Murasaki Shikibu (late 10th–early 11th cent.) was the author of *The Tale of Genji*, probably the best-known Japanese literary classic in English since it was first translated in the 1920s. Zeami (Motokiyo, 1363–1443) was an actor who established Noh theater and wrote a number of plays that have been part of the Noh repertoire ever since. Monzaemon Chikamatsu (1653–1724) wrote plays for the Bunraku theater, many of which later became part of the repertoire of Kabuki. Basho (Matsuo Munefusa, 1644–94) perfected the writing of the poetic form now known as haiku. In this genre, three other poets are also known: Buson Yosa (1716–83), Issa Kobayashi (1763–1827), and the modern reformer Shiki Masaoka (1867–1902). Ryunosuke Akutagawa (1892–1927) is best known for his story “Rashomon.” Prominent modern novelists include Jun'ichiro Tanizaki (1886–1965); Yasunari Kawabata (1899–1972), winner of the 1968 Nobel Prize for literature; Kobo Abe (1924–93); and Yukio Mishima (1925–70). A leading modern writer and Zen Buddhist scholar was Daisetz Teitaro Suzuki (1870–1966).

In art, Sesshu (1420–1506) was the most famous landscape artist of his day. Ogata Korin (1658–1716) was a master painter of plants, animals, and people. The leader of the naturalist school was Maruyama Okyo (1733–95). The best-known painters and wood-block artists of the “*ukiyo-e*” style were Kitagawa Utamaro (1754–1806), Katsushika Hokusai (1760–1849), Saito Sharaku (fl.1794–95), and Ando Hiroshige (1797–1858). Four 20th-century Japanese architects whose work has had a marked influence on international style are Mayekawa Kunio (1905–86), Hideo Kosaka (b.1912), Kenzo Tange (b.1913), and Yoshinobu Aihara (b.1918).

Noted Japanese film directors include Kenji Mizoguchi (1898–1956), Yasujiro Ozu (1903–63), and Akira Kurosawa (1910–92). Toshiro Mifune (b.1920) is the best-known film star abroad. Contemporary composers include Toshiro Mayuzumi (b.1929) and Toru Takemitsu (1930–96). Seiji Ozawa (b.1935) is a conductor of world renown. The leading home-run hitter in baseball history is Sadaharu Oh (b.1940), manager of the Yomiuri Giants, who retired as a player for the same team in 1980 after hitting 868 home runs.

Hideyo Noguchi (1876–1928), noted bacteriologist, is credited with the discovery of the cause of yellow fever and is famed for his studies on viruses, snake poisons, and toxins. Hideki Yukawa (1907–81), Japan's most noted physicist, received the 1949 Nobel Prize for research on the meson. In 1965, Shinichiro Tomonaga (1906–79), a professor at Tokyo University of Education, became one of the year's three recipients of the Nobel Prize for physics for work in the field of quantum electrodynamics. Leon Esaki

(b.1925) won the Nobel Prize for physics in 1973; Kenichi Fukui (1918–1998) shared the 1981 chemistry award; and Susumu Tonegawa (b.1939) won the 1987 medicine award.

Hirohito (1901–89) became emperor of Japan in 1926. His eldest son, Akihito (b.1933), succeeded him in 1990. The leading statesman after World War II was Eisaku Sato (1901–75), prime minister from 1964 to 1972 and winner of the Nobel Peace Prize in 1974.

#### 49 DEPENDENCIES

Japan has no territories or colonies.

# JORDAN

## The Hashemite Kingdom of Jordan

### *Al-Mamlaka al-Urdunniyya al-Hashimiyya*

**CAPITAL:** ‘Amman

**FLAG:** The national flag is a tricolor of black, white, and green horizontal stripes with a seven-pointed white star on a red triangle at the hoist.

**ANTHEM:** *As-Salam al-Maliki (Long Live the King)*.

**MONETARY UNIT:** The Jordanian dinar (JD) is a paper currency of 1,000 fils. There are coins of 1, 5, 10, 20, 25, 50, 100, and 250 fils and notes of ½, 1, 5, 10, and 20 dinars. JD1 = \$1.412 (or \$1 = JD0.708) as of January 2003.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but some local and Syrian units are still widely used, especially in the villages.

**HOLIDAYS:** Arbor Day, 15 January; Independence Day, 25 May; Accession of King Hussein, 11 August; King Hussein’s Birthday, 14 November. Muslim religious holidays include the 1st of Muharram (Islamic New Year), ‘Id al-Fitr, ‘Id al-‘Adha’, and Milad an-Nabi. Christmas and Easter are observed by sizable Christian minorities.

**TIME:** 2 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Situated in southwest Asia, Jordan has an area of 92,300 sq km (35,637 sq mi). Jordan extends 562 km (349 mi) NE–SW and 349 km (217 mi) SE–NW. Comparatively, the area occupied by Jordan is slightly smaller than the state of Indiana. It is bounded on the N by Syria, on the NE by Iraq, on the E and S by Sa‘udi Arabia, on the SW by the Gulf of Aqaba, and on the W by Israel, with a total land boundary length of 1,635 km (1,016 mi) and a coastline of 26 km (16 mi).

Jordan’s capital city, ‘Amman, is located in the northwestern part of the country.

## <sup>2</sup>TOPOGRAPHY

The Jordan Valley has a maximum depression of 392 m (1,286 ft) below sea level at the Dead Sea; south of the Dead Sea the depression, called Wadi‘Araba, slowly rises to reach sea level about halfway to the Gulf of Aqaba. To the east of the Jordan River, the Transjordanian plateaus have an average altitude of 910 m (3,000 ft), with hills rising to more than 1,650 m (5,400 ft) in the south. Farther eastward, the highlands slope down gently toward the desert, which constitutes 88% of the East Bank. The Jordan River enters the country from Israel to the north and flows into the Dead Sea; its main tributary is the Yarmuk, which near its juncture forms the border between Jordan and Syria. The Dead Sea is the lowest point on the earth’s surface, at 408 m (1,339 ft) below the level of the Mediterranean. The Dead Sea has a mineral content of about 30%.

## <sup>3</sup>CLIMATE

The Jordan Valley has little rainfall, intense summer heat, and mild, pleasant winters. The hill country of the East Bank—ancient Moab, Edom, and Gilead—has a modified Mediterranean climate, with less rainfall and hot, dry summers. The desert regions are subject to great extremes of temperature and receive rainfall of less than 20 cm (8 in) annually, while the rest of the country has an average rainfall of up to 58 cm (23 in) a year.

Temperatures at ‘Amman range from about 4°C (39°F) in winter to more than 32°C (90°F) in summer.

## <sup>4</sup>FLORA AND FAUNA

Plants and animals are those common to the eastern Mediterranean and the Syrian Desert. The vegetation ranges from semitropical flora in the Jordan Valley and other regions to shrubs and drought-resistant bushes in the desert. Less than 1% of the land is forested. The wild fauna includes the jackal, hyena, fox, wildcat, gazelle, ibex, antelope, and rabbit; the vulture, sand grouse, skylark, partridge, quail, woodcock, and goldfinch; and the viper, diced water snake, and Syrian black snake.

## <sup>5</sup>ENVIRONMENT

Jordan’s principal environmental problems are insufficient water resources, soil erosion caused by overgrazing of goats and sheep, and deforestation. Water pollution is an important issue in Jordan. Jordan has 0.7 cubic km of renewable water resources with 75% used for farming activity and 3% used for industrial purposes. One-hundred percent of all city dwellers and 84% of rural people have pure water. It is expected that the rate of population growth will place more demands on an already inadequate water supply. Current sources of pollution are sewage, herbicides, and pesticides. Jordan’s cities produce an average of 1.2 million tons of solid waste per year.

Jordan’s wildlife was reduced drastically by livestock overgrazing and uncontrolled hunting between 1930 and 1960; larger wild animals, such as the Arabian oryx, onager, and Asiatic lion, have completely disappeared. Under a law of 1973, the government has prohibited unlicensed hunting of birds or wild animals and unlicensed sport fishing, as well as the cutting of trees, shrubs, and plants. As of 2001, 3.3% of Jordan’s total land area is protected. In the same year, seven of Jordan’s mammal species and four bird species were listed as endangered. Four plant species were also endangered. Endangered species in Jordan include the South Arabian leopard and the goitered gazelle.

## 6 POPULATION

The population of Jordan in 2003 was estimated by the United Nations at 5,473,000, which placed it as number 104 in population among the 193 nations of the world. In that year approximately 5% of the population was over 65 years of age, with another 40% of the population under 15 years of age. There were 109 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 2.66%, with the projected population for the year 2015 at 6,982,000. The population density in 2002 was 60 per sq km (155 per sq mi). Population density is highest in the northern Jordan River Valley.

It was estimated by the Population Reference Bureau that 74% of the population lived in urban areas in 2001. The capital and largest city, 'Amman, had a population of 1,378,000 in that year. According to the United Nations, the urban population growth rate for 2000–2005 was 3.5%. A portion of the population is nomadic.

## 7 MIGRATION

In 2000 there were 1,945,000 migrants living in Jordan, accounting for approximately 40% of the total population. Of those migrants, 83%, or about 1,610,100 were refugees. The net migration rate for that year was -0.7 migrants per thousand population. Worker remittances amounted to \$1,664,000, or approximately 22.5% of GDP. The government views the immigration level as too high, and the emigration level as too low.

## 8 ETHNIC GROUPS

Ethnically, the Jordanians represent a mixed stock. Most of the population is Arab (approximately 98% in 2002), but, except for the Bedouin nomads and seminomads of the desert and steppe areas, this element is overlain by the numerous peoples that have been present in Jordan for millennia, including Greek, Egyptian, Persian, European, and Negroid strains. The Palestinian Arabs now resident in Jordan tend to be sedentary and urban. Perhaps 1% of the population is Armenian, and another 1% is Circassian. There are also small Kurd, Druze, and Chechen minorities.

## 9 LANGUAGES

Arabic is the official language of the country and is spoken even by the ethnic minorities who maintain their own languages in their everyday lives. The spoken Arabic of the country is essentially a vernacular of literary Arabic; it is common to neighboring countries as well but is quite different from the spoken language in Egypt. There also are differences between the languages of the towns and of the countryside, and between those of the East and West banks. English is widely understood by the upper and middle classes.

## 10 RELIGIONS

Islam is the state religion, although all are guaranteed religious freedom. Most Jordanians (about 95%) are Sunni Muslims. Of the racial minorities, the Turkomans and Circassians are Sunni Muslims, but the Druzes are a heterodox Muslim sect. Christians constitute about 4% of the population and live mainly in 'Amman or the Jordan Valley; most are Greek Orthodox or Roman Catholic. Other officially recognized denominations include Melkite, Armenian Orthodox, Maronite, Assyrian, Anglican, Lutheran, Seventh-Day Adventist, United Pentecostal, Presbyterian, Baptist, Free Evangelical, Nazarene, and Assembly of God. The Baha'is are mainly of Persian stock. A tiny community of Samaritans maintains the faith of its ancestors, a heterodox form of the ancient Jewish religion. There are numerous missionary groups within the country.

## 11 TRANSPORTATION

Jordan's transportation facilities are underdeveloped, but improvements have been made in recent years. The third development plan (1986–90) allotted JD445 million for transportation. A good road network links the principal towns and connects with Syria, Iraq, and Sa'udi Arabia. In 2002 all of Jordan's estimated 8,000 km (4,971 mi) of road was paved. Passenger automobiles numbered 107,500; trucks, buses, and other commercial vehicles totaled 91,800 in 2000.

The rail system, some 677 km (421 mi) of narrow-gauge single track, is a section of the old Hijaz railway (Damascus to Medina) for Muslim pilgrims. It runs from the Syrian border through 'Amman to Ma'an, where it connects with a spur line to the port of Al-'Aqabah. Reconstruction of the section from Ma'an to Medina in Sa'udi Arabia, which had been destroyed in World War I, was undertaken in the early 1970s as a joint venture by Jordan, Sa'udi Arabia, and Syria.

Al-'Aqabah, Jordan's only outlet to the sea, is situated at the head of the Gulf of Aqaba, an arm of the Red Sea. The port was initially developed after the 1948 Arab-Israeli war, which cut off Arab Palestine and Transjordan from Mediterranean ports; substantial development did not begin until the 1960s. The port has been enlarged for general use, including terminals for loading potash and fertilizers. In 2002 Jordan had 7 merchant ships, totaling 41,206 GRT.

Jordan had 18 airports in 2001, 15 of which were paved. The major airport is the Queen Alia International Airport, about 30 km (19 mi) south of 'Amman, which was opened in the early 1980s. Aqaba Airport is the other international airport. The government-owned Alia-Royal Jordanian Airline operates domestic and international flights. In 2001, 1,178,100 passengers were carried on scheduled domestic and international flights.

## 12 HISTORY

As part of the Fertile Crescent connecting Africa and Asia, the area now known as Jordan has long been a major transit zone and often an object of contention among rival powers. It has a relatively well known prehistory and history. Neolithic remains from about 7000 BC have been found in Jericho, the oldest known city in the world. City-states were well developed in the Bronze Age (c.3200–2100 BC). In the 16th century BC, the Egyptians first conquered Palestine, and in the 13th century BC, Semitic-speaking peoples established kingdoms on both banks of the Jordan. In the 10th century BC, the western part of the area of Jordan (on both banks of the Jordan River) formed part of the domain of the Hebrew kings David and Solomon, while subsequently the West Bank became part of the Kingdom of Judah. A succession of outside conquerors held sway in the area until, in the 4th century BC, Palestine and Syria were conquered by Alexander the Great, beginning about 1,000 years of intermittent European rule. After the death of Alexander, the whole area was disputed among the Seleucids of Syria, the Ptolemies of Egypt, and native dynasties, such as the Hasmoneans (Maccabees); in the 1st century BC, it came under the domination of Rome. In Hellenistic and Roman times, a flourishing civilization developed on the East Bank; meanwhile, in southern Jordan, the Nabataean kingdom, a native Arab state in alliance with Rome, developed a distinctive culture, blending Arab and Greco-Roman elements, and built its capital at Petra, a city whose structures hewn from red sandstone cliffs survive today. With the annexation of Nabataea by Trajan in the 2d century AD, Palestine and areas east of the Jordan came under direct Roman rule. Christianity spread rapidly in Jordan and for 300 years was the dominant religion.

The Byzantine phase of Jordan's history, from the establishment of Constantinople as the capital of the empire to the Arab conquest, was one of gradual decline. When the Muslim

LOCATION: (1949): 29°17' to 33°20' N; 34°53' to 39°12' E. BOUNDARY LENGTHS: Syria, 375 kilometers (233 miles); Iraq, 181 kilometers (112 miles); Sa'udi Arabia, 728 kilometers (452 miles); Gulf of Aqaba, 26 kilometers (16 miles); Israel, 238 kilometers (148 miles); West Bank, 97 kilometers (60 miles). TERRITORIAL SEA LIMIT: 3 miles.

invaders appeared, little resistance was offered, and in 636, Arab rule was firmly established. Soon thereafter, the area became thoroughly Arabized and Islamized, remaining so to this day despite a century-long domination by the Crusaders (12th century). Under the Ottoman Turks (1517–1917), the lands east of the Jordan were part of the Damascus vilayet (an administrative division of the empire), while the West Bank formed part of the sanjak (a further subdivision) of Jerusalem within the vilayet of Beirut.

During World War I, Sharif Hussein ibn-'Ali (Husayn bin 'Ali), the Hashemite (or Hashimite) ruler of Mecca and the Hijaz, aided and incited by the UK (which somewhat hazily promised him an independent Arab state), touched off an Arab revolt against the

Turks. After the defeat of the Turks, Palestine and Transjordan were placed under British mandate; in 1921, Hussein's son 'Abdallah was installed by the British as emir of Transjordan. In 1923, the independence of Transjordan was proclaimed under British supervision, which was partially relaxed by a 1928 treaty, and in 1939, a local cabinet government (Council of Ministers) was formed. In 1946, Transjordan attained full independence, and on 25 May, 'Abdallah was proclaimed king of the Hashemite Kingdom of Transjordan. After the Arab-Israeli War of 1948, King 'Abdallah annexed a butterfly shaped area of Palestine bordering the Jordan (thereafter called the West Bank), which was controlled by his army and which he contended was included in the area that had been promised to Sharif Hussein. On 24

April 1950, after general elections had been held in the East and West banks, an act of union joined Jordanian-occupied Palestine and the Kingdom of Transjordan to form the Hashemite Kingdom of Jordan. This action was condemned by some Arab states as evidence of inordinate Hashemite ambitions. Meanwhile, Jordan, since the 1948 war, had absorbed about 500,000 of some 1,000,000 Palestinian Arab refugees, mostly sheltered in UN-administered camps, and another 500,000 nonrefugee Palestinians. Despite what was now a Palestinian majority, power remained with the Jordanian elite loyal to the throne. On 20 July 1951, 'Abdallah was assassinated in Jerusalem by a Palestinian Arab, and his eldest son, Talal, was proclaimed king. Because of mental illness, however, King Talal was declared unfit to rule, and succession passed to his son Hussein I (Husayn ibn-Talal), who, after a brief period of regency until he reached 18 years of age, was formally enthroned on 2 May 1953.

Between the accession of King Hussein and the war with Israel in 1967, Jordan was beset not only with problems of economic development, internal security, and Arab-Israeli tensions but also with difficulties stemming from its relations with the Western powers and the Arab world. Following the overthrow of Egypt's King Faruk in July 1952, the Arab countries were strongly influenced by "Arab socialism" and aspirations to Arab unity (both for its own sake and as a precondition for defeating Israel). Early in Hussein's reign, extreme nationalists stepped up their attempts to weaken the regime and its ties with the UK. Notwithstanding the opposition of most Arabs, including many Jordanians, Jordan maintained a close association with the UK in an effort to preserve the kingdom as a separate, sovereign entity. However, the invasion of Egypt by Israel in October 1956, and the subsequent Anglo-French intervention at Suez, made it politically impossible to maintain cordial relations with the UK. Negotiations were begun to end the treaty with Britain, and thus the large military subsidies for which it provided; the end of the treaty also meant the end of British bases and of British troops in Jordan. The Jordanian army remained loyal, and the king's position was bolstered when the United States and Sa'udi Arabia indicated their intention to preserve Jordan against any attempt by Syria to occupy the country. After the formation of the United Arab Republic by Egypt and Syria and the assassination of his cousin, King Faisal II (Faysal) of Iraq, in a July 1958 coup, Hussein turned again to the West for support, and British troops were flown to Jordan from Cyprus.

When the crisis was over, a period of relative calm ensued. Hussein, while retaining Jordan's Western ties, gradually steadied his relations with other Arab states (except Syria), established relations with the USSR, and initiated several important economic development measures. But even in years of comparative peace, relations with Israel remained the focus of Jordanian and Arab attention. Terrorist raids launched from within Jordan drew strong Israeli reprisals, and the activities of the Palestine Liberation Organization (PLO) often impinged on Jordanian sovereignty, leading Hussein in July 1966, and again in early 1967, to suspend support for the PLO, thus drawing Arab enmity upon himself. On 5 June 1967, an outbreak of hostilities occurred between Israel and the combined forces of Jordan, Syria, and Egypt. These hostilities lasted only six days, during which Israel occupied the Golan Heights in Syria, Egypt's Sinai Peninsula, and the Jordanian West Bank, including all of Jerusalem. Jordan suffered heavy casualties, and a large-scale exodus of Palestinians (over 300,000) across the Jordan River to the East Bank swelled Jordan's refugee population (700,000 in 1966), adding to the war's severe economic disruption.

After Hussein's acceptance of a cease-fire with Israel in August 1970, he tried to suppress various Palestinian guerrilla organizations whose operations had brought retaliation upon Jordan. The imposition of military rule in September led to a 10-

day civil war between the army and the Palestinian forces (supported briefly by Syria which was blocked by Israel), ended by the mediation of other Arab governments. Subsequently, however, Hussein launched an offensive against Palestinian guerrillas in Jordan, driving them out in July 1971. In the following September, Premier Wasfi al-Tal was assassinated by guerrilla commandos, and coup attempts, in which Libya was said to have been involved, were thwarted in November 1972 and February 1973.

Jordan did not open a third front against Israel in the October 1973 war but sent an armored brigade of about 2,500 men to assist Syria. After the war, relations between Jordan and Syria improved. Hussein reluctantly endorsed the resolution passed by Arab nations on 28 October 1974 in Rabat, Morocco, recognizing the PLO as "sole legitimate representative of the Palestinian people on any liberated Palestinian territory," including, implicitly, the Israeli-held West Bank. After the Egyptian-Israeli Peace Treaty of 1979, Jordan joined other Arab states in trying to isolate Egypt diplomatically, and Hussein refused to join further Egyptian-Israeli talks on the future of the West Bank.

After the Israeli invasion of Lebanon in 1982 and the resulting expulsion of Palestinian guerrillas, Jordan began to coordinate peace initiatives with the PLO. These efforts culminated in a February 1985 accord between Jordan and the PLO, in which both parties agreed to work together toward "a peaceful and just settlement to the Palestinian question." In February 1986, however, Hussein announced that Jordan was unable to continue to coordinate politically with the PLO, which scrapped the agreement in April 1987. The following year the King renounced Jordan's claim to the West Bank and subsequently patched up relations with the PLO, Syria, and Egypt. In 1990, owing largely to popular support for Saddam Hussein, Jordan was critical of coalition efforts to use force to expel Iraqi forces from Kuwait. Relations with the United States and the Gulf states were impaired; Jordan lost its subsidies from the latter while having to support hundreds of thousands of refugees from the war and the aftermath. Jordan's willingness to participate in peace talks with Israel in late 1991 helped repair relations with Western countries. In June 1994, Jordan and Israel began meetings to work out practical steps on water, borders, and energy which would lead to normal relations. And, later that year, Jordan and Israel signed a peace treaty, ending the state of war that had existed between the two neighbors for decades. Relations with the major players in the Gulf War also improved in the years after the war. In 1996, Jordan and Sa'udi Arabia, the UAE and Kuwait were well on the way toward establishing normal relations.

Internally in the 1980s, Hussein followed policies of gradual political liberalization which were given new impetus by serious rioting over high prices in 1989. In that year, for the first time since 1956, Jordan held relatively free parliamentary elections in which Islamists gained more than one-third of the 80 seats. Martial law was ended in 1991 and new parliamentary elections were held in 1993. The King's supporters won 54 seats with the Moslem Brotherhood and its allies taking 18 places, the largest bloc of any party. However, the 1997 elections were boycotted by a number of opposition groups, who complained of unfair election laws, and the new upper house of parliament appointed by King Hussein did not include any members of Islamist groups.

In 1998 Hussein underwent treatment for cancer in the United States and delegated some of his powers to his brother, crown prince Hassan, who was next in the line of succession to the throne. The following winter, however, Hussein named his son Abdallah heir apparent. On 8 February 1999 King Hussein died, ending a 46-year reign; his funeral was attended by dignitaries from countries throughout the world. King Abdallah II pledged his support for the Middle East peace process, a more open government, and economic reforms requested by the IMF.

However, there was widespread uncertainty about how the untested 37-year-old heir would meet the challenges thrust upon him.

His first year in power reassured many observers, both at home and abroad. Domestically, he pushed through a series of trade bills that helped pave the way of the country's admission to the WTO, which came in April 2000, and declared his intention of implementing wide-ranging administrative and educational reforms. On the international front, Abdallah played a role in the resumption of talks between Israel and Syria and also took a firm stance against the presence of Islamic extremists in his own country, driving the radical Hamas organization out of Jordan.

Abdallah dissolved parliament in June 2001, elections were postponed twice, and were due to be held in June 2003. Islamists were expected to dominate the elections and lead the opposition in parliament. They oppose Jordan's 1994 peace treaty with Israel.

After the al-Aqsa intifada began in Israel and the West Bank and Gaza in September 2000, violence between Israel and the Palestinians increased dramatically. In the spring of 2002, Israel mounted its largest military operation in 20 years, and suicide bombings against Israelis carried out by radical Palestinian organizations were frequent. King Abdallah announced that his country backed any international initiative directed towards putting an end to the violence and to the Israeli occupation of Arab territories, and to the establishment of an independent Palestinian state.

Following the 11 September 2001 terrorist attacks on the United States, Jordan enacted a series of temporary laws imposing sharp restrictions on the right to public assembly and protest. A law broadened the definition of "terrorism," and allowed for the freezing of suspects' bank accounts. The number of offenses carrying the death penalty were increased, and journalists who publish articles which the government deems harmful to national unity or to be incitement to protests will be subject to three years' imprisonment.

As of late 2002, Jordan opposed the use of military force against Iraq to compel it to comply with UN resolutions ordering it to disarm. Jordan urged Iraq to voluntarily disarm and comply with UN weapons inspectors.

### 13 GOVERNMENT

Jordan is a constitutional monarchy based on the constitution of 8 January 1952. The king has wide powers over all branches of government. The constitution vests legislative power in the bicameral national assembly, composed of a 40-member senate and a 104-member lower house, and a chamber of deputies (a law enacted in July 2001 increased the size of the lower house from 80 seats to 104). Senators are appointed by the king for renewable eight-year terms; the chamber of deputies is elected by secret ballot for a four-year term, but the king may dissolve the chamber and order new elections. There is universal suffrage at age 18, women having received the right to vote in April 1973; general elections were held in 1989, 1993, and 1997. In February 1999, King Abdallah II succeeded to the throne following the death of his father, King Hussein.

The national assembly is convened and may be prorogued by the king, who also has veto power over legislation. The executive power of the king is administered by a cabinet, or council of ministers. The king appoints the prime minister, who then selects the other ministers, subject to royal approval. The ministers need not be members of the chamber of deputies. In the prolonged emergency created by the wars with Israel and by internal disorders, especially since 1968, King Hussein exercised nearly absolute power. The national assembly, adjourned by the king in 1974, met briefly in 1976 to amend the constitution; parliamentary elections were postponed indefinitely because of the West Bank situation, and the Assembly was then dissolved. In

1978, King Hussein established a national consultative council of 60 appointed members. The national assembly was reconvened in 1984, as King Hussein sought to strengthen his hand in future maneuvering on the Palestinian problem. Political parties were legalized in 1992. The freely elected parliaments of 1989 and 1993 have played an increasingly active and independent role in governance, with open debate and criticism of government personalities and policies. However, new press restrictions were imposed by 1997, and a majority of opposition groups boycotted the elections that year. King Abdallah dissolved parliament in June 2001 and postponed elections until summer 2002; they were once again postponed and scheduled for spring 2003.

### 14 POLITICAL PARTIES

Political parties were abolished on 25 April 1957, following an alleged attempted coup by pan-Arab militants. In the elections of 1962, 1963, and 1967, candidates qualified in a screening procedure by the Interior Ministry ran for office, in effect, as independents. The Jordanian National Union, formed in September 1971 as the official political organization of Jordan and renamed the Arab National Union in March 1972, became inactive by the mid-1970s. In 1990, the election law was amended to ban bloc voting or by party lists, substituting instead a "one person, one vote" system. In 1992, political parties were again permitted and 22 were authorized to take part in elections. The principal opposition group has been the Islamic Action Front, the political arm of the Muslim Brotherhood.

In the parliamentary elections of 8 November 1993, 22 political parties fielded candidates, representing a wide range of political views. Seats were widely dispersed among a range of largely centrist parties supportive of King Hussein's IMF-modeled reforms and his pro-Western stance. The largest bloc of seats, however, was won by the Islamic Action Front, an arm of the Muslim Brotherhood. In 1997, nine pro-government parties, hoping to gain leverage against the large Islamist bloc in upcoming elections, banded together to form the National Constitutional Party. However, the grouping won only a total of three seats, and the Islamic opposition boycotted the elections altogether. Only six parties fielded candidates. Independent pro-government candidates representing local tribal interests won 62 out of the 80 contested seats; 10 seats were won by nationalist and leftist candidates; and 8 by independent Islamists.

### 15 LOCAL GOVERNMENT

Eastern Jordan is divided into 12 governorates—Ajlun, Aqabah, 'Amman, Irbid, Balga, Jarash, Karak, Ma'an, Madaba, Zarqa', Mafraq, and Tafilah—each under a governor appointed by the king on the recommendation of the interior minister. The towns and larger villages are administered by elected municipal councils; mayors and council presidents are appointed by the council of ministers. Smaller villages are headed by a headman (*mukhtar*), who in most cases is elected informally.

### 16 JUDICIAL SYSTEM

There are six jurisdictions in the judiciary: four levels of civil and criminal jurisdiction, religious jurisdiction, and tribal courts. The new civil code of 1977 regulates civil legal procedures. The supreme court, acting as a court of cassation, deals with appeals from lower courts. In some instances, as in actions against the government, it sits as a high court of justice. The courts of appeal hear appeals from all lower courts. Courts of first instance hear major civil and criminal cases. Magistrates' courts deal with cases not coming within the jurisdiction of courts of first instance. Religious courts have jurisdiction in matters concerning personal status (marriage, divorce, wills and testaments, orphans, etc.), where the laws of the different religious sects vary. The Shari'ah courts deal with the Muslim community, following the procedure laid down by the Ottoman Law of 1913. The Council of

Religious Communities has jurisdiction over analogous cases among non-Muslims. Tribal courts, which have jurisdiction in most matters concerning tribe members, are losing their importance as more people take their cases to the government courts instead.

In 1991, the state security court, which hears security cases in panels of at least three judges, replaced the martial law court. Under 1993 amendments to the state security court law, all security court decisions may be appealed to the court of cassation on issues of law and weight of evidence. Prior to 1993, the court of cassation reviewed only cases involving death or imprisonment for over 10 years, and review was limited to errors of law.

Although the judiciary is independent, it is subject to political pressure and interference by the executive branch. The constitution prohibits arbitrary interference with privacy, family, and home. Police must obtain a judicial warrant before conducting searches.

## 17 ARMED FORCES

In 2002, the Jordanian armed forces had 100,240 active personnel with reserves numbering 35,000. The army numbered 84,700 supplied with 1,179 main battle tanks. The air force had 15,000 personnel with 101 combat aircraft and 22 armed helicopters. The navy had 540 men and 3 patrol craft. Paramilitary consisted of the Public Security Directorate with 10,000 members. Defense expenditures for 2001 were \$757.5 million or 8.6% of GDP. Jordan had peacekeepers stationed in seven regions around the world.

## 18 INTERNATIONAL COOPERATION

Jordan became a member of the UN on 14 December 1955 and belongs to ESCWA and all the nonregional specialized agencies. It is one of the founding members of the Arab League and also participates in G-77. Jordan has greatly benefited from the work of UNICEF and of UNRWA, which helps the Palestinian refugees. Jordan does not adhere to the Law of the Sea. In 1995 Jordan announced its intention to join the WTO; its accession came on 11 April 2000. Jordan and Israel signed a peace treaty in 1994 and exchanged ambassadors the following year.

## 19 ECONOMY

Jordan's economy has been profoundly affected by the Arab-Israeli conflict. The incorporation of the West Bank after the war of 1948 and the first exodus of Palestinians from the territory that became Israel tripled the population, causing grave economic and social problems. The loss of the West Bank in 1967 resulted not only in a second exodus of Palestinians but also in the loss of most of Jordan's richest agricultural land and a decline in the growing tourist industry. The 1970–71 civil war and the October 1973 war also brought setbacks to development plans. The steady influence has been foreign funds. An estimated 80% of annual national income in the early 1980s came from direct grants from and exports to oil-rich Arab countries and from remittances by Jordanians working there. Also important to the economy has been Western economic aid, notably from the US, the UK, and Germany. The economy expanded rapidly during 1975–80, growing in real terms by an average of 9% a year, but the growth rate slowed to 5% in 1985, primarily from reductions in aid from other Arab states because of their declining oil receipts. The onset of the recession in Jordan in the mid-1980s followed by the economic collapse of 1988–89 and the Gulf conflict in 1990 left the country with an unemployment rate of approximately 30–35%, high inflation, and about 25–30% of the population living below the poverty line.

When in 1989 Jordan was unable to service its external debt due to 100 repayment commitments, the Jordanian government concluded an agreement with the IMF to pursue a series of economic reforms across a five year period (that is, by 1993) in

exchange for bridge finance: the budget deficit was to be reduced from 24% of GDP to 10% of GDP; the current account balance was to improve from a deficit equivalent to 6% of GDP to a balanced position; export earnings were to grow from \$1.1 billion in 1989 to \$1.7 in 1993; and the rate of inflation was to drop from 14% in 1989 to 7% in 1993. The Gulf War interrupted this program, as the Jordanian government came out on the side of Iraq, and presumably in favor of a completely different way of solving its economic vulnerability; that is, through association with an enlarged and empowered Arab state. The international economic embargo against Iraq during the Gulf War meant that Jordan lost a lucrative export and re-export market. The loss of Iraq's oil supplies resulted in Jordan having to pay the market price for oil imports from Syria and Yemen. The balance of annual aid transfers, some \$200 billion, promised by the Arab oil states in 1990, failed to take into consideration the influx of some 230,000 Jordanian nationals from Kuwait that resulted from the Iraqi invasion. They imposed a strain on government services, and added to the pool of unemployment.

In 1994 Jordan entered into another three-year structural adjustment program financed by IMF's Extended Fund Facility (EFF). On 26 October 1994 Jordan signed a peace treaty with Israel that contained protocols for economic reform and regional integration. The fiscal year 1994/95 saw real GDP growth of about 6% and inflation of only about 3% to 3.5%. In order to build on these gains, and to incorporate the opportunities offered by the peace accord, a new three-year program was negotiated under the EFF, which ran officially from 6 February 1996 to 8 February 1999. In this case, the program fell well short of its targets, as real GDP growth slowed to an annual average of 1%, and budget deficits as a percent of GDP increased to 10% instead of decreasing as envisioned.

In April 1999 another three-year structural adjustment program was embarked upon, this time with finance from both the EFF and the Compensatory and Contingency Financing Facility (CCFF) of the IMF. The program called for privatization, tax reform, trade liberalization and increased foreign investment. Advances were made in all these areas. The government divested itself of shares in over 50 corporations, among the most important being the sale of a 10.5% share in the Jordan Telecommunications (JT) in an initial public offering (IPO) on the 'Amman Stock Exchange (ASE) in October 1999, and a further sale of 40% to a France Telecom/Arab Bank Consortium in January 2001. All or portions of the subsidiaries of the national airline, the Royal Jordanian, were privatized including the sale of 80% of Aircraft Catering Center to the Alpha British Company. By November 2002, the ASE had attained a capitalization of over \$7 billion. Tax reforms included the lowering of top rates on personal and business income taxes, the elimination or reduction of a number of subsidies and exemptions, phased introduction of a value-added tax (VAT) regime, and, in connection with trade liberalization reforms, the reduction of many customs and tariffs.

In 2000, Jordan acceded to the WTO, a condition of which was the elimination of most laws limiting foreign investment. On 28 September 2001 the US Congress passed a separate Free Trade Agreement (FTA) with Jordan. In the period 1999 to 2002, the biggest single stimulus to the Jordanian economy came from the Qualifying Industrial Zones (QIZs), a type of industrial estate authorized in a 1998 agreement among Jordan, Israel and the United States, whereby manufactured exports from a QIZ could enter the US market duty free provided it contained at least 35% local content. QIZs particularly have nurtured a fast growing textile export industry. The targets set by the IMF-monitored program for 1999–2002—including annual growth of 3–4%, inflation held to 2–3%, a budget deficit reduced to 4% of GDP by 2001, and a strengthening of the country's foreign reserve position—were all substantially met despite the eruption of the second Palestinian *intifada* in late 2000 and the global economic

slowdown from 2001 forward. Real GDP growth rose steadily from 3.1% to 4% to a projected 5.2% from 1999 to 2002.

Inflation, as measured by consumer prices, was negligible, falling from 3.1% in 1998 to 0.6%, 0.7% and 1.8% 1999–2001. An increase in inflation in 2002 to 3.5% is attributable mainly to administered price increases, particularly for electricity and petroleum products, as subsidies were removed. The government's annual deficit as a percent of GDP was at 3.7% in 2001, better than the program's 4% target, but in this case progress was not uninterrupted: the deficit rose to 4.7% of GDP in 2000 and was projected at 4.1% for 2002. There was, however, uninterrupted progress in terms of net public debt as a percent of GDP, which fell from 105.1% of GDP in 1999 to a projected 88.2% in 2002. Part of this improvement stemmed from some debt forgiveness by the United States and the European Union. As of the end of 2002, five Paris Club reschedulings of Jordan's sovereign debt—from February 1992, June 1994, May 1997, May 1999, and July 2002, respectively—were being paid down. On its foreign reserve position, according to the IMF, Jordan's net usable international reserves in the period 1999 to 2002 were on average sufficient to cover a little over 7 months of imports, up from only a four-month coverage in 1998. In May 2002, Jordan's international reserves were close to \$3 billion.

In November 2001, the government introduced its Plan for Social and Economic Transformation (PSET), a program of health and education spending and transfer payments to the poor amounting to 4% of GDP and to be financed in such a way from grants and revenues so as not to add to the country's debt. PSET particularly aims at dealing with Jordan's chronic unemployment problem, which due in part to Malthusian population growth dynamics, worsened slightly—from 12.7% in 1998 to 14.7% in 2001—during the latest period of economic growth. Population growth is such that the 8.6% growth in nominal GDP between 1999 and 2001 produced only a 2.4% increase in per capita income. In July 2002 the IMF announced a two-year stand-by agreement with Jordan for SDR85.28 million (about \$113 million) to support both the PSET and the continuing program of economic reforms. The Jordanian economy has managed to continue to improve in 2002, with the second Palestinian *intifada* unfolding next door.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2002 Jordan's gross domestic product (GDP) was estimated at \$22.8 billion. The per capita GDP was estimated at \$4,300. The annual growth rate of GDP was estimated at 3.5%. The average inflation rate in 2002 was 3.3%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 4% of GDP, industry 26%, and services 70%.

According to the United Nations, in 2000 remittances from citizens working abroad totaled \$1.664 billion or about \$339 per capita and accounted for approximately 22.5% of GDP. Worker remittances in 2001 totaled \$1.810 billion. Foreign aid receipts amounted to about \$86 per capita and accounted for approximately 5% of the gross national income (GNI).

The World Bank reports that in 2001 per capita household consumption (in constant 1995 US dollars) was \$1,210. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the same period private consumption grew at an annual rate of 1%. Approximately 32% of household consumption was spent on food, 17% on fuel, 5% on health care, and 8% on education. The richest 10% of the population accounted for

approximately 29.8% of household consumption and the poorest 10% approximately 3.3%. It was estimated that in 2001 about 30% of the population had incomes below the poverty line.

## 21 LABOR

The labor force numbered 1.26 million people in 2001, with an additional 300,000 workers employed abroad. In that year the service industry accounted for 83% of the workforce, industry employed 13%, with the remaining engaged in agriculture. The official unemployment rate was 16% in that year, however the actual rate may be as high as 30%.

Workers have the right to form unions and must register to be legal. The General Federation of Jordanian Trade Unions, formed in 1954, was comprised of 17 trade unions in 2002. Approximately 30% of the labor force is unionized. Unions are allowed to collectively bargain but they are not allowed to strike or demonstrate without a permit. Labor disputes are mediated by the Ministry of Labor. The government does not adequately protect employees from antiunion discrimination.

The national minimum wage was \$114 per month in 2002 for all sectors except agriculture and domestic labor. This amount does not provide the average family with a living wage. The minimum working age is 16 and this is effectively enforced by the Ministry of Labor except for children working in family businesses or on family farms. The standard workweek is 48 hours, with up to 54 hours per week for hotel, restaurant, and cinema employees.

## 22 AGRICULTURE

Agriculture still plays a role in the economy, although 40% of the usable land consists of the West Bank, lost to Jordan since 1967. As of 1998, only 4.4% of all land in Jordan was utilized for crop sown feed production. Rain-fed lands make up 75% of the arable land, while the remaining 25% is partially or entirely irrigated and lies mostly in the Jordan Valley and highlands. While the system of small owner-operated farms, peculiar to Jordan among the Arab countries and originating in the Land Settlement Law of 1933, limits the number of large landowners and share tenancy, the minuscule holdings have inhibited development. Agriculture accounted for 4% of GDP in 2001.

Production of principal field crops in 1999 included wheat, 12,000 tons; barley, 5,000 tons; and tobacco, 2,000 tons. Prominent vegetables and fruits produced in 1999 included tomatoes, 305,000 tons; eggplant, 16,000 tons; cucumbers, 74,000 tons; cauliflowers, 26,000 tons; and cabbages, 28,000 tons. Over 16 million fruit trees that year produced 114,000 tons of citrus, 55,000 tons of olives, 73,000 tons of bananas, and 15,000 tons of grapes. The output of fruits and vegetables has been encouraging, in part because of increased use of fertilizers, herbicides, and plastic greenhouses by the nation's farmers in the Jordan Valley.

Irrigation schemes and soil and water conservation programs have received emphasis in Jordan's economic development. The 77-km (48-mi) East Ghor Canal, substantially completed in 1966 and reconstructed in the early 1970s after heavy war damage, siphons water from the Yarmuk River and provides irrigation for about 13,000 hectares (32,000 acres). Water conservation in other areas has been undertaken with the rehabilitation of old water systems and the digging of wells. As of 1998, an estimated 75,000 hectares (185,000 acres) were irrigated.

The cooperative movement has made progress in the agricultural sector; the Central Cooperative Union, established in 1959, provides seasonal loans and advice to local cooperatives. The Agricultural Credit Corporation, founded in 1960, provides low-cost loans to finance agricultural investments.

## 23 ANIMAL HUSBANDRY

Raising livestock for both meat and dairy products is an important part of Jordanian agriculture. Animal husbandry is usually on a small scale and is often of the nomadic or seminomadic type indigenous to the area. The large nomadic tribes take their camels into the desert every winter, returning nearer to the cultivated area in summer. The camels provide transportation, food (milk and meat), shelter, and clothing (hair); the sale of surplus camels is a source of cash. Sheep and goat nomads make similar use of their animals. Imported milk and meat are sold at subsidized prices.

Animal products account for about one-third of agricultural output. Sheep and goats account for 90% of the livestock, and are raised for both meat and milk. The Awasi is the major breed of sheep used, and the goat is the Baladi. In 2001, the number of sheep was estimated at 1,484,000, goats at 426,000, and cattle at 67,000 head. Jordan had an estimated 23,750,000 chickens in 2001; poultry meat production was 117,000 tons that year. Meat production from cattle and sheep reached 8,300 tons in 2001. Production of fresh milk from cattle and sheep was 185,000 tons in 2001. Jordan produces about 31% of its needs in red meat and 50% of milk.

## 24 FISHING

Fishing is unimportant as a source of food. The rivers are relatively poor in fish; there are no fish in the Dead Sea, and the short Gulf of Aqaba shoreline has only recently been developed for fishing. The total fish catch was only 550 tons in 2000.

## 25 FORESTRY

Jordan formerly supported fairly widespread forests of oak and Aleppo pine in the uplands of southern Jordan, both west and east of the Jordan River, but forestland now covers less than 1% of the total area. Scrub forests and maquis growths are the most common; the olive, characteristic of the Mediterranean basin, is widely cultivated. The important forests are around Ajlun in the north and near Ma'an. By 1976, some 3,800 hectares (9,400 acres) had been newly planted as part of a government afforestation program. From 1976 to 1991, an additional 10,000 hectares (24,700 acres) also was reforested. Roundwood production was 226,000 tons in 2000. Imports of forestry products totaled \$147 million in 2000.

## 26 MINING

Jordan's leading industry and export commodity in 2002 was phosphate, ranking sixth in world output. Potash was the third top export commodity and fifth-leading industry, ranking seventh in world output. Fertilizers (made from phosphate rock and potash) ranked second among export commodities, and cement production ranked fourth among industries. Jordan also produced common clay, feldspar, natural gas and petroleum (for domestic consumption), gravel, gypsum, kaolin, lime, limestone, marble, crushed rock, salt, silica sand, steel, dimension stone, sulfuric acid, and zeolite tuff. In 2001, Jordan mined no metals, although it had deposits of copper, gold, iron, sulfur, titanium, and, in the Dead Sea, bromine and manganese. The output of mining and quarrying, which grew by 4.1% in 2001, accounted for 3% of GDP; construction accounted for 5.5%. GDP grew by 4.2% in 2001, 4% in 2000, 3.1% in 1999, and 3% in 1998, and was expected to grow 5.1% in 2002 and 6% in 2003. Of Jordan's \$1.91 billion in exports in 2001, stone, cement, fertilizers, phosphate rock, phosphoric acid, potash, and sulfuric acid accounted for \$541 million. Exports of phosphate rock fell from \$190 million in 1997 to \$129.9 million in 2001; 60% of phosphate output was exported, and 61.5% of exports went to India. Potash exports earned \$195.4 million, up from \$139.2 million in 1997.

Phosphate mine output (gross weight) in 2001 was 5.8 million tons. The sole producer, the Jordan Phosphate Mines Company (JPMC), was to be privatized by 2002, and planned to increase production at the Shiyada Mine, the largest of JPMC's three mines, to 7.4 million tons per year in 2003, from a 2001 capacity of 3.3 million tons. Resources at the Rusaifa Mine have been depleted. Phosphoric fertilizers (443,000 tons in 2001, down from 613,821 in 1999) and phosphoric acid (149,000 tons in 2001) were produced from phosphate rock. Phosphate reserves totaled 1 billion tons.

Production of potash crude salts—from Dead Sea potassium—was a record 1.96 million tons in 2001, up from 1.53 million tons in 1998. Capacity was expected to increase to 2.4 million tons in 2004, and the 53%-government-owned Arab Potash Co. (APC) was to be privatized by 2002. The World Bank has estimated that of the dissolved solids contained in the Dead Sea, 33 billion tons were sodium chloride and magnesium chloride and about 2 billion tons were potassium chloride.

Copper deposits between the Dead Sea and the Gulf of Aqaba remained undeveloped. Other potential for progress lay in the availability of bromine, dolomite, glass sands, iron, lead, oil shale, tin, travertine, and tripoli. Jordan Magnesia Company, a subsidiary of APC, was building a plant to produce 50,000 tons per year of refractory grade magnesia and 10,000 tons per year of other grades of magnesia—to be extracted from the Dead Sea, starting in 2002—and the Jordan and Bromine Co. Ltd. started building a plant to produce bromine and bromine compounds, beginning in 2003; the success of both projects would depend on external demand.

## 27 ENERGY AND POWER

Jordan does not have petroleum deposits. Before the 1991 Gulf War, its imports of oil from Sa'udi Arabia via the Trans-Arabian pipeline (Tapline) and its refinery at Az-Zarqa' supplied virtually all the country's energy needs. Sa'udi Arabia stopped supplying Jordan via the Tapline during the war to protest Jordan's tacit support of Iraq during the war. With the UN embargo that followed, however, Jordan became the sole legal recipient of Iraqi oil exports, which typically are imported by tanker truck. As of 1999, Jordanian officials were discussing the possibility of reducing this dependence by importing oil from Sa'udi Arabia or Kuwait. Crude oil imports in 2001 averaged 99,000 barrels per day. Large deposits of oil shale have been found, and exploratory drilling for oil and gas has begun in the eastern desert. The Az-Zarqa' refinery had a capacity 90,400 barrels per day in 2001.

Over 99% of electric power was thermal as of 2000, with hydroelectric power accounting for less than half of one percent. The government electrification plan calls for establishment of a national grid, linking the major cities. A project linking the Jordanian and Egyptian power grids via an underwater cable from Aqaba to Talra was inaugurated in 1999. As of 2001, net installed electrical capacity was 1,460 MW, and electricity generated totaled 6,900 million kWh. Consumption of electricity in 2000 was 7.1 billion kWh.

## 28 INDUSTRY

With government encouragement, industry plays an increasingly important part in Jordan's economy. In 1990, the manufacturing sector contributed 15% to GDP at factor cost. Manufacturing output fell by 2.9% in 1991 due to the adverse impact of the Gulf War. In 1992, the sector grew by 6.2%. In 2001, industry as a whole accounted for 26% of GDP, while manufacturing contributed 17%. The sector grew at an annual rate averaging 6.7% between 1988 and 1998. Most industrial income comes from four industries: cement, oil refining, phosphates, and potash. Cement production has been rising since the 1980s. In 1998, government sold 33% of the Jordan Cement Factories Company (JCFC) to La Farge of France as part of its program of

privatization begun in 1996. The 60-year old Jordan Phosphates Mine Company (JPMC) has a monopoly on phosphate mining in Jordan. In 2002 the government began negotiating with the Potash Company of Saskatchewan for the sale of a 40% stake in JPMC, finalization scheduled for March 2003. The Arab Potash Company, a pan-Arab company, was granted a 100-year monopoly for potash mining in Jordan when it was founded in 1956. As of 2003, the government holds 52% and is seeking to sell 26%. Jordan's one oil refinery is in Az-Zarqa', which has a capacity of 90,4000 barrels per day. Oil is supplied to it from Iraq by a fleet of 1,500 trucks traveling across 600 miles of desert highway. Iraq sells oil to Jordan on terms of one-half free and one-half with a 40% discount of the price above \$20/barrel. Since 1998 Jordan and Iraq have been agreed in principle to replace the oil trucks with a pipeline, estimated to cost \$350 million. In 2002, Jordan was formally receiving bids for the first stage of the projects. The government holds 52% in a 100-year monopoly.

## 29 SCIENCE AND TECHNOLOGY

Expenditures for research and development in 1987-97 totaled 0.26% of GNP. A dozen institutes offer scientific training. The Islamic Academy of Sciences, founded in 1986, is an international organization that promotes science, technology, and development in the Islamic and developing worlds. The Jordan Research Council, founded in 1964, coordinates scientific research in the country. The Royal Scientific Society, founded in 1970, is an independent industrial research and development center. All three institutions are in 'Amman. In 1996 Jordan had 13 universities and colleges offering courses in basic and applied science. In 1987-97, science and engineering students accounted for 26% of college and university enrollments.

## 30 DOMESTIC TRADE

Lack of proper storage facilities, inadequate transportation service, and a lack of quality controls and product grading have been chronic handicaps to Jordanian trade. However, these deficiencies have been alleviated, directly and indirectly, under progressive development plans. Traditional Arab forms of trade remain in evidence, particularly in villages, and farm products generally pass through a long chain of middlemen before reaching the consumer. In 'Amman, however, Westernized modes of distribution have developed and there are supermarkets and department stores as well as small shops. Some local investors are beginning to take an interest in the potential for foreign franchises.

Business hours are from 8 AM to 1 PM and from 3:30 to 6:30 PM, six days a week. Shops close either on Friday for Muslims or on Sunday for Christians. Banks stay open from 8:30 AM to 12:30 PM and from 3:30 to 5:30 PM, Saturday through Thursday.

## 31 FOREIGN TRADE

Jordan has traditionally run a trade deficit with imports at least doubling exports. During the 1990s, fertilizers accounted for about a quarter of Jordan's commodity exports, and amounted to almost a quarter of the world's total exports of crude fertilizers (23%). However, in 2000, Jordan's fertilizer exports plummeted, accounting for a mere 7.6% of exports. No particular commodity now dominates Jordan's export market, but key exports include apparel (8.9%), medical and pharmaceutical products (8.6%), and paper products (4.7%). Other important exports are industrial machinery (4.8%) and vegetables (6.4%).

In 2000 Jordan's imports were distributed among the following categories:

Consumer goods	11.4%
Food	17.1%
Fuels	4.8%
Industrial supplies	30.7%
Machinery	15.7%
Transportation	17.5%
Other	2.8%

Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
Sa'udi Arabia	119	149	-30
United States	67	452	-385
Iraq	32	159	-127
Turkey	16	90	-74
Germany	14	524	-510
Japan	14	180	-166
Italy	9	165	-156
Korea	9	162	-153
United Kingdom	n.a.	207	n.a.
France	n.a.	172	n.a.

## 32 BALANCE OF PAYMENTS

Jordan's chronically adverse trade balance has long been offset by payments from foreign governments and agencies, especially from Jordan's oil-rich Arab allies, and by remittances from Jordanians working abroad, chiefly in Sa'udi Arabia. During the Gulf War, expatriate remittances and aid from Arab countries dropped sharply, causing the improvement of the trade deficit to halt. This trend continued into the mid-1990s despite an increasing surplus in the services sector. Although Jordan enjoyed a balance of payments surplus in 2000 of around 11% of GDP, the country suffers from a chronic trade deficit, largely due to its reliance on foreign oil. Annual imports usually amount to more than double the exports.

The US Central Intelligence Agency (CIA) reports that in 2002 the purchasing power parity of Jordan's exports was \$2.5 billion while imports totaled \$4.4 billion resulting in a trade deficit of \$1.9 billion.

The International Monetary Fund (IMF) reports that in 2001 Jordan had exports of goods totaling \$2.3 billion and imports totaling \$4.3 billion. The services credit totaled \$1.48 billion and debit \$1.73 billion. The following table summarizes Jordan's balance of payments as reported by the IMF for 2001 in millions of US dollars.

<b>Current Account</b>	<b>-4</b>
Balance on goods	-2,007
Balance on services	-243
Balance on income	187
Current transfers	2,059
<b>Capital Account</b>	<b>22</b>

Portfolio investment liabilities	-172
Other investment assets	27
Other investment liabilities	580
<b>Net Errors and Omissions</b>	<b>80</b>
<b>Reserves and Related Items</b>	<b>-625</b>

## 33 BANKING AND SECURITIES

The Central Bank of Jordan, founded in 1964 with a capital of JD2 million and reorganized in 1971, is in charge of note issue, foreign exchange control, and supervision of commercial banks,

in cooperation with the Economic Security Council. In 1995, the Central Bank established the dinar as a fully convertible currency for non-capital remittances. In November of that year the bank announced a fixed dollar-dinar rate for current payments. Because of Jordan's IMF-led structural adjustments and trade and investment liberalizations, it became the first Arab country to receive credit ratings from both Standard and Poor and Moody's.

The banking system includes, besides the Central Bank, thirteen commercial banks (five of which are branches of foreign banks), five investment banks, two Islamic banks, one Industrial Development Bank, and several other institutions. Commercial banks have a tradition of being both small, with a low capital base, and highly conservative. The Arab Bank, by far the largest "high street" bank, and the Housing Bank are the largest banks in Jordan. Jordanian banks have acted rapidly to fill the banking void in the Occupied Territories, since the agreement between the PLO and Israel transferred administrative authority to the Palestinians. State banks include the Arab Bank, The Bank of Jordan, Cairo 'Amman Bank, Jordan-Kuwait Bank, and the Jordan National Bank. Commercial banks included those of Jordan, other Arab countries, the United Kingdom, and the United States. Foreign commercial banks in Jordan include the British Bank of the Middle East, Citibank (US), the Arab Land Bank, and the Arab Banking Corporation (Jordan). The late 1970s and 1980s saw an expansion of niche institutions, such as four investment banks, six specialized credit institutions (three of which are under public ownership), four non-banking financial institutions, and one Islamic bank. Unfortunately, many of these have been either too small to have had a strong impact on the provision of credit, or have replicated the approach of the commercial banks. Since 1992, moneychangers have been able to operate legally, having been closed down in February 1989, but their area of operation has been heavily circumscribed.

Loans are extended by the Jordan Industrial Bank, Agricultural Credit Corp., Jordan Co-operative Organization, and other credit institutions.

The 'Amman Financial Market (AFM) has been in existence since the late 1970s. Like most of the equity markets in the Middle East, the AFM is small and lacking in the dynamism that has seen markets in Latin America and Asia take off over the past ten years. A total of 115 companies were listed in 1997, making the AFM second in the Arab world only to Egypt, which quoted some 700 stocks. The capitalization of the AFM stood at around \$5 billion, putting it level with Bahrain, but ahead of Oman and Tunisia. In 1996, the government instituted a law allowing foreigners to invest in the AFM. In 1999, the 'Amman Stock Exchange was established as a privately managed institution. There were 149 listed public-shareholding companies at that time, with a market capitalization of approximately \$6 billion.

### 34 INSURANCE

The Al Ahlia Insurance Co. and the Jordan Insurance Co. offer commercial insurance. Several US and British insurance companies have branches or agents in Jordan. A new insurance law in 1998 brought about stricter regulation of the industry. In 1999, there were 26 national insurance companies operating in Jordan and one foreign insurance company. In 2001, \$24 million was spent on life insurance premiums.

### 35 PUBLIC FINANCE

Jordan has had to rely on foreign assistance for support of its budget, which has increased rapidly since the 1967 war. During the late 1980s, Jordan incurred large fiscal deficits, which led to a heavy burden of external debt. Efforts at cutting public expenditures reduced the budget deficit from 21% of GDP in 1989 to 18% in 1991. The Persian Gulf War, however, forced Jordan to delay the IMF deficit reduction program begun in 1989.

The US Central Intelligence Agency (CIA) estimates that in 2001 Jordan's central government took in revenues of approximately \$29 billion and had expenditures of \$31 billion. Overall, the government registered a deficit of approximately \$2 billion. External debt totaled \$8.2 billion.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

REVENUE AND GRANTS	100.0%	29,000
Tax revenue	65.0%	18,858
Non-tax revenue	20.9%	6,071
Capital revenue	0.4%	114
Grants	13.6%	3,956
EXPENDITURES	100.0%	31,038
General public services	6.6%	2,046
Defense	17.5%	5,427
Public order and safety	9.1%	2,812
Education	16.1%	4,979
Health	10.6%	3,273
Social security	16.7%	5,184
Housing and community amenities	1.8%	561
Recreation, cultural, and religious affairs	1.5%	468
Economic affairs and services	8.0%	2,494
Other expenditures	1.9%	595
Interest payments	10.3%	3,200

### 36 TAXATION

A new income tax law went into effect in 2002 that reduced the top income tax rate to 25% from 30%. The new law also equalized the level of tax exempt income for men and women, at JD1,000 (about \$1,418) for both sexes. Income tax rates range from 5% to 25%, with the average tax payer paying a marginal rate of 5%. Corporations are taxed at a rate of 15% (35% for those involved in banking and finance). In January 2001 Jordan entered the second phase of its transformation to a value-added tax (VAT) regime, a reform begun in 1996. The VAT rate is 13%, and in 2001 about 25 new commodities were added to its coverage, including some food products, tobacco, coffee, soft drinks, new cars, heavy-duty vehicles and paper products. Businesses with sales less than JD250,000 (about \$355,000) a year are exempt from registering for the VAT. There are no capital gains or net worth taxes on individuals, and social security taxes are paid jointly by employers and employees.

### 37 CUSTOMS AND DUTIES

Customs and excise duties used to provide a large portion of all tax revenues, but following accession to the World Trade Organization, they are no longer so high. All imports and exports are subject to licenses. Import duties are levied by CIF (cost, insurance, and freight) value, with a 0% to 30% rate. There is also a 13% value-added tax (VAT) that is applied to both imported and domestically produced goods. Jordan grants preferential treatment to imports from Arab League countries, under bilateral trade agreements that exempt certain items from duty and under multilateral trade and transit agreements with Arab League countries. Jordan also signed a bilateral free trade agreement (FTA) with the United States in October 2000.

### 38 FOREIGN INVESTMENT

In the past there was little foreign investment in Jordan apart from the oil pipelines, but in the early 1970s, the government began offering liberal tax inducements, including a six-year corporate tax holiday for firms established in 'Amman and a tax holiday of up to 10 years for those outside the capital. 100%

foreign ownership of local enterprises is permitted in some cases. In 1980, the government formed the Jordanian Industrial Estates Corp., near 'Amman, to attract new industries to planned industrial complexes; investors were granted two-year income tax exemptions. Jordan also has established four free-trade zones, at Al-'Aqabah, Az-Zarqa', and the Queen Alia International Airport and along the Syrian frontier, near the Jordan-Syria rail link.

In 1995, Jordan hosted an international conference on investment in the Kingdom as part of its recent opening to international investment. It also announced intentions to begin selling off government shares in major enterprises, including telecommunications and the Royal Jordanian Airlines. In 1997, the country had \$1.2 billion in foreign exchange reserves.

### 39 ECONOMIC DEVELOPMENT

Before the upheavals caused by the war of 1967, the government had begun to design its first comprehensive development plans. The Jordan Development Board, established in 1952, adopted a five-year program for 1961–65 and a seven-year program for 1964–70, which was interrupted by war. In 1971, a newly created National Planning Council, with wide responsibility for national planning, prepared the 1973–75 plan for the East Bank, with a planned total outlay of JD179 million. The main objectives were to reduce the trade deficit, increase the GNP, expand employment, and reduce dependence on foreign aid. At least 60% of the planned projects were completed, and a new five-year plan was instituted on 1 January 1976.

The 1976–80 plan entailed outlays of JD844 million (at 1975 constant prices) and achieved an annual GDP growth rate of 9.6%, below the goal of 11.9%. Notable development projects included port expansion at al 'Aqabah and construction of Queen Alia International Airport. The 1981–85 development plan allocated funds totaling JD3,300 million and projected an economic growth rate of 10.4% annually (17% for industry and mining, 7% for agriculture). The plan envisaged completion of large potash and fertilizer installations, as well as the first stage of construction of the 150 m (492 ft) Maqarin Dam project on the Yarmuk River, which would store water for irrigation. This project also was to extend the East Ghor Canal 14 km (9 mi) from Karama to the Dead Sea. The Maqarin Dam project was shelved indefinitely, however.

The 1986–90 development plan allocated JD3,115.5 million, to be shared between the public sector (52%) and the private and mixed sector (48%). The goals of the plan were the following: realization of a 5.1% annual growth rate in the GDP; creation of 97,000 new employment opportunities; a decrease in imports and an increase in exports to achieve a more favorable balance of trade; expansion of investment opportunities to attract more Arab and foreign capital; development of technological expertise and qualified personnel; attainment of a balanced distribution of economic gains nationally through regional development; and expansion and upgrading of health, education, housing, and other social services.

Between 1953 and 1986, Jordan received development assistance from the IBRD and other international agencies, other Arab countries, the United Kingdom, Germany, and the United States. The United States provided nearly \$1.7 billion in nonmilitary assistance and more than \$1.4 billion in military aid. Aid from Arab oil-producing countries totaled \$322 million in 1984. The April 1989 riots in Jordan led to a new surge of aid transfers. Arab grants to Jordan in 1989 fell between \$360 million and \$430 million. Political dissatisfaction in Kuwait and Sa'udi Arabia at Jordan's policy during the Gulf crisis resulted, however, in the Gulf states denying further direct grant assistance.

In 1988, Jordan began working with the IMF on restructuring its economy. These plans were thrown into considerable disarray by political events in the Gulf (most notably Jordan's ill-conceived support of Iraq in the face of global opposition to that

country's 1990 invasion of Kuwait), but new agreements were concluded in 1991, as Jordan began to institute democratic reforms. Foremost in the IMF plan are reductions in government spending, taming of inflation, increasing foreign exchange, and decreasing government ownership of economic enterprises. In the economic plan of 1996–98, Jordan was expected to decrease its ownership of enterprises from 1994's level of 64% to 55% by 1998.

### 40 SOCIAL DEVELOPMENT

The social insurance system provides old-age, disability, and survivor benefits, as well as workers' compensation. Public employees and workers over the age of 16 working in private companies with 5 or more employees are covered. Workers contribute 5% of their wages, employers pay 8% of payroll, and the government covered any deficit. The retirement age is 60 for men and 55 for women if coverage requirements are met. A funeral grant of 150 dinars is also provided.

Women's rights are often dictated by Islam. Under *Shari'ah* law, men may obtain a divorce more easily than women, a female heir's inheritance is half that of a male, and in court, a woman's testimony has only half the value of a man's. Married women are required by law to obtain their husband's permission to apply for a passport. Women are discouraged from pursuing careers. The Criminal Code provides for lenient sentences for men accused of murdering female relatives they believed to be "immodest" in order to "cleanse the honor" of their families. This defense is not available to women. Violence against women and spousal abuse is common. The rights of children are generally well respected in Jordan, and the government makes an effort to enforce child labor laws.

Palestinian refugees arriving after 1967 are not entitled to citizenship. Bedouins are entitled to full citizenship, but nonetheless experience professional and social discrimination. Freedom of speech and of the press are restricted by the government. Human rights violations by the government included police brutality, arbitrary arrest and detention, and there were also allegations of torture.

### 41 HEALTH

In 1995, Jordan had 6,839 physicians, 3,118 pharmacists, 2,015 dentists, and 4,304 nurses. As of 1999, there were an estimated 1.7 physicians and 1.8 hospital beds per 1,000 people. The UN Relief and Works Agency for Palestine Refugees (UNRWA) maintains its own hospitals and maternity centers. A medical faculty was added at the University of Jordan in 1972.

Medical services are concentrated in the main towns, but in recent decades the government has attempted to bring at least a minimum of modern medical care to rural areas. Village clinics are staffed by trained nurses, with regular visits by government physicians. As modern medicine has spread to the more remote areas, traditional methods have been dying out. The Ministry of Health, created in 1950, in cooperation with UNICEF, the World Health Organization, and the UNRWA, has greatly reduced the incidence of malaria and tuberculosis. In 1996, there were only 11 reported cases of tuberculosis per 100,000 people. Trachoma, hepatitis, typhoid fever, intestinal parasites, acute skin inflammations, and other endemic conditions remain common, however. In 2000, 96% of the population had access to safe drinking water and 99% had adequate sanitation. As of 1999, total health care expenditure was estimated at 8% of GDP.

In 2000, average life expectancy was 72 years. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 24.6 and 2.6 per 1,000 people. About 50% of married women (ages 15 to 49) used contraception as of 2000. The infant mortality rate was 25 per 1,000 live births in 2000. Under age five mortality has been reduced dramatically from 149 in 1960 to 30 in 2000 for every 1,000 live births. Immunization

rates for children up to one year old between 1990–94 were: tuberculosis, 93%; diphtheria, pertussis, and tetanus, 87%; polio, 94%; and measles, 69%. As of 1999, rates for DPT and measles, respectively, were 97% and 94%. Only four cases of polio were reported in 1994; none were seen in 1996. As of 2000, an estimated 8% of all children under five were malnourished.

In 1999 HIV prevalence was 0.02 per 100 adults.

## 42 HOUSING

A general housing shortage in the mid-1960s was aggravated by the influx of West Bank refugees after the 1967 war, and Jordan still lacked adequate housing in the early 1980s. During 1981–86, some 42,300 new residential building permits were issued. According to 1994 national statistics, there were 831,799 housing units nationwide, including 467,715 apartments, 335,423 dar (traditional, detached structures of one or more rooms), 2,877 barracks, and 6,907 tents. About 80% of all dwelling units were owner occupied. Most residential units were made of cement bricks or concrete blocks. About 3% of all dwellings were described as mud brick and rubble constructions.

## 43 EDUCATION

Jordan has made great strides in reducing illiteracy, the rate of which declined from 68% in 1961 to 13.5% in 1995. Adult illiteracy rates for the year 2000 were estimated at 10.2% (males, 5.1%; females, 15.6%). Education is compulsory between the ages of 6–15. Ten years are devoted to primary education, followed by two years at the secondary stage. In 1998, Jordan had 2,623 primary schools with 45,367 teachers and 1,121,866 pupils. Secondary schools had a total of 155,008 pupils, with 9,300 teachers, in the same year. As of 1999, 94% of primary-school-age children were enrolled in school, while 76% of those eligible attended secondary school. The United National Relief and Works Agency (UNRWA) operates 208 schools in refugee camps. As of 1999, public expenditure on education was estimated at 6.3% of GDP.

Jordan has five universities: the University of Jordan (founded in 1962), at 'Amman; Yarmuk University at Irbid; Mut'ah University, in Karak governorate in southern Jordan; the University of Jordan for Science and Technology; and the Zaqa University established in 1993. In addition there are 53 community colleges; two of these are UNRWA schools on the East Bank for Palestinian students. In 1997, 112,959 students were enrolled at all higher-level institutions while higher education teaching staff numbered 5,275.

## 44 LIBRARIES AND MUSEUMS

The library at the University of Jordan has 670,000 volumes. In 1977, the department of Libraries, Documentation, and Archives was founded to establish the national library, which had 70,000 volumes in 2002. The Scientific and Technical Information Center in 'Amman holds 47,000 volumes. The University of Jordan for Women, founded in 1991, holds 17,000 volumes. More than half of Jordan's museums are archaeological and historical. 'Amman has four major museums: the Jordan Archaeological Museum, the Folklore Museum, the Popular Life Museum, and the Mosaic Gallery.

## 45 MEDIA

Public communications and broadcasting facilities are government controlled. Telephone and telegraph facilities were introduced soon after World War II. Telephone service, at first rudimentary, was expanded in the 1950s; in 1998 Jordan had 425,000 telephones, mostly in 'Amman and the larger towns. In 1995, there were 11,500 cellular phones in use nationwide.

All radio and television broadcasts are controlled by the government. Radio Jordan transmits AM and FM broadcasts in English, and the television stations broadcast programs in

English, Arabic, French, and Hebrew on two channels. As of 1999, there were 6 AM and 5 FM radio stations. In 1995 there were 20 television stations. In 2000 there were 372 radios and 84 television sets for every 1,000 people. The same year, there were five Internet service providers, serving 210,000 subscribers by 2001.

Jordan's four major daily newspapers (with 2002 estimated daily circulations) are *Al-Dustour* (*Constitution*, 100,000), *Al-Rai* (*Opinion*, 90,000), *Sawt Ash-Shaab* (*Voice of the People*, 30,000), and *Jordan Times* (15,000). All except the English-language *Jordan Times* are in Arabic; all are published in 'Amman and are owned and operated by the private sector. *Al-Rai* is a government-controlled paper, founded after the 1970–71 civil war; *Al-Dustour* is 25% government owned. There are also weeklies and less frequent publications published in Arabic in 'Amman. One weekly, *The Star*, is published in English. The press code, enacted in 1955, requires all newspapers to be licensed and prohibits the publishing of certain information, mainly relating to Jordan's national security, unless taken directly from material released by the government.

The constitution provides for freedom of speech and the press; however, in practice there are some significant restrictions on these rights. Private citizens can be prosecuted for slandering the Royal Family, and the Press and Publication Law of 1993 restricts the media coverage of 10 subjects, including the military, the royal family, and economic policy.

## 46 ORGANIZATIONS

Religious organizations still are of major importance, and membership in the hamula, the kinship group or lineage comprising several related families, also is of great significance as a framework for social organization. Literary and theatrical clubs have become popular, especially since World War II, but political organizations died out after the 1957 ban on political parties. There are chambers of commerce in 'Amman and other large towns. The Jordan Trade Association supports business owners with domestic and international holdings. Jordan serves as the home base for a number of multinational organizations, including the Islamic Academy of Sciences and the Arab Music Academy.

National youth organizations include the Jordanian Association for Boy Scouts and Girl Guides, YMCA/YWCA, National Union of Jordanian Students, and the Orthodox Youth Education Society. The Alliance for Arab Women and the Jordanian National Committee for Women are based in 'Amman. The Noor Al-Hussein Foundation, founded in 1985, is a major national social welfare organization. The Red Crescent Society is active as well.

## 47 TOURISM, TRAVEL, AND RECREATION

The East Bank is an area of immense historical interest, with some 800 archaeological sites, including 224 in the Jordan Valley. Jordan's notable tourist attractions include the Greco-Roman remains at Jerash (ancient Garasi), which was one of the major cities of the Decapolis (the capital, 'Amman, was another, under the name of Philadelphia) and is one of the best-preserved cities of its time in the Middle East. Petra (Batra), the ancient capital of Nabataea in southern Jordan, carved out of the red rock by the Nabataeans, is probably the East Bank's most famous historical site. Natural attractions include the Jordan Valley and the Dead Sea, which—at 392 m below sea level—is the lowest spot on Earth.

The beaches on the Gulf of Aqaba offer holiday relaxation for Jordanians, as well as tourists. Sports facilities include swimming pools, tennis and squash courts, and bowling alleys. Eastern Jordan has modern hotel facilities in 'Amman and Al-'Aqabah, and there are government-built rest houses at some of the remote points of interest. Tourists are permitted to bring in unlimited

foreign currency. Passport and visa are required for entry except for nationals of certain Middle Eastern countries.

In 2000, 1,426,879 tourists arrived in Jordan. Of these arrivals, more than 50% were from other Middle Eastern countries. Tourism receipts totaled \$722 million that year. There were 17,485 rooms in hotels and other establishments with 34,433 beds and a 40% occupancy rate in 2000.

In 2000, the US Department of State estimated the cost of staying in 'Amman at \$188 per day. Daily costs elsewhere were about \$135.

#### 48 FAMOUS JORDANIANS

The founder of Jordan's Hashemite dynasty—the term stems from the Hashemite (or Hashimite) branch of the tribe of the Prophet Muhammad—was Hussein ibn-'Ali (Husayn bin 'Ali, 1856–1931), sharif of Mecca and king of the Hijaz.

As a separate Arab country, Jordan has had a relatively short history, during which only two men have become internationally known. The first of these was the founder of the kingdom, 'Abdallah ibn-Husayn (1882–1951). Although he was born in Hijaz and was a son of the sharif of Mecca, he made 'Amman his headquarters. He was recognized as emir in 1921 and king in 1946. The second was his grandson, King Hussein I (Husayn ibn-Talal, 1935–99), who ruled from 1953 until his death. In June 1978, 16 months after the death by helicopter crash of Queen Alia (1948–77), Hussein married his fourth wife, the Queen Noor al-Hussein (Elizabeth Halaby, b. US, 1951).

#### 49 DEPENDENCIES

Jordan has no territories or colonies.

# KAZAKHSTAN

Republic of Kazakhstan  
*Kazakstan Respublikasy*

**CAPITAL:** Astana (as of December 1997; formerly Almaty)

**FLAG:** Light blue with a yellow sun and soaring eagle in the center and a yellow vertical ornamentation in the hoist.

**ANTHEM:** *National Anthem of Kazakhstan.*

**MONETARY UNIT:** The tenge (T), issued in 15 November 1993, is the national currency, replacing the ruble (R). There is a coin, the tyin. One hundred tyin equal one tenge. As of May 2003, T1 = \$0.00661 (or \$1 = T151.2), but exchange rates fluctuate widely.

**WEIGHTS AND MEASURES:** The metric system is in force.

**HOLIDAYS:** New Year, 31 December–1 January; International Women's Day, 8 March; Nauryz (Kazak New Year), 28 March; Solidarity Day, 1 May; Victory Day, 9 May; Independence Day, 25 October.

**TIME:** 5 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Kazakhstan is located in southern Asia between Russia and Uzbekistan, bordering on the Caspian Sea and the Aral Sea, with a total area of 2,717,300 sq km (1,049,155 sq mi). Kazakhstan shares boundaries with Russia on the N and W, China on the E, Kyrgyzstan, Uzbekistan, and Turkmenistan on the S, and the Caspian Sea on the W. Kazakhstan's boundary length totals 12,012 km (7,464 mi). Its capital city, Astana, is located in the north-central part of the country.

## <sup>2</sup>TOPOGRAPHY

The topography of Kazakhstan is varied, as it extends from the Volga River to the Altai Mountains, and from plains in western Siberia to central Asian oasis and desert. About 12% of Kazakhstan's land is arable with less than 1% under irrigation.

## <sup>3</sup>CLIMATE

The country has an arid continental climate. In January, the mean temperature is -5°C (23°F). Rainfall averages between 25 cm (9.8 in) and 38 cm (15 in). Because of the wide ranges in elevation in the country, there are wide variations in temperature and rainfall.

## <sup>4</sup>FLORA AND FAUNA

The sparse plant covering in the desert consists of saltworts, wormwoods, alhagi, and a haloxylon typical of the southern desert. Animals include the antelope, sand cat, and jerboa.

## <sup>5</sup>ENVIRONMENT

Kazakhstan faces several important environmental issues. As the site of the former Soviet Union's nuclear testing programs, areas of the nation have been exposed to high levels of nuclear radiation, and there is significant radioactive pollution. The nation also has 30 uranium mines, which add to the problem of uncontrolled release of radioactivity. Kazakhstan has sought international support to convince China to stop testing atomic bombs near its territory, because of the dangerous fallout.

Mismanagement of irrigation projects has caused the level of the Aral Sea to drop by 13 m, decreasing its size by 50%. The change in size has changed the climate in the area and revealed 3 million hectares of land that are now subject to erosion.

Air pollution in Kazakhstan is another significant environmental problem. Acid rain damages the environment within the country and also affects neighboring countries. In 1992 Kazakhstan had the world's 14th highest level of industrial carbon dioxide emissions, which totaled 297.9 million metric tons, a per capita level of 17.48 metric tons. In 1996, the total had dropped to 173.8 million metric tons. Pollution from industrial and agricultural sources has also damaged the nation's water supply. UN sources report that, in some cases, contamination of rivers by industrial metals is 160 to 800 times beyond acceptable levels. Pollution of the Caspian Sea is also a problem.

Kazakhstan's wildlife is in danger of extinction due to the overall level of pollution. According to current estimates, some areas of the nation will not be able to sustain any form of wildlife by the year 2015. In the areas where pollution is the most severe, 11 species of mammals and 19 species of birds and insects are already extinct. As of 2001, 15 mammal species, 15 bird species, 5 types of freshwater fish, and 36 species of plant are listed as threatened. Threatened species include the argali, Aral salmon, great bustard, snow leopard, and tiger. The mongolian wild horse has recently become extinct in the wild.

## <sup>6</sup>POPULATION

The population of Kazakhstan in 2003 was estimated by the United Nations at 15,433,000, which placed it as number 61 in population among the 193 nations of the world. In that year approximately 7% of the population was over 65 years of age, with another 29% of the population under 15 years of age. There were 92 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is -0.36%, with the projected population for the year 2015 falling to 15,328,000. The population density in 2002 was

5 per sq km (14 per sq mi). Most people live in the east and north.

It was estimated by the Population Reference Bureau that 56% of the population lived in urban areas in 2001. The capital city, Astana, had a population of 303,000 in that year. The former capital, Almaty, is the largest city with a population of 1,129,400. Other major metropolitan areas include Karaganda, 596,000; Chimkent, 404,000; Pavlodar, 349,000; Semipalatinsk, 342,000; and Ust-Kamenogorsk, 334,000. According to the United Nations, the urban population growth rate for 2000–2005 was 0.2%.

## **7** MIGRATION

Kazakhs abroad (in China, Mongolia, and other newly independent republics of the former USSR) are encouraged to return. Those who fled in Stalin's time automatically received citizenship; others must apply.

In 1996, there was an organized return of 70,000 Kazakhs from Mongolia, Iran, and Turkey. During 1991–95, 82,000 Ukrainians and 16,000 Belarussians repatriated. Between 1991–96, 614,000 Russians repatriated and 70,000 Kazakhs had repatriated from CIS countries. During 1992–96, 480,000 ethnic Germans had returned to Germany. These Germans were forcibly deported to Central Asia during World War II as from the Volga region.

As of 1996, 42,000 Kazakhs had been displaced internally or had left for other Commonwealth of Independent States (CIS) countries as a result of the ecological problems of the Aral Sea, which had lost three-fourths its volume of water. There were also 160,000 displaced persons as a result of Semipalatinsk, an above-ground nuclear testing site in northern Kazakhstan. Since 1991, 45,000 Kazakhs were displaced internally, and 116,000 had left for other CIS countries.

As of 1999, there were an estimated 35,000 refugees and asylum seekers in Kazakhstan. Of these, there were some 25,000 returnees of ethnic Kazakh origin, 6,000 Tajiks, 3,000 Afghans, Chechens, Georgians, and Armenians, as well as individual cases from China, African and other countries. The majority of the refugee population is located in the former capital Almaty and the southern part of the country. In 2000 the net migration rate was -12.2 migrants per 1,000 population, amounting to a loss of 200,000 people. The government views the emigration level as too high.

## **8** ETHNIC GROUPS

Kazakhs constituted about 53% of the population in 1999 and Russians, about 30%. The remaining population consists of Ukrainians (4%), Uzbeks (3%), Germans (2%), Uighur (1%), and other groups collectively constituting about 7%.

## **9** LANGUAGES

The constitution declares Kazakh to be the state language and requires the president to be a Kazakh speaker. Kazakh is a Turkic language written in Cyrillic script with many special letters (but in Roman script in China since 1960). Modern Kazakh utilizes many words of foreign origin from Russian, Arabic, Persian, Mongol, Chinese, Tatar, and Uzbek. Only about 64% of all Kazakhs can speak the language effectively. Almost everyone can speak Russian (95%), which has special status as the "language of interethnic communication."

## **10** RELIGIONS

According to a 1998 government survey, about 80% of the ethnic Kazakhs are Muslim. The Kazakhs, a distinct ethnic group originating with Turkic and Mongol settlers who arrived there in late antiquity (first century BC), are the dominant group in the population and are primarily Sunni Muslims of the Hanafi school. Islam had been adopted by the Kazakhs as early as 1043,

but many of its popular religious practices did not become common until the late 18th century. The Uzbeks, Uighurs, and Tatars (which together make up less than 10% of the population) are also primarily Sunni Muslim. Other schools represented are Shafit Sunni, Shiite, Sufi, and Akhmadi.

The 1998 report indicates that about 60% of ethnic Slavs are Russian Orthodox; however, 2001 government statistics claim that evangelical Christian and Baptist churches have begun to outnumber Russian Orthodox congregations. There are several other Protestant congregations, including Lutherans, Jehovah's Witnesses, and Seventh-Day Adventists. There is also a small Jewish community.

## **11** TRANSPORTATION

About 17,850 km (11,092 mi) of railroad tracks traverse Kazakhstan. Highways totaled 189,000 km (117,445 mi) in 2002, of which 108,100 km (67,173 mi) were paved. In 1994, General Motors Corp. signed an agreement to distribute North American-built vehicles in Kazakhstan. The primary port is Guryev (Atyrau), on the Caspian Sea. There are 3,900 km (2,423 mi) of inland waterways on the Syrdariya and Ertis Irtysh rivers. Much of the infrastructure connects Kazakhstan with Russia rather than points within Kazakhstan. Landlocked in the center of Eurasia it is dependent on its transport connections through neighboring countries to deliver its goods to world markets. In 2001 there were 449 airports, 28 of which had paved runways. In the same year, 501,000 passengers were carried on scheduled domestic and international flights.

## **12** HISTORY

There is evidence of human habitation in present-day Kazakhstan from the earliest Stone Age, more than 300,000 years ago. The steppe characteristics of most of the region are best suited for nomadic pastoralism, which an ever-shifting pattern of peoples have pursued in this territory. Achaemenid documents give the name Sacae to the first such group to be historically recorded. In the 3rd and 2nd centuries BC they were displaced by the Usun in the east, the Kangiui in the south central region, and the Alani in the west.

The first well-established state was that of the Turkic Kaganate, in the 6th century AD, replaced in the early 8th century by the Turgesh state. In 766, the Karluku established dominance in what now is eastern Kazakhstan. Some of the southern portions of the region fell under Arab influence in the 8th–9th centuries, and Islam was introduced. Western Kazakhstan was under Oghuz control in 9th to the 11th centuries; at roughly the same time the Kimak and Kipchak tribes, of Turkic origin, controlled the east. The large central desert of Kazakhstan is still called "Dashti-Kipchak," or the Kipchak Steppe.

The Karluk state was destroyed by invading Iagmas in the late 9th and early 10th centuries. They formed the Karakhanid state, which controlled extensive lands into what is now China. The Karakhanids were in a constant state of war with the Seljuks, to the south, and control of parts of what is now Kazakhstan passed back and forth between them. The Karakhanids collapsed in the 1130s when they were invaded by Khitans, who established the Karakitai state. In the mid-12th century, Khwarazm split off from the weakening Karakitais, but the bulk of the state survived until the invasion of Genghiz Khan from 1219–1221.

Kazakhstan was part of Batu's Golden Horde, which in the 14th century broke up into the White Horde and Mogulistan. By the early 15th century, the White Horde had split into several large khanates, including the Nogai Horde and the Uzbek Khanate.

The present-day Kazakhs formed in the mid-15th century when clan leaders Janibek and Girei broke away from Abul Khair, leader of the Uzbeks, to seek their own territory in Semirechie, between the Chu and Talas rivers. First to unite the

LOCATION: 48° N; 60° E. BOUNDARY LENGTHS: China, 1,533 kilometers (954 miles); Kyrgyzstan, 1,051 kilometers (653 miles); Russia, 6,846 kilometers (4,254 miles); Turkmenistan, 379 kilometers (236 miles); Uzbekistan, 2,203 kilometers (1,369 miles).

Kazakhs into one people was Khan Kasym (1511–23). When the Nogai Horde and Siberian Khanates broke up in the mid 16th century, tribes from both joined the Kazakhs. The clans separated into three Hordes: the Great Horde, which controlled Semirechie; the Middle Horde, which had central Kazakhstan, and the Lesser Horde, which had western Kazakhstan.

Russian traders and soldiers began to appear on the northwestern edge of Kazakh territory in the 17th century, when Cossacks founded the forts which became the cities of Ural'sk and Gurev. The Kazakh khanate was in disarray at the time, badly pressed by Kalmyk invaders who had begun to move in from the east. Pushed west in what the Kazakhs call their "Great Retreat," the Kazakh position deteriorated until, in 1726, Lesser Horde khan Abul'khair requested Russian assistance. From that point on the Lesser Horde was under Russian control. The Middle Horde was conquered by 1798. The Great Horde remained independent until the 1820s, when pressure from both the Kokand Khanate and Russia forced them to choose what they regarded as the lesser of evils, the Russians.

There was, however, considerable resistance, led by Khan Kenen (Kenisary Kasimov), of the Middle Horde, whose followers fought the Russians 1836–47. Khan Kenen is now regarded as a Kazakh national hero. Russian attempts to quell this resistance led to establishment of a number of forts and settlements in Kazakh territory, which made Kazakh nomadism impossible and destroyed the Kazakh economy.

In 1863, Russia promulgated a policy in the Gorchakov Circular which asserted the right to annex "troublesome" border areas. It was on this basis that Russian troops began the conquest of Central Asia. Most of Kazakhstan was made part of the Steppe district of the Russian empire; the rest was in Turkestan.

Beginning in the 1890s Russian settlers were aggressively moved into fertile lands in northern and eastern Kazakhstan, further displacing the nomadic Kazakhs. Between 1906 and 1912 more than a half-million Russian farms were started as part of the Stolypin reforms. By the time of the 1916 uprising the Kazakhs were broken and starving. Despite a strong effort against the Russians, they were savagely repressed.

At the time of the revolution a group of secular nationalists called the Alash Orda attempted to create a Kazakh government, but it lasted less than two years (1918–20) before surrendering to the Bolsheviks.

The Kazakh Autonomous Soviet Socialist Republic was declared in 1920 and elevated to full republic status in 1936. In the period 1929–34, when Stalin was abolishing private agriculture and establishing huge collective farms, Kazakhstan suffered repeated famines which killed at least 1.5 million Kazakhs, as well as destroying 80% of the republic's livestock.

In World War II much Russian industry was evacuated to Kazakhstan; this was followed in 1953–65 by the so-called Virgin Lands campaign, which converted huge tracts of Kazakh grazing land to wheat and other cereal production. This campaign brought thousands more Russians and other non-Kazakhs to Kazakhstan; as a result Kazakhstan became the only Soviet republic in which the eponymous people were not a majority of the population. Because Russians and other Europeans nearly equal the number of Kazakhs in the republic, virtually every public act requires a delicate balancing of differing interests.

On 16 December 1986, Mikhail Gorbachev replaced Kazakhstan's longtime leader Dinmukhamed Kunayev, a Kazakh, with a Russian from outside the republic. This set off three days of rioting, the first public nationalist protest in the Soviet Union. In June 1989, more civil disturbances hastened the appointment of Nursultan Nazarbayev as republic leader. A metallurgist and a Kazakh, Nazarbayev became prominent in the last Soviet years as a spokesman both for greater republic sovereignty and for the formation of a confederation of former Soviet republics. He was elected president by the Kazakhstan parliament in 1990, which was reaffirmed by public vote in an uncontested election in December 1991. Not a party to the dissolution of the Soviet Union announced in early December 1991, Nazarbayev prevailed in arguments that Kazakhstan and other Central Asian states must join the new Commonwealth of Independent States.

Nazarbayev arranged a call by an extra-constitutional quasi-legislative 327-member People's Assembly composed of various cultural and ethnic leaders for an 29 April 1995 referendum on extending his rule until the year 2000. The extension was approved by over 93% of voters.

In October 1998, the Kazakh legislature approved constitutional amendments that enabled Nazarbayev to call for an early presidential race for 10 January 1999. The US State Department in November 1998 criticized a decision of the Kazakh Central Electoral Commission (CEC) and the Supreme Court that major opposition figure Akezhen Kazhegeldin was ineligible to run in the presidential race because of his participation in an "unauthorized" democracy meeting. Three candidates were registered besides Nazarbayev, but only one ran as a true opposition candidate. Onerous registration requirements included a \$30,000 deposit (forfeited by the losers) and 170,000 signatures gathered in at least eleven of sixteen regions. Nazarbayev's candidacy was extensively covered by state-owned media. The Kazakh Central Electoral Commission reported that Nazarbayev had won with 79.8% of about seven million votes cast. The Organization for Security and Cooperation in Europe (OSCE) sent only token monitors, and declared on 11 January 1999, that "the electoral process ... was far removed" from OSCE standards which Kazakhstan had pledged to follow. At his 20 January inauguration, Nazarbayev pledged to work to create a "democratic society with a market economy," to raise the standard of living, and to uphold existing foreign and ethnic policies.

Nazarbayev has stated that the geographic location of Kazakhstan and its ethnic makeup dictate its "multipolar orientation toward both West and East." He has pursued close ties with Turkey, trade ties with Iran, and better relations with China, which many Kazakhs have traditionally viewed with

concern as a security threat. Kazakhstan has extensive trade ties with China's Xinjiang Province, where many ethnic Kazakhs and Uighurs reside.

While seeking to protect Kazakh independence, Nazarbayev has also pursued close relations with Russia and other Commonwealth of Independent States (CIS) members for economic and security reasons. During Nazarbayev's July 1998 visit to Moscow, he and Yeltsin signed a Declaration of Eternal Friendship and Alliance Cooperation in which both sides pledged to assist each other in the case of threats against each other, including by providing military support. In early 1999, Kazakhstan reaffirmed a CIS collective security agreement pledging the parties to provide military assistance in case of aggression against any one of them. In 1995, Kazakhstan joined the customs union formed by Russia and Belarus, which was reaffirmed in an accord on "deeper integration" signed in 1996 (Kyrgyzstan also signed and Tajikistan joined in 1998). Nazarbayev has been highly critical of the feeble union. Another customs union, formed in 1994 between Kazakhstan, Kyrgyzstan, and Uzbekistan (joined by Tajikistan in 1998), was set back by the repercussions of the 1998 Russian and Asian financial crises.

Kazakhstan is the most economically developed of the former Soviet Central Asian republics. Kazakhstan's economic prospects are promising because of its vast energy and mineral resources, low foreign debts, and well-trained work force. There is more Western private investment in Kazakhstan than elsewhere in Central Asia because of Kazakhstan's oil resources and efforts to attract investment. Second to Russia, Kazakhstan has the largest oil and gas reserves of the Caspian Sea regional states, holding promise of large export revenues. Russia's pipelines, the major means for exporting Kazakh oil, were supplemented in 2001 with the opening of a 1,580-km (930-mi) oil pipeline from Kazakhstan to Russia's Black Sea port of Novorossiisk. Kazakhstan has also been involved in an oil swap arrangement with Iran, whereby Kazakhstan sends oil by tanker to northern Iran, and Iran in exchange exports some oil from its Persian Gulf ports. On 18 November 1999, Azerbaijan, Georgia, Turkey, and Kazakhstan signed the "Istanbul Protocol" on constructing a trans-Caucasus oil pipeline from Azerbaijan to Turkey (expected to be completed in 2004 with a capacity of one million barrels per day).

Following the 11 September 2001 terrorist attacks on the United States, Kazakhstan offered the use of its military bases, as well as air space for military and humanitarian purposes during the US-led military campaign in Afghanistan to oust the Taliban regime and al-Qaeda forces. Since 11 September, all radical Islamic groups in the Central Asian nations have been linked with international terrorism. Both the Hizb-ut-Tahrir ("Freedom Party") and the Islamic Movement of Uzbekistan (IMU), two radical Islamic organizations looking to establish an Islamic state in Central Asia, have operations in the country, but the major units of the IMU have been destroyed by the US-led coalition.

### 13 GOVERNMENT

In March 1995, the Kazakh Constitutional Court ruled that the March 1994 legislative election was invalid because it violated the principle of "one person, one vote." Constituencies had not been drawn up representing approximately equal populations, and confused voting procedures resulted in electors voting for several candidates, it declared. On 11 March Nazarbayev announced that the decision was in accordance with the constitution and dissolved the legislature. Some of the dismissed deputies tried to set up an alternative parliament, but the rebel movement soon fell apart. Nazarbayev announced that he would rule by decree pending new elections and called for a new constitution to be drafted, using France's parliamentary system as a model. On 30 August 1995, a referendum on a new constitution that widened presidential powers was passed with 89% of the vote. According to the US State Department,

proposals by democracy and human rights advocates during the discussion phase were not incorporated into the final constitutional draft submitted to the referendum, and the turnout and results were “exaggerated.”

Compared to an earlier 1993 constitution, the 1995 constitution increases the president’s powers and reduces those of the legislature, and places less emphasis on protecting human rights. As fleshed out by a presidential edict, the legislature does not control the budget or its agenda, cannot initiate changes to the constitution, or exercise oversight over the executive branch. The president’s nominees for premier and state bank head are ratified by the Majlis, the lower house of parliament, but he appoints the rest of the cabinet. If the legislature fails within 30 days to pass an “urgent” bill brought by the president, he may issue it by decree. About 10% or less of bills are initiated by deputies, but they debate and have forced minor changes in bills initiated by the presidency. While the president has broad powers to dissolve the legislature, it may only remove him for disability or high treason.

In October 1998, without any public debate, the legislature quickly rubber-stamped nineteen constitutional amendments and announced an early presidential election. The changes included increasing the presidential term from five to seven years, lifting the 65-year age limit on governmental service, creating party list representation in the Majlis, extending the term of office from four to five years for the lower legislative chamber (the Majlis) and from four to six years for the upper legislative chamber (the Senate). The Majlis consists of 77 seats, 10 of which are elected from the winning party’s lists. The Senate has 39 seats (previously 47). Seven senators are appointed by the president; other members are popularly elected, two from each of the 14 oblasts, the capital of Astana, and the city of Almaty.

On 10 January 1999, Nazarbayev won reelection as president for a seven-year term in an election that fell far short of international standards. He won 81.7% of the votes cast; three other contenders shared the rest. Nazarbayev’s most serious challenger, former Prime Minister Akezhan Kazhegeldin, was excluded from running on a technicality.

Kazakhstan held indirect elections 17 September 1999; regional legislatures elected 32 members of a 39-seat upper legislative chamber, the Senate. (On 29 November 1999, the remaining seven Senators were constitutionally appointed by Nazarbayev.) The Organization for Security and Cooperation in Europe (OSCE) reported that Kazakh Central Electoral Commission (CEC) officials had improperly blocked some monitoring, and cited reports that other officials had threatened local legislators not to vote for oppositionists.

Elections to Kazakhstan’s lower legislative chamber, the Majlis, took place on 10 October 1999, with 595 candidates and nine parties competing for 77 seats. Ten seats were reserved for a party list vote. Runoffs on 24 October were required for over two-thirds of constituency seats where no one candidate received over 50%. Ten seats were elected by party lists based on the percentage of votes parties received nationally (with a minimum vote threshold for representation of 7%), and the other 67 by single constituency voting. The Kazakh Communist Party (KPK), Otan, the Civic Party, and the Agrarian Party won seats under party list voting. No candidate nominated by a non-communist opposition party gained a party list or single constituency seat. About one-half of the winning deputies ran as independents, though many of them were former government officials who were presumably pro-government. OSCE monitors concluded that the race was “a tentative step” in democratization, but decried interference in the race by officials, biased local electoral commissions, manipulation of results, unfair campaign practices by pro-government parties, and harassment of opposition candidates. Members of the KPK, Republican Party, and Azamat joined in a “Forum of Democratic Forces” that on 27 October

stated that the Senate and Majlis elections were rigged by the government and were invalid. The next elections are due in 2004.

## 14 POLITICAL PARTIES

The constitution permits the formation of registered political parties, but in practice it is difficult to get the necessary legal permissions. Most parties are small, ephemeral, based on personalities, and lack detailed programs. Nine parties and groups participated in the party list part of the October 1999 lower-chamber legislative races, and four passed a 7% vote hurdle to win seats (the Republican People’s Party withdrew from the party list vote after its leader, Akezhen Kazhegeldin, was not registered as a candidate). The nine were Otan (Fatherland), Azamat (Citizen), Alash (Patriot), the People’s Congress, the Civic Party, the Communist Party, the Agrarian Party, the Labor Party, and the Revival Party. The pro-government Otan party bloc won the most seats in the party vote. Others included the Civic Party, Agrarian Party, and the Communist Party (KPK). Otan was formed in early 1999 from several prominent pro-Nazarbayev parties. The Civic Party, formed in 1998, represents state-industrial interests and hails Nazarbayev as its “spiritual father.” Azamat was formed in 1999. Deputy Chair of the party Petr Svoik has called it the “constructive opposition.” The Kazakh Communist Party (KPK), reregistered in July 1994, has advocated some economic re-centralization and anti-Western policies. The People’s Congress, or Social-Democratic Party, has both Kazakh and Russian members and is headed by the Kazakh poet Olzhas Suleymenov. Originally pro-Nazarbayev, the party became increasingly critical of the government after 1993. The nationalist Alash Party has refused to register because of legal requirements that it submit personal information about members to the government. Members of unregistered parties may run for elected office as individuals, but not as party members.

In Uralsk (Western Kazakhstan) and Petropavlovsk (Northern Kazakhstan) there are Cossack *obshchinas*, or communities, agitating for autonomous status. Denied registry by Kazakhstan, many are active in Cossack *obshchinas* across the border in Russia, where Cossacks have the right to maintain military organizations and carry weapons.

## 15 LOCAL GOVERNMENT

Kazakhstan is divided into 14 *oblasts* (provinces); the cities of Almaty, Astana, and Bayqongyr have special administrative status equivalent to that of *oblasts*. The 14 *oblasts* are in turn divided into *rayons* (districts). As of 1999, there were 84 cities, 159 *rayons*, 241 settlements, and 2,049 *auls* (villages). Each *oblast*, *rayon*, and settlement has its own elective assembly, charged with drawing up a budget and supervising local taxation. Cities have local assemblies as well; if large enough, cities are also divided into *rayons*, each with its own assembly. These assemblies are also elected for five-year terms. The number of *oblasts* was reduced from 19 to 14 in 1997 under the government’s consolidation program.

The *oblast* and *rayon* assemblies do not choose the local executives. According to the 1995 constitution, the local executives, known as *glavs* or *akims*, are appointed by the president, upon recommendation by the prime minister. The *akims* serve at the pleasure of the president, and he has the power to annul their decisions. The *akim* appoints the members of his staff, who become the local department heads. There is some discussion of shifting to local election of the regional *akims*.

## 16 JUDICIAL SYSTEM

A new constitution was adopted by referendum in 1995, placing the judiciary under the control of the president and the executive branch. There are local and *oblast* (regional) level courts, and a national-level Supreme Court and Constitutional Council. A special arbitration court hears disputes between state enterprises.

There is also a military court system. Local level courts serve as courts of first instance for less serious crimes such as theft and vandalism. *Oblast* level courts hear more serious criminal cases and also hear cases in rural areas where no local courts have been established. A judgment by a local court may be appealed to the *oblast* level. The Supreme Court hears appeals from the *oblast* courts. The constitution establishes a seven member Constitutional Council to determine the constitutionality of laws adopted by the legislature. It also rules on challenges to elections and referendums and interprets the constitution. The president appoints three of its members, including the chair.

Under constitutional amendments of 1998, the president appoints a chairperson of a Supreme Judicial Council, which nominates judges for the Supreme Court. The Council consists of the chairperson of the Constitutional Council, the chairperson of the Supreme Court, the Prosecutor General, the Minister of Justice, senators, judges, and other persons appointed by the president. The president recommends and the senate (upper legislative chamber) approves these nominees for the Supreme Court. *Oblast* judges (nominated by the Supreme Judicial Council) are appointed by the president. Lower level judges are appointed by the president from a list presented by the Ministry of Justice. The Ministry receives the list from a Qualification Collegium of Justice, composed of deputies from the Majlis (lower legislative chamber), judges, prosecutors, and others appointed by the president). Under legislation approved in 1996, judges serve for life.

The constitution calls for public trials where the defendant has the right to be present, the right to counsel, and the right to call witnesses. There is the presumption of innocence of the accused, and the defendant has the right of appeal. In practice, trials of political oppositionists have been closed, and there is widespread corruption among poorly paid judicial personnel. A new criminal code that took effect in 1998 increases penalties for some crimes but also removed some types of Soviet-era crimes such as parasitism.

Nazarbayev has stated that “the path from totalitarianism to democracy lies through enlightened authoritarianism” but has nonetheless allowed some degree of pluralism. The US State Department concluded in its *Country Reports on Human Rights Practices for 2001* that the Kazakh government respected the human rights of its citizens in some areas, but serious problems remained in others. The government infringed on citizens’ right to change their government. Members of the security forces often beat or otherwise abuse detainees, and there were allegations of arbitrary arrest and detention of political opponents. The government infringed on citizens’ rights to privacy by conducting unlawful monitoring of correspondence and searches of premises. The government increasingly moved against independent media, harassing and monitoring them, and as a consequence, many journalists practiced self-censorship.

## 17 ARMED FORCES

The total armed forces of Kazakhstan are estimated at 60,000, of which approximately 41,000 are estimated to be in the army. Reserves number around 237,000. The army has 650 T-72 battle tanks plus an additional 280 T-62s. There is no navy, and the air force is estimated at 19,000 personnel. There are 164 combat aircraft. The paramilitary consists of 2,000 presidential guards, an estimated 20,000 internal security troops, and an estimated 12,000 border guards. The defense budget in 2001 was \$173 million or 1% of GDP.

## 18 INTERNATIONAL COOPERATION

Kazakhstan was admitted to the UN on 2 March 1992. It is a member of the OSCE, EBRD, ECO, ESCAP, IMF, UNCTAD, and the World Bank. It is applying for membership in other international organizations, including the WTO, and is a member

of the CIS. It has established especially good relations with neighboring Central Asian states and China.

In June 2001, leaders of China, Russia, Kazakhstan, Kyrgyzstan, Tajikistan and Uzbekistan met in China to launch the Shanghai Cooperation Organisation (SCO) and sign an agreement to fight ethnic and religious militancy while promoting trade.

## 19 ECONOMY

The Kazakhstan economy is extremely well-endowed with large tracts of arable land and rich reserves of coal, oil, and rare metals. Animal herding was the mainstay of the nomadic Kazakh population before their incorporation into the Soviet Union; wool production remains an important agricultural product today, along with grains and meat.

Like other countries of the former USSR, Kazakhstan faced serious economic dislocation after 1991, resulting from the disruption of trade with other post-Soviet republics, an end to the flow of official revenues from the Soviet central government, the decline in state production orders, and the need for sudden currency adjustments. Estimated GDP fell by 8.5% in 1991, 14% in 1992, 15.3% in 1993, and 25% in 1994. Overall output is estimated to have shrunk by one-third between 1990–93. Positive if weak growth returned in 1996, when real GDP increased 1.1%, followed by an increase of 1.7% in 1997. Recovery was then arrested briefly by the effects of the Russian financial crisis, as real GDP declined 1.9% in 1998, but growth resumed in 1999 with a rise in real GDP of 2.7%. Economic and fiscal reforms in 1999 and a rise in world energy prices help spur growth to 9.6% in 2000, and to an estimated 12.6% in 2001. Meanwhile significant progress has been made in bringing inflation under control. After independence, inflation reached a staggering 2,000% in 1993, declining to 35% in 1994 and 1995, and to 28.6% in 1996. In 1998, in the recession accompanying the Russian financial crisis, inflation fell to 1.9%. With growth in 1999, inflation grew to 8.3% and 13.2% in 2000. However, prudent monetary policies instituted in 1999 helped reduce inflation to an estimated 6.6% in 2001. Fiscal reforms helped to transform a general government deficit equal to 5% of GDP in 1999 to a surplus equal to 2.9% of GDP in 2001. Registered unemployment was only 3.3% in 2001, although according to US State Department and CIA estimates, actual unemployment ranged between 10% and 30%.

A revitalized energy sector supported by substantial foreign investment has been the main factor in the economy’s strong performance, but economic reforms and good harvests have also been important elements. Privatization legislation adopted since 1992 has promoted the rapid transfer of small shops and services to the private sector, although large-scale privatization has gone much slower. In 1996, the government concluded an agreement for the 1,580-km (990-mi) Caspian Pipeline Consortium (CPC) pipeline to run from the western Tengiz oil field to the Black Sea. The CPC was officially opened 27 November 2001. Foreign investment in Kazakhstan’s oil industry has helped boost production, with prospects of the country becoming one of the world’s largest producers at 2.5 million barrels per day by 2015. Such optimistic predictions rest largely on three major oil and gas fields—Tengiz, Karachaganak, and Kashagan—the last of which was hailed by analysts as the world’s largest oil discovery in 30 years. In January 2001, the president decreed the establishment of the National Fund for the purpose of protecting the economy from the effects of swings in the price of oil and other commodities. In February 2002, the president decreed the formation of a new national energy company, KazMunaiGaz, formed through the merger of Kazakoil, the state oil company, and TransNefteGaz, the state oil and gas transport company. The main purposes of KazMunaiGaz are to ensure a single state

policy on energy issues, and to better compete with foreign energy companies.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Kazakhstan's gross domestic product (GDP) was estimated at \$98.1 billion. The per capita GDP was estimated at \$5,900. The annual growth rate of GDP was estimated at 12.2%. The average inflation rate in 2001 was 8.5%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 10% of GDP, industry 30%, and services 60%.

According to the United Nations, in 2000 remittances from citizens working abroad totaled \$64 million or about \$4 per capita and accounted for approximately 0.3% of GDP. Worker remittances in 2001 totaled \$81.50 million. Foreign aid receipts amounted to about \$10 per capita and accounted for approximately 1% of the gross national income (GNI).

The World Bank reports that in 2001 per capita household consumption (in constant 1995 US dollars) was \$1,006. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the same period private consumption grew at an annual rate of 7%. Approximately 37% of household consumption was spent on food, 20% on fuel, 9% on health care, and 6% on education. The richest 10% of the population accounted for approximately 26.3% of household consumption and the poorest 10% approximately 2.7%. It was estimated that in 2001 about 26% of the population had incomes below the poverty line.

## 21 LABOR

The labor force consisted of some 8.4 million persons in 1999. In 2000 the service sector engaged an estimated 50%, agriculture 20%, with industry accounting for the remaining 30%. The government reported unemployment of 3.3%, but international organizations estimated unemployment in 2001 at 10% or higher.

Although workers are entitled to join or form unions, registration generally is a lengthy and difficult process. The Confederation of Free Trade Unions claimed about 300,000 members in 2002, but that number is considered to be high. Some workers who have joined independent unions are subjected to various forms of harassment, indicating hostility by local authorities and state-sponsored trade unions. Workers are entitled to strike after all conciliation procedures have been exhausted. Employers must be notified 15 days prior to a strike.

The minimum age for employment is 14 but only for part-time work. Children under 18 have legal protections from hazardous work, and those between 14 and 16 years of age may only work with parental permission. As of 2002, the minimum wage was about \$24 per month, which falls below the minimum subsistence amount. The legal maximum workweek is 48 hours, although most enterprises maintain a 40-hour workweek.

## 22 AGRICULTURE

In 1998, Kazakhstan had an estimated 30,135,000 ha (74,464,000 acres) of arable land, representing 11.3% of the total land area. Most cropland is found in the northern steppes, where the failed Virgin and Idle Land Project of the 1950s occurred. Small-scale privatization resulted in the formation of 31,055 private farms by 1995, up from 3,333 in 1991. The average peasant farm size in 1995 was 428 ha (1,058 acres). Between 1990 and 2000, annual agricultural output fell an average of 7.9%.

Potatoes, fruits, and vegetables are other significant food crops. Less than 2% of agricultural land is used to cultivate commercial crops such as cotton, sugar beets, sunflowers, and flax. Kazakhstan is the only former Soviet republic that exports grain. Wheat accounted for 29% of all sown acreage in 1999. Wheat production declined from 18,285,000 tons in 1992 to 11,242,000 tons in 1999. Similarly, barley production fell from 8,511,000 tons to 2,265,000 tons during that time. Rice is produced in irrigated stretches along the Syrdar'ya near Qyzlorda and around Taldyqorghhan in the east. Production amounted to 199,000 tons in 1999.

During the Soviet period, groundwater resources and chemical fertilizers were overused, resulting in depleted soils, decreasing yields, and environmental pollution.

## 23 ANIMAL HUSBANDRY

About 70% of Kazakhstan's total land area is permanent pastureland. In 2001, the livestock population included 19.7 million chickens, 8.4 million sheep, 1.7 million pigs, 976,000 horses, and about one million goats. Total meat production in 2001 amounted to 667,000 tons, of which 43% was beef, 14% mutton and lamb, 27% pork, 5% chicken, and 11% other meat.

Wool is an important animal product; in 2001, 23,600 tons of greasy wool were produced. That year, cow milk production totaled 3,923,000 tons, and 103,000 tons of eggs were laid.

## 24 FISHING

Fisheries are concentrated around the Caspian Sea, and are of some importance to the local economy. The total catch in 2000 was 25,774 tons, all from inland fishing. Freshwater bream and Azov sea sprat were the principal species.

## 25 FORESTRY

Only 4.5% of Kazakhstan is covered by forests and woodlands; forestry is of little commercial importance. Imports of forestry products amounted to nearly \$88 million in 2000.

## 26 MINING

The leading industries in Kazakhstan in 2002 were, in order, oil, coal, iron ore, manganese, chromite, lead, zinc, copper, titanium, bauxite, gold, silver, phosphates, and sulfur. In 2000, Kazakhstan was the eighth-largest producer of manganese ore in gross weight and ninth in manganese content of ore. Kazakhstan was the CIS's leading producer in chromite, lead, and zinc. The country was also a major producer of beryllium, bismuth, cadmium, chromium, ferroalloys, magnesium, rhenium, titanium, and uranium, and produced significant amounts of arsenic, barite (75% of the former Soviet Union's output), molybdenum, natural gas, phosphate rock, and tungsten. Among other minerals, Kazakhstan produced cobalt, magnesium, nickel, vanadium, and all grades of asbestos, as well as the industrial minerals boron, cement, and kaolin. Kazakhstan had commercial reserves of three ferrous metals, 29 nonferrous metals, two precious metals, 84 types of industrial minerals, and coal, natural gas, and petroleum. The eastern region of Kazakhstan was rich in alumina, arsenic, bauxite, beryllium, bismuth, cadmium, chrome, copper, gold, iron ore, lead-zinc, manganese, molybdenum, rhenium, silver, titanium, and tungsten.

Significant increases were reported in the production of practically all ferrous and nonferrous metals, coal, crude oil, and natural gas. In 2000, Kazakhstan increased practically all its mineral product exports in quantity and value. Ferrous metals accounted for 12.9% of export earnings, second to oil and oil products, which accounted for 52.8%. A large percentage of Kazakhstan's reported exports of copper, ferrous metals, ferroalloys, lead, crude oil, oil products, precious metals, and zinc went to countries outside of the CIS. The largest sources of export earnings from outside the CIS were, in order, oil, oil

products, steel products, including ferroalloys, copper, precious metals, zinc, cotton fiber, alumina, and lead. Kazakhstan also exported substantial quantities of alumina, coal, iron ore, and lead to CIS countries. The mining sector employed 126,000 workers, about 5% of the workforce, and contributed 36% of industrial output in 1999 and 9% of GDP. By comparison, the oil sector in 2000 accounted for 6.1% of GDP.

Output of metals in 2000 included: marketable iron ore, 13.8 million tons, up from 8.7 in 1998, with an annual capacity of 25 million tons; crude manganese ore, 1.2 million tons, up from 400,000 in 1997 (the design capacity of the country's three mining enterprises was 2.55 million tons per year of crude ore, and the reserve base was 600 million tons); chromite, 2.61 million tons, up from 1.19 in 1996; lead, 39,300; mined zinc, 322,100, up from 159,400 in 1996; mined copper, 430,200, up from 250,100 in 1996, due to commissioning of new mines in Karaganda and Zhezkazgan; bauxite, 3.73 million tons; mined gold, 28,171 kg, up from 12,500 in 1996; silver, 927,110, up from 467,700 in 1996; alumina, 1.2 million tons; and mined tin, 218,863 tons, up from 119,643 in 1999.

Copper mining began to recover after foreign companies acquired management rights to the nation's copper producers, most notably the Zhezkazgan complex, which also included concentration, smelting, and refining facilities. Kazakhstan had supplied more than 95% of chromite production for the former USSR through the Donskoy mining and beneficiation complex at Khromtau. Iron ore found near Rudnyy supplied the iron and steel plants in the Russian Urals region as well as plants at Karaganda and Temirtau.

In 2000, the government announced that it intended to sell part of its remaining shares in a number of mining and metallurgical companies. A large percentage of mining and metallurgical enterprises were under the control of foreign managers, who, in exchange for a share of the profits and potential ownership rights, were investing in modernizing the enterprises, increasing output and exports, decreasing costs, and upgrading technology to meet environmental standards. The rapid development of the mining and mineral-processing industries, combined with other factors, resulted in extensive air, water, and soil pollution, natural resource depletion, and the generation of radioactive waste.

## 27 ENERGY AND POWER

Kazakhstan is richly endowed with energy reserves and was the second-largest oil producer among the former Soviet republics. Oil is its most promising energy source for exploitation. Whereas current oil sources are located along the northeastern shore of the Caspian Sea near Aqtau, the enormous Tengiz oil field lies further north along the coast. Kazakhstan's total proven oil reserves at the beginning of 2002 stood at 5.4 billion barrels.

In May 1992, Chevron entered into a joint venture agreement with Kazakhstan to develop the Tengiz oil field which is estimated to contain 6–9 billion barrels of recoverable crude oil reserves. By April 1993, a 40-year agreement was signed, creating the Tengizchevroil joint venture. In 1996, an agreement was reached to build a major oil pipeline to connect the Tengiz oilfield to a Russian port on the Black Sea. The 1,580-km (990-mi), \$2.50-billion Caspian Pipeline Consortium pipeline went into operation in 2001. As of mid-2002 production of oil from Tengiz totaled 250,000 barrels per day. Total oil production in 2001 was 811,000, up from 570,000 barrels per day in 1991.

Some natural gas is also produced as a derivative from oil fields on the shores of the Caspian Sea. Production of natural gas in 2001 totaled 8.9 billion cu m (310 billion cu ft). Hard coal is mined from the Qaranghandy and Ekibastuz basins. Total coal production in 1997 was 80 million tons.

Several hydroelectric projects also operate. The Qapshaghay Dam on the Ile River, north of Almaty, and the Shardara Dam, on

the Syrdar'ya in the extreme south, produce electricity for various industries. In 2001, Kazakhstan's total installed electrical capacity was 17,220,000 kW. Production in 2000 amounted to 48,900 million kWh, of which 86.4% was from fossil fuels and 13.6% from hydropower. Consumption of electricity in 2000 was 48.3 billion kWh.

## 28 INDUSTRY

Before its independence, Kazakhstan's designated manufactures included phosphate fertilizer, rolled metal, radio cables, aircraft wires, train bearings, tractors, and bulldozers. The country also had a well-developed network of factories that produced about 11% of the Soviet Union's military goods. Overwhelmingly dominated by state-owned enterprises under the centrally planned economy, independent Kazakhstan's economy has been substantially, if incompletely, privatized and reoriented to the market economy. Government plans originally called for an almost complete privatization by 2000 through a combination of auctions, the distribution of investment coupons to the public, and case-by-case negotiations for larger enterprises. As of 2001, according to government reports, 71% of the total number of organizations with state participation had been privatized, including 23,170 state-owned enterprises and state stock holdings and state shares in 3,495 organizations.

The process of restructuring its industry has been wrenching, however. Industrial production declined by 13.8% in 1992, by 14.8% in 1993 and by 28.5% in 1994. Decline continued in 1995, but at the single digit rate of 8%. The first positive growth in industrial production after independence was a weak 0.3% improvement in 1996. Privatization moved ahead quickly in that year and into the summer of 1997, a year in which real GDP increased 4%. However, industrial production declined again in 1998—by 2%—due primarily to the combined effects of the Russian financial crisis and a fall in world oil prices. The president, citing the low fuel prices, decreed a halt to further privatization in the country's vital oil and gas sector, and slowed the negotiations on privatization of the remaining large state enterprises called the "Blue Chips." Subsequently, industrial growth resumed at a moderate 3% in 1999, but then at robust double-digit rates of 16% in 2000 and 14% in 2001. For 2002, the estimated growth rate is 9.8%, slightly ahead of overall GDP performance. The share of industrial production fell from 25.9% of GDP in 1994 to 21.8% of GDP in 1995, but had risen to 30% by 2001, according to CIA estimates.

