, independent of his British patrons. We are assured by TWISS, who lived long in habits of friendly intimacy

with him, (and from whose pages I have largely borrowed,) that PHILIDOR would never allow any one of his numerous family to learn the game their father so excelled in. With a wife and NINETEEN CHILDREN entirely dependent for many years upon his labours for their livelihood, it was only by the exercise of the most unremitting energies of his peculiar talents, that music and Chess united could be forced to yield their master more than a very meagre competency. To the great detriment of his pocket, PHILIDOR could neither spin round for a quarter-of-an-hour on the point of his foot, nor play the devil's concerto on the fourth fiddle-string: he contributed largely to the amusement of that generation, and fortunately fared better than BURNS or CHATERTON.

During the ensuing years of his life, PHILIDOR continued to reside in London every winter, and to return in the summer to his family at Paris,

playing matches occasionally in public without seeing the board, and constantly winning of the best players who opposed themselves to him. The ensuing article is extracted from a London newspaper of May, 1783.

“ Yesterday, at the Chess-club in St. James’s-street, MONS. PHILIDOR performed one of those wonderful exhibitions for which he is so much celebrated. He played three different games at once, without seeing either of the tables. His opponents were COUNT BRUHL, MR. BOWDLER (the two best players in London), and MR. MASERES. He defeated COUNT BRUHL in one hour and twenty minutes, and MR. MASERES in two hours; MR. BOWDLER reduced his game to a drawn battle in an hour and three quarters. To those who understand Chess, this exertion of M. PHILIDOR’S abilities must appear one of the greatest of which the human memory is susceptible. He goes through it with astonishing

accuracy, and often corrects mistakes in those who have the board before them."

Between 1788, and 1792, PHILIDOR played eight different matches in the same manner, each match consisting in general of three games; and in 1792 he played two similar matches in the presence of the Turkish ambassador. These latter games probably gave rise to the foolish report of PHILIDOR's having been beaten at Chess by the Turk. The only foundation that can be assigned for this, is a newspaper paragraph which appeared *after the death* of PHILIDOR, and which was ill-naturedly reprinted by TWISS in 1802. Had there been any truth in this account, it would have certainly been made public during the life of PHILIDOR; but, from its not having appeared immediately after the pretended incident occurred, as well as from the manner in which it is worded, I have no doubt of its having been the production of some petty slanderer, envious of the reputation

he thus meanly attempted to injure. The following is the wind-up of this precious *morceau*; it is a fine specimen of the beautifully ridiculous :—

“ After winning *six games in succession* of PHILIDOR, the Ambassador told him that he knew several Chess-players at Constantinople who were able to beat himself, *giving him the Rook ! ?*”

Although now past the period when the human intellect is considered to be at the height of its powers, PHILIDOR did not relax in his exertions to promote Chess. In 1795, the last year of his life, our veteran, then sixty nine years of age, played three blindfold matches in public.* The last of these was announced by him in the daily papers as follows :—

“ CHESS-CLUB, 1795, PARSLOE'S, ST. JAMES'S-STREET.

“ By particular desire, MONS. PHILIDOR, po-

sitively for the very last time, will play on Saturday, the 20th of June, at 2 o'clock precisely, three games at once against three good Chess-players; two of them without seeing either of the boards, and the third looking over the table. He most respectfully invites all the members of the Chess-club to honour him with their presence.—Ladies and gentlemen not belonging to the club may be provided with tickets at the above-mentioned house to see the match, at five shillings each."

On Saturday, August 29, 1795, the public were informed of the death of this unconquered, and indeed unrivalled Chess-player, in the following article, which appeared in the daily paper.

" MONS. PHILIDOR, THE CHESS-PLAYER.

" On Monday last, the 24th of August, this long celebrated foreigner made his last move—into the other world. For two months he was kept alive

merely by art and the kind attentions of an old and worthy friend. To the last moment of his existence he enjoyed, though nearly seventy years of age, a strong and retentive memory, which long rendered him remarkable in the circle of his acquaintance in this capital.

