PREFACE

Colonialism is certainly one of the enduring concepts in human history. Because of its longevity as an analytical framework, however, *colonialism* has been understood in a variety of ways. Since the concept was formalized in the era of Greek settlements beyond the cities of their Aegean peninsulas, human societies have sent their citizens to distant lands, creating new iterations of their ways of life in distant settlements. Often in the process, one society sought to dominate another, extending political, economic, and sometimes even social power over another people. So common was this settlement and domination pattern in human history, the very term *colonialism* occasionally came to signify any sort of domination or assertion of control by one human group over another, often achieved by trickery and usually involving illegitimate means.

As a result of these varied definitions, *colonialism* has been used by historians, sociologists, political scientists, and many others as a concept to denote many different situations and conditions. Some begin chronologically by using the term to describe the extension of the range of early *hominids* outside of Africa into many regions of Eurasia. Still others have come to use the same concept in considering the sometimes overwhelming impact of new technologies on human life in the twenty-first century. Frequently these extended uses of the term *colonialism* offer politically satisfying characterizations of the human condition. At the same time, in an era of analytical frameworks that emphasize the importance of language and discourse in assigning meaning to the human past, it seems essential to be more pre-

cise in defining the scope and meaning of any work such as this that claims to be an encyclopedia of colonialism.

The assumption behind these volumes is that there is some considerable agreement among historians and other scholars about the conception of “modern colonialism.” This more specific idea is traceable to the development of particular patterns of settlement, control of external lands, and associated ideologies of domination that first found expression in Europe during the fifteenth and sixteenth centuries of the common era. Thus the entries in this encyclopedia overwhelmingly seek to explain colonialism as a phenomenon in world history since about 1400 C.E.

Frequently, and understandably given such a chronological focus, the concept of modern colonialism has been associated in the popular imagination with the rise of European imperialism and the creation of world-expanding empires. Indeed, *colonialism* is sometimes used as a pseudo-synonym for imperialism and empire. But these latter concepts are chiefly political, and as such they remain insufficient to explain fully the crucial issues of cultural domination that were alternately prized—and rejected—by various parties in the history of “modern colonialism.” Thus, this encyclopedia specifically sets out to treat cultural concepts and intellectual ideas as crucial to an understanding of colonialism in the modern world. But those explanations alone would not be adequate to assess the experiences of modern colonialism. Thus there are many entries in this encyclopedia that seek to deal with the geographic dimensions of colonialism, including the places that came to

be dominated by foreign societies as well as the national expressions of colonialism by various primarily (but not exclusively) European empires.

Both these cultural and geographic understandings would still remain incomplete considerations of colonialism without the inclusion of at least brief consideration of numerous individuals whose lives and work had a significant impact on the modern colonial experience. Making the selection of such individuals has been very difficult. Key imperial political leaders have, of course, been included, but so have some of those who led resistance to colonial power in a variety of ways and in widely scattered places. Thus many cultural defenders of colonialism, as well as some of their literary detractors, have found a place in this work. And a variety of intellectual conceptions related to colonialism and many of their exponents have a place here as well.

No doubt a few readers may be disappointed not to find even brief mention of some particular individual, concept, or even geographic location included. And no doubt there will also be differences of interpretation even between and among the scholars who have so skillfully provided entries for this encyclopedia. In any reference work of this kind there will certainly be such perceived problems. I seek only to reassure readers by saying that for the most part I believe these three volumes constitute a valuable introduction to the study of modern colonialism. In large measure the information contained here should only be seen as a starting point for those seeking information on the general subject or for any of the particular items discussed by the many authors. And it is to

those authors I would like to express my thanks for their commitment to this effort. Without their interest, shared experience, and determination to complete the task this encyclopedia would not be possible.

And there are inevitably others who have contributed greatly to this effort. The Editorial Board offered exceptional advice in helping to conceptualize the project and to make initial suggestions for topics that needed to be considered. Their broad experience and willingness to be of assistance literally made the entire project possible. I am also indebted to my assistant editor, Penny Sonnenburg, who read and reread much of the material, kept the project proceeding apace, and contributed significantly to bringing the encyclopedia to fruition in the final days of preparing the manuscript. Similarly, the staff of East River Books—and James Ciment, in particular—was invaluable in setting out the ancillary materials (timelines and documents, especially) that enhance the individual entries. And finally, a special word of thanks to the staff of Sherrod Library at East Tennessee State University for providing a most conducive working environment and much special assistance needed to make this encyclopedia a reality.

COLONIALISM

*An International, Social, Cultural,
and Political Encyclopedia*

A

Aborigines

Aborigines have inhabited Australia for over 50,000 years. Aboriginal culture was immensely diverse, with approximately 500 language groupings and a variety of lifestyles and religious beliefs existing on the eve of colonization. The common link among all Aboriginal groups was the centrality of land to religious, social, and economic life; Aboriginal culture was largely clan-based and highly ritualized. The British colonization of Australia spanned 150 years, beginning in New South Wales in 1788 and continuing into the far north of the continent into the 1920s. The British arrived in 1788 with no complex policy toward the indigenous people, and the continent was declared *terra nullius* (land belonging to nobody). Wherever explorers and settlers ventured, however, they came across indigenous groups. It was the historic Native Title judgment (*Mabo v. State of Queensland*, 1992) that overturned the legal fiction of *terra nullius*.

In the first half of the nineteenth century, pastoral expansion and competition for land and scarce resources such as water resulted in indigenous resistance, usually in the form of raids on stock and the destruction of crops, with violent reprisals from settlers. Smallpox spread, often ahead of settlement along main trade routes, and decimated clans. Once settlers arrived, venereal disease became a major cause of illness, death, and infertility among indigenous women. First-

wave missionary and humanitarian efforts to protect Aboriginal people in the 1840s failed. In the 1860s, so-called protection policies took the form of segregating the Aboriginal population on reserves. From the 1880s, government policies were designed to assimilate and absorb the “fading remnant” of Aboriginal people. The most insidious effect of this approach was the forced removal of children from their families, a practice that continued into the mid-twentieth century. Aborigines in South Australia were enfranchised in that territory in 1894 but were excluded from the federal franchise in 1902 and were not granted citizenship until 1967. Aborigines currently constitute 1.7 percent of the Australian population.

Absolutism

The nations of Europe set out to conquer the world for their respective leaders and impose European political forms on indigenous peoples. The first major model of colonial rule was an extension of the prevailing form of government in Europe itself—that of an absolutist monarchy. Throughout the Age of Absolutism (usually defined as the years

2 Abushiri

between 1648 and 1775), the rulers of early modern Europe fought among themselves for control of political and geographic areas. In theory, these rulers exercised complete control over their respective territories. As the modern European nation-state emerged, such absolutist figures and heads of state turned their eyes toward a wider world, particularly Africa and Asia.

Although colonial governments aspired toward the goal of improving the economic and social conditions of their colonies, the primary function of any colonial holding was to provide raw materials, prestige, and an open market for manufactured goods from the home country. It has often been argued that economies, social welfare systems, and basic human needs were disregarded in the quest for profit. The result was the development of colonial economies that quickly became dependent on the industrialized countries that promoted them.

At first, economic expansion and exploitation were the prime motives for colonial conquest by European nations. By the nineteenth century, however, ideological conditions, such as notions of supremacy and “racial” struggle and competition for world markets, pushed colonial expansion to a fevered pitch. In 1878, only a small portion of the coastal areas of Africa was claimed by Europeans. By 1914, the entire continent had been divided up among the various nations of Europe, all vying for control and economic superiority. As the cost of maintaining colonies increased, the original basis for colonial governance was forced to evolve as well. Though theoretically set up along an “absolutist” or totalitarian model, the majority of European colonial holdings could simply not afford the costs in money and manpower of maintaining complete control. Instead, they relied on a system of indirect rule, using a small number of privileged indigenous elites, endowed with power, to control a larger subordinate population. This system of authoritarian rule functioned precisely because of the advantages of superior technology, manpower, and political organization that the modern nation-state enjoyed.

For European nations, colonial empires were not simply a means of economic expansion; they also provided the framework for spreading European notions of politics, culture, and social norms. As a result, one of the unavoidable consequences

of colonial rule was the “Westernization” of colonial holdings and the blending of various aspects of European colonial rule with preexisting forms of government and societal norms. In the post-colonial era, a significant number of independent nations are struggling to find their own particular identities in the wake of decades or centuries of occupation under imperial powers. In the years ahead, these independent countries must continue to evolve along their own paths, freed from the yoke of their European absolutist fathers.

Abushiri

Abushiri was a popular uprising on the East African coast, triggered by the arrival of would-be German colonial officials in 1888. Following a series of armed expeditions in 1885 and 1886, the newly formed German East Africa Company laid claim to territory in the interior of East Africa. Its representatives further pressured the sultan of Zanzibar, the nominal sovereign of the coast, for control there, and in 1887, the company gained a concession to collect customs and tolls. Within days of establishing themselves in the coastal port of Pangani, however, the Germans sparked local riots due to their public behavior, in particular their desecration of a mosque. Disaffection quickly surfaced in other towns, and over the next several months, it gradually escalated into general rebellion. Many people later identified Bushiri bin Salim, a Pangani planter and caravan organizer, as the chief rebel leader and hence applied his name to the uprising.

The underlying causes of the rebellion were complex, and interestingly, they stemmed more from building tensions in the coastal society than from German intervention. Slavery became increasingly pronounced along the coast during the nineteenth century, as millions of captives were marched from the interior. Most labored within Swahili households, but as the region was gradually drawn into the world economy, a growing number were allotted to large Arab-owned plan-

tations. Some captives fled, establishing runaway communities in the hinterland. Many more, however, sought to improve their status through religious conversion and acculturation into Swahili society. Merchants and planters could not maintain control by force. Instead, they acted as cultural arbiters, relying on patronage of popular events and religious functions to reinforce their authority.

The German company's intervention simply tilted an already unsteady social and political balance. The customs concession compromised the elites. As much as they may have disliked the company, many did not wish to upset the political order by breaking the sultan's agreement. Moreover, most feared disorder might threaten their property. Thus, when urban crowds challenged them to defend Islamic and Swahili institutions against European intrusion, most elites failed to act. Better-organized rebel bands sought out German targets. But the bulk of the protestors, concerned more with local autonomy and social status, continued to lobby or harass planters and merchants. Initially, the German company, too, was unable to manage the rebellion, but the home government in Germany refused to let the company fail and within months provided considerable formal support. With gunboats, artillery, and Maxim guns, German military officers and African mercenary troops recaptured several rebel strongholds and thereafter declared a German East African colony.

Acadians

Acadians were people of French and Franco-German descent who lived in Acadia (now Nova Scotia) between 1604 and 1755. Acadians began to arrive from Brittany shortly after the French king Henry IV granted the land to the French Huguenot nobleman Pierre de Monts for the settlement of Catholic and Protestant soldiers, fur traders,

hunters, fishermen, and farmers. As most French men and women moved inland to Quebec over the next two decades, the British who arrived in Acadia took up joint residence with the few farming and fishing families that remained. James I went as far as to grant a renamed Nova Scotia to Sir William Alexander in 1621. Between 1632 and 1713, British and French royalty claimed and reclaimed the land seven times. All the while, the French Acadians and an emerging Franco-German minority made their presence known in the region. German Protestant and Catholic men arrived from Alsace-Lorraine, French coastal cities, and Switzerland as traders and soldiers in the early eighteenth century, and they married French Acadian women. Even so, Jesuit missionaries assured the demise of Protestantism. During the Seven Years' War (1756–1763), Acadians refused to pledge an oath of allegiance to Britain's King George. That refusal led to the dispersal of German and French Acadians to France, St. Domingue (now Haiti), the eastern seaboard of the American colonies, and Louisiana. Henry Wadsworth Longfellow romanticized their plight in his epic poem *Evangeline*.

Achebe, Chinua (1930–)

Born in Nigeria, Chinua Achebe is a fictionalist and essayist of the first order who has also had a significant impact on political developments in several parts of Africa. Always outspoken, Achebe has had a tremendous and global influence on educational trends—in literature, literary criticism, history, sociology, anthropology, political thought, and more. His first novel, *Things Fall Apart*, which sold over 3 million copies, is a literary success story of stunning proportions. It is reputedly the

4 Acheson, Dean

most widely read book in Africa and one of the most frequently seen works on university and high school reading lists all over the world; it has been translated into some fifty languages.

Achebe's writing has changed both the form and the language of the novel. He has replaced the conventional focus on individual protagonists with a new focus on the rhythm and life of the community. This allows him to explore the actions of the individual on society and the manner in which social customs affect the individual. The result is a fair-mindedness that can be found in only a handful of postcolonial writers. Achebe's language fractures the homogeneous English prose of the nineteenth- and early-twentieth-century novel by his use of proverbs, images, and linguistic rhythms of the Ibo, a Nigerian ethnic group in the south of the country. Yet his narrative remains intact and seamless. Among the staunchest defenders of the use of English to capture and convey African experience, Achebe has contributed to the enrichment of the language. He has provided new ways of looking at what happened in history and especially the period of colonization in Nigeria.

Acheson, Dean (1893–1971)

As U.S. secretary of state from 1949 to 1953, Dean Acheson was one of the chief architects of the international role played by the United States in the era that saw the decline of European colonialism and the rise of Third World nationalism.

Having been directly involved in U.S. foreign policy making since 1944, Acheson viewed world realities and trends mainly in the terms of the global power balance and the wider Cold War strategy. Thus, he was greatly concerned at the outset with the decolonization of Palestine and the independence of Israel, fearing that the Arab-Jewish conflict would be aggravated and Western influence in the Middle East endangered. As a realist, Acheson understood the inevitability of the self-

determination trend in the colonial world and the complexity of decolonization for the European powers. A true admirer of the British Great Power experience, he later defined the challenge of decolonization in his speech at West Point on December 5, 1962: "Great Britain has lost an empire and has not yet found a role."

At the same time, Acheson considered the close U.S. partnership with Britain and Western Europe as the cornerstone of America's global influence. Accordingly, he was very reluctant to antagonize the European allies by pressuring them to decolonize and instead advocated gradual colonial reforms and a search for accommodation between the metropolitan powers and the proponents of Third World nationalism.

Having been clearly sympathetic with the French in Indochina, Acheson advised Paris to show more political flexibility in Morocco and Tunisia. He also tried to stimulate negotiations between the British and the Mossadegh regime in Iran and sought a compromise outcome for the British troubles in Egypt in the early 1950s.

As a retired elder statesman in the 1960s, Dean Acheson advised several U.S. administrations. He was rather supportive of Portuguese rule in Africa and the white governments in South Africa and Rhodesia, perceiving them as islands of stability in the chaotic postcolonial developments on the African continent. These views reflected not only Acheson's Eurocentrism but also his deep distrust in the ability of Africans to govern themselves and his strong belief that the Europeans should effectively control the path to self-determination. Although Acheson's political opponents reasonably pointed out that his position hampered U.S. efforts to deal with the new nations, certain postcolonial realities, particularly in Africa (including widespread corruption, instability, economic and social disorder, and ethnic violence) have demonstrated that Dean Acheson was something of a visionary.

Aden

Aden lies opposite the Horn of Africa at the southwestern tip of the Arabian Peninsula, commanding the entrance to the Red Sea. Inland, a narrow coastal plain quickly gives way to highlands.

Aden became a dependency of the English East India Company in 1839, serving as a coaling station on the route from India to the Levant and Egypt. The islands of Perim, Sokotra, and Kamara were added to the colony later, and the British resident, or government agent, signed protective treaties with the numerous sultans, sheikhs, and *dawlas* (local leaders chosen on the basis of ability) of the interior.

In April 1937, Aden passed from the control of Britain's India Office to that of the Colonial Office, becoming a crown colony. Britain then increased its minimal supervision of the sultans and sheikhs of Aden's hinterland, signing treaties that required local rulers to accept British advice. The territories of the inland sheikhs were also formally grouped together as the Eastern Protectorate and the Western Protectorate.

After World War II, decolonization increased Aden's importance. Britain was looking for bases that would be secure against the threat of imminent decolonization. At first, it settled on Kenya, but accelerating events there led Aden to be preferred from 1961 as a location where forces could be stationed for intervention "East of Suez," as the British put it.

Two years earlier, in 1959, Britain had started restructuring the inland South Arabian protectorates as the Federation of South Arabia. The Colony of Aden was added to the federation in January 1963. By 1966, the plan was to move the federation toward independence in two years, with Britain retaining base rights. The reality was that trade unionism, Arab nationalism, Egyptian propaganda, and tensions between the tribal interior and the more developed port proved explosive. To make matters worse, the neighboring Yemen Arab Republic, or North Yemen, claimed the federation was historically South Yemen. Fueled by this explosive mix, events built up to a critical situation

in September 1965 when the Egyptian-backed Front for the Liberation of South Yemen (FLOSY) attacked both the National Liberation Front (NLF) and British troops.

Britain was unable to impose its authority, and by 1967, its Labour government was moving toward a January 1968 decision to withdraw from "East of Suez" in 1971. With the easing of Egyptian support for FLOSY, Britain turned Aden over to the NLF on November 30, 1967. Aden and the Federation of South Arabia now became the People's Democratic Republic of Southern Yemen—a Marxist, anti-Western, and relatively undeveloped nation. In May 1990, it unified with the Yemen Arab Republic to form the new Republic of Yemen.

Adwa, Battle of

On March 1, 1896, Ethiopian troops led by Emperor Menelik crushed an Italian invasion in the north of their country. The Battle of Adwa was a seminal event in African history, marking the first major disaster for a modern European army in Africa, securing Ethiopia's independence in an era of imperialist conquest, and inspiring generations of blacks around the world to resist oppression and domination.

Italy, a European country that was late to join the rush to acquire African colonies, had occupied the Red Sea port city of Mitsawa (in the territory that later became Eritrea) on February 5, 1885. The Italians prohibited the importation of weaponry to Ethiopia and began preparing to penetrate deeper into the interior. Due to rising Italian-Ethiopian tensions, Emperor Menelik met with Italian representatives in April 1889. On May 2, the two sides signed the Treaty of Wuchale, "a treaty of amity and commerce," with official versions in both Amharic and Italian. Article 17 of the Italian copy stipulated that Ethiopia *had to* pursue its for-

6 Afghanistan

eign relations through Italian intermediaries, but the Amharic text stated only that Ethiopia had the *option* of doing so. While diplomats scurried to clarify the matter, Emperor Menelik continued to import massive amounts of modern arms to strengthen his army.

In January 1895, Italian troops crossed the Mareb River into Ethiopia. Fearing further intrusion, Menelik called for a national mobilization on September 17. In early 1896, the Italian and Ethiopian forces met near the town of Adwa. Italian sources estimated there were 50,000 to 100,000 guns at Ethiopia's disposal, backed up with cannons, machine guns, and heavy artillery. On March 1, Italian commanders nevertheless sent 14,500 troops into battle against the well-armed Ethiopian army of about 100,000 men. Fighting began at 5:30 A.M., and by noon, 4,000 Italians and 2,000 of their African soldiers were dead, with another 3,230 wounded or held prisoner. By the end of the Battle of Adwa, Italy had lost 70 percent of its forces.

Ethiopia's victory guaranteed its independence during an era in which most of Africa and the rest of the non-Western world succumbed to European imperialism. But Ethiopia's triumph also deeply embarrassed Italy, leading to its 1935–1936 reinvasion of Ethiopia under the leadership of the Fascist Benito Mussolini—an event that again inspired blacks throughout the world and unwittingly contributed to the development of modern African nationalism in the 1940s and 1950s.

Afghanistan

Afghanistan is a landlocked, multiethnic Central Asian nation of 252,000 square miles astride the major trade routes connecting Central Asia and the Indian subcontinent. Over seventy different dialects are spoken there, although Dari (Afghan Persian) serves as a lingua franca. The ethnic groups are further subdivided into tribal affiliations, which exert heavy influence on political organization.

Afghanistan's location has made it a crossroads of trade and warfare since antiquity. First conquered by the Persians between 546 and 540 B.C.E., it was successively invaded by Alexander the Great, the Scythians, the White Huns, and the Turks. Islam became the dominant religion during the Arabic invasion of 642 C.E. The Mongols arrived in 1219, devastating the countryside and destroying several cities. Kabul served as a base of operations for the Mughal invasion of India by Babur in the early 1500s. With the Mughal decline, Persia again came to dominate the region.

The modern state of Afghanistan was established by Ahmad Shah Durrani following the 1747 assassination of the Persian ruler Nadir Shah. The nation quickly became a pawn in the great game of imperial rivalry. Fear of Russian expansion prompted an invasion from British India in 1839 to replace the ruling Dost Mohammad with the more tractable Shah Shuja. The effort failed; of the 4,500 men who invaded, only one Briton, surgeon William Brydon, made it back to British India. A second Afghan war began in 1878 with a similar objective. In this instance, the British managed to topple reigning Amir Shah Ali and place Abdur Rahman on the throne. In 1907, however, the British Raj took control of Afghan foreign policy.

Relations with British India were complicated by the nature of the frontier between the two countries. The Pushtun (also known as Pashtun or Pathan) tribesmen inhabiting the mountains of the frontier recognized the authority of neither government but tended to side with the Afghans for religious reasons. Several punitive expeditions were mounted against the Pushtun during the late nineteenth and early twentieth centuries; in virtually all, some evidence of Afghan complicity in risings of the Pushtun was discovered.

The third Afghan War in 1919 resulted in the elimination of British interference in Afghan foreign policy, and problems with Indian nationalism occupied an increasing amount of the Raj's attention. In 1926, Afghanistan proclaimed itself a monarchy rather than an emirate, but the modernization campaign of King Amanullah proved unpopular, and he was forced to flee the country in 1929. Ties with the Soviet Union were forged following World War II, bringing military and financial aid and a renewed modernization program. The monarchy was overthrown in 1973 by a mili-

tary coup, but the new ruling faction fell to a pro-Soviet coup in 1978.

This event initiated a civil war, which included an unsuccessful ten-year Soviet invasion of the country with over 600,000 troops. The United States supplied arms to the anti-Soviet fighters in one of the last episodes of Cold War confrontation. The threat of a common foe in the Soviet Union temporarily united the various tribal groups of Afghanistan into a jihad, but as soon as the Soviets withdrew in 1989, factional fighting resumed.

Out of this chaos emerged a Pushtun-dominated Islamic fundamentalist regime known as the Taliban (a name meaning “students of religion”), which came to control much of the country and most major cities and towns, although a small area in the Tajik northeast remained defiant under a coalition called the Northern Alliance. Strict Muslim rule was instituted, with women eliminated from public life, forbidden to practice medicine, and expelled from the nation’s schools. Extremely anti-Western, the Taliban provided safe haven for an number of Muslim terrorist organizations, chief of which was Osama bin Laden’s Al-Qaeda. On September 11, 2001, a series of major terrorist attacks took place in the United States, blame for which was placed on Al-Qaeda by the U.S. administration of George W. Bush. As a result, an undeclared war began ten days later, with a U.S.-led coalition conducting both air strikes and ground operations against the Taliban. By late fall, the Taliban had surrendered its control over the country and in 2002 was succeeded by an Afghan transitional government headed by Hamid Karzai.

Afrikaans

Afrikaans is the language that emerged in South Africa after the Dutch language, spoken by Dutch

East India Company settlers who arrived in the colony in 1652, was creolized to fit the grammatical structures of the languages of the indigenous Khoi, as well as later immigrants from South and Southeast Asia and others. Initially, native-Dutch speakers communicated with non-Dutch speakers in a Dutch creole; they then gradually borrowed words from the various languages of the polyglot Cape community until finally they began speaking a distinct Afrikaans language among themselves. Afrikaans has been called a kitchen language due to the frequent racial mixing among its speakers and the intimate household contact between white settlers, Cape Muslims (Malays), the Khoi, and others.

The earliest evidence of written Afrikaans—and an attestation of its creole origins—is an 1845 manuscript composed in Arabic phonetic script by a Cape Muslim, but until the late 1800s, Afrikaans remained largely a spoken language because most of its speakers were illiterate; those who were literate used Standard Dutch in official correspondence. From the 1870s on, Afrikaans blossomed into a literary language as white Afrikaner nationalists, opposed to British rule in South Africa, promoted it as a cornerstone of an independent, Afrikaner-ruled nation. Due to the common association of the Afrikaans language with South African apartheid, writing the history of Afrikaans has been as much a political endeavor as a linguistic one. Many Afrikaner academics under apartheid were obsessed with giving Afrikaans (not to mention the Afrikaners themselves) a pure European pedigree. Prominent theories advanced by these academics argued that Afrikaans derived from Dutch dialects of the southern Netherlands or that Afrikaans was based on the early Germanic languages; even those who acknowledged the influences of foreign languages held that the European heart of Afrikaans was unaltered. In 1976, an uprising against the forced use of Afrikaans in the black community schools of Soweto, near Johannesburg, sparked a widespread public resistance to apartheid that was the undoing of the ancien régime.

Contrary to popular belief, Afrikaans has more black speakers than white. In South Africa today, over 23 million people speak Afrikaans, and for one-third of these, it is their first language. As a result of South Africa’s occupation of Namibia for

8 Afrikaners

most of the twentieth century, Afrikaans is also the native tongue for 10 percent of Namibians and is the effective lingua franca for the rest of that country's 1.7 million inhabitants.

Agadir Crisis

The Agadir Crisis of 1911—also known as the second Moroccan crisis—was a dispute triggered by rival German and French claims to political and economic rights in the northwest African country of Morocco. Sparked by the arrival of a German gunboat in the Moroccan port of Agadir, the crisis was resolved through a series of negotiations that created a French protectorate over the territory in exchange for territorial concessions in other parts of Africa.

The proximate cause of the crisis can be traced to the beginning of the twentieth century. In 1901, Sultan Abd al-Aziz rose to power in Morocco. A Europeanized modernizer, the sultan introduced a series of reforms and new taxes that set off a series of revolts. In response to one of these revolts, the Germans dispatched the gunboat *Panther* to Agadir on July 1, 1911, ostensibly to protect Germany's economic interests there. The French—who, with the Spanish, had assumed joint control over Moroccan ports as a result of the Algeiras Conference of 1906—saw the German move as a deliberate provocation.

In fact, Morocco had been a source of dispute among the French, Spanish, and Germans since the beginning of the century. In 1904, France and Spain signed a secret agreement partitioning Morocco between them, a deal tacitly approved by London in exchange for Paris's acceptance of British power in Egypt. Germany, a rising economic and political power, resented being kept out

of North Africa. In 1908, however, Paris and Berlin negotiated an agreement granting France political sway over Morocco and giving Germany economic interests there.

But frictions continued, leading to the crisis of 1911. With tensions high, France, Germany, and even Britain began to contemplate a general war over Morocco. Nevertheless, the negotiations went on, and in November, France and Germany came to an understanding whereby France would be given a protectorate over Morocco in exchange for the cession of several strips of territory in the French Congo to Germany. Spain's objections were assuaged with the British-mediated Franco-Spanish treaty of November 1911, revising the border between the new protectorate and Spanish territory in northwest Africa.

The Agadir incident was one of a series of late-nineteenth- and early-twentieth-century crises pitting European imperial powers against each other in which war was narrowly averted through negotiations and treaties, some open and some secret. The skill of European diplomats at Agadir and elsewhere created a widespread but ultimately false impression that the rising tensions among the imperial powers could be deferred indefinitely through negotiations—an impression that contributed to the descent into World War I less than three years after Agadir.

Aguinaldo, Emilio (1869–1964)

Emilio Aguinaldo was a key figure in the revolution against Spain (1896–1898), president of the independent Philippine government established in 1898, and commander of the Filipino forces in the Philippine-American War (1899–1902). A child of local elites, he was born in 1869 near Cavite, Luzon, south of Manila. He was educated at the College of San Juan in Letran and then turned to local politics. He won elections and quickly reached the highest municipal post in his hometown.

Aguinaldo became dissatisfied with Spanish colonial rule and in 1895 joined the Katipunan, a

Emilio Aguinaldo led a three-year revolt after the United States occupied and annexed the Philippines in the wake of the Spanish American War of 1898. (Library of Congress)

secret society that aimed at liberation of the islands. During the initial phase of the revolution in 1896, Aguinaldo got into a power struggle with the leader of the Katipunan, Andres Bonifacio, and emerged as head of the revolutionary movement.

As the military tide turned against the revolutionaries, Aguinaldo went into exile in Hong Kong in December 1897. With the beginning of the Spanish-American War in May 1898, he returned, resumed leadership of the struggle for independence, and quickly established control over the island of Luzon. By June, Aguinaldo returned from exile in Hong Kong with the U.S. forces and declared himself president of a newly independent Filipino government. On June 12, 1898, he proclaimed an independent Philippine Republic.

Aguinaldo assumed that the U.S. government had brought him to the islands because American leaders, including Adm. George Dewey (who destroyed the Spanish fleet in Manila Bay), had promised his country independence if he joined U.S. forces in defeating the Spanish. But after the Spanish-American armistice, he grew resentful of the Americans' behavior, as he and his men were

ordered to stay out of Manila, were isolated from the decisionmaking, and were insulted by racial slurs.

The increasing tensions culminated in open defiance. Aguinaldo and his followers organized a government at Malolos, wrote a constitution, and reproclaimed the Philippine Republic in late January 1899. By February, the first clashes occurred between his troops and the U.S. Army. After Aguinaldo was captured in April 1901, he took an oath of allegiance to the United States, called on his troops to surrender, and retired to private life. The Philippine-American War continued even without his leadership for more than a year. In later years, he acquired large landholdings and played an important role behind the scenes in Filipino politics. Two attempts to reenter politics formally, however, were failures. During World War II, he collaborated with the Japanese occupation. Aguinaldo died in 1964.

Alaska

Alaska (a name taken from the native Aleut word meaning “Great Land”) was first detected by Siberians in the early sixteenth century. Russian interest stemmed from the reports of the *promyshlenniki* (trappers and hunters) who were searching for fur-bearing mammals after they had depleted stocks in Siberia and Kamchatka. The Russian czar dispatched the Danish mariner Vitus Bering to investigate the potential for colonial expansion in the new continent. Dense fog foiled the initial expedition in 1728, but the second one in 1741 reached landfall below Mount St. Elias in the Gulf of Alaska. After years of seasonal voyaging, the Russians settled at Three Saints Bay near Kodiak in 1784. This was Alaska's first colonial capital until 1806, when the Russian-American Company relocated to the more abundant sea otter grounds

at Sitka. The fierce competition between Russian, American, and British hunters depleted the sea otter to near extinction, and whales and land mammals (primarily bears, wolves, and fox) were overhunted as well. This decline in animal population, coupled with the political aftermath of the Crimean War (1853–1856), motivated the Russians to sell Alaska to the United States in 1867. During their rule, the Russians fought with the native Alaskans but never conquered them. Isolated communities of orthodox “Old Believers” still exist today, particularly in the Aleutian archipelago.

Two periods of concurrent, specialized, and destructive resource exploitation occurred in Alaska between the cessation of Russian control and the granting of U.S. statehood in 1959. The first involved the pursuit of salmon, which began in 1878 when the Americans built a cannery in Sitka; for the next decade, the salmon catch was the largest in the world. Minerals were the objective in the second period. Prospectors discovered gold in southeast Alaska in 1880 and again in the beach sands of Nome, which yielded the metal in significant amounts from 1898 to 1906. Between 1911 and 1938, copper ore in the Wrangell Mountains triggered yet another rush.

Russian and American colonial rule in Alaska differed from that in other areas because the seasonal nature of this highly specialized resource extraction discouraged the building of families and communities. Except for the failed Glory of Russia agricultural settlement near Yakutat (1796) and the Matanuska Colony of the Americans (1935), the home governments did little to support traditional pioneer or colonial settlement. The nonindigenous population was irregularly distributed across a vast landmass and was overwhelmingly male. Although the genocide so common elsewhere in the Americas was absent, the native Alaskans were mostly overlooked as laborers and therefore accumulated little capital. The decline of the salmon, gold, and fur industries and America’s World War II military buildup in Alaska from 1940 to 1942 combined to eclipse the colonial period.

Albania

Located in southeastern Europe, Albania is a small sovereign country—roughly 11,000 square miles, with a population of 3.5 million—situated on the Adriatic Sea, surrounded by Yugoslavia to the north, Macedonia to the east, Greece to the south, and the Adriatic to the west. At the same time, greater Albania encompasses some 5 million ethnic Albanians, of whom approximately 1 million live in the Kosovo province of Serbia and half a million in Macedonia.

Colonized by Greece in the seventh century B.C.E. and turned into the Roman province of Illyria in the second century B.C.E., Albania became part of the Byzantine Empire with the fall of the western Roman Empire in the fourth and fifth centuries C.E. Over the next millennium, the region would be ruled by Slavs, Normans, Venetians, and the Kingdom of Naples.

Beginning in the early fifteenth century, Albania was periodically invaded by the Ottoman Turks. Though the Turks were successfully repulsed by the great Albanian leader Gjergj Kastrioti (1405–1468), also known as Skanderbeg (from Alexander the Great and bey, a title of Islamic leadership), the territory eventually fell to the Ottomans in 1478. It would remain part of the Ottoman Empire until 1912, when, as a result of the First Balkan War, it gained its independence under the tutelage of Italy and the Austro-Hungarian Empire.

The 450 years of Ottoman rule were critical to the development of Albanian identity. From the late fifteenth century on, the Turks pursued a systematic policy of Islamization, eventually converting about two-thirds of the population; of the remainder, two-thirds retained their allegiance to the Eastern Orthodox Church and another one-third held on to their Roman Catholic faith. At the same time, Ottoman control of Albania prevented the country from participating in the European Renaissance and Enlightenment, keeping it a nation apart from much of the rest of Europe until the twentieth century.

Under Ottoman rule, Albania became a feudal state in which lords, loyal to Istanbul, were rewarded with vast estates where they held virtually absolute political and economic authority. With the decline of Turkish power in the eighteenth and nineteenth centuries, many of these lords broke

free of central authority. At the same time, the rise of nationalism in the Balkans infected the Albanians, leading to an ever more vital independence movement in the late nineteenth and early twentieth centuries. In 1878, Albanian nationalist leaders formed the Albanian League, which was crushed three years later by the Turks.

The rise to power of the reformist Young Turks in Istanbul in 1908 led to talk of democratic reforms for Albania. Although the new Turkish government ultimately failed to carry out these reforms, the unrest in the capital resulted in a new armed struggle by Albanians from 1910 to 1912. Fearing a sovereign Albanian state that might make claims on their own territories, Serbia, Montenegro, and Greece declared war on the Ottoman Empire, with the aim of partitioning Albania among themselves. But continued Albanian resistance forced these powers to accept an independent Albanian state, declared at Vlorë on November 28, 1912.

Occupied by the Allies in World War I, Albania became a monarchy under Italian protection in 1924 but was annexed by Rome in 1939. Communist resistance to Fascist rule under partisan leader Enver Hoxha led to the creation of a Socialist republic in 1946. Among the most totalitarian states of the Cold War era, Albania was kept isolated from the world—even the Soviet Union—until Hoxha's death in 1985 and the fall of communism in the Balkans in 1989 and 1990.

A 1998 rebellion by irredentist Albanians in Kosovo led to repression by the Serb government, which, in turn, resulted in a war against Belgrade in 1999, organized by the North Atlantic Treaty Organization (NATO). The repression and war saw hundreds of thousands of ethnic Albanians fleeing Kosovo for Albania and Macedonia, creating tensions there with the Macedonian majority. With Yugoslavia's surrender in June, 50,000 NATO troops were dispatched to Kosovo, even as the Serbian minority in the province was largely driven out by Albanian nationalists.

Alexander II (1818–1881)

Alexander II of Russia (r. 1855–1881), oldest son of Nicholas I, was groomed for the throne. He helped supervise Russian military schools and undertook diplomatic missions for his father, including a trip to Siberia (1837–1838). He also helped Russia fend off the revolutionary repercussions of events in midcentury Europe. As czar, Alexander ended Russia's involvement in the Crimean War and then began a series of political and social reforms, known collectively as the Great Reforms. These measures included the emancipation of the serfs, for which Alexander earned the title "czar-liberator." Other reforms modernized local government, the judiciary, and the military. However, not all of his reforms were liberal. Although the inviolability of Finnish institutions was reaffirmed in 1859, the Poles were subjected to a campaign of Russification in 1863, designed to strip them of cultural and political autonomy. Alexander was assassinated by terrorists on March 1, 1881.

Under Alexander, Russia divested itself of its North American holdings. It sold Alaska to the United States in 1867 and abandoned its exploration of the Pacific. Instead, the empire concentrated on expanding into Central and East Asia. The Khanates of Kokand, Bokhara, and Khiva were annexed between 1865 and 1876. In 1881, Russia acquired the remainder of the Trans-Caspian region. In the east, treaties with China in 1858 and 1860 ceded to Russia large territories in the Amur-Ussuri region, and in 1875, Russia acquired Sakhalin Island from Japan in return for its Kurile Island holdings.

Algeciras Conference

The 1906 Algeciras Conference was called by the sultan of Morocco at the request of Germany and France after Germany had reported the French monopolistic intentions vis-à-vis the Moroccan economy. The conference took place in Algeciras, Spain, between January 16 and April 7 and was

12 Algeria

attended by representatives of Germany, France, Austria-Hungary, Belgium, Spain, the United States, Italy, the Netherlands, Portugal, Russia, Sweden, and Morocco. The conference confirmed the independence and integrity of the Cherifien Moroccan empire. It also established that the area should be equally open to all countries for commercial and financial purposes, and France's special rights over Morocco were acknowledged. Spain, willing to enter Morocco "in a pacific way," made a secret partnership with France. Madrid also accepted France and Britain's secret agreement to consolidate their shared privileged position in Morocco. The main points of the agreement referred to the Moroccan police, who were to be organized under the authority of the sultan while Moroccan troops were to be trained by Spanish and French officials and placed under the supervision of a Swiss official resident in Tanger. Moreover, the agreement founded the Bank of the State in Morocco (presided over by a French official), and it established that European residents were obliged to pay the so-called *tertib*, or system, tax. Under this agreement, France was to be in charge of patrolling the border between Morocco and Algeria, and Spain received both recognition of its domains in the Rif region and the control of the ports of Larache, Tétouan, and Tanger, the latter shared with France. The bombing and occupation of Casablanca by France on August 5, 1907, rendered the Algeciras Act moot.

Algeria

Conquered over the course of its history by Carthaginians, Romans, Vandals, Byzantines, Arabs, and Moors, the area that would come to comprise much of modern Algeria fell under the Ottoman Empire in 1518. A French colonial interest in the area began in 1830 and continued apace over the next several decades until France controlled most of the region. Sporadic rebellions against colonial rule occurred throughout the nineteenth and early twentieth centuries, with the French retaliating by confiscating many of the

richest, most fertile lands and granting them to an expanding settler population, known as the *colons* or *pied noirs* (black feet). Algeria ultimately came to be seen not so much as a colonial possession but as an integral part of metropolitan France itself—a concept fueled, in part, by an expanding population of about 1 million colons, who exerted a huge influence not only on the administration of Algeria but also in French politics.

The fall of France in the summer of 1940 and the November 1942 Allied landings in Algeria stoked nationalist ferment, even though at the time Vichy and, later, Free French authorities in Algeria rejected concessions to Algerian nationalists. The final Algerian revolt against the French began on November 1, 1954, when the Algerian National Liberation Front (FLN) launched what would become the first sustained struggle against European rule in Africa. A violent and savage war ensued. The French-Algerian War (1954–1962) was a major event in the modern history of decolonization. It stirred deep feelings not only in Algeria and France but also throughout Africa, the Middle East, and much of the Third World, where it galvanized nationalist movements. Independence came on March 18, 1962, but Algeria was left a war-torn, impoverished nation, with the number of Algerian dead estimated to be anywhere from 250,000 to 1 million. In addition, perhaps as many as 2 million people were left homeless, which would have profound consequences for the future of the new state.

Ali, Muhammad (d. 1848)

Was Muhammad Ali "that Albanian tyrant" or the "father of modern of Egypt"? Historians argue this point, but most agree Muhammad Ali played an important role in Egyptian history. As regards colonialism, he was the architect of a large, albeit short-lived, Egyptian empire. Although a self-described "Ottoman gentleman," Muhammad Ali was born Albanian. He worked as a merchant before entering the more lucrative field of soldiering.

Joining a battalion of mercenaries, he arrived in Egypt, took advantage of turmoil following the 1789 French invasion, and rapidly rose to power. By 1805, a reluctant Ottoman government appointed him *wali* (viceroy), recognizing his de facto control of Egypt. Muhammad Ali viewed a centralized government and a powerful military machine as the twin pillars of the state. He supported innovation and the importation of Western ideas, where such might enhance his control. His long-term goals centered on the creation of a dynasty and an Egyptian empire.

At first, all seemed possible, as his Western-style army marched into Arabia, Syria, and the Sudan. Although a European coalition forced him to disgorge his Middle Eastern conquests, north-east Africa remained part of his Egyptian empire. There, Muhammad Ali directed forays into areas as far apart as central Sudan and Eritrea. Originally looking for gold, the Egyptian conquistadores generated state revenues mainly from the trade in slaves and ivory. More important, Muhammad Ali's strategies focused Egyptian energies on the Sudan. This became Egypt's major colony and attracted considerable attention from every subsequent ruler until Egyptian administration came to an end in 1885 with the arrival of the British.

Allenby, Edmund (1861–1936)

Field Marshal and First Viscount of Megiddo, Edmund Henry Hynman Allenby was a British military leader and statesman who contributed significantly to his country's imperial policy in South Africa and the Middle East. He was also the first European commander to capture Jerusalem since the Crusades.

Edmund Allenby was born on April 23, 1861, in a family estate at Brackenhurst, Nottinghamshire, England. After repeatedly failing to enter the Indian Civil Service between 1878 and

1880, Allenby graduated from the Royal Military College at Sandhurst (1882) and entered military service as a cavalry officer. He served in the Sudan in 1884 and 1885 and participated in military expeditions in Bechuanaland and Zululand in South Africa. During South Africa's Boer War of 1899–1902, Major Allenby commanded a mobile cavalry column in the advance on Bloemfontein and acquired a reputation in the British army for his skills in protecting convoys and operations against the local guerrillas.

Promoted to major general, Allenby took various commanding cavalry assignments after 1902 and served in France during World War I. In June 1917, he was sent to Egypt to take command of the British Expeditionary Force.

Allenby's organizational and command skills and his energy did much to transform British, Australian, New Zealand, and Indian contingents into a formidable striking force. From October 1917 to September 1918, the British and imperial troops under Allenby won a succession of victories over the Turks in Palestine, including the capture of Jerusalem on December 9, 1917.

During the Palestine campaign, Allenby supported the irregular raids against the Ottomans made by the Arabs under Thomas E. Lawrence, also known as Lawrence of Arabia. The spectacular victory at Megiddo (in September 1918) allowed the British and the Lawrence-led forces of the sheriff of Mecca to capture Syria, including Damascus and Aleppo. These victories contributed significantly to the final defeat of Turkey.

Allenby was knighted in the middle of the war and thereafter received other awards as well as being raised to the peerage and promoted to field marshal. From 1919 through 1925, as a high commissioner for Egypt and the Sudan, Allenby showed both tact and firmness in dealing with the rising nationalist aspirations of the local population. As a chief British proconsul in the Middle East, he tried to stay apart from local political and religious strife and animosities, concentrating on the key imperial interests in the region.

Allenby contributed a great deal to Egypt's transformation from British protectorate to formal independence (1922), while at the same time preserving British defense and communication assets there. Nevertheless, he was unable to escape completely involvement in Egypt's volatile

Field Marshal Edmund Allenby leads British troops through Jerusalem's Jaffa Gate in 1917. The British seized the city and surrounding Palestine from the Ottoman Empire during World War I. (Library of Congress)

domestic affairs. In 1923, he was rather successful in promoting the parliamentary regime in the country. But after the governor-general of the Sudan, Sir Lee Stack, was murdered in Cairo in

1924, Allenby decided to put on a large-scale show of force and enact punitive measures without waiting for instructions from London. His actions sparked much controversy in Egypt as well as in

Britain and finally forced him to resign. Edmund Allenby died in London on May 14, 1936.

Alsace-Lorraine

Alsace-Lorraine (known in earlier times as Lotharingia, Bas-Rhin, and Haut-Rhin) is a German province located between the Vosges Mountains and the upper Rhine River. Germans, Gauls, and Celts had occupied the area prior to the takeover by the Romans in 56 B.C.E. In fact, by the first century C.E., over half of the families there had Celtic surnames. Under Roman rule, Alsatians adapted their cultural traditions and government to fit Roman guidelines.

Long after the Fall of Rome, the French gained control of the area. The first French intendent, Colbert de Croissy, arrived in 1662. Bourbon kings may have owned Alsace-Lorraine, but they gave Alsatians political and ecclesiastical control. Huguenot refugees thus sought freedom in Alsace after 1680. During the French Revolution, the people of Alsace-Lorraine developed their current political culture.

In 1871, Alsace-Lorraine became part of the German Empire. Provincial deputies openly protested this annexation whereas local town and rural leaders favored a regional vote on the issue, believing that they should have the right to accept or reject annexation based on the will of the people. Notwithstanding, German chancellor Otto von Bismarck mandated annexation without representation. A year later, about 50,000 people left Alsace for France, and thousands of Germans took their place. Working within the German political system, Alsatians gained the right to have legislative representatives. They also achieved the right to bilingual education and local control of taxation, law enforcement, and judges. Germany changed Alsace's status from one of a provincial territory to a state in 1918. Ironically, an Alsatian plebiscite

produced a result calling for the return of the area to France in that same year. Throughout history, though they were governed by French and German leaders, Alsatians persisted in seeing themselves as a distinct people.

American Revolution

The American Revolution, a conflict between the American colonies and Great Britain, was fought from 1774 to 1781 and resulted in the end of the first British Empire. It also challenged the political, economic, and legal foundations of colonialism. Employing John Locke's argument from *Two Treatises on Government*, the colonists contended that a long train of abuses committed by King George III and Parliament had created a situation in which the contract between the people and the government had been breached. The loss of American lives, liberty, and property required the formation of a new form of government based not on the arbitrary rule of a hereditary monarch but on the consent of the people. Thomas Paine, in *Common Sense*, argued that the violations of traditional English rights and liberties required the colonists to separate from the homeland to rectify the situation.

The primary source of tension between Parliament and the colonists involved a series of acts, passed between 1763 and 1775, that placed economic restrictions on Americans. Although the Navigation Acts had been in effect since the rule of Oliver Cromwell, opposition to the authority of Parliament remained dormant until the passage of a series of measures designed specifically to benefit the British government at the expense of the colonies. The much hated Stamp Act, which placed a duty on items ranging from legal documents (such as marriage and death certificates) to playing

A group of colonists in Boston burn stamps in August 1764 in opposition to the Stamp Act, which required that official stamps be purchased and placed on documents and other items. The British imposed the taxes to help pay the costs of defending the colonies. (Library of Congress)

cards and dice, encouraged resistance. Colonial reaction forced Parliament to repeal the measure—but not without passing the Declaratory Act, a measure that reaffirmed the authority of Parliament to legislate over the colonies in all cases. In 1767, the British government also passed the Townshend Duties, placing a tax on essential products such as glass, lead, paper, paints, and tea. The colonists responded by initiating a policy of nonimportation, and economic pressure forced the removal of all of the duties except that on tea. The East India Tea Company received a monopoly to sell tea in the colonies at a low price that included a parliamentary tax, forcing the colonists to boycott the product in order to support their demand for no taxation without representation. After the Boston Tea Party, the British government disbanded the Massachusetts legislature, an act that raised suspicions and doubts about the future form of government in the other twelve colonies. Another boycott of British goods resulted in the passage of the Prohibitory Act, designed to force the American colonies into submission. The continued economic and political coercion exercised by Parliament against the colonists resulted in the calling of a continental congress, a move that led to a declaration of independence the following year. Thomas Jefferson stated the legal reasoning behind the forced separation of the homeland and the colonies. He argued that the contract between the people and the government had been violated and that a new system of government, composed of free and independent states, had to replace the former colonial administration. The legal argument set forth in the Declaration of Independence set an example for subjugated peoples around the world as they, too, pursued freedom over the course of the next two centuries.

Americans, Native

Colonization radically altered the political organizations, social relations, and worldviews of indige-

nous peoples throughout North America. Initially, many European nations established colonies on this continent; later, in the nineteenth and twentieth centuries, two North American nations—the United States and Canada—extended and refined colonial strategies and imperial projects as settler states.

Native Americans are commonly taken to be a single people with a common cultural heritage, but this conception is itself a colonial by-product. Historically, several hundred distinct peoples lived in North America, speaking nearly as many languages. They displayed great diversity in economic, political, and social organization: some foraged, and others farmed; some were deeply egalitarian, others were highly stratified; some founded confederacies rooted in democratic ideals, and others forged centralized chieftainships.

In spite of this diversity, Native Americans have a common experience of colonialism. Europeans and, later, Euroamericans dispossessed indigenous peoples, appropriating lands and resources as they assembled empires and nations. Individuals and institutions sought to secure these ends through both the eradication and the assimilation of Native Americans. On the one hand, indigenous communities endured disease and massive depopulation, military campaigns, loss of autonomy, forced removal, and resulting social problems. On the other hand, an array of policies and projects—most notably missionaries, compulsory education, economic dependence, legislation prohibiting traditional practices, and citizenship—were designed to incorporate and absorb Native Americans. Oddly, indigenous peoples have always figured prominently as imagined icons, central to efforts to formulate national identities, moral narratives, and social relations.

The latter half of the twentieth century witnessed a resurgence within Native America, marked by ethnic renewal, political activism, cultural revival, reassertions of treaty rights, and demands for cultural and political sovereignty. More than 500 years after Christopher Columbus arrived in the Americas, indigenous peoples remain marginal and subjugated, struggling against colonial legacies to define themselves and reclaim their dignity.

Angola

Although formal colonialism did not commence in Angola until the 1890s (ending in 1975), the peoples of Angola began interacting with the Atlantic world in the 1480s when Portuguese navigators arrived. The Portuguese converted the king of the Kongo people to Catholicism, along with many of his subjects. However, rumors of silver mines in the interior and the growth of the slave trade soon led Lisbon to pursue a more aggressive policy. The Portuguese king granted Paulo Dias de Novais 140 miles of coast south of Kongo, with the right to conquer the interior. Dias founded Luanda in 1575 and launched wars of conquest that lasted until 1680. The Portuguese found no silver but gained

toeholds on the lower Kwanza River and the Malanje highlands.

Slaves were Angola's main export, followed by wax, ivory, and copper. The Portuguese sometimes raided for slaves but usually bought them from African states. Over time, the expansion of the slave trade destroyed some states but raised up others. Kongo, for example, grew during the first two centuries of the trade but declined in the seventeenth century. The Mbundu state of Ndongo rose with the slave trade but was destroyed in the seventeenth century, to be replaced by Kasanje. Farther east, the Lunda state became a major slave supplier in the eighteenth century. When the Europeans partitioned Africa, Portuguese claims to Angola were confirmed. However, armed resistance to Portuguese rule continued until 1930.

Formal colonization converted the Luanda Creoles into mere adjuncts to the new colonial masters and created other elites—both Mestizo (of mixed African and European descent) and African—who challenged Creole supremacy. In Luanda, a commer-

United Nations soldiers patrol the Angolan capital of Luanda in 1999. Angola, a Portuguese colony until 1975, was torn by civil war from independence until the early twenty-first century. (Associated Press)

cial and administrative Creole elite arose—Portuguese-speaking, mixed-race, Catholic, and cosmopolitan. Traders acting on behalf of this elite bought slaves at markets in the interior.

Under colonial rule, Africans were legally compelled to work. They could become farmers in the colonial economy or hire themselves out as laborers to Portuguese concerns, the most successful of which were coffee plantations in the Kongo area. The Ovimbundu of central Angola had to seek employment on the coffee plantations, since their home area could not sustain their large population. Those Kongo who did not toil as farm laborers sought work in the Belgian Congo. Some became substantial in business and in plantation agriculture.

Colonial rule reinforced the gap between the Creoles of Luanda and Africans of the interior. As the Portuguese-speaking Catholic Creoles lost ground to the new colonial elites, they sought to maintain their superior status by stressing the traits that set them apart from other Angolans. Inland, influences from foreign Protestant and Catholic missionaries and from the other colonies where many worked outweighed influences from Luanda. Each of the first generation of nationalist leaders—Agostinho Neto, Holden Roberto, and Jonas Savimbi—came from Protestant mission schools. The first two liberation movements—Roberto's Frente Nacional para a Libertação de Angola (FNLA) and Neto's Movimento Popular de Libertação de Angola (MPLA)—represented the interests of the Kongo elites of the north and those of the Luanda Creoles and their Mbundu allies, respectively. The FNLA considered the MPLA disconnected from the "real" Africa, even though some MPLA leaders were black Africans. The third movement, Savimbi's União Nacional para a Independência Total de Angola (UNITA) represented the Ovimbundu, Angola's largest ethnic group at 37 percent of the population, which was underrepresented among educated Angolans.

Animism

The term *animism*, derived from the Latin *anima*, meaning "soul" or "breath," is applied to beliefs that attribute a soul or spirit to everything in nature: animate or inanimate. For the animist, prayer is addressed to spirits rather than gods, and ancestor worship is prominent. The dead are believed to remain among the living and communicate with them through dreams and possession. Animistic religions aim to placate spirits through a wide variety of rituals. Prevalent are rites connected with basic human needs: a good harvest, fertility, and health.

Evidence of animistic beliefs long held by human beings has been found on all continents. And though a vast majority of people now are affiliated with theistic religions, they have not necessarily discarded animistic beliefs. In part because of the influence of colonial conversions, people may turn to Judeo-Christian faiths or Islam when seeking answers to metaphysical questions yet consider organized religions irrelevant when it comes to problems of everyday life. Influenced by Sir Edward Burnett Tylor's 1871 study *Primitive Culture*, many scholars once held that animism represented a primitive, or lower, belief system, which was superseded by more advanced, higher religions. Many now question this view as an artifact of a colonial mentality and, not infrequently, a racist judgment.

Anticolonialism and Anti-Imperialism

Although the term *colonialism* overlaps *imperialism*, the latter is a much wider concept. Imperial relationships have been pervasive throughout history, whereas colonialism has arisen as an exception

One of the earliest and most articulate anticolonial exponents was Thomas Paine, a radical British printer who migrated to the American colonies in the 1770s and supported both the American and French Revolutions. His freedom-extolling Rights of Man pamphlet has been translated into numerous languages, including German. (Library of Congress)

resulting in a form of conquest, if the term is limited to the issue of control over territorial areas. (Imperial economics or the colonization of certain economies is another question.) The notion of modern colonialism implies a domination of an external power over an indigenous population and its territory. The colonial power subjugates so-called peripheral societies. Thus, for historian Jurgen Osterhammel (1997), “*Colonialism* is a relationship of domination between an indigenous . . . majority and a minority of foreign invaders.” The colonial power considers itself superior and imposes the rules, decisions, and conditions under which the colonized lived. Though imperialism refers to relationships of domination and subjugation to a metropolitan center, it does not necessarily involve the acquisition of colonies. Despite these distinctions, however, the terms *colonialism* and *imperialism* are often ambiguous and used interchangeably.

In the modern era, anticolonialism and anti-imperialism have existed from the first encounters of Europeans with the non-European world. Anticolonial movements rose up in response to the European colonial states; British North American colonies sought independence to decolonize themselves from the British Empire. In turn, Native Americans resisted the colonization process of America’s westward expansion. At the other extreme, some would argue that the protests outside the World Trade Organization meetings in Seattle in 1999 constituted a form of anti-imperialism.

Marc Ferro has pointed out that many histories of colonization ignored the anticolonial protests, creating a legend of legitimacy and a somewhat benign intervention. These traditional histories, “drawn from the archives,” frequently disregarded the indigenous perspective, especially if there were no written records of this perspective. However, anticolonialism was present in Bartolomé de Las Casas’s narratives against Spanish rule in the Caribbean, in the Quaker movements against slavery and the nationalist movements of the twentieth century, and in the writings and rhetoric of Mohandas K. Gandhi, Emilio Aguinaldo, José Martí, and Frantz Fanon. Thus, anticolonialism existed from the first encounters, to the violence on the frontiers of European expansion, to the resistance to colonial occupation, and through to the demise of European political power and territorial decolonization.

In the modern period, the process of decolonization passed through three broad phases, each inspired and led by anticolonial movements. First, there was the period after 1776 and U.S. decolonization through to the decolonization of the Spanish American territories in the 1820s. Second, there was the phase that saw the conversion of the settled colonies into states and dominions in Canada. Third, there was the period from the Irish home rule movement culminating in 1922 through to the decolonization of Asia and Africa, which followed World War II. Writers and activists such as Thomas Jefferson, Thomas Paine, and Simón Bolívar helped inspire this anticolonialism. These individuals had long-lasting influences even though, in the case of Jefferson, the United States itself became a colonial power at the close of the nineteenth century. During the twentieth century, the writings of J. A. Hobson, Vladimir Lenin, and President Woodrow Wilson inspired nationalist movements across the globe.

Many factors are pertinent in the processes of decolonization. Apart from imperial defense and economic interests, there are, among others, the leadership, strength, and goals of the anticolonial movements and the influence of anticolonial powers such as the United States and the Soviet Union. The nationalist movements in India led by Gandhi and Jawaharlal Nehru, the efforts in Indochina led by Ho Chi Minh, and the individual movements across Africa should be given primary importance. And leaders and adherents in several of these movements looked to Washington or Moscow for moral support. The ambiguous support offered by the superpowers was tempered by Cold War conditions. Ultimately, the Non-Aligned Movement, seeking a third path through the Cold War, called for a quick end to colonialism in 1955.

Self-determination and nationalism became key concepts in the anticolonial movements through the twentieth century. The primary functions of the colonial state were to maintain order and sustain the credibility and prestige of the colonizer, vis-à-vis not only the indigenous populations but also its colonial rivals. But colonial rule was increasingly seen as illegitimate in the age of global nationalism. In addition, the concepts of nation and nationhood were frequently part of an “invented tradition” that did not exist prior to the unification of the colony during the process of colonization.

World War II profoundly affected the European colonial grip on Asia and Africa. Anticolonial movements were inspired by Japan's relatively easy defeat of the European powers in Southeast Asia early on in the war. However, it soon became clear that Japan's occupation was no less colonial, even if its rule was not so all-encompassing. Thus, anti-colonialism and anti-imperialism became key features of twentieth-century world history.

Today, as Jurgen Osterhammel has remarked, the period of colonialism may be at an end, but the postcolonial period still maintains forms of exploitation and manipulation. Anti-imperialism continues to characterize the twenty-first-century activist movements against the global economic systems. In time, these may be seen as movements against what Kwame Nkrumah called neocolonialism—the direction of economic systems from metropolitan financial centers.

Anti-Semitism

Anti-Semitism is a virulent form of prejudice directed specifically against Jews. However, the term *anti-Semitism* is misleading and illogical. It is applied only to prejudice against Jews, but its root word, *Semite*, refers generally to speakers of Semitic languages, which includes Arabs. Although anti-Semitism is an ancient phenomenon, modern anti-Semitism differs from ancient pagan or Christian prejudices against Jews. Ancient anti-Semites legalized discrimination on the basis of religious differences. Modern anti-Semites, by contrast, have tended to regard religious intolerance or persecution as medieval; thus, they have justified prejudice against Jews on the basis of pseudoscientific criteria such as culture, econom-

ics, ethnicity, and politics. In the late nineteenth and twentieth centuries, anti-Semites throughout Europe encouraged violence against Jews and the erosion of Jewish legal equality by shifting their prejudice from religious considerations to the allegedly objective characteristics of Jews as an ethnic group. Anti-Semitic images of Jews often involved stereotypes portraying them as obsessed with money and involved in international conspiracies, as well as contradictory notions of the Jew as both controlling and subverting the world order. An example of this was *The Protocols of the Elders of Zion* (1895), a forgery disseminated by the Russian secret police that purported to outline a Jewish plan for world domination.

The advent of the Zionist movement, in part a nationalistic response by Jews to Europe's increasing anti-Semitism, coincided with the great rush of late-nineteenth- and early-twentieth-century imperialism. Zionists competed directly against the local Arab population for the same land, and many Arabs, not only in Palestine but also throughout the Arab world, soon equated Zionism with colonialism and employed many of the anti-Semitic stereotypes that their European counterparts had used. European colonialism created a new Arab anti-Semitism with images of the Jew as obsessed with money and world domination—stereotypes that, although linked to images in Arab culture, were not indigenous to the Arab world.

Apartheid

Literally meaning “separateness” in the Afrikaans language, the word *apartheid* refers to a philosophy of racial division that became the official policy of South Africa following the 1948 election that brought the National Party to power. Under the leadership of Prime Minister D. F. Malan and with philosophical underpinning from Boer nationalist

thinker Hendrik Verwoerd, apartheid came to dominate political, social, and even economic life in the country for almost half a century.

Although not a part of the legal structures of the state until after 1948, the philosophies of racial separation in South Africa had a long history. From the establishment of Cape Town as a refreshment station supporting the Dutch quest for colonial routes to Asia, European residents in southern Africa saw themselves as destined to be the rulers of the African populations among whom they lived. This meant the Africans would need to be kept at arm's length, although they also would be quite intimately involved with their supposed European masters. One result of this intimacy was the creation of a mixed-race, or "Coloured," community; another was a clear competition for the land that supported all these communities.

The resulting difficult relationships remained much the same until the nineteenth century, when the vast resource potential of South Africa became clear with the discovery of gold and diamonds. Thus, from the late nineteenth century forward, the social and political struggles for power took on an even more decidedly economic turn. And with the virtual independence of South Africa from British colonial control in 1911, the struggles intensified. Throughout the twentieth century, even under a union government of English-speaking and Afrikaans-speaking politicians, the position of Africans within South Africa deteriorated. But only after 1948 were these trends codified in a fully discriminatory legal system.

Transforming the long-standing social mores and racist philosophies into a coherent legal system was largely the work of a former sociology professor and editor, Hendrik Verwoerd. Although defeated for election in 1948, he was appointed to various political positions by Prime Minister Malan, and he constantly worked toward the goal of creating a segregated state. Among the great variety of legal provisions that came to underlie the system, the most infamous were the pass laws, intended to control the movements of Africans throughout the country. However, perhaps the most significant was the Bantu Education Act (1953), which placed complete control of African education under Verwoerd as minister of Bantu affairs. Thereafter, the African educational system became a focal point for resistance to apartheid.

And it was from the schools that many of the protests arose that were to lead to the destruction of apartheid and the final achievement of democratic majority rule in the 1990s.

Arab League

The Arab League, the more commonly used name for the officially titled League of Arab States, was founded in Cairo on March 22, 1945. The main goal of the organizers—which included Egypt, Iraq, Lebanon, Saudi Arabia, Syria, Transjordan (from 1949, Jordan), and Yemen—was the promotion of political, economic, social, and cultural cooperation among Arabic-speaking countries. At the same time, the organization sought to end European colonial rule in the Arab world. Indeed, at the time of the league's origin, two of the founding members—Transjordan and Syria—remained under British and French rule, respectively.

For much of the modern era—since the sixteenth century—virtually all of the Arab-speaking world was ruled by the Ottoman Empire, an Islamic entity controlled by the Turks. As that empire weakened in the eighteenth and nineteenth centuries, increasingly large areas of the Arab world were seized by European colonial powers, notably Britain in the Persian Gulf and the Arabian Peninsula and France in North Africa. Although both London and Paris promised their Arab allies independence after World War I—in exchange for Arab support in the war against the Ottoman Empire—this was not granted. Instead, much of the Middle East was divided into British- and French-ruled League of Nations mandates.

World War II, however, further weakened European rule in the Arab world. In 1942, Nuri al-Sa'id, the British-backed prime minister of Iraq, put forward a plan for a single Arab nation to be created out of the European mandates of the Levant, including Lebanon, Palestine, Syria, and Transjordan. These areas would be linked to Iraq in an Arab league, which would then encourage other

24 Arabian-American Oil Company

states to join. The idea was picked up by the Egyptian prime minister Nahhas Pasha, who organized a conference at Alexandria in late 1944. This conference resulted in the Alexandria Declaration, establishing the Arab League the following year.

Although the league never, of course, achieved its goal of politically unifying the Arab world, it did establish a number of institutions for economic coordination. And through the league, its members were able to speak in a single voice against both European colonialism in the region and the creation of Israel. Indeed, much of the Arab League's time and energy since the 1950s has been directed toward defending Palestinian rights, and it was largely responsible for the creation of the Palestine Liberation Organization. In addition, in the field of anticolonial struggle, the Arab League helped ease the transition to independence for a number of European colonies in the Arab world and was instrumental in providing support to the Algerian National Liberation Front in its war for independence from France between 1954 and 1962.

Arabian-American Oil Company

In 1933, Standard Oil of California (later Chevron) negotiated exclusive rights to oil production in Saudi Arabia and established the California-Arabian Standard Oil Company (or Casoc) in partnership with Texaco. Saudi king Abd al-Aziz ibn Saud granted this concession to strengthen his control over Arabia (gained in 1927) by repaying debts and stabilizing the economy, which relied on spending by Islamic pilgrims. The concession provided short-term gains for the Saudis, but it held advantages for Casoc similar to those of a colonial relationship. Casoc struck oil in 1938, and by 1940, it built production, transport, and refinery facilities, mainly at Ras Tanura on the Persian Gulf, as

well as an American-style settlement for expatriate workers, Dhahran. Production nearly ceased during World War II.

During the war, the increasing importance of Middle Eastern oil led President Franklin Roosevelt—encouraged by Casoc executives—to financially support the kingdom in order to guarantee long-term access to its massive oil reserves. Conversely, Saud allowed access only to U.S. companies, excluding British and French interests. Thus, in 1948, the Arabian-American Oil Company (or Aramco, as Casoc was renamed in 1944), expanded to include Standard Oil of New Jersey (later Exxon) and Standard Oil of New York (later Mobil), and President Harry Truman pledged continued support to Saudi Arabia. Aramco profited greatly in the postwar period as the U.S. demand for oil mushroomed, benefiting the U.S. government (through taxes) more than the Saudi government (through royalties).

U.S. support of Israel, increased nationalization of oil production in some countries (especially Venezuela), and the influence of anticolonial sentiments led Saud to renegotiate the concession in 1950, guaranteeing a fifty-fifty split of profits between Aramco and the Saudi government. Subsequent Saudi kings demanded increasing shares of the profits in response to various events, including Iran's nationalization of the Anglo-Iranian Oil Company in 1951 and the 1967 and 1973 Israeli-Arab wars. Finally, in 1976, Saudi king Khalid bin Abdul Aziz and oil minister Ahmed Zaki Yamani canceled Aramco's concession, nationalizing the company.

Arawak

Also known as the Taino-Arawak, this now extinct Amerindian group lived in the Caribbean Basin prior to Spanish conquest and colonization in the fifteenth and early sixteenth centuries. The Arawak population spanned the Greater and Lesser Antilles, as well as the Windward and Leeward Island chains. Reaching as far north as the Bahamas and as far south as the southern coast of

Brazil, the Arawak were most likely the largest pre-Columbian indigenous population (an estimated 2 to 3 million) in the Caribbean.

Pre-Columbian Arawakan society was simple and self-sufficient. One of the least aggressive groups in the Caribbean, this agricultural society maintained itself through the production of cassava (*yuca*), potatoes, beans, peanuts, peppers, and arrowroot. The Arawak supplemented their diet by fishing but only as a means of adding variety. Their religion was animistic in character, based on a hierarchical system of gods and spirits who were represented within nature. Arawakan political structure consisted of a network of chiefdoms, each with a *cacique* (chief) who presided over village rites and ceremonies. The cacique's other duties included settling village disputes, organizing communal labor, and requisitioning military support against hostile neighboring groups such as the Caribs. The position of cacique was matrilineal in nature, as a leader was replaced by his sister's eldest son. If none was available, the village chose a replacement. Arawakan society was also known for its pottery, weaving, wood carvings, and basic metallurgical skills.

The Arawak people's rapid and virtual disappearance by the early sixteenth century was a result of Spanish conquest and colonization. The Arawak welcomed the early Spanish explorers, sharing food and supplies. Friend soon became foe, however, as the conquistadores manipulated and used the Arawak for their own ends. Limited food supplies, weak caciques, manipulation, enslavement, and the introduction of European epidemic diseases all combined to destroy Arawakan society within a century. Those that did not perish were absorbed by neighboring Amerindian groups. Nonetheless, the Arawak still left their mark on the Caribbean and South American colonies through the obvious cultural exchanges of food, clothing, religious ideologies, and language that took place between these two worlds.

Architecture

The architecture of the colonial era is a broad subject, but it is possible to approach the topic by differentiating between buildings in colonies where the colonists were demographically insignificant (as in West Africa and on the Indian subcontinent) and buildings in the settler colonies (such as New Zealand, Australia, and the Americas).

In settler colonies, colonial architecture was often a nostalgic attempt to (re)capture some of the familiarity of the “old” world. Early-nineteenth-century settlers preferred to build in stone, and they modeled their new buildings on European precedents. The stone store in Kerikeri, Northland, built in 1833 by William Parrot, was one of the first colonial buildings in New Zealand, and it continues to be used as a retail store today. After the Wellington earthquake in 1855, most buildings were constructed in timber. Timber buildings were lighter and performed better in earthquakes; they were also cheaper to build.

Neoclassical and gothic details and styles popular in Europe were often replicated on public buildings. However, stone masonry details, such as quoin blocks on corners, were often replicated, even though they were completely unnecessary, in timber construction.

The government buildings in Wellington, New Zealand—for many years the largest timber complex in the Southern Hemisphere—were built in 1876 to give the appearance of Georgian stone buildings. These structures and New Zealand's first parliament were both designed by William Clayton, the first colonial architect in New Zealand. The close relationship between the architecture in the settler colony and the buildings in Europe was not surprising, given that Clayton was trained in Brussels and had worked in London under the English architect Sir John Rennie for a number of years.

In African countries such as Kenya and South Africa, which had smaller settler communities, public and domestic architecture was often influenced by styles derived from the European home

countries of the colonists. In Eritrea, examples of buildings designed in stately Italianate styles can still be found in Asmara, and in Mozambique, many of the public buildings were based on architectural styles that were popular in Portugal and Spain.

However, a very different approach was taken in West African and Indian colonies with a demographically insignificant settler population. Although public structures housing the judiciary and other government offices continued to be built in neoclassical and gothic styles, this trend was not reflected in the domestic colonial architecture. The new dwellings for settlers initiated an architectural dialogue that is perhaps best typified by the humble bungalow. The name *bungalow* has its roots in the Gujarati and Hindi words *bangalo* and *bangla*, meaning “of or belonging to Bengal.” Typified by its wide verandas, the bungalow was a building that worked well in warmer climates. No European neoclassical and gothic architectural styles or details were used to adorn the walls of the bungalow. Rather, these buildings were constructed using simple techniques and materials and had only a limited number of decorative details.

The *bangla* eventually evolved into a structure that, in the late nineteenth and early twentieth centuries, became one of the most popular building types in the world. The dialogue between the indigenous and the colonial also had a significant impact on modern architecture. Frank Lloyd Wright and Le Corbusier, the two most influential architects of the twentieth century, were affected in different ways by this dialogue. Wright’s Prairie houses borrowed heavily from the architectural vocabulary of the bungalow. Le Corbusier, by contrast, was also influenced by traditional African architecture and sculpture. The plasticity evident in buildings such as his chapel at Ronchamp, France, reflects this African influence.

One of the earliest examples of colonial architecture in West Africa can be found in Accra, Ghana. The nearby Fort São Jorge da Mina, also known as Elmina, was built by the Portuguese in 1482. This fort was captured by the Dutch in the middle of the seventeenth century and finally sold to the British toward the end of the nineteenth century.

Although the approach to colonial architecture differed, indigenous methods of construction and inhabitation were similar. Thus, the indigenous ar-

chitecture in the Pacific had much in common with precolonial buildings in West Africa. For example, striking similarities exist between the indigenous meetinghouses, or *marae*, built by the Maori of New Zealand and the ancestral homes, or *ulo-ogo*, built by the Igbo in southeastern Nigeria. Both types of buildings are anthropomorphic, in the sense that they are perceived as living ancestors. In the *marae*, the ridgepole represents the ancestor’s spine, the rafters make up the ribs, the bargeboards the arms. In short, as people enter the *whare whakiro*, they join the ancestor. Very similar anthropomorphic references were made in ancestral homes in Arochukwu or in Mbari shrines in Owerri, Nigeria; for instance, the columns of the shrines were referred to as eyes.

After colonization, both the Maori and the Igbo began building with new materials. Although the idea of the *marae* has remained unchanged over the years, the way they are constructed is substantially different today. In Igboland, similar changes have occurred, and houses are now constructed predominantly in concrete.

The idea of the traditional ancestral home continues to exist, but the domestic approaches to architecture have completely changed. The house in Igboland was traditionally built as clusters of rooms surrounded by a compound wall, and the relationship between space and function remained flexible. With colonization, however, the idea of the compound often gave way to the idea of a unitary house. Frequently, new houses were built in the Brazilian style—a style with Spanish and Portuguese references established in Nigeria by Brazilians who had repatriated in the nineteenth and twentieth centuries. The bungalow was also very influential, and many postcolonial houses have been built in that style.

Argentina

The land that became Argentina has been colonial in name and nature since its founding. Portuguese ex-

plorer Diego de Soliz, employed by the Spanish Crown, discovered the great Atlantic estuary and the River Plate in 1516. By the 1550s, Spaniards crossing the Andes established permanent settlements between the rapidly expanding silver mines in Potosí and the Plate region that was placed under the direct rule of the viceroy of Peru in 1563. Following their traditional paradigm, the Spaniards proclaimed their legal rights based on the authority of the Spanish Crown, established the church, and distributed Indian labor in *encomiendas*, or labor trusteeships, a colonial model that persisted for 300 years.

The motivation and inspiration for independence in Argentina grew out of overregulation, oppressive taxation, social discrimination, and Spain's general refusal to accept the ideas of a new age. On May 22, 1810, the *cabildo abierto* (city council) of Buenos Aires removed the viceroy and vested power in a governing junta. In 1811, the junta was disbanded in favor of a triumvirate, the first of numerous attempts to establish a workable government. Political instability and regional warfare persisted through the formal declaration of independence in 1817 and the drafting of the first constitution in 1818, which provinces beyond Buenos Aires refused to accept, considering it too centrist. Internal conflict persisted for another dozen years until the dictator Juan Manuel Rosas took control and ruled from 1829 to 1852.

In the late nineteenth century, European interest in Argentina's agrarian resources attracted foreign investment and massive immigration, which, along with increased technology, appeared to usher in an economic and social revolution. However, Argentina did not alter its fundamental identity, and its colonial structures were invariably refashioned rather than transcended. Throughout the twentieth century, Argentina retained many features of a colonial society; Buenos Aires dominated the interior provinces, and dependence on imported goods and foreign capital continued. Argentine elites maintained political control, and the middle class functioned as a "client" rather than as a capitalist bourgeoisie. Despite periods of economic expansion, a relatively high standard of living, and social and political stability, Argentina failed to forge new, self-sustaining links and continued to suffer from periodic severe political stresses and breakdowns.

Armenia

Armenia originally encompassed three lakes—Lake Van, Lake Urmia, and Lake Sevan. King Artashes fought for and achieved Armenian independence in 189 B.C.E. Tigran the Great (95–55 B.C.E.) established an Armenian kingdom that stretched from the Caspian Sea to the Mediterranean, but his kingdom was later destroyed by the Romans. In 62 C.E., the Parthians came to power in Armenia. Persia had jurisdiction over the Parthians from 387 until 428. In 428, the kingdom was abolished and Armenia was integrated into the Kingdom of Persia. In 387, the Romans and Persians divided Armenia between themselves (one-fifth Roman, four-fifths Persian). The Arabians invaded Armenia around the middle of the seventh century. The Armenians were again granted their own kingdom under the rule of Aschot I (886–891). But the kingdom soon collapsed into many dominions, and they succumbed to Byzantium and the Seljuks in the eleventh century. A large part of the population fled to Cilicia, where the Rubenid dynasty established its own kingdom (Armenia Minor) in 1080. The Egyptian Mamluks destroyed the Kingdom of Armenia Minor in 1375. Northern Armenia was incorporated into Georgia in the twelfth and thirteenth centuries. In the thirteenth century, the Mongols conquered northern Armenia.

In the sixteenth and seventeenth centuries, disputes arose between the Ottoman Empire and the Persian Empire over the control of northern Armenia. The Armenians appealed to Russia, which, under the rule of Catherine II, had continued to extend its kingdom toward the base of the Caucasus. In 1828, Russia gained control of the Chanat Erevan and Nakhichevan. After the military impasse between Russia and Turkey, many Armenians left Turkey and moved into Russian territory in 1829. In 1878, the Russians conquered Kars and surrounding Armenian settlements. Because the

Over a million Armenians, including the parents of these orphans boarding barges for Greece, were massacred by Ottoman Turks during World War I in what many consider the first European genocide of the twentieth century. (Library of Congress)

Turks did not abide by the terms of the Berlin Congress of 1878, the Armenians used secret societies and political parties to resist continued oppression. The Great Powers (Great Britain, France, and Russia) forced the so-called Armenian reforms on the Turks, but they did not use the Armenian reforms to intervene politically in favor of the Armenians.

In Asia Minor, a dreadful outbreak of ethnic hatred in 1895 and 1896 caused the deaths of 200,000 Armenians. The Armenians welcomed the turning point in the downfall of the Ottoman Empire, as did the radical nationalist Young Turks. The supporters of Sultan Abdülhamid II were again able to assert themselves against the Young Turks in 1909 but only temporarily. As a result, new and grievous attacks were launched against Armenians, especially in Adana. In 1915 and 1916, the Young Turks developed a plan for the strategic and methodical eradication of the Armenians. U.S. and German relief organizations were especially active in efforts to aid the victims. After the fall of the Ottoman Empire in 1918, Kemal Ataturk, the father of modern Turkey, stymied plans to create an independent Armenian state—plans that ex-

iled Armenians actively supported. Once again, brutal persecutions occurred in Cilicia and elsewhere. After the withdrawal of the French, the Armenians had no choice but to completely vacate their east Turkish provinces. They were oppressed persistently in Russia as well. After the czarist politics of Russification, there was a short period of political autonomy, which was followed by the violent incorporation of Armenia into the Soviet Union in 1920. With the dismantling of the Soviet Union late in the twentieth century, Armenia regained its political independence. However, that independence was accompanied by severe military conflicts with the neighboring country of Azerbaijan, where recurrent persecutions of Armenians had taken place in the past.

Art

The study of colonial art has undergone vast change since the 1980s. Previously, *colonial art* was considered a positive term, referring primarily to the art of settler colonies—those populated by a majority of European descent, with the indigenous population dispossessed—and especially to British colonial art. The main interest of past studies was how European styles were transplanted to the colonies. Today, however, the study of colonial art is much broader in scope and is closely allied to colonial and postcolonial studies in history, sociology, and literature. Recent investigations of all forms of colonial visual culture have focused on how visual representation served to legitimate and construct colonial power—and how it was also used to resist the imposition of control.

Art was a central element in the conspicuous display of wealth, status, and lineage among the elite classes in colonial society. Religious images, portraits, and landscape paintings expressed the new and often syncretic identities of colonial elites. To create the splendor of an entirely new culture and establish its credibility, colonial artists and their patrons often turned to locally distinctive aspects of the colonies, either in the natural environment or in indigenous culture. At the same time, the fine arts and especially portraiture clearly displayed the patron's strong identification with European culture and history. Colonial religious imagery, such as the Virgin of Guadalupe in Mexico, often served to document new myths of origin and/or special favor from God, thereby legitimating a new hierarchy of local authority.

Art, being experienced through the senses and capable of eliciting strong emotional reactions from viewers, is among the most useful of all propaganda tools. Landscape painting, which at first glance may appear to be a simple rendition of nature with no political content, can actually express attitudes toward such political themes as the appropriation and settlement of land. The artist can encode meanings very subtly, through such factors as viewpoint, climatic and atmospheric effects, the presence or absence of humans, and the choice of a site with special historical or

nationalistic meaning. These themes have been studied in colonial landscape painting from Australia to India.

Colonial images of indigenous people played an especially important role in the process of imperial control. Western fantasies and desires surrounding non-Western cultures lent themselves well to visual representation. Famous examples of such Western fantasy and projection are the Tahitian paintings of Paul Gauguin (1848–1903) and the artistic practices of the expressionist group Die Brücke (the bridge), active in Germany from around 1905 to 1913. These images celebrated an imagined sexual and social freedom within so-called primitive societies. Not all images of the colonial Other were romantic or beautiful, however; indigenous people were frequently denigrated and misrepresented through the visual arts. New genres of art, such as *casta* paintings (paintings by mixed Indian-European people), sought to categorize the bewildering variety of racial types found in the colonies. All of these fine-art representations helped to construct the racial theories, attitudes, and practices of colonial societies.

Mass-produced images of the colonized Other powerfully confirmed and reproduced the stereotypes that supported European expansion and control. Early-twentieth-century advertising posters for the British Empire Marketing Board depicted scantily clad natives happily picking cotton in the Sudan or gathering cocoa pods in the Gold Coast. Picture postcards claimed to document bizarre indigenous practices and beliefs. Images of the mysterious Orient were ubiquitous in colonial-period advertising, adding a special allure to European products—from Camel and Fatima cigarettes to Orient Delights candy. Collecting photographic and commercial imagery (often pasted into scrapbooks) was a popular nineteenth-century pastime; exotic and picturesque colonial subjects were frequently reproduced photographic subjects. These images were powerful in forming public opinion; photographs in particular were widely believed to represent the accurate truth concerning colonized people and places. The visual representation of colonized people as savages not only helped to legitimate imperialist expansion but also contributed to the formation of nationalist European identities (based on theories of racial and cultural inheritance).

A plaque from Benin (now in Nigeria) in West Africa depicts two shield-carrying soldiers. Such African artwork, introduced to Europe through the acquisition of African colonies, had a profound impact on modern European art. (Library of Congress)

The unequal power relationships of colonialism were at the root of the Western collection and display of so-called primitive art. Many objects of sacred, social, or political significance to indigenous cultures were seized by the West as a part of colonial military or scientific expeditions. For example, most of the objects of Benin culture displayed in Western museums were looted from Benin City in 1897, when a British punitive expedition deposed the king, sacked his palace, and carried off its works of art. Western authorities displayed such objects as specimens of primitive culture in ethnological museums, where they supported “scientific” discourses of imperialism, often racist in nature. The Musée d’Ethnographie du Trocadero (now the Musée de l’Homme) in Paris opened to the public in 1882 with a collection of oceanic and African art objects (this museum played a key role in the development of twentieth-century Western art). In the ethnographic museum and its scholarship, tribal arts were displayed to document the primitive state of the cultures colonized by the West; the exhibition of ethnographic villages at international expositions made the same self-serving point.

Primitive art was characterized as anonymous, pure, and timeless—as essentially outside the flow of history—because it was conceptualized as belonging to a prehistoric stage of human development. Therefore, the art created by native people interacting with the modern world through the tourist industries that emerged along colonial shipping and railway lines was regarded by scholars, critics, and collectors as without value. Tourist art was part of a hybrid culture and was therefore seen as an inauthentic or contaminated primitive art. In fact, tribal arts were never static or pure but always an integral part of the social and economic history of the colonial world.

Recent studies of tourist art—from the mutual influences operating between artists and tourists in Papua New Guinea to the influences of tourism and metal tools on the development of totem poles in Alaska—has exploded the myth of timeless, static cultures. These studies show native cultures as active participants in the nineteenth- and twentieth-century world, adapting to their changed situations under colonialism. Tourist art could provide a unique means of preserving cultural heritage and pride within an oppressive system. The links be-

tween costumed performances (in the village and at international expositions), photographic representations, and the collection of primitive art are just beginning to be studied. The myth of a pure and timeless primitive art served imperialist needs in providing a justification for colonialism, but it also arose from a more general nostalgia and longing for the lost authenticity of the local and handmade that accompanied industrialization (for example, European peasant communities were also seen through a primitivist lens).

Twentieth-century art would have been unthinkable without the existence of so-called primitive art. Virtually every major European artist, including Pablo Picasso, Henri Matisse, Max Ernst, Emil Nolde, Paul Klee, and Constantin Brancusi, drew inspiration from the masks, sculpture, and diverse other genres of tribal African, oceanic, and Native American art and from the mythology of primitivism. The art pieces that Westerners created out of the cultural imperialism of colonialism were enshrined in Western art history as masterpieces of great originality. The formal (visual) elements of modernist art were conceptualized as a universal language; modernism was beyond the petty concerns of any particular political and social context. It was only after this development in the early twentieth century that tribal objects began to be widely appreciated as fine art (for their formal qualities), rather than being seen as ethnographic specimens. The politically charged circumstances binding modernism and primitivism and the controversies surrounding the proper contemporary representation of the cultural appropriations of modernism are well documented in recent scholarship.

Colonial studies are yielding new ways of thinking about the complexities of modernism in a new global culture. Non-Western artists are increasingly represented at the Venice Biennial (a major international exhibition of contemporary art), and biennials are increasingly held outside Europe and the United States. But modernism remains a problematic concept in that it possesses no history outside the West. Until the very end of the twentieth century, scholarship dismissed the modern art of colonized elites as derivative of Western culture and therefore as lacking originality, defined as the key quality of true art. In striking contrast, modern Western art (the art of

32 Ashanti Wars

Picasso, for example) was never considered derivative or impure because of its contact with primitive art.

Colonialism was a complex cultural process of exploitation and domination in which visual imagery, which possesses great force and emotional impact, played a major role. The nature of that role, how it persists in new guises, and how the world can move forward from it is the subject of much current debate.

Ashanti Wars

The brief conflicts known as the Ashanti Wars (1873–1874, 1895, 1900) were the result of British commercial involvement in the tribal affairs of the Gold Coast in West Africa. They resulted in the subjugation of the Ashanti (Asante, Asanti) Kingdom to the British Empire.

The British were primarily interested in maintaining open trade routes, a goal complicated by the rivalry that existed between the coastal Fante and the more powerful Ashanti inland. The basic British policy involved dealing with the Fante directly and signing a series of (rapidly ignored) treaties with the Ashanti. In 1871, the Fante tried to form a quite progressive coastal confederation to unite their clans against the Ashanti. Despite a quick and decisive British rejection of the idea, as the effort was seen as an attack on British control of the area, the move provoked an Ashanti offensive on the coast to smash Fante pretensions to power in 1873. If the British had been unwilling to allow the Fante to govern themselves, they certainly were not going to allow the Ashanti to do so.

A British force of 2,500 men under the command of Maj. Gen. Sir Garnet Wolseley was dispatched to the Gold Coast. His British regulars formed the core of a column that marched inland

to the Ashanti capital of Kumasi. Early in April 1874, Wolseley sacked and burned Kumasi and forced the Ashanti to accept a treaty renouncing all claims of coastal authority. They were also forced to pay a large fine in gold dust, pledge to keep the roads to the interior open, and promise to give up the practice of human sacrifice.

Despite the decisive defeat, the Ashanti remained troublesome. During the 1880s and 1890s, they showed signs of planning a move against the coastal clans again, prompting a British accusation that they had broken the provisions of the treaty imposed in 1874. British authorities demanded the kingdom accept status as a British protectorate in 1895; when the demand was ignored, British forces again marched on Kumasi, installing a resident at bayonet point and exiling the royal family to the Seychelles. Five years later, the governor demanded that the Ashanti surrender the Golden Stool, the symbol of their sovereignty, provoking a final Anglo-Ashanti war. The kingdom was annexed in the aftermath as a Crown Colony.

Asiento

After Christopher Columbus's initial trip to the New World, Portugal and Spain entered into disputes as to who had the right to explore and colonize the territories. These debates came to a head in 1494 with the Treaty of Tordesillas, a papal decree that split the explored areas in half between the two European powers. Portugal gained all rights to Africa, and Spain found itself banned from the continent. As a concession, Spain was given the right to issue an *asiento* (contract) to another European power to supply African slaves to Spanish colonies.

In 1518, King Charles I of Spain (Ferdinand and Isabella's successor) signed a four-year contract with a Flemish company, requisitioning an annual supply of 4,000 African slaves to enter Hispaniola, Cuba, Jamaica (then a Spanish colony),

and Puerto Rico. European nations, realizing the possibilities inherent in such a contract, all scrambled to be next in line. The Portuguese were the first to gain a monopoly on the *asiento*, but they were outdone around the 1640s by the Dutch and French at successive intervals. By 1713, the English were awarded the contract as a spoil of war. That year, the Treaty of Utrecht granted England a monopoly on Spanish slave trade for thirty years. Under the treaty, England promised Spain at least 144,000 slaves, at the rate of 4,800 slaves per year. Both sides honored that agreement and maintained control of the *asiento* until 1789, when the contract was abolished.

Delicately crafted objects such as plates, goblets, and ewers were smelted. When the ransom had been paid and each Spaniard had received his share, Atahualpa demanded his freedom. But the Spaniards were impatient to move on to seize all the treasures of the Inca Empire, so Pizarro swiftly put him on trial, fearing that Atahualpa, if freed, might rally the Inca. Confronted with trumped up charges supported by the Spanish clergy, the Inca leader was sentenced to death. He could have saved his life by converting to Christianity, but he refused; in the end, he accepted conversion but only so he could die by hanging rather than being burned at the stake. Several of Pizarro's companions, including his brother Hernando and the explorer Hernando de Soto, deplored his treatment of Atahualpa.

Atahualpa (c. 1502–1533)

Atahualpa, emperor of the Inca, was executed by order of Francisco Pizarro, captain-general of the Spanish forces in the area. His death marked the end of the most powerful and advanced nation in the Americas. Atahualpa was a son of Emperor Huayna Capac, whose legitimate heir was Atahualpa's half brother Huáscar. At the death of his father, Atahualpa controlled the northern part of the Inca Empire and was popular with the army. A bloody war between the two brothers ensued. Atahualpa won and was on his way to the capital, Cuzco, when he encountered the Spanish invaders at Cajamarca in 1532. Forewarned by prophecies of the arrival of strangers from another world, he sent messages offering friendship. In response, Pizarro tricked him into coming for a visit, at which point, Atahualpa was captured and his men slaughtered. To regain his freedom, Atahualpa offered a fabulous ransom. He understood that though gold had mainly aesthetic and religious significance for his own people, the greed to acquire it was what drove the Spaniards. Indeed, Pizarro consented to the bargain.

For months, Atahualpa ruled the Inca from prison and oversaw the collection of his ransom.

Ataturk, Mustafa Kemal (1881–1938)

The architect of the modern Turkish state, Kemal Ataturk inspired a movement (called Kemalism by his supporters) of modernization, secularization, Westernization, republicanism, and self-sufficiency along Turkish national lines. Born Mustafa Kemal in 1881 in Salonika in the Ottoman Empire (now Thessaloniki, Greece), he graduated from military schools and, as a young officer, joined the Young Turk movement. He distinguished himself militarily in Albania (1909–1910), in Libya against the Italians, and, after the fall of the empire, in the nationalist struggle to expel from Turkish soil the foreign powers who sought the partition of Anatolia. Ataturk's victories helped preclude foreign domination and compelled a new peace settlement, the Treaty of Lausanne (1923), that recognized Turkey as an independent sovereign state and, ultimately, the first republic in the Middle East on October 29, 1923.

The new state was shaped by Kemalism, a corporatist movement partly inspired by the egalitarianism of the French Revolution, with a goal of establishing a strong and durable Turkish republic free from foreign dependency. Ataturk sought to create a modern infrastructure and to defeat

Mustafa Kemal, also known as Atatürk or "Father of the Turks," helped found the Turkish nation out of the post-World War I wreckage of the Ottoman Empire. (Library of Congress)

conservative elements within Turkish society. Following the abolition of the sultanate (1922) and caliphate (1924), he closed the religious schools (1924) and banned the religious orders (1925), reformed and secularized Turkish law (1926), disestablished Islam as the state religion (1928), compelled Turks to take family names (1934), changed the Turkish language to the Roman script, and forbade the wearing of the fez and the veil, all in the name of modernization. After his death on November 10, 1938, he was widely revered by Turks as an enlightened despot who had decisively shaped the destiny of modern Turkey.

Atrocities

The perpetration of atrocities during wars of conquest or imperialism dates back thousands of

years. For example, in the eighth and seventh centuries B.C.E., the Assyrians generally showed no mercy toward conquered peoples, routinely torturing or massacring defenseless civilians. Although the ancient Romans could show more mercy toward civilian populations than the Assyrians, this was certainly not the case when they conquered Carthage and razed it to the ground in the second century B.C.E. In spite of the cruelty displayed during these atrocities, those who perpetrated them—or at least did not prevent them from occurring—usually did so for a purpose. For example, they might resort to atrocities as a way to reduce what remained of their enemy's will to fight or to serve as a warning to other potential opponents.

Not surprisingly, the era of European colonialism that began in the fifteenth century was also regularly punctuated by atrocities. In 1519, for instance, a few months after Europeans first arrived in the city of Tenochtitlán (the seat of the Aztec Empire and situated close to present-day Mexico City), Spanish troops and their indigenous allies massacred about 200 weaponless Aztec nobles gathered for a religious ceremony in the courtyard of a temple. It must be noted that the Aztec had not been gentler with their own subjects before the arrival of the Europeans. In fact, the harshness of Aztec rule explains, in part, why the Spanish conquistadores found several indigenous allies in their fight against the Aztec.

Atrocities were not only committed during times of war or conquest. Consider the slave trade that took place mainly between Africa and the Americas, a more or less permanent feature of the European colonial system until the second half of the nineteenth century. Certain historians have estimated that as many as 15 million slaves may have been transported to the Americas in this period. According to these same scholars, it is also possible that as many as 40 million people died as a result of this trade. Although these numbers may exaggerate the truth, they nevertheless indicate the extent of the slave trade. They also suggest that the conditions of the slaves were far from ideal and that the slave trade certainly qualifies as one of the major atrocities committed by the European colonialists.

In spite of the growing feeling that many policies followed by the colonial powers were unjusti-

fiable, atrocities continued to be perpetrated in the second half of the nineteenth century and into twentieth century. In 1857 and 1858, for example, the mutiny in India resulted in the massacre of captured Europeans—although the mutineers had promised safe conducts for many British civilians, several women and children were massacred during the mutiny. In retaliation for this and other incidents, the British troops blew the mutiny's ringleaders from the mouths of cannons. During the South African (Boer) War (1899–1902), Britain's Lord Kitchener practiced a scorched-earth policy and placed civilians who supported the Boer guerrillas in concentration camps. Some scholars estimate that as many as 26,000 children and women may have died due the poor health and sanitary conditions that existed in these camps. And on April 13, 1919, British troops opened fire on a large crowd of people in Amritsar (in the Punjab), with little or no warning. When the dust settled, almost 400 people, most of them unarmed civilians, were dead, and many more were wounded.

During the various conflicts of decolonization that followed World War II, many more massacres were perpetrated in the European colonies. In the French Indochina War, for instance, both the Viet Minh and the forces under French command frequently committed atrocities both against opposing soldiers who had surrendered and against defenseless civilians. Tens of thousands of people were thus killed or maimed in military actions that had no concrete strategic objectives.

Although many people have wondered how such incidents occurred, the limited impact of such concerns on the field was amply demonstrated by the events that unfolded in Algeria after a revolt against French rule was openly declared there in November 1954. At this time, a vicious cycle of violence began, in which a variety of military troops, secret organizations, and nationalist guerrillas regularly took part in horrific massacres of disarmed soldiers and civilians, with the sole intent of inflicting psychological terror on their opponents. By the time Algeria became officially independent in March 1962, perhaps 150,000 people or more had perished in these nonmilitary operations, although the numbers are notoriously difficult to establish with any degree of certainty.

Many more atrocities were perpetrated in Europe's colonial domains. The incidents described earlier, however, should be enough to explain, in part, the zeal with which the former colonies rid themselves of the vestiges of European rule. They can also help to place into some sort of perspective, if not explain, a number of atrocities committed in these places in more recent decades, such as the death of over 2 million people in Cambodia in 1975 and 1976, the slaughter of some 500,000 people (mostly Tutsis) in Rwanda in 1994, and the brutal assassination of about 75,000 people in Algeria in the 1990s. It is difficult not to see these recent events as being at least partially a continuation of the cycle of violence encouraged or occasioned by the expansion of the European empires.

Attlee, Clement (1883–1967)

Clement Richard Attlee was born in London and educated at a private school at Haileybury and at Oxford University, where he graduated in 1904 with a degree in history. He gave up his job in a law office to devote his life to the poor in Stepney, east London, where he became a socialist, joining the Labour Party in 1907. He was a major in the army during World War I. In 1919, he became mayor of Stepney, and in 1922, he was elected a member of the British Parliament. Two years later, he became undersecretary at the War Office. In 1927, he traveled to India as a member of the Simon Commission and became committed to independence for

India. In 1930, he became chancellor of the Duchy of Lancaster, and in 1931, he became postmaster general, his first administrative position. Four years later, he was elected leader of the Labour Party. He expressed his views in that period in *The Will and the Way to Socialism* (1935) and *The Labour Party in Perspective* (1937).

Attlee served as lord privy seal, lord president, dominions secretary, and then, in 1942, deputy prime minister. In 1945, the Labour Party was voted into office, and Attlee served as prime minister for the next six years, presiding over one of the most important periods of government legislation in British history. A nationalization program and the National Health Service were introduced at this time. Attlee also began the process of decolonization, granting independence to India in 1947, Ceylon (later known as Sri Lanka) in 1948, and Burma in 1948. He resigned as leader of the Labour Party in 1955 when he became Earl Attlee and a member of the House of Lords. The previous year, he had published his autobiography, *As It Happened*. Attlee was a quiet, unassuming man, but he had great administrative ability.

Aung San (1915–1947)

Some of Aung San's forebears had resisted British annexation in 1886. It is hardly surprising, then, that after he went from central Burma to Rangoon University, he was among those radical students who took the title *thakin*, or master (usually reserved for Europeans), and sought independence through struggle. As secretary of the students' union, he helped U Nu lead a student strike in February 1936. By 1939, he was secretary-general of the nationalist Dobama Asiayon (We Burmans Association). This group helped form an antiwar freedom front in 1939 and 1940.

Having also founded a Communist group in 1939, Aung San traveled to China in 1940 in hopes of contacting Chinese Communists and continued on to Tokyo. Japan helped him and the so-called Thirty Comrades—Burmese who went to Japan

for training—to raise a Burmese military force. This force, the Burmese Independence Army, assisted Japan's invasion of Burma in 1941 and 1942.

When Japan gave Burma notional independence on August 1, 1943, Aung San, by now a major general (or *bogyoke*), became minister of defense in Ba Maw's government. But in March 1945, he switched the now renamed Burma National Army (BNA) to open support of the Allies.

After the Japanese surrender in August 1945, Britain sought to integrate the BNA with the regular army, but some members were channeled into the People's Volunteer Organization. This veterans' association helped keep the pressure on during the struggle for independence. The strength of the nationalist Anti-Fascist People's Freedom League (AFPFL) persuaded Britain to drop plans to delay independence. Aung San was made deputy chairman of Burma's Executive Council in September 1946. In January 1947, in London, he secured from British prime minister Clement Attlee an agreement that Burma would be granted independence within twelve months.

The AFPFL won 196 of 202 seats in the subsequent April 1947 elections for a constitutional assembly, and it seemed certain that Aung San would become the first prime minister of an independent Burma. But on July 19, 1947, the thirty-two-year-old Aung San and six Executive Council colleagues were gunned down while in session. Political rival U Saw was held responsible and executed, leaving the way open for U Nu to emerge as Burma's pre-eminent leader.

Aung San's legacy lives on. His daughter Aung San Suu Kyi (who was just two years old when he was killed) returned to Burma from the United Kingdom in 1988 and helped establish the National League for Democracy (NLD). The league won 392 out of 485 seats in the May 1990 elections, which the military then aborted. Today, Aung San Suu Kyi continues to challenge the military government. She was awarded the Nobel Peace Prize in 1991.

Australia

Capt. James Cook mapped the eastern coast of Australia in 1770, complementing the existing maps of Portuguese and Dutch explorers. In the wake of the loss of the American colonies in 1776, the British annexed southeastern Australia as a convict colony. Over 160,000 prisoners were transported to Australia between 1788 and 1856, with free settlers beginning to emigrate in significant numbers in the 1830s. Colonization, particularly through pastoral expansion, continued for over a century, into the 1930s, fanning out from the southeastern corner to the north and west.

Sovereignty was declared in Australia through the doctrine of *terra nullius* (land belonging to nobody). Aboriginal Australians and 3 million square miles of territory came under the protection and laws of the British Crown on February 6, 1788. Assuming few indigenous people lived in the interior of the vast continent, the British also claimed ownership of Australia. When it became clear to explorers and pastoralists that Aboriginal people did inhabit the interior, other arguments were invoked to deny them their rights of native title: they were considered uncivilized, they were not populous, and they were not agriculturalists. Pastoralists and settlers, however, encountered Aboriginal resistance to their incursion into Aboriginal territories, and many recognized, both publicly and privately, that Aborigines did, in fact, have proprietary interest in the land. By the mid-nineteenth century, however, the intellectual climate was turning against humanitarian, Christian, and Enlightenment ideas of racial equality, and the new scientific thinking was given credence as Aboriginal populations decreased due to disease and settler violence directed against them.

Missionaries arrived comparatively late into Australia, establishing missions in the 1830s and 1840s, more than forty years after the first settlement. Many vocally opposed the settlers' treatment of the Aborigines and attempted to protect indigenous people. But by the 1850s, most southeastern missions considered themselves to have failed. Aboriginal people did not, by and large,

adopt Christianity, and the missionaries could not persuade them to relinquish their migratory lifestyle. Further, in many places, due to depopulation, the number of indigenous people remaining was too small to sustain a mission.

Mass immigration in the 1850s due to the Victorian gold rushes heightened the competition for land. This pressure, combined with colonial policies of segregation and the establishment of reserves, resulted in increasingly punitive laws and treatment of indigenous people. A second wave of missionaries in the 1870s saw their task as caring for the remnants of a dying race and training the "half-caste" population for domestic and rural labor. Aborigines of mixed ancestry were increasingly considered able to be assimilated, and changes in colonial policy toward the end of the century were designed to expel them from reserves, leaving the "full-bloods" to die out. The practices and policies of removing Aboriginal children from their families also became more common in this period, beginning almost a century of devastating cultural assaults on the indigenous population.

In January 1901, the federation of the Australian colonies created a crisis in citizenship. In South Australia alone, both white women and Aborigines were entitled to vote from 1894 onward. The enfranchisement of these groups was strenuously opposed by the other colonies, especially those with large Aboriginal populations. The resolution was the extension of the federal franchise to white women in 1902 and the deliberate exclusion of Aborigines and other nonwhite groups. Aboriginal Australians were not granted full citizenship and enfranchisement until 1967.

In the South African War (1899–1902), Australian colonial troops served as part of the British army. In 1914, Australia sent the national armed forces (the Australia Imperial Force) to France to fight in World War I. This move began the process of differentiating Australia from Britain. The Gallipoli campaign, a disastrous World War I battle against the Turks, became known as the "birth of the nation," and its anniversary is celebrated as a national holiday. Disillusionment with Britain increased in the 1930s, but it was not until 1984 that the Crown's legislative and judicial powers over Australia were relinquished.

With federation in 1901, the new nation quickly became a colonial power in its own right. In 1906,

after five years of debate, the Papua Bill was passed, redesignating the Territory of Papua under Australian rule. Many saw this as the chance to make amends for the treatment of indigenous Australians, and basic protective clauses were built into the bill. In 1914, German rule in New Guinea was relinquished and Australia took possession of the German colony. The territory was a disappointment. White settlement did not flourish, and the Australian population was only 1,200 in 1939. Most Australians in Papua New Guinea opposed the protective legislation, but the resolve of the lieutenant governor, Herbert Murray (who served in that post from 1908 to 1940), maintained relatively positive conditions for Papuans. World War II brought thousands of Australian troops to Papua to stem the Japanese advance, and in 1947, the United Nations endorsed Australia's rule in both Papua and New Guinea. This rule, however, remained paternal and heavily controlled by the colonial elite. The tide of decolonization began in 1966 when Papua New Guinea's legislators asked to become a state of Australia; Australia's government decided independence was the preferred option, given that indigenous Australians were not yet citizens. By 1975, there was bipartisan support for decolonization.

The end of the twentieth century saw the emergence of a vigorous republican movement, although Australia remains a constitutional monarchy. The Native Title judgment in 1992 (the *Mabo* decision) recognized the native title of indigenous people and denounced the continued legal use of terra nullius. The release of the "Report of the National Inquiry into the Separation of Aboriginal and Torres Strait Islander Children from their Families" in 1997 also focused national and international attention on Australia's enduring colonial legacy.

Austro-Hungarian Empire

The Austro-Hungarian Empire (also known as Austria-Hungary) was a multinational state, situated largely in Central Europe and the Balkans,

that existed from 1804 through 1918, though predecessor states that formed the empire stretch back to the Middle Ages. A powerful player in European politics during the first half of the nineteenth century, it went into a slow decline after the pan-European revolutions of 1848, saddled with an unwieldy bureaucracy and an ineffectual emperor and crippled by the rising nationalisms in its component states.

A product of the Napoleonic Wars, the Austro-Hungarian Empire officially came into existence when the Hapsburg monarch Francis II—the Holy Roman Emperor—declared himself the Austrian emperor. Two years later, under pressure from Napoleon, the Holy Roman Empire was abolished, and Austria became leader of the various German-speaking states that emerged in its wake.

Almost immediately on its creation, the Austro-Hungarian Empire was faced with a military crisis. In 1805, its army was decisively defeated at the Battle of Austerlitz by the armies of Napoleonic France, forcing it to give up its holdings in Italy and the Tyrol to various client states of France. For three years, the empire made peace with France, even as it augmented and modernized its military for a new round of fighting, as coexistence with revolutionary Napoleonic France was considered unthinkable by the very conservative emperor and his advisers. In 1809, Austria-Hungary once again went to war with Napoleon and, after a few initial victories, was once again defeated.

This time, however, the empire—whose diplomacy was now directed by the newly appointed Prince Klemens von Metternich as foreign minister—sought accommodation with France. For four years, Vienna tried to play off various European powers. But with France's invasion of Russia collapsing in 1813, Metternich formed an anti-French alliance with Russia, Prussia, and Great Britain, an alliance that led to Napoleon's defeat and exile in 1814 and 1815. At the same time, Metternich brought together the conservative, antirevolutionary monarchs of Europe at the Congress of Vienna, where he successfully arranged a return to the old order of absolutist monarchies running the various great states of Europe in a balance of power that would preserve stability. But the plan did not last long, even if the general balance of power it achieved put off a general European conflagration for a century. The various powers soon

AUSTRO-HUNGARIAN EMPIRE

saw their interests diverging and clashing with one another. At the same time, Metternich hoped to make Austria the leader of the German-speaking states of Central Europe, a goal that was increasingly thwarted by the rising power of Prussia.

At home, Metternich—while advocating administrative modernization—was also a strong opponent of political liberalization, which created unrest both in the Austrian homeland and in the subject states of the empire, many of whose autonomous rulers refused to countenance any administrative reform. At the same time, the empire—like other states in Europe—was being convulsed by the social and economic changes wrought by the early Industrial Revolution. The government in Vienna responded by creating a customs union with Prussia and other German states, but it failed to implement the political reforms demanded by the ever growing working and middle classes. In 1848, the frustration of these classes erupted in a continent-wide revolution that toppled both Emperor Ferdinand I and Metternich. Meanwhile, in the component states of the empire—and most notably in Hungary—the revolution was both a cause and a symptom of rising nationalist sentiment. In response, the new government of Emperor Franz Joseph promised a new constitution, providing for a constitutional monarchy and more autonomy for Hungary, though Franz Joseph soon reneged on the promises.

The era between 1848 and 1859 is known as the neoabsolutist period in Austrian history, as the new emperor tried to impose absolutist rule once again, albeit sometimes in the interests of administrative and educational reform. But the embarrassing defeat of the Austro-Hungarian army in Italy in the latter year cost the empire holdings in the peninsula and forced a period of constitutional experimentation that resulted in the establishment of the dual monarchy of Austria-Hungary in 1867. Moreover, Austria-Hungary lost its preeminent position among the German-speaking states of Central Europe when it was defeated in the Austro-Prussian War of 1866 and was expelled from the German federation, which was increasingly coming under the control of Prussia.

Throughout the late nineteenth century and into the early twentieth century, Austria-Hungary was largely preoccupied by three things: political and educational reforms granting more power to Parliament and the people, though still limited;

Prince Klemens von Metternich, foreign minister of the Austro-Hungarian Empire from 1809 to 1848, helped re-establish conservative imperial rule in much of Europe following the Napoleonic Wars of the early nineteenth century. (Library of Congress)

concessions to Slavic nationalism; and the seizure and occupation of Ottoman lands in the Balkans through diplomacy and war. After several years of frustrated diplomacy—including the 1878 Congress of Berlin—Austrian troops marched into Bosnia-Herzegovina, to prevent the union of the Province of Montenegro with the independent state of Serbia. It eventually gained more influence over Serbia through an alliance in 1895. Much of this diplomacy was the result of an Austrian fear of growing Russian influence among the latter's fellow Slavs in the Balkans. Indeed, Serbia soon moved out of Austria's orbit and into that of its fellow Slavic state Russia. In response, Austria put increasing economic and political pressure on Serbia in the last decade of the nineteenth century and the first decade of the twentieth.

In 1908, Russia tried to win Austrian approval for its move to open the Turkish straits at the Dardanelles to Russian warships by granting Vi-

enna more control over Bosnia-Herzegovina, which quickly led to the annexation of that Balkan territory. The annexation aroused Serbian anger, as many Slavic Serbs lived in Bosnia-Herzegovina. Several Balkan wars between Austria-Hungary and Serbia resulted in 1912 and 1913 as the former tried to keep the latter out of Bosnia-Herzegovina and Montenegro. On June 28, 1914, an angry Serb nationalist assassinated Archduke Francis Ferdinand—heir to the Austrian throne—on the streets of Sarajevo, capital of Bosnia-Herzegovina, thereby setting in motion forces that would lead to World War I. Austria-Hungary quickly declared war on Serbia. Because of a series of alliances—sometimes arranged in secret—the various powers of Europe soon declared war on one another. Ultimately, two sides would emerge in the conflict: Austria-Hungary, Germany, and the Ottoman Empire as the Central Powers and, on the other side, Britain, France, Italy (from 1915), Russia (until its revolution in 1917), and the United States (from 1917).

With the convening of its parliament postponed until 1917, Austria was ruled by a military dictatorship, with the aging Franz Joseph serving as the figurehead emperor until his death in 1916; he was replaced by Charles I, the last of the Hapsburg monarchs. Although Austria at first scored some victories in Italy and the Balkans, the long, costly, and bloody war soon took its toll. In October 1918, Austria appealed for an armistice, and the new emperor—trying to stave off the destruction of his empire—declared Austria-Hungary a multinational federal state. Although this idea of a federal state went nowhere, it did set a precedent for the peaceful dissolution of the empire that was achieved after the war. On November 13, two days after the end of World War I, Charles I abdicated, though he left open the possibility that if either Austria or Hungary should declare itself to be a monarchy again, the Hapsburg line would rule both lands. In the end, the Austro-Hungarian Empire was divided into its component states by the Treaty of St.-Germain, signed on September 10, 1919. The states formed out of the old empire included all or parts of Austria, Czechoslovakia, Hungary, Italy, Poland, Romania, Russia, and Yugoslavia.

Azerbaijan

Azerbaijan is a region bordered by the Caspian Sea on the east, Iran to the south, Armenia to the west, and Russia and Georgia on the north. The capital city of Baku is situated on the largest harbor on the Caspian Sea. Located at the crossroads traveled by migrating tribes and military conquerors, Azerbaijan experienced successive waves of invasion from the ninth century B.C.E. to modern times. Ruled by the Scythians, Medes, and Archaemenid Persians, the region was conquered in 330 B.C.E. by Alexander the Great, who relied on Persian rulers to administer the government. After the disintegration of Alexander's empire, Azerbaijan fell under the control of the Scythians and the Seleucids before the Roman armies conquered and annexed the region, which they referred to as Albania. The fall of the Roman Empire created a power vacuum, which was quickly filled by the Persians. From the seventh century until the eleventh, the rise of Islam led to a period of Arab domination before Turkish-speaking tribes invading from Central Asia began a golden era of cultural achievement. The thirteenth century started with the arrival of the Mongol ruler Hulegu, who ruled the country until his death, whereon the Persian influence reemerged briefly before Timur, another Mongol, reasserted power over the inhabitants.

During the sixteenth century, another conqueror people, the Persians, maintained authority throughout the region despite the efforts of the Ottomans to assert domination over the land, but their efforts failed as the Russians advanced southward to the Aras River in the early eighteenth century. The area was coveted by the Russian royal family as a lucrative source of oil and revenue, but the indigenous population formed political parties

during the later nineteenth century in an effort to overthrow Russian rule. After the Russian Revolution, the Red Army suppressed all opposition until after the fall of the Soviet Union. Achieving independence in 1991, the Azerbaijani government continues to experience tensions with neighboring Armenia, primarily over the future of the Nagorno-Karabakh Autonomous Region, an area within Azerbaijan that is 94 percent Armenian and 6 percent Azerbaijani.

Azores

The Azores archipelago, an autonomous region of the Portuguese Republic since 1976, is located in the Atlantic Ocean, approximately 1,000 miles west of the Iberian Peninsula. It consists of nine volcanic islands forming a 400-mile-long semicircle. Legendary ever since antiquity, the Azores were uninhabited when the Portuguese arrived (c. 1427), followed by other Europeans, mostly Flemish. Thereafter, the area was primarily used to produce wheat and wine for Portugal and woad (a member of the mustard family) and dyes for the English textile industry.

Because of the type of economy that developed in the Azores, slavery never became common there. But transshipment of slaves did occur in the late fifteenth century. The best estimates are that by 1500, a few thousand African slaves had passed through the Azores on their way to Europe, mainly to the Iberian kingdoms. The later massive slave trade ran directly west, from Africa to the Americas. Beginning in the sixteenth century, the introduction of the caravel for long-distance Atlantic shipping multiplied Portuguese voyages to the Orient, Africa, and Brazil; Spanish galleons carrying silver and gold from the New World proliferated; and English settlements in the West Indies and North America grew. Commercial development on the islands was spurred because, although there were several possible routes away from Europe, there was only one way back to avoid strong headwinds, and that was via the Azores.

The islands of São Miguel, Santa Maria, Terceira, and particularly Fayal, which offered the archipelago's best harbor at Horta, became booming commercial centers supporting colonial commerce. Sometimes, as many as 100 ships were in port at a time. Loads from the colonies were transhipped, and vessels were supplied with fresh food and water and repaired. Fortifications held pirates at bay. In time, the invention of the steamship rendered the archipelago irrelevant to commerce, but the islands still played an important role as wartime bases as late as World War II.

Aztecs

Aztecs is a general term given to a group of independent tribes inhabiting the central valley of what is now Mexico. The name was first given to a tribe called the Tenochas who struggled, through marriage and conquest, to establish an autonomous dynastic lineage. The early Aztec period started in 1299 and was divided into the eastern and western areas. The eastern was centered in Texcoco, with Tenochtitlán as the western center. The Tributary Period lasted from 1376 to 1428 and saw the rise of city-state politics and federated central control. After this, the Western phase began to dominate the whole Aztec complex under its leader Itzcoatl (1429–1440). Montezuma (Moctezuma) I succeeded Itzcoatl, and under his reign, the Aztec culture flourished, with the erection of great temples and the establishment of an elaborate ceremonial religious life built on the traditions of some of the conquered people, including human sacrifice. These developments were coupled with tremendous public works projects designed to ensure the health and prosperity of the people. Montezuma I consolidated Aztec power in Tenochtitlán, reducing the peoples of the eastern area to the status of loyal allies. Montezuma I was succeeded by his son Axayacatl, who ruled until

1503 when Montezuma II (nephew to Montezuma I) took power. Under Montezuma II, the Aztec Empire reached its peak, both geographically and culturally, establishing Tenochtitlán as the largest and, in the words of the Spanish conquerors, the most orderly and beautiful city in the world.

It was under Montezuma II that Spanish conquistador Hernán Cortés began his conquest of the Aztec Empire in 1520. Cortés destroyed not only Aztec political autonomy but also Aztec culture, utterly obliterating Tenochtitlán. Montezuma, killed during the Spanish conquest, was succeeded by

Cuitlahuac, who died four months later of smallpox. His successor, Cuauhtemoc, was killed by Cortés in 1524 as the Spaniard marched on Honduras. Cuauhtemoc was the last of the Aztec emperors.

B

Baku

The city of Baku, on the western shore of the Caspian Sea, has long been the focus of international power struggles because of its strategic location and rich petroleum deposits. In the eighteenth century, under the pretext of protecting Christians under Muslim rule, the struggle involved Russia and Persia. Russia gained the upper hand in 1813 and maintained a monopoly on Baku's petroleum until 1872, when the industry was opened up for foreign investment. Russian rule was, almost without exception, prejudiced against the indigenous Azerbaijani Turks. Ethnic animosities increased as skilled Russian and Armenian workers flocked to Baku, monopolizing the highest-paying jobs. In 1905, the violence became so severe that the city was placed under martial law for nineteen months.

As the military importance of petroleum products increased, so did Baku's strategic importance. During the Russian Revolution and Civil War, the area changed hands several times and was the scene of the short-lived Bolshevik-led Baku Commune in 1918. The oil fields were also coveted by the British, who held the city for a short period during the Russian Civil War. In April 1920, the Red Army captured Baku and nationalized the oil industry. As the capital of the new Azerbaijani Soviet Socialist Republic, Baku continued to produce a good deal of Russia's military fuel supplies. Russian and Armenian immigration reduced the Azer-

bajani Turks to a minority in their own republic until the 1980s.

In the late 1980s, hostilities erupted between Azerbaijan and Armenia over control of Nagorno-Karabakh, an Armenian enclave located entirely within Azerbaijani territory. On January 13, 1990, Muslim mobs in Baku attacked Armenians, which led to a blockade of the city and its assault by Soviet troops. The event received worldwide media coverage, and today, the situation remains unresolved.

Balboa, Vasco Nuñez de (1475–1519)

In 1513, the Spanish explorer and conquistador Vasco Nuñez de Balboa became the first European to sight the Pacific Ocean. Born in 1475 in Jerez de los Caballeros in Extremadura, Spain, Balboa went to the Caribbean in 1501. Attempting unsuccessfully to become a planter on Hispaniola, he deserted his creditors by stowing away on a ship

bound for the Gulf of Darien in 1510. Martin Fernandez de Encisco, the leader of the expedition, followed Balboa's advice to found the new colony of Santa Maria de l'Antigua del Darien (later, Castilla del Oro) 30 miles from the mouth of the gulf.

Political competition among the Spanish leaders at Darien enabled Balboa to advance. Named supreme commander of the colony in 1513 and being under close scrutiny, he desired a grandiose achievement to improve his image with the king. On September 1, 1513, Balboa, with 190 soldiers and 1,000 Indian porters, led an expedition to find an uncharted ocean mentioned by the local people. Crossing swamps, lakes, and dense jungle, the party also fought a battle with the Indian leader Quaraqua. Balboa ordered that the Indian captives taken during the fighting be torn apart by the war dogs accompanying the Spanish party.

On September 25, Balboa spotted the Pacific Ocean. He waded into it four days later, claiming it for God and king. He returned to Antigua in January 1514, bearing Indian slaves, gold, and pearls. Over the next five years, he frequently crossed the Panama isthmus in preparation for launching a military expedition to Peru. By 1531, the Spanish under Francisco Pizarro were utilizing Balboa's pathway to attack the Inca Empire in South America.

Though successful, Balboa soon became a victim of events transpiring in Spain. Before news of his discovery reached Europe, he was replaced. The king had been convinced of his disloyalty by a prominent conquistador and the new governor at Darien, Pedrarias Davila. After five years of jockeying with Balboa for political power, Pedrarias falsely accused him of treason. After a trial at Acla in January 1519, Balboa was beheaded in the public square.

Balfour Declaration

Arthur James Balfour (the first earl of Balfour) was a British Conservative politician who had

been prime minister and first lord of the Admiralty. On November 2, 1917, during his stint as foreign secretary, he wrote a letter to Lord Rothschild, the Jewish banking magnate and philanthropist. This letter was made public and became known as the Balfour Declaration of 1917. The content of the letter in itself is not startling, but the subsequent interpretations of it have created confusion until the present day.

In his letter, which was approved by the war cabinet and was intended for public dissemination, Balfour declared, "His Majesty's Government view with favour the establishment in Palestine of a national home for the Jewish people, and will use their best endeavours to facilitate the achievement of this object, it being clearly understood that nothing shall be done that may prejudice the civil and religious rights of existing non-Jewish communities in Palestine, or the rights and political status enjoyed by Jews in any other country."

This missive contained deliberately vague and misleading phrases, such as "national home" and "use their best endeavours." There was no mention of how the issue of political rights would be handled, nor was it acknowledged that Palestine was the home of 750,000 persons, 90 percent of whom were not Jewish.

The pressures of winning an arduous and uncertain war, as well as anxieties about boundary claims during the peace settlements, help to explain why Britain would make promises that could not possibly be upheld. Against any credible evidence, those in power in Britain held that world Jewry supported the Germans during the Great War, and the London government had serious misconceptions about Jewish influence on Ottoman, Russian, and U.S. policy. In an effort to court Jewish support, Britain believed that if an "arrangement" were offered to Zionists in Palestine, Jews would withdraw their support for the Turkish government, thus causing its downfall and eliminating the eastern front enemy. The overthrow of the Russian czar in March 1917 led the British government to believe that promises made to Russian Jews would keep Russia in the war. And finally, it was felt that concessions to world Jewry would please Jews residing in the United States and cause them to influence the U.S. government to cooperate fully with British aims during the peace process.

Palestine became a mandated territory, entrusted to Britain by the League of Nations; under this arrangement, Britain was to administer the internal structure of the area. The hazy promise of independence that accompanied the league's action fostered Arab nationalism, and when that prospect was added to the promise of a Jewish homeland, violence was inevitable. The first serious Arab-Jewish clash occurred in April 1919.

That the Balfour Declaration appears, in retrospect, to be a cynical and misleading document can be explained by the wartime pressures existing when it was written. For the leaders in London, British national and colonial objectives were paramount over any idealistic promises to Semitic peoples. The betrayal inherent in the declaration was the unintended by-product of a desire to achieve short-term advantages rather than long-term solutions, and it should not be seen as a deliberate attempt on the part of London to mislead and confuse all who claimed Palestine as their own. When Zionists, not satisfied with a "homeland," demanded a Jewish state and when Arab nationalism began to develop, Britain's balancing act became unsustainable. This situation set into motion a conflict that was to last throughout the twentieth century.

Baltic States

For centuries, the Baltic states—Estonia, Latvia, and Lithuania—were a battleground in the imperial rivalry that played out in Central and Eastern Europe. They were also the first among the republics of the Soviet Union that declared independence and thereby contributed to the breakup of the Soviet empire.

Beginning in the ninth century, the Vikings, Russians, Danes, Swedes, and Germans struggled for control over the region, which was inhabited by the Baltic and Finno-Ugric tribes. In the thirteenth and fourteenth centuries, the German knights—the vanguard of Western Christian imperialism—

took over Estonia and Latvia. At the same time, Lithuania expanded eastward, absorbing much of Ukraine, and became one of the largest states in Europe. It merged with Poland as a single state in 1569.

After several wars between Russia, Sweden, Poland, and Denmark for control over the Baltic during the sixteenth and seventeenth centuries, the region was redivided. Estonia and northern Latvia were incorporated into the Swedish Empire, and Poland extended its sovereignty to Courland (southern Latvia). At the same time, Courland was engaged in the international slave trade and even had overseas possessions in Gambia and the Caribbean (Tobago) from the 1650s to the 1680s. Since the sixteenth century, the religious divisions in the Baltic region helped promote a violent history: Lithuania remained Catholic, Estonia developed as a Lutheran country, and Latvia became both Lutheran and Catholic.

Russia assumed control over the region in the eighteenth century, and thereafter, Estonia and Latvia developed as some of the most advanced parts of the Russian Empire. In the 1880s and 1890s, the Russians tried to limit the traditional influence of the Germans and further consolidate their control in the Baltic provinces. Ironically, these attempts opened the way for the national awakening of the Balts.

World War I brought German occupation to the region. In May 1918, Lithuania was proclaimed a kingdom under the Prussian dynasty of the Hohenzollerns. After the collapse of the Russian Empire and the defeat of Germany, Estonia, Latvia, and Lithuania declared independence, and a chaotic struggle erupted in the region, involving the Balts, the Bolsheviks (their Russian antagonists), the Germans, and the Poles. By 1920, Estonia and Latvia (with British naval support) as well as Lithuania had secured their independence.

The Soviet-Nazi pact and the beginning of World War II allowed the Soviets to occupy and annex the Baltic states in 1939 and 1940. Between 1941 and 1944, the Germans, supported by local collaborators, turned the region into Reichskommissariat Ostland, although there were timid attempts to declare independence (Lithuania in June 1941, Estonia in September 1944). The Sovietization of the region from 1944 to 1953 was met with guerrilla warfare, particularly in Lithuania and

Latvian citizens haul away a statue of Lenin in 1991. The Baltic state of Latvia achieved independence that year with the collapse of the Soviet Union. The latter was considered by many to be the last great European empire. (Associated Press)

Estonia. The Communist authorities responded with mass deportations (more than 400,000 individuals were deported after 1940). At the same time, rapid industrialization in the Baltic states led to the significant movement of populations from other Soviet republics.

The crisis and reforms in the Union of Soviet Socialist Republics (USSR) in the late 1980s rekindled aspirations for independence in the Baltic states. In March 1990, Lithuania declared its independence, and Latvia and Estonia prepared to follow suit. After Moscow's economic sanctions and military actions to restore its power in the Baltic states failed, the disintegrating Soviet Union recognized the independence of Estonia, Latvia, and Lithuania in September 1991.

**Banda, Hastings Kamuzu
(c. 1896–1997)**

The leader of the final phases of the independence movement in Nyasaland, Hastings Kamuzu Banda was also the first prime minister and then president of Malawi, the name given to the territory after it achieved independence in 1964. As a youth, he attended a Church of Scotland bush school near his home in the central region of the country; ambition then led him to seek further education in Southern Rhodesia, in South Africa, and ultimately in the United States. There, he began his

studies at Wilberforce College in Ohio; he then attended Indiana University and the University of Chicago, finally receiving a medical degree from Meharry Medical College in Tennessee in 1937. To qualify to practice medicine in Britain, Banda then began two years of study at Edinburgh University, after which he established a successful medical practice in London. He befriended many young Africans in London, some of whom later became important political and social leaders on the African continent. He also established contact with African leaders in his homeland, providing both moral and financial support for a variety of individuals and causes. Proposals for the federation of the Rhodesias and Nyasaland politicized him further and, when the British Parliament created the Central African Federation in 1953 in spite of African objections, he left Britain for the Gold Coast (later Ghana). In 1958, young antifederation leaders in Nyasaland successfully appealed to Banda to return to his homeland and assume the leadership of their political movement, the Nyasaland African Congress. Through fiery oratory and by encouraging a cult of personality focused on himself, he electrified the movement and caused British authorities to declare a state of emergency. Along with many of his followers, he was briefly imprisoned, and then he led a revitalized and nominally new movement, the Malawi Congress Party, in successful negotiations to end the federation and bring independence to Nyasaland. In 1963, Banda became prime minister and a year later was elected Malawi's first president. Despite his anticolonialism, he soon transformed the government into a system of both autocratic and one-party rule; his party's suppression of dissent was successful until 1993. In multiparty elections the following year—the first in thirty years—he again ran for president but was defeated. In frail health even before his 1994 electoral defeat, Banda died in a South African hospital in 1997.

Bandung Conference

The Bandung Conference (also known as the Asian-African Conference) was held in Bandung, on the island of Java in Indonesia, from April 17 to April 24, 1955. It was attended by representatives from twenty-nine nation-states in Asia and Africa, most of them new. There were also observers from organizations representing African Americans and Greek Cypriots, as well as a delegation from the African National Congress. Sukarno, the Indonesian president (1945–1965), wanted the assembled governments to stake out a nonaligned position in relation to the escalating Cold War between the United States and its allies, on the one hand, and the Sino-Soviet bloc, on the other. Jawaharlal Nehru, the prime minister of India (1947–1964), was also enthusiastic about such a project, and the delegation representing the Chinese government was sympathetic, despite its alliance with the Soviet Union. The conference produced a declaration that emphasized the need for greater cooperation between the former colonies of Asia and Africa and the governments of what would increasingly become known as the Third World.

The meeting in Bandung paved the way for the establishment of the Movement of Non-Aligned Countries in 1961. But the growing rivalry between the Indian and Chinese governments and the Indian government's improved relations with the United States by the end of the 1950s undermined many of the initiatives inspired by the Bandung Conference. More broadly, as the trend toward decolonization gained speed in the early 1960s, the complex dynamics and conflicting goals of nationalist movements in Africa and Asia often subverted efforts to unite the governments of the Third World. A plan to hold a second conference in Algeria in June 1965 was shelved when the politics of the Sino-Soviet split directly affected efforts to organize the meeting and when the Ben Bella government was toppled by the Algerian military. In September 1965, Sukarno, the sponsor of the 1955 Asian-African Conference, was marginalized by a U.S.-backed military dictatorship under General Suharto; Nehru, another major leader of the Bandung era (which stretched from the 1950s to the late 1970s), had died in office in May 1964.

Between the 1960s and 1980s, the nonaligned movement continued to meet approximately every

three years. But meetings have been less frequent since then, and as an organization, it has played no significant role in world affairs. In fact, by the beginning of the 1990s—when the Indonesian government, under President Suharto, took over the chairmanship—the movement had become obsolete.

Bao Dai, Emperor (1913–1997)

Bao Dai was Nguyen Vinh Thuy's reign name. He was born in the city of Hue in central Vietnam in 1913. Crowned emperor of Annam (the northernmost province of Vietnam) in 1926, he began to reign actively in 1932 after having studied in Paris. In the year following the end of the regency of his youth, Bao Dai enacted a small number of reforms, including the abolition of harems. By July 1933, however, the French government strictly limited his powers within the protectorate system, effectively putting a stop to his enthusiastic attempts to modernize Vietnam. This enforced position of being a mere figurehead helped to explain Bao Dai's growing fondness for big-game hunting and attractive women. Although he never entirely gave up the hope that he might convince France's policymakers to modernize Vietnam's political and social structures, he never again fully trusted them. This partially explains why, at the instigation of the Japanese (who occupied Vietnam during World War II), he readily proclaimed Vietnam's unity and independence in March 1945.

After Japan's surrender on August 14, 1945, the Viet Minh, the communist-nationalist forces, asked Bao Dai to abdicate, which he did formally in a declaration made on the August 25, but they soon offered him an advisory position. After the start of the open hostilities between French forces and the Viet Minh in late 1946, Bao Dai left for France and began to negotiate a series of accords with the French authorities. The often acrimonious negotiations finally led to a form of limited independence for the Vietnamese state in 1949.

For the next six years, the French considered Bao Dai as Vietnam's head of state, and in spite of a number of ups and downs in his relationship with the French, he remained their favored interlocutor. He was forced to retire permanently from Vietnamese politics in 1955 after losing the country's first presidential election under highly suspicious circumstances.

At the time of the French Indochina War, political and media opinion in France and other parts of the world was often split about Bao Dai's leadership. On the one hand, most commentators thought that he was one of the few realistic alternatives to the Communists; on the other, they saw him as a playboy or a puppet of the French authorities. Although such charges were true to some extent, contemporary observers generally underestimated Bao Dai's political abilities, his commitment to Vietnam, and the danger he faced from the Vietnamese Communist forces. After 1955, Bao Dai moved to France, where he lived out the remainder of his days in relative obscurity. He died in Paris in 1997.

Basutoland (Lesotho)

Basutoland was largely populated by the southern Sotho people, who comprise one of the three main branches of all Sotho in southern Africa. In the mid-nineteenth century, this region was one of the most fertile and productive areas of the entire subcontinent, in part because of its heavy rains. As the Sotho numbers started to increase, the ever advancing Boers began to compete for fertile land in the 1850s. An able leader, Moshoeshoe, emerged and united the Sotho into one nation and enabled them to successfully fend off the encroachment of the Boers. Moshoeshoe decided to appeal for British protection to ensure Basutoland's independence from the white farmers, and in 1868, the area was briefly under British control. In 1871,

Britain transferred the administration of Basutoland to the Cape Colony, which was in the process of being given control of its own affairs by Britain.

But when the Cape government decided to ban firearms in order to co-opt African labor for the burgeoning diamond mines, this direct manipulation proved too overt for the Sotho. Masopha, a younger son of Moshoeshoe, led his nation in revolt against the magisterial rule. The Cape military was unequal to the task of decisively defeating and maintaining power over a Sotho nation united under an able leader, and after three years of bloodshed, the Sotho petitioned Britain to once again step into picture. Prime Minister William Gladstone reluctantly agreed, and in 1884, Basutoland was handed back to Britain, which instituted a form of indirect rule through Sotho chiefs.

Basutoland became one of the High Commission Territories, and, along with Bechuanaland and Swaziland, it played a part in the struggle between South Africa and Britain. The South Africa Act (1909) provided for the transfer of the territories to the South African Union; however, a discrepancy developed between Britain's promise to consult African wishes and the South African racial policies. In one sense, the British protected the people of Basutoland from the draconian racial laws of South Africa, but paradoxically, the British Dominions Office did not invest in any Basutoland development projects for fear that to do so would make the country more attractive to the South African Union.

A fall in the demand for labor in the diamond mines and a cycle of bad harvests reversed the fortunes of Basutoland, especially during the inflation following the Great War. By the 1930s, the economic downturn had worsened as drought was compounded by depression, and Basutoland, once the center of southern African grain production, was forced to import food. Large numbers of Sotho migrated to South Africa in search of employment.

The contradiction between development and protection finally reached an intolerable level. Yet when independence was achieved in 1966, the newly autonomous state of Lesotho had to struggle with the legacy of having been deliberately kept in an economic backwater for decades.

Batista, Fulgencio (1901–1973)

Born on January 16, 1901, in Banés, Oriente Province, Cuba, Fulgencio Batista spent his childhood in poverty. At the age of twenty, he joined the Cuban army, rising through the ranks to become a sergeant by 1928. In September 1933, he led a mutiny, known as the Sergeants' Revolt. Although the mutineers' objective was not the overthrow of Cuba's government, other groups took advantage of the coup and established a provisional government under the control of a revolutionary junta. A purge of Cuban military officers in November 1933 led to Batista's promotion to colonel and formalized his role as commander of the army.

Although remaining behind the scenes, Batista was the real political force in Cuba from 1934 until his own election to the presidency in 1940. As president, he began a program of popular reforms, including the construction of rural hospitals and schools, establishment of a minimum wage, and salary increases for public and private workers. After his term was over, he left the island but later returned to serve as senator for Santa Clara Province. He announced that he would run for president in the upcoming June 1952 election but instead seized power on March 10, 1952.

During the 1950s, opposition to his regime increased, driven in part by the 26th of July Movement, which was named for the unsuccessful 1953 attack led by Fidel Castro on Santiago's Moncada barracks. With victories for Castro's guerrillas in the eastern mountains, increasing violence in Havana, and a loss of support from the United States, Batista fled the island during the early hours of January 1, 1959. He died in 1973 in Spain.

Bechuanaland (Botswana)

The Tswana settlement in the area of southwestern Africa known as Bechuanaland (now Botswana) certainly dates back as far as the fourteenth century. The Tswana are one of the three main groups of the Sotho who peopled southern Africa. For a large part of the nineteenth century, the northern Tswana had limited contact with missionaries and traders, and there was little interference in the socioeconomic structure of the Tswana society.

By the 1880s, matters had changed drastically. Rinderpest (a deadly cattle disease) and drought had taken their toll. Beyond that, however, the independent economic structure of the Tswana was destroyed as a result of the changing political structure of southern Africa. Bechuanaland began to be the focus of colonial attention because of its location. To the west was land claimed by the Germans (modern Namibia); to the east were the Boer republics, which were eager to expand. The Cape Colony, under the control of Cecil Rhodes, was worried that its route to the north might be cut off if the Boers gained control of Bechuanaland.

In response to the German threat, pressure from Rhodes, and coercion from the Boer republics, Britain decided to partition the area in 1885. Bechuanaland south of the Molopo River became a crown colony, with the expectation that it would be absorbed into the Cape Colony; the area north of the river was declared a British protectorate under the governance of the Colonial Office in London. The price for this compromise was paid in the twentieth century by the southern Tswana, who were sentenced to live as residents of Bophuthatswana, the South African “homeland”; the northern Tswana, by contrast, became citizens of the independent Botswana.

Before the twentieth century, Bechuanaland was of interest to Britain only as a route to the north and as a buffer between German South West Africa and the Boer-controlled Transvaal. Bechuanaland had been declared one of three High Commission Territories along with Basutoland and

Swaziland and was the responsibility of the Dominions Office in London. Under pressure from South Africa to allow Bechuanaland to be subsumed into the Union of South Africa, the British government wavered. It felt some responsibility to protect the Tswana from the cruelties of the South African racial policies but was unwilling to actively develop the area and compete with the South African economy. When faced with the evils of racism, Britain ultimately responded by containing the boundaries—a rather passive policy but one that preserved the three High Commission Territories from the apartheid regime.

This benign neglect actually benefited Bechuanaland until the 1930s, when its fortunes reversed due to a shift in transport networks and the South African embargo on the sale of cattle, the mainstay of the Tswana economy. In an all too familiar African scenario, more and more Tswana were forced to leave their independent, if subsistent, existence to seek work in South Africa’s mines and on farms. Because the British viewed any investment and development as a temptation to South African ambitions, Bechuanaland was doomed to struggle along as a subsistence economy—a situation that continued even after it achieved independence as Botswana in 1966.

Belgian Congo

On August 20, 1908, by the Treaty of Cession, Leopold II formally transferred control of the Congo to the Belgian Parliament. A small country with little previous involvement in Africa was suddenly master of a colony nearly eighty times its size. Belgian colonial rule rested on the *Charte Coloniale* (Colonial Charter), a kind of constitution for its colonial holdings, with administrative responsibility vested in the minister for colonies, accountable to Parliament. The minister framed

Independence leader Patrice Lumumba and Belgian premier Gaston Eyskens sign Congo's independence pact in July 1960. The mineral-rich Congo had been a Belgian colony since the early twentieth century. (Library of Congress)

the budget and legislation for the colony, had direct authority over the governor-general, and, with the king's assent, could raise taxes and rule by decree. The colony was to be self-funding, primarily from export taxes.

The colonial economy inherited from Leopold II was controlled by a few large companies with financial links to foreign capital and the influential Belgian banking trust, *Société Generale de Belgique*. Both the monarchy and Belgian state had significant financial interests in the concessionaire companies; hence, the interests of such firms were often paramount in the formulation of colonial policies. Africans were forced into wage labor through taxation or compulsory cultivation of cash crops, often for very low returns. Public works, largely to the benefit of Europeans, were maintained by unpaid and compulsory African communal labor of up to 120 days a year by World

War II. The third pillar of colonialism was the Belgian Catholic Church. The Convention de Jonghe (1925–1926) entrenched the Belgian Catholic dominance of state-subsidized education in the Congo—education that rarely extended beyond the primary level—while discriminating against non-Belgian Protestant missionary societies.

A second wave of railway and mining expansion in the 1920s was followed by intensified exploitation during the depression of the 1930s. Social disruption, exacerbated by demands on African labor, led to the emergence of African-Christian faith-healing millenarian movements, such as that of Simon Kimbangu in 1921, seen by the Belgians as challenging colonial authorities and established churches. By the end of World War II, an *évolué* (referring to an evolved person or someone who had adopted a Western lifestyle) underclass of Western-educated African clerks, teachers, and petty traders

flocked to the cities, demanding recognition and participation in the colony's political economy. The colonial authorities excluded the évolué from politics or leadership roles. Municipal elections with a limited African franchise were only introduced in a few major colonial cities in 1957.

Numerous African political movements based on ethnic allegiances emerged, but their adherents had no experience of democracy; the Mouvement National Congolais under Patrice Lumumba began to agitate for independence. Anticolonial riots erupted in the cities. The Belgian government dithered in the face of conservative resolve to defy the mob and calls for independence by radicals at home and nationalists in the Congo. In 1959, the Belgian king dramatically announced that Belgium would grant independence, which came on June 30, 1960, to a country (now the Democratic Republic of Congo, earlier renamed Zaire) deeply divided by regional and ethnic-based nationalist parties.

Belgium

Belgium, one of the smallest countries in Europe, is divided along ethnic lines between Dutch-speaking Flemings and French-speaking Walloons. Following the Napoleonic Wars, the area was part of the Netherlands, but in 1830, the predominantly Catholic southern provinces de-

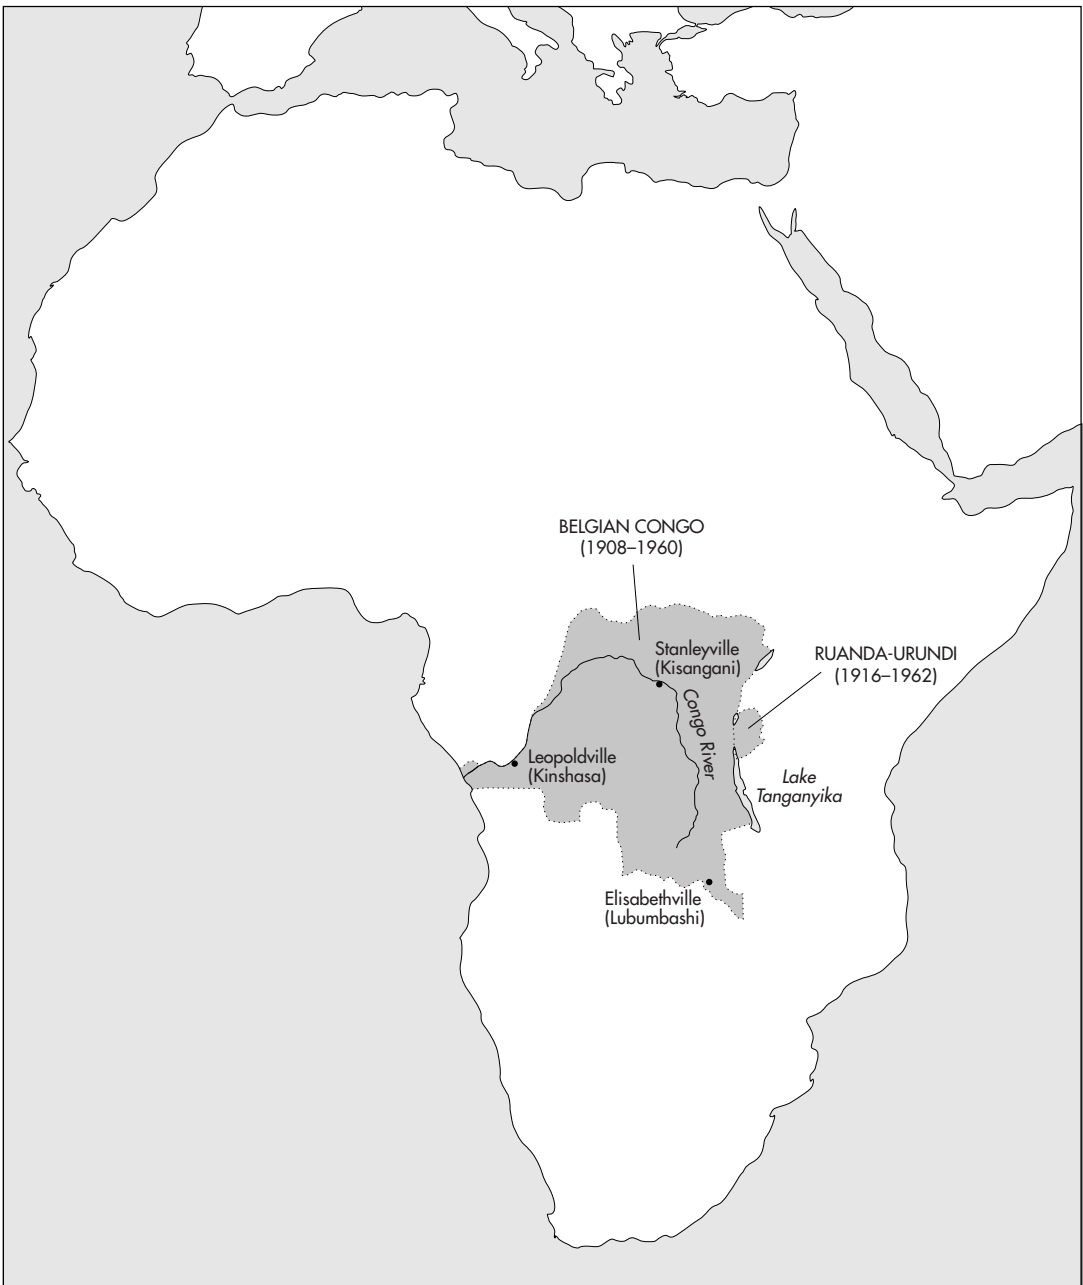

clared independence from the Protestant-dominated Netherlands. The 1839 Treaty of London recognized Belgian independence and “perpetual neutrality,” with an uncle of Queen Victoria, Leopold I of Coburg (r. 1813–1865), as constitutional monarch.

Belgium's empire in the Congo was a product of the personal ambitions of Leopold II (r. 1865–1909). Initially, with Belgium having few commercial links and no missionary presence in Africa, there was little popular enthusiasm for colonialism outside the military, which was chafing under the constraints of neutrality, and a cohort of Leopold's commercial cronies. The Congo Free State, established under the Berlin Agreement of 1885, was not a Belgian colony but sovereign property of Leopold II. The Red Rubber Scandal, consisting of worldwide outrage over the brutal treatment of rubber workers, resulted in the transfer of the Congo to Belgian control in 1908 and was viewed by many Belgians as a slight to their national honor.

The Belgian Congo, along with the former German-mandated territories of Ruanda-Urundi (now Rwanda and Burundi), were administered by the minister for colonies, responsible to Parliament. Colonial issues occasionally surfaced as foils for parliamentary jousts, though rarely with political significance. Politicians insisted that the colony be self-funding, while simultaneously exploiting its resources for the benefit of Belgium.

Investments in the Congo Free State, in mining and railways, were dominated by a handful of large companies financed by foreign capital and the influential Belgian banking trust Société Generale de Belgique (SGB). In 1906, SGB founded Union Minière du Haut-Katanga. The powerful chemical company Solvay financed the Kasai mining giant known as Compagnie des Chemins de Fer du Bas-Congo au Katanga (BCK). Tin mining was controlled by the Société de Bruxelles pour la Finance et l'Industrie (BRUFINA), whereas the Société Internationale Forestière et Minière du Congo (FORMINIÈRE) had major diamond and timber investments. In 1908, when control of the Congo passed to the Belgian government, King Leopold's secret shares in the concessionaire companies passed to the monarchy and the Belgian state. Belgian public investment in the Congo began in the 1920s, with the second wave of development in mining and railways.

BELGIAN EMPIRE

Belgian popular images of the Congo were molded by institutions such as the Musée du Congo Belge (today's Museum of Central Africa) and the Belgian Roman Catholic Church. The Musée du Congo Belge, opened by Leopold II in 1898, combined ethnographic art and colonial products in a union of art and commerce. The Congo fed a missionary enthusiasm in the Belgian Catholic Church, which recruited thousands of priests and nuns for schools and hospitals in the Congo. However, the most influential medical establishment was the Fondation Reine Elisabeth pour l'Assistance Médicale Indigène (FOREAMI) under the patronage of Queen Elizabeth of Belgium. It gained international recognition for medical research and the eradication of endemic disease from many areas of the Congo.

After World War II, Belgian images of benign paternalism were profoundly challenged by African nationalists, who denounced their Belgian colonizers as racist exploiters. The sudden withdrawal of Belgium from the Congo precipitated a financial crisis for Belgian investors and the government.

Bengal

Bengal is a major region in the northeast of India. Present-day Bengal encompasses the nation-state of Bangladesh (formerly East Pakistan, 1947–1971) and the Indian state of West Bengal. Prior to Indian independence in 1947, the region was divided politically into the Province of Bengal and the princely states of Tripura and Cooch Behar. The British East India Company ruled the Province of Bengal indirectly from 1757 to 1773 and directly from 1773 to 1857. After 1857, it was ruled by the British government. The British East India Company established a major presence in Bengal in 1690 with the location of a factory at Fort William (now Calcutta). In 1700, Fort William was accorded leading status among the three forts in the company's trading network in the subcontinent. By the early eighteenth century, at least 60 percent of the company's total imports to Europe came from Bengal, and during the course of that century, Bengal emerged as the pivot of the company's commercial operations and the administrative center of what would become an increasingly significant territorial empire.

When Fort William, which was regarded as essential to the well-being of the East India Company's operations, was captured in 1756 by the nabob (the Mughal governor) of Bengal, Siraj-ud-daula, company forces under Col. Robert Clive, along with a small British naval contingent, quickly recaptured Calcutta. Then, with the Battle of Plassey in June 1757, Clive and the company were launched on a path that involved them ever more deeply in the politics of the region. By 1765, the company had been officially made *diwan* (chief financial minister) of Bengal by the Mughal emperor. In this period, the company still ruled Bengal, at least in theory, through the nabob. In 1773, during Warren Hastings' governorship of Bengal, the nabob's remaining power was eliminated and the company became the sole authority in the province. One year later, the post of governor of Bengal was changed to governor-general, with direct responsibility for the presidencies of Bombay and Madras as well as Bengal. In 1854, by which time the company's territorial empire had grown dramatically, the position of lieutenant governor was created; this official would administer Bengal, giving the governor-general more time to deal with India-wide affairs. In 1857, the rule of

Belize

See British Honduras

Bengal and the rest of the company's Indian empire passed to the British Crown. Assam was detached from Bengal in 1874, and in 1912, Bihar and Orissa were also separated from Bengal to be administered as separate provinces. In 1937, the Province of Bengal was granted local political autonomy; ten years later, it was divided between the new nations of India and Pakistan.

Benin

Benin, a West African kingdom whose mythic origins stretch back to the thirteenth century C.E., rose to its greatest power as a state trading in pepper, palm oil, ivory, and slaves with Portugal, the Netherlands, and other European powers from the fifteenth through eighteenth centuries. Succession troubles and the increasing power of European empires in West Africa pushed the kingdom into decline in the nineteenth century.

The Edo people who founded Benin tell of how they established their kingdom to rid themselves of the oppressive rule of the quasi-mythical kings, or *ogisos*, in the thirteenth century. Under a new king invited by the Ife to rule over them, they consolidated their state and established a ruling administration. By the sixteenth century, they ruled over an area stretching from the Niger River delta to the present-day Nigerian-Benin border. Major guilds of craftspeople were established, and they produced some of the most magnificent bronze castings and other sculpture in African history.

Beginning in the early sixteenth century, Benin also established extensive trading relations with the Portuguese, the first Europeans to trade with West Africa in the modern era. Trading agricultural and mineral resources for European manufactured goods, Benin also became heavily involved in the slave trade, warring with

its neighbors to maintain its supply of human commodities.

By the late eighteenth century, however, the kingdom was going into decline, its power sapped by a series of violent succession struggles among various *obas* (kings). To gain power, these kings granted aristocratic titles to many followers, thereby creating a large class of parasitic nobles who exploited the surplus of the guilds and peasantry and created unrest in the process. The decline of the lucrative transatlantic slave trade in the early nineteenth century further undermined the economy of the kingdom. In the late 1800s, a much weakened Benin was incorporated into the British colony of Nigeria, though the traditional *obas* continue to occupy their throne to this day.

Benin is also the name of the West African coastal nation, situated between Nigeria to the east and Togo to the West, that originally won its independence from France as the nation of Dahomey in 1960. It changed its name to Benin, in honor of the ancient kingdom, in 1975.

Bentham, Jeremy (1748–1832)

Born in London in 1748, English legal theorist, economist, and social critic Jeremy Bentham was the founder and chief proponent of the utilitarian movement, which argued for “the greatest happiness of the greatest number.” He was educated at Queen’s College, Oxford, and studied law at Lincoln’s Inn, developing an interest in the shortcomings and imprecision of British legislation. Although he never practiced law, much of his life was spent working for judicial and penal reform.

Bentham decried war as the chief cause of human suffering. In “A Plan for a Universal and Perpetual Peace,” written in 1789, he proposed to eliminate war by means of significant military cutbacks throughout Europe and the creation of a court to settle international disputes. He also advocated the dissolution of ties between home countries and

their possessions because the colonial relationship engendered war, defense expenditures, corruption, and complicated forms of government. The freed nations would be allowed to develop their resources and industries and engage in the marketplace on a laissez-faire basis: all parties would benefit.

Among Bentham's most important works are *A Fragment on Government* (1776), which dissected Sir William Blackstone's *Commentaries; An Introduction to the Principles of Morals and Legislation* (1789), in which utility is defined; *The Rationale of Reward* (1825); the first volume of *The Constitutional Code* (1827); and *The Rationale of Punishment* (1830). He was also a cofounder of *The Westminster Review*, the organ of philosophic radicalism. A model prison system based on his "panopticon," a central structure that would allow inmates to be observed at all times, was the project closest to his heart; the British government ultimately rejected his plan. After Bentham's death, his body was dissected and his skeleton reconstructed, clothed, and fitted with a wax head. It remains on view at London's University College.

Berbers

The Berbers are the indigenous people of North Africa, tracing their cultural roots to pre-Roman times. Converted to Islam during the Arab invasions of the Middle Ages, most Berbers of the lowland regions along the Mediterranean coast gradually adopted Arab culture and language as well. Only in the highland regions and the Sahara beyond, particularly in Algeria and Morocco, has a significant, culturally distinctive Berber population survived, though it is almost entirely Muslim. Having intermarried and interbred for centuries, the two peoples are indistinguishable physically. As the censuses of North African countries do not classify the two groups separately, it is difficult to estimate the population of Berbers accurately, though it is thought that in Algeria, for example, the Berbers represent roughly 25 percent of the population.

The term *Berber* comes from the Latin *Barbari*, or *barbarian* in modern English, a word the Romans used to describe non-Latin-speaking foreigners. But the Berbers largely resisted the Roman culture of the coastal cities and the Christian religion that was established there in the late Roman era. Indeed, they remained a people apart until the Arab invasions of the seventh through eleventh centuries C.E.

The Berbers and the Arabs were treated differently by the French colonizers who occupied Algeria from 1830 to 1962. Subscribing to the racialist anthropology of the day, the French in North Africa—especially in Algeria and Tunisia—believed that the tribal Berbers in their mountainous home of the Kabyle were more Caucasian in origin and thus superior to the lowland Arabs.

For that reason—and as part of the traditional imperial policy of divide and rule—the French colonizers often utilized the Berbers as local gendarmes and soldiers, policing the Arab majority. At the same time, the French tended to build more schools in the Kabyle region, making the region more francophone than other parts of Algeria. Indeed, it was the Arab-speaking population of the lowlands that largely led the independence struggle against the French in the post–World War II era. To this day, the Berbers retain their own political institutions in Algeria, which, though not calling for independence for the Kabyle, demand protection of their culture. At the same time, the Berbers are more francophone than their Arab neighbors and are disproportionately represented among the North African population of France. Moreover, as is typical with non-Arab minorities in much of the Middle East and North Africa, the Berbers tend to be less orthodox in their religious practice and have tended to resist the call of political Islam.

Bertolini, Pietro (1859–1920)

An Italian political figure and author of several books on local government and administration, Pietro Bertolini became Italy's first minister of colonies. Born on July 24, 1859, in Venice, he was elected to Parliament in 1891 and served as finance undersecretary (July 1894–March 1896), interior undersecretary (May 1899–June 1900), and public works minister (November 1907–December 1909). Bertolini helped negotiate the Treaty of Ouchy (October 18, 1912), which brought an end to the war between Italy and the Ottoman Empire and secured for Rome the North African provinces of Tripolitania and Cyrenaica (as they were renamed by the Italians). As minister of colonies (November 1912–March 1914), he helped organize the colony of Libya, where he favored cooperation with the indigenous inhabitants and their leaders. A commission instituted by Bertolini dispelled the notion that Libya was a promised land for Italian emigration and recommended only small-scale colonization and the private development of agriculture. He tried to curb, albeit often unsuccessfully, the abuses of the military, such as its policy of summarily executing Arabs suspected of rebelling. Although Bertolini was opposed to Italy's entrance into World War I in May 1915, he was nominated after the war to be the Italian representative on the inter-Allied reparations commission at Paris. He died in Turin on November 28, 1920.

Bismarck, Otto von (1815–1898)

Born into an old Pomeranian Junker family, Otto von Bismarck received an administrative law education at various liberal universities. After the revolutions of 1848, he was appointed chief Prussian delegate to the Diet at Frankfurt (1851) and became prime minister of Prussia in September 1862. During his twenty-eight years in German politics, Bismarck skillfully brought various Germanic states under Prussian leadership and created a unified German nation in 1871. Over the

next two decades, he single-handedly manipulated and controlled a complex alliance system that sustained the precarious balance of power between Britain, France, Austria-Hungary, Germany, and Russia. During this period, Bismarck concentrated on consolidating the German Empire, controlling both foreign and domestic opposition to his conservative policies, and expanding German colonial holdings outside Europe. Between 1884 and 1885, his country's colonial empire grew to a size more than four times as large as contemporary Germany.

In earlier years, Bismarck had disparaged colonization, likening an imperial nation to "a poverty-stricken Polish nobleman providing himself with silks and sables when he needs shirts." His later embrace of imperialism has variously been described as an effort to keep up with other European nations, as merely an expression of his previously disguised desire for empire, and as a response to domestic pressures in order to achieve his own objectives.

Germany's colonial empire was successfully promoted by the *Kolonialverein* (Colonial Association), founded in 1882. For the next few years, the other European powers needed the support of the German Reich and thus could not actively restrict Germany's colonial ambitions. Bismarck carefully manipulated the Anglo-French disputes over control of Egypt in 1884, which culminated in Franco-German rapprochement as well as British acquiescence to German aspirations. Another series of disputes over free trade in the Congo changed the balance of power again, resulting in an Anglo-German entente—which weakened Germany's connections to France—and the Berlin Conference of 1884–1885, in which much of Africa was parceled out to European imperial powers. Although Britain was not pleased with Germany's imperial plans, the French presence in Egypt and Russian pressures in Asia fostered a spirit of toleration. In an Anglo-German agreement in October 1886, the British formally recognized German colonies in East Africa.

By 1890, however, Bismarck was rapidly becoming disenchanted with Germany's colonial empire. The extraordinarily high cost of maintaining the country's holdings, with little hope of a profitable trade, soured him on further colonial expansion. Instead, he turned to Latin America

and China in search of open markets for trade. Bismarck's decision to abandon a strong imperial policy was most likely a result of financial considerations, domestic politics, and the desire to maintain relatively amicable relations with the British in the last decades of the nineteenth century. This decision, along with other disagreements with Emperor William II, forced Bismarck to resign in March 1890.

Blyden, Edward Wilmot (1832–1912)

A Liberian educator, minister, journalist, and government official, Edward Wilmot Blyden was an early theorist of pan-Africanism and an advocate for an Africa free of colonialism. Blyden was born on the Caribbean island of St. Thomas in 1832 and emigrated to Liberia in 1850, three years after that country became the first independent black republic in Africa. There, he went on to edit a newspaper, become ordained as a Presbyterian minister, and serve as principal of the country's most prestigious high school and, from 1864 to 1866, as the nation's secretary of state.

Blyden was a renegade thinker in the community of Westernized Liberians, most of whom were descendants of freed slaves and free blacks from the United States. These Americoese, as they were called, saw themselves as more Western than

African, and though living among a native African majority in Liberia, they made a point of maintaining a separate culture and community. Blyden, by contrast, advocated an amalgam of Western and African cultures, and he saw Liberia as a natural bridge between these two worlds. Moreover, he preached and wrote that Liberian society could teach the rest of Africa how to live in the modern world while staying true to its African roots. Remarkably, as a Christian minister in a time of religious absolutism, he also sought a way to reconcile Islam and Christianity within a pan-Africanist context.

But Blyden had a hard time convincing his fellow Liberian intellectuals and elites, and in 1885, he lost a race for the presidency of the country. In the 1890s and early 1900s, however, he served as Liberia's ambassador to the United Kingdom and France—both of which had designs on Liberian territory. Thereafter, Blyden moved to the neighboring British colony of Sierra Leone, where he died in 1912.

Boer War (South African War) (1899–1902)

The Boer (or South African) War was Britain's last effort to dominate the Boer republics in southern Africa. Earlier attempts to create a confederation had failed, and their first war against the South African Republic had ended in almost complete defeat for the British. By 1895, the stakes had risen considerably with the establishment of gold mining in Witwatersrand, financed primarily by British and German capital. But the capitalists did not like having to work within President Paul Kruger's concession policy, most irritatingly the dynamite monopoly, which increased production costs. Both the concession policy and the dynamite monopoly were, in a sense, taxes paid by mining companies to Kruger's government.

Kruger sought to protect Boer society and traditions from what he saw as the immorality of the

mining camp and the political threat posed by *uitlanders* (foreigners); he also wanted to ensure that the republic would benefit as much as possible from the gold being mined within its borders. But Cecil Rhodes, who was financially involved in the Transvaal and for a time served as prime minister of the Cape Colony, sought to extend British control; he also wanted to be sure that the British involved in the project (himself and his friends in particular) profited substantially from Transvaal's gold. Not all uitlanders agreed with Rhodes; not all Boers agreed with Kruger.

Attitudes hardened in October 1895 with the abortive Jameson Raid, an attack on the Transvaal Boer republic from British-controlled Cape Colony, and were further exacerbated when Alfred (later Viscount) Milner became governor of the Cape and, bent on war, took over the negotiations with Kruger. Stubborn Boer met intransigent Briton, and war ensued—a war opposed by many in Britain (particularly the Liberals) and elsewhere. British troops, certain that the war would be “over by Christmas,” came up against Boer commando forces using guerrilla tactics. With local sources of supply, the Boers were able to mount major sieges at Ladysmith and Mafeking, the latter lifted with African help. The British adopted scorched-earth tactics—burning farms, fields, and crops. Boer women, whom the British saw as spies, and children who had been left destitute were placed in concentration camps, following an earlier Spanish practice in Cuba.

Inadequate food, water, and sanitation made the camps virtual death traps. The British journalist Emily Hobhouse and the suffragist Millicent Garrett Fawcett visited these camps and campaigned for improvements, which were eventually made. No notice was taken of the worse conditions in African camps. In what was supposedly a “white man's war,” both sides used Africans, frequently arming them. Many Africans supported Britain in the hope of receiving some reward, at least in the form of the extension of the Cape franchise. Milner's Transvaal reconstruction plans made this a vain hope.

Milner wanted to create a British majority in the Transvaal by encouraging the emigration of “yeoman” and unmarried women from Britain. He believed the “overspill” of profits from the mining industry could be used to improve agricultural

services, making British rule more acceptable to Boers who would not have accepted any concessions to Africans. However, the reconstruction efforts failed, and in 1906, a self-governing Transvaal emerged, with former Boer leader Louis Botha as prime minister. Four years later, the Union of South Africa was created.

Boers (Afrikaners)

Boers, the Dutch descendants of seventeenth-century settlers in South Africa, are also referred to as Afrikaners. After the Cape of Good Hope was acquired by the British in 1814, tensions between the Boers and the British increased, leading to the Great Trek of the Boers to the north, where they founded the Natal, the Orange Free State, and the South African Republic. By 1843, the British had asserted control over Natal, and in 1877, they brought the South African Republic under the sovereignty of the Crown, but the Boers mounted a resistance effort that resulted in the regaining of their independence in 1881. After the discovery of gold in the southern Transvaal, English immigrants flooded into the region. Boer farmers resented this intrusion and devised a system of taxation that discouraged miners.

Politically disenfranchised, the British felt they had no recourse except war. Leaders of the Cape Colony, including Cecil Rhodes and Leander Starr Jameson, organized a military expedition of 600 men whose mission was to assist the British resistance movement within the Boer republics. The Jameson Raid, an attack on the Transvaal from British-controlled Cape Colony, proved unsuccessful. As tensions escalated, the number of British troops in the region swelled to 50,000. The president of the South African Republic, Paul Kruger,

ordered these troops out of the country, and when the demand was not met, war was declared on October 12, 1899. The Boers managed to defeat British forces at Ladysmith, Natal, and Mafeking; for four months, in fact, they won every battle. But then a new commander, Gen. Frederick S. Roberts, arrived from England, and within one month, his forces captured Bloemfontein, Johannesburg, and Pretoria. Guerrilla resistance continued for another year before the two parties signed the Treaty of Vereeniging. In 1910, the British unified the republics under the Act of Union, with a British governor and a Boer prime minister and deputy. Thereafter, the Boers and British focused their attention on the indigenous population: their ongoing efforts to suppress nonwhites led to the passage of apartheid laws in the 1950s. This system of discrimination continued until the 1990s, when apartheid officially ended and Nelson Mandela was elected president.

Bolívar, Simón (1783–1839)

Known as the "Great Liberator," Simón Bolívar was a Venezuelan soldier, statesman, and Creole elite who led a successful independence movement against Spain in the early nineteenth century. Born to a family of slave owners in Caracas on July 24, 1783, Bolívar was well educated on his father's cacao plantation. In 1802, he married María Teresa Rodríguez de Toro in Madrid. On returning to Venezuela, she suddenly took ill and died.

As the Spanish monarchy slid into chaos following Napoleon's invasion of Spain in 1808, Bolívar journeyed to Europe. In April 1810, he led a legation to London and lobbied for a recognition of independence for his homeland. It was finally issued on July 5, 1811. But the Spanish, who ignored this recognition, defeated the Venezuelan independence movement and its First Republic, and Bolívar fled to Cartagena. He then issued the Cartagena Manifesto calling for support in his independence struggle. He soon received assistance

A medallion depicting Simón Bolívar, leader of the early nineteenth-century South American revolt against Spanish rule. (Library of Congress)

from the United Provinces of New Granada, which enabled his forces to capture Caracas in 1813. As a result of his efforts during the campaign, Bolívar was given the title “Liberator.”

Bolívar quickly created a military dictatorship, known as the Second Republic. His elite status soon became his undoing, however, as royalist forces persuaded the region’s poor to rally against the local aristocracy. By 1814, Bolívar was forced into exile in New Granada. Traveling to Jamaica and Haiti in 1815, he secured support for another military campaign. By 1817, his forces controlled the Orinoco River basin. Thereafter, he abolished slavery and instituted congressional elections. The new congress then convened in February 1819.

As the elected leader of Venezuela, Bolívar continued westward across the Andes, capturing Bogotá following the Battle of Boyaca on August 7. In December 1819, Gran Colombia (comprising Venezuela, New Granada, and Ecuador) was created, although royalist forces continued their resistance until June 1821. Pursuing the fight against Spain in Ecuador and Peru, Bolívar met with Argentine independence leader José de San Martín in 1822, and the two men agreed that Bolívar would liberate Peru. His forces triumphed in Peru after the Battle of Ayacucho on December 9.

Leaders in the region known as Upper Peru asked Bolívar to draft the first constitution of the country that would be named in his honor—Bolivia. However, the draft was criticized because Bolívar favored a president who served for life; ultimately, Peru and Bolivia approved the plan, but Gran Colombia did not. A failed rebellion in April 1826 persuaded Bolívar to call for constitutional reforms. Yet at a convention at Ocaña in June 1828, he canceled the liberal reforms that had defined his earlier regime. Three months later, he was almost assassinated by the forces of his rival, Francisco de Paula Santander. In response, Bolívar increased his control over the population and exiled Santander. Rebellion quickly escalated, prompting Venezuela’s withdrawal from Gran Colombia in 1829. The following year, a disappointed Bolívar resigned as president. He died in Santa Marta on December 17, 1830, shortly before boarding a ship to once again leave his native land.

Bolivia (Alto Peru)

On November 16, 1532, Francisco Pizarro and a small band of conquistadores captured (and later murdered) the Inca emperor Atahualpa at Cajamarca, Peru, and assumed control of his vast realm. During the first two decades of Spanish rule, control of the Bolivian highlands (known as Alto Peru or Upper Peru) was delayed first by a protracted struggle with the Inca successor, Manco Inca (1536–1545), then by a civil war over the spoils of the conquest between the Pizarro brothers and Diego de Almagro (1537–1538), and finally by a war between Gonzalo Pizarro’s followers and the royal forces sent to rein in the *encomenderos*, or plantation and mine owners (1544–1548). Following Gonzalo’s execution in 1548, the royalist victors established the city of La Paz in Alto Peru and founded Santa Cruz de la Sierra in 1561. Native resistance in Alto Peru did

not, however, end with the execution of the last Inca emperor in exile, Tupac Amaru in 1572. The unceasing hostility of the Indians of the Bolivian lowlands, for example, effectively forestalled the conquest of the arid Chaco region through the entire colonial era.

The 1545 discovery of the largest deposit of silver in the Western Hemisphere at Potosí fueled Spanish interest in Alto Peru. Early on, Indian producers and prospectors voluntarily flocked to the mineral-rich mountain, but as the surface deposits were exhausted in the 1560s, silver extraction began to decline. Viceroy Francisco de Toledo inspected the region in the 1570s and, to increase production, reimposed the Inca *mita* (labor draft), requiring adult Indians from sixteen outlying highland districts to spend every sixth year working in the mines. Although the viceroy's labor "reforms" and new refining techniques helped make the boomtown of Potosí fabulously wealthy and the largest city in the New World (with a population of 160,000), the mining revival exacted a heavy toll on Alto Peru's Indian *ayllus* (traditional ethnic communities).

To escape the hardships and dangers of *mita* service in the mines, many Andean Indians abandoned their lands and *ayllus* in the late seventeenth century, either escaping to distant Indian villages, seeking asylum in new colonial cities, or hiring themselves out as *yanacona* (or personal servants) on the proliferating *haciendas* (large landed estates). In the 1650s, Alto Peru had been divided into eighty-two *encomiendas* (forced Indian labor districts), but these were transitioning to large agricultural estates that prospered by growing wheat, corn, and coca leaves for the mining camps. The decline in Potosí's silver production in the eighteenth century unwittingly bolstered the rival peasant economy, as many large landowners were forced to subdivide or rent out their lands to recoup lost revenues. As royal silver revenues diminished, the Crown also sought out new sources of income and began to increase the *alcabala* (Indian tribute payments).

Andean *ayllus* survived, adapted, and persisted throughout the colonial period and were anything but passive in their responses to colonial exploitation: more than 100 Andean revolts disturbed the peace in the eighteenth century alone. The most serious rebellion, headed by Tupac Amaru II in

1780, had the support of tens of thousands of Andean Indians in Bolivia and was suppressed only after the summary execution of local leaders Tomás Catari and Túpac Catari and thousands of their followers. Colonial discontent did not disappear, however, and in 1809, Pedro Domingo Murillo led radical criollos and mestizos in a revolt in La Paz, declaring an independent state. Alto Peru became a bitterly contested battleground in the years that followed, and it was not until 1825 that a constituent assembly formally proclaimed independence, naming the new nation Bolivia in honor of the hero of the independence wars, Simón Bolívar Palacio.