To stimulate recovery, increasingly liberal foreign investment incentives were offered 1991–97. In 1995 Kazakhstan's largest pre-independence operation, the Karaganda Steel Mill (Karmet) was acquired by a London-based company. Pre-independence, Karmet was one of the largest integrated metallurgical complexes in the world, producing coke and chemical products in addition to pig iron, steel, and a wide variety of steel products. In 1995, it was operating at less than half its capacity, workers' wages were often months in arrears, and its installations were being degraded for lack of maintenance. By 2002, about \$800 million had been invested in the renamed Ispat Karmet, and output had risen from 2.1 million tons of rolled steel in 1995 to 3.63 million tons in 2001 (still nearly 40% below pre-independence levels).

Most of Kazakhstan's manufacturing, refining and metallurgy plants are concentrated in the north and northeast, in Semey, Petropavl, and Aktobe. In south-central Kazakhstan, Shymkent is an important center for chemicals, light manufactures, metallurgy, and food processing; Almaty is important for light industry, machine building, and food processing.

The mining industry accounts for over a third of industrial production, three-fourths of which by value is the production of crude oil and associated gas. Fuel production's share in industrial value-added rose from 11% in 1995 to more than 25% in 2000. By contrast, coal and lignite, 96% of which is produced in

Pavlodar and Karaganda oblasts, and iron ore mining, have experienced steady declines since 1991, and each currently accounts for less than 2% of industrial production.

Manufacturing accounts for about half of industrial production. By value the biggest manufacturing category is the processing of agricultural products, accounting for almost 17% of industrial production. Second is the production of nonferrous metals, at about 13% of the total. Textiles and leather manufacturing is served by inputs of wool and other material from the country's own livestock as well as imports of cotton from other parts of the former USSR. Textiles and related products make up an estimated 8% of total industrial output.

Almost 7% of industrial output (14% of manufactures) is accounted for by ferrous metallurgy. Production includes bulldozers, excavators, and metal-cutting equipment.

Kazakhstan's total oil refining capacity in 2002, according to the US Department of Energy, was about 427,000 barrels per day. There are three refineries: one in the north (at Pavlodar), one in the west (at Atyrau), and one in the south (at Shymkent). In early 2002, the refineries were working at about one-third capacity, averaging about 143,388 barrels per day. Refinery products account for about 4% of total production. Smaller contributions are made by mechanical engineering (2.4%) and the chemical industry (1.2%).

The production and distribution of power accounts for about 13.5% of industrial production.

## 29 SCIENCE AND TECHNOLOGY

The Kazakhstan Academy of Sciences, founded in 1946 in Almaty, has departments of physical and mathematical sciences, earth sciences, chemical-technological sciences, and biological sciences. Kazakhstan in 1996 had 47 research institutes concerned with agriculture and veterinary science, medicine, natural sciences, and technology. There is a botanical garden in Almaty. Scientific training is available at two universities and 25 higher educational institutes. In 1987–97, science and engineering students accounted for 20% of college and university enrollments.

## 30 DOMESTIC TRADE

The wholesale and retail sector, previously dominated by state-controlled distribution channels, has seen the dynamic growth of independent small shops and traders. Price controls have been lifted for 90% of consumer and 80% of wholesale prices, although basic goods and services such as bread, flour, baby food, medicines, fodder, housing rents, utilities, and public transportation have been excluded from liberalization. A 16% value added tax applies to most goods and services.

The country sponsors a number of trade exhibitions through the year, including The Kazakhstan Oil and Gas Exhibition, held in Almaty every October, and a Consumer Expo in April.

## 31 FOREIGN TRADE

In 1990, about 89% of Kazakhstan's exports and 88% of its imports represented trade with other former Soviet republics (at foreign trade prices). A serious disruption in the country's trading patterns occurred as the input procurement system within the Soviet centrally planned economy disintegrated, the uses of hard currency and world market-determined transaction prices were adopted by former USSR republics, and export demand from Eastern European countries shrank in the early 1990s. To facilitate adjustment to these hard new realities, the government decreed key trade liberalization measures in early 1992, ending export license requirements. With liberalization, exports and imports increased substantially through the 1990s.

Exports are dominated by petroleum products, followed by nonferrous and ferrous metals—a pattern likely to continue for

some time to come. Kazakhstan's largest imports were machinery and oil and gas products.

Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
Russia	1,782	2,459	-677
Bermuda	1,358	n.a.	n.a.
Italy	892	155	737
China (inc. Hong Kong)	669	154	515
Germany	566	334	232
Ukraine	269	80	189
United Kingdom	231	219	12
United States	211	277	-66
Uzbekistan	139	73	66
Turkey	64	143	-79

## 32 BALANCE OF PAYMENTS

Strong exports of oil and minerals created trade surpluses in the early 2000s. Large amounts of foreign direct investment have also aided the country's balance of payments situation. Kazakhstan floated its currency, the tenge, in 1999, resulting in a devaluation. Subsequently, exports recovered and there was a fall in imports, and the currency stabilized against the dollar.

The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Kazakhstan's exports was \$10.5 billion while imports totaled \$8.2 billion resulting in a trade surplus of \$2.3 billion.

The International Monetary Fund (IMF) reports that in 2001 Kazakhstan had exports of goods totaling \$9.1 billion and imports totaling \$8.3 billion. The services credit totaled \$1.27 billion and debit \$2.61 billion. The following table summarizes Kazakhstan's balance of payments as reported by the IMF for 2001 in millions of US dollars.

<b>Current Account</b>	<b>-1,416</b>
Balance on goods	809
Balance on services	-1,339
Balance on income	-1,115
Current transfers	230
<b>Capital Account</b>	<b>-197</b>

Direct investment in Kazakhstan	2,763
Portfolio investment assets	-1,354
Portfolio investment liabilities	32
Other investment assets	515
Other investment liabilities	778
<b>Net Errors and Omissions</b>	<b>-720</b>
<b>Reserves and Related Items</b>	<b>-385</b>

## 33 BANKING AND SECURITIES

In December 1990, the Almaty branch of Gosbank (the former Soviet State Bank) was made into the Independent Kazakh (National Bank of Kazakhstan-NBK). In the next year the existence of private and public financial institutions were legalized. In 1993, the parliament approved a new banking law that separated the National Bank of Kazakhstan from the government, and gave the central bank the power to conduct monetary and credit policies and regulate the commercial banking sector. Before November 1993, monetary and credit policy was under the control of two central banks, the Russian Central Bank (RCB), which also acted as the ruble zone's central bank, and the NBK. Until November 1993, the currency unit in the country was the ruble. On 15 November 1993, Kazakhstan established its own currency, the tenge.

In 1995 the NBK continued the tight monetary stance it adopted in 1994, becoming increasingly sophisticated in its monetary operations.

The NBK admits that corporate governance and management in banks is weak: Kazakhstan's banks tend to be very small, concentrated in Almaty, and more interested in dealing in treasury bills than in providing long-term credits to lenders. As of 2003, there was no deposit insurance scheme in operation. Organized crime is also a problem for many banks, with security therefore assuming a considerable cost.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$1.8 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$3.8 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 9%. The reform of the banking sector was initially set up according to a two-tier system, with the central bank occupying the top tier and specialized, sector-oriented banks occupying the second tier. Among these specialized banks are Narodny Bank (for savings); Kazakhstan Bank (for industry and agriculture); Turan Bank (for the construction sector); Kredsotsbank (for housing and municipal services); and Agroprombank (for agriculture).

In 2002, there were 47 commercial banks, including one state bank (3% of total financial sector assets), one intergovernmental bank, 16 banks with foreign participation, and 12 foreign representative offices. In 2001, total bank assets reached \$3.82 billion.

The Kazakhstan Stock Exchange and the Central Asian Stock Exchange both operate in Kazakhstan.

### 34 INSURANCE

Approximately 73 insurance companies were registered in 1999.

### 35 PUBLIC FINANCE

Kazakhstan has one of the fastest growing economies in the world, thanks almost entirely to high world oil prices. GDP grew 9.6% in 2000, 13.2% in 2001, and 9.5% in 2002. The surge has been extremely helpful in ridding the government deficit. In 1999, the deficit was equivalent to 3.5% of GDP; by 2001 the government ran a primary surplus of 1.9% of GDP.

The US Central Intelligence Agency (CIA) estimates that in 2001 Kazakhstan's central government took in revenues of approximately \$4.2 billion and had expenditures of \$5.1 billion. Overall, the government registered a deficit of approximately \$900 million. External debt totaled \$11.6 billion.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

REVENUE AND GRANTS	100.0%	4,200
Tax revenue	65.6%	2,755
Non-tax revenue	12.3%	515
Capital revenue	4.5%	190
Grants	17.6%	740
EXPENDITURES	100.0%	5,100
General public services	7.5%	381
Defense	5.6%	287
Public order and safety	10.5%	536
Education	4.2%	213
Health	2.9%	149
Social security	32.8%	1,674
Recreation, cultural, and religious affairs	1.2%	63
Economic affairs and services	17.9%	915
Other expenditures	9.5%	485
Interest payments	7.8%	398

### 36 TAXATION

In January 2002 a new Tax Code went into effect. The new code, seen by tax experts as a model of equity, economic neutrality and simplicity (on its face, if not in its implementation), replaced the 1995 Tax Code that had been criticized for leaving too much discretion in the hands of the Tax Police and other government officials. The new code also reduced a number of tax rates. Under it, the personal income tax (PIT) ranges from 5% to a top rate of 30%, down from 40%, while the corporate income tax (CIT) rate remains set at 30%. Social taxes (payroll taxes) were reduced to 11% from 21% and the rate for the value-added tax (VAT), introduced 1 January 1992, was reduced to 16% from 20%.

In January 2003, a new investment law was introduced that generally eliminates tax incentives for foreign investors.

### 37 CUSTOMS AND DUTIES

In Kazakhstan, licenses are required to import certain products and the importation of others is prohibited. An import tariff schedule eliminated duties for most consumer goods in April 1994. There are no longer any export tariffs. However, tariffs have increased on certain products, including alcoholic beverages, leather, and carpets. The average tariff is 9%. There is also a 16% value-added tax (VAT) on destination principal. Kazakhstan, Belarus, Kyrgyzstan, Russia, Tajikistan, and Uzbekistan have formed a customs union. In May 1992, the Republic of Kazakhstan and the United States signed a most-favored nation agreement for reciprocal tariff treatment.

### 38 FOREIGN INVESTMENT

Even before its formal independence, the government adopted the Foreign Investment Law of 1991 that allowed investment by foreign companies in any economic activity except the manufacture of military goods. The law contained provisions for duty-free imports as well as tax breaks for firms with foreign investment, especially those involved in producing consumer goods, agricultural goods, and electronic and medical equipment. Further, the law also laid out provisions for the operation of Special Economic Zones (SEZs) where imports of intermediate products and exports of finished goods would be allowed without customs duties.

The regime was subsequently revised in a new Foreign Investment Law in 1994 (amended in 1997) to provide stronger guarantees against changes in Kazakhstan's legislation, greater clarity on investment requirements and on the credit facilities available to foreign investors, some additional customs exemptions, and a guarantee of the right to recourse to international arbitration to settle disputes.

From August to November 1996, the government pursued a vigorous privatization program. In 1997, a new law enabled investors to qualify for up to 100% tax relief for five years, and for up to 50% tax relief for the second five years. Priority areas were infrastructure, manufactures, housing, construction in Astana (designated the new capital as of December 1997), and agriculture. Following the recession in 1998, in 1999 the government began to change its stance on foreign investment from favorable treatment to national treatment. In January 2001, the government passed laws to control the transfer of capital out of the country. Foreign investors expressed concern over the increased authority given customs officials to regulate export and import transactions.

In 2001 the government moved to enact a new investment law to replace the 1994 and 1997 regulations. Because of strong opposition from foreign investors, the president did not sign the new law until January 2003. The new code, unlike the previous law, offers fewer protections to foreign investors and limits exemptions from customs fees to one year, with extensions limited to no more than five years. Particularly contentious was

the removal of the right to international arbitration to settle disputes. (When the law took effect, there were at least two major disputes pending involving ChevronTexaco, Kazakhstan's largest single investor and the largest single tax payer. In November 2002, as a direct protest against the government's intention to change the investment regime, the foreign companies involved in the Tengchevoil (TCO) consortium (including ChevronTexaco with a 50% share and ExxonMobil with a 25% share) put on hold the second stage of \$3 billion expansion plan for the Tengiv oil field.

In 1996, foreign direct investment (FDI) was estimated at \$1.22 billion, and at \$1.3 billion in 1997. FDI flows fell slightly to \$1.2 billion in 1998, or from 9.4% of GDP to 5.7% of GDP. In 1999, FDI flow rose to almost \$1.8 billion, and then soared to \$2.75 billion in 2000, or from 11.4% of GDP to 15% of GDP. From 1993 to 2001, total gross inflow of FDI amounted to about \$17 billion. Over a third (34% or \$5.2 billion) of the FDI flow has come from the United States, with United Kingdom (including the British Virgin Islands) the second-largest source at \$2.3 billion or more than 15%. Other major sources of FDI are South Korea, China, Italy, Turkey, Japan, and Germany.

Since 1995, FDI in the development of the country's immense oil and gas deposits has averaged more the \$1 billion, and was close to \$2 billion in 2001. As of October 2001, there were 3,606 joint ventures and 2,030 foreign companies operating in Kazakhstan according its Ministry of Economy and Trade. Important non-oil sector projects include the expansion of gold production in partnership with foreign concerns promoted as a means of quickly boosting the inflow of foreign exchange. In 1993, the Philip Morris Co. signed an agreement with the Almaty Tobacco Company to invest \$350 million; since 1994, Philip Morris has been producing cigarettes for the domestic market. RJR Nabisco has also invested more than \$100 million in a joint venture.

### 39 ECONOMIC DEVELOPMENT

While still a republic of the USSR (prior to independence in 1991), Kazakhstan underwent rapid development of its agricultural and industrial sectors. Vast tracts of land were brought into cultivation with the expansion of irrigation under the USSR's "Virgin Lands" program, while within the industrial sector, development of its metallurgical, mining, and machinery industries were prioritized. Growth in these various economic sectors was fueled by a high labor-force-participation rate in the local population, especially among women, as well as the import of some skilled labor from Russia. By the 1980s, growing problems of inefficiency and inadequate technological development in the overwhelmingly dominant state sector resulted in a flagging rate of growth overall.

The region's industrial and agricultural development had, moreover, come at some high environmental costs. The structure of Kazakhstan's transportation and energy sectors clearly highlight the overall orientation of the economic base fostered under the Soviet regime; railroads and paved roads are clustered mainly in the north and the south, serving more to link Kazakhstan with Russia, Uzbekistan, and Kyrgyzstan than to integrate the republic itself. Similarly, electricity transmission networks facilitate the exchange of energy with different republics in the former USSR rather than between different parts of Kazakhstan.

Since sovereignty was declared in December 1991, Kazakhstan has been embarked on a process of economic restructuring aimed at establishing a market economy. In 2002, President Nazarbayev reported that Kazakhstan was recognized by both the EU and the United States as a market economy, and that 75% of the country's GDP was derived from the private sector. This transformation, substantial if incomplete, involved reform on many fronts: privatization; lifting of price, capital, and

profitability controls; the elimination of subsidies; debt restructuring; tax, customs, and banking reform; creation of a securities and exchange commission; and trade and investment liberalization. The government made several policy changes in the late 1990s and early 2000s that left outside investors and auditors uncertain about the direction and stability of the economic regime.

Independent Kazakhstan appealed to numerous international agencies for assistance in restructuring its economy. The World Bank's aid program comprised both policy-based adjustment loans and investment projects in areas that included agriculture, energy, environment, finance, health, legal reform, roads, social protection, taxation, urban transport, and water supply and sanitation. The European Bank of Reconstruction and Development (EBRD) supported both private sector development and public sector projects such as ports, power, railways, and telecommunications. Technical assistance for enterprise and civil service reforms, food production and distribution, and human development have been provided by other UN agencies and the EU. The Islamic Development Bank (IDB) was active in the areas of health, transport, postal service, and water supply. Japan, the largest bilateral donor, provided significant balance-of-payments support and extended loans for the Astrana airport and the transport infrastructure. The United States provided assistance for privatization, tax and pension reforms, and social services. Other bilateral donors are Germany, Saudi Arabia, and Turkey.

In 1993, the government negotiated a far-reaching major contract to explore and develop the Tengiz oil field. Through mergers, acquisitions and sales, the shareholders in this venture as of 2003 were ChevronTexaco (50%), Exxon Mobil (25%), KazMunaiGas (20%, down from 45% from sales of 25% to Mobil, now ExxonMobil), and LukArco (5%).

In 2000, the Philip Morris Co. completed a \$200 million greenfield cigarette factory in the Almaty region.

In seeking to achieve monetary stability, Kazakhstan in 1995 and 1996 entered into credit agreements with the IMF. In 1996 the president established a secret National Fund, into which he deposited the proceeds from the sale of shares in the Tengiz oil field. The existence of the National Fund was not revealed until 2001, and by 2002 most of the original \$1 billion had reportedly been used in two major withdrawals—\$480 million had been used in 1997 to pay off pension funds threatened with bankruptcy, and \$400 million had been used in 1998 to cover budget deficits stemming from the collapse of the Russian ruble. While the secret fund seems to have cushioned the economy from external shocks, its existence raised serious questions about the transparency of the government's finances.

The government emerged from the financial crises of the late 1990s less committed to privatization and ready to dismantle some of its incentives for foreign investment. In 1999, the government halted or slowed privatization programs. There was also a shift in monetary policy. In February 2002 the government took another major step away from privatizing the oil and gas sector by announcing the establishment of a national energy conglomerate, KazMunaiGaz, combining the national oil company with the national oil and gas transport company for the stated purpose of being able to compete with the international oil companies. In late 2002, agreement was reached among Azerbaijan, Georgia, Turkey, Turkmenistan, and Kazakhstan on the route for the Baku-Tbilisi-Ceyhan (BTC) pipeline, and construction began in May 2003.

### 40 SOCIAL DEVELOPMENT

Social security programs were first introduced in 1956, and were revised in 1991 and 1996 following independence. All employed persons, including noncitizens, qualify for old age, disability, and survivorship pensions. Employers contribute 30% of payroll, while employees contribute 1% of earnings. Residents of

ecological disaster areas are entitled to early retirement. Workers' compensation is offered under a dual social insurance and universal system. The economic and financial crisis in the mid to late 1990s, however, has meant that the government is often unable to pay pensions or other forms of benefits owed to citizens.

Women have equal rights under the law, although discrimination persists. Women generally have access to higher education but are still channeled into mostly low-level, low-paid jobs. Traditional attitudes towards women are a barrier to achieving an active role in politics or business. Violence against women and domestic abuse remain a problem and are vastly underreported. There are about 30 women's rights organizations, including the Union of Women of Kazakhstan, the Union of Women Entrepreneurs, the League of Muslim Women, and the Union of Feminists. Most women's groups work to obtain support for families and increase women's participation in public life. The government has signed the UN Convention in children's rights. The constitution provides for the upkeep and education of orphans, although limited financial resources result in many children receiving inadequate education and medical care.

Ethnic tensions between Kazakhs and Russians continue to exist. Ethnic Kazakhs receive preferential treatment in housing, education, and employment. Although the Russian language still predominates, the 1995 Constitution specifies that Kazakh is the official state language. The government is responsible for numerous violations of democratic freedoms and human rights. Prisoners are beaten and tortured, and killings are committed by security forces. A top political opposition leader was jailed for a year for insulting the president, then barred from running for parliament because he had served time in prison.

#### 4<sup>1</sup>HEALTH

Under restructuring of the health care system, roughly half of Kazakhstan's hospitals, mainly facilities in rural areas, were closed between 1990 and 1997 and the number of acute-care hospital beds was decreased by 44%. As of 1999, the rural health care network, which had deteriorated due to lack of funds, was in the midst of reorganization. As of 1999, there were an estimated 3.5 physicians and 8.5 hospital beds per 1,000 people. As of 1999 total health care expenditure was estimated at 5.5% of GDP.

The average life expectancy in 2000 was 65 years. The total fertility rate was two children per woman during her childbearing years, and the infant mortality rate was 21 per 1,000 live births. For every 100,000 live births, 70 women died during pregnancy or in childbirth in 1998. More than half of married women ages 15–49 (66%) used some form of contraceptive as of 2000. The crude birth rate as of 2002 was estimated at 17.8 per 1,000 inhabitants. Major causes of death per 100,000 people in 1990 were communicable diseases and maternal/perinatal causes, 86; noncommunicable diseases, 700; and injuries, 103. There were 130 reported cases of tuberculosis per 100,000 people in 1999. In 1990–94, immunization rates for children up to one year old were: tuberculosis, 87%; diphtheria, pertussis, and tetanus, 80%; polio, 75%; and measles, 72%. As of 1999, figures for DPT and measles were, respectively, 98% and 99%. A majority (67%) of children under five suffer from some form of anemia (1995).

As of 1999, the number of people living with HIV/AIDS was estimated at 2,500 and deaths from AIDS that year were estimated at fewer than 100. HIV prevalence was 0.04 per 100 adults. Major environmental health concerns include industrial pollution in the east, the former nuclear facilities in the Semipalatinsk region, and ecological threats in the Aral Sea region.

#### 4<sup>2</sup>HOUSING

As of 1 January 1994, 458,700 households were on waiting lists for housing in urban areas. In 2000, there were about 10,500 new housing units built. About 91% of the population had access to improved water sources and 99% had access to improved sanitation systems.

#### 4<sup>3</sup>EDUCATION

In 1999, the adult literacy rate was estimated at 98.4% (males, 99.1%; females, 97.7%). Both at the primary and secondary level, education is free and state funded. Although Russian is the most commonly taught language, Kazakh, which is the official state language, is now gaining popularity and is being extended to all areas. A small percentage of students are also taught Uzbek, Uighur, and Tajik. As of 1999, public expenditure on education was estimated at 4.4% of GDP.

In 1997 there were 1,342,035 primary school students. Secondary schools enrolled 1,921,302 students and employed approximately 178,900 teachers in the same year. The pupil-teacher ratio at the primary level was 18 to 1 in 1995. There are 55 institutions of higher education and three universities. Third level educational institutes had a total of 260,043 pupils in 1996. The University of Kazak Al-Farabi State University was founded in 1934 and offers history, philosophy, economics, sociology, journalism, mathematics, physics, chemistry, biology, and geography. The Karaganda State University was founded in 1972 and teaches philosophy, economics, law, history, mathematics, physics, chemistry, and biology. The Technical University at Karaganda Metallurgical Combine was founded in 1964 and has faculties of metallurgy, mechanics and technology, and chemical technology.

#### 4<sup>4</sup>LIBRARIES AND MUSEUMS

Three outstanding libraries are the National Library of the Republic of Kazakhstan in Almaty (5.5 million volumes), the Scientific and Technical Library of Kazakhstan also in Almaty (22.3 million volumes), and the Central Library of the Kazak Academy of Science (6.2 million volumes). The Al-Farabi Kazak State University Library in Almaty has 1.5 million volumes. Kazakhstan has an extensive public library system, with 8,770 branches holding more than 100 million volumes as of 1993.

Kazakhstan has dozens of museums. The Central State Museum of Kazakhstan in Almaty features 90,000 exhibits exploring the history and physical conditions of the region. The A. Kasteyer Kazak State Art Museum (formerly the Kazak T.G. Shevchenko State Art Gallery) in Almaty primarily contains works of Russian and Kazak artists from the 15th to 20th centuries. There are regional and general interest museums throughout the country.

#### 4<sup>5</sup>MEDIA

As of 2001, there were 1.92 million mainline phones, with an additional 400,000 cellular phones in use nationwide. Kazakhstan is connected to the other former Soviet republics by land line or microwave and to other countries through Moscow.

Kazak Radio broadcasts in Kazak, Russian, Uighur, German, and Korean. Kazak Television, established in 1959, broadcasts in the same languages except for Korean. In 1998, there were 60 AM and 17 FM radio stations. As of 2001, the five government-owned television channels are the only ones which broadcast nationwide. There were 30 independent television stations the same year. In 2000, there were 422 radios and 241 television sets for every 1,000 people. In 2001, there were ten Internet service providers serving about 85,000 subscribers.

Leading newspapers in 2002 included *Kazakhstanskaya Pravda* (Kazakhstan Truth), *Didar Kazakhstan*, *Khalyk Kenesi* (Councils of People), *Leninshil Zhas* (Leninist Youth),

*Leninskaya Smena (Leninist Rising Generation)*, and *Yegemen Kazakhstan (Sovereign Kazakhstan)*.

The constitution and 1991 Press Law provide for a free press, although in practice the media is said to perform self-censorship in key subject areas, especially criticism of the president and other government officials.

#### 46 ORGANIZATIONS

The major economic organizations in Kazakhstan are the Union of the Chambers of Commerce Industry of the Republic of Kazakhstan and the Union of Cooperative Entrepreneurs. The Zhardem International Charitable Fund promotes public interest in science and culture and operates cultural and educational centers for children and teenagers. The Republican Council of Women's Organizations, established in 1985, promotes economic and social equality for women. National youth organizations include the Association of Young Leaders, Kazakhstan Youth Forum, and the Union of Youth of Kazakhstan. As of 2003, the Red Cross Society was in formative stages within the country.

#### 47 TOURISM, TRAVEL, AND RECREATION

Kazakhstan offers a wide variety of natural landscapes to the hardier traveler, ranging from forests and mountain ranges to the vast steppes where Kazakh nomads live in tents called yurts and race thoroughbred horses and camels. The old capital, Almaty (Kazakh for "mountain of apples"), has no historic attractions but is an attractive city where tree-lined streets, parks, fountains, and canals give it a European flavor. In the winter, ice skating is popular on its waterways. Air service to Kazakhstan is good, with direct flights to Almaty from Ankara, Frankfurt, Hamburg, and other cities, as well as frequent daily flights from Moscow. Kazakhstan is open to both business travelers and tourists. Visas are required by all visitors and are obtainable upon arrival or through embassies abroad and companies that sell package tours of Central Asia. The principal accommodations are hotels that formerly belonged to the Soviet Intourist system. However, foreign chains are currently developing a number of projects in Central Asia.

In 2000, there were approximately 1,680,000 foreign visitors to Kazakhstan. Tourist receipts reached about \$356 million. According to 2001 US Department of State estimates, the daily estimated cost of staying in Almaty was about \$264. In Astana, expenses averaged \$265 per day, while stays in other parts of the country were about \$112 per day.

#### 48 FAMOUS KAZAKS

Nursultan A. Nazarbayev (b.1940) was elected president of Kazakhstan in December 1991. Sergey Tereshchenko and Akezhan Kazhegeldin have each served as prime minister since independence in 1991. Abay Ibragin Kunanbayev (1845-1904) is internationally known as a 19th century humanist and poet, and is considered the founder of modern Kazakh literature. Contemporary writer Mukhtar Awezov wrote *Abay*, a novel about steppe life that was translated into English. The novelist Kaltay Muhamedjanov is from Kazakhstan.

#### 49 DEPENDENCIES

Kazakhstan has no territories or colonies.

# KIRIBATI

Republic of Kiribati

**CAPITAL:** Tarawa

**FLAG:** Above a blue and white heraldic representation of Pacific waters, a golden sun rises against a red background, with a golden frigate bird at the top.

**ANTHEM:** *Troika kain Kiribati (Stand Kiribati)*.

**MONETARY UNIT:** The Australian dollar is the national currency. A\$1 = US\$0.6173 (or US\$1 = A\$1.62) as of May 2003.

**WEIGHTS AND MEASURES:** Kiribati is in transition from imperial to metric standards.

**HOLIDAYS:** New Year's Day, 1 January; Independence Day, 12 July; Youth Day, 4 August; Christmas Day, 25 December; Boxing Day, 26 December. Movable holidays include Good Friday, Easter Monday, Queen's Birthday (June), Bank Holiday (August), and Prince of Wales's Birthday (November).

**TIME:** Midnight = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Kiribati (pronounced "Kiribass") consists of 33 islands in the central Pacific, situated around the point where the International Date Line intersects the equator. Scattered over more than 5 million sq km (2 million sq mi) of ocean are the 17 islands of the Gilberts group (including Banaba, formerly Ocean Island); the 8 Line Islands (including Christmas Island); and the 8 Phoenix Islands. The distance between Christmas Island in the E and Banaba in the W is more than 3,200 km (2,000 mi). Kiribati's total land area is 811 sq km (313 sq mi), and its total coastline is 1,143 km (710 mi). Comparatively, the area occupied by Kiribati is about the same as four times the size of Washington, D.C.

Kiribati's capital city, Tarawa, is located on the island of Tarawa.

## <sup>2</sup>TOPOGRAPHY

With the exception of Banaba, an upthrust coral formation that reaches a high point of 265 m (868 ft), the islands are coral atolls built on a submerged volcanic chain and seldom rise more than 4 m (13 ft) above sea level. Christmas Island is the largest atoll in the world, with an area of 606 sq km (234 sq mi). In most of the atolls the reef encloses a lagoon, on the eastern side of which is a narrow stretch of land varying in length from about 45 m (150 ft) to 80 km (50 mi).

## <sup>3</sup>CLIMATE

Tempered by prevailing easterly trade winds, the islands have a maritime equatorial climate, with high humidity during the November–April rainy season. Although the islands lie outside the tropical hurricane belt, there are occasional gales and even tornadoes. Rainfall varies from an average of 102 cm (40 in) near the equator to 305 cm (120 in) in the extreme north and south. Severe droughts can also occur. On average, there is less than 1% variation between the cool and hot months, but daily temperatures range from 25°C (77°F) to 32°C (90°F), with an annual mean temperature of 27°C (81°F).

## <sup>4</sup>FLORA AND FAUNA

The extreme poverty of the soil and the variability of the rainfall make cultivation of most crops impossible. Only babai (a kind of taro root), coconut palms, and pandanus trees grow easily on most islands. Pigs and poultry were probably introduced by Europeans. Sea life abounds.

## <sup>5</sup>ENVIRONMENT

According to the United Nations Report for Pacific Island Developing Countries (1992), the most significant environmental problems facing the nations in this area of the world are global warming and the rise of sea levels. Variations in the level of the sea may damage forests and agricultural areas and contaminate fresh water supplies with salt water. A rise in sea level by even two feet (60 cm) would leave Kiribati uninhabitable; in 1996, such a rise was forecast as a possibility by 2100. Kiribati, along with the other nations in the area, is vulnerable to earthquakes and volcanic activity. The nation also has inadequate facilities for handling solid waste, which has been a major environmental concern since 1992, particularly in the larger population centers.

The environment in Kiribati has also been adversely affected by metals and chemicals from mining activities, and agricultural chemicals have polluted coastal waters. Phosphate mining was especially devastating, rendering the island of Banaba almost uninhabitable. The Banabans, who were forced to move to the Fijian island of Rabi, sued the owners of the mines and have won special compensation. A fund was also set up to compensate the people of Kiribati. Called the Phosphate Revenue Equalization Fund (PREF), in 1996 it amounted to A\$200 million.

The lagoon of the south Tarawa atoll has been heavily polluted by solid waste disposal. Like other Pacific islands, Kiribati is sensitive to the dangers of pollution and radiation from weapons tests and nuclear waste disposal. The UN Report describes the wildlife in these areas as "among the most critically threatened in the world." Endangered or extinct species include the green sea turtle and mukojima bonin honeyeater.

Kiribati is a party to the Biodiversity, Endangered Species, Marine Dumping, and the Ozone Layer Protection international agreements.

## 6 POPULATION

The population of Kiribati in 2003 was estimated by the United Nations at 96,000, which placed it as number 179 in population among the 193 nations of the world. In that year approximately 3% of the population was over 65 years of age, with another 42% of the population under 15 years of age. There were 99 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 1.41%, with the projected population for the year 2015 at 102,000. The population density in 2002 was 130 per sq km (337 per sq mi). The population is unevenly distributed; some islands of the Phoenix and Line groups are uninhabited.

It was estimated by the Population Reference Bureau that 39% of the population lived in urban areas in 2001. The capital city, Tarawa, had a population of 32,000 in that year. According to the United Nations, the urban population growth rate for 2000–2005 was 2.6%.

## 7 MIGRATION

For the islanders, migration has been a perennial form of escape from drought and starvation. In the 19th century, recruiting ships forcibly took Gilbert Islanders for plantation work in Hawaii, Australia, Fiji, and Peru; some voluntarily reenlisted after the great drought of 1870. Although the majority eventually returned home, it is reckoned that between 1860 and 1890 some 10,000 islanders of a total population of 30,000 were overseas. In the 20th century, Fiji and the Solomon Islands continued to be popular places for Gilbert Islanders in search of work. Internal migration was mainly to Banaba Island for work in the phosphate industry until 1979, and since then to Nauru or to copra plantations in the Line Islands. During 1988–93, 4,700 people were resettled on Teraira and Tabuaeran atolls of the Line Islands because of overcrowding on the main island group. In 1999 the net migration rate was -0.77 migrants per 1,000 population. The total number of migrants in 2000 was 2,000. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

About 99% of the people are Gilbertese of Micronesian extraction. Polynesians (mainly from Tuvalu) make up 0.5% of the total; Europeans and people of mixed races, 0.6%.

## 9 LANGUAGES

The principal languages spoken are Gilbertese (also called Kiribatese) and English. The official language is English, but it is seldom used on the outer islands. Gilbertese is an Austronesian language related to many other Pacific tongues.

## 10 RELIGIONS

Christian missionaries first arrived in 1857, when Dr. Hiram Bingham, of the American Board of Foreign Missionaries, began to spread Protestantism in the northern Gilberts with the help of Hawaiian pastors. In 1888, Catholicism was introduced to the islands by the Sacred Heart Mission. The American Board withdrew from the territory in 1917 and was succeeded by the London Missionary Society, which had placed Samoan pastors on the islands as early as 1870.

Virtually the entire population is Christian. According to 2002 government statistics, 55% of the population are Roman Catholics and 37% belong to the Kiribati Protestant Church (formerly called the Congregational Church). Religious minorities include the Seventh-Day Adventists, the Church of God, Assemblies of God, Mormons, and Baha'is.

## 11 TRANSPORTATION

The remoteness of the scattered islands has severely hampered transport and communications. There are only about 670 km (416 mi) of roads, mostly on Tarawa. The Nippon Causeway, completed in 1987 with Japanese assistance, has replaced ferry service between Betio and Bariki. A series of similar causeways links north and south Tarawa. In 1995, there were about 2,000 vehicles in Kiribati, almost three-quarters of which were motorcycles.

There is no rail, river, or lake transport, although canoes travel freely on the lagoons. The main ports are Betio islet, near Tarawa, and on Tabuaeran and Christmas islands. Betio is equipped for handling containers, and Banaba has a cantilever for phosphate loading. In 2001 Kiribati had 1 passenger-cargo ship at 1,291 GRT. A number of shipping lines call at the islands, and government boats provide interisland service. There were 21 airports in 2001, 4 with paved runways. All the major islands have airstrips; the airports on Christmas Island and at Bonriki (Tarawa) are used for scheduled overseas flights. Air Tungaru, the national airline, operates regularly scheduled flights to Honolulu and Tuvalu. In 1997, 28,000 passengers were carried on scheduled domestic and international flights.

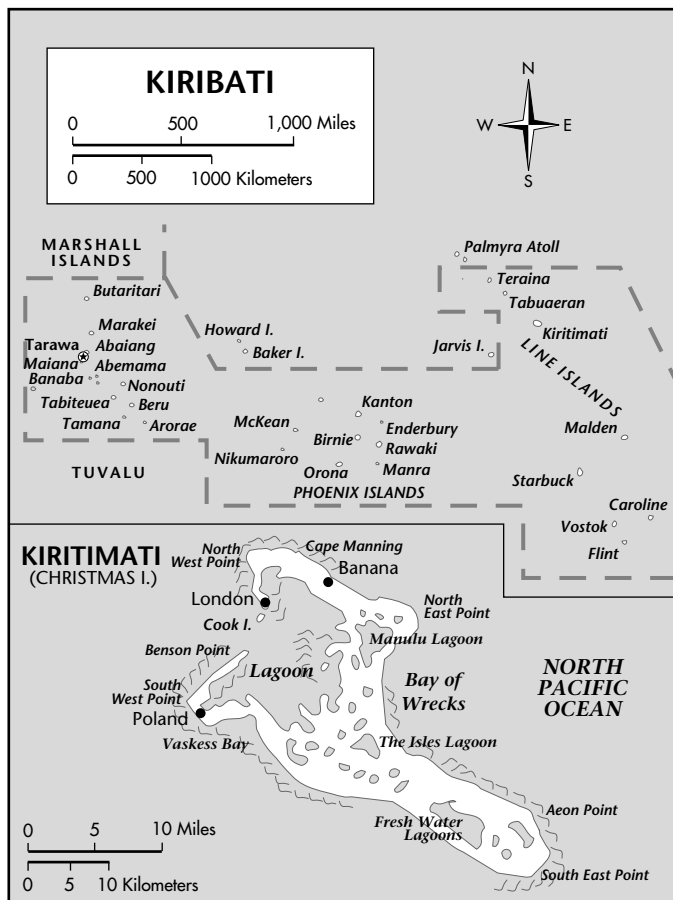

## 12 HISTORY

The main wave of Micronesian settlement is thought to have come from Samoa in the 13th century, but Gilbertese tradition suggests that the Samoans were not the first settlers. European discovery dates from 1537, when Christmas Island was sighted by Spanish explorers. The English sea captain James Cook encountered the islands in 1777, and commercial activities in the region began early in the 19th century. The Gilbert Islands were a favorite whaling ground, and deserting crews began to settle in the islands in the 1830s. Trading ships were calling there regularly by the 1850s, and a flourishing copra and coconut trade was established by the 1860s, as well as an illicit human traffic. The Office of British High Commissioner to the Western Pacific was created in 1877 to help suppress abuses by recruiting ships seeking labor for overseas service. In 1888, Christmas, Fanning (now Tabuaeran), and Washington (now Teraina) islands were annexed by the British, and Phoenix Island was placed under their protection. A declaration of a British protectorate over the Gilbert and Ellice groups followed in 1892. A handful of administrators established local native governments, and a period of stability ensued.

Ocean Island was annexed by Britain in 1900, following Sir Albert Ellis's discovery of its valuable phosphate deposits. The Gilbert and Ellice groups (including Ocean, Fanning, and Washington islands) were declared a British colony in 1916. British control was extended to Christmas Island in 1919 and to the uninhabited Phoenix group in 1937, but after the United States laid claim to Canton and Enderbury, a joint British-American administration over these islands was established. During World War II, the Gilberts were occupied by Japanese forces until 1943, when the invaders were driven out by US forces, after heavy casualties on both sides. Ocean Island was liberated by the Australians in 1945.

In a 1974 referendum, the Ellice Islands voted for separation, subsequently becoming the independent nation of Tuvalu. Internal self-government for the Gilberts was established as of 1 January 1977, and the islands became the independent Republic of Kiribati on 12 July 1979. In September, the new nation signed a treaty of friendship with the United States (ratified by the US Senate in 1983), by which the United States relinquished its claims to the Line and Phoenix groups (including Canton, Enderbury, and Malden).

Jeremia Tabai, chief minister at the time of independence, became president of the new republic in 1979 and was reelected

LOCATION: 4°N to 3°S; 168° to 176° E. TOTAL COASTLINE: 1,143 kilometers (710 miles). TERRITORIAL SEA LIMIT: 12 miles.

in May 1982 and February 1983. Although the constitution limits a president to three terms, Tabai argued that he had not completed three full terms and was reelected in May 1987. In 1991, Tabai stepped down and was replaced by Teatao Teannaki, head of the National Progressive Party. Teannaki served until 1994, when Teburoro Tito, head of the nation's first real political party, the Maneaban Te Mauri Party (MTM), was elected. The MTM won 19 of 39 seats in the House.

A special problem was posed by the Banabans, who were resettled in 1946 on Rabi (Fiji)—bought for them by means of phosphate royalties—so that strip mining on their native island could continue unimpeded. In 1975, the Banabans sued, petitioning the British courts for damages. After a lengthy legal battle, representatives of the Banabans (most of whom still reside on Rabi) agreed in 1981 to the creation of a trust fund of nearly A\$15 million for Banaban development. Recognition of Banaban minority rights is enshrined in Kiribati's constitution. Kiribati established diplomatic relations with the former Soviet Union in 1979 and with the People's Republic of China in 1980.

Kiribati opposes French nuclear testing in the Pacific and signed the 1985 Rarotonga Agreement declaring the South Pacific a nuclear-weapons-free zone. In 1985, Kiribati signed a one-year fishing agreement with the former USSR that aroused controversy at home and abroad. The agreement was not renewed after talks for its renegotiation broke off in September 1986.

Kiribati began resettling more than 4,700 people on outlying atolls in August 1988 in an attempt to relieve overcrowded conditions on the Tarawa atolls. In September 1988 Kiribati ratified the South Pacific Regional Fisheries Treaty, which permits

US tuna ships to operate within its 200-mile exclusive zone. In early 1992 the Parliament of Kiribati instructed the government (against its wishes) to seek compensation from the United States for damage done to the country during the Pacific War, 1941–45.

In 1994 the government of Kiribati underwent a constitutional crisis when President Teatao Teannaki was forced to resign following a no-confidence vote by the opposition in parliament, who had charged him with misusing travel funds. As specified in the constitution, executive authority was then transferred to a Council of State until new parliamentary and presidential elections could be held, but one member of the council refused to resign when his term expired and had to be forcibly removed, prompting calls for constitutional reform to prevent a similar situation from occurring in the future. Teburoro Tito was elected president in September, and elected to a second term in November 1998.

Together with Nauru and Tonga, Kiribati was admitted to the United Nations in 1999. In March of that year, the government declared a state of emergency as water shortages reached crisis levels due to an extended drought and pollution of the available water supply. Long-term elevation of the surrounding sea level due to global greenhouse emissions remains a serious concern for Kiribati, which reportedly has already lost two uninhabited islands and been forced to move segments of its population inland, away from coastal regions.

The 2002 presidential election process began with a general election for parliament on 29 November, but several rounds of voting took place before the election of a president on 25 February 2003. During the 29 November election, Harry Tong, a member of the opposition, won his seat in parliament and the right to stand as candidate for the presidency. Tito's party lost 14 of its 25 seats in the election, and was forced into a run-off election. Parliament could not meet until 6 January 2003, and that led to a delay in the presidential election scheduled to take place on 31 January 2003; it was postponed until 25 February. In January 2003, opposition parliamentarians named Taberannang Timeon to stand against Tito in the February election, instead of Tong. Tong had stepped aside in order not to split the opposition vote against Tito. Bakeua Bakeua Tekita stood as a third candidate. Tito narrowly won the 25 February election, defeating Timeon by only 547 votes.

### 13 GOVERNMENT

Under the independence constitution of 1979, Kiribati is a democratic republic within the Commonwealth of Nations. It has a 42-member unicameral legislature, the House of Assembly (Maneaba ni Maungatabu). Forty members are elected for four-year terms, one appointed seat is reserved for a representative of the Banaban community, and the Attorney General sits (*ex-officio*) as a non-elected member of parliament. The Speaker is elected to office by members of parliament but is not a member of parliament. He has neither an original or casting vote in parliamentary decisions. The president (*beretitenti*), who is both head of state and head of government, is elected directly by popular vote, from among members of the Assembly, to a term of up to four years; candidates are selected by the House from among its own members. When the president no longer enjoys the confidence of the legislature, the House is dissolved and new parliamentary and presidential elections are held, with a Council of State (consisting of the head of the Civil Service Commission, the chief justice, and the speaker of the House) governing in the interim. The cabinet consists of the president, vice president, attorney general, and no more than 10 other ministers selected from parliament.

Teatao Teannaki, head of the National Progressive Party, was elected the nation's second president in July 1991. He was obliged to resign following a no-confidence vote in 1994, and

Teburoro Tito, head of the Maneaban Te Mauri Party (MTM), was elected president. Tito was reelected in 1998 and 2003.

## 14 POLITICAL PARTIES

Traditionally, Kiribati had no formally organized parties. Instead, ad hoc opposition groups tended to coalesce around specific issues. There were no formally constituted political parties until 1985, when opponents of the Soviet fishing agreement founded the Christian Democratic party, headed by Dr. Harry Tong. The Christian Democrats, now known as the Maneaban te Mauri party, led by President Teburoro Tito, won 14 seats in the September 1998 parliamentary elections, and the principal opposition party, Boutokaan te Koaua, won 11; 14 seats were won by independents. In the elections held in November and December 2002, Boutokaan te Koaua took 17 seats in parliament, Tito's Maneaban te Mauri took 16, and independents held 7 seats.

Other parties that formed after 1991 included the Liberal Party; the New Movement Party; and the Health Peace and Honour Party. Today, the only recognizable parties are the Maneaban te Mauri Party and the Boutokaan te Koaua Party.

## 15 LOCAL GOVERNMENT

There are fully elective local councils on all the islands, in accordance with a local government ordinance of 1966. For administrative purposes the islands are divided into six districts: Tarawa (including the Phoenix group); North, South, and Central Gilberts; Banaba; and the Line Islands. This structure has been further divided into 21 island councils, one for each of the inhabited islands. The geographic dispersion of the islands leaves considerable freedom for the districts; their councils have wide taxing powers, including land taxes, and draw up their own estimates of revenues and expenditures.

## 16 JUDICIAL SYSTEM

The 1979 constitution provides for a High Court, with a chief justice and other judges, to act as the supreme court. There is also a Court of Appeal and magistrates' courts. Island courts were established in 1965 to deal with civil and criminal offenses. Native land courts have jurisdiction over property claims. High Court and Court of Appeal judges are appointed by the president.

The judiciary is independent and free from government influence. Civil rights and civil liberties are guaranteed in the constitution and respected in practice. Procedural due process safeguards are based on English common law. The trials are fair and public. The law prohibits the arbitrary interference with privacy, family, home and correspondence. The government authorities respect these provisions.

## 17 ARMED FORCES

Legislation providing for the establishment of a defense force of 170 men was repealed in 1978. There is a small police force. Australia and New Zealand provide defense assistance.

## 18 INTERNATIONAL COOPERATION

Kiribati participates in many Commonwealth activities and hosted the South Pacific Forum in 1981. Kiribati was admitted to the UN on 14 September 1999. It is also a member of the ESCAP, ICAO, IBRD, IMF, ICFTU, IDA, IFC, IFRC, IMF, INTELSTAT, INTERPOL, ITU, SPC, SP, UNESCO, UPU, and WHO. Kiribati participates in the Asian Development Bank and G-77 and is an applicant to the WTO.

## 19 ECONOMY

Kiribati's economy was supported by revenues from phosphate mining on Banaba until the deposits were exhausted in 1979. Since then, the nation has relied on fishing, subsistence agriculture, and exports of copra, recently 80–95% of exports,

and fish, 4–20% of exports. The country is heavily dependent on aid from the United Kingdom, Japan, Australia, New Zealand and China. Aid equals 25–50% of GDP, while tourism provides about 20%. In the 1990s, GDP increased steadily, peaking at A\$80.3 million in 1999, and then fell by 2.7% and 1.2%, respectively, in 2000 and 2001, to A\$78.1 million and A\$77.2 million, respectively. GNP runs between 1.5 to 2 times the size of GDP. In 2001, GNP was A\$136.9 million, 177% of GDP. Per capita GDP in 2000 was A\$843 and per capita GNP was A\$1,495. Inflation, at 0.4% in 2000 as measured by consumer prices, was increased to 9.4% in 2001. Unemployment was officially 2%, but underemployment was estimated by the government to be about 70% by a 1992 estimate.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Kiribati's gross domestic product (GDP) was estimated at US\$79 million. The per capita GDP was estimated at US\$840. The annual growth rate of GDP was estimated at 1.5%. The average inflation rate in 2001 was 2.5%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 30% of GDP, industry 7%, and services 63%. Foreign aid receipts amounted to about US\$134 per capita and accounted for approximately 18% of the gross national income (GNI).

## 21 LABOR

Most of the population engages in subsistence agriculture or copra production, including the copra plantations on the Line Islands. About 90% of the labor force is engaged in agriculture or fishing. Overseas workers remitted a large percentage of their wages to Kiribati.

In urban areas there is a small but strong trade union movement. Affiliates of the Kiribati Trades Union Congress (KTUC), founded in 1982 with Australian assistance, include the Fishermen's Union, the Cooperative Workers' Union, the Seamen's Union, the Teacher's Union, and the Public Employees' Association; in 2002, the KTUC had about 2,500 members. Workers have the right to strike but rarely exercise this option. The government does not interfere with union activity.

There is no statutory minimum wage; however, the government sets wage levels in the large public sector, which is the major employer in the cash economy. The standard workweek for those in the public sector was 36.25 hours, with overtime pay for any additional hours. Children may not work under the age of 14. This is effectively enforced by the government in the modern, industrial sector of the economy, but many children do perform light labor in the traditional fishing economy.

## 22 AGRICULTURE

Agriculture is limited chiefly to coconut and pandanus production. About 37,000 ha (91,400 acres) of land is considered arable, representing 5.1% of the total land area. Overseas technical aid has allowed some islands to cultivate bananas and papaws for the Tarawa market. An estimated 12,000 tons of copra, 85,000 tons of coconuts, and 5,000 tons of bananas were produced in 1999. Agricultural trade in 2001 consisted of US\$2.5 million in exports and US\$11.6 million in imports. Agriculture contributes 30% to GDP.

## 23 ANIMAL HUSBANDRY

There were 10,800 pigs in Kiribati in 2001; annual pork production is about 1,100 tons. The Agricultural Division has introduced improved breeds of livestock.

## 24 FISHING

Sea fishing is excellent, particularly for skipjack tuna around the Phoenix Islands. Kiribati has one of the world's longest maritime zones, covering approximately three million sq km. Commercial fishing has expanded dramatically since 1979 as the result of projects funded by Japan, the United Kingdom, and the EU. The total sea catch in 2000 was 40,000 tons. Kiribati also receives revenue from the sales of licenses permitting foreign vessels to fish its offshore waters. Seaweed is also exported. Exports of fish products were valued at US\$3.9 million in 2000.

## 25 FORESTRY

The forested area was estimated to cover 38.4% of the islands in 2000, but there is little useful timber on the islands.

## 26 MINING

There has been no mining in Kiribati since the closing in 1979 of the Banaba phosphate industry. In its last year of operation, 445,700 tons of phosphates worth US\$18 million were exported.

## 27 ENERGY AND POWER

The government maintains electricity-generating plants on Tarawa and Christmas Island, and there are private generators on Banaba and several other islands. In 2001, electric power generating capacity was 2,000 kW. Production of electricity in 2000 totaled 7 million kWh, of which 100% was from fossil fuels. Consumption of electricity in 2000 was 6.5 million kWh.

## 28 INDUSTRY

Several small industries have been established, including a soft-drink plant, a biscuit factory, boat-building shops, construction companies, furniture plants, repair garages, bakeries, and laundries. The government also promotes local handicrafts. A pilot project on Kiritimati for producing solar-evaporated salt began operations in 1985. In 2000, this had declined to 0.7%, down from 1.2% in 1999. Construction was 2.7% of GDP in 2000, down from 4.6% in 1999.

## 29 SCIENCE AND TECHNOLOGY

The Foundation for the Peoples of the South Pacific, founded in 1982 and located at Bairiki, Tarawa, provides technical assistance for agriculture and nutrition programs.

## 30 DOMESTIC TRADE

The domestic economy is on a subsistence and barter basis. With very few local production or agricultural facilities the nation relies heavily on imported goods of all types. Revenues from fishing licenses, worker remittances, and foreign assistance form the basis of the economy. Retail sales are handled by cooperative societies, which distribute the bulk of consumer goods and perform all merchandising functions not dealt with by the government. Although private trade is growing, cooperatives are preferred as a matter of public policy because they are closer to the local tradition than are individual enterprises. Tourism is slowly growing as the main domestic economic activity.

## 31 FOREIGN TRADE

The loss of the phosphate industry, copra price fluctuations, and the islands' remoteness have hindered overseas trade, but an upward trend in foreign trade was perceptible in the 1980s. Copra—the only commodity exported by Kiribati—accounted for 64% of total domestic exports in 1996. Fish and seaweed are also exported, accounting for 14% and 8% of total exports, respectively. Kiribati's main export partners are the US, Australia, and New Zealand. Australia provides 44% of imports; Fiji, 19%; Japan, 15%; New Zealand, 4%; and the US and China, 5% each.

In 1999 Kiribati's imports were distributed among the following categories:

Consumer goods	16.2%
Food	31.9%
Fuels	10.5%
Industrial supplies	19.6%
Machinery	15.0%
Transportation	6.5%
Other	0.3%

## 32 BALANCE OF PAYMENTS

Continued deficits in the trade balance are often met by grants from the UK to the government's current and capital accounts. Foreign aid, in fact, accounts for between 25% and 50% of GDP.

The US Central Intelligence Agency (CIA) reports that in 1998 the purchasing power parity of Kiribati's exports was US\$6 million while imports totaled US\$44 million resulting in a trade deficit of US\$38 million.

The International Monetary Fund (IMF) reports that in 1994 Kiribati had exports of goods totaling US\$6 million and imports totaling US\$27 million. The services credit totaled US\$18 million and debit US\$17 million. The following table summarizes Kiribati's balance of payments as reported by the IMF for 1994 in millions of US dollars.

<b>Current Account</b>	<b>1</b>
Balance on goods	-21
Balance on services	0
Balance on income	15

<b>Net Errors and Omissions</b>	<b>-5</b>
<b>Reserves and Related Items</b>	<b>6</b>

## 33 BANKING AND SECURITIES

The Bank of Kiribati in Tarawa is jointly owned by the Westpac Banking Corp. (Australia) and the government of Kiribati (49%). The Kiribati Development Bank, opened in 1987, was to take over the assets of the National Loans Board when it became fully operational.

## 34 INSURANCE

Individual coverage is available in Tarawa through private and government agencies.

## 35 PUBLIC FINANCE

Local revenues are derived mainly from import duties, fishing fees, and investment income from the phosphate fund. The country has been running a capital account deficit since independence. Overall, budgetary deficits have appeared in recent years, growing substantially in the 1990s.

The US Central Intelligence Agency (CIA) estimates that in 2000 Kiribati's central government took in revenues of approximately US\$28.4 million and had expenditures of US\$37.2 million. Overall, the government registered a deficit of approximately US\$8.8 million. External debt totaled US\$10 million.

### 36 TAXATION

The main source of tax revenue, the phosphate industry, ended in 1979. Other taxes have brought meager returns, except for a copra export tax, with producers protected by a government stabilization fund. The Revenue Equalization Reserve Fund decreased from A\$658 million at the end of 2000 to A\$635 million at the end of 2001. This is equivalent to 10 years of imports or 8.2 times GDP.

A progressive income tax, introduced in 1975, is set at 25% of gross income above US\$1,233 and increases in two steps to 35% on gross incomes over US\$34,393. Companies are taxed 25% of net profits of the first US\$34,393 and 35% on any net profits over this amount. The hotel tax is a flat rate of 10% of turnover. Withholding tax on dividends paid to overseas investors (except Australians) is 30%; withholding tax on dividends paid to Australians is 15%. Island councils levy local rates; a landowners' tax is based on land area and fertility.

### 37 CUSTOMS AND DUTIES

Since a single-line tariff was introduced on 1 January 1975, trade preferences are no longer granted to imports from Commonwealth countries. Tariffs, applying mostly to private imports, are imposed as a service of revenue at rates up to 75%. Most duties are levied ad valorem, with specific duties on alcoholic beverages, tobacco, certain chemicals, petroleum, cinematographer's film, and some other goods. Goods from all sources are subject to an additional freight levy charge.

### 38 FOREIGN INVESTMENT

Foreign investment legislation was passed in 1986. The Foreign Investment Commission (FIC) grants licenses on a case-by-case basis. Investments over US\$171,790 must also be approved by the Cabinet. Performance criteria regarding employment, training and production are often set. Certain local industries are closed to foreign investment including pig farming, poultry farming, millionaire salad exportation, domestic interisland shipping, and wholesaling. Endangered species are protected. Fisheries and the agricultural sector are not closed, but are subject to restrictions.

There has been little appreciable investment in recent years. Government statistics show a total of 21 approved foreign investments from 1995 to September 1997, whereas there had only been five approved foreign investments the previous three years. In 2001, foreign direct investment (FDI) was a negative US\$426,000 and portfolio investment was a negative US\$5.7 million. Portfolio investment flows have been persistently negative, reaching a peak outflow of US\$17.7 million in 1992. The main sectors for investment have been tourist-related activities, shipping, fishing ventures, and the processing and export of fish. The main sources of investments have been the US, Japan, the UK, Australia, and New Zealand.

### 39 ECONOMIC DEVELOPMENT

The economic development plans for 1979–82 and 1983–86 were financed chiefly by the United Kingdom and supplemented by Australia, New Zealand, and Japan, with loans from the Asian Development Bank. Canada, Germany, and the Republic of Korea also have started small aid programs. The government lays out National Development Plans at four year intervals, and is now on its seventh plan, for 2000–04. The goals are set with expertise assistance from Australia, the United Kingdom, New Zealand, and international financial organizations, the country's primary sources of aid. The current National Development Plan sets priority on the development of fisheries and air transportation, including a proposal for a government airline. Other sectors emphasized are communications, agriculture and tourism. Policies are aimed at improving education and training, increasing government revenues, increasing employment

opportunities and narrowing the trade deficit. It has been made illegal to sell land in Kiribati, but it may be leased. Concern about preserving traditional culture and the environment, and preventing the formation of a landless class, are as strong as aspirations for economic growth and participation in the cash economy. Of particular concern in this group of low-lying atolls is the effects of global warming, as a significant rise in the sea level could literally make much of the country disappear.

### 40 SOCIAL DEVELOPMENT

A provident fund system provides old age, disability, and survivor benefits for all employees over 14 years old with the exception of domestic workers. It is funded by employee contributions of 5% of earnings and the employer paying an equal percentage of payroll. Retirement is allowed at ages 45–50 and benefits are paid as a lump sum. Workers' compensation is compulsory for employed persons earning A\$4,000 a year or less. The cost is covered by the employer.

Migration and missionaries have proved to be the principal agents of social change. Mission lands are still used for social welfare purposes. The majority of the population still clings to traditional village life and the extended family system, which renders state welfare largely unnecessary. Problems exist mainly in the rapidly urbanized south Tarawa area, where some juvenile delinquency has developed. Women's clubs, organized by the women's section of the Ministry of Welfare, have raised funds for local projects. Rural training centers have also been established.

Women are accorded the same legal rights as men, but have traditionally been relegated to a subordinate role in society. However, they are gradually breaking out of their traditional role and entering both skilled and unskilled occupations. There have also been signs of affirmative action in government hiring and promotions. Violence against women is not a widespread problem and is usually related to alcohol abuse. Child abuse appears to be a growing problem.

There were no reports of human rights abuses or of the systematic discrimination of minorities. Corporal punishment remains legal for some crimes.

### 41 HEALTH

All health services are free. A nurses' training school is maintained at the 160-bed Central Hospital in Tarawa. There are four medical districts, each with its own medical officer and staff. Each inhabited island has a dispensary, and there is a medical radio network linking all the islands. In 1990, there were 1.8 hospital beds per 1,000 inhabitants. In 1998, there were 0.3 doctors, 2.4 nurses, and 0.05 dentists per 1,000 people. The population of Kiribati had increased access to safe water (99%) and sanitation (100%) in 1993.

Tuberculosis remains the most serious public health problem (about 200 cases per 100,000 people in 1990); other endemic diseases are leprosy, filariasis, and dysentery. There was a cholera outbreak in 1977, after which projects to construct water and sewage pipes were speeded up. Vitamin A deficiency, frequently causing night blindness and xerophthalmia, is a common occurrence among children in Kiribati. The prevalence of xerophthalmia was almost 15% in children in 1994.

Infant mortality was estimated at 53 per 1,000 live births in 2002 and average life expectancy was 60.5 years. The immunization rates for a child under one were as follows in 1995: diphtheria, tetanus, and whooping cough, 60%; polio, 100%; measles, 100%; and tuberculosis, 60%. As of 2002, the crude birth rate and overall mortality rate were estimated at 31.6 and 8.8 per 1,000 people respectively. The total fertility rate was estimated at 4.3 births per woman.

## 42 HOUSING

Most Kiribatians live in small villages of from 10 to 150 houses and construct their own dwellings from local materials. The use of more permanent building materials, such as concrete with corrugated aluminum roofing, is becoming common in urban areas. Loans to prospective homeowners are provided by the National Loans Board. Dwellings range from traditional houses with thatched roofs to nontraditional houses with metal roofs.

## 43 EDUCATION

The government has gradually taken over control of primary education from the missions. Education has been made compulsory by the government for children between the ages of 6 and 15 years. They go through seven years of primary education and five years of secondary education. In 1997, there were 17,594 students attending 86 primary schools, with 727 teachers. Student-to-teacher ratio stood at 24 to 1. In secondary schools, there were 215 staff and 4,403 students in that same year. Secondary school pupils take the New Zealand school certificate. The estimated adult literacy rate is 93%.

Higher education courses are available at the Kiribati Extension Center of the University of the South Pacific (Fiji) in Tarawa. Other post-secondary education is provided by scholarships for study abroad. The Tarawa Technical Institute offers instruction in technical and vocational skills. The Marine Training Center offers 18-month instruction in deck, engine room, and catering work on foreign shipping lines; there are approximately 200 students enrolled in these programs.

## 44 LIBRARIES AND MUSEUMS

The National Library and Archives in Tarawa has a collection of 50,000 volumes, including those in small units throughout the islands. The University of the South Pacific has a campus in Tarawa with a small library of 5,700 volumes. Items are being stored in the National Archives in anticipation of the formation of the national museum which is to be in Tarawa.

## 45 MEDIA

In 1999, there were 3,800 telephone lines in use across the country. Radio Kiribati, operated by the Broadcasting and Publications Authority (BPA), transmits daily in I-Kiribati and English and broadcasts a few imported Australian programs. As of 2002, there were two radio stations, 1 AM and 1 FM, and 1 television station. As of 1997, there were 17,000 radios and 1,000 televisions in use nationwide. In 2000, one Internet service provider served 1,000 subscribers.

The BPA publishes a fortnightly bilingual newspaper, *Te Uekera*. There is no commercial press; all publications are government- or church-sponsored. The Information Department at Tarawa publishes *Atoll Pioneer*, a weekly newspaper. *Te Itoi ni Kiribati*, a weekly newsletter, is published by the Roman Catholic Church. *Te Kaotan te Ota* is a newspaper published monthly by Protestant Church. Kiribati is on the Peacesat network, which

provides educational transmissions from Suva. A satellite link with Australia was established in 1985.

Although the one radio station and *Te Uekera* are government owned, they offer a variety of views; the constitution provides for legally guaranteed freedom of speech and press.

## 46 ORGANIZATIONS

The most important organization is the *mronron* (a word meaning "sharing"), a cooperative society based on kinship or locality. There is a national Credit Union League and a teachers' union. National youth organizations include the Kiribati Students' Association, the Kiribati Scouts Association, and the Kiribati Girl Guides Associations.

## 47 TOURISM, TRAVEL, AND RECREATION

Tourism is undeveloped because of a lack of regular transport. There is a visitors' bureau at Tarawa, and there are hotels in Betio and on Abemama and Christmas islands. The bureau makes available fishing, swimming, and boating facilities on Tarawa and arranges trips by sea or air to other islands.

Modern forms of recreation are developing, especially soccer. Traditional dancing and singing styles have survived. In 2000, 4,035 foreign visitors arrived in Kiribati. More than 1,000 tourists were from the US. Tourist receipts totaled about US\$2.1 million.

In 1999 the UN estimated the cost of staying in Christmas Island at US\$150 per day. Staying in the outer islands was significantly less expensive, requiring an estimated US\$29 in daily expenses.

## 48 FAMOUS KIRIBATIANS

Jeremia Tabai (b.1950) was president from independence until 1991.

## 49 DEPENDENCIES

Kiribati has no territories or colonies.

# KOREA, DEMOCRATIC PEOPLE'S REPUBLIC OF (DPRK)

Democratic People's Republic of Korea  
*Choson Minjujuui Inmin Konghwa-guk*

**CAPITAL:** P'yongyang

**FLAG:** A wide horizontal red stripe is bordered on top and bottom by narrow blue stripes, separated from the red by thin white stripes. The left half of the red stripe contains a red five-pointed star on a circular white field.

**ANTHEM:** *The Song of General Kim Il Sung.*

**MONETARY UNIT:** The won (₩) of 100 ch'on (or jeon) is the national currency. There are coins of 1, 5, 10, and 50 ch'on, and 1 won, and notes of 1, 5, 10, 50, and 100 won. ₩1 = \$0.00674 (or \$1 = ₩148.33; as of April 2003).

**WEIGHTS AND MEASURES:** The metric system and native Korean units of measurement are used.

**HOLIDAYS:** New Year's Day, 1 January; Kim Jong Il's Birthday, 16 February; International Women's Day, 8 March; Kim Il Sung's Birthday, 15 April; May Day, 1 May; Liberation Day, 15 August; National Foundation Day, 9 September; Founding of the Korean Workers' Party, 10 October; Anniversary of the Constitution, 27 December.

**TIME:** 9 PM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

The Democratic People's Republic of Korea (DPRK), often called North Korea, occupies the northern 55% of the Korean Peninsula in East Asia. It has an area of 120,540 sq km (46,541 sq mi), extending 719 km (447 mi) NNE–SSW and 371 km (231 mi) ESE–WNW. Comparatively, the area occupied by DPRK is slightly smaller than the state of Mississippi. It is bordered on the N by China, on the NE by the Russia, on the E by the Sea of Japan (including East Korea Bay), known in Korea as the East Sea, on the S by the Republic of Korea (ROK), and on the S and W by the Yellow Sea and Korea Bay, with a total land boundary length of 1,673 km (1,040 mi) and a coastline of 2,495 km (1,550 mi). A demilitarized zone (DMZ), 4,000 m (13,100 ft) wide, covering 1,262 sq km (487 sq mi), and located north and south of the 38th parallel, separates the DPRK from the ROK, which occupies the southern part of the Korean Peninsula.

The DPRK's capital city, P'yongyang, is located in the southwestern part of the country.

## <sup>2</sup>TOPOGRAPHY

The DPRK is mostly mountainous. Mt. Paektu (2,744 m/9,003 ft), an extinct volcano with a scenic crater lake, is the highest point; it is located on the border with China and forms part of the Mach'ol Range. Other peaks of note include Mt. Kwanmo (2,541 m/8,337 ft), in the Hamgyong Range; Mt. Myohyang (1,909 m/6,263 ft), in the Myohyang Range, north of P'yongyang; and Mt. Kumgang ("Diamond Mountain," 1,638 m/5,374 ft), in the Taebaek Range in the southeast. Only about 20% of the country consists of lowlands and plains, but it is in these areas that the population is concentrated. The principal lowlands are the Unjon, P'yongyang, Chaeryong, Anju, and Yonbaek plains, extending from north to south along the west coast; and the Susong, Yongchon, Kilchu, Hamhung, and Yonghung plains, along the eastern shore.

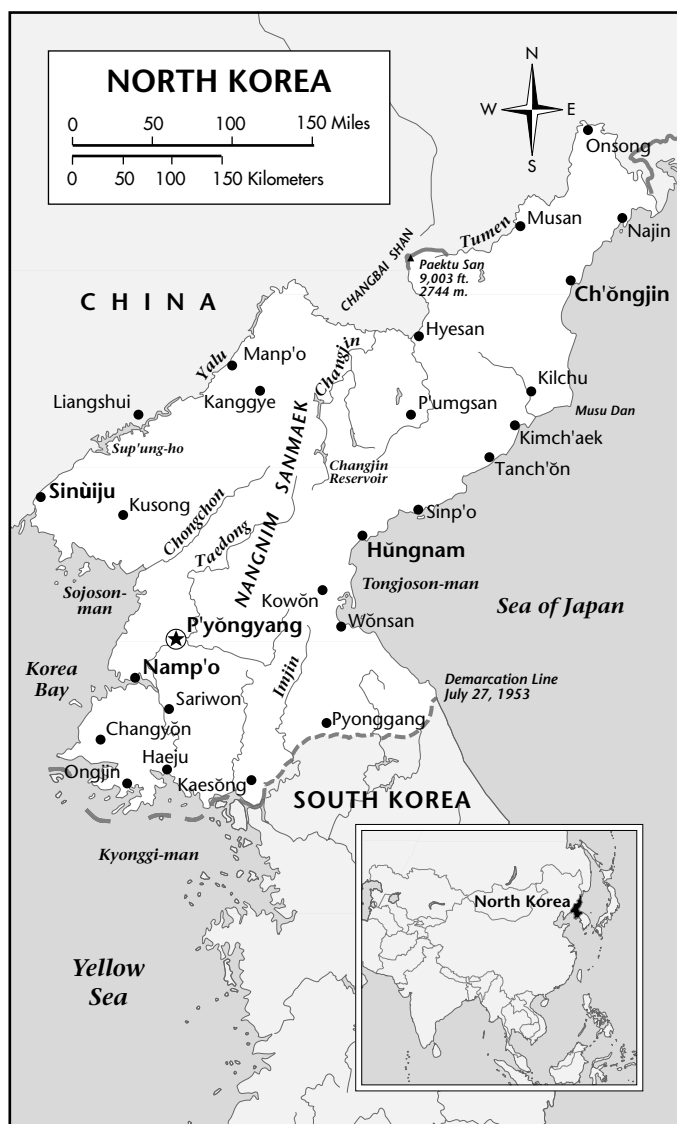

The principal rivers are the Tumen and Yalu along the northern border of the peninsula, both of which rise in Mt. Paektu, and the Taedong, which flows past P'yongyang. The Imjin rises in the DPRK near the 38th parallel in the west and crosses into the ROK before entering the Yellow Sea. Yellow Sea tides on the west coast rise to over 9 m (30 ft) in some places; Sea of Japan tides on the east rise to only about 1 m (3 ft).

## <sup>3</sup>CLIMATE

The climatic range is greater than the limited size of the peninsula would suggest. The average January temperature is -17°C (1°F) at Chunggang on the north-central border and -8°C (18°F) at P'yongyang. In the hottest part of the summer, however, the variation is not nearly so marked, average temperatures ranging from 24°C (75°F) in P'yongyang to 21°C (70°F) along the relatively cool northeast coast. Spring and fall are unusually pleasant, but winters are colder than average for the latitude, and summers are hot and humid. Precipitation is around 50 cm (20 in) along the upper reaches of the Tumen, but more than half of the peninsula receives 75–100 cm (30–40 in) per year. Nearly all the rainfall occurs in the April–September period, especially during the rainy season, from late June to early August. Typhoons occur occasionally in the early fall. Days without frost number about 180 in the northern part of the peninsula and increase toward the south.

## <sup>4</sup>FLORA AND FAUNA

Cold temperate vegetation, including firs, spruces, and other needled evergreens, predominate in mountainous areas of the DPRK, with alpine varieties flourishing at the higher altitudes. The hilly terrain of Mt. Paektu is believed to be the peninsula's last remaining habitat for Siberian tigers and is also, along with other alpine areas, the home of bears, wild boar, deer, snow leopards, and lynx. Common at lower elevations are the roe deer, Amur goral, wolf, water shrew, and muskrat. Birds seen in the

LOCATION: 37°38' to 43°1' N; 124°13' to 130°39' E. BOUNDARY LENGTHS: China, 1,025 kilometers (637 miles); Russia, 16 kilometers (10 miles); ROK, 240 kilometers (149 miles); total coastline, 1,028 kilometers (639 miles). TERRITORIAL SEA LIMIT: 12 miles.

DPRK include the black Manchurian ring-necked pheasant, black grouse, and three-toed woodpecker; the hawk owl, lesser-spotted woodpecker, and willow tit are indigenous to Mt. Paektu.

## 5 ENVIRONMENT

The Democratic People's Republic of Korea has environmental problems in the area of water pollution from agricultural and industrial sources. The nation has 67 cubic kilometers of renewable water resources with 73% used for farming activity and 16% used for industrial purposes. Korea's cities produce an average of 2.6 million tons of solid waste per year. In 1992 the DPRK was among the 20 countries with the world's highest levels of industrial carbon dioxide emissions, which totaled 253.7 million metric tons, a per capita level of 11.21 metric tons. In 1996, the total rose to 254.3 million metric tons.

The Korean government has established 220 facilities to regulate environmental conditions, industrial areas, protected land, and water reserves. The government has also created the Law of Environmental Protection. In 2001, 7 of Korea's mammal

species and 19 of its bird species were endangered. Endangered species in the DPRK included the tiger (particularly the Siberian tiger), Amur leopard, Oriental white stork, Japanese crested ibis, and Tristram's woodpecker. The Japanese sea lion has become extinct.

## 6 POPULATION

The population of North Korea in 2003 was estimated by the United Nations at 22,664,000, which placed it as number 47 in population among the 193 nations of the world. In that year approximately 6% of the population was over 65 years of age, with another 27% of the population under 15 years of age. There were an equal number of males and females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 0.54%, with the projected population for the year 2015 at 23,706,000. The population density varies greatly from region to region, with an average of 192 per sq km (498 per sq mi) in 2002. The majority of the population resides in the southern regions, with the mountainous northern border being the most sparsely populated.

It was estimated by the Population Reference Bureau that 60% of the population lived in urban areas in 2001. The capital city, P'yongyang, had a population of 3,136,000 in that year. Other large cities include Hamhung, with 670,000 inhabitants; Ch'ongjin, 530,000; Kaesong, 310,000; and Sinuiju, 330,000. According to the United Nations, the urban population growth rate for 2000–2005 was 1.6%.

## 7 MIGRATION

During the generation of Japanese occupation (1910–45), some three million Koreans, mainly from the northern provinces, emigrated to Manchuria and parts of China, 700,000 to Siberia, some three million to Japan, and about 7,000 to the United States (mostly to Hawaii). From the end of World War II in 1945 through 1950, at least 1.2 million Koreans crossed the 38th parallel into the ROK, refugees either from Communism or from the Korean War. Repatriation of overseas Koreans is actively encouraged in an attempt to ameliorate the nation's chronic labor shortages. Between 1945 and 1950, an estimated 300,000 Koreans were repatriated from Manchuria and Siberia; over 93,000 out of about 600,000 Koreans in Japan were repatriated to the DPRK between December 1959 and the end of 1974. The General Association of Korean Residents in Japan actively promotes the DPRK cause, and the P'yongyang government subsidizes some Korean schools on Japanese soil. Some 250,000 people of Korean origin in Japan have links to the DPRK, providing \$600–\$1,800 million in annual remittances to relatives. Under a 1986 treaty with China, North Koreans apprehended as illegal immigrants in China are quickly returned to the DPRK and executed. Between 1992 and 1996, about 1,000 North Koreans fled to China, where refugees can avoid detection within large ethnic-Korean communities. Both China and South Korea have begun to construct refugee camps in anticipation of a mass exodus of the population should the North Korean government collapse. In 1999, the net migration rate was zero migrants per 1,000 population.

## 8 ETHNIC GROUPS

The Koreans are believed to be descended primarily from Tungusic peoples of the Mongoloid race, who originated in the cold northern regions of Central Asia. There is scant evidence of non-Mongoloid admixture. There is a small Chinese community and a few ethnic Japanese; however, the DPRK has no sizable ethnic minority.

## 9 LANGUAGES

The Korean language is usually acknowledged to be a member of the Altaic family and is clearly related to other agglutinative

tongues like Turkish, Mongolian, and Japanese. Linguistic unification of the Korean Peninsula apparently followed political unification in the 7th century AD, and today the dialect differences are comparatively slight.

Korean is written with a largely phonetic alphabet called Han'gul. Created in 1443 under the great King Sejong, the Korean alphabet originally consisted of 14 consonants and 10 vowels; since then, 5 consonants and 11 vowels have been added. Han'gul letters are combined into syllables by clustering, in imitation of Chinese characters. Before the invention of Han'gul, Koreans wrote in Chinese, which continued to be both the official language and the language of most literature until the beginning of the 20th century. With the beginning of the Japanese colonial administration in 1910, Japanese became the official language, and the use of Korean was restricted.

Since 1949, the DPRK has used only Han'gul (calling it Choson Muntcha) for writing. North Korean linguists have studied Han'gul extensively, publishing comprehensive dictionaries in 1963 and 1969. In 1964, Kim Il Sung called for purification of Korean by replacing borrowings from English and Japanese with native Korean or familiar Chinese terms. The traditional honorifics of polite language remain in use, though in simplified forms, and have been sanctioned by the government.

Some Chinese (Mandarin dialect) and Russian are spoken in border areas.

## 10 RELIGIONS

The constitution provides for "freedom of religious belief," but in practice the government discourages all organized religious activity except that which serves the interests of the State. Real religious freedom does not exist. The constitution also states that "no one can use religion as a means to drag in foreign powers" or to disrupt the social order.

According to current government estimates, a majority of the population professes no religion or are avowed atheists. However, foreign observers indicate that religious activity within the country is much greater than the government suggests. Indigenous shamanism, notable for its emphasis on exorcising evil spirits, is practiced by a small percentage of the population, mostly in rural areas. The government reports that about 40,000 people are followers of Ch'ondogyo (Religion of the Heavenly Way), an eclectic indigenous sect incorporating both Christian and Buddhist elements. Originating in 1860, this organization went underground following the arrest of 10,000 Ch'ondogyo members in 1948. The government estimates there are 10,000 Buddhists who remain active despite the conversion of many Buddhist temples to secular uses.

Up to the mid-1940s, P'yongyang was an important center of Korean Christianity. Most of the nation's Christians, predominantly Protestants, fled to the ROK to escape persecution between 1945 and 1953. Christians now make up less than 1% of the population, or about 14,000 people according to the government. A number of Christian churches are overseen by lay leaders, since there are very few ordained priests and ministers. House churches may be more common among Christians; however, since these meetings are generally kept secret, there is no exact data concerning membership or participation. Those caught proselytizing may be arrested and are subject to harsh penalties.

## 11 TRANSPORTATION

The rail network, which has been rebuilt and extended following its almost complete destruction during the Korean War, is the principal means of transportation, carrying nearly all of the nation's freight and most of its passenger traffic. In 2002, railways in use comprised 5,000 km (3,107 mi) of track. The principal lines run along the west coast from P'yongyang to Sinuiju and across the peninsula from P'yongyang to Wonsan, Hamhung, and Ch'ongjin. A northern line, completed in the early

1980s, links P'yongyang to Hyesan and Musan. The major trunk routes are electrified. A subway system opened in P'yongyang in 1973 and was expanded under the 1978-84 development plan. There are also train services to Moscow and Beijing.

Road transportation is of secondary importance. In 2002, highways totaled an estimated 31,200 km (19,388 mi), of which only 1,997 km (1,241 mi) were paved. The exceptions are a superhighway connecting P'yongyang with Kaesong and two multi-lane highways, which link the national capital with the ports of Wonsan and Namp'o.

Most of the nation's 2,253 km (1,400 mi) of navigable waterways are suitable for small craft only. Rivers utilized for freight transportation are the Yalu, Taedong, and Chaeryong. The principal ports are Namp'o on the west coast, and Ch'ongjin and Hungnam (Hamhung) on the east coast. In 2002, there were 122 ships in the merchant fleet, with a total capacity of 738,886 GRT (1,037,506 DWT). Also in 2001, there were 87 airports, of which 39 had paved runways. Limited air services connect P'yongyang with other cities within the DPRK and in China and the former USSR. In 2001, 78,800 passengers were carried on scheduled domestic and international flights.

## 12 HISTORY

The history of the Korean people begins with the migration into the Korean Peninsula of Tungusic tribes from northern China and Manchuria about 3,000 BC. The archaeological evidence indicates that these tribes possessed a Neolithic culture and that it was not until about the 8th century BC that the art of metalworking came to Korea from China. The recorded history of Korea begins around 194 BC, when the ancient kingdom of Choson ("Land of Morning Calm") in northwestern Korea was seized by Wiman, a military figure from China of either Chinese or Korean origin. He usurped the throne from a king who, according to legend, was a descendant of Kija, a historical Chinese nobleman who emigrated from China at the end of the Shang dynasty (c.1122 BC). A popular Korean legend of much later origin asserts that Kija was preceded in his rule over the Korean Peninsula by a dynasty started in 2333 BC by the semidivine figure Tan-gun, an offspring of the son of the divine creator and a "bear woman" (possibly a woman from a bear-totem tribe). Both Tan-gun and Kija are still widely revered.

The primitive state controlled by Wiman's successors fell victim to expanding Chinese power in 108 BC, and there followed more than four centuries of Chinese colonial rule. During this period, the advanced Chinese culture slowly spread into nearly every corner of Korea, giving impetus to the coalescence of the loosely knit Korean tribes into statelike formations. By AD 313, when the Chinese power was destroyed, three Korean kingdoms had emerged: Paekche, in the southwest; Silla, in the southeast; and Koguryo, in the northwest. The three kingdoms had advanced cultures for the time, each compiling a written history during the 4th-6th centuries. During the same period, Buddhism was introduced into Korea, from which it was later taken to Japan. Ultimately, the Silla kingdom crushed the other two and united all but the northernmost portion of the peninsula, ushering in the age of the Silla Unification (668-900). After rebellions broke out, Korea again suffered threefold division, until reunification was achieved in 936 under the leadership of Wang Kon, who had proclaimed a new dynasty in the kingdom of Koryo (founded in 918), which derived its name from Koguryo; the name Korea is derived from Koryo.

Chinese influence on political and social institutions and on Korean thought went on at an accelerated pace during the Koryo period, and there were some notable cultural achievements, including the traditional invention of the use of movable metal type in printing in the early 12th century. Beginning in 1231, however, the Mongols invaded Koryo, devastating the land and, from 1259 on, making puppets of the Korean kings. Following a

revolt against the Mongol Empire in 1356 and a subsequent period of disorder, Gen. Yi Song-gye assumed the throne as King T'aejo in 1392, adopting the name Choson for Korea, moving the capital from Kaesong (the capital of Koryo since 918) to Seoul, and ushering in the long-lived Yi (or Li) Dynasty (1392–1910).

The first hundred years of Yi rule witnessed truly brilliant cultural achievements, especially during the reign of King Sejong (1418–50). The world's first authenticated casting of movable metal type was made in 1403. The Korean alphabet, Han'gul, was developed. A rain gauge was invented and put into use throughout the peninsula. A spate of basic texts—including histories, geographies, administrative codes, and works on music—were compiled and issued under state auspices. Scholars competed for government posts through the civil service examination system. By about 1500, however, factionalism divided the kingdom, and the Yi rulers were ill-prepared to meet foreign invasion. In 1592, in the course of an attempt to conquer China, the Japanese, under Hideyoshi Toyotomi, invaded Korea and were repulsed by an allied Chinese army and the Korean navy under Yi Sun-sin; in 1597 there was another invasion, which ended with Hideyoshi's death in 1598. After being invaded by the Manchus in 1636, Korea became a vassal state, eventually falling under the official but loose control of the Qing (Ch'ing), or Manchu, dynasty in China. During the 18th century, two energetic kings, Yongjo (r.1724–76) and Chongjo (r.1776–1800), were able to arrest somewhat the process of dynastic decline. The intellectual and cultural revival that they engendered, known as the Practical Learning Movement (Sirhak), was short-lived, however, and the Yi kingdom's bitterest century followed.

The first six decades of the 19th century were marked by a succession of natural disasters, by mounting peasant unrest and insurrection, and by administrative relapse into hopeless corruption and inefficiency. Eventually a Korean figure came forward to attempt to rescue the dynasty from impending collapse. This was Yi Ha-leng, known as the Taewon'gun (Prince Regent), who was the father of the king, Kojong, and held the actual power during the decade 1864–73. While his domestic reforms were generally enlightened and beneficial, he adopted an isolationist policy, including persecutions of the growing Roman Catholic community in Korea. Such a policy was doomed to failure. Soon after the Taewon'gun's downfall, the Kanghwa Treaty of 1876 with Japan opened Korea by force both to Japan and to the clamoring Western nations. During the last quarter of the 19th century, Korea was the prize in a complex rivalry for mastery of the peninsula among Japan, China, Western imperialist powers, and domestic political forces. Japan seized upon the pretext of peasant uprisings in Korea's southern provinces (the Tonghak Rebellion, led by followers of what later came to be called the Ch'ondogyo religion) during 1894–95 to destroy waning Chinese power in Korea in the First Sino-Japanese War. A decade later, Japan turned back the Russian bid for supremacy in the Russo-Japanese War (1904–5). In 1910, with the tacit approval of the United States and the European powers, the Yi Dynasty came to an end with the formal annexation of Korea by Japan.

### The Democratic People's Republic

For 35 years, Korea (renamed Choson) remained under the Japanese yoke, until liberated by US and Soviet troops at the end of World War II. Although Japanese colonial rule brought to Korea considerable economic development along modern Western lines, the benefits went primarily to the Japanese, and the process was accompanied by ever harsher political and cultural oppression. The Korean people staged a nationwide passive resistance movement beginning on 1 March 1919 (the Samil or "March 1" Movement), only to have it swiftly and brutally crushed by their Japanese overlords. In the 1920s and 1930s, nationalist and Communist movements developed both within

Korea and among Korean exiles in the former USSR, Manchuria (which was occupied by Japan in 1931), and the rest of China. After the onset of the Second Sino-Japanese War in 1937, the Japanese aimed to eradicate Korean national identity; even the use of the Korean language was banned.

After Japan accepted the Potsdam Declaration for unconditional surrender on 14 August 1945, the 38th parallel was chosen, as a result of US initiative, as a line of demarcation between Soviet occupation forces (who had entered the north on 8 August) and US occupation forces (who were introduced on 8 September). While the Americans set up a full military government allied with conservative Korean political forces, the Soviets allied their government with leftist and Communist Korean forces led by Kim Il Sung, who had been an anti-Japanese guerrilla leader in Manchuria. After a joint commission set up by the US and the USSR failed to agree on plans for the reunification of Korea, the problem was placed on the UN agenda in September 1947. In accordance with a UN resolution, elections were held on 10 May 1948 in South Korea alone; North Korea did not recognize UN competency to sponsor the elections. The newly elected National Assembly formulated a democratic constitution and chose Syngman Rhee, who had been the leader of an independence movement in exile, to be the first president of the Republic of Korea, proclaimed on 15 August 1948. On 9 September, the Democratic People's Republic of Korea was established in the north, with Kim Il-sung at the helm. Like its southern counterpart, the DPRK claimed to be the legitimate government of all Korea. In December, however, the ROK was acknowledged by the UN General Assembly as the only government in Korea to have been formed according to the original UN mandate. The next year and a half brought sporadic border clashes between the two Koreas, coupled with increasing guerrilla activity in the south.

On 25 June 1950, the People's Army of the DPRK struck across the 38th parallel at dawn in a move to unify the peninsula under Communist control. The DPRK forces advanced rapidly; Seoul, the ROK capital, fell within three days, and the destruction of the ROK seemed imminent. At US urging, the UN Security Council branded the DPRK an aggressor and called for the withdrawal of the attacking forces. President Harry S. Truman ordered US air and naval forces into battle on 27 June and ground forces three days later. A multinational UN Command was then created to join with and lead the South Koreans. An amphibious landing at Inch'on (15 September) in the ROK under General Douglas MacArthur brought about the complete disintegration of the DPRK's military position.

MacArthur then made a fateful decision to drive into the north. As the UN forces approached the Yalu River, China warned that it would not tolerate a unification of the peninsula under US/UN auspices. After several weeks of threats and feints, "volunteers" from the Chinese People's Liberation Army entered the fighting en masse, forcing MacArthur into a costly, pell-mell retreat back down the peninsula. The battle line stabilized nearly along the 38th parallel, where it remained for two years. On 27 July 1953, an armistice agreement finally was signed by the North Korean People's Army, the Chinese volunteers, and the UN Command at P'anmunjom in the DPRK, ending a conflict that cost the lives of an estimated 415,000 South Koreans, 23,300 Americans (combat dead), and 3,100 UN allies; casualties among Communist forces are officially estimated by the DPRK at 50,000 but may have been as high as two million. A military demarcation line, which neither side regarded as a permanent border, was established, surrounded by the DMZ. After the armistice agreement, all but a token force of UN Command troops withdrew, except those of the United States, which in 1954 guaranteed the security of the ROK under a mutual defense treaty. A postwar international conference held in 1954 to resolve the problem of Korea's political division was unable to find a

satisfactory formula for reunification. Meanwhile, the DPRK, with the aid of China and the former USSR, began to restore its war-damaged economy. A series of purges consolidated political power in the hands of Kim Il Sung and his supporters. By the end of the 1950s, Kim had emerged as the unchallenged leader of the DPRK and the focus of a personality cult that developed around him and his family.

In 1972, the government replaced the original 1948 constitution with a new document (which would be further revised in 1992), and reunification talks, stalled since 1954, resumed under Red Cross auspices, though without lasting effect. Throughout the 1970s and 1980s, as part of its "cold war" with the ROK, the DPRK extended its diplomatic relations to over 100 countries. The ROK continued to charge the DPRK with attempts at sabotage and subversion, including infiltration by tunnels under the DMZ. In the 1980s, Korea's basic divisions remained unresolved. Since 1980, President Kim proposed that both the North and South be reunited as a confederal state, with each part retaining regional autonomy and its own ideological and social system, but the ROK has rejected the concept; the DPRK likewise has rejected the ROK's repeated proposals for the resumption of North-South talks on reunification unless the United States is a third party in the negotiations, but neither the ROK nor the United States has accepted that condition. Kim was unanimously reelected president in May 1990, and his son, Kim Jong-Il (1942–), groomed since the 1960s as his designated successor, appeared to be running the nation's day-to-day affairs, though without benefit of any formal administrative post. Indications of an improvement in relations between the North and South included material relief provided by the DPRK to the ROK after a flood in 1984, talks under Red Cross auspices that led to a brief reunion of separated families in 1985, economic discussions, and interparliamentary contacts. The DPRK did not participate in the 1988 summer Olympic Games, officially hosted by the ROK, since it was not named as cohost.

During the 1990s, the DPRK was less able to rely on its allies, the large communist states of the former USSR and China. In 1990, the USSR and the ROK opened formal diplomatic relations and, by the 1990s, the collapse of the Soviet Union cut off an important source of economic and political support for the DPRK. After a break of twelve years since the DPRK sided with the former USSR in the Sino-Soviet clash of 1969, China and the DPRK had reestablished ties in 1982. Yet in 1990, China and the ROK began to encourage mutual trade and in 1992 established formal diplomatic relations. Beginning in 1993, China demanded that all its exports to the DPRK be paid for with cash instead of through barter. The DPRK found itself increasingly isolated and in severe economic difficulty. Reunification talks, and the DPRK's relations with the US, took on added urgency as the DPRK sought international recognition and economic aid.

In the first half of the 1990s, the DPRK's foreign relations revolved around issues of joint US-ROK military exercises and of nuclear capabilities. Repeatedly, since 1986, the DPRK canceled negotiations with the ROK during the annual "Team Spirit" exercises of US and ROK militaries. In 1991, the United States withdrew its nuclear weapons from the ROK and the two Koreas signed a bilateral agreement to create a nuclear weapons-free peninsula. Yet it was suspected that the DPRK was developing the capability to reprocess nuclear fuels and build nuclear weapons. (Both the ROK and Japan had stockpiles of plutonium.) Conflicts over the access of an International Atomic Energy Agency inspection team, which the DPRK allowed into North Korea in May 1994, to a reprocessing plant led to new tensions. These tensions were defused with an agreement for high-level talks between the US and the DPRK, previously refused by the United States, to be held on 8 July 1994, followed on 25 July by a summit in P'yongyang between the presidents of the two Koreas, the first such summit since Korea was divided in 1945.

On 8 July 1994, just as the US-DPRK talks were beginning, President Kim Il Sung died, and the talks were suspended. Kim Jong Il replaced his father as leader of the country, without assuming Kim Il Sung's previous titles of state president and general secretary of the Korean Workers Party. The official mourning period for Kim Il Sung was extended to three years.

On 10 September 1995 Russia advised the DPRK that it would not extend the 1961 treaty on friendship, cooperation and mutual assistance. The DPRK closed the Neutral Nations Supervisory Committee offices in the northern half of the joint security area at Panmunjim in an effort to dismantle the Military Armistice Agreement in May of 1994, following the expulsion of the Czech and Polish representatives and the withdrawal of China, one of the three original signatures to the agreement. This post-Cold War framework was designed to pressure the US into guaranteeing the DPRK's survival by means of a bilateral peace treaty. Marshall O Jen U, the armed forces supreme commander and the second in the hierarchy behind Kim Il Sung died 25 February 1995. He had been a prominent symbol of military acceptance of the younger Kim.

After he had served as North Korea's de facto leader for four years without formally being named as president, Kim Jong Il's position was made official. On 5 September 1998, the Supreme People's Assembly paid tribute to his father, Kim Il Sung, by permanently abolishing the post of president, which left Kim Jong Il, in his capacity as Chairman of the National Defense Commission, the nation's top political official. At the same session, the assembly approved a number of other changes to the nation's constitution.

Tensions over North Korea's nuclear capabilities were revived when it reportedly fired a three-stage ballistic missile into the Pacific; claims that the vehicle was a satellite launcher were initially greeted by skepticism on the part of the United States and Japan, over which it had been fired.

Widespread flooding, due in part to North Korea's efforts to expand the land under collectivization by massive deforestation, has led to a national famine. Relief efforts have not been able to raise nearly enough food to feed North Korea's starving population. The policies of North Korea's government have led to reticence on the part of those nations that normally would have contributed to the UN-sponsored World Food Program (WFP). Nevertheless, in 1998 the WFP mounted the largest aid effort on record in an attempt to save millions of North Koreans from starvation. That year the DPRK accepted nearly \$1 billion in food aid. Famine conditions continued through 1999 and into 2000, with the WFP issuing renewed calls for assistance from the international community.

As part of an effort to bring North Korea out of its self-imposed isolation, its government renewed the diplomatic initiative toward the South that had been interrupted by the death of Kim Il Sung in 1994. What became known as South Korean President Kim Dae-jung's "sunshine policy" of rapprochement toward the North resulted in the signing of a joint agreement at a summit in P'yongyang between Kim Dae-jung and Kim Jong Il in June 2000. In 2003, incoming South Korean President Roh Moo-hyun pledged to continue the "sunshine policy," but by then relations with North Korea had deteriorated due to revelations in October 2002 that North Korea was undertaking a program to enrich uranium for use in nuclear weapons. This revelation came on the heels of US president George W. Bush's January 2002 State of the Union Address, in which he labeled North Korea (along with Iran and Iraq) a state that endangers the peace of the world by supporting terrorism and pursuing weapons of mass destruction (chemical, biological, and nuclear weapons). In late 2002, North Korea accused the United States of not adhering to the Agreed Framework between the two countries, established in 1994, in that the US's construction of two light-water reactors in North Korea was far behind schedule. The North demanded the

International Atomic Energy Agency remove seals and surveillance equipment from its Yongbyon power plant, which the IAEA said was in danger of reprocessing spent fuel rods for plutonium.

In January 2003, North Korea announced it would withdraw from the Nuclear Nonproliferation Treaty. In March, four armed North Korean fighter jets intercepted a US reconnaissance plane in international air space over the Sea of Japan about 150 miles off North Korea's coast, and shadowed it for 22 minutes. The US plane broke off its mission and returned to its base in Japan, unharmed. On 1 April, the US announced that stealth fighters sent to South Korea for a training exercise were to remain there once the exercises ended. Later that month, talks were held between US and North Korean officials in Beijing; the talks ended in mutual recrimination, when US officials indicated the North had admitted it possessed nuclear weapons. The US on 6 June 2003 announced it would redeploy some of its 37,000 troops from the Demilitarized Zone (DMZ) between North and South Korea, in an attempt to enhance security and create a more agile and mobile force in the region. On 9 June, North Korea stated it would be necessary to develop a "nuclear deterrent" to reduce conventional weapons and funnel resources to programs that benefit its citizens, and to respond to the hostile stance taken by the United States with regard to North Korea.

### 13 GOVERNMENT

In theory, the highest organ of state power is the unicameral Supreme People's Assembly (SPA), with 687 members in 2003. In practice, however, governmental control rests with the leadership of the Korean Workers' (Communist) Party and the military. SPA members are elected every five years and meet for only a few days each year to ratify decisions made by other governmental and party organs. As part of a series of constitutional changes made by the SPA in its 1998 session, a Presidium was created to operate as the top governmental body between sessions of the SPA, performing functions that formerly belonged to a 19-member Standing Committee and the 24-member Central People's Committee.

Under the constitution (first adopted in 1948, completely revised in 1972, revisions in 1992 and 1998), the SPA also elected the president of the DPRK; however, as of 1998, following the death of Kim Il Sung four years earlier, the post of president was abolished. In addition, the responsibilities of the cabinet (formerly called the Administrative Council) were expanded.

The state ideology is self-reliance (Chuch'e or Juch'e), the Korean version of Marxism-Leninism that was formulated in 1930 and adopted by the party in 1955. Under the new constitution (which created the post of president), Kim Il Sung, who had previously held state power as premier (1948–72), was elected to the presidency in 1972 and reelected in 1977, 1982, 1986, and 1990. Kim Il Sung died 8 July 1994. Kim Jong Il assumed his father's responsibilities and was formally acknowledged as the nation's leader at the 1998 session of the SPA. Hong Song Nam has been Premier since September 1998.

Suffrage extends to all men and women 17 years of age or older. Elections are on a single slate of Communist-approved candidates, on a yes or no basis. Following elections, it is usually asserted that nearly all those eligible voted and that their votes were unanimous in favor of the candidates.

### 14 POLITICAL PARTIES

The Korean Workers' (Communist) Party, the ruling party of the DPRK, was formed on 10 October 1945 through a merger of the Communist Party and the New Democratic Party. By the mid-1980s, party membership was estimated to have risen to over 3 million, or about 16% of the population, the largest percentage of any Communist country. The principal party organ is the National Party Congress. The Congress adopts the party program

and approves the political line set by its Central People's Committee. The party constitution states that a congress is to be convened every four years; however, as of 2003, no party congress had convened since 1980.

To guide the party between sessions of the National Party Congress, the Congress elects a Central People's Committee and a Central Auditing Commission, which looks after the party's financial affairs. The Central People's Committee elects the 10 members of the Politburo or Political Bureau. At the top of the party hierarchy is the Presidium of the Politburo, of which the only remaining member is Kim Jong Il. The other members either died or were dismissed, and a new Politburo could not be appointed because the party congress has not met. In October 1997, Kim Jong Il was also named to succeed his father as general secretary of the party.

A "united front" policy confers nominal status on two ostensibly non-Communist political parties: the Korean Social Democratic Party, founded in 1945 and known as the Korean Democratic Party until 1981, and the Friends Party, founded in 1946 for adherents of the Ch'ondogyo faith.

### 15 LOCAL GOVERNMENT

Of Korea's 13 historic provinces (*do*), 6 were wholly or partly within the DPRK after 1945. The Communist regime subsequently established two new provinces and divided another into two sections, thus raising the number of provinces to nine: North P'yongan, South P'yongan, Chagang, North Hwanghae, South Hwanghae, Kangwon, North Hamgyong, South Hamgyong, and Yanggang. In addition there are four provincial-level cities under the central government (P'yongyang, the capital, and Kaesong, Najin Sonbong and Namp'o). The provinces are divided into cities (*si*), counties (*kun*), or districts (*kuyok*); and villages (*eup*), towns (*ri*), blocks (*dong*) or workers' districts. There are currently 24 ordinary cities, 146 counties, 31 districts, 2 subdistricts, 3,255 villages, 146 towns, 1,137 blocks, and 255 workers' districts.

There are people's assemblies and people's committees at all levels of administration. Members of the people's assemblies are elected for four-year terms at the provincial level and for two-year terms at the county, township, and village levels. The assemblies supervise public, economic, and cultural activities. They also elect and recall people's committees, which are the permanent executive and administrative organs of the state at the local level.

### 16 JUDICIAL SYSTEM

The DPRK's judicial system consists of the Central Court, formerly called the Supreme Court; the courts of provinces, cities, and counties; and special courts (courts-martial and transport courts). Most cases are tried in the first instance by people's courts at the city or county level. Provincial courts try important cases and examine appeals from lower court judgments. Members of the Central Court are named by the Standing Committee of the SPA; lower courts are appointed by the people's assemblies at the corresponding level. A prosecutor-general, who is also appointed by the SPA, is the country's chief law-enforcement officer. He appoints prosecutors at the provincial, city, and county levels. Paralleling the court system is the Central Procurator's Office, a supervisory and investigative body.

Judges at the city and county levels serve two-year terms and are usually Korea Workers' Party members. Prosecution of alleged crimes against the state is conducted outside the judicial system and in secret. Reports from defectors in 2002 were that 150,000–200,000 political prisoners and family members were being detained in DPRK security camps in remote areas.

The constitution declares that courts shall be independent and that judicial proceedings must be conducted according to elaborate procedural regulations. In practice, however, the

principles of procedural due process as guaranteed by Western democratic systems are not respected.

The constitution provides for the protection of the inviolability of person and residence, and the privacy of correspondence. However in practice these protections are not always afforded.

## 17 ARMED FORCES

Out of an estimated total of 1,082,000 personnel on active duty in 2000, 950,000 were in the army, 46,000 in the navy, and 86,000 in the air force. An additional 4.7 million were in the reserves, and there was a civilian militia of 3.5 million. Equipment includes some 3,500 main battle tanks, 26 submarines, and 620 combat aircraft. The DPRK has admitted to developing a nuclear weapons program. North Korea provides advisors to 12 African countries. The Ministry of Public Security controls 189,000 internal security forces. Defense expenditures in 2001 totaled an estimated \$5.1 billion or 31% of GDP. Because of the secrecy inherent in the DPRK, reliability of the figures provided is uncertain, as is information on the combat readiness of its forces.

## 18 INTERNATIONAL COOPERATION

During the mid-1970s, the DPRK came out of its relative isolation to pursue a vigorous international diplomacy. By 1986, it had diplomatic relations with 103 countries, including 67 that also had relations with the ROK. The DPRK is a member of the UN and certain non-regional specialized UN agencies, including FAO, ICAO, IFAD, IMO, ITU, UNCTAD, UNESCO, UNIDO, UPU, WHO, WIPO, and WMO. The nation has signed the Law of the Sea and has been particularly active in third-world diplomacy; in August 1975, the DPRK entered the League of Non-Aligned Nations, and it has since joined G-77. The DPRK retains treaties of friendship, cooperation, and mutual defense concluded with China and the republics of the former USSR in 1961. The DPRK was the only Asian Communist country to remain neutral in the Sino-Soviet dispute. The DPRK withdrew from the Nuclear Nonproliferation Treaty in 2003.

## 19 ECONOMY

The Korean War devastated much of the DPRK's economy, but growth after postwar reconstruction was rapid. The Communist regime used its rich mineral resources to promote industry, especially heavy industry. A generally accepted figure put annual industrial growth from 1956 to 1963 at about 25%. By 1965, industry accounted for 78% of the total output, and agriculture 22%, an exact reversal of their respective contributions in 1946. Until the oil crisis of the 1970s, the DPRK ranked as one of the most prosperous states in Asia, but the government's pursuit of self-reliance (*juche*) had, by the end of the 1960s, also transformed it into one the most isolated and strictly regulated economies in the world. After 1965, greater emphasis was placed on agriculture and light industry, the latter stress owing to increasing demands for consumer goods. The industrial growth rate slowed in the late 1960s to around 14% and averaged about 16% during the 1970s. In the meantime, the military government in South Korea—the Republic of Korea or ROK—starting in 1962, began a series of Five Year Plans that set it on the trajectory of export-led growth that would by 2001 produce a per capita income 19 times greater than that in the DPRK. Efforts in the DPRK to accelerate the growth rate during the mid-1970s, requiring substantial imports of heavy industrial equipment from Japan and Western Europe, led to a payments crisis, and the DPRK was repeatedly compelled to reschedule its foreign debt.

The seven-year plan for 1978–84 called for an annual increase in industrial output of 12%. Reliable data on the economy became increasingly difficult to obtain as Kim Il Sung's regime became more obsessed with passing power and his particular vision on to his son, Kim Jong Il. In the 1980s the government

also became seriously involved in the clandestine supply of missiles and nuclear technology to Pakistan and Middle East countries, particularly Iran. Estimates are that growth fell to no more than 2% or 3% in the early 1980s as about one-fourth of output went into the country's outsized military.

After a three year "period of adjustment" the government announced its third Seven-Year Plan for 1987 to 1993, which targeted an annual increase in industrial growth of 10%. The plan also called increased allocations to agricultural production, fueling speculation that there were food shortages. In any case the plan period spanned three watershed events that helped set the economy on its downward course. First was the ROK's successful hosting of the 1988 Olympics, which left the DPRK increasingly isolated due to its own refusal to co-host any events and instead to boycott the games. Second was the break-up of the Soviet Union in 1991, cutting off the DPRK's main sources of trade and aid. Third was the admission of the ROK and the DPRK to the UN in 1991 as separate states, unblocked by a veto from either Russia or China. On 8 July 1994, Kim Il Sung died, throwing the society into mourning, but also, it was hoped, opening up opportunities for economic reform. In October 1994, the so-called Agreed-Framework was put together whereby a consortium of the United States, the ROK, and Japan, organized as the Korean Peninsula Energy Development Organization (KEDO), would undertake to provide for the finance and construction of light-water nuclear reactors (LWRs) to supply 2000 MW of power in 2003 plus an interim supply of 500,000 metric tons of fuel oil a year in exchange for the DPRK's freezing and eventually dismantling its heavy-water nuclear facilities that were readily convertible to weapons use.

In January 1995 the United States sent a first installment of 50,000 tons of fuel, but in 1995 and 1996 the North Korean population became victims of widespread malnutrition and famine, worsened by the government's rejection of outside observers and reluctance to admit the seriousness of the situation, despite its unprecedented appeal for foreign aid in 1995. Lacking money to fuel and repair tractors, and to pay for fertilizer, the government had called for and/or allowed the cultivation of marginal land with professed target of doubling food production. The counter-productive result was crop-destroying flooding in 1995 and 1996 when the country was hit by heavy rains and a typhoon because the removal of tree cover from hillsides through the cultivation of marginal land made flooding worse. Drought conditions that followed worsened not only the food shortage but also the energy shortage by reducing the output from hydroelectric facilities. By 1997, most North Koreans had come to depend on government rations, which were reduced to 3.5 to 5.3 oz. per person a day. In 1997 construction began on what were now to be two 1000 MW LWRs, delayed many months by North Korean objections to the use of a South Korean firm for the job. Estimates are that in real terms the DPRK economy contracted 6.8% in 1997 and another 1.1% in 1998. In 1999, there were signs of positive growth, though small and from a low base, and due mainly to government construction projects.

The Bank of Korea, the most reliable source of economic data on the DPRK, estimates that the economy expanded 1.3% in 2000 and 3.7% in 2001. In 2002, albeit unannounced, a series of market-oriented reforms were undertaken. Refugees reported wage increases of 10% to 20% that partly reflected the higher prices in the unofficial "farmer's markets" and black markets, and that state rationing was being phased out. Three new special economic zones (SEZs) were announced, making a total of four (the first one established in 1991), designed to attract foreign investment, particularly from China and South Korea. A defector reported a significant reduction in the party personnel attached to two major state corporations, the Musan Consolidated Mine Corporation and the Kimchalk Consolidated Steel Corporation. Whether such reforms were meant to appease the more

confrontational Bush administration, which, through US president George W. Bush's State of the Union address in January 2002, had branded North Korea as part of an "axis of evil." In November 2002 the United States announced that it was suspending oil shipments, and that the work on the LWRs was going to be deliberately slowed. In December 2002, the DPRK expelled the last IAEA inspectors and removed their monitoring devices. In February 2003, the IAEA referred the matter of the DPRK's nuclear program to the UN Security Council. The program of economic inducements has been transformed into a zero-sum confrontation.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2002 North Korea's gross domestic product (GDP) was estimated at \$22 billion. The per capita GDP was estimated at \$1,000. The annual growth rate of GDP was estimated at 1%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 30% of GDP, industry 32%, and services 37%. Foreign aid receipts amounted to about \$5 per capita.

## 21 LABOR

The labor force was estimated at 9.6 million in 2001. Approximately 36% of the labor force was engaged in agriculture.

There are no free trade unions in North Korea; instead there is one labor organization controlled by the government, the General Federation of Trade Unions of Korea, of which virtually all industrial and office workers are members. There is no minimum wage; salaries in joint venture and foreign-owned businesses were estimated at \$110 per month in 2002. The average salary in the public sector is not known. Labor conditions are governed by a national labor law of 1978. The eight-hour workday is standard but most laborers work 12-16 hours daily during production campaigns. Although children under the age of 16 are prohibited by law from working, school children work in factories or on farms to meet production goals. Office and shop workers spend Fridays in public works and urban maintenance projects. In addition, some work time is spent on mandatory study of the writings of Kim Il Sung and Kim Jong Il.

## 22 AGRICULTURE

About two million hectares (4.9 million acres), or 16% of all land, can be classified as arable. Most of the agricultural land is concentrated in the west-coast provinces of North and South P'yongan and North and South Hwanghae. Irrigation, land reclamation, and flood-control projects have been carried out, especially in rice-growing areas; about one-half of the arable land is irrigated.

Rice is the principal crop, occupying 29% of all farmland in 1999. Total rice production was put at 2,343,000 tons in 1999, compared to 5.6 million tons in 1985. Improved rice yields have been achieved through the use of "miracle" rice strains, intensive application of fertilizer, and mechanization. In 1998 there were some 75,000 tractors in use, or about one for every 27 hectares (67 acres) of cultivated land. Double-cropping of rice is not possible because of the climate, but double-cropping of other grains has been maximized through the use of cold-bed seeding and new seed varieties, so that an estimated half of all cultivated land yields two harvests. The leading grains after rice are corn, wheat, millet, and barley. Other important crops include soybeans, potatoes, sweet potatoes, pulses, oats, sorghum, rye, tobacco, and cotton. The DPRK long claimed to be self-sufficient in grain products, with total production (including rice) increasing from seven million tons in 1974 to 13.6 million tons in

1985, but falling to 4.0 million tons in 1999. Heavy rains in 1995 caused severe flooding in the DPRK, affecting over 5.2 million people and damaging crop production. Since 1996, there have been reports of widespread food shortages and famine in the DPRK.

The country's farms were collectivized after the Korean War. The movement began late in 1953, and the process was completed by August 1958, when all of the DPRK's 1,055,000 farm families had become members of over 16,000 cooperatives. In order to establish larger and more efficient operating units, the cooperatives were merged in the autumn of 1958 into approximately 3,800 units with about 300 families each. Produce is delivered to the government, which controls distribution through state stores. Most farm workers retain small private plots (less than 100 sq m/1,100 sq ft) and can sell produce from them to the state or in peasant markets.

## 23 ANIMAL HUSBANDRY

Since the 1950s, a major effort has been made to increase corn and fodder supplies, to improve breeding practices, and to raise sharply the numbers of livestock in all categories. In 2001, livestock totals were estimated as follows: cattle, 1,570,000 head; hogs, 3,137,000; sheep, 189,000; goats, 2,566,000; and horses, 47,000. Livestock raising is generally associated with the state farms. Meat produced in 2001 totaled 210,000 tons; milk, 92,000; and eggs, 120,000.

## 24 FISHING

The catch from the sea and from freshwater aquaculture includes mackerel, anchovy, tuna, mullet, rainbow trout, squid, kelp, sea urchin eggs, pollack eggs, and shrimp. The FAO estimated production for 2000 was 200,850 tons. About 90% of fishing activity is marine, concentrated in the Sea of Japan. Much of the annual catch is now used for export.

The fishing industry is entirely socialized, with some 230 maritime cooperatives and more than 30 state-run fishery stations. The main fishing ports are on the east coast.

## 25 FORESTRY

Forests and woodland comprised about 8,210,000 hectares (20,287,000 acres) in 2000. There are rich stands of coniferous forests in the northern provinces. Predominant trees include oak, alder, larch, pine, spruce, and fir. Timber production was estimated at 7 million cu m (247 million cu ft) in 2000. About 80% of the timber cut was used for fuel. Sawn wood production in 2000 was 280,000 cu m (9.9 million cu ft); wood pulp, 56,000 tons; and paper and paperboard, 80,000 tons. The Ministry of Forestry, created in 1980, promotes development of forest industries.

## 26 MINING

Minerals and metallurgical products were North Korea's top two export commodities in 2002, and chemicals manufacturing, mining, and metallurgy ranked fourth, fifth, and sixth, respectively, among the country's top industries. The leading minerals were coal, iron ore, magnesite, graphite, copper, zinc, lead, and precious metals. The mining and construction sectors grew by 5.8% and 13.6%, respectively, and GDP grew by 1.3% in 2000 and 6.2% in 1999. Gross weight of marketable iron ore and concentrate produced in 2000 was 700,000 tons, down from 1 million tons in 1997. High-grade iron ore deposits lay off the coast of Unryl county, South Hwanghae Province. Outputs of other minerals included crude magnesite, 1.0 million tons, down from 1.5 million tons in 1998; graphite, 30,000 tons, down from 40,000 in 1997; mine copper (metal content), 14,000 tons; zinc, 190,000 tons; lead, 70,000 tons; gold (metal content), 5,000 kg; silver, 40 tons, down from 50 in 1997; sulfur, 240,000 tons; phosphate rock, 350,000 tons, down from 520,000 in 1997; and

tungsten, 700 tons, down from 900 in 1997. North Korea also produced barite, hydraulic cement, fluorspar, nitrogen, salt, and pyrophyllite soapstone, and presumably produced varieties of stone, and sand and gravel. As North Korea began emerging from its isolation, mineral trade with the Republic of Korea increased, with the DPRK exporting coal, gold, steel, and zinc to the south. Since the collapse of the Soviet Union, North Korea has faced shortages of raw materials, in addition to shortages of fuel, food, and electricity. Molopo Australia NL had four gold projects in North Korea—Big Boy, Changjin, Danchon, and Hambung—and successfully processed 625 g of gold from a gravity separation plant in Changjin.

## 27 ENERGY AND POWER

Coal, oil, and natural gas provided 32.6% of the DPRK's electricity generation in 2000. Hydroelectricity accounted for the remainder. Coal is by far the most important component of energy production. The major coal-producing center is in South Pyongan Province, where the Anju, Sunchon, Tokchon, Pukchang, and Kaechon coal-producing complexes are located. In 2000, coal accounted for 86% of primary energy consumption. Estimated coal production in 2000 was 101.4 million tons, and domestic consumption was 103.6 million tons that year. Installed electric capacity was 9.5 million kW as of 2001. Production of electricity in 2000 totaled 30.8 billion kWh, up from 9.1 billion kWh in 1960 but down from 51.9 billion kWh in 1991. Consumption of electricity in 2000 was 31 billion kWh. In 1998, engineers and technical advisers from the United States assisted with the installation of windmills in coastal villages in the P'yongyang region.

In 1986, the former USSR agreed to the construction of a nuclear power plant with an expected capacity of 1.8 million kW. In the same year, a hydroelectric power station at Taipingwan, jointly built by China and the DPRK, began operations. In February 1994, North Korea agreed to UN-supported demands that it open part of its nuclear program to international inspections. The International Atomic Energy Agency (IAEA) began inspections of North Korean nuclear facilities in March 1991 (almost one year after North Korea withdrew from the Nuclear Non-Proliferation Treaty), in order to determine whether or not North Korea was reprocessing spent nuclear reactor fuel, which could be used to make a nuclear weapon. During 1995 the IAEA was still trying to verify the status of the nuclear material, as the DPRK had agreed to some safeguard measures but declined to accept others. As of 2000, nuclear energy in North Korea continued to arouse security concerns as it involves graphite technology that could be applied to the construction of nuclear weapons. The North Korean government was generally regarded as refusing to cooperate with IAEA inspectors by 2000.

## 28 INDUSTRY

Under Japanese rule, northern Korea was regarded mainly as a supplier of war materials, while manufacturing and processing branches were neglected. The Communist regime, however, emphasized the development of manufacturing. By 1963, the metal-fabricating, textile, and food-processing industries accounted for 33%, 18.6%, and 13.7% of industrial output, respectively. By the late 1980s, heavy industry (including metal fabricating and textile production) accounted for 50% of total industrial production. Private enterprise in industry declined from 27.6% of total output in 1946 to only 2% in 1956, and the private sector was said to have disappeared by 1959. About 90% of all industry is state-owned, and 10% is owned by cooperatives.