“ M. PHILIDOR was a member of the Chess-club near thirty years, and was a man of those meek qualities that rendered him not less esteemed as a companion, than admired for his extraordinary skill in the game of Chess, for which he was pre-eminently distinguished.

“ It is only two months since he played two games blindfold at the same time, against two excellent Chess-players, and was declared the victor. He was, besides, an admirable musician and a capital composer.

“ What seemed most to have shaken the poor

old man's constitution, and to have precipitated his exit, was not being able to procure a passport to return to Paris to see his family (who reside there) before he paid the last debt of nature. This refusal was rendered still more bitter, on its being intimated to him that he was denounced by the bloodthirsty committee of French Revolutionists as a *suspected character*. From the moment he was made acquainted with this circumstance he became a martyr to grief—his philosophy forsook him—his tears were incessant—and he sank into the grave."

(a) You advance this Pawn, in order to hinder your antagonist from attacking K. B. P. with his K. B.; and also to take up a position in the middle of the board.

(b) You should not move either of these centre Pawns, until one of them is attacked; then advance the attacked Pawn.

(c) If he check with B., you interpose Q. B.; and if he then take B., you retake with Kt.

(d) You should not play this Kt. to K. B. 3d sq., unless you have previously advanced the K. B. P. two sq.; as your Kt. would stop the march of the Pawn¹.

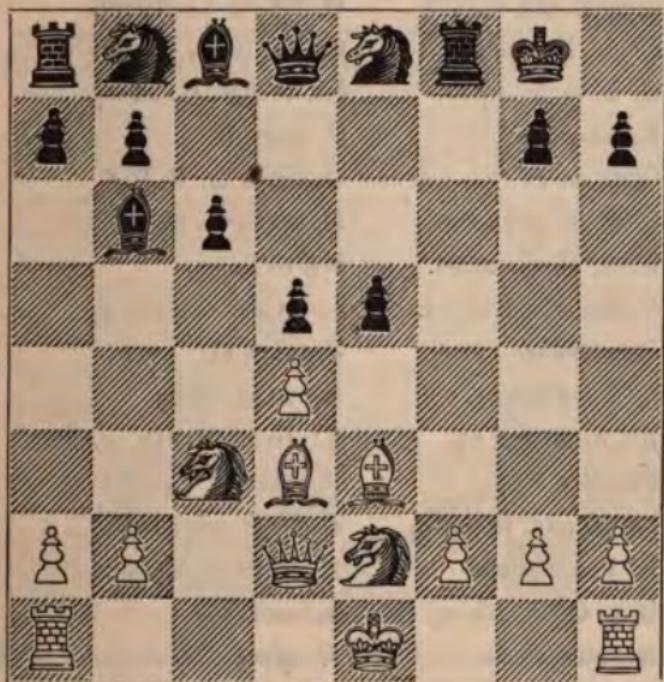

(e) You retire K. B. from the threatened attack of Q. P., which would otherwise prevent your establishing the Pawns in the centre.

(f) Black advances K. B. P., to make an opening for R.

¹ On this point, PHILIDOR differs from the first players of every age and country. He deprecates moving the Knight to K. B. 3d sq., as it confines a pawn; but inconsistently allows it to be placed at K. 2d sq., where it generally impedes the march, both of Q. and K. B. In the present game, White would have had a much stronger attack, by playing Kt. to K. B. 3d sq.

- (g) It would be bad play to take the Pawn, because your K. P. would lose its rank.
- (h) To support Q. P., and to be able to move Q. B. P. It would be no disadvantage to him, but rather the contrary, were you now to make him double a Pawn.
- (i) The K. P. being as yet safe, your Kt. attacks B., in order to compel him to withdraw.
- (k) It is almost always good play to oppose Q. B. to the adverse K. B.; when he commands, as in the present instance, your K. B. P.
- (l) Castling with K. R., you will the better defend K. B. P., which must be advanced presently, in support of K. P., when the latter is attacked.
- (m) He is compelled to advance this P., to prevent your K. B. P. from attacking his Q.
- (n) To restrain your Kt.
- (o) You play this Kt., intending afterwards to push K. B. P., which will be then supported by three pieces.
- (p) Intending to frustrate your project, which he would do by moving K. Kt. P., were you not to take Kt. with R.
- (q) You move the R. to support K. P.
- (r) Black offers to exchange Queens, to prevent the threatened mate.
- (s) When your remaining B. runs on the white diagonals, you should keep your pawns on black squares, and *vice versa*. This prevents the adverse pieces from getting between your pawns.