Bolsheviks

The Bolsheviks were members of a faction of the Russian Social Democratic Workers Party (RSDWP) established in 1903 by Vladimir Lenin. Bolsheviks split with the RSDWP on the issue of membership, which, they argued, had to involve full-time, active participation by all. They contended that a disciplined organization of "professional revolutionaries" had to lead the proletariat and convince the masses that their true interests did not lie in obtaining higher wages but in overthrowing the existing order and establishing a Communist society. Living in an empire where almost half of the population was non-Russian, with over three-quarters of the people living in villages, the great majority of Bolsheviks were urban-based (though not factory workers) and either Russians or Russified non-Russians.

The Bolsheviks functioned conspiratorially because their organization and activities were illegal. Numerous individuals in the movement differed with Lenin on major issues, and local committees were, in practice, independent before 1917. They turned their movement into the dictatorial organization that critics had predicted when they militarized themselves during four years of war and revolution. Convinced that their policies were correct,

Russians line up to pay their respects at the tomb of Vladimir Lenin in Moscow's Kremlin, a year after the Bolshevik revolutionary leader's death in 1924. The Bolsheviks created the Soviet Union out of the collapsed Russian Empire in 1917. (Library of Congress)

Bolshevik leaders believed that conspiracies lay behind the problems they faced in their newly established state. This attitude predisposed them to use the violence and terror that had brought them victory in war against their internal enemies during peacetime. Prepared to use force, unlimited by law or morality, against non-Bolshevik opponents, they never imagined that one of their own would use force against his own fellows. Thus, they were easy prey for Joseph Stalin, who gradually rose to power in the late 1920s following the death of Lenin in 1924. By 1939, only 8 percent of party members had been members since before 1920, and most regarded Stalin's centralization, forced industrialization, expropriation of peasants, use of terror, and refusal to sponsor revolutions abroad as Bolshevism in practice.

After seizing power, the Bolsheviks imposed their organizational norms on the Third Communist International (Comintern), an organization of international Communist organizations, in 1919.

According to the Twenty-One Conditions of Affiliation (1921), member parties had to combine legal and illegal activities and unquestioningly accept the authority of the Comintern Executive, which meant, in practice, the authority of the Russian party's Central Committee. After 1923, those who questioned or opposed central policies risked execution by the Soviet secret police. Although Russian Bolsheviks considered their organizational principles universally valid, leftist critics considered them characteristics of a peculiarly Russian national communism. The Comintern was dissolved in 1943, but Communist parties outside the Union of Soviet Socialist Republics (USSR) remained subordinate to Moscow, and even where they were legal, they maintained secret wings whose tasks included killing opponents. As of 1991, Bolshevik-style Communist parties controlled some 40 percent of the world's territory, but the collapse of the Soviet Union in that year, following the demise of Communist regimes in East-

ern Europe two years earlier, reduced that territory significantly. The Fourth Communist International, founded in opposition to the third by Leon Trotsky in 1938, condemned Stalin's policies as non-Bolshevik and "counterrevolutionary" but had little impact during his life.

Bombay (Mumbai)

Bombay, now usually called Mumbai, is known as the "Gateway of India." With its natural harbor, it is the principal port on the west coast of India and one of India's largest and most industrialized cities. It is a great commercial center. Bombay was first mentioned by Ptolemy in 150 C.E., and from the ninth century until the mid-fourteenth, it was under Hindu rule, before being transferred to the Sultan of Gujerat.

Bombay was ceded to the Portuguese in 1534 after being occupied by Alfonso de Albuquerque in 1510; it then went to Charles II of England as part of the dowry of Catherine of Braganza, sister of the Portuguese king, whom he married in 1661. It later became the capital of the Bombay presidency under the British and, after 1947, the Bombay state. In 1668, Bombay was leased to the East India Company, and four years later, the company's Indian president, Gerald Aungier, transferred the Indian headquarters of the East India Company from Surat to Bombay. Consequently, Aungier is considered the city's modern founder. He had a policy of religious tolerance, which attracted the Parsi merchants who played a prominent part in the city's commercial and, later, industrial development, especially in the textile and shipping industries. With the expansion of British power in India, most of western India as far north

as Sind and Gujerat became part of the Bombay presidency.

The first railway in India was built from Bombay in 1853, and the Bombay-Baroda and the Central India railway lines were constructed in the 1860s. The opening of the Suez Canal in 1869 made Bombay the premier city in Asia and a world entrepôt. The first meeting of the Indian National Congress in 1885 was held in the city, and Bombay played an important part in the nationalist movement. In the twentieth century, it developed the world's largest movie-making industry. In 1960, Bombay became the capital of the new state of Maharashtra.

Bonaparte, Napoleon (1769–1821)

Napoleon Bonaparte, a French military and political leader, served as first consul of the French Republic from 1799 to 1804 and as the emperor of France from 1804 to 1814 and again in 1815. Judgments regarding his contribution to the development of colonialism and imperialism, as well as his overall historical record, are necessarily complex and controversial. On the one hand, he would be deemed a failure if judged by the very few (and unsuccessful) attempts made to restore the shattered French overseas empire in 1802 and 1803 (consider, for example, the failed military expedition to Haiti and the reestablishment of slavery in the Antilles and Guiana). Moreover, by the end of the Napoleonic Wars in 1815, the British occupied all of France's colonies. On the other hand, he would be deemed successful if judged by France's spectacular conquest of Egypt between 1799 and 1801 and his personal contribution (until 1800) to the social reforms and establishment of French rule in that country, which ultimately opened the Orient for European expansion.

From 1803 to 1810, Napoleon actively tried to support the besieged French outposts in the Indian Ocean. Additionally, he tackled wider imperialist

projects between 1801 and 1809—the conquest of India, the partition of the Ottoman Empire—and had a variety of expansionist plans for the Caribbean, Spanish America, Brazil, the United States, Muscat, Algeria, Morocco, Mozambique, and Australia. Considered within the framework of the worldwide struggle against England, these efforts revealed Napoleon's great colonial ambitions.

The British naval preponderance obstructed Napoleon's real and potential colonial schemes and shifted the focus of his imperialist policy toward Europe. There, he succeeded in establishing effective, although incomplete, military, political, and economic control over much of the continent. By 1812, the Napoleonic empire included: the imperial core (France, with its enormous territorial acquisitions), the so-called military districts (the Hanseatic German cities under direct French rule), vassal states ruled by members of the Bonaparte dynasty (Italy, Naples, Spain, Westphalia, and several small German and Italian principalities), French protectorates (Switzerland, the Confederation of the Rhine, and the Duchy of Warsaw), and dependent allies (Austria, Prussia, Denmark, and Norway). Moreover, due to Napoleon's victories in Europe, the French overseas empire was briefly expanded: the Ionian Islands (1797–1799 and 1807–1809), Louisiana (formally 1800–1803), Tamatave (Madagascar) (1803–1811), and Java (1810–1811). In addition, the French occupation of Malta in 1799 and 1800 was an immediate consequence of Napoleon's Egyptian expedition.

At the same time, numerous and far-reaching by-products of the Napoleonic era shattered and transformed the old imperial order. Napoleon's occupation of Spain and his invasion of Portugal undermined the Spanish and Portuguese Empires and stimulated the emancipation of Latin America; Napoleon failed to subjugate Spanish America through the vassal Spain and later sought to establish contacts with Latin American insurgents. And by selling Louisiana to the United States, he helped to change the American geopolitical priorities and weaken British influence in the country. The British Empire, for its part, expanded enormously, curbing Napoleon's global adventures.

Combining a revolutionary heritage and imperialist ambitions, Napoleon himself frequently exploited the liberal ideas of the French Revolution in his conquests. This undermined foreign domi-

nation in Italy, Poland, and the Balkans. Conversely, the popular resistance to Napoleonic imperialism led to a national awakening throughout Europe and the Middle East. Some of Napoleon's expansionist projects and ideas were taken up by his French successors (for instance, the colonization of Africa and the Levant and the building of the Suez Canal).

Napoleon reexamined his own colonial legacy while exiled in St. Helena. The former emperor described the expedition to Haiti and the reestablishment of slavery as among his greatest follies (he formally abolished slavery during his brief return to power in 1815). He also foresaw the radical transformation of the old-fashioned colonial system, including the gradual emancipation of the British settler colonies.

Booth, Joseph (1851–1932)

Joseph Booth was an individualistic and anticolonialist British Protestant missionary in central, southern, and eastern Africa—areas from which he was often deported for his criticisms of colonialism. Between 1892, when he first went to Africa, and 1915, when John Chilembwe, one of his first converts to an independent Baptist attitude, led a rising against British power in Nyasaland, Booth's radical Christianity influenced a generation of mission-educated African intellectuals. He popularized the slogan "Africa for the African" and published a book with this title through an African American press in 1897. Booth believed that the African American had a special destiny in the liberation of Africa, and he endeavored to develop his connections with a number of leading African Americans, especially W. E. B. Du Bois.

Booth was widely traveled in Africa, the United States, Australia, New Zealand, and Britain, and his horizons were not limited to Africa, although it was there that his anti-imperialist influences were greatest. He also spoke energetically in Britain on colonial questions, and he assisted Indian nationalists, such as Dadabhai Naoroji, the author of *Poverty and Un-British Rule in India* (1901), in their efforts to ameliorate British rule in the subcontinent. But for some critics of imperialism, Booth seemed insufficiently militant. He was a lifelong pacifist and could not approve of the ultimate step of taking up arms against imperial rule. Colonial authorities, however, ignored this fact and wrongly accused him of immediate implication in the 1915 rising in Nyasaland. In the struggle against imperialism, Booth preferred to use tactics such as establishing Africa self-help institutions and sending petitions, looking forward to independence, to the British government. He made great personal sacrifices for his beliefs over a long life and died almost destitute.

Bosnia

Bosnia is a former Yugoslav republic on the Balkan Peninsula and is surrounded by Serbia, Croatia, and Montenegro. Throughout the centuries, four major invasions of this land created a diverse ethnic and religious population, ultimately leading to internal conflict in modern times. In the first century B.C.E., the Romans incorporated the area as the Province of Illyricum. After the fall of the Roman Empire in 476 C.E., the Goths and the Slavs exerted control until the twelfth century, when Hungary conquered the region.

In 1493, another invasion, this time by the Ottomans, introduced Islam to a population already divided between Catholic and Orthodox Christianity. Deep-seated differences between the groups resulted in increased tensions, especially as the power of the Ottoman Empire declined. In 1908,

the Austro-Hungarian Empire invaded Bosnia, driving the Ottomans out and annexing the province. National autonomy and cultural independence led to internal dissent and agitation, with the major European powers supporting opposing sides in a power struggle over land. Then, in June 1914, a Serbian nationalist assassinated Archduke Francis Ferdinand, heir to the throne, and his wife, an act that led to the outbreak of World War I. At the end of hostilities, Bosnia and Herzegovina joined Serbia under the monarchy of Aleksander I, who renamed the country Yugoslavia in 1929. During World War II, the country was divided, but it regained its unity after the conflict under the leadership of Josip Broz Tito. Peace and toleration of all ethnic and religious groups continued until his death in 1980. Thereafter, the Soviet Union dominated the country until a declaration of independence was proclaimed in 1991 after the breakup of the Communist bloc. By May 1993, hostilities broke out between Croats and Slavic Muslims, but they later joined together in an alliance against the Serbs. Fighting continued until the three groups signed the Dayton Accord in December 1995. Today, UN war crime tribunals continue to pursue individuals involved in the ethnic cleansing of the Bosnian Muslims that occurred from 1992 to the end of the conflict.

Bougainville, Louis-Antoine (1729–1811)

The Paris-born son of a bourgeois family, Louis-Antoine Bougainville (Comte de Bougainville) was a brilliant student, highly regarded for his scientific abilities. He started his military career in 1750 and was soon involved in the colonial rivalries that pitted France against Great Britain. In 1754, he was the secretary of Maréchal de Lévis-Mirepoix, who was dispatched to London to protest against the

British actions in the Ohio Valley. When the Seven Years' War (1756–1763) started, Bougainville was sent to New France as the aide-de-camp of Marquis Louis-Joseph de Montcalm, commander of the French regular troops in Canada whose mission was to defend the colony against British attacks. As such, he participated in all the campaigns led by Montcalm and was entrusted with several military and diplomatic missions. His stay in Canada allowed him to meet Native Americans, whom he planned to study with a philosophical eye. His image of the *Bon Sauvage*, or noble savage, did not survive the realities of the war, and by the time Bougainville left Canada, his expectations concerning the state of nature were destroyed. In 1763, he tried to create a new French colony in the Malouines Islands (Falkland Islands) to replace the loss of New France, but the opposition of the Spanish court prevented him from accomplishing this objective. Bougainville then turned his attention to the Pacific. In 1766, he launched an exploratory voyage that would lead him from Montevideo to Tahiti, New Hebrides (Vanuatu), the Solomon Islands, New Ireland, and the north coast of New Guinea before returning via Jakarta and the Cape of Good Hope. His account of this trip (*Voyage autour du monde*), published in 1771, revived the idealization of the state of nature in Europe despite Bougainville's pessimism in this regard. Later in life, as a member of the Academy of Marine and adviser to the minister for scientific affairs, he was deeply committed to French colonial enterprises and assisted the voyages of Comte de La Pérouse and Nicolas Baudin in the Pacific.

Bourguiba, Habib (c. 1903–2000)

Habib Bourguiba, the father of independent Tunisia, was born about twenty years after France imposed a protectorate over his country. He led the nationalist struggle that resulted in indepen-

dence in 1956. The following year, the monarchy was abolished and Bourguiba became Tunisia's first president. He ruled until 1987, when his prime minister ousted him in a bloodless coup, and survived another thirteen years under house arrest.

Born in the small town of Monastir in Tunisia's coastal, or Sahel, region (his exact date of birth is unknown), Bourguiba was educated at Tunis and at the Sorbonne in Paris, where he studied political science and law. Back in Tunis in the early 1930s, he helped to found the Neo-Destour (New Constitution) Party to work for independence.

Often referred to as a “dogmatic moderate,” Bourguiba combined a strong commitment to Tunisian independence with a love for French culture. In 1942, when the outcome of World War II was far from clear, Bourguiba supported France and the Allies against the Axis.

Embodying and reinforcing Tunisia's modernizing tendency, Bourguiba promoted secularism. Although Islam remained the state religion, polygamy was abolished. The Code du Statut Personnel (Code of Personal Status) guaranteed women rights that were unparalleled in the Muslim world. The roles of the religious courts and of the Zitouna mosque-university were circumscribed.

Postindependence tensions with France climaxed in 1962 with a violent clash at the Bizerte naval base. The French withdrawal from Bizerte led to a brief relaxation of tensions, but when Bourguiba nationalized foreign interests in 1964, relations between the two nations again suffered. Cooperation with France improved in 1968, and France has provided large-scale assistance since then. In the late 1960s, the Tunisian government came under strong pressure to support the pan-Arab cause led by Gamel Abdel Nasser of Egypt. Violent pro-Nasser student demonstrations were suppressed, and demonstrators were sentenced to as much as twenty years of hard labor.

Boxer Rebellion

Between 1880 and 1900, China faced many problems resulting from repeated brushes with the forces of imperialism. Wars ended in defeat and territorial loss. Jobs were scarce as traditional Chinese workers competed with mass-produced imports delivered over the new railroads. Even missionaries trying to spread the “good news” caused upset, for China’s influential gentry regarded members of the so-called Jesus sect as destroyers of tradition, authority, and culture.

These and other issues created a xenophobic movement promising salvation via the elimination of outsiders. It started in northern China during the late 1890s and was especially attractive to rural people. Thousands joined the movement known as Ye He Quan, which combined nationalism, mysticism, and martial arts, and Western journalists called these people Boxers, through an imperfect translation of the Chinese. At first, they were considered little more than bandits. By 1900, however, Western diplomats were calling on their governments for protection as an army of Boxers attacked foreigners all over northern China and laid siege to the foreign legations in Peking.

Another short colonial campaign followed, as an international relief force landed on the Chinese coast and fought its way to the capital. After several major battles, the Chinese government sued for peace, agreeing to yet more territorial losses, political concessions, and monetary reparations. These terms, codified in the 1901 Boxer Protocols, served to anger new generations of Chinese nationalists and spawn anticolonial feelings in the twentieth century.

Brazil

The Portuguese navigator Pedro Alvares Cabral arrived on the coast of Brazil on April 22, 1500, and claimed the land for the Portuguese Crown. However, because the Portuguese had recently found the lucrative sea route from Europe to the Far East

by rounding the southern coast of Africa, the discovery of Brazil was considered of minor importance. In Brazil, the Portuguese did not find the gold and wealth that the Spanish had chanced upon on the west coast of South America and in Central America. Nor were there rich empires such as those of the Incas, the Mayas, and the Aztecs. Indeed, the native inhabitants that the Portuguese first met in Brazil, the Tupi-speaking people, were food gatherers, hunters, and subsistence farmers, with no gold or silver to offer. They practiced a nomadic agriculture, cultivating manioc, beans, peppers, squash, pineapple, and other crops, and moved whenever the soil became exhausted.

The first economic activity developed by the Portuguese in Brazil was the extraction of brazilwood, which yielded an excellent red dye that was used in Europe at the time to color clothing. For the first few decades after Cabral’s arrival, the Portuguese exchanged European goods for brazilwood with the natives along the coast. The relationship of the two groups was, by this time, reasonably peaceful. However, conflict broke out after the 1530s, when colonization began to take place and the Portuguese began establishing themselves in Brazil.

In the seventeenth century, sugar became a profitable commodity, and Brazil soon became Europe’s most important supplier. As sugar production required a plentiful and reliable labor force, attempts were made to use the indigenous people on the sugar plantations. Their mortality rate proved high, however, and the Portuguese began importing enslaved Africans into Brazil; in fact, during this period, Brazil became the largest importer of African slaves in the world. The sugar economy developed steadily until the second half of the seventeenth century, when sugar from the Caribbean islands began to rival that from Brazil and the latter lost its monopoly in the European market.

Yet the number of enslaved Africans in Brazil did not decrease. In fact, it tripled by the eighteenth century, when Brazil provided most of the world’s supply of gold following the discovery of gold and diamonds in the Province of Minas Gerais, and it remained high in the nineteenth century, when Brazil became the world’s largest producer of coffee. Brazil was the last country in the Americas to abolish slavery. In addition to the enslaved Africans, Brazil also received successive

waves of migrants, mainly Portuguese but also Italians, Spanish, Germans, and Japanese, among others. Through intense miscegenation, these peoples have created the modern nation of Brazil.

In 1822, Brazil won its freedom from Portugal when Dom Pedro, the son of the Portuguese king, who was supported by the Brazilian elite, declared that nation's independence on September 7. In this fashion, Brazil became the only country in Latin America to have been ruled by a monarchy. That political system lasted until 1889, when a republican coup overthrew the Brazilian emperor, Dom Pedro II. Today, Brazil is the fifth largest country in the world, both in population and in geographic area, and also the only Latin America nation whose people speak Portuguese. It is an industrialized country and has the ninth largest economy in the world, though its income distribution is among the worst anywhere.

Brazza, Pierre (1852–1905)

An explorer and colonial administrator, Pierre-Paul-François-Camille Savorgnan de Brazza was born and raised near Rome. He wanted to pursue a naval career, but Italy lacked an organized navy, so he became an officer in the French navy and a French citizen. His first undertaking in Africa (1875–1878) was the exploration of the Ogowe River in Gabon. He reached its source and sighted the Alima, a tributary of the Congo.

In 1880, he returned to Africa to explore the area north of the Congo River and soon found himself in competition with Henry Stanley, who was exploring the southern shores for King Leopold II of Belgium. Both men were aware of the importance of Stanley (now Malebo) Pool for control of the area. Brazza concluded a treaty with the local African king Makoko and left for France to

have it ratified. That ratification, however, became embroiled in international politics and was opposed by powerful French companies invested elsewhere. Ultimately, the treaty was ratified, and in 1886, Brazza was appointed governor of the area that became the French Congo five years later.

By most colonial standards, Brazza was humane. He toured the colony with a minimum of arms and with tons of goods for barter and gifts, establishing friendly relations with indigenous chiefs. He opened schools and clinics and secured fair wages for Africans. However, his enemies campaigned against him as the "foreigner" and the "nigger-lover." Although he had vastly enlarged the French Empire in Africa, he was recalled in 1897.

After his departure, conditions in the French Congo deteriorated. A scandal erupted in 1905 when the French public heard of the conviction of two Frenchmen for particularly brutal acts. Embarrassed, the French government sent Brazza to investigate. He drafted a truthful report that highlighted the corruption and abuse he found. In ill health, he died on his return journey to France. He was honored with a state funeral, but his report on conditions in the French Congo was suppressed.

Bretton Woods Conference

The Bretton Woods Conference was held at Bretton Woods, New Hampshire, in July 1944. Attended by representatives from forty-four nations, the conference was focused on devising measures to avoid an international financial collapse following World War II. With the specter of the Great Depression of the 1930s looming over the proceedings, the officials in attendance drew up plans for the International Monetary Fund (IMF) and the International Bank for Reconstruction and Development (World Bank). The former would monitor the international financial system and manage a cash reserve system that a member nation could turn to at times of short-term deficits in its balance of payments. The latter would provide long-term loans

to member governments to facilitate development-oriented projects. The IMF and the World Bank were formally established in December 1945 as specialized agencies of the United Nations.

More broadly, the Bretton Woods Conference marked the establishment of a framework to manage the postwar international political economy. The IMF and the World Bank were important components in an effort to lock countries into a U.S.-centered economic order—and this became a critical consideration in the light of the superpower rivalry between the United States and the Soviet Union, which took hold within a couple of years after World War II. The Bretton Woods Conference laid the foundation for a U.S.-led consensus about both the appropriate model of economic development and the best approach to the management of international economic relations. As time passed, this consensus shifted from the Keynesianism of the early Cold War era to the neoliberalism that began to emerge by the late 1970s. The IMF and the World Bank, the main institutions spawned by the Bretton Woods Conference, have played an increasingly significant role in international economic affairs even as the ideas about economic development that prevailed at the time of their establishment have shifted.

Brezhnev, Leonid (1906–1982)

Leonid Brezhnev served as general secretary of the Communist Party of the Soviet Union from 1964 to 1982. Under his regime, nationality issues became a major threat, as attempts to create the "New Soviet Man" floundered. Brezhnev initially called for the recognition of national differences, but by 1972, the sixtieth anniversary of the November Revolution, he claimed the nationality question had been resolved. He then began to call

for the creation of the "Soviet People"; however, the 1977 Constitution—the so-called Brezhnev Constitution—failed to abolish the upper chamber of the Supreme Soviet, the Chamber of Nationalities. Ethnic appointees to government positions, especially those of an honorific nature, were increased, further emphasizing the multiethnic nature of the Soviet empire.

As the central government weakened, Moscow was increasingly unable to maintain control. It allowed local ethnic leaders to build up patronage-based power systems that served to reinforce ethnic identity and nationalism in the republics. It also built the Baikul-Amur Railroad to bring in Russian settlers and cement control over the region. But unlike its predecessor, the Trans-Siberian Railroad, the mammoth Baikul-Amur Railroad, which ran north of the old line, did not by itself dramatically increase the settlement of Siberia. However, many young Russians did move to Siberia, lured by higher wages and increased benefits.

Abroad, the Union of Soviet Socialist Republics (USSR) intervened in Czechoslovakia in 1968 and in general reinforced Communist governments in Eastern Europe. And after border skirmishes with China in 1969, the Soviets attempted but failed to improve relations with China. Under Brezhnev, the USSR also turned to Africa and the Middle East, especially South Yemen, supplying the areas with foreign aid, military assistance, and arms. When a Marxist faction seized power in Kabul, Afghanistan, in August 1978, Moscow at first resisted military intervention, but in December 1979, a rump meeting of the politburo approved military intervention because of the region's strategic importance. This move had a catastrophic effect on détente with the United States.

British Broadcasting Corporation (BBC)

In 1923, the British Broadcasting Corporation (BBC) exchanged broadcast messages with the

United States, and the new technology called radio, or “the wireless,” was rapidly embraced. Within two years, an international regulating agency was founded to reduce wavelength interference. The BBC quickly began to plan the Empire Service, radio programming aimed at the British colonies, in order to compete with U.S. broadcasting and because it was felt that Britain had an obligation to lead the colonies. The Treasury refused to supply funding for these efforts, but the BBC went ahead on a shoestring budget funded by listeners in Britain, and by December 19, 1932, the Empire Service had been inaugurated and regular broadcasts were being transmitted over its signals.

At that point, the BBC Empire Service catered mostly to colonials of British origin, and the broadcasts were designed to keep expatriates in touch with matters back in Britain; there was also some vague intention of spreading British culture. Still, most programs broadcast on the Empire Service had been produced for the BBC home market, and for ten hours a day, the programs were sent out, in English, to these far-flung areas. For its purposes, the BBC divided the empire into five zones (Australia, India, southern Africa, western Africa, and Canada), which accorded with a subjective view of the empire but ignored the physical realities of time zone differences.

The events of the 1930s caused almost immediate change, however, in the form and intent of the Empire Service. As early as 1933, Germany had begun to broadcast, in English, a regular series that presented German political views. As tensions grew, use of the Empire Service began to be seen as an appropriate means by which to compete with Nazi broadcasts. In response to international pressures, broadcasts began to be heard in languages other than English by the late 1930s.

In the postwar years, radio reflected the profound changes that had occurred in British society, but there was a struggle to find a balance between entertainment and education in the Empire Service. By the end of the 1950s, the operation became known as the General Overseas Service, a name that reflected the growing de-emphasis on the empire; the shift was completed in 1965 with the adoption of a new moniker—the World Service. Meanwhile, the old arbitrary zones were converted into a system keyed to existing time zones

for the convenience of listeners. There was an accompanying shift in outlook, as well, with far less dependence on material from the BBC’s domestic broadcasts; news and current affairs concerning the areas receiving the broadcasts received new emphasis. Thus, a great decentralization had taken place, as Britain was moved from its prior status as the center of broadcast concerns and the paternal dispenser of “civilization” to become just one of many parties competing for attention and airtime.

British East India Company

The British East India Company was established on December 31, 1600. It was granted a monopoly by Queen Elizabeth I on all trade between England and the area east of the Cape of Good Hope and west of Cape Horn. By the 1640s, the company played an important role in European and Asian trade, and by the end of the seventeenth century, it was a major commercial and political force in London. Throughout its history, the company’s operations were centered on the Indian subcontinent. In the seventeenth century, the west coast and the southeast of India was more important, but by the beginning of the eighteenth century, with the rising trade in piece goods from Bengal

and the growth of the company's trade to China, the center of gravity of its operations had shifted to the northeast of the subcontinent. In the mid-eighteenth century, the company increasingly turned to military and political intervention to advance its interests. The decline of the Mughal Empire centered on Delhi, and the accelerating competition of the French in the region encouraged the company and the British government to dispatch a growing military force to India in the 1740s and 1750s. The company's employees and officers were able to use the expanded company and British military forces in India to protect and enhance the company's commercial and territorial interests and to acquire substantial fortunes for themselves through present taking and private trade.

Between the Battle of Plassey in 1757 and the Battle of Buxar in 1764, the East India Company laid the foundations for territorial power in the subcontinent. By the late eighteenth century, however, even as the company was expanding its territorial influence, it was also slowly being brought under greater supervision by the British government. A board of control to oversee the company's affairs was established by Parliament in 1784, and Lord Cornwallis was appointed governor-general to facilitate efforts to augment government oversight of company activities. Although company employees continued to abuse their authority (which had prompted many of the changes in the first place), their financial and political autonomy was increasingly constrained. However, these measures did not prevent continued territorial annexations in the first half of the nineteenth century, which resulted in the company controlling over 60 percent of the subcontinent by the 1850s. In the wake of a major rebellion in 1857, sparked by unrest amongst the company's Indian troops and fueled by widespread dissatisfaction with the changes brought about by company rule, the East India Company was shut down and the administration of its Indian territories was taken over by the British government.

British Empire

By any measure, the British Empire was one of the largest ever. No other so completely encircled the globe, as affirmed by the frequent observation that “the sun never sets on the British Empire.” The details of the empire's history, of course, are more complex, although they do reveal ever changing patterns of colonial expansion and control of non-European territories. A standard interpretation divides the British experience into two phases: an early or first empire ending in the aftermath of the American Revolution, followed by the somewhat different experiences of a second empire. Another interpretation would also recognize a third phase, following the 1884–1885 Conference of Berlin. But there can be little doubt that there are considerable connections between the three eras.

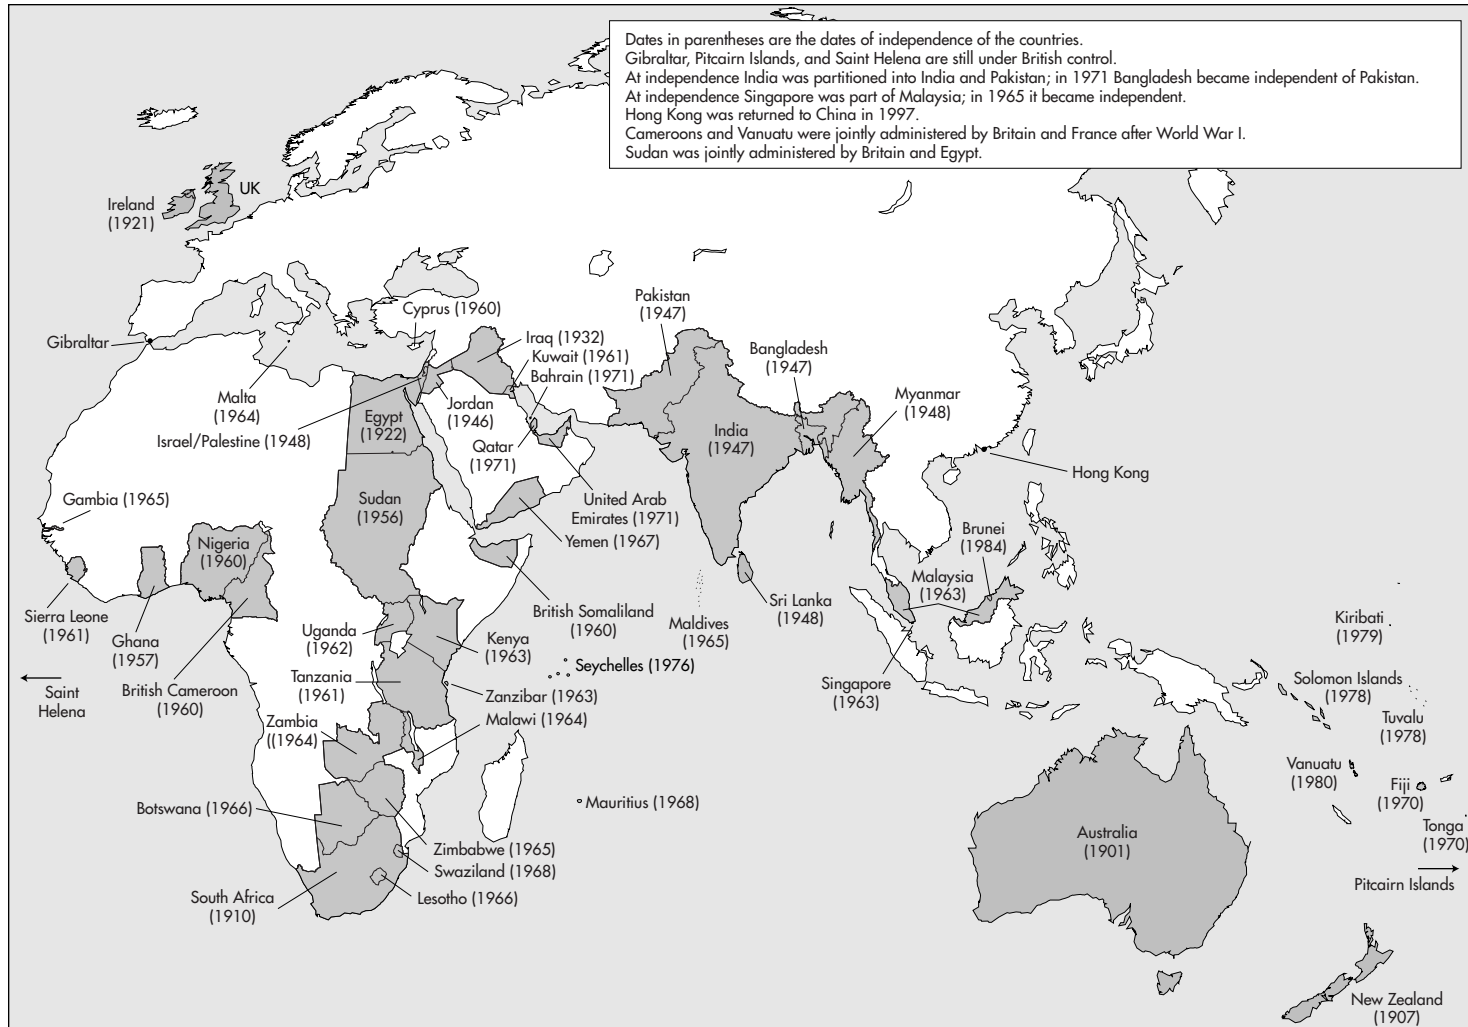

Nonetheless, the beginnings of the British Empire are in some dispute. Certainly, the basic nature of British colonialism has some roots going back at least to the twelfth-century English conquest and occupation of Ireland, although the maritime adventures of the sixteenth-century English naval and merchant seamen were responsible for the extension of English economic power throughout the Atlantic to North America and the Caribbean. The resulting claims of British sovereignty over these territories led to the development more of commercial colonies than administrative centers, and there was precious little central coordination of governmental activity except in one area: the enforcement of trade and exchange rules consistent with the prevailing economic doctrine of mercantilism, which subordinated interests of the overseas possessions to those of the home country. Thus, the obsession with maintaining colonial production led to policies that encouraged the development of labor in the new territories. Accordingly, religious dissidents such as the Puritans were sent to distant colonies, indentured servitude was instituted to encourage less-fortunate people to leave the British Isles, and finally, slavery and the slave trade from Africa was vigorously promoted.

By the seventeenth century, English businesspeople were extending the Crown's mercantile

BRITISH EMPIRE—WESTERN HEMISPHERE

BRITISH EMPIRE—EASTERN HEMISPHERE

principles to outposts in India; by the eighteenth, they spread to Australia as well. All these efforts led to conflicts with European rivals and boiled over into the first great conflict over empire, the Seven Years' War. The British victory marked a new phase in its colonialism, with India and the East its greatest focus. But in many ways, Britain's efforts to use its indigenous colonial subjects—and especially Native Americans—to support the empire during the Seven Years' War led to the greatest challenges to its first colonial endeavors. It is generally believed that with the successful revolt of colonial settlers in the American Revolution, the first phase of British imperialism came to an end, although it certainly continued at least until the United States succeeded in defending its independence in the War of 1812 and particularly with the British defeat at the Battle of New Orleans in 1814.

Subsequently, India clearly became the most important focus of the British Empire, with a resurgent East India Company serving as the agent of both royal and national interests in the subcontinent and its relationships with the Afro-Asian region. Many in England, particularly, quickly rose to defend the imperial developments during this period as having a salutary impact on all the peoples who came into contact with British commercial and political power. Others focused more narrowly on the rights and privileges of the English, no matter where in the world they might have settled. Both of these approaches gave impetus to further colonial expansion, moving out of Australia to New Zealand and eastward into Southeast Asia. The efforts of Thomas Raffles to ensure British control of the strategic island of Singapore is but one example.

Much of British colonial policy through the nineteenth century remained concentrated on India, which—perhaps rightly—was generally considered to be the jewel of the empire. Efforts to secure the sea-lanes from London to India were paramount, controlling Cape Town and its immediate vicinity first and then the eastern edges of southern Africa at Natal. The route around the Cape of Good Hope, however, was long and arduous, and establishing a shorter connection was a top priority. These efforts led to a somewhat belated interest in the Suez Canal, which was initially developed by French interests. By the time it was

completed in 1869, free access to this waterway became a hallmark of British policy and led to numerous interventions in the domestic affairs of Egypt and to involvement in Aden and Somalia as well. Just as these policies were designed to sustain British commercial ties to India, so, too, were British interests in China largely a result of attempts to maintain the economic well-being of the centerpiece of the British Empire in India. Trade with China was desirable for British commerce, and it was also a significant means of supporting colonialism in India. With the 1842 Treaty of Nanking, Britain gained rights to the deepwater port of Hong Kong as a base for these economic activities. However, Chinese resistance to some British efforts—such as the insistence that China permit the importation of Indian-produced opium—led to several conflicts, generally known as the Opium Wars, in which British naval military superiority forced Chinese submission.

This period of British colonialism also saw the extension of some aspects of the previous labor policies to other segments of the empire. This development was most evident in Australia, where the practice of settling prisoners—as had been done in the Georgia colony in North America—was extended and greatly expanded.

The British were slow to see the impact of the American Revolution on other English settlers in the empire. However, in the second half of the nineteenth century, they did begin to extend locally responsible government to some of their colonies, particularly the Cape Colony in southern Africa, Canada, Australia, and New Zealand. Clearly, these colonies differed in one important respect from India, Singapore, and other imperial outposts: they had significant populations of English Europeans who were increasingly allowed to, in essence, govern themselves. From the late nineteenth century, these colonies were treated differently in British policy, and from 1902 (with South Africa included after 1910), they were managed by a separate Dominions Office, distinct from the British government's Colonial Office.

In part, this distinction reflects developments after the 1880s as the British—not quite as reluctantly as its officials sometimes suggested—claimed many more colonial possessions, mostly in Africa. This marked a somewhat new phase in the British Empire, this one spurred on more by

European political rivalries and stoked by the evangelical aspirations of an increasingly literate British public. The rise of Germany was a major factor in this development, with many of its citizens seeking colonial expression as a measure of equality with Britain and France. This was further exacerbated by the personal ambitions of Leopold II of Belgium. Following the 1884–1885 Berlin Conference, Britain was caught up in the frenzy to ensure that it did not allow others to make claims to all of the territories in southern, eastern, and central Africa, which had theretofore not had colonial claimants.

Many of the efforts to claim territory began with British interests in southern Africa—for instance, those being pursued by individuals such as industrial mogul Cecil Rhodes and the Scots missionary David Livingstone. Rhodes promoted a “Cape to Cairo” vision for the British Empire in Africa, whereas Livingstone was associated with a supposedly more humanitarian approach that he saw as an attempt to bring the benefits of “Christianity, commerce, and civilization” to the peoples of the continent. Both, however, clearly built on the economic base that had inspired British colonial efforts since the sixteenth century. And once public pressures and political realities pushed the British government to recognize and assert its authority over these new colonies—although some were officially proclaimed protectorates—it was the Indian experience in governing non-European peoples that became the key example (thanks to the influence of Frederick Lugard) for the new, twentieth-century British colonial administrators.

Indeed, the twentieth century brought dramatic change to the British Empire and not only with its separation into dominion and colonial divisions. Not surprisingly, the major global events of the 1900s—World War I, the Great Depression, and World War II—each had an impact on the empire. And though each had different implications, the net effect was to draw more of the indigenous peoples of the empire into greater engagement with their British colonial overlords. At the same time, worldwide views about both the practice and the propriety of colonialism, expressed through the League of Nations and subsequently the United Nations, served to undermine the confidence the British had held in their colonial enterprise for centuries. By 1960, this shift in

attitudes was recognized by Prime Minister Harold Macmillan as a “wind of change,” and it resulted in a massive decolonization movement and the achievement of independence by many British colonial possessions in the years after World War II; included in this group were some of the West Indian possessions that had been colonies since the first commercial expansions of English power in the seventeenth century. However, some marginal areas stayed in the colonial fold, and British opinion remained strongly supportive of those vestiges of the colonial tradition. Thus, in 1982, Great Britain was quick to resist (successfully) the attempts by Argentina to assert its claims to the Falkland Islands.

This episode seemed to be an argument against the continuing importance of economic forces in the preservation of the British Empire, though there can be little doubt that such matters were largely responsible for the nation’s imperial drive. But what principal factor might explain the essential operation of the empire once it was under British rule? One widely held explanation focuses on the undeniable fact that most of the indigenous peoples within the empire were not Europeans; in fact, by some definitions, they all—Asians, Native Americans, Aborigines, and Africans alike—were “black people” being ruled by whites. This view rests heavily on the development of the slave trade that was so crucial to the first empire as well as its later extension to the Indian Ocean, including the indentured servitude of laborers from Malaysia and India in South Africa. This conception of race and racism as a crucial element in understanding British colonialism has been controversial, but it does have many adherents, especially in the former colonies. It is also related to the arguments, most importantly advanced by Eric Williams, that the British commercial interest in the slave trade was instrumental in financing the Industrial Revolution in England. Such views were not willingly accepted in the British consciousness.

Another view of the practical operations of the British Empire has focused on matters of class rather than race and on the related matters of status and rank within the apparatus of empire. This view follows from the hierarchical nature of British society, which, in many ways, was not just replicated in the colonies; it also flourished there as many English subjects of ordinary means and

status found themselves in positions of authority, frequently based on merit or particularly notable achievements. In this way, the British Empire did serve to expand opportunities for English men and women while at the same time underscoring the essentially stratified nature of British society. This may, in fact, help account for the long devotion of the British public to the existence of empire and to the collective memory of a glorious imperial past.

British Honduras (Belize)

When Spanish conquistadores began carving swaths through the rain forests of Central America in their restless search for gold-rich empires to plunder, the Maya Indians, who had lived, farmed, and built impressive cities in the region since 2000 B.C.E., were already in sharp decline. Those that remained ably fought off the Spanish invaders but had less success fending off imported diseases. By the time the first English buccaneers began to anchor off the Honduran coast in the early 1600s, the Maya had moved inland, and the Spanish limited themselves to the Pacific regions of the isthmus, leaving the mosquito-infested mangrove shores virtually unoccupied.

The earliest English pioneers were less interested in exploiting the land than in establishing pi-

rate bases from which to plunder Catholic Spain's treasure ships. Only in the mid-seventeenth century did the so-called Baymen begin to realize the handsome profits to be made in cutting and exporting logwood to Europe for processing into a valuable dye. In the 1660s, the woodcutting settlement at Belize began to take on the appearance of a permanent town, making it a contentious issue in most Anglo-Spanish treaties thereafter. Throughout the eighteenth century, the Spanish repeatedly tried to dislodge the English (in 1717, 1730, 1754, and 1779), but though the English often withdrew, the profits of the dyewood and mahogany trade continually lured them back. In 1798, Belizean settlers successfully repulsed a Spanish attack in the Battle of St. George's Caye and were afterward left in peace.

The commencement of large-scale mahogany logging operations in the 1790s had a profound effect on ethnic relations in the English settlement. Large numbers of African slaves were imported into Belize to serve as woodcutters for the colonists and for the twelve largest landowners, who owned nearly all of the private land. There were at least four major slave revolts in the settlement, and several hundred slaves successfully escaped across the borders to find freedom in Spanish territory before 1838, when emancipation officially ended slavery in the British Empire. In the wake of the bloody Caste War that erupted in the Yucatán in 1848, thousands of Maya and mestizos also sought refuge in northern Belize, most settling down as small-scale farmers. But it was forest production that continued to dominate, and mahogany logging operations also brought the English into direct contact (and conflict) with the Maya Indians of the Belizean interior. Although the Maya resisted encroachments on their ancestral domain, most were ultimately forced from their lands in the last quarter of the nineteenth century. The Crown Lands Ordinance of 1872 opened new territory to settlers by confining the coastal Garifuna (who were a mix of Carib Indians and African Maroons) and inland Maya Indians onto small reserves.

Although Belizeans profited as intermediaries in the trade between the Central American republics and Great Britain in the early nineteenth century, the sparsely populated settlement soon lapsed into economic obscurity. After negotiating

boundaries with Guatemala in the 1850s, the settlement of Belize officially became the royal colony of British Honduras in 1862. In 1875, the British Honduras Company, responsible for promoting immigration and distributing land, changed its name to the Belize Estate and Produce Company (BEC) and began to amass enough land, power, and political influence to dominate the colony well into the 1970s. Although Belizeans experimented with other agricultural products (bananas in the 1880s and citrus cultivation in the 1920s), forest and timber products accounted for 82 percent of total exports in 1935, and they continued to dominate the export economy into the 1950s. Belize had some limited success in encouraging immigration in the twentieth century (with overall population increasing from 30,000 in 1900 to 90,343 in 1960), but devastating hurricanes in 1931 and 1961 twice bankrupted the colony's fragile economy. Only in the last few decades has the colonial "problem" of underdevelopment been turned to advantage, as Belize marketed itself to the emergent ecotourism industry.

The devaluation of the Belize dollar on December 31, 1949, inflamed anticolonial and proindependence sentiment in the colony, especially among the hardest hit laboring classes, and in 1950, the People's United Party (PUP) was created with the aim of achieving political and economic independence. Working closely with the General Workers Union (GWU), the PUP organized a successful national strike in October 1952 and two years later won the campaign for universal adult suffrage. In 1964, Belizeans won the right to self-governance and passed land reform laws that diversified the economy and redistributed 525,000 acres to small-scale farmers between 1971 and 1982. Land claims and boundary disputes with neighboring Guatemala delayed independence, but it was finally achieved on September 21, 1981.

British West Indies

The British West Indies, a narrow chain of islands, lie between the tip of the Florida peninsula and the northern coast of South America. The shared historical experience of mainland territories such as British Honduras and British Guyana as well as the Atlantic island of Bermuda means that these are also considered to be part of the British Empire in the Caribbean. These territories were first wrested from the Spanish Empire and settled by English colonists in the seventeenth century. As a result of later wars with other European colonizers, additional colonies in the area were added to the British Empire—by then the most dominant power in the region.

The impact of this multicultural and checkered history can still be seen in the language, place-names, music, and food of some of these areas. The British impact is prominent, expressed in language, political institutions, and even cultural arenas such as sports. But more important still, the culture of these ostensibly Anglo territories is even more firmly marked by the imprint of the Africans who were dragged to the Caribbean to labor on sugar plantations between 1500 and 1807. Some also show the cultural impacts of India, China, and even Portugal, as these regions and countries provided replacements for African labor after emancipation.

The sugar plantation system, which was the founding economic and social organization of these colonies, cast a long shadow on the development of the British West Indies. The struggle to escape the dependency and monocultural grip of this system has not been easy. After a long period of colonial rule, the British Caribbean experienced a number of labor-led disturbances in the 1930s, which eventually resulted in political independence in the 1960s. Former colonies assumed republican constitutional status, and all have Westminster-type institutions, retaining links with Britain.

Some of these Caribbean nations briefly flirted with socialist agendas in the 1970s. However, the harsh realities of Cold War politics and economics

and the fact they exist in the backyard of the United States have reinforced their commitment to more conventional approaches to development. One of the enduring legacies of the region's colonial past is the balkanization of the area. The attempt at a political federation, which was the dream of the World War II generation of nationalists, lasted only four years (1959–1962). Ironically, it is slowly becoming clearer that the success of any regional venture is dependent on widening the perspective of the enterprise beyond its British core to other parts of the Caribbean.

Bronte, Charlotte (1816–1855)

Charlotte Bronte grew up in Yorkshire, England. She had one brother and five sisters, the most notable being Emily Bronte. Like her siblings, she sought relief from the tedium of parsonage life under an authoritarian father by creating a rich world of the imagination. She suffered from deprivations in a boarding school, and some of this experience was later expressed in the lives of her fictional characters. Bronte served in various positions as a teacher and governess, and though women at the time were discouraged from careers in literature, she and her sister Emily published a first book of poems under the pseudonyms Ellis Currer and Actor Bell. The first edition of her own *Jane Eyre* was published under the latter name in 1847.

Charlotte Bronte's reputation today primarily rests on the language and themes examined in *Jane Eyre*. Issues of class, gender, and the triumph of love over travail are among the foremost themes. Bronte wrote out of a world that was largely homogeneous in terms of class. It is ironic that greater attention is paid to *Jane Eyre* by post-colonial writers and critics because of the character of Bertha, an outsider to Bronte's world. A wonderfully preemptive creation on Bronte's part, Bertha is largely invisible and voiceless in the novel. She is portrayed as a mad West Indian Creole woman who stands in the way of true love between Rochester and Jane Eyre. The character of Bertha is re-created and reenvisioned in *Wide Sargasso Sea*, a novel by Jean Rhys.

Bryan, William Jennings (1860–1925)

William Jennings Bryan was one of the most outstanding political figures in turn-of-the-century America. Born in Salem, Illinois, on March 19, 1860, he studied law at the Union College of Law in Chicago and practiced as an attorney in Jacksonville, Illinois, before entering politics. "The Great Commoner," as he was known, served as a Democratic member of Congress from Nebraska (1891–1895), as a presidential candidate (1896, 1900, 1908), and as secretary of state (1913–1915).

During the presidential campaign of 1900, Bryan ran unsuccessfully against William McKinley on a platform opposed to U.S. imperialism after the Spanish-American War. He campaigned as an outspoken opponent to the annexation of the Philippine Islands but weakened the value of his opposition greatly by connecting it with his radical financial theories of populist agrarianism.

His relationship to the anti-imperial movement in the United States was ambivalent. Unlike many other Democratic politicians, he never joined the Anti-Imperialist League. And though many anti-imperialists opposed the Treaty of Paris that regulated the transfer of the Philippines, Puerto Rico, and Guam to the United States, Bryan, who had

been a volunteer colonel during the Spanish-American War but saw no action, endorsed the treaty, believing that a rejection could mean prolonged war and that the Philippines could receive independence after hostilities ended.

Bryan received his party's presidential nomination for the third time in 1908 and ran unsuccessfully against William Howard Taft. His work in securing the Democratic Party's nomination of Woodrow Wilson in 1912 won him an appointment as secretary of state after Wilson was elected to the presidency. Bryan's record on foreign policy was mixed. On the one hand, he applauded Wilson's renunciation of imperialism in 1913; advocated an international arbitration structure; urged friendly, nonexploitative relations with Latin America and independence for the Philippines; and rhetorically rejected military interventions. On the other hand, he agreed to the U.S. military intervention to contain revolution in Mexico, supported military intervention in Haiti and the Dominican Republic, secured an option for the United States to build a canal in Nicaragua (in the Bryan-Chamorro Treaty of 1914), and firmly established U.S. control over the Caribbean.

Bryan resigned in protest to the increased U.S. involvement in World War I after the sinking of the *Lusitania* in 1915. He continued to campaign for neutrality and against America's entry into the war and subsequently became a strong advocate of the League of Nations. He died on July 26, 1925.

Buchan, John (1875–1940)

John Buchan was born in Perth, Scotland, and educated at Glasgow University and Brasenose College, Oxford. While at Oxford, he published five books and many articles. A barrister, member of Parliament, soldier, publisher, and writer, he be-

came the thirty-fifth governor-general of Canada in 1935, a position he held until his death.

Buchan became a staunch advocate of British imperialism during his tenure as private secretary to the British high commissioner to South Africa. The idea of empire as a civilizing and Christianizing instrument is of major significance in Buchan's fiction. In *Prester John* (1910), a novel based on his experiences in South Africa, Buchan's protagonist is an idealistic young Briton who seeks to carry out his duty as a colonizer to the "dark men"—to spread the light of Western civilization to the natives. He invokes the divine right of the British monarch to justify the subjugation of black Africans, whom the protagonist sees as simplistic, selfish, and depraved. For Buchan, imperialism provided the opportunity to offer personal service to humanity; sacrifice, duty, clear purpose, and exemplary conduct were the hallmarks of the true servant of the empire. The rewards were to be found in furthering the colonial cause.

Although he showed signs of being anti-Semitic, Buchan wrote *A Prince of Captivity*, one of the first anti-Nazi popular novels. In the novel, the hero dies at the hands of the Nazis but preserves his integrity. Buchan recorded the process of his own dying in his final work, *Sick Heart River*.

His five major works are *The Thirty-nine Steps* (1915), *Greenmantle* (1916), *Mr. Standfast* (1919), *The Three Hostages* (1924), and *The Island of Sheep (Man from the Norlands)* (1936). *The Thirty-nine Steps* was adapted for the screen by Alfred Hitchcock.

Buddhism

Buddhism is a religion founded by Siddhartha Gautama of the Sakya clan in Maghada, in what is now Nepal. By tradition, his father, anxious to avoid fulfilling a prophecy that Siddhartha would become a world redeemer, kept him from all discomfort and disturbing experiences. Nevertheless, the Four Sights led Siddhartha to see old age, disease, death, and renunciation. At thirty, he rejected

his normal life and sought enlightenment, studying with famous teachers and practicing rigorous asceticism. Ultimately, he rejected extremes, sought the Middle Way, and achieved enlightenment under the *bodhi* tree, being known then as the *Buddha* (the Awakened One) and as *Tathagata* (Thus-Gone). His first sermon, “The Turning of the Wheel of Dharma,” was given at the Deer Park of Sarnath, near Benares in northern India. He expounded the *dharma*, or universal law, of the Four Noble Truths of the Causes of Suffering and the Cessation of Suffering and the Noble Eightfold Path to enlightenment and escape from the Cycle-of-Souls (*samsara*). His followers became the *Sangha*, or Buddhist community, and he taught for the remainder of his life. He saw himself primarily as a physician for those who suffered, not as a religious leader or prophet. His ad hoc teachings are thought to be best preserved in the Dhammapada and in the Pali Canon of the Theravada School of Ceylon.

Fundamental to the Buddha’s teachings are the Three Marks of Existence: *dukkha* (suffering), *anitya* (impermanence), and *anatman* (no-self). Physical existence is a combination of the Twelve Pre-Conditions of Dependent Co-Arising and the Five Aggregates, which combine to create the empirical individual, but no true “self” is to be found. The Noble Eightfold Path strips away both the Twelve Pre-Conditions and the illusion of self, allowing enlightenment (*nirvana*) and, ultimately, an end to reexistence (*parinirvana*). Enlightened individuals are known as *arhats* or *bhikkhus*.

The *Sangha* was composed of four groups: monks, nuns, laymen, and laywomen. Initially, only arhats were capable of advancing toward nirvana, one of several ideas that would cause a schism. Three councils were called within approximately 200 years of the Buddha’s parinirvana. By the second, a split developed between the *Sthviravada* (Teachings of the Elders) and the *Mahasanghikas* (The Great Community). By tradition, eighteen schools developed in India. Two major schools emerged: the *Theravada*, important primarily in Sri Lanka and much of Southeast Asia, and the *Mahayana*, important in such places as Tibet, Mongolia, China, Korea, Japan, Vietnam, and now North America and Europe. The Theravada School, with its narrower view of enlightenment, is also known as the *Hinayana*

(Lesser Vehicle or Lesser Raft), so named by the Mahayana School (Greater Vehicle or Greater Raft). The Theravada School accepts no writings beyond the Pali Canon and the Tripitaka, or the Three Baskets. The Mahayana School accepts a far greater breadth of writings. It also accepts notions such as the supermundane Buddha, prior and future Buddhas, and the *Bodhisattvas*, enlightened beings who strive systematically for the enlightenment of all sentient beings. A third school, the *Vajrayana* (Diamond Vehicle), developed from the Mahayana, emphasizing the possibility of enlightenment in one lifetime.

The Mahayana School has a wide variety of traditions, from a Buddhism such as that of Tibet, which is heavily religious in its expression, to a split tradition in China (and later Japan) featuring both the Ch’an and Pure Land Traditions. Ch’an is a Taoist-influenced, philosophical Buddhism. Pure Land (and True Pure Land) is a Taoist-influenced, salvationist religion based on transcendent Buddhas. In Japan, these diverse traditions are represented by Zen and Shin. In the post-Soviet era, the reestablishment of Buddhist traditions in Central Asia and Mongolia is being overseen primarily by representatives of the Tibetan tradition.

Buddhism adheres to nonviolence (*ahimsa*) and encourages a moderate and just life, with compassion for all sentient beings. The earliest important secular supporter, Asoka Maurya, rejected military conquest in favor of dharma conquest and became a layperson in the Sangha, giving financial and royal support to the spread of the *Buddha-dharma*, or universal law, beyond the borders of India, even to the capitals of the Hellenistic monarch of the Mediterranean and the Middle East, as well as to Sri Lanka and parts of Asia, beginning what came to be referred to as the Northern and Southern Transmissions.

The effects of Buddhism on the various cultures it has encountered have been profound in virtually every important area of art, literature, architecture, and aesthetics, in addition to politics, philosophy, and society. Buddhism traditionally does not support warfare or imperial adventures, although China certainly produced fighting monks of the Shao-lin tradition and Japanese samurai were often cultured practitioners of Zen. In modern times, the Buddhist culture of Tibet, represented primarily in the West by His Holiness the

Fourteenth Dali Lama of the Gelug School, has been under constant assault from the government of China. As a consequence of the Tibetan experience, as well as that of Vietnamese Buddhists (represented by such men as Nobel Peace Prize winner Thich Nhat Hanh) and the monks who committed suicide by self-immolation to protest the war in Vietnam, Buddhism has become a world force for peace and anti-imperialism.

Buenos Aires

In 1535, Pedro de Mendoza, as an agent of Charles V, established a temporary encampment on the west bank of the River Plate, which he christened Puerto Nuestra Señora Santa María del Buen Aire. This first settlement failed, but in 1580, Juan de Garay and a band of mostly Indian-Spanish mestizos returned to the site and built a fort. Garay laid out a town with a jail, a church, and a town hall arranged around a central plaza. In the center of this plaza, he planted the “tree of justice,” a wooden pole that served as a symbol for punishment and authority. Buenos Aires grew on the basis of subsistence agriculture, the trading of hides and furs, and the steadily rising volume of contraband trade in silver and slaves, thanks to the restrictive trade policies of the Spanish Crown.

From the beginning, it was also an administrative center exercising control over the interior provinces; throughout the nineteenth century, local caudillos (political/military bosses) struggled to resist that control. Power, however, followed the path of wealth and population growth that moved steadily from the interior to Buenos Aires. In 1880, Buenos Aires became a federal district, which confirmed the city’s position as the political center of the nation.

Buenos Aires had steadily grown into a colonial port city, controlled by the white elites at the top of

the social apex. In the twentieth century, despite its growth as a metropolis, its social structure had changed slowly. The middle class imitated the upper class, the upper class feared the lower class, and among all classes, attitudes toward manual labor, social distinctions, and materialism recalled those of the colonial period.

Bundists

The Bund, an organization of Jewish workers in Germany, emerged in 1897 as an expression of Jewish pride and as a response to anti-Semitism. There were two types of Jewish nationalist movements at the time, the first composed mainly of Eastern European Jews, who wanted to maintain their cultural identity and sustain their communities (Zionists), and the second composed of Western European Jews, who wanted emancipation and called for a Jewish national resistance. The Jewish masses were caught between anti-Semitism and socioeconomic decay, so that the beginning of the 1890s marked the emergence of a Jewish working class. Anti-Zionist in nature, the Bund aimed to integrate Jews and secure equal rights for them so that they could live peacefully and practice cultural autonomy.

The Bund was the first organization of Jewish workers at the time, and it represented the synthesis of Jewish enlightenment and socialism; as a result, its adherents advocated socialist revolution as a solution to social and national moral problems. This ethic extended to programs such as the Bund Deutscher Madel (the League of German Girls), since the focus increasingly centered on young people. The league involved a strict separation of the adult and youth worlds.

The activities of the Bund continued through the pre–World War II era and intensified as attacks on Jews increased. It was in this atmosphere of terror and fear that the Bund attempted to remind the German Jews of a psychological advantage they possessed: they could be physically but not mentally beaten. In 1942, reports of a Nazi plan to murder all Jews reached the Bund, headquartered

in the Warsaw ghetto, and the Allies, and on December 17, 1942, the Allies condemned this extermination effort. Even during the difficult war years, the Bund did not suspend its activities, and it persists in a minor and nonpolitical form today.

Burma (Myanmar)

In the early nineteenth century, the English East India Company thrice collided with the expanding Burmese kingdom of Ava. Border tensions led to a war between 1824 and 1826, in which Burma lost territory on the coast of the Bay of Bengal. Quarrels between British traders and the governor of Rangoon (Yangon) sparked a second war in 1852. Burma was then stripped of the rest of its coastline, leaving only landlocked and drier inland regions. Attempts to fine the British Burma Trading Company for excessive teak logging and tax avoidance and to court the French provoked complete British annexation on January 1, 1886.

British colonialism undermined Burmese identity, exiling the king, weakening the Buddhist hierarchy, treating the country as a province of India, and integrating lower Burma with the world economy as a major rice-exporting region. Burma's colonial treasury benefited, but peasants faced high debt and tax burdens. Ethnic minorities predominated in the police and in the army, and the hill regions they came from were ruled indirectly whereas lower Burma was ruled directly, perpetuating ethnic and regional differences. Finally, Indians played an important role in moneylending and the urban economy.

The resulting tensions, when combined with modern schooling, fueled nationalism. In 1906, members of the Western-educated elite formed the Young Men's Buddhist Association (YMBA), aiming to restore Buddhist values. In 1916, they

successfully campaigned for Europeans to remove their shoes in pagodas, and between 1919 and 1922, they advocated the extension of dyarchy to Burma. From 1923, under the dyarchy system, some subjects in Indian provinces came under locally elected ministers.

The YMBA, re-formed as the General Council of Buddhist Associations (GCBA), then split. This gave the initiative to rural *pongyi* (Buddhist monks), who led peasants in the Hsaya San rebellion of 1930; the peasants resented the police and were burdened by tax and debt pressures. Over 1,300 rebels were killed, but the uprising did get Britain to separate Burma from India by the Government of Burma Act of 1935. Effective from April 1937, this measure retained the wide powers of the governor but also provided for responsible government by Burmese ministers. Ba Maw became the first Burmese prime minister in 1937.

Students from Rangoon University now sought more dramatic change. Appropriating the term *thakins* (masters)—a term normally reserved for Europeans—and applying it to themselves, leaders such as Aung San and U Nu sought independence through struggle. They coordinated nationwide strikes in 1938 and 1939 and formed a paramilitary. Taking control of the We Burmans Association (Dobama Asiayon, founded in July 1933), they helped topple the Ba Maw government in 1939. World War II saw Aung San and Ba Maw combine in the Freedom Front, which offered cooperation in return for a promise of later independence.

Some of the thakins fled colonial persecution and were trained by the Japanese, returning with the latter's 1941–1942 invasion. Known as the Thirty Comrades or Thirty Heroes, these individuals led the Burmese Independence Army (later called the Burma Defense Army or Burma National Army). Japan responded by giving Burma nominal independence on August 1, 1943. Aung San then switched sides, founding the Anti-Fascist People's Freedom Organization in November 1944. Starting its resistance on March 27, 1945, it helped the Allies retake Burma. Then, in August 1945, the organization was broadened into the Anti-Fascist People's Freedom League (AFPFL), which forced Britain to abandon plans for a three-year return to direct rule in order to facilitate reconstruction. The AFPFL won the April 1947 elections to the

Constituent Assembly, leading Burma to independence outside of the Commonwealth on January 4, 1948.

The colonial legacy lived on in the form of ethnic minority revolts and a deep suspicion of capitalism and outside interference. Myanmar, the new name of Burma after 1989, became a member of the Association of Southeast Asian Nations (ASEAN) in July 1997.

Burton, Sir Richard (1821–1890)

Richard Burton was born March 19, 1821, into an upper-middle-class family of Irish descent. Raised in France and Italy after his father's military career ended in a minor scandal, Burton became well known as a hooligan, gifted linguist, and master swordsman. Sent to Oxford University in 1840, he was promptly expelled, after which he bought a commission in the Indian army. On arrival in Bombay, he began studying local customs, affairs, and erotica. He also continued his language studies and eventually mastered a total of twenty-nine separate languages and eleven dialects. Because of his language abilities, Burton was assigned to gather intelligence. Unlike other British agents, who simply paid informants, Burton chose to gather information himself by wearing disguises and "going native," much to the horror of his superiors. Although already stalling, his career in the army essentially ended after he turned in an explicit report on the Karachi brothels.

Burton returned to Britain in 1847 under a cloud of scandal and spent the next several years publishing a series of books and articles on Indian customs and religion and his own adventures. All of these early ventures failed to win popular acclaim, so in 1853, he decided to explore Mecca and Medina. Shortly thereafter, he hatched a plan to look for the source of the Nile, which at that point was still a mystery, by marching inland from the Somali coast. This expedition ended in disaster

when Burton and his travel companion, John Hanning Speke, were wounded in an attack by local tribesmen.

After returning home to recuperate, both Burton and Speke saw active duty during the final phases of the Crimean War (1854–1856). They returned to Africa in June 1857 and spent the next two years marching inland in search of the Nile source despite drought, the desertion of their bearers, and constant illness. During the final phases of this expedition, the two men quarreled over money, their different management styles, Burton's drinking, and Speke's claim to have discovered the source of the Nile while on a side trip during one of Burton's bouts of illness. On their return to England in 1859, this quarrel erupted into a vitriolic feud over the validity of Speke's assertion that Lake Victoria was indeed the source of the Nile.

In 1860, Burton married Isabel Arundel and traveled to Utah to study the Mormon community at Salt Lake City. On his return later that year, he began what was to become a long diplomatic career, serving as consul in Fernando Po, Rio de Janeiro, Damascus, and Trieste. In each of these posts, Burton continued to travel widely, and he published numerous travelogues and translations of Indian erotica. Burton was finally knighted in early 1886 for his service to the Crown. Shortly thereafter, his health began to deteriorate. After his death on October 19, 1890, his devoutly Catholic wife burned his private journals and most of his manuscripts in order to save his reputation.

Buxton, Sir Thomas Fowell (1786–1845)

The English abolitionist and social reformer Thomas Fowell Buxton was born in Essex and educated at Trinity College, Dublin. In 1807, he

married Hannah Gurney, the sister of prison reformer Elizabeth Fry, and a year later joined the brewing firm of Truman, Hanbury & Co., a move that gained him a fortune to support his philanthropic work.

In 1818, Buxton published *An Inquiry Whether Crime and Misery Are Produced or Prevented by Our Present System of Prison Discipline*, which led to the development of the Prison Discipline Society. That year, he was also elected a member of Parliament for Weymouth, a seat he would hold until 1837; in that post, he served on two select committees whose reports led the government to consolidate and amend the British penal code and in 1820 abolish the death penalty for forgery.

Buxton had long opposed slavery, and in 1823, he joined William Wilberforce's Anti-Slavery Society, soon taking over as its parliamentary spokesman. Businesspeople with colonial interests prevailed on the British government to avoid the slavery question, but public meetings and the extension of enfranchisement in 1832 forced the issue. The 1833 Abolition of Slavery Bill freed all slaves under the age of six immediately; more would be freed when it took effect on August 1, 1834. In 1836, Buxton moved that the House of Commons examine the apprenticeship program, which held technically emancipated agricultural workers under the virtual control of their former masters until 1840: the program was terminated in 1838.

After leaving Parliament, Buxton focused on eliminating slavery in Africa. He had been active in aboriginal protection since the middle of the 1830s, and in 1839, he established the Society for the Extinction of the Slave Trade and the Civilization of Africa and published *The African Slave Trade and Its Remedy*. Buxton was made a baronet for his efforts in 1840. A year later, his plans for fighting the slave trade with legitimate commerce were implemented when the British government sent an expedition up the Niger River to develop commercial trade. The effort failed when forty-one participants died of fever, and the society was dissolved in 1843. On Buxton's death two years later, a statue was erected in his honor in Westminster Abbey.

Byzantine Empire (Byzantium)

Byzantium (or *Byzantine*) is the modern name for the medieval period of the Roman Empire, roughly from 325 to 1453 C.E. The year 325 is a date of convenience, being the year that Constantine I (Constantine the Great) officially moved the capital of the empire from Rome to the Greek city of Byzantium on the Bosphorus. It is also the year in which he convened the first ecumenical council of the Christian church, to define orthodox Christian theology and cement the alliance between the Roman state and the Christian church that would determine so much of European history.

The crisis of the Third Century was ended by the reforms of Diocletian (283–305), the establishment of the Tetrarchy, the struggle for power that ensued after Diocletian's retirement, and finally, Constantine's accession to the throne and his continued reforms. Effectively, the empire was split along linguistic lines, with a Latin-speaking west and a Greek-speaking east. Pressure on the eastern frontiers of the Danube and in the Middle East drew attention and resources away from the Rhine frontier in the west. Theodosius the Great was the last emperor to rule the unified empire. Its organization can be seen in the *Notitia Dignitatum* (c. 396), a register of imperial offices. Gothic migrations over the Danube in the late 300s and Germanic invasions of the west over the Rhine in the early 400s led to the collapse of the west by 476. Following this, the empire comprised primarily the eastern provinces.

A brief resurgence under Justinian the Great (d. 565), who ruled for nearly fifty years, was the last attempt to reunify the *orbis Romanum*, or Roman world. Though much of the reconquest would be lost, the empire would hold portions of Italy and Sicily until 1071. Justinian's great legal code, the *Corpus Iuris Civilis*—the model for most of later European law and thus of many colonial statutes—was published primarily in Latin, but the *Novellae*, or new laws written after the *Corpus*, were published in Greek, an acknowledgment of the new nature of the empire. From that point forward, the culture and character of the empire

would be governed by Hellenic culture and the Orthodox Church, whereas the Latin west would be fractured into barbarian successor kingdoms, with vague memories of imperial Rome, and a Roman papacy that sought to dominate secular monarchs.

The image of Constantinople and the idea of the Roman Empire dominated, at first politically and then ideologically, much of the Middle Ages. For a thousand years, the empire was the gateway for trade and commerce between Europe and the Middle East, only gradually supplanted by the maritime republics of Italy, which often operated from Byzantine ports and harbors. And for a thousand years, Constantinople and the empire were the guardians of Europe, shielding it from the aggressive forces of Sassanid Persia and militant Zoroastrianism and then the militant and expansionist forces of Islam. The victories of Heraclius in the early 600s virtually destroyed the empire of Persia, leaving only a single battle with the forces of Islam to ensure its end. The victory of Leo III over the forces of Islam in 717 and 718 guaranteed the security of Europe for centuries. The defeat of the Vikings of Russia and their conversion to orthodox Christianity in the ninth and tenth centuries, as well as the earlier conversion of the Slavs and the eventual establishment of Slavic and Serbian kingdoms in the Balkans, would establish the pattern for much of the history of Eastern and Central Europe up to the present day. The most recent examples of such patterns and conflicts may be seen in three periods of the twentieth century: the ethnic, religious, and political events leading to World War I; the ethnic and religious hatreds exhibited during World War II by pro- and anti-Nazi forces; and the events following the breakup of Yugoslavia.

In the Middle Ages, the Orthodox Church struggled for control of the Christian *oikumene* (community) with the bishops of Rome, but the churches severed communion in 1054—the Great Schism. In the first half of the Middle Ages, the empire struggled for ascendancy with the kingdoms of Western Europe—the Merovingians, Carolingians, and Ottonians—but found its attention continually drawn back to the Danube and eastern frontiers and the threats of

Central Asian nomads and militant Islam. The empire went through several periods of expansion and contraction, but by the time of the rise of the feudal monarchies of Western Europe, it no longer played an active role in Western European politics. Alexius Comnenus (1081–1118) appealed to Pope Urban for aid against the Seljuk Turks, which led to the First Crusade, prefigured in the campaigns of Heraclius (610–641) against Persia and the campaigns of Nicephorus II Phocas (963–969) against Islam. The Fourth Crusade (1204) was redirected against Constantinople by Dondalo, the Doge of Venice, out of personal hatred, resulting in the Latin Kingdom of Constantinople. The city was eventually recaptured from the Latins, and the empire was re-formed, but the damage done was terminal. During the period of the Latin kingdom, too much of the core territories of the empire had been lost to the Turks. Recurrent outbreaks of bubonic plague and other diseases, the ambitions of the Italian maritime republics, incidents such as the adventures of the Catalan Company of mercenaries, and imperial court politics quickly cut short any attempts to stabilize and consolidate political and economic power. Despite this slow and continuous decline, Byzantine culture flowered into one of its brightest and most original periods, and its artists and scholars, fleeing the front wave of Muslim Turkish conquests, were a catalyst for much of the Italian Renaissance. The Turks of the Ottoman Empire captured virtually all Byzantine territory in Europe and Asia during the 1300s and early 1400s. In 1453, following a long siege using early cannons, Mehmed II captured Constantinople, killed the Emperor Constantine XI, and ended the empire.

C

Cabot, John (c. 1450–c. 1498)

John Cabot was Genoese by birth and Venetian by adoption, but his precise birth and death dates are unknown, and other aspects of his life are in dispute as well. He arrived in Bristol, England, in 1494, where he managed to sell his plan for sailing west to discover a new route to Asia to King Henry VII and to the Bristol merchants. Cabot's plan was conceived independently from that of Christopher Columbus, who attempted to reach Asia in 1492 but instead arrived in the West Indies. Henry VII gave official permission to his own expedition and gave Cabot and the Bristol merchants a monopoly on the trade, particularly in spices, from any new lands discovered.

Between 1494 and 1496, Cabot set out with one ship on his first voyage, but being short of supplies, he soon put back to port. His second attempt, setting out on May 20, 1497, in the *Matthew* of Bristol, was more successful; the *Matthew* was, in fact, the first English ship to cross the Atlantic. On June 24, the Feast of St. John the Baptist, Cabot made landfall, most likely near Newfoundland, and he called the island St. John's. With fair wind and good weather, his return passage to Bristol took fifteen days. He arrived there on August 6, to be met by the king and given a gratuity of £10 and a pension of £20. He became popular in Bristol, where he was known as "the Grand Admiral."

In 1498, he planned a return visit to the lands he discovered, with a fully equipped fleet provisioned for a year and financed by Bristol and Lon-

don merchants. The king provided one ship, the merchants four, and they set sail early in May 1498. One ship became damaged in a storm and put in at an Irish port for repairs, but no news of the fate of Cabot and the rest of his small fleet was ever received. Some surmise that he reached the coast of North America, followed it down to the Tropics, and perhaps entered the Caribbean; others assume Cabot and the remainder of his sailors were lost at sea. Because of the lack of reliable records on his voyages, his reputation as an agent of imperial expansion has suffered.

Cabral, Amílcar Lopes (1924–1973)

Known as a resistance leader and political theorist, Amílcar Lopes Cabral came to believe that armed struggle was necessary in the fight against colonialism. Born in Portuguese Guinea (later Guinea-Bissau) of Cape Verdean parents, Cabral studied agricultural engineering in Lisbon from 1945 to 1951. While there, he met fellow African students such as Agostinho Neto of Angola who, like himself, would later become the anticolonial leaders of their coun-

tries. He returned to Guinea-Bissau in 1952 and in the next year commenced an agricultural survey of the country, learning not only about Guinea-Bissau's crops and soils but also about the people's depressed economic situation.

He founded the Partido Africano da Independência da Guiné e Cabo Verde (African Party for the Independence of Guinea and Cape Verde, PAIGC) in 1956, becoming one of its main leaders. At first, this group operated peacefully, organizing a petition to the Portuguese government to ask for freedom from Portuguese rule and the right to unify as an independent nation. In 1959, however, Portuguese troops killed fifty striking dockworkers in Bissau. The PAIGC realized that nonviolent protest against colonialism would not bring about change, and armed struggle against Portuguese colonialism began in Guinea-Bissau. For the next four years, Cabral built up a fighting force, headquartered in nearby Guinea-Conakry. From 1962 to 1973, he was the leader of the guerrillas fighting against the Portuguese in Guinea.

Cabral also traveled in Africa, Europe, Asia, and the United States in the 1960s, promoting the PAIGC and his ideas on independence from colonial rule. His thoughts on the anticolonial struggle were based on two main ideas: first, that those people who felt morally obligated to resist oppression had to actively participate in eliminating it and, second, that these personal beliefs must be transformed into a fuller concept of complete moral and social renewal.

Cabral was assassinated in Conakry in 1973 by forces of the Portuguese secret police; he did not live to see Guinea-Bissau's independence from Portugal in 1974, when his half brother, Luis Cabral, became the country's first president.

Cabral, Pedro Alvares (1467–1520)

Pedro Alvares Cabral was a Portuguese navigator and the leader of the Portuguese expedition that,

in 1500, made the first known European landing in Brazil. Cabral left Lisbon on March 9, 1500, with thirteen ships and a crew of about 1,200, including such experienced navigators as Bartolomeu Dias, who had rounded the Cape of Good Hope (the southern tip of Africa) in 1488. Cabral's objective was to reach India, and his was the second expedition to be sent to Indian waters, following Vasco da Gama's groundbreaking voyage of the late 1490s. However, Cabral's expedition was reportedly blown off course by a storm that took it far west of the African coast; it landed instead in Brazil on April 22, 1500.

Historians have recently debated whether the landing in Brazil was accidental. Although traditional historiography states that Cabral's landing was due to chance, many historians now believe that it was improbable that such experienced sailors as those who accompanied Cabral would have made such a miscalculation. Some believe that the Portuguese had prior knowledge of the existence of a land to the west of Europe. Others have further argued that Christopher Columbus's landing in the Caribbean in 1492 had put pressure on the Portuguese to take possession of whatever lands had been conceded to them by the Treaty of Tordesillas of 1494. At any rate, Cabral and his men stayed in Brazil only ten days, after which they continued their trip to India and sent one ship back to Portugal in order to inform the king of their finding. Cabral rounded the Cape of Good Hope on May 29, where severe storms took four of his ships, including that of Bartolomeu Dias, who died in the disaster. The remaining vessels arrived in India on September 13, and the Portuguese established a fortified trading post in Cochin. Cabral returned to Portugal on June 23, 1501. Although he was considered as a candidate to lead the third Portuguese voyage to India, Vasco da Gama was chosen instead. Cabral never took part in any other expedition and died in obscurity.

Cairo

Egypt's capital reflects a past closely connected with the story of colonialism. Cairo's first brush with Western imperialism came with the French in 1798. Then, although fascinated by the city's vast collection of ancient and medieval architecture, Napoleon and his savants insisted on change, especially in civic administration, and street design.

Throughout the century that followed, a strong Western influence persisted in Cairo's development. Railways connected the city to Alexandria and Suez by the 1850s. During the reign of Khedive Ismail, the Azbakiyyah district gained a European-style quarter and an opera house. Influenced by the Exposition Universelle of 1867, Ismail wanted Cairo transformed into a Western city. Although he concentrated his resources on select districts, a master plan envisioned Paris-like boulevards and parks everywhere.

Extensive loans helped pay for Cairo's beautification, but a threatened default also allowed for the British invasion of 1882. The occupation that followed lasted until 1946, and it established a significant English influence in Cairo's urban planning. One immediate result was the creation of more western districts, military barracks, and office space. Tramways and bridges followed. All this attracted immigrants, and between 1882–1900, Cairo's population grew from 400,000 to 600,000.

In World Wars I and II, Cairo was the headquarters for Allied forces in the Middle East. During these conflicts, vast numbers of troops and civilians moved into the city, supporting economic boom times. War also spawned factories and support facilities, some of which survived the transition to peacetime. Cairo's colonial era ended in 1946, when British troops withdrew. At last, an Egyptian flag again flew over the Citadel.

Calcutta

Calcutta is the largest city in India and one of the largest commercial centers of Asia. It is also the heartland of Bengali language, culture, and civi-

lization. The Royal Asiatic Society of Bengal was founded in 1784, the University of Calcutta in 1857, and the University of Jadavpur in 1955. The Bengal cultural renaissance, led by Ram Mohan Roy (1772–1833), developed in the early nineteenth century. Located on the east bank of the Hoogly, a tributary of the Ganges, Calcutta owes its greatness to the river that links the city to the industries and commercial network of north India.

The history of the city is largely associated with the British, who founded it in 1690. In 1696, the British built Fort William, and two years later, they purchased three villages, which constituted the early city, from the Mughals. In 1756, the nabob of Bengal captured Calcutta and incarcerated 146 prisoners in a small room overnight; only a score of them emerged alive. This incident became known as the “black hole of Calcutta” event, and it led to British reprisals and recapture the following January. In June 1757, Robert Clive won the Battle of Plassey, and Calcutta became a British presidency. In 1773, it became the capital of British India, the governor of Bengal became the governor-general of India, and a supreme court was established in the city. It remained the capital of British India until 1912, when the capital was transferred to Delhi. From the 1920s until the 1940s, Calcutta became the center of communal rioting between Hindus and Muslims as the nationalist movement gathered force. The riots that took place from August 16 to 20, 1946, at the instigation of the Muslim League, were the worst in the city's history. Since 1947, Calcutta has grown into one of India's most vibrant cultural, industrial, and commercial centers.

California

The largest state by population in the United States and the third largest by area, California was first explored by the Spanish in the mid-sixteenth century and settled by missionaries in the late eighteenth century. It became part of Mexico when that

country won its independence from Spain in 1821, but it was ceded to the United States after the Mexican-American War in 1848.

California was originally settled by a dozen or so Native American tribes, with a pre-Columbian population estimated at 150,000. The first Europeans to sight the territory were the Spanish explorer Juan Rodríguez Cabrillo in 1542, the English buccaneer Francis Drake in 1579, and, in 1602, the Spanish merchant Sebastián Vizcaíno, who named many of the region's coastal features. But California's remoteness from both Europe and the heartland of New Spain (Mexico) meant that the state remained largely unsettled by Europeans into the late eighteenth century.

Fearful that British or Russian traders—both economically active in the north Pacific—might lead their respective countries to lay claim to the remote territory, Spain moved to establish its hold on California by dispatching Franciscan missionary Junípero Serra in 1769 to establish missions. Over the next decade, Serra established twenty-one missions between San Diego and the San Francisco Bay area. At the same time, the Spanish viceroy in Mexico sent an army expedition under Gaspar de Portolá to establish a military outpost at Monterey, which became the capital of the territory.

Under both the Spanish and the Mexican governments, there was little European settlement, even as most of California's Native Americans—particularly those along the coast and in the Central Valley—were herded into mission compounds, where many of them died from European-borne diseases. In 1834, the missions were secularized by the Mexican government; although half of the missions' vast holdings were supposed to be given to the Indians, most were seized by well-connected Spaniards, who established vast cattle ranches.

U.S. involvement in California began modestly in the early 1800s as small numbers of New England traders made their way by sea to the territory, exchanging manufactured products for cattle hides grown on the huge Mexican ranches, largely in the southern half of the region. Meanwhile, other Americans—still small in number—were settling in the northern half of the region as farmers and ranchers.

As tensions rose between an expansionist United States and Mexico in the 1840s, leading to

the outbreak of war in 1846, these American settlers in northern California declared the territory an independent republic in 1846. At the same time, several battles between U.S. and Mexican forces in the southern half of the territory—at San Pascual in December 1846 and Cahuenga Pass in January 1847—led to a U.S. takeover, which was formally confirmed by the Treaty of Guadalupe Hidalgo, signed by the United States and Mexico in February 1848.

The discovery of gold in the Sierra foothills in January 1848 led to a flood of gold-seekers from the eastern United States and around the world in the late 1840s and 1850s. Indeed, by 1850, when California became the thirty-first state, the non-Indian population of the territory had risen to over 200,000. Over the next fifty years or so, the original Mexican ranch owners—known as Californios—would see much of their property taken from them by American land speculators, often through fraudulent means.

The twentieth century saw California transformed from a largely agricultural state with a relatively small population to an economically diverse state with a population in excess of 33 million. Interestingly, by the year 2000, California had become the first state in the Union in which over half the population was of non-European origin, with the largest single ethnic group being Mexican.

Calvinism

In the period before 1800, Calvinism as it related to colonialism was primarily an affair of the Dutch who lived abroad. Calvinism, or the Reformed Church, was the state religion of the Dutch Republic of the United Provinces and thus was also the official religion of the overseas Dutch. Although the charters and missives of the Dutch East India Company and Dutch West India Company contained bombastic appeals for the Dutch to “advance the Christian faith abroad” or “convert the

heathen peoples,” very little of either took place in the Dutch colonies.

Unlike Catholic powers, whose Christianizing mission in their colonies was put on a par with their economic goals, the Dutch realized early on that religious tolerance paid when dealing with polyglot trading partners, especially in Asia where Dutch survival necessitated coexistence with traditional local belief systems and powerful Islamic sultanates. And whereas the theological convictions of the Spanish and Portuguese left a uniquely Catholic stamp on the peoples they controlled and the policies they pursued, the doctrines of Calvin had little influence on Dutch colonial behavior. In some areas, such as Ambon and Maluku, where the Portuguese had previous success in gaining converts to Catholicism, the indigenous congregations became Calvinist under Dutch rule, but they rarely possessed consistories or other organs of Reformed Church government. Although Reformed services were held in Asia and Calvinist conversion was necessary for an Asian woman to marry a Dutch man, evidence such as the repeated ban on performing *wayang* (traditional Javanese puppet shows) during church calls into question the extent to which the congregations were truly “reformed.”

South Africa’s nineteenth-century Boers sought an identity separate from the *uitlander* (the Afrikaans term for foreigner) British and especially the African populations and began using Calvinism and the South African Dutch Reformed Church (NGK) to this end; the NGK sought theological justification for apartheid until 1986, when it reversed its position. In the nineteenth and twentieth centuries, European missionaries and interfaith missionary societies, many of whose members were of the Reformed or Presbyterian Church, began working worldwide in humanitarian and evangelical capacities independent of the respective colonial and postcolonial states, often seeking out remote peoples in virtually unexplored territories. Some of the most lasting contributions of these mission efforts were the protoanthropological research conducted by lay ethnographers and the grammars, dictionaries, and painstaking linguistic groundwork done in the languages they serviced.

Cambodia

Human civilization has long existed in the country now known as Cambodia: tools have been used in the region for at least 6,000 years, and rice has been cultivated for over 2,000 years. As early as the first century C.E., Chinese traders reported the existence of kingdoms in the region. By 802 C.E., the Khmer people established the Kingdom of Angkor. This great civilization not only dominated most of the area covered by modern Cambodia but also conquered large parts of the Indochinese peninsula.

Starting in the fifteenth century C.E., however, the Khmers’ influence waned, and it was their turn to fall under various foreign influences. The Khmer abandoned Angkor in 1432 and were forced to establish several capital cities, most notably Phnom Penh. Over the next four centuries, the regions under the control of the Khmer were reduced to the area covered by current-day Cambodia. By the mid-nineteenth century, torn by disputes between its princes, Cambodia became the battleground of Thai and Vietnamese military forces. In exchange for France’s help against these opponents, King Norodom I was forced to accept a French protectorate in 1863. Cambodia enjoyed a relatively peaceful period after the expulsion of its enemies, even though Siam still threatened it from time to time.

The peace was definitely shattered during World War II, when Japanese troops entered French Indochina to use it as a military base. In 1941, Norodom Sihanouk was proclaimed king of Cambodia. Sihanouk declared his country’s independence from France shortly before Japan’s surrender in August 1945 but was soon forced to recant. Although the young king pledged his allegiance to the French once they had reestablished their rule in Indochina, he continued to struggle for his country’s autonomy. Because of the king’s persistence, and although his country had

been spared almost entirely by the armed independence struggle in neighboring Vietnam, the French had granted enough autonomy to Cambodia by 1953 that it could claim a seat at the United Nations. After implementing the first part of the Geneva cease-fire agreement in August 1954, the French undertook negotiations with Cambodia to finalize its economic independence.

Sihanouk remained at the head of his country after independence, maintaining close ties to France and pursuing a policy of neutrality during the Vietnamese conflict. Nevertheless, as Sihanouk's enemies gained ground in Cambodia, the U.S. government, under President Richard Nixon's administration, decided to start systematic bombing campaigns there in 1969. Sihanouk was deposed the following year in a military coup supported by the United States and led by Gen. Lon Nol, who established the Khmer Republic. After five years of fighting Nol's troops, the Communist-led Khmer Rouge took power in Cambodia in 1975. The country was renamed Democratic Kampuchea and for three years was subjected to a dictatorship headed by Pol Pot and Khieu Samphan. Over 2 million people perished under this brutal regime before the Vietnamese invaded the country in 1978 and 1979 and proclaimed the Popular Republic of Kampuchea. In 1989, due in large part to King Sihanouk's tireless efforts, the Vietnamese army left Cambodia, and the country was once again able to assert its independence from foreign influences.

Cameroon

European contacts with Cameroon, which is located on the west coast of Africa between Nigeria and Gabon, began in the late fifteenth century when Portuguese traders en route to Asia stopped along the coast. Thereafter, contacts remained intermittent and occurred only when European merchants went to the coast to purchase slaves, ivory, and palm oil from local middlemen. Although coastal peoples like the Douala and Bimbia deliberately denied Europeans the right to set up

permanent bases in order to maintain their independence, domestic problems led several chiefs to petition the British for formal protection by 1833. These calls were echoed by British Baptists who set up a mission station at the base of Mount Cameroon in 1858. Despite these requests, the British declined to take on the expense of setting up a new protectorate in Africa, preferring instead to rely on trading firms such as the John Holt Company to maintain their ties to the region.

By 1880, however, British merchants were facing increasing competition from German firms such as the Woermann Company. By 1884, the Germans took matters into their own hands and sent a gunboat under the command of Gustav Nachtigal to coerce the coastal tribes into signing treaties creating a German protectorate. German holdings increased throughout the next three decades as a result of military campaigns and negotiations with France for the cession of neighboring pieces of territory. Despite the increase in the territory under their control, the Germans' presence in Cameroon remained extremely limited and was focused primarily along the coast, in the form of several marginally successful palm oil plantations.

The German period finally came to an end in 1916, when a combined Anglo-French force invaded and seized the colony. When the war finally ended, France took possession of the bulk of Cameroon as a League of Nations mandate. A similar mandate for northern Cameroon was given to Britain. Both mandatory powers administered their respective zones until rising nationalism led to demands for independence. France finally granted Cameroon its independence in 1960. Shortly thereafter, the northern sections of the British zone voted to become part of Nigeria, and the rest voted to join the newly independent nation of Cameroon.

Camus, Albert (1913–1960)

Albert Camus, novelist, essayist, and playwright, was born in Mondovi, Algeria, on November 7,

1913. His extensive writing was recognized when he received the Nobel Prize in literature in 1957. As an existentialist, Camus explored the themes of a godless people and the inherent absurdity of life, as well as the importance of the choices the individual makes in crafting a satisfactory existence. Further examination of Camus's work reveals another theme—the author's strong resentment of colonialism. Accordingly, he urged people to rebel against foreign occupation in order to become whole human beings. As he stated in *The Plague* (1947), one of his better-known novels, "It is not rebellion itself which is noble but the demands it makes upon us."

Camus viewed foreign occupation as a form of fanaticism that had to be contained. Thus, *The Plague*, though set in North Africa, is often viewed as an allegory disdaining the Nazi occupation of European countries during World War II. In the novel, the occupying force is a legion of rats that take over the town of Oran and isolate the people from the rest of the world. The townspeople insist that the rats and the diseases they bring, however repulsive, are really nothing to worry about. Even the death of a rat is envisioned as an innocuous event: the small puddle of blood spreading around its nose is likened to a red flower. The absurdity shines through in the contrast between appearance and reality.

Camus's point was that the threat posed by colonialism in its initial stages is often minimized, much as the people of Oran minimized the incursion of rats in their town. Only later are the horrific effects of foreign occupation—be it by colonizers or rodents—made manifest and acknowledged. And in the wake of such an occupation—that is, in the process of decolonization—the people are left to face monumental difficulties as they strive to rebuild the physical structures of their land and the mental structures of their society.

Camus continued to write until his death. His most widely known works include *The Stranger* (1942), *The Myth of Sisyphos* (1942), *Caligula* (1945), *The Rebel* (1951), and *The Fall* (1956). He was killed in an automobile accident on January 4, 1960.

Canada

The earliest attempt to colonize Canada occurred about 1000 C.E., when the Vikings established a settlement at L'Anse aux Meadows, Newfoundland. Had the settlement survived, Canada's history would certainly have been very different. But the settlement did not survive, probably due to conflict with the indigenous people of the island (called Skraelings by the Vikings). Consequently, the colonial history of Canada is considered to begin much later, in the early sixteenth century.

Canada is an indigenous word, most likely of Iroquoian origin, meaning "town" or "village." The term was first used in 1535 by the French explorer Jacques Cartier, who misapplied it to the entire area, not just one village. Other early European explorers who visited the Canadian shores were John Cabot (1497); Gaspar Corte-Real, a Portuguese who is credited with bringing the first aboriginal people from Canada to Europe in 1501; Martin Frobisher, an Englishman who spent several years searching for the Northwest Passage in the high Arctic in the 1570s; and Henry Hudson, another Englishman, who in 1610 explored the bay that now bears his name.

In its early years, Canada consisted of what is now Quebec and the Maritime Provinces, and the early Canadian colonial history has been written by the French, who dominated the region after founding Quebec in 1608. The colony of New France was chartered in 1663, and it quickly became the focus of a widening French-British rivalry in the New World—a rivalry that was very disruptive to the lives of its inhabitants, both indigenous and settler. This rivalry culminated in the cession of New France to the English in the Treaty of Paris (1763). The British Quebec Act (1774) guaranteed the use of the French civil code as well as French language, land tenure, and religious rights. The Quebec Act also extended British jurisdiction in North America into the area north of the Ohio River—one of the "intolerable acts" that led to the American Revolution.

Of course, America's successful revolution led to negotiations with the British over the boundaries of what was then known as British North America. The modern boundaries of Canada were eventually recognized through negotiations established by the Treaty of Paris in 1783, although not finally settled until 1848. The British Constitution Act of 1791 separated British holdings into Upper and Lower Canada, largely divided by language. The only serious attempt at a U.S.-style revolution came in 1837 and 1838, when rebels led by W. L. Mackenzie and Louis Papineau organized agrarian discontent against the urban oligarchies that ruled Upper and Lower Canada through assemblies that they dominated. This rebellion, though brutally suppressed, did lead to certain reform, culminating in the Act of Union, which joined Upper and Lower Canada in 1840.

The British North America Act of 1867 established Canada as a dominion, with four founding provinces: Quebec, Ontario, Nova Scotia, and New Brunswick. In 1867, the vast west and north were still under the nominal control of the Hudson's Bay Company. Negotiations with the company led to the annexation of this vast northwestern territory to Canada. After the negotiation of several "numbered treaties" with many indigenous peoples and the suppression of two "rebellions" led by the great Metis leader Louis Riel (in 1870 and 1885), the prairies were opened for settlement. Manitoba entered the confederation in 1870, British Columbia in 1871, Prince Edward Island in 1873, Saskatchewan in 1905, and, finally, Newfoundland in 1949. These five provinces plus Quebec, Ontario, New Brunswick, Nova Scotia, and Alberta, along with Canada's three territories (Northwest Territories [1870], Yukon [1898], and Nunavut [1999]), comprise the world's second largest country—and one that is often cited by the United Nations as the best country to live in.

Canada's constitution was "repatriated" in 1982, thereby transferring full constitutional power from Britain to Canada, although the governor-general, appointed by Ottawa, represents the British Crown in Canada. The repatriated constitution, though it recognizes "existing aboriginal rights" and the "distinct society" status of Quebec, has not been universally accepted. Aboriginal people and the Quebecois still feel that their rights in anglophone Canada are in jeopardy. Consequently,

since 1982, the country has essentially been in the process of reforming its constitution, with the failures of the Meech Lake Accord (1990) and the Charlottetown Accord (1992) being serious setbacks to national unity. Two Quebec separatist referenda have been held (in 1980 and in 1995); both were defeated, although the 1995 referendum lost by a mere 54,000 votes (out of 4.7 million cast), a margin of only 1.1 percent.

Canary Islands

In 1344, Pope Clement VI granted the Canary Islands to the Castilian nobleman Luis de la Cerda, thus beginning a close relationship between the islands and the Iberian Peninsula. Due to the need for Atlantic bases to support expeditions of discovery, the Crown of Castile showed a growing interest in the islands; in 1477, it came to an agreement with the Peraza family, which owned the smaller islands, to allow for such bases, and then it started the conquest of the bigger ones.

The Castilian occupation was not easy because of the rivalry between the conquerors and the indigenous population. The Guanches, a tall, burly, blue-eyed, and blond-haired people that populated the Canary Islands, were organized in kingdoms and factions. However, the Christianization and Hispanization of the islands occurred very quickly, and crossbreeding soon caused the original language and culture to disappear; nowadays, only a few remnants of the Guanche culture remain. Prosperity arrived with the growth of sugarcane crops and when, despite the distrust of Seville and Cádiz, free trade with America was established. However, life was not easy, due to volcanic eruptions, severe droughts, and attacks from Portuguese, French, English, Dutch, and Berber pirates.

After the Spanish civil war (1936–1939), the underdevelopment of the islands was notable, but the area's status as a free port and, later, as a tourist

destination helped promote economic growth. The geostrategic importance of the Canary Islands has been reevaluated since 1975 in light of the tripartite agreement on Western Sahara, the Hispano-Moroccan treaties, and the 1982 entry of Spain into the North Atlantic Treaty Organization (NATO). Among the inhabitants of the islands, these issues, which were debated even in the Organization for African Unity, have stimulated nationalistic sentiment against Spanish centralism and support for a neutralist, anticolonialist approach. In August 1982, following heated confrontations between various political forces, the Canary Islands obtained autonomous status within Spain, with a level of power similar to that of other historical nationalities in the country, preserving the system of governments for each island and warranting a special tax regime.

Cape Colony (1652–1910)

When Jan van Riebeeck, an employee of the Dutch East India Company, established a refreshment station for Dutch ships on the shores of Table Bay in 1652, he did not intend to found a settlement colony. But, indeed, the Cape Colony did grow from his small station, which was located on the site of present-day Cape Town. In 1657, he allocated the first farms to settlers beyond the company's area of jurisdiction, and one year later, the first slaves were imported. By the beginning of the eighteenth century, the colonists had settled almost all of the southwestern Cape, where the Mediterranean climate enabled them to grow wheat and cultivate grapevines. From early in that century, more and more colonists trekked north and east into the more barren interior, where they engaged in pastoralism on large tracts of land. The colonial boundary was moved progressively farther into the interior in the wake of the settler advance. By the end of the 1770s, the colonial boundary in the east was fixed some 600 miles from Cape Town, on

the Fish River, where the advancing colonists encountered Bantu-speaking farmers.

So, by the time of the first British occupation of the Cape in 1795, as a war in Europe was being fought by Britain and the Netherlands, the colony included a large tract inland of the strategically important Cape peninsula. The British took over the entire colony to the Fish River. Except for three years of Batavian rule (1803–1806), the Cape remained a British colony. British troops played a key role in subordinating Bantu-speaking farmers east of the Fish River in a series of wars, which led to further extensions of the colonial boundary to the east and the incorporation of a progressively larger African population. In 1847, the Cape governor had extended the colony's northern border to the Orange River, a natural line of demarcation, to which *trekboers* (Dutch pioneers) had advanced some decades earlier. The lands on which diamonds were discovered were added to the Cape in 1880, as was Basutoland (Lesotho) for a period (from 1871 to 1884) and, in 1895, the southern portion of a large tract that the British annexed as Bechuanaland (Botswana) in 1885. Under "responsible government" (full self-government) from 1872, the Cape Colony ceased to exist in 1910, when it became the Cape Province of the new Union of South Africa. The Cape's nonracial franchise was part of a liberal tradition that set the Cape Colony apart from other components of the new union.

Cape Town

The small settlement that the Dutch East India Company established on the shores of Table Bay in 1652 grew into the modern city of Cape Town, the second largest in South Africa. Table Mountain provided some shelter from storms, and the area

was well watered. San hunter-gatherers and Khoi-khoi pastoralists had used the land; some of their descendants became part of the working population of the emergent town. De Kaap became Kaapstadt, then Cape Town. British rule from 1795 gave the town an increasingly British character. Although it was the main military headquarters as well as an administrative and marketing center, Cape Town remained heavily dependent on its trade with passing ships and its position as the primary port of entry to the interior. In the late nineteenth century, small manufacturing began to be significant, and black Africans from the eastern Cape began to settle in Cape Town, adding to the city's cosmopolitan population mix. Though enforced residential segregation for Africans began in 1901, Cape Town long enjoyed a reputation for relative racial tolerance and political liberalism.

In the twentieth century, Cape Town increasingly became an industrial city; from 1910, it was the home of the South African Union's Parliament. The central government at Pretoria intervened more and more in the life of the city, however, and after 1948, Cape Town had to follow apartheid laws, which meant much greater residential segregation on racial lines. It was from the balcony of Cape Town's city hall that Nelson Mandela delivered his first speech after walking out of jail in 1990. The city entered the twenty-first century uncertain whether it would retain Parliament and with its tourist industry concerned about the violence that had spread from the ghettos to other parts of the city.

Cape Verde Islands

The Cape Verdes are a group of islands located off the west coast of Africa, approximately 375 miles west of Cape Verde, the western tip of the continent. These islands were uninhabited prior to the arrival of Portuguese explorers between 1456 and

1460. In 1462, the first Portuguese settlement in the Tropics was established on the island of Santiago, thus founding the city of Ribeira Grande (now Cidade Velha). The population of the islands consisted of a large number of both enslaved and free mainland Africans, a handful of Portuguese (mostly convicted criminals), and a number of Jews, or New Christians, who settled there in an attempt to escape the Inquisition in Portugal.

Soon after the habitation of the islands, the Portuguese began experimenting with crops that could be grown in the arid climate. There was an attempt to develop sugar plantations. However, due to the lack of precipitation, sugar production in the Cape Verdes never reached the levels that it did in Madeira and São Tomé, two other Portuguese Atlantic islands that were being colonized during the same period. The planting of cotton and the manufacturing of cloth proved to be more viable economic activities for the islands.

Yet the Cape Verde Islands gained a measure of economic importance as an entrepôt in the European and Portuguese colonial commerce with West Africa—particularly the commerce in slaves. Slaves were brought to the islands to wait for transport to Brazil and the Caribbean. With the development of the Atlantic slave trade, the economy of the islands flourished, and their prosperity attracted other Europeans—such as the English, Dutch, and French—who attacked the Portuguese settlement in Cape Verde several times in the fifteenth, sixteenth, and seventeenth centuries.

With the end of the slave trade in the nineteenth century, the islands suffered economic decay. Constant droughts created crises of famine, and in the twentieth century, emigration—particularly to Portugal—became an alternative for the Cape Verdeans. Since the country declared its independence from Portugal in 1975, thousands of Cape Verdeans have moved to that country in search of better economic opportunities.

Capitalism

Capitalism has always been an adaptable creature. Its greatest strength has been its ability to change over time and accommodate new forms of governance within and between countries. At its most basic, it refers to an economic system in which private capital, stock, or wealth is used in the process of producing and distributing goods for a profit.

According to Raymond Williams, the word *capitalism*, used to describe an economic system, appeared in the early nineteenth century in England, France, and Germany. It referred to a particular economic system that changed over time and was therefore not a reference to a static or formulaic economic theory. During the period of the decline of absolutist power in Europe, the term referred to a system in which the means of production were centrally owned by an emerging bourgeois society. Capitalism involved a system in which the owner of the means of production employed waged laborers.

The capitalist era is generally said to have existed since the sixteenth century, though it has passed through several stages, from mercantile capitalism to industrial capitalism to financial and corporate capitalism. These changes have occurred in different places at different times: the evolution of capitalism has not been linear.

In *Civilization and Capitalism*, Fernand Braudel focused on the period from the sixteenth century but argued that in the story of capitalism, one can obviously see earlier roots in the system. There was the rise of the town across Europe and the slow abandonment of agrarian lifestyles. There was trade between these urban centers and the increasingly widespread use of paper money. There was the growing pool of labor from which the capitalists could draw to support their businesses. In time, there were dramatic increases in production, especially with the Industrial Revolution, and those involved in long-distance trade ultimately sought markets overseas or across national boundaries. For the

French and African ivory traders meet on the coast of West Africa in the late eighteenth century. Trade in luxury goods like ivory was a source of early capital accumulation that helped fund the Industrial Revolution and imperial European rule. (Library of Congress)

present purposes, it is this aspect of capitalism that is of most interest.

Mercantile capitalism existed from the late fourteenth century, centered on Venice and its accumulation of trading posts in the eastern Mediterranean that provided access to the commodities from the east and an ability to control trade in the region. Though there is a traditional assumption about the separation of the private (capitalist) sector and the public (state) sector, capitalists from early on built arsenals to protect their businesses. The Venetian state operated a naval power beginning in the fifteenth century. The centers of the capitalist system moved over time—from Venice to Antwerp in the sixteenth century, to Genoa later that century, and to Amsterdam in the mid-seventeenth century. The desire for economic growth and the fact that further eastward expansion was blocked by Islam were, according to historian Tony Spybey (1992), “the prime factor in Europe’s emergence as a set of maritime powers.”

Trade dominated mercantilist capitalism, though the initial Spanish interests in Latin America involved territorial conquest and a plundering of their wealth. Growth in the rates of domestic production gradually increased profits and the organization of colonies on the shores of distant lands to store and protect the goods and materials acquired for sale. Gradually, as more areas in the non-European world were drawn into the world economy, European settlement began to increase, at first on the coastal regions of the commercial empires.

The British Empire, which dominated the world economy from the eighteenth century to the early twentieth century, functioned as a nation-state rather than like the earlier city-states. The Industrial Revolution dramatically accelerated the capitalists’ interest in overseas markets and territory. When industrial capitalism intensified the search for markets, the cultures of the colonial areas changed dramatically. The mercantile period tended to involve the edges of the colonial areas, whereas industrial capitalism began to transform vast swaths of land and societies. With industrialization, colonialism accelerated. Until the late nineteenth century, colonial powers pursued their capitalist instincts and occupied areas to exploit resources. In the last few decades of the nineteenth

century, however, especially after the 1884–1885 Berlin Conference, the occupation of territory and the formation of colonies preceded the exploitation of resources for the growing world economy.

The cartographic division of Africa at the Berlin Conference obviously preceded the actual European penetration of the interior of the continent. But this growing process and the resource extraction created systems of commodity exchange and pricing. Commercial gain, or profit, perhaps drove the process, but the European powers always had an eye on each other. Although capitalism was one of the principal reasons for accelerated colonialism, national prestige and concerns for the security of trade and sea-lanes of communication also influenced the process.

From the late 1870s, the various European powers and the United States rapidly acquired 17 percent of the world’s surface, leaving relatively few areas that were not dominated by Europe or its former Western colonies. The growing capitalist societies and the growing competition among them ensured the accumulation, growth, and “efficient” use of resources. The desire for profits constantly drove the capitalist powers to search for new markets, cheaper labor, and areas from which to extract resources.

After the Civil War, the United States underwent rapid industrial expansion, and ultimately, the internal success of its economy led it to look for new markets across the oceans. Thus, in 1898, the United States became a formal colonial power with overseas territory, especially with the acquisition of the Philippines. Thereafter, as Washington viewed the intensification of European rivalry in China, Secretary of State John Hay issued the Open Door notes that sought equal access, “fair field and no favor” for the United States, Europeans, and Japanese. The Open Door diplomacy of 1899 and 1900 signaled the rise of U.S. power and influence and a desire not to acquire further territory but to continue with economic expansionism.

World War I changed the shape of the colonial world order and in the process gave rise to the increasing influence (and hegemony after 1945) of the United States. Colonialism was under growing scrutiny from the United States, especially as expressed in President Woodrow Wilson’s Fourteen Points of 1918. The crumbled empires of the Middle East became mandates of the League of Na-

tions. U.S. influence rose as the European powers declined in the interwar period. The Great Depression and the crisis in world capitalism following Wall Street's Crash of 1929 further intensified the colonial system. The capitalist economies began to focus inward as the world economy divided into several closed trading blocs. The colonial areas were severely affected by the crisis, as commodity prices were driven down.

The United States took the opportunity to expand its reach into the global market during World War II. Under the terms of the Atlantic Charter and the lend-lease agreement, former colonial economies were increasingly opened to U.S. trade. In the postwar period, following the creation of the Bretton Woods system in 1944, U.S.-style capitalism began to dominate the Western economies. Washington tentatively pushed decolonization for political as well as economic reasons.

The rapid growth in the world economy in the postwar period, with the United States now at the center of the world capitalist system, ushered in a period of what Kwame Nkrumah referred to as neocolonialism—the operation of informal or economic control over the destiny of politically independent sovereign states.

Cartier, Jacques (1491–1557)

Jacques Cartier, born in St. Malo, France, won a commission from Francis I, king of France, “to discover certain islands and countries where it is said that he should find great quantities of gold and other valuable things.” It is also quite likely that Cartier was seeking a northwest passage to the Orient. The idea of a northwest passage had intrigued the first English explorers to the New

World. In 1509, for example, Sebastian Cabot fitted out an expedition to locate such a route. He spent a lifetime trying to convince financial backers that he had actually located it, although he had merely sailed through the Hudson Strait and into Hudson Bay.

France, however, embarked on a more aggressive program to discover what lay between those regions and the lands of New Spain, efforts that led to the “real” discovery of Canada. The inspiration came from King Francis I, whose expansionist activities led him into conflict with Spain in Europe but who was also prepared to challenge Spain's colonial monopoly. Although the existence of a large body of water lying west of Newfoundland was known, it was not as yet completely explored; that was Cartier's mission. In the last week of May 1523, he sailed through the Strait of Belle Isle into waters already familiar to thousands of French fisherman who regularly fished the Grand Banks. Cartier, however, continued into the Gulf of St. Lawrence, an area entirely new to the European world.

Cartier discovered the Magdalene Islands, Prince Edward Island (which he described), and the Gaspé Peninsula. He found neither gold nor the passage but still returned to France with favorable reports. His cargo of furs, obtained in trade with indigenous peoples, inspired continuing French commercial interest in North America. Cartier himself made two additional voyages to the region, expanding the knowledge and understanding of the area and its people. He never did discover gold or find the Northwest Passage, but in 1541, he became the first colonizer of New France.

Casablanca

Situated on the northwest coast of Morocco, Casablanca—or Dar el-Beida, its official name in Arabic—is the largest city and principal seaport of the northwest African country. Dating back at least to medieval times, Casablanca rose to prominence as a commercial center under the French Protectorate of Morocco from 1912 to 1956.

The origins of the city of Casablanca are unknown, but historical records indicate that there was a Berber-speaking town on the site as early as the twelfth century C.E. Over the next several centuries, Casablanca became a base for pirates attacking European shipping in the Atlantic and Mediterranean. These raids led the Portuguese to destroy the city in 1468. A half century later, in 1515, the Portuguese began a long-term occupation of the site and built a new city there, which they named Casa Branca (or “white house”). The tremendous earthquake that leveled Lisbon in 1755 also destroyed Casablanca 300 miles to the southeast; the disaster led the Portuguese to abandon Casablanca.

Sultan Sidi Mohammed ibn ‘Abd Allah reconstructed the town toward the end of the eighteenth century, and Casablanca increasingly became home to French and Spanish traders, the latter providing its modern European name. But it was the French, who began to occupy neighboring Algeria in 1830, who exercised growing political power over both Morocco and Casablanca during the course of the nineteenth century.

Although the 1906 Algeciras Conference guaranteed Moroccan independence, even as it granted special economic rights in the country to Spain and France, Paris nevertheless occupied the city in 1907 during an uprising against the sultan led by the sultan’s brother. Five years later, France established a protectorate over Morocco and built Casablanca into the country’s premier port, a position it has occupied since the country won its independence in 1956. After the Nazi conquest of France in June 1940, the city was divided between Vichy and Free French forces. In 1942, it was occupied by Allied forces. Today, Casablanca remains Morocco’s largest city—with over 3 million people in the metropolitan area—and its commercial center.

Castro, Fidel (1927–)

In 1959, Fidel Castro led a revolution that overthrew the Fulgencio Batista regime in Cuba—a regime that had been supported by the United

States since 1933. Castro found the U.S. domination of Cuba and Latin America unacceptable, regarding the relationship as neocolonial. He led an attack on the Moncada barracks in Santiago de Cuba on July 26, 1953, and after that effort failed, he spent a period in prison and exile until his clandestine return to Cuba in 1956. There, he began the July 26 guerrilla movement that was organized in the Sierra Maestra. By September 1958, Castro’s forces, including Ernesto Guevara, moved out of the mountains; they succeeded in overthrowing the Batista regime on January 1, 1959.

Castro initially claimed that his revolution was humanitarian and that raising the living standards of all Cubans was a central objective. His nationalization of U.S. companies and a frosty visit with U.S. vice president Richard Nixon failed to produce economic agreement between the two countries. President John F. Kennedy imposed an economic embargo and successfully expelled Cuba from the Organization of American States in 1962. In April 1961, the Kennedy administration had planned and supported the failed Bay of Pigs invasion by Cuban exiles. Castro turned to the Soviet Union for economic and, subsequently, military assistance. The Soviet provision of strategic missiles ultimately led to the Cuban Missile Crisis of October 1962.

Following the crisis, Cuban-Soviet ties grew, though the relationship was rarely harmonious. The Soviets provided Cuba with essential aid through the subsequent decades. The United States characterized Castro’s Cuba as a Soviet colony, though Cuban independence was always asserted. Castro has been targeted in numerous assassination attempts directed by the U.S. Central Intelligence Agency (CIA), and his regime has survived the collapse of the Soviet Union in 1991.

Catherine the Great (1729–1796)

Catherine the Great became empress of Russia in 1762 and continued to reign until her death in 1796. Known for her domestic reforms, she pur-

sued an expansionist foreign policy that increased the size of the empire by annexing territory to the south and the west of Russia. Between 1768 and 1792, she fought two wars against the Ottoman Empire. At the conclusion of the first conflict, which started as a foray across the Turkish border in pursuit of a group of dissident Poles, Catherine obtained access to the Black Sea, formalizing the agreement with the sultan by signing the Treaty of Kuchuk-Kainarji in 1774. Hostilities resumed in 1783 after Catherine assumed control over the Crimea. The Ottomans retaliated in 1787. Catherine's goal remained to drive the Turks out of Europe and to reestablish the Byzantine Empire under her leadership. With her troops advancing to within 250 miles of Constantinople, Catherine accepted the sultan's surrender after the Turks realized the futility of the situation. The Treaty of Jassy in 1792 failed to fulfill Catherine's primary objective, but Russia's territorial gain proved substantial.

To the west, Catherine expanded the borders through an international agreement between Russia, Prussia, and Austria that partitioned Poland. Three indigenous attempts to resist domination resulted in the remaining portion of Poland falling under Russian sovereignty. The inclusion of various ethnic groups and religions within the empire created tension: Catholics and Jews experienced discrimination, and Poles, Ukrainians, Belorussians, and Crimean Tatars resented the loss of their independence. The diversity among the non-Russian population required the creation of a secret police force and a uniform system of administration to retain control. Establishing Russian domination over Eastern Europe and initiating a policy of prohibiting Jews from the rest of the empire, Catherine laid the foundation for future discrimination against the minority group and the resentment that continued until the fall of the Soviet Union.

gua, Costa Rica, and Belize (formerly British Honduras). During much of the Spanish period, from the early sixteenth century to the early nineteenth century, Central America was organized into administrative units as part of the Captaincy-General of Guatemala, which was nominally subordinate to the Viceroyalty of New Spain. In 1821, the Captaincy-General of Guatemala was briefly incorporated into Agustín de Iturbide's Mexican empire, which had ended Spanish rule in New Spain. Iturbide fell from power in 1823, and the former Captaincy-General of Guatemala became a federal republic called the United Provinces of Central America. This new polity was unstable, and elite conflict and caudillo-led uprisings resulted in its disintegration into the separate political units of Guatemala, Honduras, El Salvador, Nicaragua, and Costa Rica by 1838. These incipient nation-states began to consolidate in the second half of the nineteenth century with the rising export trade in coffee and bananas and the influx of foreign capital. Coffee and bananas represented as much as 70 percent of the region's annual exports by the first half of the twentieth century, and they were still central to the export trade in the 1960s and 1970s. The export of these commodities underpinned the political and social ascendancy of landed oligarchies in the various countries of Central America.

The modern history of Central America has also been shaped by the United States. From the 1920s to the end of the 1950s, the United States provided the market for between 60 and 90 percent of the exports from Central America and a comparable percentage of the region's imports. By the 1970s, the economic significance of the United States had declined somewhat, but with the election of Ronald Reagan to the presidency in 1981, Central America became the object of a dramatic increase in U.S. military aid and involvement. Reagan's preoccupation was with Nicaragua, where the Frente Sandinista de Liberación Nacional (Sandinista National Liberation Front—FSLN) had led a popular revolution that overthrew the regime of Anastasio Somoza (a longtime U.S. ally) in July 1979. In response to the rise of the Sandinistas, Washington increased its military assistance to and operations in the countries neighboring Nicaragua. For example, it set up a number of air fields in Honduras that could be used to support the Contras (primarily a reorganized contingent of

Central America

Present-day Central America includes the countries of Guatemala, Honduras, El Salvador, Nicara-

former members of Somoza's National Guard) or for a direct U.S. attack on Nicaragua. In the case of El Salvador, where a major insurgency led by the Frente Farabundo Martí de Liberación Nacional (Farabundo Martí National Liberation Front—FMLN) was under way, U.S. military aid went from \$6 million in 1980 to \$396 million between 1981 and 1984, inclusive (along with \$758 million in economic aid over the same period). By the end of the 1980s, El Salvador had received over \$3 billion in military and economic aid (approximately \$800,000 each day) in ten years. But with the end of the Cold War, the U.S. government rapidly lost interest in the region. The Sandinistas were voted out of office in Nicaragua in 1990, and the insurgencies in El Salvador and Guatemala formally came to an end with peace agreements in 1992 and 1996, respectively. Although all the countries in Central America are officially at peace today and hold regular elections, all of them (with the partial exception of Costa Rica) are mired in debt and have some of the highest levels of poverty and inequality in the hemisphere.

Césaire, Aimé Fernand (1913–)

Martiniquais poet, playwright, and essayist Aimé Césaire was one of the most important writers in French of the twentieth century. Born in Basse Pointe, he went to Paris in 1931. There, Césaire discovered the surrealist movement, and he also became involved with Léopold Sédar Senghor and other black intellectuals interested in African culture and history. His experiences led him to become a staunch opponent of French colonial practices, particularly in Africa. In 1934, Césaire, Senghor, and French Guianan poet Leon-Gontran Damas began publishing *L'étudiant noir* (The Black Student), and in a review in 1935, Césaire

first used the word *négritude*. That year, he also began work on “Cahier d'un retour au pays natal” (Notebook on a Return to One's Birthplace), one of his most famous poems. Returning to Martinique in 1939, Césaire cofounded the journal *Tropiques* in 1941: it championed surrealism and advocated the end of colonial rule.

After World War II, Césaire was elected as a deputy to the French National Assembly, a position he held from 1945 until 1993. He joined the Communist Party in 1946 and later that year became mayor of Fort-de-France, the capital of Martinique. Césaire was influential in the passage of a law that raised Martinique, Guadeloupe, Guiana, and Réunion to departmental status, but it did nothing to advance the population's civil rights. In *Discourse sur le colonialisme* (Discourse on Colonialism) (1950), Césaire wrote that colonialism undermined colonizers, “decivilizing” and forcing them to commit horrible acts and enact harmful policies as they oppressed and demeaned indigenous populations to achieve their mercantile ends. The work also drew extensive parallels between colonialism and fascism.

Césaire became convinced of the need for a new world order, one that would reject the colonial model, respect non-Western cultures and traditions, and yet retain the benefits the modern age provided to humanity. Realizing that he could no longer subordinate racial struggles to proletarian ones, he left the Communist Party in 1956. Césaire helped found the Martiniquais Progressive Party and remained as mayor of Fort-de-France, writing all the while. *Toussaint L'Ouverture: La révolution française et le problème colonial* (The French Revolution and the Colonial Problem) (1961) detailed the failure of the Haitian slave rebellion and hypothesized that the French Revolution had also failed because it left so many without real liberty. In *La tragédie du roi Christophe* (The Tragedy of King Christophe) (1963), Césaire continued to explore the theme of black exploitation in Haiti, this time focusing on the 1957–1971 regime of François “Papa Doc” Duvalier. In another play, *Un saison au Congo* (A Season in the Congo) (1965), he presented the story of Patrice Lumumba and his attempts to free the Congo, advocating that foreign-supported governments and dictatorships be overthrown. An adaptation of Shakespeare's *Tempest* followed (1969). Césaire turned from politics

to surrealism in *Noria* (1976) and *Moi, Laminaire* (Me, Laminaire) (1982), his last play.

Ceuta and Melilla

The city of Ceuta was conquered by Portugal in 1415 as part of the expansion policy of the Iberian monarchs, who sought to extend their territory down to the southern Mediterranean shore to prevent incursions from the Magrib. The strategic location of Ceuta in the Strait of Gibraltar was essential to ensuring the commercial penetration of Portugal into Africa and securing commercial routes to the Far East and the Sudan-Egypt area. However, Lisbon's economic interest in Ceuta quickly decreased due to the success of its establishments in the Guinea Gulf. In 1640, following the period of Spain's supremacy over Portugal, important areas of the city chose to remain under the Spanish administration, which was confirmed in 1668. The associated city, Melilla, was conquered in 1498 by the Castilian duke of Medina-Sidonia, who in 1556 ceded Melilla to the Crown of Castile. Huge fortifications were built to protect the city from the attacks of Berber tribes in the Rif, and it became a strategic base for the Spanish operations in the west Mediterranean area.

The Spanish Protectorate in northern Morocco (1912–1956) did not change the situation of Ceuta and Melilla nor the sovereignty status over the rest of small islands (Chafarinas) and crags (Vélez de la Gomera, Alhucemas) located nearby. Although Morocco acknowledged some rights of Spain over the two cities, Morocco from time to time claimed sovereignty over them. Since the end of the Spanish civil war (1936–1939), the economy of both cities has been based on their free port status, as well as the fact that they are locations for a prison and military base. After long negotiations, Ceuta obtained the status of autonomous city in March 1995, as did Melilla in September 1995. However, they did not get the same institutional and legal

powers that were granted to the rest of autonomous communities within Spain. Since the 1990s, both cities have become preferred gateways for many African and Asian immigrants seeking to enter the European Union, legally or illegally.

Chamberlain, Joseph (1836–1914)

Joseph Chamberlain, the nonconformist son of a prosperous British shoe manufacturer in London, entered the family business at age sixteen. He later transferred to a cousin's screw-manufacturing concern in Birmingham and was such a good businessman that he was able to retire at age thirty-eight and apply his considerable personal experience in industry and commerce to the political world.

Chamberlain's political power base remained in the industrial West Midlands, which sent him to Parliament as a Liberal member in 1876. He was named president of the Board of Trade under William Ewart Gladstone in 1882, but because Chamberlain was profoundly committed to the expansion and consolidation of the empire, he could not support Gladstone's home rule policy. As a result, he became allied with the Liberal Unionists who joined forces with the Conservatives against the Liberal Party.

It was in 1895 that Chamberlain joined the Conservative cabinet as secretary of state for the colonies and began to promulgate his imperial programs. He was not involved in expanding the British Empire; rather, he was concerned with the material, economic side of colonial administration and wanted to make the colonies profitable. In implementing this "new," or constructive, imperialism, Chamberlain proposed that colonies were, first and foremost, an economic proposition and an enormous potential source of national wealth and economic security. He had a businessman's distaste for resources going to waste, and he wanted to make the empire self-sufficient and, ultimately, richer. Chamberlain was instrumental in

British colonial secretary from 1895 to 1902, Joseph Chamberlain was unsuccessful in persuading the Conservative-led government to abandon its free trade principles for higher tariffs in order to protect imperial trade. (Library of Congress)

the founding of the Schools of Tropical Medicine (in London and Liverpool) and the establishment of numerous institutes to conduct research into better methods of colonial agriculture and husbandry. As with all of his colonial policies, however, he was motivated not so much by purely humanitarian interests as by the desire to ease the way for private capital.

By 1902, Chamberlain was frustrated by his failure to convince the government and the electorate of his ideas, and he campaigned for the establishment of a system of imperial trade preferences, which would involve protective tariffs and preferential trade policies. Chamberlain's ambitions were undone by this highly protectionist policy in a time when free trade was still basic to Conservative philosophy. After his ouster from the Conservative government, he sought to build support through private campaigning, but again, he had little success. In July 1906, Chamberlain suffered a severe stroke and retired from public life.

Charles V (1500–1558)

King of Spain from 1516 to 1556 and Holy Roman Emperor from 1519 to 1556, Charles V (his title as head of the Holy Roman Empire; in Spain, he is known as Charles I) ruled over the first great overseas empire in history, including extensive territories in Europe, the Americas, and the Philippines. Utilizing the great wealth of his American possessions, he fought numerous wars against the rival French, Protestant challengers to the Catholic Church, and aggressive Muslim Turks.

Born the son of the duke of Burgundy and grandson (on his mother's side) of King Ferdinand and Queen Isabella of Spain, Charles was put under the charge of his aunt, regent of the Hapsburg-controlled Netherlands, in 1506, after the death of his father and his mother's confinement for insanity.

On his fifteenth birthday, he became duke of Burgundy, and when Ferdinand died the following year, he was made king of Spain. A foreigner who barely spoke Spanish and who brought with him German-speaking administrators, Charles was resented by the Spanish during his three years there. In 1519, he was chosen Holy Roman Emperor and returned to Germany, just as Protestantism was beginning to make headway there. He tried to banish Protestants from the empire and then fought a rebellion against anti-Hapsburg forces in Spain before going to war with France over control of Italy in 1523. When the pope sided with France and refused to institute the church reforms that Charles demanded, the latter sent his forces against him. The poorly paid soldiers then went on a rampage in the infamous "sack of Rome" in 1527.

In the early 1530s, Charles was largely preoccupied with fending off Turkish expansion in the Mediterranean, which made it possible for the Protestant princes of Germany to challenge Charles's rule there. Only the renewal of Turkish hostility in 1538 brought the two sides together. In 1545, Charles helped organized the Council of Trent to reform the Catholic Church. At the same

King of Spain from 1519 to 1556, Charles V presided over the vast expansion of the Spanish Empire into the Western Hemisphere even while he focused much of his attention on European affairs. (Library of Congress)

time, he went to war against Protestant forces, defeating them at the Battle of Mühlberg in 1547.

In 1551, Charles was beset by another challenge—the Catholic princes of Germany who resented his growing imperial power and his decision to have his son, Philip II, succeed him as emperor. The princes soon joined forces with the French, defeating Charles at Innsbruck and forcing concessions, including more leniency toward the Protestant princes of Germany.

Three years later, exhausted by constant war, Charles V decided to relinquish some of his power, turning over his German possessions to his brother Ferdinand. In 1555, facing new challenges from France and yet another hostile pope, he decided to rid himself of his remaining realms—including the Netherlands, Spain and its overseas possessions, and parts of Italy—and give them to his son Philip, the future Philip II of Spain. Charles, who had grown increasingly interested in mystical Catholicism, then entered a monastery in Spain, where he died in 1558.

Charles V's legacy is immense. Although he failed to create a unified, Catholic empire within

Europe—hampered by rival Christian monarchs, the rising power of the Turks, and constant economic problems, despite the influx of American gold and silver—he was instrumental in the creation of the vast Spanish Empire in the Americas, promoting exploration, conquest, and settlement in the Caribbean, Central America, South America, and the Philippines.

Chiang Kai-shek (Jiang Jieshi) (1887–1975)

Chiang Kai-shek was the leader of the Kuomintang (KMT) and president of the Republic of China. His early Confucian education shaped his conservative values, and his military training in Japanese academies from 1906 to 1909 prepared him for a major political role in the KMT when Sun Yat-sen appointed him the head of the Whampoa (Huangpu) Military Academy in 1923. Following Sun's death in 1925, Chiang's control of the army made him the dominant figure in the KMT. He launched the 1926–1928 Northern Expedition that prevailed over Chinese warlords to unify China under KMT rule, and in 1927, he purged the Chinese Communists who had allied with the KMT under Soviet sponsorship.

As president of the republic, Chiang attempted to establish a strong, unified state in the 1930s but was frustrated by a resurgent Communist movement, warlords who reneged on their proclaimed allegiance to the KMT government, and Japanese imperialism. His decision to focus on eliminating the Communists while yielding to Japanese advances in Manchuria and north China proved unpopular, and after being kidnapped in 1936, he was forced to form a united front with the Communists and other patriotic Chinese elements to fight against Japanese imperialism.

As China's leader during the war of resistance against Japan from 1937 to 1945, Chiang was domestically revered and internationally recognized as one of the Big Four wartime leaders. After Japan's defeat, Chiang rejected the idea of forming a coalition government with the Communists.

Leader of the Nationalist Chinese forces in their struggle against Japanese imperialists and Chinese Communists in the 1930s and 1940s, Chiang Kai-shek was forced in 1949 to flee to the island of Taiwan after his defeat in the Chinese Civil War. (Library of Congress)

KMT's strategic military mistakes led to the victory of Communists in the Chinese civil war from 1946 to 1949. The government of the Republic of China retreated to Taiwan. As hopes for a military reconquest of the mainland faded with the consolidation of Communist power, Chiang hoped to develop Taiwan as a model province and thereby trigger a popular demand in mainland China for his return. He remained president and party leader until his death in 1975.

Children

When one thinks of colonialism, rarely does the image of a child come to mind. Yet children were affected by colonialism and had a significant place

in both the world of the colonizer and the world the colonized. Normally, the overriding ideologies of power, greed, and imperialism push children aside. However, the role of a child as a laborer, interpreter, or conduit of colonialism is highly significant to all aspects of life in the colonized world.

The legend of Virginia Dare is a case in point. The granddaughter of Sir Walter Raleigh, she was believed to be the first English child born in the North American colonies. But she and the other settlers of Roanoke disappeared without a trace, leaving behind only "CROATAN" written on a nearby tree. Were they rescued or massacred? The fate of this colony is unknown. They were never found, having disappeared without a trace. Nevertheless, this small child and her story has remained a strong part of American colonial history.

Such stories are few and far between, evidence that colonial children were a silent minority. Life was difficult for children on the frontiers of the Americas, India, China, and Africa. European children who were brought to these areas had a higher quality of life than did indigenous children. However, that life was filled with a desperate struggle for identity. These children did not know where they belonged. Were they American or British, Martinican or French, South African or Dutch, Cuban or Spanish, Brazilian or Portuguese? Those born in the colonies were conditioned by their parents to believe that their identity and allegiance lay with the home country. However, the home country did not accept them with open arms. These children were labeled as provincial or Creole. They did not have the same rights as European-born children and were continually reminded of this. Rarely would they grow up to be assemblymen, members of the Spanish Cortes, or Parliamentarians. Their parents, however, tried to shield them from discrimination. These children were often sent to Europe, at great expense, to be educated in the finest schools. As a result, many did not return to the colonies in which they were born, preferring to live in the center of European society rather than its provinces and colonial possessions. Those who remained in the colonies, most likely educated in the colonial schools, would always be seen as being in a class below those living in the metropole.

Life was similar but less advantageous for children who were products of unions between the

colonized and colonizer. Caught between both worlds, these children struggled with their identity. They were multilingual, speaking the languages of their parents; many also spoke a creole language that was a combination of the two and sometimes the European language as well. They often served as liaisons and/or interpreters, acting as buffers for both societies. However, these children were marginalized and often unaccepted by either society. Europeans looked down on them because they were part African, part Native American, part Indian, or part Chinese. At the same time, they were not completely accepted by their colonized counterparts because they were given an elevated status and the accompanying benefits. Furthermore, these children were labeled by both worlds. Terms such as *mulatto*, *half-breed*, *mestizo*, and the like would mark them all their lives. The only way to escape such a label was to adopt European characteristics and values. They married those from higher status to improve their social standing and often adopted European dress and Christianity.

Perhaps the hardest life belonged to those children who were part of colonized society. Amerindian children, if they survived, watched helplessly as their families succumbed to European epidemic diseases during the conquest of the New World. African children were kidnapped from their villages and homes to work the plantations of the Americas or to become domestic paramours or soldiers within Africa or in the Middle East. Slave children had their innocence and childhood stolen from them as they were put to work in the silver mines of Latin America, the sugar plantations of the Caribbean, or the cotton plantations of the American South. They ceased to be children and were seen merely as chattel and investment commodities. When slavery was abolished, children from India, China, Java, and Africa migrated west to work as indentured servants in the place of the newly freed slaves.

Children native to India, China, and Africa who were not sold into slavery also experienced a loss of their childhood and innocence as they were forced into adulthood before their time. They saw their parents become addicted to opium or grow exhausted from working on the clove plantations of Africa or the beet sugar plantations of India. Orphans and disowned children took to the streets

and begged for food or money. If they did not beg, they stole. As a result, many children had solid criminal records even before entering adolescence.

Whether slave, free, or indentured, these colonial children all shared common bonds. European or colonized, provincial or metropolitan, they all struggled with their identities and the labels that society gave them. As a result, these voiceless, faceless children entered adulthood without ever securing a foothold in their early years.

Chile

The Spanish began colonization of a long and narrow strip of land, south of Peru and west of the Andes Mountains, from their base in Peru in the middle of the sixteenth century, although the Portuguese under Ferdinand Magellan had first visited the land now called Chile in 1520. After establishing control over Peru in 1535, the Spanish sent a military expedition, led by Diego de Almagro, to the south in order to discover hidden treasures of the Native American tribes. However, the expedition was unsuccessful and returned in a few years empty-handed, having found no gold or silver.

In 1540, the Spanish sent another expedition, led by Pedro de Valdivia, to central and southern Chile. The expedition faced strong resistance from the Araucanians, a group of Native American tribes that occupied the northern part of the land they called Tchili (meaning "snow" or "snow region"). De Valdivia founded several fortified settlements, including Santiago (1541), Concepcion (1550), and Valdivia (1552). The Araucanians, who were disturbed by the Spanish attempts to acquire their lands, gathered a sizable army and organized an uprising. De Valdivia and many of his soldiers were killed, and several Spanish settlements were

destroyed. Thereafter, the Spanish viceroy of Peru sent a large military expedition and reconquered all the settlements and forts. The Araucanian rebellion continued for more than a century, although at a much smaller scale.

During the first years of its colonization, Chile was ruled by the viceroy of Peru, and it did not have its own government, as it was an economically underdeveloped and underpopulated region. The Spanish landlords acquired considerable portions of land from the indigenous people and established large *ranches* and *haciendas*, forming a ruling class. The mestizo, descendants of frequent intermarriages between Spanish settlers and indigenous inhabitants, were engaged in farming and in trade. The ranches supplied Peru with various agricultural products, including wheat.

By 1778, Chile had grown large enough to become an administratively separate region, virtually independent of Peru. The emerging Chilean middle class supported separatist tendencies and a growing proindependence movement. On September 18, 1810, the Santiago town council deposed the colonial governor of Chile and declared independence from Spain. The war against the local royalist supporters and the Spanish troops, dispatched from Peru, continued for more than a decade. Although the independence movement led by Juan Martínez de Rozas and Bernardo O'Higgins was defeated in the first stage (1810–1814), the proindependence army gathered its strength during the second stage of the independence war (1814–1818) and finally won the decisive Battle of Maipú (1818) with the help of an army led by José de San Martín, a South American revolutionary. However, it took another seven years before the royalist troops were completely expelled from the country.

Chilembwe, John (c. 1871–1915)

Leader of the so-called Nyasaland native rising of 1915, John Chilembwe received some Western-style education at the Scottish Presbyterian mission in Blantyre. But he broke with that church because of his independent interpretation of the Bible, notably in regard to infant baptism, and joined Joseph Booth, the radical Baptist missionary. Booth took Chilembwe to the United States in 1897, where his independent spirit increased under the tutelage of African Americans, particularly at the Lynchburg Virginia Theological Seminary and College. He returned home in 1900 and established the Providence Industrial Mission in Chiradzulu with help from African American Baptists. For the next fifteen years, Chilembwe attracted to his mission a substantial congregation of other independent-minded Africans in search of education and the liberating promise of the gospel.

Chilembwe often clashed with the owners and managers of European-owned estates, on which many of his followers worked, over labor conditions and their desire to build their own churches on white estates. Chilembwe was also highly critical of the use of African soldiers in British armies for the extension and preservation of the empire. His resentment came to a head during the Great War, and on November 26, 1914, he published a passionate anticolonial manifesto in the local press. The Nyasaland government rapidly censored this letter; but it has since become something of a classic among the documents of African nationalism. Chilembwe's movement contributed to the native rising, from January 23 to February 4, 1915, against British power in Nyasaland. Casualties were small on both sides. The British soon suppressed the rising, shooting Chilembwe as he attempted to escape into Mozambique; thereafter, they tried to stifle all discussion of him and his movement. But John Chilembwe was never forgotten by his own people. During the next half century, many Africans cherished memories of him, often in legendary form. Today, John Chilembwe is a national hero of an independent Malawi.

China

Never colonized by any great power, China nonetheless was semicolonialized in the nineteenth century, as it was compelled to surrender control over significant spheres of its administrative, legal, and economic jurisdiction, beginning with its defeat by Britain in the First Opium War (1839–1842). China's attempt to suppress the opium trade that was exceedingly lucrative to British traders and Britain's resentment over restrictions placed on Sino-Western trade led to war in 1839. British victory forced China to sign the first of many unequal treaties, the Treaty of Nanking, in 1842.

The British had pioneered in informal imperialism, or the acquisition of commercial privileges including access to markets for their industrial goods and sources of raw materials and agricul-

tural goods for their domestic markets, as opposed to formal imperialism, or the acquisition of colonies that would incur administrative costs of governing. Through the Treaty of Nanking, Britain gained the tiny island of Hong Kong as a colony, and it established an informal empire in China by forcing the opening of four treaty ports in addition to Canton for foreign trade. But unlike informal empires elsewhere, informal imperialism in China was a collective enterprise involving the major Western powers and (after 1895) Japan. The great powers followed Britain's example by forcing China to yield additional concessions through gunboat diplomacy. The most-favored-nation status held by each power entitled it to automatically enjoy any concessions surrendered by China through treaty with another power.

Informal empire in China was maintained through the treaty port system. A series of treaties with the powers opened more and more ports for trade. Within some of these ports, including Shanghai, foreign settlements came under the administrative control of foreigners, even though the

populations within them remained overwhelmingly Chinese. China surrendered the right of extraterritoriality, whereby foreign nationals were considered beyond the pale of Chinese law but were instead under the jurisdiction of their own consuls. China also gave up autonomy over its tariffs, limited by treaty to about 5 percent ad valorem. The freedom of missionaries to propagate Christianity was guaranteed.

Aside from Russian encroachments on Chinese territory along the northeastern and northwestern borders in the 1860s and 1870s, China's territorial integrity did not come into question until its devastating defeat by Japan in the First Sino-Japanese War (1894–1895). China was forced to cede Taiwan to Japan and also to permit the Japanese (and Westerners through most-favored-nation status) the right to engage in industry and manufacturing in China. Its glaring weakness prompted the foreign powers to compete in a scramble for concessions between 1897 and 1899, when China was coerced into the granting of leaseholds or acknowledging as spheres of interest various regions to one or another great power. Within its sphere of influence, each power might enjoy exclusive railway and mining concessions and other privileges. The carving of the Chinese melon threatened to escalate into the division of China into separate colonies of the great powers. This outcome was averted only when the United States, not having a sphere of influence in China, induced the powers to agree to the preservation of the territorial integrity of China and to equal commercial opportunity for all within the spheres of influence through the 1899–1900 Open Door notes.

China's semicolonial status deepened with the dramatic increase of both direct foreign investment in China and Chinese indebtedness to foreign banks, necessitated by modernization projects in response to imperialism and by indemnities owed to the foreign powers after such debacles as the Boxer Rebellion of 1900 that led to military intervention by eight powers. The Manchu dynasty's inability to fend off imperialist demands was a major factor in its overthrow in the Republican revolution of 1911.

The republic inherited the treaty and financial obligations of the Manchu dynasty. The early republican administrations' dependency on foreign support and Japan's aggressive pursuit of its inter-

ests in China, particularly during World War I, further stimulated numerous mass movements against imperialism. Anti-imperialism was a major plank in the platforms of both the Chinese Nationalist Party (or Kuomintang, KMT), which was founded in 1912, and the Chinese Communist Party, founded in 1921. After the Kuomintang came to power in 1928, it was able to negotiate with the great powers for the return of several foreign settlements to Chinese sovereignty, the abolition of tariff restrictions, and the relinquishment of extraterritoriality in principle.

In the 1930s, Japan pursued a policy of expansionism in China, first seizing Manchuria in 1931 and then encroaching on north China, leading to the outbreak of the Second Sino-Japanese War (1937–1945). China became allied with Britain and the United States, which abolished all unequal treaties with China in 1943. The defeat of Japan in 1945 ended the era of imperialist depredations on China. The establishment of the People's Republic of China by the Communists in 1949 created not only an emerging great power but also—until the death of its leader, Mao Zedong, in 1976—a revolutionary regime committed to the support of anticolonial struggles worldwide.

Chinese Communist Party

The Chinese Communist Party (CCP) began in 1921 as an organization of fifty-three intellectuals. At the urging of the Comintern, the CCP entered into a united front or alliance with the Kuomintang (KMT) in 1923, and it contributed to the Northern Expedition launched in 1926 against warlords by mobilizing workers and peasants behind enemy lines. Purged by Chiang Kai-shek in 1927, the CCP debated military and political strategy. Relentless encirclement by the KMT forced the Communists to abandon their base area in the

Kiangsi (Jiangxi) Soviet in 1934; then they embarked on the Long March, a heroic strategic retreat over great distances, ending in a base area in northwest China in 1935. Mao Zedong emerged as the CCP's top leader, and the party's previous strategy of worker-based urban insurrections was replaced by Mao's strategy of mobile warfare based on peasant guerrillas, whose support was gained through radical land reform.

The CCP's participation in the war of resistance against Japan (1937–1945) gained it considerable political legitimacy and swelled its ranks with patriots drawn from all classes. A much stronger CCP emerged in the wake of victory over Japan, defeated the KMT in the ensuing civil war (1946–1949), and established the People's Republic of China in 1949.

Initially, the CCP was a firm ally of the Soviet Union during the Cold War, and it considered the United States as the foremost imperialist enemy to world revolution. But with its claims that Mao's strategy of rural insurrection served as the model for Third World anticolonial struggles, the CCP challenged the Soviets for leadership of the international Communist movement. From 1958, the CCP's foreign policy was characterized by both militant anti-imperialism and antirevisionism, or condemnation of the Soviets for pursuing peaceful coexistence with the United States. Active CCP support for Third World revolutionary movements escalated with the onset of the Cultural Revolution in 1966. The Chinese Communists proclaimed that North America and Western Europe were "the cities of the world," whereas Asia, Africa, and Latin America constituted "the rural areas of the world" that were destined to encircle the cities with world revolution. Increasing tensions with the Soviet Union, leading to border skirmishes in 1969 and Soviet intervention in Czechoslovakia against the government of a fraternal Communist Party state in 1968, prompted Chinese condemnations of Soviet social imperialism.

However, with the Soviets now perceived as the greatest threat to China, the CCP moved toward rapprochement with the United States. Richard Nixon's historic visit to China in 1972 paved the way to the normalization of Sino-American relations. After the end of the Cultural Revolution and the death of Mao in 1976, the CCP abandoned strident anti-imperialism in favor of national eco-

nom development based on market reforms and increasing relations and economic ties with the West and Japan.

Christianity

The relationship between Christianity and colonization is a very complex one, with numerous variables to consider. In some cases, Christianity was established many centuries before the creation of colonies. The Coptic Church in Egypt and the Thomas Christians in India date back to the early days of Christianity.

A distinction has been made between colonies of settlement, which had large numbers of white immigrants (such as Australia and New Zealand), and colonies of exploitation, where climate and other factors restricted immigration to a small cadre of officials, missionaries, and businesspeople (for example, Nigeria). In the former, immigrant Europeans brought Christianity with them as part of their inherited culture.

Some older colonies were founded by European Christians in pursuit of religious freedom—the Puritans in New England, beginning with the Plymouth settlement in 1620, are a famous example. Rhode Island was founded by individuals who wished to adopt beliefs different from those of the Massachusetts Puritans, and William Penn, as a Quaker, founded the colony (and later state) that bears his name, Pennsylvania. The Afrikaners of South Africa are of predominantly Dutch ancestry, and their language is a form of Dutch. They are descended from seventeenth-century settlers. In the early nineteenth century, when the Cape became a British colony, some of the Afrikaners migrated inland (on the Great Trek) to get away from British rule. They came to think of themselves as a chosen people in exodus among unbelievers, an attitude that persisted through the years and helped underpin the white supremacy of the twentieth century, even after the indigenous inhabitants of South Africa had become Christians.

Christianity has spread much more extensively in areas of primal (traditional) religion than where the so-called world religions—Hinduism, Buddhism, Islam—predominate. Primal religion and biblical religion have certain things in common, including a belief in spiritual healing, or in the casting out of evil spirits. In India, with some notable individual exceptions, Christian converts in the nineteenth and twentieth centuries were drawn from the poor and those of low caste or from remote hill areas on the edges of the Hindu culture sphere. The Dalit movement among the so-called untouchables has a Christian wing. The Naga are an example of a people who have turned en masse to Christianity. The excellent educational facilities run by Christians in India have enabled the Thomas Christians of Kerala and other individuals to become prominent in business, the civil service, and professional life.

Western and Christian ideas influenced some major thinkers who remained within the Hindu tradition but condemned, for instance, the caste system. Mohandas Gandhi, who was assassinated in 1948, is the most famous of these. Many Westerners have been drawn to the spiritual traditions of Asia, and some have joined them. There are many Western Buddhists, for example, and some religious movements, such as Theosophy, have sought to combine Eastern and Western elements.

In sub-Saharan Africa, Christianity advanced most markedly during and after the colonial period. But small pockets of Christianity existed in earlier times. A Kongo king was converted in the early sixteenth century, and a court Christianity survived for hundreds of years. (The Kongo live in southern Congo [formerly Zaire] and northern Angola.) In the late nineteenth century in Uganda, Muslims and Anglican and Catholic missionaries all argued their cases at the court of the Ganda king, and some court pages and craftspeople adopted one of these three alternatives. In 1886, Mwanga, who had recently taken the throne, cruelly executed some of the Christian converts; these individuals are remembered as the Ganda martyrs. These were examples of court Christianity, but more typically in precolonial Africa, rulers and the elite resisted Christianity, and the first converts were drawn from the poor and marginal people and were limited in numbers. David Livingstone said of his missionary years (before he became a

full-time explorer) that he had fewer converts than fruit trees.

Missionaries naturally hoped that the area where they worked would be colonized by their own nations. They often supported the spread of colonial rule, believing that it would assist their work. Nyasaland (later Malawi) became a British colony largely because of missionary pressure; the mission of Livingstonia commemorated the great explorer, and British public opinion would have been outraged if it had become part of a Portuguese colony.

However, Christian missionaries were often critical of colonial governments, especially, perhaps, if they came from a different ethnic background. Catholic missionaries in British colonies were often French, Italian, or Irish. Moreover, colonial governments did not always support missionaries, particularly where the majority faith was Hinduism or Islam and it was feared that opposition would be provoked. Until 1857, “British” India was governed by the East India Company; its officials were sometimes hostile to Christianity because their business relied on the cooperation of the Hindu elite.

Foreign missionaries often unconsciously identified Christianity with Western culture and condemned many aspects of traditional life that were morally neutral. For example, in Africa, some said that Christians should live in rectangular houses, not the traditional circular ones. Children had to be baptized with foreign names, not indigenous ones, even if the latter had an acceptable meaning (such as the Igbo name Uchechukwuka, which means “the wisdom of God is the highest”). African Christians were sometimes even told that all their ancestors were in hell. Such attitudes and actions on the part of the missionaries provoked a variety of responses. Educated Christians, such as the African theologian John Mbiti from Kenya, reinterpreted their own culture as a local Old Testament and emphasized the elements most compatible with Christianity, such as the almost universal belief in the Supreme God.

In many cases, local Christians broke away from the mission churches and founded new ones of their own. In Africa, such churches are known as Zionist in South Africa or Aladura (the Yoruba word meaning “people of prayer”) in Nigeria. Their members join in search of spiritual aid in

coping with life's difficulties and especially for physical or mental healing. Some of these churches have hundreds of thousands of members in half a dozen countries, and others consist of one small congregation. Women have often been prominent as founders or leading members of these churches.

Such churches typically have little to do with politics; in South Africa during the apartheid era, their leaders tended to support the government. Some African Christian prophets were persecuted by colonial governments. Simon Kimbangu, for example, was a recently baptized Christian in the Belgian Congo who drew great crowds by his healing ministry. He was imprisoned by the authorities in 1921, remaining in jail until his death in 1951. William Wade Harris, a Liberian, converted vast numbers in the Ivory Coast and western Ghana, but in 1914, he was deported back to his homeland. No Christian teacher in West Africa has ever made so many converts. Alice Lenshina was the founder of the Lumpa church, which came into conflict first with colonial authorities and later with the government of newly independent Zambia in 1964.

In the colonial situation, Christianity often expanded as a result of the mission's control of education; the Holy Ghost Fathers, working among the populous Igbo of southeastern Nigeria, had great success in this regard. Western education became popular because, in the colonial situation, it led to material rewards in the form of salaried positions as teachers, clerks, and so on. Not all missionaries concentrated on schools, however. The Evangelicals of the Sudan United Mission and the Sudan Interior Mission, for instance, did not want to attract people to Christianity by the prospect of material gain. Their converts learned to read the Bible but were encouraged to continue in their traditional way of life. Although Christianity's expansion began in the colonial period, it has grown still more rapidly since the coming of independence to many sub-Saharan states.

In New Zealand, Christianity first took root among the Maori people in the 1830s. Many of them, including members of the aristocracy, welcomed both Christianity and literacy. Christian chiefs were among the signatories of the Treaty of Waitangi (1840), which was signed with the Crown. They saw it as a new covenant, and it remains of crucial importance in the contemporary

life of the nation. Later, a number of prophetic figures arose in the context of wars that led to massive land confiscations. One of them was Te Kooti, who, like the prophet Jonathan Harris (a Christian evangelical), was inspired by visions he had while a political prisoner (in Te Kooti's case, in 1867). He became a great military leader and founded a church that still flourishes, Ringatu. Te Whiti o Rongomai, another prophetic figure, advocated passive resistance as a way of halting land alienation, much like Gandhi in the twentieth century. His pacifism was rooted in the Bible, and when the Christian town of Parihaka was overcome by force in 1881, its people did not resist. Parihaka is an enduring symbol in New Zealand life.

The links between European colonization and Christian missionaries were often a source of tension in Muslim countries. During World War I, for instance, predominantly Muslim Egypt had to support a Christian overlord against Muslim Turkey, which had been closely linked with Egypt for centuries. In colonies such as Algeria, missionaries and settlers created a triumphalist church structure, which largely disappeared after independence. The cathedral of Algiers was turned into a library.

The concept of millenarianism originally referred to the belief that Christ will return and usher in a new age of justice, but it can also be applied more generally to the hope that by supernatural means, the present world, with all its injustices, will be swept away and a new and improved society introduced. The millenarian ideas of the Jehovah's Witnesses spread widely in southern Africa in the colonial period; later, Witnesses were persecuted by several colonial governments as well as independent states, especially Nyasaland (later Malawi), because of their refusal to salute the flag.

In South America, colonialism came to an end much earlier than in Africa, India, or the Pacific, but the Western world continued to wield much power there, in systems that were often called neo-colonial. The Catholic Church in particular was frequently seen to bolster unjust and oppressive governments. Liberation theology, which became influential in the 1960s, was a Catholic movement that originated there and was influenced by Marxism; it stressed the obligation of Christians to work toward a just society. Some advocated the use of violence in pursuit of this end if necessary.

The late twentieth century saw a great transformation in global Christianity—one of the two or three great shifts that have taken place in its entire history. Christianity has more adherents than any other religion; estimated to comprise 31.2 percent of the world's population, they are strongly represented in every continent. The religion is declining in Europe, though it still flourishes in the United States. But the heartlands of Christianity are now to be found in Africa, Latin America, and parts of Asia. It has been estimated that at the beginning of the twentieth century, 81 percent of the world's Christians were white, yet by century's end, that number had fallen to 45 percent. This trend is expected to continue.

Churchill, Sir Winston Spencer (1874–1965)

A British statesman, soldier, journalist, and author, Winston Churchill was the most influential Englishman of the twentieth century. He is best remembered for his leadership as prime minister during World War II.

Churchill was born November 30, 1874, in a closet at Blenheim Palace, Woodstock, Oxfordshire, the eldest son of Lord Randolph Churchill; his father was the third son of the seventh duke of Marlborough. His mother, Jeanette Jerome Churchill, had gone into premature labor during a party at the palace, thus the rather unusual circumstances of his birth. He was educated at St. George's School, Ascot, and Harrow, then passed into the Royal Military Academy, Sandhurst, in 1893. He was commissioned as a subaltern in the Fourth Hussars in 1895 but spent very little time with his regiment. Between 1897 and 1900, he served as a correspondent for the *Daily Mail* and *Morning Star*, covering the actions of the Mala-

kand Field Force on the northwest frontier, the Battle of Omdurman in the Sudan, and the South African War. The latter exploit landed him in a Boer prisoner of war (POW) camp, from which he escaped and made his way back to British-held Durban.

Churchill entered politics in 1900 as a Conservative but broke with Joseph Chamberlain's tariff policies in 1904. He was returned in the 1906 election as a Liberal member for northwest Manchester and was appointed secretary of state for the colonies in Herbert Asquith's Liberal administration. He married Clementine Hozier in 1908 and went on to hold a number of positions in government. At the outbreak of World War I, he was first lord of the Admiralty. Blame for the disastrous 1915 Gallipoli campaign fell on his shoulders, and he was forced out of office. He activated his commission and served briefly in the trenches of the western front. He returned to office as minister of munitions under the coalition government of David Lloyd George in 1916; following the war, he became secretary of state for war and briefly ran the Colonial Office. He again changed party affiliation, abandoning the Liberals in 1923, and became chancellor of the exchequer under Stanley Baldwin in 1924. He ultimately broke with the Constitutionalist Party over the government's policy toward Germany and was out of office from 1929 to 1939.

When World War II began, Churchill returned to take command of the Admiralty. With the resignation of Neville Chamberlain on May 10, 1940, he became prime minister. In the dark days following the fall of France, as Britain stood alone against the Nazis and as the Luftwaffe raided British cities each night, Churchill served as living avatar of the British Bulldog—that is, the personification of British resilience. His determined speeches and his refusal to evacuate his government from London in no small part infused the British public with a spirit of defiance. He coordinated a grand strategy with Britain's allies and organized society and industry for total war.

The Labour victory in 1945 swept Churchill from office, and for the next six years, he headed the opposition in Parliament. During this hiatus, he wrote a massive, five-volume history of World War II. In recognition of his achievements as the author of numerous books during his career, he was awarded the Nobel Prize in literature in 1953.

Winston Churchill, shown here in a 1919 portrait, remained a staunch defender of the British Empire during his long career in government. (Library of Congress)

He returned to the prime minister's office with the Conservative victory in 1951, but his health was failing by that point. He had suffered a stroke in 1949 and had second one in 1953. However, he continued to hold office until ill health forced his resignation in April 1955. He remained in Parliament for another nine years before health concerns forced his final resignation in October 1964. He died on January 4, 1965, and was buried in Bladon Churchyard, Oxford.

Cinema

The cinema was invented nearly simultaneously in the United States and France in the late 1880s. Since its inception, the motion picture industry has drawn on European empires as sources of romance and exoticism. During the colonial era, European governments supported the production of films about their colonies to encourage enthusiasm for empire at home and abroad. Colonial authorities also employed the cinema to influence and intimidate the colonized. Since the dissolution of the European empires, Western filmmakers have used the medium to reconsider the colonial past, and intellectuals in the former colonies have employed it to rewrite the Eurocentric versions of their histories. Despite these efforts, the Western cinema remains infused with a nostalgia for empire.

The first commercial cinema shows appeared in Europe in 1895 and soon found their way into the colonial world, with the first film appearing in India and South Africa before the turn of the twentieth century. Some of the earliest commercial motion pictures looked to imperial settings for spectacle and exotica (such as the Lumiere brothers' 1902 production *The Funny Muslim* and Ernst Lubin's *Rastas in Zululand* of 1910). Early newsreels allowed Western audiences to watch the waning stages of the imperial "scramble" play out in footage (frequently staged) from the Spanish-American War, the Boer (or South African) War, and other colonial conflicts of the late nineteenth century. During the silent era, travelogues produced in the tropical colonies became fixtures of cinema shows. Relying on ethnographic exotica and thrilling images of unfamiliar animals and landscapes, films such as Paul J. Rainey's *African Hunt* (1912) and Osa and Martin Johnson's *Simba, King of the Beasts* (1927) created an influential and enduring image of the imperial world.

European empires also provided a popular backdrop for early fiction films. Indeed, there was a fine line between documentary and drama in the cinema's early days, as reflected in such films as Merrian C. Cooper's thriller *King Kong* (1933), which was essentially a fictionalized version of the

travelogues of the silent era. Some of the first feature-length adventure movies drew their inspiration from the popular imperial novels of the late nineteenth and early twentieth centuries. Rider Haggard's *King Solomon's Mines* was produced for the movies three times by 1940, as were several novels by the Anglo-Indian novelist Rudyard Kipling. Perhaps the most frequently filmed series of novels in history are the Edgar Rice Burroughs Tarzan books, which have inspired dozens of screen versions. During the 1920s and 1930s, U.S. and British filmmakers churned out movies that depicted imperialism as an exciting and noble adventure, including *Lives of a Bengal Lancer* (1934), *Sanders of the River* (1935), *Gunga Din* (1939), and *The Four Feathers* (1939). Though directors in the United States and London focused primarily on the exploits of the British, Hollywood acknowledged America's growing status as an imperial power in films such as *The Real Glory* (1939), a story of U.S. soldiers battling "terrorists" in the Philippines. The French film industry also played up the exoticism of France *Outre Mer* (overseas), producing a string of imperial fantasies that included over 200 dramas about their North African empire. These films invariably focused on the accomplishments of Europeans in the Tropics and portrayed the colonized in crude and negative stereotypes. Some of these films simply relied on imperial settings to provide an atmosphere of exoticism (as in the 1942 *Casablanca*), whereas others aggressively extolled the virtues of imperialism (as in the 1937 movie *Stanley and Livingstone*).

In the eyes of some colonial officials, the cinema exerted a powerful influence over imperial audiences. Many feared that commercial films would undermine the prestige of the colonizers and encourage the colonized to emulate the violence and crime they witnessed on screen. Such prejudices were used to justify strict censorship in most colonies. However, many of these same officials were convinced that motion pictures could play an important role in transforming colonial societies. The French proconsul Hubert Lyautey was a fervent believer in the ability of the cinema to win over North African audiences to French rule, and his enthusiasm was shared by many of his British counterparts in Africa and elsewhere. In the 1930s, European governments, missionary

societies, and commercial firms produced and distributed the first motion pictures made expressly for colonial audiences. During World War II, the British Colonial Office produced dozens of propaganda films intended to educate and influence Britain's imperial subjects. Though the films were shown throughout Britain's tropical empire, the focus of the effort was in Africa. After the war, French, Belgian, and Portuguese authorities in Africa emulated the British program. Though these film units aspired to reinforce European hegemony, they ultimately introduced the techniques of film production into the colonial world and unwittingly laid the foundations for a post-colonial film industry.

In the West, postwar decolonization did little to stem the tide of films that continued to romanticize and glorify empire. The 1950s and 1960s saw the revival of the imperial fantasies of the 1930s (including more remakes of Rider Haggard novels and another version of the French Foreign Legion adventure *Beau Geste*). Hollywood's enthusiasm for epics during the 1960s encouraged the production of a series of long, grandiose imperial dramas, including *Lawrence of Arabia* (1962), *55 Days at Peking* (1963), and *Khartoum* (1966). French filmmakers also continued making imperial epics (such as the 1966 Legionnaire adventure *Les Centurions*) after their Algerian empire had disappeared.

However, alongside these old-fashioned epics, a growing number of films reflected an ambivalence toward the former empires. An early example was the 1953 American film *King of the Khyber Rifles*, one of the first postwar films to explore the racism inherent in colonial situations. By the 1970s, a handful of Western filmmakers were reconsidering the jingoism of an earlier generation, producing films that presented imperialism more ambiguously. Examples of this trend include *The Man Who Would Be King* (1975), an American adventure film based on a Rudyard Kipling story that explored the corrupting nature of imperial power, and *Noir et blanc en couleur* (Black and White in Color, 1976), a French film that ridiculed the French and German armies during the African campaigns of World War I. During the 1980s, some directors began to take an even more critical view of empire, as reflected in such epics as Richard Attenborough's *Gandhi* (1982) and David Lean's *Passage to India* (1984). The antiapartheid protests

of the 1980s inspired a series of films criticizing colonialism in South Africa, including *Cry Freedom* (1988), *A Dry White Season* (1989), and the second film version of Alan Paton's *Cry the Beloved Country* (1995). At the same time, Hollywood began to reexamine European imperialism in the New World in such films as *The Mission* (1986) and *The Black Robe* (1991). The 1990s saw a spate of new Hollywood epics that glamorized the history of rebels within England's empire, including *Braveheart* (1995), *Michael Collins* (1996), and *Patriot* (2000). By the end of the decade, the pendulum had swung so far away from the imperial epics of the 1930s that many critics complained that the British Empire was replacing Nazi Germany as Hollywood's villain of choice. However, despite the changing sensibilities of these films, they remained focused on the roles of Europeans in liberation struggles and were dominated by white and American actors and actresses.

At the same time, French filmmakers began to reassess their colonial past with films exploring the French experience in Vietnam, such as the *317th Platoon* (1965) and *Dien Bien Phu* (1993), and in sub-Saharan Africa, such as *Coup de Torchon* (1982) and *Chocolat* (1989). Nonetheless, these films existed alongside a stream of commercial films—American, British, and French—that continued to rely on imperial settings for exoticism and unthinkingly invoked threadbare stereotypes. Some of the most egregious examples of this trend include *Indiana Jones and the Temple of Doom* (1984) and yet another remake of *King Solomon's Mines* (1988). Less baldly racist were films that continued to look to the former empires for nostalgia and romance, including *Out of Africa* (1985), *The Ghost in the Darkness* (1992), and the 1984 French Legionnaire picture *Fort Saganne*.

Beginning in the 1960s, intellectuals in the former colonies began rewriting the cinematic history of their countries from the point of view of the colonized. Australia, for example, has produced several commercially successful films that have criticized the British influence in the nation's history, such as *Breaker Morant* (1980) and *Gallipoli* (1981). African nations, led by the francophone states of West Africa, have created an indigenous film industry that has allowed African directors to reinterpret their continent's history. One of the most famous anticolonial films produced in Africa during the

1960s was *Battle for Algiers* (1964), a joint Algerian-French film that inverted the *Beau Geste* paradigm by showing the colonial conflict from the Algerian point of view. In a similar vein, the Senegalese director Ousmane Sembene has challenged the French version of his nation's history in his films *Emittai* (1971) and *Camp de Thiarouye* (1987). *Emittai* tells the story of the resistance of Senegalese women to the French during World War II, and *Camp de Thiarouye* re-creates an actual massacre of African troops by their French officers. The Mauritanian director Med Hondo has reached further into the colonial past in his film *Sarrouina* (1987), the story of an African community fighting off French troops during the late nineteenth century. In the Middle East, Arab filmmakers have also reassessed the impact of colonialism in their respective countries. Egyptian directors have led the way with such films as Hussein Didky's *Yaskut al Isti-mar* (Down with Imperialism, 1953), which tells the story of the Egyptian revolution, and Youssef Chahine's *Alexandria Why?* (1979), a drama set against the backdrop of the British occupation of Egypt during World War II (1979). India, which has the largest commercial cinema industry of any non-Western nation, has also produced motion pictures that critique British influence in the nation, most notably Satyajit Ray's *Chess Players* (1977), an exploration of cultural imperialism under the Raj. In the Philippines, Eddie Romero's *Ganito Kami Noon, Papano Kayo Ngayon* (This Is the Way We Were Then: How Are You Now, 1976) presents his nation's struggle against Spain from the point of view of a nationalist rebel. Latin American directors, for their part, have challenged the mythology of the Columbian conquest in such films as Brazil's *Ajuricaba* (1977), which re-creates the story of indigenous people's struggles against the conquistadores; Peru's *Tupac Amaru* (1984), a screen biography of the eighteenth-century rebel; and Mexico's *Cabeza de Vaca* (1989), a reinterpretation of the life of an early Spanish explorer that focuses on the weaknesses and vulnerabilities of its protagonist.

Class

Considerable debate has raged around the class dimensions of colonial fervor, and great care must be taken to avoid misconceptions or misleading assumptions about which classes supported imperialism. What does seem clear is that in either advocacy of or opposition to expansion of empire, the lines of support were not drawn along class divisions.

The whole concept of class, of course, came into existence with industrialization and so cannot be examined in relation to colonial expansion before the nineteenth century. V. I. Lenin first argued that imperialism split worker loyalties in the nineteenth century. He contended that working-class consciousness was subverted by a patriotic imperialism; international socialism was fractured into nationalist feelings by the growth of colonialism. One of the main assumptions behind Lenin's theory was that the working class of each European nation supported the expansion of empire, and Lenin viewed patriotism as linked with this support. The labor historian E. J. Hobsbawm accepted most of Lenin's theory, including the assumption of working-class enthusiasm for colonialism, and he further argued that these nationalist feelings about the empire were the main source of social stability in mid-nineteenth-century Britain.

But there is little evidence that the European approach to empire in the 1800s was monolithic. In Britain, there was very little to choose between in the views of the two main parties, Conservative and Liberal. Britain was not yet a full democracy for most of the nineteenth century, and both the Conservatives and Liberals reflected the dominant classes in the country. Both vied to become known as the party of empire, but policies were aimed at constituency support at home rather than at aggressively promoting the expansion of territory. Support for active empire building was so weak among the upper and middle classes that ardent imperialists such as Joseph Chamberlain were never able to impose policies on an uncooperative electorate. The Labour Party, the mouthpiece of

the working class, was not a force until the early years of the twentieth century.

When the Labour Party did gain in power and influence after World War I, it, too, was in conflict about the empire. Working folk were naturally opposed to the exploitation of any group, but trade unions argued that empire could provide full employment at home because of the supply of raw goods that would flow to Britain to be converted into finished products. The laboring class was caught between the attraction of wages and employment in Britain and the abhorrence of the oppression of colonial subjects. It must be noted that, in reality, there was very little difference between the policies of the Labour and Conservative Parties. The Labour governments of Ramsay MacDonald and Clement Attlee, the most important in the first half of the twentieth century, had no dismantling policy. When the winding up of the British colonial empire began after World War II and continued for the next thirty years, both parties were involved, with little distinction between them.

On the continent, despite differences in electoral system and degree of democracy in the nineteenth century, both Germany and France reflected the imprint of a strong though small coterie of imperialists who were able to influence but not dominate the ruling elites. In Germany, Otto von Bismarck was reluctant to expand colonial holdings because he felt European rivalries were paramount; he was pushed toward acquiring colonies in Africa by others, but he was more interested in encouraging France's involvement in the scramble for African territory in order to divert French attention from continental matters. The German working class entered very little in Bismarck's imperial policies.

Just as in the policies of its two main rivals, the colonial lobby in France emerged in the 1870s. Although it could occasionally raise significant support, however, a considerable opposition always existed. The procolonial lobby was never powerful enough to dominate governmental policies and was composed of a distinct, although vocal, minority. The main French supporters for the expansion of empire included ambitious military officers, a small scientific lobby, and trading houses with overseas interests that could be characterized as upper- and middle-class elites, yet at the same

time, the opposition was composed of much the same sort of people and institutions. As in Britain and in Germany, the empire enthusiasts and the colonial skeptics were drawn from the same social strata, making attempts to draw imperialist sentiments along broad class lines meaningless.

It is instructive to examine colonial support from an economic perspective as well. By the second half of the nineteenth century, a wide variety of commercial agencies discovered that appeals to imperial patriotism could be profitable in marketing consumer goods to those at home. Thus, advertisers began to appeal to middle-class individuals, who could first afford consumer goods; then, by the end of the century, working-class consumers were also targeted. This use of imperial expansion in Africa for the commodity culture did not result in cross-class support for colonial holdings, but it did have another important colonial connection. Through the relentless presentation of cultural superiority in advertisements, both the ambitious middle class and the downtrodden workers could become imperial "overclasses." By feeling part of a national enterprise that was being presented as culturally and racially superior, the nonelites could feel dominant over peoples abroad, if not domestically. The cultural support for empire that resulted from nongovernmental marketing efforts was not connected to any active policy in consolidating or governing colonial holdings and should be viewed as ideological rather than practical.

Clive, Robert (1725–1774)

Son of a lawyer from the lower gentry of Shropshire, England, Robert Clive joined the East India Company as a clerk assigned to Madras. During the War of the Austrian Succession, Clive obtained a commission as an ensign in the company's army, which was carrying on the European war in India by attacking and besieging French fortified trading posts. Even after a treaty ended the conflict in

Europe, France and Britain continued to spar over their influence on the local rulers, particularly the succession to the viceroy of the Deccan. Commissioned by the company to defend their interests, Clive successfully held Arcot against the French in 1750 and then attacked and captured Trichinopoly, a feat that secured a small fortune for Clive and his soldiers.

In England for health reasons from 1753 to 1755, Clive returned to India as deputy governor of Fort St. David during the Seven Years' War in Europe. There, he found that the ruler of Bengal, Surajah Dowlah, reacting to company incursions, had captured Calcutta and confined a number of British captives to the infamous "black hole of Calcutta," an informal prison in which many died. At the head of a combined force of company as well as regular British army forces and assisted by the Royal Navy, Clive retook Calcutta and defeated Surajah Dowlah at the Battle of Plassey in 1757. Now the ruler of Bengal himself, Clive entrenched the company against Dutch and Indian rivals while accumulating a fortune. On his return to England in 1760, that fortune helped him win a seat in the House of Commons as an ally of George Grenville. In a third and final voyage to India in 1762, Clive served as commander-in-chief of all British troops and attempted to reform the East India Company policies, such as low salaries, that encouraged corruption and mismanagement. Always plagued by ill health, Clive left India in 1764 to enjoy his vast wealth at home in England, but dogged by political enemies and melancholia, he committed suicide ten years later. A brilliant military commander, Robert Clive laid the foundation for British domination in India and the success of the East India Company.

Coal

Coal was widespread throughout the colonial empires, and its mining became an important part of

some colonies' economies. Coal helped promote domestic development, and it fueled railway transportation; in certain cases, it was even exported. Nigeria, parts of the Belgian Congo, Southern Rhodesia, and South Africa all produced coal of sufficiently high quality to be commercially viable, although this was not true of all those territories' deposits. By contrast, coal deposits scattered throughout Southeast Asia were too dispersed and too small to be considered worth exploiting. Similarly, the Dutch did not find coal to be a particularly profitable commodity because of wide variation in the quality of the deposits located in their holdings, as in Sumatra, Indonesia.

India was well endowed with coal, a high proportion of it mined in Bengal. Railways did not use domestic coal as much as they might have because the high cost of rail transport as compared with sea freight meant that imported British coal was preferred, particularly in western India. Wood also continued to be used. The success of Indian iron and steel production depended, to a considerable extent, on the fortuitous presence of iron ore, coal suitable for coking, and limestone in reasonably close proximity.

The same was true in South Africa, where coal fueled railways and later supplied the coke for smelting iron and other minerals. Farther north, the Wankie Colliery on the Southern Rhodesian side of the Victoria Falls fueled the Rhodesian rail network and provided coking coal for copper smelting in both Northern Rhodesia and Katanga.