Under the Second Seven-Year Plan (1978–84), industrial output was scheduled to grow at an average annual rate of 12.2%; however, Western estimates put annual growth at 2% or 3% by the early 1980s. In the mid-1980s, the government became involved in clandestine missile production and supply.

The DPRK had obtained the technology for producing HY-2 Silkworm and Scud (short-range) missiles in the 1970s and early 1980s. In 1985 the DPRK reached a bilateral accord with Iran, then in the midst of its war with Iraq, whereby North Korea would supply production technology and missiles in exchange for payments to finance engineering of the Scud-B missiles (a more accurate version of the original Scuds) and help in covert procurement of other necessary technologies. Ironically, because it became a matter of international security concern, the missile program is better documented than other aspects of the DPRK's secretive economy.

In 1987, Scud-B production facilities were established near P'yongyang. In June 1987, North Korea delivered 90 to 100 Scud-B missiles, 12 launchers, and an undetermined number of HY-2 Silkworm missiles to Iran as part of the two countries' \$500 million military assistance agreement. In the meantime, the DPRK had established its own Scud-B regiment and begun work on an upgraded model, the Scud-C, with double the range (595 km/372 mi). Iran was being supplied "knock-down kits" for assembly at its ballistic missile plant in Isfahan. Iran continued in exchange to finance the DPRK's weapons program as it began work on an intermediate-range ballistic missile (IRBM) at Nodong that would give it its name.

In June 1990, the DPRK conducted the first successful test of the Scud-C, and in November concluded a second series of agreements with Iran believed to have covered the purchase of DPRK Scud-Cs and the conversion of an Iranian missile-maintenance facility into a production facility. In December 1990, during the run-up to the Gulf War, the DPRK also agreed to sell Scud-B and Scud-C missiles to Iraq, but in February 1991, despite a personal visit from Iraq's deputy foreign minister, the DPRK backed out of the deal because of Iraq's inability to pay cash. Syria, having received \$2 billion for participating on the side of the coalition, used some of it to purchase more than 150 North Korean Scud-C missiles for an estimated \$500 million. In March 1991, in a third agreement with Iran, the DPRK signed a five-year contract for the supply of 20,000 barrels of oil per day.

Pakistan, which North Korea had been supplying with conventional arms since the war over East Pakistan in 1971, helped with the secret deliveries of Scud-Cs to Iran. During the two tenures of Pakistani prime minister Benazir Bhutto (1988–90 and 1993–96), the cooperation with the DPRK was extended to include the training of Pakistani scientists and engineers in North Korea, the training of North Korean scientists and engineers at the Pakistan uranium enrichment plant at Kahuta, and the supply of Nodong missiles to Pakistan.

On 27 March 1992 the United States announced the imposition of sanctions on the DPRK and Iran for missile technology proliferation. In the mid-1990s, the DPRK recruited an estimated 160 Russian strategic weapons specialists to help with the DPRK's missile and nuclear programs. On 12 March 1993 North Korea announced its withdrawal from the Nuclear Nonproliferation Treaty (NPT) because of the International Atomic Energy Association's (IAEA's) efforts to conduct a special inspection of its nuclear facilities. During the spring of 1993, the successful launch of four missiles, one of which hit a target at 500 km (300 mi), raised international alarm to a new level. All the while, the DPRK representative to the UN denied that the government had ever supplied missiles to Iran.

In August 1993 a defector reported that two additional long-range missile bases had been built in DPRK, one at Chunggang and the other at Wonsan. In a report issued in 1996, the South Korean Unification Ministry estimated that arms exports constituted about 30% of DPRK exports 1980 to 1993, that annual Scud missile sales totaled about \$500 million, and that the DPRK had a production capacity of about 100 Scud-B and Scud-C missiles a year.

The consequence of DPRK's role as arms supplier to the Middle East was increasing isolation elsewhere. Japan banned the export of missile-related technology to the DPRK in 1988. In 1991 when the Soviet Union collapsed, North Korea lost its main source of fuel and fertilizer, as well as its main markets. As a result, the DPRK's nonmilitary industries atrophied while the government continued to build its military industry, developing nuclear ambitions.

At the end of its Third Seven-Year Plan the government, admitting for the first time that targets had not been met, announced another three-year period of adjustment including a promised attention to light industry, as well as agriculture and foreign trade. In March 1994, however, it was confirmed that the government was building two new medium-range missiles—the Taepodong-I with a range of more than 1,600 km (1,000 mi) and the Taepodong-II with a range of more than 3,200 km (2,000 mi).

Manufacturing output had fallen an estimated 17.8% in 1992 and continued to fall by 1.9% in 1993, 3.8% in 1994, and 5.3% in 1995. In 1995, manufacturing accounted for an estimated 26.9% of GDP, of which heavy industry accounted for 20.5% and light industry 6.4%.

Only rough production estimates are available for a few key industries. These include the iron and steel manufactures, which reportedly amounted to 6.6 million tons of pig and conversion pig iron and 8.1 million tons of steel (including rolled steel) in 1995. Major iron and steel works are located at Ch'ongjin, Kimch'aek, Kangso, Namp'o, and Kaesong. Industrial plants produce sophisticated machinery, including generators, bulldozers, high-speed engines, and diesel locomotives. Other plants produce cement (17 million tons in 1995), refined lead (80,000 tons), and zinc (200,000 tons), metal cutting lathes, tractors, and trucks. The chemical industry produced an estimated 1.2 million tons of chemical fertilizers and 56,000 tons of synthetic fibers in 1994. The petrochemical industry is centered in the Hungnam area. Oil refining capacity was recorded at approximately 71,000 barrels per day in 2000. Textiles production increased rapidly in the 1970s; North Korea also produces clothing, jackets, and shoes.

After a series of negotiations in 1994, the so-called Agreed Framework was signed in October. It was essentially an attempt to use economic incentives to induce the DPRK to give up its nuclear weapons ambitions. In exchange for a freeze on its graphite-moderated reactors, the United States undertook to arrange for the provision of a 2000 MW Light Water Reactor (LWR). In the contract concluded in 1996 with the Korea Electric Power Company (KEPCO), DPRK was to acquire two 1000 MW LWRs. The Korea Peninsula Energy Development Organization (KEDO) was established to carry out the arrangements. Ground was broken for the construction of the LWRs in August 1997. While the DPRK's nuclear program apparently remained frozen, the government continued to develop its delivery systems and to export weapons and weapons technology.

In April 1998 the US government reported that Korea had helped develop Pakistan's 1,500-km (940-mi) Ghauri intermediate-range ballistic missile. Exports of Scuds continued to Iran, Syria, Pakistan, Egypt, and Libya. On 15 September 1998, DPRK successfully launched its first artificial satellite into orbit using a multistage rocket. In February 1999, US CIA director George Tenet warned that the DPRK was developing a new generation of missiles capable of delivering payloads to the United States. In March 1999, the ROK reported that the DPRK had as many as eight missile factories and twelve missile bases, with production capacity of about 100 Scud-like missiles a year. In mid-July, intense pressure from the United States, the ROK, and Japan dissuaded the DPRK from test-launching a Taepodong-2 missile believed to have a range of 3,800 km (2,400 mi). In September 1999, the US and DPRK reached an agreement

on a moratorium on additional long-range missile testing, but an agreement on a wider freeze on its indigenous missile program and its weapons exports was not completed as of early 2003.

## 29 SCIENCE AND TECHNOLOGY

The Fifth Party Congress in 1970 called for the education of one million new technicians and specialists to aid economic modernization and development. By the mid-1990s, the government claimed that there were agricultural specialists on most rural cooperatives, although severe economic deprivation has curtailed DPRK agricultural output. Throughout this period, Russian and Chinese technicians helped train DPRK workers, and the DPRK actively sought to acquire advanced foreign technology through the importation of entire petrochemical and other manufacturing plants from Japan, France, Sweden, and other developed nations. In the 1990s, its nuclear energy program—with both peaceful and military applications—gained international attention.

The principal scientific and technical institutions are the Academy of Sciences (founded in 1952), the Academy of Agricultural Science (founded in 1948), the Academy of Fisheries (founded in 1969), the Academy of Forestry (founded in 1948), the Academy of Medical Sciences, the Academy of Light Industry Science (founded in 1954), and the Academy of Railway Sciences. All of these academies are located in P'yongyang, and each has numerous attached research institutes.

By 1994, Kim Il-sung University in P'yongyang (founded in 1946) included faculties of computer science, chemistry, biology, atomic energy, geology, mathematics, and physics. Also in P'yongyang are the Kim Chaek University of Technology, the P'yongyang University of Agriculture, and the P'yongyang University of Medicine.

## 30 DOMESTIC TRADE

Wholesale and retail trade is almost entirely in state and cooperative hands. In 1946, private trade accounted for 96.5% of total business volume. By 1960, private merchants had been entirely eliminated, and 78.8% of trade was conducted by the state, 20.4% by cooperatives, and 0.8% by farmers' markets. In 2000, 90% of the economy was in the State's hands.

Wholesale distribution is administered by the state ministries and enterprises, under the general jurisdiction of the Ministry of Material Supply. Most retail shops are run by the People's Service Committee, established in 1972. There are several state-run department stores in P'yongyang, and there is at least one in each provincial capital. All-purpose stores, cooperatives, factory outlets, and special stores for the military and for railroad workers also play an important part in retailing.

Normal business hours are from 9 AM to 12 noon and 1 to 6 PM, Monday–Friday. Saturday is a “study” day.

Since the mid-1990s, the domestic economy has remained stifled as the government refuses to give up state control of industry. Though agriculture accounted for 30% of the GDP and 36% of the workforce in 2001, there were frequent food shortages. Improvements in industry and infrastructure have been slow, as the government continued to dedicate a large portion of funds to military, rather than social or domestic, concerns. With the decay of the formal economy, black market activity has rapidly grown throughout the country, with the underground economy replacing formal domestic trade throughout much of the DPRK.

## 31 FOREIGN TRADE

The DPRK's principal exports include rice, pig iron, rolled steel, cement, machinery of various types, chemicals, magnetite, textiles, armaments, and gold. Imports include petroleum, coking coal, wheat, cotton, and machinery. A steep drop in the DPRK's trade earnings in the early 1990s was primarily a result of a

policy shift by Russia and the CIS countries requiring trade to be denominated in hard currency at world prices, ending a previous goods exchange arrangement much more favorable to the DPRK situation. No published trade figures were available from the DPRK government as of 2003.

With the change in Russian-North Korean trade relations, China took the lead as the DPRK's largest trading partner in 1992, followed by Japan and Russia. Inter-Korean trade expanded particularly rapidly after 1988. By 1992, the ROK became the DPRK's fourth-largest trading partner, behind China, Japan, and Russia. Total trade between the two countries was reported to have reached \$199 million, 90% of which consisted of exports from north to south. However, after tensions flared in the late 1990s, inter-Korean trade slowed.

As the the DPRK economy has deteriorated, smuggling activity across the Chinese border has increased. An estimated 100,000 people are involved in illegal trade across the border, which may be worth as much as \$30 to \$300 million per year.

Principal trading partners in 1998 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
Japan	197	193	4
China (inc. Hong Kong)	83	425	-342
Bangladesh	52	1	51
Saudi Arabia	44	3	41
Brazil	43	72	-29
Lebanon	36	n.a.	n.a.
India	32	41	-9
Germany	27	27	0
Ireland	11	119	-108
Russia	8	54	-46

### 32 BALANCE OF PAYMENTS

During the late 1970s, the DPRK enjoyed consistent trade surpluses, due in part to increasing shipments of agricultural products, gold and silver, and armaments in exchange for hard currencies. Despite the improving trade picture, the DPRK had still not emerged from the shadow of foreign debt left over from the mid-1970s. Declining prices for precious metals in the early 1980s made it difficult for the nation to meet its debt obligations, even after repeated rescheduling. In 1987, a new rescheduling agreement was reached after Western banks threatened to freeze the DPRK's bank assets if it failed to service bank loans. External debt was estimated at \$12 billion in 1996. In the early 2000s, the government was focusing on attracting foreign aid and earning hard currency without introducing market reforms. Desperately needed food and fuel aid from donor countries declined in 2002/03, due in part to the government's threats of nuclear weapons capabilities.

The US Central Intelligence Agency (CIA) reported that in 2001 the purchasing power parity of North Korea's exports was \$826 million while imports totaled \$1.874 billion resulting in a trade deficit of \$1.048 billion.

### 33 BANKING AND SECURITIES

The Central Bank, established in 1946, is the sole recipient of national revenues and the repository for all precious metals. It supplies basic operating funds to various sectors of the economy and is subordinate to the Ministry of Finance. The Central Bank is also an administrative organ that executes the fiscal policies of the State Planning Commission. It supervises the Foreign Trade Bank, established in 1959, and the Industrial Bank, established in 1964. The latter provides loans and credits to farm and fishing cooperatives and has an extensive system of branches which help to manage the financial operations of all cooperatives.

The Kumgang Bank is a specialized bank that handles transactions of foreign trade organizations dealing with exports

and imports of machinery, metals, mineral products, and chemical products. The Daesong Bank handles transactions of the Daesong Trading Co. and other trading organizations. There were also three joint venture banks, as of 1994. As of 1997, the Central Bank had a network of 227 local branches. Another state bank is the Changgwang Credit Bank, founded in 1983. A consortium of 60 Western countries (including Russia) filed suit in 1996 in a US district court against the DPRK's Foreign Trade Bank for a total of \$1.4 billion in principal and accumulated interest.

There are savings facilities at all post offices, in industrial enterprises, and in the "trust" sections in the agricultural cooperatives. Through the latter, large farm and fishing cooperatives perform local banking functions, especially the raising and allocation of capital for local needs.

There are no securities exchanges in the DPRK.

### 34 INSURANCE

The State Insurance Bureau and the Korea Foreign Insurance Company carry fire and natural disaster insurance and, as appropriate, livestock, marine, and passenger insurance on a compulsory basis. Individuals may take out various types of property, life, and travel insurance, all provided by the government.

### 35 PUBLIC FINANCE

The annual state budget is approved at regular sessions of the Supreme People's Assembly (SPA). In April 1995, the government failed to announce its 1995/96 budget at the annual meeting of the SPA, which exacerbated the economic stagnation. Foreign aid, important after the Korean War, has not appeared as budgetary income since 1961.

The US Central Intelligence Agency (CIA) estimates that in 1992 North Korea's central government took in revenues of approximately \$19.3 billion and had expenditures of \$19.3 billion. Total external debt is estimated to exceed \$12 billion, 75% owed to OECD countries.

### 36 TAXATION

All direct taxes were abolished in 1974; the DPRK thus became the first country in the world to abolish income taxes collected from its citizens. As a result, the population is dependent on the government for many services. The government collects a percentage (turnover tax) on all transactions between producers and state marketing agencies. Fees are charged to farmers for seeds, fertilizer, irrigation water, and equipment. Consumers pay a tax for the use of water and certain other household amenities. The tax on collective farms is 15% of the harvest, paid in kind. Refugees from North Korea report that a similar in-kind tax was being assessed on the private plots that proliferated during the 1990s, but there is no official confirmation of this assessment.

All foreign-invested enterprises are subject to income, property, turnover, and local taxes. In the four special economic zones established by the government, one in 1991 and three in 2002, the tax on profits for most enterprises is set at 14%; for enterprises involving high technology, infrastructure construction, or light industry, the tax rate is 10%. Resident aliens in the DPRK must pay personal income taxes; the rate varies from 4% to a top rate of 20%.

### 37 CUSTOMS AND DUTIES

No information is available.

### 38 FOREIGN INVESTMENT

In 1984, the Joint Venture Act permitted foreign direct investment (FDI) for the first time. Investment mainly came from Soviet bloc countries, however, as both the United States and South Korea were closed to products from the DPRK. Companies

found it difficult to do business in North Korea because of limits to equity ownership and a suffocating bureaucracy. In any case, the law was abruptly withdrawn in 1985, reinforcing perceptions of an unstable atmosphere for business.

In 1991, faced with the collapse of the Soviet bloc, the president announced plans to establish a multinational special economic zone (FETZ) in the Tuman River estuary region. On 11 December 1992 the Supreme People's Assembly passed three laws relating to foreign investment—the Foreign Investment Law, the Foreign Enterprise Law, and the Joint Venture Law. The laws allowed 10% foreign ownership and loosened government control over employee layoffs. Three types of enterprises were distinguished: contractual joint ventures, equity joint ventures, and “foreign enterprises.” Citizens of the ROK are treated as foreigners under the investment laws. Foreigners are prohibited from establishing a “technologically backward” enterprise, or one that threatens DPRK national security. In practice the most suspect categories are those involved in publishing, the press, broadcasting, and telecommunications. Also not permitted are businesses that do not conform with the “ideological emotions of the people.”

Most trade with ROK enterprises is conducted in the contractual joint venture mode in which, typically, the DPRK partner take responsibility for production and management while the ROK partner supplies both advanced technology and access to export markets. Most meetings between North and South Korean partners are held outside both countries. Applications for investment have remained limited; most have come from Japan-based Korean investors. As of 2002, the FETZ could not be rated very successful. The investment attracted totals about \$140 million. The main investors included the Emperor Group with a \$60 million hotel project, and Loxley Pacific with a \$29 million investment telecommunications infrastructure.

In 2002 the DPRK formally established three more special economic zones: a mainly tourist zone at Mount Kumgang, an industrial zone near Kaesong, and an special autonomous region (SAR) modeled on Hong Kong in the northwest city of Sinuiji on the Chinese border. In all three, free enterprise was officially guaranteed with a land lease period of 50 years with the possibility of extension. The Mount Kumgang and Kaesong zones were mainly aimed at attracting South Korean investment, whereas Sinuiji is designed to attract Chinese participation.

The Mount Kumgang zone is a direct descendant of a money-losing tourism enterprise initiated by the ROK conglomerate, Hyundai Group, in 1999. Tours peaked at about 212,000 in 2000, the year of the historic 13 June handshake between the leaders of the two Koreas, but had fallen to 56,680 by 2001. As of 2002, the Hyundai group had lost about \$400 million on the operation.

The Kaesong industrial zone also got its main impetus from firms connected with the Hyundai Group. Though the official decree establishing a 66-sq-km (25-sq-mi) “international industrial, trade, commercial, financial and tourist” zone was made law 28 November 2002, its roots are in an agreement between the Hyundai Group and the DPRK government in August 2000 to open an expanded industrial zone. Kaesong is connected to P'yongyang by railway and expressway. To make it a viable investment venue, the rail and highway connections to South Korea must be restored. In late December 2002, however, the third session of talks on the restorations of connections was called off, with no further discussions scheduled.

Much more devastating to hopes for increased foreign investment, however, has been the rapid escalation of tensions after October 2002 when a US State Department envoy asserted that the North Koreans had admitted to conducting a secret nuclear program. In November 2002, the United States announced that there would be no more oil supplied through the Korea Peninsula Energy Development Organization (KEDO).

The United States also achieved an agreement to slow down the construction of the Light Water Reactors (LWRs), which were already years behind schedule. In apparent retaliation, a letter from a North Korean bank was circulated to foreign missions and businesses stating that as of 1 December 2002 US dollars would not be accepted at North Korean shops and hotels.

By late December 2002 all IAEA inspectors had been expelled from DPRK, and all IAEA monitoring devices had been removed. In February 2003, the IAEA referred the matter of North Korea's nuclear program to the UN Security Council.

### 39 ECONOMIC DEVELOPMENT

Until the 1990s, the economy operated on a planned basis, with priority given to the development of industry, particularly heavy industry. Planning began in 1947, when the economy operated first under two consecutive one-year plans (1947 and 1948), followed by a two-year plan (1949–50), which was interrupted by the Korean War in June 1950. After the war, economic reconstruction followed the terms of a three-year plan (1954–56) and a five-year plan (1957–61). The industrial goals of the five-year plan were fulfilled in just half the allotted time, so 1960 was set aside as a year of adjustment. An ambitious seven-year plan was then launched in 1961, with the general objectives of a 220% increase in industrial output and a 150% rise in grain production. This plan had to be extended until 1970, however, before its targets were fulfilled. In 1975, the DPRK announced completion of its six-year plan (1971–76) one year ahead of schedule, although certain outputs fell somewhat short of projected levels. Industrial growth slowed in 1976. A second seven-year plan (1978–84) called for a 12% annual industrial growth rate. Although the government claimed that its goals had been met or exceeded, neither the actual results nor a new plan was announced during the following three years. During this period the DPRK experienced the double trauma of ballooning international debt (to more than \$5 billion, nearly \$2 billion owed to Communist creditors), and watching South Korea's per capita income soar past its own. By 1980, per capita income in the DPRK was about a third of that in the ROK. (By 2002 the gap had widened such that the ROK's per capita income was 20 times greater in nominal terms.)

In 1982, the president announced a new economic policy giving priority to increased agricultural production through land reclamation (taken as a sign that food shortages had appeared), development of the country's infrastructure, a greater reliance on indigenously produced capital equipment, and an emphasis on light industry. In 1984, the government issued the Joint Investment Law in its first opening to foreign direct investment (FDI), designed to secure technology and outside capital. The law was abruptly withdrawn the next year, however, having attracted little investment.

There was a three-year hiatus, before the government set forth the Third Seven-Year Plan (1987–1993), which would turn out to be the last multiyear plan issued by the government as of 2003. (The death of President Kim Il Sung on 8 July 1994 marked the end of multiyear planning.) An annual growth of 10% was targeted under the Third Seven-Year Plan, part of which would be derived from missile production and export. Its stated targets were a 90% increase in industrial output, 40% in agricultural production, and 70% in national income. The DPRK government publishes no official economic data, but estimates by the SOK Bank of Korea, the most reliable source of information on the North Korean economy, suggest that actual performance fell far short of these targets, in some areas by as much as 50%, and that overall industrial output decreased. The plan period spanned the breakup and economic liberalization of the Soviet bloc in 1991. President Kim Il Sung made a gesture at keeping up with the trends, decreeing the establishment of the Rajin-Sonborg Free Economic and Trade Zone (FETZ). However, the lack of

infrastructure and low investor confidence in the regime made the FETZ ineffective in attracting investments.

In late 1993 statements released by the Korean Workers' Party Central Committee for the first time admitted to the overall failure in achieving the goals of the economic plan. Another three-year period of adjustment was announced during which, again, agricultural production, light industry, and infrastructure projects were to be prioritized.

A serious problem the DPRK had in meeting its public goals, however, was that the international trade it had actually been fostering was clandestine. From the mid-1980s North Korea had become a prime source of missiles, missile technology, and nuclear technology for countries of the Middle East and Pakistan. The most fully developed relationships were with Iran's missile program and Pakistan's missile and nuclear programs. The weapons trade was estimated to have been worth roughly \$500 million a year, a figure equal to between 30% and 100% of estimated exports.

When Kim Il Sung died in July 1994, this was not one of the aspects of the economy that was radically affected since his son and successor, Kim Jong Il, had been in charge of the military.

As of 1994, total development assistance outside the Soviet bloc amounted to \$6 million. Famine struck the country in 1995 and 1996, and output contracted from 1995 to 1998 an estimated 46.8% (from \$23.5 billion GDP to \$12.5 billion GDP). No economic plan was issued by the government in the 1990s, a decade that was dominated from 1994 by an international effort to stop the regime's apparent nuclear ambitions with positive economic incentives.

The so-called Agreed Framework of October 1994 embodied the offer to replace the DPRK's heavy-water nuclear facilities (suitable for producing weapons-grade fuel) with light-water reactors (LWRs, not as suitable), with construction and financing arranged by the United States. An annual supply of 500,000 metric tons of heavy oil would be donated by a consortium of 17 countries. In exchange the DPRK committed to freeze and eventually dismantle its heavy-water facilities. The Korea Peninsula Energy Development Corporation (KEDO) was created to administer the agreement. Besides maintaining the freeze, the DPRK was also dissuaded in 1999 from test-firing its most advanced missile, the Taepodong-2, reported to have a range of over 2,400 km (1,500 mi).

The Agreed Framework began to unravel in early 2002, after US president George W. Bush, in his State of the Union address, branded North Korea as part of an "axis of evil." In July 2002, the DPRK introduced a number of market-based economic reforms. Three special economic zones were officially established in 2002, including a special autonomous region (SAR) in Sinuiji to attract Chinese investment, and zones at Mount Kumgang and near Kaesong to attract South Korean investment. The government also announced it would be presenting a formal economic plan in 2003. These gestures were overwhelmed by increased tensions following the October 2002 announcement from the US State Department that the DPRK regime had admitted it was pursuing a secret nuclear weapons program. Oil shipments through KEDO were stopped after November 2002, and by the end of December North Korea had expelled all IAEA inspectors and removed their monitoring devices. In February, the IAEA referred North Korea's nuclear program to the US Security Council. In April 2003, Kim Jong Il asked for a non-aggression pact with the United States, arguing that the US was planning to overthrow his regime. No economic plan had been issued.

#### 40 SOCIAL DEVELOPMENT

All men and women of working age are required to work, and all economic activity is run by the state. The government provides any medical, pension, or other welfare program to the workers.

The country relies heavily on international aid for basic subsistence.

The 1992 constitution guarantees equal rights for women. The state provides nurseries and day-care centers, and large families are encouraged. Like men, women are obligated by law to work, although few occupy high official positions. Women with large families are entitled to shorter work hours. Female workers are legally guaranteed five weeks of maternity leave. A UNICEF official reported that some 800,000 north Korean children were suffering from malnutrition and about 80,000 were in danger of dying from hunger and disease.

The government rejects international human rights standards, and human rights organizations are not permitted to operate. Dissent is not tolerated, and capital punishment is meted out for a wide variety of offenses, including attempted defection.

The government classifies all citizens into three groups: core, wavering and hostile. These security ratings reflect the perceived degree of loyalty exhibited by citizens. These ratings may be taken into account in the allocation of housing, employment, medical and other benefits. All citizens are subjected to extensive indoctrination. Listening to foreign broadcasts or possession of banned reading materials are punishable by death. Travel within the country is also strictly controlled. Travel passes must be requested for intervillage travel.

#### 41 HEALTH

The Ministry of Public Health is responsible for all national health services, including disease prevention and sanitation. All of the population had access to health care in 1993. As of 1999, estimated immunization rates for children up to one year old were as follows: diphtheria, pertussis, and tetanus, 37%, and measles, 34%. Polio has been nearly eradicated; in 1995 there were only seven cases. In 1999, there were three doctors per 1,000 people. In 1990-94, there were 13.5 hospital beds per 1,000 people. Western medicine is used alongside traditional Eastern medicine (*tonguihak*). In 1997, there were 176 cases of tuberculosis per 100,000 people. Cancer is now the leading cause of death, followed by heart disease and hypertension.

The total fertility rate has decreased from 5.8 in 1960 to 2.1 children per woman in her childbearing years, as of 2000. Average life expectancy in 1999 was 70.1 years for both men and women. The infant mortality rate was 25.5 per 1,000 in 1999 and the general mortality rate was 6.9 per 1,000 people. In 1999 the HIV/AIDS prevalence rate was less than 0.01 per 100 adults.

#### 42 HOUSING

A serious housing shortage was produced by the government's early stress on industrial rather than residential construction. The housing deficit was aggravated by the Korean War, which demolished about one-third of the country's housing. Since then, residential housing has received serious attention. About 886,000 new units were completed under the 1971-76 economic plan. Construction levels of 200,000-300,000 units a year were targeted for 1978-84, and 150,000-200,000 units a year were projected for 1987-93. Available figures for 1980-88 show a total housing stock of 4,566,000 with 4.5 people per dwelling.

The government reported that the catastrophic floods in August 1995 caused 500,000 residents to become homeless.

#### 43 EDUCATION

Both primary and secondary education are free and compulsory for 10 years, beginning at age five. Children ages one-five are cared for in nursery schools, followed by one year of kindergarten, four years of primary school, and six years of secondary school. The adult literacy rate was reported to be 99% in 1991.

Massive flooding in 1994 damaged and destroyed over 2,000 primary and secondary schools. According to UNESCO's EFA

2000 Assessment Report North Korea has 14,167 two-year kindergartens (with 748,416 pupils), 4,886 four-year primary schools (with 1,609,865 pupils), 4,772 six-year senior middle schools (with 2,181,524 pupils), and over 300 colleges and universities. In the 1990s, the school curriculum was balanced between academic and political subject matter. Subjects such as the Korean language, mathematics, and physical education accounted for most of the instructional time in the classroom; however, more than 8% of instructional time was spent on the "Great Kim Il Sung" and "Communist Morality."

Kim Il Sung University (founded in 1946) in P'yongyang is the only university, with about 16,000 full-time and part-time students and about 3,000 faculty, including teachers and research staff, as of the early 1990s. Admission to the university is by intensely competitive examination. Other institutions of higher learning include the Kimch'aek Polytechnic Institute, P'yongyang Agricultural College, and P'yongyang Medical School. In 1987 there were 220,000 students attending two- or three-year higher specialized schools and 301,000 students attending four- to six-year colleges and university courses. A system of adult schools, correspondence courses, and workplace schools makes higher education widely available.

#### 44 LIBRARIES AND MUSEUMS

The DPRK has more than 200 public libraries, the largest being the Grand People's Study House in P'yongyang, with 20 million volumes. In addition, there are research libraries at the academies of sciences and social sciences and at Kim Il Sung University.

Museums include the Korean Central Historical Museum, the Memorial Museum of the War of Liberation, the Korean Art Gallery, the Ethnographic Museum, and the Korean Revolutionary Museum, all in P'yongyang. There is a large museum at Mangyongdae, Kim Il Sung's birthplace, near the capital.

#### 45 MEDIA

Postal, telephone, and telegraph services are operated by the government. Telephones are believed to be used primarily for government business. In 1997 there were 1.1 million telephone lines in use.

The central broadcasting station in P'yongyang has a 1,500-kW transmitter. Broadcasts reach to every corner of the country through a system of more than one million loudspeakers, as well as through private radios. In addition, news is broadcast to other countries in English, Russian, French, and Spanish. There are two radio networks (Korean Central Radio and Radio P'yongyang) and two television networks (Korean Central TV and Mansudae TV). In total there were 16 AM and 14 FM radio stations, and 38 television stations in 1999. In 2000 there were 154 radios and 54 television sets for every 1,000 people. Internet access is only available to government officials.

All newspapers and periodicals in the DPRK are published by government, party, or front organizations; each edition is subjected to prepublication review and censorship. As of 2002, there were four daily newspapers in publication. The leading national newspapers and their publishers are: *Rodong Sinmun* (Central Committee of the Korean Workers' Party, circulation 1,500,000); *Minju Choson* (Presidium of the Supreme People's Assembly and the cabinet, circulation 200,000); *Joson Immingun* (*Korean People's Army Daily*); and *Rodong Chongnyon* (*Kim Il Sung Socialist Youth League*). Each province has a newspaper, and other mass organizations have their own publications. A state news service, the Korean Central News Agency, is the sole organ for the gathering and dissemination of news.

Though there are articles of the constitution that provide for freedom of speech and the press, in practice the government prohibits the exercise of these rights, controlling all information.

The receiving of foreign broadcasts is illegal, as is any criticism of the government in any media.

#### 46 ORGANIZATIONS

Mass organizations established for specialized political, economic, or cultural purposes include the powerful Democratic Front for the Reunification of the Fatherland, commonly known as the Fatherland Front. Among its constituent members are the Kim Il Sung Socialist Youth League (formerly known as the Socialist Working Youth League), under the direct guidance of the Korean Workers' Party Central People's Committee; the Young Pioneer Corps, open to children aged 9–15; and the Korean Democratic Women's League. Also important are the Korean Red Cross Society and the Korean Agricultural Workers' Union.

#### 47 TOURISM, TRAVEL, AND RECREATION

Most sightseeing takes place in the capital city of P'yongyang. Travel outside P'yongyang is closed to individual tourists but available to groups. Nampe, the port city for P'yongyang, has a beach resort area. The two most outstanding tourist sites outside the capital are the Kumgang (Diamond) Mountains in the southwest and Packdu Mountain on the Chinese border. Wrestling, tug-of-war, chess (with pieces different from the European form), and kite fighting are traditional sports. All visitors need visas secured in advance from DPRK diplomatic representatives. Increasingly anxious to obtain foreign exchange, the government has invited touring delegations from numerous nations, especially developing nations. All tourism from the United States, Israel, the ROK, and South Africa, is banned without invitation.

According to the UN, the daily cost of travel in DPRK in 1999 was \$179 in P'yongyang and \$104 elsewhere.

#### 48 FAMOUS KOREANS

Among the many historical figures of united Korea are Ulchi Mundok, a Koguryo general of the early 7th century AD; Kim Yosin (595–673), a warrior and folk hero in Silla's struggle to unify the peninsula; Wang Kon (877–943), the founder and first ruler of the Koryo Dynasty; Yun Kwan (d.1111), a Koryo general who repulsed Chinese invaders; Kim Pu-sik (1075–1151), a scholar-official who wrote the great *History of the Three Kingdoms*; Yi Song-gye (1335–1408), a general and founder of the Yi (or Li) Dynasty; King Sejong (1397–1450), who called for the invention of Han'gul and was Korea's greatest monarch; Yi Hwang (1501–70) and Yi I (1536–84), Neo-Confucianist philosophers and officials; Yi Sun-sin (1545–98), an admiral who invented the "turtleboat," the first ironclad ship, and defeated the Japanese in every naval engagement of the Hideyoshi invasions, dying in the climactic battle; Chong Yag-yong (1762–1836), a pragmatic scholar-official and prolific writer; and Yi Ha-ung (1820–98), known as the Taewon'gun (Prince Regent), the regent for his son, Kojong, and the central political figure of the late 19th century.

The preeminent political figure of the DPRK is Kim Il Sung (1912–94), the leader of the nation from 1948 until his death. Other influential figures have included Kim Il (1910–84), a prominent officeholder since 1954; Kim Jong Il (b. 1941), the son of Kim Il Sung, who succeeded him; Nam Il (1914–76), a chief of staff who became well known as an armistice negotiator at P'anmunjom (1951–53), and Marshal O Jin U (1918–95), head of the army from 1976 until 1993.

#### 49 DEPENDENCIES

The DPRK has no territories or colonies.

# KOREA, REPUBLIC OF (ROK)

Republic of Korea  
*Taehan Min-guk*

**CAPITAL:** Seoul

**FLAG:** The flag, called the T'aegukki, shows, on a white field, a central circle divided into two parts, red on top and deep blue below, in the shape of Chinese yin and yang symbols. Broken and unbroken black bars in each of the four corners are variously arranged in sets of three, representing divination diagrams.

**ANTHEM:** *Aegukka (The Song of Patriotism)*, officially adopted on 15 August 1948.

**MONETARY UNIT:** The won (₩) is the national currency. There are notes of 500, 1,000, 5,000, and 10,000 won. ₩1 = \$0.00083 (or \$1 = ₩1,206) as of May 2003.

**WEIGHTS AND MEASURES:** Both the metric system and ancient Korean units of measurement are used.

**HOLIDAYS:** New Year's Days, 1–3 January; Independence Movement Day, 1 March; Labor Day, 10 March; Arbor Day, 5 April; Children's Day, 5 May; Memorial Day, 6 June; Constitution Day, 17 July; Liberation Day, 15 August; Armed Forces Day, 1 October; National Foundation Day, 3 October; Han'gul (Korean Alphabet) Day, 9 October; Christmas, 25 December.

**TIME:** 9 PM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Occupying the southern 45% of the Korean Peninsula in East Asia, the Republic of Korea (ROK), also known as South Korea, has an area of 98,480 sq km (38,023 sq mi), extending 642 km (399 mi) NNE–SSW and 436 km (271 mi) ESE–WNW. Comparatively, the area occupied by South Korea is slightly larger than the state of Indiana. Bounded on the N by the Democratic People's Republic of Korea (DPRK), on the E by the Sea of Japan (known in Korea as the East Sea), on the S by the Korea Strait, and on the W by the Yellow Sea, the ROK has a total land boundary length of 238 km (148 mi) and a coastline of 2,413 km (1,508 mi). A demilitarized zone (DMZ), 4,000 m (13,100 ft) wide, covering 1,262 sq km (487 sq mi) and located north and south of the 38th parallel, separates the ROK from the DPRK, which comprises the northern part of the Korean Peninsula.

Over 3,000 islands, most of them off the southern and western coasts and belonging to the ROK, add another 8,600 km (5,350 mi) of coastline.

The ROK's capital city, Seoul, is located in the northwestern part of the country.

## <sup>2</sup>TOPOGRAPHY

Elevations in the southern part of the Korean Peninsula are generally lower than those in the north. Only about 30% of the ROK consists of lowlands and plains. The principal lowlands, all bordering the Yellow Sea along the west coast, include the Han River Plain, near Seoul; the Pyongtaek and Honam plains, south of the capital; and the Yongsan Plain in the southwest. Mt. Halla (1,950 m/6,398 ft), on volcanic Cheju Island, is the nation's highest point, while Mt. Chiri, or Chii (1,915 m/6,283 ft), is the highest point on the mainland.

Principal rivers of the ROK include the Han (514 km/319 mi), with Seoul near its mouth; the Kum (401 km/249 mi) and Yongsan (116 km/72 mi), which water the fertile plains areas of the southwest; and the Somjin (212 km/132 mi), in the south. The longest river in the ROK is the Naktong (521 km/324 mi), which

waters the southeast. Yellow Sea tides on the west coast rise to over 9 m (30 ft) in some places, while Japan Sea tides on the east coast rise only about 1 m (3 ft).

## <sup>3</sup>CLIMATE

The average January temperature ranges from  $-5^{\circ}\text{C}$  ( $23^{\circ}\text{F}$ ) at Seoul to  $-2^{\circ}\text{C}$  ( $28^{\circ}\text{F}$ ) at Pusan and  $4^{\circ}\text{C}$  ( $39^{\circ}\text{F}$ ) on Cheju Island. In the hottest part of the summer, however, the regional variation in temperature is not nearly so marked, with average temperatures ranging from  $25^{\circ}\text{C}$  to  $27^{\circ}\text{C}$  ( $77$ – $81^{\circ}\text{F}$ ) in most lowland areas. Average rainfall is 100 to 150 cm (40 and 50 in). Nearly all the rainfall occurs in the April–September period, especially during the rainy season, late June to early August. From one to three mild typhoons normally strike the south in the early fall, with a severe one occurring every two or three years. Days free of frost number about 240 in the southern regions.

## <sup>4</sup>FLORA AND FAUNA

The Korean Peninsula is rich in varieties of plant life typical of temperate regions. More than 3,000 species, some 500 of them unique to Korea, have been noted by botanists. Warm temperate vegetation, including camellias and other broad-leaved evergreens, predominate in the south and on Cheju Island. Zoologists have identified more than 130 freshwater fishes, 112 breeding birds, 49 mammals, and 14 reptiles and amphibians on the peninsula. Bear, wild boar, deer, and lynx still are found in the highlands, but the shrinking of the forested area has reduced the animal population in recent years. Migratory water fowl, cranes, herons, and other birds are visible on the plains. Noxious insects and household pests infest the warmer regions, and aquatic life is generally infected with parasites.

## <sup>5</sup>ENVIRONMENT

Efforts to control the detrimental effects of rapid industrialization, urbanization, and population growth focus on the Office of Environment, established in 1980 to control air, water, and land pollution and manage solid wastes. The Environmental Preservation Law, revised in 1979, covers air,

water, and noise pollution, soil preservation, and disposal of solid wastes.

The nation has 64.9 cu km of renewable water resources with 63% used for agriculture and 11% used for industrial purposes. The purity of the nation's water is threatened by agricultural chemicals. In 1990, the nation dumped 10 million tons of sewage and 7 million tons of industrial chemicals into its water sources.

Air pollution, associated mainly with the use of coal briquettes for home heating and the increase in automobile traffic, is also severe, with smog a common problem in Seoul. In the mid-1990s, South Korea had among the world's highest level of industrial carbon dioxide emissions, which totaled 289.8 million metric tons per year, a per capita level of 6.56 metric tons per year. In 1996, the total rose to 408 million metric tons.

The Naktong River delta, a marshland where thousands of birds spend the winter, is threatened by environmental pollution and by plans to dam the mouth of the river. The beginning of construction of the Kumgangsan hydroelectric dam by the DPRK near the DMZ in 1986 was protested by the ROK on the grounds that the central Korean Peninsula could be flooded. In response, the ROK began construction of its own Peace Dam near the DMZ in 1987.

Although 28 species of birds and 8 species of mammals—chipmunk, wild boar, squirrel, raccoon dog, badger, hare, river deer, and roe deer—are still classified as game species, hunting was banned by the government from August 1972 through December 1981, except in such game preserves as that of Cheju Island. In 2001, 6 of Korea's mammal species and 19 bird species were endangered, as were 52 plant species. Endangered species in the ROK include the Amur leopard, Oriental white stork, Japanese crested ibis, and Tristram's woodpecker. The Japanese sea lion has become extinct.

## 6 POPULATION

The population of South Korea in 2003 was estimated by the United Nations at 47,700,000, which placed it as number 25 in population among the 193 nations of the world. In that year approximately 7% of the population was over 65 years of age, with another 22% of the population under 15 years of age. There were 101 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 0.57%, with the projected population for the year 2015 at 49,672,000. The population density in 2002 was 487 per sq km (1,262 per sq mi).

It was estimated by the Population Reference Bureau that 82% of the population lived in urban areas in 2001. The capital city, Seoul, had a population of 9,935,000 in that year. Other large urban areas were Pusan, 4,239,000; Taegu, 2,559,000; Inch'on, 2,837,000; Kwangju, 1,665,000; Taejon, 1,431,000; Pun'chon, 1,264,000; Suwon, 1,268,000; and Ulsan, 967,000. According to the United Nations, the urban population growth rate for 2000–2005 was 1.4%.

## 7 MIGRATION

During the Japanese occupation (1910–45), some three million Koreans emigrated to Manchuria and other parts of China, 700,000 to Siberia, approximately three million to Japan, and about 7,000 to the US (mostly to Hawaii). The great majority of those who went to Japan were from the populous southern provinces, and large numbers (1.5–2 million) of them returned home following the end of hostilities in 1945. In addition, from 1945 through 1949, at least 1.2 million Koreans crossed the 38th parallel into the ROK, refugees from Communism or from the Korean War. Under the Emigration Law of 1962, the ROK government encouraged emigration to South America (especially Brazil), the Federal Republic of Germany (FRG), the Middle East, and elsewhere. Most of the emigrants are workers who remit earnings back home. A total of 409,922 Koreans emigrated

during the 1962–80 period; emigration peaked at 48,270 in 1976 but had declined to 27,163 in 1990. In addition, Koreans have emigrated permanently to the US in large numbers since 1971; the population in the US of Korean origin was 798,849 as of 1990 (72.7% foreign-born). In all, more than two million South Koreans were living abroad in 1988. Migration within South Korea, mainly from the rural areas to the cities, remains substantial, despite government efforts to improve village living conditions.

As of March 1997, the 1,400 boat people that were granted temporary refugee status were resettled to third countries. In 1999, the net migration rate was -0.3 per 1,000 population.

## 8 ETHNIC GROUPS

The Koreans are believed to be descended primarily from Tungusic peoples of the Mongoloid race, who originated in the cold northern regions of Central Asia. There is scant evidence of non-Mongoloid admixture. There are about 20,000 Chinese; however, the ROK has no sizable ethnic minority.

## 9 LANGUAGES

The Korean language is usually held to be a member of the Altaic family; there are only slight differences between the various dialects. Korean is written in a largely phonetic alphabet called *Han'gul*, created in 1443. The Korean alphabet originally consisted of 14 consonants and 10 vowels; since then, 5 consonants and 11 vowels have been added. *Han'gul* letters are combined into syllables by clustering, in imitation of Chinese characters. ROK governments have launched several “language beautification” drives designed to purge Korean of borrowings from Japanese and other languages, but more than half of the vocabulary consists of words derived from Chinese.

English is widely taught in junior high and high school.

## 10 RELIGIONS

Most South Koreans are quite eclectic in their religious beliefs, the majority subscribing to varying mixtures of Taoism, Confucianism, Buddhism, Christianity, Ch'ondogyo (Religion of the Heavenly Way, an indigenous sect originating in 1860), and local animism. Shamanism, especially its aspect of exorcism of evil spirits, survives in some rural areas of the ROK. Geomancy is also used in matters such as the selection of auspicious building and tomb sites.

In 1995 (the last government survey), 49% of the population practiced Christianity (including 8,760,336 Protestants and 2,950,730 Roman Catholics); 47% Buddhism; 3% Confucianism; and 1% folk religion (shamanism), Ch'ondogyo (Religion of the Heavenly Way), and other. Over 21 million people claimed that they did not practice any religion.

Within the religious communities, there are about 38 different orders of Buddhism and 83 different Protestant denominations, including Methodists, Lutherans, Baptists, Presbyterians, Anglicans, and the Korean Gospel Church Assembly. The Catholic Church has 15 dioceses. Other religions with significant popular followings included Taejongyo, based on the worship of a trinity of ancient deities, and Soka Gakkai, a Buddhist sect of Japanese origin. There were also practicing Muslims, members of the Unification Church, Mormons, and Jehovah's Witnesses.

The constitution provides for freedom of religion, and the government reportedly respects this right in practice. There is no state religion, and the government does not subsidize or favor a particular religion.

## 11 TRANSPORTATION

The bulk of ROK railroads, totaling 3,124 km (1,941 mi) of track in 2002, are government owned. The Seoul subway system opened in 1991. Construction of Pusan's first subway line was completed in 1985.

LOCATION: 33°7' to 38°38' N; 124°36' to 130°56' E. BOUNDARY LENGTHS: DPRK, 240 kilometers (149 miles); total coastline, 1,318 kilometers (819 miles). TERRITORIAL SEA LIMIT: 12 miles.

The ROK road system carries 90% of the country's transportation. In 2002, the ROK had 87,534 km (54,394 mi) of roadway, of which 65,388 km (40,632 mi) were paved, including 1,996 km (1,069 mi) of expressways. There were 8,084,005 passenger automobiles, and 3,975,856 commercial vehicles in 2000. Bus transportation networks of varying quality serve most of the rural towns.

Maritime shipping expanded rapidly during the 1970s. By 2002, the ROK had a merchant fleet of 501 vessels, accounting for a total of 5,212,089 GRT (9,172,403 DWT). Pusan is the chief port; other major ports include Incheon (the port for Seoul), Kunsan, and Mokp'o.

There were 102 airports in 2001, 69 of which had paved runways. Major airports include Cheju International at Cheju, Kimhae International at Pusan, and Gimpo International at Seoul. Civil aviation in the ROK in 2001 amounted to 6,957 million freight ton-km (4,323 million freight ton-mi) of service and 32,638,200 passengers were carried on scheduled domestic and international flights. Korean Air Lines (KAL), privately owned since 1969, grew rapidly during the 1970s and now ranks as a major world carrier. On the morning of 1 September 1983, a KAL jetliner en route from New York to Seoul via Anchorage, Alaska, strayed over airspace of the former USSR and was shot down by Soviet interceptors, reportedly because they thought it was a military aircraft engaged in espionage; all 269 persons on board were killed, and worldwide protest followed. In November 1983, 115 people were killed when a bomb was apparently detonated aboard a KAL jet en route to Seoul.

## 12 HISTORY

[For Korean history before 1948, see Korea, Democratic People's Republic of.]

The Republic of Korea, headed by President Syngman Rhee (Rhee Syngman), was proclaimed on 15 August 1948 in the southern portion of the Korean Peninsula, which had been under US military administration since 8 September 1945. Like the Democratic People's Republic of Korea (DPRK), established in the north on 9 September 1948 with Soviet backing, the ROK claimed to be the legitimate government of all Korea. The ROK was recognized as the legitimate government by the UN General Assembly.

At dawn on 25 June 1950, following a year and a half of sporadic fighting, the well-equipped People's Army of the DPRK struck south across the 38th parallel. Proclaiming that the war was for national liberation and unification of the peninsula, the DPRK forces advanced rapidly; Seoul fell within three days, and the destruction of the ROK seemed imminent. At US urging, the UN Security Council (with the Soviet delegate absent) branded the DPRK an aggressor and called for the withdrawal of the attacking forces. On 27 June, US president Harry S. Truman ordered US air and naval units into combat, and three days later, US ground forces were sent into battle. The United Kingdom took similar action, and a multinational UN Command was created to join with and lead the ROK in its struggle against the invasion. Meanwhile, DPRK troops had pushed into the southeast corner of the peninsula. At that juncture, however, UN lines held firm, and an amphibious landing at Incheon (15 September 1950) in the ROK under General Douglas MacArthur brought about the complete disintegration of the DPRK army.

MacArthur, commanding the UN forces, made a fateful decision to drive northward. As the UN forces approached the Yalu River, however, China warned that it would not tolerate a unification of the peninsula under US/UN auspices. After several weeks of threats and feints, "volunteers" from the Chinese People's Liberation Army entered the fighting en masse, forcing MacArthur into a costly, pell-mell retreat back down the peninsula. Seoul was lost again (4 January 1951) and then regained before the battle line became stabilized very nearly along the 38th parallel. There it remained for two weary years, with bitter fighting but little change, while a cease-fire agreement was negotiated.

On 27 July 1953, an armistice agreement finally was signed at P'anmunjom in the DPRK. The Korean War was ended, but it had brought incalculable destruction and human suffering to all of Korea (some 1,300,000 military casualties, including 415,000 combat deaths, for the ROK alone), and it left the peninsula still more implacably divided. A military demarcation line, which neither side regarded as a permanent border, was established, surrounded by the DMZ. An international conference envisioned in the armistice agreement was not held until mid-1954. This

conference and subsequent efforts failed to reach an agreement on unification of the North and South, and the armistice agreement, supervised by a token UN Command in Seoul and by the Military Armistice Commission and the Neutral Nations Supervisory Commission, both in P'anmunjom, remains in effect.

In 1954, the United States and ROK signed a mutual defense treaty, under which US troops remained in the country. Financial assistance throughout the 1950s was provided by the US, averaging \$270 million annually between 1953 and 1958, and by other nations under UN auspices. Syngman Rhee ran the government until 1960, when his authoritarian rule provoked the "April Revolution," the culmination of a series of increasingly violent student demonstrations that finally brought about his ouster. The Second Korean Republic, which followed Rhee, adopted a parliamentary system to replace the previous presidential system. The new government, however, was short-lived. Premier Chang Myon and his supporters were ousted after only 10 months by a military coup in May 1961, headed by Major-General Park Chung-hee. The military junta dissolved the National Assembly, placed the nation under martial law, established the Korean Central Intelligence Agency (KCIA) as a means of detecting and suppressing potential enemies, and ruled by decree until late 1963 through the Supreme Council for National Reconstruction. General Park created a well-organized political party—the Democratic-Republican Party (DRP)—designed to serve as a vehicle for the transition from military to civilian rule, and in October 1963, under a new constitution, he easily won election as president of the Third Republic.

During the summer of 1965, riots erupted all over the ROK in protest against the ROK-Japan Normalization Treaty, which established diplomatic relations and replaced Korean war-reparation claims with Japanese promises to extend economic aid. The riots were met with harsh countermeasures, including another period of martial law and widespread arrests of demonstrators. Further demonstrations erupted in 1966, when the ROK's decision to send 45,000 combat troops to Vietnam became known. Park was elected to a second term in May 1967, defeating his chief opponent, Yun Po-sun, and the DRP won a large majority in the National Assembly. In 1969, Park pushed through the National Assembly a constitutional amendment permitting him to run for a third term. He defeated Kim Dae Jung, leader of the opposition New Democratic Party (NDP), in the elections of April 1971, but Kim's NDP made significant gains in the National Assembly elections that May.

Student demonstrations against the government in the fall of 1971 prompted Park to declare a state of national emergency on 6 December. Three weeks later, in a predawn session held without the knowledge of the opposition, the Assembly granted Park extraordinary governmental powers. These failed to quell mounting opposition and unrest, and in October 1972 martial law was declared. A new constitution, promulgated at the end of the month and ratified by national referendum in November 1972, vastly increased the powers of the presidency in economic as well as political affairs. Under this new document, which inaugurated the Fourth Republic, Park was elected for a six-year term that December, with a decisive legislative majority for his DRP. Soon the economy began to expand at a rapid rate. But Park's regime became increasingly repressive. Typical of its heavy-handed rule was the abduction by KCIA agents of Kim Dae Jung from a Japanese hotel room back to Seoul, an incident that provoked considerable friction between Japanese and Korean officials. On 15 August 1974, a Korean gunman carrying a Japanese passport and sympathetic to the DPRK attempted to assassinate the president but killed Park's wife instead. Park responded by drafting a series of emergency measures; the harshest of these, Emergency Measure No. 9, issued in May 1975, provided for the arrest of anyone criticizing the constitution and banned all political activities by students.

Park was reelected for another six-year term in July 1978, but the NDP, now led by Kim Young Sam, made major gains in the National Assembly. In October 1979, Kim was expelled from the legislature after calling for governmental reform. Riots protesting Kim's ouster were reported in several major cities. On 26 October 1979, in what may have been an attempted coup, Park was assassinated by KCIA Director Kim Jae-gyu, who was later executed. Martial law was again imposed, and a period of relative calm followed as some of the more restrictive emergency decrees were lifted by Park's constitutional successor, the prime minister, Choi Kyu-hah, who promised a new constitution and presidential elections.

In December 1979, Maj. Gen. Chun Doo Hwan led a coup in which he and his military colleagues removed the army chief of staff and took effective control of the government. Demonstrations, led by university students, spread through the spring of 1980 and, by mid-May, the government once more declared martial law (in effect until January 1981), banned demonstrations, and arrested political leaders. In the city of Kwangju, more than 200 civilians were killed in what became known as the Kwangju massacre. Choi Kyu-hah was pressured to resign and Chun Doo Hwan, now retired from the military, was named president in September 1980. Chun Doo Hwan came to power under a new constitution inaugurating the Fifth Republic. A total of 567 political leaders, including Kim Dae Jung and Kim Young Sam, were banned from political activity. Kim Dae Jung, arrested several times after his 1973 kidnapping, was originally sentenced to death but allowed to go to the United States in 1982. All existing political parties were dissolved, and all political activity banned until three months before the 1981 elections.

Twelve new parties (reduced to eight) were formed to enter the 1981 elections, in which Chun Doo Hwan was elected to a seven-year presidential term by a new electoral college and his Democratic Justice Party (DJP) secured a majority in the reconstituted National Assembly. Despite harsh controls, opposition to Chun continued. In 1982, 1,200 political prisoners were released, and in early 1983, the ban on political activity was lifted for 250 of the banned politicians. On 9 October 1983, Chun escaped an apparent assassination attempt in Rangoon, Burma, when an explosion took the lives of 17 in his entourage, including 4 ROK cabinet ministers. Chun subsequently blamed the DPRK for the bombing. In 1984, under increasing pressure for political reforms prior to the 1985 parliamentary elections, the government lifted its ban on all but 15 of the 567 politicians banned in 1980. In 1985, the ban was lifted on 14 of the remaining 15. Kim Dae Jung was allowed to return from exile in the United States in 1984 but rearrested. He remained banned from all political activity because of his conviction for sedition in 1980.

Opposition groups quickly formed the New Korea Democratic Party (NKDP) to challenge the DJP in the 1985 election; the new party became a strong minority voice in the National Assembly. The issue of constitutional reforms, particularly changes in the way in which presidents are elected and the way in which "bonus" seats in the legislature are distributed, became prominent, especially after Chun reaffirmed a commitment to step down in February 1988 and, in April 1986, dropped his long-standing opposition to any constitutional changes prior to that date. Demonstrations against Chun continued and became violent at Inch'on in May 1986 and at Konkuk University that fall. Opposition groups began collecting signatures on a petition demanding direct (instead of indirect) election of the president. In April 1987, as demonstrations became increasingly violent, Chun banned all further discussion of constitutional reform until after the 1988 Olympic Games in Seoul. The ban, which could have guaranteed the election of a handpicked DJP successor, set off violent antigovernment demonstrations throughout the nation. In June 1987, the DJP nominated its chairman, Roh Tae Woo, a

former general and a close friend of Chun, as its candidate for his successor. When Roh accepted opposition demands for political reforms, Chun announced in July that the upcoming election would be held by direct popular vote. On 8 July, 100,000 people demonstrated in Seoul in the largest protest since 1960 and, on the same day, the government restored political rights to 2,000 people, including the longtime opposition leader, Kim Dae Jung.

In the elections, held on 16 December 1987, Roh Tae Woo, as the DJP candidate, won a plurality of 37%, defeating the two major opposition candidates, Kim Young Sam and Kim Dae Jung, who had been unable to agree on a single opposition candidacy and split 55% of the total vote. Two minor candidates divided the remainder. A reported 89% of all eligible voters participated. The two leading opposition candidates charged massive fraud, and a series of demonstrations were held to protest the results. However, no evidence of extensive fraud was produced, and the demonstrations did not attract wide support. Roh Tae Woo was inaugurated as president in February 1988 when Chun Doo Hwan's term expired.

In the elections for the National Assembly, held on 26 April 1988, President Roh Tae Woo's party, the DJP, won only 34% of the vote. This gave the DJP 125 seats in the assembly, while Kim Dae Jung's Peace and Democracy Party (PDP) gained 70 seats, Kim Young Sam's Reunification Democratic Party (RDP) won 59 seats, 35 seats went to the new Democratic Republican Party (NDRP), and 10 to independent candidates. Thus, for the first time in 36 years, the government did not have a controlling vote in the National Assembly, which quickly challenged President Roh's choice for head of the Supreme Court and by year's end forced the president to work with the assembly to pass the budget.

In the fall of 1988, the National Assembly audited the government and held public hearings into former President Chun's abuses of power. In November, Chun apologized to the nation in a televised address, gave his personal wealth to the nation, and retired into a Buddhist temple. Following the revision of the constitution in 1987, South Koreans enjoyed greater freedoms of expression and assembly and freedom of the press and, in 1988, several hundred political dissidents were released from prison.

Unrest among students, workers, and farmers continued, however, and beginning in April 1989, the government repressed opposition. In October 1989, the government acknowledged making 1,315 political arrests so far that year. The National Assembly became less of a check on President Roh after two opposition parties (RDP, NDRP), including that of Kim Young Sam, merged with Roh's DJP, forming a new majority party, the Democratic Liberal Party (DLP) in January 1990. Kim Dae Jung was then left as the leader of the main opposition party (PDP).

There were continuing demonstrations into 1990 and 1991, calling for the resignation of President Roh and the withdrawal of United States troops. In May 1990, 50,000 demonstrators in Kwangju commemorated the tenth anniversary of the massacre, resulting in clashes with police which lasted several days. The United States agreed to withdraw its nuclear weapons from the ROK in November 1991. And, on the last day of the year, the ROK and the DPRK signed an agreement to ban nuclear weapons from the entire peninsula.

In the presidential election on 19 December 1992, Kim Young Sam, now leader of the majority DLP, won with 41.9% of the vote, while Kim Dae Jung (DP) took 33.8%. Inaugurated in February 1993, Kim Young Sam began a new era as the first president in 30 years who was a civilian, without a power base in the military. President Kim granted amnesty to 41,000 prisoners and instituted a series of purges of high-ranking military officials, including four generals who had roles in the 1979 coup. Among political and economic reforms was a broad anticorruption campaign, resulting in arrests, dismissals, or reprimands for

several thousands of government officials and business people. In March 1994, a former official of the National Security Planning Agency made public President Roh Tae Woo's authorization of a covert program to develop nuclear weapons at the Daeduk Science Town through 1991.

South and North Korea continue to have a rocky relationship. In April of 1996, North Korean troops on three successive days violated the 1954 armistice which had ended the Korean War by entering Panmunjom. The soldiers, who were apparently conducting training exercises, withdrew after a few hours on all three occasions. In September of the same year, a small North Korean submarine was grounded off the Eastern coast of South Korea and 26 crew members fled into the interior of South Korea. The ship appeared to be carrying a team of North Korean spies who intended to infiltrate into South Korea to carry out what remain unknown missions against South Korean targets. Twenty-four of the crewmen were killed, one escaped and one remains at large. In a surprise unusual move, the North Korean government apologized in February of 1997 for the incursion.

Meanwhile recent domestic events inside South Korea have been equally tumultuous. In August of 1996, former President Chun Doo Hwan and his successor, Roh Tae Woo were tried and found guilty of treason and mutiny for the 1980 coup that brought them to power, and the subsequent Kwangju massacre, in which troops killed at least 154 pro-democracy demonstrators. The court gave Chun a death sentence (extremely rare in Korea) and sentenced Roh to 22.5 years in prison. An appellate court later reduced Chun's sentence to life imprisonment and Roh's sentence to 17 years. When Kim Dae Jung was inaugurated as president in 1998, both leaders were released from prison under Kim's grant of amnesty.

On 11 April 1996, legislative elections took place amid allegation of corruption that reached to the inner circle of President Kim Young Sam and his New Korea Party. During the pre-election campaigning, Kim promised to launch an anti-corruption effort if his party gained power; in a major upset, the NKP captured 139 of the 299 seats, while the main opposition party (National Congress for New Politics—NCNP) or Kim Dae Jung won only 79 seats. Kim Dae Jung lost his own seat in the legislature. Several important New Korea Party officials and even Kim Young Sam's son, were implicated on charges of taking or giving millions of dollars in bribes to arrange loans to Hanbo Steel Industry Co., which eventually went bankrupt under \$6 billion of debt. Some of those officials were indicted in February of 1997 but Mr. Kim's son, Kim Hyun Chul, was cleared. However, in May of the same year Kim Hyun Chul was arrested on bribery and tax-evasion charges unrelated to the Hanbo scandal.

By 1997, many of the large *chaebols* (business conglomerates) reported serious problems with debt. A portion of Kia Group, a major manufacturer of automobiles, was nationalized to prevent bankruptcy. Increased domestic economic instability coupled with economic crisis sweeping through Asia, led to a severe decline in the value of the currency. The ensuing financial panic coincided with presidential elections on 18 December 1997, the month that negotiations with the International Monetary Fund (IMF) began. In the election Kim Dae Jung narrowly defeated the ruling party's candidate Lee Hoe Chang by 40.3% to 38.7%. A third candidate Yi In Che garnered 19.2% of the votes, effectively splitting the pro-government vote. Kim Dae Jung pledged to adhere to IMF conditionality and reform government-business relations in South Korea by increasing transparency. In 1998 and 1999, the government reduced the role of government intervention in the domestic economy despite numerous strikes by workers protesting layoffs.

By mid-2000, Kim Dae Jung managed to steer Korea's economy out of the worst of the crisis. The economy started to grow in 1999 and economic estimates suggested that economic

growth would top 10% for 2000. In April 2000, the legislative elections improved the position of Kim's party, renamed the New Millennium Party (NMP) to 115 seats. However, the Grand National Party (GNP), successor to the NKP obtained 133 seats and the United Liberal Democrats, allied to the GNP, won 17. Thus, Kim's objective to continue economic reform was imperiled.

In June 2000, Kim Dae Jung traveled to P'yongyang, the capital of the Democratic People's Republic of Korea (North Korea) for an historic meeting with his counterpart, Kim Jong Il. The two agreed to pursue further cooperation in the future. This summit meeting marked the high point of what became known as Kim Dae Jung's "sunshine policy" of rapprochement toward the North. He was awarded the Nobel Peace Prize in 2000 for his commitment to democracy and human rights in Asia.

Roh Moo Hyun was elected president in the December 2002 election, taking 49% of the vote; he was inaugurated in February 2003. While campaigning, Roh had stated he would continue with Kim Dae Jung's "sunshine policy" toward the North, but prior to his election, it was revealed that North Korea was secretly developing a program to enrich uranium for use in nuclear weapons. Relations between North Korea and the US were tense in 2002 and 2003, as the US maintained North Korea should not be allowed to develop nuclear weapons, and the North asserted it had the right to do so to provide for its defense and security. Roh took the position that North Korea's moves to develop nuclear weapons and export missiles could only be countered by dialogue. This put him at odds with some in the Bush Administration who held that the United States would not be "blackmailed" into negotiating with the North. In June 2003, the United States announced it would redeploy some of its 37,000 troops in South Korea to positions south of the DMZ, in an effort to create more agile and mobile forces.

South Korea's economy in 2003 was growing at 6.3%, a rate that was among the highest in the developed world.

### 13 GOVERNMENT

The Republic of Korea's (ROK) first constitution was adopted on 17 July 1948. Through repeated revisions, power remained concentrated in the hands of the president until the most recent revision, adopted by 93.1% of the vote in a popular referendum on 28 October 1987. Under the new constitution, which took effect in February 1988, the president is elected by direct popular vote, rather than indirectly as before, for a single term of five years. There are also a prime minister and two deputy prime ministers, who head the State Council (the cabinet). Roh Moo Hyun was elected president on 19 December 2002 for a five-year term beginning on 25 February 2003.

The ROK legislature is the unicameral National Assembly (Kuk Hoe). It has 273 seats; 227 are filled by direct election, while the remaining 46 are filled proportionally. During the first four decades of the ROK, the National Assembly had little authority. The 1987 constitution strengthened the National Assembly, giving it power to audit government activities and removing the president's power to dissolve the Assembly. Suffrage is universal at age 20.

In the elections of 2000, the Grand National Party won a narrow victory with 39% of the vote.

### 14 POLITICAL PARTIES

From 1948 to 1988, politics in the Republic of Korea were dominated by the executive arm of the government with military backing. Despite this, there were active opposition parties and, with the implementation of the revised 1987 constitution, political parties have had a greater governmental role. In the presidential election of December 1987, the governing Democratic Justice Party (DJP), with Roh Tae Woo as its candidate, won 37% of the vote; the Reunification Democratic

Party (RDP), with Kim Young Sam, won 28%; the Peace and Democracy Party (PDP), with Kim Dae Jung, won 27%; and the New Democratic-Republic Party (NDRP), with Kim Jong Pil, won 10%. In a crucial election for the National Assembly in April 1988, the DJP gained only 34% of the popular vote, allowing the opposition parties to control the assembly. This was the first time since 1952 that the government party did not have a majority in, and hence control of, the National Assembly.

In a surprise move in January 1990, the DJP merged with two of the opposition parties, the RDP and the NDRP, to form a new majority party, the Democratic Liberal Party (DLP). In July of that year, two opposition parties, the PDP and the Democratic Party (DP) merged, retaining the name DP. In September 1991, the DP agreed to merge with another opposition party, the New Democratic Party (NDP), then led by the veteran oppositionist, Kim Dae Jung, forming a new DP.

The National Assembly election on 24 March 1992 saw 38.5% of the vote going to the DLP; 29.2% to the DP; 17.3% to the Unification National Party, which later changed its name to the United People's Party (UPP); and 15% to other parties. The actual distribution of seats in the National Assembly shifts as members frequently switch among parties. In the presidential election on 18 December 1992, 41.5% of the vote went to Kim Young Sam of the DLP; 33.8% to Kim Dae Jung of the DP; 16.3% to Chung Ju Yung of the UPP; and 8% to candidates of various smaller parties.

Following the 1992 elections, Korea's largest political parties began a period of reorganization. The DLP transformed into the New Korea Party (NKP) while Kim Dae Jung formed a new opposition party, the National Congress for New Politics (NCNP). In the National Assembly election on 11 April 1996, the NKP won 139 seats; the NCNP, 79 seats; the ULD, 50 seats; and the DP, 15 seats. The remaining 16 seats were won by independents. The surprise of the election was the success of the ULD, a conservative party led by former premier Kim Jong Pil.

In the presidential election of 18 December 1997, Kim Dae Jung won 40.3% and Yi Hoe Chang of the Grand National Party (GNP) won 38.7%. In January 2000, Kim reorganized his cabinet; his party, the National Congress for New Politics, assumed a new name: New Millennium Party (NMP).

The 13 April 2000 election involved Kim Dae Jung's New Millennium Party, which captured 115 seats; the former governing party—Grand National Party (formerly the New Korea Party) obtained 133 seats; and a minor party, the United Democratic Liberal Party captured 17 seats. Two seats were held by the Democratic People's Party, one seat was held by the New Korea Party of Hope, and 5 seats went to independents.

### 15 LOCAL GOVERNMENT

The Republic of Korea (ROK) is divided into nine provinces (*do*), Cheju, North Cholla, South Cholla, North Ch'ungch'ong, South Ch'ungch'ong, Kangwan, Kyonggi, North Kyongsang, and South Kyongsang. There are seven provincial-level cities (*jikhalsi*) directly under the central government: Seoul, the capital; Inch'on; Kwangju; Pusan; Taegu; Taejon; and Ulsan. Provinces are divided into cities (*si*), counties (*kun* or *gun*), townships (*myon*), and villages (*i* or *ri*). Between 1961 and March 1990, there were no local elections.

### 16 JUDICIAL SYSTEM

The highest judicial court is the Supreme Court, under which are five intermediate appellate courts. Lower tribunals include district courts, of which there are 15, and a family and administrative court. There are 103 municipal courts in South Korea. Since 1988 constitutional challenges go to the Constitutional Court.

The president, with the consent of the National Assembly, appoints the chief justice, the other 13 justices of the Supreme

Court, and the Constitutional Court. The chief justice in consultation with the other justices of the court, appoints lower court justices.

The constitution provides for a presumption of innocence, protection from self-incrimination, the rights to a speedy trial, protection from double jeopardy and other procedural due process safeguards.

The constitution provides for an independent judiciary. There are no jury trials. The legal system combines some elements of European civil law systems, Anglo-American law, and classical Chinese philosophies.

## 17 ARMED FORCES

Of a total of 686,000 personnel on active duty, 560,000 were in the army, 63,000 in the navy and marines, and 63,000 in the air force. An additional 4.5 million were in the reserves. Paramilitary forces included 3.5 million in the Civilian Defense Corps. Equipment included over 2,000 main battle tanks, 20 submarines, and 538 combat aircraft. South Korea provided support for peacekeeping and UN missions in six regions. The US maintained a military presence of 37,140 personnel. Defense spending was \$12.8 billion in 2001 or 2.8% of GDP.

## 18 INTERNATIONAL COOPERATION

ROK is a member of the UN and participates in ESCAP and all the nonregional specialized agencies. The UN Commission on the Unification and Rehabilitation of Korea was dissolved in 1973, but the UN Command originating from the Korean War continues to supervise implementation of the 1953 armistice agreement.

The ROK pursues a vigorous international diplomacy, and in recent years has modified both its militant anti-Communist stance and its close alliance with the US. By 1986, the ROK was recognized by 122 nations, 67 of which also had diplomatic relations with the DPRK. The ROK participates in the African Development Bank, Asian Development Bank and G-77, is a permanent observer with the OAS, and is a signatory to the Law of the Sea and a member of the WTO.

## 19 ECONOMY

Under a centralized planning system initiated in 1962, the ROK was one of the fastest growing developing countries in the postwar period, shifting from an agrarian to an industrial economy to a high-tech "new economy" in the course of only a few decades. In 1996, the ROK was officially admitted to the 30-member Organization for Economic Cooperation and Development (OECD) of advanced industrialized countries. In 2001, industry contributed 44% of GDP compared to 16.2% in 1965, while agriculture, forestry and fishing accounted for 4%, down from 46.5%. Much of this industrialization was fueled by the government's stimulation of heavy industry, notably steel, construction, shipbuilding, and automobile manufacture, as well as its support of technological advances in communications and information technology (CIT). To finance industrial expansion the ROK borrowed heavily up until the mid-1980s. By the end of 1986 its foreign debt equaled about 52% of GNP, making the country one of the world's four most deeply indebted developing economies. Steady current account surpluses allowed the ROK to reduce this figure, but in 1998, in the wake of the Asian financial crisis, the external debt/GDP ratio again ballooned, reaching an average 46.9% in 1998. Financial and corporate structural reforms helped bring this ratio down to 28.4% (est.) in 2002, with a projected 25.8% in 2003.

The average annual rate of GDP growth declined from an average of 9.5% between 1965–80 and 9.7% 1980 to 1990 to 6.57% 1991 to 2000 as export growth slowed, labor costs rose, and the won steadily appreciated against the US dollar. However, Korea's economy started to grow once again at the phenomenal

rate that it saw in the 1970s and 1980s in the later 1990s. The economy grew by 9.1% in 1995 and 9.1% in 1996. However, after June 1997, when Hong Kong reverted to Chinese rule, South Korea became engulfed in the Asian financial crisis. GDP growth averaged only 5% in 1997, and then turned negative (-6.6%) in 1998, in the country's first economic contraction since the Korean war. Export value fell 25% in 1998 despite a 19.6% increase in volume, due to depreciating currencies. Before the end of 1997, a \$58 billion international support program had been arranged, anchored in a three year stand-by arrangement with the IMF running from 4 December 1997 to 3 December 2000, and a one-year arrangement under IMF's Supplemental Reserve Facility (SRF) with an additional \$14 billion line of credit. South Korea's economy made a strong recovery in 1999 and 2000, with GDP growth rates of 10.9% and 9.3%, while inflation, which had reached 4% in 1998, was held to 1.9% in 1999 and 2.8% in 2000. The recovery was sharply interrupted, however, by the collapse of the dot.com boom in early 2001 and the decline in international investment in the aftermath of the 11 September 2001 terrorist attacks on the United States. Real GDP growth dropped to 3.3% in 2001 and is projected to have achieved only between 5.5% and 5.8% in 2002.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2002 South Korea's gross domestic product (GDP) was estimated at \$931 billion. The per capita GDP was estimated at \$19,400. The annual growth rate of GDP was estimated at 5.8%. The average inflation rate in 2002 was 2.8%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 4% of GDP, industry 42%, and services 54%.

According to the United Nations, in 2000 remittances from citizens working abroad totaled \$63 million or about \$1 per capita. Worker remittances in 2001 totaled \$49.20 million. Foreign aid receipts amounted to about \$2 per capita.

The World Bank reports that in 2001 per capita household consumption (in constant 1995 US dollars) was \$6,907. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the same period private consumption grew at an annual rate of 4%. Approximately 18% of household consumption was spent on food, 7% on fuel, 5% on health care, and 14% on education. The richest 10% of the population accounted for approximately 24.3% of household consumption and the poorest 10% approximately 2.9%. It was estimated that in 2001 about 4% of the population had incomes below the poverty line.

## 21 LABOR

The labor force numbered 22 million in 2002. In that year, 10% were engaged in agriculture, 22% in industry, and 69% in the service sector. The unemployment rate in 2002 averaged 3%.

Before 1987, the labor movement was heavily controlled by the government, but since 1991, democratic reform has brought some changes. With the exception of public sector employees, workers enjoy the right to join unions even with as few as two members. All unions must register with the labor ministry. In 2002, about 12% of the workforce belonged to 5,698 registered local unions. Unions often exercise the right to strike, and collective bargaining is prevalent.

Children under the age of 15 are generally prohibited from working, and those under 18 must obtain written approval from their parents. The maximum regular workweek is set at 44 hours, with overtime pay mandatory for extended hours. In 2002, the minimum wage was \$1.63 per hour. Health and safety standards

are regulated by the government although it is not stringently enforced due to lack of inspectors.

## 22 AGRICULTURE

Some 20% of the ROK's land area is arable, with about 70% of it sown in grain, rice being the chief crop. In 1965, agriculture (including forestry and fishing) contributed nearly 50% to GNP, but by 2001 only accounted for 4.4%. Double-cropping is common in the southern provinces. Rice production in 2000/01 was 5,290,000 tons. Barley production in 1999 stood at 331,000 tons; potatoes, 562,000 tons; and soybeans, 145,000 tons. Despite increased yields due to mechanization, the use of hybrid seeds, and increased employment of fertilizers, the ROK runs a net deficit in food grains every year. In 2001, imports of cereals, mostly from the United States, amounted to \$1,510 million, consisting almost entirely of wheat and corn. Virtual self-sufficiency has been attained in rice production, but at a cost of nearly \$2 billion per year in direct producer subsidies. In 2001, the ROK's agricultural trade deficit was \$6.67 billion, fifth highest in the world.

Hemp, hops, and tobacco are the leading industrial crops. The ROK was the world's leading producer of chestnuts in 1999. The orchards in the Taegu area are renowned for their apples, the prime fruit crop; output in 1999 was 491,000 tons. Pears, peaches, persimmons, and melons also are grown in abundance. About two-thirds of vegetable production is made up of the *mu* (a large white radish) and Chinese cabbage, the main ingredients of the year-round staple kimchi, or "Korean pickle."

Until the Korean War, tenant farming was widespread in the ROK. The Land Reform Act of June 1949, interrupted by the war, was implemented in 1953; it limited arable land ownership to three ha (7.4 acres) per household, with all lands in excess of this limit to be purchased by the government for distribution among farmers who had little or no land. By the late 1980s, farms averaged 0.5–1 ha (1.2–2.5 acres). The New Village (Saemaul) Movement, initiated in 1972, plays a major role in raising productivity and modernizing villages and farming practices.

## 23 ANIMAL HUSBANDRY

The raising of livestock, traditionally a supplementary occupation among ROK farmers, expanded rapidly during the 1970s and 1980s. In 2001, 1.9 million head of cattle were raised; pigs totaled 8,719,000, and chickens, 102 million. Production in 2001 included (in thousands of tons): beef, 226; pork, 928; chicken, 433; eggs, 522; milk, 2,338; butter, 5.7. The silkworm industry has declined radically since the mid-1970s. Although the dairy industry has been protected by import restrictions, an incremental lifting of such trade constraints is underway, which will eventually include livestock imports.

## 24 FISHING

Korean waters comprise some of the best fishing grounds in the world. The Sea of Japan off the east coast provides deep-sea fishing with an average water depth of 1,700 m (5,600 ft). Warm and cold water alternate each season; the area is known for its Alaskan pollack, cod, squid, king crab, hairing crab, turban shell, and abalone. Off the west coast, the Yellow Sea has an average depth of 44 m (144 ft); major species include corker, hairtail, mackerel, surf clam, large clam abalone, lobster, Japanese paste shrimp, and blue crab. Off the south coast, the warm Pacific Ocean currents move towards the northeast, bringing diverse species such as anchovy, mackerel, oyster, mussels, shellfish, octopus, beka squid, laver, and sea mustard.

Industrialization and urbanization have led to a dramatic reduction in the number of families directly involved with fishing; from 1980 to 2000, the number of fishing families declined from

157,000 to 82,000. The fishing fleet consisted of 94,935 vessels in 2000, of which 568 were deep-sea vessels.

According to the government, the total catch in 2001 was 2,665,123 tons. Mackerel and anchovies account for about half the coastal fish landings; oysters are the principal aquacultural species; Alaskan pollack and tuna provide 80% of the deep-sea fish catch. Korean fishing bases have been established in Western Samoa and Las Palmas, and cuttlefish caught in waters off the Falkland Islands are now available. Since the declaration of 200 mi economic sea zones by many nations in the 1970s, the ROK negotiated fishing agreements with several coastal nations to secure fishing rights in their waters. Seaweed is another important aquacultural product, with 427,117 tons harvested in 2001.

The ROK exports seafood to about 65 countries throughout the world. Fisheries exports typically include tuna, shellfish, frozen/canned products, and seaweed. Japan is the largest destination for exports, annually accounting for about 75% of ROK seafood exports by value. In 2001, fisheries exports were valued at \$1,273,619,000. Fresh, chilled, and frozen fish accounted for 67% of the value; smoked, dried, and salted fish, 8%; canned fish, 18%; and other products, 7%. The rate of fish consumption in the ROK was 33 kg (73 lb) per person in 2001. Although domestic consumption is still largely tied to local production, the ROK imported \$1,648,372,000 of fish products in 2001. Major suppliers were Russia, the United States, China, Argentina, Chile, New Zealand, and Japan.

## 25 FORESTRY

Forests covered 6,248,000 ha (15,439,000 acres) in 2000, or about 63.3% of the ROK's total area, but wood supplies are grossly inadequate to meet the needs of the fast-growing plywood and paper industries. Most of the original forests were destroyed during the Korean War and have been transformed into pine forests under a massive government reforestation program. Conifers now account for 45% of the forest; broad-leaved species (such as oak), 28%; and mixed forests, 27%. About 21% of all forested land is nationally owned and is the focus of extensive reforestation efforts. The government is supporting local efforts to invest in forest development projects abroad. According to the FAO, estimated production of roundwood in 2000 was 4,041,000 cu m (142 million cu ft); sawnwood, 4,300,000 cu m (152 million cu ft); and plywood, 797,000 cu m (2.8 million cu ft). Softwoods (mostly red pine and larch) accounted for about 80% of the production; hardwoods (mainly oak), 20%. Because of low quality, domestic roundwood is mainly used for chopsticks, crates, match wood, and wood chips. Whereas plywood and wood pulp were once traditional export items, the role of forestry products in generating export earnings is now shrinking. The ROK now imports about 95% of its forest products. Imports of forest products amounted to nearly \$3.7 billion in 2000 (primarily from Indonesia, Malaysia, and the United States). Imports have been boosted by a growing demand for single and multifamily wood frame houses.

## 26 MINING

The Republic of Korea did not have significant natural resources, and its limited supplies of iron ore, coal, copper, lead, and zinc had to be supplemented by imports. In 2000, 188,000 tons of iron ore and concentrate (metal content) was produced, down from 272,000 in 1998. The output met 1% of the country's demands for its crude steel industry (which ranked sixth in the world) and its pig iron industry (which ranked eighth). Output of zinc was 11,474 tons (the Korea Zinc Group became one of the largest primary zinc producers in the world); lead output was 2,724 tons, down from 5,131 in 1996. No mine copper was produced in 1997, 1999, and 2000. The ROK also produced the metals bismuth, cadmium, gold, nickel, and silver. Among industrial minerals, the ROK produced barite, hydraulic cement,

diatomaceous earth, feldspar, graphite, kaolin, limestone, mica, nitrogen, quartzite, salt, sand (including glass sand), soda ash (manufactured), sulfur, and talc and pyrophyllite. No barite was produced in 1997–2000, and no fluorspar in 1998–2000. The production of chemicals and steel ranked third and fifth, respectively, among the country's leading industries in 2002, and steel ranked fourth among export commodities.

After four years of prospecting, Ivanhoe Mines Ltd., of Canada, announced the discovery of two epithermal gold-silver veins near Haenam, Cholla Province, with potentially high-grade gold-silver mineralization. The government continued to support state-owned or privately owned enterprises that invested in such mineral-rich countries as Australia, Brazil, Canada, and Chile. The Korea Development Bank sold off the government equity in Pohang Iron and Steel Co. Ltd. (POSCO), which had diversified interests and holdings, including a high-grade iron ore deposit in the Pilbara region of Western Australia with proven reserves of 200 million tons. Two-way trade with North Korea continued to grow.

## 27 ENERGY AND POWER

Coal is the chief fuel mined, with recoverable reserves estimated at 86 million tons in 2000 and production totaling 4.6 million tons in the same year. Most of the coal is low-quality anthracite, used mainly for home cooking and heating; imports of higher-grade coal are required for industry.

In 2000, crude oil provided 56% of all primary energy consumed, up from 9.4% in 1962, and coal, 20%. Nuclear energy, natural gas, and hydroelectricity provided the rest. Oil consumption totaled 2.1 million barrels per day in 2000, all of it imported. The Number 3 reactor at the Ulchin power plant went online in 1998, and the Number 4 reactor launched operations a year later. Units 5 and 6 are expected to be finished in 2004 and 2005. Since the 1960s, the ROK's oil sector has been heavily regulated as a means of providing manufacturers with inexpensive energy. Prices are controlled and market entry is restricted. Following the Asian economic crisis of 1997–1998, the ROK began to loosen controls over oil pricing, importing, and the export of refined petroleum products. In 1998 the refining industry was fully deregulated. Plans for the future call for a de-emphasis on oil and promotion of atomic energy, coal, and hydroelectricity as energy sources, together with importation of liquefied natural gas from Indonesia and crude oil from the United States.

In 2001, the ROK had an installed electrical generating capacity of 52 million kW, up from 9.8 million kW in 1981. The output of electricity in 2000 totaled 273.6 billion kWh, of which 60.6% was from fossil fuels, 1.5% from hydropower, 37.9% from nuclear power, and a negligible amount from other renewable sources. Industry accounts for about two-thirds of the electricity consumed. Electricity demand is projected to rise 3.4% per year on average through 2015.

## 28 INDUSTRY

Up until the 1960s, manufacturing was chiefly confined to production for domestic consumption, and a substantial proportion of the output was produced by handicraft methods in homes and small factories. While textiles, apparel and footwear were the first modern industries to be developed, heavy industry has grown rapidly over the last four decades, promoted by a series of development plans. In the 1980s, the manufacture of metals, machinery, and electronic and other equipment overtook textile production as the country's leading industries in terms of value, employment and export earnings. In turn, in the 1990s, high-tech electronics have become the leading sector as South Korea became the world's leading semi-conductor manufacturer as well as the leading shipbuilder. Prosperity brought higher labor costs, and in the last decade, South Koreans have begun

outsourcing production—particularly textiles and footwear but also more recently “commoditized” consumer electronics. During the past decade, increasing domestic production costs have encouraged the relocation of production plants in some industries—particularly textiles and footwear but more recently also consumer electronics—to overseas locations in Southeast Asia, Eastern Europe, China, Mexico, and Turkey. The ROK now ranks as a major Asian producer of electronics, automobiles, chemicals, ships, steel, textiles, clothing, shoes, and processed food. In 2002, industrial production grew 7.3% (although excluding the 21.4% growth in semi-conductors, only 5.8%) Other high value-added sectors showed above average growth: automobile production up 8.1%; machinery equipment up 7.9% and wearing apparel and fur articles, up 7.4%. The lower value-added sectors of textiles and basic metals showed the strains of global over capacity and low-cost competition. Textiles declined 6.6% and basic metals increased a weak 4.6%. Long-term plans for the textiles and clothing sectors include a shift from the current mix of 5% clothing to 30% clothing by 2010 as part of the goal of doubling export value from the 2002 level of \$15.7 billion.

Manufacturing in the ROK is dominated by a few dozen vertically integrated industrial conglomerates, known as *chaebol*, which have privileged access to financing and set the standards for contracting and procurement throughout the country. In 1995, the 30 largest chaebol accounted for 16.2% of GNP (up from 13.5% in 1992), according to the Korea Economic Research Institute. In 1999, the debts of the four biggest chaebol stood at approximately \$140 billion. Unfortunately, many of the country's chaebol have racked up huge debts in order to finance industrial expansion, some more than five times their annual intake. Asset sell-offs by the four biggest chaebols, including Hyundai, Samsung, LG, and SK amounted to \$15 billion in 1999.

Joint venture production with major US and Japanese car companies, growing domestic demand, and successful penetration of overseas markets by Korean-owned corporations has fueled steady growth in automobile output. The production of passenger cars more than doubled from 1990 to 1995. Total vehicle production in 1995 was 2,526,400, or 5% of world output. Vehicle production in 1998 was about two billion, or eighth of all OECD countries. South Korea's automotive industry is dominated by Hyundai, which accounted for 48% of all passenger cars, trucks, and buses domestically produced in 1995. Kia accounted for 25% of production that year; Daewoo, 18%; and others, 9%.

In 1998, the ROK was the second-largest world producer of new ships; in 2002 it was the world leader. In 2002, Korean shipbuilders got orders for 230 ships (2.6 million CGT), delivered 210 ships (6.8 million CGT), and had a backlog of 496 ships (17.1 million CGT).

Production of electronics has shifted from assembly of imported parts to the manufacture of competitive high-technology products, such as office automation systems, for both the international and domestic markets. Daewoo Electronics (the second-largest chaebol, with substantial debts), LG and Samsung Electronics dominate in the production of consumer electronics; the televisions, videocassette recorders, stereos, refrigerators, washing machines, and microwave ovens produced by these companies are sold across the world. Daewoo Electronics also operates 36 overseas factories and planned to capture 10% of the world's market in consumer electronics by 2000. Samsung Electronics was the world's largest producer of computer memory chips by 1996.

By 2002, ROK had become the world's fifth largest steel producer, up from 10th in 1989, accounting for 4.8% of the world total. P'ohang Iron and Steel Co. (POSCO) produces about half of the nation's total steel output, and is the world's second-

largest steel mill, producing 27.4 million tons in 2002. There are about 200 steel companies in South Korea.

## 29 SCIENCE AND TECHNOLOGY

The ROK has often been compared to its powerful neighbor, Japan, but is said to be about 10 years behind that nation in scientific and technological innovation. However, in areas such as semiconductor memory chips, cars, and steel, Korean industries provide innovation equal to that in the United States and Japan. In 1998, high technology exports were valued at \$30.5 billion and accounted for 27% of all manufactured exports.

Two organizations provide most of the main support for Korean science and technology. The Korean Institute of Science and Technology (KIST) was started in 1965 with the help of the United States. The Korean Advanced Institute of Science and Technology (KAIST), the leading university in scientific research, attracts researchers from all over the world, and is considered one of the top universities in the world for electrical and molecular engineering and computer science. In 1987-97, science and engineering students accounted for 32% of college and university enrollments.

## 30 DOMESTIC TRADE

The small family store, traditional in Korea, is giving way to chain stores and supermarkets. Large, modern department stores now operate in Seoul, Pusan and other major urban centers, although some trade in rural areas is still carried on by itinerant peddlers, mobile sidewalk stands, and periodic market fairs. Black markets offering all manner of foreign goods are much in use; haggling over prices is common. Seoul is the nation's wholesaling center. Franchising has a firm ground in the restaurant and retail markets. Direct marketing, particular door-to-door sales, is still fairly popular as well.

Most private offices are open from 8:30 AM to 6:00 PM weekdays and from 9:00 AM to 12:00 PM on Saturdays. Korean government offices keep similar hours, except for a 5:00 PM closing from November through February. Banking hours are 9:30 AM to 4:30 PM, Monday through Friday and 9:30 AM to 1:30 PM Saturdays.

## 31 FOREIGN TRADE

Various types of machinery are the Republic of Korea's most important commodity exports, accounting for 58% of exported commodities. The Republic of Korea's other major exports include woven fabrics and ships. The top 10 exports are:

	% OF COUNTRY TOTAL
Electrical machinery	18.0
Transistors, valves	14.0
Passenger motor vehicles	6.9
Telecommunications equipment	6.1
Automatic data processing equipment	5.4
Refined petroleum products	5.3
Ships	4.8
Iron and steel	4.0
Apparel	2.9
Polymers	2.7

Oil and related products, chemicals, and raw materials are major imports, as most raw inputs for the country's industrial sector are imported. A lack of small companies and technological research compels the ROK to import components and production machines for the cars, videocassette recorders, computer chips, and ships that it manufactures. In 2000 South Korea's imports were distributed among the following categories:

Consumer goods	4.9%
Food	3.7%
Fuels	23.9%
Industrial supplies	27.4%
Machinery	36.7%
Transportation	3.1%
Other	0.3%

The United States, China and Japan have continued to be the ROK's chief trading partners by far, although potential new markets in Eastern Europe and the rest of Asia are being explored. Sa'udi Arabia and Indonesia have been major providers of oil and liquefied natural gas. Australia is a leading supplier of iron ore, coal, and grains. Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
United States	37,806	29,286	8,520
China (inc. Hong Kong)	29,163	14,059	15,104
Japan	20,466	31,827	-11,361
Singapore	5,648	3,723	1,925
United Kingdom	5,380	2,576	2,804
Germany	5,154	4,625	529
Malaysia	3,515	4,878	-1,363
Indonesia	3,504	5,287	-1,783
Australia	2,606	5,958	-3,352
Sa'udi Arabia	1,262	9,642	-8,380

## 32 BALANCE OF PAYMENTS

Robust export performance turned the ROK's overall balance of payments deficit into a \$1.7 billion surplus in 1986, which grew to \$12.1 billion in 1988. Since then, the balance of payments surplus has declined; in 1990, the balance of payments had a deficit of \$274 million because of declining exports, rising imports, and a current account deficit. Over the long term, growth in exports will depend on industry's efforts to regain competitiveness lost through wage increases, labor unrest, and exchange rate changes. The deficit grew to over 4% of GDP in 1996, before subsiding in 1997 due to a shrinking currency base.

At the end of 1998, South Korea had \$20.2 billion in net outstanding loans, but by the end of 1999, it had become a net creditor. By the end of April 2001, \$33.3 billion in outstanding loans were owed the country.

The US Central Intelligence Agency (CIA) reports that in 2002 the purchasing power parity of South Korea's exports was \$159.2 billion while imports totaled \$146.6 billion resulting in a trade surplus of \$12.6 billion.

The International Monetary Fund (IMF) reports that in 2001 South Korea had exports of goods totaling \$151.4 billion and imports totaling \$138 billion. The services credit totaled \$29.6 billion and debit \$33.1 billion. The following table summarizes South Korea's balance of payments as reported by the IMF for 2001 in millions of US dollars.

<b>Current Account</b>	<b>8,617</b>
Balance on goods	13,392
Balance on services	-3,527
Balance on income	-886
Current transfers	-363
<b>Capital Account</b>	<b>-443</b>
<b>Financial Account</b>	<b>2,543</b>
Direct investment abroad	-2,600
Direct investment in South Korea	3,198
Portfolio investment assets	-5,499
Portfolio investment liabilities	11,856
Other investment assets	7,458
Other investment liabilities	-11,764
<b>Net Errors and Omissions</b>	<b>-2,698</b>
<b>Reserves and Related Items</b>	<b>-13,416</b>

### 33 BANKING AND SECURITIES

In 2000, finance, insurance, real estate, and business services accounted for over half of GDP. The Bank of Korea serves as the central bank, the bank of issue, and the depository for government funds. It was established in 12 June 1950. The banking system is regulated by the Financial Supervisory Service. Other banking services are provided by the state-run Korea Development Bank, the Export-Import Bank of Korea, and nine state-run specialized banks. Commercial banking operations in 1999 were handled by 11 nationwide commercial banks, 10 provincial banks, and 42 foreign banks. Total assets of Korea's commercial banks at the end of 1998 were \$300 billion.

By 1986, as part of the government's economic stabilization program initiated in 1980, all of the five commercial banks previously under government control were denationalized. In 1993, the Korean government began a five-year financial sector reform program, including the deregulation of interest rates, and liberalization of foreign exchange. During the financial crisis of late 1997 and 1998, non-performing loan levels skyrocketed. The credit hunger of South Korean corporations can be explained in part by the failure of the stock exchange to generate the equity capital they needed. On 25 June 1998, the Korean government ordered the takeover of five failing banks, and seven other banks were put on a warning list. Of the seven, five merged, and two continued operations. Banks directly affected by these measures included Shinhan Bank, the Housing and Commercial Bank, Kookmin Bank, KorAm Bank, Hana Bank, and Hanvit Bank, among others. In 1998, efforts continued to stabilize the banking sector by increasing the capital adequacy ratio to 8%, and the government encouraged lending to small and medium-sized companies as opposed to the large conglomerate chaebols. By 2003 the government had nationalized eight failing private banks, spending \$120 billion on bailouts. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$41.4 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$362.2 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 4.7%.

The Korean Stock Exchange, a share-issuing private corporation, functions as the country's only stock exchange. Clearly, all was not well with the stock market in 1996, when the stock price index late in was lower than that of 1988, although the economy had virtually doubled in size in real terms over the same period. Direct access by foreigners to the stock market has been allowed since 1992; Seoul implemented unrestricted foreign access in 1998. Stock issues raised \$32 billion in 1999, as opposed to \$11 billion in 1997. International links were being forged in 2000, and the KOSDAQ was to begin stock transactions for small- and medium-sized firms.

### 34 INSURANCE

The insurance industry in Republic of Korea is overseen by the Financial Supervisory Service. In 2001, there were US\$50.537 billion direct insurance premiums written, with US\$35.392 billion of the total comprised of life insurance and US\$14.145 billion comprised of nonlife insurance. In 2001, leading life insurance companies included Samsung Life, Korea Life, Kyobo Life, and Allianz. Leading nonlife insurance companies included Samsun, Hyundai, Dongbu, LG, and Oriental. Workers' compensation, medical insurance, and unemployment insurance are all compulsory.

### 35 PUBLIC FINANCE

In recent years, Korea has moved away from the planned, government-controlled economy to a more liberal market based

economy. Privatization of some major banks and a restructuring of the *chaebols* (conglomerates) contributed greatly to the opening up of the economy.

The US Central Intelligence Agency (CIA) estimates that in 2000 South Korea's central government took in revenues of approximately \$118.1 billion and had expenditures of \$95.7 billion including capital expenditures of \$22.6 billion. Overall, the government registered a surplus of approximately \$22.4 billion. External debt totaled \$128.2 billion.

The following table shows an itemized breakdown of government expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

EXPENDITURES	100.0%	95,700
General public services	5.1%	4,842
Defense	16.7%	15,941
Public order and safety	6.1%	5,801
Education	20.5%	19,627
Health	0.8%	746
Social security	10.8%	10,329
Housing and community amenities	2.3%	2,159
Recreation, cultural, and religious affairs	0.9%	815
Economic affairs and services	23.7%	22,659
Other expenditures	10.5%	10,046
Interest payments	2.9%	2,735

### 36 TAXATION

The principal sources of tax revenue are customs duties, corporate taxes, a defense tax surcharge imposed on corporations, a VAT of 10%, personal income taxes, and excise taxes ranging from 5% to 20%. As of 2000, the rates for corporate taxation ranged from 16% on taxable income up to ₩100 million to 28% on income over ₩100 million. In addition, there is a resident tax surcharge of 10% and a special agriculture and fishery tax imposed on corporations having taxable income over ₩500 million. There is a 24.2% withholding tax on interest. The capital gains tax is set at three rates of 20%, 30%, and 40%. Tax relief for up to five years, with a 50% exemption in the ensuing two years, is offered to new industries and corporations that are foreign exchange earners. Those in electronics receive seven years of exemption, and three years at 50%. The personal income tax is graduated from 10% to 45%.

### 37 CUSTOMS AND DUTIES

In 2000, Korea had an average tariff of 7.9%. However, tariffs remain high on a number of agricultural and fishery products, at 30% to 100%. Korea plans to further reduce tariffs in the future. Other import taxes include a value-added tax of 10% and excise taxes ranging from 15% to 100%. The special excise tax on consumer electronic goods and automobiles was cut by 30% in 1998. There were 57 items subject to quotas and 29 items subject to excise tariffs in 1999. The Information Technology Agreement (ITA) dropped most IT tariffs by 2000, with the remainder to be phased out by 2004.

### 38 FOREIGN INVESTMENT

The Foreign Investment Promotion Act (FIPA) and related regulations have governed foreign investment in ROK since May 1998 when a five year liberalization plan was announced covering a total of 11 sectors including real estate, financial services, and petroleum. The policy emphasis shifted from "control and regulate" to "promote and support." Tax benefits and incentives were provided for foreign investors in high-tech and services sectors. In December 2000, the ceiling on foreign ownership was raised from 33% to 49% when Korea Telecom—

now simply KT—was offered for privatization. KT was fully privatized in May 2002, albeit with SK Telecom as its largest share holder. Japanese share of foreign investments fell from about 50% in 1987 to 5.7% in 1998, as Japanese investors have been increasingly attracted to new centers of economic growth in Southeast Asia.

As of 2002, EU countries had the largest cumulative investment in South Korea (\$22.8 billion) followed by the United States with \$21.8 billion. To facilitate further technology transfer, the government offers particular incentives to foreign companies in 533 categories of high technology industries. Two free export zones geared towards highly technical business activities have been established at Masan (near Pusan) and Iri (near Kunsan) to provide additional incentives for investment in favored industries. There were also completed in 1996 two industrial parks, in Chonan and Kwangju. The parks are for the exclusive use of Korean firms with heavy foreign investment.

In 1998 net FDI was \$0.7 billion, a balance of an inflow of \$5.4 billion and an outflow of \$4.7 billion. Net portfolio equity investment was a positive \$3.9 billion. In 1999 and 2000 FDI inflow was \$9.3 billion in both years, and net FDI was \$5.1 billion and \$4.3 billion, respectively. Net portfolio investment was \$11.8 billion in 1999 and \$12.6 billion in 2000. After the 11 September 2001 terrorist attacks on the United States, FDI inflow dropped 62% to \$3.5 billion, producing a net inflow of only \$1.1 billion. For 2002, it is estimated that net FDI inflow turned negative (-\$.7) and that net portfolio investment was a low \$1.5 billion.

### 39 ECONOMIC DEVELOPMENT

The ROK has a market economy in which both private enterprise and foreign investors play an important role. From 1962 to 1997, overall economic development was guided by the Economic Planning Board and a series of five-year plans. The Korean economy was devastated by the Korean War, even requiring foreign food aid. As late as 1965, per capita income was only \$88 a year. From 1965, South Korea has been transformed from an underdeveloped agricultural economy to a leading Newly Industrialized country (NIC) to a leader in the new information technology (IT) economy. Nominal GDP was \$3 billion in 1965; in 2003 it is projected at \$514 billion, 171 times bigger.

The Seventh Five-Year Economic and Social Development Plan for 1992–96 aimed at establishing the ROK as an advanced industrialized economy by the year 2000. More specific goals included improving social and economic equity, continued liberalization, improving industrial and export competitiveness, as well as strengthening the role of the private sector while government intervention in economic management, especially in the financial sector, is reduced. The Plan targeted an annual GDP growth rate of 7% and a decline of consumer price inflation to 3%. The plan was overtaken by the Asian financial crisis. South Korea was assisted in weathering the crisis of confidence with a \$58 billion international support program mobilized through the IMF, the World Bank and the Asia Development Bank (ADB). In May 1998 the government introduced a five-year liberalization program covering 11 economic sectors including previously closed petroleum, insurance and financial services sectors. The ROK's recovery from the Asian financial crisis was remarkably strong, aided by the show of international confidence and its government's embrace of trade and investment liberalization reforms. However, the collapse of the dot.com boom and the global slowdown in 2001, combined with the aftermath of the 11 September 2001 terrorist attacks on the United States, dealt serious blows to the economy's forward momentum. Progress in reducing the share of non-performing loans (NPLs) in the financial sector and reducing dependency on foreign borrowing were brought to a halt. At the end of March 2001, total external liabilities were at a record \$137 billion. However, the ROK

continued to maintain its net creditor position as it has since September 1999. Foreign assets totaled an estimated \$188 billion.

In early 2003, under the shadow of increased tensions with North Korea, the ROK government announced that the four pillars of its development strategy were 1) consistently promoting technological innovation; 2) continued development of a fair and transparent market system; 3) social and cultural norms based on trust; and 4) peace and prosperity in East Asia.

### 40 SOCIAL DEVELOPMENT

Few countries have faced health and social welfare problems as acute as those caused in the ROK by the devastation of the Korean War. The war left a residue of 348,000 war widows, most of them with dependent children, and 100,000 war orphans. Some 595,260 homes were destroyed, 5,000 villages wiped out, and many large cities badly damaged. Military relief payments consist mainly of financial support to veterans and their families.

Old age, disability, and survivors' insurance is provided to all residents aged 18-59. There is a separate system for public employees, school teachers, self-employed individuals, and military personnel. Workers and employers contributed 4.5% of earnings and payroll, respectively. Medical benefits are provided to all permanent residents, and workers' compensation is extended to employees of firms with five or more workers.

Conservative Confucian tradition encourages married women to remain at home. Women continue to suffer legal and societal discrimination. Despite equal opportunity laws, very few women achieve high levels of professional success. The wage of the average female worker is roughly half of that earned by a male counterpart. Violence against women, domestic abuse, and child abuse are prevalent and appear to be increasing with the economic decline. Divorce remains socially unacceptable in most sectors of Korean society, and this leads many women to remain in abusive marriages. A new sexual harassment law went into effect in 1999.

Korean citizenship is determined exclusively by genealogy, and as a result, many Chinese born and raised in Korea are deprived of citizenship rights. Human rights are generally respected by the government. Some abuses have been reported involving detainees, but these are declining.

### 41 HEALTH

The substantial improvement in health care is directly related to improvement of diet, the rise in living standards, and the development of health and medical programs. Since the late 1970s, medical security, in the form of medical insurance and medical aid, has been expanded to cover a substantial portion of the population. The national medical insurance system was expanded in 1989, covering 94% of the population. In 1985–1995, 100% of the population had access to health care services. About 5.4% of the GDP went to health expenditures as of 1999. In the mid-1990s, there were 236 general hospitals, 351 hospitals, 6 dental hospitals, 12,629 clinics, 6,708 dental clinics, 269 maternity clinics, 53 herb doctor hospitals, and 4,062 herb doctor clinics. As of 1999, there were an estimated 1.3 physicians and 5.5 hospital beds per 1,000 people. In 2000, 92% of the population had access to safe drinking water and 63% had adequate sanitation.

The fertility rate in 2000 was 1.4 children per woman surviving her childbearing years. In 1993–96, 4% of all births were low birth weight. About 79% of married women (aged 15-49) used contraception in the years 1989–1995. In 1990-1994, immunization rates for children up to one year of age were tuberculosis, 72%; diphtheria, pertussis, and tetanus, 74%; polio, 79%; and measles, 93%. The 2000 infant mortality rate was 8 per 1,000 live births and the general mortality rate was 6 per 1,000 inhabitants. Tobacco consumption has risen substantially from 2.7 kg (6.0 lbs) to 3.2 kg (7.1 lbs) a year per adult in 1995.

As of 1999 the number of people living with HIV/AIDS was estimated at 3,800 and deaths from AIDS that year were estimated at 180. HIV prevalence was 0.01 per 100 adults. In 1994, there were 68,907 deaths related to cardiovascular disease and 14,730 deaths caused by traffic motor vehicle accidents. In 1999, there were about 69 cases of tuberculosis per 100,000 people. Life expectancy was 73 years in 2000.

## 42 HOUSING

After the liberation in 1945, southern Korea faced a housing shortage greatly compounded by high population growth rates. A housing shortage continues to plague the nation, especially in Seoul, Pusan, and other large cities, where shantytowns house many recent rural arrivals. The 1985 census counted 9,588,723 households but only 6,274,462 housing units, for a deficit of 3,314,261. According to 2000 national statistics, there were 10,959,342 housing units nationwide. About 47% were apartment units, 37% were detached houses, and 4% were found in buildings not originally intended for residential dwellings. Most units house single-family households.

## 43 EDUCATION

The Education Law of 1949 provided for a centralized system under the control of the Ministry of Education and made the six-year elementary schools free and compulsory for children between 6 and 12 years of age. Secondary education begins at 12 years of age and lasts for up to six years, which are divided into two cycles of three years each. Children attend middle school for three years, and subsequently attend either general academic high school or vocational high school for the remaining three years. In 1998 there were 3,794,447 students in 5,721 primary schools, with 122,743 teachers. Student-to-teacher ratio stood at 31 to 1. In 1997, secondary schools enrolled 4,662,492 students and employed 192,947 teachers. Also in 1997, all post-secondary institutions had a combined enrollment of 2,541,659 students and 114,231 teachers. As of 1999, 97% of primary-school-age children were enrolled in school, while 94% of those eligible attended secondary school.

The leading government university is Seoul National University. The principal private institutions, all of them in Seoul, are Korea, Sung Kyun Kwan, Yonsei, Hanyang, Chungang, and Ewha universities; the last named is one of the largest women's universities in the world. The country had a total of 121 colleges and universities in 1996, along with 335 graduate schools with a combined 1,556,949 students enrolled. For the year 2000, UNESCO estimated the rate of adult illiteracy at 2.2% (males, 0.8%; females, 3.6%). In the latter half of the 1990s, the government allocated approximately 17.5% of its total expenditure to education. As of 1999, public expenditure on education was estimated at 4.1% of GDP.

## 44 LIBRARIES AND MUSEUMS

In 2002, the Central National Library, founded in 1923, had approximately 3.8 million volumes. Most other sizable libraries in the ROK are found at universities. The largest academic collection is at the Seoul National University Library (2.2 million volumes).

The National Museum, with centers in Seoul, Kyongju, Kwangju, Puyo, Chinju, Chunju, Chongju, and Kongju contains art objects reflecting more than 5,000 years of cultural history, including statuary pieces, ceramics, and painting. A major private museum is the Ho-Am Art Museum in Seoul. The National Museum of Modern Art in Seoul presents many special exhibits as well as a permanent collection. The National Science Museum of Korea, completed in 1990 in Daejeon, is one of the country's most recent cultural sites. The ROK also possesses collections of early printing, dynastic histories, and art in its palaces and Buddhist temples, and in university, college, and public libraries.

## 45 MEDIA

In 2000, the number of main telephone lines in use totaled 24 million, with an additional 28 million cellular phones in use the same year. As of 2001, there were 104 AM and 136 FM radio stations, and 121 television broadcast stations. Television broadcasting began in 1956; in 1992 there were 57 commercial television stations, plus a US Armed Forces-Korea network broadcasting in English. In 2000, there were 1,033 radios and 364 television sets for every 1,000 people. In 2001, there were 22.23 million Internet subscribers served by about 11 service providers.

Most of the leading newspapers are published in Seoul. The leading Korean-language newspapers, with their estimated daily circulations (in 2002), include *Dong-A Ilbo*, 2,150,000; *Joong-ang Ilbo*, 2,020,000; *Hankook Ilbo*, 2,000,000; *Choson Ilbo*, 1,960,000; *Kyung-hyang Shinmun*, 1,478,540; and *Seoul Shinmun*, 700,000.

Though most radio and television stations and newspapers are state-supported, the government is said to have abandoned direct control over the news media, though some journalists report aggressive government lobbying to soften criticism, using the latent threat of KX investigations against media companies.

## 46 ORGANIZATIONS

Clan and county associations are a conspicuous aspect of Korean social life. A traditional type of organization with a primarily economic function is the kye, a mutual loan association formed to provide funds for a specific and typically short-term purpose, such as to defray the expenses of a wedding or funeral. The National Agricultural Cooperative Federation comprises millions of farmers who work in cooperatives.

There are a number of cultural and arts organizations including the Academy of Korean Studies, the Korea Foundation, and the National Academy of the Arts. Organizations for advancement and research in science include the Korean Medical Association and National Academy of Sciences of the Republic of Korea.

National youth organizations include Boy Scouts and Girls Scouts of Korea, Free Asian Youth Alliance, Korea Young Buddhists Federation, Korean 4-H, Korean Student Christian Federation, Korean World University Service, YMCA/YWCA, Seoul Association for Youth Service, and the Young Christian Workers of Korea. There are several sports associations throughout the country. Among the most notable are the base offices of the International Judo Federation and the World Taekwondo Federation.

National organizations for women include the Korean Association of University Women, Korean Institute for Women and Politics, and the Korean Women's Institute. International organizations with active chapters within the country include Amnesty International and the Red Cross.

## 47 TOURISM, TRAVEL, AND RECREATION

Major tourist attractions are Seoul, the former royal capital of the Yi (or Li) Dynasty, and Kyongju, with its treasures from the ancient kingdom of Silla. Soccer and baseball are the most popular modern sports. Traditional sports for men are wrestling, archery, kite fighting, and t'aekwondo (a martial art). Popular games include paduk, the Korean name for Japan's board game go; changgi, or Korean chess, with pieces different from the European form; and yut, or Korean dice, played with four wooden sticks.

The tourist industry has grown rapidly, from 4,250,216 foreign visitors in 1998 to 5,321,792 visitors in 2000. The number of hotel rooms totaled 51,189 in 2000, with a 65% occupancy rate. Tourist receipts reached \$6.8 billion that year.

In 2002, the US Department of State estimated the cost of staying in Seoul at \$264 per day; expenses in Daejeon were estimated at \$183 per day.

#### 48 FAMOUS KOREANS (ROK)

The dominant political figures of the contemporary period in the ROK have been Syngman Rhee (1875–1965), president from 1948 to 1960, and Park Chung-hee (1917–79), president from 1963 until his assassination in 1979. Chun Doo Hwan (Chon Du-hwan, b.1931) became president in 1981. Other well-known modern figures include Kim Chong-p'il (b.1926), prime minister 1971–75; Bishop Daniel Chi (Chi Hak-sun, b.1921); and Kim Dae Jung (Kim Tae-jung, b.1925) and Kim Young Sam (Kim Yong-sam, b.1927), prominent opposition leaders during the 1970s and 1980s. The Rev. Sun Myung Moon (Mun Son-myong, b.1920), a controversial evangelist and founder of the Tong-il (Unification) Church, and Kyung Wha Chung (Chung Kyung-wha, b.1943), a violinist, are both internationally well known.

#### 49 DEPENDENCIES

The ROK has no territories or colonies.

# KUWAIT

State of Kuwait  
*Dawlat al-Kuwayt*

**CAPITAL:** Kuwait (Al-Kuwayt)

**FLAG:** The flag, adopted in 1961, is a rectangle divided equally into green, white, and red horizontal stripes, with a black trapezoid whose longer base is against the staff and is equal to the breadth of the flag, and whose shorter base is equal to the breadth of the white stripe.

**ANTHEM:** National Anthem, melody only; no words.

**MONETARY UNIT:** The Kuwaiti dinar (KD) has 1,000 fils. There are coins of 1, 5, 10, 20, 50, and 100 fils, and notes of 250 and 500 fils and of 1, 5, 10, and 20 Kuwaiti dinars. KD1 = \$3.344 (or \$1 = KD0.299) as of May 2003.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but imperial weights and measures also are in use, and some US measures are recognized.

**HOLIDAYS:** New Year's Day, 1 January; Emir's Accession Day, 25 February. Movable religious holidays include Muslim New Year (1st of Muharram); Laylat al-Miraj; Milad an-Nabi; 'Id al-Fitr; and 'Id al-'Adha'.

**TIME:** 3 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Kuwait is situated at the western head of the Persian (or Arabian) Gulf. Its area is estimated at about 17,820 sq km (6,880 sq mi). Comparatively, the area occupied by Kuwait is slightly smaller than the state of New Jersey. Kuwait extends 205 km (127 mi) SE–NW and 176 km (109 mi) NE–SW. Islands that form part of Kuwait include Faylakah (an archaeological site that is the only inhabited island), Bubiyan, Maskan, 'Auha, Al-Warbah, Al-Kubr, Umm al-Maradim, Umm al-Nami, and Qaruh. Bounded on the E by the Persian Gulf, on the S and W by Sa'udi Arabia, and on the NW and N by Iraq, Kuwait has a total land boundary length of 462 km (287 mi) and a coastline of 499 km (310 mi).

Kuwait's boundary with Iraq remains unsettled. Following Kuwait's declaration of independence in June 1961, the emir requested UK assistance to ward off an Iraqi invasion; the British forces were later replaced by troops from Arab League states. The UN upheld Kuwait's sovereignty, and in October 1963, Iraq formally recognized Kuwait's independence. In March 1973 there were armed clashes on the Iraq-Kuwait border, but a settlement was announced in June 1975; negotiations to demarcate the border have continued intermittently. Again in August 1990, Iraq invaded Kuwait, asserting their right to reclaim it as their territory. US-led international forces responded with a massive air attack in January 1991, and Iraq was defeated. Some Iraqi officials continued to assert their claim to Kuwait, and relations between the two countries remained tense. On 27 May 1993, the UN Security Council reaffirmed the established border between the two nations. In 1994, Iraq formally accepted the UN-demarcated border but continues to periodically challenge the rhetoric of the agreement.

Kuwait's capital, Kuwait City, is located on the Persian Gulf coast.

## <sup>2</sup>TOPOGRAPHY

Kuwait consists almost entirely of flat rolling desert and mud flats. There is a 1137-m (450-ft) ridge at Mina' al-Ahmadi and a

290-m (951-ft) prominence in the southwest corner. There are no streams.

## <sup>3</sup>CLIMATE

During the summer, which lasts roughly from May to October, the air generally is dry, but southeasterly winds often raise daytime humidity to 90% for a few weeks in August or September. Between November and April, the climate is pleasant, with cool nights and warm sunny days. In December and January, night temperatures occasionally touch the freezing point. Summer temperatures range from 29°C (84°F) in the morning to more than 49°C (120°F) in the shade at noon. Frost, almost unknown on the coast, is common in the interior. Annual rainfall, which averages less than 25 cm (10 in), comes in the form of showers or storms between October and April. Cloudbursts have amounted to as much as 6.4 cm (2.5 in) of rain in one day, and can heavily damage roads and houses. The prevailing northwest wind (shamal) is a cooling breeze in summer.

## <sup>4</sup>FLORA AND FAUNA

Plants and animals are those common to the arid parts of Arabia. There is little vegetation except camel thorn in the desert and some shrubs along the coastal strip. Between October and March, however, when at intervals sufficient rain falls, the desert is transformed: grass and foliage are plentiful, flowers and plants appear in great variety, and in the spring truffles and mushrooms can be found. The fox and jackal have decreased in numbers; other mammals found in Kuwait include gerbils, jerboas, and desert hares. Reptile species include various lizards, geckos, and snakes. Fish are plentiful. Among the species of migratory birds are swallows, wagtails, chiffchaff, skylarks, wrens, eagles, cormorants, hoopoes, and terns.