(a) If you were to play any other move, Black would advance Q. P. two squares.

(b) If he refuse taking P., he ought equally to lose.

(c) The best move he can make.

(d) If, instead of bringing out his Pieces, he were to continue advancing the Pawns, he would lose much sooner; for, it is necessary to observe, that one or two Pawns inconsiderately pushed too far, are generally doomed, unless you can support them with others. This will be further seen in a Variation on Move 8, which will convince you that two Pawns abreast, are stronger at their fourth squares, than at their sixth; as, in the latter case, they may be compared to straggling soldiers separated from their corps.

(e) To hinder your Pawns from advancing.

(f) You play your King so, that in case of necessity, you can form an attack on the left.

(g) Although a Rook is generally of far more value than the Kt., yet, in this particular case, you gain by the exchange. His Kt. has consumed four moves in taking up this post, during which you have been gaining position.

(h) If you were not to support this P., he would get a good game, by sacrificing B. for the two P.

(i) To oblige Black to move Q. B. P., which will allow your Kts. to enter his game.

(k) He Castles with Q. R., to avoid the great strength of your Pawns on the King's side.

(l) If you were to check with Kt., you would lose at least two moves.

(m) Meaning to play Q. to K. B. sq., in order to protect Q. B. P.

¹ This is not so good a move as Q. Kt. to Q. B. 3d sq.—K. B. P. two sq., may also be played. Philidor objects to bringing out Q. Kt., as it confines Q. B. P., but substitutes a move which completely shuts up the K. B. The Modenese very properly comments on this error, in his celebrated critique on Philidor. *Vide Lolli.*

² Q. P. two sq., is rather stronger play.

31. R. to K. B. 3d sq.	R. to Q. sq.
32. R. takes P.	R. to adv. Q. 2d sq., and will win the game.

(a) Let Black have played as he will at Move 3, this is still your best move; you are certain of gaining the attack through his having brought out K. Kt. at Move 2.¹

(b) If he do not take this P., you should still leave it *en prise*, unless your adversary should Castle with K. R.; in that case, you would immediately advance the P.

¹ With all deference to Philidor, I think that, on the contrary, playing K. Kt. to B. 3d sq., at Move 2, is just as good a move as can be made.

- (c) If he take Kt., you retake with P.
 - (d) He moves this Kt., to make room for his K. B. P.
 - (e) If he were to play K. B. P. 2 sq., you should attack Q. with Q. B., and then push K. R. P. on B.; should Black then take Kt., you must retake with P.
 - (f) If he were not to take the Kt., he would lose several moves in extricating Q. B. from your Pawns.
 - (g) To make more room for your Queen, should she be attacked.
 - (h) This move may appear difficult to understand, for a young player, but it is decidedly the best you can play.
 - (i) You move this Kt., in order to stop K. P., particularly as his Pawn, where it now stands, confines B. and Kt.
 - (k) If he had advanced K. R. P., to prevent the attack of your Kt., you ought to attack his B. and Q., with your P.

If, at this stage of the game, the first player take K. R. P. with Kt., the result would be as follows:—

25. B. takes P.	R. takes P.
26. B. takes R.	R. takes B.
27. K. takes R.	Gives Mate in two moves.

(a) This move is ill played, for by immediately pushing your Q. P. 2 sq., Black loses at least the attack, if not eventually the game².

(b) If he play K. Kt. to K. 2d sq., you ought to advance K. P., and then support it with K. B. P.

(c) If he were to move Q. B. to K. 3d sq., you should answer with K. B. to Q. 3d sq.