Metallurgical-quality coal was not found in the Belgian Congo; deposits there were used for railways. Although some higher-quality deposits exist in Nigeria, most of the coal produced there was also used for railways. In sharp contrast, Angola did not have significant coal supplies, forcing the Benguela Railway to depend heavily on eucalyptus plantations for fuel. In many areas, coal gave way to electricity in generating motor power.

Cocaine

Cocaine, an alkaloid drug that produces euphoria, hallucinations, and temporary increases in physical energy, was synthesized from the coca leaf in 1860 and quickly became a staple of the late-nineteenth-century pharmaceutical industry. It was widely used in "tonics" and in various legitimate therapies until the turn of the twentieth century, when those decrying cocaine's potential dangers began to supplant those touting its legitimate medical applications.

Used by indigenous Andean people for centuries, coca itself is much like coffee in its effects. Yet due to the passage of the Harrison Drug Act of 1914 in the United States (and other legislation in the industrialized West), consumers of cocaine could no longer get the substance in relatively harmless products such as Coca-Cola and had to turn to the black market for cocaine. Cocaine was demonized as the drug of choice for "Negroes," prostitutes, addicts, and other so-called undesirable elements of society.

Cocaine is not a narcotic, but it is grouped with narcotics on the list of controlled substances in the United States today. Although it is true that excessive use of cocaine can lead to addiction, coupled with delusions, general physical deterioration, and weight loss, the demonization of cocaine became the focus of a growing *moral war*—a war based not on the effects of this and other drugs that are now banned but on characteristics of gender, race, and class.

Moralistic antidrug laws in the twentieth century led to a decline in cocaine use, which hit its nadir in the 1930s. However, a resurgence in use in the 1970s led to the latest campaign in the drug war. The anticocaine campaign is truly global in scope, from the cultivation of coca and the production of cocaine in Colombia, Bolivia, and Peru (which account for 99 percent of the world's supply) to use in other parts of the world, notably in the United States (which consumes most of the world's cocaine supply). The international relationships that have resulted from these efforts have sometimes been described as neocolonial.

In 1993, the estimated cost of cocaine use in the United States was about \$30 billion. The U.S. war on drugs is essentially a war on cocaine, and it focuses specifically on crack cocaine. Under U.S. law, the penalties for the use of crack cocaine, a drug

predominant in poor neighborhoods of the inner city, are far harsher than those meted out for the use of powder cocaine, more popular among middle-class suburbanites.

Cocoa

Cocoa, a food product derived from the cacao bean, was first utilized by the Native Americans of Mesoamerica in pre-Columbian times. Originally, cacao was a wild tree that grew in the tropical lowlands of what is now southern Mexico and Central America and was gathered by the Mayans and others who lived there. Usually made into a beverage—and mixed with chili peppers—cocoa was reserved for the aristocracy and priesthood. Both the Mayans and the Aztecs imbued cocoa with a spiritual element, and occasionally, they added psilocybin hallucinogenic mushrooms for religious ceremonies. So rare and valued were the beans that the Aztecs used them as a form of currency, a practice adopted by Spaniards in Central America as late as the eighteenth century.

The first European to note the cacao bean was Christopher Columbus on his 1502 voyage to Central America. The first Europeans to drink cocoa were the Jesuits and other missionaries who lived in the region, and they valued it so much that they began to domesticate the trees that produced the cacao bean. Cocoa then traveled to Spain in the sixteenth century, where it was seen as an abstinence drink—an alternative to wine. Meanwhile, mixed with honey and sugar, it became a popular drink among the aristocracy in both Spain and Mexico.

Realizing its popularity—a by-product, in part, of the bean's mildly addictive properties—the Spanish began to commercially produce the bean in large quantities beginning in the seventeenth century, transplanting the tree to Venezuela and the distant Philippines. Although the Spanish tried to maintain a monopoly over the raw product, English and Dutch colonial entrepreneurs were nevertheless able to transplant the tree to Brazil and later Indonesia.

By the eighteenth century, cocoa as a beverage mixed with sugar and vanilla was becoming more and more popular among the middle and lower classes of Europe. In the early nineteenth century, it began to be mixed with milk, becoming popular with women and children. Later in the nineteenth century, the Swiss developed a method of mixing milk directly with the cocoa to create the hard chocolate candy that we know today.

Coffee

The exact origins of coffee are not known, but wild coffee plants probably grew in Ethiopia. Later, the plant was taken to the Arabian Peninsula. By the fifteenth and sixteenth centuries, cultivation had become common in Yemen. The stimulating effects of coffee made it popular, and its use spread among Arabs. In the sixteenth and seventeenth centuries, the drink was introduced in European countries, and coffeehouses began appearing in cities such as London.

Coffee's popularity led the Dutch to begin growing it in their colonies, introducing it in Java in 1696. By the eighteenth century, coffee was a major trade item, as the Dutch obtained concessions from the native inhabitants for its compulsory delivery. Production in Java expanded in the nineteenth century, when the Dutch forced villages to set aside a certain amount of land to grow cash crops (such as coffee) that the government would then purchase at low prices. Although the Dutch and some of the indigenous elite did profit greatly from the system, most Javanese did not. In the 1870s, coffee leaf disease led to a dramatic decline in production and the loss of jobs for many Javanese.

The failure of the coffee crop in Java allowed countries in Latin America to increase their share of the world market. In the 1700s, coffee had already appeared in the Caribbean, and in the nineteenth

century, Brazil became a major producer. By the early twentieth century, Brazil produced about 75 percent of the world's coffee. Colombia also became a significant coffee exporter, as it produced a very high-quality product, which led to a high total value for its coffee exports. Coffee was also a major export product for Venezuela, some Central American countries, and parts of southern Mexico. In the early 1900s, some 90 percent of the world's coffee came from Latin America.

Although the Latin American countries that produced coffee were not formal colonies, neo-colonial relationships continued between those countries and Europe. Much of Latin America's coffee went to foreign commission houses abroad. Locally, a few large landholders grew wealthy by controlling the coffee business. But Latin American nations were often at the mercy of world prices. For example, although Colombia enjoyed a period of expansion from 1886 until 1896, its export earnings were greatly reduced when the price paid for its coffee fell by half.

In the twentieth century, a number of colonies in Africa became important coffee producers, including Angola, Kenya, the Ivory Coast, and Uganda, along with independent Ethiopia. By the 1960s, about 20 percent of the world's coffee came from Africa; by the 1980s, perhaps one-third came from the continent. Much of Africa's coffee is of the cheaper *robusta* species used in instant coffee, as opposed to the *arabica* variety. Colonial wars of independence often had damaging effects on coffee production, as happened in Angola, where production fell by two-thirds between the 1970s and the 1990s. In the postindependence period, some African countries have retained a colonial legacy of coffee monoculture, among them Burundi and Rwanda. In other countries, such as Kenya, peasants had been prevented from growing coffee, as only European settlers could legally do so, and so the industry remains dominated by a few large growers even to this day.

In the post-World War II era, some coffee-producing countries have attempted to impose quotas in order to keep prices high. One measure enacted to accomplish that goal, the International Coffee Agreement, lasted from 1962 until 1989, after which prices once again fell.

Cold War

Some observers trace the origins of the Cold War to the Russian Revolution of 1917. However, the term *Cold War* is more generally understood to refer to the period stretching from the mid-1940s to the collapse of the state-socialist regimes in Eastern Europe in 1989 and the subsequent disintegration of the Soviet Union in 1991. The term was first used in a speech given on April 16, 1947, by Bernard Baruch (a former adviser to President Franklin Delano Roosevelt). At the time of Baruch's speech, the United States was about to promulgate the Truman Doctrine (named after Roosevelt's successor, President Harry Truman), which was aimed at containing Soviet expansion and influence in Europe by an infusion of U.S. military and economic aid (the latter effort was embodied by the Marshall Plan). The conflict in Europe intensified after 1947, and the division of Europe into U.S. and Soviet spheres of influence was institutionalized with the establishment of a U.S.-led military alliance, the North Atlantic Treaty Organization (NATO), in between 1949 and 1950 and the Soviet-led Warsaw Pact in May 1955. From the late 1940s to the end of the 1980s, the shifting military, political, economic, and ideological conflict between the United States and the Soviet Union, together with the imperatives and imaginings that attended this rivalry, profoundly conditioned European and world history, including the process of decolonization.

The U.S. effort to contain the Soviet Union has been characterized as a "long peace." (It is calculated that the United States spent \$13.4 trillion, in 1997 dollars, between 1948 and 1991 to prosecute the Cold War.) However, although open warfare was avoided in Europe, the main arena of the Cold

War, other areas of the world emerged as important and far less peaceful Cold War battlegrounds, including East Asia, sub-Saharan Africa (particularly in the 1970s and 1980s), and Central America (in the 1980s). Northeast and Southeast Asia was the scene of at least four full-scale wars in this period: the Chinese civil war (1945–1949); the Korean War (1950–1953); and the complex colonial and civil wars in Vietnam, Cambodia, and Laos that are often known as the First Indochina War (1946–1954) and the Second Indochina War (1965–1975). (In Vietnam, the First Indochina War is sometimes called the War of National Liberation, and the Second Indochina War is often known as the American War; in the United States, the latter is known as the Vietnam War.) These conflicts, along with innumerable smaller confrontations, all had local and regional dynamics, but all were bent to the wheel of superpower rivalry in important ways.

Some historians divide the Cold War into at least four phases. According to this periodization, the First Cold War covered the period between 1946 and 1953, whereas the 1953–1969 period was the era of oscillatory antagonism. This era was followed by the period of Détente, which ran from 1969 to 1979. The final phase, the Second Cold War, began in 1979 and ended between 1989 and 1991.

Colombia

The second largest Spanish-speaking country in the world by population—after Mexico—Colombia is situated in northwest South America. Populated by approximately 1 million indigenous people in late pre-Columbian times, its first contact with Europeans came in the early sixteenth century, and it was soon incorporated as the Spanish colony of New Granada. In 1821, it won its independence under the leadership of Simón Bolívar.

The two largest indigenous groups in Colombia in 1500—when the first European, Spanish explorer Rodrigo de Bastidas, encountered the region—were the Chibcha of the central highlands and the Carib of the coast. At first overlooked by Francisco Pizarro in his war against the Inca in neighboring Peru, Colombia began to be conquered by the Spanish in 1525, a process largely completed by 1538 when the territory was declared the colony of New Granada, under the jurisdiction of the viceroy in Lima, Peru.

At first, the colony was controlled by various conquistadores, who made slave laborers of many of the local people who survived the plague of European diseases; these individuals were put to work on coastal plantations and mines in the interior of the country. The Crown control over the colony began with the founding of the *audiencia*, or administrative and judicial tribunal, in Bogotá in 1549. However, the mountainous landscape made communication difficult and impeded the establishment of centralized administration for many years, with various regions of Colombia remaining quasi-independent and culturally distinctive from one another.

From 1717 through 1723, Bogotá became the capital of the viceroyalty of New Granada, which included Ecuador and Venezuela as well as Colombia. In 1740, the viceroyalty of New Granada was made permanent. Gradually during these years, the Crown asserted itself in the territory, taking back control of the *encomiendas*—vast, quasi-feudal estates—from the conquistadores and their descendants who ruled over them. At the same time, significant numbers of African slaves were imported to work the plantations of the coastal regions. By the late eighteenth century, then, the ethnic components of modern-day Colombia were in place—a ruling elite of Spanish and European landowners, or Creoles; a large population of mixed Indian and European peasants; and an impoverished black minority along the coast.

Resistance to Spanish rule began in the late 1700s and early 1800s as the Creole community pushed for a more open economic system, limits on the Crown's power, freedom to trade with other countries, and the abolition of slavery. The triggering event for rebellion against Spanish rule came with the French invasion of Spain in 1808. As Spanish rule in New Granada faltered, conflict

broke out among various forces within the viceroyalty, leading to the reconquest of the territory by Spanish forces from 1814 to 1816. Their brutal tactics led many Colombians to rally behind the forces of Venezuelan liberation leader Bolívar. The Republic of Colombia was established at the Congress of Cúcuta in 1821.

Colombia's postindependence history has been marked by much violence. During the nineteenth century, liberal and conservative forces fought no less than six civil wars. In 1903, Colombia rejected a U.S. offer to build a canal across Panama (which was then under Colombian jurisdiction), leading to a revolt in the province that was backed by U.S. forces. More fighting between liberals and conservatives took place in the 1940s and 1950s, a period Colombians refer to as *La Violencia* that saw the deaths of more than 200,000 people.

Since the 1960s, the country has witnessed a three-way conflict between leftist guerrillas, the Colombia army, and rightist death squads, with many of the latter having close ties to the military. The violence was made worse by the rise of powerful drug cartels in the 1980s and 1990s, which created virtual private armies from money earned in raising and smuggling cocaine into the United States.

Colonial Administration

Colonial rule was an inequitable political and economic system, sustained by coercion and violence. However, the nature of colonial administration and its ideological underpinning varied over time and across empires.

The sixteenth-century conquistadores of the Spanish Empire in the New World sought to extract maximum wealth in the minimum time before retiring to Spain. The savage exploitation of indigenous Indians was rationalized in terms of civilization through labor and ultimate salvation

through ministrations of the Catholic Church. The Spanish imposed on the New World the semifeudal hierarchies of late-medieval Spain. Under the *encomienda*, the indigenous labor tribute system, indigenous Indians were forced to labor or pay tribute to Spanish landowners and the Crown. The harsh treatment of the Indians, combined with the lethal impact of alien diseases such as smallpox, resulted in a massive decline in the Indian population. Only in nineteenth-century Australia was extermination of the aboriginal population by colonial settler society undertaken on a comparable scale, the remnant indigenous Australians being sent to isolated stations under missionary or government “protectors,” in expectation of their eventual demise.

Under pressure from the Catholic Church, the New Laws of the Indies in 1546 sought to curb the power of the conquistadores by restricting Indian tribute and forbidding forced labor. Yet the socioeconomic structures of colonialism persist in much of Latin America even today. Only Indians who inhabited environments too hostile for European settlement escaped the predatory colonialism of the New World, to be treated as conquered subjects under the administrative authority of settler governments.

Following the Papal Treaty of Tordesillas in 1494, defining Spanish and Portuguese spheres in the New World, the Portuguese monarchy divided Brazil into twelve captaincies in 1533. Few captaincies generated the wealth the Crown had anticipated, and therefore, in 1549, the colony was reunited under a captain-general, with prosperity based on slave sugar plantations and exploitation of forest resources. Following the French occupation of Portugal in 1808, the Portuguese monarchy-in-exile relocated to Brazil, a rare instance of direct monarchical colonial governance that ended in a bloodless republican coup on November 15, 1889.

It was the rise of the sugar plantations in the islands of the West Indies, based on African slave labor, that transformed colonialism from a relationship of conquest to that of master and slave. The power of colonial governors paled with the rise of the West Indian plantocracy, the sugar barons whose wealth and political influence brought them into the nobility. Sugar restructured colonial social relations around the tyranny of

production. The Dutch, British, and French seized West Indian sugar islands and fought each other for dominance in the African slave and the Asian spice trades. However, with few exceptions, European colonization in Africa, India, and the Far East was confined to coastal enclaves and trading forts managed by charter companies.

The Cape of Good Hope and Batavia (Java) were not Dutch colonies but property of the powerful Dutch East India Company. Local Indonesian rulers were forced into vassalage to the governor of Batavia, appointed by the company to look after its commercial interests. In India, the English East India Company, founded in 1600, steadily extended its authority by a combination of treaties and conquest. Company rule under Robert Clive in Bengal after 1765 was corrupt and predaceous but grew into an efficient tax-collecting administration. The India Acts of 1773 and 1784 increased parliamentary oversight of the company's activities, but distance and poor communications meant that considerable power was exercised by local officials. British expansion in India arose from piecemeal local initiatives, subsequently sanctioned by Parliament.

Company colonization was based on rudimentary administration. Local rulers in Africa, India, Indonesia, and Southeast Asia were forced to recognize the companies' hegemony. As long as they maintained order and paid tribute and as long as trade prospered, vassal princes were allowed to rule their people as they saw fit. In contrast, the Russian colonization of Siberia was tightly controlled by the czar, with planned serf settlements policed by Cossack soldiers.

In 1799, control of Indonesia passed to the Dutch government. In 1830, Governor-general Johannes van den Bosch introduced the *cultuurstelsel*, obligatory cash crop cultivation and payment in kind, administered through hereditary regents and village chiefs loyal to the colonial masters. Exposure of corruption and oppression under the *cultuurstelsel* state commercial monopoly led to reform in 1870s. Dutch district administrators, or *controleurs*, with wide discretionary powers replaced the regents, and the private plantation economy was introduced. From 1901, Dutch administration was proactive, seeking to bring the Javanese into the colonial economy by social engineering through education and development.

At the end of the Napoleonic Wars, Britain annexed the Cape Colony of South Africa and the cinnamon island of Ceylon from the Dutch. In the Cape, British colonial governors ruled both European settlers and indigenous Africans with autocratic humanitarianism. In Ceylon, as in princely India, governance was indirect, exercised through the landed Sinhalese nobility. India only passed under direct British control in 1858 following the Indian mutiny, when rebels supported by the Mughal emperor tried to overthrow company rule.

The nineteenth-century transformation from informal commercial empire to European colonial control was accomplished by often-violent confrontation, as indigenous states were forced to surrender sovereignty to the new imperial powers. Even when the transfer of power was done by treaty, the threat of coercion was always present. The exploitation of Congo Free State commercial colonialism was only partially moderated under Belgian administrative paternalism. German colonial administration never evolved beyond the era of conquest and military administration before being overtaken by World War I and the loss of its colonies.

With the rise of nineteenth-century racism and cultural imperialism, colonialism became increasingly intrusive in law, education, taxation, and the organization of labor. Yet the colonizers lacked the resources to govern their vast territories simply by force of arms. They required local cooperation from people who did not challenge European hegemony. Distance was maintained by segregation, and opposition undermined policies of divide and rule. In British India, ultimate power rested with the secretary of state for India in London, acting through and on the advice of the governor-general or viceroy in India. The country was divided between British India, directly administered by British officials, and the princely states, which retained a measure of local autonomy. The system was autocratic and centralized under the viceroy, assisted by an advisory executive council, and from him to provincial governors and down through the bureaucracy to the touring district officers—the face of British imperial rule to most Indians. Though empowered with judicial and police powers, their primary task was to supervise taxation collected through indigenous institutions by Indian officials.

British indirect rule, as formulated by Sir Frederick (later Lord) Lugard in *Dual Mandate in Tropical Africa*, provided an ideological doctrine of British rule in nonsettler sub-Saharan Africa. Building on Indian precedents, it gave administrative recognition to existing territorial entities and indigenous institutions within a framework of overarching British authority. Colonial officials maintained a careful image of ruling through “native administrations,” which exercised considerable parochial power and budgetary autonomy through retention of a proportion of local tax revenues.

In British settler colonies, such as Kenya and Southern Rhodesia, indirect rule remained the overarching ideology of native administration, but African interests were persistently subordinated to the interests of white settlers, though never to the extent as in French Algeria, colonized from 1830. The 1848 French constitution integrated Algeria as a department of France, entitled to elect deputies to the government in Paris. Arabs were subordinated to the political control and interests of French settlers, with only the southern military zone remaining under the military administrators of the Bureaux Arabes.

In contrast, the French protectorates of Morocco and Tunisia of the 1880s were administered in the names of the sultan and bey, respectively, though power lay with the French resident-general and his officials. South of the Sahara, France conquered a vast empire extending from its old coastal enclaves on the Senegal River across the Sahel beyond Lake Chad and south to Gabon. The two great colonial federations of French West Africa and Equatorial Africa were presided over by governor-generals, based at Dakar and Brazzaville, respectively. These were highly centralized administrations. Only Paris could enact colonial legislation. The governors-general were responsible to the colonial minister in Paris, in turn controlling the budget of subordinate governors of individual colonies. At the district level, the French *commandant du cercle*, or area commander, was dependent on local cadres, often appointed from the indigenous police. Local chiefs were used as agents of administration, but there was little pretext of ruling through indigenous institutions.

A similar system operated in French Indochina, where an autocratic governor-general, responsible to the colonial minister, ruled directly

through French officials down to the village level, with local chiefs co-opted as civil servants. French Indochina was funded by a head tax, supplemented by state monopolies on the sale of salt, alcohol, and opium. As in Algiers, French settler interests dominated the elected advisory *conseil* (council) in Saigon.

Although British indirect rule envisaged the creation of more effective native administrations, the French civilizing mission was the transformation of subject peoples into loyal French men and women. Through education and examinations, it was theoretically possible for an African or a Vietnamese to obtain French citizenship, with all its privileges. Yet in reality, the criteria for citizenship were manipulated to ensure that subject citizens never threatened French political power.

Late Portuguese administration in Africa and the Far East, which underwent reform only in 1907 and 1930, resembled centralized French administration, with power in each of the colonies being vested in a governor-general who appointed Portuguese administrators if funding and personnel were available. The colonized had no civil rights, which were accorded only to settlers and those few subjects raised to the rank of *assimilato* (assimilated person).

The undemocratic, unresponsive, and often exploitative and arbitrary institutions of colonial rule became the cultural legacy of the colonized, with local elites, who often held many of the same condescending attitudes toward the poor and uneducated as their formal colonial masters, taking the latter's places in positions of leadership.

Columbian Exchange

Christopher Columbus's journeys to the New World brought various cultural, ideological, and biological consequences. The contacts between cultures resulted in a new way of life that was different for all parties involved, something that would influence the chain of events for years to come. This contact between Old World and New has been termed by many scholars the Columbian Exchange, and it had both positive and negative aspects for Europe and the Americas.

On the positive side, two polar opposites exchanged essential cultural traits and ideologies. American indigenous foods such as maize, potatoes, and tomatoes became staples in the European diet; seasonings such as paprika and hot peppers revolutionized the taste and texture of European cuisine. The turkey, indigenous to South America, became an icon with Anglo-American celebrations of settlement and thanks. American plants such as tobacco, cocoa, and American cotton transformed European culture in more ways than can be counted. Europeans added to the American indigenous diet through the introduction of sugarcane, rice, wheat, onions, grapes, salad greens, and fruits such as oranges, plantains, bananas, lemons, and figs. Further changes were made when animals—horses, dogs, pigs, cattle, chickens, sheep, and goats, among others—arrived with Columbus on his second voyage to the Americas in 1493.

At the same time, ideas were being exchanged. Although mostly by force, European religious ide-

ologies and beliefs were adopted by the Amerindian population. Many resisted, but papal measures such as the *Requerimiento* edict forced conversions under the threat of imprisonment or death. Other American natives freely embraced Christianity or selectively accepted certain beliefs and joined them with their own. Europeans also brought technology to the indigenous population through the introduction of new tools and processes. In return, Amerindians taught Europeans skills in architecture, agriculture, and food preservation. Furthermore, Europeans realized that their heavy fabrics and clothing were inappropriate for their new environment and selectively embraced Amerindian styles and dress.

Despite the positive “creolization” of cultures that occurred in the New World, there was a dark side to the Columbian Exchange, especially with the introduction of epidemic diseases to the Amerindian population of the Americas. Smallpox, influenza, cholera, typhus, malaria, yellow fever, measles, and pneumonia were not always epidemic in Europe, but their effect on the isolated immune systems of the Amerindian population produced disastrous effects. These diseases spread quickly and led to the disappearance of entire peoples in the Americas. With the Amerindian population greatly reduced or incapable of resisting, Europeans were able to settle newly unpopulated areas with ease.

Columbus, Christopher (1451–1506)

The Genoa-born explorer Christopher Columbus is considered the first modern European to encounter the Americas. His discoveries opened the way to a new world that the European powers would exploit for its apparently limitless natural resources and manufacturing and market possibilities. They also set in motion the destruction

Christopher Columbus is greeted by Queen Isabella and King Ferdinand of Spain upon his return from his first voyage to the Americas in 1492. Columbus ultimately failed in his goal to find a western sea route to China and the East Indies. (Library of Congress)

and subjugation of indigenous populations and the displacement and enslavement of millions of Africans in support of various mercantile enterprises. In the realm of science, Columbus “proved” that the world was not flat, and he detailed the principle of compass variation and described the diurnal rotation of the North Star.

Columbus sailed with the Portuguese merchant marine and worked as a chart maker, sugar broker, and trader, encountering seamen who believed in the existence of rich islands far to the west. Hoping to find those mythical islands as well as a western route to the East Indies and China, Columbus began petitioning the Spanish rulers, King Ferdinand of Aragon and Queen Isabella of Castile, for support in 1486. They rejected him at least twice, but in 1492, Isabella decided to back him. On August 3, three small ships sailed off in search of a route to the east that would circumvent the Ottoman Empire and allow Spain access to precious stones and metals, spices, and souls for the

Catholic Church. There was a sense of urgency to the expedition because Portuguese explorer Bartolomeu Dias had already begun sailing around Africa on the same quest.

On October 12, 1492, Columbus planted the Spanish banner on San Salvador. He sailed to Cuba, then landed on Hispaniola, where he found gold and spices and built a stockade using timber and supplies from his flagship, which had run aground. Thirty-nine men were left to establish a colony, and the remaining ships sailed for home on January 16, 1493.

A second fleet reached Dominica on November 3. It continued on to Hispaniola, and on November 27, Columbus found his stockade destroyed and its defenders dead. By January 2, 1494, he had founded a city, La Isabela, and begun to reconnoiter the island. That spring, he explored the Cuban coast and Jamaica; he decided that Hispaniola was the land of Sheba and Cuba was part of China. An effort to conquer Hispaniola devastated the in-

digenous population as well as the island itself. When Columbus left on March 10, 1496, he placed his brothers Bartholomew and Diego in control of La Isabela.

Although the returns from the first two voyages had proven disappointing, Ferdinand and Isabella agreed to finance a third trip. Six ships set off on May 30, 1498, under Columbus's command: three carried supplies for Hispaniola, and three were directed to explore further. Columbus made landfall on Trinidad and on Venezuela's Paria Peninsula and explored the Orinoco River delta, realizing by its freshwater that he had discovered a new continent.

In the meantime, a rebellion against his brothers had taken place, and Spain had sent its chief justice, Francisco de Bobadilla, to Hispaniola to resolve the situation. Arriving on August 23, 1500, Bobadilla found all three brothers responsible for the unrest and had them sent back to Spain to stand trial. Suffering from a variety of illnesses, Columbus wrote to the king and queen asserting the strength of his navigational skills and his belief that he had almost reached the Biblical Paradise and the fields of gold that were sure to be nearby.

When Ferdinand and Isabella met with Columbus late in December, they expressed confidence in his seafaring but deplored his actions as governor. The following October, they agreed to back a fourth voyage, convinced that a declining Columbus was more likely than any replacement to fulfill their dreams of riches and glory. Perhaps they also feared that if they rejected him, Columbus would offer his services to Portugal or Genoa.

On May 9, 1502, Columbus led four ships from Cádiz (the new governor, Nicolas de Ovando, had been granted thirty). Forbidden to return to Hispaniola, he was to continue investigating the lands he had found on the last voyage and search for gold and a passage to India. He landed on Martinique on June 15 and, disobeying orders, attempted to enter Santo Domingo on Hispaniola two weeks later. Rebuffed by Ovando, he explored parts of Jamaica, Cuba, Honduras, and Nicaragua and continued along Costa Rica and Panama, finding gold in Veragua. He tried to set up a trading post in February 1503, but the hostility of the indigenous peoples and the poor condition of his two remaining ships forced him to turn north. The

ships got no farther than Jamaica, where the small band was cast away in June: it would not be rescued for another year.

Columbus returned to Hispaniola on August 13, 1504, and sailed for Spain on November 7, returning to the news that Queen Isabella was dying. He spent the next year following the court and trying to gain an audience with King Ferdinand, hoping to receive the gold from Hispaniola that he had been promised as well as the credit he believed was his due. Unsuccessful in these efforts, he died on May 20, 1506.

Commonwealth

The Commonwealth is a free association of the United Kingdom and about fifty states, all except Mozambique having at some time been part of the British Empire. Its members comprise approximately a quarter of the world's population.

Its origins lie in the nineteenth-century British dilemma of how to give white settler colonies, as opposed to tropical colonies, more autonomy and yet keep them firmly linked to Britain. In the 1840s, Canada became the first colonial holding to be given "responsible government" (which eventually amounted to virtually full internal self-government), and by World War I, the list included Australia, South Africa, New Zealand, and Newfoundland.

When Queen Victoria celebrated her Silver Jubilee in 1887, Prime Minister Lord Salisbury took advantage of the occasion to hold the first Colonial Conference. Further conferences followed in 1894, 1897, and 1902, allowing the colonies to discuss matters in which Britain still predominated, such as defense and telegraph cables. Participants in the 1902 meeting decided that the gatherings (now called the Imperial Conferences) should be held every four years, and the white

settler colonies were to be called dominions. A new Dominions Office was set up, separate from the Colonial Office.

With their massive contribution to World War I and their different geographic requirements, the dominions felt an increasing need to have some autonomy in foreign affairs. The 1926 Imperial Conference defined *dominion status* and *dominions* as “autonomous communities within the British Empire, equal in status, in no way subordinate to one another in any aspect of their domestic or foreign affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations.” This statement was incorporated in the 1931 Statute of Westminster, which in theory gave the dominions the right to separate diplomatic representation. In fact, however, many of the dominions continued to look to Britain to take a lead in defense and foreign relations until after World War II.

World War II saw the dominions (with the exception of Ireland) come to Britain’s aid much as they had in 1914, but it also accelerated the decolonization of colonies with non-European majorities. India’s and Pakistan’s 1947 independence and entry into the Commonwealth (the word *British* having been dropped by then) marked the beginning of a transformation from a commonwealth of settler colonies to a more kaleidoscopic association of nations. These nations were, nevertheless, linked by British legacies in areas as diverse as parliamentary forms, professional practices, sport, and legal practice.

When India became a republic in 1949, allegiance to the Crown was replaced by recognition of the British monarch merely as head of the Commonwealth. These days, the various heads of government within the Commonwealth meet every two years, and similar meetings are held by the ministers of finance, health, education, and so forth. A secretariat, with a secretary-general, was established in London in 1965. Where the original Colonial Conferences were inspired by the idea of coordinating “Britons overseas” and strategic concerns, the modern Commonwealth is self-consciously multiracial and does its most valuable work in facilitating aid, advice, and exchanges in arenas as varied as education, agriculture, and law.

Communications

The building of empires was almost synonymous with the development of technologies to improve the efficiency and speed with which the central regions could communicate with the periphery. In the fifteenth and sixteenth centuries, for example, Europe dominated the rest of the world in part because of the dramatic improvements in shipbuilding techniques. The same can be said of the English in the nineteenth century, when the invention of the steamship, the railroad, and the telegraph allowed them to dominate their European counterparts on the seas and within the colonies.

But the notion that communications were important to empire building did not start in the fifteenth century, nor was it confined to Europe. Roman and Chinese rulers, for example, understood the fundamental importance of having effective communication routes in maintaining the wealth and cohesion of their far-flung empires. To this day, evidence remains of the roads, bridges, and buildings left behind by both empires. In fact, the excellence of their communications systems helps to explain how two of the world’s largest empires lasted for several centuries. The Chinese also opened and maintained the famous Silk Route that brought silks and other goods from Asia to the Romans and, once that empire had collapsed, to the various European nations. In fact, the Europeans began to ply the seas in earnest in the fifteenth century partly because the reliability of the Silk Route came into question when the Chinese could no longer guarantee the safety of traders who used it.

On the other side of the Atlantic, in the fourteenth century C.E., the Incas managed to forge a

huge empire in less than a century. They did this in part by building an impressive network of highways, formed of paved roads and bridges, that permitted their armed forces to move rapidly throughout the empire. But these roads were also used by the *chasquis*, highly trained runners who memorized a variety of messages and relayed them by means of cleverly spaced way stations. This system was engineered so that news could travel about 200 kilometers in a single day. Thanks to this remarkable communications infrastructure, the Inca rulers were able to impose and maintain a coherent and rational political, economic, and social system that would not be matched until the advent of modern mass communications in the second half of the nineteenth century. The downside of this highly organized social structure, however, was that it fomented a great deal of resentment and resistance among many of the subjugated nations that formed the empire, thereby destabilizing the Incas just as the Spanish conquistadores arrived in the area in the 1520s and 1530s. Paradoxically, what should have been a source of strength was transformed into a source of weakness in a crucial period.

Like their predecessors, the leaders of the European empires were aware of the need to maintain efficient communications between the home country and its colonies. In the sixteenth and seventeenth centuries, the travel and communication routes were used mainly to transport goods and people between the colonies and the home country, but they were also used to transmit a variety of personal and official messages.

Until the nineteenth century, mariners were forced to rely on favorable winds and currents to improve the time it took to make trips across the oceans. The few technical improvements made until the end of the eighteenth century basically ensured that ships sank less frequently in storms but shaved only a few days or weeks off trips that could last for several months. The invention and improvement of the steam engine in the second half of the eighteenth century changed all that. When engineers managed to place these engines on ocean liners in the early nineteenth century, trips that used to take several months could now be accomplished in several weeks. Even steamships were dramatically improved over time: in 1857, it took forty-two days to go from southern

England to Cape Town in South Africa, but by the end of the century (in 1893), the trip only took nineteen days.

The second major communications innovation in the nineteenth century was the railway. Of all the European colonies, India was probably one of the most favored in this regard. Although several railway projects were planned in the 1830s and 1840s, none of them ever became reality. The first freight train in India began operations in December 1851. The first passenger train made its maiden voyage in April 1853 between Bombay and Thane; the trip took one hour to complete and covered 35 kilometers. By 1860, about 1,600 kilometers of track had been laid in India; by 1870, the number jumped to over 8,000 kilometers. Although these numbers pale by comparison with those in Great Britain (2,400 kilometers of track in 1840, 14,600 in 1860, and 25,000 in 1880), India's total track length in 1870 still exceeded that of the other colonies and even compared favorably to certain European countries (such as Belgium and Russia).

On the African continent, however, the situation never developed as robustly. Although British and French imperial officials had several ambitious plans in mind, none of them were ever completed. Cecil Rhodes of Great Britain, for instance, proposed a railroad that would connect the Cape in South Africa with Cairo in Egypt. The French, for their part, thought of building a trans-Saharan railroad connecting their North African colonies with French West Africa. One of the more important rail projects that *was* developed during Africa's colonial period, the Congo-Ocean Railway, was completed at a terrible price. Begun in 1921, this railroad connected Pointe-Noire on the Atlantic coast to Brazzaville in the interior and was about 450 kilometers long. Tragically, this ambitious project caused a very high death toll among the Africans who worked on it, more or less willingly, until its completion in 1934. In fact, scholars now estimate that anywhere between 15,000 and 20,000 Africans were killed in thirteen years. Ultimately, when the African nations became independent, most of the railways built by the Europeans covered only a fraction of the continent.

But perhaps the greatest communications revolution of the nineteenth century was the telegraph.

The first telegraphic line in Europe was inaugurated in 1845. (It had been tested for the first time by Samuel Morse in the United States in 1837; the first commercial line was inaugurated, also in the United States, in 1844.) The ability to communicate virtually instantly across the entire world was, to put it mildly, quite revolutionary. It made the administration of the colonies that much easier for the home countries, since they no longer had to rely exclusively on ships for their communications. This factor certainly explains why the first experimental transatlantic telegraphic transmission was tested between England and Newfoundland in 1858 and why the first regular service was begun soon after, in 1866.

In general, all of these technologies improved communications between the home countries and the major colonial urban centers, but they did very little to improve communications within the colonies themselves. Since the railroads built in the colonies were designed to take primary goods to colonial port cities as rapidly as possible, they often bypassed small communities; as a result, many of these lost an important communications tool. Several small communities did, however, benefit from the appearance of passenger trains, for they usually made more frequent stops and could be used to transport letters and other printed materials. The same can be said of the telegraph. It was a highly efficient tool to transfer information between large colonial cities to the home country but was not quite as efficient within the colonies themselves, since the distribution mechanisms from the few major centers to the rest of the country were not as efficient as they might have been. By controlling the flow of communications in this manner, the home countries hoped to keep the colonies dependent on them for their survival.

As hinted earlier in relation to the Inca Empire, improved communications did not always guarantee the cohesion of empires. On the contrary, as became amply evident in the twentieth century, they even hastened their downfall by making it easier for nationalists or revolutionaries to broadcast their ideas and to organize resistance to the colonial power. A prime example of this use of modern technology was Mohandas Gandhi's tactic throughout the 1930s of gathering large but peaceful crowds to protest against and destabilize the British admin-

istration. The success of his actions was due in part to the presence of modern forms of transportation in India, most notably railways. Conversely, overdependence on technologically developed modes of transportation could also precipitate the end of colonial hegemony. Such was the case in the French Indochina War, when France's ability to move goods and people over land between Hanoi and points south was routinely compromised by the destruction of paved roads and railroads. During a number of battles, the Viet Minh's ability to use people and animals to transport goods and carry messages often created tremendous difficulties for the French army. This was nowhere more evident than during the Battle of Dien Bien Phu, when the Viet Minh managed to carry large pieces of equipment through the jungle even as the French were no longer able to ship in matériel or soldiers because the landing strip had been completely destroyed. In a sense, then, the communications revolution of the nineteenth century held within it the seed of the destruction of the great European empires.

Communism

Communism—or, more specifically, the Marxist variation of communism—went through several distinct stages in its approach to Western imperialism and the rise of European global empires. Karl Marx himself, though he wrote little on the topic, argued that colonialism might, in fact, be a useful and necessary stage in the development of world communism. By colonizing "primitive" and "feudal" societies, Western powers accelerated their history to the capitalist stage of economic de-

velopment, a necessary stage for the ultimate triumph of communism.

Vladimir Lenin, the first significant Marxist thinker to look at the question of imperialism in a systematic way, wrote that imperialism was “the highest stage of capitalism.” By this, he meant that it was the most recent manifestation of capitalism’s various incarnations and thus the most prone to its inherent contradictions. In practice, specifically in its Russian manifestation, “real-world” communism—as opposed to the theoretical forms in Marx and Lenin’s writings—had a contradictory approach to colonialism.

Real-World Communism

On the one hand, the early Bolshevik governments acted to disengage the new Soviet state from the imperialist adventures of the old Russian Empire in places such as Port Arthur (now Lüshun), China. In addition, Lenin’s government exposed the secret World War I treaties signed by France and Britain (with Russia as an observer), whereby the old Middle Eastern territories of the Ottoman Empire would be distributed among the three European powers, despite promises to the Arabs of postwar independence.

Yet when it came to dismantling those non-Russian territories acquired by Moscow since the early modern era—notably in Central Asia and the Caucasus—the Bolsheviks were adamant: those lands had to remain as part of the new Soviet Union. It would, they argued, be better for the protection of the Soviet Union and good for the people of these lands, as communism was a superior form of social and economic organization.

Outside the old Russian Empire, Soviet communism went through a major change in attitude—from aloof to enthusiastic—over the course of the twentieth century, with the 1950s as the benchmark period. As noted earlier, from the 1920s to the 1940s, Soviet Communists voluntarily abandoned previous Russian colonies, such as Port Arthur in China. Yet neither the Comintern, the Moscow-controlled international organization of national Communist parties, nor Communist countries such as the Union of Soviet Socialist Republics (USSR) provided any boost for decolonization per se, owing to three reasons.

First was the Leninist principle of proletarianism, which only approved of anticolonial efforts

that were led by working-class parties. As most interwar anticolonial movements were nationalist-oriented, among them the Indian nationalist effort led by Mohandas Gandhi’s Indian National Congress, orthodox Leninists found it unacceptable to embrace a decolonization that might only end up with the establishment of new bourgeois regimes.

Second was the role of fascism, the most virulent enemy of communism during the middle years of the twentieth century. When Nazi Germany and Japan publicly—and rather hypocritically, given their own expansionist agendas—pledged their support to nationalist movements against British and French colonialists in North Africa and Southeast Asia, Moscow became worried by the connection between anticolonialism and right-wing extremism. In short, fascism’s public embrace of anticolonialism tarnished the cause in the eyes of many Bolsheviks.

Third was, quite simply, the limited capacity of Communist institutions in the years leading up to World War II to actually aid anticolonial struggles in any meaningful way. That is, the Comintern might offer rhetorical support, particularly to anticolonial struggles led by Communists, but it could do little in the way of providing financial or military support. And Moscow’s main foreign aid effort in the 1930s was directed not at a colony of the West but at a former imperialist power, Spain.

With the Soviet Union’s newfound post-World War II strength and its superpower ambitions, Communist assistance toward anticolonial struggles expanded and accelerated, particularly in the 1950s, as nationalist uprisings spread throughout the Third World. Although much of the actual fighting and many of the political struggles were conducted by local Communists, Moscow offered some aid in the birth of a number of Communist-influenced or Communist-dominated Third World regimes that emerged in territories formerly ruled by European (or Japanese) colonialists between the 1940s and the 1970s; the list included North Korea, the short-lived Democratic Republic of Congo, and Mozambique. Moreover, the Soviet Union supported left-wing socialist regimes in places such as South Yemen, Benin, and Tanzania and counted a number of supposedly “neutral” countries among its supporters, including Gamel Nasser’s Egypt and Sukarno’s Indonesia.

Five reasons contributed to the symbiotic advancement of communism and decolonization. First was the transformation in Moscow's attitude toward revolution, from a belief that only working-class revolutions were authentically Communist and deserving of support to an attitude that any left-wing, anticolonial struggle was both in the ideological interests of communism and in the strategic interests of the Soviet Union and its Cold War struggle with the United States. The formal transitional signal was observed in 1956, when Nikita Khrushchev denounced Stalinism and called for lessened control over Communist parties.

Hence, as political scientist John Kautsky suggests, the Soviet interest in strategic expansion overrode its belief in ideological expansion. Under this so-called realist argument, newly liberated colonies represented power vacuums that could be filled by pro-Moscow regimes. In other words, any new Third World regime that said it was neutral or was openly leaning toward the Soviet Union in the Cold War struggle was worthy of support.

Communist China

The success of the Chinese Communist revolution in 1949 was an additional inspiration. Beijing—like Moscow before it—did not at first support every nationalist, anticolonial movement, seeing many as being led by bourgeois forces. But after the falling out between China and the Soviet Union in the late 1950s and early 1960s, Beijing was forced to take a more pragmatic attitude; thus, Mao Zedong proposed his “three systems theory,” pledging support to any left-leaning Third World regime that stood against the “new imperialism” of the United States. Indeed, in the 1960s, China declared itself the leader of the Third World, and in its struggle against neocolonialism Beijing even supported the struggle of the Vietnamese—traditionally a rival of China in Southeast Asia—in its nationalist-Communist struggle against both France and the United States. At the same time, China offered material support—in a limited way, given its own economic backwardness—to a few left-leaning nationalist regimes, particularly in Africa. It was Chinese capital and expertise that helped build the railway linking Zambia and Tanzania in the 1960s.

Finally and perhaps most important, communism's influence in the Third World was enhanced

by the simple fact that, in many anticolonial struggles (such as those in Angola, Mozambique, and Vietnam) it was local Communists who featured prominently in the fighting. As they had led the struggle, so they had earned the respect of local peoples and hence power in the early independent regimes.

Case Study: Southeast Asia

The highpoint of communism's influence in the decolonization process was most visible in Southeast Asia, with North Vietnam as a critical case. Vietnamese anticolonialism was once nearly synonymous with nationalism; even its Communist leader, Ho Chi Minh, was an open nationalist in his early years, with the alias Nguyen Ai Quoc (Nguyen the Patriot). Moreover, the revolutionary stance of the Viet Minh—the anti-French force in Vietnam—was less vivid than its nationalism during the first Vietnamese war (1946 to 1954) against the French colonial government.

Before the relationship between the Viet Minh and the USSR solidified in the 1950s, Ho was still able to hope that he would win support in his nationalist struggle from the United States. But once Washington showed itself to be a supporter of the French and, after that, a supporter of the hated, anti-Communist regime in South Vietnam, Ho and the Viet Minh realized that Washington and, by implication, capitalism was enemy. In a sense, it was American hostility—more than Russian or Chinese support—that help weld communism and nationalism together in the Hanoi regime.

During the so-called second Vietnamese war (1964–1975) against the United States, the Viet Minh felt they had no choice but to side unconditionally with the USSR and China, which helped to inspire fellow anticolonial movements in the rest of world to “turn Red.” However, the eventual Communist-led unification of Vietnam witnessed not only the triumph of Communist-led anticolonialism but also the expansion of the Communist sphere.

Conference of Berlin (1884–1885)

The Conference of Berlin—called by its host, the German prince Otto von Bismarck—convened in Berlin from November 15, 1884, through February 27, 1885. At the European negotiating table, where the African continental prize pieces would be awarded, were delegates from more than a dozen parties, including Germany (the conference host), Britain, France, Portugal—each a major contestant—Russia, Austria-Hungary, Denmark, Sweden, Belgium, Norway, and Holland. Present as well were two more-than-interested onlookers—the United States and Leopold II’s International Association of the Congo. Each representative had particular designs—with respect to both territory and trade—on and for the map of Africa that was to be outlined at the conference. The thirty-six articles of the resulting General Act of the Conference of Berlin, signed on February 26, 1885, were divided, albeit unequally, into six chapters. Chapter 1 was concerned with “freedom of trade in the Basin of the Congo”; chapter 2, the shortest (article 9), dealt expeditiously with the slave trade; chapter 3 related to the question of neutrality in the region; chapters 4 and 5, by far the longest (articles 13–33), adjudicated questions of navigation rights for the Congo and Niger Rivers; and finally, chapter 6 laid out the conditions to be observed by the signatories for the “new occupations on the coasts of the African continent.”

Freedom of trade and navigation thus took primacy of place in the document drafted in Berlin to divide and distribute to European predators Africa’s continental resources, along the lines of the “three Cs” that the early British explorer David Livingstone had identified for European imperial aspirations and ambitions: Christianity, civilization, and commerce. Trade and territory would be well instantiated at the continental corners by business concerns and their designates: the work of the Suez Canal Company at the northeastern tip of the continent, begun by Frenchman Ferdinand de Lesseps but ultimately financed through the shares bought by British prime minister Benjamin Disraeli, had been completed in 1869. On the western coast, Sir George Goldie (1946–1925), a British colonial administrator in West Africa, would soon take advantage of the treaty’s terms, and his Royal Niger Company was chartered by Britain in 1886. Just a few years later, in 1889, mining magnate Cecil John Rhodes (1853–1902) made sure that his British South Africa Company would be granted its own charter. But it was the Belgium king Leopold II’s concessions in the Congo Free State that challenged—and abused—the treaty’s international terms on trade and territory and provoked both commercial objections and humanitarian encomiums in the early twentieth century.

The Berlin Conference brought rival European diplomats to the table to make orderly treaty determinations, but it was occasioned by—and laid the grounds for—what has become known as the rather more disorderly “scramble for Africa.” More than a century later, the lines drawn across Africa at the Berlin Conference remain much the same, defining the territorial boundaries of postcolonial African states, and a new scramble for the resources of a decolonized Africa has been undertaken by international monetary and aid agencies alike.

Congo Free State

European penetration into central Africa via the Congo River from the sea was initially blocked by

cataracts and dense forest. The vast river basin remained unexplored by Europeans until Henry Morton Stanley's epic journey from East Africa to the mouth of the Congo between 1874 and 1877. When Britain ignored Stanley's overtures to colonizing the Congo Basin, he accepted a commission from Leopold II, king of the Belgians, to secure treaties and establish outposts on behalf of the International Association of the Congo. The association, ostensibly an international humanitarian and scientific organization, was a guise for Leopold's colonial ambitions. At the Congress of Berlin in 1885, Leopold assiduously played off European rivals, securing the Congo Basin as a sovereign entity—the Congo Free State—under his absolute authority. It was not a Belgian colony and even had its own flag, featuring a gold star on a blue field.

Congo Free State administration consisted of military adventurers drawn from numerous nations. The governor-general in the Congo was responsible to the king, who exercised autocratic powers in the Congo without reference to the Belgian Parliament. However, the king and governor-general had little effective control over the more isolated provincial commissioners, who were lords of their domains with command of local detachments of the colonial army, the Force Publique.

It proved to be a costly undertaking. Leopold II invested much of his personal fortune constructing a railway linking the river system with the sea and on military subjugation of the interior. Deprived of customs duties and direct taxation by the terms of the Berlin Agreement and unable to attract Belgian investment, Leopold sold huge tracts of land to concessionaire companies in which the king secretly owned shares. These companies, often financed by British or U.S. investors, exercised administrative authority and enjoyed lucrative monopolies on mining leases and trade in rubber and ivory.

The automobile craze created a world demand for rubber, and concessionaire companies used violence to force Africans to collect wild rubber. Women and children were held in chains as hostages until they could be redeemed in rubber. Workers who failed to reach their quotas often suffered the loss of a hand as punishment and were forced to terrorize others. In Britain, the Congo Reform Association, led by E. D. Morel, publicized missionary accounts and photographs

of the atrocities, invoking international condemnation of what became known as the Red Rubber Scandal. Leopold II was eventually forced to transfer control of the Congo to the Belgian government in 1908 but not before reaping huge financial rewards.

Congress of Berlin (1878)

The Congress of Berlin was a conference attended by Great Britain, Russia, Germany, Austria-Hungary, France, Italy, and Turkey in June and July 1878, under the presidency of the German chancellor, Prince Otto von Bismarck. The congress reorganized the political order in southeastern Europe, defined the global rivalry for almost thirty years, and opened the era of modern imperialism. It also underlined the progressive disintegration of the Ottoman Empire.

The congress revised the results of the Russian victory in the war with Turkey in 1877 and 1878 to achieve a balance between the interests of the Great Powers in the Balkans and the Near East. It approved the complete independence of former tributary principalities of the Ottoman Empire—Montenegro, Serbia, and Romania—and enlarged the territory of each. The territory of the new Bulgarian state was divided into three parts—an au-

tonomous principality of Bulgaria, tributary to the sultan; a semiautonomous province of Eastern Roumelia; and Macedonia, which remained an integral part of the Ottoman Empire. Russia obtained southern Bessarabia from Romania, a part of Turkish Armenia, and Batum.

Additionally, Austria-Hungary was given a mandate to occupy and administer the Turkish provinces of Bosnia and Herzegovina and the *sanjak* (district) of Novi Bazar between Montenegro and Serbia. Under a special, secret convention with the Ottoman Empire, Britain officially recognized the Asiatic possessions of the sultan and received Cyprus from Turkey for use as a naval base. Bosnia and Herzegovina, Novi Bazar, and Cyprus nominally remained Turkish provinces. The Porte, or government of the sultan, also promised reforms for Macedonia and the Asiatic provinces.

Beyond its immediate results, the Congress of Berlin also revealed some significant trends within a broader international context. The partial dismemberment of the Porte's possessions in Europe meant that the Ottoman Empire had finally ceased to be an effective great power. At the same time, the European concert orchestrated in Berlin removed many of the political fruits of Russian victory and set the limits of Russia's imperial expansion in the Black Sea region, the Caucasus, and the Balkans. The clear demonstration of Russia's weakness led to the reorientation of Serbia and Romania, away from Russian protection to Austrian auspices. Vienna, in turn, had significantly progressed with its expansion in the Balkans. Additionally, the deal over Cyprus marked the beginning of direct British imperial involvement in the Middle East.

In the course of the diplomatic maneuvers in Berlin, the semicolonial partition of Turkey was accomplished by means of various projects and schemes. The British suggested to the Austrians that their two countries could establish protectorates over Asiatic Turkey and the Balkans, respectively. The French, who had succeeded in preventing multilateral discussions on Egypt, Syria, and the holy places in Palestine (which they saw as their exclusive spheres of interest), were encouraged to occupy Tunisia by Germany and Britain. The same proposal to acquire Tunisia was made to Italy by Germany and Austria-Hungary. But the Italians had broader imperial ambitions,

so there were suggestions that they also expand into Albania.

The congress also demonstrated the rise of Germany among the Great Powers, and it intensified contradictions between England and Russia, Russia and Austria-Hungary, and France and Italy in the Balkans and Mediterranean. Nevertheless, the Congress of Berlin settled the immediate issues of concern and paved the way for European imperial expansion in Africa, Central Asia, and the Far East.

Conquistadores

The conquistadores originated as independent medieval agents of Spanish territorial expansion and state formation in the Iberian Peninsula. The Kingdom of Castile, the core of the emergent Spanish state in the late medieval period, pursued the reconquest of the Iberian Peninsula by encouraging military orders of knights to engage in a southward process of expansion (known as the Reconquista) against the Moors. The knights were rewarded with large estates, expropriated from their previous owners, and tributary rights to the labor of the conquered peasants (this latter arrangement was known as *encomienda*). At the same time, these conquistadores were expected to see to the Christian conversion and general well-being of their peasants. With the end of the Reconquista (following the fall of Granada in 1492) and the arrival of Christopher Columbus in the New World in the same year, the mechanisms that had been developed for the Iberian reconquest were reoriented toward territorial expansion and the control of subject populations in the Americas.

Building on the practices of the Reconquista before 1492, the conquistadores were chartered by the Spanish Crown (which, after the marriage of

Ferdinand and Isabella in 1479, was centered on the dynastic union of Castile and Aragon) to advance its interests. In exchange for its endorsement, the Crown received a percentage (the royal fifth) of all booty and land acquired by the conquistadores who organized and operated the expeditions. If they were successful, conquistadores would receive plunder, land, *encomiendas* (large feudal estates), and even titles, facilitating a rise in social status. The incredible success of some conquistadores—such as Hernán Cortés, who led the conquest of the Aztecs between 1519 and 1521, and Francisco Pizarro, who conquered the Inca Empire in 1532—ensured that there was a steady supply of aspiring conquistadores and their financiers. Warfare and resistance continued throughout the entire Spanish era, especially on the margins of empire. However, the process of conquest was at its height during the half century or so after 1492, and during that time, about 2,000 conquistadores exploited tensions within and between the indigenous polities of the Americas to capture almost 2 million square kilometers of territory. This process also delivered as many as 50 million new subjects to the Spanish monarchy, before the excesses of conquest and the ravages of disease reduced the indigenous population to about 8 million by the end of the sixteenth century.

Conrad, Joseph (1857–1924)

Joseph Teodor Konrad Korzeniowski was born in Poland and became a naturalized British citizen in 1886. Conrad's career as a seaman gave him the chance to travel to places such as the West Indies, Africa, Asia, and Southeast Asia. As he noted in the preface to *The Nigger of the Narcissus*, "There is not a place of splendor or a dark corner of the earth that does not deserve if only a passing glance of wonder and pity." In his fiction, Conrad used these places as fluid stages on which to show the outward, rippling effects that individual and group action may have on wider community. In novels

Polish-born British writer Joseph Conrad was a harsh critic of colonialism. His classic novel *Heart of Darkness* explored the brutality of European rule in the Congo. (Library of Congress)

such as *Lord Jim* and *Heart of Darkness*, Conrad's use of the intermediate narrator and multiple perspectives served to enrich the novel as a genre. *Nostromo*, set in South America, may be Conrad's most accomplished work.

In the realm of the modern novel, Conrad was perhaps the most outspoken critic of European imperialism and expansionism. However, he has come under severe attack by postcolonial writers and critics. The Nigerian novelist Chinua Achebe, for example, has called Conrad a "bloody racist," referring especially to his *Heart of Darkness*. (The West Indian novelist Wilson Harris, though sympathetic to Achebe's views, has taken precisely the opposite view.) In fact, no other modern novel has stirred so much debate as *Heart of Darkness*; few others can claim to have laid such a firm grasp on the postmodern popular imagination. The character Kurtz, a sort of anti-Christ figure and the chief representative of European colonial enterprise, has entered the work and the speech of writers and audience alike. The movie *Apocalypse Now* reenvi-

sioned the novel somewhat, setting the story in the context of the U.S.-Vietnam conflict.

Conservative Party (United Kingdom)

From the 1820s, the term *Conservatives* was applied to members of the British Houses of Parliament who favored keeping reform incremental in order to preserve existing customs and institutions, notably the monarchy, the church, and the aristocracy.

An extension of the vote in 1867 prompted the establishment of a nationwide organization: the National Union of Conservative and Constitutional Associations. This organization received a central party office in 1870. From 1886 to 1922, the party was widely known as the Conservative and Unionist Party. The Unionists were Liberals who crossed over to the Conservative side after their own leader, William Gladstone, supported giving home rule to Ireland. Home rule was, in turn, seen by Conservatives as detrimental not only to imperial unity but also to the union of England, Wales, Scotland, and Ireland, whereby all shared one Parliament. Despite Conservative reluctance and in the face of local insurgency, a December 1921 treaty gave most of Ireland self-government.

Well before the home rule controversy, the Conservatives had emerged as the most vocal supporters of empire, thanks partly to Benjamin Disraeli (prime minister in 1868 and from 1874 to 1880). He added to the proimperial rhetoric of 1872 by buying shares in the Suez Canal in 1875 and having Queen Victoria styled empress of India in

1877. Later on, Joseph Chamberlain (colonial secretary from 1895 to 1903) proposed to strengthen imperial unity by tariff reform, granting lower preferential rates to imperial countries. His ideas caused internal tensions, and the 1906 elections swept the Conservatives from office. It took the onset of a world depression and the decline of global trade after 1929 to allow imperial preference to be introduced by a national government in 1932.

The National Governments of 1931 to 1940 came to be Conservative-dominated, with all but a hard-core few reconciling to the steady devolution of power in the most politically conscious colonies, such as India. After World War II, from 1951 to 1964, Conservative governments oversaw accelerating decolonization, aiming to preserve domestic economic strength and global influence by producing cooperative successor states, even at the cost of "premature" independence.

Returning to power from June 1970 to February 1974, Edward Heath did nothing to reverse the Labour Party's 1967–1968 decision to withdraw from "East of Suez," and he led Britain into the European Economic Community (EEC) in January 1973. Again out of power from 1974 to May 1979, the Conservative Party returned to power with the governments of Margaret Thatcher in 1979 and negotiated an end to rule by white British settlers in Southern Rhodesia, which became Zimbabwe in 1980. Despite fighting to retain the Falklands Islands in 1982, the Thatcher government in 1984 negotiated the formula by which Hong Kong would be returned to China in 1997.

Constitutionalism

Constitutionalism refers to the British approach to decolonization—an approach that emphasized the colonies' gradual progression toward self-government but was designed to maximize the influence of the former colonial power in postindependence states. The European colonial powers had diverse imperial philosophies, which determined their patterns of colonization and decolonization. British colonial strategies (except in Ireland) focused on devolution of power and indirect rule, and they were designed to cause minimal disruption to traditional local politics while allowing Britain to control trade, external relations, and defense. Even in those colonies that had a governor, an executive council of officials was established to advise the governor, and later, legislative councils would often be formed to prepare legislation. This approach differed from other European colonial strategies, especially those of the French, which aimed to achieve the full assimilation of colonies into the French nation.

The British approach to colonization, which some authors argue was one that acknowledged that colonies would eventually gain self-government, was an attempt to reconcile the military, social, and economic realities of colonization with contradictory beliefs in liberty, laissez-faire government, and parliamentary democracy. It was also shaped by the political writings and legislation of the British statesman Edmund Burke, who argued that the most effective form of colonial government was one in which laws were adapted to “the genius, the temper and the manners of the [indigenous] people.” Although capable of fierce repression, particularly in Ireland, India, and Kenya, successive British governments in many cases responded to colonial unrest with reforms. The British policy of encouraging nationalist movements to take a constitutional path to self-government also developed out of the nineteenth-century experience with settler colonies in North America, Australia, and New Zealand. Forms of political representation were developed in these colonies because settlers believed they retained their English citizenship rights in the colonies. Gradually, these representative bodies were granted legislative rights, leading to self-government of internal and, later, external affairs.

British rhetoric constantly proclaimed that Britain's great colonial mission was to gradually bestow enlightened English traditions of parliamentary democracy and responsible government on “backward” colonial peoples. In reality, Britain had no intention of relinquishing its influence around the globe. Instead, responding with pragmatism and flexibility, it opted to follow Edmund Burke's formula and “reform in order to preserve” its power. Its policy of constitutionalism was based on the recognition that military repression and annexation were no longer effective methods of maintaining an empire, particularly after the end of World War II. Instead, by agreeing to a gradual process of constitutional reform, Britain hoped to control the pace and form of decolonization and to retain close economic, political, and strategic ties with newly emerging states.

As the forces of nationalism grew in its colonies—often as a result of colonial policies designed to create centralized, unified administrative and economic territories—British officials sought to shape local politics to favor the supremacy of moderate nationalists or to form alliances with traditional, socially conservative elites. They would then grant gradual constitutional change in the hope that British influence over the colony would continue after self-government. Their most successful implementation of this constitutional approach occurred in the colony of Ceylon (later Sri Lanka), where, because of its strategic importance during World War II, the British agreed to grant dominion status in return for arrangements that guaranteed Anglo-Ceylonese defense and external affairs cooperation. Despite their concerns about the ethnic animosities between the majority Sinhalese and the minority Tamil and Muslim communities, the British were able to work with the socially conservative Sinhalese elite to retain their influence over the newly independent Ceylon. So, too, in Malaya were the British able to ensure ongoing Malaysian involvement in Commonwealth trade and defense by granting independence in 1957. Prior to World War II, Malaya was a series of dependencies with different political and administrative traditions. After 1945, the British established the Malayan Union in an attempt to create an effective central administration in alliance with socially conservative traditional rulers. In 1954, the British govern-

British conservative philosopher Edmund Burke argued that the most effective colonial governments would be organized to meet the needs of the indigenous peoples over which they ruled. (Library of Congress)

ment accepted the recommendation of the Malayan Elections Committee that the majority of positions in the Legislative Council of the Federation should be elected. The Alliance Party won all but one of the elected seats, and a constitutional conference was held in London in January and February 1956, which negotiated the terms of Malayan independence.

There were many cases where the British policy of gradual constitutional reform did not result in British control over the shape of the newly independent state and the maintenance of its ties with Britain. In India, for example, a lengthy process of constitutional reform came unstuck after World War II as a result of campaigning by India's largest party, the Indian Congress, to end British rule in India and the worsening of relations between the Indian Congress and Muslim League parties. Ultimately, Pakistan was partitioned from the rest of India, independence was granted in August 1946, and both states became republics in 1950. Similarly, in the West African colony of the Gold Coast, the process of constitutionalism did not deliver an obedient dominion under conservative local rulers. Na-

tionalist agitation and the formation of Kwame Nkrumah's Convention People's Party forced the British to concede more rapid reform under a new constitution in 1950, which introduced universal suffrage, a larger elected assembly, and devolution of internal affairs to this assembly. The British hoped that this concession would favor the moderate coalition of chiefs and urban leaders, but instead, Nkrumah's party won a landslide victory in 1951; Nkrumah himself was released from jail to become the chief minister of the assembly. In 1954, Nkrumah achieved full self-government of internal affairs, and by 1957, the Gold Coast had become the independent Republic of Ghana.

The British did not adhere to this policy of decolonization by peaceful constitutional change uniformly across their empire. In Central and East Africa in the 1950s, Britain resisted nationalist calls for independence with greater resolve and brutality. In Kenya, for example, African nationalism was dismissed by the British as radical and disruptive. They tried to suppress African nationalist agitators and worked toward developing a scheme for a multiracial constitution that would preserve the leadership of the large white community in Kenya. Demands by the largest Kenyan tribe, the Kikuyu, for changes in land settlement and larger representation in the Kenya legislative assembly were rejected by the British, resulting in the development of a violent opposition movement, the Mau Mau, which was active from 1952 to 1956 and was ruthlessly suppressed by British and local white forces. By failing to make constitutional concessions, the British had provoked the growth of extremist nationalist groups. It was not until the 1960s that a series of constitutional conferences of all Kenyan groups were held in London, and independence was achieved in 1963. Kenya became a republic the following year. In Ireland, British (and Northern Irish) opposition to Irish home rule in the late nineteenth century, together with the ruthless repression of the failed Easter Rising of 1916, ensured the supremacy of physical-force nationalists over constitutional nationalists and led to the Irish war of independence from 1919 to 1921. By 1949, Ireland had become a republic.

British support for decolonization by gradual constitutional reform was designed to maintain British influence over its former colonies. In many

cases, however, the pace of change in these countries and the determination of their nationalist leaders ensured that the British policy did not always deliver control over the shape of these new states and their foreign, trade, and defense policies.

Capt. James Cook, arguably the most renowned European explorer of the eighteenth century, made several expeditions to the Pacific in the 1760s and 1770s. (Library of Congress)

Cook, James (1728–1779)

The renowned navigator Capt. James Cook was born on October 27, 1728. After an apprenticeship sailing on the North Sea, Cook volunteered for the Royal Navy in 1755 and served with distinction in the Atlantic. In 1763, he became surveyor of Newfoundland, a position he held until April 1768, when he was appointed to command the *Endeavour* on an expedition to observe the rare astronomical phenomenon of the transit of Venus across the face of the Sun in Tahiti and to search for evidence of Terra Australis Incognita, the fabled southern continent. After rounding Cape Horn, Cook spent four months in Tahiti, beginning in April 1769, before sailing south, where he sighted New Zealand in October. After a circumnavigation of New Zealand, Cook headed for the east coast of Australia in April 1770, which he charted as the *Endeavour* made its way north to Jakarta. The *Endeavour* eventually reached Britain in July 1771.

Exactly one year later, Cook again set out to search for Terra Australis Incognita; this time, he commanded the *Resolution*, and Tobias Furneaux commanded the *Adventure*. Cook crisscrossed the Pacific, pushing deep toward Antarctica and refining his survey of New Zealand in

addition to producing detailed maps of the central Pacific. On his return to Britain, he published *Observations Made during a Voyage round the World*, a detailed summation of the second voyage that established him as a careful naturalist and important ethnographic observer. Cook's third and final voyage was a search for another geographic phantom, the Northwest Passage that supposedly linked the Atlantic and the Pacific. Cook left Plymouth in July 1776 with two ships under his command, the *Resolution* and the *Discovery*. After sailing via the Cape of Good Hope, he again visited New Zealand before heading to the Pacific coast of North America via Tahiti and Hawaii. In December 1778, Cook returned to Hawaii, but he was killed at Kealakekua Bay on February 14, 1779; the voyage was finally completed under the command of John Gore. The British public celebrated Cook as a national hero, but his real significance lies in his navigational and cartographic achievements in the Pacific. In extending and refining European knowledge of

the region, he laid the foundations for a new age of imperialism there.

Copper

Copper was mined in many parts of Europe’s colonial empires long before those empires existed and was primarily used for jewelry, decoration, and domestic items. It was a significant trading commodity throughout Africa in the form of wire or bars, and cruciform ingots from the Katanga region of central Africa found their way as far afield as China during Europe’s medieval period. In the early modern empires, the metal also had monetary uses, but it was in the later nineteenth century that the growing demands of industrial economies created increased interest in nonferrous metals, particularly copper.

The copper deposits in the Katanga region of the Congo Free State and adjacent areas of Northern Rhodesia began to attract attention from Cecil Rhodes and King Leopold II in the 1890s, although the ultimately vain hope of finding gold there was initially more interesting. In 1912, the Union Minière du Haut-Katanga began full-scale, open-cast working of the highly concentrated oxide ores. The ores became a major source of Belgian financial returns from the Congo and stimulated infrastructure, particularly railway development, in the region. Katanga’s copper mines—that is, its smelting operations—also created a significant market for coal from Southern Rhodesia’s Wankie Colliery.

Northern Rhodesia also had extensive copper reserves, but these were found at much greater depth than Katanga’s and were sulfides, from which it was more difficult to separate the metal. Only in the interwar period were techniques for

treating sulfides developed, largely in connection with Chilean copper. This advance facilitated the opening up of the copper belt in the 1930s, which quickly became a major contributor to the colony’s economy, an economy that was increasingly dependent on copper exports. As an export commodity capable of generating foreign currency, copper was of great significance to Northern Rhodesia’s contribution to the Federation of Rhodesia.

Corn Laws (1804–1846)

Enforced between 1804 and 1846, Britain’s Corn Laws were designed to assure the well-being of domestic agriculture through the promotion of exports and the restriction of imports to and from continental Europe and the colonies. These protective tariffs became politically and economically unviable in the face of social and economic tensions by the 1840s, however, as increased mechanization led to production surpluses, reduced profits, and inflated prices. Although the repeal of the laws would help facilitate the rise of the English middle class, the Victorian embrace of free trade and colonial expansion would foster economic stimulation and imperial consolidation—creating stability through continuing growth.

The Corn Laws were introduced in 1804, when Parliament, dominated by aristocratic landowners, sought to protect agricultural profits by imposing a duty on imported grain. The Napoleonic Wars (1799–1815) and the mechanization of agriculture stimulated increased British wheat production beyond domestic demands, but artificial price increases led to growing social and economic pressures. In 1815, reacting to an uncharacteristic crop failure yet fearful that continental grain might undercut domestic prices in the wake of war, Parliament introduced additional protective measures by permitting duty-free wheat imports

only in the event that the domestic price reached 80 shillings per quarter (eight bushels). Passed in an atmosphere of social tension and civil unrest, the measure was despised by workers who feared rising bread prices and resented by manufacturers who feared demands for higher wages.

Circumstances began to change by the late 1830s, however, facilitated by the political enfranchisement of the new industrial towns through the Reform Act of 1832. As persistent crop failures caused shortages and higher bread prices, the mechanization of British industry facilitated dangerously rapid economic growth, leading to surplus production, low profitability, and depression from 1837 to 1842. Responding to the crisis with a plan to stimulate the economy through free trade, the Anti-Corn Law League began to mobilize the industrial middle classes against the aristocratic landlords. Founded in 1839, the Manchester-based organization maintained that, by continuing to protect wealthy landholders at the expense of the urban poor, increased production costs resulting from inflated grain prices would cause continued economic stagnation. In 1846, the league's leader, political economist and statesman Richard Cobden (1804–1865), convinced Prime Minister Sir Robert Peel (1788–1850) to abolish the Corn Laws. Although the twentieth century would witness renewed regulatory measures, the economic growth stimulated by free trade would facilitate increased interconnectedness throughout the British Empire and the later Commonwealth.

Cortés, Hernán (1485–1547)

Hernán Cortés was born into the lesser nobility in Medellín in the Province of Extremadura, Castile.

In this idealized nineteenth-century illustration, Spanish conquistador Hernán Cortés kneels before Aztec emperor Montezuma in 1519. Cortés would go on to kill Montezuma and occupy his capital of Tenochtitlán the following year. (Library of Congress)

He arrived in Hispaniola (present-day Dominican Republic) in 1504 or 1505 and participated in the conquest of Cuba in 1511. When Diego Velásquez, who led the conquest, was subsequently appointed governor of Cuba, Cortés became his secretary. Velásquez aspired to become governor of the Yucatán and petitioned Charles I of Spain (eventually Charles V, the Holy Roman Emperor) to grant him that office. In 1518, Velásquez appointed Cortés to head the third expedition to the Yucatán; however, he then changed his mind and attempted, unsuccessfully, to prevent Cortés from departing. Cortés eventually set out, on February 18, 1519, and went ashore on the mainland, to the west of the present-day Yucatán, on April 22, 1519, where he confirmed information he had received earlier about the extent and wealth of the Aztec Empire. He founded the town of Vera Cruz and had himself appointed mayor and captain-general in order to provide a legal justification for his plan to compel the Aztec emperor, Montezuma, to

submit to his authority and to that of the Spanish Crown.

On August 16, 1519, Cortés and his followers began their march toward the Aztec capital (Tenochtitlán), where they established themselves and had gained influence over Montezuma by late 1519. In early 1520, Velásquez, who had been formally appointed governor of Yucatán by the king, dispatched a band of soldiers to confront Cortés. This force was defeated by Cortés in a battle near Vera Cruz on May 27, 1520. When Cortés returned to Tenochtitlán from the coast, the Aztecs were in open rebellion against the conquistadores he had left behind. On June 30, 1520, Montezuma and many of his supporters were killed, and Cortés and his men beat a retreat from Tenochtitlán, suffering heavy casualties. By mid-1521, Cortés had reasserted his control over Tenochtitlán. Following unsuccessful attempts in 1522 and 1523 by Cortés's opponents to have him arrested, a formal decree arrived from the king in September 1523, appointing Cortés governor and captain-general of New Spain. However, the struggle for power continued, and Cortés's governorship was suspended in 1526. In 1528, Cortés sought resolution of the conflict by traveling to Spain. On his arrival, the king confirmed Cortés's claim to all his estates and gave him the title of marqués del Valle de Oaxaca, but he was not reappointed governor of New Spain. Cortés then returned to New Spain but occupied no official post. In 1540, he went back to Spain, where he remained until his death in 1547.

Cossacks

The Cossacks (from a word meaning “vagrant” or “freebooter”), semi-independent groups of armed horsemen, formed in the early fifteenth century in Russia's frontier regions. Peasants fleeing enserfment settled along rivers in the southern Russian steppe, where they organized into military units (hosts) for self-preservation. Under Czar Mikhail

Romanov, the Cossacks swore loyalty to Russia's rulers in return for a high degree of autonomy and other privileges. On the frontier, the Cossacks served as both an occupying force and as colonizers. The relationship between the Cossacks and the government was not always a happy one, and there were several Cossack-led rebellions against the government. As the frontiers were pacified, the Cossacks lost much of their military significance, although they continued to serve in the military, where they formed the bulk of the irregular forces. As the Russian imperial period drew to an end, Cossacks were used to put down revolutionary disturbances.

By World War I, however, modern weapons placed the Cossack cavalry at a disadvantage. During the 1917 revolutions, Cossacks participated in the abortive Kornilov coup against the provisional government. In the subsequent civil war, the Cossacks generally sided with the White (or counterrevolutionary) forces against the Bolsheviks. With the Bolshevik victory, the Cossack hosts were disbanded. Their pride in their heritage persisted, however, and Cossacks violently resisted collectivization in the 1930s. In World War II, some Cossacks fought for Germany, where they were not considered as “underclass” as the Russians. Others served in the Red Army or fought as partisans. After the war, Cossacks led lives little different from those of their fellow Soviet collective farmers and workers, although they retained a fierce pride in their history. In the post-Soviet period, there has been an upsurge of interest in the Cossack heritage, especially along Russia's borders where neo-Cossack groups form a nucleus for ultranationalists.

Cotton

The history of cotton dates back as early as 3000 B.C.E., when it was grown and used in the Indus

Valley of India. It was also spun and woven in ancient Egypt and China, and during the European Middle Ages the Arabs spread the plant from India to Spain. It was called *qutun*, the origin of the word *cotton*. During the eleventh century, traders carried the thin, almost transparent, muslin cloths of the East to Europe. The appearance of these cloths brought anguish to the wool and flax growers, who attempted to keep them out. The name *muslin* originated from Mosul, Iraq, which was once a large manufacturing city. In the Americas, early explorers found cotton growing in the West Indies, and the Aztecs were skilled in spinning, weaving, and dyeing the material. Ancient mummies in Peru were wrapped in local cotton.

The cotton plant, of the genus *Gossypium*, had a dual influence in colonialism. The tropical or subtropical plant, producing soft, white, downy fibers and oil-rich seeds, was used to supplement England's growing textile industry. The rich manufacturing areas of Lancashire and Manchester needed more raw material than the country was capable of producing. In the attempt to supply the growing demands of mill owners in England, slaves were imported, making cotton a factor in the Industrial Revolution and the spread of slavery—two important developments in the rise of the British Empire.

As early as 1607, planters in the American South raised cotton. The amount of labor and land required for growing it gave rise to plantations, sharecropping, and tenant farming. The secondary component of cotton production—slavery—saw the number of slaves rise from about 400,000 in 1793 to nearly 4 million by 1860. By spreading slavery in the American South, cotton has often been seen as one factor that brought on the American Civil War.

Colonial powers attempted to establish the cotton plant throughout the world, and frequently, colonial economies were dependant on cotton production. Some sixty nations now grow the plant, with the United States being by far the most successful not only in the quantity but also in the quality of the cotton produced. Exports consist of the strong, brownish Egyptian cotton used for thread and the rough Chinese fibers that are mixed with wool for rugs and blankets.

Credit Mobilier

Credit Mobilier was a popular nineteenth-century economic arrangement used in France and the United States to finance large-scale public works projects through a privately run but publicly subscribed company acting as an investment bank. In France, the Credit Mobilier was founded in 1852 by Isaac and Emile Pereier, who chartered the company as a limited liability partnership originally capitalized at 600,000 francs thorough an issue of stock. Because the Pereiers restricted the buyers to those who could purchase 500 shares at a time, the Credit Mobilier's shareholders were drawn from the wealthiest of France's investors. Able to issue bonds to raise funds, the company quickly became the financing agent behind Second Empire companies such as the Paris Gas Company and the Paris Omnibus and overseas projects such as the Maritime Company of Clippers and rail projects in French colonial Africa. Although profits were high (41 percent in 1855), they fell to only 5 percent in 1867, and the company was forced to liquidate to pay its debts in 1869. In a landmark ruling, the French High Court of Appeals ordered the Pereiers be held liable for their stockholders' losses, although little of the money was ever recovered.

In the United States, another Credit Mobilier began as the Pennsylvania Fiscal Agency, before being purchased by wealthy stockholders in the Union Pacific Railroad Company. Union Pacific, which held government contracts to build the transcontinental railroad, paid Credit Mobilier more than \$94 million for construction and services worth only \$44 million. This large-scale chicanery was made possible by the bribing of congressmen with discount stock and because there was little regulation of the banking and rail indus-

tries. Although the organizers of the scheme profited enormously, smaller investors were left holding the bag for Union Pacific's cost overruns, and they demanded an investigation. The resulting scandal tarnished the presidency of Ulysses S. Grant and tarred future president James Garfield and vice-president Schuyler Colfax, among many other prominent politicians. The incident remains a symbol of the corruption that existed in America's Gilded Age.

Crime

Although there was much variation in the practices and operations of colonial powers and in the purposes for which colonies were established and maintained, colonizing nations did share certain underlying agendas. For example, colonial powers shared concerns about sustaining extractive economies and producing raw materials for metropolitan industry and consumption; about developing and extending colonial markets for metropolitan production; about provisioning and supporting military bases; and about providing way stations on the routes to far-flung colonies or markets.

In order to control their subject populations, to ensure public order, and to maintain adequate supplies of labor for settler agriculture, mines, and industries, colonial states depended on complex systems of relationships both with individuals (chiefs, group leaders, local power brokers) and with influential political and religious groups. The legal relationships established through the imposition of the colonial condition expressed hierarchical classifications of social and economic status, making rigid and concrete existing classifications and creating new ones. These legal relationships also conceptualized and manifested differing but nonetheless specific notions of dominance and social control. Through legislation, judicial actions, and coercive policing, ambiguous and expedient definitions of criminality, of criminal behavior, and of

crime itself were utilized as integral components of the structuring of the colonial state. Implicit in all colonial relationships was a hegemony of coercion and violence that ultimately depended on the power and effectiveness of the military forces but was expressed on a more immediate and day-to-day basis through the workings of the colonial administration and through the operations of the police force as it interpreted and enforced colonial laws. Crucial to the notion of the colonial state was the acquisition of a legal monopoly on violence and force, through the suppression of other potential players in the colony or territory. Although military force was used to subdue and control overtly political threats (from previous or would-be holders of political power), much activity directed at the state, such as banditry, was dealt with not by the military but by the police (although sometimes acting in conjunction with military forces) and was defined as criminal rather than political activity.

What was defined as a crime (or as a criminal act) was a shifting and often-ambiguous entity, both in terms of legislative or administrative articulation from above and in terms of the multiple meanings that rulers and ruled could read even in such a supposedly clear-cut act as murder: an act of killing by one indigenous person against another, for example, might be read by the colonized community as justified because it revenged an act of adultery or a slight on the person's honor but read as murder by the colonizers; an act of killing by an indigene against a colonist could be read as murder by the colonizers but as a noble act of rebellion by the colonized; and an act of killing by a colonist against indigenous people might be read as justifiable defense by the rulers and as murder by the colonized. Such differing narratives flow through colonial history, refracting realities and mirroring the ambiguities inherent in the colonial experience of dominance/insecurity, oppression/fear.

Indeed, the very structures of colonialism provided fertile breeding grounds for ambiguous interfaces between the political and the criminal in the administration of public order. As a means of controlling labor, for instance, many colonies introduced laws designed specifically to register and keep track of labor forces. Men (and in some cases, women) were required to carry (at all times) a pass book or other identity document

that detailed their personal and employment history and enabled employers, police, and bureaucrats to check the bona fides of the person concerned. Clearly, such laws also facilitated social and political control of populations and of individuals and groups that might be inclined toward subversive activity. Simultaneously, such pass laws (as they were named in South Africa) or other similar pieces of legislation were often perceived by the colonized as representing the cutting edge of their oppression, as being both the symbol and the artifact of their colonization, and thus as having political meaning. This political meaning was also derived from the criminalization of acts such as leaving employment without the employer's permission (desertion), no matter how valid the reason was in the eyes of the worker concerned (a death in his family, village business, a simple rejection of coerced labor).

Colonial legal systems favored colonists in many subtle ways. An indigenous laborer who had a fine imposed for an offense would rarely be able to raise the funds and so would be imprisoned or flogged. In addition, colonial courts were often notorious for the leniency with which they dealt with European offenders as opposed to indigenous offenders.

So, too, from the Caribbean to British India, from China to Brazil, by the application of the criminal law and the discourse that produced it, a group of rioters could be redefined from a crowd expressing political or economic grievances to an uncontrollable and essentially criminal mob; a mob could be reappropriated as part of a nationalist political narrative; and several individuals could be transformed into a crowd acting in concert and with common purpose. The depiction depended on the interpretations applied by different protagonists and observers and on the hegemony of dominant narratives (which changed over time, dependent in their turn on changing political and social environments).

Fundamental to the colonial agenda—and the product of a profound notion of racially based superiority—was the concept of the “civilizing mission,” whether this was used simply as a justification and rationalization of labor and social practices that would no longer have been tolerated in the metropole or whether it was actually believed and articulated, through, for ex-

ample, the idea of instilling a work ethic in what were perceived to be shiftless and feckless indigenous populations, lacking a sense of responsibility and even a sense of the passing of time. Implicit in colonial attitudes of superiority were conservative ideas about moral order, its construction and preservation, and the dangers of consequent criminal behavior if the moral order was transgressed. Closely linked with these were deep-rooted colonialist insecurities and pollution anxieties, grounded in fears of “unhealthy” tropical and subtropical environments (“the white man's grave”), in the perceived lack of care for cleanliness on the part of indigenous populations, and in the perceived incomprehensible violence of those populations and, in particular, the potential for specific forms of violence such as assault and rape against colonizers. As a consequence, the phenomenon of the moral panic was a not infrequent visitor to colonial parts. Much of the indigenous practice in the moral and legal sphere was seen as inferior and in need of uplifting. Paradoxically, though, many colonial bureaucrats and administrators recognized there was a significant role for customary law and the continuation of indigenous court practice alongside and within the imposed colonial justice systems. Indeed, customary law, with its inherent fluidity and situational interpretations, was extensively used as a means of legitimizing colonial rule.

Crime in colonial systems carried socially constructed meanings, peculiar to the particular relationships of dominance and control that colonization implies. Those meanings differed from colony to colony and from colonial power to colonial power even as they preserved essential common characteristics of social control and authority.

Crimean War

The only major multipower conflict between the great imperialist states of Europe between 1815 and 1914, the Crimean War serves as an outstanding example of how imperial rivalries could escalate petty squabbles into a major war.

In 1852, the recently proclaimed emperor Napoleon III of France negotiated an agreement with the Ottoman Turkish sultan Abdul Mejid I, allowing French Catholics certain pilgrimage rights in Palestine. Czar Nicholas I was outraged by what he saw as interference in a Russian sphere of influence; the 1774 Treaty of Kuchuk-Kainarji recognized Russia as a legitimate defender of Christian rights within the Ottoman domain. The sultan, emboldened by French and British hints that they would come to Turkey's aid, refused to revoke the French concession. Nicholas in turn occupied the disputed Danubian provinces of Moldavia and Wallachia, which controlled access to the vital Danube River. Again emboldened by French and British support, Turkey declared war on Russia in October 1853.

Russia struck the first telling blow, destroying a Turkish fleet at Sinope in November. British newspapers carried brutal "eyewitness" accounts (keen eyesight indeed to pick out details in the Black Sea from a vantage point in London) of Russian atrocities at sea and thundering anti-Russian editorials that inflamed public opinion. Both Britain and France declared war on Russia in March 1854. The tiny northern Italian state of Piedmont-Sardinia, eager to curry favor with the liberal Western powers, joined them in January 1855.

Once war was declared, the Turks and their allies lacked any real objectives. The Royal Navy fought some engagements in the Baltic, but this was rather far from Turkey. In the Black Sea, nothing happened for several months as Britain and France mustered their forces, and more important, tried to develop a plan of action. Ultimately, the decision was made to attack the main Russian Black Sea naval base at Sevastopol. Landings in the Crimea commenced in September 1854. The bloody Battles of Balaklava and Inkerman forced the Russians into a defensive posture in Sevastopol. After an embarrassingly long siege, the city fell in September 1855.

Nicholas I died on February 18, 1855. His successor, Alexander II, inherited the increasingly unpopular, expensive war and a host of internal problems. The fall of Sevastopol and diplomatic pressure from the Austrian empire convinced him it was time to negotiate a settlement. Austria had been coerced into a more active role in the crisis through some diplomatic blackmail on the part of the French and the British; both suggested they would be more inclined to support Piedmont-Sardinia's interests against Austria in Venetia and Lombardy if the Hapsburg court did not cooperate. The war ended with the Treaty of Paris, signed on March 30, 1856. The only substantial provision of the document forbade a Russian naval presence in the Black Sea, a provision that could not be enforced because the victors were not prepared to maintain a substantial naval force there in perpetuity.

Croatia

Croatia, currently an independent Balkan state but for most of the twentieth century a component republic of the Federal State of Yugoslavia, is a crescent-shaped nation in the southwestern Balkans, situated along the eastern shore of the Adriatic Sea. From the early sixteenth century through the end of the seventeenth, the Kingdom of Croatia was the subject of disputes between the Austro-Hungarian and Ottoman Empires.

The Croats, a tribe of Slavic people, originally settled in Dalmatia (modern-day Croatia) in the seventh century C.E. Converting to Christianity shortly thereafter, the Roman Catholic Croats have maintained a nationalist and religious distinctiveness from their more powerful Orthodox Christian neighbors and fellow Slavs, the Serbs to the east, for much of their history.

In the late eleventh century, the Kingdom of Croatia was absorbed into the Hungarian state, but it retained a great deal of autonomy, including its own assembly (known as the Sabor). In 1526, the Hungarians and Croats were defeated by the expanding Ottoman Empire at the Battle of Mohács, whereon most of Croatia fell under the suzerainty of the sultan until 1699. The rest of Croatia was turned into a military frontier region by the Austrians. From 1699 on, all of Croatia fell under the rule of Vienna.

Incorporated by Napoleon into his empire in the early nineteenth century, Croatia was returned to Austria following the Congress of Vienna in 1815. With the establishment of the dual monarchy of the Austro-Hungarian Empire, Croatia was once again divided between Vienna and the autonomous Hungarian monarchy.

With Austria's defeat in World War I, Croatia, against its own wishes, was incorporated into the newly created south Slav multinational Republic of Yugoslavia. But its Roman Catholic population chafed under the rule of the Orthodox Serbs, and during World War II, the Croats collaborated with the Nazis against the largely Serbian partisans under Josip Broz, also known as Marshal Tito, even though Tito himself was half Croatian.

Following World War II, Croatia once again became one of six republics in the socialist state of Yugoslavia. Following the death of Tito in 1980 and rising tensions among the component republics, Croatia broke away from Yugoslavia in 1991, an act that precipitated an uprising among the Serbs of Croatia, an invasion by Serbian forces, and a devastating civil war that lasted through much of the early 1990s.

Cromwell, Oliver (1599–1658)

Puritan army general, statesman, and Lord Protector of England, Oliver Cromwell was born in Huntingdon, England. Elected to the Long Parliament

Leader of the Puritan revolution and Lord Protector of England, Oliver Cromwell led a punitive expedition against Irish Catholics in 1649–1650, helping to subjugate that island to British rule. (Library of Congress)

in 1640, he became deeply critical not only of royal government but also of the high command in the army. In the Civil War in England, he backed Gen. Thomas Fairfax's New Model Army, and as a brilliant cavalry general, he won notable victories against King Charles I, capturing the king at Nasby in June 1645. After he had swept aside the Presbyterian opposition in Parliament that favored negotiation and compromise with the king, the rump Parliament that was left under Cromwell began the trial of King Charles I on January 1, 1649; the king was executed on January 30.

Cromwell faced a formidable threat from Ireland and sent 20,000 troops, a huge artillery train, and a large navy to begin an Irish campaign that lasted from August 1649 to May 1650. Posing as God's liberator from Irish barbarism, royal misrule, and Catholic hypocrisy, Cromwell

together with his forces inflicted massacres in the sieges of Drogheda and Wexford, vengeful retaliation for the earlier 1641 Catholic massacres of Protestants in Ulster. Dominant in England from 1649 until his death, Cromwell suppressed Catholic and royalist resistance; executed, transported, and imprisoned large numbers of Catholic clergy from Ireland; and oversaw the wholesale confiscation of Catholic-held lands. The controversial Cromwellian land settlement of Ireland involved the displacement of Catholics to poor lands west of the River Shannon and the redistribution of 1 million acres of profitable land to over 1,000 English adventurers.

Cromwell was generally successful in foreign wars; for example, his fleet destroyed the Barbary corsairs at Algiers and Tunis. His 1654–1655 “Western Design” represented the first deployment of the armed forces in the interests of transoceanic colonization, as opposed to his Irish land settlement, but it ultimately accomplished little other than adding the island of Jamaica to Britain’s territory. Even that colonial acquisition did not serve as a base for operations against the Spanish on the American mainland, as he had hoped it would. His trade policy in the first Navigation Act of 1651 restricted trade in sugar by excluding foreign merchants from all West Indies commerce. This and subsequent acts were aimed at the Dutch, who were declared economic enemies by the Cromwellian state, and were also intended to increase state dominance over the English plantations. But in Barbados, colonists rejected Cromwell’s mercantile principles in favor of their former free trade; indeed, many remained royalist sympathizers and wanted independence from the English Commonwealth and the dictates of Cromwellian imperialism.

Ironically in light of his intolerance to Catholics, Cromwell was responsible for the readmission of Jews into England; they had been banned since the days of Edward I in the thirteenth century. He died on September 3, 1658, and was buried in Westminster Abbey.

Crusades

The Crusades were a series of religiously motivated military campaigns in Europe and the Middle East that were called for in 1095 by Pope Urban II at the Council of Claremont. The overarching goals of the successive waves of Crusades between 1095 and 1291 were, first, to protect fellow Christians in their pilgrimages to Jerusalem and, second, to support the Christian Byzantine Empire against the Muslims. The Crusades acted as a powerful force for peace within Europe while advocating war and territorial conquest abroad.

During the First Crusade, from 1095 to 1101, European armies, assembled in Constantinople, turned southward, capturing the fortified city of Antioch in 1098 and Jerusalem on July 15, 1099. The Kingdom of Jerusalem, ruled by various European nobles, encompassed the coastal area that included Antioch, Edessa, Tripoli, and Jerusalem. In 1144, Muslims recaptured Edessa, Pope Eugenius III called for the Second Crusade (which ended in defeat), and the Muslim leader Saladin conquered Egypt and Aleppo, thereby effectively surrounding the crusader states. After a victory at the Battle of Hattin, Saladin recaptured Jerusalem on October 2, 1187. Pope Gregory VIII called for the Third Crusade under the leadership of Frederick Barbarossa, who drowned before reaching the Holy Land. In 1191, Richard I (Richard the Lionhearted) captured Cyprus before joining Philip II (Augustus of France) in seizing and capturing Acre. Unable to reach Jerusalem, Richard negotiated a five-year truce with Saladin that gave pilgrims the right of safe passage to the holy places in Jerusalem. In 1198, Pope Innocent III called for the Fourth Crusade, this time targeting Egypt, but financial difficulties involving the Venetians diverted the armies to Constantinople, where they sacked the Byzantine city. In 1212, the Children’s Crusade ended with thousands of children either dead through shipwrecks and disease or sold into slavery by unscrupulous merchants and sea captains. Three years later, the pope called for the Fifth Crusade, which ended without any significant gains. In 1229, Frederick II of Germany set out on the

Sixth Crusade, avoiding military conflict by negotiating the return of Jerusalem to the Christians for a period of ten years. After the Turks sacked Jerusalem, Louis IX of France led the Seventh Crusade into Egypt, but like the first Egyptian adventure, this effort failed. The rise of the Mamluks signaled the end of the crusader states, with the last European stronghold falling in 1291. Thereafter, European involvement in Cyprus and Greece continued, but the eastern Mediterranean world fell under the control of Muslim rulers

Cuba

Cuba's location at the entrance to the Gulf of Mexico and the Caribbean Sea only enhanced its appeal to different colonial and national powers who sought to control or influence it. Spain was the first, claiming the island during Christopher Columbus's first voyage to the New World. As the Spanish occupied Cuba and established seven settlements between 1512 and 1515, the patterns that came to dominate the exploration and settlement of the mainland, including the decimation of the Amerindians, were born. The discovery of gold in Mexico and Peru meant that Spain's focus shifted to the mainland, yet Cuba's location helped it to remain a strategically important holding, particularly as the final stop for Spanish treasure ships returning to Europe. Spain briefly lost Havana to British naval forces in 1762 during the Seven Years' War, but it regained the city in exchange for Florida. As the wave of independence swept through the Latin American colonies in the early 1800s, Cuba remained the Spaniards' "Ever Faithful Isle," but by the end of the century, Spain had lost the island.

With the end of the Spanish-American War in 1898, Cuba had succeeded in ridding itself of Spanish control, but increasingly, it found itself drawn into the sphere of the United States. The relationship between the two countries was not a new one, however, as some U.S. and Cuban leaders had long toyed with the idea of Cuba's annexation

or admission to the Union. From 1899 to 1902, Cuba remained under U.S. military occupation and rule. During that time, extensive U.S. speculation in Cuban real estate, mines, railroads, and other investments, together with the Platt Amendment to the 1901 Cuban constitution, only strengthened economic and political ties. Among the amendment's provisions was the clause that allowed the United States to intervene in order to maintain a stable government in Cuba and to ensure the island's independence. Until the measure was abrogated in 1934, the United States invoked the Platt Amendment several times, intervening militarily from 1906 to 1909, in 1912, and again from 1917 to 1922. However, the United States remained vitally interested in the Cuban political climate. For example, Washington worked behind the scenes through Ambassador Sumner Welles in 1933 to help oust the president, Gen. Gerardo Machado, and encourage Fulgencio Batista to form a new government. During much of the 1950s, the United States maintained good relations with the Batista government, but as the country became increasingly embroiled in a civil war led in the east by Fidel Castro, Washington imposed an arms embargo. Early on January 1, 1959, Batista fled the country, and soon after, Castro entered Havana and declared himself prime minister.

Although Fidel Castro officially did not declare his status as a Marxist-Leninist until November 1961, his disdain for the United States was a central feature of his character from early on, as many biographers have noted. The Castro government's confiscation of U.S.-owned land, businesses, and other properties prompted President Dwight Eisenhower to impose a trade embargo against Cuba. By January 1961, diplomatic relations between the United States and Cuba had been severed. The Soviet Union quickly stepped in, and in 1962, it began installing missiles on the island, partly in response to a U.S.-sponsored invasion at the Bay of Pigs in 1961. The placement of the missiles led to a crisis that nearly set off nuclear war between the United States and the Soviet Union. From the 1960s to the 1980s, economic, military, and political ties between Cuba and the Soviet Union strengthened. The collapse of the Soviet bloc and the Soviet Union itself in the late 1980s and early 1990s left Cuba to search for allies elsewhere.

Charlotte A. Cosner

Heir to a long tradition of Cuban revolutionaries, Fidel Castro led a successful revolt against U.S.-backed dictator Fulgencio Batista. Like other Third World revolutionaries, Castro considered the United States the neocolonial heir of European empire. (Library of Congress)

Cyprus

The strategic position of Cyprus, located in the eastern Mediterranean Sea off the coast of Turkey and Syria and at the crossroads between Egypt and Greece, resulted in a number of civilizations colonizing the island throughout history. From the seventeenth century to the thirteenth century

B.C.E., several ethnic groups migrated to the island, eventually forming a unique civilization that was disrupted by the arrival of the Sea Peoples, a mysterious people believed to be from the eastern shores of the Mediterranean. After the disaster passed, Macedonian Greeks migrated as settlers to the isle, bringing with them their language and customs. From the thirteenth century B.C.E. to the present, the influence of this group of immigrants dominates the culture. Over the next several millennia, successive civilizations sought to control this key location, including the Phoenicians in the Early Iron Age, the Assyrians in 709 B.C., the Egyptians in 569 B.C., and the Persians in 545 B.C.E. By the fifth century B.C.E., the Greeks assisted the Cypriots in resisting the oppression of the Persians, but these efforts failed until Alexander the Great defeated them in 333 B.C.E. The Macedonian king granted the inhabitants their independence,

but on his death, the Ptolemies reasserted control over the land for the next 300 years. By 30 B.C.E., the island had passed from Cleopatra to the Roman Empire. In 649 C.E., the Arabs invaded, destroying much of the island's history and reinforcing their rule through colonization. In 964, Cyprus reverted back to the Byzantine Empire. Thereafter, the island was ruled by Richard the Lionhearted, beginning in 1191, the Knights Templar, and then a French dynasty.

By 1571, the Turks conquered Cyprus and maintained control until 1878, when the British established military rule. Under British rule, the Greek Cypriots fought for union with Greece, only

to have their efforts frustrated by the British Foreign Office. With the end of colonialism after World War II, another attempt at unification occurred but failed. After a period of independence from 1959 to 1974, the island was partitioned. The existence of two dominant ethnic groups—the Greeks and the Turks—closely allied to their homelands has resulted in continued strife both on the island and throughout the region and world.

D

Da Gama, Vasco (1469–1524)

Vasco da Gama was a Portuguese navigator who led the first European expedition to reach India by sea. His initial voyage to India—a Portuguese attempt at confirming the possibility of reaching India by sailing south, along the coast of Africa—changed the course of European history. Da Gama's voyage was a follow-up to an earlier expedition led by Bartolomeu Dias, who in 1488 had rounded the southern tip of Africa (known as the Cape of Good Hope). Due to a lack of provisions, Dias's expedition had been forced to return to Portugal. Da Gama's voyage was, therefore, an attempt to discover what lay beyond the southern tip of Africa.

Da Gama left Portugal on July 8, 1497, with four ships and a crew of between 148 and 168 men. They sailed south and, on November 5, rounded the Cape of Good Hope. They continued sailing along the east coast of Africa before reaching India on May 20, 1498, arriving at Calicut, which was the most important trade center in southern India at the time. Muslim traders controlled the commerce in Calicut and were very hostile to the Portuguese. In India, the act of offering gifts was very common and considered an sign of respect and subordination to local leaders. The monarch of Calicut was not impressed by the Portuguese, since da Gama did not bring him any impressive gifts, such as gold.

Bartolomeu Dias had not sailed with da Gama, but he had helped in organizing this expedition

and had supplied da Gama's ships with goods that were in high demand on the coast of West Africa. However, on arriving in India, da Gama was advised by local people that these same goods were not considered suitable gifts for the local high authorities. Thus, he did not present any of those items to the monarch of Calicut. This lack of protocol led the monarch to side with the Muslim traders and to spurn the Portuguese. Obviously, this was not a good start to the relationship between the Portuguese and the monarch. In the tense atmosphere, da Gama decided to leave Calicut to further explore the coast of India and that of East Africa. He left the city at the end of August and reached Portugal in September 1499.

Although he returned from India without a trading agreement, with no major cargo, and with only around fifty crew members alive, he was received as a hero by the Portuguese. Da Gama had finally vindicated Portugal in its pursuit of a southern African sea passage to the East.

As a result of his exploits, da Gama was made an admiral, and in 1502, he led another Portuguese expedition to India. This time, he was able to establish alliances with some local leaders and to establish a stronger Portuguese role in that region. Da Gama returned to Portugal in early October with a rich cargo of spices. Having become a rich man, he did not sail to the East again for another twenty years. In 1524, granted the important title of viceroy of India, he sailed to Indian waters

Portuguese explorer Vasco da Gama. Da Gama's successful 1498 voyage to India opened up an eastern sea route from Europe to Asia. (Library of Congress)

for the third and last time. Da Gama died about three months after his arrival.

Throughout the sixteenth century, the Portuguese presence in India flourished. By 1510, the city of Goa was conquered, and it became the center of the Portuguese Empire in India. In 1961, Goa as well as Damão and Diu (the other two Portuguese colonial possessions in India) won their independence after a short and successful incursion by the Indian army against a badly outnumbered and ill-equipped Portuguese garrison, thus ending the first European colonial presence in India.

Dakar

A French colonial city at the westernmost bulge of Africa, Dakar was established by French troops in

1868 at the site of a small village opposite the island of Gorée. Although the island had been associated with the West African slave trade to the Americas, it was not one of the major continental points of embarkation. And the impetus for the development of a new metropolis on the mainland was, in fact, the creation of a port for the export of peanuts to satisfy growing European demands for vegetable oils. In less than a decade, the basic infrastructure for a modern port was in place, and by 1885, the railroad north to St.-Louis—the first rail line in West Africa—had been completed; in turn, the trade in peanuts encouraged further growth of the city, and its inhabitants, both African and European, were considered French citizens.

As a relatively new town, Dakar was originally designed on a European model with attractive plazas and (by African standards) imposing buildings, although like most such cities in West Africa, it was not exceptionally well planned. Europeans never constituted more than about 10 percent of the total population, the rest being Africans and French-speaking Creoles. The city not only served as a commercial center but also, following the 1895 creation of the Federation of French West Africa, as the administrative capital of the entire region. And as citizens of one of the four communes (the others being Gorée, Rufisque, and St.-Louis), Dakar's inhabitants were subject to French law and French courts (although Muslims were allowed access to Islamic courts); they also were able to elect representatives to local governing bodies and one delegate to the French National Assembly. In 1914, one resident of Dakar, Blaise Diagne, who had served as a French civil servant in several colonies, became the first African elected to the assembly.

During the first half of the twentieth century, the city grew dramatically, reaching a population of about 20,000 at the end of World War I and nearly seven times that just after World War II. Although there never were legal provisions for racial segregation of the town, in practice there were separate sections for Europeans (the Plateau) and Africans (the Medina), with the latter set up to accommodate the influx of immigrants from the countryside. Despite the importance of the city as a rail center and a port, it was not until the independence of Senegal that Dakar increasingly became an industrial city. From 1903, Gorée was the location of the William Ponty School, which pro-

vided teacher training for all of France's West African colonies, and an African medical school opened in Dakar as early as 1918. But the full University of Dakar was not created until 1954. In these and other ways, Dakar was quite typical of colonial cities not only in Africa but elsewhere within the European empires as well.

Dalhousie, James, Tenth Earl of Dalhousie (1812–1860)

James Dalhousie, governor-general of India from 1847 to 1856, was a leading figure of the pre-Mutiny era of the British Raj. Born in Scotland, he entered Parliament in 1837 as a disciple of Sir Robert Peel. He gained administrative experience and expertise on railroads at the Board of Trade, becoming president in 1845. In 1847, the Whig government recognized Dalhousie's promise by naming him governor-general, the youngest ever appointed.

The years of Dalhousie's term were among the most turbulent and significant in the history of modern India. Although the country seemed peaceful, long-simmering tensions soon led to conflict, resulting in the annexation of the Punjab in 1849. Dalhousie also addressed hostilities with Burma, presiding over the annexation of Rangoon and the rest of Pegu Province in 1852. Although Dalhousie managed these wars successfully, his preferred policy was the peaceful consolidation of British India. He concluded important alliances with Indian rulers and rationalized the doctrine of "lapse," through which states belonging to Indian princes who did not have heirs would become British possessions. In his most controversial move, Dalhousie approved the annexation of Oudh because of its ruler's incompetence. Many of Britain's Indian troops came from Oudh, and they were angered by the treatment of their homeland. Dalhousie's efforts to consolidate and regularize British holdings contributed to resentments that would erupt in the Mutiny of 1857.

Dalhousie's purpose was not simply to acquire territory for Britain but also to provide India with modern, efficient government in a coherent, centralized state. Drawing on his Board of Trade background, he focused on developing a communication and transportation network linking the dispersed Indian states. He directed the planning of India's railway system and instituted both electric telegraph lines and a centralized postal system. His attention to public works stimulated ongoing British investment in India's economic development.

As a Peelite reformer, Dalhousie also favored social changes in India. He firmly resisted female infanticide and human sacrifice and encouraged the remarriage of widows. He emphasized the importance of education, supporting the use of the vernacular in schools and the education of girls while also creating new opportunities for Indians to learn Western ideas and techniques. In all his endeavors, Dalhousie dedicated himself to what he called the "moral and material progress" of India.

Exhausted by the intense challenges of his term, Dalhousie left India in 1856. Although the timing of the Mutiny's outbreak in 1857 can be partly attributed to Dalhousie's annexations and reforms, his promotion of Indian modernization established a solid foundation on which his successors built to strengthen India's ties to Britain.

Danish Empire

At the height of Danish power in the seventeenth and eighteenth centuries, the Danish kingdom possessed a large but scattered colonial empire. To the north, it included Norway, the Faroe Islands, Iceland, and settlements on the southern tip of Greenland that were established in the 1730s. Until 1658, the southernmost province of Sweden, Scania, was also a part of Denmark. In the Southern Hemisphere, the Danes held fortress towns on the Gold Coast of Africa, in present-day Ghana and Burkina Faso, in India, in Tranquebar and Bengal,

and in the West Indies (the islands of St. Croix, St. Johns, and St. Thomas).

These possessions held different legal statuses within the kingdom and were treated as administratively distinct. The northern provinces had fallen under Danish control as a result of the Union of Kalmar Treaty in 1380 and were defined (along with the German-speaking provinces of Schleswig and Holstein south of the Jutland peninsula) as legally inseparable provinces of the kingdom. The southern settlements, which were established during seventeenth-century explorations under Christian IV, were essentially treated as purely economic ventures, where the major trade was in slaves from the Gold Coast to the sugar plantations in the West Indies.

Following the Danish alliance with France and defeat in the Napoleonic Wars, Denmark declined radically as an economic and political power. Norway was given to Sweden in the Treaty of Kiel in 1814, and Schleswig and Holstein were lost in wars with the German Confederation in 1864 (although part of Holstein was returned following the defeat of Germany in World War I). Economic pressures led Denmark to sell its African and Indian territories to Great Britain in the 1840s and the West Indies to the United States in 1917, as the abolition of slavery in 1848 had diminished the economic value of these possessions. Furthermore, the Icelanders successfully petitioned the Danish government for independence during the nineteenth century, leading to an agreement that gave the island its freedom in 1944.

Today, of these former possessions, Denmark retains only Greenland and the Faroe Islands. In both provinces, home rule has been established (in 1944 in the Faroes and 1979 in Greenland). Significant political parties in both regions advocate independence, and the Danish government has engaged in talks with the Faroese Islanders on the question; however, the ability of these islands to support themselves economically without the Danish state remains an open question. In recent years, there has been more political willingness in Denmark to come to terms with the country's colonial past, and apologies and financial compensation have been issued by the government to the Inuit (Eskimo) natives of Greenland for past mistreatment.

Dawes Plan

As the policy of gathering Indians and placing them on reservations became a dominating concern of U.S. policy, another group of nationalistic Americans felt that the Indians had to lose their unique way of life and become Indian Americans. This component of what can be seen as internal colonization culminated in the Dawes Act of 1887. This act reduced Indian lands from 138 million acres to a mere 48 million. It further provided the necessary surplus land needed for internal expansion. The act was also justified as a way to force individualism among the Indians and extended them the rights of U.S. citizenship. The final result of the Dawes Act was an attempt to ultimately destroy any semblance of Indian culture.

The Indians, who had little input in the passage of the Dawes Act, attempted to resist and reacted in various ways to preserve their culture. These attempts were both violent and nonviolent in nature. With the surplus land opened to white settlers, the Apache tribes conducted small raiding parties, and they perfected a hit-and-run guerrilla warfare that horrified the settlers. The army of the 1870s and 1880s, unable to control these attacks, relied on Indian fighters such as Gen. George Crook and Gen. Nelson Miles, with their Indian scouts, to deal with the raiding Indian parties. The Apaches had their own celebrities, among them the headstrong Geronimo. After years of violent struggle, the Indians were induced to surrender, and the government rounded up nearly 500 Apaches and sent them as prisoners to Florida. The Indian scouts that had aided Crook and Miles were sent there as well. The harsh conditions that resulted in a large number of death, both from illness and from suicide, raised a public outcry, and eventually, the Indians were moved to Oklahoma and later to New Mexico. Geronimo died in 1909 and was buried in Oklahoma. Large-scale raiding of white settlements waned.

The nonviolent form of resistance was an equally effective outlet for Indian resistance. The Plains Indians introduced religion as a nonviolent

reaction to the attempts at exterminating the Indian culture. This religion—known as the Ghost Dance—combined elements of Christianity and traditional Indian religion. The Paiute shaman Wovoka claimed that he had a vision in which the Great Spirit spoke to him. This Great Spirit urged the unity of all Indians in an ultimate destruction of the whites. Further, the vision revealed that Indian warriors previously killed in battle would come back to life, and the buffalo would once again roam the land. This message of hope was appealing to Indians all over the Plains states, such as Idaho, Montana, Utah, Wyoming, Colorado, Nebraska, Kansas, the Dakotas, and the Oklahoma territory. Even the diversity of the tribes involved only gave different interpretations of both the dance and the religion. Although the religion was nonviolent in nature, some of the more militant tribes taught that the wearing of white ghost shirts made Indians invulnerable to the bullets of the soldiers. This form of nonviolence was seen as a wild craziness; it frightened the whites and convinced President William Henry Harrison to dispatch a multitude of federal troops to handle any overzealous use of the religion. As the celebrated Sitting Bull attempted to meet with Wovoka, he was caught up in the massacre at Wounded Knee. Combined with the demise of the violent faction of resistance, this event ultimately ended the Indian way of life.

The Dawes Act was successful in accomplishing its stated goals. It opened up lands for white settlers, eliminated the Indian way of life, and reduced any future threat that the Indians might pose to the internal colonization and expansion project of the United States.

De Gaulle, Charles (1890–1970)

Charles de Gaulle was born in 1890 in Lille, France. He began his career as an officer in the French army, holding commands during World War I and in Poland. During World War II, in May 1940, he was named brigadier general but left for London a month later because he did not accept the armis-

tice between France and Germany. On June 18, de Gaulle asked the French, via the British Broadcasting Corporation (BBC), to continue to fight against the Germans. In his call to arms, he reminded his compatriots that they were not alone, since they had a vast empire to support them in their struggle against the enemy. De Gaulle's relationship with France's colonies thus began in the very first days of his political career and became even more intense when several of them pledged their allegiance to the Allies and the Free French.

During the war, de Gaulle frequently stated his intention to renovate the French Empire. In December 1943, for example, a document released by the Free French pledged that, once the war was over, they would reform the administrative arrangement in Indochina to give each of its countries a greater degree of political, financial, and economic autonomy. Important segments of de Gaulle's entourage, however, were not so generous, as indicated by the recommendations issued at the end of the Brazzaville Conference on the future of France's colonies. This document stated that France's colonies, especially in Africa, could not aspire to any kind of autonomy in the short or long term, even though they could and should be represented more fully within France's democratic and administrative institutions. Even these moderate recommendations were further watered down in the constitution of the Fourth Republic, passed in 1946.

After retiring from political life in January 1946, de Gaulle founded a political party that received much of its support from the right end of the French political spectrum; most of its adherents advocated a vigorous response against the various nationalist movements that appeared in the 1940s and 1950s. De Gaulle nevertheless remained silent on most political issues, including the colonial question, until 1958, when the situation in Algeria had deteriorated so thoroughly that the French government no longer fully controlled the affairs of the nation. As a result, the National Assembly invited de Gaulle to head a transitional government for a six-month period. He proceeded with a major reform of France's political system, which led, in December 1958, to the Fifth Republic; de Gaulle became its first president.

In his early speeches on the Algerian conflict, de Gaulle chose to reassure those who wanted

France to defeat completely the nationalists and maintain a strong presence in Algeria. But de Gaulle always remained lucid about the situation and understood that France would have to pull out of the region in the near future or face a deadly stalemate. In June 1960, therefore, he invited several Algerian nationalists to participate in exploratory talks in France. Although these discussions were far from conclusive, they laid the foundations for further negotiations between the two parties. When the French strongly backed their president's initiatives in a referendum in January 1961, several of de Gaulle's erstwhile supporters launched an insurrection in Algeria to try to kill the peace process. This unsuccessful action only strengthened de Gaulle's resolve to get out of Algeria. In March 1962, the governments of France and Algeria signed the Evian Agreements, putting an end to the conflict.

In spite of this major achievement and although virtually all of France's former colonies gained independence by the end of the 1960s, de Gaulle maintained very close ties with most of them and even developed intense relationships with some of their new leaders. His attitude has frequently been characterized as paternalistic, and some say these paternalistic relations were pursued more or less unchanged by subsequent French governments. De Gaulle stepped down as president in September 1969 and died the following year in Colombey-les-Deux-Église, France.

Decolonization

By definition, the process of decolonization was simply the removal of colonial rulers from those territories that had been subject to colonial governance by peoples other than the indigenous inhabitants. But the term is popularly used to refer to the end, in fits and starts, of colonial empires in Africa, Asia, and the Americas following World War II.

The experiences of that conflict—including the rapid rise and demise of the Japanese Empire and

the threat that it had posed to the older European empires—were instrumental in convincing many people that the promise of self-determination articulated by Woodrow Wilson after World War I was ready to be realized. In part, this was due to the demonstrated weakness of the colonial powers in the face of Japanese, Italian, and German aggression, but it was attributed to the willingness of the colonial nations not only to accept but also frequently to demand that their colonial subjects come to the defense of the colonial powers themselves. Military service by Africans, Asians, and Caribbean peoples in defense of the empires and nations that governed them—not unknown since at least the time of the Seven Years' War in the eighteenth century—had, by the middle twentieth century, persuaded many colonial subjects of the need to be politically free of external rule.

With the expression of these ideas in the Quit India Movement of Mohandas Gandhi and the declarations of pan-Africanism as a demand for political freedom that emerged from the 1945 Pan-Africanist Congress in Manchester, it became clear that a decolonization process had begun. Similar ideas were expressed in the United States and its colony, leading to the independence of the Republic of the Philippines in 1946, just a year before British India gave way to the new nations of India and Pakistan. Nonetheless, some continued to defend the colonial order throughout this period; their arguments followed two basic lines of reasoning. One of these was essentially the simple assertion of power, affirming that as representatives of political and economic power, the European colonialists deserved to continue to be masters of their colonies. Many more colonialists, however, based their arguments against rapid decolonization on the necessity for promoting good government and the education of their colonial subjects until they reached "a stage of literacy and political experience" (as the Watson Commission put it in 1948 regarding the Gold Coast) necessary to allow them to manage their own affairs successfully.

A third strand in the opposition to decolonization, however, depended on a totally different assessment of the African and Asian subjects of colonialism. This position is well illustrated in an account, recalled years later by a young American adviser to Haile Selassie, of comments by Phillip Mitchell (who was governor of Kenya until the

mid-1950s) when he was serving as an adviser to the British military in Ethiopia in 1944. After London had decided—against Mitchell’s advice—on a policy of providing British advisers to Emperor Haile Selassie rather than having a direct British military presence in an Ethiopia freed from Italian occupation, Mitchell explained the position to his colleagues. He asked if any would volunteer to serve the emperor, while at the same time making it clear he was opposed to the policy by urging that none of them actually “go chocolate.” His clear disdain for the peoples of Africa and Asia was certainly not uncommon. And this may, alas, help explain why the emerging nationalists increasingly were unwilling, as historian Rupert Emerson (1960) put it, to “accept good government as a substitute for self-government.”

Increasingly, the process of decolonization was fed by many such attitudes that identified colonialism with both overt and covert oppression of indigenous peoples. The idea that colonialism actually *encouraged*, if not by design then by its mere practice, feelings of inferiority among colonial subjects was a growing basis of more militant decolonization efforts. In the extreme, this led to the philosophy of therapeutic violence, like that advanced by Frantz Fanon, which perceived a violent process of decolonization as necessary to achieve the psychic health as well as the political independence of colonial territories. In the late twentieth and early twenty-first centuries, such ideas have come to dominate the ideologies of those who feel themselves oppressed, regardless of whether they remain colonized peoples.

Delafosse, Maurice (1870–1926)

Linguist and ethnographer Maurice Delafosse, a native of the Cher region of France, began his career as a student of Arabic at France’s School of Oriental Languages in 1890. There, he became interested in African dialects, and through consultations with prisoners brought to France, he wrote and published a manual on the languages of Dahomey (1894).

Delafosse entered the colonial service that year and was stationed in Baoulé in the Ivory Coast. In 1896, he was named consul to Liberia, remaining in Monrovia for two years. In 1898, he returned to Baoulé and worked with the Ashanti. Two years later, he returned to France to teach Sudanese languages at his former school. Delafosse was then named as a member of the international commission charged with mapping the boundaries between French and English colonies, particularly along the Volta River: his adventures are chronicled in *Les Frontières de la Côte d’Ivoire, de la Côte d’Or et du Soudan* (The Frontiers of the Ivory Coast, the Gold Coast and the Sudan) (1908). He took command of the administration of the area surrounding Koroko, Ivory Coast, in 1904 and of the region around Bamako, Sudan, in 1908. Delafosse was brought home a year later, for he had overstepped his bounds in trying to act as an adviser rather than an administrator and in advocating a lessening of French control. He went back to the School of Oriental Languages, and he also taught at the colonial school.

Assigned to Dakar shortly after World War I broke out, Delafosse served as French West Africa’s director of public affairs and then as its secretary-general, and he became its governor in 1918. Retiring at the end of 1919, he returned to France, resuming his duties at the language school and taking on the editorship of the journal *Dépêche Coloniale*. He also wrote for the *Revue d’Ethnographie* (Ethnographic Review), which he directed, *Anthropologie* (Anthropology), and other journals; in addition, he advised the colonial service and spoke against slavery at the Congress of Geneva in 1924.

Democracy

Democracy is a Western political system that contradicted the realities of European colonialism. The modern Western notion of democracy, which was originally inherited from the ancient Greeks and possibly the Phoenicians, was based on European Enlightenment beliefs in the rights of the individual and the French revolutionary ideals of liberty, fraternity, and equality. From the seventeenth century onward, a struggle to create democratic representative institutions that would provide responsible and accountable government was waged in various European countries. Truly representative democratic institutions and universal suffrage, which allowed women and the working classes to vote, were only achieved in European countries in the early decades of the twentieth century. This struggle for representative government occurred at the same time as European powers' efforts to colonize the world.

The brutal social, economic, political, and cultural realities of colonialism directly contradicted Western notions of democracy, liberty, and freedom. In an attempt to reconcile these disparate beliefs and practices, the notions of race and racial hierarchies were developed. Built around social Darwinism, these ideas placed European ethnic groups or “races” at the top of the racial hierarchy. They described themselves as progressive, civilized people, who had a duty to save so-called backward, primitive peoples from the depths of “savagery.” The British in particular justified their occupation of other lands, resources, and peoples by declaring that they had a mission to bring “enlightened” democratic principles and processes to their colonies. French colonial philosophy, which was based on assimilating colonies into the French nation, also claimed that all their colonial peoples would ultimately enjoy the benefits of liberty, fraternity, and equality.

As a greater number of colonized peoples gained access to Western education, they explored Western notions of democracy and freedom and were quick to seize on the hypocrisy of the Euro-

pean colonial powers. Some nationalist movements and individual nationalists became dedicated to achieving democratic self-government, using alien Western parliamentary and judicial institutions. For example, in India, Jawaharlal Nehru supported and worked for the adoption and further development of Western representative institutions. Other Indian nationalists, such as Mohandas Gandhi, believed that the colonial state, with its alien public institutions and focus on capitalism, would need to be dismantled in favor of the development of a truly Indian state system.

In the subsequent decolonization process, when the pressure of nationalist movements and other global factors forced colonial powers to grant former colonies self-government, the British in particular sought to leave behind fledgling democracies. Although their emphasis on taking a gradual constitutional path toward self-government was motivated by a desire to continue exerting an indirect but powerful influence over newly independent states, they began setting up quasi- and later fully representative democratic institutions in their colonies. The general British pattern was to establish an executive council of officials to advise the governor of the colony and then to form a legislative council to assist with preparing legislation. Gradually, more of these positions became elected. Another British pattern of gradual decolonization was to allow local affairs to be controlled by representative institutions while the British retained control of national affairs. The French, because of their commitment to their colonies assimilating into and later forming close association with the French nation, did not allow the development of separate democratic institutions in their colonies. Instead, the older colonies, including Algeria, were incorporated in metropolitan France, taking part in French elections by 1946. The Dutch, Portuguese, and Spanish colonial powers took an authoritarian approach to colonialism and allowed very little democratic development in their colonies until just before independence. Although the Belgian colonizers left their colony, the Belgian Congo, with the institutions of representative democracy, their rapid acceleration of democratic development from 1957 to 1960 ensured that these institutions rapidly crumbled after independence.

Colonial rhetoric claims that the colonial powers, particularly Britain, left their former colonies

a positive democratic legacy. Although many started independent statehood with all the trappings of democracy (parliamentary representation, an independent judiciary, and a system of political checks and balances), some of these nations did not retain Western-style democracy for long. In other cases, different forms of democracy evolved, as in the case of several Asian countries, which political scientist Takashi Inoguchi argues developed Asian-style democracy. This form of democracy, through which several Asian governments achieved legitimacy and good governance, was characterized by a focus on shared economic growth enabled by minimal government interference and a system of one-party or coalition rule. The legacy many former colonies were left from their colonial masters was not parliamentary democracy, despite the development of all the external indicators and institutions. Instead, in many cases, they were bequeathed a rigid state system that had been designed to extract the economic wealth from the colony and sectarian strife caused by the importation of different ethnic groups to serve the colonial machine in diverse ways.

Democratic Party (U.S.)

One of two major political parties in the United States, the Democratic Party has a long history of involvement in U.S. expansionism in North America in the nineteenth century, resistance to U.S. colonial acquisition overseas in the late nineteenth and early twentieth centuries, and opposition to continuing European colonization of Asia and Africa in the post–World War II era.

The twelfth president of the United States, Democrat James Polk was an ardent expansionist. During his administration, from 1845 to 1849, the United States annexed the independent Republic of Texas, seized much of the Southwest from Mexico, and negotiated with the British for the Oregon Territory in the Pacific Northwest. (Library of Congress)

Founded by Thomas Jefferson and other anti-Federalists in the 1790s as the Democratic-Republican Party, the Democratic Party initially stood for a limitation on central government power and a belief that small landholding farmers represented the best basis for a functioning republic. But within three years of winning the presidency in 1800, Jefferson used the federal government to purchase the Louisiana Territory from France, thereby expanding U.S. territory by some 825,000 square miles, roughly doubling the size of the country.

During the antebellum period, the Democrats stood strongly for expansion in North America. Under Democratic president James Polk, the country settled a dispute with Britain over the Oregon Territory and fought and won a war with Mexico, which further expanded the United States to the Pacific Ocean. Along with territorial expansionism, the Democratic Party also stood for the expansion of slavery into the western territories.

During the late nineteenth century, the Democratic Party became increasingly dominated by the

interests of southerners, small farmers, and urban workers, whereas the Republicans became associated with business, the North, and the middle class. At the same time, Republicans became increasingly interested in expanding U.S. business interests. It was the Republican administration of William McKinley that saw the annexation of Hawaii and the war with Spain in 1898 that brought Guam, Puerto Rico, and the Philippines under U.S. control.

Indeed, senatorial opposition to the annexation of the latter territory was spearheaded by Democrats, though for a variety of reasons. Some opposed the move on principle, arguing both that the United States, begun in a revolution against imperial authority, should not take colonies of its own and that imperialism and big government and a big military went hand in hand. For others, it was a matter of race. With no precedent of taking territory without incorporating it into the Union as a state, many southerners feared the annexation of the nonwhite island archipelago. Still others from the South feared that the Philippine-produced products, such as sugar, would compete with southern ones.

Still, it was liberal Democrats who would expand the party's horizons during much of the twentieth century, as they controlled the White House when the United States became involved in four major wars: World War I, World War II, the Korean War, and the Vietnam War. At the same time, it was Democratic presidents Woodrow Wilson and Franklin Roosevelt who promoted U.S. participation in international organizations such as the League of Nations and the United Nations.

Both Republican and Democratic administrations backed U.S. intervention in the Americas, sending troops into Nicaragua, Haiti, and the Dominican Republic, though it was Franklin Roosevelt who proposed the more cooperative, less interventionist Good Neighbor policy toward Latin America in the 1930s.

During the Cold War, the Democrats—often under attack by conservative Republicans—frequently tried to prove their anti-Communist credentials by promoting containment of the Soviet Union. America's loss in Vietnam in the 1970s led the Democrats to eschew anti-Communist crusades in the 1980s, but under the Democratic administration of President Bill Clinton, the United

States became involved in the Yugoslav wars of the 1990s. Since the terrorist attacks of September 11, 2001, Democrats have stood behind Republican president George W. Bush in the international war against terrorism.

Diamonds

Until the eighteenth century, Hyderabad in India produced most of world's diamonds. In the mid-1700s, the Minas Gerais region of Brazil began to produce large numbers of stones. Portuguese efforts to restrict production and to control smuggling in hopes of maintaining higher prices were not entirely successful, but along with gold, the carbon-based gems continued to make a major contribution to Brazil's economy.

In 1867, Boers from the Orange Free State and Africans (or Griquas) began to find diamonds on the banks of the Vaal River in South Africa. Not surprisingly, Britain's Cape Colony subsequently annexed the territory concerned. The longer-term future of the mines was secured when Cecil Rhodes's company, De Beers Consolidated, secured control of the diamond pipes—the origin of the alluvial diamonds previously worked—at Kimberley. This was the basis on which the company built its control of the South African industry, control that it ultimately extended to other diamond producers in Africa and, indeed, through De Beers's Central Selling Organization, to the marketing of virtually all the world's diamonds. Fairly draconian measures (including closed compounds and full-body searches) were introduced to prevent African mineworkers from smuggling diamonds out of the mines.

King Leopold's Congo Free State, as it was known, also benefited from extensive diamond deposits in the Kasai region. The Compagnie Forestière et Minière was formed in 1906 to exploit the

deposits of a colony that became the world's third most important producer. At about the same time, diamonds were found and began to be worked in Angola. In 1908, Zacharias Lewala, who had worked at Kimberley, recognized a stone as a rough diamond, and this helped launch German South West Africa's diamond-mining industry. Several West African colonies, both French and British, also saw the economically significant development of diamond mining. In other colonies, such as Indonesia, diamond deposits were too small to be commercially viable.

Disraeli, Benjamin (1804–1881)

One of the best-known and most fascinating and controversial of Queen Victoria's prime ministers, Benjamin Disraeli is indelibly associated with the heyday of the British Empire. As a young man, his imagination and his literary sensibilities were aroused by his travels in India and the Middle East, and he spoke of Britain's imperial prospects in grand and romantic terms throughout his long career. Once he joined the Conservative leadership in 1849, he frequently presented a policy of imperial consolidation as the principle that distinguished his party from its Liberal rivals. His most notable effort to invoke an imperial vision for political purpose was his Crystal Palace speech of 1872, in which he dedicated the Conservatives to the maintenance of British national institutions and the preservation of empire. Although never much interested in or informed about day-to-day issues of colonial administration, Disraeli consistently emphasized the importance of empire to Britain, foreshadowing the imperial activism of his great ministry between 1874 and 1880.

Under Disraeli, Britain annexed the Fiji Islands, extended its territorial commitments in West and South Africa as well as on the Malay Peninsula, and fought wars against the Afghans and the Zulus. Although many of these developments had been initiated by preceding governments, Disraeli

Conservative British prime minister during the 1860s, 1870s, and 1880s, Benjamin Disraeli acquired control of the Suez Canal and made Queen Victoria Empress of India during his various administrations. (Library of Congress)

justified them to the British public with distinctive rhetorical flair, underscoring the glories of empire. In 1875, he boldly facilitated the purchase of Suez Canal Company shares, forestalling French intervention and giving Britain significant influence over the future of Egypt and the canal. The next year, Disraeli, urged by the queen, vigorously defended the Royal Titles Bill, which, by naming Victoria empress of India, clearly warned the Russians of British intentions in the subcontinent. In his best-known linkage of foreign and imperial policy, Disraeli, on returning from the Congress of Berlin in 1878, proclaimed a peace with honor that calmed Turkish relations with Europe and that strengthened Britain's eastern empire through the accession of Cyprus.

Although Disraeli's assertive and celebratory approach to empire satisfied the queen empress and certain sectors of the British public, it also generated much opposition. His arch rival, William Gladstone, spearheaded the Liberal return to office in 1880 by a concerted attack against what he saw as Disraeli's dangerous expansion of Britain's global responsibilities. Disraeli died shortly after leaving office, but the events of succeeding decades, typically characterized as the new imperialism, seemed to confirm his belief that Britain's status as a world power rested significantly on the resources and peoples of its empire.

Drake, Sir Francis (c. 1540–1596)

The English “seadog” and explorer Francis Drake was born near Tavistock, Devon. Under John Hawkins, he went on a disastrous slave-trading expedition to the West Indies in 1567, sailing home in the *Judith* and deserting Hawkins. Later, he made several piratical attempts to recoup his losses against the Spanish, earning him much popularity as he sought to destroy the Spanish monopoly of Peruvian silver and Mexican gold mines. In his next voyages, Drake explored the route of the Spanish treasure ships, returning home in 1573 laden with plunder and to a hero's welcome despite Queen Elizabeth's recent peace treaty with Spain. Philip II of Spain demanded a return of the treasure and Drake's execution, so for the next two years, Drake kept a low profile.

His most famous voyage, circumnavigating the globe, took place from 1577 to 1580. Drake aimed at carrying war against Spain into the Pacific and to the west coast of the Spanish American colonies, for which he had Elizabeth's tacit permission. Many of his men, believing they were on a voyage of discovery or in search of trade, mutinied, but Drake had the ringleaders executed. On August 21, 1578, he sailed the flagship by itself through the Magellan Straits and then turned the

Golden Hind northward, plundering the Spanish colonies along the South American coasts until he reached latitude 38° at California, which he named New Albion and claimed in the name of the queen. He returned to Plymouth in September 1580 with enough treasure to pay a 1,400 percent dividend on the outlay of the expedition.

Drake was knighted and in 1584 put in official command as the queen's admiral in an expedition to the Spanish West Indies, with Martin Frobisher as his deputy. They sailed from Plymouth in September 1585 and lost 300 men from fever in the Atlantic crossing. They sacked Santo Domingo and Cartagena, taking £30,000 in ransoms and double that in pillage, and then sacked St. Augustine, taking all the guns and money they found there. Drake then went inland to Virginia to rescue Ralph Lane and his colonists, giving them a passage home and incidentally taking tobacco and potatoes with him to Plymouth in July 1586. The expedition did not pay for itself, but its propaganda value was great, exposing how poorly Philip II's American empire was defended. His exploits also served to delay the departure of the Spanish Armada against the English.

Drake's 1589 Lisbon expedition to put Don Antonio on the Portuguese throne was undersupplied and proved a failure, and Drake spent the next six years in his native Devon. In August 1595, the queen authorized what proved to be Drake's last expedition, a joint-stock operation with Sir John Hawkins to the West Indies; the fleet included twenty-seven ships, six provided by the queen. Their attack on Puerto Rico failed, Hawkins died, and an expedition to Panama ended in disaster. Drake died of dysentery at Porto Bello on January 28, 1596, and was buried at sea.

Durban

Durban (eThekweni in the Zulu language) is the principal city of the former province of Natal (now KwaZulu-Natal) in South Africa. A precolonial in-

Rickshaw workers pose in traditional headgear in Durban, South Africa, in the early twentieth century. British-ruled Durban was the principal port of entry for the wealthy mining districts of the Transvaal. (Library of Congress)

digenous settlement was superseded by the first European settlement in 1824, when approximately forty colonists set up a trading post at what was then called Port Natal. Following negotiations with Shaka, leader of the Zulu people of the region, they received rights to more than 3,000 square miles of land in the areas contiguous to the great bay, which had been the initial attraction for settlement. The first town on the site was formally brought into being by a gathering of residents in June 1835, who named the settlement D'Urban after the then-governor of the Cape Colony, Sir Benjamin D'Urban. Where the British settlers had come by sea, prospective Boer settlers (Voor-trekkers, moving north from the Cape) arrived from inland, having brought their ox wagons across the physical barrier of the Drakensberg Mountains from the dry, flat lands of the interior to the lush and fecund east coastal regions.

Shaka's successor, Dingane, was not as sanguine about the presence of the settlers and the signs of permanence that had become evident by

the late 1830s. He mounted a short-lived attack on the settlement in 1838, but within a year, several areas around the bay were being laid out with street plans, and quantities of land were being sold to settlers. Although relations between the British and the Boer settlers were generally good, the decision in the early 1840s by the authorities in London to annex Natal resulted in armed conflict between the two groups on the ground. Nonetheless, Natal became a dependency of the Cape Colony in 1845.

Durban manifests several core features of the quintessential colonial city. Its harbor, constructed gradually throughout the colonial and postcolonial periods and continually rebuilt and reshaped, was the busiest in South Africa and probably in the whole of Africa. After sugar production was established on vast monocultural plantations throughout Natal (by the 1880s) and after the railway line to the industrial and mining center of Johannesburg was completed in 1895, Durban functioned as one of the principal jewels

of the necklace of British colonial port cities (such as Dar es Salaam, Karachi, Bombay [Mumbai], Singapore, and Fremantle). The city was the hub of an extensive hinterland. It was the point of import for the manufactured products of the metropole in England and for the primary produce of much of the rest of the empire; at the same time, it was the point of export for Natal sugar and for the production of the industries and mines of the Transvaal.

According to a saying often heard in modern Durban, it is “the most Indian city in Africa, and the most African city in South Africa.” The very substantial Indian population—Hindu, Muslim, and Christian—is descended, for the most part, from people taken to Durban in the late nineteenth century as indentured labor (principally for the sugar industry); some so-called passenger Indians (following clerical and professional vocations) also came as free immigrants. The multiculturalism of the twenty-first-century city—manifested in its streetscapes, its foods and footways, its music and art, its languages and religions—is an unintended consequence of the colonial policy of plantation agriculture and large-scale population movements.

One of the more significant expressions of colonial policies and practices in and around Durban was the early (c. 1846) development of a policy of rigidly segregated residential areas for different “population groups” and the isolation of the African population in designated and often remote townships (which became the model for later national segregation policies). Another administrative measure that was to have great impact on the neocolonial segregation and apartheid eras was, however, put into place only after the formal renunciation of British control: the practice that became known as the Durban System. This system involved funding the needs of African townships (and the Native Affairs Department that administered them) through the revenues derived from a monopoly on beer manufacture and sale to Africans, a practice that was adopted nationwide during the apartheid period.

In the British era, Durban represented a quintessential colonial port city, and in the neocolonial period that followed, it became the testing ground for policies and practices that would help to preserve the social and political power structures

whose lineaments had been so well established in the earlier period.

Dutch East India Company (VOC)

The Dutch East India Company (Verenigde Oost Indische Compagnie, VOC) was the largest and most impressive of the early modern European trading companies operating in Asia. It was formed in 1602 when the States-General of the United Provinces of the Netherlands, the country's parliament, finally encouraged competing Dutch spice-trading firms to incorporate into a single trading company with the States-General's authority abroad to conduct trade, erect fortifications, elect governors, keep a standing army, and make treaties in its name.

From the company's inception, VOC leaders such as Jan Pieterszoon Coen strived determinedly, even ruthlessly, to achieve a monopoly in the Asian spice trade. To dictate the price of cloves, nutmeg, and pepper, the Dutch controlled key sources of spice production, such as Ambon in 1605 and Ternate in 1680, and defeated rival port-states such as Melaka in 1641, Makassar in 1667, and Banten in 1682 to ensure that the Asia trade would only flow through Batavia (present-day Jakarta). As the world's first joint-stock company (not to mention the world's largest employer at the time), it flourished due, in part, to several innovations: the VOC's large and permanent capital stock; its perpetual reserve of ships, personnel, forts, and the like, which were not liquidated after each individual voyage; and shareholders who could buy and sell VOC shares on the stock exchange and were held liable only to the extent of their investment. Seventeen men served as its board of directors in the Netherlands, representing six local Dutch chambers, with the VOC's charter periodically renewed by the States-General. But since it could take almost two years before a directive made its way from the Netherlands to VOC headquarters at Batavia on Java and back to Ams-

terdam with a response, the reality was that the VOC was governed on-site in Asia by a governor-general, with his Council of the Indies, and by lesser VOC officials in a network of forts and factories in Africa, the Middle East, India, Sri Lanka, throughout Southeast Asia, and up into Taiwan and Japan.

Statistically, the VOC eclipsed all its rivals in the Asia trade. In its two-century life span from 1602 to 1799, the VOC sent almost a million people to work in the Asia trade (the rest of Europe combined only sent 882,412 people from 1500 to 1795) on 4,785 ships (England was a distant second with 2,690 ships) and returned with more than 2.5 million tons of Asian trade goods (five times the tonnage of its closest competitor). The VOC enjoyed huge profits through most of the 1600s, but at the moment the VOC's stranglehold on spices was absolute, in the last quarter of the seventeenth century, spices became less profitable and European demand shifted to textiles, coffee, and tea, over which the VOC did not and could not have a monopoly. To compensate for the losses, an increasing percentage of VOC revenues after 1690 came from tolls, taxes, and tributes collected through an expanding colonial administration that ruled over ever-increasing territorial holdings in Africa and Asia. Overhead costs more than kept pace with company growth throughout the eighteenth century until—crippled in Asia by debts of almost 100 million guilders and reeling in Europe from the Fourth Anglo-Dutch War and Napoleon's control over the Netherlands—the VOC was dissolved on December 31, 1799.

Dutch East Indies

In the fifteenth century, the Indonesian archipelago (now known as Indonesia) stood at the center of a great international trading network connecting India and the Middle East to China through Southeast Asia; Europe received small but valuable quantities of the Asian goods as well. Each year,

foreign merchants by the thousands would sail the monsoon winds to and from maritime Southeast Asia, selling their cargoes of rice, salt, aromatic woods, precious stones and metals, furs and silks and other textiles, porcelain, and pepper and fine spices to other traders gathered there, buying their goods in return. Powerful early modern Malay trading states with urban populations of 100,000 to 200,000, such as Melaka on the Malay Peninsula and Makassar in south Sulawesi, attracted Arab, Indian, Chinese, and Southeast Asian merchants by providing essentially free ports, warehouse facilities, and an adequate legal system and by policing the waterways for pirates.

In such an international commercial climate, the arrival of Europeans in the Indonesia archipelago in the early 1500s should not be seen as the beginning of new era of Southeast Asian history but simply as the continuation of much earlier trading patterns and systems. Trading states in the archipelago and throughout Southeast Asia profited from the worldwide commercial boom from the late fifteenth to the early seventeenth centuries. But they became increasingly absolutist and monopolistic in the seventeenth century in order to contest the Dutch East India Company (VOC), which was unwilling to tolerate free trade. The seventeenth and eighteenth centuries saw the gradual weakening of the trading states of the Indonesian archipelago, as Makassar fell to the Dutch in 1667, Banten was brought under Dutch vassalage in 1684, and Mataram was partitioned in 1743. Still, only parts of Java and scattered enclaves in the Outer Islands were actually administered by the Dutch in the early modern period. And only in the nineteenth and twentieth centuries did Dutch colonial authority span the entire Indonesian archipelago and reach into the daily lives of its disparate nations and peoples—only then can we speak of the “Dutch period” of Indonesian history.

The Dutch squeezed the East Indies harder to compensate for lagging state revenues in the Netherlands, first using indigenous elites to force Javanese peasants to deliver coffee, indigo, sugar, tea, and tobacco to the Dutch from 1830 to 1870; then opening the archipelago to large-scale private capital investment after 1870; and finally promising (although never delivering) widespread reform from 1900 onward. The Dutch had created the idea

of a Dutch East Indies—a single, archipelago-wide entity—and people across the island chain began to unite for the first time as Indonesians, galvanized by this new national identity and a common disenchantment with the Dutch colonial presence. Japanese occupation of Southeast Asia in World War II expelled the Dutch and gave Indonesians the firm footing to resist Dutch attempts at reconquest from 1945 to 1949, when the Dutch finally recognized Indonesia's independence.

Dutch Empire

Dutch merchants had dominated the European waterways since the fifteenth century, beating out their competition by providing low-cost transportation throughout Europe for bulk goods such as Baltic grain and North Sea herring. At the turn of the seventeenth century, the Dutch were the economic superpower in Europe, and the Dutch shipping industry, buoyed by superior Dutch financial institutions and vast capital resources, was well positioned to enter the New World and the Asia trade.

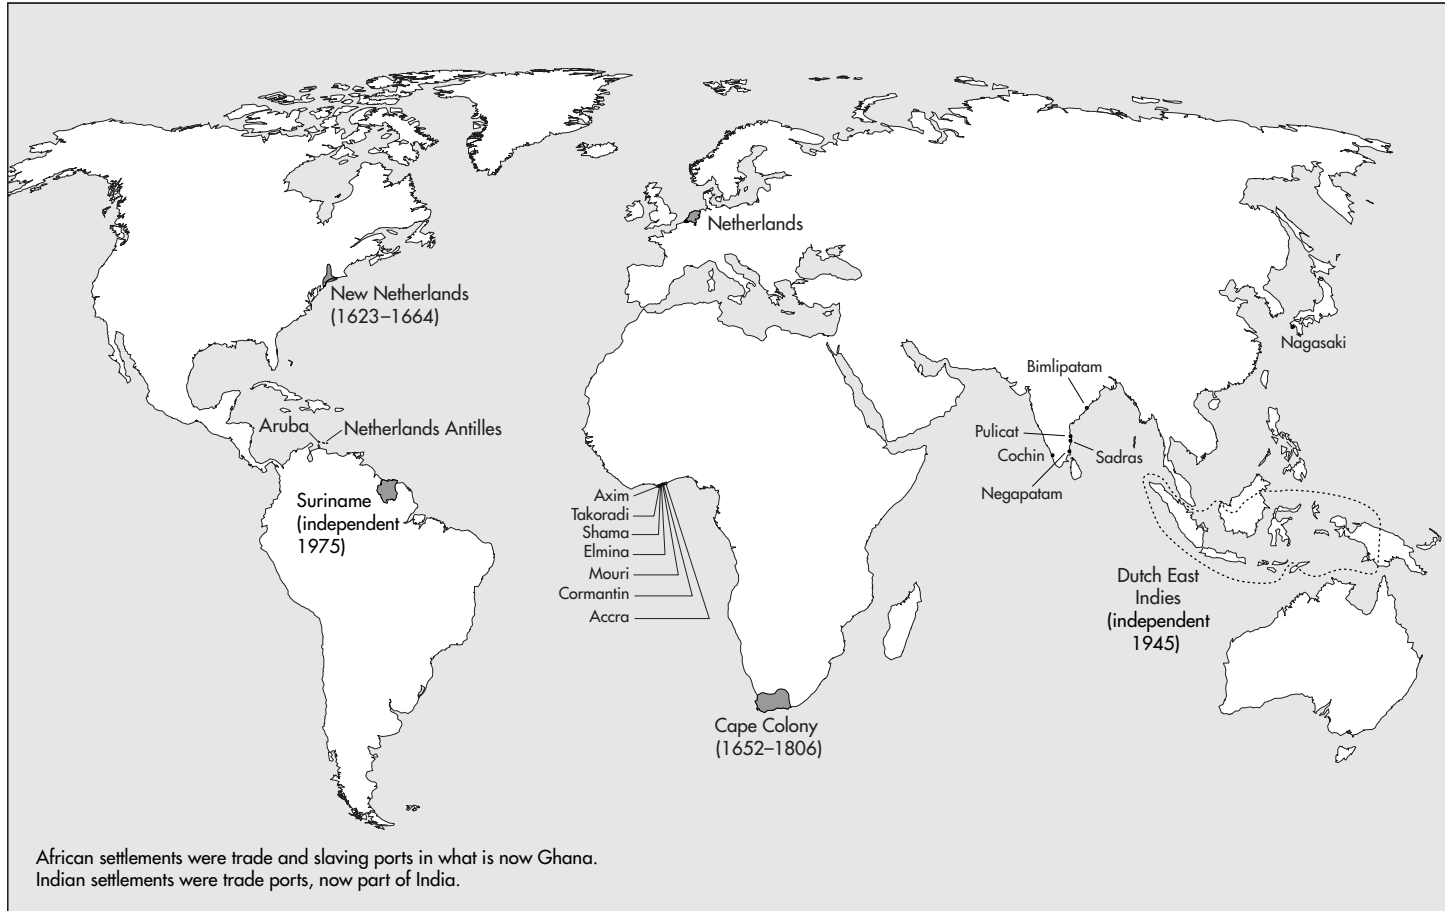

Around 1500, the Portuguese maritime spice trade joined the Asian maritime and overland caravan routes in supplying Europe with pepper and fine spices, but the Portuguese were unable to fix prices or monopolize supply in South and Southeast Asia, making the spice trade profitable and irresistible to their European competitors. In 1595, the first Dutch ship left for Asia, and in 1602, the Dutch government convinced the competing firms to incorporate into a single trading company, the Dutch East India Company (VOC). The VOC established its headquarters in 1618 at Batavia (present-day Jakarta) and aggressively pursued a spice monopoly (on cloves, nutmeg, mace, and, to a certain extent, pepper), which it more or less held after 1680. A sizable military force and a string of forts stretching from South Africa to Japan allowed the Dutch to internalize transshipping pro-

tection costs and turn huge profits by fixing prices in Europe at high but not exorbitant levels.

The Dutch concerned themselves with trade more than territorial administration and did not have a significant religious or cultural presence in Asia in the VOC period. Virtually no European women accompanied the men to the area between 1602 and 1869, so VOC men married or cohabited with Asian women. But the men died quickly from tropical disease, and their children were raised as Asians. Suffering staggering mortality rates, the Dutch never represented more than a small percentage of the population in their own VOC settlements, which resembled contemporary Asian port-states. Even so, the Dutch were far and away the most significant European presence in seventeenth- and eighteenth-century Asia, sending some 978,000 people there (Portugal was in second place with only 382,069) and returning with more shipping tonnage than Portugal, England, France, Denmark, Oostend, and Sweden combined. Toward the end of the seventeenth century and until the demise of the VOC in 1799, the focus of the Asia trade shifted from spices to textiles and coffee and tea, over which it exercised no monopoly. The eighteenth century was a period of profitless growth for the VOC, which increasingly relied on tolls, taxes, and tributes from its expanding territorial administration, especially on Java and Sri Lanka, to supplement its declining trade revenues.

Antwerp was an important sixteenth-century transit center for sugar and tropical goods from the New World, and its conquest by the Spanish in 1585 brought many Flemish merchants and cartographers to the Netherlands, providing important commercial contacts, venture capital, and cartographic information for the voyages to the Americas. At the end of the sixteenth century, Dutch ships began appearing in the Americas, pirating Spanish silver and Iberian trade and exploring new routes to Asia, resulting, for example, in the discovery of the Hudson River and Cape Horn. From 1609 to 1621, the Dutch called a truce in their war of independence from the Spanish, and large numbers of Dutch merchants appeared in the New World, mining salt pans and carrying most of the Brazilian sugar that was refined in the Netherlands. Renewal of war with the Spanish and Portuguese, temporarily united under one

DUTCH EMPIRE

monarchy, led to the formation of the Dutch West India Company (WIC) in 1621, after which the Dutch entered the West African slave trade and began capturing Brazilian sugar plantations and strategic Caribbean islands in the 1630s. The WIC endured chronic capital shortages and continual clashes with the Spanish and the Portuguese, and it failed in its colonization attempts (such as the New Netherlands settlement that was later taken over by the British as New York) and was never as profitable as its sister organization, the VOC. In the eighteenth century, a second WIC relied heavily on profits from the slave trade but saw its returns continue to tumble until it ceased operating in 1791 and was taken over by the Dutch state. Slavery was finally abolished in Dutch Suriname in 1863, which led to the importation of large numbers of workers from Indonesia, India, and China to work the plantations alongside the black former slaves.

In the wake of the French Revolution and the Napoleonic Wars, Dutch overseas possessions repeatedly changed hands between the Dutch, the French, and the British between 1795 and 1815; in the exchange, the Dutch lost the Cape Colonies (South Africa) and Ceylon (Sri Lanka) to the British. With the demise of the Dutch West India and Dutch East India Companies, the Dutch state assumed responsibility for administering its colonies. Unlike in previous centuries, the nineteenth-century Netherlands was no longer a commercial superpower, and it began to lean more heavily on its colonies for state revenues. From 1830 to 1870, the Dutch used the indigenous elite to force Javanese peasants to dedicate up to one-fifth of their land to cash crops (coffee, sugar, indigo, tobacco, and tea), which were given over to the Dutch for export in what became known as the cultivation system. The system was a fiscal savior for the Dutch state, becoming “the cork on which the Netherlands floats,” but famine on Java, systemic abuse, and pressure from Dutch industrialists caused the Dutch to abandon the system and instead open up the Dutch East Indies to private capital investment, during a period from 1870 to 1900 known as the liberal period.

The liberal period and industrial capitalism proved even more onerous for the Indonesians than the cultivation system, and the turn of the twentieth century brought a new, strongly paternalistic vision for the Dutch East Indies called the ethical period. Feeling the weight of the so-called

white man’s burden, the government of the Dutch East Indies promised and generally failed to deliver health, development and infrastructure, and education reforms to the Indonesians. Sharing a common disenchantment, Indonesia’s disparate islands and peoples gained a new political awareness and a modern sense of national unity in the first decades of the twentieth century as nationalist, Islamic, socialist, and communist parties sprung up; the Dutch state eventually turned to repressive measures, including jailing many Indonesian nationalists during the 1930s. The position of the Dutch in Asia changed overnight when Japan invaded Indonesia, defeating and interring the Dutch in 1942.

After the Japanese surrender in World War II, Dutch military forces faced an armed and hostile Indonesia, which had declared its own independence in August 1945. The Dutch waged several unsuccessful wars with Indonesian nationalists. Costing the Dutch state roughly the same amount that they were receiving in postwar reconstruction aid, the first and second Netherlands-Indonesia wars provoked intense scrutiny from the international community. The Dutch finally surrendered Indonesia in December 1949 and relinquished Irian Jaya in 1962. Dutch oil and mining firms began large-scale operations in the Netherlands Antilles (as the Dutch West Indies became known) and Suriname after World War I but played a much subordinate role to the Dutch East Indies. In the wake of the dramatic decolonization following World War II, the Netherlands Antilles became an autonomous part of the Kingdom of the Netherlands, which they remain. Suriname opted for independence in 1975.

Dutch West India Company

In the 1590s, Dutch merchants began sending regular fleets to fetch New World salt, preserving not only their herring but also their preeminence in

the European fishing industry and in world trade. During the first decades of the seventeenth century, competing Dutch firms established factors in West Africa and in North America, trading for African gold and ivory and American furs. Modeled on the successful Dutch East India Company, the various Dutch trading firms came together in 1621 to form the Dutch West India Company (WIC) and began aggressively contesting the Spanish and the Portuguese positions in the Americas and focusing on sugar-rich Brazil, which the Dutch held from 1630 to 1654.

Always lacking in numbers and usually lacking in success, Dutch settlers under the WIC began arriving in the New Netherlands (present-day New York) in 1624, only to have their settlement traded to the English by the Dutch in 1667 in return for Suriname. Many of the islands of the present-day Netherlands Antilles came under Dutch control in the 1630s, checking the Spanish in the Caribbean and serving as centers of the slave trade in which the WIC became engaged in 1626. The bellicose stance by the Dutch toward the Iberians and their failed colonies proved too costly for the WIC, and its profits fell sharply after 1640; it was finally replaced by a second WIC in 1674. The second WIC focused on West Africa and especially the slave trade, transporting around 5 percent of the African slaves to the New World. In 1713, the second WIC lost the *asiento*, or royal contract, meaning that it no longer monopolized the slave supply to the Spanish; it also meant staggering financial losses for the company, which folded in 1791. Thereafter, the Dutch Republic assumed responsibility for the Dutch West Indies.

Dutch West Indies

The Dutch West Indies include the Netherlands Antilles (Aruba, Bonaire, Curaçao, Sint Maarten, Saba, and Sint Eustatius) in the Caribbean and used to include Suriname in South America. (Suriname won its independence from the Netherlands in 1975.) Under the auspices of the Dutch West

India Company (WIC), Dutch merchants began establishing themselves in the 1630s on strategic islands in the Caribbean, especially on Curaçao as a smuggling and transit center and on the South American coast to gain access to Venezuelan salt pans and Portuguese-Brazilian sugar. Suriname was added to the Dutch fold in 1667 with their infamous exchange of their colony of New Netherlands (later New York) to the English in return for Suriname.

As sugar production increased in South America and throughout the Caribbean, so did the demand for African slaves. In 1675, the Dutch made Curaçao a free port, and the WIC sold up to 4,000 slaves per year there on the open market; from 1626 to 1791, the Dutch were responsible for exporting 550,000 African slaves, around 5 percent of the slave trade. Low European immigration and large slave and free-colored populations served as the foundation for the varied and racially mixed population of the Antilles. From the 1670s onward, the Dutch West Indies, which became the Netherlands Antilles in 1845, declined along with the WIC and its successors. In Suriname, the abolition of slavery in 1863 brought large numbers of contract laborers from India and Java to work the plantations. Economic prospects for the Netherlands Antilles picked up when oil refineries were opened up in Curaçao and Aruba shortly after World War I.

After World War II, discussion took place about the status of the Netherlands Antilles within the Dutch Empire, and in 1954, the Netherlands Antilles became an autonomous part of the Kingdom of the Netherlands. In 1975, Suriname voted for and was granted independence from the Netherlands. Not happy with Curaçao's economic supremacy within the Netherlands Antilles, Aruba left the federation in 1986, gaining an equal and apart status within the Kingdom of the Netherlands. There are currently active independence movements in the Netherlands Antilles, tempered by the grim prospect of total economic independence from the Netherlands.

E

East Timor

The world's youngest country, officially created in May 2002, East Timor has been the site in recent years of one of the last residual conflicts of the European colonial era. A part of the Portuguese Empire from the early 1600s, it nearly won its independence in 1975, only to be invaded by neighboring Indonesia, which brutally repressed a liberation movement there for nearly twenty-five years.

As its name implies, East Timor is just one-half of the island of Timor, a roughly 12,000-square-mile mountainous landmass 600 miles east of Java and 300 miles north of Australia. The island was originally inhabited by Malay people. The Portuguese first came to the island in the early 1500s to trade for sandalwood, and they began occupying the eastern half a century later. Around the same time, the Dutch established trading posts on the western half of the island. Following a period of sporadic armed conflict, the island was split between the two imperial powers in 1749, although it was not until treaties were signed in 1860 and 1914 that the boundary was officially settled.

In 1942, the island was invaded by the Japanese. Bitter fighting with Australian troops stationed on the island resulted in the deaths of tens of thousands of Timorese. Following the Japanese defeat in 1945, the Dutch attempted to repossess the Dutch East Indies, of which western Timor was a part. Following four years of guerrilla conflict, Indonesia won its independence.

Meanwhile, Portugal—controlled by a Fascist dictatorship—clung to its colonial empire in Africa and Asia, including East Timor. In 1974 and 1975, the dictatorship fell in the peaceful “carnation revolution,” and Portugal immediately announced its intention to dissolve almost all of its overseas empire. A brief civil war in East Timor in 1975 led to a declaration of independence in November of that year by the leftist guerrilla group Revolutionary Front for an Independent East Timor (or FRETILIN, its Portuguese abbreviation).

In early December, however, East Timor was invaded by the Indonesian military under the dictatorship of Suharto. The suppression of FRETILIN and East Timorese nationalism was brutal. Forced starvation, concentration camps, and military attacks resulted in the death of roughly one-third of the territory's 600,000 people during the nearly twenty-five-year Indonesian occupation.

Following the collapse of the Suharto dictatorship in 1998, Indonesia announced it would consider independence for the territory, and a referendum on independence versus autonomy within Indonesia was put to the East Timorese population under United Nations guidance. The August 1999 vote showed overwhelming (78 percent) support for independence. Nevertheless, armed militia groups—supported by the Indonesian military—refused to accept the results of the referendum; in the wake of violence that followed, thousands of

East Timorese were slaughtered and tens of thousands fled to western Timor. Over the next few months, an Australian-led peacekeeping force occupied the territory, and the UN once again began preparing East Timor for independence. It came in May 2002.

Eastern Question

Does the Ottoman Empire have a future? This was the “Eastern Question,” an important issue in nineteenth-century diplomatic affairs. As no single answer evolved, great powers sometimes went to war—or became allies—in efforts to present their opinions on the matter.

The Eastern Question first emerged in the 1700s, when European states such as Austria or Russia grabbed Ottoman possessions in the Balkans. By 1798, even core areas of the empire were targeted, as evidenced by Napoleon Bonaparte’s invasion of Egypt. This event—and the fact that only British intervention put an end to the French occupation—brought the Eastern Question to the fore.

Egypt again played a part in 1831, when its rebel viceroy, Muhammad Ali, launched his army into Syria and nearly seized Constantinople. The intervention of Russia caused the Egyptian forces to halt their advance. Although traditional foes, Russia and the Ottomans then concluded an alliance, Unkiar Skelessi (July 8, 1833), which seemed to give the former a protectorate over the latter. The same year, Lord Palmerston, England’s foreign secretary, helped form a lasting policy in support of Ottoman independence. The primary motivation was not to protect British interests in the Middle East but rather to maintain the European balance of power.

Unkiar Skelessi, annulled in 1839, started Russia and England on a collision course, each state taking a definite stance on the Eastern Question.

The Crimean War (1854–1855) was one result, the Second Russo-Turkish War (1877–1878) another. The issue was still under debate in 1914, when Ottoman leaders took their country into World War I, on the side of the Central Powers. Defeat brought a final answer to the Eastern Question, as the Ottoman Empire was dismembered by the victorious Allies.

Éboué, Félix (1884–1944)

A French colonial administrator, Félix Éboué was born in French Guyana and educated in France at the École Coloniale (Colonial School). After graduation, he was sent (in 1908) to the Ubangi-Shari colony, the present Central African Republic. He moved up in rank slowly, familiarizing himself with local languages and customs. In 1930, he was transferred to Martinique as acting governor, and in 1936, he was made governor of Guadeloupe. Political intrigues engineered by white colleagues, envious of the success of this black governor, had him transferred to Chad, a poor, landlocked colony in northwest Africa. Ironically, this presumed demotion set the stage for Éboué to take his place in history.

Éboué believed that the French presence should be beneficial to the indigenous population. He governed humanely, consulting indigenous chiefs and respecting local customs and beliefs, unless they clashed with French policies. He improved health services and transportation, fostering economic development by encouraging the modernization of agriculture.

In 1940, when France collapsed under the Nazi invasion and the newly formed Vichy government signed an armistice with Germany, Éboué was the first head of an African colony to declare allegiance to Gen. Charles de Gaulle’s government in exile, setting the example for other French African colonies. The immediacy of his response to de Gaulle’s appeal and the strategic location of Chad made his decision of capital importance to the Al-

lied air war effort in North Africa. An appreciative de Gaulle named him governor-general of the entire French Equatorial Africa Federation and asked him to organize the 1944 Brazzaville Conference on redefining the relationship between France and its African colonies so as to give the latter greater autonomy. When Éboué died, a French postage stamp was issued in his honor. In 1949, his remains were moved to the Panthéon in Paris; he is the only black buried there.

Economics

Although far from the sole reason for the evolution of modern empires, economic factors typically loomed large. Early proponents of overseas expansion saw the acquisition of colonies as a means of furthering the home country's economic growth and development. Prior to the Industrial Revolution, the theory of mercantilism, which most European monarchs adhered to, stressed the importance of a favorable balance of trade and the accumulation of specie. The Spanish Empire epitomized successful mercantilist practices, thanks to its control of Aztec and Incan mineral wealth. Spanish colonial power reached its height in the seventeenth century, but mercantilism proved a mixed blessing for Spain because the torrent of precious metal from the New World set off inflationary shocks that debilitated the Spanish economy.

As England approached the dawn of its colonial period in the late sixteenth century, the colonial propagandist Richard Hakluyt added to mercantilist theory when he argued that a New World empire would spur economic growth by providing a new home to the ranks of England's burgeoning number of poor, who, in turn, would purchase goods manufactured in the home country. Although millions of English and other Europeans did eventually call North America home, the colonies were hardly the financial windfall that Hakluyt envisioned. The colonies traded with both home country and foe, and after a century of imperial warfare, Hakluyt's descendants lost most of

the North American colonies. In Asia, meanwhile, tiny Holland built an empire that, though lacking the precious metals of the Spanish Empire, provided more sustainable wealth. Dutch control of the spice trade and the commanding position of its merchant fleet transformed Holland into one of continental Europe's wealthiest states.

With the Industrial Revolution and the emergence of the so-called new imperialism of the nineteenth century, when the industrialized nations spread colonial control over vast parts of Africa and Asia, economic explanations of colonialism generally followed the paths created by the British economist J. A. Hobson and the Marxist revolutionary and first leader of the Soviet Union, Vladimir Lenin. Hobson explained colonial expansion as a result of the industrialized nation's search for overseas outlets to solve basic problems of overproduction, underconsumption, and excess capital accumulation. In the case of the British Empire, which expanded rapidly after 1815, the Hobson-Lenin thesis has some validity. As England moved from a rural-agrarian to urban-industrial nation, its manufactured exports to the colonies skyrocketed. Japan's period of rapid modernization that followed the 1868 Meiji Restoration also saw the parallel development of an overseas empire. Starting with the Chinese island of Formosa in 1895, the Japanese Empire grew to include south Manchuria in 1905, Korea in 1910, and the remainder of Manchuria in 1931. For Japan, Formosa and Korea meant a steady supply of rice, and after Japan joined the ranks of creditor nations following World War I, Manchuria meant a home for surplus capital. In Germany's case, frequent economic booms and busts from the 1870s to the 1890s led many business and government leaders to conclude that only the acquisition of colonial markets would ward off the specter of domestic chaos.

Colonies, however, did not always play the role that Hobson and Lenin argued. The Austrian economist Joseph Schumpeter compellingly argued that colonial empires do not, in most cases, serve the needs of an industrialized nation with surplus capital problems. Indeed, in England's case, although capital exports grew apace with colonial expansion, the English tended to tuck away money in developing economies outside the empire. Japan likewise relied heavily on noncolonial sources for both

raw materials and investment outlets. For the United States, the oft-forgotten colonial power, the Philippines never matched China—or America's far greater informal empire in Latin America—as a source of raw materials, markets, and investment outlets.

Finally, no discussion of the economics of colonialism is complete without some mention of how colonialism affected the economic development of the colonized. Marxist historians stress that because the colonial relationship existed to serve the home country, colonies received little or no economic benefit from their relationship with the metropolis. In many instances, this is certainly true. In the case of French West Africa, for instance, French colonialism contributed little to sustained economic growth, and even the impressive post-World War II funding that Paris channeled into West Africa was intended primarily to spur commodity exports. Likewise in the Congo, Belgian authorities developed commodity exports almost solely for the benefit of king and country.

Although the Marxist interpretation is correct in many cases, colonialism's impact on economic development is not always so one-sided. Many non-Marxist historians demonstrate that, though not always easy or even immediately beneficial, the colonial relationship did indeed spur economic development in various colonies. Three centuries of Spanish rule in large parts of Latin America, for example, contributed to both agrarian and industrial capitalist development. In India's case, ample evidence exists to support the contention that British control led to deindustrialization of the subcontinent, but a sizable and respected body of opinion supports the opposite conclusion. In both Taiwan and Korea, abundant evidence suggests that, although undeniably destructive to the local culture and society, Japanese colonization did set the stage for economic modernization. In Taiwan, Japan created an agricultural system that provided the underpinnings for postcolonial industrialization. Similarly, in Korea, Japanese administrators reorganized the tax and fiscal structure and built modern communication and transportation facilities.

Eden, Anthony, First Earl of Avon (1897–1977)

Awarded a Military Cross in World War I, the Eton- and Oxford-educated Anthony Eden went on to become a Conservative member of Parliament from 1923. He rose to the position of minister without portfolio for League of Nations affairs in June 1935, being sent to Rome to buy Benito Mussolini off with a colonial deal. Britain suggested it would try to secure for Mussolini much of league member Abyssinia (and throw in a bit of British Somaliland, too), in the hope of keeping his support. Mussolini spurned the bait, and Eden got to replace Sir Samuel Hoare as foreign secretary when Hoare was blamed for a similar plan later that year. Eden then resigned, in 1938, to protest the appeasement of Hitler, whose ambitions seemed more dangerous.

Eden was again foreign secretary during World War II (1940–1945) and when Winston Churchill returned as prime minister from 1951 to 1955. In this capacity, he attended the Geneva Conference on Indochina of May to June 1954. By then, he believed the least damaging outcome of the Indochina war would be the neutralization of most of the area. He successfully supported calls for Vietnam to be partitioned into a Communist north and a non-Communist south, for Cambodia and Laos to be put beyond great-power competition, and for international supervisory commissions to be appointed to oversee these three areas.

It seemed to Eden his diplomacy had averted disaster, if not U.S. intervention and full-scale war.

As prime minister (1955–1957), however, Eden was to be less successful. On the one hand, decolonization continued its previous course, steady but slow, with arrangements being made that would see the Gold Coast and Malaya reach independence in 1957, following Sudan in 1956.

In mid-1956, however, Gamel Abdul Nasser nationalized the Suez Canal. Simultaneously, Nasser was broadcasting anti-British propaganda to the Arab world, leading Eden to see him as a general threat to British influence in the Middle East. Eden determined Nasser could not be appeased, and Britain and France secretly arranged for Israel to attack toward the canal, allowing an Anglo-French force to intervene to separate the sides. Israeli intervention in late October 1956 duly brought about a successful Anglo-French seizure of the canal—but only at the cost of UN condemnation and the blocking of the canal itself.

Eden halted the operation before the end of November but not before it had undermined the prestige it had been supposed to sustain. He limped on as a politically damaged and physically ailing prime minister until his resignation in January 1957.

population, who could be called on to fill lower-level clerical positions in government or business. Despite these realizations, however, the colonizers also recognized that education was inherently dangerous, since educated people had a tendency to reject the notions of inferiority and inequality on which imperialism was based. Worse yet, educated people also developed higher expectations from the colonial endeavor, ranging from the right to participate in all levels of colonial administration to increased financial opportunities. When these expectations were not met, educated elites were prone to protest, demand reforms, join nationalist movements, and eventually call for an end to colonial rule.

Despite these dangers, colonizers accepted the need for some form of education in their colonies. The real questions were who was going to provide the education, who was going to get it, what it would consist of, and what it was meant to achieve. Although the colonial powers varied widely in terms of their motivations for acquiring overseas possessions and the nature of their colonial administrations, their answers to these questions remained remarkably consistent. Since they hoped to run their empires as cheaply as possible, all of the colonial powers opened only limited numbers of government-run schools, preferring instead to rely on missionaries for the bulk of education and the so-called civilizing efforts. This led to the creation of parallel and occasionally conflicting educational systems because missionaries did not always share official views about the role of education, the curriculum content, or the language of instruction.

Government schools, usually located near administrative centers, were designed to churn out only as many graduates as were needed to help with the process of colonial administration and economic development. For this reason, colonial officials rarely attempted to provide academic education to girls, believing that their roles would and should be limited to those of future wives and mothers. As for boys, however, in addition to teaching academics and job-related skills, government schools were also designed to teach obedience, loyalty, and patriotism. Only the French bothered to go further. Building on ideals advanced during the Revolution, the French openly embraced the concept of assimilation; hence, their

Education

The task of educating the indigenous peoples of colonial empires was a double-edged sword for all concerned. Since they had justified the acquisition of colonies on grounds that they were going to uplift or “civilize” the indigenous peoples, all of the colonial powers realized the need to make good on at least some of their promises. Moreover, given the size of the territorial empires in question, the colonizers also realized that they could not hope to govern or fully exploit their vast holdings without help from Western-educated members of the local

schools were designed to remake colonial subjects into Frenchmen by teaching them French language, history, and culture. By the dawn of the twentieth century, however, the French government abandoned the concept of assimilation in favor of the looser policy of association, and it adjusted its official colonial schools accordingly. In the process, these institutions came to look like their British and German counterparts. At the base of all three colonial school systems, the curriculum was deliberately limited to teaching literacy, basic arithmetic, and a variety of menial skills in school workshops, farms, and plantations. Thus, pupils in these government-run schools not only learned skills deemed necessary by the administration for proper colonial development, they also helped to reduce the costs of the education system by earning their keep; further, at least in theory, they learned an important lesson about their place within the overall colonial system.

The best and brightest graduates of lower-level government schools were occasionally sent on to higher institutions to learn specialized skills or be trained for roles such as nurses or interpreters. For the bulk of the colonial period, there were no colleges in the colonies, and few indigenous peoples ever went abroad to attend one, but a few of the upper-level schools (such as France's *Ecole William Ponty*) were granted the same status as metropolitan institutions. However, in an effort to keep graduates from either taking their skills abroad or supplanting trained white personnel, colonial authorities passed legislation that declared diplomas granted by these schools invalid outside the colonies.

Even if they remained in the colonies, however, not all those who acquired one of these diplomas were assured of jobs suited to their training. Those lucky enough to find employment inside the government education system labored under the watchful eyes of white teachers or supervisors who ensured that only material in the official syllabus made its way into the classroom. Throughout the official education system, including lower levels staffed by indigenous teachers, classes were taught in the language of the colonizer and emphasized rote memorization, obedience, and loyalty to the regime. Discipline, as in metropolitan schools, could be harsh, and when necessary, it was maintained by the liberal use of corporal punishment.

Although they shared many of the colonial administration's problems and aspirations, the missionaries' approach to education in the colonies was quite different. Whenever the opportunity presented itself, missionaries eagerly accepted the challenge of educating colonial populations, in hopes of using schools as part of their ongoing evangelization efforts. Moreover, as products of their times, missionaries also genuinely believed in the concept of uplifting and civilizing indigenous peoples. This meant teaching loyalty, obedience, Western morality, hygiene, nutrition, and, above all, Christianity. Potential pupils, however, rarely found these subjects interesting enough to enroll in mission schools, preferring instead to concentrate on earning a living or the pursuit of a more academic education. Consequently, mission schools frequently found themselves in the position of expanding their curricula to include other elements of Western education so as to attract pupils. This was particularly true in areas where rival denominations operated, since pupils and potential converts tended to shift allegiances repeatedly in order to get the education they wanted. Once in place, missionary schools taught their pupils religious doctrine, basic academics, and valuable skills that translated into paying jobs for graduates. In order to teach these skills and to generate much-needed revenue for their evangelization efforts, the missionaries followed the lead of their governmental counterparts and opened plantations, farms, and workshops alongside all of their schools.

As in the government's educational system, the best and brightest graduates of missionary primary schools went on to the next level, where they were often trained by white missionaries as catechists and teachers so that they could help with the task of gaining converts. As soon as they were ready, indigenous teachers and catechists were sent out into the field to help open new bush or village schools as part of a self-perpetuating operation. Furthermore, as part of their ongoing evangelical efforts, mission societies were willing to start schools beyond existing administration centers and to open those schools to pupils from all castes and social classes, thereby making mission schools much more egalitarian than their government counterparts.