## <sup>5</sup>ENVIRONMENT

The Persian Gulf War of 1991 and its aftermath caused severe environmental problems for Kuwait, releasing large quantities of oil into the environment and threatening the water supply. Kuwait has no renewable water resources and must rely on wells

and desalination of sea water. The nation has some of the largest and most advanced desalination plants in the world, which provides much of its water. Kuwait's cities produce an average of 0.9 million tons of solid waste per year.

In 2001, one of Kuwait's mammal species and three of its bird species were endangered. The slender-billed curlew and hawksbill turtle are on the endangered list. The Sa'udi gazelle has become extinct in the wild.

## 6 POPULATION

The Kuwaiti population declined on average by 6.5% per year during 1990-95, due in part to the Iraqi invasion and Gulf War of 1990-91. The population of Kuwait in 2003 was estimated by the United Nations at 2,521,000, which placed it as number 137 in population among the 193 nations of the world. This number includes over one million non-nationals who live and work in the country. In that year approximately 1% of the population was over 65 years of age, with another 26% of the population under 15 years of age. There were 151 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000-2005 is 3.46%, with the projected population for the year 2015 at 3,352,000. The population density in 2002 was 127 per sq km (330 per sq mi). The vast majority of the population resides along the coast.

It was estimated by the Population Reference Bureau that 98% of the population lived in urban areas in 2001. The capital, Kuwait City, had a population of approximately 165,000 in that year. According to the United Nations, the urban population growth rate for 2000-2005 was 2.3%.

## 7 MIGRATION

With the discovery of oil and the consequent rise in living standards, Kuwait acquired a large immigrant population, attracted by jobs, free education for their children, and free medical care. The number of foreign residents more than doubled during the 1970s, and in 1994 they accounted for an estimated 56.4% of the population. After the Persian Gulf war, Kuwait deported tens of thousands of foreign workers from countries whose leaders had backed Iraq in the conflict. Of the estimated 400,000 Palestinians living in Kuwait before the 1990-91 Gulf War, reportedly only about one-sixth were allowed to remain. Only about 120,000 of the 220,000 prewar Bedouins (mostly nomads from Syria, Jordan, and Iraq) were allowed to stay. These stateless Arabs had remained in Kuwait under Iraqi occupation and were suspected of collaboration. Most other foreign workers were able to return to their home countries. By 1996, however, Egyptians, Pakistanis, Filipinos and others had filled the void that the previous foreign workers left behind.

In 2000 there were 1,108,000 migrants living in Kuwait. This accounted for 57.9% of the population. The number of refugees that year was 2,800. In 2000, the net migration rate was 11.1 migrants per 1,000 population. The government views the immigration level as too high.

## 8 ETHNIC GROUPS

Ethnic Kuwaitis are mostly descendants of the tribes of Najd (central Arabia) but some descend from Iraqi Arabs. Still others are of Iranian origin. The number of non-Kuwaitis are divided roughly in half between Arabs and non-Arabs such as Iranians, Indians, Pakistanis, and Filipinos. In 1999, 45% of the population was Kuwaiti, 35% other Arab, 9% South Asian, 4% Iranian, and 7% other.

## 9 LANGUAGES

Arabic is the official language. The Arabic spoken in Kuwait is closer to classical Arabic than to the colloquial Arabic spoken in many other parts of the Middle East. English is used generally by

business people, employees of oil companies, foreign residents, and students, and it is the second language taught in the schools.

## 10 RELIGIONS

Islam is the state religion. According 2002 figures, Muslims comprise about 71% of the total population, with a majority believed to be Sunni Muslim. About 35% of Muslim citizens are of the Shi'a branch. Other religious groups are present, primarily among foreign worker groups. These include Christians (mostly Roman Catholics and Anglicans), Hindus, Parsis, Baha'is, Sikhs, and others.

## 11 TRANSPORTATION

Kuwait has a modern network of roads, with all-weather highways running north to Iraq and south to Sa'udi Arabia. Roadways extended 4,450 km (2,777 mi) in 2002, including 3,590 km (2,230 mi) of paved roads. In 2000 there were some 552,400 passenger cars, and 167,800 commercial taxis, trucks, and buses in use. Land transport accounts for a significant share of Kuwait's imports and exports. There are no railways.

Kuwait has five ports, including a cargo port at Ash-Shuwaykh, on Kuwait Bay, and an oil port at Mina' al-Ahmedi that is equipped with a huge pier at which eight large tankers can be loaded simultaneously. In 2002, Kuwait had 38 merchant ships in service with a capacity of 2,274,515 GRT. Kuwait has regular calls from ocean shipping, and local sailing craft carry goods between Kuwait and the neighboring sheikhdoms, Iraq, and Sa'udi Arabia. Sea transport accounts for most of Kuwait's foreign trade.

In 2001, there were 7 airports, 3 of which had paved runways. The principal airport, Kuwait International Airport, is located south of the city of Kuwait. Air transportation is highly advanced, with Kuwait Airways providing service to and from the major Middle Eastern and European cities. In 2001, the airline carried 2,084,600 passengers on domestic and international flights.

## 12 HISTORY

The historical records of the Arab coast of the Persian Gulf are meager. Archaeological discoveries on Faylakah Island reveal an ancient civilization about 2800 BC that had trade links with the Sumerians. By the 6th century BC, this part of the Gulf was a principal supply route for trade with India. There is evidence of early migrations to the East African coast by the seafaring inhabitants. The historical turning point for the entire Arabian Peninsula was the conversion of the people to Islam in the 7th century AD, during the lifetime of Muhammad.

Kuwait's recent history starts in 1716, when several clans of the tribe of Aniza migrated from the interior of the Arabian Desert to a tiny Gulf coastal locality, later to be called Kuwait (a diminutive of the word *kut*, meaning "fort"). In 1756, the settled tribesmen rallied around the As-Sabah family and chose as their ruler Sheikh Sabah 'Abd ar-Rahim, founder of the present ruling dynasty. During the latter part of the century, raids by land and by sea resulted in the decline of Kuwait, but after the British suppression of piracy in the region, trading and shipbuilding prospered.

During the period in which Sheikh 'Abdallah as-Sabah ruled Kuwait (1866-92), a dynastic battle raged in Arabia between the rival houses of Ar-Rashid and As-Sa'ud. The Ottoman Turks, supporting Ibn Rashid, sought to extend their control over the coastal area to the south of Kuwait. Fearing that his territory would be lost to the Turks which considered it part of their province of Basra, Sheikh Mubarak as-Sabah (r.1896-1915) asked to be taken under British protection. The British were concerned not only because of the Turkish claims but also because the Russians were seeking to set up a coaling station in Kuwait, and both the Germans and the Turks had planned to

LOCATION: 28°32' to 30°6' N; 46°33' to 48°27' E. BOUNDARY LENGTHS: Persian Gulf shoreline, 499 kilometers (312 miles); Sa'udi Arabia, 222 kilometers (139 miles); Iraq, 242 kilometers (151 miles). TERRITORIAL SEA LIMIT: 12 miles.

make it a terminus of the Berlin–Baghdad railroad. In 1899, Sheikh Mubarak agreed not to alienate any of his territory or to receive representatives of any foreign power without British consent. In return, the British offered their services as well as an annual subsidy to support the sheikh and his heirs.

On 19 June 1961, the protective treaty relations with the United Kingdom were terminated by mutual consent, and Kuwait declared itself fully sovereign and independent. By this time, the sheikhdom had already become a major oil producer and had acquired a controlling interest in the petroleum industry. Iraq refused to recognize Kuwait's independence, asserting it had inherited the Ottoman claim to the territory. Baghdad's threat of an invasion was foiled by the dispatch of British troops and later the support for Kuwait of the Arab League. Iraq then appeared to acquiesce in Kuwait's sovereignty, although border issues were never definitely resolved. During the next two decades, Kuwait succeeded in establishing an open and prosperous economy, based in large part on foreign, especially Palestinian and Egyptian, labor.

During the Iran–Iraq War, Kuwait, albeit technically neutral, rendered important assistance to Baghdad, including the transshipment of goods and the provision of over \$6 billion in loans. As a response, members of Kuwait's large Shi'a minority and other radical dissidents waged a war of terrorism against the government. Throughout the 1980s, there were bombings, assassination attempts, hijackings, and sabotage against oil facilities.

In 1987, Iranian attacks on Persian Gulf shipping led Kuwait to request US protection for its supertankers. Washington agreed and when a "reflagged" Kuwaiti vessel was attacked, American forces retaliated against an Iranian offshore oil rig.

With the end of the war, Iraq–Kuwait relations were stable until 1990 when Saddam Hussein accused his neighbor of waging economic warfare against Iraq by illegally drilling oil from the shared Rumailia field, overproducing oil to drive down prices and unfairly demanding repayment of wartime loans. Tensions could not be defused by negotiations or mediation and on 2 August 1990, Iraqi forces invaded Kuwait, asserting that they were rightfully reclaiming their territory. Kuwaiti defense forces offered little resistance and most senior officials fled the country.

The United States led an international coalition of Arab and other nations to demand the withdrawal of Iraqi forces. After a lengthy buildup of forces, Iraq was assaulted by massive air and land forces; after six weeks, its defenses collapsed and Kuwait was liberated in February 1991. Kuwait's leaders returned to find a disgruntled population that resented their abandonment and demanded greater political participation. Enormous physical damage had been inflicted on the country, including over 700 oil well fires that did serious ecological damage before being extinguished after almost nine months' effort.

The regime, and many Kuwaitis, turned harshly against those suspected of collaboration with Iraq. As a consequence, much of the large Palestinian community was ejected from the country.

Relations with Iraq naturally remained tense, with some Baghdad officials continuing to assert their claim to Kuwait. On 27 May 1993, the UN Security Council reaffirmed the decision of a Boundary Demarcation Commission establishing the border between the two nations. Kuwait's vulnerability to possible attack from Iraq or Iran drew the nation closer to the United States, which has been willing to offer enhanced security collaboration.

In October 1994, Iraq began moving 60,000 troops to within 32 km (20 mi) of the Kuwaiti border. The UN Security Council voted unanimously to condemn Iraq's actions, and the United States, the United Kingdom, and other countries came to Kuwait's assistance. Kuwait agreed to allow the United States to station a squadron of 24 warplanes there as part of a broad effort to curb Iraqi military power. The plan kept reserves of American warplanes and a division's worth of tanks and armor stationed in the region. On 10 November 1994 Iraq agreed to recognize the independence and current borders of Kuwait, a major step apparently aimed at allowing at least some UN sanctions against Iraq to be lifted. However, in August 1995, Iraqi troop movements along the Kuwaiti border caused alarm again, and the United States began sending ships carrying equipment and supplies to the Persian Gulf. In April 1996, an international military exercise (involving forces of the United States, the United Kingdom, Russia, China, Italy, and other Arab nations) was held in Kuwait. The UN also renewed its multinational force of border observers in April 1996 to oversee the 14-km (9-mi) demilitarized zone that separates Kuwait from Iraq.

Although some of its neighbors in the Persian Gulf began to pursue a rapprochement with Iraq over the following years, Kuwait maintained its vigilance against the regime of Saddam Hussein. Early in 1998 it granted expanded staging areas to the United States in anticipation of possible military action in response to Iraq's failure to cooperate with UN weapons

inspections. At the end of 1998 it supported NATO air strikes against Iraq over the same issue. In January 1999, Kuwait placed its military on full alert in response to renewed threats from Iraq. As of 2000, a special UN commission had awarded \$15.7 billion in reparations for damages suffered in Iraq's 1990 invasion of Kuwait. In January 2003, Iraqi and Kuwaiti officials resumed talks on the fate of people who went missing during the Iraqi occupation of Kuwait in 1990–91. Kuwait claims Iraq must account for more than 600 Kuwaitis who disappeared during the occupation. Iraq insists it holds no such detainees, and accuses Kuwait of failing to account for more than 1,000 Iraqis.

On 8 November 2002, the UN Security Council passed Resolution 1441, calling on Iraq to disarm itself immediately of weapons of mass destruction (chemical, biological, and nuclear weapons), to abide by all former UN resolutions regarding the country since the end of the 1991 Gulf War, and to allow for the reintroduction of UN and IAEA weapons inspectors (they were expelled from the country in 1998). The United States adopted a firm position toward Iraq's disarmament, which it disputed, and by March 2003, was preparing for war. Since Kuwait's liberation from Iraq in 1991, it became the world's largest per capita defense spender. As of 2003, Kuwait had purchased Patriot anti-missile batteries, F/A-18 warplanes, and Apache attack helicopters for a military force estimated at 15,500, with 23,700 in reserves. However, Kuwait was not expected to take part in the expected US-led invasion of Iraq; instead, its forces were to defend the country from retaliation or other form of attack by Iraq. By early March 2003, nearly 140,000 US and British military personnel had arrived in Kuwait.

On 21 January 2003, a civilian contractor for the US military was killed and another wounded when their car was fired upon outside Kuwait City. A Kuwaiti man was arrested and claimed responsibility for the shooting, expressing support for Osama bin-Laden's al-Qaeda organization. Kuwait is concerned with a rise in Islamic fundamentalism and anti-American sentiment.

On 19 March 2003, the United States launched air strikes on Baghdad, and the war in Iraq began. Iraq fired a number of missiles at Kuwait, and one struck a mall in Kuwait City, but resulted in no deaths. Most of the missiles were destroyed by defensive Patriot missiles. The regime of Saddam Hussein was toppled on 9 April, and the military stage of the war ended soon after. Plans for the reconstruction of Iraq and for the establishment of a legitimate government were in the making in April, but it was acknowledged such progress could take years.

In May 1999, the emir of Kuwait dissolved the National Assembly in the wake of a long-standing political deadlock between government and opposition forces. However, the opposition gained even more ground in national elections held in July, with both Islamists and liberals gaining addition seats. Among the matters awaiting parliamentary consideration was a controversial decree by the emir that would allow women to vote and run for office by the next election, scheduled for 2003. Parliament on 23 November 1999 voted against the emir's decree to grant full political rights to women.

### 13 GOVERNMENT

According to the constitution of 16 November 1962, Kuwait is an independent sovereign Arab state, under a constitutional monarch. Executive power is vested in the emir, who exercises it through a Council of Ministers. Succession is restricted to descendants of Mubarak as-Sabah; an heir apparent must be appointed within one year of the accession of a new ruler. The emir appoints a prime minister after traditional consultations and appoints ministers on the prime minister's recommendation. Emir Sabah as-Salim as-Sabah died in December 1977 after a reign of 12 years and was succeeded by Emir Jabir al-Ahmad al-Jabir as-Sabah. The as-Sabah family, advised by wealthy merchants and other community leaders, dominates the government.

The National Assembly (Majlis) consists of 50 elected representatives. Elections are held every four years among adult literate males who resided in Kuwait before 1920 and their descendants; candidates must be Kuwaiti males at least 21 years of age. As a result, the electorate only accounts for about 10% of Kuwait's total population. In 1996, naturalized citizens who did not meet the pre-1920 qualification but had been naturalized for 30 years became eligible to vote. The assembly may be dissolved at any time by the emir. It was dissolved in 1976, as part of a political crackdown that followed the government's announced support of Syrian intervention in Lebanon. Elections were held in February 1981 and a new assembly was convened after elections in 1985; it was dissolved once again in 1986 as a result of national tensions over the Iran-Iraq war. It remained suspended until elections in October 1992. In 1993, the new Assembly actively produced new legislation, including a national budget. The emir suspended the Assembly once again in 1999, but new elections were held within two months.

### 14 POLITICAL PARTIES

Political parties are prohibited, but opposition groups are active in the nation's political life. Several political groups act as de facto parties: Bedouins, merchants, Sunni and Shi'ite activists, and secular leftists and nationalists. Political opinions are freely expressed in informal gatherings in the homes of government officials and leading citizens.

Pro-government forces gained ground over Muslim fundamentalist candidates in the elections of 8 October 1996. Following the 1999 elections, the Assembly was split almost evenly between pro-government, liberal, and Islamic members. Pro-government forces held 13 seats, with the rest held by Islamic and liberal parties, and unaffiliated independents.

The Islamists are divided between the Ikhwan, which traces its political antecedents to Egypt's Muslim brotherhood, and two Salafi groups which draw inspiration from Sa'udi Arabia. Current political groupings include the Islamic Constitutional Movement (ICM) and the Islamic Popular Group (of the Salafi tendency), two Sunni organizations; the Islamic National Alliance, the main faction for Shi'a Muslims; the Kuwait Democratic Forum (KDF), a loose association of groups with Nassarist and pan-Arabist foundations; and the National Democratic Group, composed of generally secular progressives with liberal tendencies. The rest are independents or are tribal confederations.

### 15 LOCAL GOVERNMENT

There are five governorates (Ahmadi, Al Jahrah, Al Kuwayt, Hawalli, and Al Farwaniyah), but political authority is highly centralized in the capital. A tradition of *diwaniyya*, or family or tribal gatherings, serves as a forum for debate in society, largely oriented around the proceedings of parliament.

### 16 JUDICIAL SYSTEM

The system of Muslim law (the *Shari'ah*) was augmented by 1959 legislation that established courts of law, regulated the judicial system, and adopted modern legal codes. In each administrative district of Kuwait there is a summary court, composed of one or more divisions, each presided over by one judge. The summary courts deal with civil and commercial cases and leases. A tribunal of first instance has jurisdiction over matters involving personal status, civil and commercial cases, and criminal cases, except those of a religious nature, cases in which the amount involved exceeds KD 1,000. The High Court of Appeals is divided into two chambers, one with jurisdiction over appeals involving personal status and civil cases, the other over appeals involving commercial and criminal cases. State security court decisions may be appealed to the court of Cassation. Ordinary criminal cases may be appealed to the High Court of Appeals. The five-member

Superior Constitutional Court is the highest level of the Kuwaiti judiciary. The Superior Constitutional Court interprets the constitution and deals with disputes related to the constitutionality of laws, statutes and by-laws. A military court handles offenses committed by members of the security forces. Religious courts, Sunni and Shi'a, decide family law matters, but there is also a separate domestic court for non-Muslims. There is no Shi'a appellate court. Shi'a cases are adjudicated by Sunni courts of appeals on appeal.

While the 1962 constitution guarantees an independent judiciary, the executive branch retains control over its administration and budget. The Emir, after recommendation of the Justice Ministry, appoints judges in the regular courts. Kuwaiti nationals receive lifetime appointments; non-Kuwaiti judges receive renewable terms of one to three years.

The constitution gives the authority to pardon and commute sentences to Emir. The Special State Security Court was abolished in 1995.

## 17 ARMED FORCES

Kuwait's armed forces totaled 15,500 volunteers in 2002. The army had 11,000 personnel equipped with 368 main battle tanks. The air force numbered 2,500 and had 81 combat aircraft. The navy had 2,000 personnel and 16 craft. There is a 6,600-member National Guard. The UN provides troops and observers in Kuwait. The US maintains a military presence with 7,388 troops stationed in Kuwait. Estimated defense expenditures in 2001 were \$1.9 billion or 5.5% of GDP.

## 18 INTERNATIONAL COOPERATION

Kuwait was admitted to UN membership on 14 May 1963 and is a member of ESCWA and all the nonregional specialized agencies. It belongs to the Arab League, G-77, OPEC, and OAUPEC; in 1981, it was a leader in forming the GCC with Sa'udi Arabia and four other Gulf states. Kuwait is a signatory of the Law of the Sea and a member of the WTO.

## 19 ECONOMY

The discovery of oil in 1934 transformed the economy. Kuwait's enormous oil reserve of 94 billion barrels and huge quantities of natural gas have provided the base for an economic presence of worldwide significance. The Kuwaiti standard of living was among the highest in the Middle East and in the world by the early 1980s. Oil wealth has stimulated trade, fishery development, and service industries. The government has used its oil revenues to build ports, roads, an international airport, a seawater distillation plant, and modern government and office buildings. The public has also been served by the large-scale construction of public works, free public services, and highly subsidized public utilities, transforming Kuwait into a fully developed welfare state. Prudent management of budgetary allocations and development priorities, as well as substantial interest from overseas investment, helped cushion the adverse impact of the collapse of the Souk al-Manakh—an unregulated curbside securities market—in 1982, the collapse in world oil prices during the mid-1980s, and the 1980–88 Iran-Iraq war. In addition, acquisition in Western Europe of 5,000 retail outlets (marketed under the name “Q-8”) and expansion into the manufacture and sale of refined oil products bolster the Kuwaiti economy.

Oil extraction and processing accounts for about 50% of GDP, 90% of export earnings, and 75% of government revenues. Kuwait's economy suffered enormously from the effects of the Gulf War and the Iraqi occupation, which ended in February 1991 with the destruction of much of Kuwait's oil production capacity and other economic infrastructure. The damage inflicted on the economy was estimated at \$20 billion. Real growth in the GDP was estimated at 22.4% in 1993, 1.1% in 1994, and 3% in

1995. Economic improvement from 1994 to 1997 was largely from growth in the industrial and financial sectors. The “Difficult Debts Law,” which aided investors with losses incurred during the Iraqi invasion and an informal stock crash in the early 1980s significantly improved investor confidence. Reversing this trend, the GDP shrank 16% due to a large decline in world oil prices. The loss was more than restored by the recovery of oil prices beginning in the second half of 1999. GDP rose 17.22% in 1999, and then an extraordinary 26.88% in 2000. Inflation rose to 4.7% in 1999, but declined to 2.7% in 2000. Gross domestic product growth in 2001 was 5.43% and inflation was down to 2%. From 1999 to 2001 per capita GDP rose from \$13,082 to \$17,880. Kuwait's portfolio investments have generally served to double the income it receives from its basic oil industry.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Kuwait's gross domestic product (GDP) was estimated at \$30.9 billion. The per capita GDP was estimated at \$15,100. The annual growth rate of GDP was estimated at 4%. The average inflation rate in 2001 was 2.7%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that industry accounted for 60% of GDP and services 40%.

Foreign aid receipts amounted to about \$2 per capita. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings.

## 21 LABOR

In 1998, the labor force was estimated at 1.3 million workers, many of whom were not Kuwaiti nationals. In 2002, 93% of the domestic workforce was employed by the public sector, while foreign workers make up 94% of the private workforce. The government-owned oil industry dominates the economy. The unemployment rate was under 2% in 1996, the last year in which statistics were available.

Although workers are legally permitted to join unions, less than 5% of the labor force are union members. Virtually all are affiliated with the Kuwait Trade Union Federation, the only trade federation allowed by law. The government performs a pervasive supervisory role of all unions, both subsidizing union expenses and carefully monitoring union activities. The right to strike is severely limited, and strikes rarely occur. About 10% of union members are foreign workers, but foreign workers must be in Kuwait for five years before they join a union and then may not vote in elections or hold official positions. The right to strike is limited.

In general, all workers are entitled to a 48-hour workweek, compensation for overtime, sick leave, termination pay, and access to arbitration for settlement of disputes. However, many laborers from developing countries are willing to tolerate poor or unhealthy working conditions in order to earn a wage significantly higher than in their own countries. The minimum working age is 18, although children who are at least 16 may work limited hours in non-hazardous occupations. Foreign workers must be at least 18 to work in Kuwait. In 2002, the public sector minimum wage was about \$742 per month for citizens and \$296 per month for non-citizens. Health and safety standards are lax in regard to foreign workers.

## 22 AGRICULTURE

Only 0.3% of the total land area is utilized for the cultivation of crops; permanent pasture land amounts to 7.7% of total land area. Despite the absence of rivers and streams, and the paucity of rain, the development of agriculture has been actively pursued.

The government apportions arable land at nominal prices on a long-term basis among farmers to stimulate production of vegetables and other crops. It also provides farmers with long-term loans and low-cost irrigation. The state has supplied extension services and demonstration centers for new farming techniques in the attempt to increase agricultural production. Nevertheless, farming contributes less than 1% of the non-oil GDP. Agricultural output in 1999 included 134,000 tons of vegetables and melons, and 10,000 tons of fruit.

### **23 ANIMAL HUSBANDRY**

When the desert is green (from the middle of March to the end of April), about one-fourth of Kuwait's meat supply is provided locally. The 2001 livestock population included: cattle, 22,000; sheep, 630,000; goats, 130,000; and chickens, 32,463,000. Kuwait's poultry production has recovered from damages inflicted during the 1990 invasion. Production in 2001 was estimated at 42,000 tons, exceeding the previous high of 21,000 tons in 1989. A small number of Bedouins raise camels, goats, and sheep for meat and milk.

### **24 FISHING**

Small boats catch enough fish to satisfy local demand. Species caught include sardines, mackerel, tuna, shark (for the fins exported to China), barracuda, and mullet. Crabs, crayfish, and oysters are plentiful, and undik and zubaidi (butterfish) are both tasty and very popular. Shrimp are produced for a growing export market. The fish catch in 2000 totaled 6,300 tons, down from 8,466 in 1993 but up from the low of 2,034 in 1991, the year of the Iraqi invasion.

### **25 FORESTRY**

There are no natural forests in Kuwait. The government's afforestation projects cover an area of about 5,000 hectares (12,300 acres). Imports of forest products totaled \$97.7 million in 2000.

### **26 MINING**

In addition to petroleum and natural gas, the country's main commodities, Kuwait produced caustic soda, chlorine, cement, clays, clay products, fertilizer, lime, salt, and sand and gravel. The cement and fertilizer production plants were damaged by retreating Iraqi troops during the 1991 Gulf War. Cement production rose from 98,000 tons in 1991 to 500,000 in 1996 and two million tons in 2000. Ammonia production (nitrogen content) in 2000 was 409,500 tons; and output of urea (nitrogen content) was 287,600 tons.

### **27 ENERGY AND POWER**

The Persian Gulf is geologically unique: sedimentary deposits are combined with large, relatively unbroken folding that results in underground oil reservoirs 16 to 240 km (10–150 mi) long, containing billions of barrels of oil. Kuwait's known petroleum deposits outrank those of any other country except Sa'udi Arabia and Iraq. With proved reserves of about 96.5 billion barrels (13.3 billion tons) in early 2002, Kuwait possesses more than 9% of the known global resources of petroleum.

Since its liberation from Iraqi occupation in February 1991, Kuwait has focused on the quick rebuilding of its preinvasion oil-based economy. During the occupation, oil production totally ceased following Iraqi sabotage and the havoc of Operation Desert Storm (the name of the allied military operation to free Kuwait). Iraqi troops had blown up 752 wells; 603 were ablaze while another 44 were gushing oil, creating oil lakes throughout the country. By November 1991, the fires were extinguished and the wells were under control, but the sabotage resulted in the loss of 1.1 billion barrels of oil. Crude oil production resumed in June 1991, exports in August 1991. Losses during the invasion had

cost Kuwait \$120 million per day. By 1994, Kuwait's oil industry was back to full strength, producing a total of 2.0 million barrels a day, a rate last reached in 1989.

In 2001, Kuwait had a crude oil output averaging 2.15 million barrels per day. The cost of production is perhaps the lowest in the world because Kuwait's vast pools of oil lie fairly close to the surface and conveniently near tidewater; the oil rises to the surface under its own pressure and, owing to a natural gradient, flows downhill to dockside without pumping. Reserves of natural gas in early 2002 were estimated at 1.5 trillion cu m (53 trillion cu ft); 9.6 billion cu m (170 billion cu ft) of natural gas were produced in 2000.

The Kuwait Petroleum Corp. (KPC), the state-run oil corporation, has a 30% share in offshore operations in the 16,000 sq km (6,200 sq mi) Neutral Zone partitioned between Kuwait and Sa'udi Arabia under a 1992 agreement. The Kuwait National Petroleum Co. (KNPC), is the refining and shipping arm of KPC. Kuwait Oil Company (KOC), another subsidiary of KPC, runs oil and gas exploration and production. KNPC has a monopoly on all petroleum sold domestically and operates the refinery complex at Sha'iba.

Oil was first discovered in commercial quantities in 1936, but only small amounts were produced before the end of World War II (1939–45). Commercial production began in 1946, and from 1951 on, a 50–50 profit-sharing plan governed the split of revenue between the Kuwait Oil Company and Kuwait's emir. KOC's concession (which was to run to the year 2026) covered all of Kuwait and its territorial waters, but in May 1962, it relinquished nearly half its area to the state. As of 1996, Kuwait was privatizing many of its state-owned companies, upon the recommendation of the World Bank. In March 1996 KNPC announced it would sell off 80% of its retail assets. With the dramatic rise in oil prices between 1999 and 2002, Kuwait's forecasted budget deficit of \$6 billion for 2001/02 turned into a surplus of roughly the same amount.

All electric power is produced thermally from oil or natural gas. Installed capacity has grown dramatically during the past two decades and reached 8.5 million kW in 2001. Electric power production increased from 2,661 million kWh in 1970 to 20,610 million kWh in 1990 before falling to only 9,100 million kWh in 1991, due to the Iraqi invasion. In 2000, electricity generation totaled 30.6 million kWh, of which 100% was from fossil fuels. Most of the country is provided with electrical service; electric refrigeration and air conditioning are widely available. An extensive diesel power generating system serves outlying villages.

### **28 INDUSTRY**

Although oil extraction continues to be the economic mainstay, Kuwait has diversified its industry. Small-scale manufacturing plants produce ammonia, fertilizer, paper products, processed foods, and other consumer goods. In 2002, the food processing industry was expanding, with growth sectors including vegetable oils, beverage bases, breakfast cereals, poultry parts, cheese, frozen vegetables, and snack foods. In 2002, Kuwait had three oil refineries with a total refining capacity of 828,000 barrels a day, including 773,000 barrels per day of crude oil distillation, 41,000 barrels per day catalytic cracking capacity, and 14,000 barrels per day reforming capacity. The major refinery products were fuel oil, gas oil, naphtha, kerosene, and diesel fuel. Industrial products include desalinated water, chemical detergents, chlorine, caustic soda, urea, concrete pipes, soap, flour, cleansers, asbestos, and bricks. The construction industry is highly developed.

Manufacturing all but stopped during the Iraqi invasion due to shortages of inputs and looting of equipment. After liberation the sector was hard-hit by the departure of Palestinian skilled labor. Low international oil prices have cut down on the value of industrial exports, but increases from the latter half of 1999 have

produced windfall returns. In 2000, industry accounted for 60% of GDP.

## 29 SCIENCE AND TECHNOLOGY

High technology in Kuwait has been largely confined to the oil industry and has been imported, along with the scientists and technicians needed to install and operate oil refineries and related facilities.

The Kuwait Institute for Scientific Research, founded in 1967 at Safat, promotes and conducts scientific research in the fields of food resources, water resources, oil sector support, and environmental studies. The Agriculture Affairs and Fish Resources Authority has an experimental research station in Safat.

Kuwait University, founded in 1962 at Safat, has colleges of science, engineering and petroleum, medicine, and allied health sciences and nursing. The College of Technological Studies, in Shuwaikh, was founded in 1976. The Telecommunications and Navigation Institute, at Safat, was founded in 1966. In 1987–97, science and engineering students accounted for 29% of college and university enrollments.

## 30 DOMESTIC TRADE

Until the early 1960s, the traditional small shop or market stall dominated retail trade. In recent decades, however, modern business centers with hundreds of new shops and offices have opened, and some smaller villages have developed retail stores with impressive stocks of foreign goods. Franchising is also becoming well established, though most of the franchise market is currently held by American fast-food and restaurant firms. The city of Kuwait is the distribution center for the emirate and serves the transit trade of nearby states.

Usual business hours in summer (May to October) are from 6 AM to noon and from 4 to 6 PM; during the rest of the year, from 7 AM to noon and from 3 to 6 PM. Stores are closed Fridays.

## 31 FOREIGN TRADE

For many years, Kuwait had maintained a boycott of imports from Israel. However, after liberation from Iraqi occupation in 1991, Kuwait relaxed its trade policies so that Israeli companies previously subject to boycott were permitted to do business in Kuwait. Kuwait also announced a trade embargo against the countries it regarded as having supported Iraq during the occupation—Jordan, Yemen, Tunisia, Sudan, Algeria, and Mauritania. Major export partners in 1997 were Japan (24%), India (16%), the United States (13%), South Korea (11%), and Singapore (8%). Imports came primarily from the US (22%), Japan (15%), the United Kingdom (13%), Germany (8%), and Italy (6%).

The export of fuels sustains Kuwait, accounting for the vast majority of commodity exports (91%). Kuwait is the source of 3.3% of the world's crude petroleum exports. Polymers are another important export (4.8% of Kuwait's exports).

In 1999 Kuwait's imports were distributed among the following categories:

Consumer goods	22.3%
Food	15.2%
Fuels	0.5%
Industrial supplies	22.4%
Machinery	20.5%
Transportation	19.0%
Other	0.1%

## 32 BALANCE OF PAYMENTS

Kuwait enjoys a highly favorable payments position because of its huge trade surpluses. The Kuwaiti dinar is completely covered by the country's reserve fund, 50% of which must be in gold.

The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Kuwait's exports was \$16.2 billion while imports totaled \$7.4 billion resulting in a trade surplus of \$8.8 billion.

The International Monetary Fund (IMF) reports that in 2001 Kuwait had exports of goods totaling \$16.2 billion and imports totaling \$6.93 billion. The services credit totaled \$1.79 billion and debit \$5.34 billion. The following table summarizes Kuwait's balance of payments as reported by the IMF for 2001 in millions of US dollars.

<b>Current Account</b>	<b>8,562</b>
Balance on goods	9,238
Balance on services	-3,551
Balance on income	4,956
Current transfers	-2,081
<b>Capital Account</b>	<b>2,931</b>
<b>Financial Account</b>	<b>-6,036</b>
Direct investment abroad	-323
Direct investment in Kuwait	-39
Portfolio investment assets	-7,372
Portfolio investment liabilities	-78
Other investment assets	430
Other investment liabilities	1,347
<b>Net Errors and Omissions</b>	<b>-2,553</b>
<b>Reserves and Related Items</b>	<b>-2,905</b>

## 33 BANKING AND SECURITIES

The Central Bank of Kuwait, established in 1969, formulates and implements the nation's monetary policy, regulates the currency, and controls the banking system. There are seven commercial banks with 96 branches in Kuwait, of which one is a single-branch operation belonging to a joint-venture bank (the Bank of Bahrain and Kuwait). Apart from this special case, foreign banks are not permitted to operate within Kuwait or to own shares in Kuwaiti-banks. Kuwaiti bank shares are typically closely held, either by the government and its agencies or by the merchant families who founded them. The preeminent bank is the National Bank of Kuwait, which at the end of 1999 accounted for one-third of all Kuwaiti bank branch assets.

The Central Bank of Kuwait only took on a serious regulatory role in 1984, after a debt crisis engulfed commercial banks, all of which had exposure to the collapsed informal stock market. However, the Central Bank's powers are limited, and, although it considers some of the banks to be too weak to be competitive, it has so far been unable to force mergers.

There are three specialized banks, one of which, Kuwait Finance House, operates as a commercial bank restricted to Islamic financial transactions. The other two, Industrial Bank of Kuwait and Kuwait Real Estate Bank, were created to provide long-term credit at a time when the supply of fresh capital from the public sector was not constrained. In the more austere environment since the war, they function like a US investment bank. The idea of establishing more Islamic banks has been welcomed. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$5.4 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$30.0 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 4.62%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 4.25%.

Kuwait's official securities exchange, the Kuwait Stock Exchange (KSE), first introduced in 1962, was founded in 1977, and handles only government bonds and securities of Kuwaiti companies. An unofficial and unregulated securities exchange, the Souk al-Manakh, listing the stocks of 45 Gulf companies outside Kuwait and considered highly speculative, collapsed

suddenly in August 1982. At the time of the crash, some 6,000 investors and \$94 billion in postdated checks drawn in anticipation of future stock price increases were said to be involved. In order to limit the effect of the collapse on the Kuwaiti economy, the government created a special rescue fund to pay compensation to small investors for validated claims. All trading operations of the KSE were suspended on the Iraqi invasion of Kuwait on 2 August 1990. The KSE recommenced trading on 28 September 1992. On the exchange, 1995 was a banner year. The combined effect of rapidly expanding credit and privatization resulted in a 36% increase in the stock price index and a 226% increase in trading volume. By the end of 2001, 88 companies were listed with a total capitalization of KD26.7 billion (\$86.9 billion) and a trading value of KD11.7 billion (\$38 billion). Only Gulf Cooperation Council (GCC) citizens are permitted to buy shares in Kuwaiti companies.

### 34 INSURANCE

The insurance sector is closed to foreign institutions. As of 2000, the insurance sector was dominated by three companies: Ahlia Insurance, Gulf Insurance, and Kuwait Insurance Co. Marine, fire, accident, and life insurance policies constitute the bulk of all policies issued. Third-party liability insurance for motor vehicles is compulsory. In 2001, there was US\$60 million spent on life insurance premiums and US\$199 million on nonlife insurance premiums in Kuwait.

### 35 PUBLIC FINANCE

Much of the recent improvement in public finances is the result of higher oil prices and production, rather than government reforms. In 1994, the Kuwaiti government began to consider various austerity measures, which became a source of debate in parliament. Several plans in discussion call for reductions in government subsidies and welfare benefits, increases in taxes, privatization of state-owned businesses, and banking sector reforms. Subsidies are one of the most contentious and politicized austerity measures; in 1995, the Ministry of Finance stated that the country annually spends \$1.8 billion on utility subsidies and free health care. The Kuwaiti cabinet passed a reform package in 1999, including a reduction in subsidies and increasing taxes on luxury goods. A government surplus of about 15% of GDP in 2000 was reduced to a deficit of over 2% in 2001 as a result of soft world oil prices.

The US Central Intelligence Agency (CIA) estimates that in 2001/2002 Kuwait's central government took in revenues of approximately \$11.5 billion and had expenditures of \$17.2 billion. Overall, the government registered a deficit of approximately \$5.7 billion. External debt totaled \$6.9 billion.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

<b>REVENUE AND GRANTS</b>	<b>100.0%</b>	<b>11,500</b>
Tax revenue	10.0%	1,145
Non-tax revenue	90.0%	10,352
Capital revenue	<0.1%	4
<b>EXPENDITURES</b>	<b>100.0%</b>	<b>17,200</b>
General public services	9.2%	1,584
Defense	17.3%	2,972
Public order and safety	9.4%	1,615
Education	14.8%	2,547
Health	7.2%	1,230
Social security	20.4%	3,506
Housing and community amenities	4.8%	818
Recreation, cultural, and religious affairs	3.1%	538
Economic affairs and services	9.9%	1,707
Other expenditures	4.0%	683

### 36 TAXATION

Income from oil concessions is based on royalties, generally at the rate of 50% or higher. Individual or local company incomes are tax exempt. Profits of foreign corporations are taxed at rates ranging from 5–55% of the total Kuwait-source profit. The only other tax is a 5% levy on a shareholding company's profit payable to the Kuwait Foundation for Scientific Research. Kuwaiti citizens are exempt from paying taxes. The government passed a law to introduce limited taxation in 2000, in the form of sales taxes.

### 37 CUSTOMS AND DUTIES

Customs duties are generally 4% ad valorem, but many goods are admitted duty-free. The tariff on cigarettes was reduced to 70% (from 100%) as of July 1997. Imports of liquor are prohibited by law. Protective tariffs may be levied at up to 25%.

### 38 FOREIGN INVESTMENT

Through tax concessions, Kuwait welcomes foreign investment in heavy and light industries, but continues to resist foreign investment in the oil sector. In May 2000 the government passed the Indirect Foreign Investment Law, allowing the purchase of up to 100% of the stock of companies listed on the Kuwait Stock Exchange except for banks. In March 2001 the government passed a liberalized Foreign Investment Law that, together with a five-year privatization plan announced July 2001, is expected to substantially increase foreign investment in Kuwait. Previously, foreign investment was not permitted in certain sectors such as banking or insurance, and was restricted to less than 49% of ownership shares in permitted areas. Foreign investors are no longer required to have a Kuwaiti sponsor, but are subject to a 55% corporate tax that Kuwaiti companies do not pay. Major foreign investors in Kuwait as of 2001 included Japan's Arabian Oil Company and US-owned Texaco. In July 1995, the Union Carbide Corp. and Kuwait's Petrochemical Industries Co. began construction of a \$2 billion petrochemical plant, the biggest joint venture involving a foreign company to date in Kuwait. Foreign investment totaled \$110 million in 1995. Foreign direct investment (FDI) has historically been low and not encouraged by a government concerned "Kuwaitization" of the economy. In 1997, FDI was reported at \$20 million, rising to \$59.1 million in 1998, and reaching \$72.3 million in 1999. However, FDI inflow fell to \$16.3 million in 2000, and then in 2001 turned into a net outflow of -\$39 million.

Low inward investment contrasts with remarkably high outward investment, though the government does not publish any statistics for these activities. Kuwaiti outward investment consists of portfolio investments held by the Kuwait Investment Authority (KIA), other direct investments by other government entities, and outward investments by private citizens. The KIA portfolio was estimated to have reached about \$60 billion in 2002. Entities like the Kuwait Petroleum Corporation have sizeable investments in production, refining and marketing activities abroad, but only the roughest estimates as to their value can be made. Investments by private citizens are thought to at least equal the government's holdings.

### 39 ECONOMIC DEVELOPMENT

Since the mid-1970s, Kuwait has restrained its spending on economic development and has fostered a policy of controlled growth. From 1977 to 1982, allocations for development projects remained steady at \$1.7–2.5 billion annually, of which 76% was spent on public works, electric power plants, and desalination and irrigation projects. Development plans for the 1980s, stressing industrial diversification, included the expansion of local oil refineries and major projects in petrochemicals, electricity, water supply, highway construction, and

telecommunications. Overseas, refining and marketing operations were stepped up.

Post-war economic planning was hampered by the expulsion of the mainly Palestinian middle-ranking civil servants in various government departments. The Industrial Bank of Kuwait played a major role in the industrial redevelopment of the emirate following the war. Diversification and privatization continue to be the strategic goals of the government to increase employment and counter the abrupt swings in the economy due to the heavy dependence on the oil sector. Increased foreign investment has come to be seen as essential to these goals. In May 2000, the government passed the Indirect Foreign Investment Law, allowing foreign investors to buy up to 100% of companies listed on the Kuwait Stock Exchange (KSE) except for banks. The government, however, controls what companies are publicly traded. In March 2001, the Foreign Direct Investment Law was passed, allowing up to 100% ownership of a company operating in Kuwait, although with the disincentive that the profits of the foreign company would be subject to a 55% tax. In July 2001, the government announced a five-year privatization program.

#### 40 SOCIAL DEVELOPMENT

Kuwait has a widespread system of social welfare on a paternalistic basis, financed by government oil revenues. It offers welfare services for the poor, provides free medical service and education to all Kuwaiti citizens, and spends heavily for waterworks, public gardens, and other public facilities. Social insurance legislation enacted in 1976 provides for old age, disability, and survivor pensions, for which the worker pays 5% of earnings and the employer pays 10% of payroll. In 1999, retirement benefits ranged from 65% to 95% of earnings, depending upon the length of employment. Large subsidies for electricity, gasoline, and rice hold prices below market rates but contribute to the government's annual deficit.

Women are denied equal rights and legal protection under Kuwaiti law, and their testimony in a court of law is not considered to be equal to that of men. Women must first obtain their husband's permission before applying for a passport. Kuwaiti women married to foreign men suffer legal discrimination, are not entitled to government housing subsidies and are required to pay a residency fee. Female political parties are banned, and women are not allowed to vote or seek national elective office. However, 33% of women of working age are employed, and some occupy professional positions. The government is actively working to segregate all classrooms by gender. Women (including foreign women) who wear Western clothing are often subject to harassment. Domestic abuse is common. Rape and abuse of foreign domestic workers is widespread.

Bedouin minorities face considerable legal discrimination. They are not entitled to citizenship, and are unable to work or enroll their children in schools.

#### 41 HEALTH

Kuwait has a highly advanced public health service, which is extended to all Kuwaiti residents, regardless of citizenship. In 1993, 100% of the population had access to health care services. As of 1999, total health care expenditure was estimated at 3.3% of GDP. In 1999, 100% of the urban population had access to safe water and 100% of the urban population had adequate sanitation. In 1994, there were 16 public hospitals and sanatoriums (with 4,271 beds) and 70 clinics and other health centers. Medical personnel included 2,717 doctors and 399 dentists in 1994. As of 1999, there were an estimated 1.9 physicians and 2.8 hospital beds per 1,000 people.

The incidence of typhoid fever and most infectious diseases is comparatively low; however, influenza is common and measles has resulted in a high fatality rate among children up to age five.

Between 1990 and 1994, immunization rates for children up to one year of age were as follows: tuberculosis, 93%; diphtheria, pertussis, and tetanus, 98%; polio, 98%; and measles, 97%. As of 1999, the rates for DPT and measles were 94% and 95%, respectively. Common diseases were malaria (1,379 new cases in 1993) and measles (432 new cases in the same year).

Life expectancy in 2000 was 77 years and infant mortality was estimated at 9 per 1,000 live births. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 21.8 and 2.5 per 1,000 people. The total fertility rate in 2000 was 2.7 children per woman during childbearing years. In 1990 and 1991, there were approximately 200,000 deaths attributed to the war between Kuwait and Iraq. In 1999 the HIV prevalence was 0.12 per 100 adults.

#### 42 HOUSING

For centuries, housing in Kuwait consisted of small cottages, mud huts, and a few larger dwellings built of coral and plastered with cement and limestone. Improved housing for the general population has been a main government objective. The National Housing Authority built about 50,000 dwelling units in 1977–85. Between 1989 and 1994, 25,213 applications were presented for the housing distribution program. According to the 1995 census, there were 255,477 households in Kuwait. The total number of dwellings that year was 251,682, of which 234,153 were private and 17,529 were collective dwellings. Including vacant dwellings and those under construction, the total number was 287,574 in 1995. About 50% of all housing units were apartments, 19% were villas, 15% were traditional dwellings, 10% were annexes, and 4% were shacks and other marginal dwellings. In 2000/2001 there were 8,875 government housing projects and 3,118 new dwellings constructed.

#### 43 EDUCATION

Kuwait offers its citizens free education, including free food, clothing, books, stationery, and transportation, from kindergarten through the fourth year of college. Most expatriates are not eligible for free education and must register their children at a private school. The Ministry of Education sets tuition levels for private schools. In 1998, 142,308 students were enrolled in 286 primary schools, with 10,798 teachers. Student-to-teacher ratio stood at 13 to 1. In the same year, secondary schools had 224,293 students and 21,187 teachers. The pupil-teacher ratio at the primary level was 14 to 1 in 1999. In the same year, 66% of primary-school-age children were enrolled in school, while an estimated 50% of those eligible attended secondary school. Schools below university level are segregated by sex.

Kuwait University was opened in 1966 with 866 students and in 1995 had a student enrollment of 12,712 and a graduating class of 1,880. Kuwaiti nationals composed 92% of the student body. Kuwaiti students who complete their secondary-school science courses in the upper 80% of their class and arts courses in the upper 70% are eligible to study abroad at government expense. Universities and equivalent institutions had a total of 29,509 students and 1,691 teachers in 1997. The government has adopted a program to wipe out illiteracy by opening adult education centers. For the year 2000, adult illiteracy rates were estimated at 17.7% (males, 15.7%; females, 15.7%). As of 1999, public expenditure on education was estimated at 6.5% of GDP.

#### 44 LIBRARIES AND MUSEUMS

The National Library of Kuwait has over 150,000 volumes, 90% of them in Arabic; it has established 22 branches throughout the country. The Kuwait University library system has over 294,000 volumes. Other schools and the oil companies maintain special libraries. In 2000, Kuwait had five museums. The Kuwait Museum displays ancient Kuwaiti artifacts (recovered from excavations on Faylakah Island), as well as exhibits concerning

local plant, bird, and animal life. The Educational Science in Safat Museum was established in 1972 and features sections on natural history, space, oil, health, and meteorology.

#### 45 MEDIA

The government administers telephone, television, radio, postal, and telegraph services. By 1994 damage to the telecommunications infrastructure from the Gulf War had been repaired and operations returned to normal. In 1997, 412,000 telephones were operated from a fully automatic exchange; a cellular telephone system also operates throughout Kuwait and had about 210,000 subscribers in 1997.

Kuwait Television is government-controlled and has offered color broadcasts since 1974; it broadcasts over three channels. Radio Kuwait produces programs in English, Urdu, Persian, and Arabic. In 1998, there were 6 AM and 11 FM radio stations and 13 television stations. In 2000, there were 624 radios and 486 television sets for every 1,000 people. In 2001, there were 165,000 Internet subscribers served by three service providers.

As of 2002, Kuwait had eight daily newspapers. Major Arabic dailies (with estimated 2002 circulation), include *Al-Anbaa* (*The News*, 106,830), *Al-Rai al-'Amm* (*Public Opinion*, 86,900), *Al Jameheer* (83,000), *Al-Qabas* (*Firebrand*, 79,700), *Al-Seyassa* (*Policy*, 70,000), and *Al-Watan* (*The Homeland*, 59,940). English-language dailies include the *Arab Times* (41,920) and *Kuwait Times* (28,000). The popular monthly magazine *Al-'Arabi* (350,000 in 1995), similar to the *Reader's Digest*, is widely read in Kuwait.

The constitution provides for freedom of speech and the press, and with a few exceptions, citizens are said to freely criticize the government in all media. The government ended pre-publication censorship in 1992. The government does not censor foreign journalists and allows them open access to the country.

#### 46 ORGANIZATIONS

The Ministry of Social Affairs and Labor encourages and supports cultural and recreational organizations and sponsors theatrical activities for youth. The Kuwait National Commission for Education, Science and Culture is a primary organization for the advancement of science, art, and culture. The multinational Islamic Organization for Medical Sciences and the Arab Center for Medical Literature are in Kuwait. National youth organizations include the National Union of Kuwaiti Students and the Boy Scouts and Girl Scouts Associations. There is a chamber of commerce and industry in the capital. The Red Crescent Society is active.

#### 47 TOURISM, TRAVEL, AND RECREATION

By the second anniversary of the Iraqi invasion, many of the physical scars of war and occupation had already been erased,

and the government was well on its way to restoring the country's extensive prewar accommodations and amenities, although hotel prices have risen steeply since the war. Except for nationals of the other Gulf states, visitors must obtain visas in advance from Kuwaiti embassies or consulates.

In 2000, there were 1,988 hotel rooms and a total of 2,857 beds. That year there were 1,944,233 foreign visitor arrivals in Kuwait and tourism receipts reached \$198 million. In 2001, the US Department of State estimated that the daily expenses for a stay in Kuwait City were about \$339.

#### 48 FAMOUS KUWAITIS

During the reign of Emir Sir 'Abdallah as-Salim as-Sabah (1870–1965), Kuwait attained a prominent position among the great oil-producing nations of the world, and the state adopted a social welfare program founded on a unique patriarchal system; the emir was revered as a man of simplicity, devotion, and deep concern for his people. His successors as emir have been Sabah as-Salim as-Sabah (1913–77), from 1965 to 1977; and Jabir al-Ahmad al-Sabah (b. 1926).

#### 49 DEPENDENCIES

Kuwait has no territories or colonies.

# KYRGYZSTAN

Kyrgyz Republic  
*Kyrgyz Respublikasy*

**CAPITAL:** Bishkek

**FLAG:** Red field with a yellow sun in the center; in the center of the sun is a red ring crossed by two sets of three lines, a stylized representation of the vent in a Kyrgyz yurt.

**ANTHEM:** *Kyrgyz National Anthem.*

**MONETARY UNIT:** The som was established in May 1993; som1 = \$0.0228 (or \$1 = som43.85) as of May 2003.

**WEIGHTS AND MEASURES:** The metric system is in force.

**HOLIDAYS:** Constitution Day, 5 May; Independence Day, 31 August; National Day, 2 December.

**TIME:** 5 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Kyrgyzstan is located in southern Asia, between China and Kazakhstan. Comparatively, it is slightly smaller than the state of South Dakota with a total area of 198,500 sq km (76,641 sq mi). Kyrgyzstan shares boundaries with Kazakhstan on the N, China on the E, Tajikistan on the S, Uzbekistan on the W. The country's boundary length totals 3,878 km (2,410 mi), and its capital city, Bishkek is located in the north central part of the country.

## <sup>2</sup>TOPOGRAPHY

The topography of Kyrgyzstan features the peaks of Tien Shan, which rise to over 7,000 m (23,000 ft), and associated valleys and basins which encompass the entire nation. About 90% of Kyrgyzstan has an elevation exceeding 1,500 m (4,900 ft). Slightly over 5% of Kyrgyzstan's land is under irrigation.

## <sup>3</sup>CLIMATE

The country's climate is continental to polar in the Tien Shan Mountains. In the Fergana Valley the average temperature in July is 27°C (81°F). In January, the coldest temperatures are in the mountain valleys, with recorded lows below -30°C (-22°F). The climate is temperate in the foothill regions of the north.

## <sup>4</sup>FLORA AND FAUNA

The country's flora and fauna is similar to Tajikistan, with wildflowers in the valleys and yak and snow leopards in the mountains.

## <sup>5</sup>ENVIRONMENT

Among Kyrgyzstan's most significant environmental issues are water pollution and soil salinity resulting from improper irrigation methods. The pollution of the nation's water causes health problems for 25% of its people, many of whom draw water directly from contaminated wells and streams. Only 66% of the nation's rural dwellers have a publicly regulated water supply. As of 2001, 3.5% of Kyrgyzstan's total land area is protected. In the same year, six mammal species and five species of birds were listed as threatened, as were seven plant species. Threatened animal species include the great bustard, European bison, snow leopard, field adder, and tiger.

## <sup>6</sup>POPULATION

The population of Kyrgyzstan in 2003 was estimated by the United Nations at 5,138,000, which placed it as number 109 in population among the 193 nations of the world. In that year approximately 6% of the population was over 65 years of age, with another 35% of the population under 15 years of age. There were 96 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000-2005 is 1.40%, with the projected population for the year 2015 at 5,949,000. The population density in 2002 was 25 per sq km (65 per sq mi).

It was estimated by the Population Reference Bureau that 33% of the population lived in urban areas in 2001. The capital city, Bishkek, had a population of 619,000 in that year. The second largest city was Osh, with a population of 218,300. According to the United Nations, the urban population growth rate for 2000-2005 was 0.9%.

## <sup>7</sup>MIGRATION

As of 1999, the total number of refugees was estimated between 40,000 and 50,000 registered and unregistered (1% of the total population). There were about 13,000 officially registered refugees, mainly from Tajikistan, and about 700 from Afghanistan. The great majority of Tajik refugees were of ethnic Kyrgyz origin and desire to stay in Kyrgyzstan permanently. The government was working with UNHCR to implement an integration package to assist Tajik refugees in their transition to Kyrgyz citizenship. Between 1989-95, 296,000 Russians, 39,000 Ukrainians, and 3,000 Belarussians all departed from Kyrgyzstan. Also, 46,000 Germans (formerly deported under Stalin during World War II from Soviet and Volga regions) returned to Germany. In 2000, the net migration rate was -0.5 migrants per 1,000 population, down from -12.5 in 1990. In 2000 there were 572,000 migrants, including 10,600 refugees. The government viewed the immigration level as too high, but the emigration level as satisfactory.

## <sup>8</sup>ETHNIC GROUPS

According to a 1999 census, about 65% of the population were Kyrgyz, about 14% were Uzbeks, 13% were Russians, 1%

Dungan (ethnic Chinese Muslims), 1% Uighur, 1% Tatar, and 0.4% German. About 420,000 ethnic Kyrgyz reside elsewhere in the former Soviet Union and 170,000 in China. Kyrgyz speak a Turkic language and most are Sunni Muslims. There are major ethnic and clan-based cleavages, including north-south clan and regional tensions that threaten fragmentation. According to some reports, 10% or more of Russians left Kyrgyzstan during 1991 because of ethnic tensions. Ethnic Germans, deported to Kyrgyzstan by Stalin during World War II, are also leaving Kyrgyzstan. In June 1990, in the Osh region on the eastern edge of the fertile Fergana Valley, a major ethnic conflict broke out between Kyrgyz and Uzbek inhabitants over land distribution. Approximately 250 people died in what has been termed “the most explosive region of Central Asia,” because of its mixed population of Uzbeks and Kyrgyz, poverty, and high unemployment. Periodic clashes also occur between Kyrgyz and Tajiks along the border with Tajikistan over water resources. Beefed-up Kyrgyz security forces were placed in Osh and Alais regions in early 1993 to prevent spillover from fighting going on between Tajik ex-communists and oppositionists in the mountains of northern Tajikistan and to halt the inflow of Tajik refugees.

## 9 LANGUAGES

A Turkic tongue, Kyrgyz is the official language. Until 1926, the Kyrgyz and Kazakh languages were not officially recognized as two distinct languages. Kyrgyz orthography was formally organized in 1923 and was modeled after the northern dialects using Arabic script. Afterwards, Roman letters were used until 1940, when the Cyrillic alphabet was mandated by the Soviet government, with three special additional characters. Since independence, there has been discussion about switching back to the Roman alphabet.

Although the Kyrgyz language is the traditional language, most of Kyrgyzstan's population also speaks Russian, the language of business and commerce. In March 1996, the Kyrgyzstani legislature amended the constitution to make Russian an official language, along with Kyrgyz, in territories and work places where Russian-speaking citizens predominate.

## 10 RELIGIONS

Some 80% of the population are Muslim, mostly Sunni of the Hanafi persuasion. An estimated 20% are Russian Orthodox, and 5% practice various other religions. Although it is not known how many Roman Catholics live in Kyrgyzstan, diplomatic relations with the Vatican were opened in 1992. Together, Jews, Buddhists, and Catholics make up about 3% of the population. There are about 151 registered Protestant churches in the country.

## 11 TRANSPORTATION

As of 2002, a single east-west rail line of 370 km (230 mi) went from Issyk-kul' across the Chuskaya region into Kazakhstan. There were some 30,300 km (18,828 mi) of highways, of which 22,600 km (14,044 mi) were paved in 2002. Irregular service with public transportation occurs frequently. As a landlocked nation, water transportation is of minor importance with only 600 km (372 mi) of waterways as of 1990. However, inland travel is possible on several east-west rivers. Kyrgyzstan has 50 airports and airfields, of which 4 have paved runways, as of 2001. The principal airport is Manas, located at Bishkek. In 2001, 192,100 passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

The area of present-day Kyrgyzstan contains evidence of human habitation from the time of the Lower Paleolithic on, approximately 300,000 years ago. Archeologists suggest that two

types of economies developed in the territory—farming and pastoral nomadism. By the 7th century BC nomadism had become predominant, and the area was controlled by various tribal alliances. In the north the Saki (7th–3rd centuries BC) were succeeded by the Usuni (2nd century BC–5th century AD); in the south the Parkan state (2nd–1st centuries BC) was replaced by the Kushani kingdom (1st–4th century AD). The ethnic identity of those peoples is the subject of much debate, but they were not Turkic. From the 6th century on, various Turkic tribes began to push westward, eventually settling most of Central Asia, including Kyrgyzstan. Much of present Kyrgyzstan was united by the 7th century as part of the West Turkic Kaganate, and replaced in the 8th century by the Turgash, who in turn were conquered by the Karluk, who originated in the Altai region further north.

When the present-day Kyrgyz first came to this territory is the subject of much debate. References to tribes of that name living in the Altai occur in the 10th century, but another people with the same name who lived along the Enisei River are first mentioned in records from the 2nd century BC. The Enisei Kyrgyz formed the Kyrgyz Kaganate in about AD 650, which survived until defeat by Genghiz Khan in 1209. Kyrgyz tradition prefers to see its origin in that state, but ethnographers and archeologists view the claim with considerable skepticism.

Evidence suggests instead that the present-day Kyrgyz are an amalgamation of various peoples, as existing tribes incorporated themselves into fresh waves of conquerors. The territory was part of the Karakhanid state from about 950–1150, during which the urban population was actively involved in trade and manufacturing along the Silk Road. Conversion to Islam also began in this period.

Genghiz Khan's Mongols conquered the area in the 13th century, destroying most of the Karakhanid culture and introducing large numbers of new peoples into the area, of Turkic, Mongol, and Tibetan stock. The resulting mix of tribes was almost certainly the basis for the present-day Kyrgyz people, who retain much of the memory of those origins in the orally preserved genealogies of their 40 clans and tribes. The present Kyrgyzstan flag includes the depiction of a sun with one ray for each tribe. The Kyrgyz follow Mongol practice of dividing their people into left (*ong*) and right (*sol*) “wings,” said to reflect either the deployment of troops in military formation, or the tribe's original place of habitation. There is also a third group, the *ichkilik*, that seems to include parts of the Kyrgyz identity.

From the 15th century until the 17th century the Kyrgyz tribes were part of the larger delineation of Central Asian history, which distinguished agricultural sedents from pastoral nomads. The appearance of the same tribal names among Kazakhs, Kyrgyz, and Uzbeks suggests how the people of this territory formed a series of tribal alliances, rather than a true state.

In the 18th century the Kyrgyz began to come under pressure from Mongol tribes farther east. This prompted some of the northern tribes to send delegations to the Russians, who had pushed into Siberia in the 17th century, and who were beginning to take what is now northern Kazakhstan under its control. The Russians made no distinction between the Kazakhs and Kyrgyz, calling both Kyrgyz. The southern Kyrgyz, however, were conquered by the Kokand Khanate, established in the late 18th century, separating them from the northern Kyrgyz. This split between south and north continues to the present day in Kyrgyz life.

Russian expansion into what it called the Steppe included Kyrgyzstan. Most of northern Kyrgyzstan was incorporated into the empire by 1863; the south followed in 1876, when Russia destroyed the Kokand Khanate. Administratively, present-day Kyrgyzstan was split among four guberniias. Beginning in the 1890s Russia settled Russian and other European farmers into the fertile river valleys of the north, forcing Kyrgyz nomads higher into the mountains.

LOCATION: 41°30' N; 75°0' E. BOUNDARY LENGTHS: Total boundary lengths, 3,878 kilometers (2,410 miles); China, 858 kilometers (533.2 miles); Tajikistan, 870 kilometers (541 miles); Uzbekistan, 1,099 kilometers (683 miles); Kazakhstan, 1,051 kilometers (653 miles).

By 1916, Russia's policies of livestock requisition and land use had left the Kyrgyz badly impoverished. When Russia attempted to issue a draft call-up for Central Asian males, including the Kyrgyz, widespread fighting broke out all across the territory. The uprisings were suppressed, with great loss of life; population in the northern part dropped as much as 40%. Since independence in 1991, the state has commemorated the 1916 uprising as a genocide.

Hostility to the tsars meant that there was some support for the Bolsheviks, at least until it became clear that Lenin was not going to encourage the development of national states. Resistance to the Russians continued sporadically until the mid-1920s, in what Russian historians have labeled the Basmachi Rebellion.

As Bolshevik power was consolidated, Kyrgyzstan was first made an autonomous oblast (political unit) of the Russian Federation in 1924; it was upgraded in 1926 to an autonomous republic, but still within Russia. (At that time Russia was one of the Soviet Republics.) Kyrgyzstan did not become a full Soviet Republic until 1936.

The republic was regarded as one of the least developed of the Soviet states, politically and economically. Thus, it came as a great surprise when, on 28 October 1990, Kyrgyzstan became the first Soviet republic to select its own leader. The Kyrgyzstan legislature refused to ratify Communist Party leader Absamat Masaliyev's bid to become the republic's president, and elected instead Askar Akayev, president of the republic's Academy of Science. Akayev and his supporters began asserting Kyrgyz nationalism and wresting political and economic control over the republic from the Soviet Communist Party. These efforts were briefly interrupted by an attempted coup in Moscow by

Communist Party hard-liners in August 1991. Akayev bravely condemned the coup and, after it fizzled, on 30 August 1991 he severed ties with the Communist Party and Kyrgyzstan declared its independence. On 12 October 1991, Akayev's presidency was confirmed by direct popular election.

A constitution was adopted on 5 May 1993. An economic and political crisis led to the resignation of the first government in December 1993, but Akayev's presidency was reaffirmed by a popular referendum of support conducted on 30 January 1994. Over 95% of registered voters participated in the referendum; 97% of those who voted supported President Akayev.

In September 1995, Akayev's supporters submitted a petition signed by 1.2 million (52% of the voting age population) urging the legislature to approve a referendum extending Akayev's term to the year 2001. After contentious debate, the legislature rejected holding a referendum, and Akayev instead announced that a presidential election would be held on 24 December 1995. Thirteen candidates were registered, but ten were disqualified, leaving Akayev, Masaliyev, and former speaker Medetken Sherimkulov. Akayev won reelection to a five year term, receiving 72% of about 1.9 million votes in a race deemed generally "free and fair" by international observers, though questions were raised about the disqualifications. In July 1998, Akayev hailed a Constitutional Court decision permitting him to run for a third term in the year 2000. He was reelected president on 29 October 2000, with 74% of the vote in an election marred by serious irregularities. Opposition activity prior to the election had been severely curtailed.

Severely shaking Kyrgyzstan's stability, several hundred Islamic extremists and other guerrillas entered Kyrgyzstan from

Tajikistan in July–August 1999. The guerrillas seized hostages, including four Japanese geologists, and several Kyrgyz villages, stating that they would cease hostilities if Kyrgyzstan provided a safe haven for refugees and would release hostages if Uzbekistan released jailed extremists. The guerrillas were rumored to be seeking to create an Islamic state in south Kyrgyzstan as a springboard for a jihad in Uzbekistan. A Kyrgyz Security Council member in October 1999 alleged that the guerrillas were trying to seize the major drug trafficking route in southern Kyrgyzstan. Kyrgyzstan called out reservists and admitted that its military was unprepared for combat. Kyrgyzstan received air support from Uzbekistan and Kazakhstan, but protested Uzbek bombing of a Kyrgyz village. The Kyrgyz defense minister on 18 October 1999 announced success in forcing virtually all guerrillas back into Tajikistan.

The United States established a major airbase near Bishkek in December 2001 for military and humanitarian uses during its campaign in Afghanistan to oust the Taliban regime and al-Qaeda forces there. Kyrgyzstan and the United States have established closer political and security ties since 11 September 2001. At US prompting, the IMF reached agreement with Kyrgyzstan on a \$93 million loan in December 2001. Since 11 September, all radical Islamic groups in the Central Asian nations have been linked with international terrorism. Both the Hizb-ut-Tahrir (“Freedom Party”) and the Islamic Movement of Uzbekistan (IMU), two radical Islamic organizations looking to establish an Islamic state in Central Asia, have a strong presence in the country. The IMU, expelled from its own country, collaborated with the Taliban and al-Qaeda and led armed incursions into Kyrgyzstan. Following the anti-terrorist operations led by the United States after 11 September, all major units of the IMU were destroyed.

In January 2002, Legislative Assembly member and opposition leader Azimbek Beknazarov was detained on charges which supporters said were politically motivated and linked to his criticism of the government’s planned transfer of disputed land to China and Kazakhstan. In February, Sherali Azarkulov, a prominent human rights activist, died while on a hunger strike to protest Beknazarov’s detention. In March, five people were killed in the southern Aksy rayon in clashes with police during a protest demanding Beknazarov’s release, and in May, the government resigned after a state commission ruled that senior officials were to blame for the deaths of the protestors. Beknazarov was subsequently freed, after being given a one-year suspended sentence for abuse of office. A rally in June called for Akayev’s resignation, increasing fears of political instability and civil war. Large protests and arrests continued throughout the year. In January 2003, Akayev announced a referendum would be held on his presidency and on amendments to the constitution to “improve democracy.” On 2 February, 76.6% of Kyrgyz citizens supported the amendments in the referendum, and 78.7% of voters determined Akayev should remain in office until his term expired in December 2005.

In October 2002, Kyrgyzstan and China staged their first joint military exercises, aiming to coordinate their response to terrorism.

### 13 GOVERNMENT

When Kyrgyzstan was still a Soviet republic, the legislature elected Askar Akayev president. Under his leadership, Kyrgyzstan declared independence and drafted a new constitution, ratified 5 May 1993. This constitution established a democratic presidential system with separation of powers and expansive human rights guarantees. In early September 1994, Akayev’s supporters in the legislature—a slim majority of 168 out of 323 sitting deputies, most of whom were local administrators—boycotted the last session of the legislature before the expiration of its mandate in February 1995. This boycott prevented

formation of a quorum, causing the dissolution of the legislature. Oppositionists alleged that the timing of the dissolution was aimed to squelch a legislative investigation into corruption in the government, and to open the way for Akayev to create a more malleable legislature. Akayev took over legislative powers, and decreed that legislative elections would be held by the end of the year. He also decreed that a referendum would be held in October 1995 to approve amendments to the constitution, including provisions revamping the legislative system to weaken it relative to the presidency. He argued that legislative and other provisions of the May 1993 constitution were too “idealistic” since the “people are not prepared for democracy,” and a “transitional period” was needed. Although the amendment process, like the dissolution of the legislature, contravened the constitution, the referendum questions were approved by over 80% of the voters.

Under the 1996 amendments, the president was given expanded powers to veto legislation, dissolve the legislature, and appoint all ministers (except the prime minister) without legislative confirmation, while making legislative impeachment more difficult. The legislature confirms the prime minister and high judges. Akayev spearheaded a referendum on 10 February 1996 to further alter the constitution. The amendments specify that Kyrgyzstan, or the Kyrgyz Republic, will be a secular, unitary state. It creates three branches of government: executive, legislative, and judicial. The Jogorku Kenesh (parliament or supreme council) has legislative responsibilities. The Jogorku Kenesh is made up of two houses—the 35-member legislative assembly and the 70-member assembly of people’s representatives. The legislative assembly is responsible for day-to-day operations of the legislature, such as interpreting laws and ratifying international treaties. The legislative assembly also has the power to impeach the president. The assembly of the people’s representatives meets periodically during the year to consider budget, tax, and appointment issues.

The executive branch is comprised of the cabinet of ministers, or ministries, appointed by the president and approved by the parliament. The head of the cabinet is the prime minister, also appointed by the president and confirmed by the parliament.

The president is to be elected once every five years, for no more than two terms, from among those citizens who are between 35 and 65 years of age, who have lived at least 15 years in the republic, and who are fluent in the state language, which is Kyrgyz.

There is no vice president. The usual functions of vice president, including the duty to replace the president in case of death or incapacity, are borne by the speaker of the parliament, who is elected from among the membership of the parliament.

Judges are chosen by the president, subject to parliamentary affirmation. Potential judges must be citizens between 35 and 65 years who have legal training and legal experience of at least ten years. The length of their service is unlimited, but can be terminated by the parliament.

In theory, the constitution provides a number of basic guarantees of human freedom, including freedom of religion, of the press and other forms of media, of movement about the republic and place of dwelling, of association, and unarmed assembly. It guarantees the privacy of post and other forms of communication, and guarantees private property. In terms of social benefits, the constitution guarantees pensions, unemployment compensation, legal representation, medical treatment, and free basic education.

Despite restrictions on its powers, in 1997–98, the legislature showed increasing signs of independence from executive power. Moving to further weaken it, Akayev spearheaded another referendum on 17 October 1998 to amend the constitution. Approved by 91.14% of voters, the amendments sharply restricted the legislature’s influence over bills involving the budget or other expenditures, limited a legislator’s immunity from

removal and prosecution, increased the size of the legislative assembly to 60, and decreased the size of the assembly of people's representatives to 45. It also provided for private land ownership and upheld freedom of the press. The legislature has acted in subordination to the executive branch, but has at times asserted itself by overriding presidential vetoes. In November 1999, the assembly of people's representatives rejected the government's budget for 2000, calling for added social and defense spending.

Kyrgyzstan's 20 February 2000 legislative election (with a runoff on 12 March) reflected the erosion of Kyrgyzstan's earlier signal progress in Central Asian democratization, according to the US State Department. Under new laws, fifteen seats in the upper chamber were set aside for party list voting. The Central Electoral Commission ruled that sixteen parties out of 27 legally registered were disqualified from fielding party list candidates, though it urged that such candidates could instead seek single-member seats. The major opposition Democratic Movement of Kyrgyzstan-Dignity Party bloc was initially registered but then decertified. The Organization for Security and Cooperation in Europe (OSCE) on 8 February criticized the de-certification as a narrow interpretation of the law and as restricting popular choice in the election. In all, 545 candidates were finally permitted to run for 105 seats. Six parties received over 5% of the vote, giving them seats: the Party of Communists (5 seats), Union of Democratic Forces (4), Democratic Party of Women (2), Party of Veterans (2), My Country (1), and Ata-Meken (1). Only Ata-Meken and the Communist Party are clear opposition parties. Only three constituency races were decided in the first round. In the second round on 12 March, 84 members were elected in a confusing vote. Prominent opposition politician Daniyar Usenov was disqualified after the first round, although he actually had won, according to the OSCE. Similarly, opposition Dignity Party head Feliks Kulov received more votes than his opponents in the first round, but was heavily defeated in the second through apparent legerdemain, according to the OSCE. After the second round, the opposition Democratic Movement, Dignity Party, and the People's Party protested the results.

About 120 OSCE observers and 2,000 local observers monitored the election. In the first round, OSCE monitors pointed to problems such as the disqualification of prominent opposition parties and the pro-government composition of electoral boards, and in the second round criticized continued government harassment of opposition candidates, politically motivated court decisions disqualifying some opposition candidates, and irregularities in vote-counting. US State Department spokesman James Foley on 14 March stressed that "the United States is disappointed in the conduct of the 2000 parliamentary election in Kyrgyzstan," which "amounted to a clear setback for the democratic process." On 23 March, he criticized Kyrgyz authorities for forcibly suppressing a peaceable demonstration and for arresting Kulov the day before on vague charges of committing crimes several years ago. Kulov was acquitted of charges of abuse of office in August, but was rearrested in January 2001. That July, new charges of embezzlement were brought against him, and in May 2002, he was sentenced to 10 years' imprisonment.

On 29 October 2000, Akayev was reelected president with 74% of the vote in an election marred by serious irregularities. Throughout 2001, the government continued to harass the opposition, independent media, and human rights defenders. Police used force to disperse protesters and arrested them throughout 2001 and 2002.

On 13 January 2003, Akayev announced a referendum would be held on 2 February for amendments to the constitution, including the abolition of the two-chamber parliament in favor of a single chamber, the abolition of party-list voting for parliament, and immunity from prosecution of former presidents and their families. Voters could not vote on the changes individually, but

were to approve or reject them wholesale. They also had to indicate whether or not they wanted Akayev to remain in office until his term expired in December 2005. 76.6% of Kyrgyz citizens supported the amendments in the referendum, and 78.7% of voters determined Akayev should remain in office. Turnout was over 86%. The opposition, which called for a boycott of the vote and sent observers to monitor the election, said that turnout had been less than 40%, failing to reach the 50% threshold for the referendum to be valid.

## 14 POLITICAL PARTIES

There is no formal ruling party. Over two dozen parties are legally registered, though all are small and some are inactive. Fewer than one-half of legislators claim party affiliation. Pro-Akayev parties include the Birimdik (Unity) Party, and the Adilet (Justice) Party (formed by writer Chingiz Aitmatov in October 1999). The main "constructive opposition" party is the People's Party. Among other parties, the Party of Communists (PCK; headed by Masaliyev) calls for reunification with Russia. The Erkin (Free) Kyrgyzstan Progressive Democratic Party calls for elevating the rights of ethnic Kyrgyz. Democratic Movement calls for democratic socialism. Erkin Kyrgyzstan, Asaba, the Social Democratic Party, Unity, Democratic Movement, My Country, and others decided in July 1999 to form a bloc to contest the legislative elections. The Dignity Party, headed by Felix Kulov (former vice president, security minister, and Bishkek mayor) was formed in August 1999. The electoral code forbade parties from taking part in the February 2000 legislative races unless they were more than one year old, eliminating eight new parties. The Central Electoral Commission in late 1999 also declared the People's, Citizens of Bishkek, Labor-Popular, and the People of Manas Parties disqualified on technicalities from taking part in the race. Religious parties are banned. Regional interests are important in the political process. The Kyrgyz leadership reportedly favors interests of the Chu region. Ten major opposition parties formed a broad coalition, the People's Patriotic Movement, in April 2001. The ability of this opposition coalition to provide an effective counter-weight to President Akayev and his supporters remains unproven. Feliks Kulov was sentenced to 10 years' imprisonment in May 2002 on embezzlement charges.

## 15 LOCAL GOVERNMENT

The republic is divided into seven administrative regions, plus the capital city of Bishkek. In addition, there are rayons, or districts. Each oblast and rayon has a local administration consisting of a governor, and a local assembly. According to a presidential decree of March 1996, regional governors are appointed by the president to four-year terms, and are responsible for making sure that the local executive and legislative branches cooperate in carrying out state decisions, for upholding law and order, for ensuring citizens' rights and freedoms, for obtaining funds to maintain local government and public property, for adhering to state budget strictures, for ensuring that taxes are collected, for making sure that local pensions and state wages are paid, and for generally ensuring the local welfare. Although in theory answering to the president, in practice some of the governors have become powerful spokesmen for regional interests, and run their districts with considerable autonomy. In October 1999, the first elections of municipal, *rayon* (district) and *oblast* (region) assemblies or *keneshs* took place. A new electoral law called for the candidate who gained a simple majority of votes to be declared the winner, introduced multi-seat constituencies, and dictated that only a Kyrgyz citizen who has lived in a constituency for no less than two years could become an assembly deputy.

## 16 JUDICIAL SYSTEM

The 1993 constitution declares the independence of the judiciary from the other branches of government. Thus far, however, the courts remain under the supervision of the Ministry of Justice and continue to operate mostly under Soviet-era laws and procedures. Some judicial reforms are being introduced, such as a separate judicial budget and more judicial training. There are three levels of criminal courts: local courts, which handle petty crimes; provincial courts, which consider most categories of crime, and the appellate supreme court. Traditional elders' courts may also handle petty crimes in rural areas. Defendants in elders' courts may appeal to the local administrative court.

A state prosecutor, or procurator, remains responsible for criminal arrests, investigations, and presentations before a panel consisting of a judge and two people's assessors (pensioners or members of labor collectives). Since 1990 there has been a right to have legal counsel in criminal cases. In 1996, the constitutional court ruled that only the defense has the right of appeal. Counteracting these restrictions on prosecutorial power, the law continues to allow judges to remand a case to the procurator for further investigation, rather than to declare the defendant guilty or innocent.

Judges hold varying terms of office. Constitutional court judges are appointed to fifteen-year terms, supreme court judges to ten-year terms, and first-term local court judges to three-year terms by recommendation of the president and confirmation by the Jogorku Kenesh (legislature). The 1993 constitution instituted a Western concept of judicial review by a constitutional court which did not exist under the former Soviet regime. Formed in 1993, the constitutional court reviews legislation and administrative acts for consistency with the constitution. It also considers cases on appeal involving individual rights and liberties of citizens. Constitutional court decisions are final. There is also a higher court of arbitration and a system of lower courts for economic cases.

## 17 ARMED FORCES

Active armed forces were estimated at 10,900 personnel in 2002, with 57,000 reserves. The army had 8,500 personnel and was equipped with 233 main battle tanks. An air force of 2,400 operates 52 combat aircraft and nine attack helicopters. There is also a paramilitary force of 5,000 border guards. Kyrgyzstan provides two observers in Sierra Leone. The United States, France, Spain, and South Korea provide support to Kyrgyzstan through Operation Enduring Freedom. Defense expenditures were estimated at \$19.2 million in 2001 or 1.4% of GDP.

## 18 INTERNATIONAL COOPERATION

Kyrgyzstan was admitted to the UN on 2 March 1992. The country is a member of the CIS, EBRD, ECE, ECO, ESCAP, IFC, IMF, UNCTAD, UNESCO, WTO, and the World Bank. As a member of the CIS, Kyrgyzstan has formal diplomatic relations with all the republics of the former Soviet Union.

The United States and the EU nations, along with many others, have diplomatic relations with the country. Kyrgyzstan has especially good relations with Germany, neighboring Central Asian states, and China.

In June 2001, leaders of China, Russia, Kazakhstan, Kyrgyzstan, Tajikistan and Uzbekistan met in China to launch the Shanghai Cooperation Organisation (SCO) and sign an agreement to fight ethnic and religious militancy while promoting trade.

## 19 ECONOMY

Kyrgyzstan is among the poorest of the post-Soviet countries. Although coal, gold, mercury, and uranium deposits are considerable, the country boasts few of the oil and gas reserves

that promise a badly needed economic windfall to other Central Asian republics.

Under the presidency of Askar Akayev, the process for economic restructuring toward a free market orientation outpaced that of most other post-Soviet republics, yet the transition has been an extremely difficult one. Dissolution of the state ordering system in Kyrgyzstan and its reduction in other post-Soviet republics have disrupted the traditional supply channels and effective markets for the country's industries, severely affecting overall economic performance.

As of 1995, 59.5% of enterprises had been privatized or converted to joint stock companies; privatized firms accounted for more than half the GDP that year. Some 50% of industrial firms, 75% of agriculture, and 90% of retail trade were privatized by 1995. By 1999, most of the state-owned enterprises had been sold.

The Kyrgyz government instituted tight monetary and fiscal policies in 1994 that reduced inflation from 23% per month in 1993 to 5.4% in 1994 and further, to 2.3% in 1995. Inflation was up again to 18% in 1998. Gross domestic product grew by an average annual rate of 7% from 1987 to 1998, with a 1998 growth rate of 1.8%.

A reform of the government structure in early 1992 consolidated 41 ministries into 13 ministries and 7 commissions. As part of this change, the Ministry of Economy and Finance was established to assume the fiscal and economic planning duties previously carried out separately by the Ministry of Finance and the State Planning Committee. In May 1993, Kyrgyzstan was the first country of the CIS countries to announce the introduction of its own currency, the som. Although taken in order to stabilize the national economy in face of continuing turmoil in the ruble zone, this step posed a large setback to previous negotiations for a single monetary union with other post-Soviet republics. The som has been remarkably stable since 1994, and is considered the most stable currency in central Asia, although the government still faces excessive debt.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Kyrgyzstan's gross domestic product (GDP) was estimated at \$13.5 billion. The per capita GDP was estimated at \$2,800. The annual growth rate of GDP was estimated at 5%. The average inflation rate in 2001 was 7%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 38% of GDP, industry 27%, and services 35%.

According to the United Nations, in 2000 remittances from citizens working abroad totaled \$43 million or about \$1 per capita and accounted for approximately 0.2% of GDP. Worker remittances in 2001 totaled \$21.62 million. Foreign aid receipts amounted to about \$38 per capita and accounted for approximately 13% of the gross national income (GNI).

The World Bank reports that in 2001 per capita household consumption (in constant 1995 US dollars) was \$257. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the same period private consumption grew at an annual rate of 4%. Approximately 33% of household consumption was spent on food, 11% on fuel, 3% on health care, and 22% on education. The richest 10% of the population accounted for approximately 27.2% of household consumption and the poorest 10% approximately 3.2%. It was estimated that in 2001 about 55% of the population had incomes below the poverty line.

## 21 LABOR

In 2000, the labor force included an estimated two million persons. As of that year, agriculture engaged 55%, industry 15%, and services 30%. The estimated unemployment rate in 1999 was 7.2%.

A labor comprehensive law protects the right of all workers to form and belong to unions. The Federation of Independent Trade Unions of Kyrgyzstan (FITUK), successor to the former Soviet-era official unions, remains the single trade union umbrella organization. Nineteen of the 20 union organizations in Kyrgyzstan are affiliated with FITUK. The exception is the union of entrepreneurs and cooperative members, which essentially is an association of over 80,000 self-employed persons. Strikes are permitted. Collective bargaining is legally recognized and is used to negotiate workers conditions on a limited basis.

The standard workweek is 41 hours. Safety and health regulations in factories are generally not enforced. Child labor is widespread due to economic hardship. The government set the minimum wage at \$2.00 per month, which does not provide a decent standard of living.

## 22 AGRICULTURE

In 1998, Kyrgyzstan's crop-producing land amounted to 1,425,000 ha (3,521,000 acres), or 7.4% of the total land area. About 50% of this area is used to cultivate fodder crops, 42% for winter wheat and barley, 5% for commercial crops (cotton, sugar beets, mulberry trees for silkworms, and tobacco), with the remaining 3% used for growing potatoes and other vegetables. Cultivation occurs primarily in the Shu, Talas, and Fergana valleys. About 38% of GDP was derived from agriculture in 2001. Since independence, about 75% of state farms have been privatized.

Wheat is Kyrgyzstan's main grain crop. Total wheat production was estimated at 1,105,000 tons in 1999. Individual farmers account for over half of production; state farms, about 40%; and the rest by private households. Production of barley in 1999 was estimated at 191,000 tons; corn, 308,000 tons; and rice, 14,000 tons.

Tobacco is an important cash crop in Kyrgyzstan. The areas around Osh and Jalalabad in the Fergana Valley and the Talas oblast to the north of Osh are the three major tobacco growing regions. The estimated total production was 30,000 tons in 1999.

## 23 ANIMAL HUSBANDRY

About 44% of the total land area is considered permanent pastureland. Because of the rugged topography, pasture-based stock breeding is the agricultural mainstay.

Livestock in 2001 included 3.2 million chickens, 3,104,000 sheep, 1,970,000 cattle, 324,600 horses, 640,000 goats, and 87,000 pigs. Yaks are also bred. Meat production in 2001 totaled 200,000 tons; cow's milk, 1,110,000 tons; wool (greasy), 11,000 tons; and eggs, 12,700 tons.

## 24 FISHING

The Naryn River is the primary site of fishing activity; but fishing is of little commercial significance. The Yssk Kol Lake is slightly saline and not conducive to the development of fresh water species fishing. The total catch in 2000 was 52 tons, including 10 tons of carp.

## 25 FORESTRY

Forests and woodlands account for about 5.2% of the total land area. With 85% of the country covered by high-altitude mountain ranges, and coupled with an underdeveloped transportation system, the forestry sector is not commercially significant. Imports of forest products totaled \$11.6 million in 2000.

## 26 MINING

Southwestern Kyrgyzstan contained most of the nation's mineral wealth, including, most importantly, antimony (often found with lead-zinc), mercury (often found with fluorspar), and gold. Principal deposits of these minerals were found in the Kadamzhayskiy Rayon and Khaydarkan regions, in the Alay foothills. The Khaydarkan mercury mining and metallurgical complex, in the Osh region, was the major producer of metallic mercury in the former Soviet Union.

In 2000, Kyrgyzstan produced 554 tons of metallic mercury, a 14% decline from 1999; all the mercury, the nation's fifth-leading export commodity, was exported to China. Antimony produced at Kadamzhay was another important export product, because it was suitable for technical purposes requiring high-purity antimony. Uranium, from the center of the country, was processed in the Shu Valley and was a leading export commodity. The mountains also contained deposits of gold, mercury, tungsten, molybdenum, rare earth metals, indium, sulfur, tin, and arsenic. Gold, the fourth-leading export commodity, was mined in the Issyk-Kul' region. Several major gold deposits were under development, and Kyrgyzstan's economy has benefited greatly from gold production by the Kumtor Gold Co., which increased production in 2000 by 10%, to 21.5 tons, and increased recovery rate from ore to 81.5%. A rich deposit of tin, a regionally scarce mineral commodity, was being developed in the eastern mountains. Output figures in 2000 were: antimony, 150 tons, down from 1,200 in 1997; mercury, 257 tons, down from 550 in 1997; fluorspar concentrate, 3,000 tons, down from 4,176 in 1997; and gold, 22,000 kg, up from 1,500 in 1996.

## 27 ENERGY AND POWER

Unlike its Central Asian neighbors, Kyrgyzstan has insignificant reserves of petroleum and natural gas. Kyrgyzstan's principal energy resources are its deposits of coal; subbituminous coal deposits are found on the southern fringe of the Fergana Valley (at Suluktu and Kyzl-Kyya), while hard coal comes from the west and northwest fringes of the valley (at Tash-Komur, Jalal-Abad, and Osh) and in the Tien Shan foothills east of Ysyk Kol Lake. In 2000 coal production amounted to 0.7 million tons.

Several large hydroelectric projects are spread along the Naryn River and its headwater tributaries, and a series of dams, built on irrigation canals, produce power for the manufacturing sector around Bishkek. The two major electric power plants are a 1,200 MW facility at Toktogul and a 760 MW generator at Bishkek. In 2000, electrical production totaled 14,700 million kWh, of which 92.4% came from hydropower and 7.6% from fossil fuels. About 25% was exported (mainly to Uzbekistan). Total installed capacity in 2001 was 3.8 billion kW. Consumption of electricity in 2000 was 9.8 billion kWh.

Production of oil and natural gas in small quantities comes from fields at the northeastern edge of the Fergana Valley; in 2000, Kyrgyzstan produced about 2,100 barrels per day of oil. Kyrgyz natural gas satisfies only a small percentage of domestic demand. In 2000, Kyrgyzstan's natural gas consumption was 1.9 billion cu m (67 billion cu ft), while production was only 14 million cu m (494 million cu ft). Most natural gas is imported from Uzbekistan. A crude oil refinery was built in Dzhahal-ahad in 1997 by a Kyrgyz-Canadian joint venture. It produces heavy fuel oil, diesel fuel, and gasoline.

## 28 INDUSTRY

During the Soviet era, industry in Kyrgyzstan was totally dependent on the other republics for raw materials and other resources. Between 1985 and 1989, industrial output increased at a rate of over 5% annually. With the disruption of traditional supply and export arrangements within the former USSR, however, industrial output declined by 1% in 1990 and dropped

by over 23% in 1992. Industrial production decreased by 24% in 1994 and by another 12.5% in 1995. By mid-1995, production began to recover and in 1997, Kyrgyzstan reported an industrial growth rate of 7%, one of 14% for 1998. The high growth rate in 1998 was associated with a steep rise in gold production. Nearly all of Kyrgyzstan's industrial output derives from the capital of Bishkek and surrounding areas. Mechanical and electrical engineering (vehicle assembly, washing machines, electrical appliances, electronics), light industry (mainly textiles and wool processing), and food processing make up close to 75% of the country's industrial production and 80% of its industrial exports. Other important industries include chemicals, leather goods such as shoes, and construction materials (primarily cement).

The government passed the "Privatization and Denationalization Act" in December 1991, authorizing the transfer of all small, medium, and large-scale industrial enterprises to the private sector. The Concept Law on Privatization passed in 1994 was designed to correct early problems with the transition. By 1995, about 600 enterprises had been sold, with 250 fully privatized. The transition is also expected to involve the conversion of defense industries to civilian use under private ownership. One important conversion thus far involves the participation of a South Korean firm in establishing electronics manufacture at a plant previously geared toward military-related production. The government is encouraging the purchase of substantial shares of individual enterprises by worker collectives, although more widespread and non-collective ownership is also being promoted. By 1999, much of the government's stock had been sold.

## 29 SCIENCE AND TECHNOLOGY

The Kyrgyz Academy of Sciences, founded in 1954 at Bishkek, has departments of physical engineering, mathematics, mining geological sciences, chemical-technological, medical-technological, agricultural, and biological sciences. Attached to the academy are 24 specialized learned societies and research institutes concerned with agriculture, medicine, natural sciences, and technology. Kyrgyz State University has faculties of geography, physics, mathematics, information science and applied mathematics, biology, and chemistry. Agricultural and medical institutes and a technical university are located in Bishkek. In 1987-97, science and engineering students accounted for 14% of college and university enrollments. The city also has a botanical garden and a scientific and technical library.

## 30 DOMESTIC TRADE

As in other post-Soviet republics, structural reform appears to be proceeding most rapidly in the domestic retail sector. Small shops and traders predominate among the country's private retailing entities. However, expansion in the number of private wholesale distributors has been much less marked, placing small retailers in a disadvantaged position compared with large-scale and potentially monopolistic producers within the country's industrial sector. As of 2002, the government continues to work toward reforms, including greater privatization, that would strengthen a market economy. A 20% value-added tax applies to most goods and services.

Most businesses open around 8 AM and close at about 5 PM, with lunch taken sometime between noon and 2 PM. Retail shops are usually open from 7 AM to 8 PM, with an afternoon lunch period. Department stores, bookstores, and other shops usually open according to state institution hours. Bazaars are open from 6 AM until 7 or 8 PM.

## 31 FOREIGN TRADE

Since 1992, Kyrgyzstan's trade balance has been negative, continuing the structural deficit caused by the costs of oil and gas,

pharmaceuticals, and agricultural resources formerly supplied through internal trade with other Soviet republics. The countries of the former USSR still represent the major export markets, but 25% of total exports are typically sent to countries outside the former USSR.

Kyrgyzstan exports metals, including gold, mercury, iron, steel and uranium (15%), hydropower (11.5%), tobacco (9.8%), cotton (4.7%), road vehicles (3.3%), and inorganic chemicals (2.8%).

In 1999 Kyrgyzstan's imports were distributed among the following categories:

Consumer goods	12.4%
Food	11.7%
Fuels	20.1%
Industrial supplies	21.8%
Machinery	26.8%
Transportation	7.1%
Other	0.1%

Principal trading partners in 1999 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
Germany	145	25	120
Uzbekistan	89	75	14
Russia	65	133	-68
China (inc. Hong Kong)	44	37	7
Switzerland	34	3	31
Kazakhstan	33	58	-25
Turkey	7	27	-20
United States	3	54	-51
Turkmenistan	3	19	-16
Canada	n.a.	11	n.a.

## 32 BALANCE OF PAYMENTS

Kyrgyzstan had traditionally maintained a trade deficit, derived mostly from dependence on imports from other former Soviet republics. Exports began to increase by 1995, however; the country registered relatively high growth rates in the early 2000s and had a trade surplus in 2001. Foreign exchange reserves are minimal. In 2001, the IMF awarded Kyrgyzstan \$93 million in aid over a three-year period. Total external debt in 2001 stood at \$1.6 billion.

The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Kyrgyzstan's exports was \$475 million while imports totaled \$420 million resulting in a trade surplus of \$55 million.

The International Monetary Fund (IMF) reports that in 2001 Kyrgyzstan had exports of goods totaling \$480 million and imports totaling \$441 million. The services credit totaled \$81 million and debit \$125 million. The following table summarizes Kyrgyzstan's balance of payments as reported by the IMF for 2001 in millions of US dollars.

<b>Current Account</b>	-53
Balance on goods	39
Balance on services	-45

### 33 BANKING AND SECURITIES

The central bank of Kyrgyzstan is the National Bank of the Kyrgyz Republic. It heads all 20 banks in the system, the savings bank, three former specialized state banks that have been converted into joint-stock commercial banks, two foreign joint-venture banks, and commercial banks. The specialized banks still dominate the allocation of credit and the taking of deposits, although some smaller banks are starting to challenge the major banks. However, many of the country's commercial banks have only one office. The larger banks have large bad loan portfolios; Promstroybank (Construction Bank) had 80% of its loans overdue at the end of 1994. Bank failures and bank consolidation were common during the late 1990s.

The NBK, formerly the local branch of Gosbank (the State Bank of the former Soviet Union), began to operate independently in December 1991 and is intended to perform all the functions of a central bank. The government has stuck with a tight monetary policy. The currency unit was initially the ruble following independence; however, with IMF support, the government introduced a new currency, the som, in May 1993 in order to stabilize the economy, avoid the inflation of the ruble, and attract foreign investment. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$114.9 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$170.2 million. The money market rate, the rate at which financial institutions lend to one another in the short term, was 11.9%.

The country has a small stock exchange, opened in May 1995. As of January 1996, 298 companies issued securities, with 7 trading on the stock exchange.

### 34 INSURANCE

No recent information is available.

### 35 PUBLIC FINANCE

During the early 1990s, economic output declined, while inflation escalated. As a result, the proportion of public revenues in GDP plummeted. Transfers from the former Soviet Union amounting to over 11% of GDP largely created an overall budget surplus equivalent to 4.1% of GDP in 1991. In 1992, parliament agreed to a further tightening of fiscal policy (including decreased expenditures and the elimination of transfers to inefficient state enterprises) due to the virtual termination of in-flowing subsidies caused by the demise of the Soviet Union. The som, currency introduced by the government in May 1993, has proven fairly stable, and monthly inflation has slowed from 40% to about 10%.

The US Central Intelligence Agency (CIA) estimates that in 1999 Kyrgyzstan's central government took in revenues of approximately \$207.4 million and had expenditures of \$238.7 million. Overall, the government registered a deficit of approximately \$31.3 million. External debt totaled \$1.6 billion.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

REVENUE AND GRANTS	100.0%	207
Tax revenue	77.6%	161
Non-tax revenue	16.0%	33
Grants	6.2%	13
EXPENDITURES	100.0%	239
General public services	14.9%	36
Defense	9.7%	23
Public order and safety	6.3%	15
Education	19.5%	47
Health	11.0%	26
Social security	9.5%	23
Housing and community amenities	5.7%	14
Recreation, cultural, and religious affairs	2.9%	7
Economic affairs and services	11.4%	27
Other expenditures	1.1%	3
Interest payments	8.0%	19

### 36 TAXATION

The personal income tax varies up to a maximum rate of 40%; the corporate rate ranges from 15–55% with a standard rate of 35%. Also levied are a 20% value-added tax; a withholding tax ranging from zero to 5%; and a social security contribution of 37% by employers and 1% by employees.

### 37 CUSTOMS AND DUTIES

Imports are subject to customs duties at an average rate of 10%. The rate is 10–20% for certain products, including tobacco, alcoholic beverages, precious metals, and petroleum. Imported raw materials and imports from the former USSR are exempt. Also, a 20% value-added tax is levied on products from everywhere except Azerbaijan, Belarus, and Russia. Kazakhstan, Belarus, Kyrgyzstan, Russia, Tajikistan, and Uzbekistan have formed a customs union. Kyrgyzstan and the United States signed a most-favored nation agreement in 1992.

### 38 FOREIGN INVESTMENT

In June 1991, the Kyrgyzstan parliament passed the Foreign Investment Law guiding the establishment of local enterprises with foreign shareholding as well as 100% foreign ownership. The law secures the right to repatriation of profits and allows foreign investment in all sectors of the economy except military production and certain forms of ownership in agriculture. Foreign buyers may acquire small enterprises being transferred from the state to the private sector directly on the open market; foreign participation in auctions or other forms of bidding for medium and large-scale enterprises requires special government permission. At present the government is attempting to attract overseas investors, particularly to the minerals, electronics, and agro-processing sectors of the economy. In 1995, the Foreign Investment Law was amended to expand foreign investment opportunities, to clarify investors' rights, and to remove or extend some time limits on certain aspects of foreign investment. Direct foreign investment that year amounted to about \$800 million, and was rising at a slow but steady rate. Investments from Canada represented 45% of the total; these were concentrated primarily in gold mining (the largest single project being the \$375 million development of the Kumtor gold field). Investments from Turkey comprised about 20% of the total; those from the US, 12%; and China, 10%. In 1998, foreign direct investment totaled \$102 million, up from \$83 million in 1997.

### 39 ECONOMIC DEVELOPMENT

Under the Soviet system, economic planning efforts in Kyrgyzstan focused on increasing agricultural production (particularly in the meat and dairy subsectors during the 1980s) and specialized development of industrial sectors in line with the wider Soviet economy. Transfer payments from the central government as well as capital inflows into state enterprises covered the republic's

modest balance of trade deficit with its Soviet trading partners and countries beyond. With this support, GDP growth was sustained at moderately high levels in the late 1980s, averaging 5.1% in 1985–89.

Kyrgyzstan declared its independence in 1991. Since then, the Kyrgyzstan government faced the task of sustaining a viable national economy despite the sudden cessation of transfers from the central government, the country's critical dependence on oil and gas imports, and its landlocked geographic position that has hampered development of trading ties outside the economically troubled former Soviet Union. Reforms have aimed at making the transition to a market-oriented economy.

Kyrgyzstan experienced declines in gross domestic product (GDP) from 1991–94. Both per capita income and overall output fell to well below the 1990 level. Agricultural output fell by an estimated 20%, and industrial output, by 42%. By 1996, however, Kyrgyzstan had begun to show progress, especially when compared to the other former Soviet republics, in the areas of privatizing state enterprises, ending the state ordering system, lifting price controls, and converting military enterprises to civilian uses. Prime Minister Apas Jumagulov reported in 1995 that the economic crises had eased, and the rates of decline were slowing.

A value-added tax was introduced in 1992 to help strengthen the government revenue base. Expected state revenues however, have fallen short of expectation due to steeply declining consumption and collection difficulties within the new tax system. With seriously declining revenues since 1991, the government's ability to make new development investments in either the productive sectors or physical and social infrastructure has been severely constrained. Capital expenditures as a percentage of total budgetary expenditures declined from 15% in 1990 to only 7% in 1992. Because of its commitment to democracy, Kyrgyzstan has received favorable treatment from international economic aid agencies. In 1992, the government signed a formal agreement with Russia transferring its share of the former Soviet Union's external debt to the latter in return for relinquishing most claims to the financial and other assets of the former USSR.

In May 1996, President Akayev negotiated an aid package from the Asian Development Bank that included \$60 million in loans to finance privatization of agriculture and to renovate power and heating facilities in Bishkek. In support of the government's efforts to evolve the country's agriculture from large communes to private farms, the Asian Development Bank also offered loans to small farmers. In July 1996, the International Finance Corporation promised \$40 million to finance a project to mine for gold near Issy-Kul', a large lake in the northeast. In November 1996, the World Bank moved to support programs to reform the Kyrgyzstan banking system and to modernize the electric power generating system.

#### 40 SOCIAL DEVELOPMENT

Old age, disability and survivorship pensions are provided to all employed persons and members of cooperatives and collective farms. Contributions of 2.5% of earnings from employees, and 34% of payroll by employers finance the program. A universal medical care system exists for all residents. Maternity benefits for employed women include 100% of pay for 126 days of leave. Workers' compensation, unemployment benefits, and family allowances are also provided.

Women have equal status under the law although discrimination persists. Women are well-represented in the work force in urban areas, and participate in higher education and professional fields. However, they appear to be disproportionately affected by growing unemployment. A women's congress in Bishkek convenes periodically to consider women's issues. Opportunities for women are lacking in the rural

areas. Domestic abuse and violence against women remain common. The lack of government funds impacts the programs aimed at assisting children. Child labor is increasingly common.

In 1993, parliament narrowly rejected a law to legalize polygamy, a Muslim custom practiced in Kyrgyzstan. Polygyny (one man having multiple wives) is more common, and a husband must financially provide each wife with her own separate household. In order for a woman to have multiple husbands (polyandry), she must have substantial wealth or influence.

There is reported discrimination in hiring, promotion, and housing against citizens who are not ethnic Kyrgyz. Police brutality has been reported, as well as arbitrary arrest and detention. The government violates basic civil rights, including the freedoms of speech, assembly, association, and the press.

Compared to other Central Asian states, many observers stress, Kyrgyzstan has a less objectionable human rights record. According to the State Department's *Country Reports on Human Rights Practices for 2001*, however, the Kyrgyz government's human rights record remains poor. There were problems with freedom of speech and the press, due process for the accused, religious freedom, ethnic discrimination, and electoral irregularities. There are cases of police brutality and arbitrary arrest. Citizens have only a limited ability to peaceably change their government. Elections and referenda have involved irregular procedures. There are independent newspapers, magazines, and radio stations, and some independent television broadcasts, though the government increasingly adopted measures to curtail the operations of independent media.

#### 41 HEALTH

Kyrgyzstan's health care system has remained state-run following the breakup of the Soviet Union. Primary health care is being restructured using a family group practice model. As of 1999, there were an estimated 3 physicians and 9.5 hospital beds per 1,000 people. Approximately 26% of the country's hospital beds were eliminated between 1990 and 1996, but hospital expenditures still account for more than 70% of health care spending. As of 1999, total health care expenditure was estimated at 4.4% of GDP.

The infant mortality rate in 2000 was 23 per 1,000 live births and the maternal mortality rate in 1998 was 65 per 100,000 live births. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 26.1 and 9.1 per 1,000 people. Major causes of death in 1990 (per 100,000 people) were communicable diseases and maternal/perinatal causes, 124; noncommunicable diseases, 651; and injuries, 95. Between 1990 and 1994, immunization rates for children up to one year old were tuberculosis, 97%, and polio, 84%. As of 1999 the rates for DPT and measles immunizations were, respectively, 98% and 97%. Tuberculosis incidence and mortality rates are rising steeply, reflecting economic hardship and the deterioration of the health infrastructure. In 1999, there were 130 cases of tuberculosis per 1,000 people. Controlled for 30 years, diphtheria has reemerged since the breakup of the Soviet Union. In 1994, there were 489 new cases of diphtheria. Nearly 50% of these cases occurred in persons 15 or under. The cancer mortality rates in Kyrgyzstan were higher than the medium human development countries during 1990–1993. In 2000, life expectancy was 67 years for both men and women.

In 1999 the number of people living with HIV/AIDS and deaths from AIDS were both under 100. HIV prevalence was less than 0.01 per 100 adults.

#### 42 HOUSING

During the Soviet era, there was a severe lack of urban housing in Kyrgyzstan. In 1990, Kyrgyzstan had 12.1 sq m of housing space per capita and, as of 1 January 1991, 85,000 households (or 18.6%) were on waiting lists for housing in urban areas. From

1996–2000, only about 14,800 new dwellings were built. In 2000, about 77% of the population had access to improved water sources; most residents had access to improved sanitation.

### 43 EDUCATION

The adult illiteracy rate in 1995 was estimated at 0.4% (males, 0.3%; females, 0.5%). The educational system was not developed until after the 1920s when the country came under Soviet control. In 1996, 473,077 students were enrolled in 1,885 primary schools, with 24,086 teachers. In the same year, secondary schools had 530,854 students and 42,286 teachers. The pupil-teacher ratio at the primary level was 24 to 1 in 1999. In the same year, 82% of primary-school-age children were enrolled in school. In 1996, there were 49,744 students enrolled and 3,691 teaching staff employed at institutions of higher learning, including the State University of Kyrgyzstan. As of 1999, public expenditure on education was estimated at 5.4% of GDP.

### 44 LIBRARIES AND MUSEUMS

Important libraries in Kyrgyzstan include the National Library of the Kyrgyz Republic, with over 3.6 million volumes, and the Scientific Technical Library of Kyrgyzstan, with over 5.8 million volumes. The Kyrgyzstan State University library contains over 931,000 volumes, the Kyrgyzstan Agricultural Institute holds 626,000, and the Kyrgyzstan Technical University holds 766,000 volumes.

The State Historical Museum of Kyrgyzstan has 20,000 items on display depicting the history of Kyrgyzstan. The Kyrgyzstan Museum of Fine Arts collects primarily modern work. There are several regional museums exhibiting primarily archaeological findings.

### 45 MEDIA

Telephone links to other former Soviet republics are via land line or microwave, and to other countries through Moscow. The telephone network is underdeveloped, with some 58,000 residents waiting for telephone lines as of 2000. In 1997 there were an estimated 351,000 telephones in use.

Dom Radio in Bishkek broadcasts in Kyrgyz, German, Dungan, and Russian. In 1998, there were 12 AM and 14 FM radio stations. Television programming is provided through Orbita and INTELSAT. In 2000 there were 111 radios and 49 television sets in use per 1,000 population. In 2001, there were 51,600 Internet subscribers.

In 2002 there were four daily newspapers. They were *Sovetik Kyrzystan* (circulation 162,625), *Slovo Kyrgyzstan* (in Russian, circulation 111,000), *Vecherni Bishkek* (also in Russian, with a circulation of 51,500), and *Kyrgyz Tuusu* (NA).

On 2 July 1992 the government passed a law on the press and mass media which supports freedom of the press but also provides guidelines proscribing publication of certain information. The law supports the right of journalists to work, obtain information, and publish without prior restraint. The law prohibits publication of state secrets, material which advocates the overthrow of, or changes to, the existing constitutional order in Kyrgyzstan or elsewhere. It also prohibits publication of material that advocates war, violence, or intolerance toward ethnic or religious groups. Desecration of national norms, ethics, and symbols like the national seal, anthem, or flag is prohibited. Publication of pornography is prohibited, as is propagation of untrue information.

The press is free to publish material without prior government approval or restraint, although some infringement of press freedoms was reported as of 1999.

### 46 ORGANIZATIONS

Important economic organizations in Kyrgyzstan include the Chamber of Commerce and Industry and the Kyrgyzstan Federation of Trade Unions. Active political organizations include the Committee for the Defense of Human Rights, the Slavic Fund, Free Kyrgyzstan, Agigat, and Ashar. The Kyrgyz Bar Association was formed in August 1995. Kiwanis International has programs in the country. The Red Crescent Society is also active.

### 47 TOURISM, TRAVEL, AND RECREATION

Osh, Kyrgyzstan's second-largest city, is considered a holy city by Muslim pilgrims who visit it annually to pray at its Islamic shrines. The capital city of Bishkek is surrounded by some of the highest mountain ranges in the world. Bishkek is known for its large public parks and gardens, shady avenues, and botanical gardens. Equestrian sports are very popular in Kyrgyzstan.

Visas are required for entry to Kyrgyzstan and are obtainable upon arrival or through Kyrgyz embassies abroad and tour companies. The principal accommodations are hotels that formerly belonged to the Soviet Intourist system. However, foreign chains are currently developing a number of projects in Central Asia. In 1999 there were 68,863 visitor arrivals in the country and tourism receipts totaled \$14 million.

According to 2002 US Department of State estimates, the daily cost of staying in Bishkek is approximately \$183 per day.

### 48 FAMOUS KYRGYZSTANIS

Askar A. Akayev was elected president of the republic of Kyrgyzstan, in October 1990, prior to the republic declaring its independence. Chingiz Aitmatov (b.1928), winner of two Lenin Prizes for literature, is a native Kyrgyzstani.

### 49 DEPENDENCIES

Kyrgyzstan has no territories or colonies.

# LAO PEOPLE'S DEMOCRATIC REPUBLIC

Laos

*Sathalanalat Paxathipatai Paxaxon Lao*

**CAPITAL:** Vientiane (Viangchan)

**FLAG:** The national flag, officially adopted in 1975, is the former flag of the Pathet Lao, consisting of three horizontal stripes of red, dark blue, and red, with a white disk, representing the full moon, at the center.

**ANTHEM:** *Pheng Sat Lao (Hymn of the Lao People).*

**MONETARY UNIT:** The new kip (₭) is a paper currency of 100 at (cents). There are notes of 10, 20, 50, 200, and 500 new kip. ₭1 = \$0.00009385 (or \$1 = ₭10,655) as of May 2003.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but older local units also are used.

**HOLIDAYS:** Anniversary of the Founding of the Lao People's Democratic Republic, 2 December. The government generally reschedules on weekends such traditional festivals as the Lao New Year (April); Boun Bang-fai (Rocket Festival), the celebration of the birth, enlightenment, and death of the Buddha (May); Boun Khao Watsa, the beginning of a period of fasting and meditation lasting through the rainy season (July); Boun Ok Watsa (Water Holiday), a celebration of the end of the period of fasting and meditation (October); and That Luang, a pagoda pilgrimage holiday (November).

**TIME:** 7 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Laos is a landlocked country on the Indochina Peninsula near the eastern extremity of mainland Southeast Asia. Laos occupies an area of 236,800 sq km (91,429 sq mi), extending 1,162 km (722 mi) SSE–NNW and 478 km (297 mi) ENE–WSW. Comparatively, the area occupied by Laos is slightly larger than the state of Utah. It is bordered on the N by China, on the E and SE by Vietnam, on the S by Cambodia, on the W by Thailand, and on the NW by Myanmar, with a total boundary length of 5,083 km (3,158 mi).

The capital of Laos, Vientiane, is located along the country's southwestern boundary.

## <sup>2</sup>TOPOGRAPHY

The terrain is rugged and mountainous, especially in the north and in the Annam Range, along the border with Vietnam. The mountains reach heights of more than 2,700 m (8,860 ft), with Pou Bia, the highest point in Laos, rising to 2,817 m (9,242 ft) in the north-central part of the country. Only three passes cross the mountains to link Laos with Vietnam. The Tran Ninh Plateau, in the northeast, rises to between 1,020 m and 1,370 m (3,350–4,500 ft), and the fertile Bolovens Plateau, in the south, reaches a height of about 1,070 m (3,500 ft). Broad alluvial plains, where much of the rice crop is grown, are found only in the south and west along the Mekong River and its tributaries. Of these, the Vientiane plain is the most extensive.

Except for a relatively small area east of the main divide, Laos is drained by the Mekong and its tributaries. The Mekong flows in a broad valley along the border with Thailand and through Laos for 1,805 km (1,122 mi). In its low-water phase, it is almost dry, but it rises more than 6 m (20 ft) during the monsoon period. The river is wide, but except for a navigable stretch between Vientiane and Savannakhét, rapids are numerous. Below Savannakhét and at the extreme south there are large rapids and waterfalls. Floods are common in the rainy season.

## <sup>3</sup>CLIMATE

Laos has a tropical monsoon climate with three main seasons. The rainy season is from May through October, when rainfall averages 127 to 229 cm (50–90 in). November through February is a cool, dry season. March through April is a hot, dry season, during which temperatures can be as high as 40°C (104°F). Humidity is high throughout the year, even during the season of drought. Average daily temperatures in Vientiane range from 14° to 28°C (57–82°F) in January, the coolest month, and from 23° to 34°C (73–93°F) in April, the hottest.

## <sup>4</sup>FLORA AND FAUNA

Nearly two-thirds of Laos is covered by thick forest. The forests of southernmost Laos are an extension of the Kampuchean type of vegetation, while the highland forests of the north, consisting of prairies interspersed with thickets, resemble central Vietnam. Bamboo, lianas, rattan, and palms are found throughout Laos.

Roaming the forests are panthers and a dwindling number of tigers, elephants, and leopards. The elephant, until 1975 depicted on the national flag as the traditional symbol of Lao royalty, has been used throughout history as a beast of burden. A local breed of water buffalo also is universally used as a draft animal. Reptiles include cobras, geckos, kraits, and Siamese crocodiles. There are many varieties of birds, fish, and insects.

## <sup>5</sup>ENVIRONMENT

Soil erosion, deforestation, and flood control are the principal environmental concerns in Laos, there being only minimal industrial development. The government seeks to control erosion by discouraging the traditional slash-and-burn agriculture practiced by many mountain tribes, and by resettling the tribes in permanent villages.

Reforestation projects have been promoted by the government as a means of increasing lumber exports and of restoring valuable hardwoods to logged-out forest areas. Each person was required to plant five trees in the course of the 1981–85 economic plan. In 1986, the government prohibited the cutting of 15 different

LOCATION: 100° to 107°E; 13°40' to 22°40' N. BOUNDARY LENGTHS: China, 425 kilometers (264 miles); Vietnam, 1,555 kilometers (966 miles); Cambodia, 541 kilometers (336 miles); Thailand, 1,754 kilometers (1,090 miles); Myanmar, 238 kilometers (148 miles).

varieties of trees. At that time, forests were reportedly being consumed at a rate of 300,000 hectares (741,000 acres) per year. Between 1983 and 1993, Laos suffered a further decline of 11.3% in its forest and woodland area.

Laos has 190 cubic kilometers of renewable water resources with 82% used in farming activity and 10% used for industrial purposes. Only 61% of city dwellers and 29% of rural citizens have access to safe drinking water. The nation's water supply has begun to decrease due to a combination of factors, among them the loss of forest land, uncontrolled agricultural practices, flooding and drought. Pollution from fires, dust, and cars is also becoming a national problem.

In 2001, 30 of Laos's mammal species and 27 bird species were threatened. One of the nation's plant species was endangered. Endangered species in Laos included the douc langur, three species of gibbon (pileated, crowned, and capped), tiger, Asian elephant, Sumatran rhinoceros, Javan rhinoceros, Thailand brow-antlered deer, kouprey, and Siamese crocodile. The Vietnam warty pig has become extinct.

## 6 POPULATION

The population of Laos in 2003 was estimated by the United Nations at 5,657,000, which placed it as number 102 in

population among the 193 nations of the world. In that year approximately 4% of the population was over 65 years of age, with another 43% of the population under 15 years of age. There were 100 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 2.29%, with the projected population for the year 2015 at 7,282,000. The population density in 2002 was a sparse 23 per sq km (60 per sq mi), but the population is unevenly spread, with the greatest concentration in the Mekong Valley. More than 70% of the population is rural, living in some 9,000 villages.

It was estimated by the Population Reference Bureau that only 24% of the population lived in urban areas in 2001. The capital city, Vientiane, had a population of 640,000 in that year. Other large towns, all on or near the Mekong and its tributaries, are Savannakhet, Pakxé, Luangphrabang (the former royal capital), Xaignabouri, and Ban Houayxay. According to the United Nations, the urban population growth rate for 2000–2005 was 4.9%.