(d) It is generally good play to avoid exchanging either your K. P. for the K. B. P., or Q. P. for Q. B. P.; as these Pawns occupy the centre of the board, they prevent your adversary's Pieces from entering your game.

¹ This is one of the worst moves he could play; it would be better to move the Kt. to K. 5th. sq.

² I cannot help differing from this; Q. B. P. one square, is not play to be recommended at the second move, because I do not think it leads to a very attacking game; but it is perfectly safe.

(e) If he take K. P., you would take Q. and then P.

(f) When your Pawns are divided into two bodies, you should always try to add to the stronger; and, if you have two Pawns in the centre, endeavour to unite others with them.

(g) It would be bad play to take the Pawn.

(h) If he take P., he equally loses the game.

7. Q. Kt. P. two sq.	Q. B. to B. 3d sq.
8. R. checks. ²	K. to B. 2d sq.
9. R. takes Q.	Mates in two moves.

¹ K. R. P. two sq., were better play.

² Instead of checking, the first player should proceed as follows :—

BLACK.

WHITE.

28. B. takes B.	Q. takes B.
29. Rook checks.	Q. takes R.
30. R. takes Q. ch.	K. takes R.
31. K. to B. sq.	K. R. checks.
32. K. to K. 2d sq.	Q. R. to K. sq.
33. Q. to K. B. 4th sq., and will draw the game.	

The reader will see from these moves, that I have not scrupled to avail myself occasionally of the notes attached to former editions of Philidor.

SECOND VARIATION.

Moves 1 to 5 as in Game IV.

BLACK.

WHITE.

6. Q. to Q. B. 2d square.	K. B. to Q. B. 4th sq.

SECOND OPENING.

WHITE.

BLACK.

1. K. P. two squares. Same move.
 2. K. B. to Q. B. 4th sq. K. Kt. to B. 3d sq. ¹

¹ This is not a good move, strictly speaking, but, for the sake of variety, it may sometimes be played; you may also push K. B. P. two sq., at this point of the game.

WHITE.	BLACK.
3. Q. P. one sq. ¹	K. B. to Q. B. 4th sq.
4. K. Kt. to B. 3d sq. (<i>a</i>)	Q. P. one sq.

17. K. R. to B. 2d sq.	Q. to Q. 2d sq.
18. Q. R. to K. B. sq.	K. to Kt. 2d sq.

Equal Game.

(*a*) You might also advance K. B. P. two squares.

(*b*) If he were to play Q. B. to your K. Kt. 4th sq., you would win by moving Q. to Q. Kt. 3d sq.; and should he play the same B. to K. 3d sq., you change Bishops, and then play Q. to Q. Kt. 3d sq.

(*c*) If he move Q. B. to adv. Kt. 4th sq., you advance Q. P., and if he then take Kt., you retake with K. Kt. P.

¹ White should now play K. Kt. to B. 3d sq., and if Black answer with Q. Kt. to B. 3d sq., then advance K. Kt. to adv. K. Kt. 4th sq.

THIRD OPENING.

WHITE.

BLACK.

1. K. P. two squares.	K. P. two sq.

17. Q. R. to Q. sq.	K. Kt. to Q. 4th sq.
18. Q. to Q. 2d sq.	Q. R. P. two sq.
19. K. Kt. to Q. B. 3d sq.—Equal game.	

VARIATION ON MOVE 5.

WHITE.	BLACK.
5. K. P. advances.	Q. to K. 2d square.
6. Q. B. P. takes P.	K. B. checks.
7. Q. B. interposes ¹	B. takes B. chg.
8. Q. Kt. takes B.	Q. P. one sq.
9. Q. to K. 2d sq.	Q. P. takes P.
10. Q. P. takes P.	K. Kt. to Q. 2d sq.

¹ This is a weak move; you should retire K. to B. sq., he then play K. Kt. to your K. 4th sq., place your Queen at 4th sq.

WHITE.

BLACK.

11. K. B. P. two squares. K. B. P. one sq.
 12. K. Kt. to B. 3d sq. K. B. P. takes P.

Black has rather the better game.