The final element to missionary efforts to acquire converts was a conscious effort to educate

women. In the process, missionaries hoped to convert not just their female pupils but also future generations as these students passed on what they had learned to their own children. To this end, missions in all of the colonial empires opened up increasing numbers of girls' schools. Curricular content in these institutions was, however, even more limited than that for male pupils because missionaries tended to accept contemporary gender norms, which mandated that girls be prepared for roles as future wives and mothers. Hence, girls' schools run by missionaries offered limited academics and focused instead on religion, cooking, and housekeeping skills.

Although the colonial powers generally welcomed and applauded missionary education efforts, disputes did occasionally arise, particularly in reference to the scope, content, and quality of missionary activities. In particular, colonial administrators worried that the growing networks of missionary bush schools were staffed by indigenous teachers who were insufficiently prepared for the job and were therefore counteracting uplift efforts. Similarly, colonial officials frequently complained about the missionary preference for using local vernaculars as the medium of instruction, arguing that it was not conducive to efforts to teach patriotism and loyalty to the home country. Although missionaries attempted to reassure colonial governments that they were indeed committed to the colonial endeavor and were attempting to instill the proper values in their pupils, they also hastened to add that their primary duty was to gain converts—a task that could best be accomplished by giving students the skills necessary to read and understand the Scriptures in their own language. Finally, government officials also feared that the scope of missionary education efforts was creating a generation of people who felt that they were too good for manual labor. This would not only retard colonial development, which depended on a steady supply of plantation and other workers, it also dangerously raised expectations among the indigenous population. In the end, government concerns about missionary school systems led to the establishment of a wide variety of regulatory practices in all the colonial empires, including the creation of official qualifying exams for all graduates, inspections and licensing requirements for schools and

teachers, and the payment of subsidies to mission schools that enacted official curricula.

Egypt

Most historians concur that Egypt's modern *colonial* history starts with the French invasion of 1798. Indeed, Napoleon's temporary success certainly fueled the new colonialism of the nineteenth century, one that saw established states in Africa or Asia as legitimate prey for European imperialists. After the French evacuated in 1801, Egyptian history followed two paths. Between 1811 and 1885, Egypt itself was a colonial power, dominating parts of the Middle East and northeast Africa. Simultaneously, down to 1956, European powers tried to control Egypt, via direct and indirect means.

Actions of the ambitious Muhammad Ali dynasty helped set both paths. The founder, who dominated Egypt from 1805 to 1848, sent armies into the Sudan, Arabia, Greece, Syria, and Anatolia. His repeated success helped frame the Eastern Question concerning the collapse of the Ottoman Empire, which had ruled Egypt for centuries, and led to great-power intervention via the Treaty of London (1841). Although this deprived Egypt of its Middle Eastern empire, it left intact even larger holdings in the Sudan. There, Egyptian expansion continued until the country was faced with defeat in a war with Ethiopia (1875–1876) and simultaneous financial collapse.

Egypt's hard times ended dreams of empire and allowed European penetration. When tremendous debts forced government austerity, popular

resentment led to the Arabi Revolution. This, in turn, provided an excuse for the British invasion of 1882. Until 1914, Britain exercised a veiled protectorate over Egypt, simultaneously maintaining that Egypt had its own government. During World War I and until 1946, the English tried more direct control, then opted for partial independence, with significant reservations. Treaties in 1922 and 1936 established greater Egyptian autonomy, but as demonstrated by London's attitude during World War II, all could be swept aside in deference to imperial strategies.

When British authority finally waned in the postwar era, nationalist currents rose to create a radical government in 1952. Soon led by Gamel Abdel Nasser, the United Arab Republic played a leading role in supporting anticolonial movements in Africa, the Middle East, and Asia. During the Suez War of 1956, Israel, Britain, and France struck hard at the new regime and won all the battles, but they were then forced to withdraw due to U.S. and Soviet diplomatic efforts. A milestone in the struggle against colonialism, this ended a cycle that dated back to Napoleon's 1798 invasion.

Eisenhower, Dwight (1890–1969)

As the thirty-fourth president—from 1953 through 1961—Dwight David Eisenhower led the United States during a period when most of the nation's Western allies were loosening their hold and giving up sovereignty over their vast empires in the developing world. Although concerned that some of these new countries would become Communist or, at least, allies of the Soviet Union during the Cold War, the Republican Eisenhower administration nevertheless maintained the nation's consistent anticolonial policy, encouraging the

peaceful transition to independence of numerous countries in Africa and Asia. At the same time, however, Eisenhower and his secretary of state, John Foster Dulles, did not hesitate to intervene in the decolonization process—as in the case of the Congo—if they felt U.S. interests were at stake.

Born in Denison, Texas, in 1890 and raised in Abilene, Kansas, Eisenhower graduated from West Point Military Academy in 1915 and served as a captain in the U.S. Army in World War I. A career officer, he rose through the ranks during the lean military years of the interwar period. He took command of U.S. forces in Europe during World War II, launching successful invasions of North Africa, Italy, and France. Between the end of the war and his election to the presidency in 1952, Eisenhower served as army chief of staff, president of Columbia University, and supreme commander of the North Atlantic Treaty Organization (NATO).

Eisenhower was partly elected on his promise to quickly bring the Korean conflict to an end, which he did in 1953. Although he continued supplying massive U.S. support to the French in their efforts to hold on to their colony in Vietnam and prevent a takeover by Communist forces led by Ho Chi Minh, Eisenhower nevertheless refused to go to France's rescue—ruling out the use of nuclear weapons—at Dien Bien Phu in 1954. Subsequently, the Eisenhower administration was deeply involved in the negotiations behind the Geneva Accords of 1954, whereby Vietnam was divided into northern and southern halves in preparation for nationwide elections to determine a unified government later. However, fearing the popularity of the nationalist-Communist Ho Chi Minh, the Eisenhower administration prevented implementation of the accords and began supporting the anti-Communist regime in the south with military aid and small numbers of military advisers.

Eisenhower's true anticolonial colors were demonstrated in the Middle East in 1956. That year, the nationalist leader of Egypt—Gamel Abdel Nasser—seized control of the Suez Canal from the British and French. When these two powers, along with Israel, invaded Egypt to regain control of the canal, Eisenhower used the vast persuasive powers of the United States to force them to back down, which they did. Eisenhower feared that

this recrudescence of old-style colonialism would alienate peoples in the developing world and turn them toward the Soviet Union.

However, the Eisenhower administration was not above intervening in the decolonization process if it felt that Communist or Communist-leaning governments were about to come to power. During the chaotic transition from Belgian to independent rule in the Congo in late 1960 and early 1961, Eisenhower dispatched the Central Intelligence Agency (CIA) to prevent the leftist Patrice Lumumba from consolidating his control over the central African nation. On January 17, 1961, during Eisenhower's last days in office, Lumumba was assassinated by his opponents in the Congo, with the help of the CIA.

Eisenhower left office on January 20, 1961, and retired to his farm in Gettysburg, Pennsylvania. He died in 1969.

Elizabeth I (1533–1603)

Elizabeth Tudor, the daughter of Henry VIII and Anne Boleyn, rose to the English throne in 1559, after a childhood punctuated by threats to her position in the royal household under her half siblings Edward VI and Mary I. Inheriting a dangerous and unstable situation, Elizabeth transformed England from a peripheral power beset by the more powerful France and Spain into an independent force, backed by a strong Protestant nationalism and an excellent navy. Much of the philosophy of expansion came from John Dee, the queen's personal astrologer, who invested the idea of English colonization with the mythological weight of King Arthur and ancient British claims to the New World, while teaching solid mastery of navigation and mapmaking. Others around the queen, including Robert Dudley, earl of Leicester, Philip Sydney,

and Francis Walsingham were investors and supporters of the Muscovy Company and the search for a northeast passage by Martin Frobisher between 1576 and 1578. The chief architect of English colonization, Richard Hakluyt, received a church living from the queen to support his efforts.

Much of Elizabeth's policy was motivated by a desire to keep England safe, balanced between France and Spain. Toward the end of her reign, she had to alter her policy, as England supported the Dutch against Spain and backed the Huguenots in France. Because of this, Elizabeth publicly supported the quasi-private navy developed through the issuing of letters of marque to privateers, who attacked Spanish shipping in the Americas. Elizabeth was a major investor in Francis Drake's circumnavigation in the *Golden Hind*, and she used much of the proceeds from Drake's raids on that voyage to finance England's defense against the Spanish Armada in 1588. Although Drake had claimed Tierra del Fuego and parts of California on his voyage, more tangible claims were made to North America. Humphrey Gilbert and Walter Raleigh received a commission to colonize, in the process claiming Newfoundland and laying the foundations for the Virginia colony, named for the "virgin" queen.

Establishing a permanent English colony was not the queen's chief concern. But in the face of Spanish invasion and continuing hostilities in the Netherlands, which made any outside settlement a hostage to Spanish aggression, her reign saw the establishment of influential trading companies, the production of accurate maps and sea charts of the Americas, and the accession of the ideas that England ought to possess a strong navy and that it had title to the New World through historical antecedents, such as Prince Madoc of Wales, a legendary twelfth-century voyager to the Americas. Elizabeth's influence also set the pattern of private enterprise and entrepreneurship in the settlement of British America.

Energy

The Industrial Revolution in Europe introduced steam power fueled by coal, thereby transforming energy on an unprecedented scale. Although the first practical steam engine was invented in 1698 by the English engineer Thomas Savery (1650–1715), this and its improved versions were confined to pumping water from mines up to the 1760s. Then, in 1769, the Scottish engineer James Watt (1736–1819) invented the separate condenser and thereby introduced the grand age of steam-powered transportation.

The increased use of steamships by the European powers in the course of the nineteenth century reinforced their supremacy in foreign territories. Steamships with steel hulls, screws, and compound engines greatly reduced the duration of the voyages between Europe and its colonies, which, in turn, meant that people and cargo could be transported to the colonies faster and raw materials and foodstuffs from the colonies could reach Europe sooner. Combined with the development of extensive railway networks based on steam locomotives within the colonies, used to transport the much sought after minerals from the mining areas in the interior to the coastal ports, the introduction of steamships allowed for rapid exploitation of the natural resources in the colonies.

The European powers, with ample domestic coal resources, found a ready market for their coal exports in the colonial territories. Imported coal was used by the coaling stations established along the sea routes and by the transportation, mining, and industrial sectors within the colonies. In addition, coal deposits in British colonies such as the Natal (South Africa), Zimbabwe, Zambia, Nigeria, and India were actively exploited by the colonial governments and used as the main energy source within the coal-producing colonies. Surplus coal was exported to neighboring colonies that lacked the necessary deposits to fuel their mining and transportation systems. The extensive mining areas in Zambia, for example, were fully dependent on imported Zimbabwean coal from the Wankie Colliery.

The second phase of industrial development in Europe in the late nineteenth and early twentieth centuries led to major technological innovations and introduced new sources of energy based on electric power and petroleum. The age of petroleum started in earnest on August 28, 1859, when

the American Edwin Drake (1819–1880) found oil in western Pennsylvania. This discovery triggered oil explorations on a global scale, even though petroleum's use as an energy source was confined to kerosene until the invention of a practical internal combustion engine in the 1890s. This invention was followed by the advent of the automobile, fueled by gasoline, and that, in turn, transformed transportation systems globally over the course of the twentieth century.

Although petroleum gained prominence in the first half of the twentieth century, coal remained the primary source of energy in Europe, providing around 80 percent of all European energy needs during this period. Yet despite the continuing predominance of coal, European countries opened up their colonial territories to intensive geological surveys by petroleum companies in the hope of discovering commercially viable petroleum deposits. Protective measures were introduced in the colonies, such as the British Mineral Oil Ordinance No. 17 of 1914 that barred non-British petroleum companies from prospecting for and exploiting petroleum resources within the British Empire. But by the 1950s, despite extensive exploration efforts in the colonies, colonial petroleum production was mainly confined to Trinidad (a British colony), Morocco (a French colony), and the Dutch East Indies. It was only in the final days of colonialism that petroleum exploration began to pay off in colonies such as Nigeria, which created perfect conditions for European neoimperialism in the independence period because the European energy companies that conducted the exploration won contracts to exploit the resources they had uncovered.

English Language

As a native tongue or as a second language, English is the most widely spoken language on earth

Smoke spews from a coal mine in Southern Rhodesia (now Zimbabwe) in the early twentieth century. Coal remained the principal fuel of railroads and steamships during most of the colonial era. (Library of Congress)

today. Though its present spread is largely due to the influence of U.S. technology, it was initially disseminated across the globe by the far-flung British Empire.

Colonies in North America and Australia, sparsely inhabited by indigenous peoples and populated mainly by British settlers, became English-speaking countries quite naturally. In most colonies, however, Britons constituted a small minority and the linguistic situation was quite different. Although the British felt they had a duty to educate and Christianize the so-called savage natives, they considered it practical to accomplish this by indirect rule, placing traditional chiefs on the throne and interfering only when absolutely necessary. The choice of language in education was left to the missionaries, who at least initially taught in English.

Britons were focused on seeking economic benefits from colonization and were not particularly eager to promote the English language. Indeed, their feeling of superiority led them to keep indigenous populations at arm's length. Only in 1835 did British authorities in India formulate policies to utilize English as an instrument of colonization. They put an end to the debate between Orientalists and Anglicists, ruling in favor of the latter, and established schools modeled on the British system. Even then, however, English education was instituted mainly to train the professionals and skilled workers who would be needed by the colonial administrations. In time, the Indian paradigm was implemented in other colonies. The use of English was deemed helpful in developing national unity because it avoided any favoring one indigenous language over another. Moreover, economic survival required continuing ties with the English-speaking world.

Underlying these policies was an awareness that political configurations would eventually change and that it was desirable to indoctrinate future local leaders so that they would want to maintain ties with Britain. Colonies gained independence sooner than Britain had anticipated, and most of them did adopt English as the official (or co-official) language.

English is still the language of secondary and higher education in the former British colonies, but in most, unique varieties of English have emerged in which innovations of vocabulary, syn-

tax, and imagery are used to convey indigenous thought. Influential intellectuals disagree on the effect of these developments. Some agree with Kenya's Ngugi wa Thiong'o and argue that the use of colonial languages results in a domination of the mental universe of the colonized and must therefore be eliminated; they favor the development of indigenous languages. Others, such as Nigeria's Chinua Achebe or India's Salman Rushdie, believe that English can be made to express indigenous experience and that altering English to reflect contemporary local life is the most effective act of liberation.

Environment

Colonialism not only affected the political and socioeconomic lives of colonized peoples but also had a deep impact on their environments. One remarkable result of encounters between Europeans and non-European peoples in Africa, the Americas, and Asia after the late-fifteenth-century European voyages of exploration was the exchange of animals, diseases, and plants. Christopher Columbus's voyage to the Americas in 1492, for example, resulted in the trade of a host of such items between the Americas and the rest of the world years later. Some of the early exchanges were positive developments that brought the world closer together; others, however, had catastrophic consequences for indigenous peoples of the colonized regions. For example, maize and potatoes, both native to the Americas, were introduced to Europe and Asia and have become staple foods for much of the world's population. But smallpox, introduced to the Americas from Europe, killed millions of Native Americans because they had no immunity to the disease.

European colonialism resulted in the conquest of lands in Africa, the Americas, and Asia. In some of these regions, especially in the Americas, Australia, and southern Africa, European settlements were established. In most instances, European agriculture was successfully used to manipulate the environment to meet the needs of the settlers for food and other resources. In North America, for instance, European immigrants tamed whatever portions of land they needed within a few decades and sometimes even sooner.

Animals and plants from Europe were introduced in colonial settlements with large tracts of forests, savannas, and steppes. By the 1600s, herds of horses and cattle were roaming Argentina, Uruguay, southern Brazil, and the plains of Mexico. Also by this time, a rapidly increasing number of domestic dogs gone wild were among the predators of these herds. In British North America, imported animals increased in number very dramatically, and wild horses and cattle were part of the expanding frontier from New England to the Gulf of Mexico. In Australia, pigs and poultry imported from the Cape of Good Hope in South Africa were thriving on the farms of English settlers by the late eighteenth century. The British also imported woolly sheep from Europe, and the animals multiplied within a short period. In New Zealand, there were about a quarter million sheep by the time Great Britain annexed the island in 1840.

European crops as well as undesirable plants flourished in regions where climatic and soil conditions were conducive to growth. Imported weeds thrived and took over vast tracts of fields in the Caribbean Islands, Mexico, Australia, and New Zealand, where the land had been disturbed by conquest and the introduction of new crops and animals. Forests were razed for timber and fuel in areas endowed with vast expanses of vegetation, and animals overgrazed grasslands and woodlands where pasture was available. Many indigenous floras were fatally vulnerable to European species of weeds, such as ferns, thistles, and nettles. In some cases, however, the introduced plants and weeds helped to protect the topsoil of hectares of valuable agricultural land.

The soil and flora of most colonized areas throughout the world were altered forever. Domesticated animals from Europe arrived, thrived, and multiplied into enormous herds. Their eating

habits, trampling hooves, and droppings and the seeds of weeds they brought left a deep impact on the environments that became their new homes. In the end, colonialism changed and reshaped the world because most continents lost countless natural plants and animals due to the human introduction of overpowering species. And in many instances, colonized regions were adversely affected by the introduction of animals, diseases, and plants from another environment, which dominated the existing indigenous flora and fauna.

Eritrea

Eritrea achieved nationhood in 1992, one of the last African states to do so, winning independence not from a European colonial power but by separating from Ethiopia after thirty years of war. Eritreans considered their move to independence a liberation, but Ethiopians saw it as a secession.

In modern times, Eritrea was generally recognized as part of the Ottoman Empire, although Ethiopian emperors considered it their territory; they tolerated an Ottoman presence, utilizing Eritrea as a buffer and collaborating with the Ottomans economically. Ethiopia militarily repulsed Egyptian moves to occupy Eritrea in 1875 and 1876. Meanwhile, Italy had established itself at Massawa and Aseb in the 1860s, eventually consolidating control over a larger coastal colony. Eritrea served as an Italian base for conquering Ethiopia in 1896 and again between 1935 and 1936, although both efforts ultimately failed.

Eritrea remained in Italian hands until 1941, when, as a result of Italy's World War II defeat, ten years of British military occupation began. Political party formation ensued, and the United Nations endeavored to settle Eritrea's long-term

future. Eritrean Christians generally favored federation with Ethiopia, whereas Muslims preferred independence or partition. Ethiopia, arguing historical and cultural ties to Eritrea's peoples and wanting secure access to the sea, encouraged federation. A sharply divided United Nations accepted a U.S.-sponsored plan that federated the colony with Ethiopia in 1952. But ten years later, Emperor Haile Selassie I scrapped this arrangement, annexing Eritrea as Ethiopia's fourteenth province.

This unilateral action, largely ignored by the international community, lent momentum to Eritrea's nationalist movement, and many Eritreans began to view Ethiopian administration as colonial. They perceived that Eritrea's own economic development was subordinated to the greater needs of Ethiopia. The Eritrean Liberation Front (ELF), founded in 1960, contested the Ethiopian presence in Eritrea, but Ethiopia's military, well supplied by the West, was generally able to contain it. Various factions challenged the ELF internally, most prominently the Eritrean People's Liberation Front (EPLF), which was founded in 1973. Incessant infighting detracted from efforts to mount a more effective liberation struggle. Meanwhile, a deteriorating domestic situation in Ethiopia in the early 1970s (drought and famine as well as the mounting human and economic costs of the Eritrean insurgency) contributed to Haile Selassie's deposition in 1974 and the succession of a Marxist-oriented military regime (the Derg).

The Derg briefly toyed with Eritrean reconciliation but soon dissolved in its own internecine struggles and purges, thereby encouraging the 1977–1978 Somali grab for the Ethiopian region of Ogadeen. With the Derg alienated from Western support and overextended both militarily and economically, the Eritrean liberation groups, having achieved a fragile unity, were able to mount a more effective challenge and went on the offensive after 1979. In 1982, the Derg, in the Red Star campaign, committed itself to an all-out, final military solution in Eritrea, but the offensive stalled, with heavy losses on both sides. By 1988, the Ethiopians had lost vast sections of the country and were increasingly isolated in urban areas. They intensified the use of aerial bombardment, displacing hundreds of thousands of Eritreans, who joined the many refugees already in Sudan.

By 1989, the EPLF, working closely with Ethiopian opposition groups—particularly the Tigre People's Liberation Front (TPLF)—sought to undermine and destabilize Ethiopia's military regime. Domestic support for the Derg quickly eroded, and in 1991, forces of the Ethiopian People's Revolutionary Democratic Front (EPRDF) (a coalition of the TPLF, EPLF, and various other opposition groups) occupied Addis Ababa. Espousing self-determination, the EPRDF supported a UN-sponsored referendum on Eritrean independence in 1992 by which Eritrea became a self-governing nation.

Espionage

The act of gathering information in a clandestine fashion has been part of statecraft since the very beginning of civilization. Because one nation feels the need to know what another is doing, there is a continuing demand for material that reveals military, industrial, or political secrets. Thus, espionage has been described as the “second oldest profession.” The ancient Egyptians practiced spying; it is mentioned by Homer and is found in the Bible.

The greatest exponent of espionage was Sun Tzu, the ancient Chinese strategist who wrote the *Art of War*, a treatise in which he described five types of spies and their usefulness (for him, the art of war was entirely based on deception). He enumerated these as: local spies (agents who are citizens of a hostile nation), moles (agents that are officials in the government of the hostile nation), double agents (recruited enemy agents used against their own country), doomed spies (agents used for deception and entirely expendable), and surviving spies (agents that consistently produce information about the hostile nation). The qualities that each spy must possess include intuition, acumen, ingenuity, and subtlety. As for the fate of

each spy, Sun Tzu made it simple—all spies are expendable. He also stressed the importance of counterintelligence. Enemy agents may compromise the effectiveness of a country's intelligence service unless measures are taken to thwart the enemy. Thus, the basic principles of espionage delineated by Sun Tzu have changed little over time, as they remain in effect to this day.

One of the earliest examples of modern espionage occurred in the nineteenth century—namely, the “great game,” which was an elaborate system of surveillance, intelligence, and counterintelligence deployed by Great Britain and the Russian Empire. The effort on Britain's part was to head off any expansionist ambitions that Russia harbored concerning India. To this end, a buffer zone known as the Wakhan Corridor was established in southern Afghanistan in 1896. However, wariness persisted on each side, and measures and countermeasures continued to be employed right up to the cessation of British rule in India in 1947.

By 1914, on the very eve of World War I, all European nations had established departments where spies were trained, as well as highly sophisticated infrastructures that allowed for the handling of spies and the decoding of information that was gathered in the field and sent back to headquarters. Two of the most famous spies to emerge from this period were Sydney Reilly (1874–c. 1925) and Mata Hari (1876–1917). It was Reilly who set the standard for modern-day espionage, transforming it from a “great game” for gentlemen, with accepted rules and limits, into an arena of ruthless intrigue and deception to achieve political and military ends. Reilly worked for the British, was able to penetrate the German High Command during World War I, and nearly reversed the Russian Revolution in 1918. To this day, his fate is shrouded in myth, with some firmly believing that he was not killed by the Russians as had been reported but lived out his life in secrecy.

Mata Hari also paid dearly for her exploits. She is best known for her skills at double-crossing, that is, she worked for both the British and the Germans simultaneously. Dutch by origin, her real name was Margaretha Geertruida Zelle. She worked as a dancer in Paris and joined the German Secret Service sometime in 1907. She gained military secrets by seducing British, French, and German officers, then passed the information on

to either side. She was eventually arrested by the French (in 1917), quickly tried, and executed.

The countries that led the rest in developing a refined structure of spy rings were Britain, Germany, and Russia. Each of these three colonial powers required a continuous flow of information in order to deflect and diffuse conflicts that could undermine their dominance.

The history of British espionage goes back to Sir Francis Walsingham, Elizabeth I's spymaster, whose agents had infiltrated all the courts of Europe. In later years, Britain established the ground rules for cryptography, domestic surveillance, and the detection of treason. In 1909, two agencies were created within the Secret Service Bureau of the War Office—namely, the Home Section (known as MI5, short for the fifth branch of Military Intelligence) and the Foreign Section (known as MI6, or the sixth branch of the Military Intelligence). MI5 became adept at counterespionage during World War II and was responsible for catching many German spies. It is still in operation and functions as a counterterrorism agency. MI6 still sends agents abroad on spy missions.

From the 1880s until 1918, the largest spy school in the world was located in Berlin and was run by the German Secret Service; Berlin has had a long history as a center for espionage activity, down to the present day. Most of the infrastructure was disassembled after 1918, with Germany's defeat in World War I. However, with the surge of national socialism and Adolf Hitler's rise to power from 1920 to 1933, the infrastructure of German intelligence agencies was again reestablished, since Hitler had need to uncover his enemies. This task was entrusted to the Sicherheitsdienst (SD, or Security Service), which was a specialized unit within the Schutzstaffel (SS), Hitler's elite personal guard. As Hitler consolidated his power, the work of the SD expanded as well, until an espionage unit was specifically created—the Reichssicherheitshauptamt (RSHA, or Reich Security Organization), which worked only on overseas operations (much like MI6). Out of the RSHA was created the infamous Gestapo (the Geheime Staatspolizei, or Secret State Police), which looked after homeland security (much like MI5). The RSHA established a network of agents, spies, and informants throughout the world, and it ran two spy schools, one in the Hague and one

in Belgrade, where agents were trained in engineering, disguises, topography, trigonometry, ciphers, coding, deception, and seduction.

Like England, Russia has a long history of espionage, going back to the reign of Ivan the Terrible (1533–1584), and each successive czar had his own network of spies who scoured the land for revolutionaries and counterrevolutionaries. After the revolution, intelligence activity was greatly extended by Vladimir Lenin. However, it was Joseph Stalin who established Russian espionage both at home and abroad. The intelligence apparatus that he created evolved into three separate units. The People's Commissariat for Internal Affairs (NKVD, or Secret Police) was responsible for internal security and also ran Stalin's countless death camps (the gulag system). The Ministry of Internal Affairs (MVD) was the NKVD reformulated after 1946. The Committee for State Security (KGB) was the result of merging two agencies: the Ministry of State Security (MGB, or military counterespionage) and the economic intelligence unit known as K1. The KGB was created in 1954 and was responsible for internal security and foreign intelligence. This agency operates to this day in modified form.

Ethiopia (Abyssinia)

Modern Ethiopia (known as Abyssinia or the Abyssinian empire prior to the twentieth century) has long defended its sovereignty against outside encroachment, while periodically challenging its neighbors offensively. Ethiopia's temperate climate and fertile soils, its ancient Coptic Orthodox Chris-

tianity, its association with the Nile's source, and its plentiful resources (including gold, ivory, slaves, and coffee) have attracted foreign interest throughout history.

The Portuguese were involved in Ethiopia in the sixteenth and seventeenth centuries, pursuing a Christian alliance against the Ottoman Turks by aiding Ethiopia against the Somali leader Ahmed ibn Ibrahim. In 1868, the British dispatched a 32,000-man force to compel Ethiopian emperor Tewodros II to release European hostages he had seized to help him secure Western weapons. In the late nineteenth century, as the Ottoman Empire disintegrated, Isma'il, the grandson of Egypt's Muhammad Ali, claimed Ottoman coastal territory along the Red Sea and in the Horn of Africa. Fighting for control of Eritrea, Ethiopia's emperor Yohannis IV annihilated a small Egyptian force at Gundet in 1875 and a larger one in 1876 at Gura. One year later, Yohannis thwarted Italian efforts to garrison the Eritrean highlands, pummeling a 500-man Italian force at Dogali, an event that encouraged the Italians to aid Menelik's imperial challenge of Yohannis. Meanwhile, Isma'il's domination of the neighboring Sudan helped spark the Mahdist revolt there in 1889, resulting in border confrontation between the Mahdists and Ethiopians as the former raided for booty and destroyed isolated Egyptian garrisons. Yohannis's death in this campaign left Menelik II to assume the Ethiopian throne.

As regional ruler of Shewa, Menelik expanded his territory to the south, west, and east, improving his access to the sea and gaining rich reserves in land, gold, slaves, and ivory. Using force or its threat, Menelik compelled dozens of new ethnic entities to accept his authority, tripling the size of the Abyssinian empire, defining its modern boundaries, and consequently creating modern Ethiopia. In 1889, the Italians signed the duplicitous Treaty of Wuchale with Menelik, claiming an Italian protectorate over Ethiopia. Menelik, too, was eventually forced to defend his kingdom, overwhelming the Italians at the Battle of Adwa in 1896.

His eventual successor was the progressive Haile Selassie I, who became regent in 1916 and emperor in 1930. Like Mustafa Kemal and Reza Khan, he envisioned modernization for his country. Distrusting the Italians, he played the colonial

Emperor Haile Selassie of Ethiopia appears before the League of Nations in 1940 to protest Italy's invasion of his country. powers against each other and placed great faith in collective security, gaining Ethiopia's 1923 admission to the League of Nations despite strong Italian opposition.

In the next decade, Italian Fascists and nationalists would make yet another attempt to conquer Ethiopia. The Italians were frustrated at their failure to dominate Ethiopia economically, and they recalled the previous humiliation at Adwa; in addition, they felt Italy had been mistreated by the Allies after World War I, and their country was affected by the impact of the world depression in the 1930s. Thus, in October 1935, Italian forces invaded Ethiopia. Employing both Italian and colonial troops (from Eritrea, Somalia, and Libya) and using modern tanks, airplanes, bombs, and poison gas, Italian forces advanced from Eritrea and Somaliland. Denied assistance from the League of Nations, Haile Selassie fought the Italians in a se-

ries of conventional battles at Tembien, Amba Aradom, and Maichew in early 1936. Ultimately, however, modern technology overwhelmed and dispirited his forces, and the emperor chose to go into exile in London, where he continued diplomatic efforts to win support for his kingdom. Meanwhile, Italian forces occupied the entire country, although never securely. An Ethiopian guerrilla movement subsequently emerged, relentlessly targeting Italian convoys, isolated garrisons, and work camps. For their part, the Italians initiated a campaign of economic development, focused on transportation infrastructure, cash crops, and European settlement, but Italy's involvement in World War II drained away available resources. The broader war led to Allied assistance for the Ethiopian guerrillas, a commitment of supplies, and fresh forces and equipment. British, South African, French, and Belgian troops, along

with their colonial levies, fought alongside the guerrillas in liberating Ethiopia. Haile Selassie returned to his capital in May 1941 after a five-year exile.

Despite his wartime experience, Haile Selassie steadfastly supported collective security, making Ethiopia a UN member in 1945 and serving as co-founder of the Organization of African Unity in 1963. In the postwar period, the emperor successfully ended Allied military occupation of his country and won control of Eritrea. At the same time, he cultivated a warm relationship with the United States while associating Ethiopia with the Non-Aligned Movement.

Eurocentrism

Eurocentrism is a much debated concept that has a close relationship to the history of European colonialism. At one level, the term is often simply used to mean the disproportionate emphasis given to Europe (especially Western Europe) in the writing and teaching of history and in the social sciences and the media. But at another level, this primarily empirical definition masks deeper layers of Eurocentrism, such as the implicit or explicit assumption that the often romanticized historical trajectory of Western Europe (and more recently North America or what some observers call Euramerica) represents the model against which all peoples and social formations are to be evaluated and understood. In this case, Eurocentrism is the long-standing academic and popular practice of viewing the history of the societies of the non-European world in terms of their success or failure to modernize along “Western” lines. Directly related to this is the way in which Europe is held up as the fountainhead of democracy, economic progress, and modernity, even as its long history of colonialism and its history of dictatorship and authoritarianism (until well into the twentieth century) is disregarded or downplayed. Eurocentrism also

refers to the practice of viewing the rise and spread of Europe as the driving force in world history. This form of Eurocentrism is readily apparent in the way that colonialism and the colonial era are still regularly interpreted as the event or period that brought the rest of the world into history.

Institutions—such as the nation-state, which was and still is seen as the main vehicle for liberation from colonialism in the non-European world—are also grounded in European history and reflect the deeply rooted character of Eurocentrism. Although nationalism emerged in the colonies as a reaction against colonialism and even against Eurocentrism, colonialism provided the overall context for the rise of new nation-states. As a consequence, the ability of the new nations to transcend their colonial histories and their Eurocentric underpinnings has been more circumscribed than was often anticipated or is currently asserted. The complex and variegated European colonial empires that had been built up by the late nineteenth and early twentieth centuries in Asia and Africa were the framework within which anticolonial nationalisms emerged. At the moment of decolonization, nationalist movements turned the “state” into the embodiment of the national struggle, and the various movements’ many contradictions and tensions were given a unity by the new nation-states erected on the Eurocentric foundations of colonial power. The development of the new nations was evaluated by their leaders and citizens—and by the rest of the world—in terms of the ability to follow the historical path to development and democracy ostensibly pioneered by the nation-states of Western Europe and North America.

This points to the way in which Eurocentrism remains widespread and is embedded in the very fabric of the contemporary nation-state system and the international economy. Efforts to overcome Eurocentrism, like nationalist initiatives against colonialism, are compromised from the outset and can work as much to reinforce Eurocentrism as to help bring about a more thoroughgoing liberation from the West. In fact, with the passing of the Bandung era (the period from the Bandung Conference in 1955 to the failed push for a new international economic order by the Group of 77 and the Non-Aligned Movement in the 1970s), along with the growing trend toward globalization and the end of

the Cold War, some observers argue that the terrain has shifted so dramatically as to make the idea of overcoming Eurocentrism more problematic than ever. In the 1970s, postcolonial theory emerged to provide a thorough critique of the way in which the ideas and practices of the new nation-states were implicated in—and reproduced types of Eurocentric knowledge that were grounded in—the colonial era. However, most postcolonial theorists still implicitly accepted the nation-states, established by the earlier anticolonial initiatives, as the key political units of the postcolonial era. At this juncture, there is a view, outlined in some detail by writers such as David Scott, Arif Dirlik, Michael Hardt, and Antonio Negri, that the dramatic reconfiguration of the nation-state system in an era of globalization means a point of diminishing returns has been reached. The emancipatory potential of the nation-state has been seriously challenged by its record in the postcolonial world, at the same time as the illusive character of efforts to transcend Eurocentrism has been highlighted. With the passing of the Cold War and the deepening and spread of globalization, the significance and character of Eurocentrism is changing, and the way in which it is being—or can be—challenged is shifting as well.

powers, that was set up in 1957 to promote an overwhelming integration of Europe and expand its international role, including its trade and development ties with the Third World. By 2001, the European Union included Belgium, France, Germany, Italy, Luxembourg, the Netherlands, Denmark, Ireland, the United Kingdom, Greece, Spain, Portugal, Austria, Finland, Norway, and Sweden. Further candidates for membership in 2003 included Bulgaria, the Czech Republic, Estonia, Cyprus, Latvia, Lithuania, Hungary, Malta, Poland, Romania, Slovakia, Slovenia, and Turkey. In the mid-1990s, the former colonies and semicolonies accounted for some 34 percent of EU exports, and more than 20 percent of the Third World exports went to the EU. The EU continues to rely on key raw material imports from former colonies, such as rubber, copper, and uranium. Additionally, a multitude of cultural, economic, and political ties still bind many of the former colonies to Europe.

The history of the European integration, with all its difficulties, setbacks, and rivalries, closely coincided with the decolonization of the European empires and postcolonial development in the Third World. The association of the French, Belgian, Dutch, and Italian possessions with the European Community was envisaged initially in the 1957 Treaty of Rome that created the EC. Since the time of President Charles de Gaulle, France used EC relations with postcolonial Africa to strengthen its ambitions as a great power within the community. At the same time, West Germany and the Netherlands contested the EC aid programs of the 1960s that were centered on the francophone African countries and promoted wider association between the community and the Third World.

In the 1960s and early 1970s, Britain's vast interests in the British Commonwealth complicated the country's application to the EC, and conversely, inter-European disagreements over the British admission to the community hampered the association of former British colonies in Africa with the EC. By contrast, the rapid expansion of EC-Third World ties in the 1970s allowed the former Spanish and Portuguese African colonies to obtain association status before their former masters joined the community.

By the early twenty-first century, the EC extended association status to seventy-seven African, Caribbean, and Pacific (ACP) countries,

European Union (European Community)

The European Union (EU)—formerly the European Community (EC)—is an association of European countries, some of them former colonial

mainly former European colonies. A series of agreements (the Yaoundé Conventions of 1963 and 1969; the Lomé Conventions of 1975, 1979, 1984, and 1990–1995; and the Cotonou Agreement of 2000) built a closely integrated global system of trade and aid arrangements; this system guarantees preferential commercial ties between Europe and the ACP countries and, most important, makes the later eligible for EC grants and low-interest loans through the world's largest development aid program. Since the 1970s, accords paralleling the EC-ACP association have been made with nonassociated European ex-dependencies and other countries in the Middle East and North Africa, Asia, and Latin America. These accords emphasize closer economic cooperation, political dialogue, cultural ties, technical assistance, development aid, and the prospect of establishing free trade zones in the future.

Thus, by the end of the twentieth century, Europe succeeded in creating a huge trading empire that recast and refashioned the old colonial ties with former colonies and overseas territories (only

Guinea in 1962 and Greenland in 1985 withdrew from association with the EC). Nevertheless, inherited antagonisms and suspicions, as well as new tensions, cloud EC-Third World relations.

Some see the EC-ACP relations as a manifestation of neocolonialism, whereby former colonial powers use trade privileges to continue the exploitation of poor countries in the era of globalization (although for Europe, the importance of trade with the ACP countries is decreasing). Additionally, former colonies demand more EC aid. The Europeans, for their part, frequently complain about political instability, corruption, and human rights abuses in the Third World, and they are concerned about the growing illegal immigration from Europe's former possessions. The EC protection of its agriculture and some declining industries (steel, shipbuilding, textiles, and so on) seriously affects free trade relations with the developing countries. Thus, Europe's domestic social and economic priorities often limit its overseas aid programs.

Some former European colonies have established closer ties with the EC/EU. For instance, the

overseas territories of France (Guadeloupe, Martinique, Réunion, and Guiana), Spain (Canary Islands), and Portugal (Azores and Madeira) acquired a special status as the most remote regions of the EU, and they provide it with strategically important assets to develop international tourism and trade and to expand agricultural production and space and ocean exploration. The British former colonies of Malta and Cyprus are among the likely candidates to join the EU in the near future.

Exhibitions, Colonial

Perhaps the best-known forms of imperial exhibition were the international expositions of the period between 1851 and 1940—grand events designed to celebrate progress, technology, and colonialism. At these exhibitions, the colonial powers displayed their advanced technology, industry, resources, fine arts, and all types of manufactured goods. The words *exhibition*, *exposition*, and *fair* are used interchangeably to refer to these events.

The first of these colonial spectacles was the Great Exhibition of the Works of Industry of All Nations, held in Hyde Park, London, in 1851, under the sponsorship of Prince Albert (1819–1861). Over 100,000 domestic and foreign exhibits were housed in a huge, glassed-in space, which was as much a marvel of industrial technology as any of the machines or goods displayed inside. The structure, dubbed the Crystal Palace by the media, was designed by Joseph Paxton (1803–1865), a former gardener and greenhouse engineer. The Crystal Palace was constructed in nine months from prefabricated units of iron and glass; it measured 564 meters (1,850 feet) in length and covered over 70,000 square meters (750,000 square feet) of exhibition space. On display within this glass arena were all of the industrial and decorative arts (ex-

cept painting), with a decided emphasis on British-manufactured goods made from colonial raw materials. More than 6 million people visited this spectacular display of British colonial wealth and resources.

The 1851 London exhibition immediately inspired competition from other industrialized nations; between 1851 and 1940, there were almost a hundred such expositions hosted by the Germans, Dutch, Belgians, and Americans, as well as the English and French. Keeping with the tradition of technologically wondrous exhibition structures established by the Crystal Palace, the French built the Eiffel Tower for their 1889 Exposition Universelle (commemorating the centennial of the French Revolution, with 32.3 million visitors) and constructed the Paris Metro for the 1900 Exposition Universelle (celebrating the new century, with 50 million visitors). Other major international expositions of the colonial period included the Centennial International Exposition (Philadelphia, 1876); the World's Columbian Exposition (Chicago, 1893–1894); the Louisiana Purchase International Exposition (St. Louis, 1904); the Panama Pacific International Exposition (San Francisco, 1915); the British Empire Exposition (London, 1924–1925); the Exposition Coloniale Internationale (Paris, 1931); the Century of Progress Exposition (Chicago, 1933–1934); the Exposition Internationale des Arts et Techniques dans la Vie Moderne (Paris, 1937); the Golden Gate International Exposition (San Francisco, 1939–1940); and the New York World's Fair (New York City, 1939–1940). The theme of every international exhibition was Western technological progress and, implicitly, the “rightness” of the colonial system. It is difficult to overstate the importance of the international exhibitions in the construction of colonial ideology, both directly, through their mass audiences, and indirectly, through visual representations such as photography, publications, and mass-produced souvenirs.

A second important colonial exhibition practice was the Western display of the cultural artifacts of the traditional societies of colonized people. Objects of material culture from Africa, Oceania, and the Americas were first exhibited in the West in seventeenth- and eighteenth-century “cabinets of curiosity” (collections of natural oddities), then as specimens of allegedly primitive

culture in ethnographic and natural history museums. Such objects (masks, carvings, textiles) only became appreciated as fine art after Western artists had begun appropriating the style of non-Western art in the modernism movement, around 1910.

Perhaps the most shocking form of colonial exhibition was the display and commodification of living human beings. This practice had a long history prior to Western colonialism as an aspect of the display of freaks and/or wonders of nature; colonialism supplied a new source of strange and exotic persons to meet the ever present demand. As early as 1501, live Eskimos were displayed to the public in Bristol, England; in the seventeenth century, Native American Virginians were displayed as zoological specimens at the zoo in St. James Park in London. In the early nineteenth century, the London entrepreneur William Bullock featured several types of exotic people in dramatic theatrical displays incorporating panoramic backdrops. In the 1870s, the Hamburg animal trainer and zoo master Carl Hagenbeck hired Norwegian ship captain Johan Adrian Jacobsen to “collect” a Greenland Eskimo family for display in Germany and throughout Europe. The tour was so profitable that Jacobsen repeated it with other so-called exotic types, including a group of Lapps complete with a reindeer herd and, in 1885 and 1886, a twenty-seven-city tour featuring nine dancing Bella Coola (Pacific Northwest Coast) natives. Jacobsen’s “collections” also furnished cultural artifacts for German museums. Human displays were common sights in European cities throughout the colonial period.

Beginning in earnest with the 1889 Paris Exposition, most of the international expositions also featured exhibits of “primitive” people collected from the colonies. These displays were intended to educate by showing the progress of Western civilization over raw, primitive nature. Didactic and entertaining, the human displays (frequently in the form of ethnographic villages) were a popular feature of the international expositions. Hundreds of souvenir photograph albums featuring exotic types were published, further emphasizing the contrast between these primitive “others” and advanced Western society. These visual displays of difference stressed the importance of biology and inheritance rather than environment and culture

in the formation of human societies, and they were related to contemporary scientific theories concerning race, including both anthropometry (the measurement of the races) and eugenics (the selective breeding of humans). Western institutions used the exhibition of the cultures of colonized people to illustrate essential differences in nature that were asserted to exist between the colonizer and the colonized. Colonial exhibitions were never passive reflections of reality; rather, they worked to construct and support the colonial system.

Exploration

In the view of many historians, the age of European exploration in the fifteenth, sixteenth, and seventeenth centuries was a necessary precursor to the establishment of a colonial world order in the eighteenth and nineteenth centuries. During the age of exploration, the major European powers, including Spain, Great Britain, France, the Netherlands, and Portugal, sought out new products and markets in the Americas, Africa, and the Far East.

In 1498, Portuguese explorer Vasco da Gama discovered the sea route from Europe to India, which sped the trade in spices and cotton, as well as silk and porcelain from China; before this discovery, such goods had to be transported via a long overland route to Europe. With this beginning, European explorers ventured into the South Pacific, to the Americas, and to Australia. Thus, the age of exploration is sometimes called the Vasco da Gama era. The knowledge of the geography and natural resources of distant territories gained during these explorations helped European powers establish trading companies and trading towns in regions such as India and the Gold Coast of Africa during the seventeenth century.

One of the most important of these companies, the British East India Company, established in 1600, came to dominate the political and economic life of India from its headquarters in London. The company was granted a monopoly on the Eastern trade by Elizabeth I, and during its early voyages, the company battled with Dutch, French, and Portuguese competitors over trade in India and the East Indies. After reorganization as a joint-stock trading company, it established administrative districts in the Provinces of Bengal, Madras, and Bombay and consolidated its control over Indian affairs.

In the beginning of this period, European possessions in the rest of the world were limited to coastal outposts and the small trading towns that grew up around them. As time went on, however, European companies came to control the production of goods as well as the trade. In the case of the British East India Company, British officials allied themselves more and more closely with the local elites, gaining power and access to resources in this way. In 1773 and 1774, the British government shifted power from the company to the government through the India Act. This measure established a separate department and governor-general for Indian affairs, turning India into a *de facto* colony of Great Britain. The British East India Company was one of the most prominent and successful of these ventures in using exploration as a step toward colonialism, but other companies, such as the Dutch East India Company and the Danish East India Company, functioned along much the same lines.

In the Americas, the Pacific, and Australia, European exploration had more brutal consequences for the local cultures that the Europeans encountered. In the Americas over the course of the sixteenth and seventeenth centuries, the Spanish conquistadores decimated the local populations, who fell victim to the superior Spanish technologies of warfare and European diseases to which they had no natural resistance. In the Americas, as in the East, European powers competed with each other to explore and establish colonies and gain access to trade goods, including coffee and chocolate from South America. Christopher Columbus's expedition, sponsored by the Spanish Crown in 1492, was an effort to find a new trade route to the riches of the East but instead landed in the Caribbean. Explorers were also attracted to the region by legends of a city of gold—

El Dorado—in the Americas. Several wars were fought in Europe and the Americas during the seventeenth and eighteenth centuries in the struggle over the resources of the New World. Although the Portuguese and the Spanish were the first to explore this region, it was the British and the French who were ultimately more successful in establishing permanent colonies, especially in North America. The rise of British sea power is symbolically recognized with the British defeat of the Spanish Armada in a battle for control of trade routes to the Americas. The English arrival in the South Pacific, in the Hawaiian islands in the late eighteenth century, was also marked by violent encounters with the peoples there, whom the English denigrated as "savages." In Australia, which the British used as a prison colony, the Aborigines were forced off their land—to which the British declared that they possessed no legal right—and killed or dispersed across the continent in large numbers.

Compared to efforts in other parts of the world, the European exploration of Africa occurred relatively late. Until the mid-nineteenth-century discovery that quinine could be used as a prophylactic against malaria, the interior of Africa was considered too dangerous and unhealthy for European exploration. Prior to that point, the European presence in Africa was essentially limited to the slave-trading posts on the west and north coasts, through which kidnapped people passed from the interior of Africa to sugar plantations in the Caribbean and farms in the American South; it is estimated that over 20 million people were enslaved before the abolition of slavery in the nineteenth century. After the exploration and mapping of the Congo River by Henry David Morgan and the crossing of Africa by David Livingstone in the mid-nineteenth century, the African interior was opened for further European exploration. In the latter half of the nineteenth century, Britain, France, Belgium, Germany, and the Ottoman Empire competed in a rapid scramble to claim colonial territories. The speed of the colonial acquisition in Africa and the brutality with which the technologically advanced Europeans destroyed the indigenous peoples in warfare represented a significant escalation in terms of the importance of the colonial enterprise in shaping world power. The tension among the European powers that ensued is considered to be one of factors leading to World War I.

The activities of exploration and colonization were very closely linked, and the European influence on the globe in that regard is often divided into two periods: an early modern period of exploration and a modern period during which Europeans capitalized on the knowledge and access to resources gained during their travels to establish powerful bureaucracies to govern the regions and people they had encountered as explorers.

F

Faidherbe, Louis (1818–1889)

Governor of the French colony of Senegal and founder of the city of Dakar, Louis Faidherbe was one of the leading figures in the creation of the French Empire in West Africa in the middle and late nineteenth century. Born in Lille in 1818 and educated at the prestigious École Polytechnique in Paris, Faidherbe became a military engineer in 1840 and for the next twelve years served in Algeria, as well as Guadeloupe in the Caribbean. In 1852, he was posted to Senegal and, after winning the respect of the local French merchants, was appointed governor. Among his first actions was a successful expedition against the Islamic leader Umar Tal, who was challenging Senegal from the east.

His campaign against Umar Tal lasted until 1861 and resulted in the transformation of French Senegal from a scattering of trading outposts to a unified colony that had become the economic and military heart of the growing French Empire in West Africa. An administrator as well as a military leader, Faidherbe moved vigorously to eliminate slavery; founded Dakar (the future capital of French West Africa) and several other cities; and established an administration that ruled through local chieftains.

Ultimately, Faidherbe was too ambitious for the French government in Paris, which turned down his plans to expand Senegal eastward to the Niger River and Timbuktu. At the time, his plans were

seen as too expensive, but they would serve as a model for French expansion after the turn of the twentieth century.

Faidherbe returned to Algeria in 1865 and then was recalled to France at the outbreak of the Franco-Prussian War in 1870 and was made commander of the Army of the North. Following France's defeat, he was elected to the National Assembly but resigned due to the body's hostility to the republican cause, which he had strongly supported throughout his life. He was elected to the Senate in 1879 and served there until 1888, dying the following year.

Falkland Islands (Islas Malvinas)

The Falklands (known as the Malvinas by Argentinians) consist of two large and many small islands in the South Atlantic, 480 miles northeast of Cape Horn, South America. Humans (2,050 in 1991) are outnumbered by sheep (around 720,000 in 1992) by a ratio of 350 to 1 on these chilly, boggy, treeless outposts. Most people live in the only town, Port Stanley, which is on the largest island, East Falkland.

France (1764–1767), Spain (1767–1810), and Britain (1765–1774) all made abortive attempts to settle the area in the eighteenth century, for the islands proved useful for whaling and sealing. Following independence from Spain in 1816, Argentina (then known as the United Provinces of the River Plate) claimed the islands after Spain in 1820, sending settlers there six years later. In January 1833, a British ship took the islands by threat of force, and the Argentinean settlers left. At first a naval station, the colony was dominated by the Falklands Islands Company from midcentury on, and settlers came from Britain.

Argentina, however, never abandoned its claim to this territory. The United Nations called for the two sides to enter discussions in 1965; they commenced in 1967. Britain was willing to consider ceding sovereignty but only if the islanders' consent could be secured. It could not. In 1980 and 1981, parliamentary and islander pressure stalled proposals to cede sovereignty in return for Argentina leasing back the islands to Britain.

In March 1982, a few Argentineans raised their flag on icy South Georgia, 800 miles to the south of Port Stanley, disturbing Britain's Antarctic Survey and the native penguins. On April 1 and 2, 1982, the 67 British Marines on the Falklands were overwhelmed by an Argentinean force that grew to 12,000. After a moment's hesitation, Britain sent 20 warships (including 2 of its 3 remaining aircraft carriers), merchant vessels, and 6,000 troops. Leading elements departed from Britain on April 5. Arriving in East Falkland on May 20, they landed at San Carlos, on the opposite side of East Falkland from the Argentinean headquarters at Port Stanley. Argentinean airplanes from the mainland took a slow, steady toll, sinking the HMS *Sheffield* early on and destroying the container ship *Atlantic Conveyor* and its helicopters. This loss forced British troops to "yomp" (move with a heavy load) across the island to the heights outside Port Stanley. There they seized after hand-to-hand combat from June 11 to June 14, forcing the Argentineans to surrender.

In this last British imperial fling, 750 Argentine, 255 British, and 3 Falklanders' lives were lost (as well as four naval vessels and a container ship), all to defend fewer than 2,000 people on islands 8,000 miles from Britain. Had Argentina waited longer before committing its mainly con-

script army, the decommissioning of British ships might have made this perilous adventure still more improbable.

Subsequently, the Falklanders were given full British citizenship. The Falklands Island Development Corporation was established in June 1984, with the sale of fishing licenses and stamps and coins supplementing traditional wool exports. A 1985 constitution acknowledged the Falklanders' right to self-determination, and in the same year, a new airfield allowed for rapid reinforcement by wide-body jets. The islands' status remains in dispute.

Fanon, Frantz (1925–1961)

Psychiatrist and anticolonialist political theoretician Frantz Fanon left his hometown of Fort-de-France, Martinique, in 1943 to join the Free French forces and fight against the Nazis in Provence and Alsace. He remained in France after World War II, studying medicine and then psychiatry in Lyons, where he experienced racism for the first time. Fanon's clinical and personal observations of the relationships between whites and blacks and, by extension, colonizers and colonized are explored in his book *Peau noire, masques blancs* (Black Skin, White Masks) (1952), which examines the images and realities that lead to the depersonalization of the black man and his eventual alienation from himself.

Called to head the psychiatric hospital in Blida, Algeria, in 1953, before the struggle for Algerian independence began in earnest, Fanon treated both the victims of government-sanctioned torture and those who administered it. His sympathy for the Algerian cause grew, and in 1956, he resigned his post and went to Tunisia to work for the Algerian Front de la Libération Nationale

(FLN) in exile. He continued to see patients and wrote magazine and newspaper articles supporting the anticolonial cause; some were included in his *L'an V de la révolution algérienne* (Year Five of the Algerian Revolution) (1959) and *Pour la révolution africaine* (For the African Revolution) (1964). Fanon became acquainted with Ghanaian president Kwame Nkrumah and Congolese leader Patrice Lumumba, and in 1960, he was named the Provisional Algerian Government's ambassador to Ghana. Shortly afterward, Fanon was diagnosed with leukemia, but he continued to work on what would be called "the Bible of Third Worldism," *Les damnés de la terre* (The Wretched of the Earth) (1961). Jean-Paul Sartre wrote the preface to this book, which was published shortly before Fanon's death in Washington, D.C., where he had gone to seek medical treatment. His body was returned to Tunis, and he was buried in a martyr's cemetery in Algeria.

Les damnés de la terre calls for a new world to be born of a violent revolution led by the peasants of Africa because they benefited least but were most oppressed by capitalism and imperialism. Nothing short of the destruction of colonialism would be acceptable, according to Fanon, because any accommodation meant that profits would merely shift from one set of oppressors to another. In 1965, an English translation of the book was published in the United States by Grove Press, which advertised it as "the handbook for a Negro Revolution that is changing the shape of the white world."

to dominate the struggle for independence and finally brought an end to the monarchy in 1952.

Crowned in 1937, Farouk inherited his father's autocratic manner. At the time he assumed the throne, Egypt's largest nationalist party, the Wafd, had been successfully marginalized by a combination of pressures from the palace and Great Britain. But as World War II approached, Britain's ambassador and de facto high commissioner, Miles Lampson, urged a different approach. Arguing that Egypt needed a more unified government and that Farouk had too many Italian friends, Lampson asked the king to allow a Wafdist government. Farouk refused, appointing his own people instead. Then, on February 4, 1942, British troops surrounded the royal place, and Lampson presented an ultimatum: Farouk could accept the Wafd or abdicate.

The king surrendered, and although this saved his throne, the act squandered whatever influence he held in nationalist circles. His abject capitulation to British demands was greatly resented within the Egyptian army and led to the creation of the Free Officers' Movement. Indeed, 1942 marked a key point in Farouk's political life, and his stature continued to be eroded thereafter. Although he proudly hoisted the royal flag over Cairo's Citadel as British forces withdrew in 1946, he was by then seen as an overly indulgent despot and a disgrace to Egypt. Farouk continued to dominate Egyptian affairs through the disastrous Palestine War, economic hard times, and growing political unrest. On July 23, 1952, a bloodless coup by the Free Officers' Movement overthrew the royal government. Farouk abdicated on July 26 and sailed off in exile to Italy.

Farouk I (1919–1965)

Farouk I, Egypt's last reigning king, played an ambivalent role in his country's struggle against colonialism. Although there is little doubt he opposed British control over Egypt, Farouk was immature, autocratic, and erratic. These traits allowed others

Fascism, Italian

Much of the Fascist position on overseas expansion was based on theories that were borrowed from the nineteenth century and applied in an inconsistent and opportunistic manner. Combining the nineteenth-century belief in the destiny

Benito Mussolini, Fascist leader of Italy. (*The Illustrated London News Group*)

of nations to actualize themselves with social Darwinism's emphasis on the survival of the fittest, Fascists conceived of imperial expansion and conquest as a natural outgrowth of the emergence of the Fascist state. They contended that, struggling amid competitive and hostile states, Fascist Italy could fulfill its destiny only through militaristic expansion. As early as 1919, the future Fascist leader Benito Mussolini referred to imperialism as eternal and immutable, the destiny of dynamic nations that had the courage to embrace it in the face of weaker states who failed to accept the challenge.

Mussolini's imperial doctrines and policies were framed by his vision of an Italian empire in the Mediterranean and Red Sea that would constitute a rebirth of ancient Roman grandeur, his feeling that Italy's territorial aspirations had been betrayed by Britain and France in the peace settlements following World War I, and the convenient reminder that Italy's defeat by Ethiopia in 1896 should be avenged and used as a catalyst in the new imperial vision.

Furthermore, apologists for Italian imperialism justified their incursions into Africa as the responsibility of a superior people to elevate backward societies. Fascist theorists considered it both a historical duty and the national destiny to impose superior Italian (and Roman) civilization on the lesser peoples of Africa. In addition to supplying food and raw materials, colonies would be outlets for Italian settlement that would make the colonies prosper and progress while at the same time relieving Italy's severe economic problems.

In reality, Italian policy after the seizure of Ethiopia in 1935 and the formal establishment of an East African empire changed to an apartheid-type system based on explicitly racial ideas. Undoubtedly, some of the Italian racial theorists were persuaded by the central role race played in national socialism. Many writers on colonial issues, such as the influential Italian anthropologist Lidio Cipriani, questioned the civilizing mission of Italian colonization, claiming that Africans were mentally, physically, and morally inferior to whites and thereby to Italian culture as well. Consequently, Italy imposed a colonial system that rigidly segregated Italians and Africans. This system, though frequently unimplemented or ignored in practice, was designed to underscore the subject status of the Africans, and all rules and practices were intended to encourage racial purity and the consciousness of white superiority.

But with the inherent contradictions between Mussolini's aspirations and Italy's actual resources in Africa and with his increasing preoccupation with the approaching war, this vision of a Fascist colonial empire ultimately suffered the fate of Mussolini's other boastful—and unfulfilled—dreams.

Fashoda Crisis

The 1898 Fashoda Crisis had its roots in the European obsession to colonize the African continent. The crisis was essentially a confrontation between two imperialist powers, France and Great Britain, as

they attempted to assert their dominance over the African continent. The Berlin Conference, hosted by Otto von Bismarck in 1884, not only set the rules for the division of Africa but also made the colonial powers even more aggressive in their pursuit of unclaimed territory and proclamation of protectorates and colonies that all powers would recognize.

The climatic event took place in Fashoda, a settlement on the White Nile in southeastern Sudan (the present-day town of Kodok). At the time of the crisis, France was clearly in the process of expanding in a west-to-east direction, and Britain was expanding from north to south. French troops under Maj. Jean-Baptiste Marchand arrived in Fashoda on July 10, 1898. Two months later, on September 18, the British arrived, under the command of Lord Horatio Herbert Kitchener. Both powers laid claim to Fashoda and the Sudan, and the threat of war loomed.

Although both armies wanted to occupy the fort at Fashoda, Kitchener and Marchand recognized that a military confrontation was undesirable. Consequently, they agreed to hoist British, French, and Egyptian flags over the fort at Fashoda. Thereafter, the two imperial powers reached a compromise whereby the French sphere became the region west of this watershed and the British confirmed their position in Egypt, which was especially important because of the Suez Canal (built in 1869). This solution to the Fashoda Crisis led to the 1904 Anglo-French Entente. The formation of this entente prompted the British to change the town's name in hopes of obliterating the memory of the incident.

Ferdinand and Isabella (Spain)

The 1469 marriage of King Ferdinand of Aragon (1452–1516) and Queen Isabella of Castile (1451–

1504) united the kingdoms of Spain. The political philosophies of the two rulers were largely identical, as both believed strongly in religious homogeneity as well as expanding the material wealth and territory of the Spanish Empire. Given those two preeminent goals, 1492 became the pivotal year of their reign. That year, Spain succeeded in its campaign of expelling Jews and Moors from its territory, and with the help of Christopher Columbus and his famous entourage, it began its expansion into the New World.

Already in possession of islands along the coast of Africa, Ferdinand and Isabella began the exploration and conquest of the Spanish Main after Columbus's initial voyage. Ostensibly interested in promoting their religion through exploration and salvation, the Catholic monarchs instructed the conquistadores to convert all heathens in their path. However, the primary motive for Ferdinand and Isabella's expansion into the New World was a desire to accumulate wealth. Notables such as Hernán Cortés and Francisco Pizarro explored and conquered the Americas, sending all recovered gold directly to the Crown. When the Caribbean islands of Cuba and Puerto Rico proved unprofitable, the monarchs directed a deeper exploration into the Americas to seek out greater wealth and search for mythical lands and repositories such as the city of El Dorado, whose streets were supposedly paved with gold.

Isabella died in 1504, but Ferdinand continued Spain's expansion into the Americas and Europe. After joining the League of Cambria against Venice in 1508, he moved on to conquer areas along the North African coast. By 1512, Ferdinand had successfully extended Spanish borders from the Pyrenees to the Rock of Gibraltar with the annexation of Navarre. On his death in 1516, his grandson, the Holy Roman Emperor Charles V, succeeded him.

Ferry, Jules (1832–1893)

French statesman Jules Ferry was elected deputy, or member of the National Assembly, in 1869. After the defeat at Sedan (1870) against Prussian invaders, he became a member of the Government of National Defense and mayor of Paris. Later, as head of the republican Left, he held several important ministerial posts (from 1879 to 1885). He is remembered for instituting major educational reforms and expanding France's colonial empire.

As minister for public instruction, he proposed laws secularizing public education, making it free, and making it compulsory for children between the ages of six and thirteen. He also made secondary education available to girls and founded a normal school specifically for them in Sèvres. His laws were passed in 1882, notwithstanding strong opposition from many who viewed them as anticlerical.

Between 1883 and 1885, as minister of foreign affairs, he endeavored to acquire new colonies. He wanted France to reassert its status as a great power after the 1870 defeat; he also believed in the superiority of the white race and its "duty to civilize inferior races." Above all, however, he was motivated by economic considerations. He visualized a worldwide economy in which trade would become an increasingly important factor and believed that France's export markets were menaced by German and U.S. protectionism and competition. He foresaw grave economic and social problems—problems he felt could be solved through colonial expansion. Thus, he sought new markets and ports of call. He championed the conquest of Tunisia (1881), northern and central Vietnam (1883), the French Congo (1884–1885), and Madagascar (1885). Ferry pursued his imperialistic goals relentlessly and, by and large, successfully, but in 1885, he was voted out of office because of setbacks encountered in connection with the conquest of Tonkin. He was elected to the French Senate in 1891 and became its president in February 1893 but was assassinated one month later by a religious fanatic.

Feudalism

Derived from the Latin word for fief (*feudum*), *feudalism* was a term created in the sixteenth century by European lawyers attempting to codify property laws; it was never used during the medieval period that it attempts to describe. The modern uses of the term are widely disparate and variously include social, political, and economic aspects of society.

Feudalism has been primarily understood as a political system in which a vassal voluntarily promised military service through a series of oaths to a lord in exchange for protection and benefices—often a piece of land known as a fief. This system, based almost wholly on personal associations, was believed to have evolved from Germanic tribal customs after the collapse of Roman institutions in Western Europe. The fragmentation of central authority necessitated the distributed model of feudalism in which individuals acted independently, devoid of notions of state or public power. The feudal system in Europe is thought to have begun sometime between the sixth and eighth centuries, reached its height around the eleventh and twelfth centuries, and died out over the next few centuries.

Often included in the pledges of loyalty were a series of reciprocal duties for both lord and vassal. The vassal might pledge to serve at court, provide counsel and financial assistance, and generally uphold the interests of his or her lord. The lord could also pledge to defend his vassal's land and offer advice and counsel to the vassal. These rights and duties were never uniform and varied significantly over time and location.

However, the notion that feudal relationships were the primary form of political organization during the medieval period has been brought into question. In fact, feudo-vassalic relationships were only one of a number of complementary interpersonal and collective relationships that included conceptions of personal and public power. Although there is no firm consensus regarding the

remaining utility of feudal conceptualizations, the most recent scholarship has moved beyond regarding feudal relations as the primary method for understanding the complex and varied associations of medieval Europe.

In addition to this aristocratic and military arrangement, some historians have also attempted to describe a feudal society that was determined by the economic and social relationships that existed between lords and peasants. This model characterizes feudalism as a hierarchical social system having a servile peasantry ruled by a dominant military class that controlled access to land and resources. Karl Marx's understanding of feudalism as a direct replacement for ancient slavery that lasted from the sixth century to the eighteenth has been particularly influential. Marx's static conception of serfs being exploited for twelve centuries has often been generalized to include any society in which wealth and privileges are reserved for a small segment of the population. It is this conceptualization of feudalism that is often applied to colonial areas outside of Europe. However, if feudalism has limited usefulness in describing medieval Europe, it would seem to be even less relevant in regard to other societies.

Fiji

The islands of Fiji, first settled by Austronesian migrants around 1500 B.C.E., were unknown to Europeans until the seventeenth century. In 1643, Abel Janszoon Tasman of the Verenigde Oostindische Compagnie, or Dutch East India Company, sighted the northeast edge of the group, but European knowledge of the islands remained limited even after the brief visits made by James Cook in 1774 and William Bligh in 1789 and 1792. It was only after the "sandalwood rush" in the first

decade of the nineteenth century, focused on the west coast of Vanua Levu, that Fijians established sustained contacts with Euramerican traders. Contact further intensified between the 1820s and 1850s as a result of a thriving *beche-de-mer* (sea cucumber) trade that, like the sandalwood boom, was driven by the demands of distant Chinese markets.

These trading contacts had important cultural and political consequences: the hegemony of the Bau *vanua* (confederation) was underpinned by its large store of muskets and its prominent role in cross-cultural trade. On the basis of a series of military victories against the rival vanua, the Bau chief, Cakobau, emerged as the dominant figure in Fiji, and his conversion to Christianity under the influence of the Tongan Christian Enele Ma'afu in 1854 further cemented Bau authority. Cakobau's formal assumption of kingship in 1871 failed to prevent escalating racial violence, however, and in 1874, at the behest of Cakobau, Fiji became a crown colony of Britain.

The first governor, Sir Arthur Gordon, launched a series of important reforms, banning sales of Fijian land and buttressing traditional sociopolitical hierarchies. Gordon also initiated the use of indentured Indian laborers in newly established sugar plantations: these laborers were encouraged to stay on in Fiji (even after the abolition of the indenture system in 1920), but the Indian settlers (who now compose some 44 percent of the population) enjoyed few political rights. Despite a weak nationalist movement, Fiji gained independence in October 1970, but the legacies of colonial rule, particularly the political and cultural marginalization of Fijian Indians, continue to trouble this Pacific nation.

Firestone Tire and Rubber Company

The Firestone Tire and Rubber Company was founded by Harvey S. Firestone in 1900. Its success

resulted from the burgeoning demand for tires as automobile production increased in the United States. However, to supply the rubber his company needed to produce those tires, Firestone depended on two colonies in Asia—the British colony of Malaya (now Malaysia) and the Dutch colony known as the Dutch East Indies (now Indonesia).

After a post–World War I depression caused rubber prices to fall to less than \$.15 a pound, the British government, cooperating with the Dutch and with plantation owners in the colonies, passed the Restriction Act of 1922. Better known as the Stevenson Plan, the act caused prices to rise to \$1.23 a pound by reducing rubber output. Harvey Firestone denounced the British and Dutch monopoly on rubber as a “vicious plan” that forced Americans to pay inflated prices. Opposed to monopoly yet believing in supply-and-demand economics, he sought out new rubber plantations to supply his company. An agreement with the West African republic of Liberia resolved Firestone’s problem.

Liberia, which had been founded by African American colonists, remained independent after European powers colonized Africa due to its ties to the United States. Its connection to the United States proved profitable to Firestone, as the Liberian government signed an agreement in 1926 that gave his company lease rights to 1 million acres of land at \$.06 an acre for ninety-nine years. Firestone also gained access through the free port of entry Monrovia, the capital, while paying a nominal tax of 1 percent of gross rubber exports. Finally, the agreement gave Firestone Tire and Rubber Company unofficial yet effective control over Liberia’s revenues through indirect economic concessions such as company stores and the Bank of Monrovia, which was established by a Firestone subsidiary, the Finance Corporation of America. Most egregious of all, however, was the recruitment of laborers for Firestone plantations by Liberian officials in exchange for cash payments. The agreement saved the Liberian government from bankruptcy while establishing Firestone Tire and Rubber Company as the equivalent of a European colonial power.

Fourteen Points

In a famous address delivered to the U.S. Congress on January 8, 1918, President Woodrow Wilson laid out a fourteen-point peace plan that encapsulated his conception of the new international order that should flow from the eventual end of World War I. Wilson’s address included a call for: (1) the end of secret diplomacy; (2) unrestricted access to the high seas; (3) the dismantling of barriers to trade and investment; (4) the reduction of arms production; (5) the impartial adjudication of territorial claims; (6) the German government and its allies to withdraw from Russian territory; (7) the restoration of Belgian national sovereignty; (8) the return of Alsace-Lorraine to France and the withdrawal of all foreign troops from the occupied areas of France; (9) the readjustment of Italy’s borders; (10) the autonomy of national groups in Austria-Hungary; (11) the end of the foreign occupation of Romania, Montenegro, and Serbia, with the latter being granted access to the Adriatic Sea; (12) some form of autonomy for the non-Turkish peoples living within the borders of the Ottoman Empire; (13) the establishment of a sovereign and independent Poland, with access to the Baltic Sea; and (14) the creation of an association of nations that would facilitate the sovereignty and independence of all nations.

The Fourteen Points were greeted with enthusiasm in the United States; however, Wilson had drawn them up without any consultation with his allies. Nevertheless, they provided the framework for the negotiation of an armistice with Germany and Austria-Hungary by November 11, 1918, the end of World War I. During these negotiations, Wilson revised the tenth point to mean that the nationalities of Austria-Hungary should be given “complete independence,” and the Allied powers registered concern about the significance of the second point and ensured that demands for repa-

rations (something not covered in the Fourteen Points) were imposed on Germany and Austria-Hungary. It is often emphasized that the Fourteen Points were aimed in particular at undermining the secret treaties that Britain, France, Russia, Italy, and Japan had entered into at the beginning of the war (the Constantinople Agreements and the Treaty of London of 1915), providing for the redistribution of the colonies and territories of Germany and its allies. More generally, Wilson sought to make clear that the United States was opposed to the colonial and territorial ambitions of its allies. By the far the most significant point as far as Wilson was concerned was the last one, which paved the way for the establishment of the League of Nations.

Franco, Francisco (1892–1975)

Francisco Franco Bahamonde was born in El Ferrol, Galicia, Spain, on December 4, 1892. In 1912, after his graduation from the Infantry Academy in Toledo, he requested a transfer to the Spanish Protectorate in Morocco. Four years later, having been mentioned in dispatches from field commanders to military headquarters in Madrid, he was promoted to commandant. After becoming head of the Foreign Legion in Africa in 1917, he participated in a number of military engagements against the Moroccan mutineers in the area of Rif and Tétouan. He was promoted for his role in these actions, becoming the youngest general in Europe. At that time, he was very popular among those in the Spanish army who were interested in Africa.

In February 1936, Spain's leftist Popular Front government, which suspected Franco's right-wing politics, sent Franco to the Canary Islands in semi-exile; five months later, he fled to Tétouan and from there to the Iberian Peninsula, where he oversaw the mutiny of the Spanish army in Africa, marking the start of the Spanish civil war. During this struggle, Franco set himself up as chief of the army, head of state, head of the government, and

head of the only existing party in Spain. With the assistance of German chancellor Adolf Hitler and the Italian leader Benito Mussolini—and the passivity of the democratic countries—Franco's insurrectional “national” side defeated Spanish republican troops in 1939 and set up a dictatorial regime, abolishing all individual and collective freedoms, as well as any kind democratic participation in government.

Thousands of citizens fled into exile. In Catalonia, the Parliament and the autonomous government were abolished, and its language and culture were banished. So-called national Catholicism and Fascist principles inspired the diffuse ideology of Franco's regime, resulting in an active intolerance and persecution of anyone expressing an opinion against the regime. From 1953, the geostrategic interests of the Cold War favored the end of Spain's isolation from the West and after 1959 made deeper the characteristic underdevelopment of Spain. After a long illness, Franco died in Madrid on November 20, 1975, without having modified the essential structures and basic features of his regime.

Franco-Prussian War (1870–1871)

Under the exceptional control of Otto von Bismarck, the Prussian government sought to create a German empire composed of all the German-speaking lands in Europe. Bismarck had succeeded in creating the North German Confederation of states, but the south German states were hostile toward Prussian authoritarianism.

The path to war between France and Prussia began with a dispute over the successor to the Spanish throne. The French opposed the candidacy of Prince Leopold von Hohenzollern-Sigmaringen, a distant relative of King William of Prussia. In a carefully worded telegram, Bismarck enraged the French government while at the same time arousing support for war in Berlin.

France declared war on the North German Confederation on July 19, 1870, despite its own military

unpreparedness. The Prussian military machine defeated the French forces in two months, though the siege of Paris continued until January 28, 1871. France's defeat led to the abdication of Napoleon III and the establishment of the Third Republic. Under the terms of the Treaty of Frankfurt, France lost the German-speaking provinces of Alsace and Lorraine and a small mining district in its northern frontier; it also had to pay an indemnity of 5 billion francs. The German victory over France led directly to the formation of the German Empire, though unification of the German lands proved to be a stumbling block for peaceful relations with France and Britain.

The southern German states, not previously connected to the North German Confederation, were drawn into the "conflict of nations" between France and what would become the German Empire through the twin pressures of nationalism and patriotism. Through political and diplomatic maneuverings, Bismarck was able to fight three separate wars for unification and create Germany's Second Reich, the historical successor to the Holy Roman Empire that Napoleon had destroyed in 1806.

After an armistice was signed with France, King William of Prussia was crowned emperor (*Kaiser*) of Germany. The North German Confederation and its constitution provided the framework on which the empire was to be based. Prussian autocracy and militarism became the leading characteristics of the Second Reich, but most of the German people remained uninvolved with politics. The annexation of Alsace and Lorraine, against Bismarck's own wishes, allowed nationalism and pan-German sentiments to dictate politics, both at home and abroad, while at the same time alienating Germany from France and Britain.

The newly formed German reich had upset the delicate balance of power that had characterized European politics since the Congress of Vienna in 1815. France was openly hostile to Germany and its ambitions on the continent and in the world as a whole. Britain feared competition from an industrial, military power nestled in the heart of Europe. Ultimately, the unification of Germany set in motion a series of events that would lead to World War I.

Franklin, Benjamin (1706–1790)

Benjamin Franklin was a true Renaissance man, being, among many other things, a statesman, an inventor, a philosopher, and a successful businessman. Born into modest means in Boston, Massachusetts, he rose to be one of the leading Americans of the eighteenth century. His broad interests, coupled with a pragmatic and empirical mind-set, led Franklin to keen insights about many issues. In 1729, at the age of twenty-three, he published *A Modest Enquiry into the Nature and Necessity of a Paper Currency*, arguing that the American colonies should have a currency other than gold and silver. Even at that young age, he was aware that the needs of the colonies differed from the needs of the mercantilist home country.

When war broke out in 1754 between the English and the French (labeled the French and Indian Wars in the colonies), Franklin effectively argued, at the Albany Congress, that the colonies must unite to defend themselves against France. Although the plan for colonial unity was adopted, it was not ratified, and little became of it. Franklin later went to London in an attempt to get the proprietors of his adopted home colony, Pennsylvania, to allow a tax for the common defense of the colony; up to that point, the proprietors had resisted any effort to tax their interest in Pennsylvania. In 1760, Parliament passed a bill taxing both the colonists and the proprietors. Franklin stayed in England as an unofficial representative of the colony for the next eighteen years. During this time, he published numerous pamphlets and articles to present the colonial point of view to the English people and to Parliament. When an armistice was signed between the English and French in 1763, Franklin successfully argued that the British Empire was better served by taking Canada rather than the island of Guadeloupe. He knew that the colonies had the potential for tremendous growth

and that, although they were still just a frontier for the empire, they would one day represent a major partner, if properly managed. He called for the colonies to be allowed to manufacture goods, arguing that they were growing so rapidly they could easily absorb goods manufactured both domestically and in England.

By 1775, the relationship between the colonies and England had degraded to the point that Franklin believed he could accomplish little more in London, so he returned to Philadelphia. There, he was elected to the Continental Congress, and he proposed the Plan of Union, a modified version of his earlier Albany plan; it was later incorporated into the Articles of Confederation. In 1776, at the age of seventy, he was appointed as minister to France. This assignment was critical to the budding nation, and Franklin performed his duties splendidly. After the Revolutionary War, he aided in the negotiation and drafting of the Treaty of Paris. He was also a delegate to the new nation's 1789 Constitutional Convention, his last major civic duty. During his later life, Franklin opposed the slave trade, arguing, with his typical pragmatism, that slavery was both a hardship for the white laborer and detrimental to the African American. Unfortunately, he himself owned slaves and even took a slave servant with him to London, where he argued against Parliament's abuses of colonial rights.

Franz Joseph (Austro-Hungarian Empire) (1830–1916)

One of the longest-reigning monarchs in European history, Franz (Francis) Joseph ruled the Austro-Hungarian Empire from 1848 to 1916. As emperor, he was responsible both for the establishment of the dual monarchy of Austria and Hungary in 1867 and for the Austro-Hungarian ultimatum issued to Serbia in 1914 that led to the outbreak of World War I and the ultimate destruction of the empire.

Born in 1830, Franz Joseph was the son of Archduke Francis Charles and the grandson, on his mother's side, of King Maximilian I of Bavaria. But it was his position as the nephew of the heirless Austrian emperor Ferdinand I that led to his grooming as the future monarch. On the abdication of his uncle during the widespread revolutions of 1848, Franz Joseph became emperor.

The rebellions of that year led to promises of a constitution limiting the power of the emperor. When Franz Joseph and his prime minister, Felix Schwarzenberg, refused to implement those promises in 1851, it caused widespread protest and a general dislike for Franz Joseph that would persist throughout his reign. When Schwarzenberg died the following year, Franz Joseph decided not to appoint another prime minister; he would rule more directly himself.

In 1859, Franz Joseph led Austria into a war against the Kingdom of Sardinia and its ally, France, for control of Lombardy. When the emperor's army commanders proved incapable, Franz Joseph turned to Prussia for help. But when the latter demanded control of the Austrian army, the emperor instead signed a peace treaty with Sardinia, ceding Lombardy.

In the following decade, hostilities with Prussia forced Franz Joseph to give up Austria's remaining claims on Germany and resulted in the loss of Venetia in Italy. At the same time, the emperor faced an increasingly restive Hungarian population, seeking greater autonomy within the empire. In 1867, a reluctant Franz Joseph accepted the idea of a dual monarchy for Austria and Hungary.

During much of the rest of the century, he was largely preoccupied with the Balkans, where the Austro-Hungarian Empire was expanding as the Ottoman Empire collapsed. But rising Russian power and Slavic nationalism provided constant resistance. Ultimately, that Slavic nationalism would play itself out in Sarajevo with the assassination of Archduke Francis Ferdinand, heir to the Austrian throne, and the subsequent outbreak of World War I. Siding with Germany, the Austro-Hungarian Empire would be defeated in the war and broken up into its component national parts. But Franz Joseph would not live to see this, for he died in 1916, two years before the end of the war.

Franz Joseph is remembered as both a bumbler in foreign affairs and a reformer at home. He

Printed for Vienna's World Fair of 1873, this poster depicts Hapsburg Emperor Franz-Joseph, who led the Austro-Hungarian Empire during its final decades in the late nineteenth and early twentieth centuries. (Library of Congress)

instituted much-needed reforms to streamline the empire's administration and helped the passage of a good deal of social welfare legislation. Abroad, however, he often sent contradictory signals, trying to shore up his empire on one front while ceding territory to nationalist forces on the other. In the final analysis, it can be said that Franz Joseph underestimated the power of such forces to destroy his antiquated notion of empire.

French and Indian War

See Seven Years' War

French Empire

Competing with other great powers, France dispatched explorers, sailors, missionaries, and mer-

chants in the 1500s to lay claim to lands beyond the seas. By the eighteenth century, it was in possession of numerous overseas regions: New France (the eastern coast of Canada), a band of territory stretching in a wide swath from the New France area down to the Mississippi Delta, the French West Indies, French Guyana, parts of India, and a few scattered forts on the West African coast.

But in a series of wars with Britain and Spain in the 1700s, culminating in those of the French Revolution after 1789, France lost most of its possessions—the largest loss being New France. Realizing he could not preserve the Louisiana territories from American designs, Napoleon sold them to the United States in 1803. The most valuable colony, the sugar-producing island of St. Domingue, was lost as a result of slave uprisings in the 1790s. Although France had lost most of its possessions due to the aggression of rival great powers, Haiti became the first French colony lost as the result of the inhabitants waging a successful struggle for independence from the home country.

After the Napoleonic era, during which France's imperial activity was mainly confined to the European mainland, there was some resumption of overseas imperialism. Charles X, seeking to bolster support for his regime through military exploits, sent an army against the bey of Algiers in July 1830. News of the army's victory came too late to benefit the king, however, and he was overthrown. Algeria was the only French possession to become a major settlement colony. The government seized the best land, handing it over to the settlers; meanwhile, the Muslim populations continued to grow even as the amount of land they had shrank, and they became increasingly pauperized.

In the 1840s, the Anglophobic French navy competed with Britain in establishing outposts around the world from which French power might be projected. French positions were established in the Guinea Coast, farther south at Libreville, and on Tahiti in the Pacific.

Under Napoleon III, expansion continued. Wanting to curry favor with Catholics who were concerned about the ill treatment of their priests, Napoleon established control over southern parts of Vietnam. In West Africa, the forts in Senegal, Gorée, and St.-Louis became bases from which a more aggressive policy was pursued, giving France larger territorial control, particularly along the

Senegal River. When France needed a place for its convicts, it took over New Caledonia in the Pacific and made it into a penal colony in 1853.

Imperialism was fully launched in the 1880s as the European powers, convinced that colonies were a necessary part of great-power status, sought to increase the territories to which they could lay claim overseas. One of the most important imperialist ideologues was the economist Paul Leroy-Beaulieu; in *De la colonisation des peuples modernes* (Of the Colonization of Modern Peoples) (1874), he proclaimed that empire was a matter of survival for France, ensuring its economic well-being. The French prime minister in the 1880s, Jules Ferry (1832–1893), apparently accepted Leroy-Beaulieu's analysis and also regarded overseas empire as essential to great-power status. Furthermore, after their defeat in the Franco-Prussian War, French statesmen saw in empire an affirmation that France still could be counted among the leading states of Europe.

If Ferry and many of his fellow republicans were confirmed imperialists, expansion was not necessarily always directed from the top. In the 1880s, for example, French military officers seeking action and glory used Senegal as a launching pad for military operations into the western Sudan (today's Mali), and they often, in disregard of orders from their superiors, planted the French flag ever farther inland. Similarly, French explorers and military personnel in Indochina ignored cautions from Paris and moved northward, bringing all of Vietnam under French rule in the 1880s.

The naval officer Pierre Savorgnan de Brazza explored the Congo and returned to Paris with a treaty that the king of the Beté, known as Makoko, had signed, acknowledging a French protectorate over his kingdom. A vigorous press campaign convinced Parliament to ratify the treaty; meanwhile, Belgian and German interest in the area only increased its value. In its rivalry with Britain for control of the Niger River, France was bested: Britain acquired the coastal areas, and France was stuck with landlocked, desert land that became the colony of Niger in 1900. To the east, Chad, equally devoid of resources, had been acquired a year earlier. French imperialists could win satisfaction, however, from the contiguous territories linking the Congo to Algeria. The possession of Algeria stimulated French interest in the two adjoining

territories, and the Algerian colony would be used as a base from which to conquer Tunisia in 1881 and Morocco in 1911. Thus, by 1914, the French Empire stretched across the globe. With 10 million square kilometers in surface area and 50 million subjects, it was the second largest empire in the world.

Imperial propaganda upheld the economic benefits of empire. Indeed, Ferry had declared empire to be the “daughter of industry.” But empire turned out to be of limited utility to the French economy. France's foreign trade was only a modest part of its economy, and colonial trade, in turn, represented only a limited part of that foreign trade (about 10 percent before World War I). At the same time, however, colonial trade *was* of use to industries that were in decline and no longer competitive, such as candle, soap, and textile manufacturing. For them, the colonies were necessary for economic survival.

French colonial rhetoric embraced grand principles of spreading civilization overseas. Yet few funds were expended on development projects. By a law enacted in 1900, all colonies had to be self-sufficient; their progress was to depend on the resources that could be locally mobilized. Precious little was spent on education or health. Moreover, to build the colonial infrastructure, the administration subjected much of the local population to forced labor. Control was assured through the *indigénat*, a disciplinary system under which colonial administrators could arbitrarily, without any judicial proceedings, imprison colonial subjects for a long list of infractions, including showing insufficient respect for the French authorities.

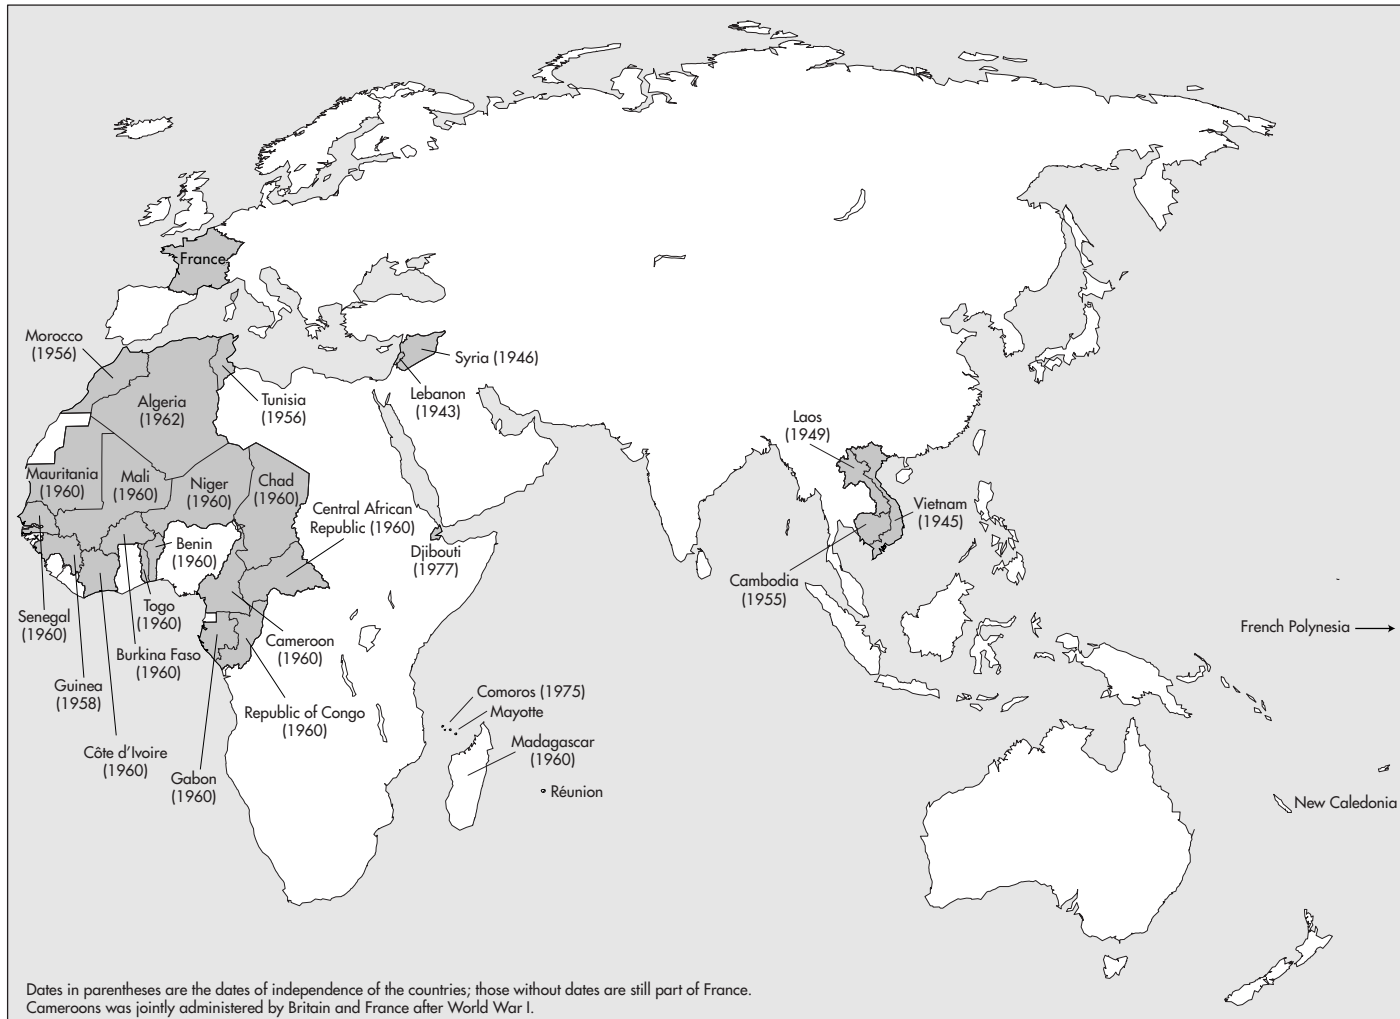

From the beginning, French rule was resisted by the colonial peoples. In Algeria, there were repeated uprisings in the nineteenth century; in Indochina, the French battled the rebel Black Flags in the north for years. In West Africa, the Ivory Coast was annexed in 1893, but it was 1916 before the territory was fully pacified.

Especially after World War I, many colonies expressed a desire to establish a separate identity, apart from the metropole. The West Indian Aimé Césaire and the Senegalese Léopold Sedar Senghor spoke of a separate black identity, *négritude*. Across the globe, the Vietnamese Ho Chi Minh, a founding member of the French Communist Party, was determined to free his country from

FRENCH EMPIRE—WESTERN HEMISPHERE

FRENCH EMPIRE—EASTERN HEMISPHERE

French imperialism and bring socialism to his people. The Algerian Messali Hadj founded the Etoile Nord Africaine, hoping to make it the vehicle of Algerian independence. The French answered these overseas stirrings with repression; they made few changes to adjust to the transformations occurring in their empire.

World War II spelled the end of empire for France, as it did for most other imperial powers. France was defeated in a few weeks and occupied by Germany. And as foreigners intruded in the empire, the decline in French power and prestige was revealed: Japan occupied Indochina, the Americans landed in North Africa, and the British entered Madagascar. The Franco-French war between the authorities in Vichy and the Free French extended overseas, indicating that France itself was divided.

As a result of the war, France never returned to Syria but had to grant it independence; in Indochina, taking advantage of the eclipse of France during the war, Ho Chi Minh started a war of independence that culminated with military victory in 1954. French rule was challenged elsewhere as well. In Algeria, there were mass protests in 1945 that were put down with severe force, and two years later in Madagascar, a nationalist rebellion was defeated only after 100,000 Madagascans were killed. In French West Africa, labor protests and political agitation were common.

France's Fourth Republic, founded after World War II, seemed to provide a new deal for its overseas peoples. It created the French Union, connecting the colonial peoples to France. Citizenship was granted to these people, and they could elect representatives to Paris and local councils. The integration of the colonies into the French Fourth Republic was intended to discourage nationalist movements overseas. But the integration was very incomplete. If the overseas peoples elected deputies to the French National Assembly, it was not in relation to their numbers. And in the metropole, no government tolerated the kind of disease, illiteracy, and grinding poverty that existed overseas. Meanwhile, the French claimed that there was no need to grant independence to the colonies because they no longer existed, having become fully part of France, but that claim rang hollow to nationalists overseas.

The French pulled out of Indochina in 1954, but almost immediately thereafter, organized resistance convinced them it was wise to grant independence to Tunisia and Morocco in 1956. With relative equanimity, France withdrew from these two North African possessions. Algeria, however, was a different matter. Algeria was legally considered an integral part of France, and the French stakes there were much higher. Some 1 million Europeans lived in Algeria at the time, and it was considered the most valuable of France's possessions; it was the linchpin of the empire, connecting France to black Africa. Thus, when a revolt broke out in Algeria in November 1954, the French fought hard to destroy the nationalist movement. But four years later, fearing that a government in Paris might compromise with the nationalists, settlers and the army in Algeria rose up and overthrew the Fourth Republic, bringing to power Gen. Charles de Gaulle, leader of the Resistance in World War II. De Gaulle realized that the era of empires was passed. After several false starts, he negotiated with the Algerian nationalists, and Algeria became independent in 1962. In the meantime, by 1960, the French had accepted the independence of all of black Africa. Only the confetti of empire was left—the overseas departments such as the West Indies, French Guyana, and Réunion, which had been fully integrated, as well as a few other possessions such as the Comores, which became independent in 1975; the Territories of Afars and Issas, which became the Republic of Djibouti in 1977; and the New Hebrides, which became Vanuatu in 1980. New Caledonia, Wallis and Futuna, and French Polynesia remained overseas territories.

French Equatorial Africa (AEF)

French Equatorial Africa (Afrique Equatoriale Française—AEF) was a federation created by the French government in 1910 to centralize control of its four territories in west-central Africa: Gabon, Middle Congo (now Republic of the Congo), Chad, and Ubangi-Shari (now Central African Republic). Cameroon was added to the federation by a League of Nations mandate in 1918. The capital was Brazzaville on the Malebo Cove of the Congo River; it was named for Pierre Savorgnan de Brazza, who had explored the Congo River basin in the late nineteenth century and acquired the territory for France, linking French possessions in central Africa with those in West Africa. He became the first governor of the region then called French Congo.

The federation was ruled by a governor, assisted by a deputy in each territory. The governor was in complete charge and was directly responsible to the minister of colonies in Paris. He could do little, however, as poor communications and a lack of personnel and financial support prevented development. Consequently, the governor essentially focused on security matters.

The multiethnic federation covered almost 1 million square miles stretching over very different climatic zones: desert in the north, then savanna, and dense rain forest farther south. Population density was low, about 3.5 persons per square mile, and the isolated indigenous population was poor and unaware of modernization. The area offered few resources. France had sought possession of the region not for its resources but rather for reasons of European politics. It wanted to keep out European competitors and relished claiming ownership of a vast empire that stretched from the Mediterranean to the Bight of Benin.

French colonial policies required that this vast empire not burden metropolitan taxpayers; hence, the large amount of capital needed to exploit the ivory and wild rubber found in the rain forest was unavailable. And since no worthwhile trade between European manufactures and African products existed, the colonial governments could not raise taxes to support themselves. The only possibility left was to attract private capital in exchange for land grants. Concessionaires paid little rent and in practice ruled the land as they saw fit. To exploit their possessions, they needed hunters,

porters, and rubber workers. They resorted to terror to obtain their labor force, and working conditions were horrendous. Moreover, forcible recruitment prevented Africans from cultivating their own fields, which resulted in famines. Thousands perished before the situation attracted European attention. When André Gide visited the Congo between 1925 and 1926, he was incensed by the beatings and killings he witnessed. But even with greater awareness and good intentions, the small number of civil servants allocated to French Equatorial Africa could do little to correct the neglect and oppression. Not surprisingly, endemic resistance persisted in Chad, revolts occurred repeatedly in Gabon and Ubangi-Shari, and violence erupted in Brazzaville. The situation did not improve significantly until World War II.

The fate of AEF changed due to the fall of France and the presence of Félix Éboué, a black French civil servant from French Guiana. As lieutenant governor of Chad in 1940, Éboué unhesitatingly declared allegiance to Free France. The example he set, later followed in other African colonies, and the strategic importance of AEF led to a close relationship between Éboué and de

Charles de Gaulle is welcomed to Chad by Governor-General Félix Éboué of Free French Africa. (Library of Congress)

Gaule, and the idea of a genuine partnership between France and its colonies was born. Meanwhile, Éboué put an end to forced labor and developed agriculture. He also strengthened indigenous institutions and taught traditional chiefs modern administrative techniques. At the 1944 Brazzaville Conference, African leaders for the first time called publicly for reforms in French colonial rule.

In 1946, when voting on a new constitution, French voters granted Africans the right to elect territorial assemblies. These, in turn, elected delegates to the French General Council of AEF. Inhabitants of the African colonies, regardless of race, were also authorized to elect representatives to all French parliamentary bodies: the National Assembly, the Council of the Republic, and the Assembly of the French Union. Africans became French citizens, and the colonies were designated overseas territories of France. However, Paris remained in control.

In the 1958 referendum, all territories of AEF rejected immediate independence in favor of membership in the new French Community, and the federation was dissolved. Middle Congo became Congo-Brazzaville, and Ubangi-Shari became the Central African Republic. In 1959, the new republics formed a short-lived, loose association (the Union of Central African Republics), and in 1960, they became fully independent republics.

fairs by assisting in the creation of a unified Vietnamese empire in 1802. It was not until 1859, however, that Napoleon III began the haphazard process that led the French to establish colonies in Indochina. The French completed their conquest of Vietnam by 1884 and established protectorates in Cambodia in 1863 and in Laos in 1887. Although the reasons for this colonial policy were rarely clearly expressed, political and cultural prestige, along with the desire for economic gain, were certainly major factors driving a part of France's elite to support the conquering of these distant lands.

In the first decades of the twentieth century, the French colonizers experienced a certain level of popular and political unrest, which culminated in serious troubles during World War I. The rigid political structure and the often brutal labor conditions imposed by the French in Indochina, combined with growing intellectual ferment among a good part of the indigenous elite, fostered a powerful undercurrent of anger during the 1920s and 1930s, particularly in Vietnam. This discontent led to the creation of several nationalist parties, including the Indochinese Communist Party. Since the French severely repressed these movements, however, they were effectively broken immediately before the outbreak of World War II, with one notable exception: the Communists.

The French repression of the 1930s, combined with the Japanese occupation of Vietnam from 1940 to 1945, prepared the Communists and their nationalist allies for their struggle against the French colonizer in the postwar era. After a brief peaceful interlude in 1946, the Communists turned against the French and began a long guerrilla campaign that culminated in the defeat of the French forces in the armed camp of Dien Bien Phu in May 1954. Although the fort was of little military value, the loss was highly symbolic and forced the French to negotiate a peace agreement in July of that year in Geneva. All of the details surrounding the independence of Vietnam, Laos, and Cambodia were not finalized until the end of the year, but France's direct influence in the area was effectively over. What little indirect influence it still exercised in Vietnam ended in 1956 when the Vietnamese government "invited" the French forces to leave the country.

Pierre Cenerelli

French Indochina

The European presence in Indochina dates from the sixteenth century, when Jesuits began to evangelize the region's population and even created a Latin-based Vietnamese alphabet. The French state first involved itself in Vietnam's political af-

French Language

France's motivation for empire building has been as much a striving for prestige as a desire for economic benefit; hence, the propagation of French culture and language has been central to its colonial policies. France firmly believed that to remain a world power, its culture needed to flourish beyond its national boundaries. This long-standing belief was expressed in France's nineteenth-century imperialism, which rejected foreign linguistic and cultural values. Proclaiming the universality and preeminence of its own language and culture, France undertook a civilizing mission whereby peoples in its colonies would presumably become French over time. Moreover, from the creation of the French Academy (in 1635) up to the recent Loi Toubon (legislation intended to protect the French language, adopted in 1994), France has always defined what *proper* French is.

In practice, colonial linguistic policy varied from continent to continent and from one time period to another, depending on the attitudes of specific colonial administrators as well as the primary concerns of the heads of state in Paris. In sparsely inhabited North America, preservation of the French language became an issue only in the nineteenth century, as Great Britain and the United States became ruling powers. On Caribbean islands, French took hold: as early as 1804, for example, Haitian freedom fighters pleaded their case for independence from Paris in French. On Pacific and Indian Ocean islands and in Indochina, French governments tolerated local idioms even though they sponsored education in French, mainly to train the needed labor force. French colonial linguistic policy could best be seen in Africa, where the use of indigenous languages was forbidden in schools and where the myth of as-

similation was consistently propagated. In practice, French education reached only a limited percentage of the population. The existence of francophone literature is due, in large part, to the achievements of a tiny minority of local leaders and writers, such as Léopold Sédar Senghor, who were imbued with French culture and expressed themselves in the purest metropolitan French. There are also differences between North Africa, where Arabic serves as a common national language, and multilingual West Africa, where ethnic jealousies perpetuate the use of French.

Notwithstanding protests against continued use of the colonial language, attempts at Africanizing written French, and the fact that spoken French has assumed its own syntax and created its own vocabulary in the different countries, “proper” French is still the official language in many former French colonies in Africa. Meanwhile, France, obsessed with the waning of its international influence and the threat of English becoming the dominant international language, encourages the perpetuation of French by sponsoring a number of organizations centered on *francophonie*. In doing so, it indirectly recognizes its debt to its former colonies, which have spread the use of its language and have enriched French-language literature into the twenty-first century.

French Revolution

Among the most cataclysmic events in Western history, the French Revolution (1789–1815) remade the map of Europe and profoundly affected the course of empire in every corner of the world. Moreover, the political principles of democracy, equality, and liberty that the Revolution forwarded would be taken up by colonized peoples around the world over the next two centuries—in the French and other empires—in

their efforts to achieve political independence and self-determination.

The causes of the French Revolution that began in July 1789 were complex and long-standing and included widespread hunger and poverty among the peasantry and urban working poor; political disenfranchisement of the growing middle class; a bloated aristocracy; and a government that was out of touch with the needs of the people. Over the next ten years, the Revolution underwent radical and reactionary phases before being transformed in 1799 with Napoleon Bonaparte's declaration of a consulate, with himself becoming the de facto dictator of the nation.

During those years, the impact of the Revolution was felt well beyond France's borders, both in Europe and overseas. In the former, France—under both the directorate from 1795 to 1799 and Napoleon's consulate and empire from 1799 to 1804 and 1804 to 1815, respectively—seized possessions of the Austro-Hungarian Empire in Italy and Germany. Most of these changes in sovereignty on the European continent, however, were reversed by the Congress of Vienna in 1815, in which the victorious antirevolutionary and anti-Napoleonic powers of Europe largely reestablished the prerevolutionary political order of the continent.

Abroad, the changes wrought by the Revolution and by the Napoleonic government it gave birth to were more long-lasting, though the ban on slavery in French colonial possessions promulgated in 1791 would be reversed by Napoleon eleven years later. The British, at war with France and its allies through much of the revolutionary period between 1789 and 1815, took advantage of the chaos of the era. In 1793, they seized France's outposts on the Indian subcontinent. Two years later, with the Netherlands occupied by the French, the British seized the Dutch colonies of Ceylon (now Sri Lanka) and the Cape Colony in southern Africa. The British navy also defeated the French at the Battle of the Nile in 1798, undermining Paris's effort to seize Egypt, though it would take three more years before Napoleon gave up his dream of a French empire in the Middle East.

Still, despite these momentous events, the most important effects of the French Revolution on the colonial order of the late eighteenth and early nineteenth centuries were felt in the Americas. In 1791, a rebellion by the mixed-race people of St.

Domingue (now Haiti)—inspired by the ideals of the Revolution and encouraged by the chaos back in France—led to a full-scale slave rebellion that would result in the creation of the first black republic in modern history and the second independent republic in the Americas in 1804, after the United States. Moreover, Napoleon's unsuccessful efforts to recapture the island helped convince the French leader to strike a deal with President Thomas Jefferson, ceding the vast Louisiana territory to the new United States and ending France's colonial presence in mainland North America.

To the south, the ideals of the French Revolution—as well as the French invasion of Spain in the first decade of the nineteenth century—inspired Latin American revolutionaries such as Simón Bolívar and José de San Martín to lead independence struggles throughout the region. Within a few years of the end of the French revolutionary era in 1815, all of mainland Latin America—with the exception of a few tiny European holdings—would be divided up into independent republics.

Finally, the Revolution introduced the world to the idea of universal human rights, a concept taught to many colonial peoples in missionary schools in the empires of France and other European powers over the next 150 years. These principles—departing so blatantly from repressive colonial practice—would help inspire revolutionary sentiment among colonized peoples in much of Asia and Africa in the twentieth century as well, leading to the downfall of the colonial order throughout the world.

French West Africa (AOF)

As France pushed eastward to Lake Chad and occupied territories linking its African colonies on

the Mediterranean with those on the Atlantic, it formalized the administrative structure of its holdings. It established the Ministry of Colonies in Paris and in the following year (1895) created the Federation of French West Africa (Afrique Occidentale Française—AOF). Borders, drawn along straight lines without regard to topography, were negotiated with neighboring colonial powers. Internal borders and names of territories changed repeatedly over the sixty-four years of AOF's existence, without concern for local history and ethnic distribution.

In the 1920s, the federation included present-day Benin, Burkina Faso, Guinea, Ivory Coast, Mali, Mauritania, Niger, Senegal, and formerly German Togo, under a mandate of the League of Nations. It covered an area of some 1,730,000 square miles and had about 15 million inhabitants belonging to dozens of ethnic groups. Most numerous were the Mossi, Mande, Fulani, Hausa, Wolof, Moors, and Tuareg.

The capital of AOF was Dakar, located in the oldest of these French colonies, Senegal. The French presence in Senegal had started with a trading post in the mid-1600s, and two centuries later, Louis Faidherbe had organized African troops under French command, expanded the territory, developed trade, and founded Dakar. Senegal was the base from which French occupation proceeded.

The French believed in the superiority of Western civilization and in the universal validity of French culture. Yet the much vaunted policy of assimilation, which was supposed to transform Africans into French men and women, was actually a policy of association geared to French interests. The only exception to the assimilation policy was made in the 1870s for four communes of coastal Senegal where male inhabitants were granted French citizenship with full political rights, including that of electing representatives to French parliamentary assemblies (provided they knew French). All other inhabitants of AOF remained subject to the *indigénat* (law of indigenous people), which imposed taxation, forced labor, and conscription. On the eve of World War II, only about 80,500 blacks were citizens.

The federation was administered by a governor-general responsible directly to the minister of colonies and assisted by a lieutenant governor and

staff in each colony. French administrators were responsible for all aspects of life in their jurisdictions. Of course, there were too few of them to deal with all Africans directly, so they had to rely on African chiefs as intermediaries. Recalcitrant chiefs were replaced with compliant ones, despised by both their French bosses and the population. Moreover, all branches of government had to employ blacks in order to function. Clerks, craftspeople, laborers, and soldiers had to be trained. The rapid changes disrupted traditional life and created much misery, particularly in remote interior regions and among nomadic tribes such as the Tuareg.

The French government demanded that colonies be financially self-sufficient. Unwilling to invest taxpayers' money in its colonies, it ignored the exploitation of the indigenous population. It also appropriated land by claiming that it did not belong to anyone because it superimposed European legal notions of property on African notions of traditionally shared land. It implemented forced labor. Subsistence agriculture was forcibly replaced by cash crops. The principal sources of revenue were rigorously enforced duties on trade and direct taxation. However, only older coastal colonies had sufficient production and trade to engender any significant income. The original intention of utilizing some of these revenues to develop territories in the interior had actually been one of the reasons for creation of the federation, but resources remained insufficient; even providing the basic infrastructures needed for further development proved most difficult. Over the years, French schools, military service, employment by the administration, money-based exchanges, and the growth of cities did put the local populations in direct contact with French civilization. But most often, this entailed dislocation and poverty. The advantages of colonization were few, but two proved significant in the years ahead: a considerable population growth when basic sanitary improvements were implemented and the creation of a small, highly educated elite ready to lead the colonies to freedom after World War II.

The 1944 Brazzaville Conference of French colonial administrators marked a turning point. Recognizing Africa's contribution to Free France, Gen. Charles de Gaulle's provisional government offered French citizenship to the peoples of all the

African colonies, abolished forced labor and the *indigénat*, and made French-style education more available. Liberalization, however, did not mean self-government. The establishment of the Fourth Republic (1946) classified former colonies as constituent territories of the new French Union. Full French citizenship rights were extended—but only to overseas citizens who met specific property and literacy criteria, that is, less than one-tenth of the population. New advisory bodies were established. Metropolitan overseas investments grew considerably. However, African parliamentarians saw the new constitution as undemocratic and created the African Democratic Assembly (in 1946) and the Democratic Senegalese Bloc (in 1948) to lobby for greater rights. Under pressure, the 1956 *loi-cadre* (enabling legislation) was promulgated, granting greater local autonomy as a substitute for independence.

In 1958, General de Gaulle, returned to power, presented a new alternative: either African territories could ratify the constitution of the new Fifth Republic and thereby become autonomous states within a community whose external affairs would be controlled by France or they choose total and immediate independence. Only Guinea, led by Sékou Touré, voted against the constitution. Others were reluctant to sever their long association with France and to see the substantial developmental assistance given their territories since the conclusion of World War II come to an abrupt end. As the new constitution came into being, the federation was dissolved. Two years later, its former members became fully independent republics and members of the United Nations.

French West Indies

After the initial settlement of the Caribbean by the Spanish in the fifteenth century, European nations flocked to the West Indies in search of land to colonize. During the seventeenth century, the French succeeded in colonizing several West Indian islands, but only a few have survived as the French West Indies.

Also known as the French Antilles, France's Caribbean empire originally was composed of St. Kitts, St. Eustatius, Grenada, Dominica, Martinique, Guadeloupe, St. Barthélemy, St. Martin, St. Domingue, and a few other tiny islands. France was a powerful entity in the Caribbean, but it found it hard to maintain control of all of its possessions and eventually lost most of the settlements. Several were lost to neighboring European powers. The most notable of its lost colonies, St. Domingue, gained its independence in 1804, becoming the sovereign nation of Haiti soon after the Haitian Revolution in 1791.

By the beginning of the twenty-first century, only the islands of Martinique, Guadeloupe, Les Saintes, and St. Barthélemy remained under French control. In 1946, these few possessions were established as separate departments of the Fourth French Republic, retaining this status through the Fifth French Republic in 1958. As departments, the French West Indies have full political rights within France, with representation in the French Senate and the National Assembly. Each island's residents are French citizens, who enjoy open migration to and from France and the other French possessions.

The French colonies, like the rest of the Americas, relied on African slave labor until emancipation in the early nineteenth century. That labor was replaced by wage labor, first indentured and now local. The local economies have remained largely agrarian, primarily producing bananas and sugarcane; in addition to agricultural profits, the French West Indies also rely on a very lucrative tourist industry. Although a majority of the people in the islands support their status as departments of France, some favor independence.

Frobisher, Sir Martin (1539–1594)

A navigator, explorer, pirate, and naval captain, Martin Frobisher was born in Yorkshire, England. After his father's death, he went to sea on an expedition to the Guinea Coast in 1553, which, though financially successful, resulted in a great loss of life. The following year, he went with John Lok on another voyage to Guinea, where a chief demanded a hostage before he would trade. Frobisher volunteered for the job, but he later fell into Portuguese hands and was imprisoned for a while before being released and sent home. Between 1559 and 1576, he operated as a freelance corsair, or pirate, taking many prizes for the Protestant princes of Europe. Though arrested and imprisoned five times by the Elizabethan government of England, he was never tried on a criminal charge.

Frobisher later turned his energies to the search for a northwest passage and in June 1576 set forth on the first of three voyages into Arctic waters. He pinned his hopes on Zeno's largely fictitious map of 1558, but he did sail to the Shetlands, then on to the Faroes and to Cape Farewell on the southern tip of Greenland, which, according to Zeno's map, he took

to be Friesland. On August 11, 1576, he sailed into the strait that would thereafter bear his name but which he imagined was the entrance to a northwestern passage to China. After both this and his next voyage, he returned to England with a cargo of worthless black pyrite he mistakenly thought contained gold. On a third voyage in 1578, he discovered what is now known as Hudson's Strait. In 1585, as vice admiral, he sailed with Sir Francis Drake on a Spanish West Indies expedition. The expedition brought home vast spoils, possibly worth £60,000.

During the battle with the Spanish Armada in 1588, Frobisher commanded the *Triumph*, a flagship of one of the four squadrons, and he fought with courage and distinction, for which he was knighted. During three subsequent expeditions to the Azores, he took many valuable prizes for England. In 1594, he led a squadron of ships to help the French Huguenots, but in storming the fort at Crozon near Brest in Brittany, he was severely wounded. He died on returning to Plymouth.

G

Gandhi, Mohandas (1869–1948)

Mohandas Karamchand Gandhi was born on October 2, 1869, at Porbandar in Gujerat, India. He was married at the age of thirteen to Kasturbai, and they had four sons. From 1888 until 1891, he studied law in England and was called to the bar. In India, he practiced law but was not successful. Consequently, he traveled to South Africa in May 1893 to practice law there and did not return to India permanently until January 1915. However, he gave up his lucrative law practice in 1904 to devote his life to communal uplift. In 1894, he started the Natal India Congress. During the South African War (1899–1902) and the Zulu Rebellion (1906), he organized an ambulance corps. Subsequently, he developed his technique of nonviolent noncooperation, *satyagraha* (truth force), to fight against the government's racist policies.

He returned to India a national hero and was given the title of Mahatma (Great Soul). In 1917, he started a satyagraha movement against the indigo growers of Champaran in Bihar and then against the mill owners of Ahmedabad. In 1919, he called for a national *hartal* (strike) against the British and supported the Khilafat Movement. By 1920, he had become the most important leader of the Indian National Congress. He spread his ideas through his journals—*Indian Opinion*, *Young India*, and *Harijan*—and through such books as *Hind Swaraj* (1909), *Ethical Religion* (1922), and

Autobiography: The Story of My Experiments with Truth, which he wrote in the 1920s.

His participation in the satyagraha movement led to his arrest in 1922, and he was imprisoned for two years; he subsequently started two other satyagraha movements (1930–1932 and 1940–1942). From 1924 until 1930, he retired to his *ashram* (commune) at Sabarmati to devote himself to Hindu-Muslim unity, to prohibition, to the moral and economic uplift of village life, and to spinning *khadi* (homespun cloth). On March 12, 1930, he commenced the Salt March, an attempt to protest the British monopoly over the crucial commodity. He was arrested on May 5 and held in prison for nearly a year, until January 26, 1931.

In 1932, as a result of the Gandhi-Irwin Pact in which Gandhi agreed to call off civil disobedience against British authority in India, he was invited to attend the Second Round Table Conference in London. He did so as the sole representative of the Congress. Unfortunately, instead of focusing on ending British rule in India, the conference centered on the rights of minority groups in the subcontinent. On Gandhi's return to India, he was imprisoned but was released in 1933. When World War II broke out in 1939, Gandhi refused to support the British in the war effort, and in 1942, he began the Quit India Movement, for which he was imprisoned until 1944. When India became independent in 1947, Gandhi was in Bengal trying to bring about harmony between the Muslims and

the Hindus. He was assassinated on January 30, 1948, by Hindu nationalists angry at his compromises with Pakistani leader Mohammad Jinnah.

Garibaldi, Giuseppe (1807–1882)

An Italian patriot and military leader, Giuseppe Garibaldi fought for peoples' right to self-determination and for the unification of Italy. Influenced by Giuseppe Mazzini, he became a republican with socialist leanings, yet, foremost a patriot, he devoted his life to helping the Kingdom of Piedmont-Sardinia grow into the Kingdom of Italy. Garibaldi served in the Piedmontese navy, but participation in an abortive republican uprising forced him to flee to South America. For twelve years there (1836–1848), he fought against Brazilian and Argentinian imperialism. His exploits made him famous as a freedom fighter. In 1848, news of revolutionary stirring drew him back to Italy. His personal reputation was enhanced by his efforts, but uprisings in Milan and Rome failed, and he again went into exile.

Only in 1854 was he allowed to return to Piedmont. King Victor Emanuel II and Prime Minister Camillo Benso (Count of Cavour), needed Garibaldi's skills and determination, but they feared his republicanism, anti-imperialism, and disregard for international relations. When war with Austria broke out in 1859, Cavour gave Garibaldi command of an army of volunteers. Garibaldi liberated northern Lombardy and was aghast when Cavour signed an armistice. On his own, Garibaldi regrouped his forces and, with 1,000 men, undertook to liberate Sicily and southern Italy in 1860. He succeeded thanks to

Giuseppe Garibaldi was a key leader in the wars and revolts against Austro-Hungarian imperial rule that led to the formation of the Italian nation in the late nineteenth century. (Library of Congress)

enthusiastic popular support and generously declared Victor Emanuel II king of the newly liberated lands. The Kingdom of Italy was proclaimed in 1861. Yet Cavour still feared international complications, and when Garibaldi moved toward Rome in 1862, Piedmontese forces stopped him. Commonality of purpose prevailed again in 1866, and Garibaldi accepted Victor Emanuel II's request to lead troops in a new war against Austria, which resulted in the liberation of the Venetian region. Garibaldi lived his last years on the island of Caprera, issuing political pronouncements. He declared himself a socialist and a pacifist, championed the rights of labor and women, and condemned capital punishment and racism.

General Agreement on Tariffs and Trade

Originally signed in 1947, the General Agreement on Tariffs and Trade (GATT), formed as part of the International Trade Organization, establishes rules for international economic relations that are designed to encourage free trade while eliminating discriminatory trade barriers. Signatories voluntarily agree to abide by multilateral agreements that promote the most efficient allocation of resources, as advocated by Adam Smith and David Ricardo. Each country has the option of exercising an escape clause if the rates adversely affect its own domestic producers. Once a country negotiates a tariff reduction with another member, all other participants receive the same rates automatically. The ability of developing countries to participate in the international economy with a status equal to that of developed countries has helped stabilize internal political institutions and foster robust economies.

After World War II, colonies, encouraged by the prospect of involvement with GATT, insisted on independence and, once it was achieved, quickly joined the organization. More than 117 nations signed the agreement, pledging to resolve disputes through the governing body. The two major Communist countries, the Soviet Union and China, refused to participate. Since 1947, the member countries have participated in seven separate rounds of negotiations: in Geneva in 1947; in Torquay, England, in 1951; in Annecy, France, in 1949; and in Geneva again in 1956, 1960, 1961, and 1962. The last three—and the most important—sets of trade negotiations occurred in the Kennedy Round (1964–1967), the Tokyo Round (1973–1979), and the Uruguay Round (1986–1994). In 1994, representatives agreed to establish the World Trade Organization, thereby replacing GATT with another organization empowered with the ability to enforce trade violations through sanctions. GATT has stimulated international trade and reduced the average rate of tariffs from 40 percent to 5 percent throughout its forty-seven years of operation and governs over 90 percent of the world's trade.

Geneva Conventions

The Geneva Conventions is the informal name given to a series of international treaties signed by most of the world's nations between the years 1864 and 1977. Collectively, the five main treaties—signed in 1864, 1906, 1929, 1949, and 1977—deal with the rules of war. Although some of the treaties were negotiated elsewhere, all were signed in the Swiss city of Geneva, home to the Red Cross and Red Crescent international relief agencies, with which the conventions are closely associated.

The first convention was signed in 1864 and dealt with the protection of persons wounded in war and those helping the wounded, the 1906 convention applied the rules to maritime conflict, and the 1929 provisions set out protections for and rights of prisoners of war. Because of numerous violations of earlier protocols during World War II, the 1949 convention extended protections for the wounded and for prisoners of war.

But it is the 1977 convention that is of most concern to the subject of colonialism. Due to the many anticolonial wars of national liberation and the numerous civil conflicts in newly liberated countries in the post-World War II era, the latest Geneva protocols extend the protections of the earlier conventions to wars that are noninternational in nature, involving combatants who are not fighting for sovereign states. (The 1977 convention also updates earlier protections to take account of technological changes in warfare and apply new protections to civilian populations in times of war.)

As far as noninternational wars are concerned, part 1, article 1, paragraph 4 of the 1977 convention reads that the Geneva Conventions apply to “armed conflicts in which peoples are fighting against colonial domination and alien occupation and against racist regimes in the exercise of their right of self-determination, as enshrined in the Charter of the United Nations and the Declaration on Principles of International Law concerning Friendly Relations and Co-operation among States in accordance with the Charter of the United Nations.”

George III (1738–1820)

George III, the grandson of George II of England, is primarily remembered as the king who lost the American colonies and, sometimes secondarily, as "Mad King George" because of his devastating episodes of insanity. This is not an entirely fair picture. On his accession to the throne in 1760, George III insisted that Britain scale back the Seven Years' War in Europe (known in America as the French and Indian War), as it was faced with mounting bills and Prime Minister William Pitt's insistence on an invasion of Spain. The king's pressure on his ministers resulted in the resignation of Pitt and his replacement by the more pliable Earl of Bute, a longtime friend of the king. This arrangement, though it prevented Prussia from achieving its war aims, resulted in the 1763 Treaty of Paris, by which Britain inherited the largest colonial empire in the world, including Canada, the Ohio River valley, and west Florida as well as secured privileges in Newfoundland fisheries and the Honduran forests.

The king had also learned to pick malleable ministers and cabinet officers who would accede to his wishes and particularly his colonial policy, which stressed the need to pay off the enormous war debt through taxation and led to the Stamp Act and Townshend Duties. A focused and frequently stubborn monarch, George III was familiar with the minute mechanics of the government and intervened frequently to manipulate elections, as he did in 1784, and to crush offensive legislation, as with the India Bill in 1783. Although de-

spising factions and attempting to keep government run by court favorites, George III was personally hurt by opposition from men such as John Wilkes and the Whigs who pressed the claims of the American rebel leaders. The king was set on prosecuting the American Revolution until the Battle of Yorktown in 1781. At that point, he was convinced to offer a conciliation, but the effort failed.

The last years of his reign were tragic, as the king was increasingly beset by attacks of madness, perhaps brought on by inherited porphyria, a disorder of the nervous system. Nonetheless, George III was regarded affectionately by his subjects for his interest in agriculture, for which he won the nickname "Farmer George," and his domestic respectability, especially when his personal life was contrasted with that of his unruly sons. The French Revolution seemed to vindicate the king's stance on revolution in general. He was a major force in keeping Britain in arms against Napoleon, even when the rest of the allies made peace, and was thus responsible for the great victories at Camperdown, Cape St. Vincent, and the Nile. In 1811, permanently disabled by his insanity, George III, by then entirely blind, was replaced by a regency under his eldest son, George IV, and died in 1820. The king who lost America was also the king who triumphed over Napoleon, oversaw the Industrial Revolution in Britain, and saw the birth of the successful expansion of the British Empire into India and Canada.

German East Africa

See Tanganyika

German Empire

In the history of colonialism, Germany's empire has received far less attention than the overseas empires of Great Britain and France. There are several reasons for this, including the relative

GERMAN EMPIRE

brevity of Germany's colonial project, the comparatively small amount of territory involved, the marginal economic importance of the German colonies, and Germany's early loss of its colonies following defeat in World War I. Yet Germany's colonial empire is significant to both modern European history and the colonial histories of Africa and Asia. Indeed, it is impossible to understand the histories of modern Germany and its former colonies without also understanding the German colonial period.

German liberals began discussing the acquisition of colonies as early as 1848, and the idea of colonialism reemerged in the 1860s as a subject of interest to certain German constituencies, such as industrialists and the Prussian military establishment. It was not until after German unification in 1871, however, that colonialist agitation reached a higher pitch in domestic politics. The development of the colonialist movement after 1871 was due to the convergent interests of several groups, including commercial and industrial representatives, tropical trading interests, and German emigrationists.

In the 1860s and 1870s, several organizations were founded to promote German colonial interests. These early examples became models for the later *Deutsche Kolonialgesellschaft*, formed in 1887 by the members of two existing colonial organizations. This organization, which remained the most vocal and steadfast advocate of colonialism throughout the imperial period, lasted until the Third Reich, when it was subsumed under the national socialist organizational apparatus. Carl Peters, one of the group's initial leaders and perhaps the most notorious figure in German colonial history, played a formative role in the ideological development of the German colonialist movement as a propagandist, but he also played an active role in the actual territorial acquisition of Germany's East Africa colonies. He and several like-minded associates undertook a series of treaty-signing expeditions in 1884 that led directly to the German possession of Tanganyika. Chancellor Otto von Bismarck had staunchly opposed colonial expansion until 1884, but for a combination of domestic and foreign policy reasons that have been much debated by historians, he changed his mind in 1884, setting Germany on its path to formal colonialism.

Chancellor Bismarck officially declared a protectorate over portions of southwest Africa in 1884. The establishment of protectorates over the West African areas that later became known as Togo and Cameroon followed later that year. In February 1885, Bismarck also declared a protectorate over mainland East Africa, and he later placed its administration under the newly created German East Africa Company. In each case, the establishment of protectorates over these territories followed the signing of individual "treaties" with local African leaders. These treaties were of dubious character, since the African leaders who signed them generally had no authority to grant land concessions to the Germans and certainly could not have known what the German legal concepts in the treaties involved. Nevertheless, these pieces of paper served as the foundation for German colonial rule over these four disparate regions of Africa.

In the Pacific, Germany acquired northeastern New Guinea in 1884 and added the Mariana Islands, Caroline Islands, and Palau Islands to German New Guinea in 1899. It also occupied and leased the Chinese city of Qingdao and its hinterland in 1897 and annexed the islands of Savaii and Upolu as German Samoa in 1900. This annexation rounded out Germany's possessions for the remainder of its tenure as a colonial power. The Pacific islands remained the most economically unimportant in the German colonial constellation, though they did feature in political debates in the Reichstag over the citizenship rights of the "mixed-race" offspring of German men and Asian women.

In November 1884, Bismarck hosted the Berlin Conference, at which the Great Powers of Europe decided how best to proceed with the colonial occupation of Africa while at the same time avoiding potentially disastrous conflicts among themselves. Although Bismarck achieved his goal of preventing a major European conflagration over the colonies, the doctrine of "effective occupation" that emerged from the conference committed Germany to a more expensive colonial project than he had planned for.

Between 1884 and 1907, Germany attempted to fulfill its effective occupation requirements in its various African colonies by fighting a series of wars of "pacification" and launching "punitive ex-

peditions” against numerous peoples who opposed the German presence and the economic, social, and political changes the colonial regime demanded. German colonialists also attempted to set up the fundamental economic and political elements necessary to effectively administer the colonies and to encourage more settlers. German military commitments to securing colonial territories culminated in two major rebellions in two separate colonies—German South West Africa and German East Africa—that began in 1904 and 1905, respectively. In German South West Africa, first the Herero and then the Nama rose in open and coordinated rebellion against the Germans, and they met with some initial successes. However, after German reinforcements arrived in the summer of 1904, they defeated the Herero at Waterberg Mountain, surrounded them there, and drove the remaining force into the Omaheke Desert, where most of them died of thirst and starvation. In October 1904, Gen. Lothar von Trotha, the German commander, issued his infamous “extermination order,” in which he ordered that all Herero were to be shot regardless of combatant status. In the end, about 80 percent of the Herero and 50 percent of the Nama died either in the war itself or in its aftermath, when those who survived were confined in disease-ridden concentration camps on the coast or used as forced laborers. In East Africa, the Maji Maji Rebellion, which mainly involved the southern portion of the colony, broke out in 1905. As in South West Africa, the military suppression of this rebellion required the use of reinforcements. The main part of the uprising was put down by April 1906. Up to 100,000 Africans died in the conflict, and the famine and disease that followed it unleashed massive starvation in the southern region. Although relatively few Germans died in these conflicts, the expenses incurred and the publicity surrounding the alleged atrocities committed by German troops provoked much domestic discussion about Germany’s colonial project.

These military activities, the brutal treatment of the subject African populations involved, and a series of colonial scandals caused by official misconduct on the part of colonial military officers and administrators provoked substantial debate and crisis in the Reichstag, raising questions about colonial policy and parliamentary oversight. The

turmoil eventually resulted in Chancellor Bernhard von Bülow’s dissolution of the Reichstag and the election of the “Bülow bloc”—which included all political parties except the Catholic center and the Social Democrats—based on a patriotic, pro-colonialist platform. Between 1907 and 1914, German colonial administrators and governors sought to develop the colonies so that they would be self-sufficient and economically productive for Germany. By 1913, however, the colonies still required subsidies in order to function, and profits from trade in the colonies were negligible.

In 1914, World War I erupted, and the German colonies came under attack by Allied forces almost immediately after war was declared in Europe in August 1914. Togo and the Pacific possessions fell to Allied occupation in late 1914, but South West Africa and Cameroon were not conquered until 1915 and 1916, respectively. In German East Africa, a legendary force led by Gen. Paul von Lettow-Vorbeck held out against a harried multinational Allied force until after the European armistice in 1918. At Versailles, Germany petitioned to have its colonies returned to it, but the Allies argued that Germany was not fit to continue to administer colonies. Accordingly, its colonies were taken and divided among the Allies as mandates of the League of Nations. For Germany’s former colonies, the mandate period entailed learning how to live under new colonial administrations and the different practices of a new set of colonial practitioners. Although Germany’s formal period of colonialism had now come to an ignoble end, the colonies remained a prominent feature in German politics during the Weimar and Nazi eras, when they became symbols of the perceived wrongs done to Germany during World War I and at Versailles.

Gibraltar

This 425-meter-high (1,380-foot) rocky promontory is linked to the Iberian Peninsula by a sandy isthmus of 1.6 kilometers (1 mile). Muslim invaders noticed the strategic value of the site in 711, and the Almohads fortified the rock in the twelfth century. Castilians invaded Gibraltar first in 1309 and then in 1462. During the War of the Spanish Succession, the defenses went unattended, and an Anglo-Dutch squad, commanded by Adm. George Rooke, conquered Gibraltar in 1704. The Treaty of Utrecht in 1713 acknowledged British supremacy over Gibraltar, causing consternation in Spain and prompting multiple warlike and diplomatic initiatives to reclaim the Rock of Gibraltar.

In 1830, Gibraltar formally became a British colony, and in 1909, the British authorities, acting unilaterally, set its colonial borders. This created a huge controversy when, later on, an airport was built in the neutral fringe. The Spanish government repeatedly put its claims for the return of Gibraltar before the UN General Assembly and its decolonization committee, transforming this claim into a nationalist crusade during the regime of Francisco Franco. In 1967, the United Kingdom set a referendum for the Gibraltar population, which showed its support for maintaining the status quo. In 1969, a new constitution was promulgated, and the Spanish government closed the border and interrupted any communication with the rock, removing Spanish workers from the area. In 1981, the United Kingdom granted British citizenship to the inhabitants of Gibraltar, although the border would not be reopened until 1982.

Gilbert and Sullivan

As Britain's most popular composers of the Victorian era, W. S. Gilbert and Sir Arthur Sullivan collaborated on thirteen comic operas between 1871 and 1896. Though these operas dealt only tangentially with imperial themes and situations, they were imbued with the patriotism and chauvinism of the late Victorians.

Gilbert and Sullivan were both products of the Victorian lower middle class that they delighted in parodying. Gilbert trained as an attorney before taking up journalism, and Sullivan was the son of an army bandmaster. When they met in 1870, Sullivan had already established a reputation as a talented classical composer; Gilbert was a successful comic journalist. Their first collaboration was *Thespis, or the Gods Grown Old*, which appeared in 1871. They achieved their first triumph in 1878 with *HMS Pinafore*, a farce about an English captain's daughter's love for a common sailor. Over the next eighteen years, they produced a string of commercially and critically successful operas, including *The Pirates of Penzance* (1879), *Iolanthe, or the Peer and the Peri* (1882), and *The Mikado, or the Town of Titipu* (1885). After 1877, their productions were staged by the English impresario Richard D'Oyly Carte, who established the Savoy Theater in 1881 as a venue for their operas.

Gilbert and Sullivan produced comic, escapist operas that sought to transport their London audiences away from the anxieties of late Victorian England. Therefore, they contained almost no references to the so-called scramble for Africa, Irish home rule, industrial depression, or any of the other major problems plaguing the nation. However, both Gilbert and Sullivan shared the promonarchical, patriotic, and chauvinistic predilections of most middle-class Victorians, and these views came through in their operas. Their heroes are often sailors (*HMS Pinafore*, *Pirates of Penzance*), soldiers (*The Yeoman of the Guard*), or aristocrats (*Iolanthe*). Both men were supporters of the monarchy, and they presented the institution with great reverence in many of their operas. The duo counted Queen Victoria among their fans, and Sir Arthur Sullivan was a friend of the Prince of Wales. Their operas presented English institutions as standards of civilization and portrayed foreigners as invariably exotic and silly (most apparently in *The Mikado*). Gilbert himself was a

strong supporter of the Conservative Party, and his blind patriotism is reflected in the song “For He Is an Englishman” from *HMS Pinafore*, which laments the fate of someone unfortunate enough to be born “A Roosian, a French, or Turk, or Proosian.” Gilbert and Sullivan’s only opera with an overtly imperial theme is *Utopia Limited*, a fantasy in which the people of a fictional south sea island look to England to reform their backward country.

Despite the success of their partnership, Gilbert and Sullivan were often at odds over creative differences, and they experienced long periods of estrangement. They collaborated on their final opera, *The Grand Duke, or the Stationary Duel*, in 1895. Sir Arthur Sullivan died in 1900, and W. S. Gilbert died eleven years later. During the twentieth century, the Gilbert and Sullivan operas became a part of the imperial culture that bound together the English-speaking members of the British Empire and Commonwealth. They provided a cheerful and nostalgic reminder of the bygone confidence of the Victorians and their apparently effortless mastery of their empire. The operas remain popular in Britain and throughout the English-speaking world today.

Gladstone, William Ewart (1809–1898)

One of the greatest figures of the Victorian age and four times prime minister of England, William Gladstone maintained a strong interest in the British Empire throughout his long career. As a young member of Parliament, he spoke frequently on colonial affairs, serving briefly as colonial secretary under Robert Peel in 1846. With the split of the Conservative Party, Gladstone, like other Peelites, devoted sustained attention to colonial matters and advocated the extension of local self-government to the colonies of settlement. In 1855, Gladstone delivered his famous “Our Colonies” speech, which highlighted the importance of the

As Liberal prime minister, William Gladstone agreed to the British occupation of Egypt in 1882, a triggering event in the European scramble for African colonies later in the decade. (Library of Congress)

colonies to Britain and argued that an enduring imperial bond had to rest on a reciprocal sharing of rights and responsibilities.

As chancellor of the exchequer under Lord Palmerston, Gladstone pursued the implications of his imperial vision by urging that the colonies, which had received responsible government, should take on the duties of their own local defense. He was accused of being concerned only with budgetary savings, but in fact, he believed that, as colonies met their local defense challenges, they would mature and grow in their relationship with Britain. At the same time, he was realistic about the demands Britain faced along the “turbulent frontiers” of the empire in West and South Africa and in the Pacific, and he was hesitant

about extending Britain's control in those regions. During his first government, from 1868 to 1874, critics of Gladstone's views in Parliament and the press condemned what they called the "crisis of anti-imperialism" that risked the empire's future. Gladstone vigorously and persuasively restated his deep commitment to an imperial association that rested on freely chosen ties.

Gladstone's later governments faced urgent imperial crises. In 1882, he reluctantly agreed to the British occupation of Egypt, a significant step that fueled European competition for colonies—the so-called scrambles in Africa and the Pacific. Gladstone continued to resist pressures for the further extension of territory and was widely blamed for the death of Gen. Charles G. Gordon and the debacle in the Sudan.

Despite setbacks and a rapidly changing global context, Gladstone still attempted to maintain the principles of his imperial policy. This fact is best illustrated by his adaptation of the idea of responsible self-government to the campaign for Irish home rule, through which he hoped to address Irish grievances. Thus, in all phases of his distinguished career, Gladstone dedicated himself to initiatives that would consolidate and maintain a vibrant, mutually desired imperial network.

Glorious Revolution

In 1688 the birth of a male heir to King James II of England guaranteed that the next ruler of England would be, not one of James's Protestant daughters Mary or Anne, but a Catholic son. Rebellion broke out among subjects already threatened by the king's open toleration of Catholicism, which he embraced himself.

Invited to intervene, the Dutch Protestant William of Orange and his wife, Mary, accepted the

throne from Parliament when James II fled to France. This act is what constituted the Glorious Revolution. In the American colonies, this revolution was taken up by the inhabitants and directed against the hated Dominion of New England, which James II had instituted in 1686 by combining the colonies of Connecticut, Massachusetts Bay, Plymouth, Rhode Island, New York, and New Jersey under the military rule of Sir Edmund Andros. Colonists in Boston arrested Andros on news of the rebellion in England, forcing him to return home. Maryland's Protestants used the rebellion as an opportunity to overthrow Catholics appointed by the colony's proprietor, Lord Baltimore, and the Dutch population of New York captured and held Andros's deputy, Col. Francis Nicholson, and replaced him with a regime led by the German Jacob Leisler.

Once secure in power, William and Mary turned to deal with the colonies in 1691, revoking the Dominion of New England but combining Massachusetts Bay, Plymouth, and Maine into Massachusetts and allowing a government in which a royally appointed governor worked with an elected house of representatives under a new charter. The Catholic Calvert family formally lost their charter to the colony of Maryland, which remained in the hands of Protestant governors until one of the Calvert heirs converted to the Church of England in 1712. William and Mary also ordered the deposition of Leisler in New York, a task accomplished by the use of force. Leisler's regime had become vindictive and tyrannical, and the people of New York welcomed the new governor appointed by the monarchs. William and Mary were deeply interested in their colonial people, anxious to avoid the colonies being used as a power base for James II and his descendants and wanting to allow them the benefits of the Revolution that had been accomplished in England. In the era of the American Revolution, the political settlement of the Glorious Revolution featured heavily in the arguments of the American rebels.

Gobineau, Count Arthur de (1816–1882)

In the nineteenth century, Count Arthur de Gobineau devised a racial philosophy of history on which subsequent racial doctrines, including many associated with colonialism, would be based. The sinister pessimism of Gobineau's theories of history and societies (not just those in Europe) surpasses every other comparable document, including Adolf Hitler's *Mein Kampf*. Despite its modern-day associations with pseudo-intellectualism or outright cultural ignorance, racialism or race-thinking was an important component of European political thought and theory throughout the 1800s and is most prominently exemplified in Nazi Germany during the twentieth century.

Gobineau's enormous, six-volume *Essai sur l'inégalité des races humaines* (Essay on the Inequality of the Human Races), begun in 1850 and completed in 1855, and his personal links with Richard Wagner, Houston Stewart Chamberlain, and other prominent racial theorists mark him as an independent philosopher whose disillusionment with European society became the motivating factor for a view of humanity based entirely on racial terms. Gobineau's ideology has been compared to Karl Marx's deterministic view of society. Although Marx saw class struggle as the key to social interpretation, Gobineau believed that the struggle between racial groups was the most enduring element of human history. Both Marx's and Gobineau's major works were divergent responses to the same crisis—the drastic social, economic, and cultural changes taking place in industrializing Europe, and both had an impact on colonial and anticolonial ideas arising in Europe at the time.

Gobineau divided humanity into three categories: white, yellow, and black. According to Gobineau, blacks were the “lowest,” possessing great physical strength but marked by a limited intellect and impassivity toward suffering. Yellows, above the blacks, personified mediocrity, preferring to live simply and passively. Whites, though, were depicted as motivated and highly intelligent, valuing honor, liberty, and freedom. Interestingly enough, Gobineau's chief indictment of the whites was their “great susceptibility” to intermingle with other racial groups.

Though Gobineau originally intended to encourage a restoration of the social order in Eu-

rope, he eventually concluded that Europe was being poisoned irreparably both from within and without through miscegenation between races. His hierarchical racial scheme came to have a considerable impact on theories and philosophies of colonialism. However, his personal stance, although seeming to support imperialist ventures, actually became that of a pessimistic anti-imperialist. Gobineau was utterly convinced that the racial inequalities of humanity would steadily weaken the “superior” races. By acquiring colonies, he argued, the European nations were only accelerating the intermingling of races, which would ultimately lead to the downfall of Western civilization.

Gold

The Portuguese searched vainly for Prester John's mythical gold hoards that were supposedly in Africa or India, which helped inspire their imperial ventures. But their trade in gold from Monomotapa (Zimbabwe) at Sofala on the Mozambique coast proved more profitable, albeit for a brief period. West African gold, long traded with Arabs, supplemented the transatlantic slave trade as a source of profit. Ashanti gold was the particular target for the British, and in the late nineteenth century, development of this resource justified the building of a railway from the Atlantic coast to facilitate both mining and British military domination. For the French, gold from the Soudan (Mali) was particularly important.

Earlier, Spanish looting of Inca gold helped Madrid finance its European adventures and promoted Atlantic piracy (euphemistically known as privateering). Replacing plunder, mining efforts over much of Spain's American empire covered the initial costs of penetrating new regions. Ultimately, however, gold was less important than silver for the Spanish American economy. In the eighteenth century, gold mining in the Minas Gerais region of Brazil became a major part of the

economy, but in contrast to the situation in Peru, where indigenous labor was generally available, the Brazilian mining required large numbers of slaves.

The Australian colony of Victoria experienced one of the three major mid-nineteenth-century gold rushes. This rush not only impacted the country's economy but also considerably altered the nature of migration to Australia and ultimately shaped its society and culture. India also saw some gold-mining development, particularly in Mysore under British rule in the later nineteenth century.

Two new major gold fields opened up in the late 1800s, one in Western Australia and the other in the Transvaal, which was only brought formally into the British Empire in 1901 by the South African War. These discoveries, particularly in the Transvaal, depended even more than earlier mining efforts on technological developments, especially the MacArthur-Forrest cyanide process, which made it possible to derive profit from very low-grade ores.

Gold Coast (Ghana)

The earliest encounters between Europeans and the people of what became known as the Gold Coast occurred as far back as the sixteenth century. Yet a formal European colonial presence was not established until 1821.

Gold, ivory, and eventually slaves attracted Portuguese, Dutch, French, and English traders to the coastal trading stations. By the seventeenth century, many forts built of stone had been erected, presenting a rare continuous European presence in the whole of sub-Saharan Africa. The castles served as trading depots and, from the late seventeenth century, as collecting points for departing African slaves. With the rise of the transatlantic slave trade, the Gold Coast gained further importance.

The eighteenth-century peak of the trade saw additional problems when, as a result of the differences between the peace and the war parties in Ashanti (Asante, Asanti), the interior kingdom initiated a

southern expansionist move toward the coast. By the time the slave trade was abolished in the early nineteenth century, the British, Dutch, and Danish had all established enclaves on the Gold Coast.

In 1821, the British forts were officially placed under the governor of Sierra Leone, thus beginning the period of British colonial rule. Conflicts ensued between Great Britain and the Ashanti state. The subsequent wars with the Ashanti empire in 1824, 1863, and 1874 represented some of the first clashes between a European power and an African kingdom.

The continuous European presence on the coast created a coastal population that was defining its aims for a European-style government within the British Empire when, in 1844, a bond was signed between the coastal Fantee and the home country.

Wars against the Ashanti empire in 1874, 1896, and 1901 finally completed the British conquest of one of the most feared enemies of Victorian Britain. By the twentieth century, the Gold Coast included most of today's Ghana. Primarily due to the presence of gold mines, the colony drew the largest number of Europeans in the whole of West Africa by 1900. And with the development of cocoa plantations that attracted small farmers and migrant workers, the colony became a relatively successful territory in economic terms during the colonial period.

Mostly due to its complex urban intellectual history, the nationalist movement in the Gold Coast was among the more developed in British West Africa. In 1957, given its political and economic development, the country became the first African colony to gain independence, as Ghana, and Kwame Nkrumah assumed the presidency.

Good Neighbor Policy

In 1933, President Franklin D. Roosevelt introduced a concept he called the Good Neighbor pol-

icy to improve relations between the United States and Latin America. In his inaugural address, he dedicated the United States to this policy in its conduct of foreign affairs. Just a few weeks later, the phrase was specifically directed to Latin America, thereby reversing the previous administrations' insistence on America's right to intervene in the internal affairs of Latin American nations. A different form of colonization developed as the United States offered a "helping hand" to its neighbors, said Roosevelt, in order to promote "more order in this hemisphere and less dislike." This message, as well as the Good Neighbor policy itself, was solidified later that year at the Inter-American Conference in Montevideo, where Secretary of State Cordell Hull signed a joint declaration prohibiting any nation from interfering in the internal or external affairs of another within the Western Hemisphere.

This new policy was quickly put to the test when Mexico nationalized U.S. oil holdings. Further pressure was applied to Washington's nonintervention promise as revolutions climaxed in Nicaragua, Guatemala, and Cuba. In response to these incidents, Roosevelt chose a wait-and-see stance, rather than sending in military troops to protect U.S. interests as previous presidents had done. In addition, in 1934 he withdrew U.S. Marines from Haiti, an area that the United States had exerted control over since 1916.

U.S. businesses, invigorated by the new policy, entered into money-making schemes with dictators such as Anastasio Somoza in Nicaragua and Fulgencio Batista in Cuba, enabling these tyrannical leaders to gain power and wealth at the expense of their own populations. This form of economic colonialism became prevalent as the United States continued to pursue its good neighbor strategy. As a result, American businesses were able to exert power over the foreign policy of the very countries that had been guaranteed freedom from intervention in the Montevideo declaration.

Although Roosevelt wanted an empire in Latin America, he rejected the use of military force to obtain it. Cordell Hull appeared in the limelight again as he engineered passage of the Reciprocal Trade Agreements Act of 1934. Since the leaders of the United States had advocated a noninterventionist program, they looked to foreign trade to regulate the business aspects of Latin America.

This form of economic colonialism gained strength as the gap widened between the economic power of the United States and that of the rest of the Western Hemisphere. For a time, it appeared that Roosevelt had succeeded in enjoying the "cooperation of others" in his quest for order and less dislike in the hemisphere.

Gorbachev, Mikhail Sergeyeovich (1931–)

Mikhail Gorbachev, general secretary of the Communist Party of the Soviet Union (1985–1991) and president of the Supreme Soviet (1988–1991), was the last leader of the Union of Soviet Socialist Republics (USSR). Gorbachev's reform politics helped bring about the union's collapse and the opening of Eastern Europe. His economic reforms of *perestroika* (restructuring and reform) and *glasnost* (openness) led to increased demands for political change. He decreased military expenditures, pursued détente with the West, and worked toward nuclear disarmament.

Gorbachev allowed his new economic reforms to be applied to Soviet satellite states as well. Unlike previous Soviet administrations, when the satellites rebelled against Moscow, his regime chose not to resort to military intervention. This led to the fall of the Berlin Wall and the ousting of Communist governments throughout the Eastern Bloc. In February 1989, he also ended the Soviet intervention in Afghanistan.

Inside the Soviet Union, economic reforms prompted nationalists and dissidents to openly criticize the government. Although it pursued a policy of noninterventionism abroad, the government continued to apply military force at home in order to maintain its cohesion. Soviet troops were dispatched to quell uprisings in the Armenian-dominated area of Nagorny Karabakh, in Georgia, in Central Asia, in the Baltics, and in other parts of

the Soviet empire as well. As nationalities along the periphery gained in strength, Russians in non-Russian republics began to be increasingly viewed as colonialists, triggering interethnic hostilities. After a failed coup in August 1991, Mikhail Gorbachev resigned, on December 25, 1991, ending over seventy years of Soviet rule.

Gordon, Charles G. (1833–1885)

A British colonial personality par excellence, Charles Gordon played a prominent role in both Asia and Africa. By training a military engineer, he was also an explorer, general, and religious eccentric. Although often sympathetic to local peoples, Gordon ended his life a hero of the imperialist government of Britain.

His career began with service during the Crimean War, followed by surveying work to delineate the new Ottoman-Russia frontier. In 1860, Gordon took part in the Second Opium War and the sacking of Beijing. Afterward, he left the British military, taking over command of “the Ever Victorious Army,” a band of mercenaries serving the Chinese government against Taiping rebels. Under his direction, the force lived up to its name, and Gordon became a popular figure back home, picking up the nickname “Chinese Gordon.”

Leaving China in 1865, his next colonial experience began eight years later, when he accepted employment with Khedive Ismail of Egypt. Gordon’s new job was to continue the pacification and development of Ismail’s vast holdings in the southern Sudan. Success led to his 1877 appointment as governor-general of the Sudan, but illness and disputes with Egyptian lieutenants caused his resignation three years later.

Returning to the Sudan in 1884, he directed an ambiguous strategy that was supposed to pull Egyptian forces out in order to avoid their destruction by local rebels under the charismatic Muhammed al-Mahdi. Gordon’s miscalculation of British support led to the famous siege of Khar-

toum and his death as pro-Mahdi forces stormed the city on January 26, 1885.

Great Depression

The Great Depression of the 1930s was an era full of contradiction in the history of colonialism. That is, it represented both a period of resurgent imperialist expansion, particularly by the Fascist and militarist states of Italy and Japan, and yet another crippling blow undermining the hold the great colonial powers of Britain and France had on their empires around the world.

The Great Depression is the name given by contemporaries and historians to the extraordinary economic downturn in the industrialized West—and, by implication, in much of the non-Western world—that occurred in the period between the Wall Street stock market crash of 1929 and the outbreak of World War II in 1939. The impact of the depression was felt in different degrees in different countries, although a pattern emerged: the more industrialized a country was, the deeper it was affected. The United States, Germany, and the United Kingdom were particularly hard hit, especially in the first few years of the downturn.

Britain, the greatest of the imperialist powers, was able to effect a recovery after 1932 by going off the gold standard—an action taken in 1931—and establishing higher protective tariffs in 1932. Moreover, the economy was reoriented away from exports, which were hard hit by the collapse in worldwide demand, and toward the home market. The impact on the economies of the British colonies was severe, as markets for the raw materials they produced dried up both in Britain and elsewhere.

At the same time, London began to relax its hold over some of its colonies, most notably India. The Government of India Act, passed in 1935, created a modicum of home rule for the subcontinent, extending the franchise to some 30 million Indians and establishing Indian-run ministries.

But the key ministries of defense, revenue, and foreign affairs continued to be run by officials appointed by Britain.

Meanwhile, France—less industrialized and thus less severely impacted—made virtually no moves to relinquish control over its colonial holdings, even as drops in demand led to depressed economies in West Africa, particularly in those areas tied to the export of raw materials.

The most spectacular imperial developments during the Great Depression period did not involve the leading old imperial powers but the aggressive, militaristic states of Italy and Japan. The former used the disarray in the international community—a result, in part, of the economic calamity—to aggressively move against Ethiopia, the last independent kingdom on the African continent in 1935, which it conquered.

Japan was even more ambitious and aggressive. With its own industrializing economy hit badly by the Great Depression, Tokyo began to develop the notion of creating its own vast empire in East Asia, though it cloaked its ambitions in anti-imperialist rhetoric and called its plan for a new Japan-led order in the region the Greater Asian Co-Prospersity Sphere. It invaded Manchuria in 1931 and the rest of China in 1937, pursuing its quest to create a self-contained economic sphere of influence for itself.

Finally, perhaps the most important impact of the Great Depression on the history of colonialism was an indirect one. By undermining the slowly healing post-World War I international community, the Great Depression helped precipitate World War II. That global conflict, more than any other event, led to the downfall of the great empires that Europe had built from the fifteenth century onward.

Grotius, Hugo (1583–1645)

Hugo Grotius, a Dutch jurist and statesman, wrote two influential treatises that have become the

basis of contemporary international law but in their time also gave legal justification to European colonial activity. Both works—the 1604 *De jure praedae* (On the Law of Prize and Booty), of which the chapter *Mare liberum* is best known, and the better-known 1625 *De jure belli ac pacis* (On the Rights of War and Peace)—were conceived in the context of religious conflict in Europe as well as nascent Dutch colonial expansion. As a humanist scholar, Grotius strongly believed that all behavior of individuals and states was subject to regulation by natural law. This belief allowed him not only to articulate rules of conduct in warfare between European states but also to legitimate the activities of said states as their colonial activity was becoming firmly established.

A famous passage in *De jure belli ac pacis*, for example, asserted that people in need had a natural right to the use of objects (particularly land) that others were not using, even if they were under another's territorial jurisdiction. By this statement alone, he justified much of the colonial activity of European settlement and occupation in the Americas and southern Asia. Grotius's legal interpretation also broadened the definition of just war to sanction European military action taken against indigenous peoples who resisted European settlement or hampered trade. According to Grotius, states were not restricted to defending themselves or responding in kind against an aggressor as reasons for precipitating conflict. Moreover, even if it was not directly affected, a state could initiate retribution against those who “violated the law of nature.” Such views, though not universally accepted, became the cornerstone of much of the colonial activity of the seventeenth and eighteenth centuries and provided the justification for the European dispossession of indigenous peoples during colonial expansion.

Guam

Located in the Marianas Islands in the western Pacific, Guam is the largest, most populous, and southernmost island of the group, and it has the political status of an unincorporated, organized territory of the United States. Agana (also known as Hagatna) is the capital of the territory, which covers 209 square miles. English is the official language, and both Chamorro, the local language, and Japanese are also spoken. The indigenous inhabitants of the islands, the mainly Christian Chamorros, share the territory with Filipinos, whites, and Asians (primarily Japanese, Chinese, and Koreans). Since 1950, a person born in Guam is a U.S. citizen. The territory was a possession of Spain until acquired as a flag territory of the

United States in 1898 as a result of the Spanish-American War, when the Treaty of Paris ceded it in 1898. From 1898 to 1941, Guam was under U.S. naval administration.

During World War II, the Japanese occupied the Marianas Islands for two years until Japan's defeat returned the territory to the United States in August 1944. A U.S. naval base located at Apra Harbor served as a staging theater for air attacks on Japan. The U.S. secretary of the interior assumed administrative responsibility for the territory on August 1, 1950, replacing the secretary of the navy, and located the headquarters of the Trust Territory of the Pacific Islands there. Guam was also an important staging area for U.S. armed forces during the Vietnam War in the 1960s. In 1994, the U.S. Congress approved legislation providing for the transfer of 3,200 acres of land on Guam, appropriated by U.S. military forces after World War II, from federal to local control. In 1995, Brewer Field, a U.S. naval air

Japanese prisoners of war bow upon hearing Emperor Hirohito announce their country's surrender at the end of World War II. As part of their imperial expansion during World War II, Japan seized Guam from its American colonizers. (Library of Congress)

station, was returned to the government of Guam for civilian use.

Guam became an unincorporated organized territory of the United States under the Department of the Interior in 1950, when the Organic Act was passed by the U.S. Congress and approved by the president. The act also transferred jurisdiction for the island to the Department of the Interior and provided for a civilian governor appointed every four years by the U.S. president. In 1970, the island elected its first governor, and since 1972, a nonvoting delegate, elected every two years to the U.S. House of Representatives, has represented the territory in the U.S. Congress. The delegate votes in committee but not on the House floor. The act also provided for a fifteen-member, unicameral legislature that is directly elected every two years by men and women over the age of eighteen. Since 1970, elective power has been vested in a governor who is popularly elected every four years. The judiciary is appointed and includes a territorial court called a superior court, a supreme court, and a U.S. district court, which handles U.S. constitutional questions and other federal cases. Appeals are channeled through the Ninth Circuit Court of Appeals in San Francisco and from there to the U.S. Supreme Court.

The main political status issue is Guam's desire to change from an unincorporated territory to that of a commonwealth territory. The Guam Commission on Self-Determination drafted the proposed Guam Commonwealth Act, which was approved in two 1987 plebiscites and has been under consideration by consecutive branches of Congress since then.

Guinea

Guinea, the name given by European explorers to the coastal tropical area of western Africa, was an important locus of European maritime trade be-

ginning in the fifteenth century. The Portuguese pioneered this trade, but by the mid-sixteenth century, the English, French, Dutch, and other Europeans participated in regional and transatlantic commerce in slaves, gold, and other commodities. Some coastal African peoples—such as the Fanti and Yoruba—benefited by gaining profit from the trade and familiarity with European languages, society, and government. Such groups often formed an elite social class and facilitated European administration in the colonial era. In the nineteenth century, economic and social changes in Europe led to the decline of the slave trade and increased demand for African agricultural products, especially palm oil. Export-oriented agriculture was more capital-intensive than the slave trade and thus required greater investment and oversight. This situation encouraged the formalization of European administrations throughout Guinea.

Thus, in 1849, France proclaimed the Rivières du Sud protectorate around trade posts in the Nuñez River area; this protectorate became the colony of French Guinea in 1895, part of French West Africa. Little development occurred in the colony before World War II. Despite limited post-war moves by the metropolitan government that granted some degree of self-determination, an independence movement formed in the 1950s behind Ahmed Sékou Touré, who rejected Félix Houphouët-Boigny's accommodationist principles. In 1958, the collapse of the French Fourth Republic led President Charles de Gaulle to promote a referendum in French West Africa in which the colonies were offered equal partnership with France in a greater French community. Only French Guinea rejected this referendum—thus souring relations with de Gaulle's France—and gained full independence in 1958.

The independent Republic of Guinea under President Touré remained steadfastly opposed to neocolonial control, and anticolonial leaders—including Kwame Nkrumah and Amílcar Cabral—fled to Guinea in the 1960s and 1970s. However, economic decline led Touré to seek international aid, even from France, before his death in 1984.

Gurkhas

The history of the Gurkhas recalls a great chunk of Britain's colonial and military history: the siege of Delhi in 1857; World War I on the western front and in Gallipoli, Mesopotamia, and Palestine; on India's mountainous northwest frontier between the world wars; World War II in Africa, Burma, and Italy; and after 1945, colonial conflicts, including the Malayan emergency, Cyprus, and the 1982 Falklands War. In the Gurkhas, the British army still retains a vestige of the Indian army, which for much of the nineteenth and twentieth century provided the backbone for Britain's Eastern and Middle Eastern empire.

When not fighting, the Gurkhas have been based in Eastern territories, notably India until it attained independence, Malaya (Malaysia from 1963) until the 1970s, Hong Kong to 1997, and now Brunei. The latter, which gained full independence from Britain in 1984, still raises one Gurkha battalion of its own. It also pays for one British army Gurkha battalion to be stationed on its territory.

This long association started with the 1814–1816 war between British India and Nepal, a mountainous neighbor that also borders China and Tibet. Nepal remained an independent kingdom but was forced to cede the Provinces of Kumaon and Gharwal and to accept a British resident in its capital, Kathmandu. Despite this setback, Nepal's Gurkha troops were so impressive that the Indian army has recruited them ever since.

Their loyalty in the 1857 Indian Mutiny confirmed the value of the Gurkhas. There were ten regiments of Gurkhas, of two battalions each, by the eve of World War I, with over 100,000 serving in each world war. When India was granted independence in August 1947, it was agreed that the Indian army would keep most of the Gurkha battalions. Britain, overstretched by commitments across the world, secured the right to recruit up to eight battalions (15,000 men). The latter were incorporated into the British army as the Brigade of Gurkhas. The 1967–1968 British decisions to

withdraw from most bases east of Suez caused the Gurkhas' numbers to fall to 8,000 by 1971. After Hong Kong was turned over to China on June 30, 1997, the Brigade of Gurkhas was reorganized. Now called the Royal Gurkha Rifle Regiment and reduced to 3,400 men, it has just two battalions. One is based at its new headquarters in Hampshire, England; the other is normally in Brunei.

Gustavus Adolphus (1594–1632)

During his reign as king of Sweden (1611–1632), Gustavus Adolphus was primarily known as the "Lion of the North," the Protestant military champion. Using his classical education, the king reorganized his army into shallow lines supported by artillery; this force successfully invaded Catholic Poland and then intervened in the Thirty Years' War. After scoring major victories, including the occupation of Pomerania, the surrender of Magdeburg (in 1631), and in the Battle of Breitenfeld (in 1632), Gustavus Adolphus was killed in battle at Lutzen in 1632, leaving his infant daughter, Cristina, as queen under the regency of Axel Oxensteerna.

Gustavus Adolphus had begun a process within the Swedish government that encouraged the foundation of New Sweden along the Delaware River in North America. In the 1620s, the king had organized waves of emigration from Finland into vast tracts of forest on the Norwegian-Swedish border, then extended this policy to conquered areas of the Baltic. Encouraging both industry and commerce, he invited Dutch investors such as Louis de Geer and William Usselinx by licensing them to conduct business as the Ships' Company, the Copper Company, and various mining and shipping firms. As patron of the University of Uppsala, the king patronized the training of Lutheran ministers, many of whom led congregations in New Sweden. As part of Gustavus Adolphus's

legacy, the regent Oxenstierna produced the 1634 Form of Government, a written constitution confirming both Sweden's Lutheranism as well as its commitment to the expansion of commerce and the increasing prosperity of the government.

By involving Sweden in the European wars, Gustavus Adolphus was responsible for the deaths of 50,000 of his subjects (out of a population of only 1 million), but the victories he achieved provided a rallying point for even such disparate Protestants as the Dutch, English, and Swedes settling the Delaware River area. Even

though his death at Lutzen cut short the king's own implementation of his trade and expansion policies, he had already set in motion the process by which Sweden would settle colonists in North America.

H

Haile Selassie I (1892–1975)

In contemporary Ethiopia, no squares, hospitals, schools, or boulevards bear the name of Emperor Haile Selassie I. Had he died before the revolution of 1974, his name and his achievements would be celebrated to this day. Instead, the military clique that deposed him first vilified him as the cause of Ethiopia's many ills and then transformed him into a nonperson. His achievements were lost to a younger generation that learned history from highly politicized textbooks.

Born Tafari Makonnen, he was the son of Ras Makonnen, one of Menelik II's regional governors; on his father's death, the future ruler was singled out by Menelik for education and advancement. When Menelik died in 1913, Tafari fulfilled a pledge to support the designated successor, Iyasu I. But after the latter began a flirtation with Islam, Tafari participated in a successful 1916 revolt in which he was named regent for Zawditu, Menelik's daughter. He served for fourteen years as head of government and then ascended to throne in his own right, taking the name Haile Selassie.

Except for the period of the Italian war and occupation, from 1934 to 1941, Haile Selassie's reign was characterized by growth, development, optimism, and peace. As the architect of the modern state, he managed his country's entry into the world, in the process becoming a global figure with considerable anticolonial credentials. During the 1920s and 1930s, he modernized and centralized the govern-

ment through the introduction of uniform administration and legal structures and the appointment of Western-educated officials; he also reformed and reequipped the Ethiopian army and police by providing up-to-date training and weaponry. To pay development costs, Haile Selassie fostered capitalistic agriculture and an export trade in coffee, oil seeds, and cereal, in demand in the Middle East. On returning to Ethiopia in 1941 following the Italian colonial occupation, he moved rapidly to align himself with the United States, the world's main supplier of technology, capital, and weaponry. In addition, he immediately reverted Ethiopia to an import-export economy to garner enough funds to continue his policies of modernization.

Most notably, he built modern communications to tie the country together, a national economy to raise his subjects' standard of living, and a uniform national culture. He imposed Amharic, his own native tongue, on his heterogeneous subjects, arguing that a uniform national language was "the Mother of the Nation." He also introduced modern legal codes to ensure equal justice, new forms of taxation to standardize payments nationwide, parliamentary government through direct election of representatives, a national airline, and modern education.

From a few thousand students in the prewar state, the educational system grew to comprise hundreds of thousands students by 1974. A paternalistic leader, the emperor visited schools and

sampled the food students ate; he gave the youngsters gifts of clothing and fruit, he questioned them about their studies, and he spoke to them about the importance of their educations for the nation and for himself as their monarch. Besides seeing himself as the father of the nation, Haile Selassie viewed himself as the embodiment of Ethiopia's proud sovereignty and independence and as worldwide symbol of anticolonial struggle.

His national vision—a legacy from his father, Ras Makonnen (1854–1906), who administered Harerge Province in eastern Ethiopia for Emperor Menelik (r. 1889–1913)—encompassed an elite that governed a polyglot, often non-Christian population. The latter could assimilate into the power structure by acculturating to the Amhara—if not Christian—culture of the rulers. As the twentieth century became the age of ethnicity and minority rights, assimilation in Ethiopia became personally and then politically insulting. No amount of imperial paternalism could redress the cultural hurt felt by Ethiopia's nationalities, and Haile Selassie was unable to change his monomania about the importance of the Amharic language.

He continued to govern, as had his predecessors, by acting as the country's balance of power between different groups, a method that worked well in a customary government that mediated between the ruling classes and the masses. Modern administration, however, required institutions that permitted the development of competing political ideas and the transfer of power from generation to generation and from one set of elites to another. The emperor's limited Western education directed him toward change—but only in terms of enhancing imperial power and adding to the central government that acted in his name. In the 1960s and 1970s, with no institutionalized outlet for their political goals and ambitions, the newly educated agitated for any change that would free them from the political inertia of the emperor's no-party, paternalistic state. They adopted a simplistic and wrongheaded Marxist ideology as their catalyst for change and thereby mistook economic growth and the creation of capital in the countryside as the result of the ruling elites' crude exploitation of the peasantry.

By 1972, the emperor was a very old man who displayed signs of senility. He was tired of the new ideological politics and felt betrayed by

those he had educated and favored. There was strife in the Ogaden, Eritrea, Bale, and even Gojam over the question of ethnicity and political rights. The bureaucratic bourgeoisie wanted more power in government and administration. At the same time, the emperor's love affair with the United States appeared to be ending as Washington's strategic interests switched away from the Red Sea to the eastern Mediterranean, where Egypt and Israel were now U.S. allies. His imperial vision of Ethiopia was contradicted by the realities surrounding him, and the old emperor seemed to know his time was past. To the last, Haile Selassie nonetheless remained a humane Christian and a true Ethiopian patriot, unwilling to spill his compatriots' blood even for the sake of his empire.

Haiti

Among the many colonies of the New World, Haiti was unique. The former French colony was the second nation in the Americas to gain political independence and the first black nation to break the shackles of colonial rule. Haiti's political independence was born out of the only successful slave rebellion in the New World.

Prior to its independence, Haiti was known as St. Domingue. In the middle and late eighteenth century, St. Domingue was not only the wealthiest colony of France but also one of the richest colonies in the world. Driven by slave labor and blessed with fertile soil and an ideal climate, St. Domingue generated large profits for France through its main export, sugar. It also produced, albeit on a much smaller scale, crops such as coffee, cocoa, indigo, tobacco, and cotton for export to France.

The Haitian Revolution was inextricably linked to the politics of the French Revolution. The ideologies and slogan of that revolution—“Liberty, Equality, and Fraternity”—struck a chord with all classes in St. Domingue but for different reasons and with often contradictory responses and unexpected results. In the end, the slogan proved to be too combustible for the tinderbox of the slave society. In 1791, the enslaved of the colony struck a blow for their own version of Liberty, Equality, and Fraternity. By 1804, the colony gained its political independence and renamed itself Haiti. The economic and social consequences of self-emancipation and political independence changed the course of Haitian history. Former slaves, who had labored on the plantations of wealthy plantation owners, later eked out their economic survival through subsistence farming. Hence, Haiti moved from being a plantation-based economy, reliant on slave labor, to an economy grounded in peasant farming.

Isolated for the better part of nineteenth century from legal commercial intercourse with the rest of the world, Haiti paid a heavy price for official recognition from other nations. It entered its period of political independence with a heavy indemnity for property loss, imposed by France, as the price for diplomatic recognition. With its infrastructure seriously damaged by the war of independence, the new nation was forced to assume an intolerable debt to pay the compensation. All of this contributed to the pattern of underdevelopment that haunted Haiti throughout the nineteenth and twentieth centuries. Civil war divided the new state into republics up to 1822 and also reinforced the race-color-caste division inherited from the slave period. These internal cleavages and the accompanying struggle for political and economic control of the minimal resources generated the instability that plagued the new nation. This set the stage for a new period of neocolonialism in the twentieth century.

Hammar skjöld, Dag (1905–1961)

Born into an aristocratic Swedish family with a tradition of public service, Dag Hammar skjöld was educated in economics and spent his early career in the Swedish Finance Ministry. In 1953, he succeeded Trygve Lie to become the second secretary-general of the United Nations. His primary achievements in that post included his persuasion of China to release captured U.S. pilots in 1955, the resolution of the Suez Canal crisis in 1956, and repeated efforts to broker Middle East conflicts and avoid war.

During Hammar skjöld's term, one of the principal tasks of the United Nations was to assist in the dismantling of the colonial world order. In 1960, the Belgian Congo secured independence. Fighting broke out along ethnic and regional lines, and Belgium sent troops. The democratically elected president of the Congo, Patrice Lumumba (who had the backing of the Soviet Union), requested military support from the United Nations to resist Belgian aggression; the United Nations responded by ordering Belgium to withdraw its forces and sending 20,000 UN troops. In the continuing civil war, Lumumba was assassinated by troops of the U.S.-supported dictator Joseph Mobutu, who seized power in a military coup and held it until his exile in 1998. UN involvement in the Congo discredited Hammar skjöld and the organization in the eyes of African leaders and the Soviet Union, and Nikita Khrushchev proposed that the office of UN secretary-general be abolished. Hammar skjöld did not have the opportunity to defend himself, however, for on September 7, 1961, his plane crashed in Katanga. This fatal accident, suspected to be sabotage, left the United Nations in disarray and raised questions about the role to be played by UN troops in peacekeeping missions thereafter.

Hangzhou

Located in southeastern China, the city of Hangzhou is renowned both for its beautiful scenery, most notably the picturesque West Lake, and for its teas. Hangzhou was founded in 591 C.E. to replace an older settlement in the vicinity as the regional administrative center. Situated at the southern end of the Grand Canal, the major inland waterway for grain transportation, the city quickly rose to commercial prominence. The political, economic, and cultural development of Hangzhou reached its peak in the twelfth and thirteenth centuries, when—under the name of Lin'an—it was the capital of the Southern Song dynasty (1127–1279), which controlled the southern half of China. In 1279, the Mongols conquered the city. Only after this event could Marco Polo have visited the city, which he referred to as Kinsay, a name probably derived from the Chinese word *jingshi* (capital). In spite of the devastation brought about by the Mongol conquest, Polo described Hangzhou as the “City of Heaven” and as a thriving commercial center. Though his description was grossly exaggerated, it is true that Hangzhou maintained its political and economic importance to a considerable degree.

In the sixteenth century, the Jesuits established a Christian congregation there, which declined after Christianity was outlawed by the imperial court in 1724. After the Opium Wars of the 1840s, missionary activities were resumed. A Presbyterian boys' school became Hangchow College in 1897 and attained the status of university in 1941. In the wake of the Sino-Japanese peace treaty of 1895, Hangzhou was made a treaty port. During World War II, it fell under Japanese control, and as early as 1937, Japanese troops looted and pillaged the city. After 1945, the Guomindang (Kuomintang) reestablished its rule until Communist troops entered the city in May 1949. In the People's Republic of China, Hangzhou continues to function as the capital of Zhejiang Province. In 1985, it had a population of 1.2 million.

Hapsburg (Habsburg), House of

One of the most important and longest-ruling dynasties in European history, the House of Hapsburg reigned at various times over much of the continent, from the Balkans in the southeast to the Low Countries in the northwest. In addition, as monarchs of Spain during the sixteenth and seventeenth centuries, the Hapsburgs ruled over a vast empire that included much of the Americas and such far-flung possessions as the Philippines.