## 7 MIGRATION

There has been only limited population movement into Laos in modern times. During the late 1960s and early 1970s, under pressure of combat operations, Black Tai tribesmen moved southward into the Mekong Valley. Between 1975–90, over 360,000 Laotians fled to Thailand and China. The majority resettled and were given new lives in Western nations. To date, more than 27,000 Laotians have repatriated. In 1996, some 6,000 Laotian refugees remained in Thailand, and several hundred remained on collective farms in China. As of 1999, about 1,100 of the small number of refugees still remaining in Ban Napho camp in Thailand were determined not to have valid refugee claims. The two governments agreed that they should return to Laos, with UNHCR assistance; however, only a few families and individuals have volunteered to do so thus far. In the mid-1990s, as Laos opened up to international investment and development, Vietnamese workers began migrating to Laos—although in relatively small numbers—to work in the construction industry, primarily. The net migration rate for 2000 was -0.3 migrants per 1,000 population. The government views the immigration level as satisfactory, but the emigration level as too high.

## 8 ETHNIC GROUPS

There are officially 68 ethnic groups in Laos. About 68% of all Laotians are Lao-Loum, or lowland Lao, a people related to the people of Thailand; thought to have migrated to Laos from southwestern China in the 8th century, the Lao-Loum are concentrated in the lowlands along the Mekong. On the hillsides live the Lao-theung, or slope dwellers, a diverse group dominated by the Lao-tai (with various subgroups, including the Black Tai), who are ethnically related to the Lao-Loum. They account for 22% of the population. At higher altitudes are the Lao-soung, or mountain dwellers, a diverse group of ethnic minorities of mainly Malayo-Polynesian or proto-Malay backgrounds. They constitute 9% of the population. Important among the Lao-soung, and more prosperous than most Lao because of the opium poppies they grow, are the Hmong (Meo), a people of Tibeto-Burman origin who supported the American presence until 1975 and, because of their continuing insurgency, became the targets of harassment by government and Vietnamese troops. Other important upland tribes, all with customs and religions considerably different from those of the lowland Lao, are the Ho, Kha, Kho, and Yao (Mien). Ethnic Vietnamese and Chinese account for 1% of the population.

## 9 LANGUAGES

Lao, the official language and the language of the ethnic Lao, is closely related to the language of Thailand. It is monosyllabic and tonal and contains words borrowed from Sanskrit, Pali, and Farsi. Pali, a Sanskritic language, is used among the Buddhist priesthood.

Other groups speak the Tibeto-Burman, Non-Khmer, or Miao-Yao languages. French, formerly the principal language of government and higher education, has been largely replaced by Lao. English and various ethnic languages are also spoken.

## 10 RELIGIONS

Between 60% and 65% of all Laotians, including nearly all the Lao-Loum, are adherents of Theravada Buddhism, a large part of whose daily life is shaped by its rituals and precepts. Buddhist temples, found in every village, town, and city, serve as intellectual as well as religious centers. Vientiane and Luangprabang have been called cities of thousands of temples. More than 70 pagodas were built in Vientiane alone in the 16th century, including the famous Wat Phra Keo and That Luang. Despite the major role that Buddhism, its temples, and its priests have played in Laotian life, the average lowland Lao regulates a large part of daily activities in accordance with animistic concepts. Certain spirits (*phi*) are believed to have great power over human destiny and to be present throughout the material world, as well as within nonmaterial realms. Thus, each of the four universal elements (earth, sky, fire, and water) has its special *phi*; every road, stream, village, house, and person has a particular *phi*; forests and jungles are inhabited by *phi*. Evil *phi* can cause disease and must be propitiated by sacrifices.

Approximately 30% of the population practice animism. About 34% of Laotians, including the upland tribes, are almost exclusively animists, although influenced by Buddhism to some extent. Christian missionaries have been active in Laos, but less than 2% of all Laotians profess the religion.

About 2% of the population are Christians, with about 60,000 Protestants and 40,000 Roman Catholics. Most Protestants are members of the Lao Evangelical Church or Seventh-Day Adventists, which are the only two officially recognized Protestant groups. Other minority religions include the Baha'i faith, Islam, Mahayana Buddhism, Taoism, and Confucianism.

Though religious activity was discouraged by the state from 1976 to 1979, freedom of religion has been legally guaranteed since the constitution of 1991.

## 11 TRANSPORTATION

Lack of adequate transportation facilities continues to be a major deterrent to economic progress. Of the approximately 14,000 km (8,700 mi) of roads, only about 3,360 km (2,088 mi) were paved in 2002; many are impassable in the rainy season. Only a single major road connects the northern and southern regions. Most of the roads were damaged by US bombing in the Vietnam war, but the main links with Vietnam (notably Highway 9, from Savannakhét to the Vietnamese port of Da Nang, and Highways 7 and 13, from Vientiane and Savannakhét to the Vietnamese port of Vinh and Ho Chi Minh City, respectively) are being rebuilt with Vietnamese aid. Under the 1981-85 economic plan, 844 km (524 mi) of roads were built or improved. The 1986-90 plan projected an additional 1,500 km (932 mi), 50% of which was to be asphalted. There are no railroads in Laos, although in 1994, the government entered into an agreement with a Thai company to build a railroad from Nong Khai in Thailand to Vientiane.

In 2001 there were 51 airports, only 9 of which had paved runways. Vientiane has the only international airport. Major cities in Laos are connected by air services operated by state-run Lao Aviation, founded with Soviet aid in 1976. In 1995, the

government signed an agreement with China's Yunnan Airlines forming a joint venture projected to increase Yunnan's holdings of Lao Aviation to 60% while the former pays off the latter's debt. In 2001 210,800 passengers were carried on scheduled domestic and international airline flights.

Landlocked, Laos' only water-transport link with the outside world is via the Mekong River, which forms a large part of the border with Thailand and flows through Cambodia and Vietnam into the South China Sea. The Mekong is navigable for small transport craft and, with its tributaries in Laos, forms a 4,587-km (2,850-mi) inland waterway system, although rapids make necessary the transshipment of cargo. To lessen dependence on Thailand, Laos in 1977 signed an agreement with Vietnam whereby the Vietnamese port of Da Nang would replace Bangkok as the chief outlet for Laos. In 2002, Laos had one merchant vessel, a cargo ship at 2,370 GRT.

## 12 HISTORY

Although archaeological evidence indicates that settlers along the Mekong had learned agriculture, metallurgy, and pottery making by 3000 BC, little is known about the early history of the land that today bears the name of Laos. The lowland Lao are believed to be the descendants of Thai tribes that were pushed southward in the 8th century. According to tradition, the kingdom called Lan Xang ("a million elephants") was established in 756 by King Thao Khoun Lo. In 1353, it was reunified by Fa-Ngoum, who had been raised at the court of Angkor in Kampuchea and returned with a force of Khmer troops. He is also credited with the introduction of Hinayana Buddhism into Laos. Lan Xang waged intermittent wars with the Khmers, Burmese, Vietnamese, and Thai and developed an effective administrative system, an elaborate military organization, and an active commerce with neighboring countries. In 1707, internal dissensions brought about a split of Lan Xang into two kingdoms, Luangphrabang in the north (present-day upper Laos) and Vientiane in the south (lower Laos). Strong neighboring states took advantage of this split to invade the region. Vientiane was overrun and annexed by Siam (Thailand) in 1828, while Luangphrabang became a vassal of both the Chinese and the Vietnamese. In 1893, France, which had already established a protectorate over what is now central and northern Vietnam, extended its control to both Vientiane and Luangphrabang, and Laos was ruled by France as part of Indochina. Although French control over Luangphrabang took the nominal form of a protectorate, the French colonial administration directly ruled the rest of Laos, legal justification being ultimately provided in the Lao-French convention of 1917.

During World War II, Laos was occupied by Japan. After the Japanese proclaimed on 10 March 1945 that "the colonial status of Indochina has ended," the king of Luangphrabang, Sisavang Vong, was compelled to issue a declaration of independence. The nationalist Free Lao (Lao Issarak) movement deposed the monarch soon after, but French forces reoccupied Laos, and on 27 August 1946, France concluded an agreement establishing him as king of Laos and reimposing French domination over the country. In May 1947, the king established a constitution providing for a democratic government. On 19 July 1949, Laos nominally became an independent sovereign state within the French Union. Additional conventions transferring full sovereignty to Laos were signed on 6 February 1950 and on 22 October 1953. All special economic ties with France and the other Indochinese states were abolished by the Paris pacts of 29 December 1954. In the meantime, Vietnamese Communist (Viet-Minh) forces had invaded Laos in the spring of 1953. A Laotian Communist movement, the Pathet Lao (Lao State), created on 13 August 1950 and led by Prince Souphanouvong, collaborated with the Viet-Minh during its Laotian offensive. Under the Geneva cease-fire of 21 July 1954, all Viet-Minh and most French troops were to withdraw, and the Pathet Lao was to pull back to

two northern provinces, pending reunification talks with the national government under the leadership of Souvanna Phouma (Souphanouvong's half-brother). The negotiations were completed on 2 November 1957, and the Pathet Lao transformed itself into a legal political party called the National Political Front (Neo Lao Hak Xat). However, a political swing to the right that led to the ouster of Souvanna Phouma as prime minister, coupled with the refusal of the Pathet Lao forces to integrate into the Royal Lao Army, led to a renewal of fighting in May 1959.

A bloodless right-wing coup in January 1960 was answered in August by a coup led by paratroops, under the command of Capt. Kong Le; in the ensuing turmoil, Souvanna Phouma returned to power. After a three-day artillery battle that destroyed much of Vientiane, right-wing military elements under Gen. Phoumi Nosavan and Prince Boun Oum occupied the capital on 11 December. A new right-wing government under Prince Boun Oum was established, but further military reverses, despite a heavy influx of US aid and advisers, caused the government to ask for a cease-fire in May 1961. An international conference assembled in Geneva to guarantee the cease-fire. All three Laotian political factions agreed on 11 June 1962 to accept a coalition government, with Souvanna Phouma as prime minister. On 23 July, the powers assembled at Geneva signed an agreement on the independence and neutrality of Laos, which provided for the evacuation of all foreign forces by 7 October. The United States announced full compliance, under supervision of the International Control Commission (ICC), set up in 1954. Communist forces were not withdrawn. Fighting resumed in the spring of 1963, and Laos was steadily drawn into the role of a main theater in the escalating Vietnam war. The Laotian segment of the so-called Ho Chi Minh trail emerged as a vital route for troops and supplies moving south from the Democratic Republic of Vietnam (DRV), also known as North Vietnam, and was the target for heavy and persistent US bombing raids. While the Vientiane government was heavily bolstered by US military and economic support, the Pathet Lao received key support from the DRV, which was reported to have 20,000 troops stationed in Laos by 1974. Efforts to negotiate a settlement in Laos resumed with US backing in 1971, but a settlement was not concluded until February 1973, a month after a Vietnam peace agreement was signed in Paris. On 5 April 1974, a new coalition government was set up, with equal representation for Pathet Lao and non-Communist elements. Souvanna Phouma, 73 years old and in failing health, stayed on as prime minister, while Prince Souphanouvong was brought closer to the center of political authority as head of the newly created Joint National Political Council.

The Pathet Lao had by this time asserted its control over three-fourths of the national territory. Following the fall of the US-backed regimes in Vietnam and Cambodia in April 1975, the Laotian Communists embarked on a campaign to achieve complete military and political supremacy in Laos. On 23 August, Vientiane was declared "liberated" by the Pathet Lao, whose effective control of Laos was thereby secured. On 2 December 1975, the Lao People's Democratic Republic (LPDR) was established, with Prince Souphanouvong as president and Kaysone Phomvihane as prime minister. King Savang Vatthana abdicated his throne, ending the monarchy that had survived in Laos for 622 years. Elections for a new National Assembly were called for April 1976; however, voting was put off indefinitely, amid reports of civil unrest and sabotage. A Supreme People's Council was convened, meanwhile, with Prince Souphanouvong as chairman, and was charged with the task of drafting a new constitution.

During the late 1970s, the Communists moved to consolidate their control and socialize the economy. Private trade was banned, factories were nationalized, and forcible collectivization of agriculture was initiated. "Reeducation" camps for an

estimated 40,000 former royalists and military leaders were established in remote areas; as of 1986, the government maintained that almost all the inmates had been released, but Amnesty International claimed that about 5,000 remained. A 25-year friendship treaty with Vietnam, signed in July 1977, led to closer relations with that country (already signaled by the continued presence in Laos of Vietnamese troops) and with the former USSR, and also to the subsequent dismissal from Laos of all Chinese technicians and advisers. China, for its part, began to give support and training to several small antigovernment guerrilla groups. With the economy in 1979 near collapse, in part because of severe drought in 1977 and flooding in 1978, the Laotian government slowed the process of socialization and announced a return to private enterprise and a readiness to accept aid from the non-Communist world. Throughout the 1980s armed opposition to the government persisted, particularly from the Hmong hill tribe rebels. At the Fourth Party Congress of the Lao People's Revolutionary Party (LPRP), in December 1986, a "new economic management mechanism" (NEM) was set up, aiming at granting increased autonomy in the management of formerly state-run enterprises to the private sector.

In 1988 the Lao national legislature, the Supreme People's Assembly (SPA), adopted new election laws and the first elections since the formation of the LPDR in 1975 were held. Local and provincial elections were held in 1988, and on 27 March 1989 national elections took place for an enlarged Supreme People's Assembly. In March 1991 the Fifth Party Congress of the LPRP changed Kaysone Phomvihane's title from prime minister to president, elected a new 11-member politburo, pledged to continue economic reforms in line with free-market principles while denying the need for political pluralism, and changed the national motto by substituting the words "democracy and prosperity" for "socialism." The newly elected SPA drafted a constitution adopted on 14 August 1991. The constitution provided for a national assembly functioning on principles of "democratic centralism," established the LPRP as the political system's "leading organ," created a presidency with executive powers, and mandated a market-oriented economy with rights of private ownership.

President Kaysone Phomvihane, longtime LPRP leader, died on 21 November 1992. A special session of parliament on 24 November 1992 elected hard-line Communist Nouthak Phoumsavan as the next president. Gen. Khamtai Suphandon, who had been prime minister since 15 August 1991, remained in that post. National Assembly elections were held in December 1992. One day before these elections, three former officials who called for a multiparty democracy and had been detained in 1990 were sentenced to 14 years imprisonment. The National Assembly convened in February 1993 and approved government reorganization designed to improve public administration. On 9 January 1995, longtime leader Prince Souphanouvong died, unofficially marking an end to Laos' long dalliance with hard-line Marxism. Although the NEM had initiated an opening up to international investment and improved relations with the rest of the world, there remained elements of the old guard in positions of power. With the death of Souphanouvong, the only old-time hard-line Marxist still in power as of 1996 was the country's president, Nouthak Phoumsavan. Khamtai Siphandon, prime minister and party chief, was more powerful than Nouthak and is largely credited with exerting a moderating influence on the hard-liner. Nonetheless, there remains a strongly conservative mindset among the politburo members that still pulls the government back from economic flexibility or any hint of political liberalization.

Laos has actively improved its already "special relations" with Vietnam and Cambodia, while always seeking to improve relations with Thailand, the People's Republic of China (PRC), and the United States. Periodic meetings are held to promote the

cooperative development of the Mekong River region by Laos, Thailand, Vietnam, and Cambodia. Laos and the People's Republic of China restored full diplomatic relations in 1989 and are now full-fledged trading partners. Mutual suspicions, characterizing the relationship between Laos and Thailand, improved with agreements to withdraw troops and resolve border disputes, and agreements between the United Nations High Commissioner for Refugees (UNHCR) to repatriate or resettle nearly 60,000 Lao refugees in Thailand. Laos has cooperated with the United States in recovering the remains of US soldiers missing in action in Laos since the Vietnam War and in efforts to suppress drug-trafficking. The US Department of State objects to Laos' restrictions on free speech, freedom of assembly and religious freedom. US Assistant Secretary of State Stanley Roth commented in March 2000 that Laos is unlikely to gain Most Favored Nation trading status unless it accounts for the fate of two naturalized US citizens, Hmong activists who disappeared in Laos during 1999. The debate over whether to grant Laos normal trade relations status was ongoing as of early 2003.

On 26 February 1998, Khamtai Siphandon was elected president, and he was reelected in March 2001. Beginning in 2000, Vientiane was hit by a series of bomb blasts, attributed to anti-government groups based abroad. Beginning in the late 1990s, tensions emerged between rival groups of ethnic Hmong in the highlands. Triggered by Thailand's closing of refugee camps on its side of the Laos-Thai border, tens of thousands of exiles were forced to return home. Most were expected to be jailed or executed for their anti-government activities, but instead, the government encouraged their peaceful settlement among the lowland population. Certain right-wing guerrilla factions among the Hmong, long fighting the Pathet Lao, subsequently reacted violently to the government's pacification efforts to integrate moderate Hmong villagers. On 6 February 2003 near Vang Vieng, a bus and 2 Western bicyclers were attacked by gunmen, who killed twelve people. Militant Hmong were blamed for the attack.

On 24 February 2002, parliamentary elections were held, but all but one of the 166 candidates were from the Lao People's Revolutionary Party (LPRP). The LPRP won 108 of 109 seats in the National Assembly.

### 13 GOVERNMENT

Under the constitution of 1947 (as subsequently amended), Laos was a parliamentary democracy with a king as the nominal chief executive. The monarch was assisted by a prime minister (or president of the Council of Ministers), who was the executive and legislative leader in fact. The prime minister and cabinet were responsible to the national assembly, the main repository of legislative authority, whose 59 members were elected every five years by universal adult suffrage. With the establishment of the Lao People's Democratic Republic in December 1975, governmental authority passed to a national congress made up of 264 delegates elected by newly appointed local authorities. The congress in turn appointed a 45-member Supreme People's Council to draw up a new constitution. Pending the completion of this task effective power rested with Kaysone Phomvihane, a longtime Pathet Lao leader who headed the government as chairman of the Council of Ministers and was also secretary-general of the Lao People's Revolutionary (Communist) Party.

Prince Souphanouvong, the head of state and president of the Supreme People's Council since 1975, left office in October 1986 because of poor health. He was replaced first by Phoumi Vongvichit, a former vice-chairman of the Council of Ministers, and later by Sisomphon Lovansay, a former vice president of the Supreme People's Council. The Lao national legislature, the Supreme People's Assembly (SPA), adopted new election laws in 1988, and the first national elections under the current government took place in March 1989 (local elections were held

in 1988). Kaysone Phomvihane was elected president and Khamtai Siphandon was named prime minister. The newly elected SPA set out to draft a constitution, which was finished in mid-1990, and adopted on 14 August 1991 by the SPA. Khamtai Siphandon was elected president in 1998, and reelected in 2001. The executive branch consists of the president, prime minister and two deputy prime ministers, and the Council of Ministers (cabinet) which are appointed by the president with the approval of the National Assembly. The legislative branch is the 109-member National Assembly which is elected by universal suffrage for a period of five years. The judicial branch is the Supreme People's Court Leaders. The constitution calls for a strong legislature elected by secret ballot, but most political power continues to rest with the party-dominated council of ministers, who are much aligned with the military.

### 14 POLITICAL PARTIES

Elections to the National Assembly were first held in 1947. In the elections of 4 May 1958, the Pathet Lao's newly organized National Political Front (Neo Lao Hak Xat) won 9 of the 21 seats in contention; 4 were won by the Santiphab faction, a neutralist group allied with them, and 8 were obtained by the Nationalist and Independent parties. After the elections, the Nationalists and Independents combined to establish a new political party, the Rally of the Lao People (Lao Luam Lao), which held 36 of the 59 Assembly seats. The remaining 23 seats were divided among the National Political Front (9), the Santiphab grouping (7), the Democrats (3), the National Union (2), and unaffiliated deputies (2). The leaders of the Rally, upon formation of that party, announced its purpose to be the defense of Laos against "an extremist ideology contrary to the customs and traditions of the Lao country" and the establishment of true unity and independence of the nation against "subversion from within and without." The Front then and later called for a reduction in the size of the armed forces and of US military aid. In December 1959, because of emergency conditions, election of new Assembly deputies was postponed until April 1960. When the balloting was finally held, the opposition Committee for the Defense of the National Interests won a landslide victory. The Committee leader, Phoumi Nosavan, then formed a new political party, the Social Democrats (Paxa Sangkhom).

In August 1960, a coup led by Kong Le brought down the government. After a period of struggle, Souvanna Phouma, who had earlier established the Neutralist Party (Lao Pen Kang) in order to build a broader popular following, became prime minister on 11 June 1962. In his 19-man cabinet, 4 posts were held by right-wing politicians, 11 by Neutralists, and 4 others by Pathet Lao adherents. The National Assembly came to the end of its five-year term in 1965. Political instability prevented the holding of national elections, and a provisional assembly was convened to amend the constitution so as to provide a means for maintaining the legislature. The result was a general election held on 18 July, with the franchise limited to civil servants, teachers, merchants, and village headmen. The new National Assembly was convened on 16 August, with the Neutralists retaining 13 seats, the Social Democrats 11, the Rally 8, and various independents 27. The endorsement gained in the limited polling of 1965 was not sufficient to sustain Prime Minister Souvanna Phouma for long, and new voting—the first real and effective election in a decade—took place on 1 January 1967. About 60% of 800,000 eligible voters went to the polls in 1967, despite the Pathet Lao charge that the balloting was illegal. Souvanna Phouma's United Front took 32 of 59 seats in the National Assembly voting.

In the last years of the constitutional monarchy, the gulf between the Pathet Lao and the enclave of rightists and neutralists that held governmental power widened appreciably. The pressures of war—both the civil strife within Laos and the

larger conflict pressed by the external forces of the United States and the DRV—had thwarted the effectiveness of normal political processes. General elections held on 2 January 1972 were confined to government-controlled areas, with representatives for the Pathet Lao provinces elected by refugees from those regions. Despite the narrow range of political choices available to voters, only 20 of the 60 National Assembly deputies were reelected, reflecting a growing uneasiness both with the war and with the increasing evidence of corrupt practices among government officials. Despite right-wing pressures from within the National Assembly, Souvanna Phouma—whose neutralist policy was favored by both the United States and the DRV—retained the position of prime minister. The withdrawal of US military support for the Thieu regime in the Republic of Vietnam (South Vietnam) was followed, in April 1974, by the creation of a new coalition in Vientiane that gave equal political footing to the Pathet Lao. The National Assembly, which had become little more than a forum for disputes among right-wing factions, was dissolved by King Savang Vatthana on 13 April 1975, an act that signaled the end of domestic political opposition to the inexorable progress of the Pathet Lao.

The formation of the Lao People's Democratic Republic in December 1975 effectively established the Communist Lao People's Revolutionary Party (LPRP) (Phak Pasason Pativat Lao), the political incarnation of the Pathet Lao movement, as the sole political force in Laos. Kaysone Phomvihane, general secretary of the LPRP, was named head of government, and Prince Souphanouvong head of state. The LPRP plays the leading role in the Lao Front for National Reconstruction, which sought to promote socialism and national solidarity. The Third Party Congress of the PPPL, and the first since the party assumed control, was held in Vientiane in April 1982. The congress, whose 228 delegates represented a party membership of 35,000, elected an enlarged Central Committee with 49 full and 6 alternate members. The Central Committee reelected Kaysone as general secretary. The Fourth Party Congress, held in Vientiane in December 1986, established the "new economic management mechanism."

In 1988 the Supreme People's Assembly (SPA) adopted new elections laws and elections were held the next year—the first since 1975. In 1991, the Fifth Party Congress changed Prime Minister Phomvihane's title to president, a post he held until his death one year later. Elevated to the post of prime minister was Khamtai Suphandon, a generally pro-free market antidemocratic pragmatist of the Singaporean variety. Suphandon had for a time studied Marxism in Hanoi, but in his position as prime minister was considered essentially a transitional figure between the old guard and a new generation of leaders. After Phomvihane's death in 1992, a special session of the SPA elected an old-guard communist, Nouhak Phoumsavan, to the presidency.

Elections for the SPA were again held in 1992 but they were marred by the sentencing of three pro-democracy activists to 14 years in prison on the day before balloting. By 1996, Laos' leadership was made up primarily of party functionaries, regardless of the makeup of the SPA. Prime Minister Suphandon held considerable power as did Deputy Prime Minister Khamphoui Keoboulapha, who also served as the administrator of the State Committee for Planning and Cooperation (CPC), considered by many analysts to be a government within a government.

A 1998 election retrenched the hard-liners, as "technocrats" vanished from the pre-approved slate, replaced with old style LPRP functionaries. This was viewed as a reaction to the social tensions (such as crime and corruption) arising with economic openness, as well as an attempt to reestablish centralized control over provincial matters.

The Seventh Party Congress, which took place in March 2001, re-elected all eight surviving members of the nine-member

Politburo. The decision was a clear sign that the party had opted for continuity rather than change.

Several governments-in-exile have been set up by former ministers of pre-1975 regimes, and overseas Hmongs and other dissidents have formed opposition organizations. A young pretender to the throne, Prince Soulivong Savang, has rallied support in exile. Some Hmong groups and others continue a low-level insurgency in rural Laos. Underground antigovernment sentiment may be on the rise among the urban intellectuals.

As of early 2003, parties other than the LPRP continue to be proscribed. A glimpse of popular discontent emerged with reports of an October 1999 demonstration in Vientiane, led by students and professors calling for democracy and human rights. The protest was quickly suppressed, and Khamtai's government disavowed all knowledge of its occurrence.

## 15 LOCAL GOVERNMENT

Laos consists of 16 provinces (*khoueng*), one special zone, Xaisomboun, and the municipality of Vientiane. The provinces are subdivided into districts (*muong*), townships (*tasseng*), and villages (*ban*). The president appoints provincial governors and mayors of municipalities. The prime minister appoints deputy provincial governors and deputy mayors and district chiefs. Since 1975, local administration has been restructured, with elected people's committees in the villages functioning as basic units. Both suffrage and candidacy are open to citizens 18 and over. Village heads administer at the village level. Lack of control over local party members in the rural areas appears to be a source of worry for the politburo, with its implications of corruption and even potential unrest.

## 16 JUDICIAL SYSTEM

The 1991 constitution provides for freedom of speech, assembly, and religion, although, in practice, organized political speech and activities are severely restricted. The reality of religious freedom is equally illusory, with imprisonment of Christian activists in recent years. The constitution contains provisions designed to guarantee the independence of judges and prosecutors, but in practice the courts appear to be subject to influence of other government agencies. Provincial courts are at the next level as appellate courts. There is also a central supreme court in Vientiane. In 1993 the government began publishing an official gazette in which all laws and regulations are disseminated. A bar association was formed in 1996 to strengthen the legal profession and individual rights to counsel. Rising crime rates place a burden on Laos's under-funded and understaffed legal system.

## 17 ARMED FORCES

In 2002 the armed forces in Laos numbered 29,100. The army of 25,000 was equipped with 25 main battle tanks. The army marine section, equipped with 16 patrol crafts, had 600 personnel. The air force, with 3,500 personnel, was equipped with antiaircraft missiles and 24 combat aircraft. Militia self-defense forces numbered approximately 100,000 organized for local defense. The armed forces faced about 2,000 rebels from the United Lao National Liberation Front (ULNLF). Defense expenditures in 1998 were \$55 million.

## 18 INTERNATIONAL COOPERATION

Laos, a UN member since 14 December 1955, belongs to ESCAP and all the nonregional specialized agencies except IAEA and IMO. The nation participates in the Asian Development Bank and G-77, is a signatory to the Law of the Sea, and has observer status with the WTO. Since 1961, it has been a member of the nonaligned movement. Laos's main diplomatic, economic, and military allies have been Vietnam and the former USSR. In 1977, Laos signed a 20-year treaty of cooperation with Vietnam. A four-year agreement with Vietnam and Cambodia that pledged

cooperation in regulating forestry, processing agricultural goods, producing consumer goods, and increasing trade was signed in 1986. In 1997, Laos joined ASEAN and AFTA.

## 19 ECONOMY

One of the world's poorest and least-developed nations, Laos is overwhelmingly agricultural, with 85% of the population still engaged in subsistence farming. Because industrialization is minimal, Laos imports nearly all the manufactured products it requires. Distribution of imports is limited almost entirely to Vientiane and a few other towns, and even there consumption is low. The hostilities of the 1960s and 1970s badly disrupted the economy, forcing the country to depend on imports from Thailand to supplement its daily rice requirements.

With the curtailment of hostilities in 1975, the development of a unified political structure offered an immediate advantage. The government began in late 1975 to pursue in earnest a variety of projects to repair and improve the infrastructure and make use of the country's ample mineral, lumber, and hydroelectric resources. During 1978–80, the government gave priority to postwar reconstruction, collectivization of agriculture, and improvements in rice production. In 1994 a liberalized Foreign Investment Law was promulgated as the government sought greater economic integration regionally and internationally.

By 1997, Laos had made modest improvements. In international investment, it had opened up its economy considerably. In April 1997, the government signed a trade and cooperation agreement with the EC. In July 1997, Laos became a full member of ASEAN and AFTA. In 1998 the government applied for membership in the WTO. More than \$5 billion in foreign investment had been made by more than 500 investors, mainly from other ASEAN countries. The government had also made considerable progress in the construction of a modern road network linking Laos to China and Vietnam. The country also announced plans for a second bridge into Thailand and the construction of its first railroad, linking Vientiane with Nong Khai in Thailand.

However, the Asian financial crisis dealt the economy a series of blows from which it has not yet recovered. Laos's economy was particularly dependent on Thailand, source of 42% of its foreign investment as well as 45% of imports and 37% of export purchases, which was severely affected by the financial crisis. From June 1997 to June 1999, the Laotian currency, the kip, lost 87% of its value. Growth, which averaged 7% for the six years 1992 to 1997, dropped to 4.8% in 1998, the lowest since 1991. Foreign investment dropped from \$179 million in 1996 to \$45.3 million in 1998. Growth increased in 1999, to 7.3%, propelled by growth of over 8% in both industry and agriculture, and continued at moderated rates of 5.7% and 6.4% in 2000 and 2001. However, high inflation rates and low declining foreign investments have persisted. Inflation in 2000 was 25% and though it eased to 10% with lower growth in 2001, it was back to double digits, 12% in 2002 and a projected 15% in 2003. Foreign direct investment dropped to \$23.9 million in 2001. By late 2002, the kip had fallen to more than 10,000 to 1 US dollar from its level of 1,171 to 1 US dollar in June 1997. In February 2003, the Bush administration submitted legislation supporting the granting of normal trade relations (NTR) to Laos.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Laos's gross domestic product (GDP) was estimated at \$9.2 billion. The per capita GDP was estimated at \$1,630. The annual growth rate of GDP was estimated at 5%. The average inflation rate in 2001 was 10%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of

exchange. It was estimated that agriculture accounted for 53% of GDP, industry 22%, and services 25%. Foreign aid receipts amounted to about \$45 per capita and accounted for approximately 15% of the gross national income (GNI).

The richest 10% of the population accounted for approximately 30.6% of household consumption and the poorest 10% approximately 3.2%. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that in 2001 about 40% of the population had incomes below the poverty line.

## 21 LABOR

The estimated labor force was 2.4 million in 1999. In the absence of additional data, it is estimated that 85% are subsistence farmers, with most of the remainder in the public sector as of 1997. In that year the unemployment rate was approximately 5.7%.

Labor is organized into a single Federation of Lao Trade Unions (FLTU) which is controlled by the Lao People's Revolutionary Party (LPRP), the authoritarian governmental body. In 2002, the vast majority of the 78,000 members of the FLTU were in the public sector. There is no right to organize, strike, or bargain collectively. Labor disputes have so far been infrequent and the desperate economic situation means that workers have little bargaining power.

Children under the age of 15 are forbidden by law from working, but many children work for their families in farms or in shops due to extreme economic hardship. The daily minimum wage was \$.53 in 2002. The labor code limits the workweek to 48 hours with at least one day of rest.

## 22 AGRICULTURE

In 1998, Laos's sown-field area was estimated at 852,000 hectares (2,105,000 acres), or less than 4% of the country's total area. Agriculture accounts for 53% of production and as much as 85% of employment. The main crop is rice, almost entirely of the glutinous variety. Except in northern Laos, where some farmers grow dry rice in forest clearings or on hillsides, most Lao are wet-rice farmers. The total area of rice plantings in 1999 was estimated at 718,000 hectares (1,774,000 acres), up from 554,000 hectares (1,369,000 acres) in 1996. Yields, which are relatively low, could be raised substantially through wider use of irrigation and fertilizers. Production, which averaged 609,000 tons annually during 1961–65, rose to 2,103,000 tons in 1999. Less important crops include corn (favored by some upland tribes and stressed by the government as a means of increasing livestock production), manioc, peanuts, and soybeans. The main commercial crops, emphasized by the government as part of its export drive, are coffee, cotton, and tobacco. Also grown are cardamom, tea, ramie, hemp, sugar, bananas, and pineapples. In 2001, the trade deficit for agricultural products was \$41 million. The mountain peoples have been known to grow large quantities of opium poppies, sold to dealers in the plains. Opium production was estimated at 200 tons in 2001.

## 23 ANIMAL HUSBANDRY

Cattle raising is important, especially in the southern plains and in the valleys of the Noy, Banghiang, and Don rivers. Much of the livestock population was killed in the final stages of the civil war that ended in 1975. As of 2001, livestock included an estimated 1,217,000 head of cattle, 1,051,000 buffalo, 1,426,000 hogs, and 14,063,000 chickens. Livestock products in 2001 included 35,000 tons of pork, 24,000 tons of beef and veal, 13,000 tons of poultry, and 10,500 tons of eggs.

## 24 FISHING

Edible fish, found in the Mekong and other rivers, constitutes the main source of protein in the Laotian diet. The prize catch is the pa beuk, weighing 205 kg (450 lb) or more. Despite the abundance of fish and their important contribution to the Laotian subsistence economy, there has been no systematic commercial fishery development. The total catch in 2000 was 29,250 tons.

## 25 FORESTRY

Timber is a major resource and one of Laos's most valuable exports. About 54% of the total area is forested, and about half of the forested area is commercially exploitable. The principal timber-producing areas are around Champasak, Savannakhet, Khammouan, and Vientiane. Muang Paklay, in western Laos, is noted for its teak. Exploitation is easiest in areas near the Mekong River, which facilitates transportation. Elephants and oxen are used in most forestry operations. Aside from timber, firewood, and charcoal, forestry products include benzoin and benzoin bark, bamboo, copra, kapok, palm oil, rattan, various resins, and sticklac. Production of roundwood totaled an estimated 5.5 million cu m (194 million cu ft) in 2000; over 80% of the annual output is burned as fuel. Sawn wood output in 2000 was about 350,000 cu m (12.4 million cu ft); wood-based panels, 125,000 cu m (4.38 million cu ft).

## 26 MINING

Tin and gypsum mining were the country's leading industries in 2002, and tin was its fifth-leading export commodity. The mining sector, the economy's smallest, contributed 0.56% of the country's GDP in 2000. Although much of the country remained unprospected, the nature of the terrain has led to ardent speculation about the nation's mineral resources. Laos was fairly rich in gold, gypsum, iron ore, limestone, potash, precious stones, and tin; of those, only gypsum, limestone, and tin were mined. Also produced in 2001 were barite (all of which was exported to Thailand), cement, gemstones, rock salt, sand and gravel, varieties of stone, and zinc (all of which was exported to Thailand). Other mineral resources known to exist in Laos were magnesium, antimony, copper, lead, manganese, pyrites, silver, and sulfur. Copper, gemstone, gold, iron ore, lead, potash, tin, and zinc were earmarked for further exploration. Undiscovered resources of iron ore, potash, and rock salt were believed to be substantial.

Tin mine output in 2001 was 400 tons, down from 717 in 1997 and 906 in 1996. Gypsum production, by the State Gypsum Mining Operation from the Dong Hene Mine, in Savannakhet Province, was 150,000 tons in 2001, up from 114,306 in 1997; the mine's proven ore reserves were estimated to be 18 million tons. Gold production ceased in 1998–2001; it was 24,755 grams in 1997. Important iron deposits, with reserves of 68% ore estimated at 11 billion tons, have been discovered on the Plain of Jars near Xiangkhoang. A substantial deposit of low-grade anthracite coal has been found at Saravan. Sapphire production went from 4,006 carats in 1996 to 9,229 carats in 1997, and increased substantially further in 1998 and 1999. Output of gemstones went from 4,013,280 carats in 1999 to 100,000 in 2001. Tungsten and copper deposits and gold-bearing alluvials produced a limited income for the local population but have not been exploited by modern industrial methods.

## 27 ENERGY AND POWER

In 2001, Laos had a total installed electrical generating capacity of 425,000 kW, up from 225,000 kW in 1988. Production of electricity in 2000 totaled 1,000 million kWh (up from 532 million in 1988), of which 98% was hydropower and the remainder from conventional thermal sources. Consumption of

electricity in 2000 was 690.6 million kWh. The nation has an estimated hydroelectric potential of 12,500,000 kW, most of which is undeveloped. The largest power project is the Nam Ngum Dam, located on the Mekong 72 km (45 mi) from Vientiane. Construction began in 1969, with the first stage completed in 1971 and the second stage in 1978. Annual output at Nam Ngum is around 900 million kWh, with about 90% of the electricity produced being supplied to Thailand. An additional 3,000 kW of capacity comes from several smaller hydroelectric facilities, and about 14,000 kW is provided by diesel-powered generators throughout Laos.

## 28 INDUSTRY

Industrial development is rudimentary. There are some small mining operations, charcoal ovens, a cement plant, a few brick works, carpenter shops, a tobacco factory, rice mills, some furniture factories, and more than two dozen sawmills. Industrialization plans center on cotton spinning, garment manufacturing, hydroelectric power projects, brewing, coffee and tea processing, and plywood milling. New resource developments, including the Nam Ngum hydroelectric project and the Vientiane sylvite field, have aided industrial growth. Handicrafts account for an important part of the income of many Laotians. Some villages or areas specialize in certain types of products: silk fabrics, baskets, lacquerware, and gold and silver jewelry and ornaments. Bricks, pottery, iron products, and distilled beverages are made in individual villages. Manufacturing is largely confined to the processing of agricultural—food and natural fibers—and forestry products.

From 1998 to 2001, industry grew at an average annual rate of 8.7%. The growth is in large part attributable to government-sponsored construction projects, particularly hydroelectric power projects. By 2002, hydroelectric power had taken the place of garments as the country's leading industrial export, and its leading source of foreign exchange. Most manufactures, however, continue to be imported; exports regularly only amount to 60% of imports. At the end of 2002 the main industrial project under consideration was the construction of the \$1.3 billion hydroelectric dam on the Nam Theum River, the power from which would be exported to Thailand. The project was far from realization, lacking both a purchase agreement with the state agency in Thailand, and the World Bank guarantee for the investors.

## 29 SCIENCE AND TECHNOLOGY

Like many developing nations, Laos depends primarily on external expertise in science and technology. Sisavangvong University, founded in 1958 at Vientiane, has faculties of agriculture, forestry, and irrigation, and of medicine, a technical college, and a polytechnic. Regional technical colleges are located in Luang Pradang, Savannakhet, and Champasak. In 1987–97, science and engineering students accounted for 20% of college and university enrollments.

## 30 DOMESTIC TRADE

Before the Pathet Lao came to power, there was a growing market in Laos for capital and consumer goods. Vientiane was the wholesale distributing point for much of the country. In late 1975, private trade was banned and many small traders and businessmen—including Chinese, Japanese, Pakistani, Thai, and Vietnamese—fled the country. The new government subsequently made it clear that the trend toward consumerism would be reversed in favor of a production-oriented society. The Pathet Lao entered directly into the distribution and sale of essential commodities, such as rice and sugar, and prices were brought under control. In 1979, however, the ban on private trade was lifted, and consumer items, which had all but disappeared from circulation, were once again available.

In the countryside, barter replaces money as the principal method of exchange. Markets are held at regular intervals, generally one day a week, at central villages or smaller towns. Once or twice a year, lowland farmers barter cloth and handicraft products with the mountain peoples for cereals, deer and rhinoceros horns, and ivory. Certain items recognized as media of exchange include tea, opium, tobacco, salt, silver, and gold. As of 1999, subsistence farming accounted for about 51% of the GDP, employing about 85% of the nation's workforce.

The New Economic Mechanism (NEM), a set of economic reforms instituted in 1986 across all sectors of the economy, has begun to demonstrate results in establishing a market-based economy. The government freed the market price of rice and other food staples in 1986, increasing agricultural output despite severe climatic conditions. Later reforms—floating the national currency, the kip, and freeing interest rates—stimulated a market-based economy and controlled inflation. Major land reforms in 1988 included the freedom to sell products at market-determined prices. Growth from these stimuli is demonstrated by the doubling of private shops in Vientiane and abundant fairly-priced goods in the markets. In a 1989 agreement with the World Bank and the International Monetary Fund, the government initiated reforms toward privatization and monetary reforms.

The usual hours of business are from 8 AM to 4 PM, Monday through Friday. Some factories and private companies extend the workday to 5 PM and factories are permitted to maintain a six day workweek if desired. Banking hours are 8 to 10:30 AM and 2 to 3:30 PM, Monday–Friday.

### 3<sup>1</sup> FOREIGN TRADE

The political reorganization of 1975 brought changes in Laos's foreign trade pattern, because regional alignments were shifting and because the aid needed to finance the nation's imports was no longer available from the US. In the 1980s, much of the nation's trade was subsidized by the former USSR. The export of electricity, the sale of overflight rights to foreign airlines, wood products, green coffee, and tin are sources of foreign earnings. In 1991 Laos's largest export earner, logging, was banned pending steps to prevent further destruction of the forests. There are 11 million ha of mature forests in Laos, and about 4.4 million are considered commercially exploitable. The ban on log exports was modified to allow the export of already cut logs and logs from stipulated cutting areas. Foreign aid grants exceeded export earnings in 1991. That year, export revenue decreased by 22% from 1990 because of a reduction of timber exports and a decline (caused by drought) in the production of electricity for export. At the same time the cost of imports increased by 62%, owing to the newly adopted free trade measures, which ended restrictions on imported goods.

In 2000, major exports included wood products, garments and textiles, fish, and iron and steel. Major imports include machinery and equipment, vehicles, and fuel.

Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
Thailand	72.1	419.0	-346.9
France	27.1	27.5	-0.4
Germany	21.4	4.2	17.2
United Kingdom	14.6	11.6	3
Belgium	14.3	n.a.	n.a.
Japan	11.7	27.4	-15.7
Italy	9.2	n.a.	n.a.
China (inc. Hong Kong)	6.7	37.9	-31.2
Singapore	n.a.	36.0	n.a.
Vietnam	n.a.	33.9	n.a.

### 3<sup>2</sup> BALANCE OF PAYMENTS

Laos has experienced severe trade deficits since independence. From 1963 through mid-1975, substantial deficit financing was provided through the Foreign Exchange Operations Fund (FEOf), an agency backed largely by the US but also receiving funds from Japan, France, the UK, and Australia. In June 1975, the flight of gold and hard currencies from the country forced the government to ban exports of gold and silver bullion. A devaluation of the kip had the effect of further inflating its price, with the black market exchange rate soaring. In the 1980s, financing came mainly from the former USSR, with smaller amounts from multilateral agencies. Since the collapse of communism in Europe, Laos has lost this vital means of support. Even with its recent attraction of international investment (\$5 billion from 1988–94), it still relies heavily on aid. Primary sources are Scandinavia, the US, and Japan. In 1995, the IMF announced a \$17 million loan to the country, its second in a series of structural adjustment loans. Laos received a total of \$290 million in economic aid in 1998. Total external debt stood at \$2.53 billion in 1999. In 2001, the IMF approved a \$40.2 million three-year arrangement with Laos, to reduce poverty and support the government's economic reform program. The Lao government is attempting to diversify its trading and investment partners, particularly among other Asian nations.

The International Monetary Fund (IMF) reports that in 2001 Laos had exports of goods totaling \$311 million and imports totaling \$528 million. The services credit totaled \$166 million and debit \$32 million. The following table summarizes Laos's balance of payments as reported by the IMF for 2001 in millions of US dollars. The US Central Intelligence Agency (CIA) reports that in 2000 the purchasing power parity of Laos's exports was \$325 million while imports totaled \$540 million resulting in a trade deficit of \$215 million.

### 3<sup>3</sup> BANKING AND SECURITIES

The central bank, the Bank of the Laotian People's Democratic Republic, regulates a rapidly expanding sector comprising 13 national and foreign-owned banks under the terms of the Commercial Bank and Financial Institutions Act of January 1992. Most of the wholly foreign-owned banks are Thai (such as the Thai Military Bank and Siam Commercial) and many of the joint-venture banks are backed by Thai financiers (such as the Joint Development Bank). The central bank continues to receive technical assistance from multilateral lending agencies, and is gradually strengthening the prudential framework. The banks are now believed to be more efficient. The largest commercial bank, established in 1953, is the Bank of Indochina.

The large-scale flight of foreign currency that accompanied the Pathet Lao's ascendancy to power led the new government to shut down Vientiane's banks in September 1975. Officials subsequently announced the expropriation of most private

accounts, claiming they were the property of former rightists and "traitors."

Banking reforms of the 1988-89 period opened Laos to foreign banks. Banks in Laos include: Banque Pour le Commerce Exterieur Lao, Joint Development Bank, Nakhonelouang Bank, and the Vientiane Commercial Bank.

All banks now provide basic business services and offer a range of deposit and credit facilities. Interest rates are increasingly responsive to market conditions but tend to remain close to rates set by the central bank. Public confidence in the banking system as measured by the level of domestic capital mobilization is still low. Until 1988 the wholly state-controlled system serviced the needs of the command economy, offering uncompetitive rates of interest to savers or producers in need of regular credit. Most families continued to save by investing in gold and jewelry. The system suffered severe liquidity problems in 1990-91 when the "privatization" of former state-owned enterprises was at its peak: old debts were not repaid and new capital arriving as a result of the opening of the economy to foreign investors was coming in too slowly. Laos was badly hit in 1997 by the Asian financial crisis, leading to further liquidity problems in 1998. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$41.5 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$286.4 million. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 35%.

There is no stock exchange.

### 34 INSURANCE

There are no private insurance firms.

### 35 PUBLIC FINANCE

The civil war rendered normal budgetary procedures impossible, the budget being covered largely by US aid and monetary inflation. Deficit financing continued in the 1970s and 1980s, covered mostly by foreign aid from communist nations. With the collapse of this support, however, Laos has increasingly looked to foreign investment capital and Western lending agencies for financial support. Beginning in 1994, the IMF initiated an annual program of loans to assist the country with a structural adjustment program. It lent Laos \$17 million in 1995. Still, 31% of the 1995 budget was international aid.

The US Central Intelligence Agency (CIA) estimates that in 1998/1999 Laos's central government took in revenues of approximately \$211 million and had expenditures of \$462 million. Overall, the government registered a deficit of approximately \$251 million. External debt totaled \$2.5 billion.

### 36 TAXATION

In 1977, the government introduced a progressive agricultural tax on production. The tax revenues were to be used to develop forestry and mining without the need for outside aid, but the tax had the unwanted side effect of discouraging production by some of the largest landowners and slowing the achievement of self-sufficiency in food. The 1992-93 budget included a new profits tax and a law requiring foreign firms engaged in construction projects to pay taxes. The agricultural tax was replaced by a land tax, and consumption taxes were raised on fuel oil, liquor, beer, and tobacco. The 1989 economic reforms included a new flat tax rate of 20% on profits for foreign-owned companies. The top personal income tax rate is 40% with the marginal rate for the average tax payer 10%. The top corporate tax rate is 35%.

### 37 CUSTOMS AND DUTIES

Import duties are determined on a specific and ad valorem basis and range from 2-40%, mostly not exceeding 25%.

Compensatory duties are imposed on imports of commodities in competition with local goods. A general internal tax is collected on the CIF-plus-duties value of most imports. Certain commodities—including automobiles, radios, alcoholic beverages, tobacco, and sugar—are subject to special excise taxes of up to 104%. A duty-free unloading zone for Laotian imports is located in the Vietnamese port of Da Nang.

### 38 FOREIGN INVESTMENT

Before 1975, Laotian foreign economic relations were conducted under the FEOF and the US Commodity Import Program, under which dollar exchange was provided; Laos in turn allocated dollars to local importers, who then made kip payments to the government for the purchase of foreign goods. There was little direct foreign investment, however. From 1975 until the mid-1980s, all foreign capital has come in the form of development assistance.

Reforms, as part of the New Economic Mechanism (NEM) initiated in 1986, included the introduction of a the Laos Foreign Investment Code and Decree in 1989, which established the Foreign Investment Management Cabinet (FIMC). The FIMC oversees the Committee for Investment and Foreign Cooperation (CIFC) with power to authorize and approve investment. All investment proposals, no matter how small, must be submitted to the CIFC of the FIMC, which passes it for screening by the relevant line ministries. The Code and Decree focus on three types of transactions: contractual business, joint ventures, and wholly foreign-owned enterprises. Investment is now allowed in the areas of agriculture, forestry, industry, communications, transport, service, and tourism, for projects using the indigenous raw materials and natural resources of Laos. The Decree details the permitted sectors of foreign investment and outlines restrictions and prohibitions. For instance, environmentally damaging investment, investors with overwhelming debt, long-term projects making great use of imported materials, and enterprises that would compete with local entrepreneurs are prohibited and/or discouraged. Hindrances to foreign investment are poor legal and physical infrastructure and a lack of skilled labor and capital. Additional disadvantages in the landlocked country are high transportation costs and limited domestic and foreign markets. In 1994 a new foreign investment law streamlined regulations and tax structures and included a flat corporate tax rate of 20%. The contractual business mode of foreign investment was eliminated. Although the law stipulated that the pre-approval process for new investment was to take only 60 days, delays in fact have been a year or more.

Since 1986, foreign investment in Laos has totaled an estimated \$5.7 billion, about 75% in hydroelectric power projects. The Asian financial crisis, precipitated by Hong Kong's return to Chinese rule in June 1997, dealt foreign investment flows a blow from which it has not recovered. FDI fell from \$170 million in 1996 to \$45.3 million in 1998. In 1999, the Thai company that had been granted the concession to build Laos's first railroad in May 1997, backed out of the deal declaring it economically non-viable. A small uptick in FDI to \$51.5 million in 1999 was followed by sharp declines in \$33.9 million in 2000 and a negligible \$23.9 million in 2001 in the face of the continuing depreciation of the currency. The depreciation feeds into a vicious cycle, because with the government's need to conserve its hard currency reserves, it has become increasingly difficult for foreign investors to convert their kip income into foreign exchange. The government in 2002 was rationing foreign exchange, with priorities given to fuel, food and medicines.

Thailand has been Laos's biggest foreign investor, accounting for about 42% of total FDI. In 2001, Laos and Thailand signed an agreement for the construction of a second bridge across the Me Kong, a project abandoned by a Japanese company in 1998 after the concession had been granted in 1996. Two Thai

companies are also shareholders in the proposed \$1.2 billion 650 MW Nam Theum River hydroelectric power project. The other partners are the Laotian government and the French company, Electricite de France, the largest shareholder. China's Yunnan Province contracted to develop sylvite deposits in the Vientiane Basin. Twelve sylvite-bearing zones have been identified, with an estimated total of 10 billion tons.

### 39 ECONOMIC DEVELOPMENT

The National Plan and Foreign Aid Council was established in June 1956 to prepare a general plan for the development of Laos and to set up a series of five-year plans. In view of its limited capital resources, the government sought increased private foreign investment, continued US governmental economic assistance, and help from international monetary bodies and the Colombo Plan organization. An economic plan drafted by the Laotian government in 1962 was never fully implemented, however, owing to internal instability. Little of the infrastructure for public works, industry, and mining that was abandoned in 1961 has been resumed. Although a major goal of the 1969–74 economic and social development plan, completion of the Nam Ngum Dam, was fulfilled, a host of other targets had to be abandoned because of disruption stemming from the war. US aid to Laos began in 1955 and continued until the US pullout in 1975. During this period, the Laotian economy became almost totally dependent on US aid, which amounted to over \$900 million in nonmilitary loans and grants and \$1.6 billion in military assistance.

Following the Pathet Lao takeover in 1975, efforts were made to restructure the Laotian economy along socialist lines. The source of most foreign assistance shifted to China between 1975 and 1979. By 1979, however, with the economy reduced to a virtual standstill because of poor harvests, rapid inflation, and the absence of private incentives, the government abandoned central planning for a mixed model of a centrally coordinated amalgam of state-run enterprises, cooperatives, and private ventures.

Laos's first five-year plan (1981–85) after the removal of the Pathet Lao government envisioned increases of 65–68% in the gross social product, 23–24% in agricultural production, and 100–120% in industrial production, as well as completion of repairs on major highways and waterways. During this period the source of aid again shifted, this time to the USSR, Vietnam, and their allies. Aid from Council for Mutual Economic Assistance (CMEA) countries totaled \$90 million in 1985. Among non-Communist nations, Japan, Australia, Sweden, and the Netherlands have also furnished assistance. In 1985, the US ban on aid was lifted, largely because of Laotian cooperation in accounting for US military personnel missing in action in Laos during the Vietnam war. Aid from international agencies totaled \$183.1 million between 1946 and 1986.

The targets of for the first five-year plan were largely not met as per capita income fell to \$100 and inflation rose to 30% in 1985. Failure was ascribed to an overly rigid central planning approach and in August 1986, as a major part of the second five-year plan (1986–90), the New Economic Mechanism (NEM) was introduced. The New Economic Mechanism (NEM) approved in 1986 (based on *chin tanakan may*, "new thinking,") introduced free enterprise initiatives including decentralized decision making, deregulation of pricing and financial systems, and promotion of domestic and international trade and foreign investment. Reforms have been introduced in phases. In 1988 land use reforms and market determined prices were introduced. In 1989 the tax system was modified, the Foreign Investment Code and Decree was implemented, the banking system was restructured, and the privatization of state economic enterprises commenced. Creation of a national taxation system and a customs administration are aimed at increasing government revenue. The Ministry of Industry and Primary Resources, the Economic

Planning Unit, which monitors existing and new businesses, and the Economic Development Board (EDB), which assists in the establishment of new industries, facilitate foreign investment in most sectors of the economy. Incentives offered to encourage the development of industrial and commercial enterprises include allowing 100% foreign ownership, emphasized exportation of food products, strengthening of economic management, rehabilitation of routes to seaports and rural feeder roads, reform of general education and training, and development of small- and medium-scale projects.

The third five-year plan (1991–95) continued previous policies of infrastructure improvement, export growth, and import substitution. Four sectors were considered priority areas for future income for Laos: mining and energy; agriculture and forestry; tourism; and service, as a way-station and service center between China, Vietnam, and Cambodia. Laos has untapped mineral resources and proven reserves of gold, gemstones and iron ore. Pulp and paper tree plantations would be substituted for the export of timber and agricultural products to serve the Thai market. Based on Thailand's experience, the government recognizes that mass tourism involves environmental degradation, yet the opening of the Mittaphap (Friendship) Bridge over the Mekong between Laos and Thailand (1994) seemed to open an opportunity for both trade and tourism. A second bridge was approved in 1996 but the Japanese company holding the concession backed out in 1998. In 2002 the second bridge project was revived with an agreement with a Thai company. In 1993 three western oil companies, Enterprise Oil and Monument Oil, both from the UK, and Hunt Oil of Dallas, engaged in exploration for oil and gas in Laos. These projects, handicapped by inadequate geological maps, unexploded ordnance, tough terrain, encounters with the remnants of the anticommunist insurgency movement, tropical and dietary illness, and the potential expense of drilling and pipeline construction for transport to the Vietnamese coast, have not produced any substantial discoveries. However, two major hydroelectric projects, the Nam Thuen Dam on a tributary of the Mekong in Khammouan province, and the Xeset dam in southern Laos were completed, and produce electricity sold to Thailand.

At the sixth party congress, held in March 1996, Laotian officials debated the country's slow pace of opening up to the international investment community. By that year, the country had allowed more than 500 foreign investors, in a variety of sectors, to either establish or buy (in whole or in part) Laotian businesses. The majority of \$5 billion (75%) was invested in hydroelectric power. In February 1997, Laos joined ASEAN, though some raised questions about its ability to afford even to attend all the organization's 200 or so annual meetings. Balance of payments problems had emerged almost as soon as the economy opened up to foreign trade and investments, with imports regularly running about 40% above exports. By 1997, Laos had entered into two stand-by arrangements with the IMF, a one year arrangement under the Structural Adjustment Facility (SAF), and a three year arrangement under the Extended Structural Adjustment Facility (ESAP). The credit line for the ESAP arrangement amounted to about \$49 million and ran until 7 May 1997. The next month Hong Kong returned to Chinese rule precipitating the Asian financial crisis that was to have devastating effects of Laos's economic development ambitions. From June 1997 to June 2002 the kip depreciated from 1,171 to more than 10,000 to one US dollar. Direct foreign investment (DFI) dropped from \$179 million in 1997 to \$23.9 million in 2001. In the first six months of 2002, investment flows from ASEAN countries, formally the source of the nearly 60% of FDI, fell to zero. A possibility of some relief from the downward spiral of inflation and dwindling investment lies in the likelihood that Laos will be voted normal trade relations (NTR) status in 2003 by the US Congress in line with legislation submitted by the Bush

administration in 2003. NTR would reduce US tariffs on Laotian imports from an average of over 40% to about 3%, and allow for the implementation of bilateral trade and investment agreement with the US. In turn, this would open the way for the World Bank to issue guarantees for foreign investment projects in Laos.

#### 40 SOCIAL DEVELOPMENT

By almost any measure, Laos is one of the world's most impoverished nations. Food intake does not meet basic requirements; there are virtually no sanitary facilities; and contamination of drinking water is widespread. Almost no families own cars, and bicycles and radios are considered luxuries. In general, the lowland Lao have the highest living standards, with lower standards prevailing among the upland tribes. The majority of the population engages in subsistence farming, and the country is heavily reliant on foreign aid.

Although the Constitution establishes equal rights for women, they have traditionally been subservient to men and have generally been discouraged from obtaining an education. However, the government claims that it has encouraged women to assume a larger role in national life, and girls are increasingly attending school. It has been reported that in urban areas, working women have higher incomes than their male counterparts. Violence against women, including domestic violence, is not widespread. The Family Code provides women with equal inheritance and marriage rights.

Minority highland tribes have limited ability to influence government decisions. The highland Hmong tribe, furthermore, reports instances of discrimination and harassment, including at least one disappearance of a prominent Hmong activist in 1993. The 1990 Law on Nationality, which took effect in 1994, grants greater citizenship rights to the Chinese and Vietnamese minorities.

In spite of the adoption of a Constitution in 1991 and National Assembly elections in 1993 and 1997, human rights abuses remain. Overt political dissent is not tolerated, and detention without due process is not uncommon. Prison conditions are harsh, and the government suppresses the freedoms of speech, assembly, and association and restricts freedom of religion.

#### 41 HEALTH

The use of Western medicine has improved health generally and reduced the incidence of malaria and smallpox specifically, but high infant mortality and a variety of health problems remain. Most urban areas, including Vientiane, lack pure water and sanitary disposal systems. In 2000, 90% of the population had access to safe drinking water and 46% had adequate sanitation. In parts of Laos, malaria—the most serious health threat—is known to affect the majority of children. In 1995, there were 1,365 new cases of cholera. Other health problems are acute upper respiratory infections (including pneumonia and influenza), diarrhea and dysentery, parasites, yaws, skin ailments, various childhood diseases, hepatitis, venereal disease, and tuberculosis. Common diseases in recent years have been malaria (41,787 cases in 1993), measles (3,174 cases in 1995), and leprosy (967 cases in 1995). In 1999, there were 171 reported cases of tuberculosis per 100,000 inhabitants. In the mid-1990s, a UNICEF survey found iodine deficiencies and goiter to be common problems in rural areas of Laos. Programs to increase iodine levels via salt intake were being instituted. An estimated 25% of school-age children were reported to have goiter. Children up to one year of age were vaccinated in 1990–94 against tuberculosis, 69%; diphtheria, pertussis, and tetanus, 48%; polio, 57%; and measles, 73%. Vaccination rates in 1999 were 56% for DPT and 71% for measles. The prevalence of underweight children in 1995 was 44%, greater than the average of developing countries in South East Asia.

As of 1999, there were an estimated 0.2 physicians and 2.6 hospital beds per 1,000 people. As of 1999 total health care expenditure was estimated at 2.5% of GDP. Average life expectancy in 2000 was estimated at 54 years for men and women; infant mortality was estimated at 92 per 1,000 live births. The total fertility rate has remained nearly constant over the last years. The fertility rate in 2000 was five children per woman during her childbearing years. The overall mortality rate in 2002 was estimated at 12.7 per 1,000 people; the maternal mortality rate in 1998 was 650 per 100,000 live births.

#### 42 HOUSING

The typical house is rectangular, built entirely of wooden planks and bamboo, with a thatched roof, and is raised off the ground on wooden pilings 1–2 m (3–6 ft) high. There is a critical housing shortage in the towns, and many dwellings are substandard. As of 1990, 47% of urban and 25% of rural dwellers had access to a public water supply, while 30% of urban and 8% of rural dwellers had sanitation service.

#### 43 EDUCATION

Education in Laos is compulsory for five years of primary education. In 1997, there were 7,896 primary schools with 25,831 teachers and 786,335 students. Student-to-teacher ratio stood at 30 to 1, and remained the same as of 1999. In 1996, secondary schools had 11,269 teachers and 169,691 students. As of 1999, 82% of primary-school-age children were enrolled in school, while 29% of those eligible attended secondary school.

In 1997 there were 1,369 teaching faculty and 12,732 students enrolled at all higher-level institutions. Sisavongvong University at Vientiane includes a school of education, a school of law and administration, a school of medicine, a school of vocational training, a school of agriculture, and a school of public works. There were also regional technical colleges and 63 teacher training colleges as of 1985. For the year 2000, adult illiteracy rates were estimated at 38.2% (males, 26.4%; females, 49.5%). As of 1999, public expenditure on education was estimated at 2.4% of GDP.

#### 44 LIBRARIES AND MUSEUMS

The National Library (Vientiane), with 330,000 volumes in French, Lao, and English, is the nation's largest library. In addition, a Buddhist institute owns a number of classical manuscripts. Many excellent traditional works of art and architecture may be seen in Vientiane and Luangphrabang. Of particular interest in the latter city is the former royal palace and the Prabang (Golden Buddha), which was brought to Laos from Cambodia in the days of Fa-Ngoum. Also in Vientiane are the National Museum and the Museum of Religious Art.

#### 45 MEDIA

In 1997, there were 25,000 mainline telephones in use with an additional 4,915 cellular phones throughout the country. Beginning in 1992 telephone owners were able to direct dial internationally, and private facsimile machines were permitted.

All communications, including the radio network, are operated by the government. Regular radio broadcasts were begun from Vientiane in 1968 and are now carried by Lao National Radio. Most broadcasts are in Lao, but government news broadcasts are also in English, French, and other languages. Domestic television service from Lao National TV began in 1983; in addition, programs are available by satellite from the former USSR, and it is possible to pick up Thai broadcasts. As of 1999 there were 9 AM and 4 FM radio stations and 4 television stations. In 2000, there were 148 radios and 10 television sets for every 1,000 people. In 2001, there were 6,000 Internet subscribers served by one service provider.

The press is government-controlled. The sole news agency is the Laos News Agency; the only foreign news bureaus are those of the former USSR and Vietnam. As of 2002, there were two daily newspapers, *Vientiane Mai (New Vientiane)*, with a circulation of 2,500; and *Khao San Pathet Lao (Laos Newsletter)*, published in French and English as well as Lao, with a circulation of 1,200. *Pasason (The People)* is a monthly publication with a 2002 circulation of 28,000. The *Vientiane Times*, published in English is available twice a week.

Although there are constitutional provisions for freedom of speech and the press, the government is said to exert broad control over the exercise of these rights. All domestically produced newspapers, radio, and television are controlled by the Ministry of Information, which reacts harshly to expressions of political dissent.

#### 46 ORGANIZATIONS

The National Chamber of Commerce and Industry is located in Vientiane. The Lao People's Revolutionary Party and its allied social and political groups in the Lao Front for National Reconstruction have dominated Laotian life. The cooperative movement has been intensively developed. There is also a Lao Unified Buddhists' Association. The Red Cross is active.

#### 47 TOURISM, TRAVEL, AND RECREATION

The Pathet Lao government has had little interest in tourism, and foreigners are rarely granted permits to travel outside Vientiane. Although individual tourist visas are difficult to obtain, the government's official tourist organization, Inter-Lao Tourisme, has been issuing growing numbers of visas to tour groups. The main tourist destinations are Vientiane, with its Buddhist pagodas, and the city of Luangphrabang at the junction of the Nam Khan and Mekong Rivers in the North.

In 2000, Laos recorded 737,208 visitor arrivals and receipts from tourism reached \$114 million. That year there were 7,333 rooms in hotels and guest houses and a total of 12,857 beds.

According to 2002 US government estimates, the cost of staying in Vientiane was about \$107 per day. Stays in other small towns may be as low as about \$30 per day.

#### 48 FAMOUS LAOTIANS

One of the most cherished figures in Laotian history is Fa-Ngoum, who unified Lan Xang in the 14th century. Another dynastic personage still revered is the monarch Sethathirat, in whose reign (1534–71) the famous That Luang shrine was built. Chao Anou (r.1805–28) is remembered for having fought a war

to recover Laotian independence from the Siamese (Thais) and for having restored Vientiane to a glory it had not known since the 16th century. Important 20th-century figures include Souvanna Phouma (1901–84), former prime minister; Prince Souphanouvong (1902–95), a half-brother of Souvanna Phouma, leader of the Pathet Lao and president of Laos from 1975 to 1986; and Kaysone Phomvihane (1920–1992), former chairman of the Council of Ministers.

#### 49 DEPENDENCIES

Laos has no territories or colonies.

# LEBANON

Republic of Lebanon

*Al-Jumhuriyah al-Lubnaniyah*

**CAPITAL:** Beirut (Bayrut)

**FLAG:** The national flag, introduced in 1943, consists of two horizontal red stripes separated by a white stripe which is twice as wide; at the center, in green and brown, is a cedar tree.

**ANTHEM:** *Kulluna lil watan lil'ula lil'alam* (*All of Us for the Country, Glory, Flag*).

**MONETARY UNIT:** The Lebanese pound, or livre libanaise (LL), is a paper currency of 100 piasters. There are coins of 1, 2, 5, 10, 25, and 50 piasters and 1 Lebanese pound, and notes of 1, 5, 10, 25, 50, 100, 250, 1,000 and 10,000 Lebanese pounds. LL1 = \$0.000666 (or \$1 = LL1,501) as of March 2003.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but traditional weights and measures are still used.

**HOLIDAYS:** New Year's Day, 1 January; Arab League Day, 22 March; Independence Day, 22 November; Evacuation Day, 31 December. Christian religious holidays include Feast of St. Maron, 9 February; Good Friday; Easter Monday; Ascension; Assumption, 15 August; All Saints' Day, 1 November; and Christmas, 25 December. Muslim religious holidays include 'Id al-Fitr, 'Id al-'Adha', and Milad an-Nabi.

**TIME:** 2 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Situated on the eastern coast of the Mediterranean Sea, Lebanon has an area of 10,400 sq km (4,015 sq mi), extending 217 km (135 mi) NE–SW and 56 km (35 mi) SE–NW. It is bordered on the N and E by Syria, on the S by Israel, and on the W by the Mediterranean Sea, with a total boundary length of 679 km (422 mi), of which 225 km (140 mi) is coastline. Comparatively, the area occupied by Lebanon is about three-fourths the size of the state of Connecticut.

The Lebanon of today is the Greater Lebanon (Grand Liban) created by France in September 1920, which includes the traditional area of Mount Lebanon—the hinterland of the coastal strip from Sidon (Sayda) to Tripoli (Tarabulus)—some coastal cities and districts such as Beirut and Tripoli, and the Bekaa (Biqā') Valley in the east. As of January 1988, more than two-thirds of the territory was under foreign military occupation. Syrian forces have held northern Lebanon and the Bekaa Valley since 1976; West Beirut and the Beirut-Sidon coastal strip fell into their hands in February 1987. In southern Lebanon, Israeli troops in conjunction with the South Lebanese Army, a local militia, control a 1,000-sq-km (400-sq-mi) strip along the Israeli border.

Lebanon's capital city, Beirut, is located on the Mediterranean coast.

## <sup>2</sup>TOPOGRAPHY

The Mount Lebanon area is rugged; there is a rise from sea level to a parallel mountain range of about 2,000–3,000 m (6,600–9,800 ft) in less than 40 km (25 mi), and heavy downpour of winter rains has formed many deep clefts and valleys in the soft rock. The terrain has profoundly affected the country's history in that virtually the whole landscape is a series of superb natural fortresses from which guerrilla activities can render the maintenance of control by a centralized government an intermittent and costly affair. East of the Mount Lebanon Range is the Bekaa Valley, an extremely fertile flatland about 16 km (10 mi) wide and 129 km (80 mi) long from north to south. At the eastern flank of the Bekaa rise the Anti-Lebanon Range and the

Hermon extension, in which stands Mount Hermon straddling the border with Syria. Lebanon contains few rivers, and its harbors are mostly shallow and small. Abundant springs, found to a height of 1,500 m (4,900 ft) on the western slopes of the Lebanon Mountains, provide water for cultivation up to this height.

## <sup>3</sup>CLIMATE

Lebanon's extraordinarily varied climate is due mainly to the wide range of elevation and the westerly winds that make the Mediterranean coast much wetter than the eastern hills, mountainsides, and valleys. Within a 16-km (10-mi) radius of many villages, apples, olives, and bananas are grown; within 45 minutes' drive in winter, spring, and fall, both skiing and swimming are possible. Rainfall is abundant by Middle Eastern standards, with about 89 cm (35 in) yearly along the coast, about 127 cm (50 in) on the western slopes of the mountains, and less than 38 cm (15 in) in the Bekaa. About 80% of the rain falls from November to March, mostly in December, January, and February. Summer is a dry season, but it is humid along the coast. The average annual temperature in Beirut is 21°C (70°F), with a range from 13°C (55°F) in winter to 28°C (82°F) in summer.

## <sup>4</sup>FLORA AND FAUNA

Lebanon is rich in flora, with over 3,000 species. Olive and fig trees and grapevines are abundant on lower ground, while cedar, maple, juniper, fir, cypress, valonia oak, and Aleppo pine trees occupy higher altitudes. Vegetation types range from subtropical and desert to alpine. Although hunting has killed off most wild mammals, jackals are still found in the wilder rural regions, and gazelles and rabbits are numerous in the south. Many varieties of rodents, including mice, squirrels, and gerbils, and many types of reptiles, including lizards and snakes (some of them poisonous), may be found. Thrushes, nightingales, and other songbirds are native to Lebanon; there are also partridges, pigeons, vultures, and eagles.

## 5 ENVIRONMENT

Lebanon's forests and water supplies suffered significant damage in the 1975–76 war and subsequent fighting. Rapid urbanization has also left its mark on the environment. Coastal waters show the effects of untreated sewage disposal, particularly near Beirut, and of tanker oil discharges and oil spills. The water pollution problem in Lebanon is in part due to the lack of an internal system to consistently regulate water purification. The nation has 4.8 cubic kilometers of renewable water resources with 68% used for farming activity and 4% used for industrial purposes. Lebanon's cities produce an average of 0.5 million tons of solid waste per year.

Air pollution is a serious problem in Beirut because of vehicular exhaust and the burning of industrial wastes. In 1996, industrial carbon dioxide emissions totaled 14.1 million metric tons. Control efforts have been nonexistent or ineffective because of political fragmentation and recurrent warfare since 1975.

The effects of war and the growth of the nation's cities have combined to threaten animal and plant life in Lebanon. In 1986, the National Preservation Park of Bte'nayel was created in the region of Byblos to preserve wooded areas and wildlife. As of 2001, five of the nation's mammal species and five of its bird species are endangered. Three of its plant species are also threatened with extinction. The Mediterranean monk seal, African softshell turtle, and dogfish shark are on the endangered list. The Arabian gazelle and Anatolian leopard are extinct.

## 6 POPULATION

The population of Lebanon in 2003 was estimated by the United Nations at 3,653,000, which placed it as number 124 in population among the 193 nations of the world. In that year approximately 7% of the population was over 65 years of age, with another 28% of the population under 15 years of age. There were 96 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 1.56%, with the projected population for the year 2015 at 4,207,000. The population density in 2002 was 418 per sq km (1,082 per sq mi). Most of the population lives on the coastal plains where the major cities are located.

It was estimated by the Population Reference Bureau that 90% of the population lived in urban areas in 2001, up from 74% in 1980. More than half of the population resides in the capital city, Beirut, with a population of 2,012,000. Tripoli had approximately 160,000 inhabitants. According to the United Nations, the urban population growth rate for 2000–2005 was 1.7%.

## 7 MIGRATION

The economic roots of emigration may be traced to the increase of crop specialization during the 19th century and to the subsequent setbacks of the silk market toward the end of the century. Political incentives also existed, and many Lebanese left their country for Egypt (then under British rule) or the Americas at the turn of the century. After the mid-1960s, skilled Lebanese were attracted by economic opportunities in the Persian Gulf countries. Large numbers fled abroad, many of them to France, Syria, Jordan, Egypt, and the Gulf countries, during the civil war in 1975–76. In 1986, the Lebanese World Cultural Union estimated that some 13,300,000 persons of Lebanese extraction were living abroad, the largest numbers in Brazil, the United States, and Argentina.

Since the outbreak of war in 1975, internal migration has largely followed the pattern of hostilities, peaking in 1975/76 and again after the Israeli invasion of 1982. In 1993, the number of refugees in various parts of the country was estimated at over 600,000. As of April 1998, the UNHCR was helping to assist 3,191 refugees in Lebanon, including 1,990 Iraqis, 550 Afghans,

284 Sudanese, 152 Somalis, and 250 refugees from various other countries. Also in 1998, there were more than 350,000 Palestinian refugees who had asylum in Lebanon, where they were assisted by UNRWA. In 2000, the net migration rate was 4.8 per 1,000 population, down from 12.1 per thousand in 1990. There were 634,000 migrants in Lebanon in 2000, including 382,700 refugees. The government views the migration levels as too high.

## 8 ETHNIC GROUPS

Ethnic mixtures dating back to various periods of immigration and invasion are represented, as are peoples of almost all Middle Eastern countries. A confusing factor is the religious basis of ethnic differentiation. Thus, while most Lebanese are Arabs, they are divided into Muslims and Christians, each in turn subdivided into a number of faiths or sects, most of them formed by historical development into separate ethnic groups. The Muslims are divided into Sunnis and Shi'is. The Druzes, whose religion derives from Islam, are a significant minority. The Christians are divided mainly among Maronites, Greek Orthodox, and Greek Catholics. All the major groups have their own political organizations, paramilitary units, and territorial strongholds. Other ethnic groups include Armenians (most of them Armenian Orthodox, with some Armenian Catholics) and small numbers of Jews, Syrians, Kurds, and others. The number of Palestinians is estimated at 450,000–500,000. In addition there are about 180,000 stateless undocumented persons. Some of these are inhabitants of disputed border areas. As of 1999, population statistics stood at 95% Arab, 4% Armenian, and 1% other.

## 9 LANGUAGES

Arabic is the official language and is spoken throughout the country. Much of the population is bilingual, with French as the main second language. There are also significant numbers of English, Armenian, and Turkish speakers. The distinctive Lebanese Arabic dialect contains various relics of pre-Arabic languages and also shows considerable European influence in vocabulary.

## 10 RELIGIONS

Religious communities in the Ottoman Empire were largely autonomous in matters of personal status law and were at times treated as corporations for tax and public security matters. Membership in a millet, as these groups were called in Ottoman law, gave the individual citizenship, and this position, although somewhat modified, has given Lebanese politics its confessional nature. Religion is closely connected with civic affairs, and the size and competing influence of the various religious groups are matters of overriding political importance. The imbalance of power between Christians and Muslims, aggravated by the presence of large numbers of Palestinians, was a major factor contributing to the bitter civil war in 1975–76.

As of 2002, it has been estimated that about 70% of the population practice Islam (5 legally recognized groups—Alawite or Nusayri, Druze, Isma'ilite, Shi'a, and Sunni). Christians made up 23% of the population (11 legally recognized groups—4 Orthodox Christian, 6 Catholic, and 1 Protestant). The Maronites are the largest Christian group with Greek Orthodox being the second largest. There was also a small number practicing Judaism. Muslims have come to outnumber Christians as the result of long-term demographic trends and population displacements during and after the civil war. The main branches of Islam are Shi'a and Sunni.

Under an unwritten agreement made at the time of the National Covenant of 1943, the president of Lebanon must be a Maronite Christian, the prime minister a Sunni Muslim, and the speaker of parliament a Shi'a Muslim, with a ratio of six Christians to every five Muslims in the legislature. But this

LOCATION: 35°6' to 36°36' E; 33°4' to 34°41' N. BOUNDARY LENGTHS: Syria, 359 kilometers (223 miles); Israel, 102 kilometers (63 miles); Mediterranean coastline, 195 kilometers (121 miles). TERRITORIAL SEA LIMIT: 12 miles.

arrangement has subsequently ceased to reflect the strength of competing religious groups in the population and is widely criticized. The climate of religious freedom in the country has attracted a great deal of immigrants from neighboring countries who are themselves facing religious discrimination. Both Christian and Muslim holidays are officially observed.

## 11 TRANSPORTATION

As of 2002, Lebanon had 7,300 km (4,536 mi) of roads of which 6,350 km (3,945 mi) were paved. Construction of new roads have been frequently delayed by recurrent hostilities. Many roads were badly in need of repair; since 1982, fully one-third of the country's roads have been rehabilitated. Some new mileage has also been added. In 2000 there were 524,900 registered passenger autos, and 200,400 commercial vehicles.

The 399 km (248 mi) state-owned railway of which 317 km (197 mi) consists of a 1.435-m-gauge line running parallel to the

coastal area where civil hostilities kept the railway virtually inoperable in 1991. And, due to the civil war in 2001, the entire system is unusable because of damage.

Beirut, a major Mediterranean port, was closed during the 1975-76 war and intermittently thereafter, reopening by March 1991. When Beirut port was closed, Sidon became the principal port for Muslims and Juniyah for Christians. Other ports include Tripoli and Tyre. The rehabilitation and modernization of Beirut Port is underway, and the rehabilitation and development of Tripoli Port was completed in 2001. As of 2002, Lebanon had a merchant fleet of 67 ships with a capacity of 320,770 GRT.

There were eight airports in 2001, five with paved runways. Beirut International, Lebanon's principal airport, remained generally open until bombing during the Israeli invasion forced its closure in June–October 1982. It had handled 1,660,000 passengers in 1980; by 1985, the number was down to 599,000. Lebanon's two airlines, Middle East Airlines (MEA) and Trans-Mediterranean Airways (TMA), suffered heavy losses during the 1975-76 war and the Israeli invasion. In 2001, 815,900 passengers were carried on scheduled domestic and international flights.

## 12 HISTORY

The geographical features of Lebanon have had a major effect on its history. Its mountains enabled the minority communities to survive the despotisms that submerged the surrounding areas. The sea provided trade routes in ancient times for exports from Lebanese cedar and spruce forests, and for commerce in copper and iron during the time of the Ptolemies and the Romans. Both Lebanon and Syria were historically associated from early times as part of Phoenicia (c.1600–c.800 BC), and both were later swept up into the Roman Empire. In the 7th century AD, the Arabs conquered part of Lebanon. Maronite Christians had long been established there; Islam gradually spread by conversion and migration, although the country remained predominantly Christian. In the 11th century, the Druzes established themselves in the south of the Mount Lebanon area as well as in Syria. Parts of Lebanon fell temporarily to the Crusaders; invasions by Mongols and others followed, and trade declined until the reunification of the Middle East under the Ottoman Empire.

For the most part, Ottoman officials of the surrounding areas left the Mount Lebanon districts to their own emirs and sheikhs. Fakhr ad-Din (1586–1635) of the Ma'an family set out to create an autonomous Lebanon, opened the country to Western Europe through commercial and military pacts, and encouraged Christian missionary activity. In 1697, the Shihab family acquired dominance, and from 1788 to 1840, except for a few intervals, Mount Lebanon was ruled by Bashir II of the Shihab family, who extended his power and was partly successful in building a strong state. The Egyptian occupation of Syria (1832–40) opened the Levant to large-scale European penetration and tied Lebanese affairs to international politics. It also heightened the antipathy between Christians and Druzes, with the occupiers from time to time using armed groups of one against the other. The British invasion of 1840–41 served to deliver Lebanon from Egyptian rule and forced Bashir II into exile, but it also involved France and the United Kingdom in the problem of finding a modus vivendi for the religious factions. A partition of government did not work. Economic discontent was inflamed by religious antagonisms, and the Druzes, feeling their power dwindling, organized a major onslaught against the Christians in 1860. When the latter, fearing annihilation, requested European intervention, major powers sent fleets into Syrian waters and the French sent an army into Mount Lebanon. Under European pressure, the Ottoman government agreed to the establishment of an international commission to set up a new, pro-Christian government; an autonomous province of Mount Lebanon was created in 1864, with a Christian governor who, though the

servant of the Ottoman state, relied upon European backing in disputes with his sovereign.

The entry of the Ottoman Empire into World War I led to an Allied blockade, widespread hunger, and the destruction of Lebanese prosperity. An Anglo-French force took the country in 1918, and in 1920, an Allied conference gave France a mandate over Syria, in which Mount Lebanon was included. The French separated from Syria the area they called Greater Lebanon (Grand Liban), which was four times as large as the traditional Mount Lebanon and included a Muslim population almost as large as the Christian. The mandate years were a time of material growth and little political development.

Lebanon came under Vichy control in 1940, but in 1941, Lebanon and Syria were taken by a combined Anglo-Free French force. The Free French proclaimed Lebanese independence in November 1941, but when a strongly nationalistic government was created in 1943, the French intervened and arrested the new president, Bishara al-Khuri. An insurrection followed, prompting UK intervention and the restoration of the government. In 1945 agreement was achieved for the withdrawal of both UK and French forces, and in 1946 Lebanon assumed complete independence.

The 1950s and 1960s were generally characterized by economic and political stability. Beginning in 1952, Lebanon received increased US aid and also benefited from an influx of Western commercial personnel and from growing oil royalties. It also seemed the calmest center of the Middle East, taking little part in the Arab-Israeli war of 1948 and no action in the wars of 1967 and 1973. In 1958, however, a reported attempt by President Camille Chamoun (Sha'mun) to seek a second term precipitated a civil war, and in July the United States sent forces to help quell the insurrection; this move was in keeping with the Eisenhower Doctrine, which pledged US military and economic aid to any country requesting it in order to counter a Communist threat. The crisis was settled when General Fu'ad Shihab (Chehab), who was supported by both government and opposition groups, was elected president in July. By October US forces were withdrawn, and public security was reestablished.

In the late 1960s and early 1970s Lebanon's economy was disrupted by conflict in the Middle East, vividly brought home by the presence, near the border with Israel, of thousands of well-armed Palestinian guerrillas, many of whom had come from Jordan following the "Black September" fighting there in 1970-71. Serious clashes between them and the Lebanese army occurred in 1969. Fearing civil war, the government that year signed the so-called Cairo Accord with the Palestinian Liberation Organization (PLO), which virtually made it a state within the state. The PLO gained the right to establish military bases and launch cross-border raids into Israel. This inevitably led to Israeli reprisals, and PLO interference in Lebanese affairs accelerated a slide toward anarchy. In April and May 1974, a series of Palestinian attacks on Lebanese villages killed scores of persons and injured hundreds. Government efforts to deal with the problem were denounced as insufficient by Christian rightists, while Muslim leftists defended the Palestinians, and both factions formed private militias.

Intermittent fighting between the armed factions continued, and raids by Palestinian guerrillas based in southern Lebanon drew Israel into the conflict. In March 1978 the Israeli army invaded southern Lebanon, destroyed PLO bases, and then withdrew when the UN Interim Force in Lebanon (UNIFIL) was established to keep the peace. Continuing PLO rocket attacks on northern Israel and Syria's installation of antiaircraft missiles in the Bekaa Valley prompted Israel to launch a full-scale invasion of Lebanon in June 1982. Israeli forces quickly destroyed PLO bases in the south and in Tyre and Sidon, penetrated to the outskirts of Beirut, and disabled the Syrian missile bases. Several cease-fires arranged by US envoy Philip Habib broke down, but

following a two-month Israeli siege of West Beirut, where the Palestinians were encamped, a truce was agreed to by Israel, the PLO, and Syria; by 1 September, more than 14,000 Palestinian and Syrian fighters had been evacuated. The Lebanese estimated their war casualties at more than 19,000 dead and 30,000 wounded (figures disputed by Israel). A multinational peacekeeping force, comprising British, French, and Italian soldiers and US marines, was stationed in the Beirut area in early September.

During the early months of 1975, sporadic violence between the two factions gradually erupted into a full-scale civil war that pitted Maronite Christians against Muslims and against other Christian sects, and rightist militants against Palestinian guerrillas and other leftist Arab forces. At least 100,000 people on all sides were killed and some 600,000 persons displaced during the eighteen months of fighting. In April 1976 Syrian forces entered Lebanon, in an apparent effort to prevent an all-out victory by left-wing Muslims and Palestinians; by the fall, some 20,000 Syrian troops controlled the Bekaa Valley. A cease-fire arranged through the mediation of Sa'udi Arabia and other Arab countries enabled a peacekeeping force (including Syrian troops) to separate the combatants and end the war in October. The conflict not only devastated Lebanon economically, but so weakened the central government that effective power lay with the Syrians, the Palestinians, and some thirty sectarian militias. In general, the Christian Phalangists held sway over east-central Lebanon; fighters loyal to Major Sa'ad Haddad, a right-wing Lebanese army officer, controlled the southern border area, in a security zone set up by Israel; and the PLO, other Muslim leftists, and Syrian forces occupied northern and eastern Lebanon.

Despite the truce, the violence continued. On 14 September Bashir Gemayel, a Phalangist leader who in August had been elected president by the Lebanese parliament, was assassinated. Almost immediately, Israeli troops moved into West Beirut to wipe out pockets of Palestinian resistance causing tens of thousands of casualties. Phalangist forces were allowed into the Sabra and Shatila refugee camps, and at least 600 Palestinians, many of them civilians, were massacred; a subsequent Israeli government inquiry was critical of senior officials for indirect responsibility for the killings. In 1983 Israeli and Syrian troops still occupied large portions of Lebanon, and they became targets of attack by Muslim and Druze forces. In May 1983 Lebanon, Israel, and the United States signed an agreement by which Lebanon and Israel agreed to end their state of war. Israel agreed to withdraw all its forces, and both countries agreed to establish a security zone in southern Lebanon patrolled by Lebanese forces and joint Israeli-Lebanese teams. However, Syria opposed it and the agreement, never implemented, was repudiated by Lebanon in 1984.

The American embassy in Beirut was bombed in April 1983, and US marines were harassed by sniper fire. On 23 October, 241 of them were killed by a truck-bomb explosion in their barracks at Beirut airport; on the same day, a similar bombing caused at least fifty-eight deaths at a French paratroop barracks. Shortly before, Lebanon and Syria had agreed to a cease-fire pending a reconciliation conference, which began in Switzerland in November, with all major Lebanese political factions participating. Meanwhile, fighting broke out between a radical Syrian-supported PLO faction and guerrillas loyal to Yasser Arafat, chairman of the organization; defeated at Tripoli, Arafat withdrew from Lebanon in December.

As 1984 began, the position of the government headed by Amin Gemayel, who had been elected president to succeed his brother, was deteriorating. In February the United States, the United Kingdom, and Italy pulled their ground troops and nonessential personnel out of the Beirut area. In March, the Lebanese reconciliation conference dissolved without reaching substantial agreement. The following month a "national unity"

government was formed, bringing together the leaders of all the major warring factions. But it almost never met and could not pacify the country; intermittent clashes between factions continued. Israel's withdrawal of its troops from Lebanon (except the south) in early 1985 left in its wake renewed fighting for the evacuated territory. In December a Syrian-sponsored cease-fire agreement that included constitutional reforms was signed by the Druze, Amal (Shi'i), and Christian factions, but its terms were never implemented. The general lawlessness encouraged terrorist groups of all kinds to promote their own ends by assassinations, kidnappings, and bombings. Among the most feared was the Hezbollah, or Party of God, which was aligned with fundamentalist Iranian Revolutionary Guards.

In 1985–86 there was sporadic fierce fighting between Palestinian and Shi'i Amal militia. Syria pushed for political reform and, when opposed by Gemayel and militant Christians, influenced Muslim ministers not to deal with the president, thus paralyzing the government. With the economy in serious decline, Prime Minister Rashid Karami was assassinated to be succeeded by Salim al-Huss. The badly divided factions could not agree on a successor to Gemayel when his term expired in September 1988. Christian Army Commander Michel Aoun asserted himself as prime minister, giving Lebanon two governments, a Muslim one in West Beirut and a Christian one in East Beirut. Aoun was opposed by the Syrians and Muslims and by rival Christian factions.

In January 1989 the Arab League appointed a committee on Lebanon which eventually, in September, arranged for a seven-point cease-fire and convened a meeting of Lebanese parliamentarians in Taif, Sa'udi Arabia. The Taif Accord that resulted in November led to the election of Elias Hrawi, a Maronite Christian, as president. He named al-Huss prime minister. When forces of General Aoun (who was technically deposed by Hrawi) attacked Christian and Syrian positions, they retaliated in strength and finally obliged him to take exile in France in 1991.

In 1991–92 the government gradually began to reassert its authority. Militias, except notably Hezbollah and the Israeli-backed army of South Lebanon, were dissolved in May 1991. Palestinian militants were repressed in Sidon in July. In May 1992 the last western hostages were released after years of confinement. Lebanon joined the Israeli-Arab peace talks in Madrid in October 1991. Internally, the poor economy aggravated political instability, but parliamentary elections, the first in twenty years, were scheduled for 1992. Poor preparations, widespread irregularities, and Christian abstention produced results that did not prepare Lebanon for an assured future. Yet, the appointment of Prime Minister Rafiq al-Hariri in November 1992 promised a serious effort at reconstruction.

Al-Hariri, a self-made billionaire who made his fortune in Sa'udi Arabia, was perceived by many to be a savior of sorts for the war-torn country. He had a long history of philanthropic giving, donating large sums to rebuild Beirut, for instance. As prime minister, he has been frequently accused of corruption and of making sure government rebuilding efforts were directed toward companies under his control. Still most Lebanese approved of his efforts to stabilize the country and unite its many long-warring factions. In 1996, al-Hariri was reelected prime minister in a unanimous vote of parliament.

In 1996 Lebanon was still subject to political violence, especially in the Israeli occupied south, where that year 255 people were killed (twenty-seven Israeli soldiers) in violence. Fifty-four of the dead were members of Hezbollah, and nineteen were militiamen in the Israeli-controlled South Lebanon Army (SLA). The violence continued into 1997.

The President Ilyas Hrawi had been elected to the six-year post in 1989. In 1995 when his term was set to expire in accordance with the constitution, parliament extended his term for an

additional three years. Hrawi proved to be a weak leader and his standing with the Maronites was low. Emile Lahoud, of a prominent Maronite family, had been promoted to major-general in 1985, and general and army commander in 1989. In 1998 his name surfaced as a potential successor to Hrawi. In October 1998 the Assembly introduced an unparalleled amendment to the constitutional clause requiring senior public officials to leave office before running for president. Within two days Lahoud was elected president of the National Assembly. Lahoud was sworn in on 24 November 1998 as Lebanon's eleventh president. On 4 December 1998 Salim al-Huss began his fifth term as prime minister after Hariri's sudden resignation.

In early 1999 fighting in southern Lebanon escalated as the Hezbollah staged attacks on Israeli forces and the Israeli-backed SLA. Israel retaliated on Hezbollah strongholds, and by February expanded air strikes beyond the "security zone" to southern and northern Lebanon. The al-Huss government's fiscal austerity aimed at reducing the deficit, which had grown to 15% of gross domestic product, met with resistance from the trade unions. On 24 June 1999 Israel destroyed bridges and power stations with its heaviest air raids in three years. In July 1999 the UN Security Council renewed for six months the mandate for UNIFIL, the UN Interim Force in Lebanon, and restated its support of the territorial integrity and sovereignty of Lebanon.

At the end of 1999 in anticipation of elections in August 2000, the government passed a law creating fourteen constituencies of suspiciously varying sizes based on rewarding or punishing political foes or friends. A bill to curb the media, limiting all elections news, advertisements, and coverage to the state-run Tele-Liban and Radio Liban, and limiting campaign spending was also drafted. On 24 May 2000 Israel made a quick withdrawal from southern Lebanon. With the Israeli withdrawal the SLA disintegrated. The exact border between Lebanon and Israel remained unsettled as they disputed ownership of the Shabaa Farms. The Lebanese government sent police and intelligence officers to the newly liberated area, but refused to deploy troops until there was evidence of stability or a comprehensive peace treaty with Israel.

In March 2001, Lebanon began to divert waters from the Wazzani River to supply villages in southern Lebanon. The Wazzani feeds into the Hatzbani, which in turn flows into the Jordan River watershed and Lake Kinneret (Lake Tiberias or the Sea of Galilee), a major source of Israel's water supply. In September 2002, Israel's Prime Minister Ariel Sharon identified measures to divert water from Israel as a cause for war.

Syrian troops withdrew from Beirut in June 2001 to redeploy in other parts of Lebanon, in response to greater Lebanese criticism of Syria's presence there. In February 2003, the Syrian army completed its redeployment out of north Lebanon. Up to 4,000 troops left north Lebanon for central Syria. The majority of the Syrian army left in Lebanon is assembled in a stretch of the Bekaa Valley on the Syrian border. In February, Lebanon warned Israel against expelling Palestinians to Lebanon if war were to break out in Iraq, stating such a move would be akin to declaring war. In response, Israel stated it had no such plans. As of early 2003, there were approximately 350,000 Palestinian refugees in Lebanon. Also in February, Israeli warplanes flew over southern Lebanon, particularly over the Shabaa Farms, carrying out mock raids, at which Hezbollah fired anti-aircraft weaponry. Hezbollah and Israeli forces exchanged fire over the Shabaa Farms in January 2003, the first such exchanges since August 2002. Israel and Hezbollah are locked in a territorial dispute over the Farms, an area Israel captured from Syria during the 1967 war. Lebanon claims the region, although the UN holds that it belongs to Syria, and that Syria and Israel should negotiate its fate.

Parliamentary elections held 27 August and 3 September 2000 resulted in the appointment on 23 October of Rafiq al-Hariri as prime minister once again.

### 13 GOVERNMENT

As defined by the constitution of 1926 and subsequent amendments, Lebanon is an independent republic. Executive power is vested in a president (elected by the legislature for six years) and a prime minister and cabinet, chosen by the president but responsible to the legislature. Under an agreement dating back to the French mandate, the president must be a Maronite Christian, the prime minister a Sunni Muslim, and the president of the National Assembly a Shi'a Muslim. Decisions by the president must be countersigned by the prime minister and concerned minister(s) after approval by the National Assembly. Legislative power is exercised by a 128-member National Assembly (formerly the Chamber of Deputies), elected for a four-year term by universal adult suffrage (compulsory for males of twenty-one or over, permitted for women over twenty-one with elementary education). The electoral reform law of 1960 determined the denominational composition of the legislature as follows: thirty Maronites; twenty Sunni, nineteen Shi'a; eleven Greek Orthodox; six Greek Catholics; six Druzes; four Armenian Orthodox; one Armenian Catholic; one Protestant; and one Others. Deputies were elected to the legislature in 1972, but elections scheduled for 1976 were postponed because of the war, and the legislature has extended its term every two years until 1992. The Taif Accord of 1989 set the Christian-Muslim balance in parliament at fifty-fifty, but the failure of Christians to participate in the elections of 1992 and 1996 gave Muslim groups the largest number of seats in the Chamber. There has been no official census in the country since 1932, but most observers believe Muslims now form the majority with the Shi'i as the largest single group. The denominational composition of the legislature following the 2000 elections was: Maronites (34), Sunnites (27), Shi'ites (27), Greek Orthodox (14), Greek Catholics (8), Druzes (8), Armenian Orthodox (5), Alaouites (2), Armenian Catholics (1), Protestants (1), and Christian Minorities (1).

### 14 POLITICAL PARTIES

Political life in Lebanon is affected by the diversity of religious sects and the religious basis of social organization. The mainly Christian groups, especially the Maronites, favor an independent course for Lebanon, stressing its ties to Europe and opposing the appeals of Islam and pan-Arabism. The Muslim groups favor closer ties with Arab states and are opposed to confessionalism (political division along religious lines). Principal political groups, with mainly Christian membership, are the National Liberal Party and the Phalangist Party. There are various parties of the left, including the Progressive Socialist Party (of mostly Druze membership), the Ba'ath Party, and the Lebanese Communist Party. The various Palestinian groups, allied under the umbrella of the Palestine Liberation Organization, played an important role in the political life of Lebanon from the late 1960s until Israel's invasion drove them from the country in the 1980s. Amal, a conservative grouping, and Hezbollah, more militant, represent the Shi'i community. The former gained eighteen seats and the latter twelve seats in the elections of 1992. The Christian community, which was supposed to have half the seats, largely boycotted the elections and, as a result, won only fifty-nine seats.

There are currently at least eighteen religious-based political parties in Lebanon. In 1996, parliamentary elections were again held, and again certain Christian sects called for a boycott. Still, turnout was much higher than in the 1992 elections, reflecting the country's increasing political stability (turnout was about 45%). International observers found the elections substantially fair, but noted some irregularities, including Syrian interference, vote buying and ballot stuffing. The government itself acknowledges these shortcomings and has instituted some reforms.

The 1996 elections took place in five stages between August and September. The balloting gave a strong majority to a coalition of pro-Syrian parties, notably the Hezbollah-Amal coalition. There were forty-nine newcomers elected—three of whom were female—and nineteen seats were being contested on charges of voter fraud. Following the election, Prime Minister al-Hariri stepped down, as is tradition, so that President Hrawi and the new parliament could choose a new prime minister. In late October, the parliament, with presidential backing, nominated al-Hariri for his second term, as was expected. The vote in parliament was 121-0 with four abstentions.

Al-Hariri, a billionaire, is one of the richest men in the world: in 1996 there were three billionaires and thirty-five millionaires in parliament. Asked by Lahoud to be prime minister in 1998, Salim al-Huss became prime minister after al-Hariri abruptly resigned office. Al-Hariri was asked by President Lahoud to become prime minister once again in October 2000; he received 107 parliamentary votes backing him.

Palestinian refugees have no right to vote, despite numbering approximately 350,000 in 2003.

### 15 LOCAL GOVERNMENT

Lebanon is divided into the five provinces (*muhafazat*) of Beirut, North Lebanon, South Lebanon, Bekaa, Mount Lebanon, and Nabatiye, each with its district administration. The *muhafazat* are subdivided into districts (*aqdiya*), municipalities, and villages. Provincial governors and district chiefs are appointed by presidential decree. In most villages, councils of village elders or heads of families or clans still play a considerable role.

Municipal elections had not been held since 1963, despite widespread civil desire for such elections. In 1995, parliament passed a law extending the term of municipal officers until 31 December 1996, after which elections were slated to be held. Municipal elections were held in May and June 1998. Fifty-four municipal councils and 169 *mukhtar* or mayors were elected. Seventy-eight seats were won by women on the new municipal councils.

### 16 JUDICIAL SYSTEM

Ultimate supervisory power rests with the minister of justice, who appoints the magistrates. Courts of first instance, of which there are fifty-six, are presided over by a single judge and deal with both civil and criminal cases; 17 of these courts are in Beirut. Appeals may be taken to eleven courts of appeal, each made up of three judges. Of the four courts of cassation, three hear civil cases and one hears criminal cases. A six-person Council of State handles administrative cases. A Constitutional Council, called for in the Taif Accord, rules on the constitutionality of laws upon the request of 10 members of parliament. Religious courts—Islamic, Christian, and Jewish—deal with marriages, deaths, inheritances, and other matters of personal status in their respective faiths. There is also a separate military court system dealing with cases involving military personnel and military related issues.

The law provides for the right to a fair public trial and an independent and impartial judiciary. In practice, politically influential elements succeed in intervening to obtain desired results.

Matters of state security are dealt with by a five-member Judicial Council. The Judicial Council is a permanent tribunal, and the cabinet, on the recommendation of the Ministry of Justice, decides whether to bring a case before the Judicial Council.

In the refugee camps, the Palestinian elements implement an autonomous system of justice in which rival factions try opponents without any semblance of due process. Hezbollah applies Islamic law in the area under its control.

## 17 ARMED FORCES

The conflict of 1975–90 split the regular Lebanese army along Christian-Muslim lines. The force was later reformed, first by the United States, then by Syria. In 2002, active armed forces totaled 76,000 with some 40,000 reserves in the People's Militia. The army numbered 70,000 equipped with around 327 main battle tanks. There was a navy of 830 and an air force of 1,000 personnel, neither well-armed.

Much of the opposition militia has disbanded, and the Moslem Hezbollah (3,000 active) is the only significant communal army remaining. The defense budget was \$343 million in 1999–00 or 4.8% of GDP. Also stationed in Lebanon were 3,638 UNIFIL (UN peacekeeping) troops, 150 Iranian Revolutionary Guard Troops, and 18,000 Syrian troops.

## 18 INTERNATIONAL COOPERATION

Lebanon has been a charter member of the UN since 24 October 1945 and belongs to ESCWA and all the nonregional specialized agencies. It is the host to UNRWA and UNIFIL and is one of the founding members of the Arab League. Lebanon also is a member of G-77, and a signatory of the Law of the Sea. Lebanon has observer status at the WTO.

## 19 ECONOMY

Lebanon is traditionally a trading country, with a relatively large agricultural sector and small but well-developed industry. Until the civil war, it had always figured prominently as a center of tourist trade. The 1975–76 war caused an estimated \$5 billion in property damage and reduced economic activities to about 50% of the prewar level. The cost of reconstruction after the Israeli-Palestinian-Syrian war of 1982 was estimated at \$12–15 billion. Lebanon has been able to survive economically because of remittances from abroad by Lebanese workers and companies, external aid by the United States, France, Germany, and Arab countries, and foreign subsidies to various political groups. A residual effect of the 1982 war was political uncertainty, which poisoned the economic climate in the following years. In 1984 and after, there was a pronounced deterioration in the economy. In 1987 inflation peaked at 487%. After the 1989 Taif Accord for National Reconciliation ended hostilities, the economy began to recover. Economic activity surged in 1991, and in 1993 the Hariri Government was able to stabilize the economy, and launch a program to reconstruct the economy's infrastructure. Real GDP grew 4.2% in 1992, after growing by about 40% in 1991.

Since 1988, the economy has continued to post growth rates averaging 7.5%, although a rising budget deficit threatens to hamper economic reforms. Israel's Operation Grapes of Wrath in April 1996 cut economic development short, but in the same year, the stock market had reopened, and investment had made significant returns. In 1997, unemployment remained high at about 18% although inflation had been reduced to around 5% by 1998. Gross domestic product grew by 3% in 1998. Growth in 1999 was 1% and flat in 2000, according to the Central Bank estimate. Projections for 2001 from different sources range from 2% to 4%. Inflation was 1% in 1999 and zero in 2000, and did not exceed 3% in 2001. High unemployment remains a persistent problem, at 20 to 25% in 1999 and 2000, and 15% to 20% in 2001. Among Lebanese youth unemployment is estimated to be 30%. The absence of a government department of statistics (it was closed because of the war) makes all figures questionable.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Lebanon's gross domestic product (GDP) was estimated at \$18.8 billion. The per capita GDP was estimated at \$5,200. The annual growth rate of GDP was estimated at 1%. The average inflation rate in 2001 was 0.5%. The CIA defines GDP as the value of all

final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 12% of GDP, industry 21%, and services 67%. Foreign aid receipts amounted to about \$55 per capita and accounted for approximately 1% of the gross national income (GNI).

The World Bank reports that in 2001 per capita household consumption (in constant 1995 US dollars) was \$2,705. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the same period private consumption grew at an annual rate of 7%. Approximately 31% of household consumption was spent on food, 10% on fuel, 7% on health care, and 9% on education. It was estimated that in 1999 about 28% of the population had incomes below the poverty line.

## 21 LABOR

The labor force in 2001 was approximately 1.5 million workers, with as many as 1 million additional foreign laborers in Lebanon. The estimated unemployment rate in 1997 was 18%.

There are some 160 labor unions and organizations enrolling about 42% of the workforce as of 2001. The General Confederation of Workers is composed of 22 unions with about 200,000 members. Organized labor has grown slowly, partly because of the small number of industrial workers, but also because of the availability of a large pool of unemployed. Agricultural and most trade workers are not organized. Palestinians in Lebanon are free to organize their own unions. While Lebanese workers have the right to strike, there are limitations on public demonstrations which somewhat undermine this right. Lebanese workers have the right to organize and bargain collectively and this is the standard practice in employment situations.

Workers as young as eight may legally work with restrictions as to working hours and conditions. However, in reality, age limitations are not effectively enforced. In 2002, a monthly minimum wage of \$200 was in effect. The standard workweek is set at 48 hours, with a 24-hour rest period. In practice, most laborers average around 35 hours of work per week.

## 22 AGRICULTURE

In 2000, 4% of the working population was engaged in agricultural activity, and agriculture accounted for about 12% of GDP. Less than 30% of Lebanon's land is arable, and expansion of cultivated areas is limited by the arid and rugged nature of the land.

Agricultural production was severely disrupted by the 1975–76 war, and production of citrus fruits, the main crop, was reduced to low levels in the fertile Bekaa Valley by Israeli-Syrian fighting during 1982. Principal crops and estimated 1999 production (in thousand tons) were sugar beets, 290; potatoes, 250; oranges, 155; apples, 118; lemons and limes, 111; bananas, 105; olives, 90; grapefruit, 54; and wheat, 58. In 2001, Lebanon exported \$169.1 million in agricultural products (19% of total exports) and imported \$1.2 billion (16.6% of all imports). Two profitable, albeit illegal, crops produced are opium poppy (for heroin) and cannabis (for hashish). A joint Lebanese-Syrian eradication effort has practically wiped out the opium crop and significantly reduced the cannabis crop.

## 23 ANIMAL HUSBANDRY

Much of Lebanon's livestock was lost during the protracted hostilities since the 1975–76 war and the Israeli invasion in 1982. In 2001 there were an estimated 399,000 goats, 329,000 sheep, 78,000 head of cattle, and 32,000,000 poultry. As Lebanon's

own meat and milk production is below consumption needs, animal and milk products are imported.

## 24 FISHING

The fishing industry has not progressed significantly, despite a government-sponsored effort to reduce fish imports and provide employment in the canned-fish industry. The catch in 2000 was 3,666 tons.

## 25 FORESTRY

Forests comprised about 36,000 hectares (89,000 acres), or nearly 3.5% of the total area, in 2000. Most of the forests are in the central part of the country, with pine and oak predominant. Few of the ancient cedars have survived; small cedar forests have been planted at high altitudes. Roundwood production in 2000 was 26,000 cu m (917,000 cu ft).

## 26 MINING

Lebanon's mineral industry continued its historically small contribution to the economy. Mining activity was limited to the production of salt and the quarrying of raw materials for the construction industry, particularly limestone and silica for cement manufacture. In 2001, hydraulic cement production totaled 2.7 million tons, down from 3.3 million tons in 1998; gypsum, 1,300 tons; lime, 13,500 tons; and salt, 3,500 tons. Cement exports accounted for 3% of total exports. In 2001, Lebanon also produced semimanufactured iron and steel, phosphatic fertilizers, phosphoric acid, and sulfuric acid. Modest deposits of asphalt, coal, and iron ore occurred, and the country had no petroleum or gas reserves. The success of Lebanon's minerals industry depended on the long-term restoration of peace and stability in the country.

## 27 ENERGY AND POWER

Political instability and conflict curtailed petroleum exploration in the 1970s and 1980s. In early 1991 natural gas discoveries near El-Marq encouraged further exploration.

A refinery at Tripoli satisfies only about 15% of domestic demand; imports from Syria, Romania, Bulgaria, Greece, and Italy meet the remaining demand for petroleum products.

Italian, French, and Korean firms have been contracted to rehabilitate power stations, install transmission networks, and distribute electricity outside greater Beirut. Lebanon's largest hydroelectric plants are on the Litani River. In 2001, total installed electrical capacity was about 1,323,000 kW. Production in 2000 totaled 7,200 million kWh, of which 96.9% was from fossil fuels and 3.1% from hydropower. Consumption of electricity in 2000 was 8.6 billion kWh.

## 28 INDUSTRY

The 16-year civil war that ended in 1991 caused tremendous damage to the industrial sector. By 1993, it was estimated that the Lebanese industry suffered losses of \$1.5 billion. Inadequate infrastructure and shortage of skilled labor are major obstacles in the process of rehabilitation. By 1995, the industrial sector was showing signs of improvement. Industrial exports in the first quarter of 1995 were up 76% (to \$79.5 million) compared with the same period in 1994. Industry accounted for an estimated 28% of GDP in 1995. Industrial production grew at rates of 3.8% in 1997 and 2.8% in 1998. In 2000, industry contributed 21% to GDP. Major industrial products are clothing, metal, food, marble and sanitary equipment, cement, jewelry, furniture, paper, beverages, and plastic. In 2002, manufacturing contributed 17% to GDP and accounted for 40% of total exports. Industrial activity is concentrated in construction material (35%); food and beverages (20%); textiles and ready-made garments (14%); and furniture (10%). The sector remains weak due to obsolete equipment, high operating costs, low productivity, and limited access to financing.

Lebanon's two main oil refineries suspended operations for most of the 1990s after 1992 but were operative in 2002. Total refinery capacity in 2002 was 42,000 barrels per day, including 38,000 barrels per day of crude oil distillation; 7,000 barrels per day catalytic cracking capacity; and 7,000 barrels per day reforming capacity.

## 29 SCIENCE AND TECHNOLOGY

Lebanon's advanced technology is limited to oil refining, the facilities for which were installed by international oil companies. The National Council for Scientific Research, established in Beirut in 1962, draws up national science policies and fosters research in fundamental and applied research. The council operates a marine research center at Al-Batrun. Seven colleges and universities in Beirut offer degrees in basic and applied sciences. In 1987–97, science and engineering students accounted for 30% of college and university enrollments.

## 30 DOMESTIC TRADE

Trade is by far the most important sector of the Lebanese economy. Before the 1975–91 civil war, Beirut was an important commercial center of the Middle East. During the first year of civil violence alone, 3,600 commercial establishments were destroyed, burned, or looted. Reconstruction and returning confidence have improved commercial activities since 1995.

The main trading activity is related to the importation of goods and their distribution in the local market. Distribution is generally handled by traders who acquire sole right of import and sale of specific trademarks, and although competition is keen, the markup tends to be high. Distribution of local products is more widely spread among traders. Franchising has become popular with major firms representing the restaurant, hotel, and clothing industries.

Prices are generally controlled by the Consumer Protection Department of the Ministry of Economy and Trade. Retail credit is common, and advertising has developed rapidly in motion picture theaters and the press.

Government offices are generally open from 8 AM to 2 PM Monday through Thursday, and from 8 AM to 12:30 PM on Friday. Most banks are open with similar hours, occasionally with a half-day on Saturday as well. Private businesses and shops have varying hours, sometimes exceeded in a 40-hour workweek.

## 31 FOREIGN TRADE

Foreign trade has been important in the economic life of Lebanon as a source of both income and employment. Some 40% of total exports are actually re-exports, principally machinery, metal products, foods, wood products, textiles, and chemicals.

The most expensive products that Lebanon exports are gold, silverware, jewelry, and precious stones (21%). Other exports include fruits, nuts and vegetables (10.5%), scrap metal (7.2%), and printed matter (4.5%). Major imports include food (29%), machinery and transport equipment (28%), consumer goods (18%), and chemicals (9%).

Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
Saudi Arabia	78	165	-87
United Arab Emirates	75	48	27
Switzerland	51	432	-423
United States	49	458	-613
France	37	527	-625
Syria	26	283	-212
Turkey	23	139	-159
Italy	18	680	-794
Germany	18	520	-590
United Kingdom	11	243	-298
Japan	6	211	-291
China (inc. Hong Kong)	n.a.	287	-277

### 32 BALANCE OF PAYMENTS

Lebanon traditionally maintained a favorable balance of payments, with rising trade deficits more than offset by net earnings from services, transfers of foreign capital, and remittances from Lebanese workers abroad. Although the trade deficit increased substantially between 1977 and 1984, a balance of payments deficit was recorded only for the last two years of the period. By 1985, a surplus of \$249 million was again achieved, with a modest trade recovery following in 1986–87. Hostilities in the industrial and prosperous areas of Lebanon in 1989–90 triggered a substantial outflow of capital and a deficit in the balance of payments. Order was restored in 1991 and a resumption of capital inflows averted larger deficits in the following years. In 1995, net capital inflows offset a large trade deficit to produce a \$256 million surplus in the balance of payments. A large portion of the trade imbalance consists of imports of machinery that should ultimately increase productivity. In 2000, the balance of payments registered a deficit of \$289 million, which compared to a \$267.7 million surplus in 1999.

The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Lebanon's exports was \$700 million while imports totaled \$6.6 billion resulting in a trade deficit of \$5.9 billion.

### 33 BANKING AND SECURITIES

The Bank of Lebanon, established on 1 April 1964, is now the sole bank of issue. Its powers to regulate and control commercial banks and other institutions and to implement monetary policy were expanded by amendments to the Code of Money and Credit promulgated in October 1973. To encourage the movement and deposit of foreign capital in Lebanon, a bank secrecy law of 1956 forbids banks to disclose details of a client's business even to judicial authorities. There are no restrictions on currency conversions and transfers, and no foreign exchange controls effect trading.

In the late 1990s, the banking sector was undergoing a period of expansion and consolidation with a number of banks listed on the Beirut Stock Exchange. In 1998, over 70 banks were operating in Lebanon with total assets of around \$31 billion. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$1.6 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$35.1 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 20%.

The Beirut Stock Exchange was officially opened in 1952 as a center in which the few available company shares could be traded. The exchange closed during the civil war but reopened in 1979; however, there was little trading in stock during 1980–81. In 1982, Beirut was chosen as the headquarters of the Arab Stock Exchange Union, reflecting Lebanon's continuing importance as financial center of the Middle East.

In September 1995, the Beirut Stock Exchange reopened after a 12-year closure. Trading began in January 1996, but with just three companies listed, all of them producers of cement or construction material. A fourth company joined in mid-1996. A secondary market was opened to trade shares in the private property company, Solidere. Solidere is developing the destroyed business heart of Beirut. With the secondary market considerably more successful than the stock exchange, plans to list Solidere on the latter have, for the moment, been shelved. In 1997, however, Solidere moved its shares from the secondary market to the Beirut Stock Exchange. An important reason for the move was a plan to cross-list Solidere shares on the Kuwait Stock Exchange. Kuwait said it would do so only if shares were traded on the official

bourse rather than on the secondary market. The Lebanese Stock Exchange authority signed an agreement to cross-list shares not only with Kuwait but also with Egypt from early in 1997. Solidere has a 115 million-125 million GDR (global depository receipt) to be listed on the London Stock Exchange.

In 2001, the stock market remained sluggish, with only 12 companies, including Solidere, listed. Market capitalization was at around \$1.2 billion.

### 34 INSURANCE

Activities of insurance companies are regulated by the National Insurance Council. All insurance companies must deposit a specific amount of money or real investments in an approved bank and must retain in Lebanon reserves commensurate with their volume of business. There are at least 85 insurance companies operating in Lebanon, most of them national insurance companies. In 1999, there was \$134 million spent on insurance in Lebanon.

### 35 PUBLIC FINANCE

The annual budget of the central government must be approved by the National Assembly. The Lebanese government annually faces the formidable problem of financing a massive deficit resulting from heavy financial obligations and huge shortfalls in revenues. To reduce the deficit, the government has tried to increase revenues by raising taxes and tightening the budget. The government relies heavily on grants and loans from multilateral agencies, Arab governments, and the French to cover the deficit. As a result, the country's total debt reached \$28 billion in 2001, about 150% of total GDP.

The US Central Intelligence Agency (CIA) estimates that in 2001 Lebanon's central government took in revenues of approximately \$4.6 billion and had expenditures of \$8.9 billion. Overall, the government registered a deficit of approximately \$4.3 billion. External debt totaled \$8.4 billion.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

REVENUE AND GRANTS	100.0%	4,601
Tax revenue	71.9%	3,306
Non-tax revenue	27.9%	1,284
Grants	0.2%	11
EXPENDITURES	100.0%	8,901
General public services	11.7%	1,045
Defense	10.6%	947
Public order and safety	3.8%	343
Education	7.2%	644
Health	2.0%	180
Social security	5.2%	462
Housing and community amenities	1.3%	119
Recreation, cultural, and religious affairs	0.7%	59
Economic affairs and services	15.9%	1,411
Other expenditures	0.8%	71
Interest payments	40.7%	3,620

### 36 TAXATION

A graduated tax is imposed on individual salaries, real profits, and real estate income. Corporations and joint stock companies generally are taxed on net real profits derived in Lebanon at a flat rate of 10%, and 5% on dividends. Also levied are inheritance and gift taxes, social security payroll taxes, flat and graduated property taxes, and a stamp duty.