FIFTH OPENING.

WHITE.

BLACK.

1. K. P. two squares. The same.
 2. K. B. to Q. B. 4th sq. The same.
 3. Q. B. P. one sq. Q. to K. B. 3d sq.¹

 13. Q. Kt. takes B. P. takes Kt.
 14. Q. B. to K. 3d sq. K. Kt. to Q. B. sq.

¹ It is seldom good play to move out the Queen so early in the game.

² If he play Q. to K. Kt. 3d sq. attacking two Pawns at once, you may leave either of them *en prise*; for if he take it, you have a forced won game, as shown by LOLLI.

WHITE.

15. Castles. K. R.

BLACK.

16. K. P. takes P.

K. B. P. two squares.

9. Q. Kt. to B. 3d sq.	K. Kt. to B. 3d sq.
10. Q. to K. 2d sq.	Gambit P. moves.
11. K. Kt. P. takes P.	K. Kt. P. takes P.
12. Q. takes P.	Q. B. to adv. K. Kt. 4th

¹ This Kt. may also be played to Kt. 5th sq., and the then becomes exceedingly critical. Black will, however, g best of it, if he play the correct defence.

² He may also play Q. to K. 2d sq.

³ GRECO, and SALVIO, preferred playing K. Kt. to R. but I think the move here made (sanctioned also by PONZIA) slightly better.

WHITE.	BLACK.
13. Q. to K. 3d sq.	K. B. to R. 3d sq.
14. K. Kt. to K. B. 4th sq.	Q. B. P. one sq.
15. Q. B. to Q. 2d sq.	K. B. takes Kt.
16. Q. takes B.	Q. P. one sq.
17. K. B. to Q. 3d sq.	K. Kt. takes P.
18. Q. Kt. takes Kt.	K. B. P. two sq.

The second Player ought to win.

FIRST VARIATION.

Moves 1 to 4 as before.

| 14. K. B. to Q. 3d sq., &c. | |

Black will not succeed in maintaining the Gambit P.

(a) If you play K. B. to Q. B. 4th sq. he answers with Q. to K. 2d sq.

(b) If he move Kt. to K. B. 4th sq., you play Q. Kt. to adv. Q. 4th sq.; and if he then take K. R. P. with B. chg. you retake with R., threatening to take Q. B. P.

SECOND VARIATION.

Moves 1 to 4 as in Game I.

7. K. B. P. two sq.
 8. Kt. to B. 2d square. K. B. P. takes P.
 9. Q. B. takes P., &c.

² You may now play the Muzio Gambit, by Castling and leaving the Kt. *en prise*.—For the strongest mode of proceeding with the very brilliant attack thus acquired, see "NEW VARIATIONS ON THE MUZIO GAMBIT," by G. W.—London, 1831, 12mo.

³ This is a bad move; he ought at once to push on the Gambit Pawn, as being the only move which can retrieve the game for the second player. The position then becomes remarkably difficult, but, play as you may, Black ought to get the best of it.

² This is clumsy, you should rather play thus:

10. K. to K. square.

A player who had given this check, would now be almost certain to attack K. R.; in that case, you retreat Kt. to K. B. 2d sq., and win the Queen on the following move, by playing K. B. to B. sq. If, however, seeing the danger he is in, Black

25. B. to K. R. 4th sq.	R. takes R.
26. B. takes R.	Drawn game.

(a) If he were to move K. B. P. one sq., you should take P. with Kt., and then check with Q., having a won game.

(b) If you had now advanced Q. B. P., you would lose the game, by Black's pushing Q. B. P. also.

The result of this Game, shows that this GAMBIT ought uniformly to be drawn, unless some error be committed by either Player¹.

¹ The Editor cannot avoid dissenting from this; thinking that the second Player ought always to win, through the advantage of the acquired Pawn, except when defending the Bishop's Gambit, in which he does not believe it possible to maintain the Pawn.

¹ The Bishop's Gambit is the finest opening we have, next to the Muzio, but the strongest mode of attack is very little known I think, that if the best moves are played on each side, the game ought to be drawn. SARRATT's defence was taken by him from STAMMA, an author generally under-rated. As his is not a defence against the best mode of attack, it proves nothing.