The exact origins of the Hapsburg dynasty are not entirely clear, though by the early twelfth century, the Hapsburgs were an important ruling family in what is now southwestern Germany. Their emergence onto the continental stage, however, came in 1273 when Rudolf I was declared king of Germany and after he had acquired Austria, Bohemia, and other possessions in central Europe, through diplomacy and war, by the end of the decade. During the fifteenth century, the Hapsburgs established themselves as the dominant ruling family in the German-speaking lands of Central Europe through their successful resistance to incursions by the Muslim Turks.

Under Maximilian I in the late fifteenth and early sixteenth centuries, the power of the Hapsburgs further increased as the house turned its ambitions westward and southward into the Low Countries, Burgundy, Italy, and Spain, acquiring the latter through a marriage alliance made by his son Philip. At the same time, another marriage alliance, with Maximilian's grandson Ferdinand, established Hapsburg hegemony in Hungary.

The Hapsburg dynasty reached its zenith in the first half of the sixteenth century. Under Charles V (also known as Charles I of Spain), the house controlled much of the Americas and became rich from the fabulous mineral treasures imported from across the Atlantic. Ultimately, much of this

wealth and power was dissipated under Charles V's son Philip II, who rose to take the Spanish Crown on his father's abdication in 1556; Philip spent a fortune trying to defeat Protestants in Germany and independent-minded nationalists in the Low Countries.

Meanwhile, in the east, the German Hapsburgs established absolute control over Austria, Bohemia, and, through the defeat of the Turks, Hungary as well, establishing a multinational empire in Central Europe and the Balkans that would last through World War I. But though the dynasty survived into the early twentieth century, it had become increasingly weakened much earlier. Defeated by the Dutch and then losing control of Spain in 1700, the Hapsburgs' power in the eighteenth and nineteenth centuries was confined largely to Germany and Austria-Hungary.

The rise of the German state in the mid-nineteenth century ended Hapsburg influence in that realm, and under the long-serving but rather inept Francis Joseph (who ruled from 1848 to 1916), Austria-Hungary withered as a continental power. Further debilitating the Hapsburgs' power was the rise of various nationalisms in their realm in the nineteenth century. In 1867, the Hapsburgs were forced to concede autonomy to Hungary. But it was Serbian nationalism that ultimately set in motion the forces that would end the dynasty. In June 1914, a Serbian nationalist assassinated Hapsburg heir Franz Ferdinand, thereby precipitating World War I. With Austria-Hungary's defeat in 1918, the last Hapsburg monarch abdicated, and the dynasty came to an end.

Harris, Sir John H. (1874–1940)

John Harris was a profound critic of important aspects of British colonial policy, especially concerning the treatment of indigenous peoples. As a young man, he was involved with nonconformist

religious movements and was recruited as a missionary to the Congo Free State. Appalled by conditions he observed there, Harris became involved with the Congo Reform Movement and later the Anti-Slavery and Aborigines Protection Society. From 1910, he served as secretary of the Anti-Slavery Society and in that capacity focused on a variety of colonial matters. He was a prolific public speaker and author of numerous books and countless articles concerning primarily colonial issues. His public involvement increased his pacifist sentiments, and as a result, he joined the Society of Friends. He was also active in Liberal politics, standing for Parliament on several occasions; he was elected as a member of Parliament for Hackney North in 1923 but was defeated in a reelection bid the next year.

Harris befriended many Africans and other colonial peoples whom he met in London, and he worked with the British government for their immediate benefit as well as their general interests. It was largely for these achievements and for his life's work for indigenous peoples everywhere that he was knighted in 1933. From that time forward, he fought for the abolition of slavery and counted as perhaps his most important achievement the adoption of the League of Nations Anti-Slavery Convention, for which he had worked tirelessly in Geneva and elsewhere.

Harris, Wilson (1921–)

Wilson Harris was born in New Amsterdam, Guyana. He followed the path of many West Indian writers of the 1950s and 1960s and emigrated to the United Kingdom. A land surveyor by training, Harris is one of the most prolific and innovative novelists of our time. His first published work, *Palace of the Peacock* (1960), marked a new direction for the novel in English. His works represent in practice what Harris has called the "novel of fulfillment" and the "novel as painting." In a language that has, at times, been

called difficult for its imagistic and metaphoric nature, Harris explores the themes of colonial conquest and the postmodern hybridity of consciousness. The hybrid psyche struggles to find itself through its own assembly and reassembly in a multiracial society that is itself in the process of creation and re-creation. The struggles are parallel but often go in opposite directions. One of the ways in which Harris weaves a conciliatory metaphorical strand between the deprivations wrought by colonialism and the futures of post-colonial individuals and society is through the use of myth. Very seldom has any writer woven together—through a combination of intellectual and intuitive capacities—such apparently disparate myths into a vision of potential unity.

In addition to almost twenty novels, Wilson Harris has published four books of poems, collections of short stories, and three full-length critical books. These critical books contain some of the most complex and beautiful analyses of issues surrounding colonial and postcolonial literature ever written.

Hausa

Hausaland today stretches between the two West African countries of Niger in the south and Nigeria in the north, the division the result of European colonial domination over the region between the late nineteenth and the twentieth centuries. Britain and France colonized the Hausa population, which had been under the subjugation of the Fulani-led Sokoto caliphate. The Hausas had been

under alien domination since the early nineteenth century when the Fulani jihad—the holy war of Usman dan Fodio—led to the creation of successive emirates.

The Sokoto caliphate developed a society based on agricultural labor, a role that had traditionally been filled by free Hausa peasants. The same role was associated with the majority of Hausas who lived in estates or in small villages surrounding the major urban centers, such as Sokoto or Kano. Slavery played an increasingly important role in the economy by the middle decades of the nineteenth century, which resulted in many free Hausas becoming enslaved in huge estates. Since both ethnicities—the Fulanis and the Hausas—were Muslims, the Islamic religion was strengthened in the period. The late nineteenth and early twentieth centuries witnessed a period of European conquest of the region, and by 1906, the whole of the former caliphate was under alien administration.

The French and the British who ruled Hausaland employed different political methods in their colonial states. In the British sphere, religion and traditions were not affected because of the policy of indirect rule initiated by Frederick Lugard, one of the most famous British proconsuls in Africa. The British retained the former elite with the intention of ruling the population through them, by employing them as lower-level members of the administration. This policy allowed the Hausa chiefs and leaders to gain an important political role and acquire ample resources, since they were responsible for the use of some taxes. In French colonial territories, by contrast, the policy emphasized the centralized structure of the metropolis. It has been argued that the policy of assimilation, often associated with the French colonial state, weakened the traditional structure of Hausa society, and when compared to other Nigerian groups, the former Hausa society shows a much weaker cohesion. Today, some 40 million people belong to the Hausa ethnicity; 10 million of them live in Niger, and the rest live in northern Nigeria.

Havana

Founded in 1514 and relocated to its present site four years later, Havana was among the first Spanish settlements in Cuba. Spanish treasure fleets gathered in the city's port before sailing for Europe, and despite its fortifications, Havana was occupied by the French in 1537 and burned in 1555. In 1607, it became the island's capital and its administrative and military center. Yet threats from foreign powers did not cease, as the ten-month British occupation of the city in 1762 and 1763 demonstrated. Returned to Spain in exchange for Florida, Havana remained an important Spanish administrative center. Policies implemented in the 1800s by the Spanish Crown only strengthened its position, particularly in relation to the eastern part of the island.

It was during the nineteenth and twentieth centuries, however, that Havana emerged as a site of political tension and opposition. The explosion of the U.S. battleship *Maine* in February 1898 in the city's harbor prompted the United States to enter Cuba's war of independence against Spain. In an independent Cuba, Havana remained the capital and the focus of political dissension, particularly among the city's university students. Demonstrations against dictators Gerardo Machado, Ramón Grau, and Fulgencio Batista, for example, were centered in Havana.

Hawaii

Until 1778, the politically decentralized Hawaiian archipelago evaded contact with continental colo-

nizers. Britain's Capt. James Cook ended that isolation as his sailors (and others in later years) introduced epidemics and additional influences into the Polynesian society. King Kamehameha I unified the islands by 1810 into a monarchy that was recognized by the United States in 1826. The monarchy was weakened under his successors, with foreign merchants wanting a port of call and Christian missionaries seeking to proselytize. Land was first sold to non-Hawaiians in 1850, creating an opening for export-oriented plantation crops and migrant labor. Soon, non-Hawaiians attained government positions in the constitutional monarchy. Many of these influences led to a decline in the indigenous population, which by 1872 was reduced to 16 percent of its size ninety years earlier.

Seeking nontariff access to the U.S. sugar market and fearing that Queen Lydia Liliuokalani would empower native Hawaiians, the rebel Committee of Safety colluded with the U.S. minister plenipotentiary and arrested the queen on January 17, 1893. Although unsympathetic to the rebels, U.S. president Grover Cleveland failed to elicit congressional disapproval, and in 1894, the insurgents declared a republic over the archipelago. Ignoring petitions from 37,000 Hawaiians in 1897, President William McKinley signed the resolution of annexation during the Spanish-American War of 1898, with status as a U.S. territory following in 1900.

Since the 1930s, the United States has valued Hawaii for its naval and air bases. However, following World War II, the United Nations listed Hawaii as a non-self-governing territory, a status it retained until it became the fiftieth state of the United States after a 1959 plebiscite ballot excluded independence. Subsequently, a native Hawaiian sovereignty movement reemerged, contesting title to 1.8 million acres administered by the Hawaiian monarchy. Some organizations have been seeking the reclassification of Hawaii as a non-self-governing territory. A 1993 congressional apology (U.S. Congress 1993), signed by President William Clinton, acknowledged that "the indigenous Hawaiian people never directly relinquished their claims to their inherent sovereignty as a people or over their national lands to the United States, either through their monarchy or through a plebiscite or referendum."

Vincent Kelly Pollard

The last independent ruler of Hawaii, Queen Liliuokalani was forced from power by a clique of powerful American plantation owners in 1893. Five years later, the islands were annexed to the United States. (Library of Congress)

Health, Public

Westerners often consider the Tropics—the Indian subcontinent, Africa, Latin America, and Southeast Asia—as areas of disease, malnutrition, and parasites. This attitude can be traced back to the early European expeditions to these regions, as Europeans often died from unknown tropical diseases. In fact, high mortality rates effectively delayed European settlement and colonizing in some tropical areas by hundreds of years.

However, contrary to the myth that the advent of Western medicine was an all-redeeming benefit

of colonialism, the health of the colonized peoples actually deteriorated greatly with the imposition of European colonial systems. Colonialism not only introduced new ailments but also destroyed local public health measures and ecological controls, resulting in the rapid spread of both new and old diseases. Colonialism also created conditions for malnutrition and disease through the European imposition of cash crops, forced labor, migration, taxation, colonial legislation, urban planning, and industrialization. Due in part to this history, many people in postcolonial states today, particularly those in rural areas, continue to have higher rates of malnutrition and disease as well as limited access to health care resources.

Europeans introduced contagious diseases such as measles, whooping cough, and smallpox from Europe; chiggers and syphilis from the Americas; and cholera, leprosy, and hookworm from the Indian subcontinent. The trade routes throughout Africa and Asia that preceded European colonialism by thousands of years, as well as

Islamic pilgrimages to Mecca, effectively exposed African and Asian populations to numerous diseases and enabled them to avoid the virgin soil epidemics that so drastically affected peoples in the Americas and Oceania. In these areas, the introduction of contagious and deadly pathogens weakened the populace and thereby their opposition to colonialism. Europeans were then able to establish their colonies and subject indigenous peoples with much greater ease. Population groups within the Americas, for instance, declined by as much as 90 percent in some areas within fifty years of European contact.

With the establishment of colonialism, European nations expected windfall profits from their colonies and thus placed a great demand on the land and peoples of the Tropics to produce raw materials. Hungry for labor and revenue, Europeans destroyed precolonial states, cleared forest land for plantations, and built roads, railway tracks, and mines, thereby disturbing the natural and controlled ecology of the indigenous peoples. The Gaza of Mozambique, for instance, had used ecological controls to minimize the threat posed by the tsetse fly that caused sleeping sickness, creating buffer zones between residential and farming areas and uncultivated areas that contained game. When the Portuguese destroyed these controls with the forced evacuation of Gazaland in 1889, sleeping sickness broke out in epic proportions.

Disease and famine often accompanied the early years of European colonialism, as Europeans requisitioned food, animals, and the labor of indigenous peoples through force of arms. Many colonies established plantations or coerced local populations to grow cash crops. Forced to replace fields of edible crops with cash crops such as cotton and sugarcane or made to work on plantations, the indigenous people derived little income from their efforts, as money disappeared to pay for taxes or the inflated price of goods and food. Decreases in the amount of land and labor available for food production, however, led to changes in agricultural practices and a decline in nutritional levels for the colonized people. Throughout Africa, for instance, labor-intensive but nutritious millet and sorghum crops gave way to labor-saving but less nutritious corn and cassava. Furthermore, game, which had been an important source of pro-

tein (particularly during times of famine), rapidly diminished during the early years of colonialism as a result of overhunting for sport and trade. When colonized people moved to urban areas in the twentieth century, nutritional levels fell even further, as many people removed from subsistence agriculture added refined white bread and soda to their diets. Consequently, colonialism not only made it harder for indigenous people to feed themselves by decreasing their access to land and labor; it also significantly lowered levels of nutrition, thereby increasing people's susceptibility to disease. It is not coincidental, for instance, that the use of 50,000 "volunteers" who provided 236,388 days of work along the Route du Tchad in 1912 coincided with frequent famines in the area that could be directly tied to the local population's inability to mobilize labor for food production.

Instrumental to the colonial endeavor to secure labor was the transfer of large groups of people, sometimes between continents and sometimes from homes to plantations, mines, factories, or urban areas hundreds or thousands of miles away. Many workers fell ill or died on the long journey to these new places of employment. Others succumbed to diseases on arrival due to the mixing of diverse population groups in conditions that were often overcrowded and unsanitary. In places such as Brazil, India, and Sri Lanka where European colonists tended to view labor as expendable, plantation owners did not make investments in basic sanitary measures or provide basic health care. Workers were often fed a subsistence diet of low nutritional value; they were also badly clothed and housed in poorly ventilated and cramped dwellings with no latrines or access to clean water. The increased density and mixing of people on plantations, in mines, in factories, and in urban areas not only increased exposure to new diseases and the likelihood of epidemics in these areas but also affected the health of communities away from these centers. This occurred as workers returned to their homes at the end of employment contracts or when employers sent ill workers home, where they often spread contagious diseases such as hookworm, tuberculosis, and pneumonia.

Despite the rapid decline of public health in European colonies, the earliest public health campaigns were directed at preserving the health of the colonists rather than the colonized. Theories of

miasma, the belief that disease spontaneously emerged from marshlands, led colonists in India, Africa, and the West Indies to build their houses on stilts at higher elevations and to leave doors and windows unscreened in order to maximize ventilation. In addition, they built “hill stations” in the mountains of the Tropics to mirror the cooler climes of Europe. When Europeans expressed interest in the health of the colonized, it was generally because they were worried about ill effects they themselves might suffer from contact with the indigenous people. Consequently, the colonized were often considered “unhygienic” and vectors of disease and contagion.

Only when the colonists’ own needs were not met did they consider or attempt to implement local public health measures and sanitary controls for the colonized. Thus, for example, efforts to improve public health were prompted by labor shortages in industrial areas such as South Africa in the early nineteenth century. Similarly, indigenous health became a matter of concern when Europeans found they could not recruit healthy soldiers from Africa and Asia to fight in World War I. And in South Africa, mining interests donated money to build hospitals and medical research institutes to study industrial afflictions such as tuberculosis and pneumonia and to examine the ailments of rural Africans, such as scurvy.

Public health measures implemented mostly after World War I included mandatory vaccination campaigns, fumigation, quarantining, hospitalization, and delousing, and they were not always embraced by the indigenous people. By this time, many had come to associate Europeans with the introduction of new diseases, a decline in health standards, poor diet, and war. In fact, many early public health campaigns failed not only as a result of a lack of supplies and batches of ineffective vaccination serums but also because of indigenous resistance.

By the 1940s, however, health improved in many areas due to sanitary reforms that ensured clean drinking water and proper waste disposal. Access to clean water greatly ameliorated health by decreasing gastrointestinal diseases, and proper waste disposal decreased incidents of fecal-borne diseases such as cholera and hookworm. Improvements in biomedicine also meant that doctors and medical missionaries were better able to treat

many of the tropical diseases that afflicted the colonized people. Cities built hospitals and universities, giving urban people access to biomedicine, immunizations, antimalarials, antibiotics, and surgical interventions. Access to clean water, proper waste disposal, and biomedicine, however, tended to be restricted to urban areas and was often subject to political and economic maneuvering. Therefore, many peoples in both rural and urban areas of European colonies found themselves without adequate sanitary measures and access to basic health care services—a trend still reflected in many postcolonial states today.

Henry, Prince (Henry the Navigator) (1394–1460)

Prince Henry of Portugal, nicknamed Henry the Navigator, was one of the sons of the Portuguese king João II and became the dominant maritime figure of his age. He has been considered by many historians to be the father of Europe’s expansion across the seas. His efforts led Portugal to become the preeminent nation in the European overseas explorations of the fifteenth century.

In 1415, Prince Henry accompanied the Portuguese expedition to present-day Morocco to conquer the Muslim city of Ceuta. On his return from Ceuta, Henry was made governor of the southern Portuguese coastal region of the Algarve. There, he established a center for the study of navigation at Sagres, on the Cape of St. Vincent (the southwestern-most point of the European continent). At Sagres, Prince Henry brought together the best mathematicians, astronomers, mapmakers, sea captains, and pilots to teach and exchange the most current information on the art of navigation. A new and innovative type of ship was cre-

ated at Sagres—the caravel, which was smaller and more maneuverable than previous vessels. New techniques in cartography were also developed, and navigational instruments were improved. From Sagres, Prince Henry planned and directed the daring oceangoing expeditions that were to take Portuguese explorers into the then unknown waters of the Atlantic.

Prince Henry was motivated by religious as well as commercial interests. He wanted to spread Christianity as well find the African gold supply. One of his goals was to locate the legendary Prester John, believed to be a powerful Christian king in Africa who could help the Portuguese in their fight against Islam. In addition, Prince Henry wanted to explore the lands that were beyond Cape Bojador—a place that, at the time, was considered to be the end of the inhabited world. He achieved this goal in 1434, when one of his navigators, Gil Eanes, rounded the cape. The achievements of Prince Henry at Sagres and the expeditions that he organized made possible the remarkable achievements of the Portuguese in the fifteenth century, such as the discovery of Brazil and the establishment of the maritime trade route to India by Vasco da Gama.

Herero Revolt (Herero-German War) (1904–1907)

In the nineteenth century, the Herero, a pastoral people who dominated central Namibia, clashed with the Nama, another pastoral people to the south, in a number of wars; the most bitterly fought of these wars occurred from 1863 to 1870 and from 1880 to 1892. In the 1890s, the Herero increasingly came under pressure from the German settlers who encroached on their lands and demanded their labor. The Germans did not expect the Herero, whom they regarded as allies, to turn against them, but the Herero leadership grew more and more upset with the behavior of the Germans. In January 1904, Samuel Maherero, who had be-

come chief in 1890, took advantage of the absence of the bulk of the German soldiers in the south of the territory and issued an order to his people to fight the Europeans. In the first attack, some 150 Germans were killed. The town of Okahandja was then besieged, but a German force was able to relieve it.

A large contingent of German reinforcements was rushed to South West Africa, but they were inexperienced, and for some months, the Herero were able to roam central Namibia at will. The Nama and other groups joined in the war against the Germans on the Herero side. But in May, more German reinforcements arrived, until there were 20,000 German troops in the country. In June, a tough new commander, Lothar von Trotha, took command; he issued an order to annihilate the Herero. The decisive battle took place at the Waterberg River on August 11, 1904, after which the Germans pursued the remnants of the Herero into the Omaheke Desert. As a result of the war and the genocide that followed, the Herero population, estimated at 80,000 before the conflict, fell to only some 20,000, and many of the surviving Herero sought refuge in Bechuanaland (now Botswana).

Herzl, Theodore (1860–1904)

In December 1894, Theodore Herzl, a Jewish journalist who favored cultural assimilation, was sent to cover the Alfred Dreyfus trial in Paris, in which a Jewish officer in the French military was accused of treason. The vilification of Dreyfus by the anti-Semitic French press catalyzed Herzl's conversion to Zionism. He immediately began work on *The Jewish State* (1896), a book in which he elaborated his concepts of political Zionism. He proposed that the Jewish problem could only be solved if and when the Jews established a Jewish homeland, *Eretz Israel*. To work toward this goal, Herzl proposed establishing an international organization to collect funds to purchase land as a haven for world Jewry. The established nation

would be neutral, peace-seeking, and secular. Although Herzl acknowledged that Palestine, as the historical homeland of the Jews, would be optimal, he was also open to proposals for other geographic locations, including Argentina and Uganda. Enthusiasm for Herzl's ideas led to the First Zionist Conference in Basel, Switzerland, in the fall of 1897. Between 1897 and 1902, six Zionist conferences met, establishing the Jewish National Fund. Herzl personally spoke with many national leaders, including Kaiser Wilhelm of Germany, the Ottoman sultan, and Czar Nicholas II of Russia, to gain support for his new movement. These talks were failures, but Herzl's ideas took root and prompted a movement of Jewish settlers to Palestine. There, they formed the nucleus for the future state of Israel, but they also came into conflict with British colonial authorities, despite the Balfour Declaration. Ultimately, the Zionist cause would be realized with the establishment of Israel in 1948.

Hidalgo, Padre Miguel (1753–1811)

Credited for beginning Mexico's War of Independence from Spain, Miguel Hidalgo came of age at a time when *criollos*, Spaniards born in the colonies, struggled against the limits placed on them by *peninsulares*, Spaniards born on the Iberian Peninsula. In 1778, Hidalgo was ordained a priest, one of the few professional positions available to *criollos*, and he spent the first years of his career as a college instructor and later as rector at San Nicolás in Valladolid. In 1792, he resigned his post and began to work as a parish priest first in Colima, then in San Felipe, and finally, in 1803, in the town of Dolores. It was as a parish priest that he developed a reputation for social activism, working to bring economic self-sufficiency to his parishioners.

The closing years of the eighteenth century and the early years of the nineteenth were times of un-

rest in Mexico. Rural areas were depressed from shifts in the economy, and in 1808 and 1809, poor weather conditions caused food shortages. In addition, the economic policies of the Bourbon reforms had seriously injured the church and small property owners. Finally, in 1808, Napoleon's forces invaded Spain and imprisoned Ferdinand VII. The invasion of Spain gave *criollos* in Mexico an opportunity to move for political power, and throughout the colony, they began to organize political groups called "literary clubs." While a priest at Dolores, Hidalgo joined the literary club of Querétaro, and, working with the members of the club, he developed a plan to take power from the *peninsulares*.

On September 16, Miguel Hidalgo went to the tower at Dolores, announced the revolt, and called people from all races and social classes to join him. The rebels quickly took several towns in the surrounding area, where Hidalgo issued decrees ending slavery and Indian tributes. He quickly won the support of mixed-race and indigenous peoples in the towns he took. Most of Mexico's *criollos*, however, feared a race and class war and so sided with the loyalists, seriously weakening the revolt. In March 1811, betrayed by a fellow revolutionary, Miguel Hidalgo was captured and executed. At the time of his death, he had little reason to believe the revolt would continue. But indeed, it went on for another decade, and is today considered the beginning of the Mexican War of Independence.

Hinduism

One of the oldest living religious traditions, known among its practitioners as *sanatana dharma* (the eternal dharma), Hinduism has its roots in both the Indus Valley culture (c. 3000 B.C.E.) and the Vedic religions of the Aryans (c. 1500 B.C.E.), as well as various local traditions.

No founder is associated with this ancient and polytheistic religion. Its primary source is the

Vedas, of Indo-European origin, which were transmitted orally for centuries until finally being committed to writing in the Iron Age. The four Vedas (Rig Veda, Sama Veda, Yajur Veda, and Atharva Veda) are considered to be eternal (*sanatana*) and to have been received by seers (*rsis*) through a kind of holy intuition. Over the centuries, particularly during the early Iron Age in the Ganges kingdoms, study of the Vedas generated a commentary tradition, the Brahmanas and the Aranyakas. By the fifth century B.C.E., a transition had been made from the Indo-European Vedic cult to early Hinduism. Accompanying this evolution was a societal change as well, from the traditional, heroic warrior society of early Indo-Europeans to a caste system dominated by the priestly class (Brahmans), with a concern for both ritual practice and ritual purity. This complex and elaborate system of ritual and practice is referred to by scholars as Brahmanical religion. The language of the ritual system, Sanskrit, was believed to be a reflection and a reinforcement of the cosmos; ritual constantly sustained and re-created the universe.

As with other religious traditions of India, Hinduism accepts the ideas of samsara (the cycle of rebirth), karma, and liberation through enlightenment, conceived of within the context of its own tradition. Similarly, religious life is best described as adherence to the dharma (what is appropriate), with a view toward either a better rebirth in the next cycle of souls or, ideally, *moksa* (release, casually thought of as enlightenment). The Brahmanas and the Aranyakas developed the idea of a fundamental or essential “self,” which transcended each physical reexistence of samsara. This idea reaches its apotheosis with the Upanishads and the connection of the atman (the individual Self) with the Brahman (the cosmic Absolute). Although the atman is occupied with the desires and concerns of the phenomenal world, it will continue to be reborn in samsara. This rebirth may be accomplished at many levels, including heavens and hells, and through many forms, including animals and humans. Rebirth is determined by karma, an iron law of moral order. Release from rebirth in the phenomenal world entails a merging of the atman with Brahman.

Enlightenment, or *moksa*, can be achieved in three ways, illustrated by the image of many paths to the top of the mountain: the way of works (*kar-*

mamarga), the way of knowledge (*jnanamarga*), and the way of devotion to God (*bhaktimarga*). In conjunction with this, a Hindu may choose to pass through four stages of life (*asrama*), during which he or she both attends to responsibilities and enjoys pleasures but lets go of these things in old age, as death approaches.

The Hindu pantheon is complex but rests on a triad of deities—Siva, Vishnu, and Sakti—and their avatars. Siva (Shiva) is considered the oldest of Indian deities, probably pre-Aryan and Indus Valley in his origins. Worshipers of Vishnu (with his avatar Krishna) form the most popular devotional community, whereas Sakti, the goddess who is seen by followers as a divine mother, incorporates many of the aspects and functions of Siva.

For many centuries, Hindus were required to practice their religion under foreign domination, for they were conquered by the forces of Islam and then by the British. Hindu revival during the Raj occurred under the leadership of Ram Mohan Roy and was an important force working for freedom from British imperial rule. After independence was granted to India in the latter half of the twentieth century, Hinduism there became at least partially involved with the politics of the subcontinent, with the emergence of political parties with religious goals. Secular politics and regional aberrations notwithstanding, Hinduism’s historical tolerance of religious diversity has continued to the present day and is an important model for the modern world. The incorporation of Buddhist and Jain ideas, such as vegetarianism and *ahimsa* (noninjury to living beings), into Hindu practice has provided models of moral behavior for many individuals in non-Hindu societies. Hindu communities exist in all English-speaking countries and former British colonies and contribute in significant and often profound ways to the cultures of those countries.

Hirohito, Emperor (Showa Emperor) (1901–1989)

Emperor Hirohito reigned from 1926 until his death in 1989, a turbulent period that witnessed Japan's militarist aggression against its Asian neighbors and the West, its devastating defeat in the Pacific War (1931–1945), and its spectacular postwar economic growth.

Despite an authoritarian Meiji Constitution vesting sovereignty in a sacred emperor, by the 1920s Japan had become a parliamentary democracy under which the majority political party or coalition nominated the prime minister and the cabinet; it also pursued a cooperative foreign policy with the Western powers and China. However, worsening economic conditions at home, Chinese nationalism and Western racist immigration legislation directed against Japan, and Japanese political and economic competition with the West in Asia paved the way for a breakdown of parliamentary democracy and a rising militarism in the name of emperor-centered nationalism in the

Emperor Hirohito reviews troops during his coronation. Hirohito would later preside over Japan during its great imperial expansion into mainland Asia and the Pacific in the first half of the twentieth century and its crushing defeat in World War II. (Library of Congress)

1930s. The Pacific War began with Japan's occupation of Manchuria in 1931, followed by its imperial expansion into north China and the outbreak of full hostilities between China and Japan in 1937.

Confronted with a military stalemate in the China theater and economic strangulation by U.S. embargoes, Japan chose to go to war against the United States and Britain in 1941, and it quickly occupied Western colonies in Southeast Asia under the guise of liberating them from Western colonialism. But by August 1945, the Japanese were faced with imminent defeat after U.S. atomic bombs destroyed Hiroshima and Nagasaki and the Soviets declared war. In a dramatic radio broadcast to the nation, Hirohito accepted unconditional surrender to end the war.

During the American occupation under Gen. Douglas MacArthur, it was decided not to try the emperor as a war criminal but to transform him from a divine sovereign to a human symbol of the state through the U.S.-imposed Constitution of 1946. As a democratic constitutional state, Japan prospered from an open world economy and U.S. military protection, and by the late 1960s, it emerged as an economic superpower through the hard work of its people.

Hirohito's moral responsibility for the Pacific War remains a most controversial issue. As the emperor himself and his Japanese and U.S. defenders saw it, he was a peace-loving monarch who was required by the constitution to accept the advice of his cabinet and hence was not accountable for actions taken in his name. His critics, however, charge that he was morally responsible for his inaction. Recent reappraisals have even argued that he was, in fact, a ruler of real authority who made important military decisions and was thus directly accountable for Japanese imperial ambitions under his rule.

Hispanola (Haiti)

During his first transatlantic voyage in 1492, Christopher Columbus made landfall on the island known to its Taino (or Arawak) inhabitants as

Hayti, which the admiral renamed Hispañola (or Hispaniola, meaning “Little Spanish Island”). The Tainos received the visitors warmly, and when the *Santa Maria* struck a reef near Cape Haitien on Christmas Eve, the local *cacique* (chief), Guacanagarí, consoled Columbus and brightened his countenance with gifts of gold. Consequently, the admiral resolved to leave some thirty crewmen on the island, and he used the salvage from the wreck to erect a small fort christened La Navidad—the first outpost of the Spanish American Empire. The “settlers,” however, made themselves so obnoxious with their demands for gold and women that by the time Columbus returned in 1493, he found the fort in ashes and every colonist dead. Guiding his fleet of 1,200 adventurers to another site, Columbus founded the city of Isabel and began enslaving the so-called cannibals and conquering the independent chiefdoms.

Columbus proved to be a better navigator than administrator, and as the promised gold mines proved elusive or unproductive, some Spanish colonists, under the leadership of Francisco Roldán, revolted. To pacify Roldán’s rebels, Columbus conceded them the right to make *repartimientos de indios* (allocations of Indian groups) to individual settlers in a system of virtual slavery. Disturbed by reports of maladministration and anarchy, the Crown sent Francisco de Bobadilla, a judge, to investigate the situation in 1500. Bobadilla promptly assumed command, arrested Columbus and his brother, and sent them back to Spain in chains. Two years later, Fray Nicolás de Ovando was sent to govern the island. Although the Spanish population swelled to 8,000 under his administration, the Indian population declined precipitously as imported epidemics, bloody “pacification” campaigns, draconian tribute exactions, and the institutionalization of the repartimiento system took their toll. Attempts to replace the dwindling workforce by enslaving the Indians of nearby islands merely succeeded in depopulating those islands as well.

Although Hispañola (or Santo Domingo; St. Domingue under later French rule) became the proving ground and jumping off point for the early conquests, the island also was the site of the first contemporary critique of Spanish conquest and exploitation. In 1511, the Dominican monk Antonio de Montesino preached a fiery sermon denouncing the colonial injustices, and Bar-

tolomé de Las Casas, a repentant *encomendero* (landlord who used forced Indian labor), became a tireless convert to the cause of Indian freedom. King Ferdinand responded by promulgating the Laws of Burgos in 1512, but the regulations were never enforced. Hieronymite monks were sent to reform the administration in 1516, and though they nullified absentee repartimientos, their attempts to gather the Indians into free villages failed dismally and did nothing to stem the tide of Indian decline. Only their recommendation that West African slaves be imported to relieve the dwindling Indians of the burdens of forced labor was well received. As placer mines dried up in the early 1520s and the economy shifted to cattle raising and agricultural production, African slaves were imported (and smuggled) into the colony to raise, cut, and process sugarcane in the twenty-four mills established on the island by 1523.

Neither the Africans nor the Indians accepted enslavement with resignation. Many fled to the mountains and established Maroon communities. In the 1530s, for example, an Indian *cacique* named Enrique led his people into the mountains and waged a fifteen-year guerrilla war that cost the Spaniards dearly and forced the Crown to negotiate a peace. But by 1550, the struggle was a lost cause as the numerous indigenous population had been reduced by war, slavery, exploitation, and epidemic disease to a mere 150 souls. The discovery of gold-rich Indian empires on the mainland created a gold-rush exodus that nearly depopulated Hispañola of its Spanish settlers as well, and the island’s status within the Spanish Empire waned.

In the mid-seventeenth century, French colonists established a settlement on Tortuga and steadily encroached on the remote northwest corner of the island with virtual impunity. In 1697, Spain surrendered sovereignty of the western half of Hispañola to France in the Treaty of Ryswick, and in 1795, the rest of the island was surrendered to the revolutionary regime in France.

Hitler, Adolf (1889–1945)

Adolf Hitler's response to Germany's geopolitical problem was simple. For Germany to grow and expand, it had to have Lebensraum, or living space. This living space would come from eastward expansion within Europe, at the expense of the peoples occupying those areas, and not from colonies overseas. In keeping with his racial vision, he asserted that the "superior" Aryan-German people (*Volk*) would not weaken themselves by scattering across the globe. Instead, they would forcibly conquer and resettle the "inferior" Slavs and other groups living in Eastern Europe, creating a great German empire (*Mitteleuropa*) from the Low Countries of northwestern Europe to the Ural Mountains in Russia. Peoples that were seen as valuable to their German conquerors would be used as slaves; all others, Jews in particular, would be forced farther east, relocated in Africa, or liquidated altogether.

Hitler's ideas for German expansion cannot be properly envisioned without addressing his racial framework. His Weltanschauung (worldview) derived from a fanatical German conservative nationalism combined with a rabid anti-Semitism. According to Hitler (and some other conservatives), Germany had been defeated in World War I because "alien Jews" and other inferior groups had worked to undermine the German war machine. Purging these unwanted elements from German society, by whatever means necessary, would save "genetically superior" Aryan-Germans and allow them to command a Central European empire. Hitler believed that Jewish financiers were manipulating an increasingly "negrofied" France and therefore posed a racial threat to Germany. Additionally, a Bolshevik-led Russia was threatening Germany from the east. His solution was to have a purifying war against Germany's enemies, both internal and external, and gain German living space in the ancestral lands of the Germanic people—Eastern Europe.

Hitler was highly critical of imperial Germany's drive for overseas colonial acquisitions and believed the continuance of such a policy would have

inevitably resulted in a major confrontation with Britain. Additionally, an overseas colonial empire would have forced Germany into dependence on exportation and shipping in the face of British domination of the world's oceans. Indeed, German colonial expansion under Otto von Bismarck had been tolerated to the point that it did not threaten the English, but when the Germans began to construct a sizable navy, the British reacted with considerable alarm, which helped precipitate World War I. By the 1920s, Hitler believed that the English would regard the French as a greater threat, due to their colonial holdings, and would thus be tolerant of Germanic expansion on the continent. He thought that the British would realize the benefits of an alliance with a strong Germany to help offset the threat of the growing U.S. capitalist machine, especially if that alliance meant a weakened France and an insignificant Russia. In reality, the British were completely unwilling to acquiesce to German domination in Eastern Europe. Their policy of appeasement toward Hitler during the 1930s was motivated by the strong desire to avoid another world war, and colonial rivalries had little influence. Yet war—ending in devastating defeat—was Hitler's and Nazi Germany's fate in the late 1930s and early 1940s.

With the sounds of Soviet bombardment on the outskirts of his Berlin chancellery and his aspirations for racial purity and the "thousand-year Reich" collapsing around him, Adolf Hitler committed suicide on April 30, 1945.

Ho Chi Minh (1890–1969)

Ho Chi Minh was born in the former province of Annam in central Vietnam in 1890. After receiving a French education in Vietnam, Ho arrived in Paris in 1911. Over the next decade, his travels also took him to various places in France, Great Britain, and

the United States. He became acquainted with the ideas of Karl Marx and the Communists at this time. His activities on behalf of Vietnam's independence began in 1917; two years later, he presented a petition calling for Vietnam's autonomy to the Allied leaders at the Versailles Peace Conference, but they rejected it. His experience at the conference convinced him that he needed to pursue more radical methods to achieve his goals.

In 1920, Ho participated in the Tours Conference that founded the French Communist Party. Three years later, he went to the Soviet Union for training at the headquarters of the Communist International (Comintern) in Moscow. Between 1924 and 1931, Ho participated in various Communist movements in Southeast Asia and Europe and founded the Indochinese Communist Party. His revolutionary activities eventually led to his arrest by the British in 1931. He was released from jail a year later and sojourned in the Soviet Union for a second time. In 1938, after several uneventful years, Ho went to China and assisted the Communist forces there in their struggle against the Japanese invaders. In 1941, he returned to Vietnam for the first time in over thirty years and founded a Communist-led nationalist movement, the Viet Minh, to fight the Japanese and to lead his country to total independence.

In 1945, Ho was elected Vietnam's provisional president. On September 2, 1945, a few weeks after the Japanese surrender in World War II, Ho declared Vietnam's independence. The French authorities had other plans for their Indochinese colonies, however, and did not want to abandon their hold on Vietnam. They therefore evicted the Viet Minh from the southern city of Saigon and began to negotiate a political compromise with Ho. A provisional agreement was reached between Ho and Jean Sainteny, France's main negotiator, in March 1946, but the two parties continued to wrangle over the details of the arrangements for nearly nine months. An attack on Hanoi in December 1946 by the Viet Minh clearly signaled that the two parties could not reach a lasting agreement.

Ho then led the Viet Minh in a guerrilla conflict against French troops on Vietnam's difficult terrain. For the most part, his forces took refuge in the mountainous areas of northern Vietnam between 1947 and 1954. At this time, Ho gained an almost mythical fame and popularity among his

Revolutionary leader Ho Chi Minh, who had just led his Viet Minh forces in a successful anticolonial war against the French, speaks at the 1954 Geneva Conference, which ended the war and divided Vietnam into northern and southern halves. (Library of Congress)

troops and much of northern Vietnam's civilian population. His government officially returned to power in July 1954 after the Geneva Accords divided the country into a southern and a northern zone, led, respectively, by governments in Saigon and Hanoi.

Not surprisingly, Ho and his allies controlled North Vietnam, entering the city of Hanoi in October. He now turned most of his efforts to constructing a Communist state in the north by collectivizing agriculture and developing industry. Excessive zeal on the part of many officials, however, eventually led to bloodshed and tarnished Ho's reputation even among some of his supporters. But he soon found a new cause to motivate his troops and his people, thanks to South Vietnam's continued refusal to work with Ho's government or participate in elections to restore the country's

unity. By 1959, military conflict resumed in Vietnam, when guerrillas in the south, aided by Ho's forces, attacked the U.S.-supported regime in Saigon. These military actions eventually led to the Vietnam War in the 1960s. By 1964 to 1965, however, Ho's deteriorating health forced him to play an increasingly ceremonial role, leaving his country's destiny in the hands of other Communist leaders and officers. He died in Hanoi in 1969.

Hobson, John (1858–1940)

John Atkinson Hobson, a British social theorist and economist, was educated at Oxford University (1876–1880) and became a schoolteacher and university professor. Inherited wealth then allowed him to devote his life to writing and lecturing. He coauthored *The Physiology of Industry* (1889), *The Economics of Distribution* (1900), and *The Industrial System* (1909), in which he developed his theory of underconsumption, whereby he blamed oversaving by the rich for the low level of wages and the consequent insufficient spending power of the majority. He became associated with such radical journals as the *Nation*, *Manchester Guardian*, *Ethical World*, and *Progressive Review*. In 1894, he was one of the founders of the radical discussion group Rainbow Circle. Six years later, he became a lecturer for the South Place Ethical Society, and over the next four decades, he published hundreds of articles and over fifty books and pamphlets. In *The Social Problem* (1901) and *The Crisis of Liberalism* (1909), he argued for social reform, the redistribution of wealth, and the introduction of a social welfare program.

His most famous book is *Imperialism: A Study* (1902), in which he argued that capitalists parasitically used imperial ventures to make profits. He suggested that instead of investing their excess profits in the empire, capitalists should pay better wages to workers. This argument led Vladimir

Lenin to argue that imperialism was a natural consequence of capitalism.

Hobson was a reporter during the South African (or Boer) War (1899–1902) and wrote *The War in South Africa* (1900), blaming international financiers for the conflict, and *The Psychology of Jingoism* (1901), in which he said that the press goaded people into imperialistic fervor. His espousal of free trade with some form of world government led him to write *Problems of a New World* (1921) and *Democracy and a Changing Civilization* (1934). He also wrote an autobiography, *Confessions of an Economic Heretic* (1938).

Home Rule (Ireland)

The term *home rule* in the present context refers to a movement and later legislation designed to achieve limited self-government for the Irish within the United Kingdom. After a series of rebellions, culminating in the United Irishmen's rebellion in 1798, the Irish Protestant Parliament voted itself out of existence in favor of a constitutional union with Great Britain from January 1, 1801. Although some Irish Catholics initially supported the Union, ongoing discrimination against them even after Catholic emancipation in 1829 resulted in the development of the Irish Repeal Association, whose members were determined to work for an end to the Union. It was not until after the disastrous Irish famine that started in 1848 and the Fenian Risings of 1867 that the supporters of Irish self-government found an ally in the British Liberal Party prime minister William Gladstone. Gladstone became convinced that self-government reform was necessary to deal with what became known in Britain as the Irish Question. Some authors have argued that this was a calculated attempt to overcome internal Liberal Party disunity and save Gladstone's leadership from the clutches of the rival Liberal politician Joseph Chamberlain.

Whatever his motivation, Gladstone, with the support of the Irish Home Rule Party that held the balance of power in the House of Commons, introduced the first Home Rule (Government of Ireland) Bill into Parliament in 1886. This was the first time the nebulous concept of home rule was given a definite form. The bill was designed to allow Ireland limited self-government of Irish affairs, with two Irish houses of parliament and an end to Irish representation at Westminster. The British government would retain control over national expenditures and foreign and defense policies. The British Conservative Party, however, perceived home rule as a destruction of the principle of the United Kingdom and joined forces with Ulster unionists to oppose the bill.

From this point until 1922, when Ireland became a self-governing dominion of Britain, Ireland's future was a political football in British politics. In the predominantly Protestant Ulster Province in the northeast of Ireland, support for liberalism died away, and the Ulster unionist movement campaigned tirelessly to avoid becoming subject to a Dublin-based, predominantly Catholic government. The first home rule bill was defeated by a House of Lords veto, as was the second bill in 1893.

It was not until December 1909 that the British Liberal Party prime minister Herbert Asquith was ready to reintroduce the issue of Irish home rule. Irish parliamentary party leader John Redmond promised his party's support for other Liberal legislation in return for a guarantee that the House of Lords veto would be limited to prevent it from again stopping passage of Irish home rule legislation. This was achieved in 1911, and the third Irish home rule bill was introduced in April 1912. Immediately, an amendment to exclude four of the original nine counties of Ulster was introduced and supported by the British Unionist Party (as the Conservative Party had become known). The Irish Home Rule Act was passed in September 1914, despite unionist attempts to defer it, and the Liberal Party agreed to suspend its operation for six months or until the end of World War I. By the time the war was over, however, the issue of home rule in southern Ireland had become redundant because of a shift away from constitutional nationalism to armed nationalism. This resulted in the demise of popular support for the Irish Parlia-

mentary Party, a boycott of Westminster by Irish members of Parliament who declared Irish independence in 1919, and the subsequent Anglo-Irish War of 1919 to 1921. In the meantime, the British government returned to the issue of Irish home rule in 1919, and the Government of Ireland Act, which introduced separate parliaments in northern and southern Ireland and the joint Council of Ireland, was passed in December 1920, partitioning six of the original nine Ulster counties from the rest of Ireland. Although it was not until 1927 that the southern Irish provisions of the Government of Ireland Act were formally abolished, home rule, which the Northern Irish unionists had fought so hard against, was only ever really implemented in Northern Ireland.

Hong Kong

Hong Kong was a barren, rocky island when it was ceded to Britain under the Treaty of Nanking in 1842, but its deepwater harbor, sheltered from typhoons, made it an attractive base for British commercial activities in China. As a free port, Hong Kong soon emerged as a major depot for opium smuggled into China and for Chinese contract laborers sent overseas. The end of the Second Opium War in 1860 added the Kowloon peninsula to the crown colony, and in 1898, Britain gained a ninety-nine-year lease of the New Territories.

With the expansion of Sino-Western trade in the wake of improvements in communications in the late nineteenth century, Hong Kong became a major entrepôt through which a significant percentage of Chinese imports and exports passed. An influx of immigrants and capital from mainland China preceded and followed the Communist revolution of 1949 and ushered in an era of industrialization and increasing economic diversification. Growth was rapid from the 1970s onward, and Hong Kong became a leading international financial center that surpassed Britain in per capita domestic product in the early 1990s. Since the onset of economic reform in China beginning around 1980, the economies of Hong Kong and China have become increasingly interlinked: Hong Kong exports and direct investment in China have continued to climb and fuel Chinese development.

The commonly held myth about the economic success of Hong Kong suggests that the laissez-faire free trade policy of the colonial government, along with the rule of law and an efficient and relatively uncorrupt bureaucracy, created a positive environment for economic growth. In reality, economic development also depended on the active collaboration, entrepreneurship, and networks of Chinese merchants and industrialists. Moreover, after 1949, China supplied the colony with inex-

pensive foodstuffs, raw materials, water, and other essentials. As China came under the economic blockade of the United States, Hong Kong became its main source of foreign exchange, and China guaranteed its stability by refraining from taking it over.

The colonial basis of the Hong Kong government also made its contributions to economic and political development highly ambivalent: the state did pour a lot of resources into infrastructure, public housing, and social services, and it promoted exports from the late 1960s. But from the beginning, it actively advanced the interests of the British mercantile and banking elites, though some wealthy Chinese businesspeople were later added to the favored group. Direct subsidy and tariff protection to promote industry (largely in Chinese hands) were rejected as inimical to free trade and against the interests of the British hongs in Hong Kong and industries in Britain. Court proceedings were conducted in English, foreign to the majority of Chinese residents (who constituted 98 percent of the population), and much of the legislation discriminated against the Chinese and was directed against grassroots movements. The bureaucracy was dominated at the top by British expatriates, and the Legislative Council was composed of members appointed by the colonial administration. Not until after the signing of the 1984 Sino-British Joint Declaration on the Future of Hong Kong did the colonial government begin to promote direct elections to the legislature.

On July 1, 1997, China assumed sovereignty over Hong Kong and its 6.3 million people. According to its Basic Law, the Hong Kong Special Administrative Region would retain its capitalist economy and much political autonomy (except in foreign policy and defense) for a period of fifty years, under the principle of "one country, two systems."

Houphouët-Boigny, Félix (c. 1905–1993)

Félix Houphouët-Boigny, president of the Republic of the Ivory Coast (from 1960 to 1993), was born in Yamoussoukro, Ivory Coast, into a family of coffee-growing Baule chiefs. He completed medical studies in Dakar and on returning home practiced bush, or folk, medicine. A plantation owner himself, he became politically active to combat race-based pricing and forced labor policies imposed by France. In 1946, he was elected deputy to the French National Assembly on the ticket of the Democratic Party of the Ivory Coast (PDCI). Early on, he lobbied successfully to outlaw forced labor, an achievement that won him broad support throughout Africa.

At first, the PDCI was affiliated with the French Communist Party, alone then in its unequivocal opposition to colonialism. However, when the Left lost its influence in Paris, Houphouët-Boigny broke with the Communists and continued to work closely with the French government to bring an end to colonialism. He was most influential in his role of president of the African Democratic Assembly (RDA). Serious disagreements arose between African leaders within the RDA when Charles de Gaulle offered African colonies a choice between membership in the new French Community and immediate independence. Sékou Touré of Guinea militantly advocated immediate independence; Léopold Sédar Senghor wanted to avoid Balkanization and sought creation of a federation of African states, which Houphouët-Boigny opposed because he feared that the Ivory Coast would have to subsidize poorer neighbors. However, the RDA was the single most important African organization in the transition to independence. Houphouët-Boigny campaigned for the French Community, which prevailed in all colonies except Guinea.

As the only black member of the Constituent Assembly, Houphouët-Boigny had persuaded de Gaulle to add a codicil to the new French constitution authorizing declarations of independence by African states subsequent to approval of the referendum. All former colonies availed themselves of

the opportunity in 1960. After independence, elected president of the Ivory Coast seven consecutive times (1960–1990), Houphouët-Boigny proved to be a skillful politician. He overcame political and ethnic opposition to his one-party rule and developed consensus, thus achieving a political stability that attracted foreign loans.

Houphouët-Boigny remains a controversial figure. Some Ivorians credit him with transforming their country into a modern nation and eulogize him as a man of peace, yet others accuse him of having been a lackey of France, intent only on his own glorification.

Howe, Sir William (1729–1814)

William Howe was a typical eighteenth-century British military commander. His family had ties through his mother to King George I, and he and his two brothers were placed by their family in the military establishment at an early age. His brother Richard was a naval officer and his older brother (killed at Ticonderoga during the French and Indian War) was in the army. Howe served under James Wolfe at Quebec in 1759, leading the charge onto the Plains of Abraham, and on returning home, he was elected to Parliament from Nottingham, a position he held from 1759 until 1780. A Whig, Howe opposed the British coercion of the American colonies and publicly announced that he would refuse a command against them, a statement he later retracted when ordered to replace Gen. Thomas Gage as commander of the British forces in Boston. Howe arrived in time to lead his men personally in an assault on the rebel position on Breed's (Bunker) Hill in 1775, but in March 1776, he was forced to evacuate Boston after the rebels used the guns seized at Ticonderoga by Ethan Allen and Henry Knox to force the British out of the harbor.

Over the next two years, Howe engaged George Washington and the rebel army four times, at

Long Island, Brandywine, White Plains, and Germantown. Long Island was a tremendous success for his troops, made possible by poor planning on the part of the Americans, but Howe was reluctant to follow up his success and pursue the retreating rebels. Brandywine was a less successful effort but still a victory, again hindered by a reluctance to prosecute, whereas White Plains and Germantown were fought to draws. Howe captured Philadelphia in 1777, after moving from New York via the Chesapeake Bay, and wintered there, earning much criticism for his extravagant parties and excess. He also drew fire for not assisting John Burgoyne's march south from Canada to Albany, although he had no official orders to do so. Disenchanted by the progress of the war, Howe asked to be relieved in November 1777 and was replaced by Sir Henry Clinton the following spring.

Knighted by George III for his victory at Long Island, Howe was promoted to full general in 1793 and became Fifth Viscount Howe on the death of his brother Richard. During the Napoleonic Wars, Howe was governor of Plymouth and commanded the northern and southern districts of England's defense. He was a popular officer, but Howe's political support of the rebels may have hindered his willingness to vigorously fight them, as he hoped for a negotiated settlement rather than a military suppression. Howe died, leaving no direct descendants, in 1814.

Hudson, Henry (c. 1570s–1611)

Henry Hudson, an English navigator and explorer, sailed out of Bristol, England, on May 1, 1607, on his first voyage. Sailing on behalf of the English Moscovy Company, he explored the east coast of Greenland and Spitzbergen. The company sent Hudson out again in 1608 to seek a northeast passage to the Orient, but on that voyage, he found it impossible to get through the ice pack.

Hudson's third voyage, however, made him famous. Sailing for the Dutch East India Company,

he departed Amsterdam early in the spring of 1609 on the *Halve Maen* (Half Moon), once again seeking a northeast passage. As before, Hudson was stopped by the ice pack, but he decided to ignore his orders and sailed westward for America. After suffering through a series of Atlantic storms, he reached the coast of Newfoundland without a foremast. The *Half Moon* was repaired on the Maine coast, and Hudson sailed south of Chesapeake Bay and then into Delaware Bay and Delaware River, but he quickly concluded that that was not the route to China. He coasted up the New Jersey shore, entered lower New York Bay, and in September 1609 sailed slowly up the river that was to bear his name. He explored the region, returning to England in October. Hudson was detained on his arrival at Dartmouth and forbidden to sail again in other than English employ. His journals, however, were sent on to Amsterdam, and an account of the voyage was subsequently published.

English adventurers financed his last voyage. Sailing in the *Discovery* in April 1610, Hudson sighted the coast of Greenland in June, passed the

This late-nineteenth-century painting depicts Henry Hudson, his son, and one of several other members of his crew set adrift in 1610 by mutineers in the bay that came to bear his name. Hudson led an early-seventeenth-century expedition to find the fabled and elusive Northwest Passage to Asia. (Library of Congress)

strait that bears his name by August 2, and the next day observed “a Sea to the Westward” (Hudson Bay), which he explored. The crew suffered terribly during that winter, and several died. The captain was seized at the instigation of the deposed mate Robert Juet, and on June 23, 1611, Hudson, his son, and seven others died when they were set adrift in a small boat without any supplies. Though he explored farther than any of his predecessors, Hudson actually discovered neither the bay, nor the strait, nor the river that would be named for him. His expeditions, although accomplishing very little, did spur some additional English interest in the region.

Hudson’s Bay Company

The Hudson’s Bay Company—originally chartered by King Charles II in 1670—controlled one-third of the present-day Canadian territory. The area was designated Rupert’s Land, and it encompassed most of north Ontario and northern Quebec, all of Manitoba, most of Saskatchewan, the southern half of Alberta, and a large part of the Northwest Territories. With its beginnings as a simple fur-trading enterprise, the company is one of the oldest firms still active in the world. It evolved into a trading and exploration company that reached as far as the west coast of Canada and the United States, south to Oregon, north to the Arctic, and east to Ungava Bay, with subsidiaries in Chile, Hawaii, California, and Siberia. However, the road to becoming Canada’s oldest corporation and one of its largest retailers was not entirely smooth.

The company’s first battles occurred with the French who wanted the company out of Canadian territory. French and English warships battled for ownership of company trading posts. The company finally won out with the Peace of Utrecht in 1713, which validated its right to keep its settlements. Later rivals emerged as the North West Company, composed mostly of Scottish-Canadian traders from Montreal, pushed north to the Arctic and in 1793 west to the Pacific. Later, in 1821, the

Hudson’s Bay Company absorbed the North West Company, thus ending any land title disputes. The next fifty years were some of the company’s best as it explored and traded vigorously throughout the west and north and spread south in a large area from the sources of the Missouri River to the San Francisco Bay.

People viewed the company as a monopoly, which was distasteful to many who were opposed to its misuse of power. A parliamentary inquiry in 1857 observed that Alberta, Saskatchewan, and Manitoba—known as the Fertile Belt—were suitable for settlement and therefore should be surrendered to Canada. This declaration marked the beginning of the end of the company’s monopoly. Under the terms of the Deed of Surrender of 1869, the company kept its charter but gave up ownership of its Rupert’s Land territory. For this surrender, it received cash and 7 million acres in the Fertile Belt, which it gradually sold over the next eighty-five years.

By 1912, the company found that it needed a fresh look for its retailing operation and consequently developed a chain of department stores in Canada. This approach led to its emergence as one of Canada’s leading retail organizations. Rebounding from the interruption of World War I, company expansion continued in 1923. By 1970, downtown department stores were constructed in every major city in western Canada, and the company headed east, where it expanded into the suburbs of prominent Canadian cities. Several major acquisitions followed, a trend that continued through the twentieth century. Thus, at the turn of the twenty-first century, the Hudson’s Bay Company was a far cry from the simple fur-trading operation that began in 1670 as an extension of British colonial expansion.

Huguenots

From 1555 to 1565, the Huguenots (the name given to French Protestants) tried to establish a

colony that would serve as a refuge in America. In 1555, the Catholic Nicolas Durand de Villegaignon (c. 1510–1571), viceroy of America, established a colony in the bay of Guanabara (the future bay of Rio de Janeiro). His aim was to create a refuge for all the victims of religious persecution. This ecumenical enterprise brought settlers, especially Protestants, together, and one of its main sponsors was Gaspard de Chatillon, the comte de Coligny (1519–1572), who was director of the overseas affairs of the kingdom. The aim of this colony was also to control, commercially and militarily, a region that was at the junction of the Portuguese and Spanish Empires. However, the religious disputes of the time soon divided the settlers, and in 1560, the Portuguese destroyed the French settlement, marking the end of “France Antarctique.”

This failure did not discourage Coligny. He planned to establish a second colony, which would both disrupt Spanish shipping and provide a home for the Huguenots. In 1562, a group of Protestants led by Jean Ribault and René de Goulaine de Laudonnière established a settlement in Florida, on an island named Port-Royal. This first settlement came, however, to a sudden end,

and the colony was abandoned soon after. In 1564 and 1565, Laudonnière and Ribault founded Fort Caroline on the Saint John River with about a thousand settlers, almost exclusively Protestants. The Spaniards were hostile to this French colony, which was threatening the route to the Indies and was, moreover, considered heretical. Consequently, in September 1565, the colonial governor, Pedro Menéndez de Avilés, destroyed the colony and killed almost all the settlers—not because they were French, according to Menéndez, but because they were enemies of God. After this last failure, the Huguenot party relinquished its colonial project. Meanwhile, the need for a Huguenot refuge was rendered less pressing in 1598 when the Edict of Nantes established religious tolerance in France. But it was not until 1627, when the Crown forbade the emigration of the Huguenots to America, that the Huguenot colonial dream vanished.

Iceland

Iceland, an independent republic since 1944, was part of the Danish kingdom from 1380. After the self-governing settlement period in the ninth century, the island fell under Danish domination through the Union of Kalmar Treaty in 1380. Until the seventeenth century, however, Icelanders retained much governance over their own affairs. In 1602, a monopoly trade on fish (the island's primary export) was established, and the Copenhagen government began to exercise more direct control. During the eighteenth century, the island went into economic decline after a period of bad weather, illness, and famine, and local leaders started to agitate for free trade and more local control. In a series of liberalizing measures in Denmark, the monopoly trade was abolished in 1854, and parliamentary representation was granted to Iceland, along with the other provinces, in 1839.

These measures did not entirely satisfy the Icelandic nationalists, who argued, based largely on the heritage of the Icelandic medieval saga literature, that Icelanders were a distinct people with a history and culture independent of mainland Scandinavia and therefore deserving of statehood. After a long, legalistic, but nonviolent struggle, the nationalists were successful. The island was granted home rule in 1903, and a 1918 contract provided for a twenty-five-year transition period to full independence. This treaty expired while Denmark was occupied by Germany during World

War II, and the Icelanders (with the encouragement of the United States, which believed the island to be of global strategic importance) declared independence, which was acknowledged but poorly accepted by Copenhagen. With enormous amounts of U.S. and British aid, Iceland modernized rapidly after the war.

Igbo

The Igbo people speak the Igbo language and occupy most of the Bight of Biafran hinterland in southeastern Nigeria. Following British proclamation of a protectorate over the Niger district on June 5, 1885, Igbo land became part of the British Empire. The British government granted the Royal Niger Company a royal charter to administer the territories of the Oil River Protectorate in 1886. For effective administration, the British government appointed Maj. Claude Macdonald as the high commissioner and consul-general of the Oil River Protectorate in 1891, which was renamed the Niger Coast Protectorate in 1893. From 1891, Macdonald established treaties of protection with the Akwete community. Many treaties

followed between British administrative officers and Igbo villages into the 1890s. In an attempt to open the Igbo hinterland and stop internal slavery, the British attacked the Aro, who dominated trade and commerce in Igboland in 1901. Sporadic attacks on Igbo villages continued until 1917, all of which subdued initial resistance to British imperialism.

On December 31, 1899, the British government revoked the charter granted to the Royal Niger Company to administer the area. On January 1, 1900, the Southern Nigeria Protectorate was proclaimed, with Sir Ralph Moor as high commissioner. Until 1905, the administration of Igboland was based on the realities of the Oil River coast, but the amalgamation of the Southern Nigeria Protectorate with the Protectorate of Lagos in 1906 affected the administrative structure of Igboland. Lagos established effective control and authority over Igbo land. From 1914, Fredrick Lugard, governor-general of Nigeria, amalgamated the Northern and Southern Provinces. Following the amalgamation, Igboland was given political and administrative unity within the new provincial system under a resident administrator. Under indirect rule, Africans were used as administrative assistants in the native court system.

Administrative reforms followed Lugard's tenure, giving more power to local chiefs. However, the imposition of indirect rule on the Igbo proved abortive. The new regime did not fit with Igbo traditional political systems. Ultimately, the Igbo rejection of British administration can be traced to the value they attached to independence and democratic ideals. When direct taxation was imposed in 1928, the Igbo hated it because it amounted to tribute and drained their pockets. When it was erroneously believed that women would be taxed, widespread revolts ensued throughout most of Igboland in the now famous Igbo Women's War of 1929. The women's stiff opposition to British rule led to changes in the administration of Igboland. Opposition to British rule continued in Igbo land until independence was attained in 1960. In short, Igboland may be described as a society in which the British system of indirect rule did not succeed.

Imperial British East Africa Company

Chartered in the midst of the scramble for Africa, the Imperial British East Africa Company was designed to both protect British strategic interests and profit through the private administration of the northern East African coast. Scottish shipping magnate William Mackinnon organized the company. Mackinnon had made his fortune in colonial Indian trade and transport, but during the 1870s, he shifted his attention to East and Central Africa, funding Christian missions, antislavery efforts, and geographic expeditions. Of course, he combined his humanitarian interests with commercial investments in African transport and political support for a greater British imperial presence there. In 1887, Mackinnon obtained a lease concession of the sultan of Zanzibar's customhouses on the Kenya coast, and after assembling a politically well-connected list of subscribers back in Great Britain, he obtained a charter for the company in 1888.

The British Foreign Office was never enthusiastic about Mackinnon's scheme. Yet East Africa skirted the periphery of British strategic interests in the Indian Ocean and Nile Basin. A rival German chartered company, the Deutsche Ostafrika Gesellschaft, had laid claim to territory in the interior and was concurrently negotiating with the sultan of Zanzibar. Thus, British leaders supported the Imperial British East Africa Company insofar as it served as a check on growing German influence in the region. Investors took a longer view. The administration of the coast was a necessary first step, but their goal was to advance British

commercial interests in the interior. According to Mackinnon's prospectus, the company's capital was to be invested in the organization of caravan routes and the eventual construction of a railway to Lake Victoria.

Within five years, however, the company foundered. Customs revenues proved insufficient to support the most minimal administration. Moreover, military campaigns on the Somali coast, as well as the dispatch of a garrison to the Buganda Kingdom on Lake Victoria, drained much of the company's working capital. There was little profit in land transport, and Mackinnon failed to secure needed concessions and additional investment for railway construction rapidly enough to keep the company afloat. The company withdrew from Uganda in 1893, and Great Britain assumed the protectorate there in the next year. The remainder of the company's claim in East Africa was transferred to formal British control in 1895.

Incas

Dating the origin of the Inca Empire is a subject of debate among anthropologists. One theory is that imperial consolidation began as early as 500 C.E. along the Pacific coast and that such consolidation was not achieved through war. Over the next 400 to 500 years, the theory holds, the empire grew to encompass many mountain people, and this early stage was marked by spectacular achievements in architecture, ceramics, and textile arts. Others contend that the consolidation of the Inca Empire did not begin until around 1250 and that it was established through war making. According to this theory, the empire is estimated to have covered approximately 120,000 square miles. A third theory argues that the consolidation happened as late as 1430, when the Inca king Pachacuti Inca Yupanqui defeated the Chanca and established the central power of the Inca Empire in the Cuzco Valley. This empire is said to have covered about 300,000 square miles (more than the area of Italy, Switzerland, Holland, Belgium, and France combined).

No matter what theory of its early origins is correct, the Inca Empire at the time of European contact in the early 1500s was the largest of the empires of the Americas, including under its aegis most of what is now Ecuador, Peru, and Bolivia, along with parts of Chile, Columbia, and Argentina. Its capital city of Cuzco boasted a population of about 400,000. The empire, although consolidated partly through war, was not held together militarily. Instead, it commanded the respect of its members by being organized politically to ensure the health and well-being of each individual. At the time of Spanish contact, the empire was in the midst of a "civil war," with two brothers struggling to attain ultimate power. Atahuallpa, the favorite (though illegitimate) son of the late emperor Inca Hunan Capuche, defeated his brother and was still consolidating his control when Francisco Pizarro invaded his territory with 150 men in 1533. Atahuallpa was waiting for Pizarro's arrival in his fortress city of Cajamarca with 6,000 men, as Pizarro claimed that his visit was based on friendship. Atahuallpa accepted this claim and went to Pizarro's camp, whereon he was immediately seized and held for ransom (a room full of gold). After much of the ransom had been paid, Pizarro had Atahuallpa executed (on August 29, 1533), and he assumed the mantle of Inca emperor himself.

The Inca never regained political control of their former territory. Today, however, they continue to pursue their traditional and ceremonial way of life—as far as possible given the confines of modern political systems.

India

The Republic of India, with over 1 million inhabitants, is the dominant state in South Asia. The British invasion and colonization of India began with the creation of the British East India Company in 1600 and the establishment of a trading

post at Surat, Gujerat, in 1613. By 1619, trading posts had also been established at Agra, Ahmedabad, and Broach. Bombay became a British territory in 1661, when it was given in dowry to King Charles II by the Portuguese. In 1669, it was taken over by the East India Company, and in 1687, Bombay replaced Surat as the site of the company's headquarters. On the east coast, the British set up a trading post at Masulipatnam in 1611 and at Armagaon in 1626. In 1640, they built Fort St. George at Madras. British traders also settled at Cuttack, Orissa, in 1633 but moved to the Calcutta area in 1651; in 1690, the city of Calcutta was founded by Job Charnock. The British continued to confine themselves to trade in India until the mid-eighteenth century, when the emasculation of the Mughal Empire and rivalry with France, which had trading posts in India, caused them to exercise political authority and to make India into the "jewel in the crown" of their imperial possessions.

The British Empire in India is associated with the deeds of Robert Clive (1725–1774), who defeated the French in south India in wars that were part of the worldwide conflict between the British and the French. He also established British hegemony in Bengal and was the founder of the Indian army. After the Battle of Plassey on June 23, 1757, he served as governor of Bengal and commander in chief of British forces in India (1765–1767). His successors further extended British power in India, so that by 1849, almost all of the country was under the direct or indirect control of the British.

In 1773, the Regulating Act began the process of British government control of the East India Company. The Regulating Act of 1784 established a board of control and a committee of secrecy in London, although the British government did not assume direct responsibility for governing India until 1859. Up to 1947, India was the direct responsibility of the British government, through a viceroy. During this period, India was brought firmly into the world economy through the development of plantations, ports, roads, and railways. Western learning was fostered, with three universities established in 1857, and the Indian army became part of the imperial forces. The British also introduced new administrative, legal, and political structures, beginning in 1861 with the Imperial Legislative Council, which the Indian Councils Act

expanded in 1892. High courts were established in 1861 in Bombay, Calcutta, and Madras. In 1865, district boards were created, and in 1883, elected municipal boards were formed. The Morley-Minto reforms of 1909 created provincial councils and increased Indian representation. The Government of India Act of 1919 introduced dual responsibility (both British and Indian) for governing India, which was extended considerably in the Government of India Act of 1935.

With the formation of the Indian National Congress in 1885 and the All-India Muslim League in 1906, Indians began to develop associations that became organized political parties in the 1930s. Opposition to British rule increased dramatically after World War I with the activities of Mohandas Gandhi. One effect of the introduction of an electoral system in India was that it allowed the Muslim League to build and document support for its claim that the Muslims of India demanded Pakistan as a separate homeland for the Muslims of the subcontinent. World War II destroyed British power in the world, and within ten years of the end of the war, most of Britain's colonies had become independent. Accordingly, India was partitioned into the sovereign states of India and Pakistan on August 14, 1947.

Indian Wars

Warfare was central to imperial endeavors and cross-cultural interactions in North America. Military conflicts paced colonial relations for 350 years, beginning with Francisco Vásquez de Coronado's subjugation of the Zuni and Pueblo in the

A French soldier fires an arquebus during the Battle of Ticonderoga in 1609. The battle between the Huron and Iroquois was one of the first in North America that involved European troops. (Library of Congress)

Southwest in 1540 and drawing to a close three and a half centuries later with the massacre at Wounded Knee in 1890. Mutual misunderstandings and competing political agendas facilitated armed struggles between Native Americans and Europeans and, later, Euramericans. Of greater importance, the use of military force was fundamental to policies of subjugation and appropriation, underscoring both the historical imbalances and the injustices of the colonization of Native America.

Although a near constant feature of colonial enterprises in North America, escalating as more Europeans and Euramericans occupied more and more territory closer to indigenous communities, warfare with and against indigenous peoples displayed great variation. Excluding local disputes and minor struggles that never became full-scale conflicts, three forms of cross-cultural warfare may be identified in the historical record. First, Native Americans, particularly before 1815, allied themselves with Europeans to fight historical enemies, advance political and economic interests, or control territory. For instance, during the Beaver Wars (1638–1684), the Iroquois waged an intermittent campaign against traditional adversaries,

the Huron and Algonquin, and their European ally, the French, securing their influence in the Northeast for much of the next century. Second, military force was central to the colonizing strategies of the Europeans and, later, the Euramericans. Individuals and institutions engaged in war to relocate, pacify, and even exterminate indigenous communities. Tragic examples include massacres by U.S. troops at Sand Creek and Wounded Knee; early conflicts in New England, such as the Pequot War, the Indian removal, and the Second and Third Seminole Wars; and the extended campaigns against the Lakota on the Great Plains and the Apache in the Southwest. Finally, armed struggle proved to be an effective means through which Indian nations resisted colonization and defended themselves. Among the almost countless instances are the Natchez Revolt, Little Turtle's War, Black Hawk War, and Red Cloud's War.

Colonialism altered indigenous military conceptions and strategies as well. It introduced novel technologies (the gun and the horse); frequently forced indigenous peoples to defend their communities, lands, and livelihoods in the face of external invasions; and offered novel political and economic opportunities for those aligned with the

colonizers. As a consequence, throughout Native America, political and economic motivations displaced the previous socioreligious foundations of conflict; on the battlefield, taking life competed with securing honor; and overkill scenarios undermined the previous emphasis on capture-oriented skirmishes. As indigenous groups were displaced, as they sought to exploit new resources as in the fur trade, or as they forged alliances with colonial powers, the number of conflicts between indigenous groups increased. In some cases, the disruptions associated with colonization even encouraged certain nations, among them the Iroquois and the Lakota, to expand both their territory and their influence.

Industrial Revolution

Colonialism has been a feature of the modern world since the fifteenth century. With it came encounters that saw the settlement of the colonizers on the coasts of distant shores. The Industrial Revolution of the late eighteenth century fundamentally altered the relations between the “centers,” primarily Britain, and the “periphery.” It intensified the interaction, furthering the penetration of the colonial societies. It created opportunity for the industrialists and those with whom they did business, and it created hardship for labor and exploited the transatlantic slave trade. The Industrial Revolution intensified the commercial and then the political connections and intensified the exploitation of human and material resources.

The Industrial Revolution began in the 1780s, when the invention of certain machines (such as James Watt’s steam engine in 1784) unleashed the productive powers of society—primarily British society at that point. (Other northwest European countries and the United States followed at a later date.) The seemingly limitless possibilities of economic growth necessitated dramatic changes in terms of agriculture, urbanization, patterns of work, and labor relations within the “home” society. Abroad, it implied a transformation of the rela-

tionship between Britain and colonial areas and had a dramatic and often negative effect on colonial economies. If the effects of the Industrial Revolution were to rapidly increase the connections within Britain, especially by rail, its effects abroad would increase the transoceanic traffic that fed the revolution with raw materials and sustained it with profits from the sales of various commodities, especially cotton.

By the late eighteenth century, mercantile development and colonialism ensured that the primary concern of the British government was economic development, the rapid increase of which pushed Britain into a transitional period toward industrial revolution and thus industrial colonialism, which remained a feature of the world economy until the late nineteenth century.

The Industrial Revolution brought together the inventors and the entrepreneurs that sought to maximize their gain on investment by searching for the most profitable markets and the cheapest sources of supply. Eric Hobsbawm (1975) wrote that it was British technical know-how that spurred the revolution. Other states copied the British and gained from their invention and expertise. If Britain did not have this opportunity, he argued, it did have a good economy and “a state aggressive enough to capture the markets of its competitors.” Thus, the end of the Napoleonic era also witnessed the “last and decisive phase of a century’s Anglo-French duel.” By the mid-eighteenth century, Britain had consolidated its hold on India, after the Battle of Plessey in 1757, and Canada in the 1760s. France lost out on both occasions. The only threat to Britain was the nascent potential of the United States, which was not fully realized until after the American Civil War. Hence, during the nineteenth century, Britain ruled the waves and became the center of the world economy.

The intensity of the colonial relationship grew as a result of the cotton industry. The centrality of the commodity not only affected British interests and diversified them as time progressed, it also dramatically affected the lives of those caught up in the local industries and the atrocious slave trade that fed the colonial activity and the profits of the industrialists. Thus, Britain’s pursuit of cotton took it from India, then to the southern states of the United States, and on to Egypt while the

Americans were engaged in civil war. Beyond the local impact, the British state had to adapt and build navies and plant outposts to sustain and protect the industry.

The cotton industry thus grew simultaneously with slavery. The northern and western cities that initiated the revolution also became the focus of the British slave trade. The produce and the profits were used to buy the slaves and perpetuate the triangular relationship that took cheap goods to Africa, transported slaves across the Atlantic to labor, and carried cotton back to Britain.

The rapidly increasing production transformed the relationship of the metropole and the colony. Once a source of raw materials, the colonies increasingly became important as a marketplace. The growth in the colonial markets was exceeding the growth in the domestic and European markets by the mid-nineteenth century. Hobsbawm argued that the commercial interests “systematically deindustrialized” India and reversed the trend of world history. Britain hitherto had been a net importer of Asian produce, but it now became a net exporter to Asia.

Colonialism provided further opportunity for British economic growth. The demand for more cotton meant that the colonial administrators of the East India Company and later (after 1857) the British state could directly rule over the territory, increase the areas under cultivation, exploit the supply of cheap labor and slaves, and create the necessary colonial conditions, including colonial police forces, to suppress local revolt or disturbances.

The colonies also facilitated the process by becoming the sources of cheap food imported into Europe. With the inexpensive supply of foodstuffs, European wages could be kept lower than if the nation had to rely on locally cultivated supplies. Thus, in terms of sources of raw materials, food supply, and cheap labor and slaves, and as new expanded markets, the colonies became vital to sustained European growth. A key outcome of the Industrial Revolution was that as competition increased among the European states by the late nineteenth century, the acquisition of territory (as opposed to just markets), people, and produce became essential.

Colonialism was justified by ideologies predicated on racism, civilization, and the efficient use of resources. It alleviated domestic tensions as Eu-

ropean countries and later the United States sought to overcome domestic recession through foreign expansion. The conquest of Africa in the late nineteenth century was facilitated by the industrialization of transport, communications, and warfare.

Inquisition

One of the main goals of Ferdinand and Isabella, the king and queen of Spain, was to create a homogeneous population possessing religion and culture but free of *Judaizantes* (Jews) and *Moriscos* (Moors), who were seen as heretics and discordant constituents. Consequently, the Catholic majesties established the Holy Office of the Inquisition in 1478, a council given the task of enforcing the uniformity of religious practice in the Spanish world. Following their lead, Portugal established the Holy Office in 1536 with the same goals in mind for the Portuguese world. The Inquisition was originally intended to investigate the sincerity of *conversos*, Christian converts who had been accused of being Jews and Muslims. The aims, however, changed drastically as the Inquisition became overzealous in its charges. As a result, what ensued resembled more of a witch-hunt than a religious inquiry. During the Inquisition, Jews and Muslims had only three options: to be exiled, to be killed by the Inquisition tribunals, or to convert to Christianity. Many converted, but that did not keep them safe from the watchful eyes of the Holy Office. Those who were not killed, tortured, or executed fled to locales throughout Europe, Africa, and the New World. By 1508, news traveled to the two Iberian powers that the New World was rife with “Hebrew Christians.” As a result, the Holy Office spread its tyranny throughout the colonies as well. Tribunals developed across the Spanish mainland, the Spanish West Indies, and the Philippines. No tribunals

were formed in Portuguese Brazil, however, as Brazilian prisoners were tried in Portugal. By the early 1500s, the Inquisition expanded its attacks beyond the Jews and Muslims, specifically targeting Protestants in the Portuguese and Spanish worlds. The tribunals gained more power as autonomous authorities, free from the rules of the monarchy and state. Eventually, anything deemed “illegal” or “conspicuous” was brought before the tribunals, such as acts of suspected witchcraft by African slaves, gypsies, or allegedly adulterous wives. The Inquisition also expanded outside the New World into European areas under Spanish control. Spain established tribunals in Sicily in 1517 but was unable to do so in Naples and Milan. The Holy Roman Emperor Charles V introduced the Inquisition into the Netherlands in 1522 in an attack against the Protestants, but he failed to eradicate Protestantism.

By 1665, however, the tribunals were unable to successfully complete their goals. Protestantism proved to be too resilient, and the witch-hunt in the colonies subsided. The Inquisition slowed in its attacks, serving more as a political advisory to the Iberian thrones than a defender of Catholicism. The damage was already done, however, as thousands lost their lives throughout the Spanish and Portuguese worlds simply because they were not Catholic.

International Monetary Fund (IMF)

The International Monetary Fund (IMF) came into existence in December 1945 as a result of the Bretton Woods Conference in July 1944. The IMF was established to oversee the post-1945 international financial system. It operates as a specialized agency linked to but independent from the United Nations. Its main objectives are the promotion of economic growth, market economics, and free trade. It monitors the economic performance of

countries around the world and provides reserve facilities for member governments when they are confronted with balance-of-payments problems. Member governments can automatically draw funds equal to their membership quotas.

Decision making and policy formulation at the IMF are based on a weighted voting system. The total number of votes a particular government has is directly related to the amount of capital it contributes to the IMF. Historically, this has meant that the United States has controlled 20 percent of the votes, and Germany, France, the United Kingdom, and Japan together have controlled at least another 20 percent. The IMF is administered by an executive board, made up of twenty-four representatives from member countries, that handles daily operations. The managing director is selected by the executive board. Since the early days of the IMF, it has been customary for the managing director to be a European and for the head of the World Bank to be a U.S. citizen. The IMF is governed by a board of governors that meets annually and is composed of one representative from each member country.

The financial support the IMF provides to member governments comes with conditions (“conditionality”), and the organization’s articles of agreement make clear that a member government is obliged to meet the terms of the particular standby arrangement. This usually involves following an IMF-mandated austerity program, focused on inflation reduction, currency devaluation, cuts to public spending, and the elimination of export subsidies. Now known as structural adjustment programs, these arrangements involve IMF assistance at a time of crisis or financial instability in exchange for a range of reforms oriented toward privatization, deregulation, and trade liberalization. In the 1990s, the IMF also sought to link its lending to “good governance.” This approach makes the extension of funds dependent on the government in question demonstrating improvements in the taxation system and judiciary, in education and health, and in the enhancement of private property rights and greater transparency in government financial operations.

Iran

Known as Persia until 1935 and one of the world's oldest civilizations, dating back to 2700 B.C.E., Iran experienced outside domination throughout much of its history, including Greek, Arab, Mongol, and Ottoman conquests. It achieved a degree of autonomy within the Ottoman Empire in the late seventeenth century with the Qajar dynasty, which grew weak by the twentieth century as Persia became increasingly subject to European pressure. The discovery of oil heightened Persia's importance but also added to its vulnerability. The 1909 establishment of the Anglo-Persian (later Anglo-Iranian) Oil Company (APOC) resulted in British domination of the oil industry and provoked nationalist reaction. The subsequent Anglo-Persian Agreement of 1919 made Persia a virtual protectorate, giving Britain immense military, political, and economic power and further weakening the Qajar state. Thereafter, the British backed Col. Reza Khan's successful military insurrection in 1921.

Khan (1878–1944), known as Reza Shah Pahlavi during his tenure as emperor (1926–1941), launched a campaign of reform modeled on the Kemalist revolution in neighboring Turkey. In 1932, he attempted to change the terms of the oil concession, which was heavily tilted in favor of Britain. The controversy that resulted reached the League of Nations in 1933, which conceded little to Persia. With World War II, the Great Powers grew increasingly interested in Iran, resulting in the Anglo-Soviet intervention of August 1941 and leading to the forced expulsion of Reza Shah for seeking German assistance to counter British and Soviet designs on Iran. His son, Muhammad Reza (1919–1980), began his reign as Reza Shah Pahlavi (r. 1942–1979) and was a virtual British puppet, facing an increasingly restive secular and religious nationalism that ultimately culminated in the nationalization of the Iranian oil industry in 1951. The shah fled into exile in 1953, but British and U.S. officials aided in the overthrow of the Iranian nationalist premier Mohammed Mossadegh and brought the shah back from exile. Ongo-

ing resentment of foreign interference in Iran ultimately helped fuel the final overthrow of the shah in 1979, as well as the subsequent Islamic revolution that dominates Iranian politics to this day.

Iraq

With a rich tradition of ancient indigenous civilizations but also a long history of foreign domination, the region that would become most of modern Iraq was, as part of the Ottoman Empire after 1638, three distinct provinces: Basra, Baghdad, and Mosul. During World War I (1914–1918), the region came under British control in stages, with some support from local Arabs who believed, based on hard evidence, that Britain would ultimately allow self-rule. On such assumptions, the Arab revolt of June 1916 was launched, yet the Anglo-French Sykes-Picot Agreement of May 1916 had already hinted at a formal partition of the region among the Allied victors. Ignoring many local conditions, a League of Nations mandate for Iraq was established under British administration in 1920.

The British had succeeded in repressing local resistance and installing the Hashemite emir Feisal ibn Hussein (1885–1933), a Sunni, as King Feisal I (1921–1933). Yet even Feisal acknowledged the state's artificial nature and lack of history as a cohesive entity—its arbitrary borders, Shiite majority, substantial Kurdish minority, and various provincial and tribal differences. Furthermore, the pro-British and Sunni ruling elite was increasingly out of step with local aspirations. After significant oil reserves were discovered in 1927, Britain secured long-term military ties and a favorable concession for Iraqi oil. British troops remained when the mandate ended in 1932 and crushed a nationalist coup d'état during World War II. Anti-British feeling continued to grow after the war, and a violent coup in 1958 eliminated the ruling Hashemite dynasty and pro-British government, establishing a republic and ending Britain's influence.

Modern Iraq remains acutely sensitive to external interference of any kind. A series of repressive regimes have failed to resolve persistent ethnoreligious, socioeconomic, and developmental problems. Ongoing political instability, disputed borders, and problematic access to the Persian Gulf has led to regional conflicts with Iran, Kuwait, Saudi Arabia, Syria, and Turkey and also with outside powers such as the United States and its allies.

Ireland

Ireland was an early British colony and one of the few European nations to achieve independence as late as 1922. Prior to English colonization, Ireland was invaded and ruled for long periods by the Vikings (from the eighth to the eleventh centuries) and by the Normans (from the twelfth to the fourteenth). After the decline of the Norman empire throughout the British Isles and the consolidation of English power over Scotland and Wales, Ireland was again the object of colonial desire. Previously, Ireland had become, over time, a lordship attached to the English Crown, after Diarmait Mac Murchada became Henry II's vassal in 1166 in a bid to reclaim his kingdom of Leinster. From that time forward, various English rulers settled in Ireland, and many married into Irish ruling families. As a result, an Anglo-Irish community developed that supported English rule but maintained certain Irish traditions.

In this period, English control in Ireland was maintained by a lord deputy, whose position and control became stronger after Elizabeth I's active colonization of Ireland and the subsequent bloody regime of Oliver Cromwell, the governor of Ireland, in the 1650s. From 1610 onward, the counties of Ulster in northeast Ireland were settled, or "planted," with Scottish and English settlers on land confiscated after the crushing of Hugh O'Neill's counterattack against English rule. An Irish parliament, consisting mainly of the Anglo-Irish Ascendancy (English elite in Ireland), operated fitfully throughout that century and the next,

until it was finally disbanded with the Act of Union between Britain and Ireland in 1800.

English colonial policy during these two centuries aimed to crush Irish language and culture in a deliberate, though haphazardly implemented, effort to Anglicize Ireland. Through a succession of penal laws from 1695 to 1728, Catholic rights to education, to bear arms, to own horses and land, to hold public office, and to vote were restricted. It was not until 1829 that most of these restrictions were repealed. There were, however, certain more positive effects of English colonial policy. From the 1740s until the 1820s, Ireland experienced a long period of economic expansion, during which the agricultural output rose; the manufacturing sector grew; banking, transport, and towns developed; and a wealthy group of Catholic middle-class traders emerged. Despite the terrible tragedy of the famine in the 1840s and the inadequate British response to it, the union between Britain and Ireland assisted the development of the Irish economy to a certain extent.

The history of Irish resistance to English rule after O'Neill's demise consists of an ongoing series of uprisings of varying magnitudes, followed by periods of harsher British repression and then a resurgent nationalism. The key uprisings included the Ulster Rebellion in 1641, the United Irish Rebellion in 1798, the Robert Emmet Rising in 1803, the William Smith O'Brien Rising in 1848, the Fenian Risings of 1867, and the Easter Rising of 1916. In addition to this physical force tradition, there was a parallel constitutional nationalist movement, which was particularly active in the early decades of the nineteenth century, when Daniel O'Connell led parliamentary agitation for Catholic emancipation and the repeal of the union of Britain and Ireland. From the late 1870s to the early 1890s, Charles Stewart Parnell led the campaign for home rule in Ireland. Along with this growth in political nationalism, a strong cultural nationalist movement emerged in Ireland, dedicated to the revival of the Irish language and culture.

Meanwhile, in the staunchly British Ulster Province, the Protestant majority formed unionist parties. Various Irish home rule bills were passed by the House of Commons but rejected by the House of Lords, particularly because of Ulster unionist activism and alliance with the British

Conservative Party. By the time the Home Rule Bill was passed, with an amendment excluding the Ulster Province but suspended by the eruption of World War I, Irish nationalism had grown increasingly militant. And after the harsh British reaction to the Easter Rising of 1916, the Sinn Fein (Ourselves Alone) party was able to win many Irish Westminster seats and set up a provisional Irish government. Female nationalists such as Maud Gonne, Hanna Sheehy-Skeffington, and Constance Markievicz played an active role in both the cultural nationalist and physical force nationalist movements. From 1920 until mid-1921, a guerrilla war was fought between Irish nationalists and British troops and irregulars, called the Black and Tans, and after a truce was declared, the controversial Anglo-Irish Treaty was signed. This treaty partitioned Ireland into the Irish Free State in the south and west and a semiautonomous Ulster Province, which remained part of the United Kingdom but had its own parliament. It also sparked a civil war in the Irish Free State, which lasted until 1924. The Irish Free State remained an uneasy member of the British Commonwealth until it finally became a republic in 1949.

Being in a relatively unique position as a European former colony, Ireland emerged as a champion of the decolonization process, particularly at the United Nations from the late 1950s until the 1960s. Ireland was able to use its own anticolonial struggle to win the trust and respect of many leaders in African, Asian, and Latin American countries who were fighting for their own independence during this period. Because it was also a European country having strong ties with some of the colonial powers, particularly France, Ireland was able to adopt a brokering role in decolonization issues. Further, it earned a reputation as an internationally acceptable contributor to UN peacekeeping missions, many of which were located in newly independent countries that were still dealing with the legacies of colonialism.

Iron and Steel

Although many colonized regions—parts of North Africa, for example—had localized iron industries in the medieval period and earlier, the iron and steel industry was not developed more broadly for several reasons, including: limited markets within the colonies; the European colonial powers' overriding interest in their colonies as markets for manufactured goods, not as competitive producers; and various technological and geographic difficulties. The major exception in this regard was India, where the late eighteenth century saw an increased interest in promoting domestic iron production, initially for export and later for import substitution.

The East India Company supported a very unsuccessful enterprise at Porto Novo, south of Madras, in the 1820s, but it persisted, particularly as the growth of railways and other public works increased demand. A more modern plant, the Bengal Iron Works Company, was established in 1874, but after being refused a government guarantee on private investment, it closed in five years and was taken over a decade later by the Bengal Iron and Steel Company (BISCO). Less than highly successful, BISCO did produce pig and cast iron almost entirely for the colonial government and later failed in its attempt to produce steel for the private market. These enterprises were generally inadequately planned and undercapitalized.

In sharp contrast was the Tata Iron and Steel Company (TISCO), formed in 1907 by J. N. Tata, a man from a noted Bombay trading family who organized carefully and knew his market. When British investors refused to back a company run by an Indian, the Bombay business and financial community quickly provided the necessary capital. TISCO began producing iron in 1911 and steel the following year.

In the interwar period, South Africa, in part to provide substitutes for imports but largely for political reasons, also began to develop an iron and steel industry. Similarly, in postcolonial countries, political considerations have often made it appear desirable to develop an uneconomic iron and steel industry. But many of these have proven to be financial

drains on underdeveloped Third World economies. Demands for fiscal restraint made by the International Monetary Fund and other international lending institutions has forced governments to close down many of these plants. Still, some former colonized countries, such as Brazil and South Korea, have created internationally competitive steel industries.

Iroquois Federation

The Haudenasaunee (meaning "people of the long house"), or the Iroquois Federation, is not a tribe but a collection of indigenous peoples who forged a political and economic union. The Cayuga, Mohawk, Oneida, Onodaga, Seneca, and later the Tuscarora composed the confederacy. Together, they crafted an autochthonous democratic nation guided by "the great law of peace." The Six Nations lived in an expansive territory, stretching from southern Canada through northern Pennsylvania, situated between the French to the north and briefly the Dutch and then the British to the south. The size, sophistication, and location of the confederacy made it a formidable presence throughout the colonial period.

The Haudenasaunee played a fundamental role in shaping colonial relations in North America during the seventeenth and eighteenth centuries, and the course of these relations dramatically altered the fabric of indigenous life. Through their active participation in the fur trade, they cultivated relatively good relations with the Dutch and later the British, and with the acquisition of firearms, they extended their political influence over the Ohio Valley to the west. More adversarial relations characterized their interactions with the French, who had allied with the Algonquin peoples, traditional enemies of the Iroquois. An active participant in early conflicts such as the Beaver Wars, the confederacy later sought to maintain political neutrality, serving as a buffer between the

British and the French and a mediator between the Europeans and indigenous peoples. Although individuals and communities took sides in Queen Anne's War and King George's War, most Haudenasaunee opted out of these conflicts. Later, in the French and Indian War, the Iroquois divided their allegiances between the European powers. Importantly, the French withdrawal undermined the role and significance of the Iroquois Federation. During the Revolutionary War, most of the Six Nations remained loyal to the British, and following the American victory, even those who had supported the rebels lost much of their land and sovereignty. The War of Independence left in its wake disease, depopulation, dislocation, and social disintegration, prefiguring the ultimate fate of the Haudenasaunee under European colonialism. At the same time, it marked the beginning of a phase of colonialism in which the Iroquois would struggle with the institutions and ills of American empire to survive and, more recently, revive as a people.

Islam

Muslims comprise almost a fifth of the world's population. They do not, of course, form a monolithic entity; rather, they are divided between a Sunni majority and a Shiite minority of about 12 percent. The differences between these groups go back to the early days of Islam, and the Shiites themselves are divided into several various traditions. But there are also other differences, including the complex and changing interaction between the teachings of Islam and local cultures and histories. The nation with the world's largest Muslim population is to be found not in Islam's historical heartland but on its southeastern frontier—Indonesia. To the west, the old Islamic world extends to the Atlantic, in Morocco and Senegal.

Many, though not all, of these Islamic lands have been through a colonial or quasi-colonial experience. The main exceptions are Iran, Turkey, Afghanistan, and the Arabian Peninsula (with the

exception of the coastal sheikhdoms of Aden, Oman, Kuwait, and Qatar, which were British protectorates or quasi protectorates). Some modern nations, such as Senegal and Algeria, are former colonies, whereas others, such as Morocco, were protectorates. (There was often little practical difference, but the latter implied a greater role for traditional institutions.) After World War I, Palestine, Transjordan, and Iraq became British mandates, and Syria and Lebanon French ones. The Sudan, for all practical purposes a British colony, was officially a condominium (ruled in theory by Egypt and Britain). British interests in Egypt derived essentially from the strategic importance of the Suez Canal. Egypt was never a colony, but its extensive foreign debts paved the way, in the 1880s, to a situation in which real power was in British hands. Egypt was granted a qualified independence in 1922, with four important limitations that were a lasting source of friction. The status of the Indian subcontinent was different yet; in 1876, Benjamin Disraeli declared Queen Victoria empress of India.

To the complex interplay between traditional institutions and Islam was added the variable of the culture of the ruling power, often French or British, but Italian in Libya and Dutch in Indonesia.

In 1799, Napoleon's forces invaded Egypt, then a Mamluk state, nominally part of the Ottoman domain, and one of the world's two great surviving Islamic empires, with its capital at Istanbul (the other was the Mughal Empire, on the Indian subcontinent). The French occupation proved a brief one. Although this was not the first occasion on which Christian forces had defeated a Muslim state, it had profound symbolic meaning in the Islamic world. It was a dramatic demonstration of the military power and technological superiority of industrial Europe. In the century that followed, the creation of the conquest states usually called colonies offered a profound and disquieting challenge, to which Muslims responded in a variety of ways.

A very widespread response was to fight against the colonizing power—Dipa Negara's jihad against the Dutch in Indonesia and the 1857 war that British colonialists called the Indian Mutiny are examples. The latter was fought by supporters of the last Mughal emperor and led to his deposition. Colonial rulers lived in the (unfounded) fear of pan-Islamic conspiracies and insurrections, but

Islamic loyalties did not necessarily lead to concerted action.

The French conquest of Algeria began with the capture of Algiers in 1830. Abd al-Qadir, like many resistance leaders, was a sheikh of a Sufi brotherhood, in this case the Qadiriya. He responded to French encroachment by creating a new state in western Algeria, run on Islamic lines; it lasted for some years, but was finally defeated in 1847. The Sanusiyya, another Sufi order, was founded by a scholar-saint from northwestern Algeria who died in 1859. His followers established lodges in the desert, which were used by those involved in Saharan trade. Later, the Sanusiyya opposed the Italian occupation of Libya. In World War II, they fought on the Allied side. The Grand Sanusi's descendant, Idris, the head of the Sanusiyya, became the first and last king of Libya; he was overthrown by Mu'ammar Gadhafi in 1969, eighteen years after independence.

Such Mahdism, or religious nationalism, is central to Shia Islam, but among Sunni Muslims, it has tended to flourish only on the margins of the Islamic world. The Mahdi is the Awaited One who will restore the world to justice and whose coming heralds the Endtime. Muhammad Ahmad ibn Abdullah was a Sufi sheikh, living in what is now the Republic of Sudan, who claimed to be the Mahdi, awaited at the end of an (Islamic) century—he made his proclamation in 1298 A.H. (November 1882). The movement he founded survived his death in 1885. He did not set out to create a modern nation; he believed that his mission was international, and his successor attempted to invade both Ethiopia and Egypt. The Mahdist state, however, had much the same boundaries as modern Sudan. By the time he died, that state had a well-developed organization, a system of taxation, and its own mint. It survived until British conquest in 1898. The Mahdi's claims created problems then and later for Sudanese who admired his patriotism and piety but could not accept him as the Mahdi. They remember him as *mujaddid*, a Renewer of Islam, and as a patriot, Abu'l Istiqlal, Father of Independence.

Muhammad Hassan, whom the British called the Mad Mullah, led a similar, continued struggle against colonial rule in the desert interior of Somalia. He rose to prominence in 1899 and was finally defeated in 1920. He is also remembered as

Somalia's greatest poet. He, too, was a Sufi sheikh and hoped that the creation of such a brotherhood could unite Somalia's disunited and warring clans. All these leaders recognized the value of modern weapons but did not embrace Western education or modernization in general.

An alternative model was created in the mountains of the Rif, in Spanish Morocco, in the 1920s, under the leadership of Abd el-krim, a well-educated man who had worked for the Spanish. In 1921, asked what he was seeking, he replied, "A country with a government and a flag." This Berber republic

Worshippers praying around the holy Ka'bah during the Hajj, or annual Islamic pilgrimage to Mecca on the Arabian peninsula, in the 1880s. The city's remoteness meant that Ottoman imperial control applied only lightly to the region, which is now part of Saudi Arabia. (Library of Congress)

in Morocco fell to overwhelming force in 1926. But elsewhere after World War I, several new independent Islamic nations were established. The Ottoman Empire was in decline in the nineteenth century; it lost its provinces in the west—Romania and Serbia in 1828; Greece in 1830; and Bosnia, Cyprus, and Bulgaria in 1878. Despite this, as colonialism expanded, many Muslims looked to the Ottoman sultan for leadership. In 1914, the sultan declared a jihad against the Allies. His defeat led to his deposition and the end of the sultanate. The military leader, Kemal Ataturk, the architect of modern Turkey, created a modern independent state, with its core ideology not in Islam but in Turkish identity. Its secularism was symbolized by its adoption of the Roman alphabet rather than Arabic script. Persia (later Iran) succeeded in maintaining its independence against both British and Russian threats under a dynamic soldier who became Reza Shah Pahlavi, founding a dynasty that ended with the Ayatullah Khomeini's revolution in 1979. By 1926, Abd al-Aziz ibn Saud had succeeded in uniting most of the Arabian Peninsula and founded a dynasty. His name is preserved in the country's name, Saudi Arabia. The orthodoxy and conservatism of Saudi Arabia's rulers contrast with the relative secularism of Turkey's leaders.

Military and political encounters comprised only one dimension of the interactions between Islam and the West. Intellectuals experienced the technological and military superiority of Europe both as a threat and a challenge, to which they responded in different ways. Some believed that modern technology and European liberal values were inherently incompatible with their Islamic inheritance. Others thought differently. Khayr-al-Din, prime minister of Tunisia in the 1870s, urged Muslims to absorb what was of value in Western life and thought.

Perhaps the greatest and certainly the most influential of the intellectuals who tried to reconcile Islam with modernity was Jamal ad-din al-Afghani (1839–1898). He believed that Muslims should master the technology of the Western world while simultaneously seeking spiritual renewal by returning to their own religious roots. The movement he founded was called the Salafiyya (from *salaf*, or ancestor). Its members sought to distinguish the core of Islamic belief

from later accretions. They were hostile to the Sufi orders and wanted to combine it with the best of Western education.

Al-Afghani's disciple, Muhammad Abduh (1849–1905), who expounded his teachings at Cairo's great mosque-university, has been called "modern Africa's most important intellectual." Al-Afghani's vision was an international one—he hoped that the Ottoman sultan could realize it. Muhammad Abduh, however, thought in nationalist terms. In the 1920s and 1930s, the Salafiyya was a major force in protonationalist movements in Morocco, Tunisia, and Algeria, but it was unable to generate mass support and was eclipsed by more radical parties, with greater popular appeal. In time, the Salafiyya became identified with a conservative "fundamentalism."

The same pattern is evident in Indonesia. In 1911, the Muhammadiyah movement was founded in the Javanese city Jogjakarta by Ahmad Dahlan and others who had studied in Cairo under Muhammad Abduh's disciples; it emphasized education and social reform. The first major nationalist movement was Sarekat Islam (1912); its leaders looked to Islam as a unifying ideology in an archipelago of immense linguistic and ethnic diversity.

Sir Sayyid Ahmad Khan (1817–1898) was persuaded of the futility of armed resistance by the failure of the Indian Mutiny. He founded the Anglo-Oriental College of Aligarh, modeled on Cambridge, so that Muslims could acquire a Western education and compete with Hindus for positions in government and elsewhere. Al-Afghani denounced him as an Anglophile.

In British India, the poet Muhammad Iqbal, who had studied at Cambridge and Munich, was an influential advocate of an independent state for India's Muslims. He died in 1938, and it was Mohammad Jinnah, head of the Muslim League, who was, in practical terms, the founder of Pakistan.

International boundaries, among the most significant and enduring consequences of the colonial experience, have also been involved in the colonial legacies of Islam. The Republic of Sudan consisted of an Arabic-speaking and Muslim north and a south whose peoples, such as the Dinka, were either traditionalist or Christian. This has led to endemic civil war. In Nigeria, the polarity is less clear—many (southern) Yoruba are Muslims; in central Nigeria, on the southern

frontier of the Muslim north, clashes between Christians and Muslims have become endemic.

So-called Islamic fundamentalism (the label is unsatisfactory, though used here for convenience) is largely a phenomenon of the postcolonial era. Radical Islamists challenge Muslim governments in Egypt, Algeria, and elsewhere because of their failures to translate Islamic ideals into practice. To some extent, Islamic fundamentalism has inherited the same kind of aspirations that once surrounded nationalism. It was hoped that independence would lead to a better life; the continuing experience of poverty and unemployment was profoundly disillusioning. The first of Africa's so-called fundamentalist Islamic movements was the Muslim Brotherhood, founded in Egypt by Hasan al-Banna in 1928. Its subsequent growth reflected popular dissatisfaction with elite politics and also the hardships inflicted by a worldwide economic depression. Those in its extremist wing—though not Banna himself—advocated secrecy and terrorism.

Iqbal hoped that a Muslim state would be able to put Islamic ideals of the just society into practice, and many others have shared this aspiration. Human realities always fall short of the ideal, but the issues with which Islamic intellectuals wrestled, the interaction between a religion shaped in the remote past, and the challenges of a changing and largely secular world are of enduring significance.

Isolationism

Isolationism has been a powerful influence, especially in U.S. diplomacy since the Declaration of Independence was issued in 1776. However, dis-

tinctions need to be made between isolationism and unilateralism, and it must be clear that notions of isolation were primarily confined to the level of politics and involvement in European wars. Commercial trade and cultural influence and the pursuit of Open Door economic conditions rarely prevented the United States from expanding. By the late 1950s, the revisionist historian William Appleman Williams characterized U.S. isolationism as a “legend.”

In 1776, Thomas Paine, author of *Common Sense*, argued that there ought to be “no partial connection with any part” of Europe and that it was in America’s interest to “steer clear of European contentions.” Later, President George Washington warned in his farewell address to “steer clear of permanent alliances with any portion of the foreign world,” and Thomas Jefferson warned against “entangling alliances.” But isolationism was aimed at other powers—by and large, European—and thus did not prevent the rapid border colonization of the United States through the first half of the nineteenth century. In what perhaps was his most famous speech, delivered in 1821, Secretary of State John Quincy Adams argued that the United States should set an example to the world but that “she goes not abroad in search of monsters to destroy. She is the well wisher to the freedom and independence of all. She is the champion and vindicator of her own.” By 1823, in a message that was later known as a doctrine, President James Monroe warned the European powers against further colonization in the Western Hemisphere and said that, in return, the United States would stay out of affairs that only concerned Europe. Hence, isolationism imparted a powerful set of values and beliefs throughout the history of U.S. diplomacy.

Fundamentally, isolationism was intended to preserve U.S. freedom of action and the ability to act unilaterally. Cultural and commercial exchange were constant features of U.S. diplomacy, however. The isolationist sentiment expressed itself most vociferously either just prior to periods of U.S. expansion and engagement or following World War I. The Senate rejected membership in the League of Nations in 1919 because Article 10 mandated international responses to armed aggression.

During the 1930s, the isolationists sought to preserve U.S. unilateralism and prevented inter-

vention in European affairs. They were less concerned about getting involved in Asia. Following the conclusions of the Nye Committee investigations into the origins of U.S. involvement in World War I, which found that the arms industry was influential in that regard, the isolationists were able to pass the Neutrality Act of 1935. According to that act, should war occur in Europe, the United States could not ship weapons to the belligerent powers. The act was updated the following year to prevent U.S. involvement in the Spanish civil war. However, in 1937, economic necessities during the Great Depression allowed foreign powers to purchase munitions if they paid cash and collected the munitions themselves. The following year, President Franklin Roosevelt began pulling the United States out of the depression with an order to build battleships. Despite secret involvement in the Atlantic war, the Japanese attack on Pearl Harbor finally drew the United States out of isolation.

By the end of World War II, the United States had a second chance at world leadership, and isolationism declined but never disappeared from the politics of U.S. diplomacy. The United States joined multilateral institutions such as the United Nations and security pacts such as the Rio Treaty (1947) and the North Atlantic Treaty Organization (NATO) (1949).

Israel

Founded as a Jewish state in 1948 in roughly 70 percent of the territory of the old British mandate of Palestine, Israel occupies a small area on the eastern shore of the Mediterranean, flanked by Lebanon to the north, Jordan and Syria to the east, and Egypt to the south. Although Jews see the creation of Israel as the culmination of the nationalist Zionist dream, Palestinians and Arabs generally

have seen the country as a European-style, colonialist interloper in the region and have fought numerous wars with it since its creation.

Since their exile from the region under the Roman Empire in the first century C.E., Jews have made a return to Israel a central tenet of their faith. In the late nineteenth century, an Austrian Jewish journalist named Theodore Herzl first proposed the idea of creating a modern Jewish state in Palestine. During the last decades of the nineteenth century and the first decades of the twentieth, a trickle of Jews moved into Palestine, which was then a province of the Ottoman Empire.

With the collapse of that empire in World War I, Britain took control of the territory with a League of Nations mandate. In 1917, British foreign secretary Arthur Balfour issued a declaration calling for the creation of a “National Home for the Jewish People” in Palestine. At the same time, he said this entity should not “prejudice the civil and religious rights of existing non-Jewish communities.” As Jews—fleeing Nazi Europe—poured into Palestine in the 1930s and 1940s, conflicts between Arabs and Jews rose, even as the British announced various plans to either divide Palestine into Jewish and Arab states or create one state with equal rights for all. In 1948, the British abandoned Palestine as Jews and Arabs went to war to determine its future.

For most Jews, Israel was the culmination of a 2,000-year-old spiritual quest and a half-century Zionist effort. Moreover, in the wake of the Holocaust, Jews saw their only security was having a strong state of their own. For Palestinians—many of whom fled the country on its birth—and for Arabs generally, the establishment of Israel represented a twentieth-century version of the Crusades, when Europeans forcefully imposed themselves on Arab territory. Ironically, early Jewish immigration to Israel was soon supplemented by Jews from the Middle East and North Africa fleeing an increasingly hostile atmosphere in the Arab world caused by the creation of Israel.

Arab perceptions of Israel as a colonial interloper were made more acute by the Sinai War of 1956—in which Israel sided with Britain and France as those two waning colonial powers attacked Egypt in an effort to reassert their control over the Suez Canal—and the Six-Day War of 1967, when Israel seized Egyptian, Jordanian, and

Syrian territory. In the years since, Israel annexed East Jerusalem and the Golan Heights while establishing de facto jurisdiction over much of the West Bank through the building of vast settlements.

A Palestinian uprising in 1987 led to peace efforts that would have presumably resulted in a Palestinian state in the Occupied Territories of Gaza and the West Bank. Thus far, that has not come about, as a new round of fighting—beginning in 2000—engulfed the territories.

Istanbul

Istanbul, known in earlier times as Byzantium and Constantinople, was a capital of the Ottoman Empire and then of the Turkish Republic (until 1923). The city is largely a product of the millennia-long interaction between Eastern Europe and Asia, and it represents a unique mixture of the Eastern European and Asian cultures. Originally founded by the Greeks in 667 B.C., the ancient city became a strategically important seaport due to its position on the Bosphorus, the 32-kilometer (20-mile) strait that connects the Black Sea and the Sea of Marmara and separates Asia from Europe.

Emperor Constantine the First selected it as the capital of the Byzantine Empire in 324 C.E. Gradually, Constantinople became the largest and most prosperous city in Europe, benefiting from its strategic location and a vibrant trade. However, the city could never recover from destruction brought by the Fourth Crusade in 1203 and 1204. In 1453, Constantinople was taken over by the Turks.

For many centuries, the city was a spiritual and political center of the Orthodox Church and the Byzantium Empire. In the early days, it was situated entirely on the European side and was encircled by a wall. The ancient part of the city was home to numerous Greek Orthodox churches, palaces, and public buildings, with monuments that survived from the Byzantium past. One of the most magnificent monuments and symbols of the city is the Orthodox Church, which was built in the

sixth century and converted into the Great Hagia Sophia Mosque in the fifteenth century. In 1509, a devastating earthquake seriously damaged many parts of the city. After the earthquake, the Turkish sultans ordered that the city be replanned, and they built numerous public buildings, including magnificent mosques, palaces, public baths, and gardens.

Constantinople experienced a new wave of considerable changes during the nineteenth and early twentieth centuries with the Turkish attempt to catch up with the West and to modernize the country. The city became a home for modern factories, including textile, weaponry, shipbuilding, and other industries, and it was significantly expanding into new areas across the Bosphorus. In June 1883, a railroad, the renowned *Oriental Express*, connected Constantinople with Paris via Vienna. Yet the empire could not cope with the rise of separatism in its numerous provinces and pressure from European superpowers, and it collapsed after World War I.

After the war, Britain, France, and Italy occupied the city, from 1918 until 1923. In 1923, the Turkish republican government established Ankara as the capital of the secular Turkish Republic, but Constantinople (known as Istanbul from 1930) has remained a major industrial, financial, and cultural city of the republic. By the end of the twentieth century, it had grown into the third largest city in Europe.

Italian Empire

Achieving nationhood in 1861, Italy thereafter redirected its energies to empire, driven in part by memories of Rome's past greatness and domination of Europe. After concluding its unification in 1871 with the acquisition of Venezia and the Papal States, Italy turned irredentist, focusing on the ingathering of Italian-speaking peoples in Austria, Trieste, the Balkans, and eastern Anatolia—areas

once ruled from Rome. As a consequence of the Italo-Turkish War (1912), Italy gained the Dodecanese Islands, and according to secret World War I negotiations, it was to receive coastal territory in southwestern Anatolia. Italy's claim to the latter was never made effective, but it did preserve its hold on the Dodecanese (despite Greek objections) until it was defeated in World War II. Italy's interest in Austria was discouraged by Adolf Hitler's occupation of that country in 1938. Benito Mussolini invaded and conquered Albania in 1939 before advancing against Greece, where his military forces suffered an embarrassing defeat.

Italy's African interests were stirred, in part, by Germany's domination in Europe, leaving no Italian role. Italians had been active in Africa in the nineteenth century as explorers, missionaries, and trade concessionaires. Italian colonial ambitions evidenced a strong desire to build empire as a reflection of national greatness and supposed commitment to "the civilizing mission." An industrializing northern Italy needed Africa's raw materials and potential markets. Italian nationalists voiced concern about the outflow of Italian emigrants to the United States, Canada, Argentina, and Australia and suggested Italy resettle them instead in the colonies, where they could better serve the home country. Italy eventually claimed three African possessions: Eritrea, Somaliland, and Libya. Its several campaigns to subjugate Ethiopia failed miserably.

Italy's initial African venture came in the 1860s with a missionary and commercial presence at Massawa and later at Aseb on the Red Sea coast. From there, the Italians pushed into the Eritrean highlands, a move forestalled by the Ethiopians at the Battle of Dogali in 1887. But Ethiopia, distracted by the Mahdist, or religious-nationalist, threat in the west, ultimately left Eritrea undefended and open to Italian occupation. Emperor Menelik II, following a victory over the Italians at Adwa in 1896, abandoned the opportunity to reclaim Eritrea for Ethiopia, uncertain of Italy's reaction. Eritrea served as springboard for Italy's invasion of Ethiopia in 1896 and again in 1935, and on both occasions, significant numbers of Eritrean colonial troops were utilized. Eritrea was probably the most fully developed of Italy's colonies, and a significant number of Italian emigrants were settled there. The Fascist proscription against misce-

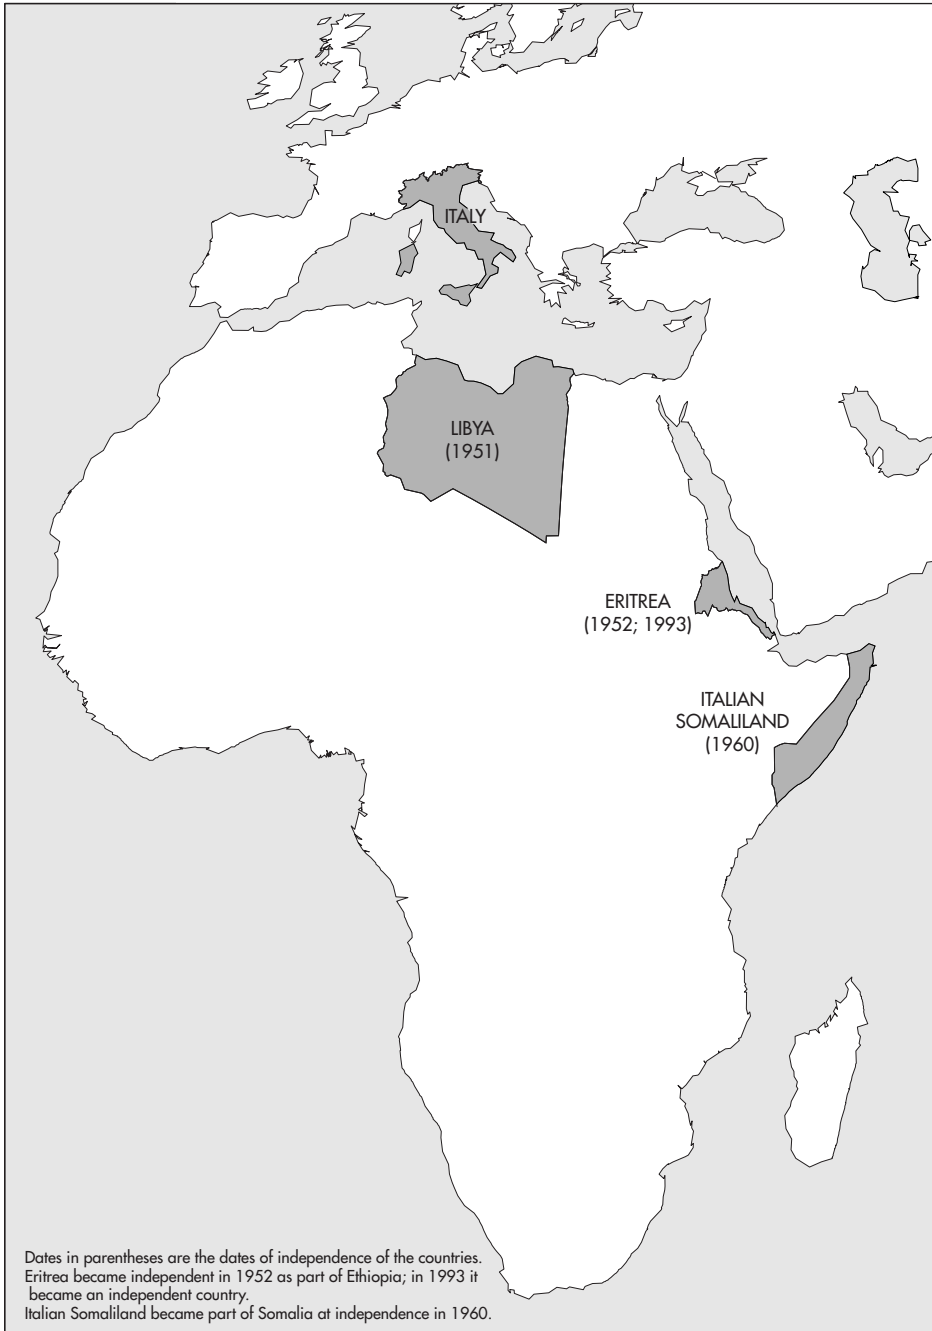

genation in the colony largely failed, as it did in Italy's other colonies.

Following Italy's defeat in 1941, Eritrea came under British military administration until 1952, when the United Nations approved its federation with Ethiopia, a union opposed by some Eritrean groups. In 1962, Emperor Haile Selassie unilaterally ended the federation, annexing the region to Ethiopia and consequently provoking a thirty-year Eritrean struggle to win independence.

Italy's Somaliland colony along the Indian Ocean coast emerged in three phases. In 1888 and 1889, Italy claimed the Majeerteen region, signing treaties of protection with several Somali clan leaders. Later, the Banaadir coast was added, and in 1925, the British handed over Somali territory that had been part of their East African protectorate. As in Eritrea, Italian expansion inland was contested by Ethiopia's emperor Menelik II, who occupied much of the Ogadeen region, blocking Italian moves in that direction. Disagreement over the boundary separating the two states and confrontation over access to wells and grazing lands led, predictably, to military skirmishes, with the most significant incident at Walwal in 1934 providing a pretext for Italy's invasion of Ethiopia shortly thereafter. During that 1935–1941 war, Italy united its colonial Somalis with those of the Ethiopian Ogadeen, governing them within a single administrative unit and unwittingly cultivating a nascent Somali nationalism. With Italy's defeat, a British military administration governed Somaliland until 1949, when it was returned to Italy as a UN mandate for ten years. In 1960, Italian control ended as the British and Italian Somali areas were united into the independent nation of Somalia.

Although initially more interested in Tunisia than in Libya, Italy settled for the latter, grudgingly accepting French claims to Tunisia. To secure its colony, it invaded Libya in 1911, wresting it from the Ottomans. Although Turkish garrisons offered stiff resistance, the Ottoman state was preoccupied with the threat of a Balkans war and negotiated cession. Italian forces occupied Libyan coastal towns, but they had less success in controlling interior regions, where they encountered resistance from the local Arab-Berber populations, particularly followers associated with the Sanusi (an Islamic brotherhood) in Cyrenaica. Resistance emerged also in Tripolitania, a region less unified

ITALIAN EMPIRE

and more suspicious of Sanusi leadership. During World War I, the Sanusis courted the Allies, hoping to use the opportunity to defeat Italy, but instead saw Italy's colonization internationally recognized. Under the Italian Fascists, the Second Italo-Sanusi War ensued, with the Sanusi leader, Umar al-Mukhtar, mobilizing his followers. Libya was not fully pacified until 1931. Italy struggled for twenty years before consolidating its rule, and the wars proved to be among the most devastating and brutal in the African colonial era.

Italy viewed Libya as its "Fourth Shore," like an Italian province; it settled as many as 150,000 émigrés there and invested heavily in basic economic infrastructure, more to serve the needs of the settlers and the home country than the indigenes. During World War II, Sanusi leaders again aided the Allies, and Libya became a focal point of the North African campaigns—an effort to defeat Germany's Erwin Rommel and safeguard Egypt and the Suez Canal. With Italy's defeat, Cyrenaica and Tripolitania were placed under British military occupation, with the interior Fezzan under French control. The United Nations decided Libya's future, and in the absence of any Great Power consensus, Libya was granted independence in 1951 as a federal monarchy, with the Sanusi leader, Sayid Idris as Sanusi, as monarch—a settlement accepted only grudgingly by all regions of the country.

Italo-Ethiopian Wars

Ethiopia engaged Italy in two major wars in the late nineteenth and early twentieth centuries. Italy viewed Ethiopia as an essential link between its Eritrean and Somaliland colonies, the core of a

projected large East African empire, and as a region abundant in fertile soil and resources, suitable for extensive European settlement.

In 1887, the Ethiopians defeated a small Italian force at Dogali, as it attempted to establish a presence in the Eritrean highlands from its base at Massawa. The Italians used a later opportunity, the Mahdist invasion of Ethiopia, to secure Eritrea while the Ethiopians were otherwise preoccupied. Emperor Menelik II combated the Italians at Adwa in 1896 as Italy endeavored to realize its claim to an Ethiopian protectorate based on the notorious and duplicitous Treaty of Wuchale (1889). Again, the Italians suffered a humiliating defeat.

Reacting to its failure to dominate Ethiopia economically and magnifying a minor border incident at Walwal in the Ogadeen in 1934, Italy again invaded Ethiopia from Eritrea and Somaliland in 1935, using overwhelming force and a full array of modern weapons and technology, including tanks, airplanes, bombs, and poison gas. With his appeal to the League of Nations dismissed and Ethiopian forces battered in conventional warfare, Haile Selassie, emperor of Ethiopia, opted for exile in Britain, and Italian forces occupied the country. The emperor used the opportunity to continue to lobby for international support and waged an effective propaganda campaign. The Ethiopians subsequently turned to guerrilla warfare, employing surprise attacks, captured arms, and ammunition and mobilizing civilian support to keep the overextended Italians off guard and weaken their commitment. The aerial distribution of leaflets bolstered guerrilla loyalty while demoralizing Italian and colonial troops, who were encouraged to defect. By 1934, as Italy joined in World War II, the Italians invested less in the Ethiopian campaign and relied more heavily on their colonial levies. Italy's invasion of neighboring British and French colonies ensured that, by 1940, the guerrillas were joined by Allied troops from Britain, South Africa, France, Belgium, and their various colonies to liberate Ethiopia, allowing the return of the emperor to Addis Ababa in May 1941. The Italo-Ethiopian War marked one of the last efforts by a European power to colonize Africa while simultaneously marking the beginning of the anticolonial struggle that would sweep Africa in the postwar period.

After the war, relations with Italy remained strained as Ethiopia struggled with the repatriation

Ivan IV (1530–1584)

Ivan IV of Russia (Ivan the Terrible) began Russia's great territorial expansion and made domestic changes that facilitated future imperialist claims. He placed the peasantry in a service system, which led to gradual enserfment. As burdens on the peasants increased, many fled to Russia's borderlands, where they eventually formed Cossack armies. These groups later played a key role in expanding and pacifying Russia's borders.

Utilizing new European weaponry and expertise, Ivan turned his armies against the Tatar princes who ruled the rich southern khanates of Crimea, Astrakhan, and Kazan. These khanates controlled the rich international trade routes between Central Asia, the Urals, and Russia. Ivan defeated Kazan in 1552, breaking the back of the Tatars in the Middle Volga region and opening the way for the annexation of Astrakhan in 1554. Ivan was less successful with the Crimean khanate that blocked Russia's access to the Black Sea. Although he was unable to conquer it, his military successes set the stage for Catherine the Great's acquisitions of this key region.

Ivan also attempted to increase Russia's holdings on the Baltic Sea. There, he was less successful. His greatest contribution to Russian territorial expansion, however, was his initiation of the conquest of Siberia. In 1558, Novgorod merchant Grigory Stroganov secured several state

land concessions east of Moscow, some of which extended beyond the Urals. Stroganov chose a Cossack, Ermak Timofeyev (known as Yermak), to lead an expedition into the unexplored eastern territories. Yermak defeated the Tatar armies there and established trade connections, which laid the groundwork for future Russian acquisitions in Siberia.

Ivory

Ivory has long been an important component of African trading networks. Because the tusks of East African elephants are soft and easy to carve, they had been highly sought by Indian craftspeople for at least 1,000 years before the nineteenth century. European and American demand for items such as combs, piano keys, and billiard balls pushed the southeast African ivory trade to new and unforeseen levels in the nineteenth century. West African ivory, which was of a harder consistency, was also heavily exported and made into knife handles, among other things, although the East African system eclipsed it as the century progressed. Indeed, ivory became a profitable primary export during this period, particularly in East Africa and Zanzibar.

The ivory was harvested by specialized groups of elephant hunters in the interior, who then traded the tusks to merchants. These merchants used the long-established East African Unyamwezi caravan trading network to transport the ivory to the coast for export. As the century progressed and elephant populations declined, the hunting region expanded farther and farther into the eastern Congo region as hunters tried to find new sources of ivory. This "moving frontier" of ivory trading was concomitant with the trade in slaves, fostering the development of an inland system of trading posts, provisioning stops, and tolls dominated by Arab and Swahili intermediaries. It also promoted warfare and raiding between communities as

competing traders attempted to influence local leaders to increase the amounts of ivory and slaves supplied to the caravans. The entrepôt island of Zanzibar, controlled by Omani sultans and later by British imperialists, played a key role in regulating the trade through the imposition of tariffs. In this way, the ivory trade helped Arab entrepreneurs accumulate enough wealth to establish clove planta-

tions, and it facilitated the growth of a class of wealthy landowners on Zanzibar itself as well as along the coast of Tanganyika.

J

Jainism

Jainism is an Indian philosophical and religious movement founded in the fifth century B.C.E. It is still a viable and important tradition, although encompassing only a very small minority of the Indian religious community (less than 0.5 percent). Its impact over the centuries has been enormous, however, and it continues to exercise great influence. The founder of the Jain religion, Vardhamana (c. 540–c. 468 B.C.E.)—referred to as Nigantha Nataputta in Buddhist scripture—was an aristocratic member of the warrior clan of the Jnatikas. He was born in the city of Bihar in the area of modern Nepal. He left home at thirty to seek enlightenment, practiced austerities for twelve years, and attained enlightenment and liberation. He is considered the twenty-fourth *Tirthankara* (Ford-maker, or one who has found a way to cross over to spiritual perfection) of the Jain tradition, each of whom renews the tradition in his age of the world. He became known as the Mahavira, “The Great Hero,” and was considered a “completed soul” and a “spiritual conqueror” (*jina*). Jain religion has its origins in Indus Valley culture before the appearance of the Aryans and Vedic religion. The career of the Mahavira is considered to be a reaction against Vedic practices and the rise of Upanishadic Hinduism.

Jain cosmology is complex and extensive, its universe having dimensions approaching those theorized by modern astronomers. Jain religious

practice eschewed the ritualism of Vedic religion and developed its own unique doctrines of the cycle of rebirth (*samsara*), karma, and release from *samsara*. Fundamental to Jain religion is the notion that there is a living entity—a *jiva*, or “life-monad,”—in each person. These *jivas* are also present in all material things, from gods to rocks, and are bright and intelligent. These life-monads are trapped in *samsara* through the actions of karma, conceived as a very fine form of matter, produced in varying degrees by different types of actions. Release of the *jiva* from *samsara* can be accomplished by the dissipation of accumulated karma. Central to the dissipation of karma and critical to Jain religious practice is the doctrine of *ahimsa*, or nonviolence toward any living being in any of the five classes of living things. Wicked acts result in the accumulation of heavy and infelicitous karma, which in turn results in more rebirths. Suffering and penance can cleanse one of karma already acquired. Adherence to the practice of *ahimsa* further reduces the acquisition of karma.

Jainism spread during the reign of Chandragupta Maurya (c. 317–293 B.C.E.). An early schism in the community resulted in the development of the two major sects: the Digambaras (The Sky-Clad) and the Svetambaras (The White-Clad). The Digambaras rejected all possessions, including clothing. The Svetambaras adopted white clothing and were less rigorous in their practice. Both sects still exist, with the Svetambaras

being in the majority. Although there are distinct differences between the two sects over issues of ascetic practices and the popular use of images of Jain saints, both communities are essentially in agreement in regard to fundamental matters of philosophy and doctrine. The Jain community in India traditionally encouraged learning and constructed important libraries, preserving both Jain learning and the writings of other religious communities. Interaction between Jain intellectuals and other Indian traditions has made the Jains an important factor in the development of a greater Indian culture, including literature, art, sculpture, and architecture.

In the period of the British Raj, the teaching of the Jains had perhaps its most profound and important impact. The Jain doctrine of ahimsa, along with the teachings of Henry David Thoreau on civil disobedience, were embodied in the person and career of Mohandas Gandhi, influenced by the life and work of Jain layman Raychandbhai Metha. The Jain commitment to education, its concern for all life, and its simple, sustainable lifestyle have had an enormous impact on Indian society and have begun to affect or complement similar thinking in Western countries such as the United Kingdom and the United States, which have small but important Jain communities.

Jakarta

Jakarta is Indonesia's capital, located at the mouth of the Ciliwung River on Java's northwest coast. Its beginnings go back to the twelfth century, when Jakarta, then known as Sunda Kelapa, was controlled by the Hindu-Javanese kingdom of Pajajaran. With its excellent harbor, Sunda Kelapa remained an important entrepôt for the spice trade into the early modern period. Competition for international trade was fierce in the sixteenth century, and the position of the Hindu-Javanese port was threatened by neighboring Muslim states, particularly Banten to the west of Sunda Kelapa. Seek-

ing powerful allies, Sunda Kelapa agreed in 1522 to allow the newly arrived Portuguese to build a fort there, but the Sultanate of Banten defeated the Portuguese, made Sunda Kelapa a vassal state, and renamed it Jayakarta. Dutch merchants working under the Dutch East India Company, or VOC, had their eyes on Jayakarta as a center for their Asian trading empire, and in 1619, they beat out rival English and Indonesian fleets and seized Jayakarta, renaming it Batavia after their ancestral Germanic tribespeople in the Netherlands, the Batavians. The VOC quickly erected city walls and a strong fort, ever fearful of Javanese reprisals, and only later began settling outside its walls.

Although the city of Batavia was Dutch, its inhabitants were mostly non-Dutch; for example, of the 27,068 Batavian residents listed in 1673, only 2,024 were European. Asian slaves were the largest group in VOC Batavia, and Chinese, Arabs, Indonesians, Asian Christians, and Eurasians also figured prominently in the period. Batavia was a melting pot, and Chinese, European, and Indonesian culture began to assume distinctly Batavian hybrid forms there. Coffee plantations, Chinese sugarcane fields, and large country estates spread out from Batavia in the eighteenth century as Batavia proper, like the VOC itself, went into decline. Situated on marshy, malarial terrain, old Batavia gained a reputation as a graveyard for Europeans. The Netherlands took over the colony from the VOC in the nineteenth century, and Batavia's environs continued to grow, including new port facilities in 1886. By 1900, the population of Batavia stood at 116,000 (down from 173,000 in 1779); from 1900 until World War II, it increased to a half million, with Europeans and Eurasians making up less than 5 percent of the inhabitants.

Drastic change came for Batavia when the Japanese invaded and took the city in 1942; they interned the Europeans and renamed the city Jakarta after its earlier appellation, Jayakarta. Events moved quickly between 1945 and 1949 as Jakarta fell into Indonesian hands for a few months after the Japanese surrender, then came under British Allied and Dutch control, and was finally handed over permanently to the newly independent Indonesia in December 1949.

James, C. L. R. (1901–1989)

Cyril Lionel Robert James, usually known as C. L. R. James, was born on the Caribbean island of Trinidad. He was a writer, political activist, historian, and intellectual Marxist. By the 1930s, he had established himself as a leading participant in the pan-Africanist, Trotskyist, and Caribbean independence movements. James's life was dedicated to the study of the colonial condition and to activism—aimed at emancipation from colonialism and neocolonialism. It is this thought and action that would see C. L. R. James emerge not only as one of the leading Marxist intellectuals of the twentieth century but also as among those in the forefront of anticolonial struggles in the Caribbean and Africa and in Afro-America working-class struggles.

James received his early formal education at Queen's Royal College in Trinidad, a secondary school modeled on the British public school system. This education prepared him and fellow colonials to be part of the British middle class. However, it was James's informal education that prepared him for his roles as political activist and intellectual. He acquired this education by observing village life and games of cricket through the window of his humble home and by the tutoring provided by his mother and aunts. This early part of his life is examined in his semiautobiographical classic, *Beyond a Boundary* (1963).

James left Trinidad for England in 1932. He lived there until 1938 and made a living by writing for newspapers on cricket—a sport that was one of his lifelong passions. Though he never attended a university, he became a leading Marxist thinker and historian. His most influential work, *The Black Jacobins* (1938), was written while he was in England. In this work, James analyzed the Haitian Revolution (1791), led by François Toussaint L'Ouverture, as a model of revolutionary struggle.

In 1938, James went to the United States and stayed there until he was deported to Britain in 1953. While in the United States, he became active in left-wing politics. He worked in anti-Stalinist Marxist circles and became associated with the in-

dependent Socialist Worker's Party (SWP). In 1940, he left the SWP to join the new Worker's Party. During this period, James helped to organize black sharecroppers in the southern states and emerged as a leading Trotskyite theoretician. He saw socialism as a vehicle for pan-Africanism and believed that people of African heritage could be the engine that drove successful social change and that this was especially so for African Americans.

Five years after his return to England in 1958, James was invited by Eric Williams, the chief minister of Trinidad and Tobago, to help in the nationalist movement symbolized by Williams's political party, the People's National Movement (PNM). These two individuals had a long history together. Williams was James's student, protégé, political ally, and political enemy—in that order. James returned to Trinidad to work for West Indian political independence but left Trinidad in 1961 after falling out with Williams because of differences in political opinion and ideology. He spent his last years in England, where he lectured and wrote historical articles and essays on Caribbean politics and culture.

Japanese Empire

Except for its invasions of Korea in the 1590s, Japan was not an expansionist power in premodern times. Within a generation of America's forced incorporation of Japan into the capitalist world economy in the 1850s, however, Japan began

JAPANESE EMPIRE

Russian troops pass through Mukden, Manchuria, during the Russo-Japanese War of 1904–1905. The war—the first in which a non-European country defeated a European one—thrust Japan onto the world stage as a major power. (Library of Congress)

building an empire of its own, one it lost with its defeat in World War II in 1945.

With Japan's sovereignty diminished by a series of unequal treaties and with the Western powers becoming increasingly dominant in Asia, the new leaders who launched Japan on a course of state building and industrialization after the overthrow of feudalism in 1868 saw emulation of Western imperialism as the best way to prevent Japan from becoming a colonial outpost itself. In other words, Japanese imperialism began as a reactive and defensive enterprise. Control of neighboring areas (especially Korea) kept the Japanese out of the

hands of powers that might be a threat to their country's security, but Japan's colonies were also important as sources of food and raw materials and as markets for Japanese manufactures.

Unlike the European powers' far-flung colonial possessions, Japan's empire was regional in scope. After incorporating Hokkaido to the north and Okinawa (the formerly independent Ryukyu Kingdom) to the south as internal colonies in 1869 and 1874, respectively, Japan turned its attention to Korea, forcing that nation to accept trade and diplomatic relations in the 1876 Kanghai Treaty, which set the stage for similar treaties between

Korea and the Western powers. Japan was slow to follow up on its gains, due to samurai rebellions and other problems at home and Chinese competition for influence in Korea. With its victory in the 1894–1895 Sino-Japanese War, however, Japan eliminated Chinese influence in Korea and won control of Taiwan. Russia's defeat in the 1904–1905 Russo-Japanese War then eliminated the last obstacle to Japanese control of Korea, which Tokyo formally annexed in 1910, and gave Japan a foothold in Manchuria as well.

Japan integrated its formal colonies, Taiwan and Korea, much more closely into the metropolitan economy than the European powers did with most of their own colonial possessions. This was partly because of the greater proximity of Japan's colonies, leading to lower transportation costs and rapid communications, as well as the shared cultivation of rice. Japan also administered its colonies much more intensively and made far greater use of colonial labor in the home economy, especially during World War II. The regional nature of the empire also meant that claims of Japanese superiority competed in official discourse with claims of cultural affinity between the people of Japan and the nations it occupied.

In the 1930s and 1940s, Japan expanded its empire through military conquest, setting up a puppet regime in Manchuria in 1932, occupying other parts of China, and then seizing much of Southeast Asia and the Pacific. In the wartime Greater East Asia Co-Prosperity Sphere, envisioned as a self-sufficient regional economy under Japanese leadership, northern Korea and Manchuria were developed as industrial bases for aggression in Asia, whereas Japan's possessions in Southeast Asia and the Pacific were harshly exploited as sources of raw material and labor. Throughout the wartime empire, at least 15 million Asians were pressed into forced labor for varying periods, often under brutally exploitative conditions, including some 200,000 young women, mostly from Korea, coerced into sexual slavery for the Japanese military.

Japan's colonial policies of exploiting the many while allowing small local elites to prosper resulted in social and economic polarization that continued long past Japan's defeat in August 1945. Korea, for example, was left a powder keg of class tensions that exploded in the Korean War. Japan's

often brutal colonial policies, combined with a lack of remorse over those policies as expressed by many leading postwar Japanese politicians, have also left tremendous bitterness and mistrust toward Japan in much of Asia. Popular hostility on both sides, however, has not prevented close economic ties between the Japanese and many of their former colonies, a number of which remain structurally dependent on Japan.

Jefferson, Thomas (1743–1826)

Thomas Jefferson, the third president of the United States, shaped the formulation and conduct of early U.S. foreign policy more than any other American statesman of his time. As the author of the Declaration of Independence and the Virginia Statute for Religious Freedom, Jefferson made important contributions to America's self-definition as a nation. He served as minister to France, as secretary of state during the first administration of George Washington, and as president from 1801 to 1809.

Jefferson interpreted the United States as a chosen country, an experiment in liberty that radically differed in terms of the doctrines and workings of European statecraft. He advocated America's role as a model for the world. Convinced that the republic would spread across the continent, Jefferson laid the foundations for U.S. expansion throughout the nineteenth century.

His ideology of national aggrandizement was based on the conviction that territorial expansion was necessary for the survival of the republic. Americans were creating a new society and needed space for the agrarian re-creation of future generations. Jefferson saw the British, French, Spanish, and Native Americans as obstacles to the process of creating an "empire of liberty." In practical terms, he envisioned an American empire that stretched all across the continent to the Pacific, encompassing Florida, Cuba, and a canal in

Thomas Jefferson—shown here as president of the United States in the early nineteenth century—powerfully evoked the right of self-government. The language of his 1776 Declaration of Independence would inspire revolutionaries throughout the world over the next two centuries. (Library of Congress)

Central America. The realization of most of those goals was left to his successors, but Jefferson laid the groundwork for America’s rise to world-power status through the Louisiana Purchase.

In 1803, the United States set out to purchase New Orleans from France and ended up, after brief negotiations, with the purchase of the entire Louisiana Territory for \$15 million. With that move, Jefferson had added 828,000 square miles to the country and thus doubled the national territory. As the new acquisitions were inhabited by indigenous cultures, the president initially envisioned this territory as Indian land for the absorption of the eastern tribes.

The empire of liberty had dire consequences for those who lived in the trans-Mississippi West. Between 1812 and the 1840s, the remaining eastern tribes were relocated to the newly acquired territories. As the century progressed, their land was successively reduced and their freedom limited to reservations. Continuous warfare accompanied the destruction of the Indian nations.

Despite Jefferson’s abhorrence for war, his ideological core convictions and his insistence on the destiny of the United States to expand had identified the Indians as impediments to the realization of “natural freedom.” Massive westward migration supported a climate in which the Indians’ military actions could cause temporary delays but could not prevent their ultimate defeat. The Jeffersonian legacy infused the expansionist ideology of manifest destiny with a long-lasting justification for the violent colonization of the American West.

Jesuits (Society of Jesus)

The Jesuits, or the Society of Jesus, a Roman Catholic order of religious men, was founded in the first half of the sixteenth century by St. Ignatius of Loyola, a former Spanish soldier who had experienced a religious conversion while convalescing from a battle wound. The Jesuits followed the Spanish, Portuguese, French, and other Catholic imperial powers as they established colonies, particularly in Latin America but also in North America, Africa, and Asia, from the sixteenth through the eighteenth centuries. Although they emphasized conversion and education in their missionary work, the Jesuits also provided health care and welfare, particularly to Native Americans in Central and South America.

The Jesuit order was officially brought into being by Pope Paul III in 1540. Facing twin challenges to the church—from the Reformation in Europe and the need to convert vast numbers of peoples in lands being conquered by Europeans overseas—the pope created the Jesuits as an intellectual and activist vanguard for the spread of Roman Catholic doctrine and institutions. The

pope was also prompted into taking this action by the Catholic monarchs of Portugal and Spain, who believed that the establishment of Catholicism in their newly conquered lands was both a duty in and of itself and a means to secure loyalty to the Crown among its new subjects.

To assure the success of the order in these missions, a number of traditional practices were dropped so that society members could be more mobile, more accessible to potential converts, more adaptable to alien societies and environments, and more capable of providing nontraditional services to host peoples. At the same time, Jesuits swore absolute loyalty to the church in Rome. The society grew by leaps and bounds in its first years. By the time Ignatius died in 1556, there were over 1,000 members working in Europe, Asia, Africa, and the Americas. By the early 1600s, that number had climbed to over 10,000, and by the middle of the eighteenth century, it had doubled.

Among the most important of the early Jesuits was San Francisco Xavier (later known as St. Francis Xavier), who established missions and proselytized in India in 1542, as well as in the East Indies and Japan. A former soldier, like many other members of the highly disciplined order, Xavier was first sent to Portuguese colonies in India, where he lived among the poor and converted thousands to Catholicism. He then went on to the East Indies, Japan, and finally China, where he died of fever in 1552. Altogether, it is estimated he made over 30,000 conversions in his decade in Asia.

Still, despite Xavier's success, the Jesuits had their most profound impact in the Americas, even though they were the last of the major Catholic orders to arrive there, setting up their first mission in 1572. And though other orders succumbed to worldly diversions, including the keeping of concubines and the making of huge fortunes, the vast majority of Jesuits remained celibate and kept to their vows of poverty. Because of their discipline and their willingness to live in the same impoverished conditions as the Native Americans they ministered to, society members were often sent on the harshest and toughest assignments, particularly among warrior peoples.

Ironically, it was the very attributes of the Jesuits that caused their downfall in the Americas. Their fierce devotion to and protection of Native

Americans angered wealthy landowners in Latin America, and their unwavering loyalty to the pope was seen as subversive by monarchs in Europe. In 1773, the royal houses of France, Spain, and Portugal pressured Pope Clement XIV to abolish the order.

Still, the order filled very real health, education, and welfare needs in Latin America and elsewhere. In 1814, Pope Pius VII reestablished the Jesuits, who went on to become the largest male order within the Catholic Church, with especially large contingents in Asia and Africa.

Jinnah, Mohammad Ali (1876–1948)

Mohammad Ali Jinnah, born in Karachi, India (now in Pakistan), is known as the founder of Pakistan and as the Quaid-i-Azam (Great Leader). He was the son of a hide merchant and, after early schooling in Karachi, was sent to London in 1892 to learn business. Instead, he studied law and was called to the bar in 1896. On his return to India, he practiced law and over time became exceedingly successful and wealthy. He was elected to the Imperial Legislative Council, where he served from 1910 to 1919, and to the Indian Legislative Assembly, serving from 1924 to 1930 and 1935 to 1947. He had married before leaving India, but his wife died while he was in London. He married his second wife, Ruttienbai Petit, in 1918, and they had one daughter, Dina, born in 1919. After the death of his second wife in 1929, his sister Fatima looked after him until his death.

Jinnah was a Muslim and in 1916 was called the Ambassador of Hindu-Muslim Unity, but by the late 1920s, he began to believe that Muslim interests and the Muslim way of life would not be safe in an independent India dominated by a Hindu majority. In 1936, he reorganized the All-India Muslim League, which had been founded in 1906, and was its president until 1947. On March 23, 1940, the Muslim League moved the Pakistan Res-

olution, which demanded separate Muslim states for the Muslims in the northwest and northeast of India. Over the next seven years, he organized the league and the Muslim politicians of India and campaigned ceaselessly for the new state of Pakistan. On August 14, 1947, India became independent and was partitioned into the sovereign states of India and Pakistan, with Jinnah becoming the first governor-general of Pakistan.

Johannesburg

Johannesburg is South Africa's largest city, part of a greater metropolitan region that is roughly 1,386 square kilometers (535 square miles) in size, home to approximately 2.5 million people, and producer of 11 percent of the country's gross domestic product. Throughout its existence, it has been the heart of the country's financial industry, a breeding ground for resistance politics, and a vibrant cultural center.

The city grew as a result of settlement after the discovery of gold in 1886. Its initial inhabitants were miners, black and white, who flocked to the area in pursuit of wealth. Independent mining soon gave way to control by large business concerns that profited from cheap black labor. Within ten years, the city's population numbered 100,000. After the Boer War of 1899–1902, extensive black and white settlement gave Johannesburg a more stable population and a permanent nature. Initially, most inhabitants—apart from the black miners housed in insalubrious compounds—lived together in crowded inner-city slums around the fringes of the center, whereas mining magnates lived on ridges to the north of the city. Residential segregation developed later. During the 1930s and 1940s, under racial segregation, and later under apartheid, black inhabitants were moved out of Johannesburg to freehold areas such as Alexandra to the north or the newly developed Soweto (South-Western Township). Standards of living in the townships were uniformly low, especially compared to those of the af-

fluent white suburbs. During the 1960s, mining lost its dominance in the Johannesburg economy and was replaced by investment in industry and commerce. From 1970 onward, especially with the Soweto Riots of 1976, the city became a focal point for black protest. The 1980s were characterized by growth in population and the financial sector. Greater Johannesburg's population is currently diverse; almost 70 percent black, it includes many migrants from throughout southern Africa, drawn to the city because of its economic potential. Since the early 1990s, the increase of crime in the city center has sent business concerns, including the Johannesburg Stock Exchange (the twelfth largest in the world), north to the developing alternative center of Sandton.

Johnston, Sir Henry "Harry" Hamilton (1858–1927)

A British naturalist, explorer, linguist, diplomat, and administrator, Harry Johnston was privately educated and had wide-ranging interests. He first went to Africa in 1879 to study botany and to paint in Tunis. Captivated by the continent, he joined private expeditions to Angola and then the Congo Basin, where he met Henry Morton Stanley. Spurred on by Stanley, he solicited Royal Society support for an expedition to the Kilimanjaro region of East Africa; there, in addition to his naturalist activities, he signed treaties with local political leaders, which were later used to establish the British East African Protectorate.

In 1885, he was appointed to the British Foreign Office and initially served as vice-consul of the British protectorate over the Niger Delta and the Cameroons. As acting counsel, he was instrumental in eliminating African opposition to British trade in the region. He then joined a British team negotiating southern African spheres of influence with Portugal, and in 1889, he became British consul in Mozambique. There, Johnston served as an agent of the British South Africa

(BSA) Company in south-central Africa, beginning a long association with Cecil Rhodes. In an effort to halt slave-trade activities in the interior, he signed treaties with local leaders and extended British protection over areas along the Shire River and Lake Nyasa.

In 1891, he became the first consul-general and commissioner of British Central Africa, established a civil administration with taxing authority, and continued to represent Rhodes's BSA Company by supporting the alienation of African lands. He also engaged in campaigns to suppress continuing conflicts associated with the slave trade and to extend British authority over additional African peoples. He left southern Africa in ill health and returned to Tunis as British consul in 1897. Two years later, he was assigned as a special commissioner to Uganda, where he negotiated a detailed agreement with African leaders aligned with differing religious factions to establish a British protectorate administration. He left the Foreign Office in 1902 and returned to Britain, where he engaged in writing, lecturing, and private business activities over the last twenty-five years of his life.

His two-volume *Comparative Study of the Bantu and Semi-Bantu Languages* (1919–1922) was probably his most important work, although he published more than thirty other books, including scientific studies, popular histories, novels, and his autobiography. He also maintained a political interest in British colonial policies, particularly in Africa, even though he was twice defeated for election to Parliament. His writing and lecturing in the later years of his life turned to promoting the economic viability of the colonies, most especially his support of the Empire Resources Development Committee (later Board) in the 1920s.

Joseph II (Austro-Hungarian Empire) (1741–1790)

Joseph II, the reformist Hapsburg emperor of the Austro-Hungarian Empire from 1765 to 1790, traveled extensively to bolster the position of his empire, and he attained some successes abroad, notably gaining for Austria a significant part of Poland during the partition of that nation. At the same time, however, he found it difficult to contain Hungarian dissent or assure security for the Austrian Netherlands (now Belgium).

Joseph was born in 1741 to Francis Stephen of Lorraine, the future Austrian emperor Francis I, and Maria Theresa, queen of Hungary and empress of the Holy Roman Empire. Brilliant and reform-minded even as a youth, Joseph assumed the imperial mantle of the Austro-Hungarian Empire on his father's death in 1765, but the real imperial power lay with his mother until her death in 1780.

On gaining full power, Joseph instituted a number of educational and administrative reforms that won him the admiration of intellectuals and modernizers throughout the European continent. His efforts to limit the power of the Catholic Church in Austria, however, produced a backlash that alienated many within his realm. Still, Joseph's reign is viewed as a domestic success by most historians.

Not so his foreign policy. During his decade in power, he did gain West Prussia for Austria-Hungary during the partition of Poland. But his efforts to gain the Austrian Netherlands an effective outlet to the sea were thwarted by Holland, and his more ambitious plan to exchange the Austrian Netherlands for Bavaria was blocked by Frederick of Prussia.

In frustration, Joseph swallowed his reformist principles and turned to an alliance with Catherine the Great of Russia, among the most reactionary monarchs in Europe. Together, they devised a plan to attack the Ottoman Empire. But when Catherine moved prematurely, Joseph was caught off guard, his army riven by the nationalist aspirations among its Austrian Netherlands and Hungarian cohorts. On his death in 1790, both territories were in revolutionary fervor, a situation that would only become more acute during the continental wars that followed the French Revolution in 1789. In the end, most of Joseph's ambitious foreign policy plans would lead to naught,

and many of his much-needed domestic reforms were undone by the reactionary period that followed the defeat of Napoleon in 1815.

Juárez, Benito (1806–1872)

Far from Mexico City, in the haven of Oaxaca, Benito Juárez was born in 1806, a descendant of the old indigenous nobility whose members were the order givers in their society. An ancient ruling by the Spanish Crown decreed that only indigenous rulers were allowed to own sheep in Oaxaca's closed world. When Juárez was a mere three years old, his parents died, and the boy was raised by his uncle. The small Zapotec village, with its 150 inhabitants, was limiting to the youngster. He was encouraged by his sister to leave this sanctuary, and he developed a strong desire to escape his background into the Spanish language and customs. At the age of twelve, he left this close-knit village and walked 41 miles to the state capital, Oaxaca City. An older sister who worked there as a cook was able to find employment for the youngster in the home of a Franciscan—a lay brother and bookbinder. Juárez's compensation provided the foundation that he needed for his future. His compensation for doing daily household chores and helping in the bindery took the form of tuition payments that allowed the young man his first taste of education. His Franciscan benefactor encouraged enrollment in an Oaxaca seminary, but Juárez realized that he did not want to become a priest. Instead, he aspired to be a lawyer, and he worked his way through law school. This pursuit opened a world that he had never experienced, consisting of racial intermixing, higher cultural civilization, and a chance at a different future. In 1831, the future appeared promising as Juárez received his lawyer's certificate, which not only demonstrated his judicial competence but also provided the an entrée into politics.

With his lawyer's certificate in hand, Juárez began his climb up the political ladder. He ap-

A Zapotec Indian, Benito Juárez defeated French forces during their occupation of Mexico in the 1860s and later went on to become president of Mexico and a national hero. (Hulton Archive)

peared ready to seize his dream. His rise to power came in small but significant steps. As a Oaxaca City Council alderman and through his subsequent service in the state legislature, Juárez came to realize that the changes he desired—mostly to benefit the poor villagers—could not be accomplished on a case-by-case basis but required altering the system itself. When war broke out between Mexico and the United States, he was called by his home state to serve one term as its provisional governor, another rung on his political ladder. Governor Juárez did not allow a defeated Antonio de Santa Anna to seek refuge in his state. This infuriated Santa Anna but thrilled the people of Oaxaca, so much so that in 1848 they elected Juárez to a full term as constitutional governor.

Far from being revolutionary, his governorship represented an honest attempt at improving his state's condition. But Santa Anna, as ruler of Mexico, was an insecure dictator with an excellent memory. He ordered Juárez arrested and exiled to New Orleans, where he joined other Mexicans who

had sought refuge from Santa Anna's Mexico and helped them devise a plan to overthrow the dictatorship. The exiles supported Juan Alvarez and in early 1854 sent him a statement of principles, later published as the *Plan de Ayulta* (Ayulta Plan). The plan consisted of a long list of grievances against Santa Anna and called for a liberal junta to designate an interim president to replace Santa Anna's dictatorship. The Revolution of Ayulta garnered a formidable force, with the exiles in New Orleans sending arms and ammunition. By August 1855, Santa Anna recognized the futility of fighting the revolution, tendered his resignation, and went into exile for the last time.

This turn of events prompted the formation of a new government, with Juan Alvarez as provisional president and Benito Juárez as secretary of justice. Alvarez's government rested solely on reform issues, and the first significant piece of legislation was known as *Ley Juárez* (Juárez Law), abolishing the military and clerical *fueros*—the special privileges that previously exempted soldiers and clerics from having to stand trial in civil courts. The Constitution of 1857 included the laws of reform and divided Mexican society into two hostile factions. As tensions mounted, the people braced themselves for another civil war.

The War of the Reform that occurred from 1858 to 1861 was the culmination of church-state controversies, ideological disputes, and the minor civil wars that had plagued the country since its struggle for independence. The war began with a new *Plan de Tacubaya* (Tacubaya Plan), proclaimed by the conservative general Felix Zuloaga. With clerical and military support, Zuloaga dissolved Congress and arrested Juárez. When the army declared Zuloaga president, Juárez escaped to Querétaro (located in the northern part of the country), where his liberal supporters proclaimed him president. The splintering of Mexico into two governments, two presidents, and two uncompromising ideologies thrust the country into its most passionate civil war. The end of the three-year war proved successful not only for Juárez but also for the Mexican liberals. Juárez solidified his power by limiting the authority of the church, making it subordinate to the state. Thus, by 1860, the victorious Juárez had achieved the pinnacle of success: he was the sole president of Mexico.

In Juárez's first attempt at stabilizing the country, he postponed the payment of the foreign debt.

Even though this was done to provide a temporary economic boost to Mexico, the United States, France, and England found this move intolerable. The United States and England eventually understood Juárez's motives and acquiesced to his desires, but France proved to be problematic as the old desire for conquest and empire reared its ugly head. The arrival of Maximilian, a French-appointed monarch for Mexico, once again divided a confused, unstable people, who attempted to choose between the stability of empire and the uncertainty of continued independence.

Juárez resisted the French incursions, demonstrating that Mexico's existence as an independent nation was not to be left in the hands of foreign powers. The emperor, Maximilian, was court-martialed and found guilty of violating Mexico's sovereignty. Three people on the six-man court voted for banishment from the country; the other three voted for the death penalty. The tiebreaking decision went to Lt. Col. Platon Sanchez, the president of the court. Fully aware that Juárez wished for the death penalty, he cast the deciding vote for death, but the emperor's execution did not ease the burdens that Juárez faced. Again elected to the presidency in 1871, he struggled to instill a sense of nationalism that had been lost without the influence of a strong central authority. Yet even as thousands of armed men roamed the countryside, Juárez once again became the stabilizing force that the country needed. He died in office in 1872 and has since been seen as one of Mexico's leading national figures and a symbol of resistance against colonial incursion.

Judaism

Judaism is the monotheistic development of polytheistic Hebrew religion, which evolved dur-

ing and after the Babylonian Captivity. Exiles returning from Mesopotamia, representatives of the Yahweh-Only Party, succeeded in rebuilding the Temple in Jerusalem and establishing a theocratic state, under the rule of the Persian monarchs. For nearly two centuries, Palestine was a province in the Persian Empire. This situation ended with the conquests of Alexander the Great of Macedon in the 320s B.C., the establishment of the successor kingdoms, and the spread of Hellenistic culture.

The attractions of Greek culture proved very appealing to portions of the Jewish population of Palestine, particularly the aristocracy. This resulted in a schism between pro-Hellenistic Jews—who wished to enter the modern world, govern themselves with laws of their own legislation, chose their form of constitution, and generally enjoy the blessings of Greek cultures—and the anti-Hellenistic elements—who wished to maintain the old, theocratic state, uphold the cult of Yahweh to the exclusion of all others, and control the people of Palestine. Disagreements led to attempts to refound Jerusalem as a Greek city with a constitution that would not allow priestly control of the society. Faction fighting broke into open warfare, and the pro-Hellenists requested the intervention of Antiochus IV Euphrosyne, the king of Syria. This war, eventually joined by the Maccabean family (who assumed leadership), was presented as a war of liberation to save true religion

against the forces of evil. The Jewish festival Hanukkah originated during this conflict.

Maccabean forces were able to achieve a victory but began to wage war on their neighbors and on other factions within the territory they claimed as their own. This was a period of expansion for the Jewish nation, with the conquest of such areas as Galilee and Samaria—territories that, by tradition, had been part of the kingdom of David. Thus, Maccabean imperial expansion was cloaked in and sanctioned by religion and tradition. One may see in this use of religion and traditional history for imperial aims at least a partial prefiguration of later Zionist claims to the entirety of the lands that were believed to have composed the kingdom of David and as a justification for the establishment of the state of Israel and the displacement of the Palestinian people.

During this time, Judaism split into numerous sects and schools as it tried to make sense of the world and its circumstances, some of which are familiar to readers of the Christian Gospels. Certain sects lent support to the monarchs and their aims, others opposed them and worked for their downfall.

K

Kartini, Raden Ajeng (1879–1904)

Raden Ajeng Kartini was a Javanese educator and writer whose letters demonstrate her commitment to nationalism and feminism. Her birthday, April 21, is a national day of commemoration in Indonesia. Kartini (note that Javanese people do not have surnames. Kartini is both a first name and a family name. Raden Ajeng is a formal title used for unmarried noblewomen in Java) was born into a Javanese noble family based at Mayong. Her father, Raden Mas Ario Adipati Sosroningrat, who was the *wedono*, or regent, of Mayong, had taken the unusual step of allowing his daughters as well as his sons to attend the local primary school for Dutch and Eurasian children. Kartini, a bright student, learned to speak fluent Dutch but was forced to go into seclusion at the age of twelve until she married. She was frustrated by this sudden end to her education, and as she matured, she determined to reclaim popular Javanese culture even as she challenged some of its customs and its rigid control of women, Kartini turned to writing to make an impact on Javanese and Dutch colonial society. Her letters, her memorandum on education, “Give the Javanese Education,” and her work to reclaim Javanese culture and establish education for Javanese girls all revealed a nationalist sentiment that was to inspire future Indonesian nationalists.

Kartini’s letters to Rosa Manuela Abendanon-Mandri, the wife of J. H. Abendanon, who was the

minister for instruction, religion, and labor in the Netherlands Indies, and to the Dutch activist Stella Zehandelaar were published after her death. But several of Kartini’s articles on aspects of Javanese culture were published during her lifetime under a series of pseudonyms.

In particular, she criticized the low salaries paid to Javanese civil servants, such as her brother, in comparison with Dutch civil servants who “curse the Indies as that ‘horrible monkey land’ forgetting that that ‘miserable monkey land’ fills many a pocket with gold” (Kartini 1995, 20). She also criticized some of the Dutch colonial establishment for being “hostile toward us for no other reason than that we dared to compete with them in terms of education and culture” (Kartini 1995, 38).

Her memorandum on providing education for the Javanese, written in 1903, argued that Javanese women should have access to Western education so that the Javanese nobility could work with the Dutch colonial regime to preserve and develop Javanese society. She also recommended that medical training, which drew on indigenous medical knowledge as well as that derived from Europe, should be provided to Javanese people. She and her two younger sisters also worked to reclaim Javanese culture through their contribution of batik work to the 1898 National Exhibition of Women’s Work, held in The Hague; their attempts to promote woodcarving and other crafts produced in

their local area of Japara; and their work in designing some of the motifs used by local craftspeople. Kartini's service as an educator of Javanese girls was another of her contributions to the beginnings of cultural and political nationalism in Indonesia. She and one of her sisters set up a school for Javanese girls in Japara, and after she accepted an arranged marriage, Kartini taught in a similar school in Rembang. In addition, she and a sister each secured a scholarship to study in the Netherlands, but J. H. Abendanon, the director of the Department of Education, Religion, and Industry, persuaded the women not to take up their scholarships but to remain in Java and set up a school in Japara. Tragically, a year after her marriage, Kartini died several days after the birth of her first child.

Kaunda, Kenneth (1924–)

The leader of Zambia after it gained independence in 1964, Kenneth Kaunda guided his United National Independence Party in the one-party state he created in 1972. As a young man, he followed his Malawian-born parents into teaching but soon participated in the nationalist movement, challenging the British authorities as well as more moderate African leaders such as Harry Nkumbula of the African National Congress in the 1950s. Successful in elections in the 1960s, he fought against the Central African Federation, dominated by the white settler government of Southern Rhodesia. The British canceled the federation in 1963 to prepare for the independence of Northern Rhodesia in the next year. Kaunda also crusaded against white minority governments and apartheid in South Africa. To minimize dependence on the more powerful economies of white-controlled

southern Africa, he accepted Chinese aid to build the TAZARA Railway to give Zambia access to the Tanzanian port of Dar-es-Salaam on the Indian Ocean. In addition, he nationalized the copper industry, which was vitally important to the economy. And while maintaining his traditional ties to the West, he sought friendly relations with other Third World nations as well as the Communist bloc.

An authoritarian but very personable and even charismatic politician, Kaunda developed a concept he called humanism, a variant of African socialism. This concept combined elements of Mohandas Gandhi's nonviolence, Christianity, and the struggle against white minority rule, as well as teetotalism, vegetarianism, and the avoidance of sugar.

Economic decline in the 1970s and 1980s forced Kaunda to allow multiparty elections, which he lost in 1991. Constitutional amendments by the new president, Frederick Chiluba, prevented anyone who did not have Zambian parents from running for the presidency, thus excluding Kaunda from the 1993 elections. In a confrontation with Zambian authorities, he was wounded by the police in 1997 and detained when a military coup failed that same year.

Kaunda has twice held the prestigious post of president of the Organization of African Unity. Bowing out of politics in 2000, he began campaigning for AIDS education after one of his sons succumbed to the HIV virus.

Kazaks (Kazakhs, Qazaqs)

The Kazaks, a nomadic Turkic people, arrived in the steppes of Kazakstan during the fifteenth century. By the mid-1500s, these quasi-Muslim pastoralists began to coalesce into three groups, or "hordes," each with its own territory, leadership, and history. Because of their loose political structure and their thin population density, the Kazaks

often fell prey to invaders. In the mid-eighteenth century, some Kazak groups swore loyalty to the Russian empress in return for protection. They were gradually incorporated into the Russian state, where they were considered part of the *inorodtsy*, or aliens, an officially recognized social grouping composed of non-Russians considered too different to be integrated into Russian society.

Between 1740 and 1840, Russian settlement began to encroach on the Kazaks' land, limiting their range for migration and forcing them to decrease the size of their herds. This caused extreme impoverishment and the erosion of traditional culture. To facilitate Russian settlement, the government declared much of Kazak territory as "excess lands," an arbitrary classification for any land not being used for agriculture. These excess lands were transferred to Russian farmers. In 1916, Kazaks revolted against forced military mobilization during World War I. The social disruption and economic chaos caused by this revolt was compounded during the following revolutionary and civil war periods. Recovery began in the 1920s, but collectivization in the 1930s eliminated any remaining nomadism. To retain their herds, some Kazaks fled to China or Mongolia, where many continue to reside today.

In 1991, after over seventy years of Soviet rule, Kazakstan became an independent republic. Today, nationalist groups there are promoting a revival of Kazak culture and language and of the Islamic religion.

Kennedy, John Fitzgerald (1917–1963)

John F. Kennedy was elected as the thirty-fifth U.S. president on November 8, 1960, with 49.7 percent of the popular vote, narrowly defeating Richard Nixon, who garnered 49.5 percent of the vote. His administration—which lasted from January 20, 1961, until his assassination on November 22, 1963—dealt with foreign policy issues that affected not only Europe but also the Latin Ameri-

can countries. Kennedy's foreign policy duality arose out of concern for underdeveloped countries as well as a desire to protect the U.S. borders. His most famous quote from his inaugural address was indicative of his intentions. "Ask not what your country can do for you—ask what you can do for your country" inspired Americans to unselfishly embark on a path that promoted goodness and endured crisis.

American compassion arose in 1961 as Kennedy furthered President Franklin Roosevelt's Good Neighbor policy by creating the Alliance for Progress. Under this program, the United States provided billions of dollars in aid to Latin America. The Alliance for Progress charter was formalized with a signing at the Inter-American Conference at Punta del Este, Uruguay, in 1961. That same year, the Peace Corps, an agency of the State Department, was established. Under R. Sargent Shriver's direction, the corps enlisted volunteers to teach in and provide technical manpower to underdeveloped countries, many of them former colonial territories. Over the next twenty years, more than 85,000 Americans served as volunteers. In 1971, the Peace Corps merged with other volunteer agencies and formed an independent agency, Action. By 1981, Action volunteers were working in sixty-three countries.

At the second Geneva conference, in 1962, the United States and thirteen other nations agreed to guarantee the independence and neutrality of Laos. Although more than willing to send military advisers to South Vietnam, Kennedy was reluctant to dispatch combat troops to fight in what he viewed as Vietnam's war. He was very succinct in his observation in an interview with CBS's Walter Cronkite that "in the final analysis, it is their war. They are the ones who have to win it or lose it." Not willing to fight communism on foreign soil, he was, however, quick to protect the United States when the threat appeared dangerously close.

Despite the failure of the 1961 Bay of Pigs invasion, Kennedy responded swiftly to the 1962 Cuban Missile Crisis. As offensive nuclear missile bases in Cuba appeared capable of striking the eastern two-thirds of the United States as well as much of Latin America, he ordered a quarantine of Cuba that limited shipping of any kind. He further demanded the dismantling of all offensive weapons in Cuba. Tension mounted as Soviet ships

312 Kenya (British East Africa Protectorate)

steamed toward the U.S. blockade. Relief came as the Soviet premier, Nikita Khrushchev, agreed to dismantle the weapons in exchange for a U.S. pledge not to invade Cuba. By the end of 1962, U.S. intelligence confirmed their removal.

In 1963 while in Texas on a mission to reconcile differences between opposing factions of the state's Democratic Party, Kennedy was assassinated as he rode in an open limousine bound for Dallas and a luncheon address at the Dallas Trade Mart. Even though the Warren Commission addressed some of the conspiracy theories involving the assassination, Kennedy's murder has long been a subject of speculation and rumination.

Kenya (British East Africa Protectorate)

From 1920 until its independence in 1963, Kenya was a British crown colony in eastern Africa. Its coastal regions, most especially Mombasa and Malindi, were the object of various colonial enterprises from perhaps as early as the seventh century. At about that time, Islamic merchants from Arabia and the Persian Gulf established commercial operations at those centers and others. They were challenged in the sixteenth and seventh centuries by Portuguese interests, following the voyage of Vasco da Gama from the Cape of Good Hope northward up the East African coast before sailing across the Indian Ocean to India. As a result of naval encounters between the Portuguese and especially the Omani forces, the coastal outposts changed hands on several occasions.

After the mid-nineteenth century, European agents arrived on the coast and penetrated into the interior, making both commercial and political claims to the territory. These excursions, along with the proximity of the Kenya coast to both India and the Suez Canal, helped to fuel what became known as the "scramble for Africa" among nations in Europe and also led to the agreements struck at the Conference of Berlin (1884–1885). As

Jomo Kenyatta, leader of the Kenya African National Union, and Duncan Sandys, British colonial secretary, meeting at the opening of independence talks in London, September 1963. (Hulton Archive)

a partial result of those agreements on the status of claims to colonial territory, the [AU] British East Africa Company (BEAC) negotiated a treaty with the sultan of Zanzibar for control of a coastal strip. In an effort to forestall other European claims, the British East Africa Protectorate was proclaimed in 1896.

Initially, the British were interested in protecting a route to Uganda, which ultimately resulted in the building of a railway line from Mombasa through the interior to the large lake named after Queen Victoria. The process of building that railway led to the discovery of what later became known as the Kenya Highlands—temperate and fertile areas in the interior that the BEAC exploited to draw colonial settlers to the protectorate. During World War I, German forces advanced on the

protectorate from German East Africa but were repulsed, and the territory then became the staging area for an invasion of the German colony, with the participation of thousands of Africans who had been recruited as soldiers. Yet on the Allied victory in the war, the British government encouraged further colonization efforts by alienating land in the highlands for settlement by veterans of the European war.

The British colonial population was so large that the British East Africa Protectorate was transformed into Kenya, a British crown colony, in 1920. And with the slow but steady increase in European settlers, tensions with Africans were exacerbated. Several attempts to improve the relationships between the two communities, especially after World War II, were only marginally successful. Increasing protests from the Kikuyu community and especially the Mau Mau emergency brought growing attention to calls for African nationalism in the colony. Led by Jomo Kenyatta, the nationalists were successful in negotiating a greater role for Africans in the colony's governance. And in 1963, the nation of Kenya achieved its independence from Britain. It became a republic a year later, with Kenyatta as its first president.

Kenyatta, Jomo (c. 1894–1978)

Jomo Kenyatta was a Kikuyu born between 1889 and 1895 to Ngengi and Wambui at Ng'enda village, in the Gatundu Division of Kiambu District in Kenya. Originally named Kamau wa Ngengi, he joined the Church of Scotland Mission in Thogoto in 1909, where he obtained an elementary education and carpentry training. Baptized in 1914 as John Peter Kamau, he later changed his name to Johnstone Kamau. In 1917, he evaded the forced recruitment of all able-bodied Kikuyu during World War I by living in Narok and working for an Asian contractor. At this time, he wore a tradi-

tional Masaai-belt with “Kinyata” (a name meaning father of Kenya, an honorary title) written on it. In 1928, he became the secretary-general of the Kikuyu Central Association (KCA), drafting and translating letters; he also edited the Kikuyu weekly *Mwigwithania* (The Reconciler), articulating the social grievances of the Kikuyu, particularly as related to land reform.

In 1929, KCA sent Kenyatta to London to represent the group before the Colonial Office and air its land grievances. During that period, Kenyatta wrote a series of articles entitled “Give Back Our Land,” which were published in English papers. He made a brief return to Kenya in 1931 to put forward KCA views before a parliamentary commission. After being ignored by the commission, he enrolled in Quaker College, Woodbrooke, United Kingdom, where he studied anthropology. In 1938, he published *Facing Mount Kenya*, under the name Jomo Kenyatta, followed four years later by *My People of Kikuyu* and *The Life of Chief Wang'ombe*. Kenyatta organized the fifth Pan-African Conference with Kwame Nkrumah in 1945, and in 1946, he returned to Kenya and assumed leadership of the Kenya African Study Union (KASU), the precursor of the Kenya African Union.

On October 20, 1952, a state of emergency was declared in Kenya, and Kenyatta was arrested and tried for alleged complicity in the Mau Mau Rebellion; he was found guilty and sentenced to seven years of hard labor and indefinite restriction thereafter. When he was released on August 14, 1961, he received a hero's welcome from the indigenous peoples of Kenya. He became the prime minister of an independent Kenya in 1963 and the first president of the Republic of Kenya one year later. Kenyatta's official slogan was *Harambee*, meaning “All pull together.” In 1968, he published an autobiography entitled *Suffering without Bitterness*. Ten years later, on August 22, 1978, he died in office.

Khartoum

Located at the confluence of the Blue and White Niles, Khartoum derives its name from the shape of the rivers as they come together, for in Arabic, the name means “elephant’s trunk.” Geography also explains the city’s foundation in 1825, when Egyptian troops constructed a fort to dominate this strategic location. Designed by Muhammad Ali’s chief lieutenant, Muhammad Osman Bey, the fort served to anchor the southern end of Egyptian holdings in the Sudan.