### 37 CUSTOMS AND DUTIES

Customs duties, based on the Harmonized System of tariffs, depend on the type of product and range from 0–70%, averaging 15%. Lebanon acceded to Arab League's Arab Free Trade Area agreement in 1997 and also has bilateral free trade agreements with Egypt, Kuwait, Syria, and the United Arab Emirates. It also adheres to the Arab League boycott of Israel. Lebanon has applied for World Trade Organization membership and is in negotiations for accession.

### 38 FOREIGN INVESTMENT

Lebanon's liberal investment policies are designed to attract foreign direct investment to foster economic recovery and rebuild its war damaged infrastructure. Some analysts estimated that the rebuilding costs would exceed \$18 billion with construction accounting for a large part of foreign investment. As of 2002, French, Italian, German, British, Korean, and Finnish companies were the predominant investors in Lebanon. Their presence is most strongly felt in the fields of electricity, water, and telecommunications. US-based investment was only \$7 million in 1996, though this had climbed to \$65 million by 1999. In addition to limiting the maximum income tax rate to 10% for foreign investors, the movement of funds in and out of Lebanon is free from taxes, fees, or restrictions. Lebanon also has bilateral trade investment agreements with China and a number of European, East European, and Arab countries.

To conserve cash, the government uses "build, operate, transfer" (BOT) agreements to finance major projects. In 1997 total foreign direct investment (FDI) totaled \$150 million. By 2000 this had nearly doubled to \$297.8 million. In 2001, the annual FDI inflow fell to \$249.3 million. Other forms of capital inflow—remittances, repatriated capital and placements in treasury bills—far outweigh inward FDI.

### 39 ECONOMIC DEVELOPMENT

Since World War II, Lebanon has followed free-enterprise and free-trade policies. The country's favorable geographical position as a transit point and the traditional importance of the trading and banking sectors of the economy helped make Lebanon prosperous by the early 1970s. Lebanon became a center of trade, finance, and tourism by means of a stable currency backed largely with gold, by a conservative fiscal policy, by various incentives for foreign investors, and by minimization of banking regulations.

Lebanon's development went awry in the mid-1970s, as factional conflict, always present in Lebanese society, erupted into open warfare. The loss to the economy was enormous, particularly in Beirut. The reconstruction plan submitted in 1979 by the Council for Development and Reconstruction (CDR) envisaged total expenditures of LL22 billion for rebuilding, including LL10 billion in the public sector and LL12 billion in the private sector. The cost of new housing and repair of damaged homes was estimated at LL4.5 billion, and of major road construction at LL1.5 billion. Redevelopment of the port of Beirut and reconstruction of Beirut airport were begun under the program.

In November 1979, Saudi Arabia and six other oil-producing Arab countries promised to contribute \$2 billion for Lebanon's reconstruction effort over a five-year period, but only \$381 million had been provided by October 1987. (After Israel invaded Lebanon in June 1982, the Arab countries decided to withhold future funds until Israeli forces had withdrawn completely.)

Under the leadership of prime minister Rafiq al-Hariri, Lebanon embarked on the Horizon 2000 program in 1993. Areas of major activity targeted by the plan were the rehabilitation of telecommunications, electricity grids, highways, sewage, waste management, water networks, renovation of the Beirut

International Airport, harbor, education, and housing. The plan also called for investment in commercial facilities that will reestablish Beirut as an international business center in competition with Hong Kong and Singapore. The government established a private company, Solidere, to carry out the reconstruction and development of downtown Beirut. No investor can hold more than a 10% share in the company. The parliament also established a public company, Elyssar, for developing southwest Beirut. Under the government's five-year program (2001–2005) the "three pillars" of reform were affirmed by the Hariri government to be 1) economic revival and sustained growth with the private sector as the engine of growth; 2) fiscal consolidation and administrative reform; and 3) monetary, financial and price stability.

### 40 SOCIAL DEVELOPMENT

A government social security plan is intended to provide sickness and maternity insurance, accident and disability insurance, family allowances, and end-of-service indemnity payments. The employer contributes 8.5% of payroll, while the employee and government make no contribution. The system provides lump sum payments only for retirement, disability, and survivor benefits. Foreigners employed in Lebanon are entitled to benefits if similar rights are available for Lebanese in their home countries. Family allowances are provided for households with children and non-working wives. Voluntary social work societies also conduct relief and welfare activities.

Careers in government, the professions, and, less commonly, business are open to women. However, in some segments of society, social pressure prevents them from taking full advantage of employment opportunities. Lebanese citizenship is passed on only by fathers to their children. The children of Lebanese women married to foreigners are unable to secure citizenship. Many of the religious laws governing family and personal status discriminate against women. Despite these circumstances, there are a growing number of women in business and in government. Domestic abuse and violence affects a significant percentage of women.

Human rights abuses include arbitrary arrest and detention and the use of excessive force and torture. Prison conditions are substandard and include severe overcrowding. Palestinian groups operate within Lebanon in autonomous refugee camps. Human rights organizations are allowed to operate freely.

### 41 HEALTH

As of 1999, there were an estimated 2.1 physicians and 2.7 hospital beds per 1,000 people. The Lebanese Ministry of Health's review of hospital use identified the major health problems as follows: hypertension, diabetes, and asthma, in addition to eye and ear diseases, cardiac conditions, and dermatological problems. In 2000, 100% of the population had access to safe drinking water and 99% had adequate sanitation.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 8.2 and 14.7 per 1,000 people. About 61% of married women (ages 15 to 49) used contraception as of 2000. Life expectancy in 2000 was 70 years and the infant mortality rate was 26 per 1,000 live births. The fertility rate was 2.3 births per childbearing woman. The maternal mortality rate in 1998 was 100 per 100,000 live births. In 1999, immunization rates for children up to one year old included diphtheria, pertussis, and tetanus, 94%, and measles, 88%. Vitamin deficiencies are a problem; 25.7% of all school-age children have goiter (1996).

Between 1982 and 1990, there were approximately 144,000 war-related deaths due to the Israeli invasion. In fact, the major causes of death between 1987–1991 were violence and acts of war. War has had a significant impact on the development of

many Lebanese children. Many children suffer from posttraumatic stress disorders.

The HIV-1 prevalence in 1999 was 0.1 per 100 adults. In 1996, there were 91 HIV cases. Malaria, polio, and neonatal tetanus are rare. In 1999, there were 24 cases of tuberculosis per 100,000 people.

## 42 HOUSING

Despite substantial construction activity since World War II and a boom in construction during the 1960s, which increased the number of housing units to 484,000 in 1970, there was a housing shortage, especially of low-cost residential units, in the early 1970s. The situation was aggravated by the civil war (ending in 1990) and subsequent factional strife in which half of the country's real estate was severely damaged or destroyed. About 750,000 people were displaced. Under the CDR 1983–91 plan, nearly 30% of total expenditures were allocated to build new dwellings and to restore war-damaged houses. According to the last available information for 1980–88, total housing units numbered 820,000 with 3.3 people per dwelling. Housing needs until the year 2000 have been estimated at 400,000 units.

## 43 EDUCATION

Lebanon's illiteracy rate is relatively low for the Middle East. For the year 2000, adult illiteracy rates were estimated at 13.9% (males, 7.7%; females, 19.6%). Free primary education was introduced in 1960, but about two-thirds of all students attend private schools. In 1997 there were 382,309 pupils in 2,160 primary schools. In the same year, there were 347,850 secondary school students. The pupil-teacher ratio at the primary level was 19 to 1 in 1999. In the same year, 71% of primary-school-age children were enrolled in school, while 70% of those eligible attended secondary school. In 1996, the total enrollment for all higher-level institutions was 81,588 students with 10,444 instructors. Leading universities include the American University in Beirut; St. Joseph University; the Lebanese (State) University; the University of the Holy Spirit; and the Arab University of Beirut. As of 1999, public expenditure on education was estimated at 2.1% of GDP.

## 44 LIBRARIES AND MUSEUMS

Lebanon has about a dozen sizable libraries with specialized collections of books, manuscripts, and documents. Most libraries are in Beirut, but there are also collections at Sidon and Harissa. The National Library of Lebanon, founded in 1921, had more than 100,000 volumes when it was destroyed at the beginning of the war in 1975. By 2002, it had restored that collection to 150,000 volumes. The Arab University Library has 200,000 volumes, but the largest library is that of the American University in Beirut, with 546,000 volumes. St. Joseph University has several specialized libraries, including the Bibliothèque Orientale, with 400,000 volumes. The library of the St. John Monastery in Khonchara, founded in 1696, contains the first known printing press in the Middle East. The Université Saint-Esprit de Koslik in Jounieh has the largest provincial collection with 200,000 volumes.

The National Museum of Lebanon (1920), in Beirut, has a collection of historical documents and many notable antiquities, including the sarcophagus of King Ahiaram (13th century BC), with the first known alphabetical inscriptions. The American University Museum also has an extensive collection of ancient artifacts. Beirut also houses the Museum of Fine Arts and the Museum of Lebanese Prehistory of St. Joseph University. There is a small Khalil Gibran museum in Bghori.

## 45 MEDIA

Before the civil war, Beirut was an international communications center with an earth satellite station and two oceanic cables

linking it to Marseille and Alexandria. As of 1999, the rebuilding of Lebanon's telecommunications system was well under way. Government-controlled Radio Lebanon broadcasts in Arabic, and Tele-Liban broadcasts on three channels in Arabic, French, and English. Some 700,000 mainline telephones were estimated to be in use as of 1999, with an additional 580,000 cellular phones in use as well.

In 2001 there were 36 radio stations and 7 television stations. The government owns one radio and one television station and the rest are privately owned. In 2000, there were 687 radios and 335 television sets for every 1,000 people. In 2001, there were 300,000 Internet subscribers served by 22 service providers.

Historically, Lebanon has had the freest press in the Arab world. Even during the civil war some 25 newspapers and magazines were published without restriction. Newspapers freely criticize the government but refrain from criticizing political groups that have the power to retaliate forcibly. As of 2002, the largest Arabic dailies included *An-Nahar* (*The Day*, 77,600), *Al-Anwar* (*Lights*, 58,675), *As-Safir* (*The Ambassador*, 50,000), *Al-Amal* (*Hope*, circulation 35,000), *Al Hayat* (*Life*, 31,030), *Al-Sharq* (36,000), and *Al-Liwa* (*The Standard*, 15,000). Also influential are the French-language papers *L'Orient-Le Jour* (23,000), *Le Soir* (16,500), and *Le Réveil* (10,000).

Though the constitution provides for freedom of the press, the government uses several means short of censorship to control freedom of expression. The Surete Generale is authorized to approve all foreign materials, including magazines, plays, books, and films. The law prohibits attacks on the dignity of the head of state or foreign leaders, prosecuting through a special Publications Court. A 1991 security agreement between Lebanon and Syria effectively prohibits the publication of any material deemed harmful to either state.

## 46 ORGANIZATIONS

There are chambers of commerce and industry in Beirut, Tripoli, Sidon, and Zahlah. There are Rotary and Lion's Clubs in Beirut. Lebanon has an Automobile and Touring Club, a French Chamber of Commerce, and an Association of Lebanese Industries.

The Amel Association is a major social welfare organization providing emergency relief and social, medical, and educational services. The National Council for Scientific Research offers major support for promoting scientific study and research. A smaller organization, the Nadim Andraos Foundation, also provides financial support for medical and scientific studies. The Red Cross is also active in the country.

National youth organizations include the Lebanese Scout Federation, Lebanese Youth and Student Movement for the United Nations, the Progressive Youth Organization, the Democratic Youth Union, and YMCA/YWCA.

## 47 TOURISM, TRAVEL, AND RECREATION

Before the civil war, Lebanon's antiquities—notably at Sidon, Tyre, Byblos, and Ba'albek—combined with a pleasant climate and scenery to attract many tourists (more than 2 million in 1974), especially from other Arab countries. During the war, however, fighting and bombing destroyed or heavily damaged major hotels in Beirut and reduced the number of tourists to practically zero. The country has been rebuilding slowly. Most attractions are historical sites in Tyre and Tripoli. The temple complex in Baalbek, which includes the remains of the temples of Jupiter, Bacchus, and Venus, is one of the largest in the world.

Tourists who are not Arab nationals need visas to enter Lebanon. In 2000, Lebanon had 741,648 tourist arrivals, a 10% increase over the previous year. Hotel rooms numbered 14,500, with 25,450 bed-places and an occupancy rate of 28%. That year tourist receipts totaled \$742 million.

In 2002, the US Department of State estimated the cost of staying in Beirut at \$210 per day.

#### 48 FAMOUS LEBANESE

Khalil Gibran (Jibran, 1883–1931), a native of Lebanon, achieved international renown through his paintings and literary works. He is best known for his long poem *The Prophet*. Charles Habib Malik (1906–87), for many years Lebanon's leading diplomat, was president of the 13th UN General Assembly in 1958/59.

#### 49 DEPENDENCIES

Lebanon has no territories or colonies.

---

# MALAYSIA

**CAPITAL:** Kuala Lumpur

**FLAG:** The national flag consists of 14 alternating horizontal stripes, of which 7 are red and 7 white; a gold 14-pointed star and crescent appear on a blue field in the upper left corner.

**ANTHEM:** *Negara Ku (My Country)*.

**MONETARY UNIT:** The Malaysian ringgit (M\$), or dollar, is divided into 100 sen, or cents. There are coins of 1, 5, 10, 20, and 50 sens and 1 ringgit, and notes of 1, 5, 10, 20, 100, 500, and 1,000 ringgits. M\$1 = US\$0.2652 (or US\$1 = M\$3.77) as of May 2003.

**WEIGHTS AND MEASURES:** The metric system became the legal standard in 1982, but some British weights and measures and local units also are in use.

**HOLIDAYS:** National Day, 31 August; Christmas, 25 December. Movable holidays include Vesak Day, Birthday of His Majesty the Yang di-Pertuan Agong, Hari Raya Puasa, Hari Raya Haji, the 1st of Muharram (Muslim New Year), Milad an-Nabi, Dewali, Thaipusam, and the Chinese New Year. Individual states celebrate the birthdays of their rulers and other holidays observed by native ethnic groups.

**TIME:** 7 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Situated in Southeast Asia, Malaysia, with an area of 329,750 sq km (127,317 sq mi), consists of two noncontiguous areas: Peninsular Malaysia (formerly West Malaysia), on the Asian mainland, and the states of Sarawak and Sabah, known together as East Malaysia, on the island of Borneo. Comparatively, the area occupied by Malaysia is slightly larger than the state of New Mexico. Peninsular Malaysia, protruding southward from the mainland of Asia, comprises an area of 131,587 sq km (50,806 sq mi), extending 748 km (465 mi) SSE-NNW and 322 km (200 mi) ENE-WSW. It is bordered on the N by Thailand, on the E by the South China Sea, on the S by the Strait of Johore, and on the W by the Strait of Malacca and the Andaman Sea, with a total boundary length of 2,068 km (1,285 mi). Sarawak, covering an area of 124,449 sq km (48,050 sq mi), on the northwest coast of Borneo, extends 679 km (422 mi) NNE-SSW and 254 km (158 mi) ESE-WNW. It is bounded by Brunei on the N, Sabah on the NE, Indonesia on the E and S, and the South China Sea on the W. Sarawak's total boundary length is 2,621 km (1,629 mi). Situated at the northern end of Borneo, Sabah has an area of 74,398 sq km (28,725 sq mi), with a length of 412 km (256 mi) E-W and a width of 328 km (204 mi) N-S. To the N is the Balabac Strait, to the NE the Sulu Sea, to the SE the Celebes Sea, to the S Indonesia, to the SW Sarawak, and to the W the South China Sea, with a total boundary length of 2,008 km (1,248 mi). The total boundary length of Malaysia is 7,344 km (4,563 mi), of which 4,675 km (2,905 mi) is coastline.

Malaysia claims several atolls of the Spratly Island group in the South China Sea. The claim, in a region where oil is suspected, is disputed by China, the Philippines, Taiwan, and Vietnam. Malaysia's capital city, Kuala Lumpur, is located in the western part of Peninsular Malaysia.

## <sup>2</sup>TOPOGRAPHY

Four-fifths of Peninsular Malaysia is covered by rainforest and swamp. The northern regions are divided by a series of mountain ranges that rise abruptly from the wide, flat coastal plains. The

highest peaks, Gunong Tahan (2,190 m/7,185 ft) and Gunong Korbu (2,183 m/7,162 ft), are in the north central region. The main watershed follows a mountain range about 80 km (50 mi) inland, roughly parallel to the west coast. The rivers flowing to the east, south, and west of this range are swift and have cut some deep gorges, but on reaching the coastal plains they become sluggish. The western coastal plain contains most of the country's population and the main seaports, George Town (on the offshore Pulau Pinang) and Kelang (formerly Port Swettenham). The eastern coastal plain is mostly jungle and lightly settled. It is subject to heavy storms from the South China Sea and lacks natural harbors.

Sarawak consists of an alluvial and swampy coastal plain, an area of rolling country interspersed with mountain ranges, and a mountainous interior. Rain forests cover the greater part of Sarawak. Many of the rivers are navigable. Sabah is split in two by the Crocker Mountains, which extend north and south some 48 km (30 mi) inland from the west coast, rising to over 4,100 m (13,450 ft) at Mt. Kinabalu, the highest point in Malaysia. Most of the interior is covered with tropical forest, while the western coastal area consists of alluvial flats making up the main rubber and rice land.

## <sup>3</sup>CLIMATE

The climate of Peninsular Malaysia is equatorial, characterized by fairly high but uniform temperatures (ranging from 23° to 31°C/73° to 88°F throughout the year), high humidity, and copious rainfall (averaging about 250 cm/100 in annually). There are seasonal variations in rainfall, with the heaviest rains from October to December or January; except for a few mountain areas, the most abundant rainfall is in the eastern coastal region, where it averages over 300 cm (120 in) per year. Elsewhere the annual average is 200–300 cm (80–120 in), the northwestern and southwestern regions having the least rainfall. The nights are usually cool because of the nearby seas. The climate of East Malaysia is relatively cool for an area so near the equator.

## 4 FLORA AND FAUNA

About 70% of Malaysia consists of tropical rain forest. In Peninsular Malaysia, camphor, ebony, sandalwood, teak, and many varieties of palm trees abound. Rain forest fauna includes seladang (Malayan bison), deer, wild pigs, tree shrews, honey bears, forest cats, civets, monkeys, crocodiles, lizards, and snakes. The seladang weighs about a ton and is the largest wild ox in the world. An immense variety of insects, particularly butterflies, and some 508 breeding species of birds are found.

On Sabah and Sarawak, lowland forests contain some 400 species of tall dipterocarps (hardwoods) and semihardwoods; fig trees abound, attracting small mammals and birds; and groves are formed by the extensive aerial roots of warangen (a sacred tree to indigenous peoples). As altitude increases, herbaceous plants—buttercups, violets, and valerian—become more numerous, until moss-covered evergreen forests are reached from 1,520 to 1,830 m (5,000–6,000 ft). Butterflies, brilliantly colored birds of paradise, and a great wealth of other insect and bird species inhabit the two states.

## 5 ENVIRONMENT

The Environmental Quality Act of 1974 and other environmental laws are administered by the Division of Environment of the Ministry of Science, Technology, and Environment. Discharge of untreated sewage has contaminated the nation's water; the most heavily polluted areas are along the west coast. Malaysia's water pollution problem also extends to its rivers, of which 40% are polluted. The nation has 580 cu km of water with 76% used for farming and 13% used for industrial activity. Malaysia's cities produce an average of 1.5 million tons of solid waste per year.

Clean-air legislation limiting industrial and automobile emissions, was adopted in 1978. However, air pollution from both of these sources is still a problem. In the mid-1990s, Malaysia ranked among 50 nations with the world's highest industrial carbon dioxide emissions, which totaled 70.5 million metric tons per year, a per capita level of 3.74 metric tons per year. Discharge of oil by vessels in Malaysian waters is prohibited.

Of Malaysia's total land area, 59% is tropical rainforest. Malaysia has the world's fifth most extensive mangrove area, which total over a half a million ha (over 1.2 million acres). The country's forests are threatened by commercial interests.

In 2001, 42 of the nation's mammal species and 34 bird species were endangered. Endangered species in Malaysia include the orangutan, tiger, Asian elephant, Malayan tapir, Sumatran rhinoceros, Singapore roundleaf horseshoe bat, four species of turtle (green sea, hawksbill, olive ridley, and leatherback), and two species of crocodile (false gavia and Siamese).

## 6 POPULATION

The population of Malaysia in 2003 was estimated by the United Nations at 24,425,000, which placed it as number 44 in population among the 193 nations of the world. In that year approximately 4% of the population was over 65 years of age, with another 33% of the population under 15 years of age. There were 103 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 1.93%, with the projected population for the year 2015 at 29,563,000. The population density in 2002 was 74 per sq km (191 per sq mi).

It was estimated by the Population Reference Bureau that 57% of the population lived in urban areas in 2001. The capital city, Kuala Lumpur, had a population of 1,348,000 in that year. According to the United Nations, the urban population growth rate for 2000–2005 was 2.8%.

## 7 MIGRATION

Not until British economic enterprise first attracted foreign labor after 1800 did large-scale Chinese, Indian, and Malaysian migration (nonnative Indonesians and Borneans) take place. The early migrants were transients: in 1921, only 20.3% of the Chinese and 11.9% of the Indians were Malayan-born. However, migration data for subsequent years show a general tendency toward permanent settlement by these nonindigenous portions of the population. The percentages of the total Chinese population reporting Peninsular Malaysia as their birthplace were 29.1%, 62.5%, and 74.4% for the years 1931, 1947, and 1957, respectively; the percentages of Indians reporting their birthplace as Peninsular Malaysia were 21.1%, 51.4%, and 64.6% for the same respective years. By 1953, the Malays were a minority in their own territory. The government enacted legislation restricting further immigration, and by 1968 the Malays formed slightly more than 50% of the population. Regulations which took effect in 1968 concerning passports and border crossings between Malaysia and Indonesia and between Malaysia and the Philippines were also intended to restrict immigration. By 1970, more than four-fifths of the Chinese and Indians were born in Peninsular Malaysia. Between 1975 and 1996, Malaysia hosted more than 250,000 Indo-Chinese refugees and permitted the local integration of some 45,000 Filipino refugees in Sabah. Between 1975 and 1989, more than 250,000 Vietnamese refugees found asylum in Malaysia; the vast majority subsequently migrated to other countries. Some 3,797 Vietnamese refugees still remain in Malaysia, but are to return home according to government authorities. The legal position of the 5,000 or so Muslims from Myanmar, who possess no documentation as citizens of Myanmar, had not been addressed by the government as of 1999. The net migration rate in 1999 was zero; however, this figure does not reflect the number of illegal immigrants, including large numbers from Indonesia and smaller numbers from the Philippines, Bangladesh, Myanmar (Burma), China, and India.

In 2000 there were 1,392,000 migrants living in Malaysia, including 50,500 refugees. The net migration rate in that year was 0.4 migrants per 1,000. These numbers do not reflect the unknown number of illegal immigrants from other countries in the region. The government views the immigration level as too high, but the emigration level as satisfactory.

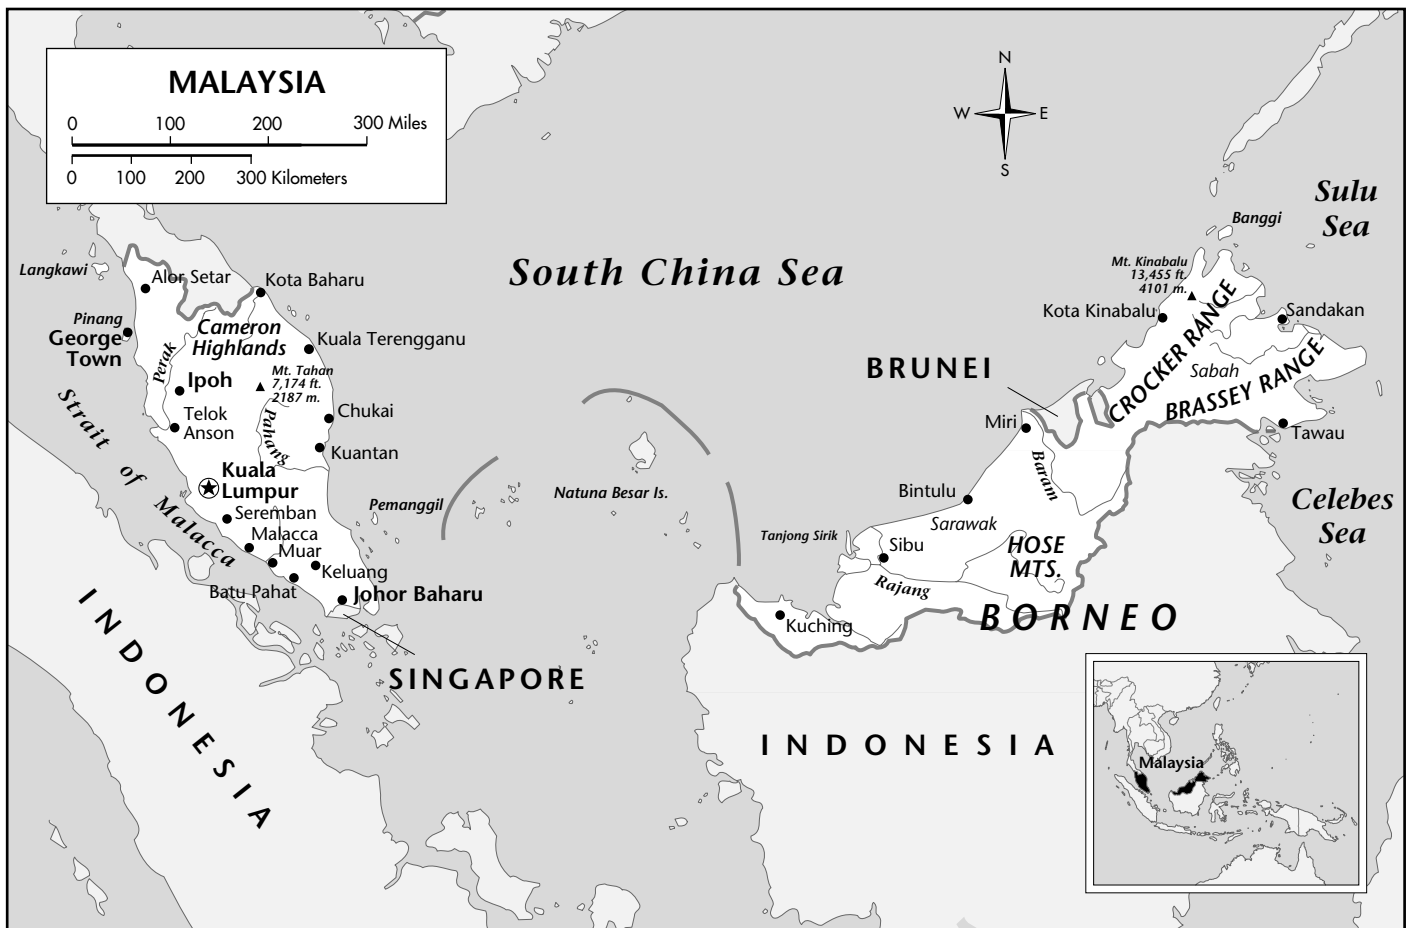

## 8 ETHNIC GROUPS

The population of Malaysia consists of three main ethnic groups—Malays, Chinese, and peoples of the South Asian subcontinent. Malays and other indigenous groups are known as Bumiputras ("sons of the soil"). Estimates for 2000 reported the following distribution: Malays and other indigenous groups (Bumiputras), 58%; Chinese, 24%; persons of Indian descent, 8%; and other groups, 10%. Malays predominate in the rural areas, while the Chinese are concentrated in urban and mining areas, where they control much of the nation's wealth; enmity between the two communities has occasionally erupted into violence. The non-Malay indigenous groups on the peninsula are collectively called the Orang Asli (aborigines) and number about 50,000.

Non-Malay indigenous tribes constitute about half of Sarawak's residents; the largest indigenous group consists of the Sea Dayaks, or Ibans, followed by the Land Dayaks, or Bidayuh. The majority of Sabah's population consists of indigenous peoples, principally Kadazans, Bajaus, and Muruts. The balance is dominated by Chinese.

## 9 LANGUAGES

Bahasa Malaysia, or Malay, is the national language and the lingua franca of all Malaysia. The traditional Bahasa Malaysia script is Jawi, which derives from Arabic script, but Rumi, based

**LOCATION:** Peninsular Malaysia: 1°17' to 6°43' N; 99°38' to 104°39' E. Sarawak: 0°52' to 4°59' N; 109°38' to 155°43' E. Sabah: 4°6' to 7°22' N; 115°7' to 119°17' E.  
**BOUNDARY LENGTHS:** Peninsular Malaysia: Thailand, 506 kilometers (316 miles); coastline, 2,068 kilometers (1,292 miles). East Malaysia: Brunei, 381 kilometers (238 miles); Indonesia, 1,728 kilometers (1,080 miles); coastline, 2,607 kilometers (1,629 miles). Total boundary length, land and coastline: 7,290 kilometers (4,555 miles). **TERRITORIAL SEA LIMIT:** 12 miles.

on the Roman alphabet, is officially used in government, education, and business. English is widely employed in government and commerce and is a compulsory subject in all schools. Chinese (notably the Mandarin, Cantonese, Hokkien, Hakka, Hainan, and Foochow dialects), Tamil, Telugu, Malalam, Punjabi, and Thai are spoken. In addition, in East Malaysia several indigenous languages are spoken, the largest of which are Iban and Kadazan. Most Malaysians are bilingual or multilingual.

## 10 RELIGIONS

Islam is the official religion. The head of state, the *yang di-pertuan agong*, is also the national leader of the Islamic faith. The constitution, however, guarantees freedom to profess, practice, and propagate other religions. Religious lines generally follow ethnic lines. Almost all Malays are Muslims; most Indians are Hindus, with a substantial minority of Muslims, Sikhs, and Parsees; and most Chinese are Confucian-Buddhists, with a minority Muslim representation. Christianity has won some adherents among the Chinese and Indians. The indigenous peoples of Sabah and Sarawak are still largely animist, although many have become Christian. Shamanism is also practiced on East Malaysia.

According to a 2000 government census, about 60% of the population are Muslim, 19% Buddhist, 9% Christian, and 6% Hindu. About 3% practice Confucianism, Taoism, or other

traditional Chinese religions. Other faiths include animism, Sikhism, and the Baha'i Faith.

## 11 TRANSPORTATION

In 2002, the highway system of Malaysia consisted of 64,672 km (40,187 mi) of roads, of which 40,707 km (25,295 mi) were paved, including 1,192 km (741 mi) of expressways. The major highways on Peninsular Malaysia run north-south along the east and west coasts; east-west links connect George Town and Kota Bharu in the north and Kuala Lumpur and Kuantan farther south. As of 1991, (according to the Malaysian Highway Authority) the East-West Highway (Federal Route 2) crossing Peninsular Malaysia, as well as the Klang Valley Expressway connecting Kuala Lumpur to Port Klang were completed. The 924 km (574 mi) North-South Highway along the west coast of Peninsular Malaysia connects Thailand and Singapore. In 2000, registered vehicles included 2,639,423 automobiles and 954,737 commercial vehicles.

The national Malayan Railway Administration operates some 1,801 km (1,119 mi) of Peninsular Malaysia, which provides links to Thailand, Singapore, and eastern parts of the peninsula. Sabah State Railways provides diesel service along the west coast and in the interior for 136 km (85 mi). There are no railroads in Sarawak.

There are 7,296 km (4,533 mi) of waterways in all of Malaysia: 3,209 km (1,994 mi) in Peninsular Malaysia; 1,569 km (975 mi) in Sabah; and, 2,518 km (1,565 mi) in Sarawak.

The three leading ports, all located on the busy Strait of Malacca, are Kelang (the port for Kuala Lumpur), Johor Baharu, and George Town. Kuching is the main port for Sarawak, and Kota Kinabalu the main port for Sabah. The Malaysian merchant fleet in 2002 consisted of 363 ships with a combined capacity of 4,952,119 GRT.

Also in 2001, there were 116 airports, 35 of which had paved runways. Most international flights enter or leave Malaysia through Kuala Lumpur International Airport. Other principal airports include Kota Kinabalu, Kuching, and Penang. The Malaysian Airline System (MAS) provides domestic service to most major cities of the peninsula and to Sarawak and Sabah. In 2001, 16,310,500 passengers were carried on scheduled domestic and international flights.

## 12 HISTORY

The ancestors of the Malays came down from South China and settled in the Malay Peninsula about 2000 BC. Sri Vijaya, a strong Indo-Malay empire with headquarters at Palembang in southern Sumatra, rose about AD 600 and came to dominate both sides of the Strait of Malacca, levying tribute and tolls on the ships faring between China and India. In the 14th century, however, Sri Vijaya fell, and Malaysia became part of the Majapahit Empire centered in Java. About 1400, a fugitive ruler from Temasek (now Singapore) founded a principality at Malacca (now Melaka) and embraced Islam. It was at Malacca that the West obtained its first foothold on the peninsula. At the height of glory and power, the Malacca principality fell to Portugal in 1511. In their turn, the Portuguese were driven out by the Dutch in 1641. The British East India Company laid the groundwork for British control of Malaya in 1786 by leasing from the sultan of Kedah the island of Pinang, off the west coast of Malaya, about 800 km (500 mi) north of Singapore. Fourteen years later, it obtained from him a small area on the mainland opposite Pinang. In 1819, Sir Thomas Stamford Raffles obtained permission to establish a settlement at Singapore; in 1824, by agreement and financial settlement, the island was ceded to the British East India Company. In the following year, the Dutch settlement at Malacca was ceded to Great Britain. Pinang, Singapore, and Malacca were combined under British rule in 1829 to form the Straits Settlements. The states of Perak and Selangor in 1874 secured treaties of protection from the British. Similar treaties were subsequently made with the sultans of Negri Sembilan (1874–89) and Pahang (1888). In 1895, these four states became a federation (the Federated Malay States), with a British resident-general and a system of centralized government. In 1909, under the Bangkok Treaty, Siam (now Thailand) ceded to British control the four northern states of Kelantan, Trengganu, Perlis, and Kedah. These four, together with Johor, which in 1914 was made a British protectorate, became known as the Unfederated Malay States. Separate British control was extended to Sabah, then known as North Borneo, in 1882. Six years later, North Borneo and Sarawak each became separate British protectorates. Tin mining and rubber grew rapidly under British rule, and large numbers of Chinese and Indian laborers were imported, respectively, for these industries.

Japanese forces invaded Malaya and the Borneo territories in December 1941 and occupied them throughout World War II. Within a year after the Japanese surrender in September 1945, the British formed the Malayan Union, consisting of the nine peninsular states, together with Pinang and Malacca; also in 1946, Singapore and the two Borneo protectorates became separate British crown colonies. The Malayan Union was succeeded by the Federation of Malaya on 1 February 1948. Over the next decade, the British weathered a Communist insurgency, as Malaya progressed toward self-government. On 31 August 1957, the Federation of Malaya became an independent member of the Commonwealth of Nations. On 1 August 1962, Great

Britain and Malaya agreed in principle on the formation of the new state of Malaysia—a political merger of Singapore and the British Borneo territories (Sarawak, Brunei, and North Borneo) with the Federation. On 1 September 1962, by a 70% plurality, Singapore voted in a referendum for incorporation in the proposed Malaysia, but an abortive revolt staged by Brunei's ultranationalist Brunei People's Party in December 1962 eliminated the sultanate from the proposed merger. On 16 September 1963, the Federation of Malaya, the State of Singapore, and the newly independent British colonies of Sarawak and Sabah merged to form the Federation of Malaysia ("Federation" was subsequently dropped from the official name). On 7 August 1965, Singapore seceded from the Federation and established an independent republic. From the outset, Indonesia's President Sukarno attempted by economic and military means to take over the young nation as part of Indonesia; cordial relations between the two countries were not established until after Sukarno's ouster in 1966. Internal disorders stemming from hostilities between Chinese and Malay communities in Kuala Lumpur disrupted the 1969 national elections and prompted the declaration of a state of emergency lasting from mid-1969 to February 1971. Successive governments managed to sustain political stability until 1987, when racial tensions between Chinese and Malay increased over a government plan to assign non-Mandarin-speaking administrators to Chinese-language schools.

In October 1987 the Malaysian government, under provisions of the Internal Security Act (ISA) which allows detention without trial on grounds of national security, arrested 79 political and civil leaders and closed four newspapers in an effort to stifle dissent. The government called its actions necessary to prevent racial violence, but many prominent Malaysians, including Tunku Abdul Rahman, the country's first prime minister, condemned the actions. At the same time the government clamped down on all news sources disseminating what the government considered false news, and new legislation denied licensing to news sources not conforming to Malaysian values. In 1981 Dato' Hussein bin Onn was succeeded as prime minister by Sato' Sei Dr. Mahathir Mohamad, whose leadership came under criticism from within the United Malays National Organization (UMNO) and other political parties as racial tensions increased. Part of the challenge to Dr. Mahathir's party leadership came in the form of a legal suit claiming that some of the delegates to the UMNO elections of 1987 had not been legally registered, therefore, the election should be declared null and void. The High Court ruled that due to the irregularities UMNO was an unlawful society and that in effect the election was invalid. Dr. Mahathir held that the ruling did not affect the legal status of the government; he was supported by the ruling Head of State, Tunku Mahmood Iskandar. In 1988 Dr. Mahathir formed a New UMNO, Umno Baru, and declared that party members would have to reregister to join. (Umno Baru was thereafter referred to as UMNO.) Under provisions of the ISA four people linked to the Parti Bersatu Sabah (PBS) were detained over alleged involvement in a secessionist plot in Sabah in June 1990. In July 1990 elections the PBS won 36 of 48 seats in the Sabah State Legislative Assembly. Prior to the general election of 1990 the PBS aligned itself with the opposition, which had formed an informal electoral alliance, Gagasan Rakyat (People's Might). The National Front (BN) won 127 of the 180 seats, thus maintaining control of the House of Representatives with the two-thirds majority necessary to amend the Constitution. The opposition increased its seats from 37 to 53. In 1992 the People's Might registered as a political organization and Tengku Razaleigh was elected chairman.

In 1990 the restructuring of the portfolio of the Ministry of Trade and Industry was rationalized into two new Ministries, the Ministry of International Trade and Industry (MITI) and the

Ministry of Domestic Trade and Consumer Affairs (MDTCA). In an action that was widely regarded as politically motivated, Datuk Seri Joseph Pairin Kitingan, chief minister of Sabah and president of the PBS, was arrested in January 1991 and charged with corruption, then released on bail. After subsequent meetings with Dr. Mahathir it was announced that the PBS state government had proposed power sharing with United Sabah National Organization (USNO). The head of USNO, Tun Mustapha Harun, resigned from USNO and joined UMNO. This switch necessitated a by-election and in May 1991 UMNO took its first seat in Sabah. The rise of Dayak nationalism in Sarawak was considered as less of a threat after the 1991 state elections. The Sarawak Native People's Party (PBDS, Parti Bansa Dayak Sarawak) retained only 7 of the 15 seats it had won in the 1987 election. A High Court ruling in 1991 upheld a ruling by the Ministry of Home Affairs banning the public sale of party newspapers. Speculation was that by targeting limited media outlets the government was muzzling the opposition press.

In 1991 UMNO raised the issue of the alleged abuse of privilege by Malaysia's nine hereditary rulers. A resolution tabled in 1990 had demanded the rulers be restrained from interfering in politics. In November 1992 the issue of the constitutional status of the sultans again arose when it was proposed that the rulers' immunity from prosecution be removed. The cases in point were the recent alleged assault on a hockey coach by the sultan of Johore, and the 1981 incident in which the sultan of Johore (before he became sultan) was convicted of homicide but pardoned by his father the previous sultan. In January 1993 these proposed amendments to the constitution were passed. Immediately after passage of the bill royal privileges other than those sanctioned and allocations not expressly provided in the constitution were withdrawn. The nine hereditary rulers first rejected the constitutional changes; however, they agreed to a compromise formula on the bill that effectively removed the blanket legal immunity granted to them. The compromise upheld the constitutional stipulation of royal assent for laws affecting the monarchy. Criticism arose over Dr. Mahathir's handling of this situation as it emphasized the antipathy between his authoritarian style and the "Malay way." These constitutional changes also highlighted Dr. Mahathir's previous moves to strengthen executive power at cost of the judiciary, to consolidate UMNO's control of the legislature, and to control the press. On 17 January 1994 Sabah's chief minister, Datuk Joseph Pairin Kitingan, was found guilty of corruption. The fine imposed on him fell short of the minimum required to disqualify him from office. Although PBS won the Sabah polls in February 1994, Pairin resigned as the PBS's leading members joined the National Front, and the Sabah wing of UMNO (with 18 of 48 seats) was about to be installed. In August 1994 the government moved to ban the radical Islamic sect, Al-Arqam.

Between 1978 and 1989 Malaysia provided asylum to about 230,000 Vietnamese refugees as they awaited resettlement in the West. In March 1989 Malaysia responded to the continuing influx of refugees and the Western nations' slow efforts to place them with a plan to screen refugees in order to separate economic migrants from political refugees. This policy was confirmed by the United Nations. In its biggest victory ever, the ruling National Front captured 162 parliamentary seats out of a possible 192 in the general election held 25 April 1995. The coalition won 64% of the popular vote and easily retained its two-thirds parliamentary majority.

The Asian economic crisis of 1997 affected both the economy and the political landscape in Malaysia. By the beginning of 1998, the Malaysian economy had undergone its first downturn in 13 years, and tensions over the handling of the crisis erupted between Prime Minister Mahathir, an economic isolationist, and his deputy, Anwar Ibrahim, who favored open-market policies. In September 1998, Mahathir removed Anwar from his cabinet and

party posts and imposed currency controls. When Anwar publicly protested these moves and attempted to rally opposition to his former mentor's policies, he was arrested and later tried for corruption and sexual misconduct. In 1999 Anwar was sentenced to six years in prison, and his wife launched a new political party to contest the upcoming national elections.

The economy began to recover by the end of 1998, and the government officially announced that the recession into which it had been plunged was over by August 1999. Responding to an April 2000 deadline for national elections, Mahathir called a snap election in November 1999. Although the arrest of Anwar and his treatment while in custody ignited widespread criticism of Mahathir and his government, the UMNO-led coalition maintained its two-thirds majority in parliament and Mahathir remained in power. However, electoral gains by the Islamic Party of Malaysia (Parti Se-Islam Malaysia or PAS) suggested a significant challenge to the popularity of the government and made PAS the country's largest opposition party.

On 9 March 2001, a wave of intercommunal violence between Malays and ethnic Indians began on the outskirts of Kuala Lumpur, the worst in more than 30 years. Six people, including five of Indian origin, were killed, and over 50 were injured. Most of the wounded were ethnic Indians. Opposition leaders claimed the casualty figures were higher; the government threatened to charge them with sedition (no charges were brought).

In early April 2001, days before public protests were scheduled for the second anniversary of the sentencing of Anwar, 10 opposition leaders were detained under Malaysia's Internal Security Act (ISA). The ISA allows the detention of suspects for up to two years without trial. Most of the detainees were members of the opposition party Keadilan (Justice), founded by Anwar's wife, Wan Azizah. The government used a variety of laws to restrict freedom of expression, and peaceful rallies were broken up by the police. An Anti-ISA Movement (AIM) was formed to work for the repeal of the ISA.

In September 2001, Malaysia and Singapore came to a series of agreements over issues that had strained relations between them for years. Largely prodded by concern over the growing influence of Islam in Malaysian politics, Singapore agreed to a Malaysian proposal that the causeway linking the two countries be demolished and replaced by a bridge and undersea tunnel after 2007. Malaysia agreed to supply water to Singapore after two water agreements expire in 2011 and 2061. Also discussed were disputes over the use of Malaysian-owned railway land in Singapore, and requests by Singapore to use Malaysian air space.

With the rise in popularity of the Islamic Party of Malaysia, Malaysia's image as a moderate Islamic state began to be questioned. In the aftermath of the 11 September 2001 terrorist attacks on the United States, countries in Southeast Asia were asked by the United States to increase their security plans and efforts to combat terrorism. However, many nations have been cautious of a broad sweeping link between Islam and terrorist activities. In May 2002, members of ASEAN met in Kuala Lumpur to form a united anti-terror front (including strengthening laws to govern the arrest, investigation, prosecution, and extradition of suspects), and pledged to set up a strong regional security framework. Alleged militants with suspected ties to Osama bin Laden's al-Qaeda organization have been arrested in Malaysia.

After the UN Security Council passed Resolution 1441 on 8 November 2002, calling on Iraq to disarm itself of weapons of mass destruction (chemical, biological, and nuclear weapons), adhere to all previous UN resolutions, and allow UN weapons inspectors to return to the country, Malaysia supported the authority of the UN in resolving the crisis in Iraq, as opposed to following a possible course of war indicated by the United States. Mahathir stated that any war with Iraq "will lengthen the anti-terrorist campaign." "It will undermine the world economy. It

will create a climate of uncertainty and fear throughout the world," he said.

In June 2002, Mahathir announced that he would resign in October 2003, news that shocked the country. It will be the first transfer of the prime ministerial office in over 20 years. His successor is predicted to be Abdullah Ahmad Badawi, one of three UMNO vice presidents.

### 13 GOVERNMENT

Malaysia is a constitutional monarchy consisting of 13 states, 9 of which were formerly sultanates under British protection and 4 of which (Melaka, Pulau Pinang, Sarawak, and Sabah) were former British settlements ruled by appointed governors.

The constitution, promulgated on 31 August 1957 and subsequently amended, derives from the former Federation of Malaya, with provisions for the special interests of Sabah and Sarawak. It provides for the election of a head of state, the *yang di-pertuan agong*, or paramount ruler, for a single term of five years by the Conference of Rulers. The constitution also provides for a deputy head of state, chosen in the same manner and for the same term.

The Conference of Rulers consists of the nine hereditary sultans. Its consent must be obtained for any law that alters state boundaries; affects the rulers' privileges, honors, or dignities; or extends any religious acts, observances, or ceremonies to the country as a whole. The conference must also be consulted on proposed changes of administrative policy affecting the special position of the Malays or the vital interests of other communities.

The *yang di-pertuan agong*, who must be one of the hereditary sultans, is commander-in-chief of the armed forces and has the power to designate judges for the federal court and the high courts on the advice of the prime minister, whom he appoints. Until January 1984, the paramount ruler had the right to veto legislation by withholding his assent; this right was lost in a constitutional compromise that gave the paramount ruler the right to delay new laws for up to 60 days but also stipulated that, if passed by a two-thirds majority, a bill may become law after six months without his signature.

The *yang di-pertuan agong* from 1979 to 1984 was Ahmad Shah al-Musta'in Billah Ibni al-Marhum, the sultan of Pahang. The leading candidate to succeed him was Idris al-Mutawakil Allahi Shah Ibni al-Marhum, the sultan of Perak, but when Idris died of a heart attack on 31 January 1984, the Conference of Rulers selected Mahmud Iskandar Ibni al-Marhum Sultan Ismail. As crown prince of Johor he had been convicted of homicide in a shooting incident in 1977 but had been pardoned by his father and became sultan in 1981. In 1989 the sultan of Perak, Azlan Muhibuddin Shah, became the *yang di-pertuan agong*. He was succeeded in 1994 by Tuanku Ja'afar ibni Al-Marhum Tuanku Abdul Rahman, who was in turn succeeded in 1999 by Salehuddin Abdul Aziz Shah ibni Al-Marhum Hismuddin Alam Shah. Salehuddin died in office on 21 November 2001 and was succeeded by Tuanku Syed Sirajuddin ibni Almarhum Tuanku Syed Putra Jamalullail, the sultan of Perlis.

Executive power rests with the cabinet, chosen by the prime minister, who is the leader of the majority party or coalition of the house of representatives (Dewan Rakyat), the lower house of parliament. The 193 members of the house of representatives must be at least 21 years old; they are elected by universal adult suffrage (at age 21). Their term is five years unless the house is dissolved earlier. The 69-member senate (Dewan Negara) consists of 26 elected members (two from each state); 2 members appointed by the paramount ruler to represent the federal territory of Kuala Lumpur and 1 to represent the island of Labaun; and 40 members appointed by the paramount ruler on the basis of distinguished public service or their eligibility to represent the ethnic minorities. Senators must be at least 30 years old; they hold office for six-year terms.

### 14 POLITICAL PARTIES

Before World War II, there was limited political activity in Malaya, but the Japanese occupation and its aftermath brought a new political awareness. Postwar political parties sought independence, and although the Malays feared domination by the populous minorities, particularly the economically stronger Chinese. The United Malays National Organization (UMNO), the leading Malay party, and the Malaysian Chinese Association (MCA) formed the Alliance Party in 1952. This party was later joined by the Malaysian Indian Congress (MIC) and became the nation's dominant political party. The Malayan Communist Party, a powerful and well-organized group after the war, penetrated and dominated the trade unions. In 1948, after the Communists had resorted to arms, they were outlawed.

In the elections of April 1964, the Alliance Party won a majority of 89 of the 154 House seats. The third general election since independence was held in Peninsular Malaysia on 10 May 1969; in the balloting, the Alliance Party suffered a setback, winning only 66 seats. The election was followed by communal rioting, mainly between Malays and Chinese, resulting in much loss of life and damage to property. The government suspended parliament and declared a state of emergency; elections in Sarawak and Sabah were postponed until July 1970. By the time parliament was reconvened on 22 February 1971, the Alliance had achieved a two-thirds majority (required for the passage of constitutional amendments) with the addition of 10 unopposed seats from Sabah and through a coalition with the Sarawak United People's Party, which controlled 12 seats.

The elections for state assemblies also resulted in a setback for the Alliance Party, which before the elections had controlled 10 of the 13 state assemblies, but after the elections only 7. In September 1970, Tunku Abdul Rahman retired as prime minister and was replaced by the deputy prime minister, Tun Abdul Razak. In 1973, the Alliance Party formed a broader coalition consisting of the UMNO, MCA, MIC, and eight minority parties. Known as the National Front and led by the UMNO, the ruling coalition was returned to power in the 1974, 1978, 1982, and 1986 elections with overwhelming majorities (148 of 177 seats in 1986). The principal opposition parties, which win few seats owing to a legislative apportionment scheme that heavily favors Malay voters, are the Chinese-based Democratic Action Party (DAP), founded in 1966, and the Pan-Malayan Islamic Party, dedicated to establishing an Islamic state.

In July 1981, Datuk Seri Mahathir bin Mohamad replaced Datuk Hussein bin Onn as prime minister. As of 1986, the National Front also had majorities in 11 of 13 state legislatures; the state assembly of Sabah, the lone exception, was under the control of the Sabah People's Union (Berjaya). In the 1986 elections, Chinese voters moved away from the MCA and toward the DAP. In April 1987, Mahathir narrowly overcame a challenge to his leadership of the UMNO.

As of 2003 there were more than 20 registered parties. The governing coalition is the Barisan Nasional (National Front), led by the United Malays National Organization (UMNO) and comprising 13 other parties, most ethnically based. Major opposition groups are the Muslim Unity Movement (APU), dominated by the Parti Se-Islam Malaysia (PAS), the Democratic Action Party (DAP), which is predominantly Chinese and socialist, the Parti Bersatu Sabah (PBS), and the newly formed National Justice Party formed by Wan Aziziah Wan Ismail, the wife of jailed government official Anwar Ibrahim.

In the election held 28 and 29 November 1999, the 193 seats of the lower house were distributed as follows: National Front (148 seats), DAP (10), PBS (3), and PAS (27), and Parti Keadilan Nasional (5). In the election, PAS won control of the state governments of Kelantan and Terengganu, giving it two of Malaysia's 13 states. The next elections must be held by 20

December 2004, but because Mahathir has announced he will resign by October 2003, an election is expected to be called before he leaves office in the hope of capitalizing on voters' goodwill towards the UMNO.

## 15 LOCAL GOVERNMENT

Of the 11 Peninsular Malaysian states, nine are headed by sultans, who act as titular rulers and as leaders of the Islamic faith in their respective states. The other two Peninsular states, Pinang and Melaka, are headed by federally appointed governors. State governments are parliamentary in form and share legislative powers with the federal parliament. Effective executive authority in each state is vested in a chief minister, selected by the majority party in the state legislature. The legislative assembly, composed of elected members, legislates in conformity with Malaysian and state constitutions, subject to the sultan's assent. In Peninsular Malaysia the states are divided into districts, each of which consists of 5 to 10 subdistricts, called *mukims* (*derah* in Kelantan). Each mukim is responsible for varying numbers of *kampongs* (villages or compounds). The mukim may include villages or consist of large, sparsely populated tracts of land. Each one is headed by a *penghulu* (*penggawa* in Kelantan), a part-time official locally elected for five years, who serves as the principal liaison between the district and the village. The village elects a chief (*ketua*).

Upon incorporation into the Federation of Malaysia in 1963, both Sabah and Sarawak adopted separate constitutions for their local self-government; each is headed by a chief minister, appointed by the majority party of the elective legislature. In Sarawak, divisions and districts are the main subdivisions; in Sabah their counterparts are residencies and districts. The district officer is the most important link between the governing and the governed. His responsibilities are administrative, fiscal and judicial. Kuala Lumpur, the national capital and former capital of Selangor State, was constituted as a separate federal territory, under the national government, on 1 February 1974. The mayor is appointed by the paramount ruler on the advice of the prime minister.

## 16 JUDICIAL SYSTEM

Malaysia has a unified judicial system, and all courts take cognizance of both federal and state laws. The legal system is founded on British common law. Most cases come before magistrates and sessions courts. Religious courts decide questions of Islamic law and custom. The Federal Court, the highest court in Malaysia, reviews decisions referred from the High Court of Peninsular Malaysia, the High Court of Sabah and Sarawak, and subordinate courts. The Federal Court, of which the *yang di-pertuan agong* is lord president, has original jurisdiction in disputes among states or between a state and the federal government. The Federal Court consists of the chief justice, the two chief judges from the High Courts, and seven other judges. Administrative detention is permitted in security cases, in which certain other guarantees of due process are reportedly suspended.

The judiciary has traditionally functioned with a high degree of independence. Most civil and criminal cases are fair and open. The accused must be brought before a judge within 24 hours of arrest. Defendants have the right to counsel and to bail. Strict rules of evidence apply in court and appeal is available to higher courts. Criminal defendants may also appeal for clemency to the paramount ruler or to the local state ruler. Severe penalties, including the death penalty, are imposed for drug-related offenses.

High courts have jurisdiction over all serious criminal cases and most civil cases. The sessions courts hear the cases involving landlord-tenant disputes and car accidents. Magistrates' courts hear criminal cases in which the maximum sentence does not

exceed 12 months. The Court of Appeals has jurisdiction over high court and sessions court decisions.

## 17 ARMED FORCES

In 2002 Malaysia had active armed forces numbering 100,000 with reservists of 41,600. The total strength of the army was 80,000, including infantry and armored battalions, artillery regiments, and supporting air defense, signal, engineer, special forces, and administrative units. Equipment included 26 *Scorpion* tanks. The navy had 12,000 personnel, 4 frigates, 8 missile craft, and 27 patrol craft. The air force had 8,000 personnel and 95 combat aircraft. Paramilitary forces numbered 20,100, and the People's Volunteer Corps had 240,000. Malaysia provides support to six peacekeeping missions. Australia provides a small training mission. Expenditures on defense were estimated at \$1.7 billion in 2000 or 2.1% of the GDP.

## 18 INTERNATIONAL COOPERATION

Malaysia is a member of the UN, having joined on 17 September 1957, and participates in ESCAP and all the nonregional specialized agencies. It also belongs to the Asian Development Bank, ASEAN, the Commonwealth of Nations, and G-77. Malaysia is a signatory of the Law of the Sea and a member of the WTO.

Before the 1970s, Malaysia pursued a pro-Western policy, but it later promoted the neutralization of Southeast Asia while establishing ties with China, the Democratic People's Republic of Korea, and Cuba and strengthening relations with the former USSR and other East European states. Links with its traditional allies, including the United States, remained strong in the course of this transition. Relations with the United Kingdom were strained in the early 1980s, after the British imposed surcharges on foreign students attending universities in the United Kingdom and issued new regulations reducing opportunities for foreign takeovers of British-owned companies. Malaysia agreed to drop its "buy British last" campaign in 1983 after the United Kingdom expanded scholarship opportunities for Malaysian students. In 1986 there was some friction with Singapore because of its improved relations with Israel. Malaysia shares the anti-Zionist ideology of the Arab League countries.

Malaysia in the new millennium has been building better relations with its neighbors. Malaysia has cooperated with the ASEAN Regional Forum (ARF), a 23-member Asian security network, helping to reduce tensions over the disputed Spratley Islands in the South China Sea. Malaysia also seeks increased economic integration in Southeast Asia. In 1990, Prime Minister Mahathir proposed the creation of an East Asian Economic Caucus, an idea that was initially regarded with skepticism, but was subsequently taken up by the ASEAN+3 group (the ten ASEAN members plus China, Japan, and South Korea), as a way of strengthening financial and trade ties between those states.

## 19 ECONOMY

Malaysia was one of the most prosperous nations in Southeast Asia before 1998, albeit with the mood swings inherent in an export-oriented economy. Until the 1970s, Malaysia's economy was based chiefly on its plantation and mining activities, with rubber and tin the principal exports. Since then, however, Malaysia has added palm oil, tropical hardwoods, petroleum, natural gas, and manufactured items, especially electronics and semiconductors, to its export list. This diversification greatly reduced the nation's dependence on overseas commodity markets. By 1980, rubber accounted for about 7.5% of the value of all exports, down from 30% in the 1970s, and tin for about 4.3%, down from about 20% in the 1970s. The worldwide recession in 1981-82 hurt the Malaysian economy. Prices of Malaysia's traditional commodity exports were depressed, growth slowed, and investment fell. Government efforts to stimulate the economy

through spending on heavy industry and infrastructure projects financed by borrowing pushed foreign debt from \$4 billion in 1980 to \$15 billion in 1984.

In 1985, the GDP in current prices was estimated at \$31 billion, up from \$25 billion in 1981. Real growth rates rose to 6.9% in 1981, and 7.6% in 1984, but declined 1.0% in 1985. In 1985–86 Malaysia's period of high growth was halted abruptly as both oil and palm oil prices were halved. Recovery began in late 1986 and 1987, spurred by foreign demand for exports. Growth rates reached an average 8–9% from 1987–92, and for most of the 1990s, the economy annually by just under 9%.

The Asian financial crisis put an end to 13 years of uninterrupted growth with a decline in GDP of -7.4% in 1998. The government's response was to embark on a massive economic recovery program, aimed at stabilizing the currency, restoring market confidence, maintaining market stability, strengthening economic fundamentals, furthering socioeconomic goals, and reviving badly affected sectors. The program featured two fiscal stimulus packages amounting to 2.25% of GDP and the establishment of three special purpose agencies: the Danaharta—also known as the National Asset Management Co.—to acquire and dispose of non-performing loans (NPLs); the Danamodal, charged with implementing government policy on recapitalizing financial institutions, and the Corporate Debt Restructuring Committee (CDRC), to facilitate voluntary debt restructuring between creditors and viable corporate debtors. More controversially, the government has proceeded, in 2000, with previous directed merger plans to consolidate Malaysia's banks into 10 “anchor” banks, and to consolidate Malaysia domestic brokerage houses into 15 “universal brokers,” the rationale being that larger entities would be better able to compete with international counterparts. Gross domestic product growth recovered to 6.3% in 1999 and increased to 7.9% in 2000, but was reduced to .7% in 2001 as the global economic slowdown and the aftermath of the 11 September 2001 terrorist attacks on the United States helped produce a 10.6% reduction in exports.

In 2002, the economy continued to recover, reaching an annual growth rate of about 3.5%. Since late 2001, Malaysia has taken a leading role, with Bahrain, in seeking to institutionalize Islamic banking. In November 2001 Malaysia signed an agreement along with Bahrain, Indonesia, Sudan and the Saudi-based Islamic Development Bank (IDB) to establish the International Islamic Financial Market (IIFM). This is an extension of its domestic efforts to foster Islamic banking going back to the Islamic Banking Act of 1983, under which it was the first Islamic economy to issue bonds on an Islamic basis. In June 2002 Malaysia took the lead in offering the world's first Islamic global bond issue. The Islamic bond is a problem because Islam forbids paying or receiving interest. The 144a offering (not subject to SEC disclosure regulations) in the name of an SPV (special purpose vehicle), the Malaysia Global Sukuk (MGS), involves MGS buying from the Malaysian government the Ministry of Finance building, two hospitals and a civil service accommodation, and leasing them back to the government for a period of five years, during which time the government issues trust certificates to the investors with payments payable exactly equal to lease rental payments being made by the government to MGS. At the end of five years, in 2007, the government will buy back the properties at the face value of the bond. These arrangements were judged compliant with Islamic law. The Trust Certificates had their primary listing on the Luxembourg Stock Exchange in August 2002, and their secondary listing on Malaysia's Labuan International Financial Exchange (LFX) in September 2002. The LFX is part of Malaysia's Labuan International Offshore Financial Centre (IOFC), established in October 1990 by the government to provide a full array of financial services for multinational corporations and investors.

The MSG Certificates are part of a recent effort to provide Sharia-compliant instruments for a growing Islamic financial market, estimated in 2002 at \$200 billion. The Labuan Offshore Financial Services Authority (OFSA) takes credit for initiating the idea for the establishment of the IIFM in November 2001. A Malaysian heads the IIFM, and the Islamic Financial Service Organization (IFSO) is headquartered in Malaysia. As host country for the IFSO, Malaysia will lead in formulating and developing standards for the regulation of Islamic financial institutions.

In 1990, Malaysia was the world's largest producer of natural rubber accounting for one-quarter of world production. By 1993, however, production was overtaken by both Thailand and Indonesia. During the late 1990s, production of synthetic rubbers undercut the natural rubber industry. In 1990 Malaysia was the world's largest exporter of tropical hardwood, the world's fourth-largest producer of cocoa, and the source of 60% of the world's palm oil (1990). By 2001, Malaysia exported over half of the world's fixed vegetable oils, accounting for approximately 6.7% of Malaysia's exports. The manufacturing sector made up about 90% of exports in 2002, up from about 69% of exports for 2002, with electronics accounting for two-thirds of total exports. Malaysia remains a major producer of commodities including rubber, tin, palm oil, tropical hardwoods, cocoa and pepper. It also produces and exports oil, petroleum products and liquefied natural gas, amounting to 5% of total exports in 1998.

Government or government-owned entities dominate a number of sectors (plantations, telecommunications, and banking). Since 1986 the government has moved toward corporatization and the eventual privatization of telecommunications, ports, highways, and electricity production and distribution. In the 1990s, the government embarked on a privatization program aimed at creating a Malaysian business elite as part of the its bumiputera (literally, “sons of the soil”) policy. However, virtually all the major privatized companies failed in the Asian financial crisis, 1997–98, including the carmaker Proton, Malaysian Airlines, the engineering group Renong and the media group, Malaysian Resources, and were renationalized in the aftermath, and in 2002, the business remains dominated by non-Malays. The official unemployment rate at 2.6% in 1996, had risen to 3.6% in 2001. The inflation rate as measured by consumer prices, at 5.1% for 1998, fell sharply in the succeeding years to 1.6% in 2000, 1.4% in 2001, and 1.8% in 2002. Sarawak's basic economy is subsistence agriculture, supplemented by petroleum production and refining, the collection of forest produce, fishing, and the cultivation of cash crops, primarily rubber, timber and pepper. Sabah's economy rests primarily on logging and petroleum production.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Malaysia's gross domestic product (GDP) was estimated at \$200 billion. The per capita GDP was estimated at \$9,000. The annual growth rate of GDP was estimated at 0.3%. The average inflation rate in 2001 was 1.5%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 12% of GDP, industry 40%, and services 48%. Foreign aid receipts amounted to about \$1 per capita.

The World Bank reports that in 2001 per capita household consumption (in constant 1995 US dollars) was \$2,129. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. The richest 10% of the population accounted for approximately 38.4% of household consumption and the poorest 10% approximately 1.7%. It was

estimated that in 1998 about 8% of the population had incomes below the poverty line.

## 21 LABOR

In 2001, Malaysia's total labor force was estimated at 9.9 million. Of these, approximately 28% were in trade and tourism, 27% in manufacturing, 16% in agriculture; 10% in services; 10% in government; and 9% in construction. Unemployment in 2001 was estimated at 3.7%.

Workers have the right to engage in union activity, but only about 8% of the workforce was unionized in 2002. There are 544 trade unions and two national trade confederations. Negotiations between unions and employers are voluntary; strikes are permitted but limited due to many restrictions. If the dispute has been referred to an industrial court for settlement, the employees are prohibited from engaging in a strike.

Employment by children under the age of 14 is prohibited by law. However, child labor persists in some areas of the country. Protective labor legislation in Malaysia is more extensive than in most Asian countries. Commerce and industry operate on a 48-hour week, although actual weekly hours tend to be closer to 44 hours. There is a legal requirement of one rest day per week. There is no national minimum wage, but a minimum wage does exist on a sector or region basis. In 2002, the government was considering a minimum wage of \$237 per month. Occupational safety and health provisions are set by law but are erratically enforced. The provisions are more rigorously enforced in the formal economic sector and are least enforced on plantations and construction sites where immigrant workers are employed. These foreign workers have no legal protections and are prohibited from forming unions.

## 22 AGRICULTURE

Agriculture is no longer the most important sector of the Malaysian economy, contributing 12% of GDP in 2001 (down from 38% in 1960) and occupying about 16% of the employed work force in that year. Nevertheless, agriculture still accounted for 6.3% of export earnings in 1997. Diversification—including development of such newer crops as oil palm, cocoa, and pineapples—is promoted by the government. Much of Sabah and Sarawak is covered with dense jungle and is not conducive to farming. Peninsular Malaysia, however, is predominantly an agricultural region. Cultivation is carried out on the coastal plains, river valleys, and foothills.

Domestic rice furnishes Peninsular Malaysia with about 80% of its requirements; most of the rice supply for Sabah and Sarawak, however, must be imported. Milled rice production for 1999 totaled 1,934,000 tons, of which about 70% came from Peninsular Malaysia. Rubber production totaled 886,000 tons in 1999. The government, through the Rubber Research Institute of Malaysia, has concentrated on improving production, but many estates have switched to production of the more profitable oil palm. Although Malaysia produced 14% of the world's rubber in 1999, and typically accounts for over one-third of the world's rubber exports, rubber is no longer the country's primary source of export income. Competition from Thailand and Indonesia has recently diminished the Malaysian market share for rubber.

Production of palm oil and palm kernel oil totaled 10,553,000 and 3,026,000 tons respectively in 1999, more than any other country in the world. More than 90% of all rubber and palm oil is produced in Peninsular Malaysia. Black and white peppers are grown on Sarawak; pepper exports amounted to \$49.3 million in 2001. Output of lesser agricultural products in 1999 included copra, 13,000 tons; coconuts, 711,000 tons; cocoa, 100,000 tons; and pineapple, 143,000 tons.

## 23 ANIMAL HUSBANDRY

Peninsular Malaysia is free of most of the infectious and contagious diseases that plague livestock in the tropical zone, but the livestock industry is of minor importance. The livestock population in 2001 included 1,972,000 hogs, 742,000 head of cattle, 247,000 goats, 129,000 sheep, and 148,000 buffalo. The swamp buffalo and indigenous breeds of cattle are used mainly as draft animals. Production of meat in 2001 included (in tons): poultry, 780,000; pork, 168,000; and beef (cattle). Malaysia is self-sufficient in pork and poultry production and also exports to other countries in the region, particularly Singapore and Japan. Sarawak's poultry sector is growing by 7% annually in response to increased demand from neighboring Kalimantan, Indonesia, where during certain festive months there is a poultry shortage. Hog raising and export are handled mainly by non-Muslim Chinese. The government prohibits the importation of chicken and chicken parts in order to protect domestic producers. Milk production was 32,000 tons in 2001.

## 24 FISHING

Fishing is being developed both as a means of reducing unemployment and as a primary source of protein in the country's diet. The total catch in 2000 was 1,289,245 tons, as compared with 296,300 tons in 1966; the increase has been largely the result of expanded and improved marketing facilities. Exports of fisheries products were valued at \$349 million in 2000, with imports of \$296.8 million that year. A government training program in navigation and engine care is also accelerating the use of powered boats. Freshwater fishing, which accounts for 2% of the total catch, occurs in paddy fields or irrigation ditches and is integrated with rice farming and hog production.

## 25 FORESTRY

Malaysia produced an estimated 26.4 million cu m (932 million cu ft) of roundwood from a forest area of 19.3 million ha (47.7 million acres) in 2000. About 32% of the forest area is located in Peninsular Malaysia, 22% in Sabah, and 46% in Sarawak.

After 40 years of large scale conversion of lowland forest areas into agricultural plantations, the pace of new land development declined in the mid-1990s. Reduced land availability and a growing need to preserve remaining forests have resulted in a 60% reduction from the government's 1991-95 plan in the total acreage of land scheduled for development. Of the total natural forest area, 15.7 million ha (38.8 million acres) of forested land is designated as Permanent Forest Estate, of which 70% is available for sustainable production.

Exports of timber products in 2000 amounted to \$3.8 billion, or 4.2% of total exports. Exports of tropical hardwoods in 2000 included (in thousands of cubic meters): logs, 6,802; lumber, 2,901; veneer, 902; and plywood, 3,355. Malaysia is the world's third leading producer (after Brazil and Slovakia) of veneer sheets, accounting for 7% of global production in 2000. In keeping with the National Forestry Policy of 1978, exports of sawlogs are being progressively reduced in favor of domestic development of veneer, plywood, furniture, and other wood-using industries. Many states ban the export of logs. Only Sarawak exports tropical hardwood logs, but its state government has also placed further restrictions on exporting logs in order to encourage expansion of value-added activities.

## 26 MINING

Petroleum and liquefied natural gas (mainly from Sabah and Sarawak) was Malaysia's second top export commodity in 2002, and tin mining and smelting were a top industry in Peninsular Malaysia. Production and employment in the tin sector have declined significantly in recent decades, as most of Malaysia's

extensive resources (ranked second in the world) were depleted or were beneath developed lands. In 2001, Malaysia mined and processed some 4,973 tons of tin metal and concentrates—falling below the 5,000-ton level for the first time in the country's mining history—down from 6,307 in 2000, 7,340 in 1999, and 36,900 in 1985; production decreased because of depleted high-grade reserves and lower tin prices in the Kuala Lumpur Tin Market. The number of working mines also declined, from 1,000 in 1974 to 37–46 in 2001. To revitalize the tin-mining industry, the Malaysian Chamber of Mines recommended that the government of Perak, one of the two main tin-mining states (Selangor being the other), change the royalty rate to a flat rate. Malaysia was the second-largest producer of refined tin in 1997.

Malaysia also had substantial resources of such tin-associated minerals as ilmenite, monazite, struverite (a columbium [niobium]/tantalum-bearing mineral), and zircon. Malaysia ranked 10th in the world in rare earths reserves, and struverite output increased tenfold in 2001 because of world demand for the production of tantalum metal products; all struverite was exported to China. Malaysia also had important mineral resources of barite, bauxite, carbonate rocks, clays, coal, copper, gold, iron ore, and silica.

Subsoil resources were public property of the states, which granted prospecting licenses and mining leases. Royalties on coal and gold accrued to the states, and export duties were levied on other minerals by the government, which returned a portion to the states. GDP grew by 0.4% in 2001, compared with 8.3% in 2000. The mining and quarrying sector grew by 0.2% in 2001, compared with 3.1% in 2000, and mining and quarrying contributed 6.9% to GDP in 2001. Mineral exports totaled \$8.5 billion in 2001, or 9.7% of total exports; of those, nonfuel minerals accounted for \$566 million. The major export-earning nonfuel minerals in 1997 were: refined tin (\$176 million); copper concentrates (\$45 million); and other minerals, including ilmenite, kaolin, bauxite, clays, iron ore, monazite, silica, zircon concentrate, and mica (\$28 million). The Malaysian Nature Society submitted a proposal to the Perak State government in 2000 to convert a tract of old tin mining land in Batu Gajah into a recreation and conservation site, to be called Kinta Park, which would also promote the area's tin-mining heritage. In 2001, the Penang Island Municipal Council announced that tantalum-bearing minerals were discovered underneath Malaysia's oldest stadium, in Georgetown, and called for interested parties to prospect and mine out the minerals before renovation work could be started on the stadium. Iron ore production increased markedly after World War II, under the stimulus of Japanese demand, but production subsequently dwindled from a peak of 3.9 million tons (iron ore and concentrate) in 1965 to a low of 181,600 in 1985 and 376,000 in 2001. The output of bauxite, all of which was exported, decreased from 703,561 tons (gross weight) in 1975 to 279,000 in 1997, 223,000 in 1999, 123,000 in 2000, and 64,000 in 2001; annual capacity, at the Teluk Rumania and Sg. Rengit mines, in Johor, was 400,000 tons. Malaysia ceased copper production, all of it at the Mamut Mine, in 1999; there were large reserves on Sabah, and output was 131,832 tons in 1985, before dropping to 13,907 in 1998 and 4,600 in 1999. As a result, silver production, most of which was a byproduct of copper mining, dropped from 9,647 kg in 1997 to 4 and 3 kg in 2000 and 2001, respectively. Other metal minerals extracted included gold, columbite, monazite, kaolin, ilmenite, zircon concentrate, and titanium dioxide (from Terangganu). Malaysia was a net exporter of all its coal, copper concentrate, ilmenite, rare earths, and zircon concentrate, and most of its smelted tin. Industrial minerals produced in 2001 included barite, hydraulic cement, clays and earth metals (80 million tons, up from 33 million tons in 1999), dolomite, feldspar, fertilizers, kaolin, limestone, mica, nitrogen, salt, sand and gravel, silica sand, and stone. Silica sand came mainly from natural sand

deposits in Sarawak (56.6 million tons of estimated reserves) and Johor and from tin mine tailings sand in Perak and Selangor; 85% was exported and 63% of exports went to Singapore.

## 27 ENERGY AND POWER

Malaysia's net installed electrical generating capacity in 1998 stood at 13,541 MW. Electrical energy production increased from 1,622 million kWh in 1963 to 4,971 million kWh in 1974 and 57,435 million kWh in 1998. In 1996, 16% of electrical production was hydrogenerated, and over 83% was of thermal origin. The National Electricity Board, a state-owned corporation, supplies the greater part of the nation's power.

Crude oil, developed in the 1970s, is now the chief mineral produced, with reserves estimated at 3 billion barrels in early 2002. In 2001, output averaged 659,205 barrels per day. Malaysia's oil is produced offshore, primarily in the peninsular region. Of new and increasing importance are large offshore natural gas deposits, with reserves estimated at more than 2.1 trillion cu m (74 trillion cu ft). Production in 2000 totaled 42.5 billion cu m (1.5 trillion cu ft). The principal gas fields are the Trengganu, off the east coast of Peninsular Malaysia, and the Central Luconia, Bintulu, and Labuan fields, located off the coasts of Sabah and Sarawak. In 2000, liquefied natural gas (LNG) exports totaled 20 billion cu m. Production of oil and natural gas is controlled by the National Petroleum Co. (PETRONAS).

Since reserves of oil are limited and local coal is of an inferior grade, the government has greatly expanded efforts to harness the country's hydroelectric potential and natural gas as alternative energy sources. In 1994, the government approved the construction of the 2,400 MW Bakun hydroelectric project in Sarawak. However, after a 1996 high court ruling halting the project on environmental grounds, it was suspended indefinitely in 1997 because its unexpectedly high costs made it unfeasible in light of the country's unfavorable economic climate.

## 28 INDUSTRY

Early industrialization efforts centered on the establishment of import-substitution industries (ISI) and resulted in construction of sugar refineries and motor vehicle assembly plants. Industrialization accelerated after the mid-1960s under the provisions of the Investment Incentives Act and the formation of the Malaysian Industrial Development Authority (MIDA). Special incentives were offered for industries that were labor intensive or export oriented or that utilized domestic rubber, wood, and other raw materials. In the mid-1980s the Malaysian economy changed from a commodity-based to a manufacturing-based economy. In 1986, the leading manufacturing industries included rubber processing, the manufacture of tires and other rubber products, palm oil processing, tin smelting, and the manufacture of chemicals, plywood, furniture, and steel. Other industries were textiles, food processing, and the manufacture of electronic and electrical components. Industrial products in 1985 included 3,128,000 tons of cement, 13,839 tons of cigarettes, 70,147 passenger cars, 568,387 television sets, 3,600,000 tires, and 180,746 m of cotton fabric. Most early industries were controlled by ethnic Chinese and foreigners, but current policies call for greater participation by ethnic Malays.

In 2001 the manufacturing sector accounted for 40% of GDP, up from 33% in 1996, and for almost 90% of exports. Of total exports in October 2002, electronics and electrical products accounted for 52%; chemicals and chemical products, 5%; liquefied natural gas (LNG) 3.65%; wood products, 3%; machinery, 2.9%; optical and scientific equipment, 2.6%; textiles and clothing, 2.4%; and refined petroleum, 2.3%. In 2001, Malaysia produced about 15% of the world's DVD players, behind China's 54.1% and Japan's 7.7%. In peninsular Malaysia, the leading industries by value of annual output are rubber and

oil palm processing and manufacturing, light manufacturing industries, electronics, tin mining and smelting, and logging and processing timber. In Sabah, the leading industries are logging and petroleum production, while in Sarawak, they are agricultural processing, petroleum production and refining, and logging.

Malaysia has six oil refineries, with a total capacity of 514,500 barrels per day. Oil production 1996 to 2002 varied between 650,000 bpd and 730,000 bpd, with the 2001 daily average at 659,205 barrels. Proven reserves have dropped from 4.3 billion in 1996 to 3 billion in 2002, and Malaysia's national oil and gas company, PETRONAS, has invested in oil exploration projects in Syria, Turkmenistan, Iran, Pakistan, China, Vietnam, Burma, Algeria, Libya, Tunisia, the Sudan and Angola. Overseas operations made up one-third of PETRONAS' operations in 2002. Japan, Thailand, South Korea and Singapore continue to be the major customers for Malaysian crude oil. Malaysia's domestic oil fields are split between the South China Sea off Borneo and those off Peninsular Malaysia. All exploration is conducted under production-sharing contracts (PSCs) between PETRONAS, the national oil company, and foreign companies. In 1999, foreign oil companies involved in the production of oil and gas in Malaysia included Exxon, Shell, Sonoco, Statoil, Union Carbide, Amerada, and Lundin. Gas reserves are being developed to fuel power stations and to supply industries in Peninsular Malaysia and Singapore. In 2000, Malaysia accounted for 15% of the world's exports of LNG, down from 18% in 1998.

A top industrial priority in Malaysia economic plans is the development of the "multimedia super corridor" (MSC), an ambitious project underway to transform a 15-by-40 km (9.3-by-25 mi) area south of Kuala Lumpur into Asia's version of California's Silicon Valley. It is composed of a number of projects: the tallest building in the world, the 450-m (1,483-ft) Petronas Twin Towers; two of the world's first Smart Cities—Putrajaya, the \$8 billion new seat of government and administrative capital of Malaysia, where the concept of electronic government will be implemented, and Cyberjaya, an intelligent city with multimedia industries, research and development centers, a multimedia university and operational headquarters for MNCs; the construction of a \$3.6 billion international airport; and the installation of a fiber-optic telecommunications system linking them all.

In 1998, as part of its policy to encourage manufacturing industries, the government relaxed restrictions on foreign ownership of new manufacturing projects. Any new manufacturing project for which the Malaysian Industrial Authority (MIDA) approves a license may have up to 100% foreign ownership regardless of its involvement in exporting. This liberalized policy, originally scheduled to expire at the end of 2001 has been extended to the end of 2003.

## 29 SCIENCE AND TECHNOLOGY

Training in science, technology, and related subjects was promoted at all levels during the 1970s and 1980s. Enrollment at technical and vocational secondary schools rose from 4,510 in 1970 to 20,720 in 1985. The National University of Malaysia at Selangor, the University of Malaya at Kuala Lumpur, the University of Agriculture at Selangor Darul Ehsan, the University of Science at Penang, the Technological University at Johor Bahru, Kolej, Damansaura Utama College at Selangor, Politeknik Kuching at Surawak, and Tunku Abdul Rahman College at Kuala Lumpur offer degrees in basic and applied sciences. In 1987-97, science and engineering students accounted for 54% of college and university enrollments. National science policy is administered by the Ministry of Science, Technology, and Environment. The Ministry of Agriculture undertakes all aspects

of research for improvement of crops. The Institute of Medical Research is a branch of the Ministry of Health.

At Kuala Lumpur are located the Forest Research Institute Malaysia (FIRM), the Freshwater Fish Research Center, the Malaysian Agricultural Research and Development Institute (MARDI), the Malaysian Institute of Microelectronic Systems (MIMOS), and the Rubber Research Institute of Malaysia.

In 1987-97, total expenditures on research and development amounted to 0.24% of GNP. During the same period, 93 scientists and engineers per million population were engaged in research and development. In 1998, high-tech exports were valued at \$31.4 billion and accounted for 54% of manufactured exports.

## 30 DOMESTIC TRADE

Imported goods are channeled into the Malaysian market through local branches of large European mercantile firms; by local importers with buying agents abroad; through branch offices and representatives of foreign manufacturers; by local Chinese, Indian, and Arab merchants who import directly; and by commission agents. Chinese merchants occupy an important place in the marketing structure and control a large share of the direct import trade. For warehousing of imported goods, the facilities of the port of Singapore are used, while rubber for export is warehoused mainly on plantations.

The usual business hours are from 8:00 AM to 4:15 PM, Monday-Friday including an hour long lunch break, with generally a half-day on Saturday. In Kelantan, Terengganu, Johor, Perlis, and Kedah states, Thursday is a half-day and (in keeping with Islamic practice) Friday is the day of rest. English is widely used in commerce and industry.

Newspaper and motion picture advertising is directed toward the higher-income consumer, while radio advertising, outdoor displays, and screen slides are used for the lower-income consumer, who is less likely to be literate. A code of practice and ethics governing advertising is in force, with restrictions on advertising of some products, such as alcohol and tobacco. Trade fairs are supervised by the Ministry of Trade and Industry.

## 31 FOREIGN TRADE

During the 1970s, petroleum and manufactures displaced rubber and tin as Malaysia's leading exports. Malaysia now exports over a third (37%) of the world's fixed vegetable oil, and a considerable portion (14%) of the world's radio broadcast receivers, but its largest export revenues come from sales of office machines. The top eight exports are:

	% OF COUNTRY TOTAL
Office machines and parts	21
Transistors and valves	19
Telecommunications equipment	13
Crude petroleum	4.0
Natural and manufactured gas	3.7
Fixed vegetable oil	2.7
Electrical breakers	2.6
Apparel	2.3

In 2000 Malaysia's imports were distributed among the following categories:

Consumer goods	4.4%
Food	3.6%
Fuels	4.8%
Industrial supplies	21.3%
Machinery	60.2%
Transportation	4.1%
Other	1.6%

Exports went primarily to the US (21%), Singapore (18%), and Japan (13%). Imports came primarily from Japan (21%), the

US (17%), and Singapore (14%). Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
United States	20,160	13,637	6,523
Singapore	18,046	11,762	6,284
Japan	12,834	17,240	-4,406
China (inc. Hong Kong)	7,464	5,494	1,970
Netherlands	4,110	578	3,532
Thailand	3,549	3,154	395
Korea	3,280	3,663	-383
United Kingdom	3,044	1,600	1,444
Germany	2,457	2,442	15
Indonesia	1,706	2,269	-563

### 32 BALANCE OF PAYMENTS

Malaysia sustained a favorable trade balance throughout the 1960s and 1970s, recording its first trade deficits in 1981 and 1982, as world prices for tin, crude oil, rubber, and palm oil, the major exports, weakened simultaneously. Malaysia's balance of payments, like that of many other producers of primary products, was adversely affected in 1981–82 by the prolonged recession in the world's industrial nations. From 1983 to 1986, however, Malaysia registered trade surpluses. In the 1990s, a significant growth in exports and a decrease in imports led to trade surpluses, along with a fairly large services deficit. In the early 2000s, however, exports declined, but so did imports of intermediate components used in the manufacture of the country's electronics exports; this contributed to continuing strong trade surpluses.

The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Malaysia's exports was \$94.4 billion while imports totaled \$769 million resulting in a trade surplus of \$93.631 billion.

The International Monetary Fund (IMF) reports that in 2000 Malaysia had exports of goods totaling \$98.4 billion and imports totaling \$77.6 billion. The services credit totaled \$13.8 billion and debit \$16.7 billion. The following table summarizes Malaysia's balance of payments as reported by the IMF for 2000 in millions of US dollars.

<b>Current Account</b>	<b>8,409</b>
Balance on goods	20,854
Balance on services	-2,951
Balance on income	-7,514
Current transfers	-1,979
<b>Capital Account</b>	<b>...</b>
<b>Financial Account</b>	<b>-6,276</b>

<b>Net Errors and Omissions</b>	<b>-3,142</b>
<b>Reserves and Related Items</b>	<b>1,009</b>

### 33 BANKING AND SECURITIES

In 1958, the Bank Negara Tanah Melayu (renamed the Bank Negara Malaysia in 1963) was created as the central banking institution. Bank Negara requires banks to maintain a minimum risk-weighted capital ration (RWCR) of 8%. At the end of 2002, Malaysia had 31 licensed commercial banks, 19 finance companies, 12 merchant banks, two Islamic banks, and 7 discount houses. A total of 36 foreign banks have offices in Malaysia, but their banking privileges are restricted. Specialized credit institutions include the Federal Land Development Authority (FELDA), the Agricultural Bank of Malaysia (Bank Pertanian Malaysia), and Bank Rakyat, serving rural credit

cooperative societies. International trade is financed mainly by the commercial banks. Total banking system assets were \$179.1 billion in 2000. There were 51 offshore banks operating on the island of Labuan in 1997, and a total of more than 1600 companies in operation.

Malaysia offers Islamic banking, which is based on the concept of profit sharing as opposed to the use of interest in the conventional banking system. One such Islamic bank is Bank Islam Malaysia Berhad. The central bank has embarked on a plan to develop Malaysia as a regional Islamic financial center. Toward this end, the central bank formed a consultative committee on Islamic banking in January 1996 to serve as a think-tank group to develop strategies and proposals to map out the future direction of Islamic banking. Although Islamic operations are still only a small proportion of total business, Malaysia has achieved more than most other Islamic countries in this respect, and its developments are regarded as models by them.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$22.1 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$93.9 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 2.79%.

The principal market for securities is the Kuala Lumpur Stock Exchange (KLSE), which separated from the joint Stock Exchange of Malaysia and Singapore in 1973. A second, smaller exchange has operated since 1970 to serve indigenous Malay interests. In October 1991 the Kuala Lumpur Stock Exchange completely severed its links with the Singapore Stock Exchange. As of 2001, the KLSE was capitalized at approximately \$120 billion. Foreign investors are permitted to buy and sell on the stock market, subject only to compliance with regulatory requirements. In June 1995, a wide range of measures liberalizing the Malaysian capital market were introduced. These included the lowering of commission rates on the KLSE, the easing of controls on loans secured against shares and less stringent conditions for overseas fund managers. Overseas funds can now set up 100% subsidiaries for conducting non-Malaysian business, and rules on work permits for expatriate staff have been relaxed. By the end of 1997, the Kuala Lumpur Stock Exchange Composite Index (KLCI) capitalization had declined 53% from its high that year of 1271.57. The KLCI hit a low of 262.70 in September 1998, but had climbed back up to 696.1 by the end of 2001, still barely over half its peak value.

### 34 INSURANCE

In Malaysia, third-party automobile liability, workers' compensation, and social security are compulsory insurance. The law requires insurance firms to maintain a minimum of 80% of their assets in authorized Malaysian holdings, including (by an amendment passed in 1978) 24% in government securities. Foreign insurance companies may operate by obtaining a license. The government's insurance branch, the Malaysian National Reinsurance Berhad, covers 25% of all fire and personal accident, 10% of aviation and automobile, and 20% of all other classes of insurance.

### 35 PUBLIC FINANCE

Malaysia's economy, heavily industrial and heavily dependent on export revenues, experienced a bump in the road when the US economy began to slow down at the end of 2000. The United States is a key trading partner for Malaysia, so as exports to the United States fell, so did Malaysia's economy. The government introduced two fiscal stimulus packages in 2001, but neither did the job; at the time, analysts suspected that GDP would grow less than 1% on the year.

The US Central Intelligence Agency (CIA) estimates that in 2001 Malaysia's central government took in revenues of approximately \$20.3 billion and had expenditures of \$27.2 billion including capital expenditures of \$9.4 billion. Overall, the government registered a deficit of approximately \$6.9 billion. External debt totaled \$44.7 billion.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

<b>REVENUE AND GRANTS</b>	<b>100.0%</b>	<b>20,294</b>
Tax revenue	81.9%	16,618
Non-tax revenue	17.9%	3,638
Capital revenue	0.2%	38
<b>EXPENDITURES</b>	<b>100.0%</b>	<b>31,573</b>
General public services	11.0%	2,994
Defense	11.1%	3,031
Public order and safety	5.3%	1,439
Education	22.8%	6,202
Health	6.3%	1,702
Social security	7.2%	1,959
Housing and community amenities	7.3%	1,988
Economic affairs and services	21.6%	5,881
Other expenditures	11.5%	3,118
Interest payments	12.0%	3,258

### 36 TAXATION

Income tax is levied on all individual and corporate income accrued in Malaysia during the previous year. As of 2000, income of resident individuals is taxed at rates ranging from 2% to 29%. Resident and nonresident companies are charged a flat rate of 28%. A 38% income tax is levied on petroleum corporations.

Incentives are available for pioneer industries and for certain capital investments. Capital gains taxes are levied on real estate. Indirect taxes include a general 10% sales tax (5% for more essential items, and 15% for liquor and cigarettes), and a services tax.

### 37 CUSTOMS AND DUTIES

Import tariffs on textiles and other items already produced in Malaysia are applied in order to protect domestic industries. Rates vary from 0% to 300% and imports are also subject to a 10% sales tax and excise taxes. However, the average duty rate is less than 8.1%. In 2000, the government reduced duties on 136 categories of food products from 5–20% to 2–12%. Imported luxury goods have the highest rates. Items imported for industrial development, including machinery and raw materials imported for processing and re-export, are usually duty-free. Exports are generally free of control, except that licenses and export duties apply to exports of petroleum (25%), rubber, tin, palm oil, timber, and pepper.

As a member of the ASEAN free trade area, Malaysia is a part of the Common Effective Preferential Tariff Scheme (CEPT), which aims to liberalize trade in the region. By 2003, all tariffs on manufactured goods will be reduced to 0–5% between member countries, including Singapore, Brunei, Thailand, Philippines, and Indonesia. Vietnam, Laos, Myanmar, and Cambodia are scheduled to join the CEPT by 2008. Malaysia has bilateral trade agreements with 59 countries as well. There are several free zones and a free port at Port Klang.

### 38 FOREIGN INVESTMENT

The government encourages foreign investors with a tax holiday of up to 10 years for investments in new industries and assurance of convertibility and repatriation of capital and profits. In 1975, the Industrial Coordination Act established new equity

participation guidelines that required a substantial majority of Malaysian ownership of new import-substitution industries catering to the domestic market and using local technology; 70% Malaysian ownership was stipulated for export industries. Export industries using imported raw materials could be 100% foreign owned. Some of these restrictions were eased under the fifth Malaysia plan (1986–90). The Promotion of Investment Act of 1986 allowed 100% foreign ownership if a company exported at least 50% of its product and did not compete with local industry, or if it exported at least 80% of its product regardless of competition. In 1998, 100% foreign ownership was granted to projects exporting at least 80% of output, 79% foreign ownership for exports of at least 51% of output, up to 50% foreign ownership for exporting at least 20% of output, and a maximum foreign ownership of 30% for projects exporting less than 20%, regardless of the origin of raw materials. Also, for new manufacturing projects, in a policy originally set to expire at the end of 2000, and now set to expire at the end of 2003, 100% foreign ownership is permitted in any project approved by the Malaysian Industrial Development Authority (MIDA). The MIDA screens all proposals for manufacturing projects to determine if they are compatible with the Second Industrial Master Plan (1996–2005), and government strategic and social policies.

In October 1990 the government established on the Federal Territory of Labuan as an International Offshore Financial Center (IOFC) to provide offshore banking and insurance, trust fund management, offshore investment holding and licensing companies, and other financial services for multinational companies. In the period following the 11 September 2001 terrorist attacks on the United States, Malaysia took the lead in seeking to institutionalize Islamic banking and attract Islamic investment. In November 2001 Malaysia was a founding member, along with Bahrain, Indonesia, Sudan and the Saudi-based Islamic Development Bank (IDB), of the International Islamic Financial Market (IIFM). Effective 1 April 2002, Malaysian banker Abdul Rais Abdul Majid became the IIFM's chief executive officer. In June 2002 the Malaysian government took the lead in putting together the world's first global Islamic bond issue, whose underlying assets were lease payments for five years by the Malaysian government on its Ministry of Finance building, two hospitals and a civil service accommodation. Trust certificates with amounts payable exactly equal to the government's lease payments were listed on the Luxembourg Stock Exchange in August 2002, and, in September 2002, as a second listing on Labuan International Financial Exchange (LFX), part of the Labuan IOFC. The Labuan Offshore Financial Services Authority (OFSA) takes credit for initiating the idea of the establishment of the IIFM, and the Islamic Financial Service Organization (IFSO), which is taking the lead in formulating and developing standards for the regulation of Islamic financial institutions, is headquartered in Malaysia. More conventionally, as of 2002, eleven free-trade zones (FTZs) have been established in Bayan Lepas, Bukit Baru, Mukim Damansara, Mukim Pringgit, Mukim Plentong, Prai, Tanjong Kling, Telok Panglima Garang, Ulu Kinta, and Ulu Klang in the states of Johor, Melaka, Perak, Penang, and Selangor. (FTZs are specially designated geographic areas with regulations, including minimum customs controls and formalities when importing raw materials, parts, machinery, and equipment, specifically designed to serve export-oriented industries.) There are specially designated FTZs for businesses engaged in commercial activities including trading, breaking bulk, grading, repacking, relabeling, and transit. Within an FTZ, goods are allowed to be imported without being subject to customs procedures, provided the goods are ultimately exported after processing. Two FTZs have been established for trading purposes in Bukit Kayu Hitam, Kedah and Pengkalan

Kubor, Kelantan. A third in Mukim of Plentong, Johor, has been established for commercial activities other than trading.

Assets attracting foreign investors to Malaysia are location, cultural ties with Singapore and Taiwan, its economic and political stability, an increasingly competent labor force, and good infrastructure. The main barriers have been restrictions put on foreign investment and ownership as a part of the government's bumiputera policy, which sought particularly to insure Malay dominance of domestic markets. Nevertheless, before the sharp reduction in 2001, Malaysia was regularly listed among the top 25 best destinations for foreign investments.

According to UNCTAD's *World Investment Report 2002*, annual average foreign direct investment (FDI) in Malaysia 1985–1995 was close to \$3 billion, amounting to an average 14.5% of the country's annual gross fixed capital formation. In 1996, annual FDI rose above \$7 billion to a record high. A strong first half in 1997 brought the year's total to \$6.3 billion before falling over 57% to \$2.7 billion in 1998 reflecting the rapid disinvestments that precipitated the Asian Financial Crisis. Recovery was sharp, if incomplete, however, and FDI reached \$3.89 billion in 1999, 22.2% of the gross fixed capital formation (GFCF), and \$3.8 billion, 16.5% of GFCF, in 2000. However, in 2001, in the context of a worldwide contraction in foreign investment of almost 50%, FDI to Malaysia fell a precipitous 85.4% to \$554 million. Total stocks of FDI in Malaysia grew 83.6% in period 1995 to 2000, from \$28.7 billion to \$52.7 billion, and from 32.3% to 58.8% as a percent of GDP. In 2001, the total FDI stock increased only 1% as the total reached \$53.3 billion. The largest investment sources are the United States, Japan, Germany, Taiwan, Singapore, and Korea.

In 1996 the government announced a list of 31 major infrastructure projects to be built between 1995 and 2020 at a cost of M\$163 billion. The Second Industrial Master Plan (1996 to 2005) outlined investment opportunities. These have drawn a huge influx of foreign investment. They include the Bukun hydroelectric dam in Sarawak, Southeast Asia's largest; and the projects involved in the development of the Multimedia Super Corridor (MSC): the Petronas Twin Towers, the world's tallest; one of the region's most modern airports; and Putrajaya, the new capital city and administrative center for electronic government, and Cyberjaya, Malaysia's center for computer technology. The United States emerged as an important investment source in recent years, with manufacturing investments in 1998 totaling \$1.7 billion. Most foreign investment is concentrated in the production of electronic components, consumer electronics, and electrical goods (dominated by US and Japanese firms), petroleum production and distribution, textiles, vehicle assembly, steel, cement, rubber products, and electrical machinery.

Malaysian outward investments 1985 to 1995 amounted to less than a quarter of inward investments, with an annual average of \$677 million. However, in 2001 and 2002, this ratio had more than doubled to about 50%. A significant source of outward investments is Petroliaam Nasional Berhad (PETRONAS), the state oil company incorporated in 1974 during the first oil shock. In 2002, domestic petroleum reserves had fallen to about 3 billion barrels of oil and 2.34 trillion cu m (82.5 trillion cu ft) of gas. Overseas investments in the upstream sectors (exploration, development and production) of the petroleum industries in 20 countries have, as of 2002, yielded an additional 3.25 billion barrels of oil equivalent. In international investments involving downstream operations (refining, distribution, marketing), PETRONAS's acquisition of the entire share holding of Engen Ltd., a South African oil company, increased its net refining capacity by almost 40%, to 361,500 bpd. The state company's other downstream activities include liquefied petroleum gas (LPG) terminalizing, bottling, and distribution in China, Vietnam and the Philippines, and refining and retailing in the Cambodia and Thailand.

### 39 ECONOMIC DEVELOPMENT

In the last 20 years, Malaysia economy has been transformed from a protected low income supplier of raw materials to a middle income emerging multi-sector market economy driven by manufactured exports, particularly electronics and semiconductors, which constitute about 90% of exports. Since 1970, and the institution of the New Economic Policy (NEP) following deadly riots in 1969 against economically dominant ethnic Chinese, the government's commitment to the free market has been hedged by its *bumiputurna* (literally, "sons of the soil") policies aimed at providing "constructive protection" for Islamic Malays against economic competition from other ethnic groups and foreign investors, particularly in the domestic market. In the Asian financial crisis of 1997, most of the major companies that the government had privatized and reserved for bumiputurna leadership, including Proton, the national car company, Malaysian Airlines, the Renong engineering group, and the Malaysian Resources media group, had to be renationalized to prevent their collapse. A vigorous recovery program mounted by the government that was showing positive results in 1999 and 2000 ran abruptly into the wall of the 2001 global slowdown. Worldwide, foreign direct investment dropped almost 50%, and in Malaysia the decline was an even more precipitous 85%. Gross domestic product growth dropped to 0.7% for 2001, from its usual 7% to 9%. Business in Malaysia remains dominated by non-Malays. Annual growth rates, which had been running 7% to 9%, came abruptly up against a wall in 2001. The government remains generally committed to a policy of free enterprise, although it owns and operates the railway and the majority of the communications systems and has become increasingly involved in certain key industries.

In 1970, a government holding company, Perbadanan Nasional (PERNAS), was created to encourage Malay-controlled businesses; in 1975, the government attempted, through PERNAS, to strengthen Malaysian interests in the tin-mining sector. Also in 1974, the government established the National Oil Co. (PETRONAS), with the overall aim of acquiring majority control of the country's petroleum operations. The Industrial Coordination Act of 1975 attempted to accelerate indigenous Malay participation in the economy by setting limits on foreign participation in the processing, domestic distribution, and export of local raw materials. In 1971, the New Economic Policy (NEP) was adopted, with the aim of channeling a greater share of future economic growth into Malay hands. It specifically called for raising the level of corporate ownership by Malays to 30% by 1990, reducing corporate ownership by other Malaysians (i.e., Chinese and Indians) to 40%, and restricting foreigners to ownership of no more than 30%. Short-term investment strategies are set forth in a series of economic plans. The fourth Malaysia plan (1981–85) proposed a level of development spending of M\$42.8 billion and called for acceleration of the NEP goals for Bumiputra economic participation. Major industrial and infrastructural development projects included a M\$900-million bridge between Pulau Pinang and the mainland and a M\$600-million automobile-manufacturing plant, both of which opened in 1985. Recent economic planning has stressed a "look East" policy, with Malaysia attempting to emulate the economic successes of Japan and the Republic of Korea by importing technology from those countries. In response to deteriorating prices for oil and other exports, the fifth Malaysia plan (1986–90) has moved away from the goals of the NEP, aiming instead at promoting foreign investment, particularly in export industries.

The year 1990 marked the culmination of several economic development plans: the fifth Malaysia plan (FMP), 1986–90; the conclusion of the first outline perspective plan (OPP1) 1971–1990; and the completion of the new economic policy (NEP) 1971–1990. The FMP emphasized industrialization. Specific

targets were formulated to ensure that the distribution of ownership and participation in the commercial and industrial sector would be characterized by ethnic group participation, 30% bumiputra—Malays and other indigenous peoples of Malaysia, 40% other Malaysians (Chinese and Indian descent), and 30% foreign. The government provided funds to purchase foreign-owned shareholding on behalf of the Bumiputra population, increasing their equity to 20% by 1990. These policies are part of the new national development policy, although specific targets and time tables have been dropped. A post-1990 NEP defined Malaysian economic strategy for full development by 2020. Three ten-year outline perspective plans, which included a new development plan and six five-year plans, made up the NEP. A second outline perspective plan (OPP2) 1991–2000 aimed to sustain growth momentum and to achieve a more balanced development of the economy. The sixth Malaysia plan called for an average annual growth rate of 7.5%, and expenditures on infrastructure were included to ensure prospects for further development. Development trends are toward privatization, encouraging the spread of industry throughout the country, increasing manufacturing in the free trade zones, and providing financing for industry through the establishment of specialized financing institutions.

A five-year development plan announced by Dr. Mahathir on 6 May 1996 forecasted average growth of 8% per year from 1996 to 2000. But it also tackled issues that bothered skeptics of the Malaysian economy: low rises in productivity, a skills shortage, and a gaping current-account deficit. In 1997 and 1998, these issues, along with a global financial crisis based in Asia caused the downturn that skeptics expected. Prospects for continuation of the second industrial master plan for 1996 through 2005 seemed grim, although the economy began to rebound in 1999. Massive capital and infrastructure projects have attracted foreign investment and international respect.

#### 40 SOCIAL DEVELOPMENT

Public financial assistance should be considered within the framework of Malaysian society, with its highly developed sense of family and clan responsibility. The government has generally encouraged volunteer social welfare activities and has subsidized programs of private groups. The Department of Social Welfare, under the Ministry of Welfare Services, administers and coordinates social assistance programs. The government's program of public assistance takes the form of cash, commodities, and institutional care. Children's services provide case-work services and administer children's homes. A probation service provides care and assistance for juvenile delinquents and dependents, and a handicapped persons' service aids the deaf, mute, and blind. In addition, care is provided for the aged and chronically ill.

A provident fund has provided lump-sum benefits for old age, disability, and death. Pensions are funded by 11% contributions of earnings by workers, and 12% of payroll by employers. The retirement age is 55. Work injury insurance and disability pensions to low-income workers is available, with a special system for public employees.

The government has taken active measures to improve the rights and standing of women. The Islamic Family Law was revised to strengthen the inheritance rights of Muslim women and to increase their access to divorce. The government passed a domestic violence bill that allows the courts to protect victims of spousal abuse. However, this law falls short of making domestic violence a criminal act that may be tried under the existing law regarding assault and battery. Most Muslim women play subordinate roles in public and private life in spite of their growing legal rights. In family and religious matters, Muslim women are subject to Islamic law, which allows polygyny. Custom favors men in matters of inheritance. Some Malays

practice a modified form of female genital mutilation. Except in teaching and nursing, women are underrepresented in professional occupations.

Human rights abuses include arbitrary arrest and detention, torture, and other types of prisoner abuse. Caning is still used for some crimes.

#### 41 HEALTH

Malaysia enjoys a comparatively high standard of health, the result of long-established health and medical services. The country has improved its health care and social conditions and is considering a national health insurance plan. There are three main hospitals in Malaysia, all located in the capital, Kuala Lumpur: Subang Jaya Hospital, General Hospital, and Penang Adventist Hospital. Approximately 80% of the population had access to health care in 1993. As of 1999, there were an estimated 0.7 physicians and 2.0 hospital beds per 1,000 people. In the same year, total health care expenditure was estimated at 2.5 % of GDP. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 24.22 and 5.2 per 1,000 people. In 1990–95, 51% of married women (ages 15 to 49) used contraception. Life expectancy has risen over the last decade and was 73 years in 2000. In 1994–95, 90% of the population had access to safe water, and 94% had adequate sanitation.

Under the tuberculosis control campaign, begun in 1961, the number of annual deaths from tuberculosis declined to 971 in 1970 and 672 in 1983. In 1999, there were only 111 reported cases of tuberculosis per 100,000 people. As a result of the yaws elimination campaign, begun in 1954, the disease was virtually eliminated in the late 1960s. A malaria eradication program, begun in 1967, resulted in a drop in the number of hospital admissions for malaria from 25,400 in 1970 to 8,274 in 1984. Malaria remains a common disease in Malaysia. At least 39,890 cases of malaria were reported in 1993.

In 1989–95, 23% of children under five years of age were still considered malnourished. Immunization rates from 1990–94 for children up to one year old were quite high: tuberculosis, 99%; diphtheria, pertussis, and tetanus, 90%; polio, 90%; and measles, 81%. In 1999, rates for DPT and measles were, respectively, 93% and 88%.

Tobacco use has increased since the mid-1980s. As of 1995, each adult smoked an average of 1.9 kg (4.2 lbs) of tobacco per year. Between 1970 and 1989, cardiovascular disease death rates more than doubled. Among the main ethnic groups in Malaysia, those of Indian origins have the highest mortality rates compared to the Chinese and Malay. Similar trends exist for diabetes mortality.

As of 1999 the number of people living with HIV/AIDS was estimated at 49,000 and deaths from AIDS that year were estimated at 1,900. HIV prevalence was 0.42 per 100 adults. Infant mortality in 2000 was 8 per 1,000 live births. The maternal mortality rate in 1998 was 39 per 100,000 live births. The total fertility rate has dropped from 4.2 in 1980 to 3 in 2000.

#### 42 HOUSING

A total of 744,000 new housing units were built during 1970–80, and an estimated 923,300 units—43% public and 57% private—were planned under the 1981–85 development plan. About 92% of all housing units were detached houses, 7% were apartments, and 1% were single rooms.

The need for urban housing is acute: an estimated 24% of Kuala Lumpur's population consists of recently arrived squatters living in overcrowded shantytowns with few urban amenities. A government plan for low-cost housing was expected to provide 80,000 units per year from 1986 to 1988. In the mid-1990s, the total number of housing units was 3,403,000.

### 43 EDUCATION

Six years of free primary education are followed by three years of comprehensive general and prevocational education. Two further years of education at the post-comprehensive level, in either a vocational or an academic program, are offered. A two-year pre-university course prepares students for admission to the universities. Malay is the medium of instruction in primary and secondary schools, with English as a compulsory second language. Muslim religious instruction is compulsory for all Muslim children while private Christian schools offer religious training to their students. For the year 2000, an estimated 12.5% of the adult population (males, 8.5%; females, 16.4%) was illiterate. As of 1999, public expenditure on education was estimated at 4.6% of GDP.

In 1997, primary schools enrolled 2,840,667 pupils, instructed by 148,000 teachers. Student-to-teacher ratio stood at 19 to 1. In secondary schools, there were 1,889,592 pupils, instructed by 102,139 teachers, in 1998. The pupil-teacher ratio at the primary level was 20 to 1 in 1999. In 1996, 210,724 students were enrolled and 14,960 teaching faculty were employed in institutions of higher education, which include the Universiti Kebangsaan Malaysia (the National University of Malaysia), the University of Malaya, and the Technological University of Malaysia, all in or near Kuala Lumpur, and the University of Science Malaysia (formerly the University of Pinang). The MARA Institute of Technology is the largest post-secondary institute in the country.

### 44 LIBRARIES AND MUSEUMS

The National Library of Malaysia, with more than 1.3 million volumes, was established in 1971 and has been charged with wide responsibilities under the National Library Act. Both the National Library and the National Archives are in Kuala Lumpur. The National University of Malaysia (Universiti Kebangsaan Malaysia) in Bargi has 945,000 volumes. Other important libraries are those at the universities; the Sabah (380,000) and Sarawak (500,000) state libraries; Tun Abdul Razak Library at the MARA University of Technology (569,000); and the library of the Malaysian Rubber Board (120,000). The largest public libraries are in Denang, Malacca, and Selangor.

The National Museum of Malaysia in Kuala Lumpur, constructed on the site of the former Selangor Museum (destroyed in World War II), houses extensive collections of Malayan archaeology, ethnography, and zoology. The Perak Museum in Taiping, founded in 1883, has a varied collection exhibiting antiquities, ethnographic, and zoological materials. Also in Kuala Lumpur are the Museum of Asian Art (1974), the Postal Museum, the Air Force Museum, and the National Art Gallery (1958). Sabah and Sarawak maintain anthropological and archaeological collections pertinent to East Malaysia. There is an Aboriginal Affairs Museum in Gombak.

### 45 MEDIA

The government owns and operates a well-developed and well-equipped telecommunications system. In 2000, Malaysia had over 4.6 million mainline telephones, including private wire and public coin stations. The same year, there were an additional 5 million cellular phones in use throughout the country. Automatic dialing for the majority of exchanges is provided by a VHF radio circuit. Telegraph and radiotelephone connections link Peninsular Malaysia with most foreign countries.

Radio-Television Malaysia (RTM) operates radio and television stations in Kuala Lumpur, Sabah, and Kuching, and there is a commercial station, Sistem TV-3 Berhad, in Kuala Lumpur as well. Broadcasts are in English, Malay, five Chinese dialects, Tamil, and numerous local languages and dialects. As of 2001 Malaysia had 35 AM and 391 FM radio stations and 1

television station. In 2000, there were 420 radios and 168 televisions sets for every 1,000 people. In 2001, there were 4.1 million Internet subscribers served by seven service providers.

Malaysia generally has enjoyed a large measure of press freedom. In October 1987, however, the government closed four newspapers in an effort to end criticism of its policies. While the press is normally moderate and objective, it treads carefully when dealing with Malaysia's plural ethnic and cultural foundations. There are about 80 English, Malay, Chinese, and Tamil daily and weekly newspapers. The Malay-language press is the largest segment, followed by English, Chinese, Tamil, Punjabi, and Kadazan. The leading Kuala Lumpur dailies (with their 2002 circulations) are as follows:

	LANGUAGE	CIRCULATION
<i>Berita Harian</i>	Malay	350,000
<i>Utusan Malaysia</i>	Malay	240,000
<i>China Press</i>	Chinese	210,000
<i>New Straits Times</i>	English	190,000
<i>Nanyang Siang Pau</i>	Chinese	183,800
<i>Malaysian Namban</i>	Tamil	NA Major

Papers in Petaling Jaya include:

	LANGUAGE	CIRCULATION
<i>New Life Post</i> (every other week)	Chinese	231,000
<i>Sin Chew Jit Poh</i> (daily)	Chinese	227,070
<i>The Star</i> (daily)	English	220,490

Though the constitution provides for freedom of speech and a free press, in practice the government is said to restrict the flow of information deemed "sensitive" including issues regarding citizenship of non-Malays and the special position of Malays in society. The media generally practices self censorship, providing laudatory, noncritical coverage of government activities.

### 46 ORGANIZATIONS

The Malaysian government promotes thrift, credit, processing, marketing, farming, consumer, and housing cooperatives. The cooperative movement was introduced in Malaya in 1922. The Chinese are organized along clan, common dialect, or occupational lines into rural credit associations. These local associations set up and maintain schools, build temples, and provide burial, relief, and employment services. In the larger cities, chambers of commerce, organized along ethnic lines, promote the economic welfare of the group represented.

Cultural organizations include the multinational Royal Asiatic Society and the International Institute of Islamic Thought and Civilization. Educational and research organizations include the Malaysian Medical Association and the Malaysian Scientific Association.

Kiwanis and Lion's clubs have programs in the country. Youth organizations include the Federation of Malay Student Unions, Girl Guides Association of Malaysia, Malaysia Council of Churches Youth Division, Muslim Youth Movement of Malaysia, National Union of Malaysian Muslim Students, and the United Malaysian Youth Movement. YMCA/YWCA chapters are also active. The Red Crescent Society is active in the country.

### 47 TOURISM, TRAVEL, AND RECREATION

In 2000, Malaysia had 134,503 hotel rooms with an occupancy rate of 58%. Most large hotels are in the major cities of Kuala Lumpur and George Town. The best-known hill resort areas are Cameron Highlands, Raub, and Pinang Hill. Island resorts off the coast of the peninsula are Langkawi and Pangkor. Horse racing, soccer, rugby, cricket, and sepak raga (a form of badminton) are popular spectator sports. Kite fighting and top spinning are traditional pastimes for children and adults, and silat (a Malay martial art) is popular in rural areas.

Passports are required of all entrants, although Malaysia has visa abolition agreements with all Commonwealth countries, the US, and other countries. Yellow fever inoculations are necessary for those arriving from infected areas.

Tourists numbered 10,221,582 in 2000 with receipts of about \$4.9 billion.

The estimated cost of staying in Kuala Lumpur, according to 2002 US government estimates, was \$129 per day.

#### 48 FAMOUS MALAYSIANS

Among the foremost Malaysian leaders of the past was Sultan Mahmud, 16th-century ruler of Malacca. A great figure in Malay culture was 'Abdallah bin 'Abd al-Kabir (surnamed Munshi', 1796–1854), sometimes called the greatest innovator in Malay letters. The best-known figure in the political life of modern Malaysia is Tunku Abdul Rahman Putra bin Abdul Hamid Halimshah (1903–1990), first prime minister of the Federation of Malaysia. Other political leaders are Tun Abdul Razak (1922–76), the nation's second prime minister (1970–76); Datuk Seri Mahathir bin Mohamed (b.1925), prime minister since 1981; Dato Onn bin Ja'afar (1895–1962), a founder of the United Malays National Organization; and Sir Cheng-lock Tan (1883–1960), leader of the Malaysian Chinese Association.

#### 49 DEPENDENCIES

Malaysia has no territories or colonies.

# MALDIVES

Republic of Maldives

*Dhivehi Raajjeyge Jumhooriyyaa*

**CAPITAL:** Malé

**FLAG:** The national flag consists of a white crescent at the center of a green field which, in turn, is at the center of a red field.

**ANTHEM:** *Gavmii mi erkuverikan matii tibegen kuriime salaam* (In National Unity Do We Salute Our Nation).

**MONETARY UNIT:** The Maldivian rupee, or rufiyaa (MR), is a paper currency of 100 laris. There are notes of ½, 1, 2, 5, 10, 50, and 100 rufiyaa. The dollar circulates freely and is the only currency accepted at some resorts. MR1 = \$0.0784 (or \$1 = MR12.75) as of January 2003.

**WEIGHTS AND MEASURES:** The metric system has been adopted, but some local units remain in use.

**HOLIDAYS:** National Day, 7 January; Independence Day, 26 July; Republic Day, 11 November; Fishermen's Day, 10 December. 'Id al-Fitr, 'Id al-'Adha', and Milad an-Nabi are some of the Muslim religious holidays observed.

**TIME:** 5 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

The smallest country in Asia, the Republic of Maldives consists of an archipelago of nearly 1,200 coral islands and sand banks in the Indian Ocean, some 200 of which are inhabited. The chain of islands sits astride the equator, south of India and west of Sri Lanka, extending 823 km (511 mi) but occupying an area of just 300 sq km (116 sq mi). The area occupied by Maldives is slightly more than 1.5 times the size of Washington, D.C. Grouped in 26 atolls, with a total coastline of 644 km (400 mi), the northernmost atoll lies some 110 km (70 mi) south of India's Minicoy Atoll, about 480 km (300 mi) southeast of India's Cape Comorin, and 649 km (400 mi) west of Sri Lanka.

Maldives' capital, Malé, is situated on a 2.5 sq km (1 sq mi) island, the largest in the entire chain, in the Malé Atoll.