² We see by PHILIDOR's note appended to this move, that he reprobates the check, and prefers playing K. B. P. two sq. SARRATT and others were of the same opinion, which I do not hesitate to pronounce erroneous; being convinced, from experience, that checking is the only move likely to lead to a safe defence.

³ Not so strong as Q. Kt. to B. 3d sq., although the latter is a move that does not immediately envelop itself.

⁴ A weak move; should still bring out Q. Kt.

6. K. B. takes Kt.	P. takes P. chg.
7. K. takes P.	R. takes B.

Black ought to win the Game.

¹ I must again observe that this is not so good as checking.

² Notwithstanding PHILIDOR's accompanying remark, neither of the moves here given are so good as Q. Kt. to B. 3d sq., though Q. to K. 2d sq. is also safe play.

(a) This is the best move for the defence; it is better than checking with Q.

(b) I make White take P., to show that he cannot recover the Game: his best move is Q. to K. square.

¹ As a model of fine play, this analysis is perhaps perfect; nothing can be imagined more skilfully conducted; but from the impossibility of forcing the second player to take up a similar position, it amounts merely to an accurate examination of one particular case, in which the Rook and Bishop win against the Rook; and not to a demonstration of those pieces having the same power, if differently placed. The position here given is one of the most unfavorable that could be devised for the second player, and I am of opinion that the Rook can always draw against the Rook and Bishop, *except in a few peculiar situations*.

No. XVI.

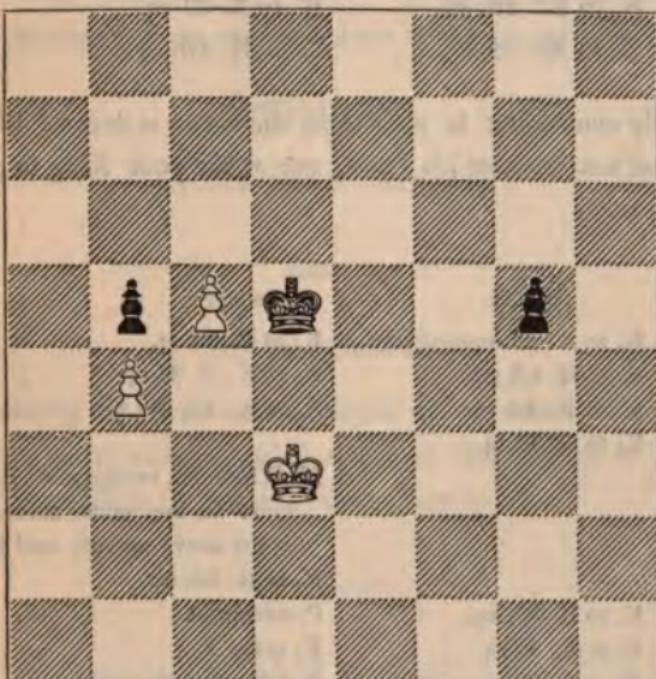

In this situation, if Black have to move first, you win; but White having the move, the Game is drawn, as follows:

WHITE.	BLACK.
1. K. to Q. 4th square.	K. to Q. 3d sq. (If he had played K. to B. 4th sq. you would win by moving K. to K. 3d sq.)
2. K. to Q. 3d sq.	K. to Q. 2d sq.
3. K. to K. 3d sq.	K. to K. 2d sq.
4. K. to Q. 4th sq.	K. to Q. 3d sq.
5. K. to K. 4th sq.	K. to K. 3d sq.

By adhering to this plan of defence, Black will be able to keep the opposition, and consequently draw the Game. Observe, that if at Move 2 he had played K. to Q. 4th sq., you would win by moving K. to K. 3d sq.

No. XVII.

In this situation, if you have the move, the Game is drawn; but if Black were to move first, you would win¹.

¹ The following Moves will show that PHILIDOR is incorrect in supposing that White could win if Black were to move first. The position is one of those which are essentially drawn, without the move being of the slightest consequence to either party. Black having to play first, moves—

WHITE.