A year later, Khartoum became the official residence for the governor-general and entered a decade of urban expansion. Government buildings, barracks, and mosques and the offer of free building supplies supported a population boom. Economic ventures flourished, especially the trade in ivory, gum, and slaves. The slave trade reached a peak during the 1860s, when 40,000 slaves passed through Khartoum. By the 1880s, the city’s population approached 30,000. At the top of the social hierarchy were a mixed group of Egyptians officials, European diplomats, Levantine businesspeople, and local notables; the rest of the population included small-scale Sudanese merchants, artisans, and a still significant number of slaves. The famous 1884–1885 siege pitted British officer Charles Gordon against religious-nationalist rebel leader Mohammad ibn Ahmed al-Sayyid Abdullah. The latter’s victory led to the abandonment of Khartoum by the British, with nearby Omdurman becoming the capital from 1885 to 1898. During that era, Khartoum was a ghost town. Then, the Anglo-Egyptian reconquest of 1898 restored Khartoum as the capital. Growth continued as a rail link to the Red Sea was completed in 1909. The city’s population reached 50,000 in 1930 and 96,000 by independence in 1956.

Khedive

Khedive is a Persian title that roughly translates into “master” or “lord” and is associated with the

rulers of nineteenth-century Egypt. Unofficial use of the term dates to the era of Muhammad Ali (1805–1848), who constantly searched for means of signifying his special status within the Ottoman Empire. On July 7, 1867, his grandson, Ismail, negotiated with Sultan Abdülaziz, obtaining official recognition of this title in exchange for a significant increase in Egypt’s annual tribute.

Ismail’s new rank expanded an already ambiguous situation, implying he had special status within the empire. The new khedive argued it recognized his autonomy from Ottoman governments and extended Egypt’s rights beyond those fixed by the 1840 Treaty of London. Although Ottoman diplomats held otherwise, Ismail’s free-wheeling policies seemed to back this claim, until a new sultan deposed him in 1879.

Several khedives followed, until 1914. Then, on December 19, England ended its veiled protectorate, severing all ties between Egypt and the Ottomans. To symbolize this change, the title *khedive* was replaced by the more lofty *sultan*. The latter, too closely associated with the British, stopped being used on March 15, 1922, with Egypt’s independence. Instead, monarchs employed the Arabic *malik*, or “king,” a title used until the dynasty’s fall in 1952.

Khoi

The Khoi, also referred to as the Khoikhoi or Hottentots, were a pastoral nomadic people who occupied the southern region of the African continent until the arrival of the Dutch in 1652. The first European settlement at Table Bay operated as a supply station for ships sailing around Africa on their way to and from the Dutch East Indies. The inadequate supply of livestock forced the early settlers into a trading relationship with the Khoi, who raised cattle primarily for milk. As the number of ships resupplying at Cape Colony increased, so did the demand for food. The Dutch East India Company encouraged settlers to raise cattle and, in the process, initiated a policy of appropriating land from the inhabitants. Encroaching on traditional

Khoikhoi territory, the Dutch Afrikaners received no resistance as they moved westward. Most of the Khoi moved farther inland or sought employment among the Dutch as shepherds, guides, or laborers. A large number of Khoi died in the smallpox outbreak of 1713. The survivors either fled into the area of southern Namibia or intermarried with the Dutch population, forming a distinct class of people known as Coloured who maintained their rights until 1956. Under the Republic of South Africa, they lived as second-class citizens.

The Khoi outside the province encountered difficulties with Europeans as well as Bantu-speaking peoples. Forced onto Namaqualand reserves, the Khoi largely disappeared into the mass of South African nonwhites without a separate, significant ethnic identity or culture. However, their traditional political and economic structures, once based on the patriarchal tribal clan, found expression in a modified form through the ward or the village. After contact with Europeans, the Khoi adopted Christian beliefs; they abandoned their customary religious practices, which had no formal worship, no priests, and no temples and featured the use of magic to heal the sick. By the late twentieth century, only 40,000 Khoi survived.

Khrushchev, Nikita (1894–1971)

As the Soviet Communist leader from 1953 to 1964 and prime minister from 1955 to 1964, Nikita Khrushchev contributed to the development of the Soviet empire and was actively involved in international quarrels over decolonization. During his tenure as a high-ranking party official between 1926 and 1929 and a local Communist leader from 1938 to 1949, Khrushchev helped strengthen the Soviet regime in Ukraine. In 1939 and 1940 as Joseph Stalin's personal emissary, he oversaw the Sovietization of western Ukraine, Bukovina, and Bessarabia. Additionally, as chairman of the Ukrainian Soviet government from 1944 to 1949, Khrushchev was directly involved in the post–World War II restoration of So-

viet control and reconstruction in Ukraine. He also supervised a military struggle against the anti-Soviet resistance of Ukrainian nationalists.

As a leader of the Union of Soviet Socialist Republics (USSR) after 1953, Khrushchev consolidated Moscow's control in the non-Russian republics and East European satellites and equipped Soviet expansionism with clearly declared global ambitions. The de-Stalinization campaign that he launched in the USSR also introduced some changes in the way in which the Soviet "outer empire" was run. In 1955, the Warsaw Pact was created, and Khrushchev repeatedly declared an intention to transform relations with Moscow's satellites into equal partnerships. Nevertheless, in 1956, the Soviet military overthrew the reformist government in Hungary and crushed the anti-Communist uprising in the country. The Communist bloc under Khrushchev also expanded its influence into the Western Hemisphere, supporting Fidel Castro's regime in Cuba.

On the broader international scene, Khrushchev actively exploited decolonization and opportunistically stimulated the anti-Western feelings of radical regimes in Asia, Africa, the Middle East, and Latin America in order to tip the global balance of power in the Soviets' favor. Flirting with Third World nationalism, the Soviets established close political, military, economic, and cultural ties with India, Burma, Indonesia, Egypt, Syria, Algeria, Ghana, Guinea, and Mali. Despite several failures to bring new states into the Soviet orbit (Congo, Burma, Indonesia, Ghana, and others), Khrushchev's adventurism in the Third World paved the way for a great expansion of an informal Soviet empire in the 1970s.

Kiev

As the capital of Ukraine, Kiev was one of the focal points of imperial rivalry and nationalist

aspirations in medieval and modern Eastern Europe. During its centuries-long history, the city developed as one of the historical and spiritual hubs of the Russian imperial tradition, and until 1991, it was a major political and economic center in the Soviet Union.

Kiev was established in the ninth century, and in the tenth through twelfth centuries, it grew as an administrative, military, and cultural capital of the Kievan Rus'—the empire of the Eastern Slavs that expanded from the Baltic to the Black Sea. The Russian conversion to Christianity brought strong Byzantine influences to the city's culture and government. Following the breakup of the Kievan Rus' and the Mongolian invasion of Russia, the importance of Kiev diminished. In 1362 and 1363, the Grand Duchy of Lithuania annexed the city and the Kiev Principality. From 1494 to 1497, Kiev received some municipal autonomy. In 1569, after the Polish-Lithuanian Union of Lublin was created, the city fell under Polish rule and cultural influence.

During the Cossack insurrections in the seventeenth century, Kiev became a symbol of the emerging Ukrainian national sentiment. The Ukrainian union with Moscow (in 1654) put the city under the political and military control of the developing Russian Empire. Beginning in the eighteenth century, the Russian emperors progressively eliminated Kiev's municipal autonomy and made it the capital of the Kievan vice-regency after 1782 and that of the Kievan Gubernia (province) after 1797. The failure of the Polish insurrections of 1830 to 1831 and 1863 to 1864 strengthened the Russian cultural influence in the city, which emerged as an important urban center of the Russian Empire. At the same time, in the second half of the nineteenth century, the city experienced the rise of Ukrainian nationalist aspirations.

Following the breakup of the Russian Empire in 1917, the independence of Ukraine was proclaimed in Kiev (on January 25, 1918), and the city witnessed frequent battles between the belligerents of the Russian civil war and the 1918–1921 Ukrainian war of independence. From 1934, Kiev was the capital of the Soviet Ukraine. The Nazis occupied the city between 1941 and 1943 during World War II. In 1991 in Kiev, the independence of Ukraine was proclaimed, which became a major factor in the demise of the USSR.

Kikuyu

The dominant ethnic group in Kenya, the Kikuyu speak Gikuyu, a language that is part of the Bantu branch of the Niger-Congo family. The Kikuyu ethnic group traditionally lived in the Central Province of Kenya, the fertile highland area of Mt. Kenya. Kikuyu myths claim that their origins stem from the first ancestor, Gikuyu, and his wife, Mumbi, who were given Kikuyu-land by Ngai (God), said to live in Mt. Kenya, also known as Kirinyaga. The Kikuyu are divided into nine clans, and in their social organization, groups of boys and girls are initiated into separate “generation sets” that in the past defined that generation of adults and how they were entitled to political authority. Within this social structure, land and its ownership have long been vital to the Kikuyu. Precolonial Kikuyu societies were agriculturalists and raised crops such as sorghum, millet, beans, peas, and yams.

After British colonial rule was established in the late nineteenth century, land policies were implemented to disenfranchise the Kikuyu of the prime highland soil. In addition, the Kikuyu were relegated to living in overcrowded tribal reserves while working on European plantations. This displacement gave rise to Kikuyu-inspired protests against colonial rule and the resolve to regain confiscated Kikuyu lands. In this reclamation, a large number of Kikuyu were forcibly made to take blood oaths and join the Mau Mau Rebellion, a violent uprising that hastened the end of British colonial rule. Having lost their land under the colonial system, the Kikuyu, to relieve their land shortage and demographic stress, moved into the Rift Valley Province during the colonial period and after independence. One Kikuyu man, named Johnstone Kamau, would one day emerge as Jomo

Kenyatta, the first president of the Republic of Kenya. During his rule (1963–1978), the Kikuyu enjoyed political and economic advantages. However, under President Daniel Arap Moi's rule, the Kikuyu were primary targets of ethnic violence.

King Philip's War

By the 1670s, the relatively peaceful coexistence of whites and Indians in New England had been replaced by growing hostility and suspicion. This was especially true in Plymouth Colony, where the Wampanoags, hemmed in on all sides by white expansion and rival Indian tribes, were forced to seek accommodation with Plymouth officials. Between 1667 and 1674, Metacom, chief of the Wampanoags—called King Philip by the English—was required several times to reaffirm his loyalty to Plymouth. Rumors of Philip's imminent rebellion were often instigated by rival Indian groups. In late 1674, John Sassamon, a Christian Indian who was apparently serving as an informant for Plymouth authorities, was murdered. In the summer of 1675, Plymouth executed three Wampanoag warriors for the murder, and tensions rapidly escalated. After Wampanoags killed nine English settlers at Swansea on June 24, 1675, both sides recognized the importance of gaining the cooperation of the Narragansetts, the most powerful tribe in the immediate neighborhood. The United Colonies, officially in charge of the war, secured a pledge of loyalty from the Narragansetts on October 18. Nevertheless, a combined force of whites and Indians under Josiah Winslow, governor of Plymouth, soon marched into Narragansett territory. After a surprise attack on the Indian encampment was repulsed with heavy losses, Winslow set fire to the fort. The ensuing Great Swamp Fight of December 19, 1675, resulted in hundreds of Indian casualties, mostly women and children. Surviving Narragansetts, as well as a

number of other smaller tribes in New England, soon allied with Philip.

During the next four months, Indian raids destroyed or damaged scores of New England towns. In March, raids reached within 10 miles of Boston. On March 29, Philip's allies raided Providence, Rhode Island, and destroyed the home of Roger Williams. By April, however, the tide of battle began to turn. Philip was unable to secure help from the Mohawks of New York, and many of the smaller tribes began to cut their own deals with the United Colonies. Benjamin Church, with a combined force of whites, Christian Indians, and allied Indians, went on the offensive. On August 12, Philip was killed by one of Church's Indians near Mt. Hope, Rhode Island, and the organized resistance soon collapsed.

King Philip's War had profound repercussions on both Indian and white civilizations in New England. Death, exile, and enslavement greatly reduced the Indian population and virtually ended any possibility that Indians could protect themselves from future encroachment by the Europeans. The physical destruction and costs of mobilization also put a great strain on New England's institutions, which would affect colonial affairs for many years to come. Almost as significant was the psychological impact on the Puritans, who could not help but see the war as a punishment from God.

King William's War (1689–1697)

Known in Europe as the War of the League of Augsburg or the War of the Grand Alliance, King William's War was a coalition action launched by England, Spain, Savoy, Brandenburg, Saxony, Hanover, Bavaria, the United Provinces, Denmark, and Austria initially against the French invasion of the Rhine Palatinate. In North America, however, the war was a contest between the French and English for control of Hudson Bay and the St. Lawrence River. With Native American Mohawk

and Abenaki allies, the governor of French Canada, Louis de Frontenac, invaded New England, striking Schenectady, New York, Salmon Falls, New Hampshire, and Falmouth (Portland), Maine, in 1690. The English, with the assistance of the Iroquois, contested with French traders for control of Hudson Bay trading posts at Severn, Hayes, and James Bay. An attack on the fortified city of Quebec, led by colonists from Massachusetts, was repulsed by Frontenac, but forces launching a successful attack from Massachusetts, led by Sir William Phips, took and held Port Royal for a year against the French. After 1690, the war in North America sputtered into border raids that severely taxed the morale of the frontier population and the tenuous relationship between the settlers and their native neighbors. Financially, the colony of Massachusetts was forced to issue paper money to pay its war expenses—bills that quickly depreciated. Because of the hardships endured by French and English colonists, the Treaty of Rystwick (1697), which ended the war, engendered great bitterness because it required the return of all lands captured during the war to the original owners, excluding only the city of Strasbourg, which remained in French hands in exchange for Louis XIV's recognition of William III as king of England.

Kipling, Rudyard (1865–1936)

Rudyard Kipling was born in Bombay, India. At the age of six, he was left, together with his three-year-old sister, in a foster home in England. This arrangement lasted for five years and was a painful experience that left him with a sense of betrayal. As if deliberately to add to this stifling experience, Kipling—frail and shortsighted—continued to be bullied in college, where he developed a love for literature.

Kipling went back to India in 1882 as a journalist and editor; seven years later, he returned once

again to England to much acclaim as a significant young writer. He was the first English author to receive the Nobel Prize in literature, in 1907. His first volume of poetry, *Departmental Ditties*, was published when he was just twenty-one. He also published six volumes of short stories set mostly in India. Kipling's work offered the point of view of the English soldier and explored the psychological and moral problems that the white man suffered in the midst of the people he had colonized. Kipling was referred to as the "prophet of imperialism," who dealt with the racial identity and religious beliefs that formed the foundation of his imperialistic ideology. This was especially apparent in his poem "The White Man's Burden," which actually addressed the involvement of the United States in the Philippines. He incorporated into his work the code of honor and the sense of duty that he had acquired in the English public school. This was best shown in "Mary Postgate" (1915), *The Jungle Book* (1894), *The Second Jungle Book* (1895), *Captains Courageous* (1897), and *Stalky and Co* (1899). For his clearly imperialistic views, Kipling has incurred the wrath of many postcolonial writers and critics.

Kissinger, Henry (1923–)

As national security adviser in the administration of President Richard Nixon and as secretary of state in the Nixon and Gerald Ford administrations, Henry Kissinger is best known for his efforts to establish diplomatic relations between the United States and Communist China. At the same time, a staunch Cold Warrior and practitioner of realpolitik, or pragmatic foreign policy, Kissinger supported an anti-Communist dictatorial regime in East Timor and a rightist violent rebel movement in Angola, both undergoing the decolonization process in the 1970s.

Born in Germany to Jewish parents, Kissinger and his family fled the Nazis in 1938, and he was educated at the City College of New York and Harvard University, where he earned a Ph.D. He then became a professor there as well as a foreign policy adviser to the administrations of Dwight Eisenhower, John F. Kennedy, and Lyndon Johnson before his appointment as national security adviser to Nixon in 1969.

While negotiating the opening to China, arms control with the Soviets, and a gradual end to U.S. involvement in the Vietnam War, Kissinger was also influential in determining U.S. foreign policy vis-à-vis the collapse of the Portuguese Empire, following that country's "carnation revolution" in 1974 and 1975. Portugal, after decades of right-wing dictatorship, had become a socialist democracy, and it quickly shed itself of its colonies in Africa and Asia, including Angola and East Timor.

In the former, Kissinger helped orchestrate covert U.S. support for Holden Roberto and his National Front for the Liberation of Angola (known by its Portuguese acronym, FNLA), a staunchly anti-Communist guerrilla movement based in Zaire (now the Democratic Republic of Congo). The FNLA was one of three groups that had fought against Portuguese rule in the colony. With the Portuguese departing, the three organizations—the FNLA, the Marxist Popular Movement for the Liberation of Angola (MPLA), which was backed by the Soviets and Cuba, and the South African-backed Union for the Total Liberation of Angola (UNITA)—had taken to fighting with each other. As Angola achieved independence in November 1975, the MPLA defeated the FNLA. Kissinger then tried to gain support for UNITA but was blocked by the Clark Amendment, a congressional act passed in 1976 banning U.S. aid to the rebel group.

In East Timor, the situation was less complicated but equally violent. As the Portuguese pulled out of this Asian enclave, a leftist, nationalist group called the Revolutionary Front of Independent East Timor (FRETILIN) took power and declared independence on November 28, 1975. Nine days later, Suharto, the right-wing, anti-Communist dictator of Indonesia—which occupied the western half of the island—sent his troops in, declaring East Timor part of Indonesia the following year. A number of historians and journalists claim

that Kissinger, who was visiting Indonesia at the time, gave the go-ahead to Suharto, promising U.S. support for the move.

The consequences of Kissinger's support were dire. Long after he had left government—following Ford's defeat in the 1976 presidential elections—Angola continued to fight a guerrilla war against UNITA, and East Timor remained under a brutal Indonesian occupation until 1999.

Kitchener, Lord Horatio Herbert (1850–1916)

As a British soldier and statesman, Lord Kitchener made his reputation in Egypt and the Sudan. He first arrived in Egypt in 1882 and on his own initiative disguised himself as a Levantine to scout the Nile from Cairo to Alexandria. This exploit led to his appointment as second in command of the cavalry, and as such, he took part in the failed campaign to relieve Charles Gordon in Khartoum. Despite the failure of that mission, his own conduct merited promotion, and he served as governor-general of the eastern Sudan from 1886 to 1888.

In 1887, Kitchener was back in Egypt and in command of the cavalry, defeating an invasion from the Sudan. Appointed sirdar (commander of the army of Egypt) in 1892, he revamped the Egyptian army and in 1896 began the suppression of the Sudan. He was created a Knight Commander of the British Empire and promoted to major-general for his capture of Dongda but had to fight for continued support for the campaign. Relatively cheap victories in 1897 solidified his reputation and ensured funding for his operations. A combined force of British and Egyptians broke the back of the Sudanese at Omdurman and avenged Gordon. Kitchener then proceeded up the Nile with an escort to eject a French expedition at Fashoda. He was elevated to the peerage as Baron Kitchener of Khartoum in

1898. As governor-general of the Sudan, he oversaw the final pacification of the region.

Kitchener next saw action in the South African War, serving first as chief of staff to Frederick Sleigh Roberts, then as overall commander of operations after Roberts returned to Britain. Following the successful conclusion of the war in 1902, he became the commander in chief of the Indian army, reforging it as he had the Egyptian forces. He was promoted to field marshal in 1909, served on the Committee for Imperial Defense in 1910 and 1911, and was consul-general of Egypt from 1911 to 1914. He was further elevated, to an earldom, in June 1914 and was still in Britain when World War I began. He was appointed secretary of state for war and oversaw the creation of the “Kitchener Armies,” a massive expansion of the British army to meet the needs of the western front. He was killed in 1916 when the HMS *Hampshire*, conveying him to a conference in Russia, struck a mine off the Orkneys and sank.

Korea

Seeking markets and raw materials as well as a strategic buffer zone, Japan defeated China (between 1894 and 1895) and Russia (from 1904 to 1905) in contests over control of Korea, which it then ruled as a formal colony from 1910 to 1945. The Japanese rule of Korea went through three major stages. An initial period of naked military rule, capped by Japan’s brutal crushing of the peaceful March 1 Movement for independence in 1919, was followed by a period of co-optation and limited liberalization until about 1931 and then by a final period of militarization, forced assimilation, and mobilization for war.

Korea was closely integrated into the Japanese economy—but under a policy of deliberate underdevelopment intended to maintain it as a source of cheap rice and a secure market for Japanese manufactures. A small Korean bourgeoisie was allowed to emerge after 1919, and late

in the colonial period, northern Korea developed as an industrial support base for Japanese aggression on the Asian mainland. Living standards declined under Japanese rule, with tenancy rising and rice consumption dropping. Japan imposed an extremely intensive administration, stationing nearly 100 times as many functionaries in Korea as France did in Vietnam, for example, although Koreans filled many positions on the bottom rungs of the colonial apparatus.

Japanese rule was most heavy-handed in the Asia-Pacific theater during World War II. Korean identity came under assault with the forced adoption of Japanese names and a ban on use of the Korean language. Exploitation intensified, with some 700,000 Koreans sent to Japan for forced labor; 365,000 conscripted by the military for use outside Japan as civilian workers, soldiers, or guards; and another 4 million mobilized for forced labor in Korea itself. Up to 200,000 young women, moreover, were forced into sexual slavery in war zones throughout Asia and the Pacific and at industrial sites in Japan.

Colonial rule has profoundly shaped postliberation Korea. The social and economic polarization Japan left behind in 1945 helped to set the stage for national division and the 1950–1953 war between capitalist South Korea, which remains structurally dependent on Japan, and socialist North Korea, which has based its legitimacy as a state largely on its founding leader’s record of pre-1945 resistance to Japan.

Kruger, Paul (1825–1904)

Known as the founder of the Afrikaner nation in South Africa, Paul Kruger served as a diplomat, a military officer, and a political leader in efforts to resist the complete takeover of South Africa by British colonialists in the middle and late years of the nineteenth century.

Born to a farm family of Dutch descent in the Cape Colony in 1825, Kruger had little formal education but became part of the commission desig-

Paul Kruger, seen in this 1900 portrait, was the founder of the Afrikaner nation in South Africa in the late nineteenth century. With his Afrikaner forces defeated by the British in the Boer War of 1899–1902 Kruger left South Africa for the Netherlands, the original homeland of the Afrikaner people, in 1902. (Library of Congress)

nated to draw up the constitution of the Transvaal Afrikaner republic in the 1850s. After Britain's annexation of the Transvaal in 1877, Kruger traveled to England in an attempt to undo the takeover. Unsuccessful in this, he won the support of the Cape Colony in a general South African effort to prevent federation under British rule. After that effort failed, Kruger led the armed resistance to British rule, which resulted, in the early 1880s, in a peace that guaranteed limited independence for the Afrikaners of the Transvaal. In 1883, he was elected president of the newly reconstituted republic, a position he filled until 1902.

Kruger and his Transvaal republic were soon threatened by an inundation of foreigners following the discovery of massive gold deposits in the Witwatersrand area of the Transvaal in 1886. These non-Afrikaners threatened the cultural uniqueness of the conservative Afrikaners, or Boers. Moreover, the wealthy capitalists—led by

industrialist and Cape Colony premier Cecil Rhodes—soon consolidated the industry and pushed for British annexation of the Transvaal.

Kruger successfully countered Rhodes's efforts through the late 1890s, winning the Transvaal president enormous popularity among the Afrikaner population. But when the gold magnates and the British continued to force the issue, Kruger opted for a war that would ultimately doom Afrikaner power for half a century. In October 1899, the British issued an ultimatum for the Afrikaners to stop their resistance to incorporation, and Kruger responded with a demand that British troops—amassing on the border between the Cape Colony and the Transvaal—pull back.

After war broke out, Kruger briefly led the Afrikaner army. But superior British power forced the Boers into a guerrilla war. Too old to lead such a rigorous struggle, Kruger turned over the reins of the military campaign to younger leaders and moved to Holland until the end of the war in 1902. He died in Switzerland two years later.

Kuomintang (Guomindang)

In 1912, Sun Yat-sen's Revolutionary Alliance merged with several smaller republican parties in China to form a new political party, the Kuomintang (KMT), which won a majority of seats in the 1913 national parliamentary elections. But President Yuan Shih-k'ai (Yuan Shikai), who favored a strong executive, outlawed the KMT.

Until 1923, the KMT was little more than a body of motley followers of Sun Yat-sen. But after Sun decided to accept aid from Soviet Russia in 1923, the Comintern (the Moscow-led international Communist directorate) helped to reorganize the KMT into a highly disciplined party of dedicated members united by an antifeudal, anti-imperialist program of revolution. The Whampoa Military Academy, headed by Chiang Kai-shek, was established to train a corps of disciplined revolutionary officers accepting hierarchical order

and obedience. Under Chiang's leadership, the KMT launched the successful Northern Expedition against warlords from 1926 to 1928, purged the Communists, and formed a national government in 1927.

In the 1930s, the KMT government expanded its authority over much of China. It succeeded through diplomatic negotiations to regain judicial control over Chinese residents in the treaty ports, as well as Chinese sovereignty over foreign-controlled Chinese government branches (maritime customs, tariffs, postal communications, and salt administration) and almost two-thirds of foreign concessions. But Japanese expansion into Manchuria and north China eventually compelled the KMT to form a second united front with the Communists to fight against Japanese imperialism and led to the outbreak of the Second Sino-Japanese War in 1937.

As the Japanese occupied east China, the KMT government retreated into the interior, moving the capital to Chungking (Chongqing). Civil war between the KMT and the Communists soon broke out, following the victory over Japan in 1945. Bureaucratic corruption, political repression, and economic mismanagement cost the KMT much popular support, and military mistakes led to its defeat by the Communists and the flight of the KMT government and 2 million of its mainland supporters to a haven in Taiwan in 1949.

The ideology of "recovering the mainland" and the Communist threat were used to legitimize an authoritarian KMT regime in Taiwan under the control of a few mainlanders. Martial law imposed in 1949 empowered the state to stifle freedom of thought, speech, publication, public assembly, and the press. But the KMT also promoted local elections and guided an economic revolution through land reform, the privatization of state enterprises, the support of export industries, the promotion of education, and other enlightened policies.

Chiang Ching-kuo, who became the leader of the KMT after the death of his father, Chiang Kai-shek, in 1975, responded to rising Taiwanese political consciousness by tolerating the formation of an opposition party, the Democratic Progressive Party, in 1986 and by ending martial law in 1987. One-party rule gave way to multiparty democracy. After Chiang Ching-kuo's death in 1988, power within the KMT was transferred from mainlan-

ders to Taiwanese leaders. With the election of Chen Shui-bian of the Democratic Progressive Party as president of the Republic of China on Taiwan in 2000, the KMT itself became an opposition party.

Kurds

Kurds are the most numerous stateless people in the world, with a population estimated at between 20 and 25 million. Recent archaeological evidence has lent some support to Kurdish claims of a distinct national identity dating back many millennia. Kurds speak an Indo-European language with several dialects and did not adopt Arabic when converted to Islam in the seventh century. Long balanced between the Ottoman and Persian Empires, the Kurds managed a degree of autonomy, and during World War I (1914–1918), the Allies contemplated an autonomous Kurdistan, but self-determination was ignored at the Paris Peace Conference (1919–1920). The League of Nations mandate for Iraq was to include some degree of Kurdish autonomy, which was ultimately rejected by the British. The subsequent Treaty of Lausanne (1923) also ignored Kurdish interests.

The Kurds are not unified politically; their cultural patterns and practices vary from region to region and state to state. In Turkey, an estimated 13 million Kurds, concentrated in the eastern provinces, comprise approximately 20 percent of the population. A separate Kurdish identity has been repressed in Turkey, and Kurdish nationalists have mounted several serious rebellions, with the worldwide Kurdish diaspora lending support to separatist movements and Turkish troops occupying much of Turkish Kurdistan. In Iran, where the Kurds constitute close to 10 percent of

the population, a brief Kurdish republic was established at the end of World War II but was repressed soon after, with the Kurdish language banned in Iranian schools and future Kurdish revolts crushed with much severity. In Iraq, the Kurds constitute 25 percent of the population and pose a real challenge to the stability of the state. Iraq has used severe repression against its Kurdish population, resorting to mass killings and even the use of chemical weapons. The plight of the Kurds gained international attention when Iraqi forces repressed a Kurdish revolt at the conclusion of the Gulf War in 1991. The twentieth

century thus witnessed a persistent repression of Kurdish national aspirations, and today, the Kurdish national question remains a significant factor in regional politics, with the ultimate status of the Kurds enmeshed in the fate of Turkey, Iran, and particularly Iraq.

L

La Salle, René-Robert Cavalier (1643–1687)

A French explorer born in Rouen on November 22, 1643, René-Robert Cavalier La Salle (Sieur de La Salle) was briefly a schoolmaster with the Jesuits in that city. In 1666, he settled in Canada as a fur trader, following his brother, a Sulpician priest. The Sulpician seminary in Montreal gave him a grant of land about 8 miles above Montreal on the St. Lawrence River. In 1669, La Salle sold this property to finance an expedition to China by way of the Ohio River, which he thought flowed into the Pacific; he was also motivated by a group of missionaries to preach to the Indians.

In 1669 and 1670, La Salle explored the Ohio River as far as the site of Louisville but not as far as its conjunction with the Mississippi; abandoned by his followers, he made his way back to Lake Erie. In 1677, he visited the court of Louis XIV, gaining a patent of nobility and a grant of lands around Fort Frontenac, the site of the present Kingston, Ontario, and a buffalo-hide monopoly. Having leagued with the western Indians, he prepared for expeditions to explore the Mississippi, which he reached below Illinois in February 1682; he took formal possession of the area for France in the name of Louis XIV and christened it Louisiana. He returned to Illinois and established Fort St. Louis near the present Ottawa, Illinois, around which thousands of Indians had gathered seeking refuge from the Iroquois. La Salle again

visited Louis XIV to obtain a license to establish a fort at the mouth of the Mississippi and to seize Spanish posts in the vicinity. On July 24, 1684, he set sail with a small convoy from La Rochelle; his expedition put in at Matagorda Bay, Texas, which he called St. Louis's Bay. After realizing it was not the mouth of the Mississippi, La Salle nonetheless established a settlement, which did not long survive privations, disease, and Indian attacks. Between October 1685 and March 1686, he vainly sought the outlets of the Mississippi; in his second attempt to get back to Canada, he was assassinated, on March 19, 1687, by some of his followers on the Trinity River in Texas.

Labor

The need for cheap labor capable of supplying the metropolitan “core” with raw materials and products from colonies in the “periphery” was fundamental to the rise of colonialism. The nature of colonial labor markets, the forms of labor (such as forced or migrant labor), the types of industries

(such as plantations or mines), and the levels of labor productivity and resistance all were influenced by prevailing economies but also by the basic inequality of the colonial relationship. To maximize profits, colonized peoples were treated as commodities, exploited, and often brutalized. However, these were not passive processes: labor patterns also were determined by local conditions and by class and political struggles in the colonies, and they profoundly influenced the economic and social lives of peoples living under colonialism.

Labor Systems under Colonialism

The organization of labor varied across region, period, and kind of colony, whether direct-rule overseas colonies, protectorates, or settler societies. European colonialism, predominant from the fifteenth to twentieth centuries, disrupted indigenous economies and societies, eventually driving many peasants into involuntary labor by controlling trade or agriculture. The early colonial period, associated with the capital accumulation phase of mercantile capitalism, was marked by the use of forced labor systems in the colonies, often juxtaposing colonial despotism, slavery, and limited elements of capitalism.

Spanish colonialism in Latin America, initially rooted in the exploitation of precious metals, relied on forced labor ruthlessly instituted by conquistadores; historians estimate that many millions died in the mines of Mexico and Bolivia. Slavery and the *encomienda* (Indian indentured labor) system of colonial tribute rapidly destroyed indigenous systems of labor, and Indian peoples were slow to adjust to the requirements of wage labor. The transatlantic slave trade, lasting 400 years, underpinned colonial growth in the New World. Closely tied to the spread of sugar and cotton plantations requiring ever increasing labor, the slave trade served as the primary labor force in the Caribbean and extensively supplemented European and Amerindian labor in Latin and North America. The centrality of slaves to colonial economies increased their social impact, and slave revolts were a factor in the move away from slave labor. But more significant were the changing requirements of the global economy, which demanded more productive labor.

Colonialism also incorporated existing forms of labor obligation, such as debt bondage, pawn-

ship, and *corvée*, common in precolonial states that colonized other peoples by incorporating them in an integral territory rather than in overseas colonies, for example, the Ottoman and Mughal Empires. Trade in labor resources crossed these boundaries; thus, African slaves also were sent to the Ottoman Empire and Indian Ocean region, including Portuguese colonies in Macau and Ceylon. In India, there was a marked difference between labor regimes under successive Mughal and British Empires; the former relied on *corvée*, the latter on plantation labor.

In Asia and Africa, trade rather than settlement characterized the early phase of European contact, and large-scale exploitation of labor did not occur until the nineteenth century. As colonial rule was extended, peasants were forced to work by the imposition of taxation or similar extralegal requirements, as was the case with plantation labor under the Dutch in Java, the French in Indochina, and the British in India. In southern Africa, colonial taxes forced many Africans from countries such as Mozambique and Nyasaland to work for long periods as low-paid migrant laborers in South African mines. In the latter half of the nineteenth century, when peoples who were still enjoying land rights proved reluctant to enter wage labor, substantial numbers of indentured Indian and Chinese laborers were deployed to British colonies in the Caribbean, Mauritius, Ceylon, Malaya, Natal, and Fiji, and Pacific Islanders were sent to Australia. Contradictions also grew between metropolitan core and settler elites, the former preferring more profitable forms of wage labor and the latter clinging to precapitalist forms of forced labor such as slavery, as in the nineteenth-century American South and South Africa.

Mixed modes of colonial production gradually gave way under the industrial and finance phases of capitalism and imperialism to the need for exploitation of more productive and easily reproducible wage labor. By the early twentieth century, the need for new markets for industrial products from imperialist centers and new investment in colonial industries increasingly required the semi-proletarianization of sections of the colonial workforce. In some colonies, such as India and Rhodesia, small-scale industrialization or intensified plantation agriculture produced a nascent urban or rural proletariat, often retaining close ties with

the land. In South Africa, a large working class emerged in the mines, yet it was, until the 1970s, overwhelming foreign.

Despite the move toward wage labor, the chronic dependency of colonial economies exacerbated the fragile position of labor. Wages remained static, work conditions harsh. In the 1930s, the key export sector dominated by colonial governments collapsed and further drove down wages, and the rise of militarism in Japan, Germany, and Italy brought brutal new varieties of genocidal forced labor in the colonies of those countries. Forced labor also remained part of the drive by colonial powers for increased exports. Rubber plantations in the Belgian Congo and in Indochina from 1910 to 1940 and the South African mines employed coercive methods of recruitment and workplace control, and efforts by colonial workers in Africa and Asia to secure better conditions were met by repression. However, such practices intensified industrial conflict and resistance and sowed the seeds of nationalist and labor opposition that, in concert with changes wrought by World War II, eventually would challenge the very basis of colonial rule.

Labor Resistance under Colonialism

Worker resistance to colonial domination initially was spontaneous but eventually developed into more organized forms of class struggle, such as labor unions and strikes. Colonial labor movements faced many obstacles, including legal barriers, low wages, and divisions of the labor force fostered by colonizers; the latter were particularly apparent in settler societies such as South Africa, Australia, and Palestine, where a white “labor aristocracy” existed side by side with an impoverished indigenous workforce. Colonial powers sought to stifle the organization of free labor. Unions were repressed in Portuguese, Italian, and German colonies and only tardily legalized by France and Britain, and South African black trade unions did not receive legal recognition until the 1970s. However, such measures did not prevent unions from forging ties with anticolonial parties, particularly in the state sector, where industrial discontent invariably turned against the employer, the colonial state.

In the final stage of European colonialism, discriminatory colonial policies drove together diverse social classes among the colonized, tem-

porarily masking class differences and at times enabling labor movements to impact on the colonial relationship. Workers in late-nineteenth-century Cuba, for instance, began to perceive the repressive nature of Spanish colonialism and to support independence. In many African and Asian colonies, industrialization and unionization accelerated with World War II. Independence offered the prospect of an improved life for colonial workers. In some countries, such as Laos and Ethiopia, unions were weak, but in others, such as India, Guinea, Benin, Ghana, South Africa, and Nigeria, they were important strategic allies of nationalists. The post-1945 period saw closer involvement in anticolonial nationalist movements on the part of African union leaders, such as Tom Mboya in Kenya and Sékou Touré in Guinea, whereas major strikes in Lagos (1945), French West Africa (1947), and Accra and Nairobi (1950) protested not only economic grievances but also colonial rule itself.

Laboring Lives under Colonialism

Coercive recruitment and control, high mortality rates, and overseer brutality marked the lives of many colonial laborers. The colonizers and the colonized had different conceptions of work. The former aimed to increase their profits through cheap labor, encouraged stereotypes such as the myth of the “lazy native” or unstable “coolie,” and sought to restrict the education of workers, thus leading to few opportunities for social mobility. In contrast, the latter often saw wage labor as a means to retrieve land lost under colonial appropriation. Migrant laborers circumvented colonial barriers to free labor organization by means of oral communication and kin-based networks. Vibrant new urban cultures developed in places such as the central and southern African mining belts. In addition, a gendered division of labor tended to prevail in colonies, with women workers performing much of the farm and domestic work at cheaper wage rates.

The imposition of labor systems played a crucial role in the underdevelopment of colonies and in so doing contributed to the perilous position of labor not only in colonial but also in postcolonial times. Following decolonization, independence removed many legal impediments to free labor organization that had existed under colonialism. However, neocolonial economies soon emerged in

the former colonies, where labor conditions remained onerous, due in part to the deleterious influence engendered by the many years of colonial dependency and domination.

concentrated on domestic reform and European relations but evinced an equivocal attitude toward the colonies. On the one hand, socialism decreed an instinctive sympathy for the nascent trade union and nationalist movements in some of the colonies, such as India and Egypt. But on the other hand, this sympathy was balanced by a refusal to advocate the abolition of the empire.

Keir Hardie, the former miner who was the first Labour member of Parliament, denounced the Boer (or South African) War at the turn of the twentieth century. He was repulsed by the jingoism encouraged among working men and women; Hardie and others believed that management fostered this mindless patriotism in order to divert attention from the domestic problems of unemployment and low wages.

But by the 1920s, when Labour had replaced the Liberal Party as one of the two major parties in British politics, the consensus of the leadership of both the Labour and Conservative Parties was that the empire should be preserved until the colonists were “fit” for self-government. Although colonial independence was considered the objective, the colonies were never viewed as ready for the responsibility.

Labour mythology might paint the granting of independence to India and Palestine in the post–World War II period as part of deliberate Labour policy to end the empire, but in retrospect, it is clear that there were other overriding concerns. Labour ministers were concerned with Britain's position as a world power after the end of the war, and they felt African colonies were essential to maintaining this position.

The Cold War also influenced Labour colonial policy. The fear of communism made the British Labour leaders reluctant to free parts of the empire that might subsequently be endangered by the Union of Soviet Socialist States (USSR) in part because the empire was seen as an important bulwark against Communist insurgency.

During the decolonization period of the 1950s and 1960s, the concept of the Commonwealth replaced concern with the empire in the political consensus. Labour supported the concept of the Commonwealth in part because of the underlying socialist ideal of international cooperation, but again, British interests would always override any desire for cooperation.

Labour Party (United Kingdom)

Before 1918, the Labour Party policy toward the British Empire was influenced to a large extent by its exclusion from political power. Labour leaders

One of the lasting legacies of the British Empire is immigration. Neither party anticipated that former colonials would arrive in Britain searching for employment. Many trade unions viewed immigration as a threat to their members' employment and wages, and racist exclusion did exist in some union branches. There was little difference between Labour and Conservative regarding discrimination, and neither party felt able to deal openly with the connection between the ending of empire and the immigration of individuals from former colonies. Despite the profound dissimilarities in the political doctrines of the Labour and Conservative Parties, there was little difference in the policy toward empire when either party held power.

Land

The interests and policies of European colonial powers in the vast colonized parts of other continents began with an informal stage (the precolonization period) in which traders, missionaries, and adventurers conducted their activities in foreign lands and evolved into a formal stage in which colonial flags were raised and colonial rule was introduced and consolidated. In both periods, beginning in the fifteenth century and spreading inexorably into the early years of the twentieth, the occupation, control, and allocation of land lay at the heart of the single most important relationship between the indigenous peoples and the new and later arrivals from Europe. In turn, this relationship shaped the social, economic, and political characteristics of colonial rule.

In the white-ruled parts of the British Empire, for example, the colonial regimen was transferred from the metropolitan colonial power to its white surrogates; such was the situation in Canada, Australia, New Zealand, and South Africa, where land policies had a common pattern, with minor local modifications, based on a color line that segregated Europeans from the local and indigenous peoples. For example, segregation was followed by

dispossession and annexation of land in the western and eastern parts of the Cape in South Africa during the period of Dutch company rule, when the San, Khoi, and the Xhosa lost vast acreages through treaties, conquest, displacement, and annexation. The British, who replaced the Dutch, carried this policy forward, consolidating segregation by creating settlements (or reserves) for the Khoi and the Xhosa. Such a pattern is also discernible in the colonial conduct in what later became British North America and Canada, where a whole host of treaties and proclamations in the seventeenth and eighteenth centuries deprived the aboriginal peoples of their lands and, by extension, their livelihood through hunting, fishing, and harvesting.

Though reserves are typically associated with colonial polices in the Americas and South Africa, the designation of land areas for occupation and use by colonized peoples through treaties and conquests was common in many areas. One of the more ambitious policies in this regard resulted from Edward Gibbon Wakefield's manipulations in 1830, through his Colonization Society. Wakefield argued that land, capital, and labor were the three cornerstones of a successful colonization policy. He tried out his theory in Australia and New Zealand. He foisted the Treaty of Waitangi on the Maoris, according to which Maori law and custom, including the entrenched and sacred concepts of communal ownership of land, were ignored. The European concept of individual landownership was introduced, and the Maoris of New Zealand became a colonized people relegated to small pockets of reserves.

If Wakefield's emigration policy was aimed at placing British settlers on lands in distant colonial outposts through treaties and conquests, another aspect of the British policy of using land grants was revealed in the indenture system, by which hundreds of thousands of impoverished Indians were recruited to work on (mainly) sugar plantations. Emigrants were promised free grants of land in lieu of return passage to India after ten years of continuous indentured labor, but this agreement was later rescinded; thereafter, jungles, swamps, and untilled areas were allotted to peasants under various smallholding schemes, and successful farmers were later displaced from their original grants.

The best examples of the operation of imperial and colonial policies and practices in regard to

land acquisition and distribution were found in the colonization of Africa, where the issue of land was a focus everywhere in one form or another. In Africa, these policies played out in the saga of slavery, the machinations of European powers as they scrambled for African territories, and the introduction of European concepts of individual landownership. All of this culminated in experimental land policies enacted in different periods of colonial rule up to and including the years and months of decolonization.

The traditional African concept of land was stated clearly by a Nigerian chief to the West African Lands Committee in 1912: "I conceive that land belongs to a vast family of which many are dead, few are living, and countless numbers are unborn" (Buell 1965). Some colonial rulers could never bring themselves to understand this concept and give credence to it. Others were quick learners and, in their haste to effect land settlements, made complicated compromises. One such official was Sir Harry Johnston, who served British colonial objectives in various parts of Africa: the Cameroons, the Niger Delta, the British Central Africa Protectorate, and Uganda. His land policies in the British Central Africa Protectorate (later Nyasaland) and Uganda were good examples of a colonial structure being superimposed on an existing precolonial structure. The precolonial structure was based in customary law, according to which the land did not belong to an individual or group but was parceled out by traditional authorities for occupation and use; the authorities functioned as guardians or trustees of the communal land.

This precolonial situation underwent changes with the advent of colonialism when, for instance, European missionaries, traders, and commercial companies competed for a share of traditional lands, often by using dubious practices, promises, and gifts. Later, these once seemingly fair exchanges were enforced in a manner unfair to native peoples when disputes arose. The sheer strength of colonial resources at home and abroad allowed whites to impose their will in this way. In attempting to merge the diverse concepts of Europe and Africa, Sir Harry Johnston was guided by five principles in the case of the Nyasaland protectorate: the rights of Africans should be protected; existing villages and plantations should remain

undisturbed—even after what Europeans deemed to be a "purchase" and "sale" transaction; there should be sufficient space for existing villages and plantations to expand; acquisition of land by Europeans for speculation purposes should be discouraged; and finally, the government should have sufficient Crown lands to develop the country.

These principles were good, but the practices that were followed during implementation, as well as the ensuing consequences, were extremely detrimental to African interests. In short, 15 percent of African lands were immediately alienated (and more followed in later years). Moreover, the original inhabitants—who were not to be "disturbed" of their rights to live and use the occupied lands—were turned into labor tenants, living on their own territory at the mercy of European landowners. This last outcome was the most tragic result of colonialism everywhere.

In the middle and later years of colonialism in Africa, many land laws were introduced, and they varied over time and place in accordance with colonial and African realities. African trust lands were instituted to prevent further land alienation, for instance, and there were some experiments with transforming customary lands into private landholdings.

Harry Johnston's land settlement of 1900 in Uganda was an example of a colonial dialogue between the British monarchy, through its colonial representative, and an African monarchy, the kabaka in Uganda. Again, Johnston began with certain principles: private estates for the kabaka, his regents, and other lesser chiefs; wastelands and uncultivated lands for the Crown; and a board of trustees to administer and protect Africans in rent-free lands originally occupied by them (as in Nyasaland). This settlement in effect divided the land between the kabaka and his entourage and subordinates, on the one side, and the colonial establishment of Uganda, on the other side. The plan resulted in considerable chaos in actually determining, on the ground, who got what, but the agreement lasted for some fifty years—half the life of the colonial era on average.

For the colonial powers, land—its acquisition, exploitation, and control—was their greatest asset. Conversely, it was also the single most important factor contributing to the enduring poverty of colonies across the globe. Consider the

Natives Land Act of South Africa of 1913, the Land Apportionment Act of 1930 in Southern Rhodesia, and the plight of the peasantry in India and in the plantation economies of Africa, Asia, and the Americas. Colonial concepts of segregation, separate development, assimilation, integration, and apartheid were all structured on and sustained by the colonial powers' ability to establish and maintain control over colonial lands. Thus, a study of colonialism is, in large measure, a study of the fate and fortunes of colonial lands.

Language

Despite the enormous linguistic diversity encountered by Europeans as they began expanding into the world around them, the nature of the colonial exchange prior to the nineteenth century was such that language was not a major issue. The reason for this was that the bulk of European contacts with indigenous peoples were made by merchants or settlers. In the course of conducting their business, merchants made do with pidgin, used sign language, learned a few words of local trade languages, or took individuals back to Europe so that

they could learn European languages and act as interpreters on return trips. Settlers, by contrast, tended to form homogeneous groups and kept to themselves as they focused on creating farms or plantations run with indentured labor or imported African slaves. Since laborers could easily be directed via interpreters, hand gestures, or a few simple verbal commands, there was no need to adopt a sophisticated language policy.

All this changed as Europeans began acquiring larger empires and attempted to justify their actions by claiming they were there to "civilize" indigenous peoples. The British were the first of the colonial powers to try to adapt to these new pressures. As they expanded into India in the late eighteenth century, the British inherited the daunting task of administering a huge and ethnically and linguistically diverse territory. At the same time, they grew increasingly enamored with the idea of a civilizing mission inspired by the Enlightenment and its notions of human perfectibility. For the British, the key to both effective administration and the uplift of indigenous peoples was to provide them with a European-style education that exposed pupils to European values and belief systems while simultaneously providing the requisite knowledge and skills to help administer the colony.

Although there was general agreement within colonial circles about the aims of the educational system, the question of how best to achieve these goals revolved around the early-nineteenth-century Anglicist versus Orientalist debate. The Orientalists advocated the use of the local vernacular as the medium of instruction in the colonial school, on the grounds that pupils could learn best and more quickly in their own language. But in India, for example, Anglicists countered with the claim that indigenous languages lacked the capacity and vocabulary to convey specialized European knowledge, thereby necessitating the use of English in all schools. As the century progressed, the sheer number of Indian languages and the rise of both nationalism and social Darwinism added further support to the Anglicist position. Hence, although colonial officials in India were encouraged to learn local vernaculars via the provision of subsidies and other incentives, the official language of British India was clearly English.

Although designed to facilitate the task of colonial administration, Britain's language policy

produced unintended side effects. As English spread across the subcontinent, it helped to unify the colony by providing Indians with a common medium of communication. As the colonial period progressed, however, this also facilitated the development of Indian nationalism, since it enabled disaffected groups to talk to one another and share their grievances with British rule. Worse yet, it gave educated elites access to nationalist tracts and revolutionary theories generated in Europe. The combination of these factors, plus increasingly inept British rule in the twentieth century, eventually forced Britain to grant independence to India.

Although the British were still grappling with the language issue in India, the onset of the worldwide scramble for colonies that erupted in the mid-1880s led to a new emphasis on the language issue. Just as the acquisition of new territories was partly motivated by the desire to express nationalist and patriotic sentiments, colonial powers began looking at the task of “civilizing” the inhabitants of these new lands as an opportunity to prove the superiority of their own languages and cultures. At same time, however, the problem of providing cost-effective administration in these large and incredibly diverse territorial empires tempered efforts to spread European languages and led to the adoption of complex and occasionally contradictory language policies.

As the British moved into Africa, they adopted a new policy known as indirect rule, by which British authorities relied as much as possible on indigenous leaders and governmental structures to carry out colonial policies. This approach not only reduced the need for a large and expensive colonial administration, it also eliminated the need to teach all of their new subjects how to communicate in English. Instead, colonial officials were encouraged to learn local vernaculars, or they conducted most of their business through interpreters. The need to train these interpreters and create Western-educated clerks to help fill the lower ranks of colonial administration meant that the British could not entirely dispense with English lessons in schools. However, the new policy went a long way toward reducing British colonial expenditures, and it ensured the survival of local vernaculars.

Unlike its British counterpart, French language policy was dominated by an overall administra-

tive ideology that focused on direct rule and assimilation. The idea behind both concepts was to create a larger, unified France that would surpass its European neighbors in size, population, economic clout, and military power. To this end, the French committed themselves to suppressing regional languages both at home and abroad in an effort to remake all of their subjects into French people. In the colonies, they did so by insisting that all official business be conducted in French and by mandating, particularly after the 1903 passage of new laws reorganizing and secularizing education, that French be the sole medium of instruction at all scholastic levels. This emphasis on the use of French continued even after the official doctrine of assimilation was replaced with the looser policy of association. Although the association policy called for the collaboration of French and local authorities on all matters and consequently hinted at a possible official role for local vernaculars, it did not effectively change French language policies in Africa. As a result, France’s efforts to Gallicize its possessions succeeded in imprinting portions of Africa with a strong francophone linguistic and cultural tradition that continues to the present day.

Finally, although the German position on language appears to have been more complex, it was always motivated by Germany’s desire to rule as cheaply as possible while engaging in the process of extracting wealth. When they took over in East Africa, the Germans found that Swahili had already become the local *lingua franca*. Since the language was already so widespread and was so easy to learn, the German colonial administrators simply chose to adopt it as the official language rather than go through the difficulty and expense of trying to impose their own language. The language situation in South West Africa proved to be equally simple. The area was sparsely populated and was always intended to be a settlement colony, so the obvious choice for an official language was German. In the rest of German Africa, however, the language issue was not so clear-cut. Both Cameroon and Togo were characterized by extreme linguistic diversity, and they had nothing approaching a *lingua franca*. As a result, the colonial administration quickly decreed that German was to be used in all official and business transactions.

Despite this stance, the small size of the German presence in these colonies prevented the Germans from actively promoting the use of their language among the indigenous populations. This situation only began to change in 1910, when colonial interest groups began expressing concerns that English and pidgin English, both of which traced their roots back to earlier periods when coastal peoples traded with passing European ships, were more prevalent than German. This, in turn, led to calls to actively spread the use of the German language in order to clearly stamp the colonies as German possessions. World War I, however, prevented these efforts from coming to fruition, as Germany lost its colonies as a consequence of the Treaty of Versailles.

Las Casas, Bartolomé de (1474–1566)

Bartolomé de Las Casas was born in 1474 to a wealthy merchant family of Seville, Spain, and received a law degree from the University of Salamanca. As part of a military expedition, Las Casas went to Hispaniola in 1502 and helped repress an uprising on the island. He received an *encomienda* for his military service and set about working to convert the people he received as part of the "property" of his estate. He eventually renounced this *encomienda* but was given another for serving as chaplain in the conquest of Cuba in 1512 (he had been ordained a priest two years earlier). He kept

this *encomienda* for a while but gave it up as well after witnessing the atrocious mistreatment of the indigenous people in Cuba and elsewhere in the New World.

This Cuban experience led him to denounce the Spanish treatment of indigenous people, and in 1514, he began a lifelong struggle for their rights. He preached for a policy of "peaceful colonization" led by priests, not soldiers, and was given land in Venezuela to test his plans. However, continued mistreatment by the colonizers in the area led the local people to attack the Spanish, and his experiment came to an end. Through his efforts, Las Casas eventually was instrumental in convincing the Spanish courts to order the phasing out of the *encomienda* system—unfortunately, the order was largely ignored by the Spanish colonizers.

After Las Casas became the bishop of Chiapas (in 1543), his struggle for the rights of indigenous people became more intense, culminating in a 1550 debate on the nature of the so-called Indians in Valladolid, Spain. There, Las Casas confronted another Spanish scholar, Juan Gines de Sepulveda, who claimed (among other things) that a just war could be waged against the Indians because they were infidels, barbarous, and, as a consequence, fit to be enslaved. Although the judges hearing the arguments of the two men made no final determination, the ensuing orders of the Spanish court and the Vatican suggest that Las Casas won the day. But it must be said that, for all of the moral arguments Las Casas won, the lot of the indigenous people of the New World did not improve materially. Las Casas spent the rest of his life working to ease their oppression. He died in Madrid in 1566.

Law

Law was crucial to the establishment and maintenance of the colonial order across the world, in regions as diverse as Africa, South America, Southeast

Asia, and the Indian subcontinent. Recognized as the “cutting edge of colonialism,” law was utilized as a coercive force, supported by the power of the colonial state, to help secure order, to promote capitalist development, and to restructure social relations. Perhaps even more important, however, the implementation of new sets of rules and regulations enabled a more general process of societal and cultural transformation. In the nineteenth century, this process was often referred to as the “civilizing mission” of colonialism. To legitimate this mission, colonial powers sought to import Western law so that traditional customs and rules would be replaced with those assumed to be more civilized. Under colonialism, European countries established dual legal systems in which the law of the colonies was superimposed on preexisting legal systems; both, however, were dependent on the legal system of the colonial state. The development and maintenance of a dual legal system was one of the central features of European colonialism over the past 300 years. Many postcolonial societies are still dealing with the effects of this process and the legacy of this legal pluralism.

The reason law was so important to the establishment of the colonial order was that it was a central mechanism to define relationships between state and society. Through both criminal and civil law regulations, the colonial state was able to set the boundaries of behavior and to control a wide spectrum of private transactions. Although there is little debate on the importance of law in the colonizing process, there is some dispute concerning the ways in which this process actually affected non-Europeans. Law was not only used to promote the interests of the colonial state but also utilized by non-Europeans to limit the demands placed on their land and labor. In many ways, both the colonizer and the colonized used the legal arena as a forum to resolve fundamental disputes concerning authority and legitimacy.

Unlike the colonial experiences in places such as North America and the Caribbean, where the colonial powers extended the laws and institutions of the home countries, the establishment of colonial rule in Southeast Asia, Latin America, the Indian subcontinent, and Africa required a more complex formulation. In India, for example, the British found a polity with a deeply entrenched state system of governance, consisting of estab-

lished laws and institutions. Rather than dismantling the entire administrative and legal structure, the British decided to use these preexisting modes of control as much as possible. The result in India—and elsewhere—was the establishment of a dual legal system that recognized particular “customary” rules as well as state laws imported from the colonizer’s home country.

The term *customary law* refers to the law of the colonized peoples as recognized by colonial governments. It does not necessarily refer to those laws actually used by non-Europeans before colonialism, which has been distinguished with the term *indigenous law*. The notion of customary law was invented by colonial governments to govern disputes involving only non-Europeans. Although customary law was first recognized and utilized in India, it was more fully developed in the late nineteenth century and early twentieth century throughout Southeast Asia and in the African colonies. Colonial powers justified the need to recognize customary law as a way to provide autonomy and self-governance to individuals they believed were not ready to appreciate the full benefits of “civilization” while at the same time enabling the colonial state to maintain control without using limited financial and personnel resources.

Yet the actual implementation of a dual legal system was difficult, at best. During the precolonial period, customary laws were usually unwritten, flexible, and adaptable to change; however, colonial governments often codified them into fixed, formal, and written rules that were ultimately enforced by colonial courts. Frequently, colonial governments utilized the codification process to invent a version of customary law that was at odds with the indigenous legal rules handed down from the precolonial period. Colonial courts in central Africa, for example, interpreted customary law in a way that promoted the authority of men over women, in a manner inconsistent with precolonial rules. This was done in order to ensure the authority of traditional leaders and particular hierarchical relationships that were eroding under the pressure of the new ideas of individualism being introduced through the colonial system in the 1920s.

In addition, it was essential to define precisely those individuals to whom customary law would apply. In many cases, the concept of tribe was used

for these purposes. For example, in the Natal Code of Native Law of 1891, a tribe was defined as “a number or collection or body of natives forming a political organization or community, and composed of not less than twenty kraals [households] under the government, control, or leadership of a chief, and which organization or community has been recognized or established by the Supreme Chief.” The colonial powers used the idea of tribe in order to legitimate the creation of customary law and the dual legal system. The concept of tribe also facilitated social control, as it dissolved the majority of colonized peoples into several minorities and thus helped to deter resistance to colonial authorities.

Colonial officials claimed that customary law provided autonomy to local populations—and that it was indeed authentic and the product of the precolonial era—but this usually was not the case; the implementation of customary law was still subject to colonial authority. For example, throughout Africa, local magistrates were given the power to interpret and apply customary law as they deemed appropriate; as a result, those colonial officers often usurped the jurisdiction of local institutions. In some cases, if a customary law was considered to violate “civilized standards,” it was simply not recognized. Most colonial powers utilized this so-called repugnancy rule to prohibit behaviors such as the practice of polygamy and witchcraft or to ban certain festivals to remember ancestors. Thus, the colonial state frequently altered the nature and use of custom among the colonized.

The second dimension of the dual legal system was the body of rules and regulations that were applied only to disputes between Europeans or between Europeans and non-Europeans. These laws were imported from Europe and were designed to afford Europeans the same rights and responsibilities as they had in their home country. With respect to non-Europeans, however, state law was often used to secure social control and to promote capitalist development. In many of the French colonies, social control was guaranteed through the establishment of an *indigénat* (indigenous) code, which was purposefully vague and extended to a wide array of activity. For example, in one case, it provided summary punishment (either brief imprisonment or a fine) for any perceived of-

fense that called into question European authority. In this way, the law was used as a means to facilitate social order and limit resistance.

At the same time, law was central to the establishment of labor relations and land allocations conducive to capitalist development. In many colonies, different taxes were imposed on non-Europeans to encourage them to enter the workplace as wage earners. Not only did such laws help sustain struggling industries, they also provided an important source of revenue for the colonial state. In the colony of Natal, for example, the hut tax on non-Europeans covered the expenses of the entire colonial administrative establishment in the 1860s. Taxes of this type provided similar benefits, to both capitalists and state governments, in such places as India, Indonesia, Vietnam, and Brazil. Colonial governments also promulgated laws regulating landownership, marriage and divorce, drinking and entertainment, and contractual obligations, all to encourage non-European activity in the capitalist economy.

Even though colonial governments sought to utilize the law to restructure social relations and maintain order, it is important to note the ways in which colonized peoples appropriated specific rules or legal forums to resist the colonial state. In many instances, colonized peoples sought protection from various colonial courts and used existing legal principles to their advantage. More important, colonized peoples constantly struggled over the application and meanings of laws in local settings. In other circumstances, laws were simply ignored or proved too difficult to enforce at the local level. The struggles waged by the colonized peoples are important, as they demonstrate how these individuals actively participated in the construction of the dual legal system and how they used the law to resist the oppressiveness of colonial rule.

Still, the use of law in the colonial experience did promote significant changes among the colonized peoples. In particular, law was used to foster important sociocultural transformations that affected daily life in a multitude of ways. The passage of laws not only facilitated particular types of behavior concerning land, labor, or personal relations but also helped to establish different understandings about power, authority, and wealth. This was especially the case when the colonized and

colonizer confronted each other in the context of specific court cases. In court, colonized peoples were subject to the implementation of particular rules but were also introduced to the implicit ideologies underlying these rules. Thus, much of what colonized people learned about colonial rule happened in the context of legal forums charged with the responsibility to settle everyday disputes and conflicts.

Colonial law and legal systems also facilitated social mobilization for a select group of colonized individuals. For those who were willing to collaborate with the colonial state, the field of the law provided a significant opportunity for social ascension. For example, many people were hired to help administer the local colonial courts as interpreters, messengers, clerks, and, with respect to the administration of customary law, chiefs; such individuals were often given a nominal salary and were considered employees of the colonial state. Those who were able to take advantage of such opportunities often emerged as the political, social, and economic leaders of the postcolonial order. Indeed, there is evidence that the authoritarian uses of law during the colonial period provided a model of governance at odds with the goals and underlying norms of newly formed democratic regimes in the postcolonial period.

At the most general level, the dual legal system established two groups of people who were differentiated in terms of the law that applied to them: those who were under the jurisdiction of state law were citizens, whereas those under customary law were subjects. Among the key challenges for colonized peoples were questions of how to form resistance movements within such a structure and how to establish a unified legal system, in which all people were citizens, in the postcolonial period. Indeed, postcolonial governments in Africa, Latin America, and Southeast Asia continue to struggle with this particular legacy of colonialism. Although many countries have adopted constitutions that proclaim the existence of a unified legal system, the dual legal system developed during colonialism frequently continues to structure understandings about politics and authority as well as the nature of dispute resolution.

Lawrence, Thomas Edward (Lawrence of Arabia) (1888–1935)

Variouly an intelligence officer, Arabist, historian of crusader castles, masochist, and writer, T. E. Lawrence was born at Tremadoc, North Wales. Educated at the Oxford School and at Jesus College, Oxford, he spent the years between 1911 and 1914 on archaeological excavations in the Middle East, notably at the Hittite site of Carchemish, Syria. The Arabic he learned there he placed at the service of British army intelligence in 1913 and 1914, helping to survey Sinai and the Negev under cover of an archaeological expedition.

After the outbreak of World War I, he joined military intelligence, going to Cairo in December 1914. In 1916, he served in Mesopotamia (now Iraq). Then, in June 1916, Arabs in the Hejaz (western Arabia and home to Muslim's holiest site, Mecca) began a revolt from Turkey. Sharif Hussein, the emir of Hejaz, led forces made up primarily of Bedouin tribes with his sons, Sharif Feisal and Sharif Abdullah. Lawrence joined them in October 1916, as Britain provided naval support, gold, and weapons. Helping to organize attacks on the Medina-Damascus Railway, he also traveled north through the desert with Arab forces, putting pressure on the Germans and Turks nearer Britain's main advance from Egypt into Palestine and Syria. The forces took the Red Sea port of Aqaba in July 1917, reaching Damascus in October 1918.

Lawrence by then knew that Britain and France intended to keep some of the spoils from the Ottoman Empire for themselves. Sent to the Paris Peace Conference in 1919, he was disappointed to see France given control of Syria. In his next post, he was the adviser on Arab affairs at the Colonial Office under Winston Churchill, and in that capacity, he accompanied Churchill to a vital Cairo conference in March 1921. This meeting secured the throne of Iraq for Feisal (who had been removed from Damascus by the French in mid-1920) and the Emirate of Transjordan for Feisal's brother, Abdullah.

So Lawrence did see his Arab allies rewarded before turning his back on high posts and joining the ranks of the armed services. Briefly enlisting in the tank corps in 1923, he changed his name to T. E. Shaw. He served in the Royal Air Force (RAF) from 1922 to 1923 and again from 1925 to 1935, including a spell on India's northwest frontier.

Despite joining the ranks, Lawrence continued to mix with public figures, such as writer Thomas Hardy. His epic account of his desert exploits, *The Seven Pillars of Wisdom*, was printed privately in 1926. The same year, it appeared in abridged form as *The Revolt in the Desert*, the full version being published after his death. Retiring to his cottage in rural Dorset (in southwest England) in 1935, Lawrence died on May 19, 1935, as a result of a motorbike accident on a Dorset lane.

League of Nations

The League of Nations was established after World War I. A number of leading politicians, including U.S. president Woodrow Wilson, had already proposed an organization of this sort in the latter stages of the war; in fact, Wilson had included it in his famous Fourteen Points. The signing of the Treaty of Versailles (on June 28, 1919), which formally ended World War I, had been preceded by

the promulgation of the Covenant (Constitution) of the League of Nations. Wilson had requested that the covenant be incorporated into all the peace treaties related to the end of the war.

At the outset, the league had forty-two member governments, rising to fifty-five by 1926. However, its work was seriously undermined by the failure of the United States to become a member. Isolationists in the United States had prevented the country from joining, fearing American entanglement in more European conflicts. Meanwhile, Germany was only in the league from 1926 to 1933, and the Soviet Union was a member only from 1934 to 1939.

The headquarters of the league was in Geneva, Switzerland, and its overall organizational structure included the Secretariat, the Council, and the General Assembly. The Secretariat prepared reports and agendas. The Assembly, which met once a year, was composed of representatives of all the member countries and set policy. The Council met more regularly to address any disputes that might have arisen. Britain, France, Italy, and Japan held permanent membership in the Council. (The United States had been expected to be the fifth permanent member.) Another four members (subsequently, nine members) were elected to the Council by the General Assembly for three-year terms. In both the Council and the Assembly, decisions had to be unanimous to be binding. There were also a number of subsidiary organizations, such as the International Labor Organization (ILO) and the Permanent Court of International Justice, as well as a range of commissions, that attempted to deal with issues such as health, drugs, refugees, and child welfare.

The league had no military force that it could call on, but it was able to prevent or end a number of conflicts in the 1920s. It successfully settled the dispute between the Finnish and Swedish governments over the Aaland Islands, for example, and following the Greek invasion of Bulgaria in 1925, it convinced the government in Athens to withdraw. It also settled a border dispute between Turkey and Iraq, not to mention a number of disputes in Latin America. However, none of the disputes that were successfully settled by the league impinged on the interests of the Great Powers of Europe and Japan. In fact, in those disputes that did involve one or more of the Great Powers, the league proved

ineffectual. For example, when the Chinese government requested help from the league following Japan's invasion of Manchuria in 1931, the league failed to prevent the ensuing Sino-Japanese conflict. The league's effectiveness—and future—was further cast in doubt when the Italian government invaded Ethiopia in 1935 and 1936 and Britain and France (key members of the league) tried to make a secret deal with Benito Mussolini, which would have allowed Italy to remain in control of some Ethiopian territory, rather than support the league's position on Italy's aggression. The league remained on the sidelines during German and Italian intervention in the Spanish civil war, and it ignored Adolf Hitler's occupation of Czechoslovakia and Mussolini's invasion of Albania. In a last gasp, the league expelled the Union of Soviet Socialist Republics (USSR) following its invasion of Finland in December 1939, but it did nothing to prevent the onset of World War II more generally. In 1946, the League of Nations was dissolved and replaced by the United Nations.

The league had, however, played an important role in relation to the fate of the colonies of Germany and its allies after World War I, for it turned them over to the member governments that were already established colonial powers. The victorious powers were granted League of Nations mandates for the administrative control of—and responsibility for—the former colonies and territories of their rivals, but they were expected to account for their administration of these mandates to the Permanent Mandate Commission (PMC). But the PMC and the whole mandate system was institutionally weak. The operation of this system primarily benefited the colonial powers, most of whom were effectively members of the PMC. For example, although the PMC examined annual reports from the colonial governments on their efforts to “increase the well-being of the natives” in the mandated territories, it had no ability to carry out its own investigations into the situation in the colonies.

Despite the league's ostensible commitment to national sovereignty and independence, its approach to the mandated territories and colonial possessions generally legitimated rather than undermined colonialism in Africa, the Middle East, Asia, and the Pacific. As a result of its institutional and organizational shortcomings, the League of

Nations never played the role in world politics envisioned for it by U.S. president Woodrow Wilson and his supporters.

Lebanon

In 64 B.C.E., Pompeius conquered Phoenicia, making it a part of the Roman Empire. An ascetic community of Maronite monks and the first Maronite monasteries were established there in the early Christian era. From 619 until 629, the Sassanids occupied the country. The country was then conquered anew by the Byzantines under the leadership of Herakleios. Thereafter, from 638 to 640, Arab troops conquered the coastal cities. The Byzantines tried to regain control of these cities but were unsuccessful.

Before the end of the thirteenth century, the country fell into the hands of the Mamluks, although Ottoman rule (in the sixteenth century) did not bring many changes. For a short period, the Druze emir Fakhr ed-Din II was able to form an independent kingdom with the help of Tuscany and France, and the Druze emir Bechir II was able, from 1800 until 1840, to govern as if he were an independent ruler. Between 1859 and 1861, social unrest culminated in the killing of 20,000 Maronites by the Druze. Thereafter, the French government forced Turkey to create an autonomous region for Christians.

Although still a part of the Ottoman Empire, Lebanon continued to be influenced by France until 1919. Then, in 1920, the League of Nations granted France the mandates for Syria and Lebanon. A much enlarged Lebanon became a republic in 1926 and established the religious proportion in the constitution, whereby power was

shared by various Christian and Muslim groups; Lebanon gained independence in 1946. A 1948 decree introduced free trade in foreign currency and turned Lebanon into one of the most important banking centers in the Middle East.

Lee Kuan Yew (1923–)

Lee Kuan Yew was born to a Straits Chinese family, speaking English and Malay at home. (Straits Chinese were descendants of Chinese who had settled in the region around the Malay Straits.) He had progressed to the elite Raffles College in Singapore when the Pacific War interrupted his studies in 1941. Already possessing a first-class English-language education, he was now schooled in a harsher world, observing the emptiness of British protection and the brutality of Japanese occupiers. He worked as a cable operator in a Japanese propaganda agency during the war and occupation.

After the war, he studied briefly at the London School of Economics before taking up law at Cambridge University and the Middle Temple, a lawyers' society in London. He also mixed with other nationalists at a student society, the Malayan Forum. Returning to Singapore, he acted as an advocate for student groups and trade unions, helping to found the socialist Peoples Action Party (PAP) in November 1954. The latter sought Singapore's independence within a wider structure embracing Malaya. To this end, it united English-speaking nationalists with the Chinese-speaking workers, students, and Communists whom Lee represented. Harry Lee, as he was known during his days in England, now remolded himself as Lee Kuan Yew, learning Chinese in order to better reach out to the Chinese-speaking majority.

Elected as one of three PAP members in Singapore's Legislative Assembly in 1955, Lee led the

PAP to victory in May 1959 elections, becoming prime minister of Singapore, which now boasted internal self-government. Lee played a major part in securing the formation of the Malaysian Federation in September 1963, with Singapore's entry into this federation marking the end of British rule in the area. Lee's advocacy of a multiracial "Malaysian Malaysia"—that is, a Malaysia made up of all the peoples, regardless of nationality—then proved irreconcilable with peninsular Malayan leaders' conception of Malay predominance.

Lee had to accept Singapore's separation from Malaysia on August 9, 1965. Driven by a sense of Singapore's extreme vulnerability—as a tiny, Chinese-dominated but multiracial entrepôt, surrounded by Muslim neighbors and threatened by Communist subversion—Lee now adopted a highly disciplined, if not authoritarian, approach. Unions were brought under control, and direct feedback was encouraged, whereas combative criticism was frowned on.

This approach helped Singapore develop as the favored transport, services, petrochemical, and electronics manufacturing hub for the region, attracting multinational headquarters. Government intervention and control was pervasive, and each worker was required to contribute to the Central Provident Fund, a kind of social security scheme. A strong emphasis was placed on self-reliance, although mass public housing was provided by the Housing Development Board. As a leader of his people, Lee thus blended elitism, meritocracy, entrepreneurialism, and self-reliance with iron self-discipline, yet he had a sufficient sense of his country's vulnerability to search for ever better ways of doing things. The PAP, meanwhile, espoused a brand of socialism that emphasized state research and planning to direct society for the common good but fostered rather than restricted the free market.

In 1990, Lee oversaw a smooth transition of power to a new prime minister, Goh Chok Tong, and a new generation of PAP leaders. His eldest son, Lee Hsien Loong, is deputy prime minister, and Lee remains senior minister in Singapore and a much respected statesman regionally and worldwide.

Lenin, Vladimir Ilich (1870–1924)

Born Vladimir Ilich Ulianov, Lenin formed the Bolshevik Party in 1903, took power from the provisional government in 1917, and in 1922 established the Union of Soviet Socialist Republics (USSR). After his death, Soviet leaders canonized his thoughts as Marxism-Leninism and used them to justify their policies. Lenin dealt with colonialism and related issues in several works: *Development of Capitalism in Russia* (1899), *Imperialism, the Highest Stage of Capitalism* (1916), *The Socialist Revolution and the Right of Nations to Self-Determination* (1916), and *Thesis on the National and Colonial Question* (1920).

Lenin distinguished between imperialism—the “monopoly capital” stage of the capitalist system of exchange and production that began at the end of the eighteenth century—and colonialism—which, as state-led territorial expansion, predated capitalism and involved Europe’s use of annexed foreign lands as sources of raw materials and markets and as places to invest. He never analyzed capitalism’s effect in overseas colonies. In *Development of Capitalism*, Lenin described capitalist colonialism up to the 1890s in the czarist empire as “progressive.” This view implied that non-Russian national separatism would destroy the centralized political unity necessary for economic progress, that the non-Russian bourgeoisie and peasantry could not be revolutionary, and that only socialist revolutions occurring simultaneously throughout the empire and led by the proletariat and the metropolitan Communist Party could bring the czar’s non-Russian subjects what he called national liberation. In *Imperialism*, Lenin claimed that monopoly capitalism had become an obstacle to industrialization in European

overseas empires. The implication was that colonial bourgeois-led national struggles for political separation were progressive and should be supported by Communists because they weakened the ruling imperial power.

The arguments in *Imperialism* justified Soviet Third World policy after 1921, when Lenin concluded that European colonies would play as important a role in the Communist revolution as did Central and Eastern Europe in the so-called bourgeois revolutions of the nineteenth century. He imagined colonial uprisings occurring alongside European socialist revolutions as two parts of a single world revolution, and he demanded that European Communists support “progressive” colonial bourgeois struggles for national independence, whereas colonial Communists advocated unity between their own and European workers. Moscow subsequently instructed European colonial Communists not to attempt socialist revolutions but to support wars of “national liberation” with the local “progressive bourgeois democrats”—whom Joseph Stalin labeled the “revolutionary national bourgeoisie” in 1924.

Lenin’s argument in *Development*, as opposed to that in *Imperialism*, underlay the postwar Soviet claim that as provinces of imperial Russia, the western, non-Russian republics of the USSR had not been economic colonies. From this perspective, non-Russian nationalisms and national revolutions were reactionary because they threatened the unity necessary for revolutionary struggle and economic development. This interpretation did not change after 1961, when historians agreed that imperialism had appeared in czarist Russia by 1914. But against the backdrop of the Soviet Union’s renewed interest in the Third World, the history of the southern Asian republics was revised according to the logic of *Imperialism*. The official view then described the czarist Central Asian provinces as economic colonies, their national bourgeoisies as revolutionary agents of “democratic capitalism,” and their national movements as progressive parts of the socialist revolution.

Leopold II (1790–1865)

Leopold II, king of the Belgians, rose to the throne in 1865 on the death of his father, Leopold I, founder of the Belgian dynasty. Leopold II embodied a union of charm and intellect with avarice and power. Belgium proved too confining an arena for his ambitions, spawning dreams of glory through overseas empire.

Leopold, who did little to quell the bitter rivalry between the Liberal Party and the Conservative Catholic Party in the face of growing socialist politics, proved powerless to prevent democratization through extension of the franchise, often retreating into costly exhibitions of royal pretension. Confined by constitutional restrictions on his authority and frustrated by Belgian parochialism, Leopold created the International African Association, ostensibly an international scientific and humanitarian organization, as a guise for his ambitions. His imperial ventures were not confined to the Congo. He sought to gain concessions in both Morocco and China, but it was the Congo River basin that captured his imagination. At the Congress of Berlin in 1885, where much of Africa was parceled out to European imperialists, he persuaded the Great Powers to recognize his sovereignty over the Congo Free State.

The costs of “opening up” the Congo nearly bankrupted him, until the development of the au-

tomobile tire created a world demand for rubber. With ruthless indifference to the exploitation of the indigenous Congolese, Leopold leased large tracts to concessionaire companies, in which he demanded secret financial interests. He met accusations of atrocities against the African population with denials and won over the Belgian populace with elaborate public works. Erstwhile detractors were deflected by a combination of veiled threats and charm, until E. D. Morel's Congo Reform Association rallied international condemnation. In disgrace, Leopold was forced to surrender control of the Congo to the Belgian government—but not before shifting large sums to secret accounts outside Belgium. One of his last acts before relinquishing control was the methodical destruction of records relating to his administration of the Congo.

Leopold's relationships with both his family and the Belgian Parliament were uneasy. He was a constitutional monarch of autocratic temperament who was disdainful of his children. In a prudish Catholic nation, he openly maintained a mistress, legitimizing their relationship by marriage only on his deathbed. He died on December 17, 1909, defiant to the end.

Lewis and Clark Expedition

Dispatched by President Thomas Jefferson in 1804 to survey lands acquired from France in the Louisiana Purchase, the Lewis and Clark Expedition explored the northern Great Plains, the Rocky Mountains, and the Pacific Northwest. The diaries

that Meriwether Lewis and William Clark kept and the maps and drawings they produced taught Americans much about the region, opening it up to settlers and assuring that the territory would eventually become American rather than British.

In 1803, Napoleon Bonaparte, uncertain about whether France could hold on to its North American holdings, sold the Louisiana Territory—which included much of the Great Plains and the eastern slope of the Rocky Mountains—to the United States. But even before the purchase, Jefferson, greatly interested in all matters scientific, had determined to launch a scientific expedition into the interior of North America. A team of some forty men—skilled in various sciences, Indian sign language, and the arts and crafts needed to sustain the expedition—was pulled together with Meriwether Lewis, Jefferson's private secretary, and former Revolutionary War general William Clark at the helm.

After wintering in St. Louis, the expedition set off up the Missouri River in May 1804, setting up camp in North Dakota among the Mandan Sioux for the next winter. There, they added to their group a Sioux woman named Sacagawea, who helped negotiate with the Shoshoni as the expedition crossed that people's territory in what is now Montana the following year. Eventually, the team made it to the Snake River, which they rafted down to the Columbia and hence to the Pacific Ocean, becoming some of the first people to ever cross the North American continent. After building a fort near present-day Astoria, Oregon, the members of the expedition made their way back east via the Yellowstone and Missouri Rivers, returning to St. Louis in September 1806. Despite the dangers and hardships of the trip, only one member died en route.

Along with a multitude of discoveries of plants and animals, the expedition brought a disappointing realization: there was no easy water crossing of the North American continent. The Lewis and Clark Expedition once and for all destroyed a dream that had obsessed Europeans and Americans for centuries—finding a northwest passage to the Pacific Ocean and East Asia.

Liberal Party (United Kingdom)

Two men, William Ewart Gladstone and Benjamin Disraeli, dominated the British Empire in the nineteenth century, albeit in very different ways. Gladstone, leader of the Liberal Party, established an intense personal antipathy toward Benjamin Disraeli, his counterpart in the Conservative Party. Empire became a focus of difference between the two men and their parties as well, but in the execution of policy, the two leaders were not far apart.

The Liberal position was that Britain should avoid the acquisition of more colonies and should divest itself of the responsibility for directly governing existing members of the empire. Gladstone was not opposed to empire but advocated an association of nations under the guidance of Britain rather than direct rule from London. He argued that the Conservatives stressed nationalism and power as opposed to the Liberal emphasis on eschewing new colonies and fostering self-governance. Gladstone painted the differences as authoritarianism (Conservatives) versus the advocacy of free trade and self-help (Liberals).

Disraeli had great success in equating patriotism with colonialism to the new members of the electorate, but this was a plan to win votes rather than a rational alliance with ardent imperialists. Even though he cast the Liberals as unsound on matters concerning the empire, there was never much difference between the parties on actual policy decisions. A study of the expansion of British colonial possessions in Africa presents a unique opportunity to uncover the nineteenth-century support for empire yet reveals the clear reluctance to expand.

Although Disraeli was opposed to the acquisition of the Transvaal, he was forced to go along with the idea because of a local crisis. The Liberals found themselves in the same position, though they had criticized the Conservatives as too aggressive. Gladstone was forced to order the invasion of Egypt in 1882 in reaction to a threat to the

Suez Canal by the encroachment of other European powers. In much the same way, Gladstone, although opposed to expansion, was responsible for the takeover of Bechuanaland because of a fear of losing influence in southern Africa. Gladstone's advocacy of nonintervention crumbled before any threat against the two routes to India.

The British Empire expanded far more under the Liberals, despite the fact that the expansion was unplanned and certainly not desired. When the Liberal Party regained power in 1906, the government's main interests were domestic policies and foreign tensions; the empire was regarded as a minor concern.

Liberia

In 1816, with support from the U.S. Congress, the American Colonization Society began to transport freed slaves back to Africa. Initially, each state chapter of the society maintained a separate settlement or "county." On July 26, 1847, the isolated coastal freed-slave settlements united as the Republic of Liberia under the slogan "The love of liberty brought us here"; however, close ties with the American Colonization Society persisted until the end of the nineteenth century.

From 1870, Liberia's government was dominated by the True Whig Party and the "300 Families," a freed-slave Americo-Liberian elite characterized by their Christian faith and American colonial lifestyle. They presided over a precarious economy based on exploitation of natural resources and small-scale export agriculture, plagued by scarcity of capital and labor. As foreign debts mounted, European colonial powers threatened to intervene. During the 1890s, Liberia was forced to surrender territory to the neighboring British and French colonies, and Liberian authority was continually challenged by indigenous African societies in the interior until the 1930s.

In 1906, Sir Harry Johnston, a former British diplomat, negotiated a \$500,000 loan intended to

pay off foreign debts, but most of the money was lost in a scam perpetrated by the lenders; the government was left with added debt. In 1912, the U.S. government negotiated a loan but demanded control of the Liberian customs revenue in return. Salvation of sorts came in 1925 from the Firestone Rubber Company. Harvey Firestone was determined to resist efforts by the British and Dutch governments to force up rubber prices by restricting rubber plantation production. He agreed to pay off the Liberian debt in exchange for a ninety-nine-year lease on a million acres of land for rubber plantations, with an option on another million, and Liberia's support in recruiting 50,000 labors annually. In 1928, Raymond Buell, a Harvard professor, published *The Native Problem in Africa*, which criticized U.S. economic imperialism in Liberia and the labor trade with the Spaniard Fernando Po. This work sparked a League of Nations inquiry into the situation, which allocated most of the blame to Liberia, forcing President C. D. B. King and Vice-President Allen Yancy to resign in 1930.

Liberia's debt mushroomed during the Great Depression, but President Edwin Barclay (1930–1944) proved adept at avoiding reforms while neutralizing external intervention by diplomatic procrastination. When Japan conquered the British and Dutch East Indian rubber colonies in 1942, the Firestone rubber plantations assumed strategic significance, and the exploitation of Liberian labor was ignored.

In 1944, President William Tubman inaugurated an "open door" policy to promote foreign investment while undercutting local opposition by co-opting indigenous African participation in government. He died in 1971 and was succeeded by William R. Tolbert, who continued the free enterprise policies but sought a less conservative image and strengthened ties with West African nations. On April 12, 1980, a small group of soldiers led by M. Sgt. Samuel K. Doe overthrew the Tolbert government, ending the political reign of the True Whig Party and Americo-Liberian colonial hegemony. After ten repressive and corrupt years, Doe was assassinated. A seven-year civil war followed in the 1990s, resulting in the election of Charles Taylor as president in 1997.

Libya

Italian nationalists long viewed the Ottoman Empire’s North African provinces of Tripoli and Benghazi (later termed “Libya,” the term for the area given by the Romans, whom Italian nationalists admired) as an obvious area for expansion; they lay directly south of Italy across the Mediterranean Sea. Nationalism, economic interest, and a desire to find an outlet for Italian emigration each played a role, but diplomatic events proved decisive in pushing Italy toward the conquest of Libya. In 1911, a confrontation between Germany and France over control of Morocco ended in the creation of a French protectorate there; this was the last area of North Africa, besides Libya, still free of European control. Italy feared that further delay in annexing Libya would allow it to slip into the hands of Germany, France, or some other colonial power, despite the general recognition, sanctified by a number of agreements (especially with France in June 1902), that Libya lay in the Italian sphere of influence.

On September 28, 1911, Italian prime minister Giovanni Giolitti issued an ultimatum to the Ottomans and then ordered an invasion. The first troops landed in Libya on October 5, and shortly thereafter, the Italians seized all the major ports. Despite this initial success, a very difficult war began, lasting twenty years. The Arab and Berber inhabitants of Libya made common cause with their fellow Muslims, the Turks, and together they carried out an often successful guerrilla war. Mas-

sive Italian reinforcements, attacks on Turkey proper, and the outbreak of war between the Balkan states and Turkey in October 1912 led the Ottomans to sign the Treaty of Ouchy (October 18, 1912), thereby renouncing sovereignty over Libya but preserving the sultan’s religious authority as caliph. The Italians failed to understand that Islamic law made no distinction between civil and religious jurisdiction and that this concession to the Turks only fueled continued resistance to their rule. A Libyan revolt in 1914, provoked in part by Italian brutality, together with Italy’s May 1915 entrance into World War I, forced Rome to adopt a policy of compromise and local self-rule for its colony.

The subsequent loss of Italian control over Libya (except for the coastal towns), together with Benito Mussolini’s seizure of power in Italy in October 1922, led to the adoption of harsh military measures. Gen. Pietro Badoglio and Gen. Rodolfo “the Butcher” Graziani carried out a ruthless plan, putting 80,000 Libyans in concentration camps, blocking and poisoning wells, building a network of garrisons in troubled areas, bombing villages with mustard gas, killing and confiscating hundreds of thousands of sheep and camels, and constructing a 200-mile barbed wire fence between Libya and Egypt to prevent rebel border crossings. At least 50,000 died inside the concentration camps, and many others perished outside. Finally, on September 11, 1931, the Italians captured Umar al-Mukhtar, the aging leader of the Sanusi religious order in Cyrenaica and the most skillful of the rebel leaders. His execution marked the end of widespread resistance.

Italy then initiated more constructive policies for its “fourth shore,” as Libya was often termed, but these benefited the indigenous people very little. Great highways were constructed, railways built, port and irrigation facilities expanded, aqueducts created, cities modernized, land reclaimed, and model villages and farms developed. In addition, modern medical care became available for the first time. Some 110,000 settlers, many from poverty-stricken southern Italy, were recruited to live in Libya, often on lands confiscated from Arabs and Berbers.

Italy’s June 1940 entrance into World War II on the side of Adolf Hitler proved disastrous for Libya. The seesaw struggle that raged across North

Africa led to widespread destruction. By February 1943, the British had driven Erwin Rommel, the commander of the German Afrika Korps, and his Italian allies out of Libya, and the Free French had occupied the southern territory of Fezzan. In 1949, the United Nations voted to grant the colony independence by January 1, 1952, when a constitutional monarchy was set up under King Idris. After Col. Mu'ammar Gadhafi overthrew the king in 1969, he confiscated all Italian-held property, leading to the departure of most Italians.

Liliuokalani (1828–1917)

Hawaii's only queen and last sovereign, Liliuokalani was born in Honolulu. She was educated at the missionary-run Royal School and traveled throughout the United States and Western Europe. In 1887, King Kalakaua, Liliuokalani's older brother, attempted to develop a treaty agreement with the United States, one that would benefit his subjects as well as the foreign merchants, plantation owners, and sugar companies. On June 15, however, Kalakaua was forced to sign the so-called Bayonet Constitution, which effectively removed him from power, awarded the United States extensive business concessions, and granted it control of Pearl Harbor. This constitution was never ratified, but it was enforced, and an attempt to overthrow the missionary government during the summer of 1889 failed.

On January 17, 1891, Liliuokalani ascended to the throne after Kalakaua's death. An opponent of the 1887 constitution, she tried to restore Hawaiian sovereignty, and within two years, she had plans and backing for a new constitution and for other reforms. Sanford B. Dole's Missionary Party soon proclaimed Liliuokalani deposed, and a provisional government declared Hawaii a republic

on July 4, 1894. Robert Wilcox staged a revolt on January 6, 1895, but it was soon put down, and Liliuokalani was arrested. She signed an abdication act under duress and appealed to President Grover Cleveland for support. He recognized her right to govern and told Dole to reinstate her: Dole, however, refused, certain that the Senate would back him.

Liliuokalani went on trial for treason and, without being convicted, was sentenced to palace imprisonment (during her incarceration, she wrote the popular song "Aloha Oe"). She was pardoned in February 1896. When a formal annexation treaty was sent to the U.S. Senate by President William McKinley on June 16, 1897, Liliuokalani protested but to no avail. After writing *Hawaii's Story by Hawaii's Queen* in 1898, she withdrew into private life.

Literature

Colonial literature may be described as that which was written from a European-imperial perspective about the issues and experiences of empire and which referred to any theme, place, or people in any "discovered" or colonized territory. The first phase of colonial writing stemmed from the voyages of discovery and conquest starting at about the time of England's Elizabeth I. The journals, logs, reports, and memoirs of Christopher Columbus, Walter Raleigh, and Francisco Miranda and the gravely indicting writings of Bartolomé de Las Casas constitute the first phase. Richard Hakluyt's multivolume *Principal Navigations, Voyages and Discoveries of the English Nation* (1598–1600) provided useful imperial perspectives through its accounts of the voyages of John Hawkins, Francis Drake, Hugh Willoughby, John Davy, and others. Much of this material, of course, dealt with issues of landscape, hidden and sought after wealth, and indigenous life. The literature promoted the idea that England was to conquer and exploit these territories for its own behalf.

George Chapman's "De Guiana, Carmen Epicum" (1596) stands as one of the earliest poems glorifying imperial conquest; one of the first novels to address the issues of colonial conquest was Daniel Defoe's *Robinson Crusoe* (1719), a tale of survival through colonial possession and capitalist exploitation. The native in that story, named Friday by Crusoe, was a ghostly presence in his own land. Defoe's novel has been variously interpreted as being for and against colonial greed. There can be no such doubt regarding Jonathan Swift's *Gulliver's Travels* (1726), which delivered a stinging attack against the colonial enterprise. Swift described the hypocrisy and greed at the heart of imperial conquest that triggered and accompanied the robbery, rape, pillage, enslavement, and murder of non-European peoples in places such as Africa, India, Asia, the Caribbean, and North America. Swift's sentiments, however, were by no means representative of his time; most of the literature produced in the eighteenth century was self-justifying and self-congratulatory. In the course of the nineteenth century, when colonial administration began to take hold in the Caribbean, Africa, Asia, and other areas, a great deal of literature was produced by sahibs and memsahibs. Their views of the places they ruled bore little resemblance to the actual places; the longing was for a romanticized home, the perspective colonial.

Literature was conscripted into the imperial aim of establishing modes of behavior and a hierarchy of values based on European models of what was good and bad, right and wrong, acceptable and unacceptable. Literature was used to validate and propagate the brutal imposition of European religion, languages, and forms of government and jurisprudence over their indigenous equivalents. Writers such as Rudyard Kipling, Eliza Cook, Jules Verne, James Montgomery, John Buchan, and Mary Kingsley consciously advanced the cause of empire. They vaunted the imperial values of duty and sacrifice in the course of civilizing and Christianizing; these values were seen to be in exact opposition to the primitivism, laziness, fickleness, and depravity of the native—the other.

In their zeal to "write back," many postcolonial writers and critics have extended their condemnation of colonialism and colonial writing to include Shakespeare, Joseph Conrad, E. M. Forster, Charlotte Bronte, and Somerset Maugham. With the

Rudyard Kipling, seen here in an 1897 portrait, became the unofficial poet-laureate of the British Empire. His 1899 poem "White Man's Burden" encouraged the United States to take up the cause of English-speaking imperial rule. (Library of Congress)

ease that comes from overgeneralizations and what passes for radical views, a number of post-colonial critics have labeled these writers racist, imperialist, colonialist, and so on. Ironically, the impulse to redress the evils of colonialism springs from the very impulse that gave birth to colonialism in the first place, and the result is all too frequently a whine of protest, reverse racism, and insular nationalism.

The two Shakespeare plays to occasion the greatest debate within the colonial-postcolonial discourse are *Othello* and *The Tempest*. *Othello* is sometimes proclaimed a racist play because the black Othello murders his white wife, Desdemona. In such an interpretation, the malevolent presence of Iago and Othello's own nobility and habitual restraint are glibly ignored. In the same vein, *The Tempest* is seen to be a play justifying the usurpation of native lands and putting the indigene to constructive use; ignored is the idea that Shakespeare condemns the despotic attitude of Prospero and warns against the devastating consequences

of colonialism, the dehumanizing of conqueror and vanquished alike.

The novel that has generated more debate than any other on the part of postcolonial writers and critics is Joseph Conrad's *Heart of Darkness* (1898). This work has been met with vilification and vindication in equal measure. For instance, Chinua Achebe, the great Nigerian novelist, has accused Conrad of being a "bloody racist." Others, such as the Guyanese novelist Wilson Harris, have given a somewhat more balanced view, while pointing to Conrad's implicit confession regarding the inadequacy of conventional language and form to capture and convey the experience of colonial contact.

The quantity and quality of literature that has come from the former colonies since the 1950s has been nothing short of astounding. This is true especially of the Caribbean (Wilson Harris, V. S. Naipaul, Derek Walcott, Gabriel Garcia Marquez, Octavio Paz, Aimé Césaire, George Lamming, Jean Rhys, John Hearne, Edward Kamau Brathwaite, Martin Carter, Jorge Luis Borges, and others); sub-Saharan Africa (Wole Soyinka, Chinua Achebe, Nadine Gordimer, Ngugi wa Thiong'o, Léopold Senghor, Amos Tutuola, Camara Laye, Athol Fugard, Doris Lessing, and others); and India (Raja Rao, R. K. Narayan, Salman Rushdie, Vickram Seth, Arun Joshi, Nissim Ezekiel, Bharati Mukherjee, and others).

Several factors may explain this explosion of writing. There has been a need to redress the wrongs of colonialism by bringing into focus people, places, and issues that were neglected or pushed onto the periphery or into the background in colonial literature. This need has spawned numerous revisionist works, though the works stand by themselves as considerable literary achievements.

Literature is also a means toward the reassembly of self and nation, both shattered by the pressures of colonialism. Myths that were lost for their devaluation have been recalled for creative use; those that were dismissed as primitive have been foregrounded; in places where myths have disappeared with entire cultures, new myths have been created. All of this has breathed life into old literary forms, refashioning them into fresh and vibrant shapes. Tired imperial languages—French, Spanish, and English, especially—have been trans-

formed from old weapons of oppression to tools of creative expression.

Although the new literatures have generally found their way into high school and university literary curricula, stubborn vestiges of colonial thinking remain. There are still universities around the world, including many in former colonies, that value colonial literature over postcolonial literatures, white over black, the imperial over the indigenous.

Livingstone, David (1813–1873)

David Livingstone, a missionary and explorer, was born in Blantyre, Scotland, in 1813 of working-class, Christian parents. As a child, he worked in a cotton mill. After a limited and hard-gained education, he entered medical school in Glasgow in 1836. Two years later, he joined the London Missionary Society. Before leaving for Africa in 1841, he became an avid antislavery supporter after hearing Thomas Fowell Buxton speak. In South Africa, he joined the Moffat mission at Kuruman. There, he met his future wife, Mary Moffat, who died while exploring with him in 1862. He found stationary missionary activity uncongenial (he made one documented convert) and began the travels across Africa that made him famous.

He completed a traverse of Africa from Luanda on the west coast to Zanzibar on the east between

British explorer and missionary David Livingstone was presumed lost in East Africa until "found" by American journalist Henry Morton Stanley in 1871. (Library of Congress)

1853 and 1856. He returned to the United Kingdom in 1856 to write his widely read *Missionary Travels and Researches in South Africa*. He also embarked on a national speaking tour, during which his statements regarding the assistance Western commerce gave to Christianity and hence civilization both appeased the British conscience about investments in Africa and legitimated further colonial and commercial penetration of the continent. He returned to Africa in 1858, now supported by the British government, to lead several explorations (including the Zambesi Expedition) to chart the commercial potential of east-central Africa and its waterways. The expeditions were unsuccessful, and Livingstone returned to Britain in 1864. He raised money for an expedition to find the source of the Nile, which he was convinced would help to exterminate the slave trade. His final expedition began in 1865. In 1871, the U.S. journalist Henry Morton Stanley led an expedition to find the missing Livingstone, who died while ex-

ploring in 1873. Two of Stanley's attendants carried Livingstone's body on a nine-month journey to the coast, after which it made its way to a hero's burial in Westminster Abbey.

Lloyd George, David (1863–1945)

David Lloyd George was the British prime minister from 1916 to 1922 and a staunch imperialist throughout his career. As a Welsh Liberal member of Parliament (MP), his calls for home rule for Wales were irregular and secondary to his interests in land reform and disestablishment, that is, the removal of official status from the Anglican Church of Wales. In 1894, he formed an organization named Cymru Fydd to promote Welsh nationalism, but it foundered, and Lloyd George returned to other issues. In 1911, he organized the investiture of the Prince of Wales at Caernarfon, in his own riding (district), promoting Wales—and himself—as important voices in the United Kingdom. Both efforts characterized Lloyd George's view of nationalism within the confines of British imperialism.

Despite such views, Lloyd George opposed the South African War of 1899–1902, accusing the Conservative government of imperialist arrogance; his true aim, however, was to criticize the Conservatives rather than imperialism. His stand was unpopular, and he was attacked as unpatriotic. Nonetheless, in 1916, he became prime minister, and when an armistice was signed in 1918 following World War I, he was hailed as the savior of the British Empire. In the 1919 Treaty of Versailles, Lloyd George was able to obtain former German colonies to support Britain's naval and economic interests.

Following Versailles, Lloyd George returned to the dilemma of Ireland. Home rule had been introduced in 1912 but was postponed with the outbreak of war. In 1916, the events of the Easter Rising caused Britain to fear the loss of Irish nationalist support for the war. Lloyd George was appointed to produce an agreement acceptable to both nationalists and unionists, but the agreement

collapsed under Conservative pressure. As prime minister, Lloyd George promised home rule again in 1918, in return for Irish conscription. The Irish backlash led to greater support for the nationalist party Sinn Fein, and Lloyd George convinced the Conservatives that if they did not offer home rule, excluding Ulster, Sinn Fein's popularity could result in Britain's total loss of Ireland. The Conservatives agreed, and the Government of Ireland Act was passed in 1920, approving separate parliaments in Dublin and Belfast. Continued violence in Ireland prompted Lloyd George to call for a truce, and in 1921, he and Irish delegates concluded the Irish Treaty. The Irish Free State was established as a dominion of Britain, and the boundaries between it and Ulster were confirmed.

In this, as in the Treaty of Versailles, Lloyd George demonstrated superior negotiating skills. Buoyed by his achievements, he called an election in 1922. But in each treaty, Lloyd George's success relied on misleading both sides, and he came to be seen as untrustworthy despite his good results. The Irish Treaty caused anger in every quarter, and Lloyd George lost the election.

Locke, John (1632–1704)

The English philosopher, physician, and educator John Locke influenced the course of British and American political philosophy through his call for responsible civil government in support of individual labor and property. Providing the ideological foundation of British liberalism and the political justification for the American Revolution, Locke's ideas helped to facilitate the advent of modern democratic society while also offering a rationalization for colonial acquisition and imperial consolidation.

Following a brief tenure at Oxford, Locke served as confidential secretary and personal physician to

the English statesman Sir Anthony Ashley Cooper (1621–1683), who later became lord chancellor and the first earl of Shaftesbury. While serving as general secretary to Ashley's Carolina proprietorship, Locke drafted *Fundamental Constitutions of the Carolinas* (1669), which offered an aristocratic framework for colonial rule. Although the proposals advanced in *Constitutions* never came into force, the document set a precedent for property rights and religious toleration under British colonial administration.

When Ashley, then earl of Shaftesbury, was made lord chancellor and president of the Council of Trade in 1672, Locke followed his benefactor into public service. While involved with the official administration of colonial policy and trade, he personally invested as a shareholder in proprietary efforts to settle the Bahamas—an arrangement that would draw him into Britain's growing political tensions, force his brief exile in Holland, and facilitate his lasting impact on the evolution of British government and political philosophy overall.

Composed in part as a condemnation of absolutism and in support of the Glorious Revolution of 1688, Locke's *Two Treatises of Government* (1690) offered a formula for civil government while also providing an ideological platform for Shaftesbury's newly formed Whig Party. The first of the *Treatises* presented a critical analysis of English political writer Sir Robert Filmer's (1588–1653) defense of absolute monarchy, whereas the second called for enlightened governance mitigated by a trust between rulers and their subjects. According to Locke, as the people surrender certain rights in return for just rule, the government must either exercise power in a just fashion or forfeit authority at the hands of revolutionary action. Central to this assertion is the argument that as individual abilities constitute one's innate property, the product of one's labor must be held sacred according to natural law—provided that one's labor and acquired property serve a public good.

Although Locke defended “life, health, liberty, and possessions” as fundamental human rights that must be safeguarded by governmental checks and balances, he also rationalized colonial acquisition through cultural prejudices that favored European labor standards above aboriginal subsistence patterns. Identifying the value of property as

found in the combination of one's labor with the object, rather than in the object itself, Locke established a long-standing philosophical basis for acquisition and ownership within Western civil society and, by extension, throughout the colonized world.

Demonstrating the utility of his doctrine, Locke's *Second Treatise* provided justification for British colonial activity in North America by contrasting British agricultural productivity with Native American land usage. According to Locke (1988), the "several nations of the Americans are rich in land . . . yet for want of improving it by labor, have not one-hundredth part of the conveniences we enjoy." Because the Native Americans lacked an adequate industry, he argued, their land would be put to better use under the yoke of colonial rule—a primacy of the "property of labor" above a "community of land."

Cultural biases and colonial rationalizations aside, Locke's impact on Western philosophy has been immeasurable. By the 1690s, the *Two Treatises of Government* had earned him distinction as Britain's leading political philosopher, and *An Essay Concerning Human Understanding* (1690) had secured his position as the founder of English empiricism. In addition to these major works, Locke produced several minor studies of lasting import, including *A Letter Concerning Toleration* (1689), *Some Thoughts Concerning Education* (1693), and *The Reasonableness of Christianity* (1695). Often cited as one of the earliest thinkers of the Enlightenment, Locke remains a central figure within the development of Western thought; as his emphasis on critical reason continues to inform philosophical inquiry, his topical studies of political theory, epistemology, psychology, education, and theology remain catalysts for philosophical debate.

Lonrho Corporation

The London and Rhodesia Mining and Land Company, better known as Lonrho, was founded on May 13, 1909, in London to acquire mining rights and shares in mining companies in southern Africa. By 1920, when Lonrho came under the control of the South African businessman Sir Abraham "Abe" Bailey (1864–1940), the company owned three gold mines and 41,600 acres of rangeland in Rhodesia. Its assets were greatly increased in the following years, especially after the acquisition of the Rhodesdale estate and Willoughby's Consolidated. By 1945, Lonrho was the biggest company in Rhodesia.

Lonrho's business activities remained confined to southern Africa, mainly Rhodesia and to a limited extent South Africa, until the controversial British businessman Roland Walter "Tiny" Rowland (1917–1998) assumed joint directorship of the company in August 1961. Under Rowland's leadership, Lonrho expanded its business interests into the rest of Africa, Europe, and the Middle East. Africa, however, remained its main sphere of operation.

In Africa, Rowland cultivated friendships with the leaders of the nationalistic movements and promoted decolonization in order to secure business contracts for Lonrho after independence. Accused of being "the unacceptable face of capitalism" by the British prime minister, Sir Edward Richard Heath (b. 1916) during the 1973 Lonrho boardroom crisis, Rowland continued to befriend

African political leaders through unorthodox methods and meddled in the political affairs of the continent to advance the interests of his company. In 1979, he played a key role in brokering the Lancaster House talks that resulted in the establishment of independent Zimbabwe in 1980 under the leadership of Robert Gabriel Mugabe (b. 1924) in order to secure Lonrho's financial interests in the country in the postcolonial period. Rowland transformed Lonrho into a multinational corporation that was active in fourteen African states, employing over 120,000 people on the continent, by the end of the twentieth century.

Louis XIV (1638–1715)

The policy of territorial expansion adopted by the French king Louis XIV relied on his restless ambition to impose French predominance on the rest of Europe. To increase the taxes that were necessary to support this policy and extend his power overseas, he encouraged the development of maritime trade based on colonial exchange. This mercantilist policy was pursued by Minister Jean-Baptiste Colbert (1619–1683), who was, until his death, the architect of the colonial policy of Louis XIV.

Between 1660 and 1670, the king took responsibility for the colonial territories that had previously been controlled by private trading companies. The political control of the colonies peaked with the creation of the central administrative institutions, such as the Ministère de la Marine (Marine Ministry) in 1669 and the Bureau des Colonies (Office for the Colonies) in 1710. By the end of the seventeenth century, the French colonial empire covered a huge territory: Canada, the West Indies, and Guyana in America; Madagascar, which was transferred in 1671 to Mascareigne (Réunion Island) in the Indian Ocean; Surate, Masulipatam, Tilcery, Calicut, and Pondichéry in India.

The role of the colonies was to enrich the kingdom, which would advance the king's ambition to

be a hegemonic power. The French foreign trade was stimulated by the sale, on the European market, of the sugar produced in the West Indies, the furs brought from Canada, and the cloth from Pondichéry and Chandernagor.

The underpopulation of the French colonies, particularly compared to their English rivals, was one of the main weakness of the colonial policy pursued by Louis XIV. The Crown never encouraged emigration due to a fear of depopulating the kingdom—in Canada, for example, Louis XIV promoted the miscegenation of a small group of settlers with the indigenous population. These settlements were also spread across huge lands, exposing them to military attacks. Claiming sovereignty over such a large territory could only provoke the hostility of the other European colonial powers. Unsurprisingly, the Peace of Utrecht initiated in 1713 the encroachment on the French colonial empire by giving to Britain sovereignty over Newfoundland, Acadia, and the Hudson Bay. The colonial dream of Louis XIV had had its day.

Louisiana Purchase

In 1800, the Mississippi River was the western boundary of the United States; the vast land west of the river was under Spanish rule. Before the French and Indian War of 1754, France had claimed and partially settled the territory. It lost this territory to Spain in the 1763 Treaty of Paris, but the Spanish foothold was precarious as Spain never sent forces to control or settle the land. Napoleon Bonaparte's rise to power in 1799 and his continuing dominance captured the attention of Thomas Jefferson, the newly elected (in 1800) president of the United States, who realized that the western territories were, in fact, under de facto French control. Jefferson's concern came as American farming families advanced westward in the

1790s and settled along the rivers that emptied into the Mississippi. Free navigational rights to the mouth of the Mississippi at New Orleans had to be ensured if Americans were to be able to settle this productive land.

With the threatened termination of U.S. rights to deposit goods at the New Orleans port, Jefferson had to take action to safeguard the fledgling expansionism efforts. Ironically, his reaction coincided with Bonaparte's realization that his projected Caribbean empire was no longer worth the effort. As Jefferson dispatched James Monroe and Robert R. Livingston to negotiate with France for the purchase of New Orleans and as much of Florida as possible, Bonaparte in the meantime had decided to sell Louisiana in its entirety. After much negotiation, the U.S. commissioners and Bonaparte's minister, Charles Talleyrand, agreed on a purchase price of \$15 million for the entire territory. In addition, the agreement included a clause whereby the United States would pay any French debts that were owed to U.S. citizens. Since the territory was uncharted land, no one knew its exact size. But the purchase doubled the size of the United States, roughly at the cost of \$.13 an acre.

This situation presented a dilemma for Jefferson, since his commissioners had far exceeded their original instructions. Having always adopted a strict interpretation of the Constitution, he had to balance his commitment to the principles of that document with his commitment to the idea of establishing an "empire of liberty," with the base of farmers he idealized, and also the elimination of any European colonial claims on the nation's western frontier. He was forced to temporarily dismiss his concerns vis-à-vis the Constitution and stand by the principle that guaranteed land for U.S. farmers and their expansionist efforts. Circumventing the Constitution proved to be expeditious, as Jefferson used the treaty-making powers granted to the president to cover this immense purchase. In late 1803, the American army was deployed to take formal control of the Louisiana Territory. With that action, the United States became 828,000 square miles larger than it had been in 1800.

Louis-Philippe of France (1773–1850)

Louis-Philippe of Orléans, son of the regicide Philippe Egalité of Orléans, survived the French Revolution after deserting from the army in 1793 and spent twenty years in exile in the United States and England before returning during the Bourbon restoration to reclaim his estates and large fortune. When the revolution of 1830 broke out against Charles X, Louis-Philippe, who had the support of liberal politicians and the press, became the general of the realm and then was proclaimed king of the French (rather than king of France) by the marquis of Lafayette. Friendly toward the rising middle class and business interests, the new regime and its "citizen-king" were still politically very conservative and left many bourgeois liberals unsatisfied and demanding electoral and social reform.

In foreign policy, Louis-Philippe encouraged English-French relations, and he assisted in the independence of Belgium in 1831, later seeing his daughter become queen of Belgium after marrying Leopold I. He also inherited the French interest in Algeria, which began in 1830. Although there were few colonists, France stepped in to formally conquer Algeria after resistance from Abd al-Qadir, a charismatic Islamic leader, and it was finally successful under Gen. Thomas-Robert Bugeaud in the late 1830s. Thereafter, Algeria was promoted by the French Crown as a colony and as a penal settlement for political enemies. Significantly, Louis-Philippe created the French Foreign Legion in 1831 for use in the Algerian fighting.

Ultimately, Louis-Philippe's government, which was crippled by weak ministers and resisted by journalists and secret societies such as the Carbonari as well as challenges from Bourbon legitimists and followers of Louis Napoleon, ignited rebellion by suppressing a political campaign by liberals to extend the franchise. The resulting 1848 revolution deposed Louis-Philippe and instituted a provisional government, quickly replaced by

Louis Napoleon. Louis-Philippe died in exile in England in 1850.

L'Ouverture, François Dominique Toussaint (1743 or 1744–1803)

Toussaint L'Ouverture was the leader of a revolt in St. Domingue (now Haiti) that led to the first black-governed French protectorate and eventually to the first free black country in the Caribbean. As a boy and youth, Toussaint learned French and Latin from his Catholic godfather, Pierre Baptiste, on the Gao-Guinou plantation. His father taught him herbal medicine. An enthusiastic reader, he sought inspiration from Moses, the apostle Paul, and Abbé Raynal, an avid abolitionist. Yet as a teenager, he did not participate in the Mackandal rebellion of 1759, in which a number of slaves plotted to poison masters through their water supplies and animals. Later, Toussaint would find other ways to overcome slavery.

Freed in 1777 at about the age of thirty-three, he joined the ranks of a growing class of freed-people whose count swelled from 6,000 in 1771 to 28,000 at the time of the French Revolution in 1789. In September 1791, the Colonial Assembly in Paris gave citizenship to free people of color such as Toussaint. When the French within the Departments of the West and South tried to revoke those rights, Toussaint sided with leaders of a new slave uprising, Jean-François and Biassou. Not opposed to whites on the basis of race and in fact having good relationships with plantation owners and with the Acadian and German people in the Department of the North, Toussaint at first only took positions such as doctor and aide-de-camp to help the slaves' cause. As an aide-de-camp, he obtained supplies and arms from the Spanish. He also had a hand in turning over the Department of the North to the Spanish. In the meantime, the British planned to attack. The situation forced Civil Commissioner Leger Felicite Sonthonax to free the slaves in August 1793; six

Seen in this posthumous portrait, Toussaint L'Ouverture helped win Haitian independence from France in the 1790s. L'Ouverture was later captured by the French and died in prison in 1803. (Library of Congress)

months later, the French General Assembly ratified this move. In May 1794, right after the official French declaration, Toussaint began to distinguish himself as a military leader, well trained by his previous successors. Turning on Jean-François and Biassou (both monarchists), Toussaint replaced the Spanish flag with a French one within the Department of the North. Such a move became a turning point in Haitian history. In July 1795, Spain finally ceded their eastern half of Hispaniola to France. Though Toussaint had shown great military skill, he was also a man of compassion. For example, when he found women and children of different colors in desperate situations due to war, he got them help through the Sisters of Charity.

After both Biassou and Jean-François left the island, Toussaint began to show leadership skills that went beyond the battlefield. In April 1796, he became lieutenant governor under Gen. Étienne Laveaux. The latter dubbed him the “Spartacus of Haiti” and declared that Abbé Raynal had foretold his prominence. As lieutenant governor, Toussaint led blacks and mulattoes to support the white governor. Cleverly assessing his situation, however,

Toussaint promoted an election for representatives to the French National Assembly, in which Laveaux and Sonthonax became the main candidates. In effect, Toussaint pushed for indirect rule of St. Domingue. Having won the election with Toussaint's support, Laveaux left in October 1796, and Sonthonax left in August 1797. Toussaint then became promoted to governor-general and commander in chief.

Between 1796 and 1801, Toussaint worked toward ridding the entire island of Hispaniola of foreign domination. French royalists sequestered at St. Marc asked the British for help in 1796. The British hired German Hussars to help them. More than any other factor, yellow fever worked on the side of the revolutionaries. In March 1798, Gen. Thomas Maitland arrived to negotiate with Toussaint. At that time, he brought up the idea of St. Domingue declaring independence from France. But Toussaint was not ready to do that yet. The British left in October 1798, as did the Acadian and German populations. Meanwhile, though the eastern part of Hispaniola remained technically under French control, Spanish captain-general Don Jaquin Garcia y Moreno refused to leave. After a short drive to Santo Domingo City, Toussaint claimed the entirety of the island for France in January 1801. He stepped forward as the new governor-general of Hispaniola.

Within six months, Toussaint wrote a new constitution without getting approval from France, the first consul, or France's new leader, Napoleon Bonaparte. The constitution abolished slavery, made Catholicism the state religion, and set Toussaint in the position of governor-general for life. Though continued allegiance to France was declared in this document, British and U.S. leaders saw it as a declaration of independence. Napoleon saw it as a first step in that direction and therefore sent his brother-in-law, Gen. Charles Leclerc, to reinstate French rule in St. Domingue. Leclerc not only did this but also oversaw the arrest and deportation of Toussaint to a French prison. Toussaint died there in 1803. His former general Jean-Jacques Dessalines became the first president of a free Haiti a year later.

Lugard, Lord Frederick (1858–1945)

Soldier, administrator, and diplomat, Lord Frederick Lugard was regarded by contemporaries as Britain's foremost authority on colonial affairs. He was born in India, the son of missionaries, and received a brief education in Britain. After attending Sandhurst, he returned to India as a military officer in 1878 and served in campaigns in Afghanistan, in Sudan, and, with distinction, in Burma. In 1887, however, after a personal misfortune, Lugard left active duty and ventured to Africa, where he offered his services to a series of chartered companies. In 1888, he led an African Lakes Company column against slave traders on Lake Nyasa, and later, from 1890 to 1892, he commanded the Imperial British East Africa Company garrison at Mengo, the capital of Buganda. It was in Buganda that Lugard first made his reputation, gaining favorable treaty terms for the company after intervening in an indigenous civil war.

Lugard returned to Africa in 1894 as head of police for the Royal Niger Company. He took charge of the West African Expeditionary Force during the scramble for the interior and rose rapidly in rank. Lugard gained official notice in West Africa, however, not so much as a soldier but rather as a decisive and pragmatic administrator. As high commissioner in northern Nigeria from 1900 to 1906, Lugard maintained British hegemony over conquered peoples through a policy of indirect rule. His administration retained compliant indigenous rulers, and in local affairs, it supported the application of Islamic law. Rather than imposing an entirely new regime, Lugard instead co-opted and reconfigured existing institutions to maintain and later extend official control. After a brief stint as governor of Hong Kong, Lugard became the first governor of Nigeria, from 1912 to

1918. He again proved an active policy maker, promoting indirect rule across the south and orchestrating the political amalgamation of the north and south, accomplishments that led one biographer to dub him “the maker of modern Nigeria” (Perham 1956).

Despite Lord Lugard’s long résumé as a colonial “man on the spot,” it should be noted that his reputation was not entirely cemented in the field. He was a prolific author and engaging public speaker and in fact took frequent home leave to promote both colonial policies and his own career. In 1893, while still a young officer, he published *The Rise of Our East African Empire* and plunged into imperial politics with a British speaking tour advocating the colonial annexation of Uganda. Thereafter, he became a frequent contributor to academic and popular journals, as well as many leading newspapers—often chronicling his own military campaigns or administrative accomplishments. On policy matters, he later published *Political Memoranda*, his instructions on amalgamation and indirect rule in Nigeria, and *The Dual Mandate in British Tropical Africa*, on indirect rule. Lord Lugard led an active retirement, working as a colonial educational adviser, serving on the League of Nations Mandates Commission, chairing the International Africa Institute, and, of course, speaking and writing on African affairs.

Lumumba, Patrice (1925–1961)

Patrice Lumumba was a complex and often contradictory politician who played a central role in the chaotic decolonization in the Belgian Congo. Born in 1925 in Kivu Province, he completed primary school at a Catholic mission in 1943, worked as a clerk for a mining company, took vocational training at Leopoldville (now Kinshasa), then

moved to Stanleyville (now Kisangani), where he worked as a postal clerk. It was a pattern typical of many *evolués* (“evolved” ones), that underclass of Western-educated and urbanized Africans who kept the colonial system functioning. Despite his limited education, he was a good writer and brilliant orator.

The recession of the mid-1950s led to high rates of urban unemployment and mounting discontent in Africa. In 1956, an *evolué* group in Leopoldville issued a manifesto calling for independence in thirty years. Joseph Kasavubu, leader of the Alliance des Ba-Kongo (ABAKO), and Patrice Lumumba joined the chorus for immediate independence. Lumumba soon proved an adroit leader, playing off divisions among the Belgians while consolidating control over his Mouvement National Congolais (MNC). However, in his quest for control, Lumumba alienated many erstwhile allies who formed parochial, mainly ethnic or regional, splinter parties, often with the secret support of Belgian colonial interests. MNC support was thus undermined in the electorate.

In response to urban riots in 1959, the Belgian government announced it was prepared for an immediate transfer of power, with hastily organized general elections in May 1960. Lumumba and the MNC advocated a unitary state with a strong central government and emerged as the largest party in the national assembly but were unable to govern without a coalition, as parochial, tribal-based parties dominated the provincial assemblies and hence the national senate. Lumumba did become the first prime minister, with Kasavubu as president. Within days, the army mutinied, and with the support of Belgian mining companies, Katanga Province declared its independence under Governor Moïse Tshombe. Lumumba appealed to the United Nations for support, but its response was colored by the Cold War, with Lumumba portrayed as a pro-Communist, antiwhite extremist. In September 1960, President Kasavubu dismissed Lumumba. With the connivance of the U.S. Central Intelligence Agency, Joseph Mobutu, the army chief of staff, arrested Lumumba and handed him over to his enemies in Katanga, who murdered him on January 17, 1961.

Lunda

The Bantu-speaking Lunda originated in the south of today's Democratic Republic of Congo and spread to northeastern Angola and northwestern and northern Zambia. By the sixteenth century a ruler, who descended in part from the neighboring Luba people and whose heirs bore the title of Mwata Yamvo, created a state in the savannah along the Kasai and other rivers. The state expanded its power and created a central administration, but it did not rule over all Lunda peoples. Some Lunda, far from the Mwata Yamvo's control, established autonomous kingdoms. The Lunda participated in an extensive local trade, exchanging crops from the slash-and-burn agricultural system for items like salt and metals, especially copper. The Mwata Yamvos created a tributary relationship with Lunda areas not directly under their control.

By the eighteenth century the centrally located Lunda engaged in an extensive interregional trade that would extend to both the west and the east coasts of Africa to merge with the Atlantic and Indian Ocean trading networks. In the west, the Portuguese in Angola stimulated Lunda interest in guns and cloth by creating a demand for slaves and ivory, which the Lunda filled. The Lunda also traded eastward with the Arabs of the Swahili coast and the Portuguese along the Zambezi River in Mozambique. Lunda prisoners and especially non-Lunda captured in war or raids were a source of people for the slave trade.

During the eighteenth century a group of Lunda founded the Kazembe state under successive rulers with the title Mwata Kazembe. Kazembe centered on the Luapula Valley, which now separates Congo and Zambia, and exploited a large trade in ivory until the elephants declined in

numbers due to overhunting. The Kazembe Lunda had primary contacts with the Portuguese in Mozambique.

The Mwata Yamvos' Lunda state in Congo and its vast trade network, harassed by the Chokwe people among others, and in the face of expanding Portuguese and Belgian colonial influence, declined in the mid-nineteenth century. The Kazembe Lunda state suffered a similar fate at about the same time.

The administrations of King Leopold II's Congo Free State and of the later Belgian colony of Congo urged the Lunda and others to work in the copper and other mines of the southeast. The Belgians ruled through established Lunda authorities; thus the Lunda preserved their historical traditions and hierarchy. When the Belgians precipitously ended their colonial rule in 1959, Moïse Tshombe, as the prime minister of the southeastern province of Katanga, led a resurgent Lunda people in resistance not only to the Chokwe and Luba but to the central authority of the newly independent Congolese state as well, attempting to form a breakaway republic. The Congolese ended the secession of Katanga, and it was reintegrated into Congo as Shaba Province.

Luxemburg, Rosa (1871–1919)

Rosa Luxemburg was an important Marxist thinker, a founding member of both the radical Polish socialist party—Social Democracy of the Kingdom of Poland (in 1893)—and the German Communist Party (in 1918), and a critic of Vladimir Lenin's theories of party organization and nationalism. Her ideas on colonial matters are found in several works she authored: *The Polish Question and the Socialist Movement* (1905), *The Problem of Nationality and Autonomy* (1908–1909), *Capitalist Accumulation* (1913), and the *Junius Brochure* (1916).

Luxemburg, like Karl Marx, regarded European capitalist colonial rule as progressive because it in-

dustrialized precapitalist societies. But Marx analyzed capitalism in only one country, whereas Luxemburg was the first to show how it had expanded throughout the world over several centuries. She claimed that capitalism needed precapitalist societies and would collapse without them. Although she provided no analysis of capitalism's effects in European colonies apart from noting that it destroyed the natural economy, she did explain that colonial acquisition predated capitalism, continued under twentieth-century imperialism, always involved violence, and was not necessarily dependent on state intervention.

Luxemburg argued that only European workers in the wake of European socialist revolutions could right the wrongs perpetrated by capitalism in colonies and liberate their "primitive peoples." Her refusal to recognize a right of national self-determination for colonized peoples derived from her study of modern Polish history. Russian capitalism, she concluded, had developed Polish industry after incorporation and, in the process, united the Polish and Russian working classes. Separatist Polish nationalism, she believed, threat-

ened not only the unity of the Russian and Polish working classes but also the centralized territorial integrity of the empire, which was necessary for economic development. Although Lenin's views on the "right of nations to self-determination" ultimately prevailed among socialists and defined Soviet policy toward the Third World, Luxemburg's arguments were seriously debated at the time, and many social democrats supported her views as opposed to Lenin's.

M

Macao (Macau)

The oldest Western enclave in East Asia, Macao, a small peninsula and island in south China, was settled in 1557 by the Portuguese, who paid annual ground rent to the Ming and Ch'ing (Qing) dynasties. In the Portuguese interpretation of the 1887 Treaty of Amity and Commerce, sovereignty over Macao was surrendered to Portugal, but the Chinese view was that only administrative rights were transferred. Macao was returned to Chinese rule on December 20, 1999, and became a special administrative region with considerable economic and political autonomy (except in defense and foreign affairs), an arrangement similar to that for Hong Kong.

Macao was a beachhead for Christianity in East Asia. The Portuguese built a large number of churches there, and many missionaries first studied the Chinese language and culture in Macao before proselytizing in China. Unlike other European colonial powers that enforced segregationist policies, Portugal encouraged miscegenation as part of its assimilationist colonial policy. Although the population remained predominantly Chinese (96 percent), there was also a Creole minority of mainly of Portuguese-Asian ancestry, known as the Macanese.

Macao was a significant entrepôt in East-West commerce as Portugal profited from the China-Japan-Manila trade in precious commodities. But its commercial power declined with the loss of the

Japan trade in 1639 and competition from Holland and Britain. Macao was further eclipsed by the rise of Hong Kong after its acquisition by Britain in 1842. Macao's economy was sustained by revenues from government monopolies in opium and gambling. Nonetheless, a Chinese bourgeoisie and some export industries did emerge by the early twentieth century, laying the foundations of Macao's subsequent development into an export-oriented industrial center and its current status as a major information, communication, and financial center linking China to the wider world.

MacArthur, Douglas (1880–1964)

U.S. Army general Douglas MacArthur was one of the principal Allied commanders during World War II. He was closely associated with the decay of the traditional imperialism in the Pacific and the decolonization of the Philippines.

General MacArthur's experience as a colonial military administrator began with his service as the commander of the Military District of Manila from 1922 to 1928, when he also supervised the

Philippine Scout Brigade (native troops), and as the commander of the army's Philippine Department in 1928 and 1929. During his assignments in Manila, MacArthur established and maintained close ties with the Philippine political elite. In 1934, as the U.S. Army chief of staff, MacArthur drafted a bill to provide the coming self-ruled Philippine Commonwealth with a U.S. military mission that would help the new country build up its national army. From 1935 to 1937, MacArthur directed the organization of the national defense of the Philippines, although the country did not have the strength to protect itself from the Japanese threat. Promoted to field marshal of the Philippine army in 1936 (he retired from the U.S. Army the same year), MacArthur strongly supported self-determination for the Philippines and advocated the granting of complete independence to the country in 1938 instead of 1946 as planned, believing that would be the most effective way to secure U.S. positions there.

At the same time, political intrigues in Washington as well as the growing controversy about MacArthur's political ambitions obstructed his intense lobbying to secure an appointment as a governor-general and later as the U.S. high commissioner to the Philippines. In 1941, MacArthur was recalled to service in the U.S. Army and headed the U.S.-Philippine forces, which resisted the Japanese invasion until the spring of 1942. His activity as the supreme allied commander in the southwestern Pacific, based in Australia, and the U.S. presence there from 1942 to 1945 weakened the traditional ties that bound the Australians with the British Empire and reoriented the country toward the United States. MacArthur himself was suspicious about British wartime imperialist intentions in the Pacific and doubted the postwar future of European rule in the Dutch East Indies and French Indochina. At the same time, he strongly opposed revolutionary nationalism and suggested Philippine-style, gradual self-determination as a model for postwar Asia. Moreover, in order to secure Allied cooperation, facilitate military operations, and avoid political turmoil, he agreed to reestablish colonial administrations in the European colonies liberated from the Japanese.

In 1944 and 1945, MacArthur actively exercised his enormous influence in Philippine politics to isolate left-wing political groups and guarantee

U.S. interests in the country on the eve of its independence. As the supreme commander for Allied powers in occupied Japan from 1945 to 1951 and commander of the United Nations forces during the Korean War in 1950 and 1951, MacArthur contributed significantly to the growth of the informal U.S. empire in East Asia.

Macmillan, (Maurice) Harold (1894–1986)

Grandson of the founder of the Macmillan publishing house and educated at Eton and Balliol, Harold Macmillan was thrice wounded in World War I. As a Conservative member of Parliament, he was a progressive by instinct and, with Winston Churchill, a critic of appeasement.

In December 1942, he became minister resident in North Africa, remaining until May 1945. Going on to hold high office under Churchill's and Anthony Eden's 1951–1957 governments—variously serving as minister of housing, defense, and foreign affairs and as chancellor of the exchequer—he supported the ill-fated Anglo-French occupation of the Suez Canal in November 1956. Macmillan then abandoned his support precipitately in the face of U.S. pressure, ironically becoming one of the main political beneficiaries of the humiliation at Suez when he became prime minister following Eden's resignation over the disastrous campaign.

After replacing Eden as prime minister (a post he held from January 1957 to October 1963), he quickly ordered an audit of the empire, one that some see as a prelude to refocusing energies away from empire and toward the nuclear deterrent, Anglo-American partnership, and attempts to modernize Britain and enter the European Economic Community (EEC).

Pressure for decolonization mounted in the face of African protests, French moves toward

leaving Algeria in 1961 and 1962, and the descent into chaos in the Congo. To this, Macmillan added his own desire to vacate Britain's colonies in time to preserve goodwill, so as to turn recalcitrant colonies into happy Commonwealth partners: a "third British Empire."

Following an emergency in Nyasaland and the beating death of some Mau Mau detainees in Kenya, both of which occurred in 1959, Macmillan told black and white Africans on a 1960 tour that the winds of change were blowing through Africa. His new colonial secretary, Iain Macleod, brought independence swiftly to Cyprus and Nigeria (1960), Sierra Leone and the Cameroons (1961), Western Samoa and Uganda (1962), and Kenya and Zanzibar (1963). New defense plans from 1957 also aimed at controlling spending and ending conscription.

At the same time, Macmillan's goal was to preserve rather than terminate Britain's status as a world power. Defense plans mutated into a new "East of Suez" policy, emphasizing mobile forces to be projected worldwide via a string of strategic bases and air-staging posts. Macmillan also secured increased Anglo-American cooperation in the intelligence and nuclear fields and attempted to remain a major player in Cold War negotiations.

Madagascar (Malagasy Republic)

The fourth largest island on earth, Madagascar lies in the Indian Ocean 250 miles from Mozambique. Its 15 million inhabitants are predominantly of

Asian origin. Archaeological, genetic, and linguistic evidence indicates that the first settlers were Indonesians who arrived early in the common era. Muslim Arabs and Bantu arrived about 1,000 years ago. After 1500, Portuguese and French traders landed repeatedly in Madagascar to exchange guns and merchandise for cattle and slaves captured by local rulers in wars, but they did not establish permanent settlements. Pirates operated from the island.

Madagascar was populated by internal migration before the beginning of the sixteenth century. Its numerous small independent states were formed by semipastoralist clans, rather than distinct ethnic groups. A caste system prevailed; societies included nobles, freepeople, and slaves. By the eighteenth century, the Merina Kingdom on the central plateau became dominant. A succession of Marina rulers negotiated with British and French colonizers. Early in the nineteenth century, the British controlled the Indian Ocean. They used Madagascar as a source of supplies for nearby colonies and provided military advisers and educational training in exchange for access to resources and a promise to abolish slavery. After the opening of the Suez Canal in 1869, they lost interest in Madagascar.

The French, in turn, colonized the island in 1896. Slavery was abolished, and over 1 million slaves were emancipated. Governor Joseph-Simon Galliéni unified the island by force under French administration, imposed the teaching of French in schools, improved sanitary conditions, and built roads. Life became Westernized, and half the population was baptized, but rebellion continued. In 1947, political struggle in Madagascar erupted into violence, and thousands perished. Madagascar gained independence thirteen years later, in 1960.

Magellan, Ferdinand (c. 1480–1521)

An explorer and navigator, Ferdinand Magellan was born in Portugal and educated at the court of

Manuel I, where he studied astronomy and navigation. Between 1505 and 1512, he sailed repeatedly to India with Portuguese expeditions to seize control of sea-lanes around Africa and in the Indian Ocean, secure the Malacca Strait, and explore the Moluccas. Travels and studies convinced him that a western route to the Moluccas could be found south of South America and across the ocean that Vasco Balboa had sighted. King Manuel, however, did not trust him, so Magellan turned to Manuel's rival, Charles I of Spain. He persuaded Charles I to authorize an expedition by reminding him that under terms of the Treaty of Tordesillas, discovery of a western passage would put the Moluccas under Spanish, rather than Portuguese, domination.

In 1519, under Charles I's sponsorship, Magellan sailed to search for the passage. After landing in Brazil, he took his five ships southward, discovered the strait that now bears his name, and continued north-northwest on the ocean that he named Pacific because of its calm waters. He landed in what are now the Philippines, his forces reduced to two ships. Some crewmen had mutinied—they did not trust Magellan, whom they viewed as Portuguese—and others perished simply due to the rigors of the long and arduous voyage. Magellan had greatly underestimated the size of the Pacific, and the crews ran out of food and were stricken by scurvy. Thus, Magellan decided to stay in the Philippines for a while to load fresh supplies, establish a base, and convert natives. He was killed in a local skirmish, but both his ships headed back to Spain. One reversed the route and was captured by the Portuguese. The other, under the command of Juan Sebastián de Elcano, continued toward the Moluccas, loaded spices, and returned to Spain in 1522, completing the first circumnavigation of the earth.

Mahdi, Muhammed al- (1844–1885)

An Islamic mystic and anticolonial leader of the late nineteenth century, Muhammed Ahmad al-Mahdi,

as he is known in the West, led an armed campaign against British colonialists in the Sudan, culminating in the capture of the colonial capital of Khartoum and the killing of Maj. Gen. Charles George Gordon, the British military commander there. The Sudanese campaign and the Battle of Khartoum represented one of the greatest—if temporary—setbacks to British colonialism in Africa.

Al-Mahdi, whose complete name was Muhammed Ahmad Ibn As-Sayyid 'Abd Allah (al-Mahdi is an Arabic title meaning “divinely guided one”) was born in 1844 to an artisan family but quickly showed a passion for religious study, soon becoming a spiritual and political leader. Al-Mahdi gathered around him Sudanese who were angry with the British and their Egyptian allies who helped rule over the Sudan for a variety of reasons, including their oppressive fiscal policies, their brutal policing, their efforts to ban the slave trade, and their presence—as non-Muslims—in an Islamic region.

Turning against the collaborationist Sudanese elite as well, al-Mahdi revealed to his followers in 1881 that he had been divinely appointed to rid the Nile Valley of Sudan of the infidel British and their Egyptian puppets. Over the next four years, al-Mahdi led a growing army of rebels in three decisive victories over British-officered, Egyptian-manned armies. On January 26, 1885, his forces captured Khartoum after a lengthy siege, with Gordon killed in the waning hours of the battle.

With the British defeated, al-Mahdi established his Islamic empire, moving his capital across the Nile to Omdurman and setting up an administration. But his reign was brief. He died in June 1885, most likely of typhus. Without his leadership, the Mahdist empire collapsed, though it was not until 1898 that the British, under Horatio Kitchener, reestablished control over the Sudan.

Although al-Mahdi was reviled in the West as a murderer and religious fanatic at the height of his powers in the 1880s, he has since become a hero to both secular and religious Sudanese nationalists.

Mahmud II (1785–1839)

Cautious reformer, unlucky general, and workaholic—all these terms describe the Ottoman Empire's Mahmud II. Rising to power in 1808 after two years of coups and countercoups, he faced immediate challenges from external enemies and the Janissary Corps. The latter was a reactionary clique of soldiers, notorious for making and breaking previous sultans. Janissaries were also an obstacle to military reform at a time when predatory neighbors called Turkey “the sick man of Europe.” Russia was a principal party in the latter group, attacking Mahmud's holdings during the Russo-Turkish wars (1808–1812 and 1828–1829). These conflicts displayed the terrible state of the Ottoman army and also encouraged regional uprisings in the Balkans, the Middle East, and Egypt. The uprisings ranged from genuine wars of independence to power grabs by local warlords, such as Muhammad Ali in Egypt. This combination of internal and external threats loomed over every year of the sultan's reign. June 1826 marked a major turning point and a considerable triumph for Mahmud: the destruction of the Janissary Corps. A Western-style army followed, along with civic, religious, and educational reforms. Indeed, Mahmud's principal accomplishment was his success in legitimizing reform, thus laying the groundwork for the *Tanzimat* era of reform of his successor, Abdul ul-Mejid.

Maji Maji

A popular rebellion against colonial rule, Maji Maji began in the Rufiji River valley in mid-1905 and rapidly spread across the southern and central regions of German East Africa. The rebellion involved a variety of communities and peoples, many of them frustrated by mounting colonial exactions. In the decade following the conquest by Germany, most had been forced to accept German-appointed local officials (*akidas* or *jumbes*, as they were titled) in place of indigenous political authorities. Through them, the German administration levied commodity and later cash taxes. Fur-

ther, intrusive German settlers and missions made escalating demands for local land and labor. And even though severe drought caused widespread hardship in 1903 and 1904, officials imposed a compulsory cotton-growing scheme in the coastal hinterland in 1905 that forced peasants to plant and tend communal cotton plots. Separately, these exactions disrupted rural communities—threatening social life, eroding political autonomy, and reducing food production. Cumulatively, however, they stretched resources to the breaking point.

In late 1905, various rebel groups burned cotton fields, attacked mission stations, and accosted local appointed officials. After initial successes, however, few pressed the fight beyond their own immediate regions, and thus, the rebellion unfolded as a widely scattered series of local actions. Interestingly, many of the participants were loosely united by religious ideology. Most were adherents of ancestral spirit cults and practitioners of divination and spiritual medicine. According to many oral accounts, a man named Kinjikitile, a shaman reputedly possessed by a powerful spirit, began to dispense a special war medicine, or *maji*, in 1904. He maintained that this special water would render those who took it invulnerable to German bullets. Travelers disseminated Kinjikitile's words and medicine to distressed communities throughout 1904 and 1905. The water was generally administered by blowing or sprinkling, an act referred to by the redoubled form, *maji maji*—the name German colonial writers later gave the uprising.

German colonial forces brutally put down the rebellion in several rural campaigns in 1906 and 1907. They targeted crops and livestock, burning and starving out the rebels. Colonial military and civilian casualties were light; the vast majority of deaths were caused by rural famine in the rebellion's aftermath.

Malaysia

Much of Malaysia’s modern and colonial history began in Melaka. Located on the straits between the Malay Peninsula and Sumatra, this port-state was an international entrepôt that attracted traders from around the world, including the Portuguese in the early 1500s. Merchants used Melaka to warehouse and exchange Indian textiles, Maluku spices, and other trade goods while they waited for the monsoon winds that had carried them to the region to reverse and take them home. The Portuguese, who described Melaka as having “no equal in the world,” soon realized after their arrival in India that controlling the spice trade meant conquering Melaka, which they did in 1511. The Melakan sultanate fled the Portuguese, moving down the peninsula and eventually becoming the Kingdom of Johor. In the 1630s, the Dutch East India Company, or VOC, was busy securing a monopoly over the spice trade and sought Johor’s assistance in capturing Melaka from the Portuguese in 1641. Late-seventeenth-century regicide in Johor and the destabilizing influence of Dutch occupation, Thai invasions, and Bugis immigration on the peninsula destroyed any hopes of reviving the great Malay entrepôt states of the past. Throughout the eighteenth century, Malay tin, gold, and pepper continued to attract Malay, Chinese, and eventually British East India Company merchants.

As the VOC collapsed at the end of the 1700s, the British established themselves in the Straits Settlements at Penang in 1786, Melaka in 1795, and Singapore, which was established by Thomas Stamford Raffles in 1819. The nineteenth century saw Sabah and Sarawak fall under the British sphere of influence, led by adventurers such as James Brooke, the “white rajah” of Sarawak. After the Pangkor Treaty of 1874, British indirect rule spread beyond the Straits Settlements as European residents (government advisers) became advisers to Malay polities.

Indigenous minerals and the plantation complex (coffee, tea, rubber) took British Malaya full-speed into the world industrial economy and en-

couraged additional Chinese settlers, who dominated the local economy, and South Asians (mostly Tamils), who were brought in for cheap labor; the Malays were largely left out of any economic developments. Through the nineteenth and twentieth centuries, the British governed by dividing their subjects through a tripartite social order in which economic function was tied to race. Known as the “plural society,” this social structure essentialized certain ethnic, cultural, and economic traits that each group was thought to possess, a notion that became deeply entrenched in Malaysia: the Chinese, who were mostly urban, ran the mines, construction, and the retail trades while providing most of the British revenue; indentured Indians provided the backbreaking plantation labor; and Malays languished in rural poverty. Interaction among the three groups was (and remains) slight, and little consideration was given to marginal or mixed-race groups.

Decolonization in what was to be Malaysia began suddenly on December 8, 1941. The day after the Japanese bombed Pearl Harbor, they raced unimpeded through British Malaya, conquering all of Southeast Asia. Earlier anticolonial and nationalist movements gained momentum under the Japanese, and when the British returned, they agreed to work toward Malaysian independence. The mostly ethnic-Chinese Communists violently resisted the Japanese interregnum and subsequent British rule. Making concessions to the ethnic Malays, Britain united all its territories under the Federation of Malaya in 1948, guaranteeing Malays political supremacy. A Malaysian government led by a coalition of elite Malays and wealthy Chinese and Indians was granted independence on August 31, 1957.

Malta

Malta is a rocky island measuring just 122 square miles. Yet its position near the narrowest part of the central Mediterranean, between Sicily and the

African coast, has attracted a succession of rulers: Carthaginian, Roman, Arab, Norman, the Knights of St. John of Jerusalem, and Napoleon in 1798. Britain took Malta in 1800, formally annexing it as a crown colony in 1814. Its expansive Grand Harbor then became home to Britain's Mediterranean fleet until 1979.

Malta had a legislative assembly from 1921, but British disputes with Malta's Roman Catholic Church saw it thrice suspended. At the same time, Britain encouraged a separate Maltese identity to counter Italian influence. The Maltese economy was also heavily dependent on Royal Navy bases. In World War II, these bases became an important link in Britain's Mediterranean supply route to North Africa, attracting heavy German and Italian bombing. The island was awarded the George Cross in April 1942 for its inhabitants' resistance to the Nazis and Italians.

Internal self-government was restored in 1947. Malta's Labour Party, perhaps reflecting the interests of dockyard workers, came to support integration with Britain. Its opponent, Gïogio Borg Olivier of the church-oriented Nationalist Party (PN), did not. Facing defense cuts and mounting unemployment, three-quarters of the Maltese voted for integration with the United Kingdom in a February 1956 referendum. In March, London offered a five-year experiment. The Maltese government, annoyed by London's ambivalence and by the scope of economic aid, rejected the plan in 1958.

The basic problem was that Malta wanted base facilities maintained and compensatory aid for any reductions in the military presence, whereas Britain sought reduced defense expenditures. As tensions mounted, the governor resorted to direct rule from 1959 to 1961, and following that, both major parties advocated independence. So when self-government was restored in 1961 and Borg Olivier of the PN was returned as prime minister in 1962, independence was demanded. It came on September 21, 1964, along with ten-year agreements with Britain on defense and \$50 million in loans and grants.

Before the ten years were up, the Labour Party returned to power in 1971. It veered toward non-alignment, ending the 1964 defense agreement. A new, seven-year agreement replaced it in 1972, providing military facilities at an increased rent, before the British finally withdrew in 1979. Malta

remains a Commonwealth member and since 1990 has sought membership in the European Community (known as the European Union beginning in 1993).

Malthus, Thomas (1766–1834)

In 1798, Thomas Malthus—an English clergyman and political economist—published an essay that garnered the attention of both Europeans and Americans. As a native of England, he observed the growing population and ultimate overcrowding of his own country. Malthus's observation was that population increased more rapidly than agricultural production. This observation provided him with the main thesis of his *Essay on the Principle of Population*, in which he stated that “the power of population is definitely greater than the power in the earth to produce subsistence for man.” He continued in grim prose as he warned of optimistic delusions about steady improvement in the quality of human life. He predicted a future filled with escalating misery, as later populations had the potential of surpassing food supplies.

Thomas Jefferson took Malthus's warnings seriously but did not feel that U.S. expansionism or colonialism was in imminent danger. He felt that the Englishman failed to understand the massive amounts of land that would enable the United States to escape Europe's fate; the food supply could always outpace population growth. His optimism regarding the country's potential was compelling but not realistic. Later years saw the American republic sharing many of the social and economic problems that troubled Malthus's nineteenth-century Europe. America's belief in its own exceptionalism was more limited than Jefferson had imagined, but it provided the justification for population growth and expansion despite Malthus's convincing and persuasive essay.

Manchuria

Ancestral homeland of the Manchus who ruled China from 1644 until the 1911 revolution, Manchuria is located in northeast China. Rich in minerals and agricultural resources, it became an arena of imperialist competition between Russia and Japan from the late nineteenth century onward. After its victory in the Russo-Japanese War of 1904–1905, Japan gained Russia's rights and interests in south Manchuria, including the port of Dairen (Dalian), the naval base of Port Arthur (Lüshun), and the South Manchurian Railway.

The Japanese Kwantung army seized Manchuria after the Manchurian Incident of 1931 when Japanese troops seized the city of Mukden. In 1932, Japan installed the puppet regime of Manchukuo, and Manchuria became the strategic center of Japan's colonial empire and the model for Japanese programs in Asian regions occupied subsequently by Japan in the Pacific War. The Greater East Asia Co-Prosperty Sphere, the wartime bloc of Asian nations under Japanese leadership, was anticipated by a bold program of coordinated industrialization in Japan and Manchukuo to create a self-sufficient production sphere. A plan was launched to settle 5 million Japanese farmers in twenty years to relieve economic depression at home and to create a new generation of "continental Japanese" to secure colonial domination. The representation of the Japanese colonial state as an ally of anticolonial independence and techniques for the mobilization of local support for Japanese rule set the pattern for later collaborationist regimes in occupied China and Japanese administrations in Southeast Asia.

After Japan's defeat in 1945, reprisals and violence were directed against Japanese settlers; only 140,000 out of 223,000 made it back to Japan. Manchuria became the base region from which the Chinese Communist Party subsequently launched a successful civil war campaign, culminating in its victory in 1949.

Maniam, K. S. (1942–)

K. S. Maniam was born in Malaysia and still lives in that country. He is one of Southeast Asia's major novelists writing in English, despite the fact that in the postindependence era, English, considered to be an imperial language, fell into official disuse in the country. Although many of Maniam's characters are Malaysians of Indian ancestry, the author's preoccupations go far beyond the ambitions and struggles of any single ethnic group. His characters live in a multiracial world that resembles modern-day Malaysia, a world still reeling from the overindulgences of colonialism and now caught up in the throes of yet another hegemonic enterprise. Maniam's characters are recognizable folk with familiar foibles and strengths.

In his plays, novels, and short stories, Maniam employs and creates myths to tell the story of the self—migrant, half-formed, unformed, and dismembered. In the works, the self is remade from creative reintegration and a series of metamorphoses; it takes as parts of itself all influences and personages that have affected it, afflicted it, lived with it, and died with it. In the making and remaking of the individual, these elements and influences are reborn into things unlike themselves, although the individual is still faced with the temptation to take the side of this or that race. At their best, the characters are all dedicated to building families, a nation, and a world

that favor no one on the basis of ethno-political affiliation.

Manifest Destiny

American journalist John L. O'Sullivan wrote in 1845 of the expansionist fervor that gripped the United States, claiming it was the nation's "manifest destiny to overspread the continent." Yet the United States was not alone in its fervor; O'Sullivan not only gave a dramatic voice but also supplied a long overdue label to a well-developed national disposition that had deep roots in Western tradition. The concept of manifest destiny evolved long before 1845 and was not limited to the American people. The United States, beginning with its colonial past, utilized the essence of the concept and placed it on a higher philosophical plane. The nationalistic expansionist movement in the United States was based on a moral ideology and appeared as an inherent quality justifying itself as a natural right.

Natural right formed the historical foundation that was later used as an explanation and underlying ideology for the manifest destiny movement. The beginnings of this idea can be traced back to Greek philosophers; later, stoic philosophers and indeed basic Roman legal beliefs followed the same reasoning that natural rights were among the truths contained in natural law. This logic formed a rational basis for the physical and moral universe in the centuries that followed, and thus, the concept of natural right came to embrace two principles in Western tradition—secular and sacred—setting the stage for expansionist nationalism and colonialism and imperialism as well.

This version of a "chosen people" doctrine became an early cornerstone of popular ideology among the Germanic peoples and later in England as the New Anglican Church under Elizabeth I adopted the essence of its message in the late sixteenth century. These ideas were planted especially

well on the frontiers of English expansionism. The intellectual ship that carried English settlers across the Atlantic also altered and then adopted an expansionist vision based on natural right as an essential principal of their colonial fervor. Similar philosophies motivated other European colonialists, as well as Chinese, Islamic, and other peoples bent on colonial expansion. In the United States, these ideologies were expressed in the doctrine of manifest destiny, and the main ingredients consisted of republicanism, democracy, freedom of religion, and Anglo-Saxonism.

The end of the American Revolution empowered the new nation and set it along a course that engaged the country in an unprecedented continental expansion under the guise of what Americans came to call manifest destiny. This total embrace of a powerful movement suggested to some that manifest destiny was a uniquely American philosophy. Certainly, the extension of the United States into the international arena in the second half of the nineteenth century drew on this idea. Leading Americans—notably Albert J. Beveridge, Theodore Roosevelt, and Alfred T. Mahan—turned the originally continental-based philosophy into wider aspirations of an American empire, notwithstanding the hemispheric limitations canonized in the early foreign policy pronouncements of President James Monroe. Thus, manifest destiny became a fundamental justification for American colonialism even though its roots actually lay deep in the Western intellectual tradition.

Manila

Manila, the capital of the Philippines, is a product of the Spanish colonization of the Philippine archipelago. Originally called Intramuros, the city was established in 1571 by Miguel López de Legaspi in a deep and sheltered harbor on the shore of Manila Bay (in the southwest of the Luzon island). Gradually, it grew from a small seaport, which largely served military needs and colonial trade, to the twelfth largest metropolitan center in Asia.

For centuries, Manila was developed under the strong colonial and missionary influence of the Spanish Empire. During its early days, the city was heavily fortified to withstand military assaults from rival powers or raids by pirates. The inner part of the city was planned and built according to the classical seventeenth-century Spanish architectural tradition, and it was home to a seminary (founded by the Jesuits in 1601), churches, and office and residential buildings. By the late nineteenth century, Manila became famous for its beauty and was often referred to as “the Pearl of the Orient.”

British troops captured the city in 1762, but they departed two years later without leaving any significant marks on Manila. In 1898, after the Spanish troops were defeated in the Spanish-American War, Manila was occupied by the United States, which controlled the city for almost half a century. During the first half of the twentieth century, the city and especially its suburban areas grew rapidly into a major industrial center of the Philippines, with cigar and cigarette manufacturing, hemp and textile plants, and various industries producing leather goods and other items. During World War II, the Japanese Imperial Army invaded the Philippines and occupied Manila from January 1942 until February 1945. The Allied liberation of the city at the end of the war involved heavy bombing and house-to-house fighting, which destroyed most of the city. In fact, the destruction was so severe that it took more than a decade to rebuild the city.

Manila became the capital of the country after independence was granted in 1946; two years later, that designation was transferred to Quezon City. However, in 1976, Manila regained its former status as the capital of the Republic of the Philippines.

Mao Zedong (Mao Tse-tung) (1893–1976)

Mao Zedong was chairman of the Chinese Communist Party and founder of the People's Republic of China. Born into a peasant family in inland China, he became a founding member of the Chinese Communist Party in 1921 and gained experience as a labor and peasant organizer. After Chiang Kai-shek broke the Kuomintang's alliance with the Communists and purged them in 1927, Mao established a peasant base at a mountain stronghold in central China, where he began to perfect the mobilization of peasant support through radical land reform and the military strategy of mobile guerrilla warfare. From 1930 to 1935, Mao was the chairman of the Communist base area called the Kiangsi (Jiangxi) Soviet, but with his peasant-based political and military ideas, he ran afoul of central party leaders who emphasized urban assaults using workers and positional warfare.

Mao emerged as a top leader of the Communists during the Long March, when central leaders and their Comintern advisers were discredited by failed strategies, necessitating this strategic retreat from the Kiangsi Soviet to the border region centered at the northwestern town of Yan'an.

The Kuomintang again allied with the Communists against Japanese imperialism during the Second Sino-Japanese War (1937–1945). By 1943, Mao had established his credentials as a theoretician by adapting the tenets of Marxism to Chinese conditions; he had also become party chairman and had triumphed over his Moscow-trained rivals.

The defeat of Japan in 1945 led to a resumption of full hostilities between the Kuomintang and the Communists in the 1946–1949 Chinese Civil War. With the victory of the Communists imminent, Mao proclaimed the establishment of the People's

Republic of China at Peking (Beijing) on October 1, 1949. One part of the new nation's policies was the encouragement of decolonization throughout much of the world, and Chairman Mao became a heroic figure to many anticolonialist campaigners.

After the end of the Korean War (1950–1953), China embarked on an ambitious program of national reconstruction on the Soviet model of central planning, collectivization, and heavy industrial development. Mao inaugurated the Great Leap Forward in 1958, with the consolidation of 740,000 agricultural cooperatives into 26,500 giant communes and the mass mobilization of labor in rural industrialization and water conservancy projects. This utopian campaign to achieve a Communist paradise resulted instead in a massive famine.

Policies instituted by other leaders to rehabilitate the economy were viewed by Mao as steps toward the restoration of capitalism. He therefore launched the Cultural Revolution in 1966, leading to ten years of turmoil during which many party leaders were purged, 100 million people suffered political persecution, and the country plunged into violent disorder.

Ironically, during the Cultural Revolution China also began to repair fences with the United States, hitherto seen by Mao as the foremost imperialist power. Mao's challenge to the Soviets for the leadership of world revolution had contributed to the rift between China and the Soviet Union, which threatened to escalate into war by 1969. Mao now perceived the Soviets as the greater menace to China's security and sought rapprochement with the United States. Richard Nixon's visit to China in 1972 began a process of normalizing Sino-American relations.

Mao's era ended with his death in 1976. Although he was a successful revolutionary who restored national unity and pride to mainland China, his role as a nation builder was tarnished by the upheavals and sufferings brought on by his political movements and economic programs.

Maori

The Maori are a Polynesian people who settled the islands of New Zealand around 800 C.E. They first encountered Europeans in 1642, in a brief and violent exchange with the Dutch explorer Abel Tasman, but sustained contact with Europeans only followed James Cook's "discovery" of New Zealand in 1769. Encounters with whalers, sealers, and Protestant missionaries introduced a host of new technologies, commodities, and beliefs that tribal leaders quickly appropriated. From 1830, many Maori embraced the Bible, fashioning a range of sectarian traditions and syncretic practices. In 1840, after intense debate, over 500 chiefs signed the Treaty of Waitangi, which protected their authority and guaranteed the ownership of their resources and possessions while ceding sovereignty over New Zealand to the British Crown.

In the wake of the treaty, the previously small and scattered *pakeha* (settler) population expanded rapidly, occupying Maori lands and undercutting chiefly authority. In wars of resistance in 1845 and 1846 and from 1860 to 1868, many Maori tribal groups attempted to prevent pakeha expansion. But as the influx of settlers continued and the Maori struggled to combat the impact of new diseases and land alienation, the pakeha reasserted their dominance, and at the conclusion of the wars, they illegally confiscated "rebel lands." Maori resistance did not die, however, as prophetic leaders from Te Whiti to Rua Kenana offered millennial visions that promised Maori liberation and reformists such as Apirana Ngata elaborated models of a Maori modernity. In the twentieth century, the Maori population grew quickly, but rapid urbanization in the 1940s and 1950s weakened tribal bonds. From the early 1970s, the emergence of the Maori Renaissance spawned a revival of interest in Maori language and arts and stimulated sustained critiques of colonialism. This flowering of political activism and cultural production continues to reshape New Zealand's cultural life.

Maroons

Perhaps the most successful acts of resistance against the colonial system of slavery were committed by the Maroons of the Americas. These were communities of Africans and their descendants who had escaped from their plantations to locales far into the mountains of Jamaica, the jungles of Brazil, and other remote and sparsely populated sections of the Caribbean and North America. Also known as *palenques*, *cimarrones*, *quilombos*, and *mocambos* in various parts of the Portuguese and Spanish colonies, these societies lasted as long as the institution of slavery itself.

The most successful Maroon villages were located in the Blue Mountains of Jamaica, the dense forest of the Sierra Maestra of Brazil, the rocky coastlines of Oriente, Cuba, and the jungles of Suriname. These villages, as well as others, were self-sufficient, autonomous communities that were socially and politically independent of the European colonial system in the New World. Though the people were predominantly African, their ranks included increased numbers of Creoles after the abolition of the slave trade in 1807. Geographic location, organization, and inaccessibility were keys to success for Maroon communities. They relied on the cooperation of slaves, free people of mixed race, and free whites in the neighboring communities for support, tools, utensils, and sometimes food.

Maroon success, however, went beyond escape from a life of slavery. Many bands proved to be constant thorns in the sides of the European colonial powers. The years between 1795 and 1798 witnessed Maroon wars in Jamaica, St. Lucia, St. Vincent, Colombia, Venezuela, Suriname, and Dominica. Notable Maroon leaders such as Nanny and Cudjoe of Jamaica, Macandal of St.-Domingue, and Coba of Cuba combined religious and political ideologies with a keen sense of their surroundings in order to successfully challenge the colonial system. They were so successful that

many colonial powers made treaties with them, often granting legal recognition to Maroons in their respective colonies to guard against Maroon attacks. Some communities lasted for only a short amount of time, but others persisted for centuries; their presence and interference were sharp reminders that the system of colonial rule in the Americas was neither permanent nor secure. These communities helped chip away at the institution of slavery by challenging the stronghold of colonialism in the Americas.

Marquette, Jacques (1637–1675)

Jacques Marquette joined the Jesuit order at the age of seventeen and for ten years continued his studies while also teaching school. All along, he aspired to become a missionary and was delighted when his superiors sent him to New France (Canada). He spent two years in Quebec familiarizing himself with the area and learning six Indian languages. Over the following five years, he preached in missions near Lakes Huron, Superior, and Michigan. He was much beloved by the Ottawa and the Huron among whom he lived. Visiting Illinois Indians had told him about their land and about the “great river” (the Mississippi), and he was eager to explore new territory and convert more Indians. His chance came in 1673 when he was chosen by the governor of New France, the comte de Frontenac, to accompany the explorer Louis Jolliet on an upcoming expedition.

The expedition team was composed of seven men, who paddled for five months in two canoes, covered a distance of 2,500 miles, and preached in numerous villages. Although warring Indians and the fear of being captured by Spaniards prevented them from reaching the Mississippi Delta, they succeeded in mapping most of its course. They correctly guessed its southward flow but believed that it would go westward and lead to California. Marquette’s health was compromised by the hard-

ships of exploration, and he died less than two years later on the way to establishing a new mission in an Indian village on the shore of the Illinois River.

His travel journals reveal Marquette as an enthusiastic explorer and a keen observer. He described landscapes, flora, fauna, and, above all, people. Primarily intent on bringing salvation to the Indians, he related their mores with warmth and expressed his gratitude for their kindness and hospitality and his admiration for their intelligent adaptation to difficult surroundings.

Marshall Islands

The Republic of the Marshall Islands (RMI), located in the central Pacific Ocean, consists of two major chains: the Ratak in the east and the Ralik in the west. It covers an area of approximately 705 square miles across thirty-four atolls. Majuro is the capital. The mainly Micronesian Marshallese are citizens of the Marshall Islands, which are part of the geographic region known as Micronesia, meaning “Little Islands.” In addition, there are substantial enclaves of U.S. military personnel, private contractors, and their families.

The islands were claimed by Spain in 1592 and in 1885 came under German administration. In 1914, Japan assumed control of the islands, first under civil and then under naval administration. Six years later, Japan received a League of Nations mandate over the islands. In 1943 and 1944, U.S. forces took the islands. After World War II, in 1947, they became part of the Trust Territory of the Pacific Islands (TTPI), administered by the United States until 1986. In 1979, the United States recognized the Marshall Islands constitution, establishing the government of the Republic of the Marshall Islands; the name change became official in 1982. The following year, the voters approved the Compact of Free Association with the United States, which was signed by the RMI and U.S. governments on June 25, 1983. The compact, composed of fifteen-year renewable agreements,

was signed as Public Law 99–239 on January 14, 1986, and entered into force later that year, on October 21.

The status of free association recognizes the Marshall Islands as a sovereign, self-governing, independent nation with the capacity to conduct foreign affairs consistent with the terms of the compact. The United States retains full responsibility for the self-defense of the RMI. The basic relationship of free association continues indefinitely; the economic provisions of the compact were further negotiated in 2002. The U.S. State Department is responsible for government-to-government relations and has the final say over foreign affairs. The Department of the Interior is responsible for funding, oversight, and coordination of U.S. programs, which include Head Start, the Job Corps, and services from the Department of Agriculture, the Federal Aviation Agency, and the National Weather Service.

Under a lease agreement with the RMI, the U.S. Department of Defense uses the largest island, Kwajalein Atoll, as the site of a U.S. missile range. The neighboring Bikini Atoll, about 200 miles to the east, has been used for weapons testing, including the dropping of atomic bombs. Over the years, sixty-six atomic and hydrogen weapons have been exploded in the area. As a result, Marshallese and Bikinians have been subjected to radiation poisoning, displacement, and the destruction of a self-sufficient island way of life.

Marx, Karl (1818–1883)

Prussian historian, economist, and social theorist Karl Heinrich Marx developed a socio-economic theory of history that identified what he believed to be crucial components in the growth

and ultimate demise of capitalism. Providing a theoretical foundation for later socialist and communist ideologies, particularly as formed by Russian revolutionary Vladimir Ilyich Lenin (1870–1924), Soviet dictator Joseph Stalin (1879–1953), and Chinese Communist revolutionary Mao Zedong (1893–1976), Marxist doctrine draws correlations between the rise of capitalism and the expansion of European colonialism that continue to influence philosophers, historians, and economists across ideological lines.

According to Marxist theory, just as capitalism replaced feudalism as the economic norm, a proletarian revolution will eventually overthrow bourgeois society when capitalist monopolies become financially inviable in the face of surplus production. Viewing capitalism as an exploitative system that would overtake the global economy, Marx considered European colonial expansion and imperial consolidation central to the overall process. As “barbarian” societies are forced to embrace bourgeois modes of production, thought Marx, production levels will unavoidably outpace consumption. Once surpluses decrease the salability of capitalist goods, he argued, economic exploitation will ultimately give way to the formation of a classless society worldwide as capitalists lose control of their markets and therefore are forced to relinquish their economic and political dominance.

After initially forming his philosophical views during an uneasy affiliation with the Young Hegelians, a group of political anarchists at Berlin University (1836–1841), Marx developed his unique ideological perspective during a brief period among communist revolutionaries in Paris (1843–1845) and through his lifelong collaboration with Prussian philosopher Friedrich Engels (1820–95). Marx’s ideas were as timely as they were revolutionary, establishing an unlikely fusion of German philosophical positions: Friedrich Hegel’s (1770–1831) intellectually focused approach to historical determinism and Ludwig Feuerbach’s (1804–1872) emphasis on material conditions as the primary causes of change. While Hegelian philosophy provided Marx with a framework for historical development as a dialectical process between opposing ideas resolved through syntheses, Feuerbach’s identification of material pressures as the primary catalysts of change grounded Marxist ideology in economic theory.

Following revolutions in France, Italy, and Austria in the early months of 1848, Marx found himself embroiled in continental politics as an advocate for social and economic reform. His views earned him little favor with many governments, however, and in 1849 he was forced to move to London, where he joined the Communist League and later became a leading figure in the First International labor movement. Although his collaboration with Engels produced the major works of Marxist ideology, the *Communist Manifesto* (1848) and later *Capital* (1867, 1885, 1894), Marx’s perspective on colonialism was voiced largely through his numerous dispatches as a London correspondent for the *New York Daily Tribune* (1851–1862). Having become interested in the dynamics of colonial expansion while covering parliamentary debates over the renewal of the British East India Company in 1853, Marx rapidly expanded his coverage of colonialism and traditional “Asian” economic systems to include some 500 articles—many identifying what later came to be called the “development of underdevelopment” as a necessary step toward internationalization and ultimate global reform.

Martí, José

José Martí was born in Havana, Cuba, on January 28, 1853, to Spanish parents. Known for his writings and poetry as well as his political views, Martí was an ardent supporter of Cuban independence. Charged with disloyalty to Spain before he was seventeen years old, he was sentenced to six years of hard labor, a punishment that was later dropped in favor of deportation to Spain.

After the Pact of Zanjón ended the Ten Years' War, Martí returned to Cuba, but his support for independence forced him to face charges or leave the island. He chose the latter, and while in the United States, he worked with other exiled Cubans and raised money for the cause. In 1881, New York City became the center of his political activities. Fearing that rebel leaders Antonio Maceo and Máximo Gómez would establish a military dictatorship after independence, Martí broke with them in 1884. By 1887, however, the three were again working together to free Cuba from Spain. Martí formed the Cuban Revolutionary Party in 1892, again soliciting funds and support from Cubans living in New York and Florida. Independence from Spain and the United States, he believed, was the only solution for Cuba, and he felt a quick war was necessary to prevent any U.S. intervention.

Martí returned to Cuba as a major general in the Army of Liberation when hostilities resumed in 1895. Less than a month later, he was made the supreme chief of the revolution, with Gómez as the commander in chief. On May 19, 1895, Martí was killed during a skirmish with Spanish forces at Dos Ríos, in Oriente Province.

Mau Mau

The Mau Mau Rebellion movement of the 1950s found its roots among the Kikuyu people of Kenya. It allegedly took its name from the Mau escarpment, a range of mountains bordering the Rift Valley on its western side, northeast of Lake Naivasha. This movement was borne of Kikuyu social and economic consequences associated with colonialism and the disenfranchisement of land. The ensuing sense of anger, despair, and urgency among the Kikuyu created the preconditions for the Mau Mau uprising.

The initial protestations arose in 1946, as a rebellion of landless peasants and underpaid workers. Subsequently, attacks were launched against police stations and other government offices as

well as white settler farms and African sympathizers or loyalists (Kenyans supporting British actions against Mau Mau). By 1952, the organization of the movement had become secretive and had gained notoriety among the panic-stricken white settlers, who, in their anger and fear, lashed out against native peoples, thereby further popularizing the movement. Central to the Mau Mau uprising were the oath-taking ceremony and the recruitment of willing and unwilling Kikuyu. Mau Mau bases were established in the Rift Valley forest, where the leaders launched more militant campaigns. Many innocent African and European victims were slain as the rebellion intensified. The Mau Mau insurrection continued primarily in the Central Province, Aberdares (Nyandarua), Mount Kenya, and Nakuru District. The self-proclaimed Land Freedom Army was said to have swelled in number to 30,000. Armed with homemade weapons and dependent on popular support, the soldiers of the movement were difficult to stop because they were organized in different cells. British troops fought the Mau Mau in the forests, and the colonial government took strict measures against civilians who were suspected of supporting the movement. In 1952, Jomo Kenyatta and approximately 200 other Kenyans were tried and interned for complicity with the Mau Mau uprising.

In April 1954, the Mau Mau Central Committee was neutralized by the government, effectively destroying the movement's only organized supply network, and 17,000 young Kikuyu were interned in concentration camps. The movement lost most of its support in the particularly shocking murder of ninety-seven loyalists during the Lari massacre of 1955. The British gained an upper hand against the Mau Mau in the same year, but it took 21,000 paramilitary police, thousands of armed loyalists, and a full division of British troops supported by the Royal Air Force with jets and bombers to accomplish defeat the Mau Mau in 1956. Dedan Kimathi, a well-known Mau Mau leader, was captured and later executed by the British (in 1957). In the final analysis, Mau Mau established that the Africans of Kenya were prepared to fight and die for their land, ending all hopes for white minority rule. As a direct result of the rebellion, the British government began planning for Kenyan independence under majority rule.

Maugham, W. Somerset (1874–1965)

Author W. Somerset Maugham was born in Paris, where he lived until he was orphaned at the age of ten. He was then sent to live with his uncle in England, and Maugham's experience there was miserable. He was educated in medicine in Heidelberg and at London's St. Thomas's Hospital. Maugham qualified as a doctor and began to practice, but he preferred to pursue a writing career, especially after the success of his first novel, *Liza of Lambeth* (1897), which drew on his experiences as a young doctor in the slums of London. He also worked for the Red Cross in France and for British intelligence in Switzerland. After he made a fortune from his plays, he bought a villa on the French Riviera, where he entertained high society and the literary elite. He also traveled extensively.

Maugham was listed among the best 100 writers of the age in 1909. He was a prolific writer who trained himself to become an outstanding storyteller. He wrote plays, novels, short stories, essays, and travel books until he died at the age of ninety-four. He admired the work of many writers, including Anton Chekov, Guy de Maupassant, and Edgar Allan Poe. His fiction, like that of Rudyard Kipling and Joseph Conrad, was a portrayal of British colonies, and his travel books depicted the lives of people who lived in remote parts of the empire. Maugham believed that the purpose of fiction was to entertain, not to inform life. He resented critics, but his responses were often contradictory: sometimes he bitterly attacked the critics, but at other times he claimed he did not care what they wrote about his work. His most famous story, "Rain" (1920)—made into a play and several movies—was inspired by a prostitute and by a missionary. *Cakes and Ale* (1930) is acknowledged to be Maugham's best novel.

Mauritius (Isle of France)

Arriving in 1598, the Dutch settled this small, tropical Indian Ocean island, which lies about 500 miles east of Madagascar, in the seventeenth century. They named it after their ruler, Prince Maurice of Nassau. After heavily exploiting Mauritius's ebony trees and faced with drought and cyclones, the Dutch left in 1710. (Unfortunately, the flightless dodo bird left first, having become extinct around 1691 in the face of deforestation and newly introduced predators.) Following French occupation in 1715, the island was renamed Isle de France and passed to the control of the French East India Company.

The French government took over in 1767, using the capital and naval base, Port Louis, to attack British India during the Napoleonic Wars (1793–1815). But with the Royal Navy growing and Indian troops now being used for expeditions, Britain soon dominated the Indian Ocean, and Mauritius was duly taken in July 1810 by a force of 8,000. British sovereignty was formalized by the 1814 Treaty of Paris.

Most of the inhabitants of Britain's new colony were slaves from East Africa and Madagascar. They worked sugar plantations on Mauritius's rich, volcanic soil. After slavery was abolished (effective in 1835), indentured laborers were imported from India. This practice stopped in the early twentieth century, but enough of these individuals stayed to boost Mauritius's population in the 1930s to 465,000 (increasing to over 1.1 million by 2000, on just 788 square miles of land). Mauritius became a classic case (with Malaysia, Fiji, Trinidad, and others) of a mixed population, or "plural society." Mauritians are, by and large, the descendants of Indian Hindus, Africans, and Asian Muslims; a small minority are descended from Europeans, mainly French. English is the official language, but the lingua franca is French-derived Creole. The press uses French, whereas Hindi, Tamil, Marathi, Urdu, and Chinese are all spoken.

Mauritius had dependent territory as far away as the Chagos Islands, one of which, Diego Garcia, lay 1,200 miles to the northeast. It still claims the Chagos, which were carved out of Mauritius in November 1965 and joined with three island groups from the Seychelles to create a new colony—the British Indian Ocean Territory (BIOT). Britain paid Mauritius £3 million in compensation and deported the Diego Garcia and Chagos populations, comprising 1,200 Ilois (descendants of slaves bought to farm copra plantations). In this way, Britain secured a staging post in the mid-Indian Ocean to project military power eastward—one that, unlike populated colonies, could not demand independence. In November 2000, the British High Court ruled that the 1971 barring of the Ilois was illegal. This finding may pave the way for some Ilois to return.