## <sup>2</sup>TOPOGRAPHY

The islands vary from tiny banks to real islets. Some of the islands are in process of formation and are constantly increasing in size; others are gradually washing away. The islands are level and extremely low-lying, with elevations rarely exceeding 1.8 m (6 ft) above sea level. Many contain freshwater lagoons.

## <sup>3</sup>CLIMATE

The Maldives' equatorial climate is generally hot and humid, with a mean temperature of about 27°C (81°F). The weather during the northeast monsoon (November–March) is mild and pleasant; the southwest monsoon (June–August) is violent and very rainy. The northern atolls are subject to more violent storms than those in the south. Annual rainfall in the south averages about 380 cm (150 in); in the north, 250 cm (100 in).

## <sup>4</sup>FLORA AND FAUNA

The islands are covered with a dense scrub. The northern and southern islands are more fertile than those in the central group, and the eastern islands generally are more fertile than the western. Coconut, breadfruit, plantain, papaya, mango, and banyan trees flourish. Shrubs and flowers are widespread. Rats,

rabbits, and flying foxes are the only indigenous mammals. Birds include ducks, bitterns, crows, curlews, snipes, and various sea birds. Small scorpions, beetles, and land crabs are common. Inland lagoons and coastal reefs contain tropical ocean fish, crustaceans, and turtles; the surrounding waters contain sharks, swordfish, and porpoises.

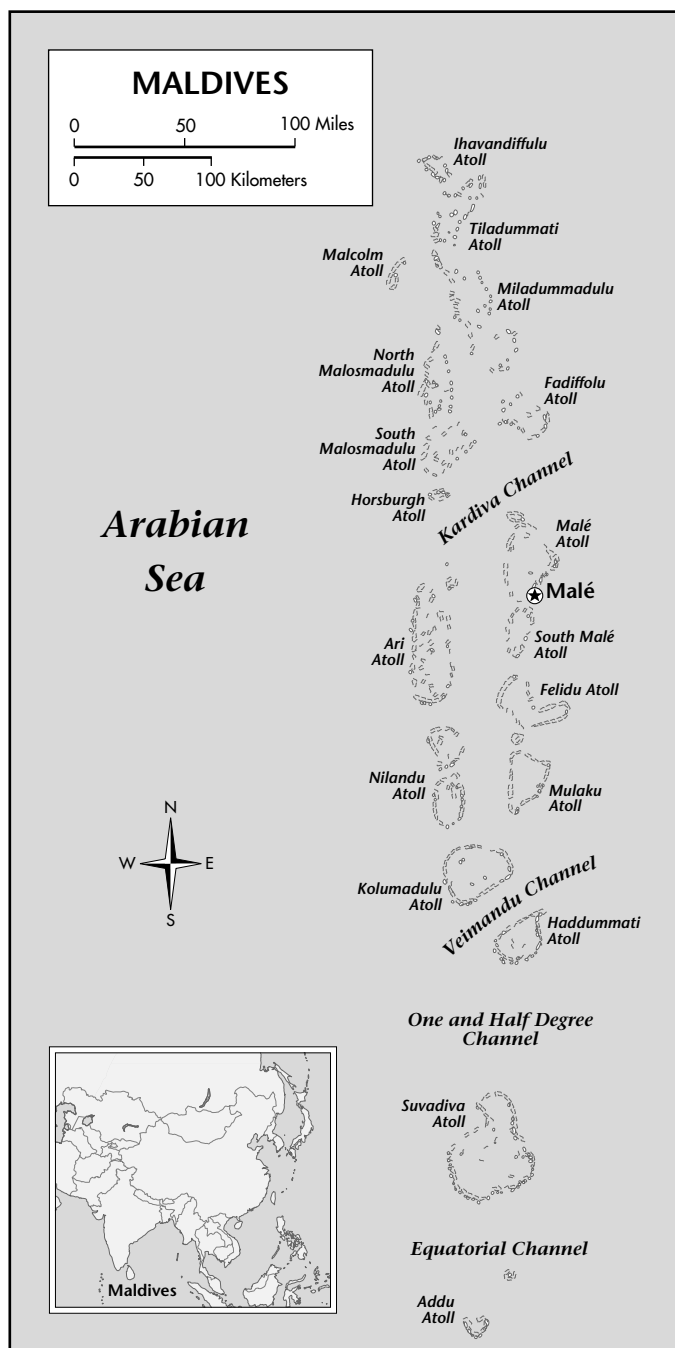

## <sup>5</sup>ENVIRONMENT

Environmental issues in the Maldives include dwindling freshwater supply and inadequate sewage treatment. Recent estimates indicate that the nation's water supply may be exhausted in the near future, and population increases have created a sanitation problem that threatens the waters surrounding this island nation. Another significant environmental problem is a rise in sea levels due to global warming. The islands are particularly susceptible to flooding. Environmental preservation is complicated by the unique problems of a nation consisting of 1,200 islands spread over 510 miles of the Indian Ocean. Preservation of the desert island ecology, protection of marine life and coral reefs, and coconut tree rehabilitation are additional environmental goals. The hawksbill turtle, green turtle, and blue whale are on the endangered list.

## <sup>6</sup>POPULATION

The population of Maldives in 2003 was estimated by the United Nations at 318,000, which placed it as number 167 in population among the 193 nations of the world. In that year approximately 4% of the population was over 65 years of age, with another 41% of the population under 15 years of age. There were 105 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 2.98%, with the projected population for the year 2015 at 447,000. The population density in 2002 was 937 per sq km (2,426 per sq mi).

It was estimated by the Population Reference Bureau that 26% of the population lived in urban areas in 2001. Malé, the capital and sole urban settlement, had a population of 72,000 concentrated on an island of only about 1.9 sq km (0.75 sq mi).

LOCATION: 7°7' N to 0°43' S; 72°31' to 73°46' E. TERRITORIAL SEA LIMIT: 12 miles.

According to the United Nations, the urban population growth rate for 2000–2005 was 3.8%.

## 7 MIGRATION

Inter-island migration is limited to settlement in Malé; between 1967 and 2000, population in the capital rose from one-tenth to nearly one-quarter of the national total. In 1999, the net migration rate was zero. The total number of migrants in 2000 was 3,000. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

The original inhabitants of the Maldives are thought to have been of south Indian and Arab origin. The people of the northern atolls have to some extent intermarried with peoples from western India, Arabia, and North Africa. Inhabitants of the southern islands show stronger physical affinities with the Sinhalese of Sri Lanka. Black African slaves imported from Zanzibar and Arabia have intermarried with the Maldivians, and there are also some Caucasian and Malayan elements.

## 9 LANGUAGES

The Maldivian language, called Divehi, is similar to the old Sinhala (Elu) of Ceylon. It has contributed the word *atoll* to international terminology. In recent years, the language has been influenced by Arabic and Urdu. Thaana, developed during the 17th century, is the corresponding script, written from right to left. English is spoken by most government officials, but only by a small number of the Maldivian population.

## 10 RELIGIONS

Though there is evidence that the early Maldivians were Buddhists, their conversion to Islam dates from 1153. With few exceptions, the people are Sunni Muslims, and both land ownership and citizenship are limited to adherents to this faith. Non-Muslim foreigners working in or visiting the country are permitted to practice their own religion privately. There are no non-Muslim places of worship. Proselytizing for non-Muslim faiths is prohibited. The government's Department of Religious Affairs regulates matters pertaining to religion.

## 11 TRANSPORTATION

Malé, the capital, and some other islands have fairly good streets. Most people travel by bicycle or on foot. Interatoll transportation still depends mostly on local sailing boats, called *batheli* and *odi*. Although some mechanized boats carry cargo and, occasionally, passengers between Malé and other atolls, interisland transport is mainly by means of *dhonis* (small boats). Only a few of the islands are big enough to support automobiles. As of 2002, the Maldives had a fleet of 14 vessels, totaling 51,532 GRT, serving worldwide destinations, all controlled by Maldives Shipping Ltd., a public enterprise. In 2001, the Maldives had five airports, two of which had paved runways. Hulule, Malé's international airport, two km (one mi) away over water from the capital, was completed in 1966. Built with assistance by Sri Lanka under the Colombo Plan, it consists of two islands that were joined together to create a runway. It is served by Singapore Airlines, Air Lanka, various European tourist carriers, and Indian Airlines, the last also operating as Air Maldivian on certain flights. Also in 2001, 311,100 passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

The first inhabitants of the Maldives were probably Dravidian speakers from south India, who were followed by Indo-European speaking Sinhalese from Ceylon in the 4th and 5th centuries BC. The island chain first became known in the West through the writings of Ptolemy, during the 2nd century AD. The island chain may have been ruled in ancient times by the Chinese; later, its rulers paid an annual tribute to principalities of western India. Maldivians were converted to Sunni Islam from Buddhism by Arab traders from east Africa and the Middle East in the middle of the 12th century, and from 1153, an unbroken line of 92 sultans served as local rulers for 800 years until 1953. In 1343, Ibn Battutah, the Arab traveler and historian, visited the islands and served for a time as a qadi.

After their discovery by the Portuguese traveler Dom Lourenço de Alameida in 1507, the Maldives were occupied by the

Portuguese and forced to pay a tribute to Goa, the center of Portugal's South Asian holdings. But the Portuguese were driven out in 1573 by Muhammad Thakurufaani al-Azam, who, after becoming sultan, introduced a monetary system, a new script, and a standing militia. In the 17th century, the Dutch, who controlled neighboring Ceylon (now Sri Lanka), concluded a treaty with the sultanate which thereafter paid tribute to the rulers of Ceylon and claimed their protection.

The British completed their occupation of Ceylon in 1815, and British responsibility for the protection of the Maldives was formally recorded in 1887. By terms of the compact, the sultan recognized the suzerainty of the British sovereign and disclaimed all rights or intention to enter into any treaty or negotiations with any foreign state except through the (British) ruler of Ceylon. When Ceylon became independent in 1948, a new agreement was signed with the British government, providing for the Maldives to remain under the protection of the British crown, for external affairs to be conducted by or in accordance with the advice of the British government, for Britain to refrain from interfering in the internal affairs of the islands, and for the sultan to afford such facilities for British forces as were necessary for the defense of the islands or the Commonwealth. No tribute was to be paid by Maldives. New agreements reaffirming these provisions were signed in 1953, 1956, and 1960.

The sultanate, dominated by the Didi family since 1759, was abolished in 1953, and the Maldives was declared a republic. The first president, Amin Didi, ordered the emancipation of women and other reforms that were resented by more conservative elements among the people, and nine months later he was overthrown. His cousins Muhammad Farid Didi and Ibrahim 'Ali Didi became co-presidents in September 1953, and a month later the National Assembly voted to restore the sultanate. The new sultan, Muhammad Didi, was installed at Malé on 7 March 1954, and Ibrahim 'Ali Didi, the prime minister, formed a new government.

The government's agreement in 1956 to permit Britain to maintain an air base on Gan Island in the southern Maldives produced a public reaction so strong that Prime Minister Ibrahim was forced to resign in December 1957. Ibrahim Nasir, who succeeded him, asserted that the British base would violate Maldivian neutrality, but when his government sent a representative to Gan to tell the islanders to stop working for the British, the islanders attacked him.

Early in 1959, the people of Addu Atoll, in which Gan Island is located, declared their independence. At the same time, a rebellion broke out in the three southernmost atolls (including Addu). The rebel headmen declared the formation of the United Suvadiva Republic (with a population of 20,000) and demanded recognition from London. The British refused to comply, but the Nasir government made public its suspicions that the coup had been engineered by the British. In the event, government forces crushed the rebels in two of the atolls but made no attempt to interfere on Gan or any of the other seven main islands in the Addu group. By March 1960, the Suvadiva Republic was declared dissolved, and a committee ruling under the sovereign control of the sultan was set up, including among its members 'Abdallah Afif, leader of the rebellion.

In February 1960, the Maldivian government made a free gift to the British government of the use of Gan Island and other facilities in Addu Atoll for 30 years, and a fresh agreement was drawn up between the governments. In return, the British agreed to assist in bringing about a reconciliation between the Maldivian government and the disaffected inhabitants of the southern islands. But by 1962, resentment had grown against the British owing to their lack of progress in implementing the agreement; in late 1962 a Royal Navy frigate was sent to the capital island of Malé to protect British citizens. 'Abdallah Afif was evacuated by the British to the Seychelles.

The Sultanate of the Maldivian Islands achieved complete independence on 26 July 1965, with the British continuing to retain use of the facilities on Gan in return for the payment of \$2,380,000, most to be spent over a period of years for economic development. In March 1968, a referendum resulted in an 81% vote to abolish the sultanate and to reestablish a republic. A new republican constitution came into force on 11 November 1968, establishing the Republic of Maldives, and Nasir—then prime minister—became president.

With the British secure in their control of facilities they share with the United States outside the Maldives in Diego Garcia, 650 km (400 mi) east of Gan, Britain vacated the Gan air base on 31 December 1975, and the UK-Maldivian accord was formally terminated the following year.

Nasir declined renomination and was succeeded as president on 11 November 1978 by Maumoon Abdul Gayoom, who was chosen by the Citizens' Majlis (parliament) in June and was confirmed in a popular referendum by a majority of 90% on 28 July. Reelected president by the Majlis in August 1983, Gayoom won confirmation in a national referendum on 30 September with a majority of 95.6%. Gayoom was reelected to a third term in August 1988. He successfully resisted a brief attempt to overthrow him by Sri Lankan Tamil mercenaries in November 1988 with the help of an Indian military contingent flown to the Maldives at his request. In addition to the presidency, Gayoom is also minister of defense and minister for national security.

Gayoom was reelected for a fourth term as president in August 1993 and confirmed by popular referendum in September. He was elected to a fifth term, unopposed, in 1998. Gayoom's only principal rival for the presidency came in the 1993 election when his brother-in-law Ilyas Ibrahim ran against him. Ibrahim subsequently was tried in absentia for violation of the constitution, found guilty of treason, and sentenced to more than 15 years banishment from the islands.

The Maldives has been concerned for two decades about the effects of global warming on the islands. At the UN World Summit on Sustainable Development held in August and September 2002 in Johannesburg, South Africa, President Gayoom warned that his country could be submerged if a rise in sea levels due to the melting of polar ice caps continued. "A mere one-meter rise would mean the death of a nation," he stated. As world temperatures rise, the effects on the Maldives would include coastal erosion, increasing salinity of fresh water sources, altered tidal ranges and patterns, and the gradual destruction of the coral reefs that form the islands and their breakwaters.

### 13 GOVERNMENT

The constitution of the Republic of Maldives that came into force in 1968 (and amended in 1970, 1972, and 1975) was repealed and replaced by a new constitution in 1997. It came into force on 1 January 1998. The Citizens' Majlis (parliament) nominates a single candidate for the presidency, who is confirmed in office thereafter by popular referendum. The president heads the executive branch and appoints the cabinet and is constitutionally permitted to have as many vice presidents as he desires. The president serves a five-year term of office. Presidential elections must be held by October 2003.

The unicameral Majlis is a body of 50 members, 42 of whom are directly elected (2 from each of the 20 inhabited atolls and 2 from the capital island of Malé) by universal suffrage of citizens over 21. Eight members are appointed by the president. Members serve five-year terms. The Majlis drafts legislation that becomes law after ratification by the president. The Majlis also nominates the president by secret ballot. The candidate is then approved by referendum of the population.

Elections to the Majlis are held individually and do not necessarily coincide with its sessions. Elections were held in

December 1994 and December 1999. They are next due to be held in November 2004.

## 14 POLITICAL PARTIES

There are no organized political parties. While not banned, they are officially discouraged. Candidates for office stand for election as independents and campaign on their family and personal stature.

## 15 LOCAL GOVERNMENT

The Maldives is divided administratively into 20 districts, each a discrete atoll headed by a government-appointed *verin*, or chief, who functions in the manner of a District Officer. On each inhabited island a *khatib*, or headman, also appointed by the government, supervises and carries out the orders of the government under the supervision of the atoll chief. Malé and Hulhulé (the island of the international airport) are geographically in Kaafu Atoll, but are treated as a separate administrative entity.

## 16 JUDICIAL SYSTEM

Justice is meted out according to traditional Islamic law (Shari'ah) by the high court and lower courts appointed for that purpose by the president and functioning under the Ministry of Justice. Civil law is also applied but remains subordinate to Shari'ah. Judges must be Muslims.

On the capital island, Malé, there is a high court which hears a range of cases as a court of first instance and also serves as a court of appeal. Lower courts each deal with a specific area such as theft, property or family law issues. The 1995 presidential decree gives power to a five-member advisory council appointed by the president to review the high court's decisions. The president also has authority to affirm judgments of the high court, to order a second hearing, or to overturn the court's decision.

On the other islands, there is one all-purpose lower court in which cases are often adjudicated by traditional legal practitioners. Complex cases are referred to the appropriate specialized court in Malé. There are 204 general courts on the islands.

In criminal cases there is no jury trial. The accused may call witness and may be assisted by a lawyer. There are, however, few professionally trained lawyers in Maldives, and the court does not provide a lawyer to an indigent defendant. The judiciary is subject to executive influence. The president may grant pardons and amnesties.

## 17 ARMED FORCES

The armed forces of the Maldives consist of a paramilitary national security service and militia of a few hundred. Armed boats patrol the territorial waters to protect the local fishing industry. Military expenditures amounted to \$34.5 million in 2001 or 8.6% of GDP.

## 18 INTERNATIONAL COOPERATION

The Maldives, which joined the UN on 21 September 1965, is a member of ESCAP and all the nonregional specialized agencies except IAEA, ILO, and WIPO. Special membership status in the Commonwealth of Nations was granted 9 July 1982. Maldives is member of the WTO, participates in G-77, and is a signatory to the Law of the Sea.

An active member of the nonaligned movement, Maldives has led efforts to declare an Indian Ocean Peace Zone, free of nuclear arms. In October 1977, the government rebuffed an offer from the former USSR to lease Gan as a base for its fishing fleet for \$1 million annually. The Maldives participates in the Islamic Conference and has been a recipient of Arab financial and technical aid.

Sri Lanka has traditionally served as the Maldives' focus in its external affairs. However, this has been broadened in the last few decades as the Maldives entered into diplomatic relations with more countries and communication and transportation have opened up with the outside world.

## 19 ECONOMY

As of 2003, the Maldives remains on the UN list of least developed countries, yet economic progress has been steady. The first tourist resort was opened in 1972. In 1989 the government lifted import quotas and liberalized some sectors of trade. Gross domestic product growth rates averaged about 10% in the 1980s, and about 7% in the 1990s. In the 1990s the peak was 16% (1990) and the low 4% (1993). In 1998 and 1999, real GDP growth reached 9.1% and 8.5%, respectively, but fell to 4.8% in 2000, following a decline of -2.3% in agriculture (including coral and sand mining) and of -0.5% in industry. Growth recovered to 5.7% in 2001.

Fishing, tourism, and shipping are the mainstays of the economy, employing over half of the work force. The tourism industry has become particularly important, accounting for about 20% of GDP, 31% of government revenues, and more than 60% of the country's foreign exchange earnings in 2002. The government is seeking to continue diversifying the economy through further promotion of tourism, processing industries, and garment production. Besides tourism, GDP is comprised of distribution, 4.5%; construction, 3%; fisheries, 6%; agriculture, 3%; transportation and communication, 16%; government administration, 12%; and manufacturing and electricity, 8%.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Maldives's gross domestic product (GDP) was estimated at \$1.2 billion. The per capita GDP was estimated at \$3,870. The annual growth rate of GDP was estimated at 7%. The average inflation rate in 2000 was 3%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 20% of GDP, industry 18%, and services 62%. Foreign aid receipts amounted to about \$89 per capita and accounted for approximately 5% of the gross national income (GNI).

The World Bank reports that in 2001 per capita household consumption (in constant 1995 US dollars) was \$451. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the same period private consumption declined at an annual rate of 3%.

## 21 LABOR

There were approximately 72,000 members of the Maldives workforce in 2002, one-third of whom were foreign workers. About 20% of the workforce in 1999 was employed in fishing; 15% in industry; 10% in tourism, and 55% in other sectors. The unemployment rate was negligible.

Union organization is not prohibited but the government does not recognize union organization or striking as a right. However, some associations have been formed to address workers' rights.

The minimum working age is 14 (16 for government work) and there were no reports of children working in the formal economic sector in 2001. However, children work in family agricultural and fishing enterprises. There are no specific statutory provisions regarding working hours, the workweek length, or overtime pay. Administrative orders from the president's office have set a seven-hour workday and a five-day workweek. There is no national minimum wage, but wage floors

exist for certain kinds of work. Although no statutory provisions are in place, employers offer competitive pay and working conditions. Wages generally provide a family with a decent standard of living.

## 22 AGRICULTURE

Only 10% of the land is estimated to be cultivable. Millet, corn, pumpkins, sweet potatoes, pineapples, sugarcane, almonds, and many kinds of tropical vegetables and fruits are successfully grown, largely in homestead gardens. Coconut palms provide copra and coir, the most important exports after fish. Virtually all rice, a staple food for the population, must be imported. Breadfruit, mangoes, papayas, limes, bananas, pumpkins, watermelon, taro, and chili peppers are also valuable crops. As of 1999, small amounts of corn, millet, and sorghum were cultivated. Production in 1999 included 12,000 tons of coconuts and 2,000 tons of copra.

## 23 ANIMAL HUSBANDRY

Fodder is insufficient for more than a few head of cattle, but there are many goats and chickens.

## 24 FISHING

Fishing is the chief industry (accounting for 11% of GDP), with the main catch being skipjack and yellowfin tuna. About half the annual harvest is frozen, canned, or dried and exported to Thailand, Europe, and Sri Lanka. The Maldivian fisheries sector underwent a major transformation during the 1980s and became increasingly productive through modernization of catch collection and processing methods. Expansion of the canning industry and investment in fisheries diversification is ongoing. The fish catch in 2000 totaled 132,437 tons; exports of fish were valued at \$40.9 million that year. Annual per capita consumption of fish and shellfish in the mid-1990s averaged 175.5 kg/386.9 lb (live-weight equivalent), greater than that of any other nation. Shell gathering is a relatively important activity in the Maldives, with large quantities of cowries exported for use as ornaments. Several rare shell species are also collected.

## 25 FORESTRY

There are no forests as such. Coconut wood, however, is used in the building of boats and the construction of houses. Imports of forest products amounted to \$4.2 million in 2000.

## 26 MINING

There were no known mineral resources.

## 27 ENERGY AND POWER

The power plant in Malé, with a capacity of 25,000 kW, provided 85 million kWh of electricity for the island in 1998. More than half of this amount was distributed to residences, and one-quarter to government buildings. A smaller plant on Hulule supplies power for the airstrip on that island. About 55% of total energy consumption comes from wood. Nearly all of the inhabited islands of the Maldives (194 out of 199) have access to electricity; in late 2001, the Asian Development Bank issued an \$8 million loan to boost the availability and supply of power to 40 outlying islands of the Maldives. In 2000, net electricity generation for all of Maldives was 110 million kWh, of which 100% came from fossil fuels. In the same year, consumption of electricity totaled 102.3 million kWh. Total installed capacity at the beginning of 2001 was 25 MW.

## 28 INDUSTRY

The manufacturing sector is small and limited by the shortage of domestic labor. Important traditional industries in the Maldives include, boat building, the manufacture of coir, a rope made from dried coconut fibers, and lacemaking (handmade pillow lace),

introduced by the Dutch in the 17th century. Maldivian lacquerwork and finely woven mats are famous for their quality and design. Coconuts, copra, shells, tortoiseshell, bone dust, red stone, ambergris, and handicrafts are also produced locally as well as exported. All fishing is done by the traditional line and pole method as the use of nets is illegal. The country's fishing fleet of small, flat bottomed boats have, however, shifted from using sails and oars to outboard motors. In May 2001, the government ended its monopoly of the export tuna sector, and in 2002 four Maldivian operations were licensed to buy and export fresh tuna. Modern industry is limited to tuna canneries and other fish-processing, several apparel factories, built during the past decade, a soft drink bottling plant, and small scale manufacturing enterprises that produce PVC pipe, soap, furniture, and food products. Tourism has been developing since the first resort was built in 1977. As of November 2000, there were 84 resorts in operation, and in 2001, cruise tourism was introduced by the Ministry of Tourism.

## 29 SCIENCE AND TECHNOLOGY

Mechanized fishing operations have been the focus of research and development efforts since the 1980s, with the help of UNDP.

## 30 DOMESTIC TRADE

Malé Island is the chief commercial center. Sri Lankan and Indian merchants in Malé act as their own importers, exporters, and wholesalers. The importing of rice and exporting of ambergris are government monopolies. Tourism and its related services are a major portion of the economy. Most shops are open from 8 AM to 1:30 PM and from 2:30 to 5 PM, Sunday through Thursday. Banks and government offices are open from 9 AM to 1 PM on the same days. Most establishments are closed on Fridays.

## 31 FOREIGN TRADE

In 1989, the government initiated an economic reform program that lifted import quotas and opened exports of some commodities to the private sector (until then, exports had been entirely controlled by a state trading organization). In 2000, exports consisted almost exclusively of fish products and apparel. Manufactured goods, machinery, fuels, and food are the main imports.

Leading trade partners of 2000 are listed in the accompanying table. In the late 1970s, Mauritius, Japan, and Pakistan comprised almost 90% of the country's export market. The vast majority of Maldives' commodity exports are fish (53%) and apparel (46%).

Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
United States	34	7	27
Sri Lanka	14	53	-39
Germany	7	6	1
United Kingdom	6	10	-4
Thailand	4	13	-9
Singapore	3	99	-96
Japan	3	13	-10
India	n.a.	36	n.a.
Malaysia	n.a.	49	n.a.
United Arab Emirates	n.a.	33	n.a.

## 32 BALANCE OF PAYMENTS

Balance of payments deficits during the first half of the 1980s were caused largely by the international shipping recession, the collapse of world tuna prices, and a brief downturn in tourism caused by the violence in nearby Sri Lanka. The government began an economic reform program in 1989, by lifting import quotas and opening some exports to the private sector. In recent

years, it has encouraged more foreign investment by liberalizing regulations.

The US Central Intelligence Agency (CIA) reports that in 2000 the purchasing power parity of Maldives' exports was \$88 million while imports totaled \$372 million resulting in a trade deficit of \$284 million.

The International Monetary Fund (IMF) reports that in 2001 Maldives had exports of goods totaling \$110 million and imports totaling \$348 million. The services credit totaled \$354 million and debit \$109 million. The following table summarizes Maldives' balance of payments as reported by the IMF for 2001 in millions of US dollars.

<b>Current Account</b>	<b>-61</b>

### 33 BANKING AND SECURITIES

The Maldives Monetary Authority, established 1 July 1981, issues currency, advises the government on banking and monetary matters, supervises commercial banks, and manages exchange rates and exchange assets. Other banking services are provided by the Bank of Maldives (created in 1982) and commercial banks with headquarters in India, Pakistan, and Sri Lanka. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$135.3 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$271.6 million. The money market rate, the rate at which financial institutions lend to one another in the short term, was 6.8%.

There is no securities exchange.

### 34 INSURANCE

No recent information is available.

### 35 PUBLIC FINANCE

Public enterprises, including the State Trading Organization, the state shipping line, and public utilities, account for nearly half of government revenues; customs and tourist receipts make up most of the rest.

The US Central Intelligence Agency (CIA) estimates that in 2001 Maldives' central government took in revenues of approximately \$166 million and had expenditures of \$192 million including capital expenditures of \$80 million. Overall, the government registered a deficit of approximately \$26 million. External debt totaled \$237 million.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

<b>REVENUE AND GRANTS</b>	<b>100.0%</b>	<b>166</b>
Tax revenue	40.2%	67
Non-tax revenue	55.8%	93
Capital revenue	0.4%	1
Grants	3.6%	6
<b>EXPENDITURES</b>	<b>99.7%</b>	<b>191</b>
General public services	23.6%	45
Defense	11.5%	22
Public order and safety	2.1%	4
Education	18.0%	35
Health	9.5%	18
Social security	2.4%	5
Housing and community amenities	15.1%	29
Economic affairs and services	13.8%	26
Interest payments	3.8%	7

### 36 TAXATION

There is no income or sales tax in the Maldives. Government revenues are generated by import taxes, tourism taxes, lease rentals on resorts, and earnings on state owned enterprises. License fees are charged for boats and motor vehicles. Uninhabited islands are leased for farming to individuals, who pay annual dues to the government; over 90% of these absentee landlords reside in Malé. In 1999, 48% of revenues came from taxes of which 64% were from import duties, and about 30% from tourism taxes. Non-tax revenue accounted for about 52% of government revenue.

Given the growing wealth in the country in recent years, in 2002 the government was considering bolstering government development revenues by instituting a personal income tax, though concerns remain that enforcement may prove difficult.

### 37 CUSTOMS AND DUTIES

Customs duties are a primary source of government revenues and vary from 5–20% on essentials to 35–200% on luxury goods. Staple commodities (rice, wheat, flour, and sugar) and specified medicines and textbooks are duty-free. Import duties comprised 63% of government tax revenue in 1997. Duties on consumer goods were reduced in May 1988.

### 38 FOREIGN INVESTMENT

Assistance has been received from IBRD, WHO, UNDP, UNICEF, the EU, the Colombo Plan, CARE, and other international agencies, mostly in the form of grants and low-interest loans. In the 1990s funds from donors averaged over 8% of GDP annually, although in 2000, when, according to UNCTAD, the Maldives received \$13.3 million from donors, ODA (Official Development Assistance) was only 2.4% of GDP. Liberalized foreign investment policies have been adopted in recent years in order to attract needed development capital, especially for hotel and resort construction and other businesses related to the tourism industry.

### 39 ECONOMIC DEVELOPMENT

The government has implemented a series of development programs to improve and expand fishing and related industries, textile manufacturing, food processing, tourism, communications, and health and education services. In 1986, Malé's new commercial harbor was opened, considerably speeding up cargo handling from 200–300 tons to 1,500 tons a day. Also in the late 1980s, Malé's international airport was upgraded in the late 1980s, comprising a critical factor in the growth of the country's tourism sector. Effective 1 July 1997, the Companies Act governed the formation, registration, and management of companies doing business in Maldives. Part of the economic thrust has been to lessen the reliance on fishing and to diversify the economy.

Continued expansion of tourism has been particularly targeted in government development plans for the immediate future, along

with facilitating a spread of economic activity to outlying island groups. Water taxis and scheduled sea vessel and light aircraft transportation services were developing in the late 1990s for this purpose. The Foreign Investment Services Bureau (FISB), established in August 1986 as a “one-stop service” for investors, in 2002 was encouraging investment projects that were 1) capital intensive; 2) enhance technology transfer; 3) introduce new skills and offer training to local employees; and 4) are environmentally friendly.

#### 40 SOCIAL DEVELOPMENT

The government has focused its spending on social services and preventive health services. There is no organized social welfare system. Assistance is traditionally provided through the extended family. Employees are entitled to medical and maternity leave.

In spite of traditional Islamic restrictions on the role of women, they have increased their participation in public life. Under the terms of the 1997 constitution, men and women are considered equal before the law. Women usually receive pay equal to men in similar positions. A Gender Equality Council was created to assist the government in strengthening the role of women in society. However, Islamic law discriminates against women in matters of divorce and inheritance. Women are less able to initiate and obtain a divorce. Few women choose to participate in politics, largely because of tradition and custom. Violence against women and domestic abuse are not widespread problems. Although children’s rights are explicit in law and provisions are in place to protect children from abuse, education is not compulsory. Female children are much more likely to be withdrawn from school than boys.

Human rights violations by the government include arbitrary arrest and detention and infringement of the freedoms of assembly, association, the press, and religion.

#### 41 HEALTH

As of 1995, there were an estimated 0.4 physicians, 1.1 nurses, and 1.9 midwives per 1,000 people. There is a relatively modern 86-bed hospital in Malé, backed by a 12-bed regional hospital and medical rescue services in the outlying atolls and the new Indira Gandhi Memorial Hospital (200 beds).

In 2002 the estimated fertility rate was 5.4. Between 1976–1994, 30% of children under five were underweight. The under five mortality rate has improved greatly during the last decades. The rate was 78 in 1994 but 258 in 1960. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 37.4 and 7.86 per 1,000 people. Life expectancy was estimated at 62.9 years as of 2002 and the infant mortality rate was 61.9 per 1,000 live births. In 1994, 96% of the country’s children had been vaccinated against measles. In 1996, five AIDS cases were reported. In 1994, there were 249 tuberculosis cases and in 1993, 29 malaria cases.

Safe water is available to urban dwellers. Four desalination plants were completed by 1988 and a nationwide project is providing sewage systems to the atolls. Between 1994–1995, 88% of the population had access to safe water; 40% had access to adequate sanitation. Malaria and diarrheal diseases have been drastically reduced. Water-borne disease epidemics have occurred, often caused by contamination of wells.

#### 42 HOUSING

Some of the houses on Malé are built in imitation of those in Colombo. Most residential units throughout the country have brick walls, some of which are also plastered, and roofs of galvanized metal sheets. The poorest homes are made from thatch and sticks. According to a 2000 housing census, there were about 43,556 residential units nationwide. About 96% were detached dwellings. About 325 were apartments. The average dwelling size is from three to six rooms. About 48% of all dwellings had been

built from 1990–2000. Nearly 68% of the population relies on rain water as a primary source of water; 43% of all dwellings have septic tanks. About 84% of households have electric lighting, but firewood and oil are the primary heating and cooking fuels.

#### 43 EDUCATION

For 2000, adult illiteracy rates were estimated at 3.7% (males, 3.7%; females, 3.6%). Primary level education is for five years and secondary education is in two stages: five years at the lower level and two years at the higher level. Education is not compulsory. There are three streams of Maldivian education: traditional religious schools (*makhtabs*), which teach the Koran (Qur’an), basic arithmetic, and the ability to read and write Divehi; modern Divehi-language primary schools; and modern English-language schools. Primary and secondary schooling is based on the British educational system. Distance educational courses and educational programs on the radio are also provided.

In 1998 there were 48,895 students enrolled in 228 primary schools, with 1,992 teachers. Student-to-teacher ratio stood at 25 to 1. In the same year, secondary schools had a total of 36,905 students. As of 1999, virtually 100% of primary-school-age children were enrolled in school, while only 31% of those eligible attended secondary school. Maldivians must go abroad for higher education. In the 1990s, the government began making large investments in secondary, vocational, and post-secondary education. Currently the Science Education Center in Malé provides pre-University courses, and the Center may evolve into a university. As of 1999, public expenditure on education was estimated at 3.9 % of GDP.

#### 44 LIBRARIES AND MUSEUMS

A National Library founded in 1945 contains 30,000 volumes and serves as a public library facility. A National Museum was founded in 1952 in Malé to conserve and display historical items.

#### 45 MEDIA

Interatoll communication is through a network of high-frequency transceivers; within atolls, communication between islands and with boats is by walkie-talkie. A satellite earth station was installed in 1977 to facilitate external communications. In 1999, there were 21,000 mainline phones in use. In 1997, there were 1,290 cellular phones in use as well.

The Voice of Maldives has been transmitting radio broadcasts since 1962 in Divehi and English. Television Maldives is the country’s only TV station. As of 2001 there was one radio station and one television station, both government owned. In 1999, there were 35,000 radios and 10,000 television sets throughout the country. In 2001, there were 6,000 Internet subscribers with access through one service provider.

There are two major daily newspapers, *Aafathis* (2002 circulation 300) and *Haveeru* Daily (circulation 4,500). Both papers are published in Divehi and English. As of 2001, there were about 200 other newspapers and periodicals in circulation.

The Penal Code prohibits speech against Islam or the government, though it is said that journalists are more self-confident than in the past and that self-censorship has abated. There are legal prohibitions on the import of foreign publications.

#### 46 ORGANIZATIONS

Several sport clubs and a Muslim religious organization operate in Malé. The Maldives National Chamber of Commerce and Industry is also in Malé along with the Maldives Traders’ Association. The Maldives National Youth Council was formed in 1984 to assist in organizing national programs for youth. Scouting programs are available for youth as well.

#### 47 TOURISM, TRAVEL, AND RECREATION

Tourism is the principal industry and leading foreign exchange earner. It has developed rapidly with government support, climbing from 9,000 visitors in 1975 to 196,112 in 1991 and 467,154 in 2000. In 2000, income from tourism reached \$344 million. There were 8,329 hotel rooms and 16,658 bed-places, with an occupancy rate of 68%.

Natural attractions are crystal-clear lagoons and white beaches that are ideal for swimming, fishing, and both snorkeling and scuba diving. Modern, one- and two-story tourist facilities have been built on various otherwise uninhabited islands, mainly in the Malé atoll but also in neighboring atolls. Developed with European, Sri Lankan, and Indian assistance and part ownership, such resorts are confined to these individual islands, thus allowing the conservative Islamic government to profit from the presence of foreign tourists while shielding its citizens from the presence and consumption of alcoholic beverages and other un-Islamic holiday practices of these tourists. Maldivian resort workers maintain their homes and families on other islands, and non-Maldivians—often Sri Lankans—are hired to serve the alcohol. Passports are required of all visitors, as are yellow fever inoculation certificates for those arriving from infected areas.

In 1993, the US Department of State estimated the cost of staying in Maldives at \$198 to \$242 per day. Past UN reports indicate that the cost of staying within the country can be much lower, even as low as about \$30 per day.

#### 48 FAMOUS MALDIVIANS

Ibn Battutah (Muhammad bin ‘Abdallah bin Battutah, b.Tangier, 1304–77), the remarkable Arab traveler and geographer, lived in the Maldives for several years, served as a quadi there, and married the daughter of a Maldivian vizier. Sultan Iskandar Ibrahim I, who reigned for nearly 40 years during the 17th century, had the Hukuru Miskit (the principal mosque on Malé Island) built in 1674. Modern-day leaders include Amir Ibrahim Nasir (b.1926) and Maumoon Abdul Gayoom (b.1937).

#### 49 DEPENDENCIES

Maldives has no territories or colonies.

# MARSHALL ISLANDS

Republic of the Marshall Islands

**CAPITAL:** Majuro, Majuro Atoll

**FLAG:** The flag, adopted in 1979, is blue, with two diagonal strips of orange over white; in the canton is a white star with 4 large rays and 20 shorter ones.

**ANTHEM:** *Ij iokwe lok aelon eo ao ijo iaar lotak ie (I Love My Island, Where I Was Born).*

**MONETARY UNIT:** The US dollar is the official medium of exchange.

**WEIGHTS AND MEASURES:** British units are used, as modified by US usage.

**HOLIDAYS:** The government has not legislated official holidays.

**TIME:** 11 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

The Marshall Islands is located in the central Pacific Ocean, just north of the equator. Isolated from major population centers, Majuro, the capital, lies 3,438 km (2,136 mi) W of Honolulu, 3,701 km (2,300 mi) SE of Tokyo, and 3,241 km (2,014 mi) SE of Saipan, the former trust territory capital. The country consists of 29 atolls and 1,152 islands, 5 of which are major islands, extending over a sea area exceeding 1,942,500 sq km (750,000 sq mi). The main land area is only about 181 sq km (70 sq mi).

Comparatively, the area occupied by the Marshall Islands is slightly larger than Washington, D.C. The atolls and islands form two almost parallel chainlike formations: the Ratak ("Sunrise"), or Eastern, group and the Ralik ("Sunset"), or Western, group. The largest atolls in the Ratak group are Mili, Majuro, Maloelap, Wotje, Likiep, and Bikini; in the Ralik group, Jaluit, Kwajalein, Wotho, and Enewetak. The Marshall Islands have a coastline of 370.4 km (230 mi).

The capital city of the Marshall Islands, Majuro, is located on the island of Majuro.

## <sup>2</sup>TOPOGRAPHY

The majority of islands are in typical atoll formations, consisting of low-lying narrow strips of land enclosing a lagoon. Soils are porous, sandy, and of low fertility. Kwajalein Atoll in the Ralik, or Western, atoll is the largest atoll in the world.

## <sup>3</sup>CLIMATE

The maritime tropical climate is hot and humid, with little seasonal temperature change. Diurnal variations generally range between 21° and 34°C (70° and 93°F). Trade winds from the northeast cool the high temperatures from December through March.

Rainfall averages about 30–38 cm (12–15 in) per month, with October and November the wettest and December to April the driest. Average rainfall increases from the north to the south; the northern atolls average 178 cm (70 in) annually, compared with 432 cm (170 in) in the southern atolls.

## <sup>4</sup>FLORA AND FAUNA

The flora and fauna of the atolls are limited in number and variety. The flora consists of species resilient to porous soils, salt spray, and relatively strong wind force. The dominant tree species include coconut palms, pandanus, breadfruit, and citrus trees. Fauna include rodents and indigenous strains of pig.

## <sup>5</sup>ENVIRONMENT

Among the Marshall Islands' more significant environmental problems are water pollution due to lack of adequate sanitation facilities, inadequate supplies of drinking water, and the rise of sea levels due to global warming. Any rise in the sea level is a constant and serious threat to an island nation whose land mass is 2–3 meters (6–10 ft) above sea level.

The Marshall Islands Environmental Protection Agency, established in 1984, is concerned with programs for water quality standards, solid waste disposal, earthworks, and use of pesticides. The environments of the Bikini, Enewetak, Rongelap, and Utirik atolls were contaminated by nuclear testing. Nuclear tests were carried out in the region from 1946 to 1958. The long-term environmental effects on these atolls and their populations remained undetermined. The hawksbill turtle and green turtle are on the endangered species list.

## <sup>6</sup>POPULATION

The population of Marshall Islands in 2003 was estimated by the United Nations at 55,000, which placed it as number 185 in population among the 193 nations of the world. In that year approximately 2% of the population was over 65 years of age, with another 49% of the population under 15 years of age. There were 104 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 1.19%, with the projected population for the year 2015 at 60,000. The population density in 2002 was 300 per sq km (777 per sq mi).

It was estimated by the Population Reference Bureau that 72% of the population lived in urban areas in 2001. About 60% of the total population resided on two atolls, Majuro and Ebeye. Of the 34 atolls and major islands, 24 are inhabited. The capital city,

Majuro, had a population of 33,000 in 2002. According to the United Nations, the urban population growth rate for 2000–2005 was 3.4%.

## 7 MIGRATION

Population has been steadily migrating from the outer atolls to the urban concentrations on Majuro and Ebeye. As a result, outer atolls have been left with unbalanced population structures of children, females, and the aged.

Provisions under the Compact of Free Association with the United States permit unrestricted entry into the US and allow high-school graduates to join the US armed forces. In 1999, the net migration rate was zero. In 2000 the total number of migrants was 2,000. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

The Marshallese people are Micronesians, who are physically similar to the Polynesian peoples. The largest non-Marshallese ethnic group is from Kosrae in the Federated States of Micronesia. There are also small numbers of Americans and Filipinos.

## 9 LANGUAGES

English is universally spoken and is the official language. Two major Marshallese dialects are also spoken. Marshallese is a Malayo-Polynesian language and the common source of each of the atolls' dialects. Both English and Marshallese are used in official communications and in commerce. Japanese is also spoken.

## 10 RELIGIONS

The people are almost entirely Christian, primarily Protestant, as a result of the arrival of American and Hawaiian Protestant missionaries in the 1860s. As of a 2002 report, the United Church of Christ is the principal denomination, representing some 55% of the population. The United Church of Christ is the successor of the Congregationalists from New England and Hawaii who converted the islanders in the latter half of the 19th century. Other religious denominations represented include Assemblies of God (26%), Roman Catholics (8%), Bukot Nan Jesus (also called Assembly of God Part Two, 3%), the Church of Jesus Christ of Latter-Day Saints (2%), Seventh Day Adventists (1%), Full Gospel (1%), and the Baha'i Faith (1%). About 1% are Muslims, Jehovah's Witnesses, and members of the Salvation Army.

## 11 TRANSPORTATION

There are 64.5 km (40 mi) of paved road on the Majuro atoll and on the Kwajalein atoll with less than 10% of those roads on Kwajalein in 2002. On the outer islands, roads consist primarily of cleared paths and roads surfaced with stone, coral, or laterite. There are few motor vehicles.

The many scattered atolls separated by long distances make sea and air transportation essential. Domestic sea transportation is provided by interisland ships, which service each of the outer islands about once every three months. Two commercial dock facilities in Majuro and one in Ebeye furnish port facilities for international shipping. In 2001, the merchant fleet consisted of 270 ships with a capacity totaling 11,807,839 GRT.

Also in 2001, the Marshall Islands had 17 airports, only 4 of which had paved runways. Majuro International Airport, completed in 1974, accommodates aircraft up to Boeing 707 size. The government-owned Airline of the Marshall Islands (AMI), established in 1980, provides service to all outer islands with airstrips. International airline connections are provided to Tarawa in Kiribati, Funafuti in Tuvalu, and Nadi in Fiji. Air Micronesia/Continental Airlines links Majuro with major foreign destinations, including Hawaii, Guam, Manila, and Tokyo. In

2001, 18,800 passengers were carried on domestic and international airline flights.

## 12 HISTORY

Sighting of the islands was first recorded by the Spanish navigator Alvaro de Saavedra in 1529. The British captain John Marshall, after whom the islands are named, explored them in 1788. Throughout the late 1800s and early 1900s, foreign powers ruled the islands for such advantages as trade, religious propagation, exploitation of resources, strategic considerations, and maintenance of sea routes. Spain claimed the islands in 1874, but sold them to Germany in 1899. At the outbreak of World War I, Japanese naval squadrons took possession of the Marshalls and began formal administration under a League of Nations mandate in 1920.

In World War II, after bitter fighting between US and Japanese forces that included battles for Kwajalein and Eniwetok (now Enewetak), the islands came under US control. In 1947, the Marshalls became a district of a UN trusteeship, called the Trust Territory of the Pacific Islands, which was administered by the United States.

The United States used Bikini and Enewetak atolls as nuclear testing sites from 1946 to 1958, exploding 66 atomic and nuclear tests during this period. The nuclear testing program resulted in the displacement of the indigenous people due to radiation contamination. The people of Bikini and Enewetak, along with those exposed to radioactive fallout in the 1954 Bravo Blast, fought for compensation from the United States, which in February 1990 agreed to pay \$45 million to the victims of the nuclear testing program. Fifty years after testing began, Bikini Island has begun to attract a few tourists and scientific surveys have declared the island habitable again, although there is still a danger in eating too many of the local coconuts. Despite the scientific assurances, the US government has yet to issue a statement saying that the island is safe to inhabit. Because of the US promise to care for the Islanders until they could return to their home, Bikinians made President Clinton their king and expected him to look after his people. In October 1999, the United States, through the Majuro-based Nuclear Claims Tribunal, paid nearly another \$2.3 million toward the \$45 million originally promised in 1990, bringing the amount paid toward the total to \$39.4 million.

The Marshallese people adopted a constitution in 1978, under which the Marshalls were designated the Republic of the Marshall Islands. In 1979, the constitution went into effect and the republic became a self-governing territory. Amata Kabua was elected the Republic's first president. In 1983, a Compact of Free Association with the United States, providing for full self-government except for defense, was approved by plebiscite. In January 1986, the compact was ratified by the United States, and on 21 October 1986 it went into effect. The UN Security Council voted in December 1990 to terminate the Marshall Islands' status as a UN Trust Territory. The Republic became an independent state and joined the UN in September 1991. The Compact of Free Association with the United States expired in 2001. It is to be replaced with a new arrangement which will guarantee US funding over the next 20 years; the provisions of the compact were subsequently extended though September 2003. While the Compact of Free Association is being negotiated, the level of yearly assistance is \$37 million.

In late 1999 and early 2000, two major political changes took place. For the first time, an opposition party, the newly formed United Democratic Party (UDP), gained a majority in parliament in the November 1999 elections. Then, in January 2000, Kessai Note, the Speaker of the Nitijela, was elected to the presidency, becoming the first president of the Marshall Islands who is a commoner (not a traditional chief).

Also in the late-1990s and into the new millennium, global warming and the possibility of rising sea levels have raised concern over the long-term prospects for the islands in the middle of the Pacific Ocean. The Marshall Islands, along with Kiribati and Tuvalu, rise only a few feet above sea level. The Intergovernmental Panel on Climate Change has suggested that the sea could rise 18 inches by 2100, but that figure could be much lower or higher.

### 13 GOVERNMENT

The Marshall Islands is an independent republic. The constitution effective on 1 May 1979 incorporates a blend of the British and American constitutional concepts. It provides for three main branches of government: the legislature, the executive, and the judiciary.

Legislative power is vested in the Parliament, known as the Nitijela, which consists of 33 members elected from 24 electoral districts, each corresponding roughly to an atoll. The Council of Iroij (Chiefs) has 12 members, whose main functions are to request reconsideration by the Nitijela of any bill affecting customary law, traditional practice, or land tenure, and to express an opinion to the cabinet on any matter of national concern.

Executive power is vested in the cabinet, headed by the president, who is also head of state. The president serves a four-year term. The president, a member of the Nitijela, is elected by a majority of that assembly. The constitution requires the president to nominate not more than 10 or fewer than 6 members of the Nitijela as ministers. All citizens who have attained the age of 18 are eligible to vote.

After the US trusteeship administration of the Marshall Islands came to an end on 21 October 1986, the governments of the United States and the Marshall Islands entered into a Compact of Free Association which provided defense, economic, technical, trade, and other benefits to the Marshall Islands for an initial period of 15 years that expired in 2001. The provisions of the compact were extended to September 2003, until another arrangement guaranteeing US funding is made.

### 14 POLITICAL PARTIES

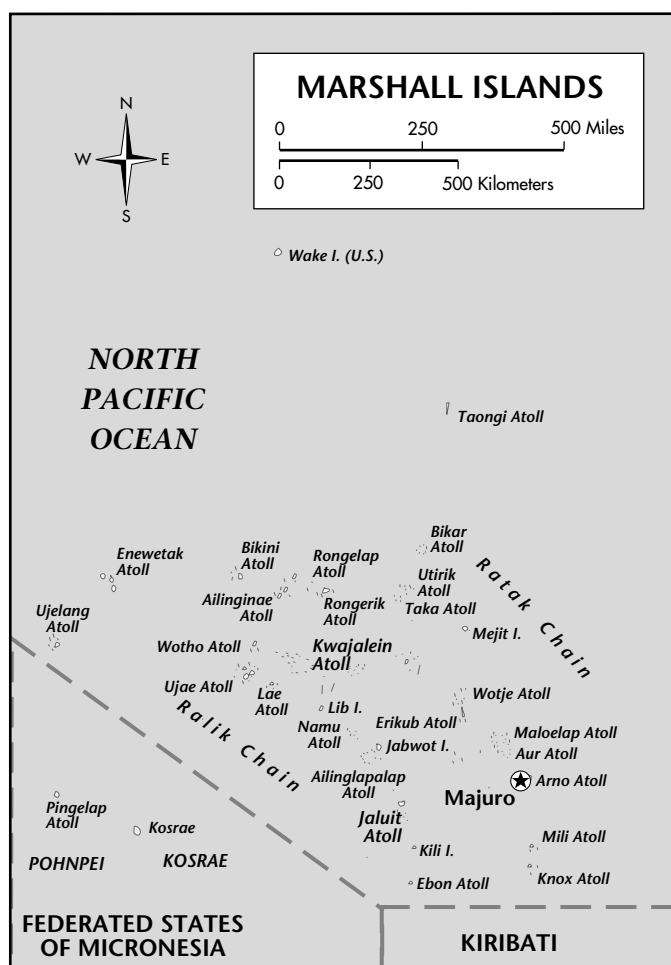

There is no tradition of organized political parties in the Marshall Islands; what has existed more closely resembles factions or interest groups because they do not have party platforms, headquarters, or party structures. However, two major groupings have competed in legislative balloting in recent years. The Kabua Party of former President Amata Kabua was in ascendance from 1979 to 1999. Kabua was re-elected to a fifth term in 1995. When President Kabua died on 12 December 1996, the government named Kunio Lemari, Minister of Transport and Communications, as Acting President. New presidential elections, held on 14 January 1997, were won by Amata Kabua's cousin Imata Kabua. The newly formed United Democratic Party (UDP), led by Litokwa Tomeing, gained a majority in parliament in November 1999, and Kessai Note was elected president.

### 15 LOCAL GOVERNMENT

There are 24 local governments for the inhabited atolls and islands. Typically, each is headed by a mayor, and consists of an elected council, appointed local officials, and a local police force.

### 16 JUDICIAL SYSTEM

The judiciary consists of the supreme court, the high court, the district court, and community courts. The supreme court has final appellate jurisdiction. The high court has trial jurisdiction over almost all cases and appellate jurisdiction over all types of cases tried in subordinate courts. The district court has limited civil and criminal jurisdiction nationwide.

LOCATION: 4° to 14° N; 160° to 173°E.

Community courts in local government areas adjudicate civil and criminal cases within their communities. In 1984, a traditional rights court was established to determine questions relating to titles or land rights and other legal interests involving customary law and traditional practice.

The constitution provides for an independent judiciary. The constitution also provides for the right to a fair trial. It prohibits the arbitrary interference with privacy, family, home, or correspondence. Government authorities respect these provisions in practice.

### 17 ARMED FORCES

There are no armed forces in the Marshall Islands. Under the Compact of Free Association, the United States provides defense for a minimum 15-year period and operation of the Kwajalein Missile Range for 30 years.

### 18 INTERNATIONAL COOPERATION

Until 21 October 1986, the Marshall Islands was administered by the United States under a UN Trusteeship Agreement. The Marshall Islands was admitted to the UN on 17 September 1991, and participates in agencies including UNCTAD, UNESCO, and WHO. In 1992, it became a member of ESCAP. The government continues to support and participate in the activities of regional bodies and has full membership in the SPC. The Marshall Islands has no diplomatic missions overseas, although an office of a

resident representative to the United States was established in 1986.

In 1996 the Marshall Islands joined with 38 other nations to form the Alliance of Small Island States. The Alliance, concerned with global warming and rising sea levels, wants the industrialized nations to reduce greenhouse gas emissions by 20% by 2005.

## 19 ECONOMY

The economy consists of a monetary sector and a nonmonetary subsistence sector. The monetary sector is localized in Majuro and Ebeye and is sustained largely by expenditures of the government and Kwajalein Missile Range employees. In turn the government is heavily dependent on grants from the US government provided, particularly those under the Compact of Free Association, which went into effect in 1986. These grants, averaging ranging from \$40 million/year to \$60 million/year, are given in exchange for furnishing military facilities and comprise roughly 60% to 70% of total government revenues, and 40% to over 50% of total GDP (though individual estimates are subject to statistical deficiencies due to the uncertainties in the collection of data). Copra (dried coconut meat) production provides a source of cash income for outer-atoll families engaged in subsistence activities.

The labor force has increased 160% from 1988 to 1999, to about 28,700, with the percent in industry doubling from 10% to 21%. Among the 21% engaged in agriculture and fishing, the main activities are copra (dried coconut meat) production, and the cultivation of breadfruit, taro, and pandanus. The nascent tourist industry employs less than 10% of the labor force, and efforts to capitalize on beautiful beaches enlivened with WWII relics are hampered by fears of radioactive fallout from the atomic testing done in these remote islands in the 1950s. At least half of the population still suffers from the effects of this fallout. In services, there have been attempts to develop offshore financial and ships registry services taking advantage of the time-space convergences in the computer age. In 1993, the Marshall Islands led all other countries in the passage of legislation decentralizing procedures for ship registry and mortgages so that they could be handled from distant offices, an important advantage for a country whose nearest neighbor, Hawaii, is over 2100 miles away. By April 2001, the Marshall Islands had become the ninth-largest flag of convenience registry in the world in terms of tonnage. However, attempts to offer competitive offshore services have also put the Marshall Islands on virtually every blacklist developed during the 1990s to crack down on tax havens and regulatory avoidance, including the US Financial Action Task Force (FATF) for inadequate safeguards against money laundering and the OECD's blacklist for open registry countries with poor health and safety records.

The islands have few natural resources, and imports exceed exports by factors ranging from 11 to 18, a gap that is also financed by grants from the United States under the Compact Agreement. Negotiations to extend the terms of the agreement with the United States were initiated in 1999, although the long-term goal was to substitute grants under the Compact with returns from a Marshall Island Intergenerational Trust Fund (MIITF). In the meantime, the Compact arrangements were extended through 31 October 2003. Savings for an MIITF were expected to come out of decreased expenditures on debt servicing.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 the Marshall Islands' gross domestic product (GDP) was estimated at \$115 million. The per capita GDP was estimated at \$1,600. The annual growth rate of GDP was estimated at 1%. The average inflation rate in 1999 was 1.9%. The CIA defines GDP as the value of all final goods and services produced within

a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 14% of GDP, industry 16%, and services 70%. Foreign aid receipts amounted to about \$1,410 per capita and accounted for approximately 64% of the gross national income (GNI).

## 21 LABOR

The labor force numbered 28,698 in 2002. Approximately 58% of the labor force was engaged in the service sector, with 21% in industry and 21% in agriculture. In 1999, the estimated unemployment rate was 31%.

Although the constitution provides for the freedom of association, and the government construes this to include labor organization, as of 2002, no labor unions existed. There is no statutory provision permitting strikes by workers nor is there a right to collectively bargain or organize. Generally wages are set in accordance with the minimum wage regulation and determined in part by market influence.

There is no prohibition against child labor but the law requires compulsory education until the age of 14. In practice this requirement is not effectively enforced, and many children work, especially in the fishing industry. A minimum wage of \$2 per hour was in place by the government in 2002. There are no laws concerning maximum work hours or health and safety in the workplace.

## 22 AGRICULTURE

The traditional interplanting of root crops and other vegetables with coconuts, which maintained self-sufficiency in food and provided the Marshallese with dietetic variety before modern times, is still widely practiced as a subsistence activity. Dried coconut meat, known as copra, is produced on almost all islands and atolls; some 6,500 ha (16,000 acres) of coconut palm were productive. Taro, breadfruit, and pandanus are also grown.

## 23 ANIMAL HUSBANDRY

Livestock on the islands consists of pigs and poultry. Most families raise pigs for subsistence and for family and community feasts. In 1981, pigs were imported from New Zealand to improve the strains of the local breed.

## 24 FISHING

While subsistence fishing for inshore species is carried out from all atolls, there is little domestic commercial fishing in the nation's 1,942,500 sq km (750,000 sq mi) of sea. The total catch in 2000 amounted to 7,960 tons. Principal marine resources include tuna, prawns, shrimp, seaweed, sponges, black pearls, giant clams, trochus, and green mussels. Colorful baby giant clams for ornamental aquariums are grown for export to the US.

A fisheries base with a freezer plant (200 tons capacity) and a chilling plant (50 tons capacity) was constructed in Majuro with Japanese government assistance. In 1986, the Marshall Islands Maritime Authority (MIMA) was reestablished to organize all marine resource activities, including protection, management, and development, under one agency. During the mid-1990s, about 10,500 foreign fishing vessels annually operated in the Marshall Islands' waters, about three-fourths of them Japanese.

## 25 FORESTRY

Some 8,900 ha (22,000 acres) are planted with coconut palm. Replanting has been undertaken on Arno, Lae, Maloelap, Rongelap, Ujae, Wotho, and Wotje. Pine species are under experimentation in a windbreak tree project on Ebeye. In 1984, a sawmill was purchased for processing coconut trunks and other tree species as lumber. In 2000, forest product imports totaled \$1.9 million.

## 26 MINING

There was no mining of mineral resources. However, preliminary surveys have revealed the presence of phosphate and manganese nodules in the seabed within the territorial waters. Lagoon dredging of sand and coral for construction purposes was undertaken in Majuro and Ebeye.

## 27 ENERGY AND POWER

The Marshall Islands is nearly 100% dependent on imported fossil fuels for electric power generation. In 1988, fuel imports amounted to \$3.6 million, or 10% of total imports. In 1995, mineral fuels and lubricants accounted for about 25% of merchandise import expenditures. The urban centers of Majuro and Ebeye have major generating facilities. The Majuro power plant, commissioned in 1982, has an installed power capacity of 14,000 kW. A 5,200 kW power plant was commissioned in Ebeye in 1987. The low power requirements in the outer islands are met by solar-powered systems. However, as of 2003, there were still outer island residents without adequate access to electricity because they were not supplied with solar power. Electricity production was 57 million kWh in 1994.

## 28 INDUSTRY

The economy's small manufacturing sector, localized largely in Majuro, accounts for less than 4% of the gross revenues generated in the private sector. The largest industrial operation is a copra-processing mill under a government and private-sector joint enterprise. (Copra is dried coconut meat.) The rest of the manufacturing sector consists of small-scale and domestic operations, such as coin making, furniture making, handicrafts, and boat making. In 1986, a government-owned dairy factory was established in Majuro, producing liquid milk, ice cream, and yogurt from imported milk powder and butterfat. In 1987, a small tuna cannery began production in Majuro but did not survive the economic downturns of the late 1990s. Manufacturing output increased rapidly in the early 1990s climbing from \$853 million in 1991 to a peak of \$2.7 billion in 1995, a 215% increase. The growth was not sustained, and by 1998, manufacturing output had fallen almost 45% to \$1.48 billion. Coconut oil was again the Marshall Islands' only appreciable manufactured export. At the end of 1999 a tuna loining plant was opened in Majuro, an operation that performed all but the canning of tuna, which was done at a StarKist cannery in American Samoa. By 2000 manufacturing output had climbed to \$1.72 billion. In the period from 1988 and 1999, the percent of the work force engaged in industry more than doubled, from 10% to 21%. The sector is dominated by small-scale, labor-intensive operations, however, and only accounts for 16% of GDP.

## 29 SCIENCE AND TECHNOLOGY

While there are no institutions involved in scientific research or training, the College of Micronesia nursing facility and science center, located in the Majuro Hospital, provides instruction in nursing technology and science.

## 30 DOMESTIC TRADE

Domestic trade accounts for the majority of the total gross trade revenue from urban private enterprises. The modern commercial/retail sectors are located in Majuro and Ebeye and consists mainly of service establishments and imported goods, although increasing amounts of locally produced vegetables and fish are being marketed. Most imports are purchased and consumed at these two main locations. Other islanders are primarily employed in subsistence farming or in production of copra and woven handicrafts. Domestic trade in outer island areas is primarily for basic necessities.

## 31 FOREIGN TRADE

Heavy and increasing trade deficits result from limited exports and dependency on imports for consumer and capital goods. Over 90% of the value of exports is accounted for by fish, coconut oil, and copra cake (made of dried coconut meat). The US, Japan, and Australia are the main export partners, while the US is the primary import source, followed by Japan and the Philippines. The major imports are foodstuffs, machinery and equipment, fuels, beverages, and tobacco.

## 32 BALANCE OF PAYMENTS

The economy suffers from a long-standing imbalance of trade, with imports far exceeding exports. A comprehensive record of international transactions in the form of standardized balance-of-payments accounts was not maintained during the trusteeship period (prior to 1986). The chronic trade deficit is offset by official unrequited transfers, predominantly from the US.

The US Central Intelligence Agency (CIA) reports that in 2000 the purchasing power parity of the Marshall Islands's exports was \$9 million while imports totaled \$54 million resulting in a trade deficit of \$45 million.

## 33 BANKING AND SECURITIES

Financial services are provided by three commercial banks: the Bank of Guam and the Bank of Marshalls, located in Majuro, and the Bank of Hawaii, located in Ebeye. The Marshall Islands Development Loan Office in Majuro was established as an independent government corporation in 1982. There were four credit unions, operated by over 2,000 members.

The Marshall Islands has no stock issues or securities trading.

## 34 INSURANCE

Two foreign insurance companies, located in Majuro, provide coverage. A US insurance company provides loan protection policies to credit unions.

## 35 PUBLIC FINANCE

Government revenues are derived from domestic sources and US grants. Domestic revenues are from taxes and nontax sources (fishing rights, philatelic sales, and user charges). The leading areas of expenditure include health services, education, public works, and transportation and communication.

The US Central Intelligence Agency (CIA) estimates that in 1999 the Marshall Islands' central government took in revenues of approximately \$42 million and had expenditures of \$40 million. Overall, the government registered a surplus of approximately \$2 million. External debt totaled \$86.5 million.

## 36 TAXATION

Income tax is applied to wages and salaries at graduated rates. Business tax is applied to gross revenues of service-related enterprises generated anywhere in the Marshall Islands, the Federated States of Micronesia, and Palau, except on Kwajalein. A sales tax is applied only in Kwajalein. There is also a fuel tax.

## 37 CUSTOMS AND DUTIES

Import taxes are generally ad valorem; duties range from 5% to 75%. The average rate is 10%. Specific duties apply to cigarettes, soft drinks, beer, spirits, wine, gasoline, and other gases and fuels.

## 38 FOREIGN INVESTMENT

The government favors joint ventures with foreign private investors but efforts to attract foreign investment and develop new export products have been largely unsuccessful. The IMF has urged the reduction in the minimum wage and the reserved list for small scale investment as means to secure more foreign direct investment. Foreigners may lease but not own land. The US

department of defense operates a missile testing range on behalf of the strategic defense command in Kwajalein.

### 39 ECONOMIC DEVELOPMENT

The first five-year national development plan (1985–89), which was rephased to 1986/87–1990/91 to meet the requirements of the Compact of Free Association with the United States, constituted the first phase of a 15-year development program. The plan focused on economic development, with emphasis on private-sector expansion, personnel development and employment creation, regional development, population planning and social development, and cultural and environmental preservation. Total funding across the 15 year span of the agreement was envisioned at about to \$1 billion, or about \$65 million dollars per year in financial aid from the United States. Aid was gradually decreased across the 15 year period, and a down-step in 1996 caused a budget deficit that the government filled with debt financing. Paying off the bond obligations kept government expenditures and investment strapped until they were paid off in 2001. By that time, the size of the government had been significantly reduced. Compared to 1994/95, 2002 expenditures were 25% less in current dollar terms. Also, US aid had dropped to an estimated \$39 million. Under Title 11 of the Compact of Free Association, funding was scheduled to expire in 2001, with provision of a two year extension equal to the average level of assistance over the last 15 years. This increased US grant aid to almost \$60 million for 2001, above the average of \$45.33 million for 1997 to 2001.

Tourism was under development in the late 1990s with the opening of a first-calls resort hotel, the first in the Marshall Islands.

In 2001 the government paid off all commercial debt but usable fiscal resources remained short because of a need to set aside about \$30 million in 2001 and 2002 for the initial capitalization of the Marshall Islands Intergenerational Trust Fund (MIITF). The MIITF is the government's long-term solution to the island's public finance needs, but is not projected to provide substantial yearly dividends until at least 2024. In the meantime, the government renegotiated the terms of Title II of the Compact. In an agreement signed 23 April 2002 to go into effect in 2004, US aid is extended for 20 years, to 2024, with a base grant of \$37 million. The base grant is to be reduced by \$500,000 each year with the decrement to be deposited in the MIITF, which is also to receive an initial \$8 million contribution from the United States. Inflation indexation was set with a cap of 5%, down from 7% under the old agreement. It also agreed to establish a RMI-US Joint Economic Review Board (JERB) to monitor and oversee the spending of the grant money. The priority targets set for spending are education, health, and infrastructure. The agreement requires amendment to the Compact of Free Association, which requires passage by both houses of the US Congress.

Another agreement reached in April 2003 was a 50-year extension of the US lease of land on the Kwajalein atoll as a defense site, with an option to extend an additional 20 years. As the current lease expires in 2016, this means an extension to 2066. In calculating its assistance to the Marshall Islands, the US includes not only the \$13 million a year paid for the Kwajalein lease under the Military Use and Operating Rights Agreement (MUORA) but also an estimated \$21 million in tax dollars that are infused through salaries, tax payments and telecom services, plus an estimated \$10 million worth of federal programs, like the postal service. The RMI government expressed concerns that the assistance is insufficient to prevent economic stagnation, and social and infrastructure deterioration and/or prevent recourse to debt financing to fill revenue shortfalls.

### 40 SOCIAL DEVELOPMENT

Private-sector provision of community and social services is mainly through the Marshalls Community Action Agency, a nonprofit organization. Among government agencies, the Ministry of Social Services is involved in five major areas: housing, women's and youth development, feeding programs, aging, and other community development welfare programs. Funding of these services is provided almost entirely by the US. A social security system provides old age, disability, and survivor benefits, paid for by employers and employees. The program is funded by 5% contributions from both employers and employees. Retirement is set at age 55.

The Marshallese society retains a traditional matrilineal structure. Each person belongs to the bwij, or clan, of his or her mother, and has the right to use the land and other property of the bwij. The head of the bwif is called an alap. The alap is the spokesperson between the clan members and the members of the iroj, or royal clan. Inheritance of traditional rank and of property is matrilineal, and women occupy important positions within the traditional social system. However, within the economic system, many hold low-paid dead-end jobs. Spousal abuse is common, usually in conjunction with alcohol use. No overt instances of sex discrimination have been reported. The government is committed to protecting and promoting the rights of children.

The government fully respects the human rights of its citizens. No human rights organizations exist, but there are no legal restrictions against their formation.

### 41 HEALTH

There are two hospitals: the Armer Ishoda Hospital in Majuro, with an 81-bed capacity, and a recently renovated hospital in Ebeye. Both hospitals provide dental services. In 1991, there were 20 doctors, 130 nurses, and 4 midwives.

Rudimentary health care on the outer atolls is provided through 69 dispensaries staffed by health assistants. Emergency cases are sent to the Majuro or Ebeye hospital and, when necessary, to hospitals in Honolulu. Dental services to the outer atolls are provided by periodic visits by dental teams from Majuro and Ebeye.

Once the site for nuclear testing, the Marshall Islands government has once again considered testing on the uninhabitable islands of Bikini and Enewetak. As of 1996, radioactive dose assessments have been commissioned by the Republic of the Marshall Islands.

Infant mortality was an estimated 38.68 per 1,000 live births as of 2002. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 44.98 and 6.1 per 1,000 people. Life expectancy was 66.18 years. Immunization rates were as follows in 1994: diphtheria, tetanus, and pertussis, 67%; measles, 59%; polio, 62%; and tuberculosis, 96%. The prevalence of anemia in children under five years of age was 43% in 1990. No polio, measles, or neonatal tetanus cases were reported in 1994. Alcoholism and drug abuse are common and there is a relatively high incidence of sexually transmitted diseases. There were two new cases of AIDS reported in 1996.

### 42 HOUSING

Houses in the urban centers are simple wooden or cement-block structures, with corrugated iron roofs; because of the limited land availability, houses are heavily crowded. In the outer atolls houses are constructed of local materials, with thatched sloping roofs and sides of plaited palm fronds.

The Ministry of Social Services provides housing grants, principally to low-income families, through a low-cost housing program and a grant-in-aid program. Government housing is administered by the Public Service Commission.

In 1999, there were about 6,478 households with an average of 7.8 people per household. About 70% of households relied on rain water as a primary water source, 39% of households had indoor flush toilets, and 63% had access to electricity for lighting and/or cooking.

### 43 EDUCATION

The Ministry of Education provides for public education at the elementary, secondary, and higher education levels. Public elementary schools provide eight years of compulsory education to students ages 6–14. A high school entrance examination is given to all eighth graders in order to determine the 300 or so students who will be admitted into the two public high schools each year. During the 1994–95 school year, a combined total of 15,755 students were enrolled in the Marshall Islands' 115 public and non-public primary and secondary schools. Fifty-one percent of all students were male, and 49% were female. The public schools employed a total of 512 teachers while non-public institutions employed 297 teachers. The pupil-teacher ratio at the primary level was estimated at 15 to 1 in 1999. For students who are admitted to high school, a comprehensive four-year program of secondary education provides instruction in general studies, college preparatory courses, and vocational training.

Higher education is provided through formal programs of teacher training and the provision of grants for university training abroad. In 1986, approximately 160 students received financial assistance for foreign training. The Majuro campus of the College of Micronesia opened its School of Nursing and Science Center in 1986. In 1991, the Marshall Islands campus separated from the College of Micronesia system and became accredited by the Accrediting Commission for Community and Junior Colleges of the Western Association for Schools and Colleges (WASC). On 1 April 1993, the College of the Marshall Islands was established as an independent institution with its own Board of Regents. In 1994–95, approximately 1,149 students were enrolled at the college, with 42 teaching staff members.

### 44 LIBRARIES AND MUSEUMS

The College of Marshall Islands Library has 7,000 volumes, while the High Court Library holds 50,000. In Majuro, the Alele Museum, which also houses a library, was completed in 1973. Alele Museum showcases both the traditional and colonial history of the Marshalls. The library houses historical documents and photographs from the trust territory archives. More than 2,000 glass-plate negatives taken between 1890 and 1930 are on loan to the museum. Alele's newest attraction is the elaborate shell collection from Mili Atoll.

### 45 MEDIA

The inter-island communications network consists of shortwave outer-island radio stations, which link all major islands and atolls. In 2001, there were 4,186 mainline telephones in use and 489 cellular phones.

The island of Ebeye is linked to Majuro by radio and also by satellite. As of 2001, there were two radio stations. The government radio station, which has advertising, relays world news from Voice of America and Radio Australia. The other station is religious. In 1997 there were an estimated 2,000 telephones on all islands. In 2002 there were two U.S. military television stations and one government-owned station. In 2001, there were only 537 Internet subscribers served by one service provider.

There are no daily newspapers. A weekly newspaper, *The Marshall Islands Journal* (2002 circulation 3,700), is published in Majuro in English and Marshallese. *The Marshall Island Gazette*, established in 1982, is a free four-page government newsletter, printed in English.

The constitution provides for free expression, and the government is said to respect these provisions in practice.

### 46 ORGANIZATIONS

A number of consumers' cooperatives are in operation. The Chamber of Commerce is located on Majuro.

Marshallese society is matrilineal and organized on the basis of the clan (*bwij*). The head of the clan (*alap*) serves as spokesman between clan members and members of the royal clan. At the community level there are youth organizations, including Boy Scouts and Girl Scouts, women's organizations, and various religiously affiliated social organizations. A national women's organization began in 1986. The Red Cross is also active.

### 47 TOURISM, TRAVEL, AND RECREATION

Tourist attractions include the sandy beaches on the atolls, protected lagoons, underwater coral reefs, and abundant marine life, including large gamefish. The outer atolls of Mili, Maloelap, Wotje, and Jaluit offer many Japanese and American relics from World War II. However, tourism remains undeveloped, and the outer atolls do not have any accommodations for visitors.

In 2000 there were 5,246 tourist arrivals and tourism receipts totaled \$4 million. That year there were 305 hotel rooms and a total of 665 bed-places.

In 2001, the US Department of State estimated the cost of staying in Majuro at \$175 per day.

### 48 FAMOUS MARSHALLESE

Amata Kabua (1928–96), president from 1979 until his death, was founder and leader of the Political Movement for the Marshall Islands Separation from Micronesia in 1972. He previously served as a member of the Congress of Micronesia and guided his country to self-governing status under the US-administered UN trusteeship. He was a graduate of the Mauna Olu college in Hawaii and taught secondary school before starting his political career.

### 49 DEPENDENCIES

The Marshall Islands have no territories or colonies.

# MICRONESIA, FEDERATED STATES OF

Federated States of Micronesia

**CAPITAL:** Palikir, Pohnpei Island

**FLAG:** Adopted in 1978, the flag is light blue, bearing four five-pointed stars arranged in a diamond in the center.

**ANTHEM:** *Patriots of Micronesia*

**MONETARY UNIT:** The US dollar is the official medium of exchange.

**WEIGHTS AND MEASURES:** British units are used, as modified by US usage.

**HOLIDAYS:** New Year's Day, 1 January; Federated States of Micronesia Day, 10 May; Independence Day, 3 November; Christmas Day, 25 December.

**TIME:** In Pohnpei and Kosrae, 10 PM = noon GMT; in Yap and Truk, 9 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

The Federated States of Micronesia (FSM) is located in the western Pacific Ocean within the Carolinian archipelago. The four states consist of 607 islands with a total area of 7,866 sq km (3,037 sq mi), comprising 702 sq km (271 sq mi) of land, and 7,164 sq km (2,766 sq mi) of lagoons. Comparatively, the area occupied by the Federated States of Micronesia is slightly less than four times the size of Washington, D.C. Kosrae, the smallest and easternmost state, consists of five closely situated islands. Pohnpei consists of the single large island of Pohnpei and 25 smaller islands within a barrier reef, in addition to 137 outer islands, of which the major atolls are Mokil, Pingelap, Kapingamarangi, Nukjuoro, and Ngatik. Truk includes the large Truk lagoon, enclosing 98 islands, and major outer island groups, including the Mortlocks, Halls, Western, and Namwunweito islands. Yap, the westernmost state, consists of 4 large islands and 7 smaller islands surrounded by barrier reefs, in addition to 134 outer islands, of which the largest groups are Ulithi and Woleai. The cumulative coastline distance is 6,112 km (3,798 mi).

The capital city of the Federated States of Micronesia, Palikir, is located on the island of Pohnpei.

## <sup>2</sup>TOPOGRAPHY

The 607 islands constituting the four states include large, mountainous islands of volcanic origin and coral atolls. Kosrae is largely mountainous, with two peaks, Fenkol (634 m/2,080 ft) and Matanti (583 m/1,913 ft). Pohnpei contains a large volcanic island, with the highest elevation that of Mt. Totolom (791 m/2,595 ft). Truk contains 14 islands that are mountainous and of volcanic origin. Yap contains four large high islands, with the peak elevation that of Mt. Tabiwol (178 m/584 ft). The outer islands of all states are mostly coral atolls.

## <sup>3</sup>CLIMATE

The climate is maritime tropical, with little seasonal or diurnal variation in temperature, which averages 27°C (80°F). The islands are subject to typhoons. The short and torrential nature of the

rainfall, which decreases from east to west, results in an annual average of 508 cm (200 in) in Pohnpei and 305 cm (120 in) in Yap.

## <sup>4</sup>FLORA AND FAUNA

There is moderately heavy tropical vegetation, with tree species including tropical hardwoods on the slopes of the higher volcanic islands and coconut palms on the coral atolls. The only native land mammal is the tropical bat. A rich marine fauna inhabits the open sea, reefs, lagoons, and shore areas.

## <sup>5</sup>ENVIRONMENT

Solid waste disposal in urban areas is a continuing problem and the land is threatened by toxic pollutants from mining operations. Micronesia's water supply is also threatened by industrial and agricultural pollutants. Population increases in urban areas, untreated sewage, and contaminants from industrialized countries in the region add to the problem of water pollution.

United Nations research shows that global warming and the rise of sea levels are a threat to Micronesia's forests, agricultural areas, and fresh-water supply. Pollution from industrial and agricultural sources also threatens the nation's mangrove areas. The fish population is endangered by waterborne toxins and explosives used in commercial fishing. The country also has a problem with the degeneration of its reefs due to tourism. In 1984, the government established an FSM Environmental Protection Board.

Threatened species include the chuuk flying-fox, the chuuk monarch, and the Mortlock Islands flying-fox. The Kosrae crane and the Kosrae mountain starling have become extinct.

## <sup>6</sup>POPULATION

The population of Micronesia in 2003 was estimated by the United Nations at 136,000, which placed it as number 176 in population among the 193 nations of the world. In that year approximately 4% of the population was over 65 years of age, with another 44% of the population under 15 years of age. There were 102 males for every 100 females in the country in 2003.

According to the UN, the annual population growth rate for 2000–2005 is 0.81%, with the projected population for the year 2015 at 119,000. The population density in 2002 was 154 per sq km (400 per sq mi). The majority of the population live in the coastal areas of the high islands, leaving the mountainous interiors largely uninhabited.

It was estimated by the Population Reference Bureau that 28% of the population lived in urban areas in 2001. The capital city, Palikir, had a population of 9,000 in that year. Population estimates for other large urban areas include 7,200 in Kosrae, 33,100 in Pohnpei, 53,700 in Truk, and 13,900 in Yap. According to the United Nations, the urban population growth rate for 2000–2005 was 3.3%.

## 7 MIGRATION

No significant permanent emigration has occurred; most emigration has been undertaken temporarily for higher education. In 1999, the net migration rate was 11.65 migrants per 1,000 population. The total number of migrants in 2000 was 3,000.

## 8 ETHNIC GROUPS

The islanders are classified as Micronesians of Malayo-Mongoloid origins. The people of the Nukuoro and Kapingamarangi atolls in southwestern Pohnpei are of Polynesian descent. In total, there are nine ethnic Micronesian and Polynesian groups.

## 9 LANGUAGES

English is the official language and is taught in the schools. The indigenous languages are of the Malayo-Polynesian family. Yapese, Ulithian, Woleaian, Trukese, Pohnpeian, and Kosraean are classed as Malaysian. Kapingamarangi and Nukuoro, spoken on two isolated atolls of the same names in Pohnpei, are Polynesian languages.

## 10 RELIGIONS

Roman Catholicism and Protestantism have been widely accepted throughout the country following their introduction by missionaries in the 1880s. Protestantism is predominant in Kosrae. The largest denominations are the United Church of Christ, Baptists, Seventh Day Adventists, Mormons, and the Baha'i Faith. Roman Catholics are dominant on Chuuk and Yap. There is a small Buddhist community of Pohnpei.

## 11 TRANSPORTATION

As of 2002, there were 240 km (149 mi) of roadways on the major islands, of which 42 km (26 mi) are paved. Over 90% of all vehicles are located on the main islands of Pohnpei, Moen (in Truk), Kosrae, and Yap. The state of Yap provides public bus transportation, primarily used by students. International shipping services are provided by 8 companies, some of them Japanese. There are commercial harbor facilities at Kolonia, Moen, Okat, and Colonia. The Federated States of Micronesia have no merchant marine, but inter-island shipping service is provided by 6 government-owned vessels. In 2001, there were 7 airports, 6 of which had paved runways. International and interstate scheduled airline services are provided by Continental/Air Micronesia, Air Nauru, and Pacific Missionary Aviation.

## 12 HISTORY

The Carolinian archipelago was sighted by European navigators in the 16th century. In 1686 the Spanish captain Francisco Lezcano named Yap Island "La Carolina" after King Charles II of Spain; the name was later generalized to the islands as a whole. Until the end of the 19th century, the islands were under Spanish colonial administration. In 1899 following the Spanish-American War, Spain sold the islands to Germany. Japanese administration

commenced at the end of World War I, and in 1947, following World War II, the four states of the FSM came under US administration as part of the UN Trust Territory of the Pacific Islands. Beginning in the 1960s, the people of Micronesia began making clear their desire for political independence. The United States, ever interested in maintaining good relations with the strategically significant Pacific islands, gave in to such demands and helped Micronesia to form a consultative body called the Congress of Micronesia in 1967. The congress declared the area sovereign in 1970. The history of the FSM as a political entity began on 12 July 1978, when a constitution drafted by a popularly elected constitutional convention was adopted; it went into effect on 10 May 1979. The government of the FSM and the government of the United States executed a Compact of Free Association in October 1982; in November 1986, that compact went into effect. Under the Compact of Free Association, the United States is responsible for defence and security issues. The UN Security Council voted in December 1990 to terminate the FSM's status as a UN Trust Territory. A new capital was built about 10 km southwest of Kolonia in the Palikir Valley; it has served the FSM since 1990.

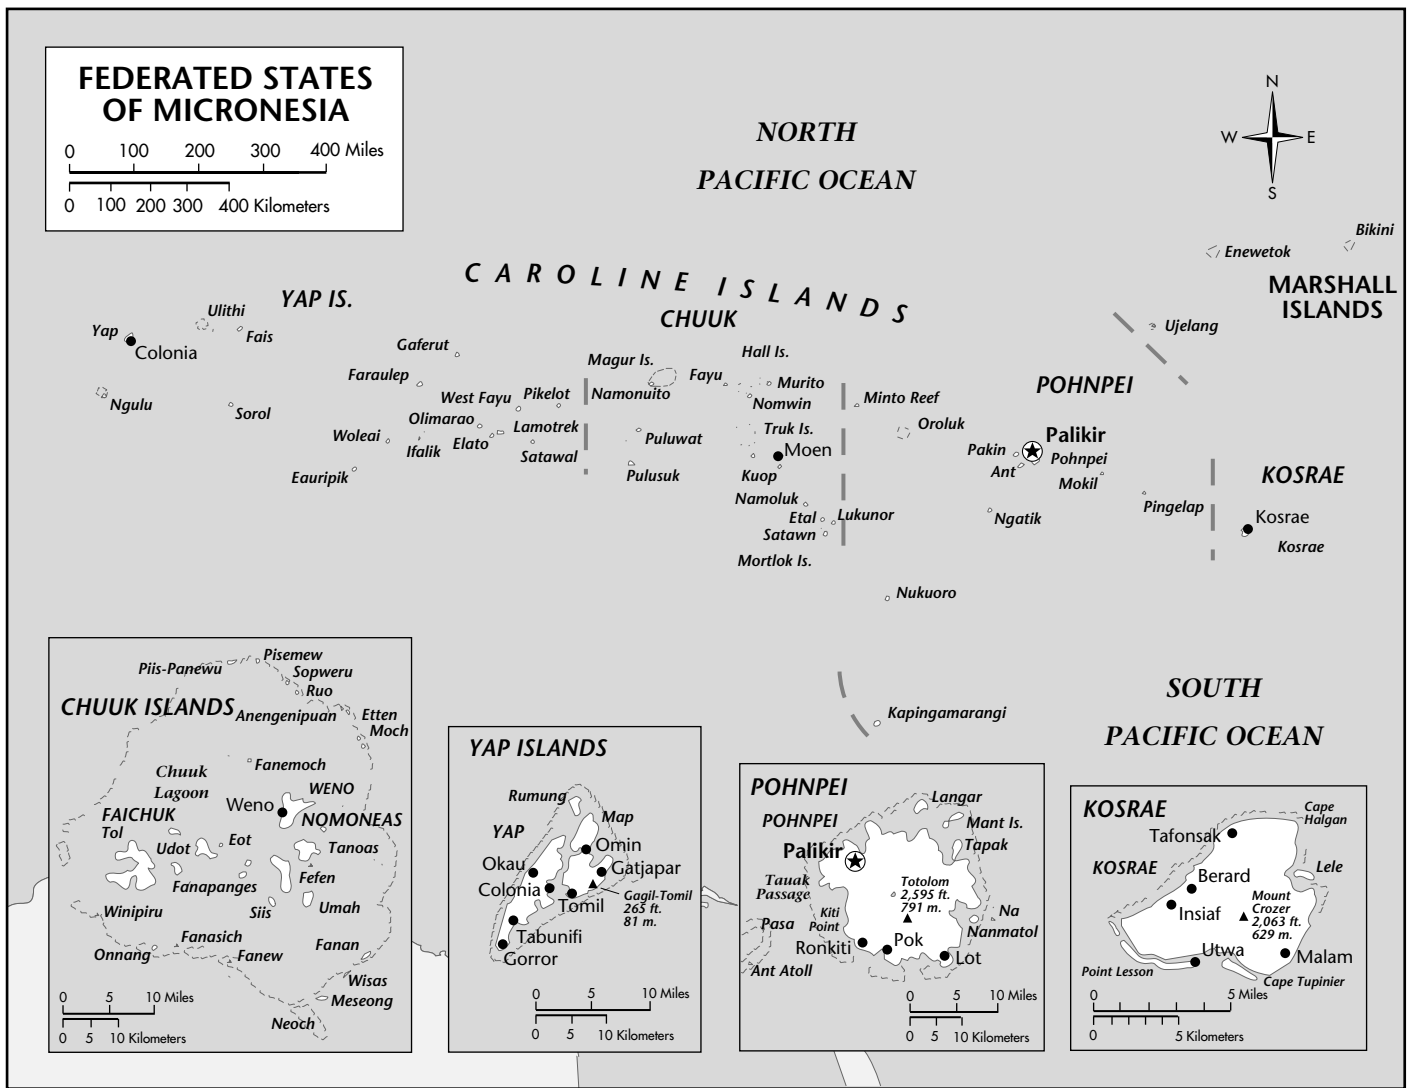

The FSM became an independent state and joined the UN in September 1991. John R. Haglegam of Yap was elected FSM's president in 1987. In May 1991 Bailey Olter of Pohnpei defeated Haglegam and was elected president. On 11 May 1995 Bailey Olter was reelected to a second term as president and Jacob Nena was reelected to a second term as vice-president. On 18 July 1996 Olter suffered a stroke and underwent treatment in Texas. Nena served as acting president while Olter was incapacitated. When Olter was unable to resume his duties, Nena became the FSM's fourth president on 8 May 1997. In a new election Leo A. Falcam, of Pohnpei, was elected vice president. In the May 1999 elections Falcam was elected president and Redley Killion, of Chuuk, was elected vice president.

The Compact of Free Association between the FSM and the United States expired in 2001. Negotiations to replace the compact started in 1999 and were extended for a further two years. Under a new agreement, to be signed in 2003, ongoing grant assistance would be provided for a period of 20 years. Prior to beginning negotiations and before any other assistance was considered, the United States requested a full accounting of the approximately \$3 billion in US funding provided to FSM since 1986. During further discussions of the Compact in 2000 the United States suggested that restrictions on Micronesian immigration may be tied to future funding.

Also in the late-1990s and into the new millennium, global warming and the possibility of rising sea levels have raised concern over the long-term prospects for the islands in the middle of the Pacific Ocean. The Intergovernmental Panel on Climate Change has suggested that the sea could rise 18 inches by 2100, but that figure could be much lower or higher. For countries that rise a short distance above sea level, their existence may be threatened.

## 13 GOVERNMENT

The national executive branch includes the president and vice president, elected by the congress from its membership, who serve a four-year term and may not be from the same state. The principal officers of the executive branch are appointed by the president, with the advice and consent of congress. The judiciary consists of a supreme court that applies criminal and civil laws and procedures closely paralleling those of the United States. The legislature consists of a unicameral congress of fourteen senators. Of the senators, four are elected at large on the basis of state equality and ten on the basis of population apportionment, with five from Truk, three from Pohnpei, and one each from Yap and Kosrae. The four at-large senators serve four-year terms and the remaining senators serve two-year terms. Congressional elections

LOCATION: 0° to 14° N; 135° to 166° E.

were held in four states (Chuuk, Kosrae, Pohnpei, and Yap) to fill 14 seats in March 1999. The next elections for the legislature will be held in March 2003; elections for president will be held in May.

#### 14 POLITICAL PARTIES

There are no formal political parties.

#### 15 LOCAL GOVERNMENT

The state executive branch consists of state governors and lieutenant-governors, popularly elected for four-year terms. The state legislative branch consists of members popularly elected on the basis of proportional representation, numbering twenty in Pohnpei, thirty in Truk, thirteen in Kosrae, and nine in Yap. Municipalities are districts composed of a number of small communities (sections), some of which may be located in different islands.

Municipal government is considered by many to be the most important level of government in Micronesia. The leaders of local bodies are generally tribal chiefs, who are considered to be more important figures than nationally elected politicians by a sizable body of Micronesians. The Council of Chiefs can veto any legislation it considers detrimental to traditional ways.

#### 16 JUDICIAL SYSTEM

The national judiciary consists of a Supreme Court, headed by a chief justice, and such subordinate courts as are established by statute. Justices are appointed by the president, with the advice and consent of Congress, and serve for life. The Supreme Court has both trial and appellate divisions. It may review cases heard in state or local courts if they require interpretation of the constitution, national law, or treaties, and it may hear appeals from the highest state court where permitted by a state's constitution.

State and municipal court systems have been established in each of the states. State courts have jurisdiction over all matters not within the exclusive jurisdiction of the national courts. Municipal courts have jurisdiction over civil and criminal matters arising within their municipalities.

The Micronesian constitution and judicial system are modeled after those of the United States. The civil and criminal laws also parallel those of the United States.

The constitution provides for an independent judiciary and the government respects this provision in practice.

#### 17 ARMED FORCES

The Federated States of Micronesia maintains no armed forces. External security is the responsibility of the United States.

## 18 INTERNATIONAL COOPERATION

The FSM participates in such regional organizations as the South Pacific Commission (SPC), and South Pacific Forum. In 1992, the FSM became a member of ESCAP. It also participates in the activities of other UN agencies, including IMF, UNCTAD, and WHO. In 1999, FSM signed the constitution of the United Nations Educational, Scientific and Cultural Organization (UNESCO) to become the 188th member of that agency. The government maintains overseas offices in Washington, D.C., Tokyo, Honolulu, and Guam.

## 19 ECONOMY

Other than US payments, the Micronesian economy is markedly underdeveloped. A clothing plant in Yap employs 500 workers in the country's largest private-sector industrial enterprise. The subsistence economy is thought to generate about 25% of GDP, but statistics from the government are incomplete and unreliable.

In 1993, the United States, whose aid constitutes a large share of GDP, enlisted the Asian Development Bank in a plan to devise and implement an economic development scheme for the country. In 1995, an economic summit was convened to discuss some solutions. Privatization was high on the list of recommendations and Yap has already initiated a plan to reduce government employment by 37%. The ADB-led summit also recommended resources be spent in the development of fisheries and tourism, two sectors with substantial potential. In recent years, licensing fees paid by foreign fisherman for tuna fishing in Micronesia's Exclusive Economic Zone have provided between \$18–24 million annually.

The Second National Development Plan, for the years 1992–96, featured as its primary objective decreasing dependence on aid and, at the same time, making better use of its aid. Little has been done, however. It is estimated that after US-led grants end in 2002, per-capita GDP could drop to below \$500.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Micronesia's gross domestic product (GDP) was estimated at \$269 million. The per capita GDP was estimated at \$2,000. The annual growth rate of GDP was estimated at 2%. The average inflation rate in 2001 was 2.5%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 50% of GDP, industry 4%, and services 46%. Foreign aid receipts amounted to about \$1,440 per capita and accounted for approximately 52% of the gross national income (GNI).

## 21 LABOR

The national labor force was estimated at about 23,190 in 1994. Two-thirds of the labor force in 2002 were government employees. In 1999 the unemployment rate stood at 16%. While unemployment remains high, the economy faces shortages of skilled personnel since over 44% of the population is under 16 years of age.

The law provides the right to form or join unions, and government employees are granted the right to form associations to proffer their views. However, no such associations have been formed as of 2002. The country is not affiliated with the International Labour Organization (ILO).

While labor laws are applied mostly without variance in all four states, the minimum wage varies from state to state. Minimums for government-employed workers in 2002 ranged from \$0.80 per hour for Yap to \$2.00 per hour in Pohnpei. Only Pohnpei had a minimum wage for private sector workers. In 1999, it stood at \$1.35 an hour. There is no minimum working

age for children and many children assist their families in subsistence farming activities.

## 22 AGRICULTURE

Agricultural production has traditionally been for subsistence and is based on a system of shifting cultivation in the high islands. Staple crops include taros, sweet potatoes, bananas, cassavas, and breadfruit. Yams are grown on Pohnpei, Kosrae, Yap, and Fais islands. Other vegetables, such as cucumbers, eggplant, head cabbage, Chinese cabbage, bell peppers, green onions, and tomatoes, are also produced. Other fruits include mangoes, papayas, pandanus, pineapples, lemons, and limes, with oranges and tangerines also produced on Kosrae. The ubiquitous coconut palm is used for a wide range of subsistence purposes, and copra is the main cash crop and the nation's leading export. Crop production in 1999 included (in thousands of tons): coconuts, 140; copra, 18; cassava, 12; and bananas, 2. Black and white peppers were introduced to Micronesia in 1938, but pepper growing only began in Pohnpei (the FSM's most important pepper-producing island) in 1960. Rich volcanic soil and heavy rainfall make gourmet Pohnpei peppers highly regarded.

## 23 ANIMAL HUSBANDRY

Livestock in 2001 included some 14,000 head of cattle, 32,000 pigs, and 4,000 goats. Pigs, traditionally kept by many households for ceremonial purposes, are being upgraded through the introduction of improved strains. Two pig farms operate on Pohnpei. The largest cattle herd is on Pohnpei Island. Eggs are produced commercially, and limited success has been achieved by commercial poultry chicken projects in the states of Pohnpei and Chuuk. Chickens are kept by many households. Goat projects are also operating in Kosrae and Chuuk. A few head of water buffalo are privately raised on Pohnpei and on Pata in Chuuk. In the mid-1990s, the government started encouraging domestic feed production in order to decrease the reliance on imported feed meal.

## 24 FISHING

Inshore marine resources of the reefs and lagoons are harvested mainly for subsistence. The FSM's exclusive economic zone covers some 2.6 million sq. km (1 million sq. mi) of ocean which contain the world's most productive tuna fishing grounds. Although the FSM now has sole ownership of tuna stocks capable of a sustained yield of well over 100,000 tons per year, there is virtually no national participation in its exploitation. The total catch in 2000 was 27,974 tons, including 19,192 tons of skipjack tuna, 6,384 tons of yellowfin tuna, and 1,043 tons of bigeye tuna. The tuna catch is valued at about \$200 million annually. The Micronesian Maritime Authority and the National Fisheries Corporation assist in the development and promotion of commercial fisheries. Pohnpei and Kosrae have embarked on the construction of cold storage and tuna processing plants, and the Yap Fishing Corporation began upgrading its fleet. Total fisheries exports were valued at \$620,000 in 2000.

## 25 FORESTRY

The nation has abundant forestry resources, particularly on the high islands, consisting of approximately 15,000 ha (37,000 acres) of forests. Two privately owned commercial sawmills are operated on Pohnpei; one in Kitti logging mangrove cedar, and one in Kolonia utilizing upland timber. Exploitation of the nation's forestry resources is limited, and virtually all lumber used in construction is imported (\$2.1 million in 2000). Mangrove timber is used for handicrafts and furniture making.

## 26 MINING

There were deposits of phosphates on Fais Island in Yap and bauxite in Pohnpei, Truk, and Yap, but there was no commercial

exploitation. Clays, coral, sand, rock aggregate, and quarry stone works supplied construction materials.

## 27 ENERGY AND POWER

The nation is dependent on imported petroleum, which supplies about 80% of the total energy requirements. Fuel wood for household use provides most of the remainder. Diesel fuel, which accounts for over two-thirds of petroleum imports, is used primarily for electrical generation and ship services. Electricity is generated by government power stations located in each state center. About one-half of the electricity produced is used by the government. Small quantities of electricity are produced in outer island communities.

## 28 INDUSTRY

Manufacturing activity is nearly non-existent and accounts for only a fraction of a percent of GDP. Cottage industries involving handicrafts and small-scale processing are carried out in all states and constitute an important source of income for those not integrated into the monetary economy. In Truk, a small industries center, a garment factory, a coconut-processing plant, a boat-building plant, and a breadfruit flour plant are in operation; in Pohnpei, a coconut processing and soap and oil plant, a feedmill, an ice production plant, a brick-manufacturing plant; in Yap, a cottage industries program; and in Kosrae, a small industries center and a wood-processing plant. In late 1999, a tuna processing plant opened in Majuro.

## 29 SCIENCE AND TECHNOLOGY

There are no institutions for advanced instruction or research and development in science and technology.

## 30 DOMESTIC TRADE

Domestic commercial activity is dominated by wholesale and retail trade, which is highly localized in the four state centers of Kolonia, Tofol, Moen, and Colonia. Nearly half of the population is employed in subsistence farming and fishing. The country relies heavily on imports of food and manufactured goods.

## 31 FOREIGN TRADE

The FSM sustains a severe trade deficit. Exports include agricultural products (coconuts, bananas, betel nuts, cassava, and sweet potatoes), pigs, chickens, and re-exports of fish. Copra, formerly the country's largest export crop, suffered a severe decline in the late 1990s. Major export partners are Japan, the US, and Guam; major import partners are the US, Japan, and Australia.

## 32 BALANCE OF PAYMENTS

Foreign receipts are predominantly grants and rental payments from the United States and aid from other sources. Economic aid totaled \$77.4 million in 1995.

The US Central Intelligence Agency (CIA) reports that the purchasing power parity of Micronesia's exports was \$22 million while imports totaled \$149 million resulting in a trade deficit of \$127 million.

## 33 BANKING AND SECURITIES

Commercial banking operations are regulated by the FSM Banking Board. There are two foreign commercial banks: the Bank of Hawaii, with branches in Pohnpei, Yap and Kosrae; and the Bank of Guam, with branches in Pohnpei and Truk. There is also a domestic Bank of the FSM that operates branches throughout the islands. The FSM Development Bank commenced operations in 1982. It provides loans for projects that meet criteria based on the government's development priorities and is authorized to provide loan guarantees to other financial

institutions in the FSM. However, it can only make loans of up to \$200,000 because of capital limitations. The FSM Employees Credit Union was chartered in 1986. Tradable securities are not issued by the FSM government, state governments, or enterprises residing in the FSM. The currency is the US dollar.

In 1996, national and state governments considered measures designed to cope with the winding down of US funding under the Compact of Free Association (payments scheduled to end in 2001). The restructuring of national government is now underway, with the aim of reducing the number of employees and departments. The government is also seeking to improve basic infrastructure through private-sector investment; infrastructure improvements should in turn encourage growth of the private sector. In 1999, the FSM Trust Fund was established to foster financial independence. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$21.2 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$115.3 million.

## 34 INSURANCE

The Public Service System administers life insurance and workers' compensation programs. In 1984, a government-employee group health insurance program was instituted, and in 1987, a retirement pension program—for both state and national government employees—was initiated.

## 35 PUBLIC FINANCE

The state and national governments had a series of surpluses in the late 1980s, followed by years of deficits in the early 1990s. Government revenues remained nearly constant during the 1990s, while spending was unrestrained. By the late 1990s, the deficits had come under control.

The US Central Intelligence Agency (CIA) estimates that in 1998 Micronesia's central government took in revenues of approximately \$161 million and had expenditures of \$160 million. Overall, the government registered a surplus of approximately \$1 million. External debt totaled \$66.5 million.

## 36 TAXATION

National taxes on wages and salaries are levied, as well as a business gross receipts tax. The states are constitutionally limited in the types of taxes they may impose; they may levy sales taxes on alcoholic beverages, soft drinks, and cigarettes. The municipal governments usually levy head taxes and boat license and business license fees.

An important tax revenue service is from the sale of tuna fishing rights, which rose from \$12.7 million in 1990 to \$18.2 million in 1994. In 1999, FSM, Palau, and the Republic of Marshall Islands agreed to cooperate in policing illegal fishing in the region.

## 37 CUSTOMS AND DUTIES

As of 1988, specific duties were levied on cigarettes, beer and malt beverages, wine, distilled alcohol, and gasoline and diesel fuel. Ad valorem duties were levied as follows: tobacco, 50%; perfumes, cosmetics, and toiletries, 25%; soft drinks, 2% per 12 fl oz; foodstuffs for human consumption, 1%; and all other products, 3%. Micronesia's import taxes are among the lowest in the Pacific.

## 38 FOREIGN INVESTMENT

There is little foreign private investment. The Foreign Investment Act of 1997 was enacted to prohibit foreign investment in specific business activities, namely arms manufacture, minting of coins or printing of currency notes, and nuclear power or radioactivity-related businesses. The Act also restricts investment by foreigners

in banking, telecommunications, fishing, air transport, and shipping.

### 39 ECONOMIC DEVELOPMENT

The first national development plan (1985–89) was the initial stage of the government's 15-year program designed to achieve national self-sufficiency. Funds accruing under the Compact of Free Association were required for implementing the plan, and rephrasing of the plan was necessary. A multi-million dollar US-implemented capital improvement plan was scheduled for completion in 2001. It included new airports, docks, water and sewage systems, paved roads, and hospitals. Under the terms of the Compact, the United States provided \$1.3 billion from 1986–2001 in grant aid.

A Second National Development Plan covering the years 1992–96 sought to diversify Micronesia's economy; mainly to wean it from dependence on Compact funds. Little was accomplished. In late 1999, representatives of the United States and Micronesia began negotiations aimed at renewing some provisions of the Compact of Free Association.

### 40 SOCIAL DEVELOPMENT

The extended family and clan system, headed by traditional leaders or chiefs, is retained in varying degrees, especially in the outer islands. Rapid Westernization has resulted in an increasing incidence of juvenile delinquency, drug and alcohol abuse, and crime. A wide range of national and state social programs are ameliorating these trends. A social insurance system includes old age, disability, and survivor benefits. Employees contribute 5% of their earnings; employers make a 5% payroll contribution. The basic retirement pension benefit is 16.5% of the first \$10,000 and marginal rates beyond that level. Survivor payments totaled 60% of the descendant's pension.

In spite of Constitutional safeguards, sex discrimination and violence against women are serious problems. Women's roles within the family remain essentially the traditional ones. Sexual abuse and domestic violence are increasing. Women, however, face no discrimination in education. There are currently a higher percentage of graduates who are female at all educational levels.

Minorities generally do not face discrimination or prejudice. Non-citizens, however, are prohibited from owning land. Human rights are generally respected.

### 41 HEALTH

There are hospitals in each state center. In 1986, a community health center was established in Pohnpei and in 1987, a medical school was started. In the outer islands, primary medical services are provided through dispensaries staffed by health assistants. In 1982, a superdispensary was initiated in the Lower Mortlock Islands to serve 3,769 people scattered on seven atolls. Tertiary medical treatment is provided through patient referral to hospitals in Guam and Hawaii. All of Micronesia had access to safe water and sanitation in 1993.

The infant mortality rate in 1999 was 33.9 per 1,000 live births, and the life expectancy was 68.5 years. In the same year, the general mortality rate was 6 deaths per 1,000 people and the fertility rate was 3.9 children per woman. The maternal mortality rate was 121 per 100,000 live births in 1991–93. Immunization rates for Micronesian children under one year of age in 1994 were as follows: measles, 80%; tuberculosis, 50%; polio, 77%; and diphtheria, tetanus, and pertussis, 78%. Although polio has been eradicated, there have been cases of tuberculosis (173 in 1994) and measles (905 in 1994). Anemia was seen in 33% of children under the age of five in 1993.

### 42 HOUSING

In 1980 (the latest year for which statistics are available), the total housing consisted of 11,562 units, of which 47% were in

Truk, 32% in Pohnpei, 16% in Yap, and 5% in Kosrae. The average occupancy was seven persons per house. There has been a marked movement away from traditional construction materials toward imported lumber, plywood, and corrugated metal roofing.

### 43 EDUCATION

The state governments are responsible for the provision of education. Elementary education is compulsory up to the eighth grade or until age 15. In 1986 there were 142 primary schools, nine of them private, with 968 teachers and 23,636 pupils. Secondary education was provided through five public high schools, one in each state center and one in Falalop on the Ulithi atoll, serving Yap's outer islands, and through five private secondary schools, two in Truk and three in Pohnpei. The only post-secondary institution is the College of Micronesia (COM) in Pohnpei. However, in 1999 COM was in the process of opening a new campus built with US assistance, the beneficiary of Land Grant status through the US Department of Agriculture. FSM students are eligible for post-secondary education grants from the US government and attend institutions mainly in Guam, Hawaii, and the US mainland. Vocational education is provided by the Pohnpei Agriculture and Trade School and the Micronesian Occupational College in Palau.

A 1994 census poll reported that 22.8% of the FSM population had no schooling; 30.3% had some elementary schooling; 15.1% had some high school education; 13.6% had a high school diploma; 7.5% had some college; 6.1% had an associate's degree; 3.1% had a bachelor's degree; and 1.6% had engaged in graduate study.

### 44 LIBRARIES AND MUSEUMS

Most library materials are contained in the educational institutions; there are no public libraries. The library of the Congress of the Federated States of Micronesia holds 15,000 book volumes. The Community College of Micronesia, with 33,000 volumes, is the depository for documents from the trust territory government's archives in Saipan. There is a small museum in Kolonia, Pohnpei. The Nan Madol archaeological site was designated a historical landmark in 1986.

### 45 MEDIA

In 1983, the FSM Telecommunications Corp. provided interstate telecommunications via its satellite ground station in each state center and international connections through the Pohnpei and Truk stations. An interstate and international telex service has been available through the Pohnpei station since 1984. Telecommunications services to all inhabited outer islands are provided by radio links with the Pohnpei, Truk, and Yap stations. In 2001 there were 11,000 telephones.

There are no private newspapers. Newsletters are published by the national and state governments. *The National Union* comes out (twice monthly). State publications include *Mogethin* (Yap), *Uss Me Auus*, (Truk), *Pohnpei Reports*, *Kaselehile Press Pohnpei State*, and *Kosrae State Newsletters*.

As of 2001, there is one state-owned radio station in each state capital, broadcasting in English and local languages. There is one private radio station owned by a religious group. In 1997, there were 127 radios and 10 television sets per 1,000 population. In 2000, there were 2,000 Internet subscribers served by one service provider.

The Constitution provides for free speech and a free press, and the government is said to respect these rights in practice.

### 46 ORGANIZATIONS

There are Community Action Agencies in Yap, Truk, and Pohnpei, which organize youth clubs and community self-help projects. Private institutions, most of them church-affiliated, play

an active role in youth and community development. Many municipalities sponsor local women's organizations and community centers.

#### 47 **TOURISM, TRAVEL, AND RECREATION**

Tourist facilities have been developed in each state but are limited. Tourist attractions include the spectacular beauty of the high islands; the rich marine environment; World War II artifacts, including sunken Japanese ships in the Truk lagoon; and remains of an ancient culture on Yap Island, including stone platforms and large circular stones used as money.

In 2000, there were 32,530 tourist arrivals. The cost of staying in Truk, according to 2002 US government estimates, was about \$157 per day. Daily expenses were estimated at \$219 in Yap and \$130 in Pohnpei.

#### 48 **FAMOUS MICRONESIANS**

John Haglelgam, a former senator in the Congress, was elected president of the FSM from 1987 to 1991. In 2000, FSM's first 5-story building (and first building with an elevator) opened; it was named for Raymond Setik (d.1997), a successful businessman and one of the first members of the legislature in 1979.

#### 49 **DEPENDENCIES**

The FSM has no territories or colonies.

# MONGOLIA

*Mongol Uls*

**CAPITAL:** Ulaanbaatar

**FLAG:** The national flag, adopted in 1946, contains a light blue vertical stripe between two red stripes; in gold, on the stripe nearest the hoist, is the *soyombo*, Mongolia's independence emblem.

**ANTHEM:** *Bügd Nayramdah mongol ard ulsyn töriin duulal* (*State Anthem of the Mongolian People's Republic*).

**MONETARY UNIT:** The tugrik (₮) of 100 mongos. There are coins of 1, 2, 5, 10, 15, 20, and 50 mongos and notes of 1, 3, 5, 10, 20, 25, 50, and 100 tugriks. ₮1 = \$0.0008833 (or \$1 = ₮1,132) as of May 2003.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Constitution Day, 13 January; Women's Day, 8 March; Mother and Children's Day, 1 June; Naadam Festival, 11–13 July; Mongolian Republic Day, 26 November. Movable holidays include Mongol New Year's Day, in February or March.

**TIME:** 8 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Situated in east-central Asia, Mongolia has an area of 1,565,000 sq km (604,250 sq mi), extending 2,368 km (1,471 mi) E–W and 1,260 km (783 mi) N–S. Comparatively, the area occupied by Mongolia is slightly smaller than the state of Alaska. The largest landlocked country in the world, Mongolia is bordered on the N by Russia and on the E, S, and W by China, with a total boundary length of 8,162 km (5,072 mi).

## <sup>2</sup>TOPOGRAPHY

Mongolia is essentially a vast plateau with an average elevation of 914 to 1,524 m (3,000 to 5,000 ft). Mongolia comprises a mountainous section in the extreme west, where the peak of Nayramadlin Orgil (Huyten Orgil) of the Mongolian Altay Mountains rises to a height of 4,374 m (14,350 ft). Other mountain ranges are the Hentiyn, along the Soviet border, and the Hangayn, in west-central Mongolia. The southern part of the country is occupied by the Gobi, a rocky desert with a thin veneer of shifting sand. Explorations have uncovered large reservoirs of water 2–3 m (7–10 ft) beneath the desert surface.

## <sup>3</sup>CLIMATE

Mongolia has an arid continental climate with a wide seasonal range of temperature and low precipitation. In winter, it is the site of the great Siberian high, which governs the climate of a large part of Asia and gives Mongolia average winter temperatures of -21° to 30°C (-5° to -22°F) and dry, virtually snowless winters. In summer, remnants of the southeasterly monsoon bring most of the year's precipitation. Annual precipitation ranges from 25 to 38 cm (10 to 15 in) in mountain areas to less than 10 cm (4 in) in the Gobi.

## <sup>4</sup>FLORA AND FAUNA

Mongolia is divided into several natural regions, each with its characteristic plant and animal life. These regions are the mountain forests near the Soviet Siberian border; the mountain steppe and hilly forest farther south; the lowland steppe

grasslands; the semidesert; and finally the true desert. Larch and Siberian stone pine are characteristic trees of the northern forests, which are inhabited by bear, Manchurian red deer, snow panther, wild boar, and elk. The saiga antelope and the wild horse are typical steppe dwellers.

## <sup>5</sup>ENVIRONMENT

Environmental problems facing Mongolia include desertification, inadequate water supply, and air and water pollution. The presence of the Gobi Desert in the southeastern part of the country and mountains in the northwest provide natural limits to the amount of agricultural land. Areas affected by deforestation and excessive grazing are eventually overtaken by the desert.

Water pollution is a particularly significant problem in Mongolia because the water supply is so limited. The country has only 34.8 cubic kilometers of renewable water resources, 53% of which are used for farming. In 2000, only 77% of city dwellers and 30% of the people living in rural areas had access to pure water.

The country's air pollution problems are due to increased industrial activity within the country, including the burning of soft coal, and airborne industrial pollution from the former Soviet Union and the People's Republic of China. The heavy concentration of factories in Ulaanbaatar has polluted the environment in that area.

Przewalski's horse, the Bactrian camel, the snow leopard, and the saiga are among 12 mammals and 14 birds which are considered endangered. The Mongolian wild horse has become extinct in the wild.

After a winter of little snow, wildfires spread across northern Mongolia from March until June of 1996. The fires were the most extensive since records were first compiled in 1978, resulting in 26 deaths and nearly 800 people injured or rendered shelterless. An estimated 20% of Mongolia's coniferous forest was damaged in the blaze.

## 6 POPULATION

The population of Mongolia in 2003 was estimated by the United Nations at 2,594,000, which placed it as number 136 in population among the 193 nations of the world. In that year approximately 4% of the population was over 65 years of age, with another 34% of the population under 15 years of age. There were an equal number of males and females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 1.29%, with the projected population for the year 2015 at 3,051,000. The population density in 2002 was 2 per sq km (4 per sq mi).

It was estimated by the Population Reference Bureau that 64% of the population lived in urban areas in 2001. The capital city, Ulaanbaatar, had a population of 740,000 in that year. Darhan has a population of 90,000; Erdenet, 58,200. According to the United Nations, the urban population growth rate for 2000–2005 was 2.3%.

## 7 MIGRATION

Few Mongolian nationals live outside the country, but 3.4 million persons of Mongolian extraction lived in the Inner Mongolia province of China. About 500,000 live in Russia—in the Buryat and Kalmyk republics. Between 1955 and 1962, some 20,000 Chinese laborers entered Mongolia to work on construction projects, but in 1964 Mongolia expelled about 2,000 Chinese nationals who had refused to take part in an agricultural resettlement program, and another 1,700 in 1983. In addition, Mongolia expelled 7,000 ethnic Chinese between 1983 and 1993. Since the independence of Kazakhstan, many Kazakhs have emigrated.

Nomadic herders account for nearly half of Mongolia's population. Mongolia is one of the only developing countries where internal migration to rural areas exceeds migration to cities. The number of families formally registered as nomadic herders grew from an estimated 74,000 in 1990 to 170,000 in 1995.

In 2000 the total number of migrants was 8,000, with virtually no refugees. The migration rate for that year was -6.5 per 1,000 population. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

In 1999, 90% of the population consisted of Mongols, approximately three-quarters of them Khalkha. The Kazakhs are the leading minority group, making up about 4%. Peoples of Soviet and Chinese origin are also present in substantial numbers (2% each); other varied ethnic groups make up the remaining 2%.

## 9 LANGUAGES

Khalkha Mongolian, the official language, is spoken by about 85% of the population. It is one of a large dialect group in the Mongolic branch of the Altaic language family. Early in the 13th century, the Mongols adopted an alphabet written in vertical columns from the Turkic Uighurs, and they retained that script until modern times. The literary language differed increasingly from the living spoken language, and in 1941 the Mongolian government decided to introduce a new phonetic alphabet that would accurately reflect modern spoken Mongolian. The new alphabet consisted of the Cyrillic letters used in Russian, except for two special characters needed to render the Mongolian vowels represented as *ö* and *ü* in Western European languages. After a period of preparation (1941–45), the new alphabet was introduced in 1946 in all publications and in 1950 in all business transactions, but, following independence, the traditional script was due to be restored in 1994. The differences between the Khalkha language spoken in Mongolia, the Buryat language

spoken in the Buryat Republic of the Russian Federation, the Chahar and Ordos languages of China's Inner Mongolian Autonomous Region, and other Mongolian dialects are comparatively small and chiefly phonetic. A characteristic phonetic feature of Mongolian is the law of vowel harmony, which requires that a word contain either the so-called back vowels, represented as *a*, *o*, and *u* in Western European languages, or the so-called front vowels, represented as *e* (*ā*), *ö*, and *ü*, but not an association of the two types of vowels. Turkic, Russian, and Chinese are also spoken.