1. K. to K. 3d square.

- K. to K. 4th sq.
- K. to B. 4th sq.
- K. to K. 4th sq.
- K. to B. 3d sq.

By continuing to play thus, the Game is drawn; Black must not advance his Pawn, nor suffer your King to gain the move.

3. K. to K. 4th sq.

THE LAWS OF CHESS.

[THE Editor has thought it necessary to alter the laws of the Game as laid down by Philidor, in order to suit them to the practice of the present time.]

No. I.

The Chess-board should be placed with the white corner to your right; so that, if playing with the white pieces, your King's Rook will stand on a white square. Should the board be improperly placed, either player has the right of rectifying the error by commencing the Game again, if the mistake be discovered before four moves on each side have been played; but after that, the Game must be played out as the board stands.

No. II.

Should any of the pieces be originally set up wrong, or any piece omitted to be placed on the board, the mistake may be rectified, provided there have not been four moves played on each side before the discovery of the error. After that time the Game must be played out as it stands.

No. III.

If a player omit to take off the piece or pawn he may have engaged to give as odds, he may remove it, provided as before, that four moves have not been played by both parties. Should such be not the case, he must play out the Game with all his pieces, and even though he should give Checkmate, the Game can only be reckoned as drawn.

No. IV.

In playing even, it is usual to draw lots for the first move, which is afterwards taken alternately. When the Game is drawn, the player who began that Game begins the next, for a drawn Game is no Game. If also two parties agree to play a match of a certain number of Games, unless specially agreed, drawn Games are not to be counted in the number. The player giving odds takes which coloured men he pleases, but in even Games, the choice of men is decided by lot. During the sitting each player keeps the same men.

No. V.

The player giving odds has always a right to the first move unless otherwise agreed. The party who engages to give a piece may give it from which side he likes, but if a Pawn is given, it is always the King's Bishop's Pawn. In receiving the odds of the Pawn and a certain number of moves, you must not cross your own half of the board in taking these moves.

No. VI.

If a player touch a piece or Pawn, it being his turn to play, he must move the piece so touched, unless at the first instant of touching it he say "j'adoube." (This rule may be enforced, even should you touch one of the pieces with your coat-sleeve, or should a third person by accident knock one of your pieces off the table, and you stoop to pick it up.) The King cannot, however, be left in check, as provided for in the next law.

No. VII.

Should you touch your King, it being your turn to move, and then find that you cannot play him without going into check, you may replace your King and play another piece, without being liable to any penalty. If also you touch a piece which cannot be moved without leaving your King in check, you must move your King by way of penalty, but should the King not be able to move without going into check, no penalty can be exacted.

No. VIII.

If you touch one of the adverse pieces, it being your turn to play, without, as before, saying "j'adoube," you must take that piece if it can be taken. Should you be unable to take it you must move your King, but if the King cannot move without going into check, no penalty can be inflicted. When obliged to move your King by way of penalty, you cannot Castle.

No. IX.

So long as you hold a piece on any particular square you may withdraw it, and play it to another square.

No. X.

Should you, by mistake, move one of your adversary's pieces instead of one of your own, you may be compelled, at the option of your adversary, either to take the piece if it can be taken, to replace it where it stood and move your King, or to leave it on the square to which you have played it. In this, as in every other case, should the King be unable to move without going into check, that part of the penalty cannot be enforced.

No. XI.

If a player capture a piece with one that cannot take it without making a false move, his antagonist may compel him either to take such piece with one that can legally take it, or to move the piece touched.

No. XII.

Should you, however inadvertently, capture one of your own pieces with another, you must move either of the two at the choice of your adversary.

No. XIII.

If a player make a false move, he may be compelled, at the choice of his antagonist, either to leave the piece where he has played it, or to move it to a square on its proper line of action, or to replace it and move the King instead.

No. XIV.

Should a player move twice in succession, he must replace the second piece, or his adversary may, if he think fit, insist on both moves remaining, and may go on with the Game accordingly.