In 1966, Britain signed a fifty-year agreement to allow the United States to use Diego Garcia for military purposes, and facilities were built from the 1970s. As of 2000, Diego Garcia was administered by less than fifty Royal Navy personnel, whereas the U.S. facilities employed several thousand. The forces stationed on Diego Garcia have projected military power to the Middle East, notably in Operation Desert Storm in 1991. Ironically, Britain abandoned plans to develop BIOT's Aldabra Island as its own base because protesters argued this would disturb the nesting of frigate birds and because the British had made a decision in the late 1960s to withdraw from bases "East of Suez," that is, east of the Suez Canal.

In regard to the history of Mauritius itself, a council of government assisted the governor from 1825. Some nonofficials were added to this council in 1832, as were elected members from 1886 onward. After the 1947 constitution introduced a legislative council with a wider franchise, based on literacy, Indian-led pressure for independence began to build. Other groups remained more skeptical. Mauritius received a ministerial form of government and universal adult suffrage in 1957. A September 1965 constitutional conference paved the way for independence on March 12, 1968, despite ongoing racial tensions. A republic from 1992, Mauritius remains in the Commonwealth today.

Maximilian, Emperor (1832–1867)

Ferdinand Maximilian Joseph was archduke of Austria and briefly (from 1864 to 1867) emperor of Mexico. As the younger brother of Emperor Francis Joseph I, he was frustrated in his desire to govern; when Napoleon III, for his own imperialistic reasons, deceived Maximilian into believing that the Mexican people had expressed a desire to have him as their emperor and offered him French military support, he accepted. The new Mexican government had suspended repayment of debts to European powers. Sensing an opportune moment, Napoleon III sent troops to occupy Mexico. Other European nations did not oppose his plans, and the United States was preoccupied with its own civil war. However, the enterprise was doomed from the start. In their Eurocentric fixation, neither Napoleon III nor Maximilian understood the depth of the Mexicans' determination to achieve independence.

Accompanied by his wife, Carlota, daughter of Leopold I of Belgium, Maximilian arrived in Mexico honestly believing he could he could bring peace and prosperity to a country plagued by years of civil war. Unable to grasp the real situation, he wavered between liberal and repressive actions and in the end pleased no one. Moreover, when the American Civil War ended in 1865, the United States turned its attention to enforcing the Monroe Doctrine. Napoleon III, already severely criticized in the French press for expenditures caused by the intervention in Mexico, had to withdraw the French military under diplomatic pressure. Left with only a few troops under his orders, Maximilian decided to defend his honor rather than abdicate. But after local republican forces reconquered Mexico, Maximilian was captured, tried, and executed. The republican victory, followed by the presidency of Benito Juárez, marked the end of Mexico's colonial era.

Maya

Although the Spanish conquests of the mid-sixteenth century destroyed its centers of power and its economic and religious “empire,” the Mayan culture has spanned the millennia and survives today in hundreds of villages in Mexico, Belize, Guatemala, Honduras, and El Salvador. The Maya can point to cultural continuity from around 2200 B.C.E., but anthropologists have set the emergence of Mayan civilization proper in the period between 400 B.C.E. to 100 C.E. This civilization created a complex system of writing (the most complex of the pre-Columbian New World) and monumental architecture, with pyramids reaching 230 feet in height. The Maya also developed metallurgy and sculpture that rivaled that of Europe. The early capital, Tikal, boasted a population in excess of 100,000 in 800 C.E.—a size that European cities would not achieve for many more centuries.

The Spanish began to assault the Maya in the early 1500s, with a smallpox epidemic in either 1515 or 1516 often viewed as the beginning of this process. The last major independent capital city, Tayasal, fell in 1697, and the Spaniards’ brutal conquest policy of killing and destroying all they encountered took a terrible toll on the Maya.

After centuries of external domination by hegemonic modern nation-states, the Maya have emerged as a dominant political force in the areas in which they still live. The uprising of the Zapatistas in Chiapas, Mexico, in a struggle to maintain their land base and way of life is an indigenous movement dominated by Mayan people. Also, after suffering decades of brutal treatment at the hands of the Guatemalan state (with the aid and complicity of the United States), the Maya have begun negotiations with officials in Guatemala that could lead to the world’s first indigenous government—a Mayan institution that could draw on its 4,000-year history to envision its future.

Phillip Bellfy

McKinley, William (1843–1901)

As the twenty-fifth president of the United States, William McKinley significantly engaged U.S. power across the globe. During his administration (1896–1901), the United States formally colonized the Philippines and fostered U.S. expansionism in Asia through the Open Door notes, which called for free trade for all countries with China.

Born in Niles, Ohio, on January 29, 1843, McKinley grew up as one of nine children in a working-class family. He fought in the Civil War and practiced law in Canton, Ohio. He quickly rose to the top in the state’s Republican politics. He was a member of the U.S. House of Representatives (1877–1882, 1885–1891) and was twice elected governor of Ohio (serving from 1892 to 1896). He had no international experience and little interest in foreign policy before he became president. And although the Republican platform in 1896 included calls for the annexation of Hawaii, reassertion of the Monroe Doctrine, and U.S. support for Cuban independence, McKinley displayed little concern for diplomacy during the campaign.

The foreign policy activities of his administration were concentrated on the Spanish-American War and its consequences. McKinley had urged Spain to institute a cease-fire in the Cuban rebellion, which had broken out in 1895, and allow the United States to mediate the conflict. His mediation efforts failed, however, and when the *Maine* was sunk in Havana harbor in February 1898, the president demanded the withdrawal of Spanish forces from Cuba. War was imminent. It was declared by Congress on April 19.

The U.S. intervention in the Spanish-American War resulted in victory. And although McKinley had seriously supported the Teller Amendment, which promised that the United States would not annex Cuba (that text was appended to the declaration of war), he believed that the Cuban people

required a period of U.S. tutelage to prepare them for full independence.

As a result of the war, the United States acquired a number of overseas possessions, such as Puerto Rico, Guam, and the Philippines. During the peace negotiations, McKinley insisted on the acquisition of colonies for political, strategic, and economic reasons and argued along the lines of social Darwinism and benevolent racism that the white race was destined to rule over the nonwhite races of the world.

His decision to turn the Philippines into a U.S. colony inspired a long and bloody war with Filipino rebels under the leadership of Emilio Aguinaldo. But McKinley believed in the civilizing mission of the United States and supported the acquisition of the islands for geostrategic and commercial reasons. The islands would serve as a springboard to Asia and would bolster the U.S. position in the competition for the China market.

McKinley was assassinated by anarchist Leon Czolgosz while visiting the Pan-American Exposition in Buffalo, New York, on September 6, 1901. Together with his secretaries of state and war, John Hay and Elihu Root, he had laid the foundations for the American empire and the superpower status the United States would attain in the twentieth century.

Media

Humans have used a wide variety of media to communicate rapidly and at a distance for several thousand years. In the present context, however, the discussion will focus more narrowly on the news media—the press, newsreels, and radio. Beginning with a look back at the press in colonial America, it will highlight developments that occurred between the nineteenth century, when cheaper printing techniques and increased literacy rates led to the creation of the first large-circu-

lation newspapers and periodicals, and the 1960s, when most of the former European colonies had achieved their independence.

One of the earliest examples of the role played by the media in the formation and destruction of the European empires occurred several decades before the appearance of what is normally considered the mass media. In the British North American colonies of the eighteenth century, newspapers and periodicals were an important part of the political education of the colonial elite in spite of their limited circulation (they rarely exceeded a few hundred copies). When the king began to rein in the independence of the American colonies, criticism of his colonial policies grew there. This eventually led the king to adopt an act requiring that a special stamp be affixed, for a fee, on all paper used for legal documents or publications; the purpose of the 1765 Stamp Act was to make the publishing of periodicals uneconomical. Although the law was never successfully enforced, it angered many people in the colonies, and news publishers who opposed the Stamp Act and various other taxes imposed by the Crown stepped up their press campaign against the measures. The king's attempt to censor the colonial press was, in fact, one of the factors that helped to pave the way for the American Revolution of 1776.

Once the United States gained independence from Great Britain, the press helped to forge the new country's emerging national identity, especially after the 1790s when public education was provided in each of the states. The crucial role of the press during and after the Revolution accounts, in large part, for the central position it occupies in U.S. society today. To varying degrees, the press played a similar role in the newly emerging Latin American countries in the first half of the nineteenth century.

On the whole, however, the media began to impact the lives of the general population only in the middle of the nineteenth century, when a dramatic rise in literacy rates was combined with cheaper and more efficient printing methods. With increased readership, America's appetite for accurate international news grew. Since most newspapers could not afford to gather this information themselves, they usually relied on news agencies to do it for them. By the 1850s, Europe had three major agencies: Havas (France), Reuters (Great Britain),

and Wolf (Germany). Not surprisingly, each of these agencies covered its own country's colonies with particular zeal and established offices in the most important colonial cities. The agencies convinced people that having European eyes and ears across the globe was important in order to gather and disseminate vital information. Even when the colonial empires fell, the major European news agencies were often allowed to continue operating in the newly independent nations, transmitting news from many different parts of the world.

Toward the end of the nineteenth century, many of the large European newspapers were read by hundreds of thousands of people, especially in France and Great Britain; at the turn of the twentieth century, the circulation of some of the major dailies exceeded 1 million readers. And as the popularity of newspapers grew, so did the public's taste for the recounting of adventures in exotic locales. Henry Morton Stanley (born John Rowlands) was among the first and, at least in the English-speaking world, best-known journalists to write such reports. He had visited various spots in Asia Minor, the American Far West, and Africa. He gained his reputation as a daring reporter in 1868 by covering Lord Napier's Abyssinian campaign for the *New York Herald*. But his most famous journey occurred in 1871, when he was commissioned by the *Herald* to find the Scottish missionary-explorer David Livingstone, who had gone missing in Africa several years earlier. After an eight-month voyage, Stanley found Livingstone on the island of Ujiji in modern-day Tanzania. When he met him, he supposedly exclaimed, "Doctor Livingstone, I presume!"

Stanley's adventures inaugurated an important tradition of reports by seemingly daring journalists from the European colonies. This kind of reporting generally emphasized the savagery of the indigenous peoples and the places that had not yet been settled by the Europeans. At the same time, it underlined the necessity of Europe's "civilizing mission" in its colonies. In this way, the media of the late nineteenth and early twentieth centuries more or less directly supported Europe's colonial policies and helped to increase the population's support for them.

Like Great Britain, France had several great journalists who wrote vivid reports of their journeys in the colonies, including, most notably, Al-

bert Londres and Pierre Mille. Although both of these men gave an exotic flavor to their reports, they also were not afraid to give the unvarnished truth about the condition of the Africans under the European colonial system. In fact, in the 1920s, both of them wrote articles and books highly critical of the horrible working conditions inflicted on the native Africans by the Europeans; both also demonstrated that African workers received wages far below the actual worth of their work. In 1929, for example, Londres and a colleague revealed the enormous human cost of the Congo-Ocean Railway. These journalists may well have revised their notions of the inherent superiority of European culture after having witnessed the horrors and the barbarity of the Great War.

Newsreels remained the most important source of moving-picture news until the last decade or so of European colonialism, when it was displaced by television. The filming of newsworthy events began in the earliest years of the cinema. The true revolution occurred when sound was added to the pictures, allowing an off-screen speaker to comment on the news. By the 1930s, millions of people saw these newsreels every week within the borders of the major colonial powers, such as France and Great Britain. Although newsreels rarely analyzed the news in any depth, the power of the images they presented and the simplicity of their narratives ensured that they had a significant impact on their audiences.

Like the press, the newsreels in various countries generally supported the colonial policies of their respective governments. In Great Britain, for example, when the government insisted that British rulers had to remain in India to prevent it from descending into chaos, the newsreels defended this point of view. Similarly, when the government decided to pull out, the newsreels defended that choice, although they were also quick to point out that massacres were occurring in the areas that were no longer under British control. Things were essentially the same in France during the conflicts in Indochina and Algeria. But those who opposed colonial rule could also use the power of the newsreel. No one did this more effectively than Mohandas Gandhi in India during the 1930s, when he used this medium to publicize his nonviolent campaign against the British in India and abroad.

Radio remained one of the most influential forms of mass media for most of the period between the 1930s and the disappearance of the European colonies in the 1960s. In fact, Great Britain and France developed their international radio networks in the 1930s in large part because of their empires. The importance of these networks grew as shortwave technology improved, allowing them to broadcast programs from the homeland to the farthest reaches of the world. At the same time, local radio stations were founded throughout the colonies, normally in the major cities. These stations were usually controlled by the white settlers or colonial officials, but when the colonies gained their independence, most of them fell under local control and became important tools of national consolidation and nation building. For their part, the shortwave stations of the European countries continued to broadcast news to and from the former colonies, helping them, to some extent, to integrate into the international community.

As with the press, radio broadcasting both increased the cohesion of empires and gave a powerful communication tool to those who opposed colonial rule. In Vietnam, for example, the Viet Minh controlled a radio station in the region of Hanoi in the 1950s that allowed it not only to pass its social and political messages to the population but also to communicate coded messages to its guerrilla troops. This was an especially important tool, since the troops were thinly spread throughout the country and often had no other modern method of communication.

The Algerian conflict clearly illustrated the ambiguous and even tenuous role played by the media. For instance, although reports of the dubious tactics employed in Algeria by the French army appeared for several years in periodicals and newspapers, such as *L'Express* and *Le Monde*, public opinion was barely swayed by them. People were convinced by the official version of events and believed that France should remain in the region. They began to question the conduct of the French army and, in some cases, the very necessity of the war only when Charles de Gaulle openly said, in 1960, that the conflict would end when Algeria became independent. Public opinion was also shaped by an increasing number of television, radio, and press reports explaining the underlying reasons for the French pullout from the region.

The media played another important role during the Algerian conflict. In April 1961, several French generals serving in Algeria decided to defy the government because they did not agree with the decision to negotiate an end to the conflict with the Algerian nationalists. Thanks to their portable radios, however, soldiers and officers who served in Algeria heard appeals by officials and by General de Gaulle to remain loyal to the French government. Because the overwhelming majority of soldiers decided to follow this advice, the generals' putsch failed utterly. The failure paved the way for the signature less than a year later of the Evian Accords that granted independence to Algeria.

In conclusion, the media played an ambiguous role in the formation and consolidation of Europe's colonial empires. On the one hand, they contributed to the cohesion of the empires by improving communications between the colonial powers and the colonies themselves and by allowing governments to convince their populations that their colonial policies were beneficial. On the other hand, some of the colonists or the original inhabitants of the colonies skillfully used the media to communicate their ideas and their plans to the public during their struggles against the colonial powers. Various groups also used the media to defend or attack imperial policies within the borders of the colonial powers, in the hope that shifts in public opinion would change the governments' resolve.

Medicine

The European colonial endeavor played a large role in expanding biomedical knowledge, medical

institutions, and the pharmacopoeia of Europeans. Likewise, biomedicine played an important part in colonial expansion and social control of the colonized. Tropical diseases slowed colonial penetration throughout the world. Malaria and yellow fever, for instance, largely repelled European colonialism into Africa's interior until the late nineteenth century, when quinine (derived from the cinchona tree native to the Andes), itself a by-product of European expansion, enabled Europeans to penetrate and settle in the Tropics. The colonial expansion, in turn, further exposed Europeans to new ailments, as well as new remedies and new knowledge. Advances in biomedicine gained through the colonial experience, however, did not always benefit the lives of the colonized; rather, medicine became what many historians and sociologists have termed a "tool of empire."

Colonial governments invested significant money into improving medical research and infrastructures during the early colonial period, due largely to the profits or potential profits that the Tropics represented. St.-Domingue, now Haiti, a

small island in the Caribbean, for instance, accounted for half the world's production of sugar in the 1780s, proving at the time to be the richest and most productive colony in the world. Yet when 100 French soldiers took up occupation 100 miles outside of Port-au-Prince in 1777, 66 became sick within only 8 days; after 45 days, 25 had died and only 9 remained healthy. Likewise in 1826 and 1827, a British parliamentary study commenting on mortality rates in West Africa found that between 33 and 56 percent of all individuals died within a few years of arriving on the African continent. Indigenous tropical diseases also posed a threat to the colonial host country, such as the cholera epidemic in the British colony of India in 1816 that spread to China, Mongolia, Siberia, Russia, Afghanistan, Turkistan, and Persia before eventually striking Europe and the Americas in the late nineteenth century. Such incidents and high mortality rates highlighted the need for research on tropical diseases and provided a new impetus to these efforts.

Colonialism not only resulted in the expansion of medical research but also led to the discovery

A colonial scientist studies malarial parasites at the Institute of Medical Research in Malawi in 1949. Defenders of empire cited such public health efforts as justification for continued European rule in Africa. (Library of Congress)

and production of new *materia medica*. Believing that nature provided local remedies for local diseases, travelers, traders, and biomedical doctors within the colonies initially sought local cures for local ailments. Colonial doctors interested in the biological efficacy of indigenous medicine wrote about it extensively and sent samples to their host countries for examination. Thus, the Americas provided coca, mescaline, nicotine, quinine, pectin, psilocybin, dopamine, and camphor; India provided yarrow, cutch, the India stinging nettle, the prickly chaff flower, *cannabis sativa*, and nut grass; the Pacific provided the kava plant; and Africa provided buchu, castor oil, devil's claw, and various forms of aloes. In addition to improving the general health of the colonists, investigations of local remedies could also be quite lucrative. In a popular medical journal in 1896, Andrew Smith of South Africa, who had published a book on medicinal plants from the Cape Colony, implored his fellow doctors to collect as much information on indigenous medicinal plants as possible, with an eye to replacing the more expensive imported European herbs. He wrote: "A wide field and a well-paying one lies open to anyone with sufficient knowledge, business capacity, time and capital to devote to the investigation, cultivation, and exportation of South African drugs" (Smith 1896). Many colonies, in fact, did produce medicinal herbs—and not necessarily indigenous ones—for export. Botanic gardens in Calcutta, Bangalore, Sharanpar, Ootacumund, and Poona grew various herbs, including atee tubers, camilla powder, deadly nightshade, castor oil, *cannabis*, opium poppies for the production of morphine, coca for the alkaloid cocaine, and cinchona for quinine. The largest cinchona plantations were in India, the East Indies, and Java—which became the world's largest producer of this herb until World War II. It is ironic that even as European colonies were collecting and producing indigenous herbs for export and local consumption, they were also criminalizing and discrediting the very healers from whom they had secured these numerous remedies.

Colonialism not only expanded Europe's pharmacopoeias but also provided new subjects and labs for medical experimentation. Inoculations against smallpox in St.-Domingue, for instance, were first tried on slaves. Other colonized people often found themselves exposed to different med-

ical experiments, including inoculations, trials involving new medicines or the effects of poisons, and new surgical procedures. The colonized were also measured and probed by colonial doctors and scientists who sought to establish biological differences between the "races." Some European scientists interpreted empirically suspicious data taken from measuring the skulls and pelvic bones of indigenous people to support the racial superiority of the colonizer. However, although ideas of racial superiority were already in the European mind, medicine naturalized "racial" and cultural distinctions and was instrumental in influencing European ideas of normality and abnormality—what is healthy versus unhealthy or sane versus insane—in racially defined ways.

Notions of hygiene and germ theory were used to justify the segregation of the colonized from the colonizers and to exercise social control. Disease also served as a social metaphor, and fear about the sexual, social, and political implications of racial mixing were often expressed in these terms: indigenous people represented the locus of sickness and were described as dirty, unhygienic vectors of disease that threatened to contaminate colonists. Further, medicine was used to justify segregation legislation and coercive forms of medical intervention during epidemics. In Dakar, Senegal, segregation resulted from a plague measure but continued long after the threat had diminished. This tying together of race, culture, and disease influenced much of the urban planning done by colonists, as they sought to maintain public health and prevent racial degeneration that was thought to result from the social and sexual mixing of the so-called races.

Lastly, medicine was employed directly in the service of colonialism. In the French colony of Algeria, West Indian psychologist Frantz Fanon wrote about how the French government forbade pharmacists from giving penicillin, antibiotics, alcohol, cotton, or antitetanus serum to Algerians fighting against French colonialism. Medicine was used as a weapon, as well: doctors administered truth serum to captured rebels and kept dissidents alive with heart stimulants and massive doses of vitamins so that colonial officials could torture them. Furthermore, missionaries hoped that by saving lives with biomedicine, they would convert the colonized to Christianity and a belief in the

racial and cultural superiority of the colonizer. Given the often contentious history of medicine in the colonies, it is little wonder that so many indigenous people have maintained a skeptical attitude toward biomedicine.

Meiji Emperor (1852–1912)

The Meiji Emperor of Japan, whose personal name was Mutsuhito, was born November 3, 1852, in Kyoto, the only surviving son of the Komei Emperor and his concubine Nakayama Yoshiko. Raised in seclusion by his maternal grandfather, Mutsuhito was trained to be a traditional emperor—that is, to live in a highly ornamental court, speaking archaic Japanese, while the country was run by the shogun, or military dictator, of Japan. The arrival of Matthew Perry and other foreigners so destabilized Japan that the shogun and emperor joined forces to resist the outsiders, only to be defeated by the united Satsuma and Choshu clans, who, in 1868, seized power and proclaimed Mutsuhito emperor, following his father's death from smallpox.

Unlike other emperors, though, the Meiji Emperor was now the central figure in the Japanese state. Embarking on a national public relations tour, he and his bride, Haruko, whom he married in 1868, introduced the Japanese people to a style of modern royalty, copying their ceremonies and dress from European customs. Sufficiently popular to weather a revolt of the samurai, who were being displaced by the creation of a modern bureaucracy and the end of their privileges, the emperor encouraged full modernization. And as a royal, he could provide a link with the elite of the United

States and Europe. Under the Meiji Restoration, Japan adopted a constitution based on Otto von Bismarck's German government, while also promoting Western-style university education, a conscripted and professional military, and the building of infrastructure such as railroads with no outside funding. Both the emperor and his wife were active in philanthropy, founding the Japanese Red Cross. Meiji's reign also saw Japan become a major world power, defeating China and Russia to take possession of Korea and making a treaty alliance with Great Britain. Unlike China, Japan ended up as a strong and independent nation as a result of its encounter with the West.

Meiji and Haruko had no children, so they formally adopted Meiji's children by his concubine Lady Naruko. Meiji, suffering from diabetes and kidney failure, collapsed and died after participating in the graduation ceremonies at Tokyo University in July 1912. He was succeeded by his son Yoshihito, the Taisho Emperor.

Menelik II (1844–1913)

Menelik was born in 1844 in Ankober, Ethiopia, a strategically well-placed town that his father, Haile Malecot, the king of Shewa (an Ethiopian province), used as his capital. The boy was raised there in the traditional manner, not only learning how to read and write in Amharic and do basic arithmetic but also how to ride horses and mules, shoot, administer small provinces, and lead troops into battle. He also learned enough Ge'ez, the liturgical language of the Ethiopian Orthodox Church, to say his prayers and follow the mass and a sufficient amount of religious lore to appreciate that Christian princes once governed many more provinces than currently fell under the church's sway.

During Menelik's reign as emperor (1889–1913), the Solomonic dynasty regained its hegemony over Ethiopia, sparked in part by irredentist ideology. It also resisted Italian colonialism partly by pointing out the dramatic theological differ-

ences between the bicephalous Western churches and the Monophysitic Ethiopian faith. Beyond that, it undertook modernization in order to maintain Ethiopia's sovereignty and independence in the face of colonial encirclement. Ironically, Menelik learned national statecraft at the court of Tewodros II (1855–1866), whose hostage he became when the upstart emperor rebelled against the petty government officials of the fractious Gondar State and returned Ethiopia to fragile unity. Tewodros was ultimately pushed from the throne by a population scandalized by his use of terror as a political weapon, by his inability to compromise on issues, and by his effort to confiscate church properties. Desperate to hold on to power, Tewodros sought a foreign adventure to eject the Turks from holy Jerusalem. In the wake of this effort, Menelik and a congeries of hostages successfully fled for home, infused with the idea of national unity but fully aware that change required patience and diplomacy. As for Tewodros, he tweaked the tail of the British Empire by taking subjects of Queen Victoria hostage, and London responded not by offering alliance but by mounting an expedition into Ethiopia to depose him.

With Tewodros gone and the new emperor, Yohannes IV (r. 1868–1889), busy consolidating his government, Menelik moved to ensure that the slave and primary products trade of southern and western Ethiopia transited Shewa on the way to the coast. In order for European and other merchants to benefit, they had to sell Menelik reasonably priced modern weaponry. Meanwhile, he retained his political autonomy by opening independent relations with adjacent European powers. Among them were the Italians, much hated by the emperor because they controlled the port of Mitsiwa, through which a large portion of northern Ethiopia's trade moved. Rome immediately turned to Menelik, hoping he would act as its cat's-paw and balancer of power; the king cooperated, since the Italians offered Remington rifles and ammunition. Through diplomacy and leg-erdemain, Menelik strengthened his power and position in Ethiopia during his reign as king of Shewa from 1865 to 1889. When Yohannes died on March 9, 1889, the king declared himself emperor and quickly signed a treaty of amity and commerce with his European benefactors at Wuchale on May 2, 1889.

Rome took advantage of a mistranslation of the Italian version of the treaty to declare a protectorate over Ethiopia. After repeated Ethiopian requests to correct the matter, Menelik broke off diplomatic relations in 1893 and denounced the treaty. The Italians long had coveted Ethiopia and had decided to make it the salubrious jewel of its East African desert empire by force. The masters in Rome had no understanding that Menelik was a first-class general, that Ethiopians were typically good soldiers, and that whites would not naturally vanquish blacks. They did not credit Menelik's empire with political unity, and they ignored the success of his rearmament programs and the depth of the support for Ethiopia among France, Russia, the United States, and other nations.

Everything that Menelik had strived for came together on March 1, 1896, between 5:00 A.M. and noon on the battlefields of Adwa. The Battle of Adwa was a resounding victory for Ethiopia and an ignominious defeat for Italy, which immediately sued for peace. The success gave substance to Ethiopia's assertions of sovereign independence for another generation; ultimately, it led to general diplomatic recognition for the independent nation of Ethiopia.

Menelik was able to consolidate Solomonic authority over the periphery of the state, doubling Ethiopia's size; he built a permanent capital at Addis Ababa; he facilitated the construction of the Addis Ababa–Djibouti Railway; he organized the country's first telephone and telegraph systems; and he permitted schools and hospitals to be opened in the capital and elsewhere. As he grew older and in an effort to reduce his workload, he pioneered reforms in local government and in the judiciary, and he named Ethiopia's first cabinet. After 1906, he suffered from debilitating third-degree syphilis attacks, which left him paralyzed and speechless by 1909. A regency regime, in which the cabinet played a vital role, took over, but the succession was not really settled until 1916, when Ras Tafari Makonnen (later Haile Selassie I) and Empress Zawditu (r. 1916–1930), Menelik's daughter, took power.

Mercantilism

Mercantilism was an economic policy that shaped the relationship between the imperial powers of Western Europe and their colonies between the sixteenth and eighteenth centuries. Although mercantilism took varying forms and often occurred at different historical moments—and differed somewhat from nation to nation—certain general comments apply.

Mercantilist economic policy emphasized domestic production and control of export markets and sources of raw materials. This economic framework was grounded in a number of basic assumptions that, it was believed, would lead a nation to economic self-sufficiency. Key to the idea of mercantilism was bullionism—the notion that the state of the national economy could be measured by the amount of precious metal, usually gold or silver, that it possessed. Bullionism required that a nation or, more specifically, the various European imperial powers always maintain a favorable balance of trade. In other words, to increase the amount of gold in the national treasury, the value of the European state's exports would have to be greater than the value of its imports. This could be accomplished by discouraging the importation of manufactured goods through high tariffs and taxes and encouraging the importation of raw materials by keeping tariffs and taxes low. The colonies of imperial powers such as Spain, England, France, and Holland were seen as potential markets for the manufactured goods produced in the metropolis and as a source for the raw materials needed. Some of the main goods imported from the colonies were sugar, tobacco, and cotton.

Europe's reliance on the colonies for such goods meant that a large population was needed to meet the labor demands of the colonies. These labor needs were initially met by transporting indentured servants from Europe and later by taking slaves from Africa across the Atlantic. Mercantilist policies also encouraged the development of a strong agricultural sector in the metropolis, as domestic production reduced food imports. In addition, a strong merchant fleet was necessary to con-

trol foreign markets and avoid dependence on foreign assistance for shipping goods. Mercantilism began its decline with the coming of the Industrial Revolution and as more laissez-faire economic policies gained popularity and the idea of a government-directed economy lost support.

Metternich, Prince Klemens von (Austro-Hungarian Empire) (1773–1859)

A conservative Austrian statesman and foreign minister from 1809 through 1848, Prince Metternich was instrumental in creating the Grand Alliance that defeated Napoleon Bonaparte and establishing the return of conservative imperial rule to much of Europe in the first half of the nineteenth century. A despised symbol of reactionary politics in his later years, he was forced to resign in the wake of the revolutions of 1848 that rocked the Austro-Hungarian Empire.

Born Klemens Metternich in Trier, Austria, in 1773 to a noble family, he studied diplomacy at the Universities of Strasbourg and Mainz in the late 1780s and early 1790s. Fleeing French revolutionary armies, he joined his diplomat father in the Austrian Netherlands (now Belgium) and then was sent to England on a diplomatic mission in 1794. The following year, he married into the highest circles of Austrian aristocracy, gaining an entrée into the empire's halls of power.

During the first decade of the nineteenth century, Metternich rose through the diplomatic ranks until he was appointed foreign minister by Emperor Francis I in 1809. Aware of Austria-Hungary's weakness vis-à-vis Napoleon and his French imperial army, Metternich tried to stave off further fighting and further inevitable losses by marrying one of the emperor's daughters to Napoleon—a stratagem that played to Napoleon's ego, which Metternich was adept at manipulating.

Hoping to bolster Austria's chances further, Metternich tried to streamline the state's administration by devolving powers to the component national entities, but he was resisted in this by the absolutist emperor. Frustrated in this regard and convinced that an alliance with a weak Russia would further undermine Austria-Hungary, Metternich arranged for the empire to remain neutral during Napoleon's invasion of Russia in 1812. That, he hoped, would buy the empire the time it needed to rebuild its army.

Through clever diplomacy, Metternich won Austria-Hungary a leadership position in the growing alliance against Napoleon in 1813, the same year he was granted the title of prince. In 1814 and again in 1815, this alliance of Russia, Austria-Hungary, and Great Britain proved successful, and Napoleon was forced into exile.

Beginning in 1814 and lasting into 1815, the great powers of Europe met at the Congress of Vienna, a conference, largely organized by Metternich, to establish the future political outlines of Europe. Metternich's goal was to create two great confederations—one among the German principalities and one in Italy—with Austria as the linchpin of both. Neither plan came to fruition, though his goals of bringing France back into the fold—once a conservative monarch was put on a newly revived throne there—and staving off Russian advances into Europe were. More generally, Metternich reestablished Austria's position as a key power in Europe and stabilized a conservative monarchical order for Europe that would last through the revolutions of 1848.

Although Metternich continued to be an important figure in Austrian politics through the first half of the nineteenth century, he was often thwarted in his efforts to streamline the monarchy and frequently lost out in his political turf battles with other ministers over domestic reforms. Confined largely to foreign affairs, he nevertheless remained a hated figure to those in Austria-Hungary and Europe generally who sought liberal reforms. When revolution broke out in Vienna in 1848, Metternich became its first victim and was forced into exile in England. Three years later, he returned to Vienna, where he died in 1859.

Mexican-American War (1846–1848)

Two developments in the United States were central to the outbreak of the Mexican-American War (also known in Mexico as the North American Invasion). The first was the ideology of manifest destiny—the belief that the United States was destined to possess all of the North American continent from the original thirteen colonies to the Pacific Ocean. The second was the Texas War for Independence, in which U.S. immigrants to the Mexican territory of Texas, along with Tejano allies, seceded from Mexico in 1836.

In declaring independence from Mexico, leaders in Texas also redrew the boundaries of the area, ignoring the former boundary of the Nueces River and claiming instead all the land to the Rio Grande. In 1846, realizing that his country could not afford a full-scale war with the United States but concerned that U.S. leaders might use the Texas boundary dispute to provoke a conflict, Mexican president José Herrera proposed a confidential meeting with U.S. representatives to negotiate a new Mexico-Texas border. President James K. Polk sent John Slidell to Mexico to negotiate the border and to attempt to purchase New Mexico and California for the United States. However, Slidell's lack of discretion in Mexico lost him the mission and José Herrera the presidency. Having failed to purchase Mexico's northern territories, President Polk moved to provoke a war with Mexico. He sent Gen. Zachary Taylor into the Rio Grande area claimed by Mexico, and when fighting broke out between Taylor's troops and the Mexican army, he went to Congress and claimed, "American blood had been shed on American soil."

In California, filibusterers, calling their movement the Bear Flag Revolt, had initiated aggression against Californio residents prior to the U.S. declaration of war. When news of the war arrived, the filibusterers declared themselves part of the larger war and exchanged their bear flag for that of the United States. Fighting continued until January 1847, when Californios, acting independent of the

government in Mexico City, signed the Treaty of Cahuenga.

To the south, Gen. Winfield Scott marched to Mexico City. At Chapultepec Hill, outside of the capital, his troops were confronted by 100 military cadets, today known as Los Niños Heroes, who struggled in vain to protect their capital. On September 14, 1848, the U.S. Army occupied Mexico City. On February 2, 1848, a treaty was signed at the village of Guadalupe Hidalgo, ceding Mexico's northern territories to the United States; this land encompassed what is now the American Southwest. Although the protocol that accompanied the treaty included assurances that Mexican land titles would be respected, most Mexican landholders were disposed of their land by the close of the century.

Mexico

On September 16, 1810, a small town parish priest, Padre Miguel Hidalgo, rang his church bells and exhorted the oppressed peoples and races of New Spain to rise up and overthrow the Spanish colonial government with his infamous “grito de dolores” (“shout of sorrows”). Although Hidalgo’s followers successfully sacked a few cities and killed the resident *gachupines* (their derisive name for Spaniards), the insurgents failed to take Mexico City and alienated conservative *Creoles* (native-born Americans of Spanish ancestry), who were terrified by the prospect of a race and class war.

Following Hidalgo’s capture and execution in the summer of 1811, another parish priest, José María Morelos Pavón, assumed command of the *guerrilleros* (guerrilla army) that continued to fight for the cause of Mexican independence. In November 1813, the rebel leader convened the Congress of

Chilpancingo, whose platform envisioned an independent, Catholic Mexico; proposed universal male suffrage and popular sovereignty; and promised to abolish slavery, forced labor, and government monopolies. In the winter of 1815, Morelos, too, was captured, defrocked, and executed, and the remnants of the rebel army scattered.

The independence movement gained new impetus in 1821 when an ambitious conservative Creole, Agustín de Iturbide, made common cause with the guerrillas, agreeing to set up an independent Mexican monarchy, to make Catholicism the nation’s official religion, and to recognize no distinctions with respect to caste or Creole status among the citizenry. Although the reconstituted army of the “three guarantees” defeated the royalist army and forced the Spanish Crown to recognize Mexican independence by the Treaty of Córdoba, signed on September 27, 1821, the uneasy alliance of liberal and conservative liberators did not last long. Iturbide briefly reigned as Mexico’s constitutional emperor, but his autocratic behavior provoked a rebellion among the liberal elements in the army. They deposed him in 1823 and executed him when he defied exile orders.

Iturbide’s abdication and execution did not resolve the new nation’s crisis of legitimacy; rather, it ushered in an era of anarchic republican rule in which liberal and conservative *caudillos* (regional military commanders) seized the presidency or else “pronounced” against the weak federal government from their provincial strongholds. In spite of a crippling financial crisis and the political chaos and strife that accompanied each presidential succession, important reforms were enacted in this period, including the abolition of slavery in September 1829 under the liberal president Vicente Guerrero. In April 1834, the self-declared savior of the nation, Antonio López de Santa Anna, deposed another liberal president, dismissed congress, and assumed dictatorial powers. Between 1834 and 1855, Santa Anna occupied the presidency ten times, but being more interested in military glory than in the responsibilities of rule, he failed to finish a single term and as commander in chief presided over the loss by war and by sale of more than half of the nation’s territory to the United States.

Following Santa Anna’s final resignation and self-imposed exile, Mexico’s dissident and exiled

Mexican defenders unsuccessfully battle against French invaders at the Battle of Puebla in 1863. The French—in a quixotic bid for a new empire in the Western Hemisphere—would eventually be defeated by Mexican nationalists and driven from the country later in the decade. (Library of Congress)

intellectuals returned to power and attempted to rid Mexican society of the vestiges of colonial privileges. As minister of justice and the unofficial architect of the liberal constitution of 1857, the Zapotec Indian lawyer Benito Juárez and his fellow anticlerical reformers tried to abolish the military *fueros* (privileges) and to curtail the power of the church but instead provoked a three-year religious civil war. In 1861, a victorious Juárez moved into the national palace, but later that year, the country's insupportable foreign debt provided Spain, England, and France with an excuse to occupy Mexican ports and collect customs duties until the loans were repaid. Vainly dreaming of reestablishing his nation's imperial glory, the French emperor Napoleon III used the debt issue as a pretext for launching a full-scale invasion from Veracruz in January 1862, with the intent of reconquering and recolonizing Mexico.

With Juárez's liberal government forced from the capital, his conservative enemies welcomed the French occupation forces as liberators, invit-

ing the emperor's puppet, Ferdinand Maximilian Joseph von Hapsburg of Austria, to assume the Mexican throne. Juárez and his generals refused to capitulate, however, and in 1867, they routed the occupying armies and captured and executed the foreign monarch. Juárez again assumed the presidency, and during the so-called restoration period (1867–1876), Mexico enjoyed a brief respite from the despotism and anarchy that characterized its early political life. It seemed that the bitter experience of foreign intervention and occupation had at least temporarily persuaded the Mexican people to forget their differences and unite as a nation.

Micronesia

The Federated States of Micronesia (FSM) extends 1,800 miles across an archipelago of the Caroline Islands and comprises four states: Kosrae, Pohnpei, Truk (now Chuuk), and Yap; the capital, Kolonia, is on Pohnpei. The population of the FSM is predominantly Micronesian. The Portuguese, seeking the Spice Islands, were the first Europeans to arrive there, and the Spanish, who claimed sovereignty over the Caroline Islands until 1899, followed. After Spain's defeat in the Spanish-American War, all of the Spanish Pacific was sold to Germany, with the exception of Guam, which became a U.S. possession. In 1914, Japan took military possession of the Marshall, Caroline, and Northern Marianas Islands; it assumed formal administration under a League of Nations mandate in 1920, thereby ending German administration.

In 1947, the United Nations created the Trust Territory of the Pacific Islands (TTPI), which consisted of Pohnpei (then including Kusaie), Truk, Yap, Palau, the Marshall Islands, and the Northern Marianas Islands. The United States accepted the role of trustee, and this territory became the only UN trusteeship to be designated a "security trusteeship," whose ultimate status would be determined by the UN Security Council. In 1951, the TTPI was placed under the jurisdiction of the U.S. Department of the Interior, with the U.S. president appointing a high commissioner to administer the trust territory. In turn, until 1979, the high commissioner appointed a district administrator for each of the Federated States of Micronesia to oversee their programs.

Evolution in the political status of the FSM resulted from U.S. recognition of its constitution in 1979 and the establishment of the government of the FSM (GFSM) at both national and state levels. The governments of the FSM and the United States signed the final version of the Compact of Free Association on October 1, 1982, which went into force on January 14, 1986, as PL 99-239. Under the compact, the political status of the FSM is that of a freely associated sovereign state with the capacity to conduct foreign affairs; the United States is responsible for its defense. The U.S. State Depart-

ment handles government-to-government relations, and the U.S. Department of the Interior is responsible for the oversight and coordination of U.S. programs and funding assistance. The FSM maintains a Washington, D.C., embassy and has diplomatic relations with fifty countries.

The constitution of the FSM separates the executive, legislative, and judicial branches and incorporates a bill of rights and a provision for traditional rights. There is a unicameral legislature of fourteen members; four are elected at large on a nationwide basis, and ten are elected from congressional districts apportioned by population. The chief executive offices are the president of the FSM and governors for Pohnpei, Yap, Kosrae, and Chuuk. A supreme court heads the judiciary branch, and each state government has its own legislative and court system.

Milner, Sir Alfred (1854–1925)

A British administrator in the Cape Colony and South Africa in the late nineteenth and early twentieth centuries, Alfred Milner was one of the leading instigators of the Boer War and the British conquest of the independent Transvaal Republic of the Afrikaners.

Born of English and German parents in 1854, Milner was educated at Oxford University, becoming a fellow of the university and a journalist in the 1870s and 1880s before attempting an unsuccessful run for Parliament as a Liberal Party candidate in 1885. He then joined the government in an appointed post as secretary to the finance minister. An author of numerous books on the British Empire, Milner was a strong proponent of British imperialism and was appointed governor of Cape Colony and high commissioner for South Africa in 1897.

The 1890s were a period of great tension in South Africa. Although Afrikaners had won a

nominally independent Transvaal Republic in the early 1880s, the discovery of gold there in 1886 led to a massive influx of foreign (largely British) miners and wealthy British capitalists, all of whom wanted the Transvaal incorporated into a British-ruled South African federation. But Transvaal president Paul Kruger and his Afrikaner followers resisted the idea, much to Milner's chagrin.

When Kruger refused to capitulate, Milner determined that the only way to achieve British control over South Africa was through force of arms. In October 1899, he issued an ultimatum to the Transvaal: either full citizenship would be granted the British people or war would ensue. When this was spurned, the Boer War—named after the Dutch term for Afrikaners—broke out. After several years of brutal guerrilla fighting, the Boers were forced to concede. Meanwhile, in 1901, Kruger gave up his Cape Colony post to become the administrator of the former Boer territories.

Although Milner was successful in resettling displaced Boer farmers back on the land, his efforts to encourage British settlement largely failed, and his attempt to Anglicize Boer education was met with much hostility. Frustrated in these schemes and in another to bring in Chinese laborers to work the gold mines, Milner left South Africa in 1905 and returned to England; he spent the next decade writing books on empire and serving in the House of Lords (he had been made a viscount in 1901). He later served in the World War I cabinet of David Lloyd George but resigned from public service after his plan for the creation of a quasi-independent Egypt was rejected in 1921. Milner died four years later.

Mining

Mining played a major role in the economic activity and development of colonies from the very early stages of colonialism. Spanish looting of

gold artifacts gave way to gold and silver mining, surpassed in value by silver mining in Mexico and Upper Peru (Bolivia) where traditional methods sometimes proved superior to those imported from Spain. The Spanish also mined other metals, such as tin in America. In Brazil, the Portuguese were primarily interested in sugar, but the eighteenth century saw diamond and gold mining in the Minas Gerais area change the colony's economy.

Traditional mining in India, with plentiful cheap labor, was generally confined to surface working. Where feasible, as in Mysore gold mines, Europeans brought in technology that was more capital-intensive. Iron mining in particular continued on a small scale until well into the twentieth century to supply localized iron- and steel-making projects. As was the case elsewhere, increased demand for nonferrous metals led to increased European interest in developing mining, but large-scale operations were often considered impracticable because of difficulties in treating specific ores or geographic location. This was also true in Indonesia, where a range of nonferrous metals were found; bauxite mining began in 1935, and manganese and nickel were also exported, although they were of limited economic importance. The only serious metal mining in Southeast Asia involved Malayan tin, which began to be commercially exploited in the nineteenth century, dominated by the Yukon Gold Company. Some mining of gemstones also occurred.

Mining played a much more significant role in imperial rule in parts of Africa. Especially diamonds and gold attracted the very large amounts of capital required, particularly as surface and alluvial workings were depleted. The need to import major quantities of machinery from Europe also required the building of railways; such projects most often were financed by the government to serve wider political or strategic aims, but they were privately funded if mining profits were expected (though not always accurately) to be substantial, as in the Rhodesias and the Congo.

Transvaal gold mining and Cape diamond mining were mainstays of South Africa's economy. In the years between World War I and World War II, the Anglo-American Corporation opened up the Orange Free State gold fields, and iron mining began to feed the infant iron and steel industry.

Black and white miners await transport to the surface from Kimberley diamond mine in South Africa in the 1890s. Mineral wealth was a primary motivation for European colonial expansion in southern Africa in the late nineteenth century. (Library of Congress)

Coal and various nonferrous metals were also important. Elsewhere in the region, the mining of diamonds in South West Africa (now Namibia), Angola, and the Kasai Province of the Congo as well as copper and eventually uranium, tin, and other metals from Katanga made major contributions to the colonial economies. The Northern Rhodesia (now Zambia) copper belt only became exploitable in the interwar years with the development of appropriate technology. Similarly, lead and zinc ores found around Broken Hill (Kabwe) could not be treated successfully until many years after they were first discovered.

In West Africa, mining played a less dominant economic role. In many parts of this area, gold was mined, especially in the Gold Coast. There was less mining activity in France's West and Equatorial African colonies, apparently in large part because of a general French preference for less-speculative investment opportunities. In addition, gold-mining rights continued to be held by Africans in some cases.

In North Africa, mining was also rather less important than it was farther south, but it was not without some significance. Iron ore that had supplied precolonial shipbuilding continued, as did the mining of zinc and lead in Algeria and Tunisia; the latter also produced mercury. The region's most important mining involved phosphates, of which Morocco had the world's largest reserves.

Australia also has a wide range of minerals. Gold was first worked in Victoria and later in Western Australia, followed by copper, silver, tin, lead, nickel, and other minerals that indeed gave Australia "a rush that never ended."

Monroe Doctrine

In his December 2, 1823, message to Congress, U.S. president James Monroe announced the three key principles of what came to be known as the Monroe Doctrine. The key components of the doctrine were: that the United States was to abstain from European wars unless U.S. interests were involved, that what were considered the “American continents” were no longer to be the arena for future colonization by any European power, and that any European colonization attempt would be interpreted by the United States as an unfriendly act. This doctrine provided a rationalization for the country’s desire for empire and overseas markets. Previously, the United States had appeared uninterested as it watched England, Spain, and Germany scramble for overseas colonies.

U.S. leaders became acutely aware of the profits, as well as the prestige, to be derived from access to overseas markets. But though profits were to be had, there were also risks of involvement in foreign incidents. The Monroe Doctrine blatantly targeted and attempted to limit European colonization efforts, a tactic that was not likely to be embraced or adhered to. According to the doctrine, European actions that the United States deemed unfriendly guided the country’s reaction to European powers in the late 1800s. The country was nearly drawn into war with Germany over the Samoan Islands, with Germany apparently misunderstanding what the United States claimed as its sphere of influence as well as what the reaction to an intrusion would cause. In 1893, U.S. sugar companies staged a rebellion in Hawaii that prompted the United States to consider and then push for annexation of the islands. Additionally, in 1895, the country risked war with Great Britain over the right to be the arbitrator of any border dispute between Venezuela and British Guiana. Breaches into the U.S. hemisphere occurred again and again as the United States continued not only to expand but also to control the countries in what it considered to be its own backyard. The Monroe Doctrine’s attempt at preventing European colo-

nization became a source of contention for decades.

Montezuma (1467–1520)

At the time of the Spanish Conquest, the Aztec ruler Montezuma II was at the pinnacle of his power and the Aztec Empire was at its greatest extent. Montezuma rose to power in 1502 on the death of Ahuitzotl, and he consolidated his power through war and conquest and by advancing the cause of the noble classes while diminishing the power of the commoners and meritocratic leaders. His ruthless war making had created any number of enemies, a situation that the Spanish conqueror Hernán Cortés exploited. When the Spanish arrived, the Aztec capital, Tenochtitlán, was (as far as can be determined) the largest and most beautiful city in the world, containing perhaps 1 million people in the city itself and another 1.5 million in the surrounding Valley of Mexico.

Much has been made of Cortés’s seemingly impossible conquest, since his forces were very badly outnumbered, and many have attributed the fall of the Aztec Empire to the supposed indecision and blundering of Montezuma. When Cortés reached Tenochtitlán on November 8, 1519, he was welcomed by Montezuma and was apparently given the throne to the empire. Two explanations of Montezuma’s actions have been offered. First, it has been claimed that Montezuma was following a religious precedent, believing that Cortés was the emperor/god Quetzalcoatl returning to reassume the throne. An alternative explanation suggests that Montezuma was being extremely clever by offering Cortés the throne: the Spaniard had only a small number of conquistadores with him in the city, and by accepting the throne, he was essentially held as a prisoner in Montezuma’s palace. Whatever the Aztec ruler’s intent, Cortés accepted the offer and immediately took Montezuma hostage.

After accepting the Aztec throne, Cortés was called out of the city and had to return to the coast to intercept a force sent to arrest him as a traitor; his competitors among the conquistadores had helped convince the court that he was disobeying its orders. As he had done before, Cortés simply bought off these soldiers, who then joined with him in his war of conquest, and he returned to the capital to discover that the Aztecs had killed or expelled the Spaniards left to hold the city. Cortés laid siege to Tenochtitlán on May 21, 1520, but was forced to abandon his siege in July. Montezuma was killed during the siege, with the Spaniards claiming that he was killed by his own people for his abdication and the Aztecs claiming that he was killed by Spanish soldiers. Montezuma was succeeded by Chauhtemoc, who was taken prisoner when Cortés took the city on August 13, 1521.

Morel, E. D. (1873–1924)

Born in Paris on July 15, 1873, George Edmond Pierre Achille Morel-de-Ville, better known as E. D. Morel, rose from the lower middle class to become a major journalist and humanitarian crusader of early-twentieth-century colonialism. His widowed mother could afford to give him only a modest education, but his command of French and English secured him employment as a clerk for Elder Dempster, the Liverpool shipping firm, in 1891. Morel supplemented his meager wages by writing for British newspapers and soon acquired a reputation as an outspoken authority on the West African trade. His defense of British commerce as a vehicle for “civilization” forged close bonds with travel writer Mary Kingsley.

In 1900, Morel published a series of articles on “the Congo scandal” detailing unfair trade practices based on forced labor in the Congo Free State of the Belgian king Leopold II. With funds from rival Liverpool shipping magnates Sir Alfred Jones

of Elder Dempster and John Holt, Morel founded a newspaper in 1903, the *West African Mail*, to promote British commerce. A year later, he helped found the Congo Reform Association to campaign against atrocities in the Congo. Under public pressure, the British Foreign Office sent Roger Casement, British consul in the Congo, on a fact-finding expedition. The 1904 Casement Report documented the systematic violence against Africans in the commerce for wild rubber, accusations heatedly denied by the Belgian king. Missionary photographs of mutilated women and children, published in the *West African Mail* and Morel’s book *Red Rubber*, rallied international condemnation, but governments were reluctant to put pressure on Leopold. A protracted and savage campaign ensued, but eventually, Leopold II was forced to relinquish administration of the Congo to the Belgian government in 1908.

The Congo campaign had exposed the duplicity of the British government. Morel’s *Great Britain and the Congo* (1909) marked a new phase in his life—the campaign against British secret diplomacy, epitomized by his exposé in *Morocco in Diplomacy* (1912). He denounced the secret alliances that led to World War I. In 1914, he helped found the Union of Democratic Control, which advocated parliamentary regulation of foreign policy and opposed British involvement in the war. He was wrongly accused of being a German agent and imprisoned for his antiwar activities in 1917. After the war, he denounced “the war guilt lie” of the Paris Peace Conference, and in *The Black Man’s Burden* (1920), he attacked the mandate system that was applied to former German colonies. Until his death in 1924, he played an active role in formulating British Labour Party foreign policies, but he was passed over for the coveted post of foreign secretary in the first Labour government.

Morelos y Pavón, José María

As the wars for Mexico's independence began on December 8, 1810, the country's struggle for freedom from Spain engendered several capable leaders. One of these was José María Morelos y Pavón, born in 1765. Even though Miguel Hidalgo y Costilla was executed by firing squad and decapitated, with his head put on display in Guanajuato, Morelos was not dissuaded from assuming leadership of the independence movement. Morelos, like Hidalgo, was a parish priest. His parents and other ancestors were of mixed racial origins, an indigenous-European combination, which in Latin American countries was commonly referred to as the mestizo class. After more than a year of intense fighting under the leadership of Hidalgo and Domingo Allende, camaraderie among the men fighting for independence had dramatically diminished. This was, in part, due to the radical nature that the revolution appeared to be assuming, which alarmed many wealthy *criollos*, individuals of European descent who were born in Mexico. The unbridled mob attacks on aristocratic property was unnerving, and they made previous supporters of independence skeptical. Even though the *criollos* favored elimination of their Spanish rivals, they were not willing to become involved in any social revolution. Morelos, cognizant that *criollo* support was not to be counted on, divided his attention between the military and political aspects of the movement.

Militarily by 1813, he had realized his plan for surrounding Mexico City and isolating it from both coasts. Using his political prowess, he called for meetings of congress in Chilpancingo, with the main focus on deciding what would happen after

the Spaniards were defeated. In November 1813, independence was formally declared and a new constitution was drafted, incorporating the following main principles: the recognition that sovereignty resided in the people and that universal male suffrage was to be established; the abolition of slavery and all caste systems; the removal of all government monopolies, to be replaced by a 5 percent income tax; and the cessation of all judicial torture. Even though this appeared as a liberal constitution, the delegates insisted that Roman Catholicism be the official religion of the new nation.

For six months, Mexico City provided the protection that Morelos wanted, until the Spaniards broke the circle around the city and not only invaded it but also captured Valladolid, Oaxaca, Cuernavaca, Cuautla, Taxco, and even Chilpancingo (where the congress had previously convened). The delegates scattered to seek more secure environs. The constitution that they had put so much thought into became simply paper promises that the viceroy's army denied in battle. This outcome forced Morelos to become a fugitive, rather than the leader of the insurgents.

In the fall of 1815, he was captured by the enemy forces and taken back to Mexico City. Like Hidalgo before him, he was tried and convicted of treason. He was stripped of his religious vestments and met his end in front of a firing squad. For the next five years, the independence movement consisted of poorly organized, sporadic, hit-or-miss guerrilla fighting.

Moreno, Mariano Garcia (1778–1810)

In its early stages, the movement for Argentina's independence was led by radical intellectuals such as Mariano Moreno, with backing from Creole militia leaders—individuals of African descent who were

born in the Americas. Moreno was an Argentine revolutionary and publicized his views throughout Buenos Aires. He constantly condemned the Spanish colonial system, and his promotion of liberal economic principles gained him notoriety. As a leader in the revolution of 1810, he was part of the movement to depose the Spanish viceroy.

His intellectual radical spirit did not wane when he founded the *Gazeta de Buenos Aires* and, as editor, championed his democratic, reform ideas in his newspaper. He went further in founding a national library to promote Argentina's nationalism and sovereignty. As with most liberals, he was in constant conflict with conservatives, who admitted provincial deputies to the junta. Moreno did not see any relief or sign of independence, so despite all of his efforts, he resigned as legal counselor of Buenos Aires in May 1810. His resignation halted any democratic movement in the Río de la Plata and began a long struggle between Buenos Aires and Argentina's country provinces. He was appointed to a diplomatic mission abroad, one that he was most adept at, but while sailing for Europe in January 1811, he died at sea.

Representatives of the Province of Buenos Aires, who considered themselves the spokespeople and leaders of Argentina, were left in charge of determining the destiny of their province. Independence was always a goal, but it was not declared formally until 1816. It was to be left to those who followed Moreno to achieve independence for Argentina. Most notably, this included Bernardino Rivadavia, whose ultimate goal was total independence—a goal that would have many more struggles ahead.

by the Portuguese (in Ceuta, Tangier, and Mazagan) and the Spanish (in Melilla). At the same time, the threat of Turkish expansion also came to the area. When the Alauit sheikhs of Tafilelt reached a position of unified power, they settled the basis of the present Kingdom of Morocco; however, from the end of the eighteenth century, the government of the country was controlled by European interests, mainly through commercial treaties with France and the United Kingdom. In the mid-nineteenth century, continuous armed conflicts with France and Spain led to a deep economic crisis, made worse by the conditions imposed in the 1906 Algeciras Conference allowing France and Spain to split up the territory and effectively take control of it.

In the Fès Treaty of 1912, the Spanish protectorate was established in the north (the Rif region) and in the south (Tarfaya), and the French protectorate occupied the extensive area in between. Although the Sintra's Treaty of 1509 recognized the right of Castile to colonize the Saharan coast, it was not until 1884 that Spain, alerted by the intention of some British agencies, explored and occupied the interior. France and Spain drew the borders of Western Sahara farther to the south, marking out a territory that never had any relation with Morocco; it became a Spanish colony in 1900.

After World War II, democratic and nationalist Moroccan parties (especially Istiqlal) made claims for independence, which was achieved in 1956. Independent Morocco was constituted by the territories coming from the Spanish and French protectorates as well as the international city of Tangier, which had been a free port since 1906 and under British, French, Spanish, and Italian joint administration since 1923. In 1958, Morocco obtained the Spanish colony of Ifni and began making claims to Western Sahara, Ceuta, Melilla, Mauritania, and parts of Algeria, although making these claims was primarily a strategy to divert attention from internal social, political, and economic problems. By the Madrid Agreement of 1975, Morocco directly obtained from the Spanish the administration of central and northern Western Sahara, and Mauritania was granted the southern part; these provision came in spite of UN declarations and decisions by the International Court of Justice in The Hague urging a plebiscite for all of Western Sahara.

Morocco (and Western Sahara)

Foreign occupation of the western Magrib region in North Africa began in the fifteenth century, led

Since 1973, the Popular Liberation Front of Segúia-el-Hamra and Río de Oro (POLISARIO) has fought for Western Sahara's independence, first against Spain and then against Mauritania and also Morocco and its ally Algeria. The February 1976 proclamation of the Arab Sahawin Democratic Republic (ASDR), with POLISARIO as the core of its armed forces, was recognized by the Organization of African Unity and more than 100 countries. The ASDR brought several regions of the Saharan territory under its control, and in 1979, Mauritania renounced its claims to territories in Western Sahara. These areas were immediately claimed by Morocco. Since the end of the 1980s, a UN Security Council resolution calling for a referendum on the future of Western Sahara has been in force, but this process has been delayed many times due to obstacles introduced by Morocco. At the beginning of the twenty-first century, the status of the Western Sahara remains unresolved.

Mossadegh, Mohammed (1880–1967)

The elected premier of Iran from 1951 to 1953, Mohammed Mossadegh presided over an administration marked by turmoil surrounding the nationalization of the British-controlled Anglo-Iranian Oil Company. Coming at the height of the Cold War, the move prompted a successful U.S.-sponsored coup that toppled Mossadegh's government and left the nationalist leader under house arrest for the remainder of his life.

The scion of an elite Iranian family, Mossadegh earned a law degree from the University of Lausanne, Switzerland, and returned to Iran in 1914, where he took a series of government posts, including minister of foreign affairs, and was elected to the parliament, or Majles. But when the military

dictator Reza Khan declared himself the hereditary monarch, or shah of Iran, in 1925, Mossadegh returned to private life. With the pro-Nazi shah forced out of power by the British and Russians during World War II, Mossadegh returned to government service as an elected Majle, or member of parliament, in 1944.

As a leading parliamentarian and nationalist, Mossadegh resented British control of the Iranian oil industry. Although Iran was never formally colonized by the British, its weakness in the early years of the twentieth century—when the Anglo-Persian Oil Company, predecessor of the Anglo-Iranian Oil Company, was set up—allowed the British to gain virtually total control over Iranian oil reserves.

After Mossadegh's return to the Majles, he worked to oppose a similar concession to the Soviet Union shortly after World War II. Then, during the late 1940s, Mossadegh gathered political support through his calls for a nationalized Iranian oil industry. In March 1951, the Majles passed his nationalization bill. Although the shah, Mohammed Reza Pahlavi, son of the original shah, opposed the nationalization, he was forced to appoint Mossadegh premier because the latter's political strength appeared insurmountable.

But as popular as the nationalization move was at home, it proved extremely unpopular with Western heads of state, as the British first pulled out of the Iranian oil market and then, with the Americans, orchestrated a virtual international boycott of Iranian petroleum.

The economic turmoil caused by the boycott produced political unrest at home, particularly among the nation's business and military leaders. In August 1953, the shah attempted to dismiss Mossadegh, only to be met by huge street demonstrations that forced his own flight out of the country. Just days later, however, supporters of the shah, backed by the U.S. Central Intelligence Agency, put the shah back on his throne. The shah quickly arrested, tried, and convicted Mossadegh for treason. The former premier was sentenced to three years in prison and then kept under house arrest until he died in 1967.

Mossadegh's nationalization was one of the first efforts by a country of the developing world to overturn economic arrangements set up during the heyday of European imperialism and considered

by Third World nationalists to be overly favorable to Western interests.

Mountbatten, Earl (1900–1979)

Louis Francis Albert Victor Nicholas Mountbatten, Earl Mountbatten of Burma, was the last viceroy of India and served as the first governor-general of India from August 1947 until June 1948. His mother was the granddaughter of Queen Victoria, and so he was related to most of the royal families of Europe. He was educated in private schools and at the British navy colleges of Osborne, Dartmouth, and Devonport. In 1919, he was sent to Christ's College, Cambridge University, and during his year there, he imbibed leftist ideas. In 1922, he married the heiress Edwina Ashley; they had two daughters. He was not known for intellectual interests but spent much of his time working on his family tree. During World War II, he became a favorite of Winston Churchill and gained rapid promotion. Mountbatten loved speed and dash. When he became captain of his own naval ship, the *Kelly*, his recklessness led to its sinking in 1942. Although some in the navy wanted him court-martialed, Churchill appointed him to Combined Operations, where he planned the disastrous Dieppe raid of August 1942. In spite of this disaster, Churchill promoted him to the rank of admiral and made him the supreme commander of Allied forces in Southeast Asia.

As viceroy of India, he advanced the idea of Indian independence from August 1947 to June 1948, but his lack of a plan for adequate security led to the death of millions of Indians in communal clashes. He also cheated Pakistan out of territory (especially in Kashmir) and armaments. In 1948, he was promoted to rear admiral; in 1953, he became second sea lord and commander of the North Atlantic Treaty Organization fleets in the Mediterranean. One year later, he was promoted to first sea lord. He then became admiral of the fleet in 1956 and chief of the defense staff in 1959. In

1979, he was assassinated by an Irish Republican Army bomb that also killed several members of his family.

Mozambique (Portuguese East Africa)

A Portuguese colony on the southeastern coast of Africa, Mozambique was well known to Islamic sailors and merchants by at least the tenth century; these individuals maintained a few settlements, mostly along the coast, to support commercial activities with African populations in the interior. Kilwa was the principal center of commerce. After the arrival of Vasco da Gama in the early sixteenth century on his expedition to India, Portuguese agents destroyed Islamic settlements and built Portuguese outposts on the coast.

The Portuguese gradually eliminated African resistance to their authority, seeking to maintain control of the territory by making land grants to their nationals who would settle in East Africa. But increasingly, the colony suffered from what might best be described as a policy of benign neglect. Many settlers intermarried with local Africans, and the most important of these offspring became more like African political leaders than Portuguese colonialists. Nonetheless, by the middle of the nineteenth century, the metropolitan government managed to protect its interest in its East African possession. With little capital to support development, however, the Portuguese turned to international financiers to create companies to govern much of the countryside in the name of the Lisbon government and to develop some infrastructure, especially rail links to the interior.

Despite the resulting abuses, especially of local labor (reports of which occasionally surfaced in the international press), Mozambique managed to remain allied with other European colonial nations—especially Britain—well into the twentieth century. In 1951, it officially became an overseas province of Portugal, and all of its assimilated citizens—those who spoke Portuguese and who accepted the local variant of European culture—

were able to participate in government. But the development of the Antonio Salazar dictatorship in the home country continued to limit the rights of even the most favored Mozambiquans.

In reaction, a Marxist-Leninist organization, the Mozambique Liberation Front (FRELIMO), was founded in 1964 with the purpose of undertaking a guerrilla campaign for independence. With its fighters trained largely in Algeria and Egypt, the FRELIMO army, under the leadership of Eduardo Mondlane and Samora Machel, continued to pressure Portuguese forces. Even with clandestine assistance from the North Atlantic Treaty Organization (NATO), Portuguese authority gradually collapsed, and a people's republic was proclaimed in 1975, with Machel as its leader. The new nation continued to suffer due to its support for nationalist groups in Southern Rhodesia and South Africa as well as a very perilous economic situation.

Mughal Empire

The Mughal Empire was created by the Muslims in north India and existed from 1526 until its formal abolition by the British in 1858, although it declined rapidly after 1739. The empire was established by Babur (r. 1526–1530), who was descended from the Mongol leaders of Central Asia. Babur supplanted the Muslim Lodi dynasty of Delhi and defeated a Hindu Rajput confederacy to establish the Mughal dynasty. He was followed by eighteen Mughal sovereigns, of whom the first six emperors, known as the Great Mughals, created the power and greatness of the empire. After Babur came Humayun (1530–1556), Akbar (1556–1605), Jahangir (1605–1627), Shah Jahan (1627–1658), and Aurangzeb (1658–1707).

Mughal civilization was a composite of Hindu, Persian, and Muslim elements. All of the arts flourished during the Mughal period—from crafts to cuisine, from music to dance, and, above all, literature and architecture, with the Red Fort in Delhi and the Taj Mahal in Agra (considered one of the wonders of the world). A new language, Urdu, also arose out of the military camps and became a refined form of expression. All of the great Mughals expanded or defended their extensive territory. Akbar brought the whole of north India under his control as well as Khandesh and Berar in the south, and he created a highly centralized system of administration divided into provinces and districts. In religious terms, Akbar, Jahangir, and Shah Jahan developed a syncretist religion that stressed tolerance. Akbar was particularly tolerant of non-Muslims. His policy was reversed by the orthodox Aurangzeb, who, in 1679, reinstated the *jizya* (poll tax) against non-Muslims and demolished Hindu temples, replacing them with Muslim mosques. His intolerant policy, together with his long war against the Marathas in the south of India, crippled the Mughal state both militarily and financially. The empire declined rapidly after his death.

Mukden, Battle of

Mukden, the last major battle of the Russo-Japanese War, was fought between February 23 and March 20, 1905, in Russian-occupied Manchuria. The Japanese (about 300,000 troops) under Marshal I. Oyama defeated an equal number of men in the Russian armies under Gen. Aleksei N. Kuropatkin. The losses were almost equal as well: about 70,000 killed, wounded, and missing in action for each side. In terms of its scale and ferocity, the Battle of Mukden was the greatest military encounter in the history of modern imperial wars.

The Russian military defeat at Mukden marked the virtual end of czarist expansion in the Far East and destroyed the Russian de facto protectorate in the southern part of Manchuria as this territory came under Japanese military control. The results

of the battle stimulated a widespread perception that Russia had ceased to exist as a great power. This fact influenced the international colonial rivalry as well. Having concluded that Russia could give no support to France, Germany attempted to undermine the French influence and assert its own interests in Morocco as well; it also tried to weaken the Anglo-French Entente Cordiale. Three weeks after the Battle of Mukden, the visit of the German emperor William II to Tangier initiated the first Moroccan Crisis over European interests in the northern African country.

Music

In studying the music of the colonial era, it is possible to distinguish between traditional/primitive musical forms and “modern,” classical, and Western contexts. Western musical ideals and concepts, based on nineteenth-century classical traditions, were spread throughout the non-Western world via colonial conquest. Because colonialism influenced and transformed indigenous cultures, it is doubtful whether traditional/primitive music can still be found in a pure, precolonial form. Yet some individuals believe traditional music had an impact on the way music after colonialism developed in the West.

The most significant contact between Western and non-Western music cultures occurred through colonization. Music was utilized as a vehicle to convert and control colonized peoples. The ideals of nineteenth-century classical music closely informed contact with non-Western traditional music. The classical ideals included the concepts of harmony, composition, group performance, technical mastery, and music for music’s sake. In the most immediate sense, however, contact with Western music came in the form of military bands (a phenomenon tracing its origins to the time of the Crusades), with military forces accompanied by their own musicians. Native peoples were often

trained to play in such groups. In addition, missionaries introduced hymns to the colonized, and though some argued that music should be adapted to suit indigenous tonalities (in Africa, for example), Western forms prevailed. Instruments such as the piano were also introduced through these contexts. In addition, colonial policies had an effect on traditional music and the arts in general. For instance, due to Dutch restrictions on funding to the traditional leadership in Bali, court gamelan musicians returned to the villages and so contributed to the democratization of previously elite and ritualistic musical forms.

In 1835, François-Joseph Fétis, a Belgian musicologist, became the first European to produce a study of non-European music, in his *Resumé Philosophique de l’Histoire de la Musique* (Philosophical Summary of the History of Music). Comparative musicology emerged as a field of study in the 1880s (renamed ethnomusicology in the 1950s) and was closely tied to studies within colonial territories. These studies were based on the paradigm of the dynamic Western classical model versus traditional, static, non-Western music. This paradigm did not account for adaptation or adoption of Western music into the traditional models and in fact sought to “conserve” traditional music in the midst of foreign influences. It also reinforced evolutionary ideas and reconfirmed Western superiority; one example of this latter thinking is Richard Wallascheck’s *Primitive Music* (1893), which began with a discussion of African music. The academic pursuit also resulted in some famous studies among American Indians, including Theodore Baker’s work with the Seneca Indians (1882) and Carl Stumpf’s with the Bella Coola (1886). This field of study was further aided by the development of the phonograph in 1877, from the successive inventions of Thomas Edison and Emile Berliner. The new device was used for recording traditional music, and it allowed detailed analysis and documentation of previously undocumented musical forms.

The colonized world was depicted through Western music as the “exotic Orient” and a spectacle for public consumption. W. S. Gilbert and Arthur Sullivan’s Japanese-inspired *Mikado* (1855) and other operettas such as *The Geisha* (1896) and *Chinese Honeymoon* (1901) were pro-

duced in response to a demand for subjects on the Orient. The Italian composer Giuseppe Verdi's famous "Egyptian" opera, *Aida* (first performed in 1871 and commissioned for the opening of the Cairo Opera House), typifies the influence of the colonial world on Western musical imagination. *Aida* presented the grandeur of an exotic and distant Egypt to European audiences and still enjoys considerable popularity today.

Music within the colonial territories also influenced Western forms. In colonial Africa, popular music forms such as "highlife" and "juju" developed and incorporated Western musical instruments; they also enjoyed commercial success. In the United States, spirituals adapted by Negro slaves from hymns and plantation songs were recognized as important musical forms through such publications as William Allen's *Slave Songs of the United States* (1868). Colonialism also played a role in the fusion between traditional and Western music (for instance, British-Pakistani music), and in more recent times, the influence of African music can be seen in the development of pop and rock music.

Mussolini, Benito (1883–1945)

Beginning as a revolutionary socialist journalist propounding antimilitarism and anti-imperialism, Benito Mussolini came out of World War I preaching nationalism and the need for a dictator to restore order in Italy. His magnetic personality and oratorical talent earned him fame. He gathered the nucleus of what was to become the Fascist Party, and its ranks swelled rapidly. In 1922, he organized a mass march on Rome that induced Victor Emmanuel II to appoint him prime minister, with dictatorial powers. Thereafter, unrest ceased, working conditions improved, and public works were started, to the delight of all classes of society. In Italy and abroad, Mussolini was admired. His undoing was an egomaniacal foreign policy inspired by dreams of re-creating the glory of ancient Rome.

He turned his attention to Africa. Italy already ruled most of Eritrea and Somalia; occupying Ethiopia, which lay between the two, would enable him to rule an empire and also avenge the 1896 defeat Italy had suffered at Adwa at the hands of Ethiopian emperor Menelik II. Using the excuse of border disputes between Somalia and Ethiopia, he sent an expeditionary corps to the area in 1935. Emperor Haile Selassie appealed to the League of Nations, which in response imposed sanctions on Italy. These notwithstanding, Mussolini was able to announce victory over Ethiopia to cheering crowds within one year.

Then, diplomatically isolated in Europe, he formed an alliance with Adolf Hitler's Germany. When Hitler's victorious armies occupied most of Western Europe by 1940, Mussolini, envious and eager to get his share of the spoils, declared war on the Allies. However, Italian troops suffered defeats, he lost much popular support, and in 1943 he was deposed by his own Fascist Grand Council and arrested. German soldiers rescued him, and Hitler

400 Myanmar

appointed him head of a puppet republic in northern Italy. When the Allies liberated Italy in 1945, Mussolini fled but was caught by Italian partisans and shot.

Naipaul, V. S. (1932–)

Vidiadhar Surajprasad Naipaul was born in Trinidad and left for England in 1950. Writing has been his singular career, and the sheer volume of his work and its consistent excellence establishes him as one of the greatest novelists of all time. Naipaul has unquestionable mastery over the language, and his use of it is always simple and lucid. Not since Joseph Conrad has the world witnessed a writer whose vision of the colonial and postcolonial worlds is so penetrating and uncompromisingly honest. His analyses of societies, past and present, in many parts of the world—the West Indies, Asia, Southeast Asia, the United States, and Africa, for example—make the work of conventional academics seem feeble and worn. Naipaul’s vision is usually dark; the analysis often reveals hopelessness and haplessness. For him, the world is often an alien place that mocks humanity’s attempt to conquer and construct. Imperialism, whether of the Arab/Islamic or European/Christian order, is destructive for its impure motives. At the same time, attempts at postindependent construction are rendered futile because of learned impurity of motive, sheer intellectual incompetence, and moral corruption.

Naipaul’s scathing analysis of political leaders and political and religious systems has resulted in much criticism from around the world; a good deal of this is personal, and most of it is juvenile. The author’s apparent disenchantment with sys-

tems, religions, and civilizations often seems to spring from a personal hurt and from a desire to belong. His harshness, after all, may have its roots in deep disappointment. Beneath Naipaul’s cutting humor and his scathing commentary lies the writer’s compassion, often overlooked.

V. S. Naipaul has been the recipient of numerous literary awards. He was knighted in 1989 and was awarded the Nobel Prize in literature in 2001.

Nairobi

Nairobi (from the Maasai word meaning “the place of sweet waters”) is the capital of Kenya. Its history dates back to 1890, when the Imperial British East

Africa Company maintained British interests in Kenya. Six years later, the British Foreign Office assumed direct control of Kenya due to a decision to build a railroad from Mombasa to Lake Victoria. Nairobi was formally founded in 1899 on the site of a water hole of the pastoral Maasai ethnic group. The location was later made a railhead camp on the Mombasa-to-Uganda railroad. From 1899, Nairobi served as the provincial capital for the British, and later, in 1905, it replaced Mombasa as the capital of the British East Africa Protectorate (Kenya Colony, 1920–1963).

Although Nairobi is only 90 miles (145 kilometers) south of the equator, it has a moderate climate and was favored by the British settlers, largely because of its high altitude (c. 5,500 feet, or 1,680 meters, above sea level), the economic value of the highlands, and the consequent natural barrier to most insects. Thus, Nairobi and its environs became the center of the prosperous European-dominated highlands farming area. Some lands were guaranteed to the indigenous people of Kenya, but all so-called unoccupied land became Crown property, preventing indigenous groups from expanding in the area. Of the 9,000 white colonists in Kenya at the close of World War I, many were in the “white highlands” (much of the highlands had been reserved for colonial white settlement), thus creating an inadequate land reserve for the Africans and forcing many of them to become squatters on the land of their birth. The British government favored the white minority, which consisted of mostly European colonists, and by the 1950s, the Mau Mau insurgency flared among Kikuyu people near Nairobi; there were related disturbances in the city as well. Although the Mau Mau Rebellion was eventually quelled with much brutality, it paved the way for an independent Kenya in 1963, with Nairobi as its capital.

Nanking, Treaty of

The Treaty of Nanking (Nanjing) in 1842 brought to a conclusion the first of the Opium Wars between Britain and China over the former’s effort to force China to accept imports of the dangerous drug. The price exacted from a defeated China was a payment of \$21 million as indemnity and the cession of Hong Kong to Britain. The Ch’ing (Qing) dynasty also agreed to the opening of five ports for trade and as residences for British subjects and their families, the establishment of consulates in each of these ports, equality in official correspondence, and a fixed tariff. In a supplementary treaty in 1843, the British further added a most-favored-nation clause, stipulating that Britain would be extended the same privileges or immunities that China might grant to any other country in the future.

As the first of many unequal agreements between China and the foreign powers, the Treaty of Nanking set the pattern for the Treaty Port System, the institutional arrangement for Western imperialist penetration of China. The Western nations (and Japan in 1895) followed suit, with more treaties forced on China via gunboat diplomacy. China suffered a loss of sovereignty through numerous commercial and political concessions. By 1900, scores of treaty ports were opened, where foreigners could reside and work under the protection of extraterritorial privilege outside the jurisdiction of Chinese law. The foreign settlements of some treaty ports were governed by foreign-controlled administrations even though the vast majority of residents were Chinese. The limitation of tariffs to 5 percent ad valorem deprived the Chinese government of the possibility of using protective tariffs to foster industrial development or to keep out undesirable imports, such as opium. In addition, most-favored-nation status entitled nationals of each foreign power to automatically enjoy concessions or privileges yielded by China to any of these powers. Chinese sovereignty was not fully regained until the establishment of the People’s Republic of China in 1949.

Nanking Massacre (Rape of Nanking)

In the Nanking (Nanjing) Massacre, hundreds of thousands of Chinese civilians and surrendered soldiers were systematically murdered, raped, and tortured by the Japanese army from December 1937 through February 1938. A turning point in the Second Sino-Japanese War, the massacre undermined Japan's claim to legitimacy as the liberator of the Asian peoples from Western imperialism, and it stiffened Chinese resolve to resist Japan's colonial aggression. The atrocities at Nanking were not random acts of violence by undisciplined soldiers but were organized and sanctioned by local commanders. Several theories have been advanced to explain how a civilized people could commit such horrors. Some attribute the massacre to a Japanese thirst for vengeance after encountering unexpectedly stiff Chinese resistance; others say Japan's brutal system of military discipline caused abused Japanese soldiers to

transfer their aggression to the Chinese; and still others point to the indoctrination of Japanese soldiers, which emphasized unconditional loyalty to the emperor and promoted contempt for the Chinese and other Asians.

Some Japanese were tried and convicted at the Nanking and Tokyo War Crimes Trials after Japan's defeat in 1945. But many perpetrators of atrocities escaped justice. Nor has Japan as a nation fully assumed responsibility for its war crimes. In part because of the atomic bomb destruction of Hiroshima and Nagasaki and the great loss of life and property suffered at home, many Japanese see their country primarily as a victim of war rather than a victimizer.

Since the 1970s, in a climate of rising nationalism, right-wing Japanese conservatives have denied or minimized the scale of the Nanking Massacre, depicting it as a fabrication of the Chinese and the Allies. Progressive Japanese, by contrast,

The railroad station in Nanking lies in ruins following a Japanese air raid in November 1937. Japan's capture of the then-Chinese capital led to the so-called Rape of Nanking, in which hundreds of thousands of Chinese civilians were massacred. (Hulton Archive)

believe that their nation must come to terms with its past by assuming full responsibility for its wartime atrocities. Since the normalization of Sino-Japanese relations in 1972, growing Japanese investment in China, ongoing territorial disputes between China and Japan, and the denial of the Nanking Massacre by some Japanese have combined to induce anger among many Chinese at what they see as a revival of Japanese imperialism. Diaspora Chinese communities have, from the 1980s, rediscovered the Nanking Massacre as a means to connect with China and to forge their own cultural identity; in this way, the tragedy has functioned much as the Holocaust has for Jewish communities. The Nanking Massacre has thus become a politicized and hotly contested topic among diverse groups of Chinese and Japanese citizens.

Nantes, Edict of (April 13, 1598)

The Edict of Nantes was a law passed after much bargaining by Henry IV of France, granting civil and religious liberties to his Huguenot subjects at the end of the wars of religion that had divided Europe during the late sixteenth century. As Henry of Navarre, the king was the leader of the Huguenots until his conversion to Roman Catholicism in 1593. The Huguenots had been persecuted and suffered greatly, and thus, the struggle for the edict was an important part of the history of France.

The main clauses of the edict gave liberty of conscience to all Protestants throughout France and the right to public worship in all the places they had frequented before 1597. They were to have full civil rights to trade freely, hold property, enter universities, and assume official positions, and their pastors were to be paid by the state. They

could hold religious synods and political assemblies, and as a guarantee of their safety, they could occupy 100 strongly fortified areas for eight years at the king's expense. The edict has been seen as a milestone in the history of toleration, but to contemporaries, it was a compromise justifying the coexistence of two religions in one body politic.

In 1629, Cardinal Richelieu annulled its political provisions, and on October 13, 1685, King Louis XIV ordered the full revocation of the Edict of Nantes. As a result, Huguenots left France in a mass exodus to England, Ireland, Holland, and Brandenburg and eventually to colonial destinations in the Americas and Africa as well.

Napoleon III (1808–1873)

Charles-Louis Napoleon Bonaparte, nephew and stepson-in-law of Napoleon I, was president of the Second Republic from 1850 to 1852 and emperor of France from 1852 to 1870. He ruled autocratically, yet he supported social, political, and economic modernization and reform and tried to bring stability to France.

In foreign policy, he pursued a series of unrelated initiatives to perpetuate the Napoleonic legend and have France regain its status in Europe. He participated in the Crimean War (1854–1856) and in an expedition to China, and he supported construction of the Suez Canal. He sent troops to help the king of Sardinia-Piedmont expel Austrians from Lombardy. After a massacre of Maronite Christians, he sent troops to Lebanon to impose an autonomous region under a Christian governor.

Napoleon III enlarged the French colonial empire for both prestige and economic reasons. Only in Algeria did he pursue a relatively liberal policy, recognizing Arab rights while protecting French colonists. His course in sub-Saharan Africa, Asia, and America was clearly imperialist.

He sent Louis Faidherbe to Senegal with the mission of controlling the colony at the lowest possible cost and achieving maximal economic gain, and he directed him to seize the Wolof kingdoms.

He ordered the conquest of southern Vietnam, imposed a protectorate on Cambodia, and proclaimed the formation of a new colony, Cochinchina (1862–1863). To assert French influence in North America, he rashly persuaded Maximilian of Austria to become emperor of Mexico, with the support of French troops, in 1864. Three years later, he abandoned Maximilian to his fate because of general opposition from European nations and the United States. Maximilian was executed by Mexican nationalists in 1867.

Napoleon III's undoing was that he underestimated Otto von Bismarck and the power of Prussia. In 1870, overwhelmed by invading Prussian armies, France was defeated and Napoleon III overthrown.

Nasser, Gamel Abdel (1918–1970)

Gamel Abdel Nasser was a leader not only of Egypt but also of the worldwide nonaligned movement, and his strong anticolonial message and defiance of the West gave inspiration to millions beyond Egypt's frontiers. Born the son of a postal employee on January 15, 1918, he was wounded by the British in 1935 while protesting against their imperial presence in Egypt. Subsequently, he attended a military academy and later distinguished himself in the 1948–1949 Arab war with Israel. He became a leader of the Free Officers' Movement,

Egyptian President Gamel Abdel Nasser waves to citizens in Cairo in August 1956, shortly after his announcement that he had “taken over” the Suez Canal Company from the French and British. Nasser’s move prompted an unsuccessful French-British-Israeli invasion of Egypt in October. (Hulton Archive)

which overthrew the Egyptian monarchy on July 22, 1952, and proclaimed a republic the following year.

Nasser subsequently maneuvered to emerge as absolute leader of his country and embarked on a moderate course, even initially looking to the United States as a prospective ally. Yet he became increasingly populist and nationalist, soon challenging Western influence in the region. He opposed the U.S.-sponsored Baghdad Pact (1955), seeing the West's anti-Soviet containment strategy as a neoimperialist scheme, and his opposition to Israel stemmed, in part, from his perception of it as the handmaiden of Western influence in the region. He envisioned Egypt—at the crossroads of Arab, Islamic, and African civilizations—as the leader of a populist movement of neutralism in the world and boldly emphasized this at the 1955 Bandung Conference of nonaligned leaders, where he met Jawaharlal Nehru, Sukarno, and Marshal Tito. Nasser also negotiated Sudanese independence from Egypt and the removal of British troops from Egyptian soil in 1956.

Yet the West increasingly saw Nasser as a destabilizing presence, particularly after his July 1956 nationalization of the Suez Canal. In the fall of that year, Britain, France, and Israel launched coordinated attacks on Egypt, which failed to gain U.S. support and thus led to Nasser's ultimate triumph. His prestige was never higher than after the Suez incident, and subsequently, Syria and, later, Yemen, joined with Egypt to form the short-lived United Arab Republic (1958–1961) under Nasser's guidance. At the time of his sudden death from a heart attack on September 28, 1970, the Middle East, with the decline of European power and the emergence of numerous independent Arab states, scarcely resembled the region of his youth. He is considered the most revered Arab nationalist of the twentieth century.

Natal

Founded in 1845 as a colony of the British Empire, Natal made its most important contribution to the

creation and maintenance of colonial rule in southeastern Africa by implementing a policy referred to as indirect rule. Although this policy was confined to Natal at first, it eventually became the central mode of domination throughout the region as well as the rest of the continent, and more specifically, it helped to set the foundations for what became the South African apartheid state in the mid-twentieth century.

The issues facing Natal's leaders in 1845 were not unlike those that most colonial officials faced in Africa. Lacking sufficient funds from the British government and confronting an indigenous African population that greatly outnumbered the white settlers, the obvious question was how to establish effective political control. In addition, both the white British settlers occupying the coastal region of modern-day Durban and the white Afrikaner settlers in the interior pressured the colonial state to protect them from the Zulu kingdom to the north as well as from over ninety individual chieftaincies occupying territory in Natal itself. Under these conditions, Theophilus Shepstone, who served as a colonial administrator in Natal from 1846 to 1872, began to implement a series of decisions that would eventually form the basis of indirect rule. Rather than depending on state money or institutions, Shepstone believed land should be demarcated for different "tribes" and that the tribal leaders should continue to govern as they had in the past. Of course, certain customary laws and practices were disallowed if they were not "civilized," and individual chiefs who chose not to cooperate with the state were deposed and replaced. The colonial state also gave the chiefs nominal salaries for the performance of certain duties, such as maintaining order, collecting taxes, and providing cheap labor.

Natal refined and rationalized indirect rule during the nineteenth century, culminating in 1896 with limited autonomy under "responsible government." In 1910, Natal was incorporated into the Union of South Africa, where it was still able to maintain its system of indirect rule. Finally, in 1927, with the passage of the Native Administration Act, the so-called Shepstonianism system of indirect rule became policy for the entire union, and the foundation for subsequent apartheid legislation was set.

Navajo

Modern Navajo is a tribal nation of people in the southwestern United States residing on a reservation of 26,110 square miles and occupying portions of three states (New Mexico, Arizona, and Utah). The name *Navajo* likely evolved from the name *Apachés de Nabajú*, which was assigned to these people by the Spanish during exploration and colonization of the region early in the sixteenth century. The Navajo refer to themselves as *Dine’*.

The Navajo evolved culturally and politically from the Athabascan-speaking peoples believed to

have migrated, by way of a land bridge at the Bering Strait, from Asia to North America between 40,000 and 8,000 years ago, arriving in the southwestern United States in the fifteenth century. This theory of their origins is disputed by some Navajo because it contradicts oral traditions that attribute their existence in this world, as with many indigenous peoples, to a point of origin at or near their traditional homeland. The Navajo traditional homeland is a small region in north-central New Mexico, known to them as Dinétah.

After the United States took the southwestern region by military force in 1848, the Navajo people suffered great hardships and relocation in the face of massive westward expansion by Americans. Following an intense campaign led by Col. Christopher “Kit” Carson, from 1862 to 1864, most Navajo people were forcibly rounded up in a “scorched-earth” effort and marched east from their homelands to an encampment at Fort Sumner (Bosque Redondo), New Mexico. The professed purpose of this relocation was to civilize and make sedentary farmers of these traditionally nomadic hunter-gatherers. During the Long Walk to Bosque

Two Navajo horsemen pause in this 1855 lithograph. Among the largest Indian tribes in North America, the Navajo survived Spanish, Mexican, and U.S. rule. (Library of Congress)

Redondo, several hundred Dine' died, were shot, or were simply left behind to perish, and during their four-year confinement, approximately 2,000 succumbed to exposure, famine, illness, dysentery, and despair. This tragic experiment was so costly that Congress cut off funding for the relocation and in 1868 established a Navajo reservation of approximately 3.5 million acres. Tribal leaders signed a treaty establishing the boundaries and committing the surviving 7,000 Navajo to remain there.

It is doubtful that many of the Navajo people understood the terms of the treaty of 1868. In the years that followed, Navajo sheep flocks increased to the tens of thousands as the tribal population grew. As grazing needs increased, the animals moved in all directions outside the boundaries of the reservation, causing competition for land with the rapidly advancing white settlers; the prospect of renewed violence loomed. Washington was determined to control Navajo expansion and direct it away from white settlements while accommodating Navajo growth needs, and numerous congressional and administrative actions between 1868 and 1934 increased the Navajo Reservation to its current size of 16.7 million acres. This rapid expansion occurred largely to the detriment of the Hopi Indians of the region, as it almost entirely consumed their traditional territories. By some definitions and assuredly from the perspective of the Hopi, the colonized Navajo became colonizers by virtue of their consumption of over 90 percent of Hopi lands.

The modern Navajo Nation, with a local population approaching 200,000 and a tribal enrollment in excess of 270,000, considers itself a sovereign nation by virtue of its government-to-government relationship with the federal government. It is governed by a tribal government led by a tribal council of chapter representatives, a Navajo Nation president, and a Navajo Nation court system. The impetus for this system came from energy developers wishing to establish a central government with the authority to approve land leases for the extraction of minerals. To many Navajo, this is an alien and culturally incompatible form of government. They believe it was forced on them by an overzealous Bureau of Indian Affairs and politicians in the 1920s in their efforts to civilize these very traditional people and to impose on them a form of government both

familiar to U.S. politicians and amenable to "rubber stamping" mineral leases.

Nazism

The ideology of the German National Socialist Party drew its inspiration from the speeches and writing of Adolf Hitler. Although this ideology had its greatest influence in Europe, the ideas did find their way into the colonial world. Drawn to the notions of romantic nationalism and a quest for "racial purity" at the expense of other social groups, a few colonial Europeans began to accept and espouse many of the core tenets of Nazi rhetoric.

The most significant group of these Nazi admirers was found in South Africa, particularly among the Afrikaner community, which traced its roots to the original European colonists who arrived in South Africa in 1652. The Afrikaners conceived of a nation based on the racial superiority of the "original" colonists and the subjugation and exploitation of other groups, particularly Africans. During the 1930s and 1940s, many of them became very sympathetic to the ideas of racial characteristics and superiority of blood and the *volk* (people) promoted by the Nazis; such ideas were easily applied both to white-black relations and to Afrikaans-speaking whites and their Anglophile counterparts.

Germany's defeat in World War II did not diminish the Afrikaners' adherence to Nazi philosophies. In fact, the political ascendancy of the Afrikaner-dominated National Party in 1948 led to the adoption of apartheid, a rigid system of racial separation. By constructing a strict caste system with each group in isolation and whites in every position of power, the white minority imposed a tyrannical dictatorship over its subjugated groups that bore a striking resemblance to the callous disregard for human life that charac-

terized the policies of Nazi Germany. The Nationalist government did not repeal the apartheid laws until the early 1990s, as the country began a transition to majority rule under heavy pressure from the United Nations.

Ndebele

A central-south African people swallowed up by the imperial ambitions of Cecil Rhodes and the British South Africa Company, the Ndebele originated from the fragments of clans broken up during the formation of the Zulu nation in Natal in the early nineteenth century. These fragments—initially commanded by an exiled *induna* (chieftain) of Shaka, the leader of the Zulu nation during its expansionist phase in the early 1800s—gradually drifted to the northwest under Boer and Zulu pressure to settle what was to become Southern Rhodesia. Like the Zulu, the Ndebele were a warrior society who raided their neighbors for cattle and captives.

The Ndebele remained relatively untouched by European expansion until the 1890s. Great changes had occurred to their south, however. Massive gold and diamond strikes provided funding for the dreams of Cecil Rhodes. He was convinced the lands across the Limpopo River held yet undiscovered mineral wealth and, as a fervent imperialist, believed the government was moving too slowly in expanding the empire. If British interests were not extended into the area quickly, he argued, some other ambitious imperial power was sure to do so. His ultimate goal was to see a swath of British red on the map extending from the Cape Colony to Cairo. Squarely in his path lay the Ndebele.

Rhodes acquired a charter for his British South Africa Company in 1889. The following year, he obtained extensive mining concessions across the Limpopo in return for cash, rifles, and a spurious promise of a river gunboat to the Ndebele king, Lobengula. At the same time, his company pushed a heavily armed pioneer column through Loben-

gula's domain and established a fort in adjoining Mashonaland. The intent was to build a mining and farming settlement and gradually assimilate the Ndebele as client-laborers for the company.

The Ndebele, however, did not give up their warrior society, and continued raids on the tribes in Mashonaland provoked war with the company in 1893. The Ndebele outnumbered the company forces by a factor of at least ten and had acquired over 1,000 Martini-Henry rifles. The company could field only 1,100 men but had the advantages of mounted mobility, a pair of light artillery pieces, and eight machine guns. Technology provided an edge that numbers could not overcome, and after a few battles, the Ndebele were forced to seek terms of surrender. A second rising took place in 1896, with similar results. Rhodes himself negotiated the settlement with the Ndebele chiefs to end the conflict and establish company rule in the region. With that, the Ndebele lost their independence entirely.

Ne Win (Maung Shu Maung) (1911–)

Born on May 24, 1911, to a Sino-Burmese family that called him Maung Shu Maung, Ne Win attended Rangoon University. Leaving without a degree, he joined the Dobama Asiayon (We Burmans Association) and was one of the young nationalists known as the Thirty Heroes or Thirty Comrades. These individuals fled Burma and helped found the Burmese Independence Army, which returned with the 1941–1942 Japanese invasion.

Burmese forces switched sides to the Allies between 1944 and 1945, by which time Maung Shu Maung had taken the nom de guerre Ne Win (Son of Glory). After the war, he became deputy to the commander in chief of the armed forces. Promoted to commander of the armed forces when his predecessor, a Karen, revolted, he held ministerial posts in 1949 and 1950.

In 1958, he was invited to assume control of the government, but he relinquished his post after arranging for the 1960 elections. The restored civilian government of U Nu did not last long. Economic deterioration and continuing ethnic insurgency saw Ne Win install a military government again in March 1962.

Ne Win then became prime minister (1958–1960, 1962–1974), chairman of the Revolutionary Council, and state president when Burma was declared the Socialist Republic of the Union of Burma in 1974. Though he retired in 1981, he continued to dominate affairs as chairman of the executive committee of the ruling Burma Socialist Programme Party (BSPP) from 1973 to 1988.

Under his rule, Burma followed a policy of non-alignment and a “Burmese path to socialism.” Far-reaching nationalization of businesses, state planning, and international isolation saw the country sink into stagnation. Combined with political repression, this sparked nationwide protests in 1988 and forced Ne Win’s official resignation in July 1988. Burma then came under the State Law and Order Restoration Council (SLORC) in September 1988 and the State Peace and Development Council (SPDC), ostensibly under Lt. Gen. Khin Nyunt, in November 1997. The military dominated these councils, and many assumed Ne Win still wielded influence behind the scenes.

Nehru, Jawaharlal (1889–1964)

Born in India on November 14, 1889, the son of Motilal Nehru—one of India’s richest lawyers and a leader of the Indian National Congress—Jawaharlal Nehru was educated at home and then at Harrow (1905–1907) and Cambridge University (1907–1910), where he studied natural sciences. In 1912, he was called to the bar in London. After his return to India, he dedicated his life to politics. He married in 1916, and his only child, Indira, was born the next year. He met Mohandas Gandhi in 1915, became one of his most important supporters, and succeeded him as leader of the Indian National Congress. He joined the Home Rule League

in 1916, started the *Independent* newspaper in 1919 with his father, and took part in Gandhi’s first noncooperation movement in 1920. One year later, he began serving the first of several imprisonments that would total some nine years. While in prison, he wrote *Glimpses of World History* (1934–1935) and *An Autobiography* (1936). In 1946, he published *The Discovery of India*.

From 1923 to 1925, he was general secretary of the All-India Congress Committee, and in 1927, he participated in the Congress of Oppressed Nationalities in Brussels, Belgium. In November of that year, he attended the tenth-anniversary celebration of the Russian Revolution in Moscow, and in December, he moved the resolution at the Indian National Congress demanding complete independence for India and became president of the congress.

After India was granted independence in 1947, Nehru became the new nation’s prime minister, and he led the country until his death on May 27, 1964. As prime minister, he began a large-scale industrialization through five-year plans. He gave women equal rights in regard to divorce and inheritance, and he pushed for land reform. India became the world’s largest democracy under Nehru’s leadership, and he also was one of the leaders of the nonaligned movement. He is remembered as a man of great ideals, erudition, sophistication, and charm.

Nelson, Lord Horatio (1758–1804)

A British naval hero of the Napoleonic Wars and a symbol of the naval superiority of the British Empire, Horatio Nelson entered the Royal Navy as a “captain’s servant” to his maternal uncle, Capt. Maurice Suckling, in 1770. He was appointed midshipman in 1773 and was promoted to second lieutenant four years later. His first command was of the brig *Badger* in the Caribbean during the American Revolution.

Nelson's early career was marred by conflicts with other officers but enhanced through connections with influential naval officials such as Lord Hood and Prince William. He married the widowed Frances Nisbet in 1787 and spent the period from 1789 to 1793 without command, convinced he had angered his superiors at the Admiralty. He returned to sea in command of the HMS *Agamemnon* and accompanied Hood's squadron into the Mediterranean in 1793. There, he was instrumental in the capture of Corsica, losing the sight in his right eye while commanding a shore party bombarding Calvi in 1794. He also played a pivotal role in the February 14, 1797, Battle of Cape St. Vincent by preventing the broken Spanish line from reforming and engaging the 130-gun *Santisima Trinidad* with his own 74-gun *Captain*. His actions allowed the British fleet to adjust its dispositions and win a decisive general victory.

Nelson was again severely wounded ashore in an abortive attack on Santa Cruz, Spain, on July 24, 1797, losing his right arm at the elbow. He returned to command in the Mediterranean and won a signal victory on August 1, 1798, with the destruction of the French fleet at anchor in Aboukir Bay, Egypt, thereby hamstringing Napoleon's army in Egypt. Nelson was made Baron Nelson of the Nile and Burnham-Thorpe (his birthplace) after this victory. His next service came in the Baltic Sea, where he commanded a strike on Danish naval forces at Copenhagen, opening the Baltic to British operations. Nelson was further elevated to viscount and given command of the Southeastern Defense Flotilla of the home islands.

Nelson's greatest and final victory came, fittingly, aboard the HMS *Victory* on October 21, 1804, off Cape Trafalgar, when his slightly outnumbered command defeated a combined Franco-Spanish fleet. While engaged at point-blank range with the 74-gun French ship of the line *Redoubtable*, Nelson was shot by a French marine and died three hours later. His body was preserved in rum, returned to Britain, and accorded a state funeral in St. Paul's Cathedral. One of the most visible landmarks in London, Trafalgar Square, is dedicated to his memory.

Nepal

The only official Hindu kingdom in the world, Nepal is a nation of 25 million people situated in the Himalayan Mountains and foothills, with India to the south, west, and east and the Tibetan province of China to the north. Nepal was one of the few Asian nations that remained independent during the heyday of European imperialism in the eighteenth, nineteenth, and early twentieth centuries.

The history of Nepal in the modern era of the Indian subcontinent—that is, since roughly the late eighteenth century—has been marked by three important historical facts. One was the struggle of various noble families for hegemony. Ultimately, the Rana family won out in the mid-nineteenth century, exiling leaders of rival clans to India and turning the *sah*, or king, into a puppet ruler. The second fact was warfare. Between the late eighteenth and mid-nineteenth centuries, the Nepalese fought and lost a series of wars with Tibet, China, the Sikhs, and the British that fixed the modern, constricted boundaries of the nation.

The final element of Nepalese colonial-era history was accommodation with the British. As London consolidated its power in the subcontinent, many Nepalese feared their kingdom would be absorbed into the Raj. In 1860, the ruling Rana family established a working relationship with the British. The latter largely controlled Nepalese foreign policy and were permitted to recruit the highly prized Nepalese Gurkha soldiers for the imperial army. At the same time, the British granted the Nepalese ruling family control over domestic affairs and protection from internal and external enemies.

With British withdrawal from India in 1947, London's protection of the Ranas—resented by many for their corruption and repression—disappeared, and the family was overthrown in the revolution of 1950. The new government order featured a king with newly enhanced powers and an administration dominated by the Nepali Congress Party, itself strongly influenced by the

nationalism of its namesake Indian Congress Party to the south.

Nerchinsk, Treaty of

The August 27, 1689, Treaty of Nerchinsk between Russia and China was the first agreement that the Chinese Middle Kingdom signed with a European nation. Concluded in the frontier outpost of Nerchinsk on the Shilka, a tributary of the Amur River, it settled for four decades the smoldering conflict over control of the Amur Valley that began when Russian Cossacks intruded into the borderland in search of furs and grain. The clash with Chinese troops was the consequence of the Russian colonization of Siberia and the subjugation of the Siberian peoples. Before the Russian advance to the Siberian-Chinese border, several Siberian tribes, such as the Tungus in the Amur Valley, paid tributes (furs, copper, silver) to the Chinese court.

Russian incursions into that territory were ventures of individuals, mostly Cossacks, unauthorized by the Muscovite government. Peter the Great, the czar of enlightenment, saw the future of Russia's prosperity in the Far East and therefore wished to live in peaceful coexistence with China. Peter's counterpart, Emperor Kangxi, wanted to open his country for trade with its northern neighbor. The Russo-Chinese accord had an extreme significance because through it, the Qing (Manchu) dynasty entered for the first time into diplomatic relations based on equality. Before that, Confucian emperors had a hierarchical perspective of the international order. According to that perspective, China stood at the core of the world, surrounded by other "enlightened" Confucian societies such as Korea, Japan, and Vietnam. The outer periphery—composed of Mongolia, Turkestan, Siberia, Russia, and the West European nations—was inhabited by barbarians (*yenmanren*).

The Russo-Chinese rapprochement was, in part, a product of the mediation of two Jesuits, Fa-

thers Jean-François Gerbillon and Thomas Pereira, who advised the Chinese court on European diplomacy. To the Manchu advantage, the Russians had to give up the fortifications along the Amur, but most of the east Siberian boundary was left undefined. Trade was the most decisive outcome of the treaty and let Siberian outposts such as Nerchinsk and later Kiakhta experience a boom, which Western travelers euphorically described as the golden age of the "Siberian Venice and Genoa." The range of merchandise involved in this trade was quite manifold: furs, tea, silk, fabrics, chinaware, and gold. Russo-Chinese trade was mediated not only by Siberian and Chinese traders but also by a specially privileged group, generally known as Bukharans—a label that referred both to Central Asians and also to Persian, Turkish, Greek, and Indian merchants as participants in Russia's commerce. The oriental merchants turned Nerchinsk and many other trading posts into an interethnic conglomerate. Peter the Great's mercantile policy toward China reflected his cosmopolitanism, that is, his view that Russia needed to be opened up to influences from other countries.

Trading on the border proved to be a dangerous adventure. The route along the Rivers Selenga and Argun and through mountains and steppes was difficult, especially in harsh winters. Russians and Chinese were vague about the area's geography, and caravans from and to China were often plundered by nomads and Cossacks. In the mid-eighteenth century, the Chinese imperial government announced that trade with Russia was unnecessary. Chinese trappers in northern Manchuria and European ships at Canton satisfied Peking's needs for furs. Siberian outposts along the Amur fell into oblivion.

One hundred years later (in 1860), in an imperialistic overture, Russia took advantage of a gap in the Treaty of Nerchinsk—the nondemarcation of the border—and annexed the Amur Valley. Although under Russian tutelage, this area experienced a gradually growing Chinese influence in the late nineteenth century due to the influx of Chinese migrants who were hired on the Amur gold fields and for the construction of the Trans-Siberian Railroad. The border remained unruly in the twentieth century when Maoists during the Cultural Revolution declared that the Amur was Chinese soil. Finally, in May 1989—300 years after

the Treaty of Nerchinsk—Mikhail Gorbachev and Deng Xiaoping announced that the two countries should settle their border disputes and begin fruitful cooperation.

New Amsterdam

Present-day New York City was originally called New Amsterdam. A Dutch commercial settlement at the mouth of the Hudson River, New Amsterdam was established in 1626 by the Dutch West India Company. It was the administrative center and principal trading port of the colony of New Netherlands (centered in the Hudson River valley and including parts of modern-day New York, New Jersey, Connecticut, and Delaware).

The Dutch presence in New York can be traced to the fact that the Netherlands struggled for years to achieve its independence from Spain. As a rising maritime power, the Netherlands was eager to weaken its foe, especially after Spain annexed Portugal and won rights to the Orient trade. With its country's consent, the Dutch West India Company commissioned explorer Henry Hudson to seek an Arctic shortcut to the Indies. Instead, weather conditions forced the navigator westward, and he discovered the Hudson River in 1609. The Netherlands laid claim to the area, and Dutch merchants began to commercially exploit the rich fur trade there. When early private trade initiatives did not result in colonization, the Dutch West India Company was granted an exclusive, twenty-four-year monopoly to all Dutch trade and navigation in the Americas. Since colonization was a means of securing its commercial interests, the company transported thirty French-speaking Walloon fami-

lies from the southern Netherlands to establish its agricultural base in 1624. Initially spread across the colony, these families were moved back to the mouth of the Hudson River when Indian conflicts threatened their safety in the outlying areas. Resettled on Noten (Governor's) Island, the colonists were relocated across the harbor to Manhattan Island in 1626 after the island was "purchased" from the Lenapes (who did not recognize the concept of land ownership) for the equivalent of sixty guilders in goods. Taking its name from the fortification at the south end of the island, the settlement was called New Amsterdam.

As a company town, administered by the Dutch West India Company, New Amsterdam manifested great religious and ethnic diversity among the settlers from its inception. Walloons, Huguenots, Baptists, Quakers, Calvinists, and Jews all lived in New Amsterdam, and some eighteen different languages were spoken there when Jesuit missionary Isaac Joques visited in 1664. Even as late as the mid-1660s, less than half of the people in New Amsterdam were actually Dutch. The pragmatic Dutch West India Company encouraged ethnic and religious tolerance, lest disharmony threaten trade or discourage immigration.

Unwise and brutal policies in regard to the Indians, especially on the part of Director-General William Kieft, led to bloody encounters that threatened New Amsterdam from the late 1630s until 1645, when peace was finally secured. Intermittent conflicts again arose with the Indians in the 1650s but were resolved. The greater threat to New Amsterdam, however, came from England, which saw the colony of New Netherlands, positioned between its colonies of New England and Virginia, as a trading impediment. In 1664, the English pressed their colonial claim to New Netherlands by virtue of the earlier discoveries of John Cabot. Charles II granted his brother James the right to New Netherlands; on August 28, 1644, Col. Richard Nicolls blocked the harbor and seized New Amsterdam for England. Since New Amsterdam was virtually defenseless, a reluctant Director-General Peter Stuyvesant was persuaded to surrender to the English on September 9, and the colony of New Netherlands also capitulated to the English. Together, New Amsterdam and New Netherlands were renamed New York in honor of James, Duke of York. The Treaty of Breda (1667)

recognized England's claim to the area. In 1673, the Dutch recaptured New Amsterdam, but the city reverted to the English under the Treaty of Westminster one year later.

New Caledonia

New Caledonia is a French territory in the South Pacific made up of Grand Terre (250 miles long and comprising 88 percent of the landmass) and a number of lesser islands off its east coast. Capt. James Cook, the first European to visit the island (in 1774), named it after his native Scotland because of its rugged coast and apparent poverty. For the next half century, the European colonizing nations ignored New Caledonia until the French, competing with the British for the last unclaimed territories in the area, annexed it in 1853. The capital was soon located at Noumea, which has a fine harbor, on the extreme southeast coast.

European settlement and exploitation proceeded slowly. From 1864 to 1894, the French used New Caledonia as a penal colony; the main settlements ran from the Isle of Pines off the southern tip of Grand Terre up the western coast, which was suitable for cattle grazing. Free settlers also established themselves on the west coast and, together with the convicts, developed the cattle-based economy. As a result, the indigenous Melanesian population had its lands expropriated, which led to a general uprising in 1878. After putting down the revolt, the French enacted the Code de l'Indigénat (Native Regulations), which confined the Melanesians to reserves, restricted their movement, and made labor obligations compulsory.

Nickel (discovered by Jules Garnier in 1864) changed the course of colonial development and put New Caledonia on the map. The deposits were extensive, and by the outbreak of World War II, New Caledonia was second only to Canada (albeit by a large margin) as the world's leading producer of this

commodity. Nickel became the island's largest export and remains so today. Nickel mining, of course, is particularly sensitive to global politics—especially war—and thus is prone to booms and busts. The last great boom in nickel occurred from 1969 to 1971, when the Vietnam War stimulated demand.

World War II not only touched off a boom in nickel but also altered the political situation in the colony. A coup against the Vichy governor led to the installation of a Free French regime and the transformation of Noumea into the Pearl Harbor of the South Pacific. Thousands of U.S. servicepeople were based there, and many more passed through New Caledonia on their way to the battlefields in the Solomons. Americans brought with them consumerism, mechanization, and democratic ideas. The immediate effect was the abolition of the Code de l'Indigénat and the restoration of citizenship to the Melanesian population. The long-term effect can be called Melanesian nationalism, and with it came the demand for independence in line with that of neighbors that were once colonial dependencies—Vanuatu (New Hebrides), Fiji, the Solomon Islands, and Papua New Guinea.

In the twenty-first century, New Caledonia has the unique status of being one of the few colonies remaining on the globe (legally, it is a French territory under the governance of the secretary of state for overseas departments and territories, or DOM-TOM). The population, as a result of colonial and labor policies, is multiracial. Indeed, New Caledonia is a land of minorities. The two largest groups that now oppose each other are the Melanesian nationalists (called Kanaks, a name rehabilitated from a negative to a positive meaning), organized since 1984 as Front de Libération National Kanak et Socialiste (FLNKS), and the descendants of European settlers, known as Caldoches, who are opposed to independence. The key issue is land. On the fringes are smaller minorities ranging from Vietnamese to Algerian Arabs. Most recently, in the 1980s, a referendum on independence was boycotted by FLNKS, with some attending violence. As a result of the boycott, a majority voted against independence.

New Delhi

Indraprastha, first mentioned in the Indian epic the Mahabharata, was the earliest name for the city that became Delhi. The name Dilli appeared in the first century B.C.E. In 1020, Dilli became a sizable settlement, and it was much expanded a century later. In 1204, the first Muslim sultan established himself in Delhi, but the flourishing of Delhi as a great Muslim city, with its Red Fort, Jama Mosque, and other fine buildings, occurred during the Mughal dynasty in the seventeenth century.

In 1804, the British took control of the city, and it became an important administrative and military center. On December 12, 1911, they announced that they would transfer the capital of British India from Calcutta to a new center that would be called New Delhi. In 1912, this city became the capital and a province under the direct control of the central government. It was built on Raisini Hill, located 3 miles south of Delhi. Edward L. Lutyens was the architect for the new city, which originally comprised an area of 10 square miles, and the main buildings were designed by Herbert Baker. The plan for the city was based on a series of large hexagons with wide, tree-lined avenues. The major buildings were the viceroy's palace (now the Indian president's residence), the Raj Bhavan, the two houses of Parliament (now the Rajya Sabha and the Lok Sabha), and the two secretariat buildings. Their design blended Roman classical architecture with Indian architectural details. The combination of fine buildings, elegant avenues, squares, and gardens makes New Delhi a most distinctive city. Together with the vibrant old city, which has developed as a large commercial and industrial center, New Delhi is one of the world's great urban areas. In 1952, it was made a state, and it became an Indian Union territory four years later.

New England

New England, generally defined as that part of the present-day United States lying east of New York State, is an area of ecological diversity but dominated by thick forests, rocky soil, fast-flowing streams, and extensive coastlines. Its original inhabitants were mainly small tribes of Algonquian Indians with a typical Eastern Woodland culture. European exploration, beginning with the voyage of Giovanni da Verrazano in 1524, was at first largely confined to the coastal areas, where a lucrative fishing trade developed. Serious English interest in the area began with the voyages of Bartholomew Gosnold in 1602, Martin Pring in 1603, and George Weymouth in 1605. The Virginia Company of Plymouth attempted to establish a colony at the mouth of the Kennebec River in 1607. Although the effort to settle at Sagadahoc failed, as did several subsequent English efforts, interest remained high. The New England coast was visited by several expeditions, including those of Samuel Argall in 1610 and 1613, Edward Harlow in 1611, John Smith in 1614, and Thomas Dermer in 1619 and 1620.

Significant European involvement in New England, however, was a result of the Puritan movement in England. A small group of English Separatists established a permanent colony at Plymouth in 1620. Mainline Puritans began arriving in large numbers in 1630, when John Winthrop and the Massachusetts Bay Company took nearly 1,000 settlers to the area around Boston Harbor. Good leadership, strong financing, and relatively peaceful relations with the local Indians led to rapid population growth. Expansion, occasionally aided by internal dissensions, resulted in the establishment of the colonies of New Haven, Connecticut, and Rhode Island in the 1630s.

Although the New England colonies differed from one another in many specifics, their similarities were such that they could be considered as a single cultural entity throughout the colonial

period. In the beginning, the colonies were largely devoted to efforts to create a Bible commonwealth in what the settlers considered a wilderness. After the 1650s rising, overseas trade and non-Puritan immigration resulted in more and more interest in worldly matters. Throughout this period, however, the center of New England social and political life was the town, and the political structure of the town meeting was probably the most distinctive contribution of the region. An early experiment in cooperation, the Confederation of New England formed by Connecticut, Plymouth, Massachusetts, and New Haven in 1643, eventually fell apart under the pressures of King Philip's War. In 1686, with the establishment of the Dominion of New England, the English government made an effort to consolidate the colonies into a single royal colony, but that effort was undone by colonial resistance and the Glorious Revolution, which replaced the rule of the autocratic King James II, who had imposed the Dominion.

New France

New France was a French colonial possession in North America that comprised, at its zenith, Le Canada (the present-day Canadian provinces of Quebec and Ontario), L'Acadie (the present-day Canadian provinces of New Brunswick, Nova Scotia, and Prince Edward Island), and La Louisiane (most of the American Midwest and portions of the Canadian west).

In the first half of the sixteenth century, the explorers Giovanni da Verrazano and Jacques Cartier first claimed North American lands in the name of France. In 1605, Pierre de Gua, Sieur de Monts, obtained a monopoly of trade and settlement from Henry IV and founded, with Samuel de Champlain, the first permanent settlement at Port Royal. Subsequent settlements, such as Quebec, were established as fur-trading posts. Champlain's strate-

gic alliance with the Hurons (Wendat), who had wide-ranging trade networks, greatly enhanced the fur trade. Although that trade was the economic center of the colonial program, the French colonial enterprise also mandated the conversion of Native Americans to Roman Catholicism and the implantation of an agricultural society modeled on the French seigneurial system.

Continuing warfare with competing groups such as the Five Nations Iroquois (Haudenosaunee) and the English, as well as the lack of a clear settlement strategy, resulted in an export-based colony with few permanent settlers. The French presence was instead composed of fur traders (*coureurs de bois*) and missionaries (Recollet and Jesuit priests). In a bold reorganizational move, Cardinal Richelieu established the Compagnie des Cent-Associés in 1627, to which was given, as a fief and seignury, the entirety of New France. However, the Cent-Associés suffered considerable financial losses and did not substantially increase the colonial population.

In 1664, Louis XIV granted a monopoly to the Compagnie des Indes Occidentales but withheld governing responsibilities. Instead, the king instituted an administrative body composed of a royal governor, an intendant, and a bishop. Under Jean Talon, intendant from 1665 to 1672—who granted lands to French soldiers sent to assist in warfare and who imported 1,200 marriageable women (*les filles du roi*)—the population rose to over 9,000. Talon diversified the export-based economy by establishing domestic concerns in lumbering, shipbuilding, and crafts. However, the often conflicting aims of the fur trade and the evangelization of indigenous people brought about rifts between the secular and religious branches of governance.

In the late seventeenth century, New France faced serious competition from the Hudson's Bay Company in the fur trade, as well as English military opposition. The French and Indian Wars ended with the cession of L'Acadie to England in 1713. Although French explorers such as Cavalier de La Salle, fur traders such as Pierre Radisson, and missionaries such as Jacques Marquette continued to expand the territory of New France, English rivalry persisted. In 1745, warfare between the French and the English resumed. The decisive battle ended in the defeat of the marquis de Montcalm at Quebec by Gen. James Wolfe in 1759. The

Samuel de Champlain was one of the first Europeans to explore what became New France. Founder of Quebec in 1608, he ruled over New France in one capacity or another almost continuously until his death in 1635. (Library of Congress)

next year, Montreal fell. In 1763, under the terms of the Treaty of Paris, France ceded almost all of its North American colonial possessions to Britain and Spain. Thereafter, the term *New France* lost its meaning and fell out of usage.

New Spain (Mexico)

In 1519, the charismatic conquistador Hernán Cortés recruited a *compaña* (band of adventurers) in Cuba and sailed with them to Veracruz, where he scuttled his ships and exhorted his army to march into the heart of the Aztec Empire for God, gold, and glory. Winning the allegiance of some discontented Aztec subjects and hostile Tlaxcalan neighbors en route, Cortés entered Tenochtitlán, the capital city, and made the Aztec emperor, Montezuma II, his prisoner and puppet. Some months later, the Spaniards had to flee for their lives in the dead of night, but in the wake of a devastating smallpox epidemic in the Aztec camp and with the steadfast support of their Tlaxcalan allies, they returned in 1521 to lay siege to the city and reduce it to rubble. After the war, the *ciudad* (city) of Mexico rose from the ashes to become the new colonial capital.

Although the Spanish Crown named Cortés governor and captain-general of Nueva España (New Spain) in 1522, only five years later an *audiencia* (panel of judges) was appointed with executive, judicial, and legislative authority to oversee the governance of the new colony. Cortés's enemy Nuño de Guzman took control of the first colonial government but was so corrupt and ruthless that a second *audiencia* deposed him and sent him back to Spain in chains. In

1530, Cortés retired to his substantial estate in the Valley of Oaxaca, and in 1535, Antonio de Mendoza was appointed the first of New Spain's many viceroys, or royal representatives. In the years that followed, New Spain expanded its borders to include the regions of Nueva Galicia (1548), Nueva Vizcaya (1562), Nuevo León (1579), and Nuevo México (1583).

The military conquest, however, would have remained a hollow victory had not the religious orders been equally successful in “colonizing” the minds of Catholic Spain's newest subjects. At Cortés's invitation, the first Franciscans arrived in New Spain in 1523; the Dominicans followed in 1525, the Augustinians in 1533, and the Jesuits in 1571, winning over the Indians by acting as their defenders and by dedicating themselves to Indian education. Mesoamerican Indians were accustomed to adding the religious icons of conquering tribes to their own pantheon of gods, and many willingly exchanged images of their own mother goddess, Tonantzin, for representations of an Indianized Virgin Mary (La Virgen de Guadalupe).

The Hapsburg dynasty, which ruled Spain until 1700, considered New Spain to be a colony whose primary purpose was to fill the royal treasury with silver and gold bullion. The Zacatecas silver deposits, for example, were discovered in the late 1540s, and by the early seventeenth century, they were producing one-fifth of the world's supply, with most of the precious metal being channeled back to the home country. The Crown was interested not in fostering economic interdependence among its American possessions but in generating royal revenue and supplying Spain with raw materials and commodities not available on the European continent, such as cochineal and indigo dyes, cacao, vanilla, cotton, and tobacco. Although New Spain's largely agrarian and cattle-raising economy was primarily driven by domestic demands for wheat, sugarcane, and leather goods, the Crown imposed monopolies on salt, mercury (essential to the mining industry), pulque, and tobacco and stifled all industrial development in the colony that might compete with Spain's own industries. The money-strapped Bourbon kings enacted a series of sweeping political and economic reforms in the late colonial period, but these measures failed to stem the tide of growing

dissatisfaction with the colonial regime or to silence the calls for Mexican independence.

New York

New York was unique among the thirteen original colonies in that it had a Dutch-English heritage and was characterized from its inception by its religious and ethnic diversity. Originally known as the Dutch colony of New Netherlands, New York was captured by the English (1664), lost to the Dutch (1673), and then returned to the English under the terms of the Treaty of Westminster (1674). The lands encompassed in the New York colony stretched from roughly the Delaware to the Connecticut Rivers and included the city of New York, then called New Amsterdam.

James, Duke of York, was granted personal title to all lands and resources in the Province of York by his brother Charles II. Because the English were concerned with maintaining established commerce and also recognized that few English people actually resided in the colony, the terms of capitulation for New Netherlands were moderate and included the continuance of religious tolerance, respect for property and inheritance rights, and the short-term allowance of uninterrupted trade with the Netherlands. Although New York was officially English, it maintained its Dutch identity for almost another generation.

English settlement grew slowly, and efforts at Anglicizing the colony occurred incrementally. A group of English settlers moved west of the Hudson River and established the separate colony of New Jersey in 1665. The English judicial system was reflected in the province's establishment of trial by jury (1665), the required use of the English language for all court proceedings (1674), and the acceptance of common law (1691). Other English influences were seen in the appointment of a mayor, a board of aldermen, and a common council in the charter enacted for New York City (1686) and in the use of such English land designations as shires

and manors. Many Dutch acknowledged the rising influence of the English in public life and commerce by learning their language.

The province had more concerns than the assimilation of its Dutch population. Its English settlers on Long Island, who had migrated from New England, were accustomed to self-government and balked at the duke's strictures. To accommodate their demands, the settlers were granted limited self-government under the Duke's Laws of 1665. Boundary disputes, too, were an ongoing problem and led England to relinquish its claims on Connecticut by 1668. Also of concern were the nearby French, who posed an economic threat to the stability of the strategically located province. In 1688, to strengthen its position and facilitate enforcement of its Navigation Acts, England annexed New York into the Dominion of New England. By forming an alliance with the Iroquois, the English further protected their lands against French encroachment. The difficulties of the province were compounded by the Leisler Rebellion (1689–1691), which occurred in reaction to the overthrow of the Catholic James II and the accession of William and Mary to the English throne. With the city government still in the hands of followers of James II, insurgents rose up against the aristocracy in New York, seized control, and unsuccessfully attempted to elevate the Anglican Church in the hitherto religiously tolerant province. Becoming the de facto government, Jacob Leisler and his followers assumed military control of the province and collaborated with the New England colonies in an unsuccessful attack on French Catholic settlements in Canada in 1690. Though Leisler was tried for treason and hung by the English in 1691, conflicts between England and France in America continued through a series of long wars: King William's War (1689–1697), Queen Anne's War (1702–1713), and the French and Indian Wars (1754–1763). Financially weakened by its extended military campaigns, England imposed direct taxes on the colony and enforced restrictive controls on its manufacturing and trade. These actions directly led to the American Revolution (1776–1783) and ultimately resulted in complete independence from England. British colonialism officially ended for New York and the other twelve colonies, and a new nation was formed.

New Zealand

The islands of New Zealand were first settled by migrants from Polynesia around 800 C.E.; these tribal communities are now known collectively as Maori. In 1642, people of the Ngati Tumatakokiri tribe encountered two ships under the command of Abel Tasman. This first meeting was tense, culminating in the violent death of four Dutch sailors. Tasman's hasty retreat meant European knowledge of the islands that the Dutch cartographer Joannes Blaeu named Nieuw Zeeland remained limited; it was only in 1769 that James Cook rediscovered them. Cook's three visits to New Zealand marked a crucial turning point as he established strong trading relationships with many Maori communities, and his journals transmitted knowledge of New Zealand's rich natural resources to European and American audiences. From the 1790s, whalers, sealers, and timber merchants plied New Zealand's coasts, but these pioneers were mobile and transitory.

The arrival of Church Missionary Society missionaries in 1814 marked the beginning of a permanent settler population. These Anglicans enjoyed limited success until the 1830s, when they (and their Methodist and Catholic counterparts) began to attract large numbers of Maori converts. The 1830s were a turbulent period, as intertribal conflict, epidemic disease, and increased shipping traffic reshaped relationships between the tribes and Maori interaction with the *pakeha* (settlers). In light of these shifts and as a result of pressure from the New Zealand Company, which had begun elaborate plans for systematic colonization, the Colonial Office approved the annexation of New Zealand in 1839. One year later, over 500 Maori chiefs signed the Treaty of Waitangi, which transferred sovereignty to the British Crown in re-

Tawaiho, the Maori king, displays characteristic Maori tattooing in this early-twentieth-century portrait. A Polynesian people, the martial Maori fought several wars against British settlers in New Zealand in the nineteenth century. (Library of Congress)

turn for a guarantee of chiefly authority and the recognition of their resource rights. By the time the treaty was signed, the first shipload of colonists had arrived at Wellington, and over the next fifteen years, planned colonies were developed at New Plymouth, Nelson, Christchurch, and Dunedin; Auckland emerged as the colony's most important commercial and military center. Maori fought against the expansion of settler power in wars in the North Island in 1845 and 1846 and from 1860 to 1868, but with the help of imperial troops and "loyal Maori," this resistance was finally extinguished.

The discovery of gold in Otago (and subsequently on the west coast) boosted the economy of the colony, which had enjoyed responsible government from 1852, but these gold rushes in the South Island also sparked racial conflict as many *pakeha* opposed the presence of Cantonese miners. Despite the emergence of settler nationalism, links to Britain remained strong because New Zealand's prosperity rested on the export of agri-

cultural products to metropolitan markets. Both Maori and pakeha soldiers from the dominion (a status achieved in 1907) were prominent in World Wars I and II. After World War II, New Zealand was an active participant in the Commonwealth and devoted increased attention to its role as a regional power in the Pacific. Since 1975, the Treaty of Waitangi has played a fundamental role in New Zealand political and cultural life. The Waitangi Tribunal has investigated the Crown's breaches of the treaty, and the bicultural spirit of the treaty continues to shape policy formation and New Zealand public institutions in this postcolonial age.

Newfoundland

The history of European settlement in Newfoundland began around the year 1000 with the arrival of Leif Erikson and his establishment of a colony at what is now L'Anse aux Meadows. The colony failed, most likely due to hostilities with the Skraelings, the name given to the island's indigenous people by the Vikings. Newfoundland remained the exclusive home of its aboriginal people until the early eighteenth century, when the area became the base for the fishing fleets of Spain, Portugal, France, and Great Britain; its waters were also fished by the New England Puritan settlers. At first, the ports of Newfoundland were simply places to dry and salt fish for transport to Europe, but over time, several ports became permanent settlements.

Many of these fishing ports were intended to be training grounds for seamen drafted into the British navy, but large numbers of these men resisted the transport back to England and instead signed on with the New Englanders as recruits in their expanding fishing-trading complex. This "recruitment" was considered to be illegal by the British, who attempted to bring these so-called squatters under British naval authority. The Royal Navy allowed for no local rule, and the residents of

Newfoundland resisted European control, going so far as to kill the magistrate the British tried to install in 1745. Civil order (as limited as it was) was restored in 1764 by the British naval captain Hugh Palliser. Although Palliser left the island four years later, the British Parliament passed what came to be called Palliser's Act in 1775, which penalized shipmasters who failed to return to England all the recruits taken to Newfoundland to work the fisheries. The British also began to deport many Newfoundlanders that they considered to be on the island illegally.

The American Revolution returned Newfoundland to its anarchistic state. By this time, the indigenous Beothuk people had been hunted to near extinction, and the interior of the island was opened for settlement. After the American Revolution, Newfoundland shores were opened to French and New England fishers, although the territory was still viewed by the British as a seasonal fishing area. In 1824, Parliament granted Newfoundland a royal charter, essentially ending the power of the fishing-fleet admirals to administer the island. In essence, the charter established Newfoundland as a British colony, and local governments were elected beginning in the 1850s, with power split between the Protestants (fifteen seats) and the Catholics (fourteen seats). Confederation with Canada was resoundingly defeated in 1869, and Newfoundland remained a colony of the British Commonwealth until 1948, when it voted to shift its dependence from London to Ottawa and become a province of Canada.

Ngo Dinh Diem (1901–1963)

Born in 1901 in Quang Binh, a village near Hue in central Vietnam, Ngo Dinh Diem was part of a prominent Vietnamese Catholic family. After receiving a French education, he began a career as a civil servant. He was named to a variety of posts and rose very quickly in the ranks of Vietnam's

colonial administration. The French-imposed emperor Bao Dai's inability to impose his reformist agenda, however, caused Diem to resign a short while after his nomination as minister of the interior in 1933. Thus began Diem's long and often solitary struggle against French rule in Vietnam.

Diem also signaled his opposition to the Communists, whom he saw as anti-Catholic and even antinationalist, by refusing a ministerial position offered to him by the Viet Minh in August 1945. Five years later, he decided to leave Vietnam in a self-imposed exile. He eventually arrived in the United States, where officials in the Eisenhower administration began to consider him as a credible alternative to the Communists. In June 1954, Bao Dai named Diem to the post of prime minister at the insistence of U.S. officials. During the peace negotiations in Geneva in June and July, Diem's representatives steadfastly refused to cooperate with the Viet Minh or acknowledge their right to participate in the government of a unified Vietnam. Predictably, both Diem and the United States refused to sign the peace agreement concluded on July 20, 1954, because it acknowledged the role of the Viet Minh in the government of Vietnam.

In April 1955, Diem forced Bao Dai to abdicate and replaced him as head of state. A few months later, Diem was elected South Vietnam's first president. His fight against the Communists, which included the establishment of a vigorous secret police (which, to make matters worse, was headed by Diem's corrupt brother, Ngo Dinh Nhu) and the forcible displacement of civilians into controlled living areas soon revealed his autocratic tendencies. Diem's popularity at home was further reduced by his support of large landowners and by his open favoritism toward Catholics. Because of his growing ties to the U.S. government, many non-Communist Vietnamese nationalists even accused him of placing their country under the control of yet another foreign power.

Although Diem managed to remain in power for almost a decade, his government's actions eventually led to massive street protests in Saigon in May 1963 and to the highly publicized self-immolation of several Buddhist monks. After these events, the U.S. government increasingly saw Diem's regime as an embarrassment and thus more or less tacitly supported a coup d'état by South Vietnamese generals on November 1, 1963.

The following day, both Diem and his brother Nhu were assassinated in a suburb of Saigon.

Nicaragua

During the Spanish colonial era, Nicaragua was a province of the captaincy-general of Guatemala. It was named after a prominent local *cacique* (chief) whom the Spanish conquerors encountered when they first entered the region in 1522. The first Spanish governor of Nicaragua arrived in 1528, and the region remained within the orbit of Spanish rule for the next 300 years. With the end of Spain's rule in the early 1820s, the captaincy-general of Guatemala (following a brief period as part of an independent Mexico) became the United Provinces of Central America. By 1838, this polity had fallen apart, and Nicaragua, like the other provinces, emerged as an independent nation-state.

After independence, Nicaraguan politics was dominated by the struggle between elite factions: the Conservatives based in the town of Granada and the Liberals in the town of León. By the twentieth century, the United States had become a major influence in the Caribbean. The U.S. Marines were deployed in Nicaragua between 1916 and 1933. In the 1930s, political power in Nicaragua was increasingly centered on the National Guard, which had been set up with U.S. advice and support. The National Guard was run by Gen. Anastasio Somoza García, who took over the presidency of Nicaragua directly in 1937. The Somoza family, with U.S. support, went on to rule Nicaragua until 1979. Anastasio Somoza was assassinated in 1956, and his eldest son, Luis Somoza Debayle, was formally elected to the presidency in 1957. With the death of Luis in 1967, the country was ruled in an increasingly despotic fashion by his younger brother, Anastasio Somoza Debayle, a graduate of West Point and head of the National Guard.

The Somoza dynasty was eventually overthrown (in July 1979) in a popular revolution led

by the Frente Sandinista de Liberación Nacional (Sandinista National Liberation Front—FSLN). Founded in 1961, the FSLN had little military success until the mid-1970s. However, from 1974 onward, a series of bold and popular military initiatives positioned the FSLN at the head of a broad opposition movement. Increasingly unable to get Washington to come to his aid, Somoza eventually fled into exile, and the FSLN rose to power on July 19, 1979. However, once Ronald Reagan assumed the presidency of the United States in 1981, a decade-long campaign to subvert the Sandinistas began, forcing them to spend more than 50 percent of the Nicaraguan government budget on defense. By the late 1980s, the ongoing war had alienated many of the country's citizens, and in February 1990, the Sandinistas were voted out of office; a fragmented opposition coalition under Violeta Barrios de Chamorro assumed power. Chamorro was president for six years. In 1996, Arnoldo Alemán, the former mayor of Managua and head of the new Liberal Alliance coalition, was elected to a five-year term as president. However, neither president grappled effectively with the country's profound economic and social problems, which had been exacerbated by Washington's war on Nicaragua in the 1980s.

Nicholas II, Czar (1868–1918)

Nicholas II, a member of the Romanov dynasty, was the last emperor of the Russian Empire. During his reign, Russia's imperial expansion achieved its peak. Nicholas II and his closest associates were personally involved in Russia's extremely aggressive policy in the Far East from 1895 on—intervention into Chinese affairs, acquisition of the Liaotung Peninsula, military occupation, and creation of the de facto Russian protectorate in Manchuria. This adventurous course, as well as the

policy of Russian domination in Korea, led to the Russo-Japanese War.

After its defeat in that war, Russia managed to preserve its sphere of influence in part of Manchuria by making several agreements with Japan. In 1913 and 1915, Russia also signed accords with the Chinese to secure Moscow's special interests in Mongolia. In the Middle East, the expansionist ambitions and diplomatic maneuvers of Nicholas II's government led to the agreements with Britain and Germany that recognized Russia's spheres of influence in northern Persia. The czar was also strongly devoted to the expansionist schemes involving the Turkish Straits.

Nicholas II's ethnocentric and chauvinistic view of the “inner” Russian Empire led to an aggressive Russification policy and widespread discrimination against non-Slavs, despite the growing protests from the nationalities and the Russian liberal and radical Left opposition. From 1899 to 1905, the czar consistently eroded the autonomy of Finland. Overall, his adventurous foreign and colonial policies aggravated the crisis of imperial Russia and helped to bring about its final downfall.

Nigeria

Nigeria, Britain's largest West African colonial territory, had its origins in three quite distinct entities—the Colony of Lagos, the Niger Coast (Oil River) Protectorate, and the territory claimed by the Royal Niger Company.

The Colony of Lagos was established in 1851 under pressure from British missionaries and traders. The British navy bombarded Lagos, deposing the king, or *oba*, and installing his rival, Akitoye, who promptly signed a treaty giving protection to missionaries and free trade to British merchants and abolishing the export of slaves. The

A poster advertising a 1962 Nigerian trade fair captures the hopeful spirit of the newly independent country. Many former African colonies expected independence to lead quickly to economic development. (Library of Congress)

treaty did not, however, end the slave trade or political intrigue; hence, on July 30, 1861, Akitoye's successor, Oba Docemo, was forced to cede Lagos to the British as a crown colony. Under a series of energetic governors, especially John Glover (1864–1872) and Sir Gilbert Carter (1891–1897), a British protectorate was extended in a piecemeal fashion across the Yoruba hinterland to form the Colony and Protectorate of Lagos.

In 1885, the British declared a protectorate over the so-called Niger Districts, essentially the coastline from Lagos to the Cameroon. The move was intended to forestall other European powers' encroachment on Britain's vital palm oil trade. The Niger Coast (Oil River) Protectorate was administered by the Foreign Office. British consuls regularly intervened in the interest of British merchants, but it was not until 1891, under Maj. Claude MacDonald, that the British systematically asserted their authority.

In 1900, a new entity, the Protectorate of Southern Nigeria, was created, and in 1906, the protectorate was amalgamated with the Colony and Protectorate of Lagos to form the Colony and Protectorate of Southern Nigeria.

The Royal Niger Company was the creation of a merchant named Sir George Goldie. He united rival British merchants under the Niger Company to resist both encroachments by other European traders and the tariff demands of local African rulers. In 1886, he obtained a royal charter from the British government to administer the territories along the Niger River and its hinterland, thus thwarting colonial rivals. In 1900, the British government revoked the charter, and the hinterland became the Protectorate of Northern Nigeria under Sir Frederick Lugard as governor. In 1918, Lugard (by then a lord) united Southern Nigeria and Northern Nigeria to form Nigeria, with the Colony of Lagos as its capital.

Though centralized under the governor-general, Nigeria was in many ways two quite distinctive protectorates, plus the Colony of Lagos. Africans born in the colony were British subjects with rights such as access to the courts. In the protectorate, Africans were protected peoples under the control of government-appointed chiefs and, ultimately, the authority of British officials. In northern Nigeria, the system of indirect rule through chiefs and native administrations held

sway, with missionaries restricted to the non-Muslim areas and potentially disruptive influences such as Western education tightly controlled. In southern Nigeria, the rule through chiefs proved less effective in many areas, and Christianity and Western education became widespread. Colonial officers were rarely transferred from one region to the other, with the result that two quite distinct administrative cultures and African responses emerged. The north, where the Muslim emirs exercised authority over large areas, remained more conservative, whereas in the south, nationalist politicians began to agitate for a greater share in governance.

In 1937, the south was divided into the Eastern and Western Provinces, laying the foundations for future disruptive regional rivalries. As postwar African nationalism grew, the British responded with the MacPherson Constitution in 1951, giving greater regional responsibility for local government. Provincial governments became the foci of parochial nationalism, often based on tribal loyalties. The Northern Nigerian traditional leaders were initially suspicious of losing control to southern politicians, but a constitutional deal was struck that maintained regional autonomy under a federal system and effectively entrenched Northern Nigeria's dominance. It was on such fragile political grounds that Nigeria secured independence in 1961.

Nkrumah, Kwame (1909–1972)

Kwame Francis Nwia Kofie Nkrumah was the first nationalist leader of the British colony of the Gold Coast, which he led to independence in 1957 as the nation of Ghana. A leading advocate of

Ghanaian Premier Kwame Nkrumah (right) shares a laugh with Indian Prime Minister Jawaharlal Nehru at a New York hotel in 1960. Three years earlier, Nkrumah had led his nation—the first in black Africa—to independence from Britain. (Library of Congress)

pan-Africanism, he received his early education in mission schools and a Gold Coast government teacher-training college. He then began a teaching career and later went to the United States to study at Lincoln University in Pennsylvania and for subsequent graduate training. In the States, he served as president of the African Students Association of the United States and Canada. Later, as a law student in London, he worked with the West African Student's Union and became secretary-general of the working group that organized the 1945 Fifth Pan-African Congress held in Manchester, England.

Nkrumah used his educational and organizing experiences effectively to imbue himself in the African diaspora as well as to gain a valuable background in political organization. As a consequence, he was called home in 1947 to lead the United Gold Coast Convention (UGCC) in its ef-

forts to achieve political independence from colonial rule in the shortest possible time. That goal proved illusive, despite Nkrumah's relatively radical leadership. Following various demonstrations and his arrest by authorities, Nkrumah was forced out of the UGCC and formed his own organization, the Convention People's Party (CCP). After spending a year in prison for political agitation, Nkrumah worked with the CCP and won a series of electoral victories and eventual independence for the nation in 1957. But the creation of the small African-governed state of Ghana was only the first of Nkrumah's goals.

Drawing on his experiences in the United States and Britain, he believed Ghana needed to be the vanguard for an all-African movement. Only "a union of African states" freed from colonial control, Nkrumah believed, could effectively "project the African personality [and] command respect from a

world that has regard only for size and influence” (Nkrumah 1961). In 1958, he organized the All-Africa Peoples’ Conference held in Accra, Ghana’s capital, with representatives not only of independent African states but also of various nationalist movements from throughout the continent. This meeting later led to the formation of the Organization of African Unity (OAU); however, Nkrumah was disappointed by the ineffectiveness of the OAU in achieving greater continental unity. He therefore took a leading role in the Bandung Movement, in which he encouraged greater cooperation between the emerging new nations of the Third World.

He also became disillusioned with the slow pace of change in Ghana, and his government became increasingly autocratic. Many of his opponents were jailed, and the media were censored; in addition, Nkrumah fostered an exaggerated cult of personality surrounding his leadership. He favored the title *Osagyefo* (Redeemer) and even approved of the refrain in which schoolchildren proclaimed, “Nkrumah loves us this we know, for the handbook tells us so.” These developments brought increasing disaffection, and in 1966, he was deposed by a military coup while on a state visit to China. He went into exile in Guinea and died there of cancer in 1972.

Noble Savage

The term *noble savage*, popularized during the colonial era, referred to mythical human beings who were dignified, virtuous, and unspoiled by European civilization; having remained one with nature, they were also free and lighthearted. The concept served a variety of purposes: it gave form to a desire to recapture a lost Eden, it validated the reassuring belief that humans are born good, it permitted veiled criticism of contemporary European society, and it bolstered the abolitionist movement.

Journals and eyewitness reports of explorers and travelers—from Christopher Columbus in the late fifteenth century to Baron La Hontan in the early eighteenth century—testified that the greatest part of the human race lived happily in accord with natural religion and morality. The myth kindled the imagination of European writers and readers alike. The noble savage appeared in the work of Michel Montaigne, on stage in seventeenth-century England (in the plays of John Dryden and Thomas Southerne), and in fiction (Aphra Behn). The concept was, however, most closely associated with French Enlightenment writers. In 1721, Charles-Louis Montesquieu praised the Troglodytes’ simple life. And the concept appeared in the writing of Gabrielle Mably, Guillaume-Thomas Raynal, and Denis Diderot, which frequently challenged the belief that Europeans had the right—and even the duty—to colonize others. Best known, however, is Jean-Jacques Rousseau’s *bon sauvage*, as described in *Discourse on the Origin of Inequality* (1755), who incarnated both social criticism and romantic idealization.

Nineteenth-century romanticism and humanitarianism adopted the myth, as expressed in François-Auguste René Chateaubriand’s fiction or in the idealized Indian of American literature, most enduringly portrayed in James Fenimore Cooper’s *Leatherstocking*. Moreover, inasmuch as the noble savage embodies a human yearning for a better life, the concept has been a recurring literary theme throughout history. It can be found peopling the nostalgia for a Golden Age expressed in antiquity by writers such as Hesiod, Tacitus, Virgil, or Ovid, as well as in modern visions of poets such as Léopold Sédar Senghor or in the dreams of some ecologists.

North Atlantic Treaty Organization (NATO)

The North Atlantic Treaty Organization (NATO) is a military organization established on April 4,

1949, in Washington, D.C. It was originally a multi-lateral guaranty pact of Western powers designed to counterbalance the potential threat from the Soviet Union. But it quickly evolved into an integrated military organization and a collective defensive alliance after the establishment of the Warsaw Pact, headed by the Soviet Union.

Although the major European powers were preoccupied with their own military and political security in Europe in the post–World War II era, the colonies controlled by member states of NATO experienced a rapid decolonization process. Over 100 new independent countries have been established either through peaceful negotiation or armed conflicts with their colonial masters. Within the alliance, there were serious disagreements as to how to handle the colonies' demand for independence and self-determination. Although the United States and several other countries generally supported the national liberation movement, Great Britain, France, and Portugal attempted to extend NATO's defensive role to their colonies so that their colonial interests would be protected. The crisis in Zaire in 1978 provoked a joint intervention from France and the United States, but NATO played only a minimal role in the operation. Due to limited resources, NATO eventually abandoned the idea of incorporating the African continent and some of NATO members' military bases in Africa into a part of NATO's command structure. Later, to compete with the growing influence of Communist countries in the African continent, the NATO nations increased foreign aid to their former colonies. But these funds only worsened the debt problem of the Third World countries.

The end of the Cold War in 1991 led NATO to redefine its political and military missions. Today, it has expanded its roles in Euro-Atlantic crisis management, conflict prevention, and peacekeeping. Its willingness to go beyond the traditional security commitment was demonstrated by the part it played in resolving ethnic conflict in non-NATO member states, as in the Bosnia and Kosovo crises.

After the collapse of the Soviet Union, three former Soviet allies also joined NATO. There are currently nineteen member states, including Belgium, Canada, the Czech Republic, Denmark, France, Germany, Greece, Hungary, Iceland, Italy, Luxembourg, the Netherlands, Norway, Poland, Portugal,

Spain, Turkey, the United Kingdom, and the United States. The key institutions of NATO include the North Atlantic Council, the International Secretariat, and the Supreme Headquarters of the Allied Powers, Europe (SHAPE).

Northern Ireland

Northern Ireland, a province of the United Kingdom, is still dealing with the legacies of colonialism. Although there had been some Scottish migration of people to the Northern Irish region (or Ulster, as the province is known) for many centuries, the formal and systematic colonization of Ulster began in 1610 when the lands of six of its counties were confiscated and “planted” with Scottish and English settlers. English rulers hoped to establish a “plantation,” or a close settlement of loyal supporters who would be separate from the original Irish inhabitants. These plans were never fully implemented, resulting in the retention of many Irish tenants on the land and the development of rural and, later, urban labor forces split along religious, sectarian lines.

Ulster's economy developed along different lines compared to the rest of Ireland because of the protection Scottish and English settlers received; the skills in commodity farming and linen manufacture they brought with them; their different system of land tenure, which provided for long, fixed leases; and their guaranteed access to the best land. This prosperity assisted the development of textile, brewing, and shipbuilding industries, which continued to employ people along sectarian lines. Tensions between the Protestant and Catholic communities exploded into armed conflict at different periods during the seventeenth, eighteenth, and nineteenth centuries, although, on rare occasions, some members of the two communities joined forces in trying to develop a secular nationalism; one example is the United Irishmen Movement, which was formed in 1791 and rebelled unsuccessfully against British rule in 1798.

Over the centuries, the Protestant community in Northern Ireland was rewarded for its loyal support of the English royalty, but it felt alienated from the developing Irish nationalism that, after the collapse of the United Irishmen Movement, increasingly adopted a Catholic ethos that celebrated only pre-Reformation Irish culture. Many Protestants also believed the union of Great Britain and Ireland was the basis for continued economic prosperity in Ulster. As a result, when nationalist agitation for home rule in Ireland gained momentum in the second half of the nineteenth century, Protestant forces in Ulster came together to form a Unionist movement, which was able to establish a productive political alliance with the English Conservative Party. This alliance ensured the defeat of a number of home rule bills and provided powerful support for the Unionists' attempts to remain separate from the rest of Ireland during the Anglo-Irish Treaty negotiations. This 1921 treaty partitioned six of the nine original Ulster counties from the rest of Ireland, allowing Northern Ireland to remain a self-governing province within the United Kingdom.

The problem for the Catholic community in Northern Ireland was that successive Northern Irish governments used the overwhelming Protestant majority to entrench systematic discrimination against Catholics. This effort was also supported by the formation of a largely Protestant police force, the Royal Ulster Constabulary. Catholic discontent with the ongoing discrimination resulted in the formation of a Northern Irish civil rights movement in the 1960s, which eventually provoked sectarian rioting, the deployment of British troops in Northern Ireland (initially to protect the Catholic minority), and the reestablishment of direct rule from London. These developments provided fertile ground for the resurgence of paramilitary groups from both communities, including the Irish Republican Army (IRA) and a range of Protestant paramilitary groups, such as the Ulster Volunteer Force and the Ulster Defence Association.

Despite a number of power-sharing experiments in the 1970s, Northern Ireland remained under direct British rule until the IRA cease-fire and subsequent peace talks of the 1990s. The Belfast Agreement between the British and Irish governments, which was voted for by the majority

of people in both the northern and southern parts of Ireland in November 2000, lays the foundation for an assembly in Northern Ireland, which will end direct British rule there, and a number of councils linking northern and southern Irish ministers and the British and Irish governments. There are cautious hopes that this agreement could represent a new beginning for the conflict-weary people of Northern Ireland. Some members of the Catholic community in Northern Ireland, however, contend that colonialism will continue in the province until it is reunited with the rest of Ireland. And many people in the Northern Irish Protestant community believe that Ulster has nothing in common with the Irish Republic and should remain an integral part of the United Kingdom. Whatever the eventual outcome, the legacies of colonialism cast a long shadow over Northern Ireland.

Northern Marianas Islands

The Commonwealth of the Northern Marianas Islands (CNMI) comprises fourteen islands in the western Pacific, excluding Guam. Six are inhabited, including the three largest—Saipan, Tinian, and Rota. The principal settlement and administrative centers are on Saipan, and English, Chamorro, and Carolinian are the official languages. The population is mainly Chamorro (people of mixed Spanish, Filipino, and Micronesian descent). Since November 1986, U.S. citizenship has been granted to individuals born in the Marianas Islands, but not all inhabitants are U.S. citizens.

The islands were held at various times by Spain, Germany, Japan, and the League of Nations. After the defeat of Spain in the Spanish-American War, the Marianas Islands, Caroline Islands, and

Palau were sold to Germany in 1899. In 1914, control was transferred to Japan, and in 1921, sovereignty shifted to the League of Nations under Japanese administration. In 1944, the United States captured Saipan and Tinian from the defeated Japanese, and a year later, the islands were placed under the administration of a U.S. military government. In 1947, they became part of the U.S. Trust Territory of the Pacific Islands, administered as a UN trusteeship under the control of the U.S. Navy. In 1951, administrative responsibility was passed to the U.S. Department of the Interior. During the trusteeship years, the U.S. government restricted entry to the Northern Marianas, and the islands were used for military training; most of Tinian was and still is reserved for potential U.S. military use.

In June 1975, the islanders voted for the political status of a U.S. commonwealth, and the islands were formally given this status in November 1986, at which time those born in the commonwealth became U.S. citizens. In 1990, the UN Security Council voted to end the trusteeship.

In March 1976, President Gerald Ford signed the Northern Marianas Commonwealth Covenant, and in October 1977, President Jimmy Carter approved the Constitution of the Northern Marianas Islands, which provided for self-government over internal affairs. The Covenant to Establish a Commonwealth of the Northern Marianas Islands in Political Union with the United States of America, signed in 1978, is a negotiated agreement defining the relationship between the two countries. U.S. federal law generally applies in the commonwealth. The CNMI is outside the customs territory of the United States, and although the Internal Revenue Code does apply in the form of a local income tax, the tax system is locally determined. According to the covenant, the federal minimum wage and federal immigration laws “will not apply to the Northern Mariana Islands except in the manner and to the extent made applicable to them by the [U.S.] Congress by law after termination of the Trusteeship Agreement.”

Although they are U.S. citizens, Chamorros do not vote in national elections. A resident representative in Washington represents the commonwealth in the U.S. Congress. The representative is not a member of Congress but works closely with it to ensure that legislation passed in the Northern

Marianas Commonwealth Legislature is compatible with the U.S. Constitution. The legislature is a bicameral body consisting of the Senate and the House of Representatives. Nine senators are elected every four years, and the eighteen members of the House of Representatives are elected for two-year terms. Executive authority is vested in the popularly elected governor. There are two political parties: Democrat and Republican.

Northern Rhodesia (Zambia)

Northern Rhodesia was a British colonial possession in central Africa, bordered on the north by the Belgian Congo and in the south by Southern Rhodesia. Europeans knew little about this region before the Scottish missionary David Livingstone arrived at Victoria Falls in 1851. Livingstone's reports about the country raised interest in the region in the Cape Colony and in England. In 1889, the South African capitalist Cecil Rhodes received a royal charter from the British government granting his company, the British South Africa Company (BSAC), the right to establish a colony in the vast territory north of the Limpopo River. Rhodes's agents established a settlement in 1889 in Salisbury (modern Harare). From there, his representatives moved north across the Zambezi River, where they found many African rulers who proved willing to ally themselves with the powerful newcomers. The borders of the new territory were ultimately limited by British treaties signed with Germany, Portugal, and Belgium. Initially, the region was administered as North Eastern and North Western Rhodesia, before being amalgamated into one colony in 1912.

Company officials imposed a hut tax on Africans to raise revenue for administration and to encourage them to enter wage employment in the copper mines of neighboring Katanga. During World War I, Northern Rhodesia's mineral resources were exploited commercially for the first time, and within a

Victoria Falls, located on the Zambezi River between Zambia and Zimbabwe (once Northern and Southern Rhodesia respectively), was originally known as Mosi-oa-tunya, “the smoke that thunders,” in the Kalolo-Lozi language. Colonial explorers frequently applied European names to landmarks in Africa, ignoring existing names for them. (Library of Congress)

decade, copper mining became the colony's major industry. BSAC rule ended in 1924, and the British Colonial Office became responsible for the colony. The British government established a legislative council that came to be dominated by members representing the tiny community of white settlers.

The rapid expansion of mining led to urbanization and encouraged industrial organization among

the poorly paid African miners. By 1949, African workers had created powerful unions that helped them to bargain on equal terms with white workers. It was in the mining centers that the first effective political organization, the Northern Rhodesia Congress, emerged in 1948. However, the political aspirations of Northern Rhodesian Africans were sharply checked when the colony was federated

with Southern Rhodesia in 1953. African politicians feared that federation would allow the segregationist policies of Southern Rhodesia to be imposed in the north. Most whites in the colony hoped that closer union with Southern Rhodesia would allow them to wrestle more autonomy from the Colonial Office. Though their opposition failed in the short term, Africans who protested against federation brought together rural and urban leaders for the first time. A trade depression in 1956 accentuated the growing hostility to federation and British rule in general and led to a radicalization of the congress movement. Led by Kenneth Kaunda, a civil servant, a nationalist wing of the party split off to found the Zambia African National Congress (later renamed the United Independence Party, UNIP) in 1958. Four years later, Kaunda and his followers led a civil disobedience campaign against the government. Recognizing the vehemence of African opinion, the British held a referendum on federation in 1963. Africans in Northern Rhodesia voted overwhelmingly against federation, thus effectively ending the colony's association with Southern Rhodesia. The following year, national elections were held for an independent government. Kaunda's UNIP swept to victory, and he became the first president of the independent nation of Zambia.

North-South Conflict

The North-South conflict refers to tensions between the developed countries of the so-called North—specifically, North America, Europe, Japan, and other industrially advanced regions of the globe—and those of the South, primarily nations of the Tropics and the Southern Hemisphere that are less developed economically. Rooted in the

old colonial order, the division between the North and the South has been exacerbated in the post-colonial era through an economic relationship that many claim to be exploitative of the latter.

The North-South conflict was symbolized by the push for a new international economic order (NIEO) and the call for a north-south dialogue in the 1970s. The formal demand for an NIEO flowed from the Declaration and Programme of Action for the Establishment of a New Economic Order at the Sixth Special Session of the General Assembly of the United Nations, held in April 1974. This initiative sought to restructure the world economy in favor of the countries of the South, that is, poor nations of the Tropics and the Southern Hemisphere. The first North-South Conference was held in Paris in December 1975 in an effort to improve relations between the “developed” countries of the North and the “developing” countries of the South. The origins of these initiatives can be traced to the Bandung Conference in 1955, where issues such as the stabilization of international prices for raw materials and greater control over the processing of raw materials by governments of the South were discussed. The call for an NIEO also has antecedents in the nonaligned movement of the 1960s.

The demand for international economic equality and the North-South conflict of which it was a manifestation were apparent at the United Nations by the 1950s and were especially tied to the growing pressure to end colonialism. In 1961, the UN launched the First Development Decade and laid out an economic development program for the 1960s that coincided with the increasing pace of decolonization. The first United Nations Conference on Trade and Development (UNCTAD) in 1964 provided a forum in which the debate about economic development manifested itself clearly as a conflict between the North and the South. Prior to the meeting, a range of governments in the Third World sought to coordinate their efforts and operate as a bloc. Their efforts also led to the creation of the Group of 77, which sought to generate unity among governments of the Third World at subsequent international meetings. There was also a recognition, at least in some quarters in North America and Western Europe, that the North-South conflict was increasingly overshadowing the East-West conflict of the Cold War. This shift in

emphasis was partially reflected in the policies adopted by U.S. president Jimmy Carter (1977–1980). In his first two years in office, Carter advocated and sought accommodation rather than confrontation with the governments of the Third World. At the end of the 1970s, the Brandt Commission (chaired by former German chancellor Willy Brandt) was also set up to address the North-South conflict.

By the beginning of the 1980s, the emphasis on the need to address the North-South conflict via accommodation and reform was under serious challenge. The Group of 77 was making little headway, and the various United Nations initiatives were regularly ignored by the governments of the North. UNCTAD meetings continued to be held (the tenth UNCTAD was held in Bangkok in February 2000), but they produced nothing of substance. This situation worsened with the dramatic revitalization of the Cold War during the presidency of Ronald Reagan (1981–1988) and the spread of neoliberal economic policies and practices around the world in the 1980s. Neoliberalism, which was enthusiastically sponsored by the British government after 1979 and the U.S. government after 1981 and taken up, willingly or unwillingly, by a growing number of governments of the South, completely rejected the ideas associated with the NIEO and related initiatives. The governments of the United States and Western Europe, along with the International Monetary Fund and the World Bank, increasingly recommended that governments of the South follow the U.S. and British lead and privatize their public sectors, deregulate their economies, and liberalize their trade. The end of the Cold War between 1989 and 1991 only served to deepen and broaden the trend toward neoliberalism and what is increasingly called globalization. The North-South conflict also encouraged the agenda of those groups that have demanded reparations for slavery and the slave trade.

Nu, U (1907–1995)

U Nu was the prime minister of Burma from 1948 to 1958 and again from 1960 to 1962. In the 1930s, he was one of the students who took the title *thakin*, or master, usually reserved for Europeans. Casting aside a comfortable youth, which included hard drinking and frequenting prostitutes, he pledged himself to a more Buddhist life and graduated from the University of Rangoon in 1929. Returning to study law, he was expelled in 1936 for independence activities along with fellow activist Aung San, thus helping to spark the student strike of that year. In 1937, he joined the radical Dobama Asiayon (We Burmans Association), which sought independence through protest and action.

Jailed for sedition in 1940, he served as foreign minister when a Burmese government was established under the wartime Japanese occupation. Aung San's assassination in July 1947 then catapulted U Nu to the leadership of the Anti-Fascist People's Freedom League (AFPFL). As such, it was U Nu who became the first prime minister when Burma achieved independence on January 4, 1948, and he retained this position (except for 1957–1958) until 1960.

However, he had inherited a state incinerated by war, and he compounded the problem by creating inefficient nationalized industries and soon faced widespread revolt and insurgency. At independence, the Union of Burma had promised significant autonomy for some of its upland regions, but the results disappointed many of the ethnically distinct minorities, notably the Christian Karens. In addition, the Communist Party resorted to arms in 1948.

The continuing failure of U Nu's democratic governments to deal with ethnic separatism, together with a failing economy and spiraling inflation, saw the AFPFL split in two in 1958, becoming the Clean AFPFL, under U Nu, and the Stable AFPFL.

U Nu then asked the army chief of staff, Gen. Ne Win, to assume power to control the escalating friction. Ne Win allowed elections again in February 1960, which returned U Nu and the Clean

AFPFL (called the Union Party from March onward). He was not in this position for long, though, as U Nu was finally deposed by Ne Win in March 1962.

Detained until 1966, he left for exile and protest in India in 1969. A May 1980 general amnesty for political dissidents allowed his return in July of that year to become a Buddhist monk. His final attempt to regain some power after the prodemocracy demonstrations of 1988 failed. U Nu died in 1995.

Nyasaland (British Central Africa Protectorate, Malawi)

Nyasaland was a British protectorate in central Africa, centered on Lake Nyasa and the Shire River. Following David Livingstone's travels in the region during the 1850s and 1860s, Scottish missionaries and Christian entrepreneurs established outposts along the lake. Upset by evidence of continued slave trading from the East Africa coast and local African conflicts and with a desire to prevent further Portuguese claims, these Europeans called on the British government for protection. Their efforts were initially rebuffed as too costly, but the British consul in Mozambique, Harry Johnston, soon became convinced that only an end to slave-trading activities would bring peace to the region as well as to Mozambique.

Johnston first began signing treaties with local rulers on behalf of the British Crown (and for his other employer, Cecil Rhodes) and then declared much of the region to be under official British protection. Faced with these declarations by a foreign officer in its employ, the British Parliament officially proclaimed a protectorate over the Nyasaland districts in 1891. Johnston was appointed commissioner and consul-general, although his salary and administrative expenses were borne by

Rhodes's British South Africa Company. In 1893, the territory was named the British Central Africa Protectorate, and Johnston increased his efforts to bring an end to the slave trade, pacify the area, and introduce something approaching organized colonial authority.

Johnston also attempted to establish a colonial land and taxation policy for the protectorate and to attract a somewhat greater European presence. His success led, in part, to the newly renamed Nyasaland Protectorate being passed from Foreign Office to Colonial Office management in 1907. This change brought some recognition of local African rights and responsibilities, although it was not until after World War I that a complete system of indirect rule could be introduced. This theoretically indirect system of colonial administration, utilizing African leadership intended to represent traditional authority, continued with only slight modifications until independence in 1964.

From 1914 on, a number of African organizations arose and increasingly claimed to speak for the African peoples native to the protectorate. Most were local or regional groups, and almost all the leaders were mission-educated Africans. But not until the emergence of the Nyasaland African Congress in the 1940s was there a protectorate-wide organization attempting to speak for local peoples. A single event galvanized African opinion against British colonial rule: the proposal to create the Central African Federation of Nyasaland and both Northern and Southern Rhodesia. Many Africans from Nyasaland had migrated to Southern Rhodesia and South Africa seeking work, and their experiences convinced them that closer ties with any settler-controlled colony would likely mean the end to the small benefits they enjoyed as residents of an official protectorate. The vehemence of their opposition ultimately led to the end of the federation and the independence of Nyasaland as the new country of Malawi in 1964.

Nyerere, Julius (1922–1999)

Julius Kambarage Nyerere, often referred to as “Mwalimu” (meaning “teacher” in the Kiswahili language), served as Tanzania’s president and elder statesman for over four decades, until his death in November 1999. The massive outpouring of grief at his funeral reflected the passing of one of Africa’s most important and respected independence leaders. Born in 1922 in Butiama in British colonial Tanganyika (later the independent mainland Tanzania), he received his primary and secondary education from Catholic missionaries. He attended Makerere University in Uganda and remained in Makerere as a teacher until 1949, when he moved to Edinburgh, Scotland, to complete a master’s degree in economics and history. He returned to Tanganyika in 1952 and subsequently founded the Tanganyika African National Union (TANU), which would become the key mass party in Tanganyikan politics through the independence struggle and into the postcolonial period.

Nyerere was largely responsible for building TANU’s political power through a grassroots campaign that aimed to reach all parts of Tanganyikan territory. During his campaigning, he employed Kiswahili as a means of overcoming the immense linguistic and ethnic diversity of the colony and later ensured that it became the national language

of Tanzania. In 1961, after close negotiations with the British colonial authorities, Tanganyika became an independent nation, with Nyerere as its first prime minister. He immediately set about the business of building a national identity for Tanganyika, which became Tanzania with the inclusion of Zanzibar in 1964. An important component of his vision for Tanzania’s future was the notion of African socialism and especially his idea, as articulated in the 1967 Arusha Declaration, of a one-party state operating on a principle of *ujamaa* (communal cooperation). In short, he hoped to create a classless, self-reliant society through a planned and centralized national economy. Despite other modest successes in improving national literacy and health care, his “villagization,” or collectivization, scheme was harshly criticized both within and outside Tanzania for further debilitating the country’s already weak economy and worsening the lives of Tanzanian peasants. He stepped down from the presidency in 1985 but remained the head of the party (Chama Cha Mapinduzi, or CCM, the successor to TANU) until 1990. He spent his remaining years acting as an international political adviser and peace broker, most notably in trying to settle the ongoing political crisis in neighboring Burundi. Despite his domestic failures while president, his diplomatic skills and humanitarian sensibilities were highly regarded, as was his willingness to peacefully transfer power in 1985 and to lend his support to Tanzania’s transition to multipartyism.

O'Brien, Conor Cruise (1917–)

Diplomat, politician, and historian, Conor Cruise O'Brien was a consistent critic of past and ongoing British, French, and American colonialism. As a member of a prominent family of Irish nationalists, he grew up with a strong commitment to anti-colonialism. His early involvement in anticolonial campaigns included anti-Franco activism as a student delegate of the Trinity College Labour Party. After he had entered the Department of External Affairs, he assisted Irish Minister of External Affairs Sean MacBride with a campaign against the partition of Ireland in the 1940s and 1950s. He was to alter his view about the partition of Ireland completely by the 1990s, when he concluded that forcing the Ulster unionists into a united Ireland was actually a form of imperialism. Many saw this reversal of his previous views as evidence that he had never really been committed to anticolonialism. One of his biographers, Donald Akenson, however, has concluded that opposition to imperialism was a genuine and consistent theme of his life and work.

His most prominent profile as a critic of Western colonialism emerged in his role as head of the United Nations section in Dublin and a member of the Irish UN delegation from 1956 until 1961. In UN General Assembly debates, O'Brien delivered speeches demonstrating Ireland's firm anticolonial stance on issues such as the Algerian struggle for independence. He was also a dedicated propo-

nent of Ireland's neutral position on the numerous Cold War issues that were debated in the United Nations, supporting, among other things, the admission of the People's Republic of China, which he suggested to his minister, Frank Aiken, as the most powerful way of demonstrating Ireland's independence at the UN. He was able to take an active role in UN peacekeeping in the Congo (the former Belgian Congo, now known as Zaire), as the secretary-general's representative in the separatist Congo province of Katanga. He paid the price of exposing the neocolonial involvement of French, Belgian, and British interests in the Katanga dispute against a background of clandestine U.S. anti-Communist interference when he was removed from his Katanga post. He subsequently resigned from the Department of External Affairs and later worked for a time as the vice-chancellor of the newly established University of Ghana. Throughout this period, he continued his involvement in various anticolonial causes, such as the antiapartheid movement. After holding the Albert Schweitzer Chair in the Humanities at New York University in the 1960s, O'Brien was elected as the Labour member for Howth in 1969 and became the Irish minister for posts and telegraphs. He is also a prolific writer and historian, whose work, both fiction and nonfiction, has often been concerned with imperialism and its ongoing effects.

O'Higgins, Bernardo (1778–1842)

Bernardo O'Higgins was born on August 20, 1778, the illegitimate son of Isabel Riquelme, the daughter of a modest Creole landowner, and Ambrosio O'Higgins, an Irish officer in the Spanish Royal Army. Because the Crown discouraged royal officials from establishing alliances with local families, his ambitious father only quietly acknowledged his paternity as he rose in rank from military commander to governor of Chile and ultimately assumed the coveted position of viceroy of Peru. He did, however, see to the boy's education, secretly arranging for him to attend the prestigious Royal College of San Carlos in Lima, Peru, and afterward providing him with a stipend to continue his education in Spain and England. It was during his stay in England (while pining for direction and recognition from his cold and distant benefactor) that O'Higgins came under the influence of Venezuelan expatriate and revolutionary firebrand Francisco Miranda, who converted him to the cause of American independence. The revelation of such connections embarrassed his father, who promptly disowned him. His fortunes abruptly changed in 1801, however, when his ailing father recognized him in a deathbed will, leaving him a valuable estate in southern Chile.

In 1802, O'Higgins assumed the life of a prosperous Chilean landowner, although his English education and liberal ideas and sympathies made him politically suspect. But when Napoleon Bonaparte deposed and imprisoned Ferdinand VII and attempted to install his brother Joseph on the Spanish throne in 1808, O'Higgins and other proindependence radicals took advantage of the crisis of legitimacy by refusing to recognize any Spanish authority other than that of the imprisoned king. They also clamored for the convening of congresses and pressed for "reforms" that were actually designed to dismantle the colonial bureaucracy and to put the country quietly but irre-

trievably on the road to independence. The petty squabbles and struggles of the competing juntas and political factions in Chile, however, were overshadowed by the Peruvian viceroy's 1813 decision to invade the renegade province and to crush the burgeoning independence movement.

Recognizing that Chilean independence would be decided by a contest of arms, O'Higgins sought the military training and experience that would serve him well in the independence wars and would foster his meteoric rise to political power in Chile. He quickly rose to the rank of general in the liberation army and gained notoriety for his heroic stand at the Battle of Rancagua (October 1813); after escaping across the Andes to Buenos Aires, he returned at the head of the division of the army of continental liberation that decisively defeated the royalist forces at Chacabuco (February 1817). In the heady atmosphere of the patriot victory, an assembly of notables in Santiago elected O'Higgins interim supreme director of Chile.

Although O'Higgins successfully routed the last royalist forces on Chilean soil in April 1818, promulgated a provisional constitution for the new nation, and created a navy capable of carrying the independence wars to Peru, he also made some powerful enemies in Chile. He alienated the aristocratic class by confiscating royalist property and by abolishing the trappings of nobility and title; he also offended church officials (and many religious Chileans) by imprisoning and exiling clergymen with royalist sympathies. Ironically, even Chilean nationalists turned against the supreme director, accusing him of being a puppet of the secretive Logia Lautarina (the Masonic lodge founded in Buenos Aires and dedicated to achieving continental independence). Only a few months after Chile's new constitution was signed in October 1822, an assembly of Santiago civilians executed a bloodless coup d'état on January 28, 1823, forcing O'Higgins to resign and leave the country. While in exile in Peru, he accepted a command in Simón Bolívar's army, but he arrived too late to participate in the final battles of the independence wars. From 1825 to his death in 1842, the patriot exile lived out his remaining days in relative poverty and obscurity in Peru.

Okinawa

The islands incorporated into Japan in the nineteenth century as Okinawa had comprised the independent Ryukyu Kingdom, which flourished as a regional trading center with a distinct cultural and linguistic tradition. The Japanese domain of Satsuma conquered the islands in 1609, but they retained a measure of independence until the new Meiji regime asserted its authority and abolished the Ryukyu Kingdom in the 1870s.

As new subjects of the Japanese state, Okinawans were subjected to assimilation policies intended to “Japanize” their language, religion, and names; they also were assigned greater duties and fewer rights than residents of the main Japanese islands. The local assembly was weaker, and the tax burden was heavier, for example. Assimilation policies reached a fevered extreme during World War II, when over 1,000 civilians were wrongfully executed as spies because they spoke the Okinawan dialect. During the final months of the war, Okinawa was sacrificed to buy time for the defense of the main Japanese islands in a battle that cost the lives of 160,000 Okinawan civilians, many of them driven by Japanese troops out of the caves where they had taken refuge from U.S. bombing.

Following its victory in 1945, the United States imposed a military government and seized much of Okinawa for military use. Japan regained sovereignty over the islands in 1972, but even today, densely populated Okinawa, which makes up only 0.6 percent of Japan's total land area, hosts some 75 percent of U.S. bases in Japan and 28,000 of the 47,000 U.S. troops stationed there. Recent years have seen vigorous local campaigns against the sexual violence and environmental problems caused by the U.S. presence, with little response from the Japanese or American governments. Tourism has overtaken the U.S. military in economic importance, but most of the profits from that industry flow to corporations in mainland Japan, leaving Okinawa the nation's poorest prefecture.

W. Donald Smith

Oman

Oman, long the world's main source of frankincense, runs along the eastern extremity of the Arabian Peninsula before turning to trace its southern shore. In this way, several hundred miles of coastline face Iran, commanding the entrance to the Persian Gulf, and then the Indian Ocean. The main settlement of Muscat offers a fine, scorchingly hot harbor, lying on a narrow coastal plain. The latter soon gives way to high mountains. Mountains yield to plateau, and plateau to vast reaches of desert. It is a land of goats and camels, with little cultivation, though the Dhofar region in the southeast provides dates, subsistence cereal, limes, and dried fish.

Oman's strategic significance came from the overland route connecting the Mediterranean to the spices of the East, which rejoined the sea at the Persian Gulf. Oman's location at the gulf's entrance attracted the Portuguese in 1508, gaining in importance when the latter lost Hormuz, on the opposite side of the gulf, in 1622. The Portuguese were expelled in the mid-seventeenth century, an Arab empire rising in its place at Muscat. The Muscat Sultanate seized Portuguese outposts in Africa, such as Mogadishu, Mombasa, and Zanzibar (in 1730). The sultanate even transferred residence to Zanzibar in the 1830s before it was split in two, with one son ruling in Zanzibar and the East African possessions and the other ruling over Muscat.

Britain, which developed treaty relationships with several small gulf states from the 1820s, signed a treaty of friendship with Oman's Sultan Said ibn Sultan (1804–1856). Oman was never to be a colony but instead became a state with a British consul and “special relations” with Britain. These treaty relations prevented foreign powers from interfering with this staging post to India but left internal affairs untouched. Britain confirmed Oman's independence by a December 1951 treaty and in theory ended the treaty relationships it had with other, smaller gulf states in 1971, following a January 1968 announcement it would withdraw

from “East of Suez.” In practice, British officers remained in the Oman armed forces and police to the century’s end, and Britain’s assistance was instrumental in helping the Sultanate survive threats both before and after the official withdrawal.

These threats included an inland revolt between 1954 and 1959, the expulsion of the last Ibadi Imam (an Islamic religious leader who was long dominant in the interior) in 1959, and the 1965–1975 counterinsurgency in the Dhofar region. In the latter situation, British troops and Special Air Service (SAS) soldiers successfully combined small-scale operations with efforts to win hearts and minds. SAS patrols provided agricultural, veterinary, and other services, helping bring insurgency to an end. In 1980, Oman acquired extra insurance in the form of allowing U.S. forces to use facilities on its Masirah Island.

Before then, the British had helped restore tranquility in another way. In July 1970, they gave covert support for the overthrow of Sultan Said bin Taimur, who had ruled since 1932, by his Sandhurst-trained son, Qaboos bin Said. The son was less tradition bound than his father, and the production of oil after 1967 helped him transform a country that banned radios and had just 10 kilometers of tarred roads when he assumed power in 1970. Oman, a territory with just half a million people in the 1950s, grew to a relatively developed country of over 2.5 million by 2000.

Open Door Policy

The Open Door policy of the late 1800s was spawned by a perception among American leaders that China was weakening and that the United States stood to benefit from that situation. They saw in China not so much an opportunity for empire per se but rather a chance to expand economically and commercially. The United States was not alone in that perception; other nations were also hungrily looking at China, each pressuring this weak late-nineteenth-century government for spe-

cial trade and political concessions. At the same time, China was especially vulnerable to foreign intervention, for the Manchu dynasty that had reigned for 250 years was showing definite signs of strain. Indeed, the country was beginning to be informally divided into different spheres of influence among the strongest imperial powers—Russia, Germany, and Britain—all of whom wanted to secure trade positions either by land or by sea. In 1896, Russia won the right to build a railway across Manchuria and received a twenty-five-year lease on a large section of the region. Germany later forcibly secured a ninety-nine-year lease on the port of Kiaochow, along with mining and railroad rights in nearby Shantung. Britain also garnered various port and trade privileges.

In 1898, Albert J. Beveridge, a U.S. senator, aptly proclaimed, “American factories are making more than the American people can use; American soil is producing more than they can consume. Fate has written our policy for us; the trade of the world must and shall be ours.” Senator Beveridge managed to state bluntly an attitude that underpinned the motivation of all the major imperial powers.

In September 1899, American secretary of state John Hay directed a set of notes to the major European powers with economic interests in China. These notes—which formed the basis of what would later be known as the Open Door policy—specifically requested that the Europeans keep the Chinese ports they controlled open to all nations; further, Hay asked them not to grant special privileges to traders from their own countries. The six nations he addressed basically gave noncommittal responses to his requests, but this did not dissuade Hay from announcing that the notion of an “Open Door” to U.S. business had been accepted. The Open Door policy, when coupled with the Monroe Doctrine, reflected the U.S. approach to foreign policy in that era. This quest for “informal empire,” in contrast to the direct acquisition favored by the other imperial powers, fit neatly into the *laissez-faire* mentality of that period in U.S. history.

The Boxer Rebellion that followed further weakened China’s governmental structure, as an international army was called in to quash the rebellion. In 1900, John Hay, fearing a total collapse in China that would allow the imperial

Secretary of State John Hay, shown here in his Washington office, was the author of the so-called Open Door policy, calling for free trade with China and an end to European (and Japanese) spheres of influence there. (Library of Congress)

powers to carve up the country, issued a second and more important set of Open Door notes. In them, he reaffirmed the principle of free and open trade and made a further announcement of the U.S. determination to preserve China's territorial integrity.

The Open Door policy was proactive well into the 1930s, as when Japanese expansionism threatened China's survival; it was Hay's policy that helped fashion the U.S. response, which included verbal pressure but no military efforts to get the Japanese out of China.

Opium Wars

The First Opium War (1839–1842) ushered in the era of imperialist exploitation of China. Since 1759, Sino-Western trade had been confined to the single port of Canton (Guangzhou), with Western merchants under numerous restrictions. Moreover, Western traders were unable to find a commodity that the Chinese would buy in quantity—until they hit on opium in the early nineteenth century. The booming opium import trade that developed was exceedingly profitable for British and U.S. merchants, but it greatly damaged China's public health and economy and promoted a great

deal of crime and corruption. When the Chinese government moved to suppress the opium trade in 1838, the British seized the opportunity to declare war on China in order to get rid of the many restrictions they had been chafing under and saw as barriers to the exploitation of the vast China market.

After suffering numerous military defeats, the Ch'ing (Qing) dynasty was forced to sign the Treaty of Nanking in 1842, ceding Hong Kong and paying a huge indemnity to Britain, opening four more ports in addition to Canton to British commerce, and agreeing to a fixed tariff and consular representation. The floodgate was opened, with China being compelled to surrender more concessions to Britain and the other Great Powers, including extraterritoriality (or the right of citizens of the Great Powers to be protected by their own countries' laws) and most-favored-nation status.

However, opium was not legalized or mentioned in the 1842 treaty, and the subsequent course of Sino-Western trade proved disappointing. The British government therefore planned a war with China to revise the Treaty of Nanking and to expand British commercial interests. Opportunity came with the *Arrow* incident of 1856, when the Chinese allegedly made an illegal search of a ship of Hong Kong registry. In the Second Opium War (1856–1860), the French joined the British in an expedition against China after the murder of a missionary. With Peking under the threat of capture, the Ch'ing dynasty signed the Treaty of Tientsin in 1858, providing for permanent resident ministers representing Western nations in Peking, the opening of more ports, foreign travel in all parts of China, freedom of movement for missionaries, and indemnities for Britain and France. But hostilities resumed in 1859, and the allied forces captured Peking and compelled the signing of the Treaty of Peking, which finally ended the Second Opium War. Indemnities were increased, and Tientsin was opened to foreign trade and residence. The British acquired the Kowloon Peninsula to add to their Hong Kong possession, and the accompanying commercial protocol finally gave British traders the legal right to import opium. Revenues from opium sales propped up the shaky finances of the government of India and the private businesses linking Bombay, Calcutta, and Canton, and it supported the British balance of

trade with Asia. The Opium Wars thus opened the way for the Great Powers, under British leadership, to impose their will on China, and they expanded and ultimately legalized the opium trade that served as a cornerstone of the British Empire.

Organization for Economic Cooperation and Development (OECD)

In the Organization for Economic Cooperation and Development (OECD), the member states—thirty developed countries—have a forum for discussion and coordination of their social and economic policies. Its predecessor, the Organization for European Economic Cooperation (OEEC), was established in 1948 and was responsible for coordinating aid provided under the Marshall Plan. In 1961, the OECD replaced the OEEC when the United States and Canada joined the organization.

To strengthen the patron-client relationship with formal colonies and other developing nations, OECD established a number of institutions to coordinate its efforts. The Development Assistance Committee (DAC) was established initially to organize aid distribution. Today, the DAC's work is guided by the Development Partnership Strategy formulated in 1996. The DAC deals with issues relating to cooperation with developing countries and the coordination of bilateral donors, in an effort to increase their effectiveness in support of sustainable development. The basic aim of the DAC is to encourage aid efforts and improve the quality of the aid given. The OECD Development Center was established in 1962 to provide timely analyses and policy dialogues on developmental issues. The Club du Sahel provides an informal framework for dialogue and cooperation between Sahelian countries in northern Africa, donor governments of the West, and other concerned organizations.

Overall, the DAC coordinated \$53 billion in aid from twenty-one OECD countries from 1990 to

1991 (including debt forgiveness), but only half of this amount was spent in low-income countries with an average per capita income of U.S.\$2 a day. Some 27 percent of the aid was given on the condition that it be used only to purchase goods and services from the donor countries.

The OECD governing institutions include a council, which meets annually, and a secretariat. After more than four decades, the OECD is moving beyond a focus on its own countries and is setting its analytical sights on those countries—today, nearly the whole world—that embrace a market economy.

Organization of African Unity (OAU)

The Organization of African Unity (OAU) was founded in Addis Ababa in 1963 by all of the then independent African states except the Republic of South Africa. The organization was created out of a spirit of pan-Africanism and a belief that the total independence of African peoples could only be realized with the direct participation and encouragement of those who had already achieved independence.

Shortly after gaining independence, the new nation of Ghana played host to the 1958 All-African Peoples Conference, which included representatives of many independence movements seeking to end colonialism in Africa. The spirit of that conference was influential in bringing decolonization to much of Africa. But the calls of some African leaders, notably Kwame Nkrumah, for full unity and a common African citizenship were widely rejected. Nonetheless, in a 1963 conference in Addis Ababa, thirty-two sovereign nations agreed to create the Organization of African Unity “to promote the unity and solidarity of the African States.”

After the initial wave of independence for African colonies, the OAU took up the cause of other Africans still living under colonial rule. Forming the nine-nation Liberation Committee based in Dar es Salaam, the OAU worked for the independence of Africans remaining in colonies,

as well for majority rule in South Africa. Through the OAU Liberation Committee, many organizations working for decolonization found greater international support than they might otherwise had achieved. At the same time, the OAU consistently supported the principle of noninterference in the internal affairs of its members as well as the peaceful settlement of disputes between any of them. The influence of the organization in ending colonialism on the Africa continent, however, was greater than its success in encouraging the peaceful resolution of conflict between independent African nations.

Organization of American States (OAS)

The Organization of American States (OAS), known in Spanish as the Organización de Estados Americanos (OEA), was established at the Ninth International Conference of American States, held in Bogotá, Colombia, in 1948. It is the direct linear descendent of the International American Union and the Commercial Bureau of the American Republics, which were set up as a result of the First International Conference of American States in Washington, D.C. (October 2, 1889, to April 19, 1890). The International American Union and its bureau became the Union of American Republics and the Pan-American Union in 1910.

The OAS, like its predecessors, is the institutional manifestation of a range of competing and complementary pan-American visions that have informed efforts at cooperation by the governments of the Western Hemisphere for many years. The original member countries of the OAS were the United States and twenty Latin American countries (including Haiti) that had successfully emerged as independent nations following periods of European colonial rule. In 1962, the government of Cuba was excluded from participating in the OAS, but it remained a formal member, as there was no provision in the organization’s charter for complete expulsion. By the beginning of the

Panamanian President Omar Torrijos signs the Panama Canal Treaty of 1977, calling for a return of the canal and the Canal Zone to Panamanian control. Organization of American States President Alejandro Orfila, immediately to Torrijos's right, looks on. (Associated Press)

1990s, there were thirty-five member countries, with several newer members, many of them former British colonies (such as Barbados) as well as the former Dutch colony of Suriname. Canada joined in 1990, and Belize and Guyana joined in 1991. The membership has remained unchanged since the early 1990s.

Beginning with its foundation in the early years of the Cold War, the main focus of the OAS has been on conflict resolution, collective security, peace settlements, and peacekeeping. Since 1975, the OAS has also placed a greater emphasis on the protection of human rights and, more recently, the promotion of democracy. In the second half of the 1960s, the OAS formally enhanced the status of the Inter-American Commission on Human Rights (IACHR), which led to the establishment of the Inter-American Court of Human Rights in 1978 (with headquarters in Costa Rica). The growing emphasis on the promotion of democracy was reflected in the *Santiago Commitment to Democracy* adopted at the General Assembly of the OAS in Santiago, Chile, in 1991. The specific resolution on

representative democracy that emerged requires the secretary-general of the OAS to convene a meeting of the organization's Permanent Council within ten days of the overthrow of a democratically elected government in the hemisphere so that it can decide on a course of action. For many years, the OAS has also played a role as an observer and monitor of elections in member nations.

Organization of Petroleum Exporting Countries (OPEC)

The Organization of Petroleum Exporting Countries (OPEC) was founded in September 1960 with the primary aim of stemming the decline in oil prices and presenting a unified front to foreign oil

companies. The various oil companies had dominated the Middle East following the collapse of the Ottoman Empire and the League of Nations' imposition of mandated territories. Though little was achieved during the 1960s, the thirteen members of OPEC, including Venezuela, Saudi Arabia, Iran, and Indonesia, shared information and worked for greater coordination. From 1968 onward, they increased their coordination as the demand for oil dramatically increased and prices were being pressed further downward. Libya led the way in negotiations with the oil companies; ultimately, these efforts resulted in the 1971 Teheran Agreement, which increased prices. By 1972, the producing countries sought greater control of their resources.

OPEC gained considerable power following the October 1973 Arab-Israeli war. OPEC's member nations' actions had broken the neocolonial relationship with the oil companies. Following the war, production was reduced by 5 percent per month, and exports to the United States were embargoed. The result was dramatic. The so-called oil crisis of 1973 led to a quadrupling of prices by 1974. The impact was severe, as Western development and economic growth had been somewhat predicated on the cheap availability of oil. Western stock exchanges fell dramatically. OPEC representatives argued that Western powers had frequently increased the price of their food exports to the Middle East and that such reciprocation was justified.

Since 1973, OPEC members have continued to coordinate their activities, but relations with the principal oil-consuming areas—the United States, the European Union, and Japan—have been more harmonious. Moreover, divisions within OPEC, especially among the Middle Eastern countries, have undermined the organization's potential to use oil as a political weapon.

Ottawa Agreements

The Ottawa Agreements were a series of twelve bilateral trade agreements negotiated in Ottawa by

Canada, Britain, and other Commonwealth dominions and territories in 1932. These trade pacts were designed to reduce or eliminate tariffs and duties on goods traded within the constituent elements of the old British Empire. Britain saw the negotiations as a way to boost British exports to dominion members, yet the agreements served to increase the import of dominion members' goods into Great Britain. The agreements also called for an increase in tariffs and duties for nonempire imports throughout the Commonwealth, a policy that greatly angered other countries—especially the United States, whose largest trading partner is Canada.

Ottoman Empire (Sublime Porte)

Known to its citizens as *devlet-i aliye* (the exalted state) and in Europe as the Sublime Porte, the Ottoman Empire was a great power in the Middle East between 1400 and 1918. The empire was founded by Turkish clans who, although a minority, maintained control to the very end. The Ottoman domain stretched from modern Algeria to Iraq and from Romania to the Sudan, and though presenting an image of grandeur, it was a giant with feet of clay for much of the eighteenth, nineteenth, and twentieth centuries. Very rough estimates number Ottoman subjects at 24 million in 1800. These people ranged from sophisticated city folk to semicivilized nomads. Although most of them lived in the country, the empire had significant urban centers, such as the capital, Constantinople, and Cairo, Damascus, and Baghdad.

Ruling this sprawling, multiethnic state was the *padishah*, or sultan, who, in theory, was both an absolute monarch and leader of the state religion. In practice, sultans governed in conjunction with a confusing array of local officials. These ranged from loyal subordinates to banditlike *derebeys* (valley lords), who maintained semiautonomous fiefdoms within the empire's heartland. All such men were *ayans* (notables), distinguished by the fact that they had a following—retainers who

OTTOMAN EMPIRE

would do their bidding, even if this was contrary to Ottoman authority.

Their empire was a collection of provinces, special military zones, autonomous regions, tributary states, and local governments sometimes based on religious affiliation. The most common was the *sancak*, an administrative unit ruled by a *bey*. The latter was not only a government official but also, in the Ottoman sense, an aristocrat. Higher up was the *pasa*, who ruled a more important or larger territory. Very significant regions, such as Egypt, rated *vilayet* status, with a viceroy, or *vali*.

Ottoman government centered about the court in Constantinople, where twelve powerful officials formed a *divan*, or council. These individuals advised sultans, like European cabinets. Their leader, equivalent to a prime minister, was the *sadr-i a'zem*. Known to Westerners as the “grand vizier,” this man acted as the sultan’s agent, directing government ministries, commanding armies, and conducting diplomatic negotiations. By the late 1600s, grand viziers were sometimes more powerful than sultans. Another key office was that of the *caliphate*. This position was held by the sultan, and the ancient religious title declared him the leader, or *caliph*, of all Muslims. The relationship stretched beyond the empire and played a role in the story of colonialism. Sultans could influence coreligionists as far away as Indonesia or central Africa.

Although Ottoman leaders pushed their own colonial agendas in Arabia and along the Red Sea coast of northeast Africa, they were more often victims rather than players in the nineteenth-century world of imperialism. Indeed, their very existence was sometimes threatened by greater powers—for example, Russia, which described this rival empire as “the sick man of Europe.” Such in-

tense rivalry helped create the so-called Eastern Question, a nineteenth-century debate over Ottoman survival. Nationalism was also part of the equation, as non-Muslim minority groups, such as the Greeks and Serbs, fought wars of national liberation against their Ottoman overlords. These Balkan conflicts nearly always attracted other European powers, further exacerbating the Eastern Question issue.

Territorial problems greatly stressed imperial legitimacy and were not exclusively fixed in the Balkans. Large Muslim regions such as Algeria, Libya, and Egypt fell under varying degrees of French, Italian, and British authority between 1830 and 1912. Other parts of the empire saw Western businesspeople, missionaries, and diplomats take advantage of the old capitulatory treaties to gain ascendancy over local rivals and enjoy extraterritorial rights.

Reactions ranged from efforts at government reform to anti-Christian bigotry to the horrific Armenian massacres of 1915. The latter, corresponding with the Ottoman Empire’s fatal entry into World War I, were but one of many atrocities that befell all groups as the exalted state collapsed into a bloody mass of nationalist and sectarian conflicts. The last vestiges of imperial authority disappeared in 1923 when the new Turkish Republic abolished the caliphate, ending any role for the last Ottoman sultan, Mehmed VI.

P

Pacifism

To some, pacifism stands in stark contrast to the very concept of colonialism. With an emphasis on peace and nonviolence and an appreciation for conciliation, pacifism does not seem to have any deep roots in the colonial enterprise. At best, it would appear to hold much greater appeal for the subjects of colonialism rather than the colonizers themselves. Yet even those who opposed colonial rule in their territories have, for the most part, rejected the appeal of pacifism. The campaigns against colonial rule throughout the world have instead generally emphasized the idea of a “struggle” against the colonizers and frequently been willing to call for military solutions. Indeed, some theorists—such as Frantz Fanon—called explicitly for violent solutions as a means of purging the colonized from the effects of their oppression.

This is an understandable reaction to the process of colonial conquest. In certain instances—for example, in Africa following the Conference of Berlin—some colonial powers attempted to extend their control by peaceful means such as negotiation and treaty making. But all too often, such efforts were followed by “pacification” campaigns that were undertaken by the extension of police, if not military, power. These patterns replicated experiences elsewhere—by the Spanish in Latin America, the British in Asia, and the United States in the Philippines. These situations did create some small measure of pacifist response,

although limited and often isolated. Perhaps the best-known examples were associated with the Society of Friends (also known as the Quakers) in Britain and the United States and later with the followers of Mohandas Gandhi in India.

The Quakers were members of a British non-conformist sect, founded in the seventeenth century, that became prominent in English colonization in Ireland and British North America, especially Pennsylvania. Their pacifism stemmed from religious egalitarianism and a belief that any exercise of power was contrary to the Christian principles they practiced. This was particularly evident in the Quaker opposition to slavery, which, at least initially, divided believers in the American colonies. The American Revolution severely tested Quaker pacifism, with many members of the sect supporting the colonial challenge to British colonial authority while seeking to avoid personal involvement in the conflict. Others chose to remove themselves from the conflict by relocating northward to other British colonies—such as Nova Scotia—where they were less likely to face such difficult choices.

Quaker pacifism also influenced many campaigners for reforms within the colonial enterprise more generally. They opposed violence against colonial peoples, even those who were in protest or rebellion against colonial authorities. These efforts included opposition to the slave trade and later to colonial slavery as well. Quakers were also active in

Mahatma Gandhi, Indian independence leader, consults with future Indian prime minister Jawaharlal Nehru in a 1946 meeting of the Indian National Congress. Gandhi's successful nonviolent struggle against British imperial rule was one of the great triumphs of pacifism in the twentieth century. (Library of Congress)

opposition to forced labor in the colonies, and many joined E. D. Morel in the Congo Reform Movement and other efforts aimed at preserving peace in the colonial territories. Among the most well known of these was John H. Harris, whose growing pacifism led him from participation in such activities to acceptance of Quaker beliefs late in his life.

Perhaps the most ardent example of pacifism in opposition to colonial power, however, was embodied in Mohandas Gandhi. It was in South Africa that he first put his pacifist principles into practice to oppose the racially based discrimination he and his fellow Indian residents faced in Natal. He attempted to demonstrate his support of British authority by organizing a noncombatant ambulance corps during the South African War; however, his other activities—including nonviolent protests—led to his imprisonment by South African authorities. After his release, he returned

to his homeland, where he continued to lead nonviolent protests against various British interests in India. By 1920, he was one of the key leaders of the Indian National Congress, and he was imprisoned for various activities that increasingly were targeted at British rule on the subcontinent. His pacifism led him to refuse to support the British during World War II and to actively campaign for the Quit India Movement, which again led to his imprisonment.

Gandhi's nonviolent approach and his pacifism were much admired in India and praised around the world, but they also seemed to encourage even more violent opposition. Sometimes, this came from colonial authorities, but there was also opposition from individuals who supported his cause while broadly disagreeing with his methods. One such detractor was persuaded to assassinate Gandhi in 1948 shortly after India achieved independence from Britain. This event was a setback to

appeals for pacifist efforts on behalf of other anti-colonialist movements around the world. Not surprisingly, though, leaders of colonial regimes generally held up Gandhi as the model they most wished to see in those who opposed their continued rule. In such circumstances, it is most surprising that the processes of decolonization were frequently as peaceful as they actually were.

Padmore, George (1903–1959)

George Padmore, born Malcolm Nurse in the Caribbean nation of Trinidad and Tobago, was a political activist, pan-Africanist, and author. Of the many Caribbean nationals who distinguished themselves in the international arena during the twentieth century, Padmore is the least known and least appreciated. Unlike celebrated, world-class Caribbean-born intellectuals such as C. L. R. James and Eric Williams, Padmore made his most significant contributions to the anticolonial movement not through theoretical works but instead through his strong administrative skills and his practical involvement in the fight for black liberation. Padmore also wrote several books and edited the journal *The Negro Worker*.

Padmore received his early education in Trinidad and pursued his postsecondary education in the United States. He studied at Fisk University, New York University, and Howard University. In his university years, Padmore was a militant and often the organizing force behind student protests. It was also in this period that he joined the Communist Party and, in 1929, went to the Soviet Union. He played a key role in organizing Soviet propaganda directed at the peoples of the colonial empires and at African Americans. Gradually, Padmore became disenchanted with

Stalinism, as he believed the Soviet Union's anti-colonial activity was reduced by Moscow in the hope that it would gain greater acceptance in the West. In 1934, he resigned from the party, and by 1935, he had moved to London.

It was there that Padmore met many radicals from African countries—some of whom were to lead their countries to political independence in later years. During this period, Padmore's involvement in the pan-Africanist movement became crystallized, and he emerged as one of its leading apostles. It was also during this period that he met Kwame Nkrumah—a key actor in the fight for Ghana's independence. When Nkrumah became the president of an independent Ghana in 1957, he made Padmore head of Ghana's African Bureau for the Advancement of African Unity. Unfortunately, the organization did not benefit from his experience for long, as Padmore died in 1959.

Pakistan

The Islamic Republic of Pakistan became a sovereign state on August 14, 1947. It originally consisted of East and West Pakistan, but East Pakistan separated in 1971 to become Bangladesh. The national language is Urdu, although other major languages are used, including Punjabi, Sindhi, Brahui, and Farsi. The capital is Islamabad.

In 1930, the poet Muhammad Iqbal (1877–1938) called for the creation of a state for the Muslims of India in the northwest part of the country. In 1933, Choudhary Rahmat Ali (1897–1951) coined the name Pakistan, but the Pakistan movement did not become a serious effort until the

Lord Louis Mountbatten, the last British viceroy of India (fourth from left), and Mohammed Ali Jinnah (third from left) preside over a ceremony ending British rule over Pakistan in August 1947. (Library of Congress)

election of Mohammad Ali Jinnah (1876–1948) as president and Liaquat Ali Khan (1895–1951) as general secretary of the All-India Muslim League in 1936. The league received its main support from Muslim politicians of the United Provinces. They, and Muslims in other parts of India as well, believed that the Indian National Congress was acting in the interests of the country's Hindus, to the detriment of the Muslim way of life. In its constant propaganda against the congress, the league issued the Pirpur Report in 1938 and the Shareef Report in 1939, which cataloged actions taken by the congress that were deemed inimical to Muslim interests. With the creation of the newspaper *Dawn* as a weekly in 1941 and as a daily in 1942, the league was increasingly seen to be defending Muslim interests in India. On March 23, 1940, at Lahore, the league promulgated the Pakistan Resolution, which demanded the establishment of Muslim states in northwest and northeast India, and from that point until 1947, the creation of a separate Pakistan became the league's unwavering

demand. At the Simla conferences in 1944 and 1945, Jinnah held firm to this demand, as he did during the cabinet mission of 1946. The following year, India was partitioned into the two states of India and Pakistan.

Palestine

Long an area of intense conflict and rivalry and a crossroads between Asia, Africa, and Europe, Palestine experienced waves of imperial conquerors, including Egyptians, Assyrians, Babylonians, Persians, Greeks, the Roman and Byzantine Empires, Arabs, Christian crusaders, and, ulti-

mately, the Ottoman Empire. Consisting of three separate districts within the Ottoman Empire, Palestine as a modern entity came into existence due to the empire's collapse during World War I (1914–1918); for the British, this underscored the region's strategic importance due to its proximity to the Suez Canal. The November 2, 1917, Balfour Declaration, anticipating the arrival of British forces in Jerusalem, paved the way for massive Jewish immigration and settlement, thus profoundly altering demographic patterns and provoking the tensions between populations that persist today. From London's point of view, the Balfour Declaration would aid British imperial aims in the region, as would the establishment of the mandates for Palestine and Transjordan under British control.

Palestine also became increasingly important to British imperial aims as a terminus for oil from Britain's mandate in Iraq. Persistent Jewish immigration to Palestine continued to shift the demographic composition of the region and led to widespread Arab resistance, as expressed most significantly between 1936 and 1939. The British responded by limiting Jewish immigration, but the European Holocaust provoked considerable sympathy and support for the Zionist effort to create a Jewish state in Palestine after the war. As the British continued to lose their grip on Palestine, the crisis was deferred to the United Nations in 1947, which recommended a partition plan granting a majority of Palestine to the Jews (who constituted only 30 percent of the population). In subsequent fighting with the local Arab population and later with surrounding Arab countries, the new state of Israel gained an even larger share of Palestine, and as many as 700,000 Arabs became permanent refugees.

during his service as foreign secretary (1830–1834, 1835–1841, and 1846–1851) and prime minister (1855–1858 and 1859–1865).

Palmerston entered Parliament in 1807 as member for Newport, an Isle of Wight pocket borough controlled by a local family called Holmes, on the condition that he never set foot on the island. He served as secretary at war from 1827 to 1830, when he took over the Foreign Office in the Whig-Canningite coalition under Earl Grey. He was out of office during Robert Peel's ministry but returned with the creation of Lord John Russell's government in 1846. He championed any cause that strengthened British influence or weakened the power of a rival and often spoke his mind in a fashion that blurred the distinction between personal opinion and official position. This habit cost him the Foreign Office in 1851, after he voiced his approval of the creation of the French Second Empire in contradiction to the official ministry position of strict neutrality. He took an unaccustomed role as home secretary with the formation of the Aberdeen government, which in turn resulted in his elevation to prime minister due to the lackluster leadership of the ministry during the Crimean War. As foreign secretary and as prime minister, he was, to a certain extent, an idealist, believing that matters of principle were as strong a justification for guiding national and foreign policy as commercial or strategic interests.

Palmerston's main diplomatic fears were that Russian and French competition would interfere with British ambitions. Central to those fears were India and the Far East and the difficulty and urgency of maintaining communications with these areas via the Mediterranean Sea. Any combinations of Russia and France were to be avoided; the former, expanding yearly into Central Asia, was a threat to India, and the latter, as a Mediterranean power, was a potential threat to imperial communications. Much of his foreign policy was based on forestalling unilateral action by rival powers; both the First Afghan War and British intervention in the Turkish-Egyptian crisis in 1839 are examples of actions taken to preclude the expansion of Russian influence. He favored imperial expansion as a means to accomplish imperial stability, observing in the wake of the Persian war in 1857 that both Kabul and Kandahar would sooner or later have to be absorbed by British India. He also

Palmerston, Lord (1784–1865)

As a British Whig-Liberal statesman, Lord Henry John Temple Palmerston had his greatest impact

influenced affairs through inaction, steering a course of neutrality during the American Civil War despite brushes with involvement in the *Trent* affair, when Britain built ships for the Confederacy, and the controversy surrounding the *Alabama*. Palmerston died in office in 1865.

Pan-Africanism

Pan-Africanism is both a political and an emotional expression of the unity and independence of peoples of African descent. As such, it has had expressions throughout the world and not merely in Africa. But the strongest manifestations of the philosophy were associated with resistance to colonialism in Africa and the Caribbean.

It is impossible to pinpoint the first usage of the term, although it certainly was recognizable to many who attended—or wished to attend—the First Pan-African Congress, held in London in 1900 and organized by Trinidadian Henry Sylvester Williams. That first congress marked the very beginnings of the widespread development of pan-Africanist ideas, although the previous conferences on Africa held in Chicago and Atlanta in the 1890s laid important foundations for the London meeting. Among other calls for unity of the world's black peoples, the congress also considered the negative effects of colonial rule on black populations. However, few practical changes resulted from these efforts.

Attempts to develop a formal pan-African movement were stillborn, although many of the ideas found expression in Marcus Garvey's creation of the Universal Negro Improvement Association (UNIA) in Jamaica and its growth in the United States. Garvey, though, was not a participant in the 1919 Second Pan-African Congress, organized in Paris by W. E. B. Du Bois. This congress coincided with the Versailles Peace Conference following World War I. The delegates—from Europe, the United States, the Caribbean, and Africa—

called on colonial powers to ensure that “in time, Africa is ruled by consent of the Africans.” The 1919 congress was followed a year later by a much larger meeting, organized in New York by Garvey's UNIA, which asserted a declaration of rights for blacks everywhere. Despite Garvey's absence from subsequent conferences—in part due to his personal dispute with Du Bois—the movement found expression in congresses held in London and Europe in 1921 and 1923 and in New York in 1927.

Garvey's legal difficulties in the United States and the worldwide impact of the Great Depression reduced the prominence of the pan-African movement—except in colonial capitals. Throughout the colonial world, governments were alerted to what they saw as the perils of pan-Africanism and, perhaps even more important, to Garveyism, which continued to spread its influence through networks of followers and the circulation of the UNIA newspaper, *The Negro World*. Sharing information through their European governments, colonial authorities sought to reduce the local influence of many pan-Africanists by outlawing their activities and arresting many of their leaders. The coming of World War II, however, changed the dynamics of the pan-African movement. The 1945 postwar congress, held in Manchester, England, welcomed far fewer representatives from the United States, although Du Bois was in attendance. Instead, this meeting was dominated by many more young African leaders, including Jomo Kenyatta and Kwame Nkrumah.

Responding to the nationalist stirrings among the new leadership, the 1945 congress specifically made a “demand for Black Africa[n] autonomy and independence,” further asserting “we are determined to be free.” This signaled a fundamental pattern of anticolonialism and anti-imperialism that emerged throughout the world in the second half of the twentieth century and that led to the substantial process of decolonization. Drawing on the heritage of pan-Africanism, newly emergent African states held a series of meetings in Accra (1958) and Monrovia (1959 and 1961), leading to the creation of the Organization of African Unity at a 1953 meeting in Addis Ababa. Rejecting the situations of people of African descent in other parts of the world, the movement had shifted primarily to a focus on Africa itself, devoting its support to anticolonial movements in remaining

colonies, particularly in southern Africa, as well as the antiapartheid movements in South Africa.

Panama

Panama, located at the narrowest point on the isthmus between North and South America, attracted the attention of the explorer Vasco Nuñez de Balboa in 1501. By 1510, the Spanish established a settlement at the mouth of the Chagres River and also founded San Sebastian de Uraba. Later, the settlers moved northeast and renamed their city Santa Maria de la Antigua del Darien. The local Indians, under the domination of Balboa, revealed the existence of a large sea and an empire to the south where he could find gold in abundance. The conquest of the Incas required the shipping of confiscated gold around the tip of South America, a risky venture plagued by bad weather and pirates. Balboa decided to transport the gold across the narrow, 40-mile strip of land that separated the Pacific and Atlantic Oceans at Panama. By 1550, Panama and Portobello operated as the principal cities of the region, with English raiders continually attacking these lucrative centers of trade.

By the 1800s, agitation erupted among the Spanish colonies in the New World. In 1821, Panama seceded from Spain and joined Gran Colombia but continued to elect its own governor until 1843, when the government in Bogotá consolidated its power over the region. A proposed railroad project, with investors from the United States, spurred interest in a canal during the late 1800s, with the French negotiating rights of con-

struction. Because of the technological and financial difficulties involved, the French offered to sell their assets to the United States. Negotiations stalled after the Colombian government failed to accept the initial offer, and President Theodore Roosevelt supported a Panamanian revolt against Colombia in exchange for the rights to a 10-mile strip of land, \$10 million, and an annual payment of \$250,000. Although the Panamanian government functioned independently of the United States, the issue of sovereignty over the Canal Zone resulted in agitation for complete local autonomy over the land controlled by the United States. In 1977, the two nations signed a treaty providing for the gradual transfer of operations back to Panama by the year 2000, thus ending foreign involvement in the country.

Panama Canal

One of the two most important artificial waterways in the world, the Panama Canal cuts across the isthmus between North and South America in a series of locks and lakes extending 51 miles, allowing ships to pass between the Atlantic and Pacific Oceans and thereby shortening the voyage by approximately 8,000 nautical miles. Founded in 1879 by Ferdinand de Lesseps, the French Compagnie Universelle du Canal Interocéanique commenced excavation of the proposed sea-level channel only to encounter financial, technological, and medical difficulties during construction. On the verge of bankruptcy, owners of the French company offered their shares to the United States in exchange for \$40 million. Negotiations with the Colombians over the long-term rights to the project ended in their rejection of the U.S. offer of \$10 million and an annual payment of \$250,000 in rent, as agreed to in the proposed Hay-Herran Treaty. President Theodore Roosevelt, anxious to secure U.S. control over the project, supported a Panamanian-led revolution, recognized the fledgling country, and authorized his secretary of state, John Hay, to negotiate the Hay–Bunau-Varilla

Treaty, which granted the United States the sole right to control and operate the Canal Zone. Internal social and political unrest resulted in U.S. intervention in 1908, 1912, 1918, and 1925. In 1936, the United States relinquished the right of intervention by ratifying the Hull-Alfaro Treaty. During World War II, Panama granted U.S. requests for additional defense sites to protect the canal, many of which reverted back to Panama immediately after the conflict but some of which the United States continued to control for decades. By the 1980s, a disputed election resulted in the imposition of sanctions and the withholding of the annual payment to Panama by President Ronald Reagan. Continued tensions led to the loss of U.S. life, with a quick retaliation that ended with the capture and extradition of Panama's leader, Manuel Noriega, to Florida, where he was tried and sentenced to prison on drug-trafficking charges. By a treaty signed in 1977, Panama gradually assumed control over the Canal Zone, with the United States relinquishing all control by December 31, 1999.

The Papacy

Derived from the Latin *papa*, meaning “pope” or “father,” the word *papacy* has four separate (but related) meanings: the office of the pope as bishop of Rome and head of Roman Catholicism and its hierarchy; the system of church government under the pope, who has supreme authority; the collective succession of popes from St. Peter to the present; and the period in which any one pope is in office. As both a human and a divine institution, the papacy served to defend and to spread the basic truths of the Christian revelation. The pope as supreme pastor took the leading role or primacy in that mission.

In its charter, or mission, from Jesus, “Go ye and teach all nations” (Matt. 28:19), the papacy drew its basic justification for the global missionary activity of Christianity throughout history. However, when the Spanish, Portuguese, Dutch, and English

conquerors also sought to legitimate imperial conquests under the religious duty to convert the heathen to the Christian faith, religion and politics often became indistinguishable. Frequently, rulers claimed papal authority for their actions, and by the sixteenth century, numerous political tracts appeared and justified the establishment of overseas colonies. For example, the papal grants of Alexander VI in 1493 to Ferdinand and Isabella—which enabled them to take over a region vaguely defined as “such islands and lands . . . as you have discovered or are about to discover”—were used to justify Spanish colonial conquests, despite the assertions of many loyal Catholic theologians that such claims were spurious. Yet ever since, the theology of Christian missions has been much abused both by popes and by Christian rulers in their efforts to justify imperial secular and territorial ambitions.

Papua and New Guinea (Papua New Guinea)

The island of New Guinea, encompassing 306,000 square miles, is the second largest on the planet. The coastline of the western end of the island was known to Europeans as early as the sixteenth century, and ultimately, the Dutch established control as far as 141° east longitude. The eastern part of the island (as well as the Bismarck Archipelago, the Admiralties, and Bougainville) became known to Europeans only in the eighteenth century.

The European colonizing powers showed little interest in eastern New Guinea until the late nineteenth century. In 1884, faced with German penetration in the area, Queensland annexed Papua (the southeast part of the island). London disavowed the annexation but in 1884 agreed with the Germans to a partition, which gave to the former the southeast (Papua) and to the latter the northeast as well as the Bismarcks and Bougainville (German New Guinea). In 1888, Papua be-

U.S. Marines march through the mud in Papua New Guinea during World War II. After the war the territory came under UN trusteeship and won its independence in 1975. (Library of Congress)

came a crown colony, and in 1906, Australia assumed responsibility for it. Little was done in the way of exploitation. The Germans, however, with their administrative center at Rabaul, were more active in exploiting the copra trade, first under the Neuguinea-Kompagnie and then under direct colonial control from Berlin. With the outbreak of World War I in 1914, Australia quickly occupied German New Guinea, and under the provisions of the Treaty of Versailles, it received the colony as a mandate. Papua and New Guinea were maintained as separate administrative units, and with the exception of a gold rush in the Markham Valley in the 1930s, little else was done in regard to changing the status quo.

World War II ushered Papua and New Guinea into the modern era; some of the most savage fighting in the Pacific occurred there. In early 1942, to meet the demands posed by the Japanese invasion of much of Papua and New Guinea, Australia combined Papua and New Guinea under a

single administration, the Australian New Guinea Administrative Unit (ANGAU), which was responsible administratively for civil affairs and operationally for overseeing the labor supply for civilian and military use. The indigenous population also provided military forces to the Allies. The most famous of these, the Papuan Infantry Battalion, veteran of the Kokoda Trail battle, was later joined by the First, Second, and Third New Guinea Infantry Battalions to make up the Pacific Islands Regiment, which fought with distinction until the surrender of Japan in 1945.

After the war, with the mandated territory becoming a UN trusteeship, Australia took a more active role in the area. Economic aid in particular was increased not only for postwar rebuilding but also for economic development. The highlands were opened up for the first time, and new export crops such as coffee were introduced. Politically, as the anticolonial movement gained headway, Australia began the installation of self-government,

establishing a legislative council in 1951 and local government councils in 1952. In 1964, a house of assembly was elected, and in 1972, self-government was granted. Independence was achieved for Papua New Guinea three years later.

Paris, Peace of (1783)

The Peace of Paris (also known as the 1783 Treaty of Paris) officially ended British colonial rule in the thirteen American colonies. Aided greatly by the French, the United States had won its war against Great Britain, and it sent John Jay, Benjamin Franklin, and John Adams to negotiate the terms of peace. Along with the British, the French, Dutch, and Spanish all needed to be dealt with. The U.S. negotiators pursued their mission with the following goals: to complete the independence of the United States; to make a claim to the whole of British North America, including the Mississippi Valley and lands beyond the Ohio River; and to secure continued access to the northeast fisheries. Great Britain sought the resolution of two important issues—compensation for loyalists who left U.S. territory and the recovery of British debts (including the right of the British to carry away their slaves and other property). France had hoped to achieve some sort of imperial power over the former British colonies as its “reward” for its assistance to the Americans, and Spain sought to restrict U.S. westward expansion and secure the return of Gibraltar from the English. All the European powers sought to restrict the U.S. fishing fleet, as they saw it as a “nursery” for seamen who could then be engaged to make the United States a naval power.

Although the United States did not gain the whole of British North America, the ten articles of the treaty greatly favored the Americans: they

achieved complete independence and sovereignty with no European “colonial” entanglements; the U.S. territorial boundary extended to the Mississippi and included the lands north of the Ohio (the Northwest Territory); they obtained unrestricted rights to the northeast fisheries; and they agreed only to “recommend” that individual states compensate the British for their losses—the federal government itself was not to be liable for these costs. In addition to this compensation, Great Britain did manage to retain its Canadian colonies, and its right to navigate the Mississippi was assured. Although Great Britain received the signatures of France and Spain on the provisional articles of the treaty, the determined efforts of the U.S. negotiators kept the French and Spanish out of the treaty negotiations, and none of their concerns were addressed in the final treaty document. The Peace of Paris was signed by Franklin, Adams, and Jay (for the United States) and David Hartley (for England) on September 3, 1783.

Paris, Treaty of (1763)

The British conquest of North and Central America neared its apex with the defeat of the French on the Plains of Abraham in Quebec in 1760. The British were also at war with Spain, officially declaring war on both France and Spain on January 4, 1762, after many years of “unofficial” imperialist expansion and conflict with both these New World European powers. By the spring of 1762, England’s foes were suing for peace. In addition to France, England, and Spain, the Seven Years’ War (1756–1763) involved Sweden, Prussia, Germany, and Russia.

The 1763 Treaty of Paris recognized British sovereignty over North America in areas east of the Mississippi River; Spain retained nominal con-

trol over the territory west of the Mississippi. France retained the small islands of St. Pierre and Miquelon off the Newfoundland coast as shelter for the French fishing fleet. Great Britain agreed to allow French Roman Catholics, now subjects of the British Crown, the freedom to practice the “rites of the Romish church.” The treaty also allowed for the peaceful emigration from North America of French subjects who sought to leave.

Pathet Lao

Although the Pathet Lao (meaning “Laos State”) was officially founded as a political party by the Laotian prince Souphanouvong, it was, in fact, mainly a highly structured fighting force whose major aim at first was to end French rule in Laos. It was founded in the ashes of the Lao Issara (meaning “Free Laos”), an independence party that dissolved itself in October 1949 when a new Laotian government was established by an agreement signed a few months earlier with the French. Although this document granted limited sovereignty to Laos within the framework of the French Union, foreign affairs and national defense remained in the hands of the French authorities. Souphanouvong and his allies felt that this arrangement was unacceptable and so formed the nominally neutralist but in fact pro-Communist Pathet Lao to counter the new government.

Although the Pathet Lao began as an underground movement, it gained a foothold in northern Laos in 1953, most notably after the Viet Minh successfully invaded this region in the course of their war against the French. Until the end of 1954, the Pathet Lao consolidated its hold on these regions by, among other things, enacting an intensive land reform program. A few months after the July 1954 cease-fire agreement was reached between the French and the Viet Minh in Geneva, the Pathet Lao openly fought the proroyalist and pro-French forces based in Vientiane. After a number of relatively successful campaigns, the Pathet Lao was in-

vited to join in a coalition government in November 1957 under the terms of the short-lived Vientiane Agreement. By May 1959, however, the coalition had fallen apart, and most of the leaders of the Pathet Lao were arrested.

After fourteen years of civil war, made more complicated by the Vietnam War and by U.S. military actions throughout the region, the second Vientiane Agreement, in 1973, appointed another short-lived coalition government that included the Pathet Lao. When the North Vietnamese forces defeated the southern forces, the Pathet Lao managed to take power in its own right by capturing Vientiane in April 1975. Its history as a fighting force disguised as a political party ended in December of that year when it declared the People’s Democratic Republic of Laos and became the Lao People’s Front.

Paton, Alan (1903–1988)

Alan Paton was a prominent white, English-speaking South African novelist and political activist. A religious man, he spent most of his early working life as a teacher, primarily as headmaster of a reform school for young African men. Disillusioned by the prison system of which he was inexorably a part, Paton became a crusader for prison reform. Out of this activism, he wrote his most important work, *Cry, the Beloved Country*, which was published in 1928. Coming as it did at the same time as the National Party victory in South African elections and the subsequent development of the apartheid system in his country, this novel was not generally well received in South Africa. However, the book was a sensation worldwide and a best-seller in many countries.

The story centered on an African father and son, the latter a criminal, and highlighted the oppressive nature of South African society even before the development of the apartheid legal system. But the novel concerned more than just racial tensions, which gave it a much more universal appeal. It was translated into many languages and transformed into a musical play and a motion picture; a second motion picture version was

filmed in the 1990s. The real impact of the book, however, was that it seared the image of South Africa as an oppressive, racist society into the minds of many in the world community.

Paton's subsequent career as a political figure reinforced the message of his book, especially when he founded the South African Liberal Party, which stood squarely for universal suffrage. Ultimately, the party was banned by the South African government, although Paton himself was not. He was, however, prohibited from traveling outside the country from 1960 to 1970. This did not reduce his international appeal even though his political effectiveness within the country diminished. Paradoxically, he continued to be seen as too liberal by many South African whites while at the same time being viewed as too moderate and ineffective by most South African blacks. Nonetheless, Paton remained an optimist about the possibility of a multiracial democracy in South Africa until his death in 1988.

Pearl Harbor

A key U.S. naval base on the island of Oahu in the Hawaiian Island chain, Pearl Harbor was the scene of one of the most devastating defeats in U.S. naval history when, in December 1941, an air attack by Japanese imperial forces destroyed much of the U.S. Pacific Fleet and triggered America's entry into World War II.

Originally known as Wai Momi to the native Hawaiians—a name that means “pearl waters,” a reference to the pearl oysters found there—Pearl Harbor was first encountered by an American in 1840. In 1887, the Hawaiian monarchy signed a treaty with the United States, granting the latter exclusive use of the harbor as a coaling and repair station. However, it was not until the Spanish-American War of 1898 that Americans realized the strategic need for such a station in the mid-Pacific. Construction of facilities began shortly after, and work was largely completed by 1919.

Pearl Harbor's importance grew as Japan rose to great-power status in East Asia and the western

Pacific in the 1930s. Indeed, to American strategists, the Japanese Empire represented a major threat to U.S. interests in the region. Following Japan's attacks on Manchuria and China in the early and late 1930s, the United States began to impose embargoes on the empire. Those on scrap metal and oil fell particularly hard on resource-poor Japan, compelling the militarists there to look to other sources.

Bent on taking control of Europe's resource-rich colonies in the East Indies and Southeast Asia in late 1941, Japan's military strategists decided they had to neutralize U.S. naval power in the Pacific. Their attack on Pearl Harbor on December 7, 1941, was devastating but not decisive. Although some 2,000 military personnel were killed and numerous battleships destroyed, the U.S. aircraft carriers—critical in the new kind of naval warfare developing at the time—were out to sea when the attack occurred.

Nevertheless, the attack on Pearl Harbor compelled a still-reluctant America to declare war on Japan and its allies Nazi Germany and Fascist Italy. In fact, because Pearl Harbor aided Franklin Roosevelt in convincing America to go to war, some historians have concluded that the U.S. military knew about the attack in advance and did nothing to prevent it. But most experts agree that although Roosevelt should have known that embargoes against Japan might force the empire to attack the United States, specific details about where and when the assault would occur were beyond U.S. intelligence.

In any event, Pearl Harbor led to America's entry into World War II—a move that proved decisive to the war's outcome, leading to the defeat of the Axis powers and the destruction of the Japanese Empire in East Asia and the western Pacific.

Penal Colonies

In the first centuries following the “discovery” of the New World, European nations disposed of their convicts in their colonies beyond the seas.

Arguably the finest deepwater harbor of any Pacific Island, Pearl Harbor became a center of U.S. naval power in the Pacific in the first half of the twentieth century, inviting attack by Japanese imperial forces on December 7, 1941. (Library of Congress)

During the sixteenth century, the Portuguese sent heretics and criminals who had been convicted by the tribunals of the Inquisition to Brazil. Similarly, the Spanish disposed of victims of the Inquisition in their South American colonies. These so-called exiles were used as slave labor.

Besides the malefactors sent to the Spanish and Portuguese colonies, there was also a steady flow of convict labor being used in the English colonies. The practice of transporting malefactors—mainly rogues, vagabonds, and sturdy beggars—had been established by the statute 39 Elizabeth c4 in 1597, which resulted in an assortment of criminals being sentenced to penal servitude in the plantations of Virginia. In 1615, under an act of the Privy Council, the range of individuals who could be transported was widened, and felons

could be granted conditional pardons if they chose to serve in the colonies (with the exception of those convicted of burglary, witchcraft, murder, and rape). These felons were contracted to private planters, and by the mid-seventeenth century, they were mainly engaged in tobacco production in the Chesapeake (Virginia) and sugar production in Barbados. However, it was not until 1718 that a statute (4 Geo I c2) was enacted and that a transportation act to officially deter criminals and supply the colonies with labor became fully standardized. Between 1718 and 1776, an estimated 50,000 British convicts were forcibly conveyed to the American colonies, sent from such prisons as Newgate in London. Convict labor was perceived by the planters to be a cheaper alternative to black slave labor.

Due to the outbreak of the American War of Independence in 1776, the British stopped sending convicts to the thirteen colonies. As an alternative method of punishment, convicts were restrained on moored prison ships that became to be known as hulks. These ships were anchored in the Thames, and the prisoners were taken in chains to assigned work tasks each day. An act passed in 1776 (16 Geo III c4) specified that prisoners who should have been transported were “to be put to hard labor in cleaning the River Thames or any other service for the benefit of the navigation of the said river.”

However, in 1786, the British decided to establish a penal colony in Botany Bay, Australia, a decision that entailed chartering ships to convey the convicts. The first batch consisted of those transferred from the hulks and others sent from jails in London and Middlesex. It was estimated that only one in five convicts survived the voyage. The first fleet arrived in Botany Bay on January 20, 1788. A penal colony had been established at Port Jackson in Sydney Cove. Subsequent penal colonies were created at Port Phillip (Melbourne) and Norfolk Island. By the early nineteenth century, there were also settlements at Port Macquarie and Moreton Bay. The convicts who were sent to these colonies in New South Wales worked in gangs in the public sector or for free settlers. Their terms of servitude ranged from seven years to life. For good behavior, they got a ticket of leave (a kind of probation), but if they were idle or unruly, they were usually flogged. Men who worked in the public sector were mainly employed in constructing roads and public buildings. Female convicts were destined for domestic service, but some ended up as prostitutes. After 1806, men and women were sent to the colony on separate ships. Few convicts returned after they had completed their terms because they could not afford the passage back to England. The transportation of convicts to New South Wales continued until 1840, when the settlers refused to accept any more.

Transportation to Van Diemens Land, Tasmania, began in 1812. After 1840, convicts were transferred from New South Wales as well as being directly sent from England. The convicts were mainly engaged in public work, toiling in chain gangs to build roads. However, in 1853, Tasmania also objected to the numbers of convicts being

sent, and transportation ceased. Between 1853 and 1868, the only settlement that would take convicts was Western Australia, which had a labor shortage. No women were received. The British penal system of transporting criminals to Australia ceased in 1868.

Besides operating the transportation program to the Australian colonies between 1787 and 1868, the British also continued to disperse substantial numbers of convicts for hard labor to dockyards in their colonies. During the 1820s, between 200 and 300 were sent to Bermuda and were accommodated on prison hulks such as the *Dromedary*. The numbers being sent increased in the 1830s, and by the 1840s, the system was extended in Bermuda to deal with the crisis caused when Van Diemens Land refused to accept more prisoners. Rather than being classed as a penal colony, Bermuda should actually be thought of as a penal destination because the convicts were not allowed to settle there after finishing their terms but were shipped elsewhere in the empire. However, in 1862, the hulks were broken up in Bermuda, as confinement in Millbank Penitentiary in London was considered a better alternative than servitude in the colonies.

During the early nineteenth century, capital offenses included pickpocketing, stealing goods valued at five shillings or more, burglaries in which goods in excess of forty shillings were stolen, forgery, and rioting. The only alternative punishment for these offenses was death. It is therefore not surprising that between 1787 and 1868, an estimated 165,000 men were transported to the penal colonies in Australia and Van Diemens Land. Approximately 25,000 women were transported as well.

Perry, Matthew (1794–1858)

U.S. naval officer Matthew Perry led an expedition to Japan in the 1850s that ended nearly two centuries of self-imposed diplomatic and economic isolation of that Far Eastern nation. At the same time, the successful expedition introduced the United States as a major world power.

Born in 1794 to a Rhode Island family with a military tradition—his older brother Oliver was a naval hero of the War of 1812—Perry, too, served as a sailor in that war and was the commander of the U.S. Navy's first steamship. He led an expedition against the slave trade and helped found the former slave republic of Liberia in West Africa in the 1840s.

In 1852, President Millard Fillmore appointed Perry to serve as head of a naval expedition designed to open diplomatic and trading relations with Japan. In the seventeenth century, Japan's feudal leaders had ejected virtually all foreigners from their island nation and cut nearly all ties to the West, seeing in both Westerners and Western ideas threats to the integrity of the Japanese peoples and their own power. Perry had decided that only a display of superior military strength could persuade the Japanese shogun, or military dictatorship, to open up its island home.

In July 1853, he sailed his four armed ships into the fortified Japanese harbor of Uraga and refused to obey all orders to leave. The Japanese recognized that they were powerless to resist him, and they were well aware of China's disastrous loss to another Western power—Britain—in the Opium Wars of the 1840s; consequently, they agreed to consider a treaty. A year later, Perry returned with nine ships to Edo (now Tokyo) Harbor and signed formal treaties with the Japanese government, allowing for better treatment of shipwrecked sailors, fueling and provisioning rights for U.S. ships, the opening of an American consulate, and U.S. trading privileges.

The shock to the Japanese people of this forced treaty was profound and led to far-reaching changes. The shogunate form of government was abandoned in the following decade, and Japan began its headlong modernization, becoming a major military power by the end of the century. Similarly, Perry's expedition also introduced the world to a more powerful and assertive United States.

Persian Empire

The Persian Empire was founded by Cyrus the Great (559–529 B.C.E.) and his successor, Darius (521–486 B.C.E.). At its greatest extent, it stretched from Egypt and the Balkans in the west to the borders of India and the steppes of Central Asia in the east. Cyrus's Achaemenid dynasty ruled until overthrown by Alexander the Great at the Battle of Gaugamela (331 B.C.E.). The Seleucid Kingdom, spanning all of the same territory except the Balkans and Egypt, was gradually displaced by the Parthians, or the Arsacids, who held much of the Middle East, at the time of the late Roman Republic and the early Roman Empire. The Parthians were displaced in the mid-200s C.E. by the Sassanids, kings of the New Persian Empire (224–636). The Sassanids were overthrown by the militant and expansionist forces of Islam in 636 C.E., hanging on briefly as a local power in Persia.

The Persians, who were Indo-Europeans, entered the Iranian plateau from the northeast, being the western branch of Aryans, whose eastern branch entered India around 1500 B.C.E. The Assyrians mentioned the Persians for the first time in the 800s B.C.E. Cyrus the Great conquered and consolidated much of the area that would become the empire in the 500s. The empire formed by Cyrus and Darius was substantially different from the closely organized and administered empires of Mesopotamia. Although they divided the empire into provinces ruled by Persian satraps, they allowed considerable local autonomy, ruling through local aristocracies. Civil and military authorities

were made responsible to the king in order to avoid a concentration of power in the satraps. To help maintain local stability and satisfaction with Persian imperial rule, local governmental systems and local religious customs were encouraged, as in the Second Temple period in Israel. In return for local autonomy, the different peoples were expected to respect the peace, pay their taxes, and, in time of need, supply military forces.

Expansion to the west was halted by the Greeks in the Persian War (490–479 B.C.E.), under the leadership of Athens and Sparta. Battles at Marathon, Thermopylae, Salamis, and Plataea, immortalized in the *Histories* of Herodotus of Halicarnus, have attained virtually mythic proportions in Western culture and are seen as ending eastern imperialist expansion and saving the West for governments of free people. The counterblow, under Alexander the Great of Macedon, destroyed the Achaemenids, replacing them with the Hellenistic Greek dynasty of the Seleucids. The Seleucids lost control of much of the Middle East to the Parthians in the mid-third century B.C.E., when the expansion of the Roman Republic broke the Seleucids' military power.

With the Parthians came a syncretic period of politics and culture, partially Persian and partially Greek. They were largely content to continue the existing system and to practice the tolerance of their Persian and Seleucid predecessors. Their primary innovation was in warfare, in which they developed a cavalry army, disdaining the heavy infantry of the Greeks and the combined-forces armies of the Hellenistic period. Composed of light horse archers and heavily armored and armed *cataphracts*, the Parthian cavalry was the predecessor of the Byzantine professional armored cavalry and various other cavalry forces in later times. The *triumvir* (one of three rulers of the Byzantine Empire) M. Licinius Crassus was killed in battle against the Parthians, and the *triumvir* Mark Antony was forced to retreat in disarray. Emperor Trajan nearly destroyed Parthia before being forced to withdraw from Mesopotamia by Jewish rebellions in the empire.

The Sassanids displaced the Parthian Arsacids in the mid-200s C.E. and contested the control of the Middle East with the Romans. Two Roman emperors, Valerian and Julian, were killed in campaigns against the Persians. In the early 600s,

Khosroes II occupied Asia Minor and threatened Constantinople before being defeated and driven back by Heraclius. Attacked and virtually destroyed by the Roman armies of Heraclius, as well as the Hephthalite Huns and their allies, they collapsed when attacked by the Arab armies of expansionist Islam.

The religion of the Achaemenids, the Arsacids, and the Sassanids was Zoroastrianism, with the Magian clergy forming an important influence in the empire. Each Persian monarch styled himself “king of kings” and viewed himself as the vice-regent on Earth of the Persian god Ahura Mazda. The Achaemenids and Arsacids took a tolerant attitude toward other religions, but the Sassanids were more militant in their Zoroastrianism. Their expansionist phase was closely linked with their religious ideas, as was the Roman response under Justinian and, in particular, Heraclius, whose campaign took on the forms later recognized in the Crusades against Islam.

In recent times, the former shah of Iran, Reza Pahlavi, leaned heavily on the imagery and history of imperial Persia as both a justification of and model for his rule. A similar use of pre-Persian and Persian imagery can be seen in the propaganda of Saddam Hussein of Iraq.

Persian Gulf

Also known as the Arab Gulf, the Persian Gulf consists of western Arab and eastern Persian coasts and is bordered by seven modern nations (Bahrain, Kuwait, Oman, Qatar, and the United Arab Emirates on the west and Iran and Iraq on the east). The term *Gulf nations* often refers to the five western countries only.

European colonialists first arrived in the area in 1498. The Portuguese seized Muscat and Bahrain, two ports on the gulf, in 1514 as trading stations, but their influence soon faded after they were defeated by the Ottoman Turks (whose border extended to Kuwait) and the Omani (who recovered Muscat).

British forces remove their base from the island of Bahrain in the Persian Gulf in 1971. The British Empire seized virtual control of the Gulf in the early nineteenth century but gradually abandoned the area in the first half of the twentieth century. Bahrain was among the last British possessions in the Gulf to win its independence. (Associated Press)

To secure trading routes to East and Central Asia, the British, French, and Dutch East India Companies competed in the gulf in the seventeenth century. The British won virtually total control after consolidating their colonies in northeast India and defeating the Qawasim, the trading dynasty of the Persian Gulf—the Arabic “pirates,” as the British controversially called them, though modern Arabs scholars disagree with this label—in 1809. In 1820, Britain signed the General Treaty of Peace with the sheikhs of Bahrain, Abu Dhabi, Ajman, Dubai, and Umm al-Qaiwain (later known as the Trucial States). In the late nineteenth century, British colonial dominance was again challenged by the French, Russians, Germans, and Ottomans. Thus, in 1880 and 1892, the sheikhs of Bahrain and the Trucial States (now mostly encompassed by the United Arab Emirates) signed the Exclusive Agreements

with Britain, agreeing not to negotiate with any foreign powers or formulate any foreign policies without British consent. In addition, nonalienation bonds were signed by the sheikhs, guaranteeing they would not sell, cede, or lease any territories to any power other than Britain.

Kuwait joined the treaty system in 1899 after signing a nonalienation bond, on Kuwaiti request to secede from the Ottomans. However, the separation of Kuwait and the Ottomans was not recognized until 1914. Qatar joined the treaty system in 1916 by means of an exclusive agreement due to similar concerns. States “in treaty relations” with Britain were not formal British protectorates until 1947, when they were handled by the Foreign Office instead of the British government in India after Indian independence.

Oman remained under the rule of the sultan of Muscat, yet it witnessed growing British influence

after the Britons split Zanzibar from the sultanate in 1861. Oman partially joined the treaty system in 1873 after signing a major treaty to suppress the slave trade.

On the eastern coast, Britain remained the main imperialist power. Dividing Persia with Russia in 1907, Britain gained the gulf as part of its sphere of influence. Iraq, which was part of the Ottoman Empire, helped fight against the Turks in World War I but became a British mandate according to a League of Nations decision in 1920, much to the disappointment of Arab nationalists there. Iraqis gained full independence in 1932, yet they remained under British dominance.

The British administered much of the Persian Gulf through the political resident, stationed in Bushire, Persia (1778–1946), and then Bahrain (1946–1971). Little in the way of socioeconomic reforms was introduced, and contacts to the outside world (except India) were not encouraged. The traditional dictatorship of the sheikhs was preserved and even strengthened. The gulf people had limited Arab nationalist awareness until the discovery of oil opened their contacts both inside and outside the Arab world.

Colonialism in the gulf collapsed after World War II. Full independence was gained by Oman in 1951 and Kuwait in 1961. In 1968, the British Labour government announced its retreat from areas “East of Suez” because of financial burdens—or the “dilemma of overextension,” as historians called it. In 1971, Bahrain and Qatar gained full independence; the rest of the Trucial States formed the United Arab Emirates. The informal British influence on the east, or Persian, coast ended with rising American influence, and the final bursts of nationalist revolutions occurred in Iraq in 1958 and Iran one year later.

Peru

Peru was carved out of the vast Inca Empire when the Spanish invader Francisco Pizarro established his capital at Lima (the City of the King) in 1533. The Inca Empire at the time of the conquest not only incorporated what is now Peru but also extended through what is now Ecuador and Bolivia, as well as parts of Colombia, Argentina, and Chile. Estimates of the age of the Inca Empire vary, with some claiming a heritage that stretches back to 1500 B.C.E. Others claim the “modern” Inca state came into being about 1250 C.E. This empire achieved spectacular heights in architecture, ceramics, and textiles and was ruled through an enlightened social policy that valued the well-being of the individual above all else.

After Pizarro's conquest, the colonial territory of Peru was ruled by viceroys appointed by the king of Spain. The Spanish rule was constantly being challenged, notably in the late eighteenth century as colonial order fractured. This colonial period lasted until 1821, when independence was declared. Three years later, Peru's independence was secured by José de San Martín and Simón Bolívar after their defeat of the Spanish overlords. Yet the neocolonialism of the Spanish could not be easily countered. Peru's 175-year history since independence has been marked by a series of elected governments (most often loyal to the wealthy elite) and dictatorial juntas (both military and civilian). The change in Peru's government is usually predicated on the easing of—or the return to—the exploitation of the indigenous poor who constitute the majority of the country's population.

Peter I (Peter the Great) (1672–1725)

Peter Romanov, the son of Czar Alexis and his second wife, Natalia Naryshkin, was given an unusu-

ally cosmopolitan education and allowed to remain outside the Moscow palace complex of the Kremlin during much of his youth. He came in contact with foreigners in the commercial quarter of the Russian capital and trained with a regiment of mercenary European soldiers. Emerging as czar after the regency of his half sister Sophia, Peter embarked on a policy of ruthlessly modernizing Russian technology and society, from cosmetic changes such as the forbidding of long beards and Russian clothing to the importation of European expert craftspeople. Peter himself made two grand tours of Europe to seek out and recruit such experts as well as to see the West for himself. While in Amsterdam and London, Peter was impressed by colonial trade. With a modernized Russian military, he determined to re-create the glory of Kievan Rus by expanding Russia into a sea power with colonial territory of its own.

These territorial ambitions first centered on the Ottoman periphery, into which Peter launched military expeditions in 1687 and 1689 to take the Crimea. Although he seized Azov, the Russians were unable to hold it, but the campaign ended Russian vassalage to the Ottoman sultan and allowed forts to be built along the Dnieper frontier. In the east, Peter sent embassies to the Persian shah to arrange trade concessions in 1717, and he secured Russian interests in Baku on the Caspian Sea as well as friendly relations with Astrakhan, Georgia, and Armenia. Between 1721 and 1772, Peter sent an exploratory party to the Kamchatka peninsula and the Kuril Islands after signing a Jesuit-brokered treaty with China and dispatching emissaries to Japan with gifts and commercial offers.

The most significant expansion, however, was in the north. Convinced that Russia had to have access to the North Sea, Peter joined an alliance of Denmark and Poland in 1699 in order to attack Sweden and seize the lands on which he would build his western-looking capital, St. Petersburg. Although this action involved Russia in the Great Northern War, during which Peter suffered a terrible defeat at the Narva River, in 1709 he defeated Charles XII of Sweden at Poltava in the Ukraine and established Russian supremacy in the Baltic area, taking Finland, Livonia, Estonia, and building the Kronstadt naval base. Peter's successors would use these early expansions as bases from

which to launch Russia into control of Siberia, eastern Poland, and the Caucasus. They would also take up Peter's crusade of modernization as the course of Russia's future in Europe.

Petroleum

Petroleum, unlike precious metals, generally was not a commodity that led to colonial conquests because most colonial borders had been established before petroleum products, especially gasoline, gained major strategic importance in the early twentieth century. During World War II, however, the Axis powers, which lacked secure sources of petroleum, sought to capture oil fields throughout the world, and Japan seized important fields in the Dutch East Indies. Control of the world petroleum supply substantially enabled the Allied powers to defeat the Axis.

This control arose from essentially neocolonial relationships between the British, French, Dutch, and U.S. governments and the dominant world oil corporations—Mobil, Exxon, Chevron, Texaco, Gulf, British Petroleum (BP), Royal Dutch/Shell, and Compagnie Française des Pétroles—to ensure both sufficient supply and controlled prices for governments, on the one hand, and secure and profitable investments for corporations, on the other. Many of these relationships arose during the strategic buildup before World War I. For instance, in 1914, Great Britain, urged by First Lord of the Admiralty Winston Churchill, bought 51 percent of the previously private Anglo-Persian Oil (later BP), which guaranteed British control over Persia's oil reserves. Although the Persian government gained short-term profits from Anglo-Persian's activities, the corporation profited significantly more.

After World War II, the inequity of such relationships became clear to people in oil-producing areas, and petroleum corporations came to symbolize Western, if not colonial, domination. Thus, the Iranian nationalist Mohammed Mossadegh gained popularity by advocating seizure of British

oil holdings in Iran, and as premier of Iran in 1951, he oversaw their nationalization. Due to the strategic supremacy of petroleum, however, colonial powers were reluctant to lose control of oil production. Indeed, the 1956 discovery of oil in Algeria contributed to the ferocity of France's struggle to retain this colony.

Since the 1960s, many oil-producing nations—particularly members of the Organization of Petroleum Exporting Countries (OPEC)—have sought political and economic power by limiting production. Nevertheless, industrial nations and oil corporations often have maintained neocolonial relationships with oil-producing nations. Such relationships continue to inspire nationalist movements, as happened in Nigeria.

Philip II (1527–1598)

Philip of Spain, the son of Holy Roman Emperor Charles V and Isabella of Portugal, inherited a huge empire on the retirement of his father in 1555. Although the German and East European Hapsburg territories passed to his uncle, Ferdinand I, Philip controlled not only Spain, Naples, Milan, and the Netherlands but also all of the New World discoveries claimed by Spain since 1492. As his father's regent in Spain, Philip had excellent training in managing the empire, and in 1542, he established laws to protect indigenous peoples. Unfortunately, the size of the Spanish Empire—and its crises—limited Philip's ability to reform it or to even give it his full attention while war raged in the Netherlands, against England, and in the Mediterranean, against the Ottoman Empire. The problems presented by having too much to deal with on too many fronts were exacerbated by Philip's tendency to micro-manage the empire, refusing to delegate even small tasks to subordinates.

He and his Council of the Indies did accomplish some significant reforms in the Spanish colonies, setting up ordinances in 1573 that regulated city planning and forbade further conquest

in the Americas. Philip, interested in the native plants and animals of the empire, sent Juan Lopes de Velasco to compile a regional survey of flora and fauna in 1571; he also kept a collection in his palace, the Escorial outside Madrid. In 1576, he sent out the "Questionnaire for America" to Spanish administrators in an attempt to catalog geographic and cultural points of interest. An early supporter of Bartolomé de Las Casas, whom he named bishop of Chiapas, Philip rejected calls for favoring those of "pure blood" and pressed for the ordination of mixed-race Spanish Americans in the church.

However, the empire, beleaguered by attacks led by English privateers, did exist to fund Spain, and Philip counted on the silver and gold generated by the colonies to fuel his wars in Europe. Because of this, he granted permission for areas with labor shortages to import slaves and to conscript local peoples, such as the Caribs, as forced labor. Colonial policy also provoked revolts among the settlers and indigenous people in the Philippines, Peru, and Quito, including the revolt of Tupac Amaru. The interests of the Spanish Empire also required that French colonies at Fort Caroline be demolished and the settlers killed, and English settlements were discouraged by force.

In Europe, Philip annexed Portugal in 1580, assuming control of Portuguese colonies around the globe, but he was faced with continuing threats from English privateers, who attacked Cádiz, Cartagena, and Florida. Toward the end of his life, overwhelmed by these multiple problems, Philip increasingly began to see the empire as a source of income for his aims in Europe and drew back from reform in order to promote Catholic causes there.

Philippines

The Philippine Islands were a territory of the United States until gaining independence in 1946, having attained the political status of a U.S. commonwealth. The islands, whose capital is Manila, are located in the southwest Pacific, in the Malay

Archipelago. Named in honor of the Spanish king Philip II, the islands were ceded to the United States in 1898 by Spain following the latter's defeat in the Spanish-American War. Under the terms of the Treaty of Peace, signed in Paris on December 10, 1898, the United States paid Spain \$20 million. Military rule of the islands began immediately under Gen. Elwell S. Otis, who was succeeded by Gen. Arthur MacArthur, and continued until Supreme Court judge William Howard Taft was inaugurated as the first civilian governor on July 4, 1901. On December 21, 1898, President William McKinley issued the Benevolent Assimilation Proclamation, which outlined U.S. intentions toward the Filipinos.

From the very beginning, Filipino nationalists resisted U.S. colonial rule. On January 4, 1899, the Filipino nationalist leader Emilio Aguinaldo, having returned from exile, issued a proclamation condemning the "violent and aggressive seizure" by the United States, and on January 5, he called on Filipinos to declare independence from the United States. On January 20, delegates meeting at Malolos promulgated the declaration of independence, the Malolos Constitution, and Aguinaldo was chosen as president of the new government. On February 4, the Philippine-American War for independence began. The constitution of the new independent Philippine Republic created a Filipino state with a "popular, representative and responsible" governing body consisting of the executive, the legislature, and the judiciary, with legislative powers vested in an assembly of elected delegates. Filipino armed resistance to U.S. colonial rule continued until July 4, 1902, when President Theodore Roosevelt officially ended the Philippine "insurrection" with the Peace Proclamation and Amnesty Grant, but sporadic resistance continued and claimed 7,000 Americans and about 20,000 Filipino soldiers; in addition, there were some 250,000 civilian casualties resulting from disease, pestilence, and brutality.

The cornerstone of American policy in this first U.S. overseas colonial territory was "pragmatic materialism" as initiated by the First Philippine Commission, whose proclamation published the founding principles of U.S. policy and established that "the supremacy of the United States must and will be enforced throughout every part of the Archipelago, and those who resist it can ac-

complish no end other than their own ruin." Among the achievements of the first commission were the development of infrastructure; the reestablishment of the Philippine court system; the opening of public schools whose teachers included Americans, Spaniards, and Filipinos; and other humanitarian projects, side by side with policies of economic self-interest. The Second Philippine Commission, the Taft Commission, was headed by the first civil governor of the Philippines, William Taft, who arrived on June 3, 1900. The commission became a colonial legislative body with authority to raise taxes, appropriate funds, fix tariffs, and set up law courts in which Spanish was the primary language. In 1901, the pro-American political party—the Partido Federal—was established, with the blessing of the Taft Commission, by Trinidad Hermenegildo Pardo de Tavera, Benito Legarda, and Jose Luzuriaga. The Thomasites (American school-teachers), arrived in the islands on board the USS *Thomas* on August 21, 1901. The commission mandated English as the medium of instruction and provided for the training of Filipino teachers and the opening of schools in Manila.

On July 1, 1902, the U.S. Congress passed the Philippine Organic Act establishing a bicameral legislature consisting of an appointed upper house (composed mostly of Americans) and an elected assembly, with veto power reserved to the U.S. Congress. The nationality of Filipinos in the American empire emerged as a crucial legal issue and was addressed by the U.S. Supreme Court in *Downes v. Bidwell* and in the insular cases. The issue revolved around whether collective naturalization followed cession and whether Filipinos were "nationals," "citizens," or "aliens," as each status differed and had consequences for civil and political rights and disabilities. In the final analysis, Congress, under the Constitution, would determine the legal status of Filipinos. Inhabitants of several territories (Guam, Puerto Rico, the U.S. Virgin Islands) were incorporated into the Union of the United States as citizens by Congress, but Filipinos were never U.S. citizens, although they "owe[d] permanent allegiance to the United States, since they [cannot] owe it to [any] other sovereignty." Congress did eventually grant Filipinos the right to American diplomatic protection when traveling abroad in the Act of July 1, 1902.

In 1916, the U.S. Congress, creating an elective senate of twenty-four members, promulgated the Jones Act. Nationalist leaders continued to press for independence. Among the key political events in the evolution that culminated in the political independence of the islands was the 1919 dispatch of a delegation to Washington, consisting of forty prominent Filipinos (including Manuel Quezon), to seek assurances that a promise of independence would be fulfilled. The U.S. position on future independence was addressed by President Calvin Coolidge, who wrote on March 6, 1924: “The Philippine people are by no means equipped, either in wealth or experience, to undertake the heavy burden, which would be imposed upon them with political independence.” On May 6, another mission led by Quezon, then the former president of the Philippine Senate, arrived in Washington to demand full and complete independence. In 1933, the U.S. Congress passed the Howes-Cutting Bill, providing for a transitional commonwealth for twelve years; this measure was rejected by the Philippine legislature. In March 1934, the U.S. Congress adopted the Tydings-McDuffie Act, thereby modifying the Howes-Cutting Bill, and on November 15, 1935, commonwealth status was formally established. The evolution of the Philippines to independence was interrupted during World War II with the Japanese occupation of the country until February 1945, when the islands were retaken by the United States. On July 4, 1946, the Republic of the Philippines was formally inaugurated at Manila, under President Manuel Roxas. On March 14, 1947, the United States was granted a ninety-nine-year lease for military and naval bases there, which was abrogated by the Philippine government in 1992.

Pilgrimages

Pilgrimages can be subsumed under the category of ritual activity, similar to ceremonies, festivals, and celebrations, because of their ability to act as symbolic activities that communicate how power is structured in society. Most scholars regard pilgrimage as involving a ritual journey over a geographic area to a site of cultural, social, or religious significance. Though notably associated with religious destinations (for example, the tomb of a saint), pilgrimages also possess a secular dimension, such as tourists visiting monuments of national heroes (the Vietnam War Memorial in Washington, D.C.) or tombs of famous artists (Elvis in Graceland).

Scholars differ in their interpretations of what pilgrimages reveal about the cultural, political, and social dynamics of a society. Victor Turner has argued that pilgrimages erase differences between pilgrims—usually including groups of peasants, urban residents, political leaders, and religious officials—by creating a state of “communitas,” in which pilgrims share a united sense of solidarity. Others contend that pilgrimages challenge the established powers in society. Increasingly, scholars view pilgrimages not as supporting or subverting authority but as arenas of “competing discourses” between different social groups in society. This approach identifies each social group as possessing its own secular or religious agenda, as pilgrimages transform into forums for the groups to advance their distinctive worldviews.

The transformations of colonial rule rendered pilgrimages as unique ritual activities that illuminate the dynamics and conflicts in a colonized society. For example, colonial rule establishes new social groups, such as the colonial authority and the co-opted local political and religious leaders who help administer colonial rule; it also inspires new forms of identity, such as nationalism. The following are a few broad themes of pilgrimages in colonial contexts.

In Mexico City under Spanish colonial rule, the ruling colonial powers used the Corpus Christi pilgrimage and festival to reflect their vision of how the hierarchical structure of society should be ordered, giving great prominence to certain ethnic groups with close ties to the vice-regal colonial powers. In the sixteenth century, the Portuguese in India sponsored a new shrine and pilgrimage center in Mylapur on the Coromandel coast, in their

bid to strengthen their commercial presence in the region and establish closer relations with the local Christian communities.

Another familiar pattern under colonial rule was the ability for both the colonial authority and the colonized peoples to inject pilgrimages with greater political and nationalist meaning. In Lucknow, India, the political and legal controls the British imposed over the Shi'i celebration of Muharram brought this pilgrimage out of the context of India's traditional communal conflicts and into the arena of modern Indian nationalist politics. In British-ruled Palestine, Palestinian political groups used a popular Islamic pilgrimage to the tomb of Moses as a forum to express nascent Palestinian nationalism, as religious leaders wove Islamic tropes and images to protest Britain's colonial policies.

As Eric Hobsbawm has observed, because ritual can sacralize and traditionalize anything, different groups in the power structures of a society can invest rituals, such as pilgrimages, with a diversity of meanings.

ventures. The distinction between the two is that the privateer plundered within the law under license of letters of marque and reprisal, whereas the pirate plundered outside the law. But privateers often turned to piracy during years when England was not at war, the main attraction being the prospect of plunder.

The usual procedure followed to plunder a captured vessel was to send a boarding party to search the ship. The booty would then be divided among the crew of the plundering ship according to rank. Pirates were often described as treacherous rabble, only held together by a common lust for riches.

By the seventeenth century, the pirates who operated in the Atlantic waters were described as a confederation. Among these pirates was Henry Morgan, who later became the governor of Jamaica. Before receiving the governorship and a knighthood, he participated in raids along the South American coast. However, he was one of the pirates who managed to make the transition from pirate to buccaneer, in the service of Sir Thomas Modyford, the governor of Jamaica. Subsequently, he was granted a king's pardon.

The head of the notorious pirate Blackbeard hangs from the bowsprit of a ship in this 1837 illustration. First encouraged by the British government in its struggle against Spain in the sixteenth century, pirates were soon seen as a menace by London and hunted down by the British navy in the eighteenth and nineteenth centuries. (Library of Congress)

Piracy

Since the sixteenth century, piracy on the high seas has sometimes been confused with privateering

Piracy escalated during the first quarter of the eighteenth century, with pirates operating as far away as the slave coast of West Africa. Between the years 1714 and 1724, there were an estimated 5,500 freebooters who sailed under the Jolly Roger, the unofficial flag of pirates. Spanish ships were their main targets, and Spanish prisoners were usually tortured and killed. Among the brutal pirate captains who operated off the Spanish Main were Howel Davis, Bartholomew Roberts, Jack Rackham, and—the cruelest of the lot—Edward Teach, known as Blackbeard.

Blackbeard started his career as a privateer during the War of the Spanish Succession but turned to piracy when the war ended in 1713. However, despite being granted a king's pardon by the governor of North Carolina, he continued to seize prizes on the high seas. He was finally taken in 1718 and killed while doing battle with the British warships *Lyme* and *Pearl*.

An act had been passed on November 14, 1718, to encourage the apprehension and punishment of pirates, and a reward had been offered for Blackbeard's capture. After this act, piracy greatly diminished, and the demise of Blackbeard has been considered the watershed of the decline of piracy.

Although piracy has been considered a male pursuit, there were two female pirates sailing with Capt. Jack Rackham. Anne Bonny and Mary Reade dressed as men and were as fierce as any other members of the crew. Mary Reade was known to fight duels with men, using both pistol and cutlass. In one fight, she severed the head of her opponent with a single stroke of the cutlass. Both women escaped execution because of convenient pregnancies. However, Mary Reade died in 1721 of fever during her lying-in.

Due to the combined efforts of the British Royal Navy and the governors of Jamaica, Barbados, Virginia, and Maryland, stringent methods were adopted to wipe out piracy. By 1726, 600 pirates had been captured and executed in the American colonies and Caribbean Islands. Although the period marked the end of an era, piracy in the Atlantic waters did not finally disappear until the nineteenth century, although it continues to the present day in the seas off South and East Asia.

Pitt, William (1708–1778)

William Pitt, the first earl of Chatham, was prime minister of Great Britain from 1766 to 1768. He was born on November 15, 1708, in Westminster, England, into a family that had gained its fortune in India. Pitt received his education through the expected venues: Eton and Oxford. He entered Parliament in 1735, representing a borough controlled by his family, and immediately became a powerful and influential orator and politician. Pitt's participation in the opposition against the unpopular ministry of Sir Robert Walpole, which led to Walpole's resignation in 1742, motivated King George II to appoint Pitt as paymaster of the army in 1746.

In that position, Pitt set out to accomplish his main goal of expanding the England's empire. His alliance with Thomas Pelham-Holles, duke of Newcastle, during the Seven Years' War (1756–1763)—also known as the French and Indian War on the North American front—influenced a series of English victories against the French. These victories were aided by Pitt's collaboration with Frederick II of Prussia, who supplied military support until the French finally agreed to sign a treaty in 1763. As a result of this treaty, England gained the territory between the Appalachian Mountains and the Mississippi River, the French West Indies, and French trading posts in West Africa; furthermore, French power in India was destroyed.

In 1762, after Spain's declaration of war against England, Pitt's forces captured Spanish Florida, Havana, and Manila. The following year, as a result of the Treaty of Paris of 1763, England became the dominant imperial power. Spain had been cast aside, but Pitt soon faced resistance from the North American colonies. As the newly self-proclaimed Americans cried for “no taxation without representation,” Pitt's ministry failed to quiet the colonies and eventually collapsed in 1768. His influence after that was constantly in question. Although he was bitterly against independence for

the Americans, he could not prevent their declaration of independence in 1776. Two years later, an exhausted Pitt collapsed in the House of Lords while delivering a speech against the colonies. He died in Kent on May 11, 1778.

Pizarro, Francisco (c. 1475–1541)

Although the date of Francisco Pizarro's birth is in dispute (being either 1475 or 1478), the circumstances are not; all agree that he was the illegitimate child of Don Gonzalo Pizarro and Francisca Morales. The circumstances of his early life are not in dispute either; as a "bastard" son, he was not given an education and lived his youth as a poor swineherd. When he reached maturity, he signed on as a common soldier and sailed to New Andalusia on November 10, 1509, with an expedition led by Alonso de Ojeda in search of gold. In time, he became an established secondary military leader, and he accompanied Vasco Nuñez de Balboa on his voyage to the Pacific in 1513. By 1524, he had advanced to the point where he became the leader of an expedition that left Panama and traveled into the South American interior in search of gold. This expedition ended in disaster, and he was not placed in charge of another expedition until 1531.

On this second expedition, Pizarro was armed with a grant of the governorship of Peru, although that land was not yet conquered. The royal grant of governorship amounted to little more than the title itself; he was given little in the way of actual material support. On this expedition, Pizarro did not attempt another foray into the interior; instead, he explored along the coast, where he uncovered evidence and heard rumors of a vast inland empire that was rich in gold. Accompanied by 150 mounted soldiers, he began his war of conquest

the following year. After meeting with the Inca emperor, Atahualpa, and slaughtering the emperor's guard, Pizarro held Atahualpa hostage and received a "room full of gold" for his ransom. He then had the emperor executed on August 29, 1533, and set out on a reign of terror throughout the Andes. Diego de Almagro was Pizarro's lieutenant through this entire period, but after Pizarro cheated him out of what he claimed were his just spoils from the conquest, Almagro rebelled. The rebellion was crushed by troops loyal to Pizarro, and after Almagro's defeat in 1538, Pizarro's brother Hernando had the rebel leader executed. In turn, troops loyal to Almagro assassinated Pizarro in Lima in 1541.

Plaatje, Sol T. (1876–1932)

Solomon Tshekisho Plaatje was an African political leader and writer of the early twentieth century who challenged the inequality of settler colonialism in South Africa. Born in 1875 of a Barolong *khohwa* (Christianized) family, he received only three years of formal education but continued to study privately, working as a courier in Kimberley and then as an interpreter and clerk in the Mafeking magistrate's court. His diary of the siege of Mafeking in the South African War vividly recorded black experiences. As editor of *Koranta ea Becoana* (Tswana Gazette) (1901–1908) and *Tsala ea Batho* (Friend of the People) (1910–1915), he highlighted issues of concern to Africans, such as racism, injustice, and the exploitation of black miners. These efforts raised his national profile, and in 1912, he was a founder and first secretary-general of the African National Congress (ANC). He strongly opposed the 1913 Natives' Land Act, which restricted Africans to the most barren parts of the country, and published *Native Life in South Africa* (1916), a passionate exposé of the harsh effects of the act on Africans.

In 1914, Plaatje joined an ANC protest delegation to Britain, and five years later, he led a second

delegation that met with British prime minister David Lloyd George. From 1920 to 1922, he toured Canada and the United States, meeting African American civil rights advocate W. E. B. Du Bois and giving public lectures that raised consciousness about South Africa. In the 1920s, he participated in government-sponsored Native Conferences, using them as forums to criticize state policy. Although not abandoning the African National Congress, he largely withdrew from national ANC politics. In his later years, he turned increasingly to temperance work and literature, writing the first black South African novel in English, *Mhudi* (1930). In his writings, he challenged the cultural domination of colonialism, with its stereotypes of Africans, and worked to preserve the Setswana language and people, publishing a book of Tswana proverbs and becoming the first to translate Shakespeare into an African language. His writing did not stop him, however, from continuing to lobby for better conditions for Africans until the year of his death, 1932. Plaatje opposed settler colonialism, albeit in ambiguous ways. He combined a commitment to African emancipation with a belief in the fairness of Cape justice, sympathy for the plight of African workers with opposition to radical socialism. A devout British Empire loyalist, he nevertheless used irony to recreate, in the colonizer's language, a sense of African dignity. Since the demise of apartheid, Plaatje's writings have continued to attract attention, and in 1992, his Kimberley home was declared a national monument.

Poland

Throughout history, supporters of the Polish state sought to defend it against invaders, expand it to include neighboring territories where Poles lived, or act aggressively to spread Polish civilization. This expansion produced an empire of sorts with “colonies” of Polish culture in the eastern borderlands. Poles justified their expansion by reference to the Holy Roman Empire and Roman Catholic Christianity and the struggle on the eastern marches of Western civilization, where they were more successful than in the west. Through a series of dynastic, political, and religious unions beginning in the Middle Ages, the vast state of Lithuania (including much of Byelorussia and Ukraine) joined Poland to create a commonwealth stretching from the Baltic to the Black Sea—in Europe, second in size only to Russia. Three partitions in the late eighteenth century removed Poland from the map, but patriots kept alive the dream of resuscitating their land, likening the suffering of Poland to Christ's suffering on the cross. Poland reemerged as a consequence of the end of World War I in 1918.

Two political movements created a Poland strong enough to withstand German and Russian pressure. The first was the National Democrat movement, which was led by Roman Dmowski and sought to control as much land as was settled or claimed by Poles, especially in the so-called borderlands. The National Democrats defended Polish prerogatives of power and the Polonization of national minorities to create an ethnically homogeneous state. Some National Democrats believed a great European state such as Poland needed overseas colonies—in Brazil, for example. The second movement was the Polish Socialist Party headed by Joseph Piłsudski, who founded Poland in 1918. An anti-Bolshevik, Piłsudski sought a Poland federated with independent Lithuania, reminiscent of the past commonwealth but now joined together on the basis of ethnic equality. The federation would include a coequal Ukraine. This state would have stretched from the Baltic to the Black Sea.

Both of these political organizations failed in their objectives after the Russo-Polish War ended in 1920. However, the boundaries of the new Poland included important Lithuanian, Byelorussian, and Ukrainian populations, integrated into a unitary state. Again partitioned in 1939 at the beginning of World War II, Poland emerged from the war in 1945 as the Soviet-inspired Polish People's Republic. After extensive population transfers, the new Polish state became overwhelmingly ethnically Polish. Meanwhile, Poland's entry into the North Atlantic Treaty Organization (NATO) and its impending entry into the European Union proscribe any dreams of post-Soviet Russians about regaining control over Polish territory.

Police and Policing

The study of colonial policing was, for many years, the neglected stepchild of colonial and imperial history, preserving and perpetuating untested generalizations and myths as undifferentiated assumptions were reiterated and reified. In an academic process that resembled nothing so much as the colonialism it described, the multiple roles of colonial police forces went unexplored, their positions in colonial power structures for the most part went unexamined, and their status as key apparatuses of the state was underplayed. Consequently, readings of colonial and imperial history as a whole often have lacked an understanding of the complexities and subtleties of colonial power and of the ways in which colonial police forces not infrequently were key coercive elements in the imposition of the social, political, and economic control of newly colonized areas and peoples. The “new imperial/colonial history” introduced in the 1980s has begun to fill some of those lacunae, enabling more nuanced elaborations of the intricacies and ambiguities of social power and control.

Colonial policing has variously been described as little more than an exploitative instrument of

colonial capitalism, engaged in the systematic subjugation and coercion of the colonized; as almost invariably militaristic in origin and underlying philosophy (deriving directly in many colonies from the occupying armed forces); as a core institution of the process of establishing civil society in colonized territories; as a crucial interface between colonizers and colonized, with the incorporation of indigenous personnel into colonial forces being read as a significant factor in wider acceptance of the colonial condition; and as a means of exercising indirect control over large subject populations. The range of explanations, arguments, and descriptions reminds us that, despite some commonalities, the colonial experiment was diverse, carried out over a very long period of time, and imposed on many widely differing cultures, each of which reacted in its own particularist way.

Insofar as generalizations about the core roles of colonial police can be established, the idea of *la mission civilatrice* (the civilizing mission) as a key justification underpinning the colonial enterprise was comparatively widespread, although perhaps less subscribed to by some colonial powers than others. The project of a civilizing mission allowed colonizers to understand their actions as something more than expropriation or invasion, since they were not simply imposing political and legal control on subject populations but rather achieving that necessary control through a paternalistic process of civilizing and socializing both the indigenous peoples and the colonial white working class, with the police acting as relatively benign arbiters of the process. The development of nuanced understandings of the field were inevitably retarded because two key factors—the essentially extractive nature of the economic relationships between metropole and colony and the inherent inequalities of status between colonizer and colonized—were largely underplayed in earlier analyses of colonial policing.

For British colonial territories, a long-standing assumption has been that the most prevalent policing model was that of the “Irish” or “Ulster” tradition of coercive policing rather than the “English” tradition of consensual policing: that is, that the police were isolated from the communities in which they policed (living in barracks), that they were militarized (equipped with firearms, rather than the simple baton of the English bobby), and that they

were organized centrally rather than locally, thus further removing them from the communities in which they lived. The corollary of this notion was that of “martial race”—the theory by which the indigenous people of one territory would be controlled by police (from a supposedly martial race) who came from a geographically, linguistically, ethnically, or culturally distant territory. Indeed, some colonial administrators specifically acknowledged the ways in which they had drawn on the model of the Royal Irish (or later Ulster) Constabulary.

These models have proved useful for explanatory purposes, and they can help to uncover something of the derivations of particular practices or philosophies of policing. But their persistence speaks more to a perceived need for generalization about the complexities of policing in the imperial situation. In such a situation, relatively few men from the colonial bourgeoisie commanded not many more indigenous police whose task it was to work closely with the military to impose and maintain the observance of new, often confusing law in situations of mutual cultural incomprehension. That they often were armed and acted coercively, however, says more about the policing environments in which they operated than about the models from which they may have derived their policing methods and practices. In reality, the consensual model of community policing, established more or less firmly through London’s Metropolitan Police and its affiliated forces after 1829, was not able to deal effectively with the ambiguities of the colonial environment (or of the processes of decolonization); indeed, they began to be torn apart in the metropole itself as the United Kingdom found it had to deal with more complex domestic issues of ethnicity and religion in the postcolonial period.

In many colonies, the colonial police assumed the role of internal security maintenance from the military and focused almost totally on coercive roles, rather than on building consensual communities. In most colonies, too, the frontier, turbulent and always shifting, was an integral component of both the practicalities and the psychology of policing; in fact, the frontier was often seen as requiring coercive paramilitary styles of policing because of a perceived lack of consensual communities. The policing environment described by August Kituai in the then Australian colony of Papua New Guinea—with a culture of violence that informed and under-

pinned the colonial enterprise, enforced physically and psychologically by indigenous police under the command of Australian patrol officers—is a model that (as opposed to the United Kingdom and Irish examples) can usefully be transposed to many other colonies, underlining as it does the essential violence of the colonial system.

As David Anderson and David Killingray demonstrated in the seminal collection of essays on colonial policing that they edited in 1991, colonial policing is often best understood in its local environments, where the complex interplay between coercive and consensual models can be explored more fully. It is within this local contextualization that the significance of the hierarchical relationships between indigenous police and entered populations and between indigenous constables and noncommissioned officers, on the one hand, and expatriate officers, on the other, can be engaged; furthermore, this is where racial attitudes and policies (varying both temporally and geographically) can be better understood. To analyze locally is not, however, to downplay the significance of what Anderson and Killingray called “imperial linkage”: empires, whether British, German, Portuguese, or French, were complex networks, spiders’ webs of information and ideas in which officials (usually male) moved from post to post across ethnic and geographic boundaries, carrying practices from one to another, and from center to periphery and vice versa, with long institutional memories and collective experiences.

Polo, Marco (1254–1324)

The most celebrated of medieval European travelers, Marco Polo dictated his *Description of the World* in a Genoese prison in 1298. He set out for China in 1271 with his father, Nicolo, and uncle,

Maffeo, Venetian merchants who had already reached China and been received as guests of the Mongol ruler Khubilai Khan in 1266. The Polos arrived at the court of the khan after an arduous journey in 1275. Marco served as a minor functionary at the court of Khubilai and undertook many official tours of the Mongol empire. The Polos returned to Venice in 1295.

Marco's account was not just a travelogue; it was also a prodigious compendium of geographic knowledge about vast regions of Asia largely unknown to Europeans at the time. It chronicled, for the first time in the West, the sources of spices and other precious commodities in East Asia that were valued by Western merchants. Marco's main point was that the empire of China was far richer, more urbanized, and more technologically advanced than Europe. He celebrated Khubilai as a benevolent despot who was tolerant of different religions, and he introduced to the West the use of paper money and coal, both of which had been used in China for some time.

Although *The Travels of Marco Polo* immediately became the most popular book in Europe, it was initially read as a romantic fantasy. Only during the Renaissance was the book embraced as a source of geographic knowledge, and it inspired Christopher Columbus and other explorers to pursue their voyages of discovery. The credibility of the book has been subsequently questioned, for Marco failed to mention certain salient characteristics of Chinese civilization (such as foot binding or the Great Wall). Defenders, however, point to geographic and cultural observations borne out by nineteenth-century explorations of the Silk Road and by Chinese sources.

Regardless, *The Travels of Marco Polo* helped to spark a sustained interest among Europeans in collecting information about other parts of the world and about potential sources of wealth, which paved the way for Europe's subsequent imperialist expansion.

Polynesia

Polynesia consists of several archipelagos of small islands situated in the vast expanses of the southwestern and central Pacific Ocean. These are islands settled by Malay-speaking peoples—originally from Southeast Asia—who established themselves there several thousand years ago, slowly island-hopping across the Pacific to locations as far apart as New Zealand and Hawaii.

The heart of Polynesia consists of the five archipelagos making up what is now called French Polynesia (officially, the *Territoire de la Polynésie Française*, an overseas territory of France with representation in the French Parliament): the Gambier Islands, the Marquesas Islands, the Society Islands (including Tahiti, the largest of the islands), the Tubuai Islands, and the Tuamotu Archipelago. Other major non-French islands of Polynesia include American Samoa, Western Samoa (an independent nation), and the Cook Islands, which have a free association with New Zealand.

The Samoan Islands may have been first settled by Malay-speaking Polynesians as early as the first millennium B.C.E., whereas the islands of French Polynesia were first populated about 300 C.E. Using their extraordinary navigational skills, the Polynesians eventually made their way across much of the Pacific, locating and settling islands as they went and finally reaching Hawaii several hundred years later.

Although Ferdinand Magellan first sighted several Polynesian islands on his transglobal voyage in 1521, it was the French who became the first Europeans to chart and settle the islands in the second half of the eighteenth century. Missionaries from France and the United Kingdom established themselves in French Polynesia and the Samoan islands in the late eighteenth and early nineteenth centuries.

During the late nineteenth century, the various islands of Polynesia came under different European colonial rulers. The island groups that now comprise French Polynesia were gradually consolidated under Paris's rule between 1842 (when Tahiti became a protectorate) and 1900. The

Samoa Islands, by contrast, were disputed between France, Germany, the United Kingdom, and the United States in the late nineteenth century. Eventually, Western Samoa became a German colony, and American Samoa was absorbed by the United States. During World War I, Western Samoa was occupied by forces from New Zealand. In the late nineteenth and early twentieth centuries, the islands were coveted for their geographic location as potential coaling stations for European navies.

Since World War II, the various island groups of Polynesia have experienced different political fates. Political agitation in French Polynesia in the 1960s and 1970s—often connected to France’s nuclear testing in the area—eventually won those islands a partial autonomy. The residents of American Samoa have gained a degree of self-rule in the postwar era, although they continue to be administered by the U.S. Department of the Interior. Meanwhile, Western Samoa became a UN trust territory, administered by New Zealand, from the end of World War II until 1962, when it won its independence.

Ponce de León, Juan (1460–1521)

In 1508, Spanish authorities, in an attempt to extend their Caribbean base from Hispaniola, sent Juan Ponce de León to conquer Puerto Rico. De León’s fame has long rested on his search for a mysterious fountain of youth. He had been told of an island lying to the north of Hispaniola where there was reputed to be a spring or river of such “marvelous virtue” that anyone who drank its waters would be restored to youth and vigor. It was those rumors that drove him beyond Puerto Rico to Florida.

After his successful conquest and subsequent colonization of Puerto Rico, de León sailed from that island in 1513 on an exploration and slave-hunting expedition, during which he discovered Florida and sailed up its west coast. He then

turned southward and sailed along the east coast of the peninsula, proving that it was not an island. De León subsequently secured a royal patent to colonize Florida and Bimini, which he had also explored. Instead of proceeding to that task, however, he entered into a war against the Caribs, and it was not until 1521 that he attempted to settle colonists in Florida. He led a group of 200 men to try to establish a settlement on the west coast, but his efforts failed when the inhabitants attacked the colonists. De León was critically wounded and driven back to Cuba, where he died. The greatest product of his expeditions was not gold or silver but his study of the environment and indigenous peoples of North America.

Ponty, William (1866–1915)

French colonial statesman Amédée William Merlaud-Ponty, born in Rochefort-sur-Mer, trained to be a lawyer and colonial administrator. He served in the western Sudan from 1889 to 1895, was sent to Madagascar, and returned to the Sudan in 1897. Rising through the colonial ranks, he was appointed governor-general of French West Africa in 1908 and held that post until 1915. Ponty is remembered for reformulating native policy, reforming the judicial process, and restructuring the educational system, which stressed the use of French in all aspects and at all levels of West African life.

Ponty viewed the indigenous peoples as needing to be “trained” (*apprivoisé*). Severely limiting the role of regional chiefs, whose rule had evolved over geographically contiguous but not necessarily culturally similar Africans, he declared that the leaders of ethnic groups would be chosen from the families they represented. Ponty wanted these village leaders to take charge of administrative and fiscal duties; however, he failed to realize that his plan was unworkable because of local political realities.

His legal reforms, set out in 1912, were more viable. Ponty demanded that the colonial courts rec-

ognize and respect the various ethnic groups and that customary laws remain in place as long as they did not contravene Western morality: cannibalism and ritual murder were deemed unacceptable. French courts could be used or appealed to under certain circumstances, and French law determined levels of criminality. The concept of punishing an individual who had committed a specific crime, as opposed to a collective family or social group, took hold, and for criminal acts, imprisonment was required, rather than the payment of compensation.

The goals of Ponty's educational program were to entrench French as the official language of French West Africa and create "useful men" (*hommes utiles*) who could work the land. He believed the universal acceptance of French would enable individuals to better their living standards, develop their country, counter the spread of Islam, and solidify society by instilling a love of French culture. The fact that this would lead to aspirations of equality was ignored.

Population and Demographics

Imperialism's effects on population and demographics in colonies and metropolises are difficult to trace because multiple factors affect demographics, only some of which are directly attributable to imperialism or colonialism. Most studies of the demographic impact of colonialism (and there are surprisingly few) examine migration. Imperial migration can be categorized into three types: migration from the metropolis to the colonies, migration from the colonies to the metropolis, and migration between different colonies within the empire. It is often difficult, however, to draw a direct causal relationship between migration and colonialism.

One exception might be labor migration, which includes the movement of slaves and indentured servants as well as economic migration. The slave trade predated the heyday of imperialism but was

nevertheless quite significant demographically. Estimates of the demographics of the slave trade vary, but at least 10 million Africans were sent to the Americas, with most going to Brazil or the Caribbean. In addition to slavery, labor migration includes the movement of Indians to Mauritius, Ceylon, the Caribbean, British Guiana, Natal, and other parts of southern and eastern Africa; South Pacific Islanders to New Zealand; Chinese workers transiting through Hong Kong into Malaya and British North Borneo; and Asian migration into Australia and British Columbia. Migration from the Netherlands Indies to Surinam followed the same pattern. French colonial labor migration policy during World War I resulted in the recruitment of some 223,000 colonial subjects from North Africa, Indochina, and Madagascar, as well as Chinese workers. Labor migration was generally less important elsewhere, overshadowed by population movements from the centers to the imperial peripheries.

Population movement from metropolises to colonies was part of the larger phenomenon of emigration from Europe. Roughly 55 million people emigrated from Europe in the century following 1820, but most were not driven by imperialism: English, German, and Irish populations formed the largest groups of emigrants through the peak years of the 1850s, with Italians and Eastern Europeans coming to dominate thereafter. Key demographic push factors included unemployment caused by new agricultural practices and landownership in Great Britain and Germany; the Irish potato famine; and the search for religious freedom, such as that on the part of Jews from the Russian Empire. Emigration from Britain declined after the middle years of the nineteenth century and averaged roughly 200,000 annually from 1870 to 1894—some three-quarters of whom emigrated to the United States in the latter part of that period. British emigration slowed to a trickle in the 1890s, although organizations such as the Emigrants' Information Office, opened in 1886, reversed the proportion of emigrants staying within the empire to approximately two-thirds. Another surge of emigration began in 1907 and peaked between 1910 and 1913, when an average of 394,000 British emigrants annually left for the dominions or colonies, with the majority being English and Scottish rather than Irish as in the past. After World War I, settler societies in

Kenya and Southern Rhodesia attracted distressed landowners, former military officers and soldiers (aided, for example, by the 1919 Soldier Settlement Scheme for farming in Kenya), and others seeking foreign opportunities, including single women. Various British imperial emigration efforts were centralized in the Empire Settlement Act of 1922, which was periodically renewed and finally expired when the Commonwealth Settlement Act was passed in 1972. The demographic effects of colonialism were especially significant after World War II, as there was much migration to the colonies; many of the emigrants were participants in assisted settlement schemes in Australia, Canada, and New Zealand.

Another demographic effect of imperialism was transverse migration around the peripheries of empire, such as the large-scale movements between Australia and New Zealand and, to a lesser extent, South Africa. By the late nineteenth century, demographic and emigration policies took on geostrategic and geopolitical connotations as European governments began to see population as an asset or resource of imperialism, much like territory or natural resources. In this light, the 1905 Census of the British Empire cataloged the dispersal of people from the British Isles to the colonies of white settlement and elsewhere; the diaspora, especially of Indians, black Africans, and Pacific Islanders to imperial territories outside their homelands; and some influx of the colonial-born, especially those from white settler societies, into Britain.

With the exception of the wartime recruiting referred to earlier, migration to France from French colonies was not especially significant in the first half of the twentieth century. Much more important in terms of numbers was immigration into France from European countries. For example, between 1918 and 1928, some 400,000 Polish workers immigrated to France. Workers and political exiles from Italy after Benito Mussolini's accession in 1922 and from Spain during and after the civil war comprised other large sources of demographic growth. These groups were replaced in the middle of the 1950s by colonial subjects from the Maghreb, especially Algeria, and other French colonies in Africa and overseas. In addition, approximately 1 million *pièdes-noirs*, or white settlers born in Africa, moved to France following Algerian independence in 1962.

Decolonization also had major demographic effects in many other cases. Some involved population transfers between former colonies. Certainly, one of the largest mass population movements ever was the exchange of 14 million people between India and Pakistan in 1947 and 1948, after these countries achieved independence. Some 300,000 people migrated to the Netherlands from Indonesia in the years following Indonesian independence. Likewise, immigration to the United Kingdom surged in the 1950s. The 1961 census estimated that the "coloured" population of Great Britain rose in a decade from 74,500 to 336,000, to include 171,800 West Indians, 81,400 Indians, 24,900 Pakistanis, and 19,800 West Africans. Some scholars argue that their presence proved the existence of an integrated imperial labor market in the twentieth century, but further research on the demographic impacts of imperialism and colonialism remains to be done.

Portsmouth, Treaty of (1905)

The peace treaty between Russia and Japan was concluded on September 5, 1905, at the Portsmouth naval yards in New Hampshire. The

treaty marked the twilight of the Russian imperial power in the Far East, the rise of the Japanese Empire, and the beginning of the final phase of colonial exploitation in East Asia.

According to the treaty, Russia agreed to transfer to Japan its de facto protectorate over Korea as well as the lease of the Chinese Liaotung Peninsula, the railroad from Port Arthur to Changchun, and its mining concessions in the southern part of Manchuria. The treaty also ended the Russian protectorate over Manchuria, in existence since 1900, as both powers agreed to evacuate the province and restore it to China.

Additionally, Russia ceded the southern half of Sakhalin Island to Japan. The Russo-Japanese talks in Portsmouth and the treaty itself were tributes to the mediation of U.S. president Theodore Roosevelt, and they confirmed America's emergence as a world power.

Portuguese Empire

In the early fifteenth century, the small country of Portugal was the leading European power in terms of overseas expansion. A small country with a population of less than 1 million, Portugal was able to establish the first global European empire, which spanned the earth from the Americas to Africa and Asia. The history of the Portuguese Empire can be divided in three distinct periods. From 1415 to the mid-1500s, it was a maritime commercial empire, with enterprises in Africa and Asia; from the middle of the 1500s to 1822, the Portuguese developed an Atlantic empire based on cash crops, slavery, and precious metals, with Brazil being the major colonial possession in this arena; and from the independence of Brazil in

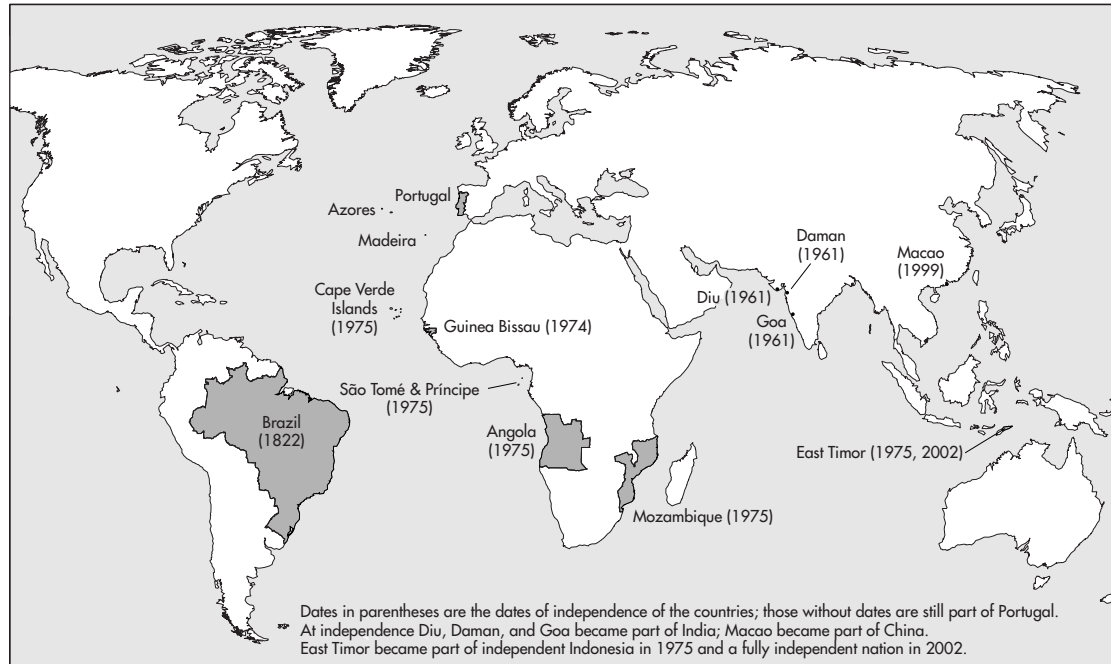

1822 until the mid-1970s, the empire was characterized by the colonization of Portugal's Africa colonies—Angola, Mozambique, São Tomé and Príncipe, Cape Verde, and Guinea-Bissau.

The Portuguese were the first Europeans to systematically explore the Atlantic Ocean. They initiated the Atlantic slave trade and established the first European overseas empire, with explorations that predated those of all other European nations. All of this was a consequence of several factors, including the fact that Portugal was the first modern nation-state in Europe. Unlike the divided states of Spain, Italy, France, and England, Portugal was a unified nation, and it enjoyed domestic tranquility. Geographically, it possessed a long ocean sea-coast and faced the Atlantic Ocean. Portugal's only neighbor, Spain, had historically been hostile toward Portugal and had prevented the Portuguese from turning toward Europe. Also, the lack of natural resources in Portugal's territory made trade the most viable alternative for acquiring wealth. Finally, the Portuguese government was centralized, and it supported the Portuguese bourgeoisie in its attempts to expand trade and power.

Prior to the European overseas expansions into the Atlantic and Pacific Oceans, European trade was undertaken mostly in the Mediterranean Sea. The Italian states (there was no unified Italy in that period) dominated this trade. In the early fifteenth century, the Portuguese began seeking out a sea route to Asia as a way to circumvent the Italian monopoly in the trade of spices. Another objective of the overseas expansions, one that was especially important in the first half of the fifteenth century, was to reach the African source of gold without encountering the interference of the Arabs (or Moors) from North Africa.

Religion also played an important role in the Portuguese explorations. Both Portugal and Spain had fought the Moors for centuries to recover a good part of the Iberian Peninsula. It was only in the middle of the thirteenth century that the Portuguese finally conquered all of its present-day territory, taking it from the Moors. Thus, the overseas expansion of the peoples of the Iberian Peninsula in the fifteenth century followed the reconquest of the peninsula from the Moors. In addition, the Portuguese also believed that somewhere in Africa there was a powerful Christian king, known as Prester John, who could help the

PORTUGUESE EMPIRE

Portuguese spread Christianity. Consequently, the church supported overseas expansion as a way to carry the Christian faith to the rest of the world.

The Portuguese conquest of Ceuta in 1415, a Muslim city in northern Africa, gave a new impetus to the long struggle with the Moors. The idea of fighting the Moors in their own land—spreading Christianity beyond Europe—and at the same time expanding trading routes gave the Portuguese an incentive to venture overseas. Moreover, since Ceuta was an important commercial center, the Portuguese must have learned a great deal from other African peoples who supplied the Moors with gold.

The discovery of the archipelago of Madeira in 1418 was one of the first milestones in the Portuguese expansion. Between 1427 and 1431, the Azore Islands were discovered by Portuguese sailors. Both the Azores and Madeira were then uninhabited, and their colonization was initiated quite quickly, from about 1445. The expansion of the Portuguese continued to Cape Verde as well as São Tomé and Príncipe on the west coast of Africa, where they established sugar colonies by the middle of the 1400s. These islands became the first tropical colonies designed almost exclusively to produce sugar and with a labor force of African slaves. The experiences in tropical agriculture and in the slave trade developed there were used by the Portuguese in the colonization of Brazil, as well as by the Spanish, the French, and the English in the rest of the Americas.

After reaching the Atlantic islands, the Portuguese continued to sail southward along the coast of Africa, trading on equal terms with the African kingdoms that they encountered. By the mid-1400s, they had explored the African coast as far as Sierra Leone. By the 1480s, they had reached the Congo Kingdom and Namibia. In 1488, another expedition, led by Bartolomeu Dias, rounded the southern tip of Africa and reached the East African coast, thus establishing Europe's first sea-way to Asia. Dias and his men named the southern tip of Africa the Cape of Storms due to the severe weather they encountered there. However, the Portuguese king João II later changed the name to the Cape of Good Hope, since it promised the long awaited passage to the East. It took many years for the Portuguese to send another expedition to sail to the East, for they were involved in developing

commercial alliances in Africa and were trying to learn as much as possible about that continent and the Far East by sending a few expeditions by land through Africa. However, by 1497, another navigator, Vasco da Gama, sailed to India and for the first time linked the East and West by sea. The Portuguese continued their expansion into Asia, and by the middle of the 1500s, they had established Christian settlements in Goa (India), Macau (China), Nagasaki (Japan, a city that was founded by the Portuguese), Malacca (Malaysia), and East Timor (Indonesia).

The development of navigational skills by the Portuguese influenced all of those in Europe who were interested in sailing the oceans, including Christopher Columbus. In fact, Columbus's career as a seaman began effectively in Portugal, where he lived and worked for about ten years, from the late 1470s to the late 1480s. Columbus married a Portuguese woman and lived in Lisbon and on the island of Madeira. His marriage gave him access to the maps and documents of his deceased father-in-law, who was one of Prince Henry's navigators. Columbus also sailed several times along the coast of Africa for the Portuguese. In 1484, he approached King João II, asking him to finance an expedition that would attempt to find a western sea route to the Indies. The king refused his offer, as the Portuguese believed they could find a route to the East by sailing south along the coast of Africa.

During this time, the Portuguese goal was to establish a commercial rather than a colonial empire. This fact is well illustrated in their lack of interest in Brazil. After Pedro Alvares Cabral reached the Brazilian coast in 1500 and claimed the new land for the Portuguese Crown, the Portuguese at first did little to exploit the discovery. In fact, Brazil was of minor importance to Portugal, as the trade with the East proved to be much more profitable for the empire. It was only after the control of Brazil was threatened by foreign invasion, from the Dutch and French, that the Portuguese began to take a more serious approach to the colonization of Brazil. By this time, the Portuguese were also losing their monopoly in their eastern trade, and the production of sugar was proving to be a major source of profits on the islands of Madeira and São Tomé. Although Brazil was one of Portugal's most uninteresting colonial

possessions initially, it proved to be the most long-lasting and profitable colonial enterprise in Portuguese history. Between the sixteenth and the early nineteenth centuries, Portugal's economic dependence on Brazil increased to the point that, by the time Brazil declared its independence in 1822, Lisbon was totally dependent on the trade that derived from its colony.

From the early nineteenth century, the Portuguese economy was stagnant. Agriculture had not been modernized, for it was abandoned by the nobility, who were more interested in exploiting the potential of Portugal's overseas lands. Yet the structural problems of the Portuguese economy were masked by the rich profits derived from the colonies. However, by the eighteenth century, Portugal had already lost its trading monopoly with India, and the only lucrative enterprise that its colonies in Africa offered was the slave trade—a business that the Portuguese Crown could not always control to its own advantage. The healthiest segment of the Portuguese economy was the colonial commerce with Brazil. After Brazilian ports were opened to international trade in 1808, the Portuguese economy entered an era of stagnation, and thereafter, both the manufacturing and the agricultural sectors in Portugal were severely crippled due to the loss of the Brazilian market. Portugal had become a dependent home country, which had failed to generate investment in its internal development because of the profits that had been brought from Brazil.

After Brazil's independence in 1822, Lisbon attempted to revive the Portuguese economy by investing in the colonization of its African holdings. However, Portugal was never able to recover the wealth of its earlier colonial period. From 1926 to 1974, a nationalistic and authoritarian dictatorship controlled Portugal. In 1961, rebel groups in Angola rose up against Portuguese rule, and the revolt soon spread to Mozambique and Guinea-Bissau. In 1974, a leftist revolution, mainly a domestic reaction to these colonial wars, took place in Portugal and ended the long and violent conflicts with the African colonies. By 1975, all Portuguese colonies in Africa had achieved independence. However, independence did not bring peace to the new nations, as Angola and Mozambique embarked on violent civil wars. These two countries are still trying to recover

from the economic and human losses since the 1960s.

In Asia, the Portuguese lost control of Goa in 1961 when the Indian army overwhelmed the Portuguese military presence in that region. East Timor, by contrast, underwent devastating violence in the decades following its independence from Portugal in 1975. Invaded by Indonesia on December 7, 1975, and occupied for nearly thirty years, one-third of its population was killed by Indonesian troops. Presently, East Timor is being occupied by the United Nations in an attempt to rebuild this nation and have its independence respected by the Indonesians. The last Portuguese presence in Asia—Macao in China—was handed back to the Chinese in December 1999. Thus, after more than 500 years of colonialism, the Portuguese Empire was finally over. Portugal became the first and last European presence in Asia and one of the last of the colonizing nations.

Potosí

The Bolivian city of Potosí—the highest in the world at 4,090 meters—was founded in 1545 at the site of a newly discovered silver mine. This mine, essentially a mountain of mineral wealth, came to be called Cerro Rico—the Rich Hill. The silver deposit proved to be truly immense, and Potosí soon became one of the largest cities in the world. In its heyday, this Spanish colonial city supported over eighty churches. The indigenous people of the region worked as virtual slaves in the mines and supplied Spain (and Europe) with vast wealth. Some claim that the immense silver

wealth of Cerro Rico, when coupled with the equally immense plunder of gold resources from the New World, fueled the nascent capitalist economy of Europe and gave it economic power equal to its military prowess as it moved to establish a truly global economic system. Inevitably, the mines of Cerro Rico played out, and the millions of indigenous people who died extracting ore for their colonial masters were forgotten. Bolivia never profited from the tremendous wealth extracted from Cerro Rico, and it is now one of the world's poorest countries. Potosí, which once supported as many as 200,000 people, has shrunk to about 120,000. Today, many of its residents make a living (if it can be called that) picking through the immense heaps of refuse from the mines, searching for bits of mineral wealth that were overlooked centuries ago.

Potsdam Conference

The leaders of the United States, Great Britain, and the Soviet Union met for the third and last major conference of the Allied powers in World War II in the Berlin suburb of Potsdam from July 17 to August 2, 1945. U.S. president Franklin Roosevelt had died on April 12 and was succeeded by Harry S. Truman. British prime minister Winston Churchill was voted out of office on July 28 and was therefore replaced by Clement Attlee. Of the three leaders who first met in Teheran in late 1943, only Joseph Stalin remained. Relations within the Grand Alliance had soured after the Yalta Conference and Germany's surrender on May 7, 1945. U.S. and British leaders now understood that Stalin would not abide by the Declaration on Liberated Europe and would use the Red Army occupation of Eastern Europe to ensure Communist domination there. Moreover, Stalin now insisted that Poland's western border be set at the Western Neisse River, deeper in eastern

Germany than the Allies had agreed at Yalta, and the Red Army had begun massive shipments of industrial equipment from Germany as reparations for war damage. Faced with a *fait accompli*, the Allies agreed to a contradictory policy that called for treatment of the German economy as a "single economic unit" but allowed each of the Allies to exact reparations from its own zone of occupation. Although the Allies rejected a plan for separate German states, Potsdam set Germany on the road to division into eastern and western governments. Austria was restored as an independent state and, like Germany, divided into four occupation zones (which came to include France alongside the other Allies—the United States, the Soviet Union, and the United Kingdom). Also at Potsdam, Truman informed Stalin of America's successful detonation of an atomic bomb.

Prester John

Medieval Europeans believed the priest (or presbyter) John to be the leader of a fabulous land to the east. Marco Polo wrote of him as the leader of the Tartars in Central Asia. By the fourteenth century, some Europeans believed his land was isolated within the Islam world, and they sought to make contact with Prester John to join in an alliance against Islamic forces. Some observers also came to conflate the legend of Prester John with increasing evidence of a wealthy merchant kingdom in the interior of West Africa ruled by the *mansa* (king) Musa.

It was not surprising that Portuguese explorers, encouraged by the efforts of Prince Henry the Navigator, made the discovery of Prester John one of the major goals of their explorations along the coast of Africa. Indeed, the Portuguese who reached the Kingdom of Ethiopia in Africa's eastern highlands in the late fifteenth century actually carried a letter addressed to the mythical ruler. And when Vasco da Gama finally crossed the Indian Ocean, it was that same determination that led him to believe that the Hindu rites he saw

there were evidence of the long-sought Christian kingdom.

Although it seems the Europeans' original goal was to make Prester John an ally, it is clear that once the legendary ruler was found, the areas in which the search had been conducted—whether in the West African savanna, the Ethiopian highlands, or India—were more likely to become targeted for European colonial expansion. Certainly, Portugal's colonial enclaves in West Africa and Goa testified to that country's colonial ambitions, as did abortive Portuguese efforts to annex Ethiopia following an uneasy alliance with the latter against hostile Islamic forces threatening the African kingdom. But once colonialism had spread throughout Asia and Africa, the legend of Prester John remained more a legacy of European efforts to make the world Christian than evidence of careful research and intelligence about the world beyond the lands of Europe itself.

Puerto Rico

Puerto Rico, also known as Borinquen, was ruled by Spain from 1509 until it was ceded to the United States by the Treaty of Peace on December 10, 1898, signed at Paris. The Puerto Rican islands are located in the eastern Caribbean and are officially the Commonwealth of Puerto Rico (Estado Libre Asociado), a self-governing entity in association with the United States—a political status acquired in 1952. San Juan is the capital, and the territory includes the offshore islands of Vieques and Culebra, the sites of U.S. military bombing ranges. In 1901, the U.S. Supreme Court ruled, in *De Lima v. Bidwell*, that Puerto Ricans were not ipso facto U.S. citizens, and in 1917, the Jones Act made the islands a territory and granted U.S. citizenship to the inhabitants. The country held the status of an unincorporated territory under U.S. military administration until 1912, when the U.S. Congress passed the Foraker Act, establishing a civil government.

Nationalist political sentiment emerged soon after the U.S. acquisition. In 1898, Eugenio M. de Hostos called for self-determination to begin immediately, and in 1909, Luis Muñoz Rivera led a movement for the extension of U.S. citizenship. In 1924, a mission of statehood advocates arrived in the United States to demand that Puerto Rico be granted the rights of statehood without representation in Congress, and in 1928, the Puerto Rican legislature petitioned President Calvin Coolidge for a grant of autonomy without statehood. In 1939, a committee of the Puerto Rico legislature demanded statehood and an elected governor with power to appoint officials, and in November 1948, Luis Muñoz Marín became the first popularly elected governor of Puerto Rico.

The year 1950 was significant for a change in political status and for nationalist encounters. In July, an act of the U.S. Congress, the Organic Act, permitted Puerto Rico to draft its own constitution, and on November 1, Puerto Rican nationalists made an attempt on the life of U.S. president Harry Truman in Washington. On July 4, 1952, Governor Muñoz Marín proclaimed the Commonwealth of Puerto Rico one day after President Truman signed a congressional resolution approving a new constitution, which was ratified by popular vote.

Political status is of considerable interest to the islanders. Three options to the present commonwealth status are possible: statehood, enhanced commonwealth, and independence. Under the current commonwealth status, Puerto Ricans do not pay federal taxes on income received from island sources, but they do pay customs taxes to the federal treasury, which are then returned to the commonwealth. Current relations between Puerto Rico and the United States are defined in the Puerto Rico–Federal Relations Act. Every four years, Puerto Ricans elect a resident commissioner, who is permitted to vote only in committee and not on the floor of the U.S. House of Representatives. Executive power is vested in a governor, elected for a four-year term by universal adult suffrage. An appointed cabinet assists the governor. Legislative power is held by the bicameral Legislative Assembly, comprising the Senate (twenty-eight members) and the House of Representatives (fifty-four members). The members of both chambers are elected by direct vote for four-year terms. Puerto Rican U.S. citizens living in the is-

lands participate in U.S. party primary elections but do not vote in national presidential elections.

The three main political parties correspond to the political status options: the National Republican Party of Puerto Rico supports statehood; the Partido Independentista Puertorriqueño (PIP) advocates full independence; and the Partido Nuevo Progresista (PNP) seeks the eventual admission of Puerto Rico as a federated state of the United States. Other political parties include the Partido Comunista Puertorriqueño (PCP), which seeks full independence and severance of ties with the United States, and the Partido Popular Democrático (PPD), which advocates a continuation and improvement of the present commonwealth status. None of the status options have won a clearly majority in ongoing plebiscites.

Puritans

The term *puritan* was first used in England in the 1560s to refer to persons who believed the Church of England had not gone far enough to “purify” itself from the vestiges of the Roman Catholic Church. Puritans believed in a Calvinist theology, personal piety, and a church government based on

New Testament examples. In England, Puritans soon became allied with the parliamentary opposition to James I and Charles I. Despite a successful revolution against the monarchy, English Puritanism could not maintain its power. By 1660, it had splintered into numerous small sects and was no longer a significant influence in England.

In the meantime, however, Puritans had played a major role in the English colonization of America. A small band of Separatists, Puritans who took the extreme measure of breaking all ties with the existing church, established Plymouth Colony in 1620. In 1629, a group of Puritans led by John Winthrop took over direction of the Massachusetts Bay Company. During the next decade, more than 20,000 people followed Winthrop to New England, where political and social life was molded to fit the Puritan ideal of a Bible commonwealth. Although Puritans were present in all the American colonies and even experimented with settlements in the West Indies, they are best remembered for their efforts in New England. Though they had lost the political control of Massachusetts by 1692, they continued to exercise considerable influence in New England up to the time of the American Revolution. Their emphasis on congregational church polity, local town meetings, the necessity of hard work, and the importance of education made a lasting contribution to the development of the United States.

Q

Quebec

Although settled for millennia by indigenous people, the first recorded European exploration of the Quebec region was undertaken by the Frenchman Jacques Cartier in 1535. However, Samuel Champlain is credited with establishing the first European settlement in the area in 1608 (Quebec City, now the provincial capital). Quebec was established as the center of the thriving fur trade in the New World, and for most of its history, Montreal was Canada's largest city (it has since been overtaken by Toronto, Ontario). By the middle of the eighteenth century, Quebec was the center of the New France empire, which stretched from the Atlantic coast to Hudson's Bay to the Gulf of Mexico and New Orleans. This New World empire came to an end with the British defeat of the French in 1760, and it was further reduced when France sold its Louisiana holdings to the United States in 1803. In an attempt to win the allegiance of the Québécois in its looming war with the American colonies, the British recognized the rights of the French language, Catholicism, and French civil law in Quebec by enacting the Quebec Act in 1774. This step did little to address the grievances of the Québécois, although French-speakers and English-speakers have long been rather reluctant partners in that country that is now called Canada.

The Canadian constitution, repatriated in 1982, no longer recognized Quebec as a "distinct society" (a term from the Quebec Act of 1774). This

lack of a direct statement concerning Quebec in the constitution led to considerable political turmoil in Canada as a debate raged over the role of a francophone Quebec within the context of the rest of Canada. A national referendum on a constitutional reform package—including several "distinct society" clauses designed to address Québécois concerns—was defeated by the Canadian electorate in 1992. This rejection of Quebec concerns at the national level led the ruling party—the Parti Québécois—to seek an independent Quebec government through a 1995 provincial sovereignty referendum. The referendum lost by the narrowest of margins (50.56 percent no votes to 49.44 percent yes votes); about 60 percent of the francophone population voted for the referendum, and about 95 percent of the non-French-speaking minority (including the aboriginal population) voted no. Although the referendum was defeated, the issue of Quebec's dissatisfaction with the rest of Canada has not gone away, and the future status of Quebec within the Canadian federation is still an open question.

Quran (Koran)

The prophet Muhammad was born in Mecca in 570 and died in 632. When he was about forty, he began to meditate in a local cave. There, he was called to be a prophet, by a spiritual presence he identified as the angel Gabriel. The angel dictated the first part of the Quran (a word meaning “discourse” or “recitation”) and the beginning of the ninety-sixth *sura*, or chapter. The rest of the Quran was revealed to him over a period of twenty-three years, first in Mecca, then, after the *hijra* (flight) with which the Muslim calendar begins, in Medina. The text was preserved by scribes and remembrancers; there is a tradition that the prophet was illiterate, which enhances the Quran’s miraculous character.

The Quran comprises 120,000 words—roughly the length of the New Testament. It is divided into 6,000 verses and 114 chapters, arranged in order of length. The definitive text, thought to originate with the Prophet’s scribe, Zaid ibn Thabit, was established in the caliphate of Uthman (644–656), who destroyed other versions so that they would not be used in controversies. All Muslims regard the Arabic text as divinely inspired. Memorizing it—or parts of it—is an essential part of a traditional Islamic education.

The Quran includes ecstatic invocations of the power, majesty, and goodness of God and accounts of human moral responsibility: all must face the Last Judgment. The Prophet did not claim to found a new religion; his was the complete fullness of a revelation that had been glimpsed by others in the past. The Quran tells of Adam and Eve, Noah, Abraham, Moses, and Isa (Jesus), as well as Arab prophets. In fact, Mary is mentioned more often by name in the Quran than in the New Testament. All *sura* but one begin with an invocation to God the Gracious and Merciful. Where its text is internally inconsistent, as on the drinking of wine, the inconsistency is explained by progressive revelation, with a later revelation canceling an earlier one. Only a tenth of the text deals with regulations or legal issues; in this regard, the Quran came to be supplemented by the *Hadith* (meaning “traditions”), which are the reported words or actions of Muhammad and one of the bases of Islamic law. It is these interpretations of the Quran that have frequently highlighted conflicts between Muslims and European colonialists.

R

Racism

Perhaps no other colonial legacy is as controversial as racism. Stereotypically equated with color, more specifically with blackness, the idea of race is merely a social construct. Race simply does not exist. It was created by those in power in order to justify and legitimize their hegemony over their colonial subjects, and it eventually became integral to maintaining colonial power. Therefore, it can be argued that racism has a more complex nature than a simple color issue where colonialism is concerned.

Ironically, the first experiments in colonialism were not racially motivated. When the Spanish “discovered” the New World in the fifteenth century, they were interested in expanding their empire and its wealth. European efforts and dominance in Asia, Africa, and India were intended not only to expand territory but also to control trade relations within those areas. Those who controlled the spice, ivory, gold, or silk trades controlled empires.

Once Europe secured power in these areas, missionaries were deployed to convert the masses to Christianity. Advanced Amerindian civilizations, such as the Inca and the Maya, were labeled “savage” because they were “pagan.” Individuals who did not convert were killed or enslaved. Brilliant Chinese, Japanese, and Indian philosophers, scientists, and mathematicians were persecuted and marginalized due to their Confucian, Bud-

dhist, Hindu, and other beliefs. Similarly, African societies across the continent were misunderstood and therefore considered to be backward and in need of guidance.

Although this attitude was largely religious prejudice, early colonists and explorers subjected their hosts to a very basic and early form of racism. In all of these situations, Europeans justified their intrusion by voicing a paternalistic need to save the unfortunate and ignorant peoples from themselves. However, their actions were motivated by a racist point of view that considered Amerindians and Africans incapable of reason and intelligence simply because they were not Christian. In European eyes, these inferior cultures performed barbaric rituals and sacrifices. They were misunderstood, and consequently, their polygamous unions were considered sinful and improper. European racism, then, defined these societies as uncivilized.

As a result, stories circulated throughout Europe depicting those being colonized as savage races of people who were dangerous to the future of civilization and humanity. Theologians, scholars, and humanists constantly debated the nature of these peoples in an effort to discern their overall humanity and their ability to reason. In the Asian case, Europeans saw rudimentary governments in serious need of tutelage, believing that their colonial subjects would grow and prosper with Western assistance and guidance.

This need to protect and guide eventually was transformed into a need to exploit, with the greatest example developing on New World plantations. The Europeans' obsession with power and wealth led to the importation of millions of Africans to the Americas to work as slaves on European sugar, coffee, cotton, and tobacco plantations. European diseases had decimated the Amerindian population, and indentured servants proved too costly. The only apparent solution was to tap into the already existing African trade in slaves. Their slaves' blackness was attributed to their ability to sustain a harsh climate and constant contact with the sun. Africans were considered no more than chattel, which made them easily controllable and subjugated. Furthermore, their blackness would condemn them to slavery once in the New World: blending was impossible, making it extremely difficult for them to form independent communities or to flee from slavery. As a result of this massive influx of African labor, slavery had become synonymous with blackness by the mid-eighteenth century.

By the nineteenth century, people in many areas had come to see racism as merely a color issue. Although Europe began eradicating slavery, freedom did not eradicate racism. Racism, in fact, increased as a means of maintaining control and distance from those who originally were in chains. Especially in areas with newly emancipated slaves, blackness implied laziness, sloth, and dishonesty. Freedpeople and their descendants were deemed no better than the slaves before them, and they were treated merely as slaves with wages. Such individuals may have had freedom, but for them, equality with the white populations was just a dream.

Exploitation continued in other parts of the world, as Europe diligently worked to preserve its place of power. In China, for example, England encouraged opium addiction among the indigenous population in order to maintain order and loyalty, believing the racial inferiority of the Chinese predisposed them to drug addiction—a situation that could then be turned to England's advantage. Elsewhere, Europeans bullied and terrorized African peoples into building railroads and harvesting lucrative crops such as rubber and palm oil. No matter the region or people, Europeans felt that manual labor should be performed by those

they deemed inferior. Racism justified all these beliefs and helped to maintain such practices.

These and other experiences of colonialism during the nineteenth century brought a change in the way racism expressed itself. The need for racial exploitation had progressed into a need for differentiation. In the era of emancipated slaves and international indentured servitude, biological racism had replaced the chains of slavery, as the populations of the colonizing powers tried to prove scientifically the various stages of racial inferiority in order to maintain some semblance of colonial control. Any differences from European phenotypic attributes were ascribed to biological inferiority, and those people who were then deemed racially inferior were categorized, segregated, and marginalized. Slanted eyes, large noses, kinky hair, and dark or brown skin were undesirable; indeed, such attributes inhibited people from gaining equality within civilized society. Black women were relegated to domestic service, known solely as mammies and maids. Chinese and Indian men could only find work building railroads, managing laundries, or replacing the African slaves on near bankrupt plantations.

At the same time, whites devised legal boundaries in order to maintain their hegemony over all of their colonial possessions. Literacy and property laws, taxes, and voting regulations effectively prohibited equality. It did not matter if the colonials were Indian or Pakistani, Chinese or Siamese. Yorubans were no different from Akan or Khoisan. They were all merely colonial subjects, and most were thus described as racially inferior. In turn, that inferiority made them incapable of running their own countries. Boundaries and borders were redrawn and political units reorganized to benefit the Europeans in power, while indigenous leaders were pushed to the side or made puppet rulers. As a result, minorities came to rule majorities, and this situation was most often justified by reference to racial stereotyping.

When those minorities lost power with the independence of their colonies, racism became one of the deepest legacies of colonialism—and perhaps the most harmful. Colonialism ended, but racism did not. Although they have long been free to rule themselves, many societies still are suffering from their colonial experiences. South Africa continues to reel from the legacy of apartheid.

Rwanda's Hutus and Tutsis constantly and violently react to the environment created by the Belgian government. Brazil has over 150 racial categories in the national census into which all its residents must be categorized. Nigerians find unity only in a soccer game. Thus, what was once merely a justification became a social construct that has now come to define societies.

Radical Party (France)

France's Radical Party, officially founded in 1901 under the name Radical and Radical-Socialist Republican Party, actually began during the July Monarchy (1830–1848) as a loose alliance of moderate politicians who advocated the enactment of democratic and limited social reforms. After the fall of the Second Republic in 1852, the Radicals joined other republican groups opposed to Napoleon III's Second Empire. In spite of their opposition to this regime, however, many Radicals supported the empire's colonial policies. In April 1872, after the fall of the Second Empire and the start of the Third Republic, a leading figure of the Radical faction, Léon Gambetta, made an important speech defending France's active colonial policy. According to him, France needed its colonies to reestablish its position among the world's great

powers following the country's defeat at the hands of the Germans in 1870. During his brief tenure as the French prime minister in late 1881, Gambetta established an under-secretariat of state responsible for France's colonies. This decision effectively allowed Radical officials to dominate France's colonial administrative apparatus for the next forty years, even though many leading figures of the Radical camp, most notably George Clemenceau, continued to condemn France's colonial policies. In spite of Clemenceau's importance to the Radical movement, however, his position on the matter of colonialism had little impact on the majority view within his own party. Indeed, the Radicals led or participated in every French government between 1902 and 1940 but never significantly altered the country's colonial system.

Although the Radical Party's ambivalent attitude to the Vichy regime during World War II weakened its influence after 1945, a few of its leaders participated in the many governments of the Fourth Republic; three of them (Edgar Faure,

Pierre Mendès-France, head of the Radical Party and president of France in the mid-1950s, had a mixed record on colonialism. He negotiated France's retreat from Indochina in 1954 but then took a firm stance against rebels fighting French rule in Algeria from 1954 on. (Library of Congress)

Henri Queuille, and Pierre Mendès-France) even became prime minister. Only one of them seemed ready to make significant changes in France's colonial policy. When Mendès-France became prime minister in June 1954, most commentators believed that he would transform France's political landscape, including its colonial system. He had, after all, vigorously attacked the government's handling of the war in Indochina in the French National Assembly in October 1950. Furthermore, one of his staunchest supporters, Jean-Jacques Servan-Schreiber, openly advocated the withdrawal of French troops from Indochina in *L'Express*, the news magazine that he had helped to establish. The first few months of Mendès-France's government seemed to signal a complete change in French policy, especially in the colonial sphere. For example, it put an end to the war in Indochina in late July 1954 in Geneva and granted internal autonomy to Tunisia a few weeks later. In November, however, Mendès-France took a firm stance against the insurrection in Algeria and promised that France would not pull out of its North African departments. In February 1955, after Mendès-France's fall, Faure headed the last Radical government, hardening his country's stance against the Algerian rebels. In the following years, the party was divided over a number of issues, including the future of France's remaining colonies and the policies it should pursue in its former colonies. The Radical Party gradually lost its cohesion after 1972 and was never again able to reassert itself on the French political scene.

Raffles, Sir (Thomas) Stamford (1781–1826)

Stamford Raffles, the founder of Singapore, had an inauspicious start, being born at sea off Jamaica to

an improvident sea captain. With money scarce, he joined the British East India Company as a clerk at age fourteen, rising to the post of assistant secretary in the company's Penang settlement in 1805.

From 1786, Penang Island had been Britain's first foothold in the Malay Peninsula, and Raffles began an avid study of the cultures of the region. Lord Minto, governor-general of India, was impressed enough to take Raffles on the expedition to conquer Java from the Dutch in 1811, making him lieutenant governor of Java until 1816. Raffles reformed Java's administration and land systems in ways that were both enlightened and impractically expensive, before returning to England in ill health. The post-Napoleonic War settlement then saw the East Indies restored to Dutch control, destroying Raffles's dreams of expanding British trade and its "civilizing" influence beyond Java.

In London in 1817, Raffles published his *History of Java* and was knighted. But on his return to the East, he received only the post of lieutenant governor of Bencoolen, a pepper port on the west coast of Dutch-dominated Sumatra. In 1818, a frustrated Raffles persuaded India's governor-general, Lord Hastings, to authorize the establishment of a new post at the southeastern end of the Malacca Straits, in order to establish British influence closer to the China Sea. Raffles landed at Singapore on January 29, 1819, securing the island by treaties made with local rulers. After another three years in Bencoolen, he returned to Singapore from 1822 to 1824. His influence helped establish Singapore as a fast-expanding free port in the face of Dutch hostility and ambivalence from London, India, and Penang. He stayed long enough to see the Dutch withdraw all claims by a treaty concluded in March 1824, before failing health and ferocious headaches forced his return to England. There, he won recognition for his natural history collections, and before a brain tumor took his life in July 1826, he also helped found the London Zoological Society and served as its first president.

Ranjit Singh (1780–1839)

Ranjit Singh Sukerchakia was the leader of the Sikhs of the Punjab and unified his people into a single powerful state. Deeply scarred by smallpox, he lost the use of his left eye and had a formidable appearance. He had no formal education. After his marriage at fifteen, he began to unify the Punjab, which until then consisted of small states. This division had encouraged the Afghans, the Gurkhas, the Marathas, and the British to exploit the Punjab for plunder or expansion. When the Afghan Zaman Shah invaded in 1798, Ranjit Singh opposed him so vigorously that Zaman Shah appointed him governor as a way of making him an ally. From the capital, Lahore, Ranjit Singh defeated rival Sikhs and Muslims in 1801, and he was declared maharaja of the Punjab. He then annexed some ten principalities before signing the Treaty of Lahore with the British in 1806. On the basis of this agreement, he was allowed to mount invasions of the cis-Sutlej states for the purpose of extracting tribute. He then annexed or extracted tribute from ten other states.

In January 1809, the British forced him to sign the Treaty of Amritsar, but this did not stop him from incorporating more states into his kingdom over the next two years. In 1815, he abolished the Gurumata, the central body that had exercised a loose control over the Sikh community, and he established his own strong personal rule. Multan fell in 1818, Kashmir in 1819, Dera Ghazi Khan in 1820, and Derajat and Dera Ismail Khan in 1821. In 1834, he finally annexed Peshawar. It was only the British, in the Tripartite Treaty of 1838, who prevented him from attacking Sind and Shikapur. Although the creator of a Sikh state, Ranjit Singh appointed Muslims and Hindus as well as Sikhs to important positions; his greatest contribution was to instill a sense of nationalism among the Sikhs. Within two decades of his death, the Punjab fell to the British.

Reconquista (Reconquest)

From 740 to 1492, Spanish Christians fought to conquer Spain, which was under Muslim rule. The Muslim conquest of the Iberian Peninsula had been swift, taking only three years due to internal strife among Visigothic rulers. With the Muslim invasion, Spanish kingdoms united against a common enemy and adopted a Christian identity in opposition to their Muslim conquerors. The impetuous for the *reconquista*, or reconquest, began in the north. In the mid-eighth century, the forces of Alfonso I descended from the mountains of Asturias and took territory in the Duero Valley. Early in the next century, under the rule of Alfonso III, peoples of the northern kingdom of Asturias discovered an impressive tomb they claimed to belong to Santiago (James, the brother of Christ). The tomb became a major site of pilgrimages for people throughout the Christian West, thereby bringing funds and Western European cultural ideas to northern Spain. By the close of the tenth century, the Kingdom of Asturias had doubled in size, and, in opposition to their Muslim rivals, its people identified themselves as strongly Christian.

In 1064, the efforts of Spanish Christians received aid from the papacy, when it promised indulgences to French knights who assisted the Kingdom of Aragon in its struggles against the Muslims. Soon, branches of the two largest crusading orders, the Knights Templar and the Hospitallers, were founded on the peninsula. In 1212, the peninsula's first university was established, thus increasing cultural bonds between people from different Spanish kingdoms and between Spain and Western Europe. In the same year, the armies of Castile, León, and Navarre united to defeat Al-mohad invaders. Spoils of the battle poured into the royal treasuries of the Christian kingdoms, thereby facilitating another wave of conquest. By 1265, only Granada remained under Muslim rule. Continued strife within and between kingdoms as well as the black plague and economic and military involvement in the Hundred Years' War weakened the larger kingdoms of Spain, precluding further conquest until the fifteenth century.

In 1469, the heirs to the thrones of the two most powerful kingdoms in Spain—Isabella of Castile and Ferdinand of Aragon—were married. During their reign, they unified Spain by reducing the power of the nobles, imposing religious

orthodoxy on their subjects, and improving tax collection methods. With increased funds in the royal treasury and their combined military forces, the Kingdoms of Aragon and Castile were able to conquer Granada in 1492, giving Christian Spain control of the peninsula and securing a firm base for the subsequent Spanish colonial expansion into the New World.

Religion

To approach the intimately interrelated subjects of religion and colonialism, it may be helpful to paraphrase Edward Said's oft-cited definition of colonialism: almost always a consequence of imperialism, colonialism is a historical phenomenon supported by the notion that certain territories and people require and beseech domination, as well as forms of knowledge affiliated with domination. Under this definition, religion constitutes one of the forms of knowledge in the possession of the colonial power that is believed (initially by the colonial power) to be required by the people to be colonized. To this definition, one may also append the observation that in many instances, religion also has served as a foundational justification for the colonial enterprise itself.

Of all religions, Christianity has been most associated with colonialism because several of its forms (Catholicism and various types of Protestantism) were the religions of the European powers engaged in colonial enterprises on a global scale. Although other so-called world religions are, to varying degrees, missionary in character and method, the spread of non-Christian religions has been associated less frequently with a colonial impulse within imperial expansion. In fact, many non-Christian nations have themselves experienced the effects of European/Christian colonialism. It must be noted that Buddhism did indeed spread beyond the borders of India under the reign of King Asoka Maurya; however, his policy was not one of colonial conquest but of dharma

conquest (the peaceful, noncoercive teaching of Buddhist doctrine).

In addition, the transmission of Islam was definitely an aspect of Arab imperial expansion. However, from Islam's inception as a missionary religion, Islamic rulers generally permitted the practice of other "religions of the book" and gave Jews and Christians protected status as *dhimmis*, or people of the book (the Old and New Testaments). As Islam expanded throughout the Arabic-speaking world, traditional religions were incorporated under the umbrella of Islam and became part of a general Arabic culture. During early Islamic expansion outside of the Arabian Peninsula, conversion was most often not coerced; rather, many Iranians, Palestinians, and Egyptians actively sought *mawali* (non-Arab Muslim) status. Islamic expansionism continued under the Umayyad dynasty, but Semitic people such as the Aramaic-speakers of Palestine, Syria, and Iraq were not so much colonized as relatively smoothly incorporated into the Islamic empire. In India, Islam spread through peaceful evangelization as well as through conquest, but after the decline of the Mughal Empire, it was relegated to minority status in a primarily Hindu region. The African Muslim conquest of Spain again involved classifying "people of the book" as *dhimmis*, and thus, on the Iberian Peninsula, the Islamic religion was not held to be a required form of knowledge for non-Muslim inhabitants. Overall in the Islamic world, Muslim nations were themselves objects of European Christian colonialism. In the nineteenth and twentieth centuries, many traditionally Islamic countries became British, French, or Dutch colonies, mandates, or protectorates.

Ultimately, the European Christian voyages of exploration and campaigns of conquest that began in the sixteenth century brought about the most obvious manifestations of colonialism on a global scale. The case of the Spanish conquest of the Americas is perhaps most notable for its explicit linking of colonial conquest with religious evangelism. Although the clear purpose of the Spanish Empire in the Americas was to find and acquire gold and silver, the conversion of the indigenous population of the Americas was not incidental to this goal. In the *Requerimiento* (the document created in 1514 by the Spanish Crown and required to be read to indigenous people on encountering the

Spanish), it was stated that Jesus Christ, the son of God, had transmitted his sovereign power to St. Peter and to successive popes, who, in turn, bestowed on the Spanish (and also, in part, the Portuguese) sovereignty over the Americas (and, of course, title to its resources). If peoples so addressed refused to subject themselves, they were informed that “we shall forcibly enter into your country and shall make war against you . . . and shall subject you to the yoke and obedience of the Church and of Their Highnesses; we shall take you and your wives and your children and shall make slaves of them as Their Highnesses command; and we shall take away your goods, and we shall do all the harm and damage that we can as to vassals who do not obey” (Palacios 1967).

Although the colonial purpose of the French was not the quest for precious metals but the establishment of networks of trade (in furs and other materials) and bases of agricultural production, they, too, linked colonialism with the mandate of religious conversion. As early as 1541, French commissions charged with designating *seigneurs* (landlords appointed by the king) invoked the king’s instructions to “inhabit the aforesaid lands and countries and build there towns and fortresses, temples and churches, in order to impart our Holy Catholic faith and Catholic Doctrine, to constitute and to establish law and peace . . . so that they [the indigenous people] may live by reason and civility” (Biggar 1930). The French had intended to assimilate the indigenous populations; conversion would be both a prelude to and a product of that strategy.

Like the French, the English included commerce and agriculture in their colonial purposes, but the goal of converting indigenous people was much less in evidence, perhaps due to a highly developed Calvinist theology of predestination. Lockean notions of property also colored the methods of English colonial incursion, so that when early British colonists in North America developed evangelistic programs, conversion was intimately tied to plans to teach indigenous people how to cultivate and own land in the English manner. Portuguese colonialism both inside and outside of the Americas (including Brazil, Uruguay, Angola, and Mozambique) also left a religious mark, tied up as these colonial endeavors were with slavery, forced labor, and conversion. Dutch

colonialism in the East and West Indies as well as the Americas and Africa (including Indonesia, Suriname, and South Africa), which involved forced labor in mines and on plantations, also contained a missionary component.

The religious effects of European imperial and colonial undertakings persist into the present. Although most formerly colonized people have achieved independence, the majority of the indigenous populations have, in many areas, adopted (and, most often, transformed) the religions of the colonial powers. In the Americas, many indigenous people now subscribe to forms of Christianity, although they may also retain their own traditional religious practices alongside the adopted religion. In every case, the form of Christianity practiced is reflective (either overtly or secretly) of traditional indigenous cultural and religious practices. In the formerly colonized countries in Africa and the erstwhile East Indies, the various types of Christianity introduced by missionaries also persist to a high degree. Of course, on every continent, many formerly colonized people have retained traditional religious orientations. It is perhaps most notable, however, that new and distinctive religions have emerged out of the intercultural encounters and exchanges that were brought about by colonialism. For example, Vodou, Santeria, Rastafarianism, Ghost Dance religion, and Peyote religion are a few of the new religions that arose in the Americas; similarly, Ethiopian, Zion, and Independent Churches have arisen in Africa. The expressions of religious creativity that have arisen out of oppressive colonial circumstances, variously shaped for purposes of self-determination and autonomy, are indeed remarkable.

Republican Party (U.S.)

Originally founded as a party opposed to the extension of slavery into the western territories of the United States in the 1850s, the Republican Party became a probusiness party in the late nineteenth century and a proimperial party by the 1890s. In the years between the world wars, however, the party advocated U.S. isolationism—except in the Americas—but it supported a strong interventionist stance in the Cold War against the Soviet Union after World War II.

The Republican Party emerged out of the wreckage of the Whig and American (or Know-Nothing) Parties in the mid-1850s and was primarily associated with the antislavery North before the Civil War. With Abraham Lincoln as its standard-bearer, the party led the North to victory in the Civil War and became the dominant political organization in the United States during the last half of the nineteenth century.

Allied with big business, the party was increasingly associated with an expansionist foreign policy. It was during the Republican administration of Andrew Johnson that Alaska was acquired from the Russians. By the 1890s, one wing of the party—associated with the young Theodore Roosevelt—was advocating a much stronger U.S. Navy to protect the nation's economic and political interests in the Pacific and Caribbean. Roosevelt and his fellow expansionist Republicans—including Sen. Henry Cabot Lodge of Massachusetts—were much influenced by the writings of military theorist Alfred T. Mahan, who argued that a strong navy was the key to international influence and power. Thus, in the early 1890s, the United States began to acquire a large, modern navy.

The culmination of the Republican Party's imperial pretensions came in the Spanish-American War, strongly advocated by the expansionist wing of the party even if reluctantly entered into by Republican president William McKinley in 1898. Although the great debate that ensued in Congress over whether to annex the Philippines after the war did not break down entirely along party lines,

it was generally northern Republicans who supported taking the islands.

With the rise to the presidency of Vice-President Roosevelt in 1901—on the assassination of McKinley—the expansionist wing of the Republican Party was in the ascendant. Roosevelt, whose foreign policy motto was “Speak softly and carry a big stick,” orchestrated a revolution in Panama in order to facilitate the construction of a canal across the isthmus on U.S. terms. Roosevelt also posited his famous corollary to the Monroe Doctrine. The doctrine, formulated in the 1820s, stated that the United States would resist European interference in the new republics of Latin America; to that, Roosevelt added that the United States had the right to regulate the affairs of Caribbean nations. Outside of the Americas, John Hay—secretary of state under McKinley and Roosevelt—advocated the Open Door policy vis-à-vis China, insisting that all foreign powers have equal access to Chinese trade and that the Chinese empire not be divided into European (and Japanese) spheres of influence.

Still, it was a Democratic president who got the United States involved in World War I, producing a popular backlash in the war's aftermath against U.S. intervention in affairs outside of the Americas; Republican candidate for president Warren G. Harding exploited this sentiment in the 1920 election. And it was largely conservative Republicans who opposed U.S. involvement in World War II before the Japanese attack on Pearl Harbor.

Although an isolationist wing remained within the party in the post-World War II era, the Republicans were strong advocates of the containment—and even rollback—of communism around the world during the Cold War from 1945 to 1990, advocating an activist U.S. foreign policy and even intervention in conflicts in Asia, Latin America, and Africa. Along with the Democrats, Republican administrations advocated European decolonization in the Cold War era but were wary of the process, especially where it might lead to Communist regimes. President Dwight Eisenhower, for example, strongly supported French efforts to prevent the rise of communism in Indochina, supplying much of the colonial power's arms in its war there. In the end, however, Eisenhower refused to help Paris during the 1954 debacle at Dien Bien Phu, when the French lost to the Communist-nationalist forces of Ho Chi Minh.

Twenty years later, the Republican administration of President Gerald Ford and Secretary of State Henry Kissinger supported anti-Communist forces in Angola and, according to some historians, gave a green light to Indonesia to invade and occupy East Timor after the collapse of the Portuguese Empire in Africa and Asia in 1974 and 1975.

In the wake of the Cold War, a renewed ambivalence about U.S. foreign involvement temporarily regained ascendancy within the Republican Party. Since the attacks on the World Trade Center and Pentagon on September 11, 2001, however, the party has lined up behind the global war against terrorism.

Reza Shah Pahlavi (Shah of Iran) (1878–1944)

An army officer who seized power in a 1921 coup and declared himself the founder of a new Persian dynasty in 1925, Reza Shah Pahlavi overthrew the disintegrating Qajar dynasty, began Iran's modernization, and reduced foreign influence—most notably from Britain and the Soviet Union—in his country.

Born Reza Khan, the son of a chief of the Pahlavan clan, he enlisted in the military, quickly rising through the ranks on the basis of his intelligence and physical stamina. A strong nationalist, Khan witnessed an Iran—ruled by the failing Qajar dynasty—that was economically destitute and powerless to ward off foreign control of its resources.

With the Russians and British taking de facto control over Iran in the early twentieth century, Khan led a coup in February 1921 and was appointed minister of war under the new republican regime.

Khan, however, quickly became disenchanted with the new government, which he saw as too idealistic and inexperienced to get the Russians and British out of the country. Although viewed as unsophisticated by the civilian members of the regime, he was actually quite skilled, having built an independent power base within the military that was loyal to him alone. He soon became the real power in the country.

In 1925, Ahmad Shah, the ailing Qajar monarch, left Iran for treatment in Europe. While he was gone, the Majles, Iran's parliament, elected Reza Khan as the shah of Iran, creating a new dynasty for the country. Moving rapidly to consolidate his power and put into force his nationalist ideals, Khan disarmed many of the country's warring tribes, emancipated women, embarked on a major building program, and ended all special privileges for foreigners.

To protect a relatively weak Iran, he tried to play off the Soviets against the British, a policy that no longer worked after the two powers joined forces in an anti-Nazi alliance following Germany's invasion of Russia in June 1941. Claiming the shah was potentially pro-Nazi, Russia and Britain jointly occupied Iran in August to ensure a supply route into the Soviet Union. To protect his dynasty, the shah abdicated in favor of his son, Mohammed Reza Pahlavi, who would rule the country until his own overthrow by Islamist forces in 1979. The elder shah, meanwhile, went into exile in Johannesburg, South Africa, where he died in 1944.

Rhodes, Cecil John (1853–1902)

The son of an English parson, Cecil John Rhodes arrived in Natal, South Africa, in 1870 to join his brother Herbert on a cotton farm, but he moved to

Shown in an 1898 portrait, Cecil Rhodes was an ardent expansionist who promoted white settlement in the eponymous British colonies of Northern and Southern Rhodesia (now Zambia and Zimbabwe). (Library of Congress)

Kimberley at the end of 1871, where he began to work as a speculative digger in the newly discovered diamond fields. He built his initial wealth through a pumping contract for the removal of water from submerged mining claims, some of which he was then able to buy. A man of great ambition, his goal was to control all production of diamonds at Kimberley. By 1888, the De Beers Mining Company, which he established, had secured ownership of all the Kimberley mines. That same year, he acquired an important stake in the gold mines of the Witwatersrand, and by 1895, his Consolidated Gold Fields of South Africa Company provided even more of his income than De Beers, though he was less involved in its operation.

Rhodes used his base in Kimberley to further a political career. From 1880, when the diamond territory of Griqualand West was incorporated into the Cape Colony, until his death, he served as a Cape parliamentarian and devoted much of his time attempting to limit the Transvaal influence in

the subcontinent. He entered a political alliance with the Afrikaner Bond and was thus able to become prime minister of the Cape in 1890 with the backing of Cape agrarian interests as well as his traditional mining allies. As prime minister, he was responsible for the passage of the Glen Grey Act of 1894, designed, in part, to provide labor for the mines, and his government took over Pondoland, the last independent area between the Cape and Natal, which completed the annexation of the Transkeian territories by the Cape.

Rhodes was an ardent British imperialist, and the anti-British government in the Transvaal was, for him, an obstacle to be removed as well as a threat to the interests of the gold-mining industry. In 1895, he plotted to overthrow the Transvaal government, but the failure of the Jameson Raid forced him to resign as prime minister; it also alienated him from many of his former Cape Afrikaner supporters. Though he retained the support of English-speakers in the Cape, his political career was effectively over, particularly as his health deteriorated after 1897.

From the late 1880s, much of his time was occupied with promoting white settlement in the area north of the Transvaal (later Rhodesia, now Zimbabwe)—an area that was to bear his name for over eighty years. His chief instrument in settling what became known as Rhodesia was the British South Africa Company, for which he won a charter from the British government in 1888. In 1896, he intervened personally when the Ndebele threatened the new settlement in Rhodesia. But little came of his dream of extending British rule from the Cape to Cairo, and he did not find the second gold-rich Witwatersrand he hoped existed north of the Limpopo River. In his will, he left his home, Groote Schuur, and lands on the slopes of Table Mountain to the nation, and much of his giant fortune went to funding the Rhodes Scholarships to his alma mater, Oxford University.

Rio de Janeiro

Rio de Janeiro, Brazil's second largest city, is located in the southeastern region of that country. During the colonial period, from 1500 to 1822, all of Brazil, including Rio, was part of the Portuguese Empire. In 1555, the French occupied the region of Rio de Janeiro in an attempt to establish a colony in Portuguese territory. However, they were expelled by the Portuguese in 1567. In the seventeenth century, Rio de Janeiro prospered due to its excellent harbor and the sugar industry, which developed in the region. Yet it was only with the growth of the mining economy in the interior of Brazil (in Minas Gerais) that Rio gained real importance, when the city became the major intermediary between this mining region and Europe. As a consequence, in 1763, the capital of Brazil was moved from Salvador, Bahia (in the northeast), to Rio de Janeiro.

Events in Europe led this city to become, for a time, the center of the Portuguese Empire. In 1807, Napoleon's troops threatened to invade Portugal and to remove from power Dom João, the prince regent who governed in the name of his insane mother, Dona Maria I. The response of the Portuguese nobility was to flee Portugal. In 1808, Dom João, along with approximately 16,000 of his courtiers, established the Portuguese government in the city of Rio de Janeiro, which at the time was the major city in the most important colony of the empire.

This solution eliminated the immediate threat to the Portuguese royal family. However, it precipitated a new challenge to Portugal's colonial empire. During his thirteen years in Brazil, Dom João was compelled to enact a number of measures that created de facto independence for the colony and made it difficult for Portugal to regain total control over this country. For example, Dom João opened Brazil's ports to commerce with other nations, ending the centuries-old monopoly that Portugal had enjoyed in its colony.

Nowhere did these changes have more impact than in Rio. The population grew significantly, and the city's infrastructure and services had to be adapted in order to serve the Portuguese court. In 1808, Rio became the birthplace of the first Brazilian newspaper, intended to serve the new elite. In addition, Dom João opened a medical school, a national museum, a national library, and a botanical garden in the city. In the early 1800s, Rio de Janeiro also had the largest black population in all of the Americas, a consequence of the city's growth after the arrival of the court. Slaves were employed in all kinds of occupations in the city and also in the flourishing coffee economy of the period.

On December 16, 1815, Brazil was raised to the status of a kingdom, of equal importance to Portugal. With this measure, Rio de Janeiro replaced Lisbon as the capital of the empire and caused the decline of Portugal's position as the head of this empire. Brazil declared its formal independence from Portugal in 1822. Rio continued to be the capital of independent Brazil until 1961, when the newly constructed city of Brasília became the new capital.

Rodney, Walter (1942–1980)

Walter Rodney was born in 1942 in Georgetown, Guyana. In 1966, just after completing a dissertation on the history of the Upper Guinea coast at the University of London, Rodney began a two-year teaching assignment at the University of Tanzania in Dar-es-Salaam. In 1968, he returned to the West Indies and a teaching position at the University of the West Indies—Mona (in Jamaica) as a lecturer on African and Caribbean history. He also worked as a political activist against the

exploitation and oppression of Jamaica's poor. Less than a year later, his written works were banned, and he was forbidden from returning to Jamaica after attending a writer's conference in Canada. Rodney then went back to Tanzania to resume teaching at the university there.

In 1974, Rodney returned to Guyana and immediately became active in politics. He spoke at public meetings and organized free education programs at his home. He soon joined the Working Peoples Alliance (WPA), which mobilized and united the Guyanese people in their opposition to the country's government. Rodney and his allies in the WPA argued that Guyana had no viable future if all parties did not openly engage its race question, and the Guyanese government was challenged. By 1979, the WPA had become so effective that many thought its members had the capacity to restore democracy in Guyana. Rodney was assassinated in Georgetown on the evening of June 13, 1980. His last book, *A History of the Guyanese Working People, 1805–1905*, was published posthumously. Rodney is best known for his definitive study of the effects of colonialism on the African continent. His work typified a trend in diasporan scholarship that argued that the Atlantic commerce between Africa and Europe created a state of dependency and underdevelopment. In his two most widely known books, *How Europe Underdeveloped Africa* (1974) and *A History of the Upper Guinea Coast* (1970), he contended that inequities in the trade between the two continents was the origins of Africa's position as a poor, Third World region. According to Rodney, Europe was more economically advanced than Africa, which forced the latter to enter into a "colonial" trade in which Africans traded slaves for manufactured goods. As a result, Africa became dependent on Europeans, which sank them deeper into the state of underdevelopment that would persist into the twentieth century. Although Rodney's argumentation was controversial, it did create a new trend in historiographical scholarship that forced a fresh examination of the relationship between Europe and Africa, the effects of the slave trade on all who were involved, and the long-lasting consequences of colonialism.

Romanov Dynasty

Under Russia's Romanov dynasty (1613–1917), most of North and Central Asia and large parts of Eastern Europe were unified under one state. The land acquired by the expansion of the Slavic state of Muscovy beyond its original borders was dwarfed by the territorial acquisitions of the Romanovs. At its height, the Russian Empire covered one-sixth of the land area of the globe.

The Romanov dynasty ascended to the throne of Russia in 1613, following the turbulent period known as the "time of troubles." The first Romanov czar, sixteen-year-old Michael Romanov (1613–1645), was chosen by the Zemski Sobor, a council composed of *boyars* (princes), service-nobility (that is, those who gained their noble status through service to the state), clergy, peasants, and townspeople. During the reign of the first three Romanovs, Russia absorbed the Ukraine and continued its exploration of Siberia, reaching the Sea of Okhotsk in 1649. Cossacks were often the first settlers in newly acquired territories and were used by the czarist government to secure its borders. In 1710, Peter the Great (1682–1725) made Siberia an administrative province. Because serfdom was never established in Siberia, the region became a magnet for those seeking freedom and land.

It was not until 1725 that Peter declared Russia an empire. His modernization of Russian society and the Russian military set the stage for further expansion. The Treaty of Nerchinsk in 1689 set the western borders of the empire, which remained virtually the same until the reign of Alexander II. To the south, Russia began offering protection to indigenous peoples, including the Kazaks. These territories were later annexed.

The Russian-American Company (1799–1867) claimed Alaska and parts of the western coast of North America for the Russian Empire. Very few settlements were made there, however, and in 1867, the czarist government sold its possessions in North America to the United States for \$7.2 million.

Under Alexander II (1855–1881), Russia continued its expansion into Asia, gaining territory in the Caucasus, Central Asia, and the Far East. Pacification continued in the Caucasus, where Muslim mountaineers engaged in “holy war” against the Russian military. Between 1865 and 1876, Russia conquered Central Asia in a series of wars, acquiring the khanates of Kokand, Bukhara, and Khiva by the 1870s. Fighting continued in Central Asia until the 1880s, when the Turkmen were finally subdued. In 1875, Russia yielded the Kuril Islands to Japan in return for the southern half of Sakhalin Island.

During the reign of Nicholas II (1894–1917), Russia’s eastern sphere of influence extended into northern China, including Mongolia and Manchuria. The Russo-Japanese War (1904–1905) was essentially a struggle over influence in northern China. Russia’s loss ended its attempts at eastern expansion and helped end the Romanov dynasty. Nicholas II abdicated the throne during the February Revolution of 1917.

Rome, Treaties of

Two treaties were signed in Rome on March 25, 1957, by representatives of six countries: Belgium, France, the German Federal Republic, Italy, Luxembourg, and the Netherlands. One treaty established the European Atomic Energy Authority (EURATOM). The other established the European Economic Community (EEC), which evolved into the European Community (EC) in 1967 and then

the current fifteen-member European Union (EU) in 1993.

Effective January 1, 1958, the Treaty of Rome aimed to establish a common market in Europe by removing internal customs barriers, erecting a common external customs tariff, formulating policies in areas such as agriculture, and allowing the free movement of people and goods. To achieve this over a period of twelve years, it established the European Commission, a bureaucracy that could propose as well as administer policies, and the European Council of Ministers to make binding decisions.

The EEC dealt with decolonization by giving members’ former colonies preferential treatment as “associated states.” The first and second Yaoundé Conventions (in 1963 and 1969) offered aid and investment to these former colonies and allowed most agricultural products from the associated states to enter the EEC duty-free. The first Lomé Convention in 1975 extended previous provisions to Britain’s former colonies, following British accession to the EC in 1973. Subsequent conventions have expanded aid and assistance programs and since 1993 attempted to protect Caribbean banana growers through quotas and preferences. In return, the states that are covered—known as the African, Caribbean, and Pacific (ACP) countries and numbering seventy by the 1990s—are expected to give most-favored-nation status to some European products. The ACP arrangement has its own Council of Ministers and Committee of Ambassadors.

Roosevelt, Franklin D. (1882–1945)

The thirty-second president of the United States—and the only president to serve more than two terms—Franklin Delano Roosevelt (FDR) occupied the Oval Office during the major twentieth-century upheavals of the Great Depression and World War II. An internationalist, Roosevelt tried to enlist the United States in the struggle against

global fascism, working against great isolationist opposition in Congress and the public.

At the same time, Roosevelt, through his Good Neighbor policy, emphasized a less hegemonic U.S. relationship with Latin America and gently urged America's World War II allies—especially Britain—to consider decolonization after 1945. Finally, like his Democratic predecessor Woodrow Wilson, FDR was a firm believer in the ability of international organizations to resolve disputes between countries, and he was an ardent supporter of the United Nations.

A distant cousin of President Theodore Roosevelt, FDR was born to a wealthy upstate New York family in 1882 and attended Harvard University and Columbia University School of Law. A Democrat, he entered politics as a young man, serving as a state senator in New York and as assistant secretary of the navy in World War I, and he was the vice-presidential candidate on the 1920 Democratic Party ticket. However, a bout with polio, which left him paralyzed, seemed to put an end to his political career.

Still, Roosevelt recovered both physically (though still largely confined to a wheelchair) and politically, making a successful run for governor of New York State in 1928. As a liberal reformer, he instituted a number of innovative unemployment and welfare plans after the state was hit hard by the Great Depression, beginning in 1929. His activism caught the nation's attention, and he was elected president in 1932. Although much of his first term was devoted to domestic affairs—pulling the nation's economy out of the slump—Roosevelt pursued two foreign policy initiatives: establishing diplomatic relations with the Soviet Union and developing the Good Neighbor policy toward Latin America.

The latter was not so much a departure from existing policy as a consolidation of a trend established by his predecessor, Herbert Hoover. From the late nineteenth century, the United States had taken a highly interventionist approach to Latin America, often backing the most exploitative practices of American businesses there with barefisted diplomacy and a dispatch of troops whenever Latin Americans resisted U.S. hegemony too rigorously. Hoover began pulling back from this policy, and Roosevelt confirmed this restraint and made it official policy, though he continued to

back dictators such as Anastasio Somoza in Nicaragua. At the 1936 Pan-American Conference in Buenos Aires, U.S. officials endorsed a resolution calling for nonintervention in the affairs of other states in the hemisphere. Three years later, the Latin American governments responded by declaring the hemisphere off-limits to German, Italian, and Japanese expansion and agreeing to reduce the sales of raw materials to aggressor states.

In the final months before the United States entered World War II, Roosevelt—in his efforts to stand by Britain in its struggle against the Nazis—signed the Atlantic Charter with British prime minister Winston Churchill. Among the principles outlined in the charter, which was meant to serve as set of principles in the anti-Fascist struggle, was self-determination for peoples around the world. And, indeed, Roosevelt made it clear to Churchill in their conversations and negotiations that the United States was determined that Britain should give up its colonies after the war.