No. XV.

When a Pawn advances two squares, your adversary has the option of taking it "*en passant*," as explained in the different elementary works on the Game.

No. XVI.

You may not Castle under the following circumstances :—
If your King has moved—if he be in check—if in castling either of the squares he must traverse or go to be in check; or if the Rook with which he intends castling has been previously moved. Should you Castle in either of these cases, your adversary has the option of obliging you to play either your King or Rook.

No. XVII.

When you give check to the King you must always surprise your adversary of it, by saying "check," or he obliged to notice it, but may play elsewhere, as if check not been given. If also, after neglecting to say "check," the King should remain in that state for one or more moves, and on your then perceiving it you should attack a piece at the same time declaring "check," you can derive no advantage; for every move played since you really check the King must be recalled, and the original check provided.

No. XVIII.

Supposing you discover your King to be in check, and have remained so during two or more moves, without being able to ascertain how it first occurred, you are at liberty to retract your last move and provide for the check.

No. XIX.

Stalemate constitutes a DRAWN GAME.

No. XX.

If your adversary say "check," without at the same time giving check, and you should in consequence have your King or interposed a piece, you may retract the move provided you discover your error before he plays again.

No. XXI.

A Pawn advanced to the eighth square, or extreme rank of the board, may be replaced by any piece you choose to demand, except the King, or another Pawn. Thus you may have a second Queen, or third Rook, &c. though your Queen or Rooks are still on the board.

No. XXII.

Towards the end of the Game, if you remain with a small numerical superiority, you are bound to give Mate in fifty moves, or the Game must be relinquished as drawn. With greater force, as for instance with the Queen against the King, the same rule must be observed.

No. XXIII.

Should you undertake to win any particular position, and your opponent succeed in drawing it, you remain the loser.

No. XXIV.

Whatsoever false move or irregularity may have been committed, the other party can exact no penalty for it, after moving or even touching a piece.

No. XXV.

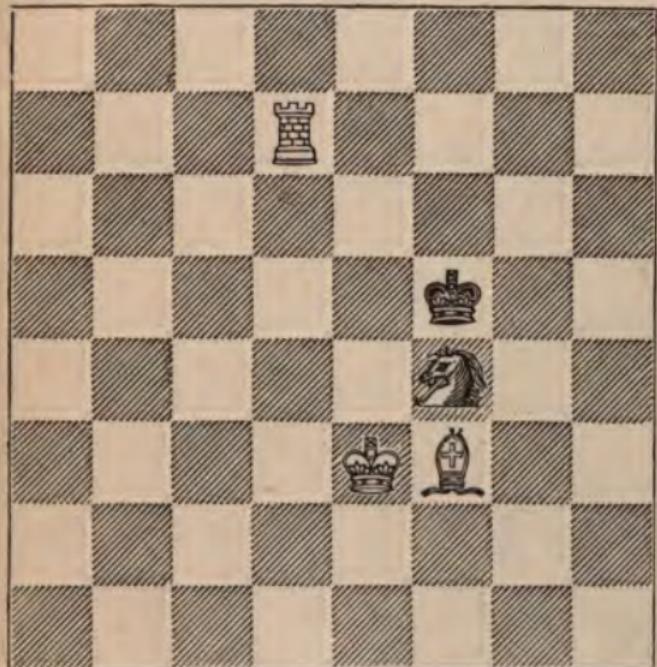

If any dispute should occur between players as to points of the Game for which the laws may not have provided, or

on which they are not considered sufficiently explicit, the question must be referred to a third party, whose decision ought to be received as a final settlement of the point in question.

C H E S S P R O B L E M S.

EDITOR having given no appendix of critical situations in
otherwise valuable work, the Editor has attempted to
supply the deficiency by the following Positions; none of
which have ever before been published in England.—He
selected them chiefly from contemporary German authors,
giving a fair specimen of the manner in which this pecu-
liar branch of Chess is developed in the North of Europe;
and confidently trusts that this collection will be allowed to
contain some of the most curious and ingenious Problems
ever printed.