## 10 RELIGIONS

Before the government's campaign against religion in the 1930s, there were about 700 monasteries, with about 100,000 lamas (theoretically celibate), in Mongolia. During 1936–39, the Communist regime closed virtually all monasteries, confiscated their livestock and landholdings, tried the higher lamas for counterrevolutionary activities, and induced thousands of lower lamas to adopt a secular mode of life. In the mid-1980s, only about 100 lamas remained. The new constitution of 1992 established freedom of religion for all. Mahayana Buddhism, the primary religious following before the suppression of religion in the 1930s is making a surprising resurgence. Former monasteries are being restored, and there is a seminary at Gandantegchinlen Hiid. In 1992, Roman Catholic missionaries were also encouraged to come to Mongolia to continue the presence they had initiated earlier in the century.

A 2002 report indicates that about 93% of the population practice some form of Buddhism, mostly Lamaist (or Tibetan) Buddhism. About 4% of the population are ethnic Kazakh Muslims. There are small Christian communities throughout the country and it is believed that some natives practice shamanism.

## 11 TRANSPORTATION

The Trans-Mongolian Railway, about 1,496 km (930 mi) in length, connects Mongolia with both China and Russia. Ulaanbaatar has been connected to the Trans-Siberian Railway via Bayantümen since 1939 and via Sühbaatar since 1950, and to the Chinese Railways via Dzamin üüd since the end of 1955. Choybalsan is also connected to the Trans-Siberian system via Ereenstav. Ulaanbaatar Railways has been linked to Nalayah since 1938 and to Darhan and Tamsagbulag since 1964. The Sharin Gol Open-Pit Coal Mining Industry was connected to the Darhan industrial center during the third five-year plan (1961–65) by a 60-km (37-mi) rail line. A 200-km (124-mi) railroad line connects Erdenet, a copper-molybdenum mining and industrial center near the Russian border, with the Trans-Mongolian Railway. The total length of railroads in 2002 was 1,815 km (1,128 mi).

Mongolia had about 3,387 km (2,105 mi) of roadways in 2002, of which 1,563 km (972 mi) were paved. Freight and passenger traffic are carried on the Selenge River and across Hövsgöl Lake.

There were 34 airports in 2001, of which 8 had paved runways. Mongolia's first air service began operating between Ulaanbaatar and Verkhneudinsk in eastern Siberia in 1926. Miatair Mongol is the principal airline. In 2001, 255,300 passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

Archaeological investigations show that the land now known as Mongolia has been inhabited since the Lower Paleolithic period, more than 130,000 years ago. By about 1000 BC, animal husbandry of the nomadic type had developed, and by the 3d century BC, a clan style of organization based on horsemanship had emerged. The Huns, a Turkic-speaking people, driven westward during the Han dynasty in China (206 BC–AD 220), created a nomadic empire in central Asia that extended into

LOCATION: 87°47' to 119°54' E; 41°31' to 52°16' N. BOUNDARY LENGTHS: Russia, 3,441 kilometers (2,138 miles); China, 4,673 kilometers (2,904 miles).

Europe, beginning about AD 370. It reached almost to Rome under the leadership of Attila (r.433?–453) and declined after his death. Mongolia first played an important part in world history in AD 1206, when the Mongol tribes united under the leadership of the conqueror Temujin, or Genghis Khan. The Mongols set up their capital at Karakorum and established a vast empire extending from the northern Siberian forest to Tibet and from the Caspian Sea to the Pacific. After the death of Genghis in 1227, his empire was divided among his sons into Mongol states, or khanates: the Great Khanate of East Asia, which included the Yuan dynasty of China, and reached its peak under Kublai Khan (r.1260–94), who established his capital at Cambaluc (now Beijing); the Khanate of Chaghadai (Djakhatai) in Turkestan; the Hulagid Khanate, founded by Hulagu Khan in Persia; and the Golden Horde in southern Russia, founded by Batu Khan, who invaded Poland and Hungary in 1240. Having crossed the Danube River, Batu withdrew in 1241. The Mongols' century of dominance in Asia allowed for great trade and cultural interchange but also led to the spread of the bubonic plague to Europe.

During the 14th century, the great Mongol states disintegrated. The Yuan dynasty in China collapsed in 1368, to be replaced by the Ming dynasty; the western part of the Turkestan Khanate was incorporated into the empire of Timur in 1390; Hulagu's Persian empire disintegrated after 1335; and the Golden Horde was attacked and shaken by the forces of Prince Dmitry Donskoy in Russia in 1380 but ruled South Russia into the 15th century. In 1369, at the age of 33, Timur, also called Timur Lenk ("Timur the Lame") or Tamerlane, proclaimed himself ruler of all the land lying between the Tien Shan and the Hindu Kush mountain ranges. The Mongols retired to their original steppe homelands, splitting into three major groups: the northern Khalkha Mongols, north of the Gobi Desert; the southern Chahar Mongols, south of the Gobi; and the western Oirat Mongols. Babur, a descendant of Timur, founded the Mughal (or Mogul) Empire (so called from the Farsi word for "Mongol") in India in 1526; it lasted until the 18th century. Buddhism, which had been introduced by Tibetan monks in the 15th century, became widespread in the 16th and 17th centuries.

A cleavage developed between the northern (outer) Mongols and the southern (inner) Mongols, who had been more closely

associated with Mongol rule in China. In the course of conquering China, the Manchus subdued the southern Mongols in 1636, placing them under the eventual rule of China's Qing (Ch'ing) or Manchu dynasty (1644–1911). The northern Mongols, who had been fighting with western Mongols for supremacy, sought Manchu aid against their foes and accepted Manchu suzerainty in 1691. Finally, the Manchus destroyed the western Mongols as a historical force in 1758. The Russian-Chinese border treaties of Nerchinsk (1689) and Kyakhta (1727) confirmed Chinese rule over both the southern and northern Mongols but assigned the Buryats to Russia.

Following the overthrow of the Manchu dynasty by the Chinese revolution in 1911, northern Mongol princes proclaimed an autonomous Outer Mongolia under the rule of Bogdo Khan, the Living Buddha (Jebtsun Damba Khutukhtu) of Urga, an earlier name of Ulaanbaatar. A treaty with the tsar's government pledged Russian assistance for the autonomous state. After the Bolshevik Revolution, the Chinese exploited Russia's weakness, reoccupying Outer Mongolia in 1919 and ending its autonomy. In early 1921, the Chinese were driven out by Russian counterrevolutionary forces under Baron von Ungern-Sternberg. He, in turn, was overcome in July 1921 by the Mongol revolutionary leaders Sukhe Baatar and Khorloin Choybalsan, assisted by the Soviet Red Army. Under Soviet influence, a nominally independent state, headed by the Living Buddha, was proclaimed on 11 July 1921 and lasted as a constitutional monarchy until his death in 1924.

The Mongolian People's Republic (MPR), the second communist country in world history, was proclaimed on 26 November 1924. With the support of the former USSR, Communist rule was gradually consolidated. Large landholdings of feudal lords were confiscated, starting in 1929, and those of monasteries in 1938. A 10-year mutual assistance treaty, signed in 1936 and renewed for another 10 years in 1946, formalized the close relations between the former USSR and the MPR. In the summer of 1939, with Soviet support, the Mongolians fought invading Japanese along the border with Manchuria, ending with a solid defeat for the Japanese in September. After a virtually unanimous plebiscite by the Mongolians in favor of independence, the Nationalist government of the Republic of China formally recognized the MPR in 1945 (it withdrew its recognition in 1953) and the Nationalists on Taiwan still claim Mongolia as part of China. On 14 February 1950, the People's Republic of China and the former USSR signed a treaty that guaranteed the MPR's independence. In October 1961, the MPR became a member of the United Nations. Conflicting boundary claims between the MPR and China were settled by treaty on 26 December 1962, and on 30 June 1964 the MPR and the former USSR signed a 20-year treaty of friendship, cooperation, and mutual assistance. In June 1987, the MPR and the United States established diplomatic relations. With the growth of cities around the mining industry, Mongolian society shifted from being 78% rural in 1956 to being 58% urban in 1989.

With their close ties with the former USSR, Mongolians were well aware of Soviet policies of *glasnost* (openness) and *perestroika* (restructuring) and of the democratic movements in Eastern Europe after the mid-1980s. The MPR initiated its own policy of "openness" (il tod) and began economic reforms to serve as transitional steps away from a centrally planned, collective economy and toward a market economy. Following the first popular demonstrations calling for faster reforms, in Ulaanbaatar in December 1989, the ruling Mongolian People's Revolutionary Party (MPRP) opted for political as well as economic reforms. The MPRP's leadership resigned in March 1990 and in May the constitution (of 1960) was amended to allow for new, multiparty elections, which took place in July. The MPRP won a majority (85% of the seats) in the legislature, the People's Great Hural (PGH), which took office in September. The

PGH elected as president a member of the MPRP, Punsalmaagiyn Ochirbat, but invited the opposition parties to join in forming the new government.

During 1991, the new government discussed Mongolia's economic and political transformation. It issued vouchers to all citizens for the purchase of state property as a step toward privatization. Economic reform was made more difficult by the economic collapse of the former Soviet Union. In 1991, Russia insisted on trade based on cash rather than barter and dramatically cut aid. By 1992, Mongolia faced severe energy shortages. In 1991, the PGH also discussed the writing of a new constitution, which took effect in February of the next year. Based on that constitution, elections in June 1992 created a new legislature (with a MPRP majority), the State Great Hural (SGH) and, in June 1993, President Ochirbat was reelected (but with the support of a coalition of new parties, not the MPRP) in the first direct presidential elections. By September 1992, some 67,000 former Soviet troops (in Mongolia since 1966 when Sino-Soviet tensions increased) completed a process of withdrawal begun in 1990.

In the 1996 parliamentary elections, discontent, especially among the young, led to the defeat of the MPRP. The leaders of the winning Democratic Union Coalition (DUC), mostly political novices, promised to intensify market reforms. The election results marked the first smooth transfer of power in Mongolia's modern history and one of the most peaceful among all the former communist nations. In the following years, however, the stability and effectiveness of Mongolia's democratic government were hobbled by disunity within the majority DUC and by the political stalemate between the DUC and the ex-communists of the opposition MPRP. In late 1996 and early 1997, the MPRP prevailed in local elections, and its candidate, Natsagiyn Bagabandi, was elected president. After the resignation of two prime ministers, the nation was left with an interim government in the second half of 1998, as Bagabandi rejected multiple DUC nominees for the post.

In October 1998 the country was shaken by the murder of Sanjaasurengiyn Zorig, a pro-democracy leader and government minister who had been tapped to be the next DUC nominee for prime minister. By August 1999, yet another DUC government had fallen, and Rinchinyamiin Amarjargal, the 38-year-old former foreign minister, became Mongolia's third prime minister in 15 months.

On 2 July 2000, parliamentary elections were held that resulted in an overwhelming victory for the MPRP. The MPRP took 72 of 76 seats in the State Great Hural, with only 4 seats going to opposition members. Nambaryn Enkhbayar was named prime minister. On 20 May 2001, Bagabandi was reelected president with 58% of the vote, giving the MPRP control of both the presidency and parliament. The elections were characterized by international observers as free and fair.

In November 2002, the Dalai Lama visited Mongolia, a trip denounced by China. China warned Mongolian officials not to meet with the Tibetan spiritual leader, and briefly suspended train services with the country. Thousands of Mongolian Buddhists attended the Dalai Lama's speech on 6 November.

As of early 2003, the country continued to face problems of high unemployment, poor welfare and education systems, corruption, crime, and harsh winters. The severe winter of 2001 killed at least 1.3 million livestock; approximately 40% of Mongolians depend upon the country's 30 million livestock for their livelihood. Mongolia, though engaging in increased privatization of state-owned enterprises to speed the country's alignment with free market principles, has been careful to dedicate a percentage of the resulting revenues to social programs.

### 13 GOVERNMENT

A new constitution went into effect 12 February 1992, replacing the 1960 constitution and completing Mongolia's transition from a single-party state to a multiparty, parliamentary form of government. At that time, the country's name was officially changed from "Mongolian People's Republic" to "Mongolia." Suffrage is universal at age 18. The unicameral legislature, the State Great Hural (SGH), has 76 members, who are elected by district to four-year terms. The SGH meets twice each year. It can enact and amend laws, set domestic and foreign policy, ratify international agreements, and declare a state of emergency.

A president, the head of state and commander-in-chief of the armed forces, is selected by direct, popular vote for a four-year term, with a limit of two terms. The president nominates the prime minister and can call for the dissolution of the government, initiate and veto legislation (subject to override by two-thirds vote of the SGH), and issue decrees which take effect with the signature of the prime minister.

A prime minister, the head of government, is nominated by the president and confirmed by the SGH to a four-year term. The prime minister selects a cabinet which must be confirmed by the SGH. The government dissolves when the prime minister resigns, when half the cabinet resigns simultaneously, or upon a vote for dissolution by the SGH.

### 14 POLITICAL PARTIES

The Mongolian People's Revolutionary Party (MPRP), which had been the single ruling party since 1924, legalized opposition parties in 1990. In addition to the MPRP, major parties prior to the 2000 elections included the Democratic Union Coalition (DUC), which included the Mongolian National Democratic Party (MNDP), the Mongolian Social Democratic Party (MSDP), the Green Party (NYAM), and the Mongolian Democratic Party of Believers (MDPB); Mongolian Conservative Party (MCP); Democratic Power Coalition, which included the Mongolian Democratic Renaissance Party (MDRP) and Mongolian People's Party (MPP); Mongolian National Solidarity Party (MNSP); Bourgeois Party/Capitalist Party; United Heritage Party (UHP), which included the United Party of Herdsman and Farmers, Independence Party; Traditional United Conservative Party, and Mongolian United Private Property Owners Party; and the Mongolian Workers Party. The Democratic Union Coalition broke into its constituent parties prior to the July 2000 elections, and reorganized itself as the Mongolian Democratic Party in order to participate in the May 2001 presidential election.

In the first election for the State Great Hural (SGH) 28 June 1992, the MPRP won 56.9% of the vote and 71 of 76 seats in the SGH. In the first direct presidential election, 6 June 1993, President Punsalmaagiyn Ochirbat (first elected president 3 September 1990) was reelected with 58% of the vote. A former member of the MPRP, Ochirbat defeated that party's candidate, running as head of a coalition of the SDP and MNDP.

In the elections of 30 June 1996, the Democratic Union Coalition (which included the MNDP, the MSDP, and two smaller parties) defeated the MPRP, winning 50 of 76 seats (an increase of 44 seats). The MPRP won 25 seats, and the remaining seat went to the MCP. The DUC campaign platform included the Mongolia's Contract With Voters, which promised to cut government spending, reduce welfare, and reorganize the transformation of the government.

In the July 2000 parliamentary elections, MPRP candidates won 72 of the 76 seats, with the remaining 4 seats won (one each) by MNDP, the Civil Courage Party or Civil Will Party (CWP) in alliance with the Mongolian Green, the Motherland Alliance (the Mongol Democratic New Socialist Party and the Mongolian Labor Party), and an independent non-partisan

candidate. As of late 2002, there were 18 political parties operating in Mongolia.

### 15 LOCAL GOVERNMENT

Mongolia administratively consists of 21 provinces (*aymag*), divided into 334 counties (*soums*) and lesser administrative units called *baghs*, as well as one autonomous city, Ulaanbaatar, which is divided into districts and *horoos*. Each level of local administration has its own legislative body, or *hural*. These hurals nominate the provincial governors, who are then appointed by the prime minister.

In October 2000 local elections, the MPRP repeated its parliamentary election victory of July, winning 552 of 695 seats in the provincial and Ulaanbaatar governments. The democratic opposition took 87 local government seats, and independent candidates and small parties took 31 seats.

### 16 JUDICIAL SYSTEM

Prior to the 1992 constitution, justice was administered through a Supreme Court elected by the People's Great Hural; province and city courts, elected by the corresponding assemblies of people's deputies; and lower courts. The 17-member Supreme Court remains the highest judicial body with a Constitutional Court vested with sole authority for constitutional review. The local courts (people's courts) handle most routine civil and criminal cases. Provincial courts hear more serious cases and review local court decisions. The Supreme Court hears appeals from the local and provincial courts. The old specialized military justice and railway courts have been abolished. All courts are now organized under a single unified national system.

The General Council of Courts nominates and the president appoints the lower and the Supreme Court judges.

The new constitution provides for a completely independent judiciary. It also promises procedural due process rights to a fair trial, legal assistance, right to appeal, and access to requests for pardons, among others.

### 17 ARMED FORCES

In 2002, the armed forces totaled 9,100 active personnel with reserves of 137,000. The army had 7,500 equipped with 370 main battle tanks. The air defense force had 800 personnel and was equipped with 11 armed helicopters. Paramilitary forces consisted of a border guard numbering 6,000 and internal security troops of 1,200. Mongolia spent an estimated \$24.3 million for defense in 2001 or 2.5% of GDP.

### 18 INTERNATIONAL COOPERATION

Admitted to the UN on 27 October 1961, Mongolia participates in ESCAP, FAO, IAEA, ILO, IMF, ITU, UNESCO, UNIDO, UPU, WHO, WIPO, WMO, and the World Bank. It is a signatory to the Law of the Sea treaty, and a member of the WTO. Mongolia is an observer at ASEAN, and participates in the Asian Development Bank and the G-77.

The principal ally of Mongolia was the former USSR, which provided substantial economic and military assistance over the years. In 1986, the MPR made efforts toward normalizing relations with China, which had become strained after the expulsion of Chinese laborers in 1983, by establishing the first five-year trade agreement between the two countries, restoring air service and improving rail service between them, and exchanging consular delegations for the first time.

In the 1990s, Mongolia expanded its political and financial relationships with the United States, Japan, and the European Union. However, it remains dependent upon Russia and China for the development of its economy and trade.

## 19 ECONOMY

After 70 years as a centrally planned economy, Mongolia has undergone a difficult transition towards a free market system since 1990. With the help of active government promotion, the country's industrial sector grew steadily for several decades, expanding from 7% of the national income in 1940 to 35% by 1997, as agriculture's share of total production declined from 79% to 31%. Despite these changes, animal husbandry has remained a dominant sector of the economy, with live animals and animal products accounting for a major share of current exports, and livestock providing much of the raw material processed in the country's industrial sector. Total Soviet assistance at the height of Soviet support amounted to 30% of GDP. A number of factors, including the sudden cessation of economic aid from the former Soviet Union and allied countries, the disruption of trade with traditional trading partners, as well as a severe winter in 1990/91, caused a steep decline in the country's economic activity in the early 1990s. The annual growth rate of the GDP dropped steeply from 8.3% to -9.5% in 1992, and -3% in 1993.

Despite these difficulties, the government continued its economic transformation program involving the privatization of most previously state-owned enterprises and other policy reforms. In 1994, GDP grew by 2.3%, followed by further increases of 6.3% in 1995, 2.6% in 1996, 4% in 1997, 3.5% in 1998, 3.2% in 1999, 1.1% in 2000 and 1.4% in 2001. Although the economy has grown steadily since 1994, the economic wellbeing of most people is still in decline. Inflation reached a peak of over 325% in 1992, accelerating faster than wages, but dropping to about 4% in 1995. In 1999, inflation jumped to 10%, and was at 8% and 8.1% in 2000 and 2001. Development of the country's rich oil and mineral resources continues to be a high priority, and negotiations for the exploitation of oil, gold and rare earth elements with foreign companies are being actively pursued. Estimates for 2002 were for a real GDP growth rate of 3.9% and an inflation of 6%.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Mongolia's gross domestic product (GDP) was estimated at \$4.7 billion. The per capita GDP was estimated at \$1,770. The annual growth rate of GDP was estimated at 2.4%. The average inflation rate in 2000 was 11.8%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 32% of GDP, industry 30%, and services 38%.

According to the United Nations, in 2000 remittances from citizens working abroad totaled \$12 million or about \$3 per capita and accounted for approximately 0.8% of GDP. Worker remittances in 2001 totaled \$24 million. Foreign aid receipts amounted to about \$88 per capita and accounted for approximately 21% of the gross national income (GNI).

Approximately 56% of household consumption was spent on food, 9% on fuel, 8% on health care, and 14% on education. The richest 10% of the population accounted for approximately 24.5% of household consumption and the poorest 10% approximately 2.9%. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that in 2001 about 36% of the population had incomes below the poverty line.

## 21 LABOR

In 2000, the workforce was estimated at 1.4 million people. About half of the population engages in animal husbandry as

nomadic herders. In 2000, unemployment officially stood at 20%. A shortage of skilled labor had required the procurement of a large supplementary workforce from the former USSR and Eastern Europe.

The right to organize trade unions and professional organizations is granted by the 1990 constitution. In that year, the Association of Free Trade Unions, (AFTU) which includes about 70 unions, was chartered. In 2002, there were 400,000 unionized workers, amounting to less than 50% of the workforce. Nonessential workers have a right to strike.

According to the labor code, the working week is fixed at 40 hours, and for those under 18, at 36 hours. Children as young as 14 or 15 may work with parental permission. In reality, regulations regarding child labor are not effectively enforced. The legal minimum wage was less than \$25 per month in 2002, although most workers earned in excess of this amount.

## 22 AGRICULTURE

As of 1998, cropland amounted to 1,322,000 hectares (3,266,000 acres), up from only 1,160,000 hectares (2,866,000 acres) in 1979; the cultivated area represents only 1% of potentially arable land. The high altitude, temperature extremes, long winters, and low precipitation provide limited potential for agricultural development. Crop production accounts for 3% of all employment.

Shortages of fuels and parts for agricultural equipment caused crop production to decline by 70% during the 1990s. Principal crops produced in 1999 (in 1,000 tons) included: wheat, 168; barley, 3; potatoes, 64; and vegetables, 47. Trade in agricultural products in 2001 consisted of \$79.5 million in imports and \$96.5 in exports.

## 23 ANIMAL HUSBANDRY

Animal husbandry is the backbone of Mongolia's economy, employing some 160,000 persons. After Mongolia became the world's second communist country in 1924, many nomads settled down to raise livestock on state-owned collectives. Pastures constitute about 75% of the national territory. In 2001 there were 13,876,000 sheep, 10,269,000 goats, 3,097,000 cattle, 3,200,000 horses, 352,000 camels, and some 21,000 hogs. The goat population increased by over one million in 1994/95, due to a boom in the cashmere industry. The meat produced in 2001 was 290,000 tons. Because of the harsh climate, Mongolians consume much fat and meat during winter, and dairy products in the summer.

Mongols claim that the Mongolian thoroughbred is the progenitor of many breeds of race horses worldwide; furthermore, its stamina and speed over long distances surpass Arabic and Akhaltec racers. The Mongolian Horse Association was founded in February 1989 in Zunmod to increase the population and preserve traditional horse-breeding techniques, which were largely being forgotten over the past three decades.

Hunting remains an important commercial activity, with furs and skins the chief products. In 1999, production of skins and hides was estimated at 26,000 tons from sheepskins and 21,000 tons from cattle hides.

## 24 FISHING

Fishing is not a significant industry in Mongolia. The total catch in 2000 was 425 tons.

## 25 FORESTRY

Forests cover about 6.8% of the total territory of Mongolia, mainly in the area around Hövsgöl Lake. It is estimated that the country's total timber resources represent at least 1.25 billion cu m (44 billion cu ft). Birch, cedar, larch, and fir trees predominate. In 2000, the timber cut was 6,314,000 cu m (222.9 million cu ft),

with 29% burned as fuel. The lumber industry yielded 300,000 cu m of sawn wood that year.

## 26 MINING

Mongolia was the world's third-largest producer of fluorspar and among the top three producers in Asia and the Pacific of copper and molybdenum. Copper was the top export commodity in 2002 (almost all copper concentrates were exported, mainly to China and Russia), and fluorspar and other nonferrous metals were other top export commodities. Construction, mining (of coal, copper, molybdenum fluorspar, and gold), and oil were Mongolia's top three industries. Geological surveys have uncovered deposits of some 80 minerals, which were largely untapped. Also produced in 2000 were cement, hydrated lime, quicklime, varieties of stone, and silica. Most mining operations were in the eastern and northcentral regions, including the Erdenet copper mining center.

Output in 2000 included, in tons: mine copper (metal content), 125,227; fluorspar (including acid grade and submetallurgical), 198,000, up from 155,000 in 1999 (nearly all was exported to Russia); mine molybdenum, 1,335, down from 1,910 in 1999; gypsum, 25,000; and mine tungsten, 52, up from 27 in 1999. Gold output for 2000 was 11,485 kg, up from 6,976 in 1996. Gold mining increased significantly in the 1990s, and the number of companies engaged in gold mining grew to more than 100; total reserves were estimated to be 2,000 tons gold in 17 regions, the most important being Naran, Tolgoi, and Zamar. No tin was mined in 1999 and 2000, and uranium production ceased after 1997. The Erdenet copper-molybdenum mine, completed in 1981, was developed by the state in cooperation with the former USSR, and was 51% owned by the Mongolian government and 49%, by the Russian government. Clay, gold, gypsum, limestone, molybdenum, salt, sand and gravel, silver, precious stones, and tungsten were mined by small operations.

Mongolia's GDP rose by 3% in 2000, 3.2% in 1999, and 4.0% in 1997; it declined by 3.5% in 1998. The mining and quarrying sector accounted for 8.5% of GDP. The value of mineral exports accounted for 40.5% of Mongolia's \$466.1 million in total exports. The government encouraged foreign investment and adopted a number of long-term programs to explore for and develop metallic and nonmetallic minerals. Ivanhoe Mines Ltd. estimated that the Oyu Tolgoi had as much as 750 million tons of copper and gold resources; initial drilling had begun. The Tsagaan Suvraga porphyry copper deposit, in southwestern Sayanshand City, in the northern part of the Ulaan-Uul structural-formational zone of the south Gobi mineral belt, contained 240 million tons of sulfide ore at a grade of 0.53% copper and 0.018% molybdenum. The government was looking for investors to develop a 500-million-ton iron ore deposit north of Darkhan City; and construction of the Tsaiminerals' Tumurtiin Ovoo Mine, near Sukhe Bator, began in 2000, and would, after completion in 2004, produce 68,000 tons per year of zinc concentrates for 27 years, to be exported mainly to China.

Parliament-approved guidelines for 2001–2004 would privatize 27 state-owned enterprises and restructure 25 state-owned enterprises and organizations. Copper mining remained state owned. In 1997, the government modified mining laws to increase the land open to exploration to 40%, change policies regarding exploration licenses, and grant tax incentives to promote mining.

## 27 ENERGY AND POWER

In 2001, the installed capacity of the electric power stations in Mongolia amounted to 901,000 kW. About half the population is served with electricity. Three major power plants are in Ulaanbaatar, one is in Darhan, and smaller facilities are in Sühbaatar and Choybalsan. In 2000, the output was 2.8 billion kWh, of which 100% was from fossil fuels. Electric power

outages in rural areas can last for months. Consumption of electricity in 2000 was 2.7 billion kWh.

The Baga Nuur and Shariyn Gol mines were the two major coal mines. Mongol Gazry Tos, a state-owned petroleum company, has explored for new oil wells in the Dzuunbayan oil field near Saynshand in Dornogovi Aimag. Oil sands in the Tamstag Basin were determined to be commercially viable in 1995. Shortages of gasoline are common in the countryside, due to the declining deliveries from Russia.

## 28 INDUSTRY

Small-scale processing of livestock and agricultural products has historically been a mainstay of Mongolia's industrial sector. With the establishment of the Erdenet copper plant in the late 1970s, metal processing also became an important part of the economy. In 1996, industrial output was estimated at T239.3 billion, with production of metals accounting for 32.6%; energy production, 19.1%; processed foods, 15.8%; wool and woolen apparel, 11.5%; mineral fuels, 6.8%; chemicals, 6.7%; and other items, 7.5%. Much of the country's industrial activity is concentrated in four centers: Ulaanbaatar, Erdenet, Darhan, and Choybalsan. Industry employed approximately 74,100 persons in 1996.

Mongolia's industrial development has been severely affected by dwindling imports of fuel, spare parts, and equipment formerly obtained from the former USSR and allied trading partners. As a result, total output from the industrial sector generally declined in the early 1990s, falling by 2.5% in 1996. By 1997, the industrial sector had begun to recover, with growth estimated that year at 4.5%. Industrial growth in 2000 was 2.4%. Industrial production in Mongolia included about 40 different commodities. As of 2002, the production of food, leather, shoes, glass, and garments were on the decline, while production of copper and molybdenum concentrates, coal mining, and the food and beverage industries were increasing. About 72% of the economy had been privatized by 2000.

## 29 SCIENCE AND TECHNOLOGY

The Academy of Sciences, in Ulaanbaatar, was founded in 1921 and reorganized in 1961. It includes departments of agriculture, chemistry and biology, geography and geology, medicine, and technology; and numerous research institutes concerning agriculture, fisheries and veterinary science, medicine, natural sciences, and technology. The Natural History Museum in Ulaanbaatar features Gobi Desert dinosaur eggs and skeletons. The National University of Mongolia, founded in 1942 at Ulaanbaatar, has faculties of mathematics, natural sciences, physics, and biology, and undertakes research with the State Construction Research Institute in pursuit of knowledge related to nuclear physics, biophysics, mineral resources, energy, and communications. The Mongolian Technical University, founded in 1969 at Ulaanbaatar, has schools of power engineering, mechanical engineering, civil engineering, and geology and mining engineering. In 1987–97, science and engineering students accounted for 24% of college and university enrollments.

## 30 DOMESTIC TRADE

Prior to economic reforms of the early 1990s, consumer goods produced at Ulaanbaatar or imported from abroad were distributed by state marketing agencies to retail outlets in local administrative centers. Prices for all items except consumer services and some luxury goods were set by the government. With steady price liberalization undertaken since 1990, prices are now closely regulated for only a few staples, such as fuel, rice, and flour.

Because the rapid dismantling of the government's centrally planned distribution system proceeded without an effective alternative yet in place, severe supply shortages have been experienced especially in the country's urban centers. To reduce

these shortages, a system of public markets has been developed where supplies in excess of targeted deliveries can be sold freely. Commodity exchanges, however, still retain some of the characteristics of a centrally planned economy. Bartering is still common among Mongolia's nomadic population.

As of 2002, wide-spread reform toward privatization was nearly completed and these privately-owned enterprises have begun to show growth in contributions to the economy. The government still seeks foreign investment as a major opportunity to boost and stabilize the domestic economy.

Business hours are generally from 9 AM to 6 PM, Monday through Friday.

### 3<sup>1</sup> FOREIGN TRADE

Minerals, mainly copper concentrates and molybdenum, were Mongolia's largest exports. In 1998, exports totaled \$316.8 million. The second most important export category includes wool, hides, and skins, followed by consumer goods, mainly manufactured garments. The liberalization and expansion of free trade zones have promoted the export of manufactured goods such as spun wool and cashmere, carpets, leather goods, green tea, canned meat, and light consumer goods. In 1999, imports amounted to \$472.4 million. Imports included machinery and equipment, fuels, rice, wheat flour, industrial consumer goods, chemicals, building materials, sugar, and tea.

Although Mongolia continues to depend on the republics of the former USSR (especially Russia) as its dominant trading partners, the country's trading profile has changed greatly since the mid-1980s. In 1985, communist countries, excluding China and North Korea, accounted for 95.5% of Mongolia's exports and 98.1% of its imports. In 1997 Mongolia joined the World Trade Organization. By 1998 Russia accounted for only 12.1% of exports, while their share of imports fell to 30.6%.

Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
China (inc. Hong Kong)	274	126	148
United States	93	28	65
Russia	45	206	-161
United Kingdom	11	6	5
Japan	8	73	-65
Korea	3	56	-53
Germany	2	30	-28
Singapore	n.a.	11	n.a.
France	n.a.	8	n.a.

### 3<sup>2</sup> BALANCE OF PAYMENTS

Mongolia consistently imports more than it exports. The sudden discontinuance of grants and debt cancellations by the former Soviet Union devastated the balance of payments position. Subsequently, the IMF in 1993, 1997, and 2001 approved a series of three-year loans to Mongolia, the last due to expire in September 2004.

The US Central Intelligence Agency (CIA) reports that in 2000 the purchasing power parity of Mongolia's exports was \$466.1 million while imports totaled \$614.5 million resulting in a trade deficit of \$148.4 million.

The International Monetary Fund (IMF) reports that in 2001 Mongolia had exports of goods totaling \$460 million and imports totaling \$549 million. The services credit totaled \$86 million and debit \$174 million. The following table summarizes Mongolia's balance of payments as reported by the IMF for 2001 in millions of US dollars.

<b>Current Account</b>	<b>-151</b>

### 3<sup>3</sup> BANKING AND SECURITIES

Before 1924, Mongolia lacked its own banks and currency. Mongolians bartered, using such commodities as livestock, tea, and salt for exchange, or such foreign currencies as the US dollar, the Russian ruble, the British pound, and the Chinese Mexican dollar in commerce. Chinese and Russian banks offered credit, as did monasteries and private moneylenders. The government began to transform this chaotic monetary situation with a series of reforms, starting with the establishment of Mongolbank, or the Mongolian Trade-Industrial Bank, in June 1924. Mongolbank was founded as a Mongolian-Soviet joint-stock company. In February 1925, the tugrik was made the official national currency, and it was slowly introduced into circulation over the next three years. In April 1928, all other currencies were withdrawn from circulation. In 1929, the government drove private moneylenders out of business by establishing a monopoly on foreign trade and outlawing private lending.

In April 1954, the Soviet Union handed over its shares in Mongolbank, which was renamed the State Bank of the Mongolian People's Republic, which remains the official bank of Mongolia. However, recent economic reforms have allowed the formation of a commercial banking sector. The economic reforms were brought about by the collapse of the Soviet Union in the early 1990s.

Mongolia has a two-tier banking system where control of the money supply is invested in the central bank. The Bank of Mongolia has established lending rules the commercial banks must follow. Also, reserve requirements are set by the national bank. In 1991, commercial functions were separated from the Mongol Bank, and two commercial banks were created; by the late 1990s there were 18. On advice from the Asian Development Bank, the government closed a number of banks in 1999 and 2000, leaving 12 in operation in an effort to restructure the two-tier system. In 2000, the World Bank gave Mongolia a loan earmarked for restructuring of its financial systems. Also in that year, foreign exchange reserves reached \$123 million. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$142.2 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$301.6 million. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 8.6%.

The Mongolian Securities Exchange opened in August 1995. About 60,000 individuals have opened accounts on the stock market. By 1996, more than 7.8 million shares from 400 companies had been traded and 28,000 contracts concluded; average daily trade volume is 60,000-80,000 shares.

### 3<sup>4</sup> INSURANCE

In the 1980s, insurance was offered by the State Directorate for Insurance, or Mongoldaatgal, which was under the control of the

Ministry of Finance. The government was planning to introduce health insurance in 1993 as a cooperative effort between individuals, government agencies, and the private sector.

### 35 PUBLIC FINANCE

The annual budget is submitted to the People's Great Hural for approval. Privatization did not begin until fiscal year 1990/1991 along with political upheaval. Privatization of large state businesses has begun, as has the implementation of tax reforms. Most small businesses were private as of 2001.

The US Central Intelligence Agency (CIA) estimates that in 2000 Mongolia's central government took in revenues of approximately \$262 million and had expenditures of \$328 million. Overall, the government registered a deficit of approximately \$66 million. External debt totaled \$760 million.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

REVENUE AND GRANTS	100.0%	262
Tax revenue	72.2%	189
Non-tax revenue	24.1%	63
Capital revenue	1.2%	3
Grants	2.5%	7
EXPENDITURES	100.0%	335
General public services	8.3%	27
Defense	7.2%	24
Public order and safety	4.4%	14
Education	7.7%	25
Health	8.5%	28
Social security	23.8%	78
Housing and community amenities	0.5%	2
Recreation, cultural, and religious affairs	2.5%	8
Economic affairs and services	14.0%	46
Other expenditures	20.6%	67
Interest payments	4.7%	15

### 36 TAXATION

The turnover tax, for the majority of state revenues, is an indirect sales tax levied at the production stage on all manufactured commodities. Personal taxes consist of income taxes, paid by salaried industrial workers and office employees, and livestock taxes on private herders, based on the number of livestock owned. There is a collection of 40% on taxes levied on enterprises with foreign capital.

### 37 CUSTOMS AND DUTIES

Mongolia collects a general import tariff of 5% and a value-added tax (VAT) of 13% on all imported items. Customs duties have been insignificant, yielding less than 1% of total state revenues.

### 38 FOREIGN INVESTMENT

Prior to 1990, no private investments were possible in Mongolia; much of the country's investment capital was derived from government loans and grants provided by the former USSR and allied countries. New government policy and laws since the late 1980s, including the Foreign Investment Law of 1993, provide the legal basis and incentive for foreign investments. In 1994, Mongolia concluded a Bilateral Trade and Investment Agreement (BTIA) with the US, in 1997 accessed to the WTO, and in 1999 was granted normal trade relations (NTR) status by the US.

The Foreign Investment and Taxation Laws provide for tax incentives and exemptions for foreign investment. Total income tax exemptions are granted to businesses engaged in

infrastructural projects like building power plants, thermal plants, power transmission networks, highways, railways, and air cargo transportation facilities. Mining operations, metallurgy operations, chemicals production, and machinery and electronics manufacturing receive a 10-year tax holiday, and 50% tax exemption for the next five years. Companies that export more than 50% of production receive a three-year tax holiday, and 50% tax exemption for another three years. Thus far, private foreign capital remains a small source of investment in the country. Mongolia's lack of infrastructure remains an impediment to foreign investment. A north-south paved road running from Russia to China and through the capital was completed with finance from the Asian Development Bank (ADB) but Mongolia still lacks an East-West highway. As of July 2000, cumulative foreign investment in Mongolia totaled \$308.4 million. The biggest source has been China, including Hong Kong (\$86 million), followed by Japan (\$47.5 million), South Korea (\$30.4 million), the US (\$27.1 million), Russia (\$15.5 million) and Canada (\$9.3 million). The sector attracting the most foreign direct investment (FDI) has been mining (24%), followed by light industry (19.6%); raw material processing, including cashmere (10.9%); trade and catering (6.4%); construction (6.3%); banking and financial services (5.4%) and telecommunications (5.0%). Leading investors include Sumitomo Corporation and Komatsu of Japan; Korean Telecom; and SOCO Oil, Caterpillar, and Nescor of the United States.

### 39 ECONOMIC DEVELOPMENT

In the past, Mongolia operated on the basis of a planned economy, with five-year plans implemented from 1947 until 1990, with assistance from the former USSR and China. In 1990, with the establishment of a new consensus government, there followed a three-year plan that aimed for achieving greater efficiency in the allocation of resources and a diversified economic base by undertaking a sustained transition to a free market economy. The change was a fundamental shift, as the government relinquished its role as the primary factor in the economy and began limiting itself to policies supporting a market-oriented economy. Main components of the government's program include privatization of state enterprises, price liberalization, changes in national law, and an action plan for environmental protection. Current plans specify development of the country's energy and mining sectors, and further action in environmental protection as well as continued reforms in a number of areas including fiscal management, land tenure, and social benefit entitlements.

In 1996, the initial phase of privatization of state property was completed. According to the government, 100% of small- and medium-sized enterprises were privatized as well as 97% of the country's livestock. In 2000, the private sector accounted for 72% of GDP. At the end of the 1990s, however, the government's commitment to privatization and market reforms appeared to be weakening. However, the government that took office in August 2000 renewed the effort at gaining macroeconomic stability and restoring the momentum for reform. In September 2001, the administration entered into a three-year arrangement with the IMF under its Poverty Reduction and Growth Facility (PRGF) supported by stand-by funds of SDR28.49 million (about \$40 million). In a 2002 review, the IMF commended the government on progress made to contain inflation, but noted that improvements were needed in fiscal transparency and accountability.

In July 2002, a pledge meeting of the Consultative Group (CG) for Mongolia, consisting of donors from 20 countries and 18 international organizations in addition to representatives of various civil and private organizations, agreed on the importance of the government's addressing governance issues: ensuring accountability, promoting transparency, controlling corruption,

reforming the judiciary and strengthening the rule of law. Priority areas of action stressed were energy and information and communications technology (ICT), as well as preparation of a long-term strategy for rural development. The donors pledged \$333 million in support of Mongolia's development efforts in 2003.

#### 40 SOCIAL DEVELOPMENT

The social insurance program provides for free medical services, benefits for temporary disability, and pensions for permanent disability and old age.

Women have equal rights and freedoms under Mongolian law, with the exception of a law barring them from hazardous work. Women account for approximately half of the work force, generally receive equal pay for equal work, and many hold mid-level government and professional jobs. Domestic abuse and violence remain serious problems.

Although the government generally respects the human rights of its citizens, there are reports of mistreatment of detainees and prisoners. Human rights organizations operate openly in Mongolia.

#### 41 HEALTH

Health care is administered under state auspices and all medical and hospital services are free. The government gives special priority to increasing the number of physicians and other health personnel and expanding facilities in rural areas. Each province has at least two hospitals and each agricultural cooperative and state farm has a medical station. As of 1999, there were an estimated 2.4 physicians and 11.5 hospital beds per 1,000 people. During 1990–95, most Mongolians had access to health services (95%). In 2000, 60% of the population had access to safe drinking water and 30% had adequate sanitation. Health expenditures were 4.7% of the GDP in 1990–97.

Average life expectancy in 2000 was an estimated 67 years (up from 45 years in 1950). Pulmonary and bronchial infections, including tuberculosis and brucellosis, are widespread but are being brought under control through the use of *ayrag*, an indigenous drink brewed from horse milk and possessing demonstrated healing qualities. Cholera, smallpox, typhus, and other epidemic diseases have been virtually eliminated. In 1990–94, immunization rates for children up to one year of age were as follows: tuberculosis, 90%; diphtheria, pertussis, and tetanus, 78%; polio, 87%; and measles, 80%. As of 1999, rates for DPT and measles were, respectively, 94% and 93%.

The general mortality rate was estimated at seven per 1,000 people as of 2002. In 2000 the infant mortality rate was 56 per 1,000 live births. At least 30.4% of children in 1996 had goiter. About 25% of children under five years of age were malnourished in 1999 and 11% of births were of low birth weight. Maternal mortality in 1995 was 65 per 100,000 live births. The total fertility rate decreased steadily from 5.4 in 1980 to 2.6 per woman in 1999.

As of 1999, the number of people living with HIV/AIDS was estimated at fewer than 100.

#### 42 HOUSING

Although there are many stone and wood buildings in Ulaanbaatar and some of the larger provincial centers, the traditional housing structure is the ger, a tent-like wooden frame structure covered in woolen felt. In 2000, about 51% of all households lived in gers; 25% lived in conventional permanent structure homes, and 22% lived in apartment buildings. Large apartment-house complexes with stores, services, and cultural facilities are being built in Ulaanbaatar, as well as in various other cities and towns. The average household has 4.3 people.

### 43 EDUCATION

Eight years of schooling is compulsory starting at age eight, and free of charge. Since the 1950s, the MPR has claimed that the entire adult population is literate; in 1995, however, UNESCO estimated the illiteracy rate at 10.9% for males and 21.9% for females.

After declining for years, average national enrollment in primary schools was 78% in 1994, and probably substantially lower in rural areas. Many children in rural areas are withdrawn from school in order to work at home. An absence of heat in many rural schools is also a problem that may contribute to poor enrollment levels. More than 70% of students from rural areas reside in dormitories adjoining the schools. Attendance at vocational schools declined sharply from 23,236 in 1985 to 7,480 in 1994.

School enrollment rose again by 1999, when 90% of primary-school-age children were enrolled in school, while 59% of those eligible attended secondary school. In 1997, there were 7,587 teachers and 234,193 pupils in primary schools. Student-to-teacher ratio stood at 31 to 1. In the same year, secondary schools had 13,171 teachers and 195,408 pupils.

The Mongolian State University, in Ulaanbaatar, was founded in 1942 and includes faculties in the social sciences, trade, and philology, as well as in science and technology. In 1998 all institutions of higher learning had a combined enrollment of 50,961, with 3,331 teachers.

The 1991 Education Law introduced a number of changes in the system. The traditional Mongolian script was to be introduced from the first grade, and teaching of English in all schools was made compulsory. Non-formal education offered by private institutions was also given due importance and recognition. While higher and professional education is not free, tuition fees for poor students are subsidized by the government. As of 1999, public expenditure on education was estimated at 6.2% of GDP.

#### 44 LIBRARIES AND MUSEUMS

The Mongolian State University has a library of 350,000 volumes. The State Public Library, which is under the jurisdiction of the Academy of Sciences, contains three million volumes in Mongolian, Chinese, English, French, German, Manchu, Russian, Tibetan, and other languages. It also has a collection of valuable Buddhist manuscripts, including a 335-volume Buddhist encyclopedia. In 1991, the country opened a college of business and commerce, which houses a library of 21,000 volumes. Also that year, it opened the College of Economics with 40,000 volumes. The State Central Museum, containing art treasures and antiquities, the Museum of National History, the Ulaanbaatar Museum (a public affairs museum), the Fine Arts Museum, and the Museum of Religion, all in Ulaanbaatar, are under the jurisdiction of the Academy of Sciences. Also in the capital are the Mongolian National Modern Art Gallery, opened in 1989, and the Palace Museum, in the home of Bodg Geegen, former head of state and leader of the Buddhist Church of Mongolia.

#### 45 MEDIA

In 1999, there were 104,100 mainline telephones in use, with an additional 110,000 cellular phones in use in 2001. Radio broadcasting began in the MPR in 1934. Radio Ulaanbaatar broadcasts programs in Mongolian, Russian, Chinese, English, French, and Kazakh. Mongel Telev 12, which transmits locally produced programs, and a satellite station are also located in Ulaanbaatar. In 2001 there were 7 AM and 9 FM radio stations. As of 1999, there were four television stations. In 2000 there were 154 radios and 65 television sets for every 1,000 people. In 2001 Internet access was available through five service providers, with 30,000 subscribers that year.

The newspapers of the MPR (together with the organizations that publish them) include *Unen* (Central Committee of the MPRP, 1999 circulation 170,000); *Ardyn Erh* (Mongolian Great Hural and Cabinet, circulation 77,500); *Novosti Mongolii* (the Mongolian News Agency); *Hodolmor*, the organ of the trade unions; *Dzaluuchuudyn Unen* (Central Committee of the Mongolian Revolutionary Youth League); *Shine Hodo* (Ministry of Agriculture and the Supreme Council of the Federation of Agricultural Cooperatives); *Utga Dzobiol Uurlag* (the Union of Mongolian Writers and the Ministry of Culture); and *Ulaan Od* (Ministry of Defense and the Ministry of Public Security). Also published are 41 periodicals, including *Namyn Am'dral*, a journal of the Central Committee of the MPRP, and *Shinjleh Uhaan Am'dral*, a bimonthly publication of the Mongolian Academy of Sciences.

The constitution provides for freedom of expression, including free speech and a free press, and the government is said to respect these rights in practice.

#### 46 ORGANIZATIONS

Mongolia's mass organizations, all of which work closely with the MPRP, include the Mongolian Revolutionary Youth League (founded in 1922), Mongolian Pioneers' Organization, Committee of Mongolian Women (founded in 1933), and Mongolian-Soviet Friendship Society (founded in 1947).

Other youth organizations include the Union of Mongolian Students and the Scout Association of Mongolia. Another non-government women's organization is the Women's Information and Research Center.

Professional and cultural organizations include the Mongolia Academy of Science, the Union of Mongolian Artists, the Union of Mongolian Composers, the Mongolian Association for Lawyers, the Union of Mongolian Journalists, the Union of Mongolian Writers, and the Union of Mongolian Philatelists.

Social action organizations are the Mongolian Committee for Afro-Asian Solidarity, Mongolian Union for Peace and Friendship Organizations, and Mongolian Committee for the Defense of Peace. The Red Cross is also active.

#### 47 TOURISM, TRAVEL, AND RECREATION

In 2000, approximately 158,205 travelers visited the MPR from abroad. Despite the birth of multiparty democracy in the 1990s, Mongolia has not encouraged tourism. Tourist facilities are in short supply, and prices are high.

Points of interest include the Gandan Lamasery in Ulaanbaatar and the ruined city of Karakorum, once the capital of the Mongol Empire. Mongolia offers abundant and varied scenery, including forests, steppes, lakes, and deserts, and a wide variety of wildlife. Traditional sports in Mongolia include wrestling, archery, and horse racing.

The estimated cost of staying in Ulaanbaatar, according to the US Department of State, was \$183 per day in 2000. In small towns and villages, daily expenses are much lower, perhaps even less than \$50 per day.

#### 48 FAMOUS MONGOLIANS

A long line of Mongol khans have left their mark on history ever since Temujin, or Genghis Khan (1162–1227), set up the first Mongol empire in 1206. Outstanding among them were Kublai Khan (1216–94), a grandson of Genghis, who conquered most of

China; Hulagu Khan (1217–60), a brother of Kublai, who conquered Persia and Syria; Batu Khan (d.1255), Kublai's cousin, who overran Russia, Poland, and Hungary; Timur, also known as Timur Lenk ("Timur the Lame") or Tamerlane (1336?–1405), a descendant of Genghis, who extended his military power for short periods into southern Russia, India, and the Levant; and Babur (Zahir ad-Din Muhammad, 1483–1530), a descendant of Timur, who established an empire in India.

In recent times, two national leaders were Sukhe Baatar (1894–1923) and Khorloin Choybalsan (1895–1952). Yumjaagiin Tsendenbal (1916–1991), intermittently general secretary of the Central Committee of the MPRP since 1940, became chairman of the Council of Ministers in 1952, was elected chairman of the Presidium of the People's Great Hural in 1974, and was named the MPRP general secretary in 1981. Jambyn Batmunkh (b.1926) became chairman of the Council of Ministers in 1974 and was elected chairman of the Presidium and general secretary of the MPRP in 1984.

The founder of modern Mongolian literature is D. Natsagdorj (1906–37). Tsendyn Damdinsuren (b.1908) is one of the most important writers. Leading playwrights are Ch. Oydov (1917–63) and E. Oyuun (b.1918). Other prominent writers are B. Rindhen (1905–78), D. Namdag (b.1911), U. Ulambayar (b.1911), and Ch. Lodoydamba (1917–70). B. Damdinsuren (b.1919) and L. Murdorzh are noted composers. Jugderdemidiyn Gurragcha (b.1947) became the first Mongolian in space in 1981, when he was carried into orbit aboard the former USSR's *Soyuz 39*.

#### 49 DEPENDENCIES

The MPR has no territories or colonies.

# MYANMAR

Union of Myanmar  
*Pyidaungzu Myanma Naingngandaw*

**CAPITAL:** Yangon (formerly Rangoon)

**FLAG:** The national flag is red with a blue canton, within which 14 white stars encircle a rice stalk and an industrial wheel.

**ANTHEM:** *Kaba Makye (Our Free Homeland)*.

**MONETARY UNIT:** The kyat (K) is a paper currency of 100 pyas. There are coins of 1, 5, 10, 25, and 50 pyas and 1 kyat, and notes of 1, 5, 10, 25, and 100 kyats. K1 = \$0.00125 (or \$1 = K800) as of May 2003.

**WEIGHTS AND MEASURES:** Both British and metric weights and measures are in general use, but local units also are employed.

**HOLIDAYS:** Independence Day, 4 January; Union Day, 12 February; Peasants' Day, 2 March; Defense Services Day, 27 March; Burmese New Year, 17 April; World Workers' Day, 1 May; Martyrs' Day, 19 July; Christmas, 25 December. Movable religious holidays include Full Moon of Tabaung, February or March; Thingyan (Water Festival), April; Full Moon of Kason, April or May; Waso (Beginning of Buddhist Lent), June or July; Thadingyut (End of Buddhist Lent), October; and Tazaungdaing, November.

**TIME:** 6:30 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Situated in Southeast Asia, Myanmar has an area of 678,500 sq km (261,970 sq mi), extending 1,931 km (1,200 mi) N–S and 925 km (575 mi) E–W. Comparatively, the area occupied by Myanmar is slightly smaller than the state of Texas. It is bounded on the N and E by China, on the E by Laos, on the SE by Thailand, on the S by the Andaman Sea, and on the W by the Bay of Bengal, Bangladesh, and India, with a total boundary length of 7,806 km (4,850 mi), of which 1,930 km (1,197 mi) is coastline.

Myanmar's capital city, Yangon (formerly Rangoon), is located in the southern part of the country.

## <sup>2</sup>TOPOGRAPHY

Myanmar is divided into four topographic regions: a mountainous area in the north and west, ranging from about 1,830 to 6,100 m (6,000–20,000 ft) in altitude, and including the Arakan coastal strip between the Arakan Yoma mountain range and the Bay of Bengal; the Shan Highlands in the east, a deeply dissected plateau averaging 910 m (2,990 ft) in height and extending southward into the Tenasserim Yoma, a narrow strip of land that projects some 800 km (500 mi) along the Malay Peninsula, in the southeast; central Myanmar, a principal area of cultivation, bounded by the Salween River in the east and the Irrawaddy River and its tributary, the Chindwin, in the west; and the fertile delta and lower valley regions of the Irrawaddy and Sittang rivers in the south, covering an area of about 25,900 sq km (10,000 sq mi) and forming one of the world's great rice granaries. Good harbors are located along the coastline.

## <sup>3</sup>CLIMATE

Myanmar has a largely tropical climate with three seasons: the monsoon or rainy season, from May to October; the cool season, from November to February; and the hot season, generally from March to April. Rainfall during the monsoon season totals more than 500 cm (200 in) in upper Myanmar and over 250 cm (100 in) in lower Myanmar and Yangon (formerly Rangoon). Central Myanmar, called the dry zone, and Mandalay, the chief city in the

area, each receive about 76 cm (30 in). The mean annual temperature is 27°C (81°F); average daily temperatures in Yangon (Rangoon) range from 18° to 32°C (64–90°F) in January, during the cool season, and from 24° to 36°C (75–97°F) in April, during the hot season. The climate in upper Myanmar, particularly at altitudes ranging from about 300 to 1,220 m (1,000–4,000 ft), is the most temperate throughout the year, while lower Myanmar, especially in the delta and coastal regions, is the most humid.

## <sup>4</sup>FLORA AND FAUNA

Myanmar has a wide variety of plant and animal life. Teak, representing about 25% of the total forested area, thrives mainly in the mountainous regions; evergreen, bamboo, and palm in the freshwater delta swamps and along the coastlands; mangrove in the salty coastal marshes; mixed temperate forests and rolling grasslands in the Shan Highlands; and scrub vegetation in the dry central area. There are about 12 species of monkeys, as well as tigers, leopards, elephants, and half-wild pariah dogs. Fish abound along the coastline, in the tidal waters of the delta, and in the rivers and streams.

## <sup>5</sup>ENVIRONMENT

In Myanmar the principal environmental threat comes from cyclones and flooding during the monsoon season, and regular earthquakes. Deforestation for farming or illegal economic gain is the most persistent ecological effect of human encroachment. In 1985, 405 square miles were lost through deforestation. By 1994, two-thirds of Myanmar's tropical forests had been eliminated. However, the nation still had the world's eighth largest mangrove area, totaling approximately half a million hectares.

Little information is available about the long-term effects of industrialization on the natural environment, although evidence of industrial pollutants has been found in the air, water, soil, and food. Myanmar has 880.6 cubic kilometers of renewable water resources. Only about 89% of city dwellers and 66% of the rural population have pure water. Inadequate sanitation and water treatment are leading contributors to disease. Environmental concerns have been given low priority by the government.

Endangered species in Myanmar include the tiger, Asian elephant, Malayan tapir, Sumatran rhinoceros, Fea's muntjac, river terrapin, estuarine crocodile, and four species of turtle (green sea, hawksbill, olive ridley, and leatherback). The Javan rhinoceros is extinct. Out of a total of 251 species of mammals, 31 are endangered; of 867 breeding bird species, 44 are endangered. Twenty reptiles in 203 species are threatened along with one type of freshwater fish. Myanmar also has 6 threatened species of plants in a total of 7,000. Threatened species include the banteng, pink-headed duck, freshwater sawfish, Sumatran rhinoceros, Siamese crocodile, hawksbill turtle, gaur, and sun bear.

## 6 POPULATION

The population of Burma in 2003 was estimated by the United Nations at 42,281,000, which placed it as number 28 in population among the 193 nations of the world. In that year approximately 5% of the population was over 65 years of age, with another 33% of the population under 15 years of age. There were 98 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 1.28%, with the projected population for the year 2015 at 55,762,000. The population density in 2002 was 72 per sq km (187 per sq mi).

It was estimated by the Population Reference Bureau that 28% of the population lived in urban areas in 2001. The capital city, Yangon, had a population of 4,101,000 in that year. The next largest city is Mandalay, numbering 532,985. According to the United Nations, the urban population growth rate for 2000–2005 was 2.9%.

## 7 MIGRATION

Indians were the most significant Asian minority in Myanmar until World War II, when hundreds of thousands fled the Japanese invasion; although many returned after the war, the Indian minority never regained its prewar proportions, because after independence in 1948 the government of Myanmar instituted rigid restrictions on Indian migration. The Indian population was substantially reduced between April 1963 and June 1965, when 100,000 were repatriated as part of a program to increase the wealth and holdings of Myanmar nationals. (Indians had dominated Myanmar's commerce.) The government has sought to curtail both immigration and emigration, although as many as 500,000 persons may have left Myanmar during 1962–71. About 187,000 Muslims who fled to Bangladesh in 1978 were repatriated with the help of UN agencies by the end of 1981; they had left Myanmar because of alleged atrocities by its soldiers in Arakan State. They lost their citizenship in 1982.

About 500,000 poor urban residents were forcibly relocated to rural areas between 1989 and 1992. Rural residents are also subject to forced resettlement in connection with counterinsurgency operations.

In 1992, 250,000 Muslim refugees from Myanmar's Northern Rakhine state began arriving in Bangladesh claiming human rights abuses in Myanmar. As of October 1996, around 50,000 of these refugees from were still living in South Bangladesh in five refugee camps. Between 1994 and 1997, some 230,000 of these refugees returned home to Northern Rakhine state. The repatriation resumed in November 1998, following meetings between the UNHCR and Myanmar authorities, but returns were limited to some 450 people due to procedural problems. UNHCR has appealed to the governments of Myanmar and Bangladesh to accelerate the repatriation process.

In 2000 the total number of migrants residing in Burma numbered 113,000. The net migration rate for that year was 0.1 per 1000 population. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

The Burmans, ethnically related to the Tibetans, constituted about 68% of Myanmar's total population in 1999. In remote times, the Burmans, migrants from the hills east of Tibet, descended the Irrawaddy Valley and intermarried with the previously settled Mon and Pyu peoples. Since then, however, many other migrant peoples from the northeast and northwest have settled in Myanmar: the Shans, Karens, Kachins, Kayahs, and Chins are among the more numerous. Although much ethnic fusion has taken place among these peoples and the Burmans, most of the later migrant groups remain distinct cultural entities, and have sought to preserve their autonomy, sometimes by violent means. As of 1999, the Shan made up about 9% of the population, the Karen 7%, Rakhine 4%, Chinese 3%, Mon 2%, Indian 2%, and other 5%.

## 9 LANGUAGES

Burmese, the official language, is spoken by at least 80% of the population. Pronunciation varies greatly from area to area. Although Burmese is monosyllabic and tonal like other Tibeto-Chinese languages, its alphabet of 10 vowels and 32 consonants is derived from the Pahlavi script of South India; loan words from other languages are common. Burmese is the language of government, but the ethnic minorities have their own languages; according to the 1974 constitution, "if necessary the language of the national race concerned may be used."

## 10 RELIGIONS

Under the government of U Nu (overthrown in 1962), Buddhism was the state religion. Since then the government has been controlled by authoritarian military regimes which have generally placed restrictions on religious freedom. Though the most recent constitution (1974) guarantees religious freedom, the government shows a preference for Theravada Buddhism, which according to government statistics is practiced by about 90% of the population. A number of adherents combine their practice with traditional practices such as astrology, numerology, fortune-telling, and the veneration of pre-Buddhist deities called *nats*.

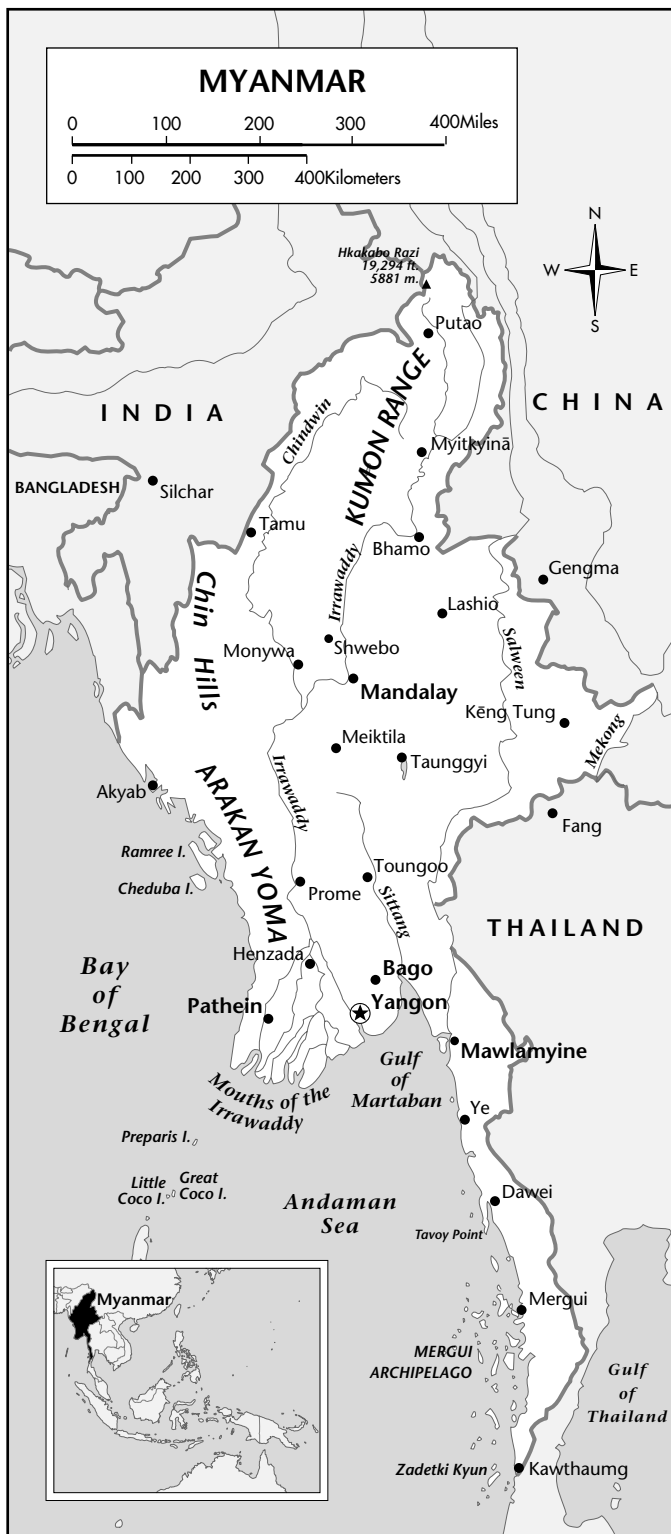

The Chinese in Myanmar practice a traditional mixture of Mahayana Buddhism, Taoism, Confucianism, and ancestor worship; the Indians are Hindus; the Pakistanis are Muslims; and most of the Europeans are Christians. Although Christian missionaries had some success with peoples of the hill areas—the Karens, Kayahs, Kachins, and Chins—conversion among the Burmans and the Shans was negligible. About 4% of the population are Christian, with Baptists, Catholics, and Anglicans being the primary denominations. About 4% of the population are Muslim, mostly Sunni.

## 11 TRANSPORTATION

Because of Myanmar's near encirclement by mountain ranges, international land transportation is virtually nonexistent. Historically, Myanmar has been dependent on sea and river transport externally and internally, supplemented in modern times by the airplane. The Myanmar Road, connecting Lashio with Kunming in southern China, and the Ledo Road between Myitkyina and Ledo in Assam, northeastern India, are the only land ties between Myanmar and adjacent nations. There were an estimated 28,200 km (17,523 mi) of roads in 2002, but only 3,440 km (2,138 mi) were paved. In 2000, Myanmar had about 73,900 passenger cars and 49,300 commercial vehicles.

Myanmar's railway system, a government monopoly, operates 3,991 km (2,480 mi) of track, all of which is meter-gauge in 2002. The main lines are from Yangon (Rangoon) to Prome (259 km/161 mi) and from Yangon to Mandalay (621 km/386 mi) and then to Myitkyina (1,164 km/723 mi from the capital).

LOCATION: 92°10' to 101°11' E; 9°35' to 28°28' N. BOUNDARY LENGTHS: China, 2,185 kilometers (1,358 miles); Laos, 238 kilometers (148 miles); Thailand, 1,799 kilometers (1,118 miles); total coastline, 2,276 kilometers (1,414 miles); Bangladesh, 233 kilometers (145 miles); India, 1,403 kilometers (872 miles). TERRITORIAL SEA LIMIT: 12 miles.

Inland waterways, including some 12,800 km (7,954 mi) of navigable passages (25% of which are navigable by commercial vessels), are the key to internal transportation, partly compensating for limited railroad and highway development.

Some 500,000 small river craft ply the Irrawaddy (navigable for about 640 km/400 mi), the Salween, the Sittoung, and numerous tributaries. The Irrawaddy Delta, the focus of most water transportation, has some 2,700 km (1,700 mi) of rivers and streams, providing a seaboard for all types of craft. The state merchant fleet totaled 35 ships in 2002, with a combined GRT of 382,084.

Ocean shipping, the traditional means of external transport, is controlled by the government, which operates coastal and ocean-going freight-passenger lines. Yangon, on the Rangoon River about 34 km (21 mi) inland from the Andaman Sea, is the chief port for ocean shipping, handling the majority of the country's seaborne trade; it is also the principal terminus for the highways, railroad, inland waterways, and airways. Other ports include Sittwe (Akyab), serving western Myanmar; Patheingyi (Bassein), serving the delta area; and Mawlamyine (Moulmein), Dawei (Tavoy), and Mergui, which handle mineral and timber exports of the Tenasserim region.

As of 2001 there were 80 airports, 8 with paved runways. Mingaladon, outside of Yangon, is the principal airport. In 2001, 398,200 passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

The founding of a kingdom at Pagan in 1044 by Anawrahta marks the beginning of the history of Myanmar (Burma) as a distinct political entity. The kingdom survived until 1287, when it was destroyed by the armies of Kublai Khan, and the next five centuries were marked by disunity. In 1754, Alaungpaya defeated the Shan kingdom in northern Myanmar and the Mon kingdom in southern Myanmar and founded the last ruling dynasty, which was in power until the British came in the early 19th century. The British conquest of the land then known as Burma spanned 62 years: the first Anglo-Burmese War took place during 1824–26, when the British East India Company, acting for the crown, took possession of the Arakan and Tenasserim coastal regions. In 1852, at the end of the second war, the British acquired the remainder of lower Burma; and on 1 January 1886, following Burma's defeat in the third war, total annexation of Burma was proclaimed. Incorporated into the British Indian Empire, Burma was administered as a province of India until 1937, when it became a separate colony. At this time, Burma was permitted some steps toward self-government; however, the British governor retained authority over foreign affairs, defense, currency, and the administration of frontier peoples. From 1886 to 1948, many Burmese agitated and fought continually for independence. The nationalists who finally gained independence for Burma were a group of socialist-minded intellectuals, called the Thakins, from the University of Rangoon. They included Aung San, one of the founders of modern Burma; U Nu, independent Burma's first premier; Shu Maung, also known as Ne Win, later U Nu's chief of staff; and Than Tun, a leader of a Communist revolt (1948–50) against the independent government. At the start of World War II, these anti-British nationalists collaborated with the Japanese, and with the aid of the Burma Independence Army, led by Aung San, the capital, Rangoon (now Yangon) fell to Japan on 8 March 1943. They were soon disappointed with the Japanese occupation, however, and the Burma Independence Army was converted into an anti-Japanese guerrilla force called the Anti-Fascist People's Freedom League, which later assisted the British liberation of Burma. Many of the ethnic nationalities of the frontier regions, such as the Karens and Kachins, had remained loyal to the British, as valued fighters for the Allies. After the war, Aung San negotiated with frontier ethnic leaders, signing the Panglong Agreement on 12 February 1947 with them, as a pledge of autonomy and other rights.

Having assumed leadership of the nationalist movement following the 19 July 1947 assassination of Aung San and six of his associates, U Nu signed an agreement with British Prime Minister Clement Attlee covering economic and defense relationships between the two countries. On 4 January 1948, the sovereign Union of Burma came into being outside the Commonwealth of Nations. After severe setbacks in 1948–49, the U Nu government was able to control a Communist insurgency and consolidate its own power, and in 1951 the nation held its first parliamentary elections. The decade of the 1950s also brought the implementation of an ambitious land reform program and an attempt to forge a neutralist foreign policy, in the face of sporadic Communist resistance and an intermittent border dispute with China. U Nu appointed Gen. Ne Win to head an interim “caretaker government” during a period of instability from 1958 to the 1960 national election (which U Nu’s party won.) Ne Win returned to power with a coup d’état on 2 March 1962. The U Nu government was overthrown, and a military regime headed by a Revolutionary Council and led by Ne Win assumed control. Student protests following the 1962 coup, and again in 1974, were crushed by the army with many civilian casualties. Most major political figures in the democratic governments of the years 1948–62 were arrested but were released in 1966–68, including U Nu. Ne Win rejected a return to a multiparty parliamentary system and proclaimed the Socialist Republic of Burma on 3 January 1974. Under a new constitution, Ne Win became president, and the government continued to be dominated by the military. Ne Win retired as president in November 1981, with Gen. San Yu succeeding him in office; but Ne Win retained his dominance, as chairman of the country’s only legal political organization, the Burma Socialist Program Party (BSPP). Insurgency by the underground Communist Party of Burma (CPB) and numerous ethnic armies had begun just after World War II and continued throughout Ne Win’s time in power. The general sought to unify the country by giving it a Burmese-ethnic majority identity, and to defeat insurgency with the “four cuts policy” of taking civilian support away from the rebels. Instead, the tactics of his armed forces in ethnic regions drove more and more inhabitants into rebellion.

Despite President San Yu’s reelection in 1985 to a four-year term and his appointment as vice-chairman of the BSPP, Ne Win continued to dominate the political scene and to make all major and many minor government policy decisions. One such decision, to withdraw large currency notes from circulation in September 1987, threw the economy and the country into turmoil. The move, possibly aimed against black marketers who had accumulated large sums of money, made 80% of the country’s currency valueless, touching off student-led demonstrations. Citing his personal responsibility for dire economic conditions, Ne Win resigned as BSPP party chairman in July 1988. A protégé of Ne Win, Sein Lwin, was made BSPP chairman and president of the country. Sein Lwin’s appointment triggered nationwide revolts. A broad spectrum of the population joined in, marching in the streets and going on general strikes throughout Burma. The army opened fire on unarmed protesters, killing thousands, particularly during the first week of August. Sein Lwin resigned on 12 August and Dr. Maung Maung, a civilian lawyer and journalist, was appointed his successor on 19 August. Although Maung Maung proposed multiparty elections and decreed that government employees could not be members of any political party, his refusal to step down provoked further protests. On 18 September 1988 the army abolished the BSPP, took over the government and imposed military rule under the State Law and Order Restoration Council (SLORC) headed by the army Chief of Staff, General Saw Maung. He also named himself prime minister and retained the portfolios of the Defense Ministry and Ministry of Foreign Affairs. Several days of violence occurred countrywide with thousands of civilians, including children,

students, and monks, killed by the armed forces. In announcing the takeover, General Saw Maung stated that the military rule would be temporary and that multiparty elections would be held once law and order were reestablished. In February 1989 Japan was the first nation to officially recognize SLORC as the legitimate government. Elections were set for 27 May 1990. On 18 June 1989 the Saw Maung regime renamed Burma “Myanmar Naing Ngan,” a formal historical Burmese name for the country. It is colloquially known as “Myanmar,” while democracy advocates and the US government continue to use the name “Burma.”

With the elections called, political parties formed. First to organize was U Nu’s League for Democracy and Peace, later known as the League for Democracy. The BSPP was reformed as the pre-regime National Union Party (NUP). U Nu had declared an interim government on 9 September 1988, but he garnered little support with his surprise move. In 1988 Aung San Suu Kyi, daughter of assassinated legendary hero General Aung San, had returned to Myanmar to visit her ailing mother. In the midst of the chaos of this period of demonstrations and protests Aung San Suu Kyi rose to prominence delivering speeches and establishing a coalition party opposing the military regime. On 24 September 1988 Suu Kyi with U Tin Oo and Aung Gyi formed the National League for Democracy (NLD). In early 1989 Aung Gyi formed his own organization, the Union Nationals Democracy Party (UNDP). In speeches and interviews Suu Kyi challenged Ne Win’s record, characterizing it as one of economic and sociopolitical degeneration. She also protested SLORC’s repressive laws and actions. Aung San Suu Kyi was placed under house arrest in Yangon (Rangoon) by Ne Win on 20 July 1989.

The top contenders in the elections were the NUP, the NLD, the UNDP, and the League for Democracy. The NUP was the party favored by the SLORC; and other parties had immense difficulty in campaigning and obtaining publicity. Six other parties figured prominently: the Coalition League for Democratic Multi-Party Unity; the Democracy Party; the Union of Burma Main AFPFL Party led by the children of former Premier U Ba Swe; the Democratic National Front for National Reconstruction, a former leftist NUF group; the Graduates and Old Students Democratic Association; and the Original Anti-Fascist People’s Freedom League. A total of 93 parties fielded 2,209 candidates who, along with 87 independent candidates, contested 485 seats out of a total of 492 constituencies designated for holding elections. Seven constituencies that were excluded from the election represented mostly the ethnic minority states of insurgency. Over 100 candidates were fielded by each of five parties: The National League for Democracy (NLD), 447 candidates; the National Unity Party (NUP) backed by SLORC, 413 candidates; the League for Democracy and Peace (LDP), 309 candidates (another source indicates 325 candidates); the Union Nationals Democracy Party (UNDP), 247 candidates (another source indicates 270 candidates), and the Democracy Party, 105 candidates. Despite its leader’s (Aung San Suu Kyi) incommunicado house arrest, the NLD won the 27 May 1990 general elections by a landslide (392 candidates elected out of its field of 447, or 87.7% of the votes). The NUP took 2.4% of the votes for 10 seats out of 413 fielded. The UNDP, with 0.4% of the vote, took 1 seat in Shan State out of the 247 (270) fielded. The Democracy Party with 0.95% of the vote took 1 seat out of 105 fielded. Of the candidates fielded by the LDP none won a seat. On 18 June 1989 Saw Maung indicated that the transfer of power to the winner of the election would not occur until a new constitution was drafted, one which met with SLORC’s approval. However, on 13 July the powerful junta member Lt.-General Khin Nyunt denied the initial promise of an immediate transfer of power made by General Saw Maung. SLORC’s further response was to alter the purpose of the newly elected assembly from its original function as a legislative body, to that of a constituent

assembly formed to draft the new constitution. SLORC would not transfer power until the resulting draft constitution had been approved both by a referendum and by SLORC.

### 1990–Present

In September 1990 SLORC revealed its intention to remain in power for a further five to ten years. After his mental collapse in December 1991, Senior General Saw Maung resigned due to ill health on 23 April 1992. On the same day he was replaced as Chairman of SLORC by General Than Shwe who was also named (and remains) Chief of State and Head of the Government. The First Secretary was Lt.-General Khin Nyunt and Second Secretary was Lt.-General Tin Oo. Accompanying these leadership changes SLORC initially indicated that an effort was being made to appease criticism of its methods as hundreds of political prisoners were released. Aung San Suu Kyi's family was allowed to visit her. Two martial law decrees imposed in July 1989 also were lifted in September 1992, and a constitutional convention was promised. In early 1993 a National Convention of 700 mostly hand-picked members met to draft a new constitution. Meeting with resistance and presented with a proposal by Yo E La of the Lahu National Development Party suggesting a return to the basic principles of Myanmar's pre-1962 constitution, a bicameral parliament and the granting of basic freedoms, the convention was adjourned until 7 June 1993. Another impasse occurred with further resistance to certain clauses in the new constitution that the ruling military wanted implemented; the National Convention was adjourned until January 1994. On 18 January 1994 the convention met again to approve six objectives and 104 basic principles which would entrench and perpetuate the power of the military.

The plight of Aung San Suu Kyi garnered the attention of human rights groups internationally. In March 1991, the Geneva UN Human Rights Commission passed a resolution to condemn and monitor the human rights abuses of SLORC, and in subsequent years Special Rapporteurs have been appointed to investigate Myanmar's human rights situation. In 1991 Aung San Suu Kyi was awarded the 1990 Sakharov Prize for Freedom of Thought by the European Parliament, the 1990 Thorolf Rafto Human Rights Prize by Norway, and on 10 December 1991 Aung San Suu Kyi's son, Alexander, accepted the 1991 Nobel Peace Prize on her behalf. In December 1993 the UN General Assembly unanimously rebuked the military rulers of Myanmar for their refusal to hand over power to the parliament democratically elected in May 1990, and called for the release of political prisoners, including Aung San Suu Kyi, in her fifth year of house arrest. Eight fellow Nobel prize-winners met in Thailand in February 1993 to speak on behalf of Aung San Suu Kyi, but were denied visas to visit Myanmar. US Congressman William Richardson visited with Aung San Suu Kyi, who was still under house arrest in Yangon, on 14–15 February 1994, her first non-family visit in four-and-a-half years. Richardson also met with Lieutenant-General Khin Nyunt of the State Law and Order Restoration Council (SLORC).

Another dissenting voice in Myanmar, that of 74-year-old Aung Gyi, founder of the UNDP, was silenced when on 27 April 1993 he was sentenced to a six-month prison term. He had written a series of letters to Ne Win (much as he had paved the way for the pro-democracy movement in 1987–88 with a similar series of letters), and criticized the military regime in interviews with foreign journalists, but was convicted for failing to pay for eggs ordered as supplies for his tea and pastry shops. A type of human rights violation in Myanmar which drew international attention was forced labor, which the government used on tourist projects such as the reconstruction of the palace in Mandalay. Of Mandalay's 500,000 residents each family had to contribute at least three days of free labor each month. The work lasted from dawn until evening and was so strenuous that it took several days

to recover from it. Prison inmates were required to work every day. Many military families could be exempted, as could any family that agreed to pay a monthly fine of about us\$6, about a week's wages for some families. Forced labor was also used on a vast scale throughout Myanmar, on many building projects including roads and railroads, as well as for carrying supplies and munitions for the SLORC troops in insurgent areas. According to the testimony of escapees, the labor was accompanied by beatings, rape, execution of the ill or slow, and use of civilians as human shields and human mine-detectors. Muslim refugees who fled Myanmar said that Muslims had to pay two to three times as much as others to retain their rice ration card as a fine to escape labor. The SLORC commonly used euphemisms such as "merit-making" or "self reliance" in reference to the forced labor. Asia Watch also reported in 1994 that the government turned a "blind eye to traffic in women and girls from Myanmar to Thailand for forced-prostitution." Corrupt officials on both sides of the border were involved. It was estimated that there were about 20,000 women from Myanmar in Thai brothels, where they were at severe risk of HIV/AIDS infection.

A casualty of the China-Myanmar border agreement of 1988 was the Communist Party of Burma (CPB) which collapsed with the withdrawal of Chinese support and the mutiny of its Wa troops in 1989. The CPB split into four different ethnic armies. SLORC's main objective was to neutralize the border rebel minorities and to prevent urban dissidents from getting access to arms and ammunition. SLORC's strategy was to divide and rule. Karen National Union President Bo Mya held that guerilla armies should hold joint talks with the government and not negotiate separately. The junta, however, would only negotiate separate agreements or treaties with individual rebel groups. To achieve its objectives SLORC introduced its Border Areas Development Program into ex-CPB areas. Infrastructure improvements of US\$11.1 million in roads, bridges, schools, and hospitals were pledged in the state-run media. Necessities such as diesel, petrol, kerosene and rice were distributed. The Wa were the first to negotiate with the junta. In 1989 they were promised development assistance, were allowed to retain their arms, maintain control of their areas, and to engage in any kind of business. In exchange they promised not to attack government forces and to sever their ties with the other dissident groups and students. Throughout the 1990s the cease-fired Wa complained from time to time that little of the promised aid had been delivered, and that their demand to create a separate state was never discussed. The next deal was made with the 2,000-member Shan State Army (SSA), one of the Shan rebel factions, on 2 September 1989. The SSA was followed in December 1990 by a breakaway faction of the Kachin Independence Army (KIA). On 23 April 1991 the 600-member Palaung State Liberation Army made a truce with SLORC. The 500-member Pa-O National Army rebel group also signed a peace treaty with the military regime. Accusations were leveled that the smaller forces were pushed into signing accords by the unremitting abuse of their ethnic civilians by SLORC troops. The Tatmadaw, the SLORC's armed force, had increased its own troop strength from approximately 190,000 to well over 300,000 since the suppression of 1988's pro-democracy uprising.

The Karenni rebels, angry over SLORC logging encroachments in their territory, reversed their cease-fire, in September 1992. The government launched a major counter attack on the Karenni that spilled over the Thai border. Since 1984 the rebel Karen National Union (KNU) had its camps near the Thai border; and tens of thousands of Karen civilians fled from SLORC attacks and forced labor, to the Thai side. Manerplaw was the KNU headquarters and also the seat of the National Coalition Government of the Union of Burma (NCGUB), set up by fugitive members of National League for Democracy and other pro-

democracy Members of Parliament elected in the thwarted 1990 polls.

Far to the north, the Kachins who had been in rebellion since 1961, had been the largest military group in a coalition of anti-SLORC ethnic forces. On 24 February 1994 the Kachin Independence Organization (KIO) signed a peace treaty with SLORC. They agreed to a cease-fire in exchange for permission to participate in commerce. Conflict between the SLORC and Shan groups continued. The Mong Tai Army (MTA) of the notorious "opium warlord" Khun Sa fought the Tatmadaw in the mid-1990s, then made a surprise surrender. He was able to spend his "retirement" living in comfort in Yangon (Rangoon). Like another rehabilitated drug lord, Lo Hsing Han, he has engaged in various legitimate business ventures, giving rise to charges of large-scale narcotics money laundering involvement on the part of the *junta*. Cease-fired Wa officers, from Myanmar's primary opium/heroin production region, are also said to have legitimate business access in Yangon and Mandalay. Some factions of the SSA refused to sign truces with SLORC, and joined in shifting alliances with anti-cess-fire factions of the MTA, continuing to battle the Tatmadaw. In response to Shan and Karenni defiance of the cease-fire policy, the SLORC engaged in enormous forced village relocations in those regions.

Ethnic peoples of western Burma also suffered. The Muslim residents of Arakan, called the Rohingyas, became refugees en masse in the early 1990s. Previously in 1978 the Burmese government had denied them citizenship and launched Operation Naga Min (Dragon King) forcing over 200,000 Rohingyas to seek refuge in Bangladesh. This pattern was repeated in 1991-92. The Rohingyas whose history in the area went as far back as the 9-15th centuries when Moorish, Arab, and Persian traders arrived and married local women and settled in the area, were displaced from their land and homes. As many as 300,000 Rohingyas fled to Bangladesh when they were forced from their land, their belongings were confiscated and women were raped by government troops. Some co-religionists made statements of protest, but ASEAN offered a policy of "constructive engagement" thus resisting pressures by the United States and European Community (EC) to adopt a stand on human rights abuses. According to this regional attitude, taking a stand would amount to interference in the internal affairs of a neighboring country. The countries of the region for the most part entered into "constructive engagement" with SLORC, gaining trade and investment opportunities, thus altering the status of the Myanmar exiles and refugees within their borders.

The international community has continued to debate the most effective approach for dealing with Myanmar. Up to and following Myanmar's acceptance into ASEAN in July 1997, ASEAN countries and Japan have argued that "engaging" Myanmar is more productive than "isolating" it. This approach gained them controversial timber concessions, energy projects, and some tourism plus manufacturing opportunities. It did not inspire liberalization by the *junta*. The United States and European Union (EU) have imposed limited economic sanctions, but allowed their petroleum corporations to remain in Myanmar as major investors. Proposals by groups of nations to offer Myanmar's generals economic rewards for steps toward liberalization have been rejected by the *junta* as "bribery." Aung San Suu Kyi's NLD continues to call for strong economic sanctions as the best way to pressure the *junta* to the negotiation table, and to deprive the Tatmadaw of the weapons it buys with hard currency (mainly from China and Singapore). The NLD has called for a tourism boycott and for withdrawal of foreign corporations until democracy arrives.

SLORC released Aung San Suu Kyi from house arrest on 10 July 1995. Her freedom was short-lived, however. After large crowds of people began gathering in front of her house for weekly speeches, she was forbidden to address such gatherings. In

November 1995, the NLD withdrew from the National Convention which was to formulate a SLORC-approved constitution, in protest of undemocratic policies; in turn SLORC permanently barred the NLD from participation and eventually the Convention meetings were suspended. Suu Kyi announced in May 1996 the NLD's plan to draft its version of the constitution, one that would oust the *junta* and implement new economic policies for the country.

SLORC curtailed Suu Kyi's attempts at movement outside of Yangon, which she protested with car sit-ins in 1998. NLD members have been detained by the hundreds, and many publicly renounced their membership. The Union Solidarity Defense Association (USDA) was formed by SLORC as a "mass organization" modeled after Sukarno's Golkar in Indonesia. It staged rallies denouncing the NLD, and Suu Kyi was physically threatened by some of its members. A steady campaign of insults against Suu Kyi was featured in the state-run press. In 1999, Suu Kyi's terminally ill British husband, Michael Aris, was denied a visa to see her one last time. The *junta* stated that she was free to leave Myanmar, but the implication was that she would not be permitted back. Aris died on 27 March. Student demonstrations took place in 1996, and institutions of higher learning were closed down by SLORC. Most universities and colleges remained shut down the majority of the time since 1988 (although as of 2000 some were reopening). Attempts by student activists to mark the tenth anniversary of the "four eights" (8-8-88) democracy uprising, and another auspicious date, 9-9-99, were quickly suppressed. Long jail sentences have been handed down for even mild forms of public protest, and human rights groups report that torture of student dissidents is routine in Myanmar's prisons. Min Ko Naing, an important leader of the 1988 demonstrations, remains in prison. Leo Nichols, an honorary consul for European nations, died in a Myanmar prison, where he was held for unauthorized possession of a fax machine. As the *junta* attempts to control information, Internet access is extremely limited and unauthorized possession of a modem can earn a 17 year prison sentence.

Using a Buddhist breakaway Karen faction, the Democratic Karen Buddhist Army (DKBA), against the Christian-led KNU, the Tatmadaw was able to over-run Manerplaw and destroy most of the Karen rebel bases in 1995. Tatmadaw and DKBA troops entered Thailand in late January 1997 and attacked Karen refugee camps. A highly controversial natural gas pipeline across the region of southern Burma called the Tenasserim apparently inspired SLORC military campaigns against Mon and Karen rebels in that area. The Mon rebels signed a cease-fire agreement, but numerous Tatmadaw battalions were brought in to protect the pipeline project from Karen sabotage. The multinational petroleum companies involved, Total of France and Unocal from the United States, were accused by human rights and environmental groups of complicity in human rights violations, including forced labor and forced relocation, committed by the SLORC's security forces. Victims of such abuses sued Unocal in a groundbreaking US court case. The pipeline began bringing natural gas from Myanmar's Andaman Sea to an electrical generating plant on the Thai side of the border in 1999. Outside economic pressure built up during the 1990s, in the form of consumer boycotts of companies doing business in Myanmar, limited US economic sanctions, and "selective purchasing" laws by cities. Massachusetts' "Burma selective purchasing law" was brought to the Supreme Court in 2000. By that year, foreign investment in Myanmar had decreased markedly, due to sanctions pressures, the Asian economic crisis, and concerns about corruption in the State Peace and Development Council (SLORC was renamed the SPDC in 1997)-controlled economy. In June 1999, the International Labor Organization of the UN essentially expelled Myanmar from its ranks, following a detailed investigation of forced labor under the SPDC. In early 2000, the

World Bank issued a report highly critical of Myanmar's economic and political climate. The World Bank and International Monetary Fund have been barred from lending to Myanmar.

The Myanmar government has also come under considerable international criticism for its complicity in the country's massive drug trade. Myanmar is one of the world's largest producers of opium and heroin. Since 1990, the country has also become one of the largest manufacturers of illicit methamphetamine. Thai officials voiced dismay over the flood of "speed" pills into Thailand from Myanmar (particularly the Wa region, where a cease-fire is in effect) and the seeming callousness of the Myanmar government regarding the drug trade. Myanmar is the main source of heroin in China, where addiction grew seven-fold from 1989 to 1997. A 1999 Interpol conference on narcotic suppression, held in Yangon, was boycotted by the United States and other governments as a protest against the junta's apparent profiting from drug trafficking.

With burgeoning drug production in the north of Myanmar has also come a raging HIV/AIDS epidemic. International health organizations estimated the number of Burmese infected in the north alone at 350,000–400,000 in 1996. The HIV/AIDS virus has spread unchecked in Myanmar through the use of contaminated needles by drug addicts, by unsafe medical practices, and by infected Burmese women returning from forced prostitution in Thailand. AIDS education, prevention, and care programs have been a low priority in Myanmar.

Aung San Suu Kyi was again placed under house detention in September 2000; she was released in May 2002, and toured the country, speaking out in support of democratization. She urged the international community in August to keep economic sanctions against the SPDC in place until a democratic dialogue reached a more meaningful stage. During 2001, over 200 NLD activists were released from detention; in November 2002, another 115 political prisoners were released.

During 2001 and 2002, relations between Myanmar and Thailand improved. The two countries held talks in June 2001, attempting to ameliorate disagreements over the drug trade and border tensions. By September, Myanmar pledged to eliminate drug trade in the Golden Triangle by 2005. Thailand committed funds to finance a crop substitution program, and the two countries regarded themselves as good neighbors. However, in May 2002, Myanmar closed its border with Thailand after the Thai army fired shells into Myanmar's territory during a battle between the SPDC and ethnic Shan rebels. The border was reopened in October. In December 2000, Amnesty International reported that torture was increasing in Myanmar despite official military statements that it is illegal. In November 2001, the International Labour Organization (ILO) sent a mission to Myanmar to investigate governmental measures taken to end its program of forced labor. The mission reported some progress, but expressed "profound concern" that the governmental measures had had a limited impact. On 12 February 2003, the UN marked the anniversary of the entry into force of an international treaty banning child soldiers, but warned that the problem of child soldiers is still prevalent. In Myanmar, an estimated 70,000 children are in uniform in the state army. Many are forcibly conscripted by kidnapping or threats of prison at ages as young as 11.

In January 2003, fighting broke out near the Thai border between the Karen National Union (KNU) and SPDC forces, which launched an offensive against the KNU. Over 700 Karen villagers and 400 Thai villagers fled their homes to escape the fighting, and sought refuge in Thailand.

On 5 December 2002, General Ne Win died under house arrest. He had been arrested in March for plotting a coup against the military regime. Ne Win's three grandsons and son-in-law are in jail, sentenced to death for their plot in the supposed coup.

## 13 GOVERNMENT

The Socialist Republic of the Union of Burma was announced on 3 January 1974, after a new basic law had been approved by plebiscite. Under the 1974 constitution (which was suspended in September 1988), the leading organ of state power was the 489-member unicameral People's Assembly (Pyithu Hluttaw). The head of state was the chairman of the Council of State (29 members in 1986), which was elected by the People's Assembly and theoretically responsible to it. The prime minister headed the Council of Ministers (24 members in 1986) and also served on the Council of State. Other main governmental organs were the Council of People's Justices (9 members), the Council of People's Attorneys (6), the Council of People's Inspectors (6), and the people's councils at the level of the state (or division), township, and ward or village tract. Nationwide legislative elections were held in 1974, 1978, 1981, and 1985; in each election, voters either accepted or rejected candidates from a single slate presented by the ruling Burma Socialist Program Party (BSPP). Suffrage is universal at age 18, although the military has taken measures to discourage voter registration. A military coup in September 1988 brought the State Law and Order Restoration Council (SLORC) to power. SLORC abolished the previous government and placed the country under martial law. In June 1989, the official title of the country was changed to Myanmar Naing Ngan. The SLORC *junta* supervised and coordinated the work of the central and local organs of state power. It renamed itself the State Peace and Development Council (SPDC) in November 1997.

In the multi-party election held 27 May 1990, Aung San Suu Kyi's National League for Democracy (NLD) received 87.7% of the total vote and took 392 of its 447 contested seats, and the National Unity Party (NUP), the former BSPP re-registered as a new party, took only 10 seats with 2.4% of the votes.

SLORC refused to hand over power to the NLD, instead voiding the election and insisting that a new constitution need be drafted and approved by referendum, and by SLORC, prior to the transfer of power. Senior General Saw Maung resigned due to ill health on 23 April 1992 and General Than Shwe replaced him on the same day as Chairman of SLORC and as Chief of State and Head of the Government. Vice-chairman of the SPDC is General Maung Aye. The Foreign Minister is Win Aung, and the Home Affairs Minister is Tin Hlaing. Lt. Gen. Tin Oo, former second secretary of the SPDC and chief of staff of the army, died in a helicopter crash 19 February 2002. The other two "secretaries" of the SPDC are Lt.-General Khin Nyunt and Lt.-General Win Myint. Some observers have noted possible tensions among the top generals. Tin Oo's death will likely accelerate the factional struggle within the SPDC as the more liberal factions see an opportunity to acquire some of the conservatives' waning power.

## 14 POLITICAL PARTIES

Between 1948 and 1962, Burma's parties were mostly socialist in economic orientation. The most important of these was the Anti-Fascist People's Freedom League (AFPFL), which gained independence for the country and which included within its ranks the distinct Burma Socialist Program Party. The AFPFL governed the country from 1948. In 1958, tensions within the government, and insurgency in the countryside, prompted Prime Minister U Nu to temporarily hand over power to a "caretaker" government headed by General Ne Win. When U Nu's new Union Party won a landslide victory in 1960 elections, Ne Win relinquished power to him. Then on 2 March 1962, Ne Win staged a coup d'état and began his long rule with the one-party (Burma Socialist Program Party) state.

Other parties before 1962 included two Communist movements, the "White Flags" and the "Red Flags," both of

which took up arms early after independence and were later defeated by the government (the White Flags, however, were not completely eradicated until 1975). An above-ground Communist Party existed after 1949 and became the nucleus of the National United Front (NUF) in 1952. Both the Communists and the NUF, like all other parties except the ruling military-dominated Burma Socialist Program Party (BSPP), were banned in 1974. The well-armed Communist Party of Burma (CPB) insurgents based themselves primarily in northeast Burma, along the China border. Chinese support for the Communist party of Burma (CPB) continued well after support for the Communist parties of Malaysia and Thailand was withdrawn, but from the mid-1980s aid did not compare with a decade earlier. In 1989 the CPB was overthrown by its troops, many of whom regrouped as the United Wa State Army, which soon signed a cease-fire deal with the State Law and Order Restoration Council (SLORC).

Burmese independence leader General Aung San had negotiated the Panglong Agreement with representatives of frontier ethnic groups in 1947, but issues of autonomy and federalism have never been resolved. Numerous ethnic parties with armed wings were formed in the mid- to late-twentieth century, including the Karen National Union, Kachin Independence Organization, New Mon State Party, Karenni National Progressive Party, Shan State Progress Party, Arakan Liberation Party, and Chin National Front. Umbrella groups of the ethnic insurgents were established, notably the National Democratic Front, followed by the Democratic Alliance of Burma. In the 1990s, many ethnic organizations signed cease-fire agreements with the SLORC. A continuous demand of the opposition is "tri-partite negotiations" between the SLORC/SPDC junta, Aung San Suu Kyi's National League for Democracy, and representatives of the ethnic groups. Most of the ethnic leaders favor a federal union of Burma based on ethnic regions.

The democracy uprising of 1988 ended with the 18 September coup which installed the military officers of the State Law and Order Restoration Council (SLORC). The Burma Socialist Program Party was formally abolished, and all governing authority was concentrated in the hands of the military. The earliest formation of the State Law and Order Restoration Council (SLORC) was made up of seventeen active military commanders of the Defense Services. On 18 September 1988 it was renamed the Organization for Building Law and Order in the State (OBLOS) and two more members were added. On 20 September 1988 the final version of the SLORC government was formed by maintaining the 19 members and adding two non-members to the Cabinet, increasing the number of Cabinet ministers from seven to nine. On 24 September 1988 the BSPP was reborn as the National Unity Party (NUP), inheriting the buildings and machinery of the old BSPP. Allied to the NUP were satellite parties, the former supporters of the BSPP.

On 24 September 1988 the National League for Democracy (NLD), a coalition party, was formed in opposition to the military regime. Leaders Aung San Suu Kyi and Aung Gyi soon parted ways over the latter's accusations of communist infiltration of the NLD. On 28 August 1988 U Nu at age 83, with his followers from the older generation formed the League for Democracy and Peace (LDP), latter known as the League for Democracy. The NLD won the 27 May 1990 elections by a landslide, electing 392 candidates; the NUP took 10 seats; the UNDP and the Democracy Party took 1 seat each; and the LDP did not win any seats. In April/May 1991 the Election Commission dropped the names of the NLD's General Secretary Aung San Suu Kyi and President U Tin Oo from a roster of NLD leaders, as well as the names of all other Central Executive Committee members who were jailed. NLD leader Aung San Suu Kyi was placed under house arrest from 20 July 1989 to 10 July 1995, and again from 2 September 2000 to 6 May 2002. NLD members have been detained and imprisoned in ever-increasing

numbers, and many have been pressured to renounce their membership at public rallies of the junta-sponsored Union Solidarity Defense Association (USDA) a mass organization formed in September 1993 to support the ruling military.

Dr. Sein Win of the Party for National Democracy, winner of a seat in Pegu District, and seven NLD members legitimately elected to parliament but not recognized by SLORC, fled to border areas and formed a parallel government, the National Coalition Government Union of Burma (NCGUB). Sein Win was named prime minister of the NCGUB, which is now headquartered in Washington, D.C., where it serves as a diplomatic vehicle for the international exiled Burmese democracy movement.

On 29 January 1992 SLORC appointed additional ministers, mostly serving or ex-military, to the original nine-member cabinet, and three new military commanders were added to the original nineteen-member SLORC. Senior General Saw Maung resigned due to ill health on 23 April 1992. He was replaced as Chairman of SLORC by General Than Shwe on 23 April 1992. Than Shwe was named Chief of State and Head of the Government. First Secretary is Major-General Khin Nyunt and Second Secretary was Major-General Tin Oo, until his death in a helicopter crash in February 2002. Lt.-Gen. Win Myint is the other secretary of the SPDC. The SLORC changed its name to State Peace and Development Council (SPDC) in November 1997. The National Convention, aimed at drafting a new constitution has been suspended, and the NLD withdrew from the process in protest at its being used to legitimize the junta. Other parties have objected to the National Convention's insensitivity to ethnic rights issues.

## 15 LOCAL GOVERNMENT

Myanmar is a unitary nation, ruled by a military *junta*, comprising seven states and seven divisions. The main distinction between the two kinds of units, which are functionally the same, is that the states represent an area where a national ethnic minority is the local majority, while the divisions have no such communal basis. The states are Arakan (Rakhine), Chin, Kachin, Karen (Kayin), Kayah, Mon, and Shan. The divisions are Irrawaddy, Magwe, Mandalay, Bago (Pegu), Sagaing, Yangon (Rangoon), and Tenasserim. States and divisions are segmented into 317 townships. Village tracts consist of villages, and towns are divided into wards. Law and Order Restoration Councils (LORCs) serve as local administration, although regional army commanders control the actual decision making process. A LORC was formed for each State, Division, Township Sector and Ward/Village Sector. Military campaigns of forced village relocations, especially in the Shan and Karenni states and Tenasserim Division, have changed the rural map of Myanmar and placed much of the agricultural population under direct army control. In some frontier areas where cease-fire groups (such as the UWSA or KIO) still hold significant territory, administration is by the former insurgent leadership.

## 16 JUDICIAL SYSTEM

The British-style judicial organs with which Burma began its independence, including a supreme court, were disbanded by Ne Win's Revolutionary Council. The 1974 constitution, suspended since 1988, provided for a Council of People's Justices, state and divisional judges' committees, and township, ward, and village tract judges' committees. The Council of People's Justices was elected by the national assembly from among its own members; nominations were made by the Council of State, which coordinated relations between central and local levels of government. Military tribunals which enforced orders issued by the State Law and Order Restoration Council (SLORC) were abolished in 1992. Ordinary courts now handle such cases, with heavy military influence. The supreme court appoints judges after

approval of the SPDC. There are courts at the township, district, state, and national levels. The SPDC has used laws such as the Emergency Provisions Act and the Unlawful Associations Act to crack down on dissent. Human rights organizations such as Amnesty International and the United Nations have criticized the SPDC for unfair trials and arbitrary imprisonment, as well as use of torture and summary execution.

## 17 ARMED FORCES

The armed forces play the major role in Myanmar's politics and administration; senior members of the government are officers who govern under martial law.

Myanmar's armed forces totaled an estimated 444,000 in 2002 including the paramilitary people's militia and people's police force. The army, with 325,000 personnel, was organized in infantry battalions chiefly for internal security duties, mainly against the various insurgent groups that have challenged successive governments almost from the start of independence. The army was equipped with 100 main battle tanks. The navy had 10,000 members, and the air force 9,000. The navy's responsibilities related primarily to antismuggling and other coastal patrol duties operating 73 patrol and coastal combatants. The air force was also concerned mainly with internal security; it had 113 combat aircraft and 29 armed helicopters. Military expenditures were \$3.9 billion in 1997-98 or 2.1% of GDP. Various rebel groups were estimated at perhaps 15,000 and operate inside and outside of northern Myanmar.

## 18 INTERNATIONAL COOPERATION

Myanmar was admitted to UN membership on 19 April 1948; it is a member of ESCAP and all the nonregional specialized agencies. Regional bodies to which Myanmar belongs include the Asian Development Bank, ASEAN, and the Colombo Plan; it also is a member of G-77, a member of the WTO, and a signatory to the Law of the Sea. Myanmar's foreign policy is neutralist, and the country belongs to no alliances.

## 19 ECONOMY

As of 2000 nearly 75% of the economy was in the private sector comprised chiefly of agriculture (including fish and forestry), which is almost entirely private, contributing nearly 42% of GDP, down from 60% in the 1990s and employing close to 65% (1999 est.) of the work force. Myanmar is self-sufficient in food. Principal crops are paddy rice, corn, oilseed, sugarcane, and pulses. Traditionally rice was the major product and the major foreign exchange earner, accounting for about 70% of the country's cultivated land. In 1996, rice exports quadrupled to \$197 million, and accounted for 22% of merchandise exports. The Asian financial crisis hit Myanmar hard, reducing rice exports by about one-third. The major recipients of Myanmar's rice are Indonesia and China. Myanmar also has the world's largest stand of hardwood trees.

Industries include agricultural processing, textiles and footwear, wood and wood products, petroleum refining, mining production (mainly copper, tin, tungsten, and iron), construction materials, pharmaceuticals, and fertilizer. In 2000, industrial production accounted for 17% of GDP, up from 11% in 1998. In the past Myanmar was a net petroleum exporter, but production decreased steadily. Both oil and gas exploration is on-going with the participation of foreign companies, and in 1997/98 the energy sector grew by 37.7% (from virtual non-existence) due to investment in the Yadana natural gas pipeline to Thailand, which came on-line in 1999. The \$1.2 billion pipeline was a joint venture between the California company Unocal and the Myanmar military government. In 2003 the government was considering a \$1 billion Myanmar-Bangladesh-India pipeline that would be built in cooperation with Unocal Bangladesh, Unocal having been forced by the US government to sell its share in the

Myanmar Oil and Gas Company (MOGC). For the most part, Myanmar's significant mineral resources have not been fully developed due to out-dated equipment and poor management.

Infrastructure is a major impediment to economic growth. Water treatment and distribution, sewage disposal, and irrigation systems, as well as power transmission and distribution, require up-grading. Industry faces chronic shortages of electricity. Roads are poor and many are not passable during parts of the year. Telephone facilities are lacking; in 1993 there were only 100,000 telephone lines for the entire country. Presently a telecommunications modernization program includes the installation of a cellular telephone system in Yangon. The financial sector suffers from excessive bureaucratic red tape and foot-dragging by state economic enterprises fearing competition. The government drafted new laws on a central banking and financial institutions as steps toward improvement in the financial sector.

The government reported that the economy grew by 6% in 1995 and 6.8% in 1996. Growth was estimated by the US State Department at 1.1% for 1998. In 1999 strong growth of 10.9% was reported, propelled by a 13.8% growth in industry and 11.5% growth in agriculture. The government reported growth in 2000 at 13.6% overall but according to the Asian Development Bank (ADB), independent estimates suggest more modest progress of around 6%. Inflation had averaged about 25% for more than a decade, but a drop in food prices due to a bumper rice crop (and the heavy weight given rice in Myanmar's consumer price index) brought a sharp drop in inflation, to a negative 0.1% according to government statistics. In 2001 a slower annual growth of 5% was reported with a 9.6% resurgence of inflation.

It should be noted that it is difficult to assess the true economic situation in Myanmar due to the existence of an enormous and all-pervasive informal market. Much of Myanmar's economic activity is illicit, notably the smuggling of drugs. Myanmar, which forms part of the "Golden Triangle" (along with Laos and Thailand), is the world's largest supplier of illegal opiates. The government's efforts to control poppy production and drug traffic to China and Hong Kong were ineffective. Since 1989, the only kind of US aid for which Myanmar has been eligible, besides humanitarian aid, is counter-narcotic and crop substitution assistance, because of the human rights issues involved with the imposition of military rule in 1988. By 1995 Myanmar's opium production was estimated at 2,340 metric tons (the source for over 60% of US heroin imports). Large quantities of smuggled consumer goods are sold in Myanmar cities, where the black market thrives.

The military regime, SLORC, which took over Myanmar in 1988, proclaimed a market oriented economic policy and invited foreign investment. A 1992 United Nations Development Programme report noted that Myanmar after a few years of recovery from the economic and political upheaval of 1988 was again slipping into recession and hyperinflation. Myanmar's main donors suspended aid. The country has not fully serviced its foreign debt since 1988, a situation that by 2002 amounted to default. Two trends have been apparent in the government's economic policies: the capture of revenues from short term, quick turnover sources such as hardwoods, prospecting rights, and taxes on profits from illegal sources; and spending patterns that emphasize defense spending and acquisition of armaments. An estimated 87% of tax revenues are spent on the military whereas expenditures on health and on education both amount to less than 0.5% of GDP. Myanmar receives no aid from US or EC programs and aid from Japan is run at a maintenance level. The International Monetary Fund (IMF), the World Bank, and the Asian Development Bank (ADB) extend no credit to Myanmar.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Myanmar's gross domestic product (GDP) was estimated at \$63 billion. The per capita GDP was estimated at \$1,500. The annual growth rate of GDP was estimated at 2.3%. The average inflation rate in 2001 was 20%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 42% of GDP, industry 17%, and services 41%.

According to the United Nations, in 2000 remittances from citizens working abroad totaled \$73 million or about \$2 per capita and accounted for approximately 0.2% of GDP. Foreign aid receipts amounted to about \$3 per capita.

## 21 LABOR

In 1999, about two-thirds of Myanmar's civilian wage labor force, estimated at 24 million, was engaged in agriculture, primarily rice cultivation. Roughly 10% were employed in industry, and the remainder in services. The unemployment rate was estimated at 5.1% in 2001.

No trade union or independent labor movement activity has occurred since 1988, when the government banned the workers' and peasants' organizations of the previous government, thereby eliminating any right to bargain collectively. Forced labor is frequently used by the military for building projects. Prison labor is also extensively used, especially in stone quarrying projects. Wage levels continue to be low and have been eroded by inflation.

While the official minimum working age is 13, the presence of child labor is conspicuous in both rural and urban areas. Most children must work to help support their families and only about 40% of children complete five years at primary schooling.

Only government workers and employees of a few traditional industries are covered by minimum wage laws, which was \$0.25 daily for a six hour workday in 2002. A skilled factory worker can earn around \$12.00 a day. Health and safety risks in the workplace are prevalent.

## 22 AGRICULTURE

Myanmar is one of the few developing nations that is a net exporter of food, which accounted for 20% of its foreign exchange earnings in 2001. About 15% of the land is under cultivation. Agriculture generated roughly two-thirds of employment and 42% of the recorded GDP in 2000.

Rice, by far the most important agricultural product, in 1999 covered about 5.5 million hectares (13.5 million acres) of land in the fertile Irrawaddy delta region, the lower valleys of the Sittang and Salween rivers, and along the Arakan and Tenasserim coasts. Prior to World War II (1939–45), Myanmar was the world's leading exporter of rice; annual production ranged between 13 million and 14 million tons, of which about three million tons were exported. However, the war caused extensive damage to the economy, and Myanmar did not achieve prewar levels of rice acreage and output until 1964. Rice production totaled 10.77 million tons in 2000/01. Farmers have been instructed by the government to double-crop wet season paddy and triple-crop in areas with year-round access to water. In some areas near the sea, multiple cropping brings saltwater intrusion, high flood risks, and seasonal pest problems. New high-yield varieties of rice have contributed to the increases in recent years, along with the completion of new irrigation systems and flood-control dams in the Irrawaddy delta during the early 1980s.

Other crops in 1999, grown mainly in central Myanmar and the state of Shan, included 5,429,000 tons of sugarcane, 562,000 tons of groundnuts, 303,000 tons of corn, and 210,000 tons of

sesame. The use of high-yield varieties of seeds helped to more than triple the output of wheat, corn, and sunflower seeds and to double cotton production during 1976–86. Tobacco and jute are also produced, and rubber is grown on small plantations in the Tenasserim and Irrawaddy delta regions. Myanmar is the world's largest producer of opium and heroin. In 2001, opium poppy production was estimated at 865 tons.

The total amount of land under cultivation declined in the 1970s, but the amount of paddy land increased. The Mu Valley irrigation project, implemented in north-central Myanmar with UNDP aid in the 1970s, irrigated 1.7 million hectares (4.2 million acres) of farmland. With the completion of the Nawin Dam in 1982, about 40,000 hectares (99,000 acres) of new irrigated land in the Prome region, north of Yangon (Rangoon), were added to the cultivated area. With IBRD and Asian Development Bank aid, new rice storage facilities, a system of drainage canals in the heavy-rainfall paddy land of lower Myanmar, and gravity irrigation systems in dry zones were constructed.

## 23 ANIMAL HUSBANDRY

Despite Buddhist prohibitions against any kind of animal slaughter, the Myanmar eat beef and other meats. Zebu cattle and water buffalo are mainly raised as draft animals; the output of such hides was 25,000 tons in 1999. Dairy farming is confined to the Shan and Kachin states; hogs and poultry are found in virtually every village.

In 2001, Myanmar had an estimated 11,218,000 head of cattle, 4,138,000 hogs, 2,500,000 water buffalo, 1,439,000 goats, 403,000 sheep, and 48,269,000 chickens, and 6,000,000 ducks. Meat production was 476,000 tons; milk from cattle, 581,000 tons (82% cow, 18% buffalo); eggs, 86,000 tons.

## 24 FISHING

Fishing is the most significant nonagricultural pursuit in Myanmar. Fish, which supply the main protein element in the Myanmar diet, generally are dried and salted before marketing or consumed fresh or as fish paste. Roho labeo and various carp are the main species caught. Traditionally, the Myanmar preferred fish from fresh or brackish water; but saltwater fishing in the shallow waters of the Bay of Bengal, Andaman Sea, and Gulf of Martaban has increased in recent years. To encourage a larger saltwater catch, the government embarked on expanded deep-sea fishing operations and erected a cold storage plant, a fish cannery, and a fish oil and meal factory. The total fish catch in 2000 was 1,069,726 tons (82% saltwater, 18% freshwater), up from 686,515 tons in 1986. Exports of fish products were valued at \$184.9 million in 2000.

## 25 FORESTRY

Forests and woodland cover nearly half the country, even though the annual deforestation rate was 0.68% during 1975–89. Some 38% of the forest was Reserved Forest Area in 2001. Myanmar has a major share of the world's teak reserves, which constitute about one-third of the forested area. As the world's leading exporter of teak, Myanmar supplies about 75% of the world market. The lumbering of teak, a 10-year process from the first girdling of the tree to its arrival at the sawmill, was disrupted by World War II (1939–45); production rebounded to about 136,000 tons in 1986. Increased output of teak in the 1980s was attributable to completion of four modern timber-extraction projects. Teak log production totaled 622,000 tons in 2001. A special teak plantation program begun in 1998 will provide a sustainable production of 1.8 million cu m (63.5 million cu ft) per year. Roundwood production in 2000 totaled 22.8 million cu m (805 million cu ft). Other forest products include lac, catechu resin, and bamboo.

All foreign timber concessions have been nationalized, and all forests are government-owned; the State Timber Board (STB)

lumber, mills, and markets forest products. The export of forest products decreased in value from \$294.1 million in 1993 to \$221.5 million in 2000.

## 26 MINING

With the exception of precious gemstones, of which Myanmar had large resources, mineral production was small, and mostly for domestic consumption. The mining sector, including oil and gas, contributed 2% of GDP in 2001. Copper, tin, tungsten, iron, construction materials, and fertilizer were among the country's leading industries in 2002; precious stones ranked fourth among export commodities, supplying 2% of export earnings.

Outputs for 2001 were: copper (metal content), 26,300 tons, up from 6,700 in 1998 (ore reserves at the Sabetaung deposit were 51.2 million tons at a grade of 0.432%, and those at the Sabetaung South deposit, 13.7 million tons at 0.379%); tin (metal content, from tin and tin-tungsten concentrate), 230 tons, down from 335 in 1997; tungsten (metal content, from tin and tin-tungsten concentrate), 71 tons, down from 272 in 1997; jade, 1.7 million kg, down from 8.32 million in 2000; and spinel rubies and sapphires, 8.63 million carats, down from 14.45 million in 1998. Metallic ores of chromite, gold, lead, manganese, nickel, silver, and zinc were mined in small amounts. Industrial mineral production included construction aggregates, barite, hydraulic cement, fire clay, feldspar, gypsum, limestone, salt (including brine salt), sand and gravel, and silica sand. Lead, zinc, silver, copper, nickel, and cobalt were produced at the Bawdwin mine, in Namtu. No carbonate rocks, cobalt, or dolomite was produced in 2000 or 2001. Deposits of iron ore and antimony have been found.

The government controlled all mineral exploration, extraction, regulation, and planning through the two departments and six enterprises of the Ministry of Mines. In 2001, state-owned enterprises—whose share of output was 5.5% (11.6% in 1998)—operated one gold mine (the Kyaukpahtoe), three nonferrous metals mines (the Bawdwin, Bawsaing, and the Yadanatheingi), and two coal mines. Of the four foreign exploration companies active in 2000, two were active in 2001—mining gypsum, zinc, and gold. The Myalate Taung limestone resources, in Kyaukse Township, Mandalay Division, had 291 million tons.

## 27 ENERGY AND POWER

Myanmar's petroleum industry was completely nationalized in 1963–64, and the Petroleum and Mineral Development Corp. was formed by the amalgamation of the Mineral Resources Development Corp., the Mines and Explosives Department, and the Burma Geological Development Corp. Petroleum and natural gas deposits were found in 1963 in the Irrawaddy basin and delta. Myanmar has been self-sufficient in oil since 1977; petroleum reserves were estimated at 51.3 million barrels in 1991. Most natural gas comes from the field at Prome. Exploitation of the natural gas discovery in the Gulf of Martaban, Natmi, and Payagon was expected to significantly raise Myanmar's energy reserves. Oil production was estimated at 11,000 barrels per day in 1998. In 1995, natural gas production totaled 51,044 million cu ft (1,446 million cu m). Pipelines in Myanmar include 1,343 km (835 mi) for crude petroleum and 330 km (205 mi) for natural gas, although some of these lines are believed to be in disrepair. Coal resources in Myanmar are of relatively low thermal value. The two principal mines are an underground mine south of Kalewa and an opencast mine at Namma, south of Lashio. About 32,191 tons of coal came from the two mines in 1995.

Production of electricity in 2000 totaled 49,310 million kWh, of which thermal plants provided about 83% and hydroelectric power roughly 17%. Electric power capacity rose to 1,458 MW in 2001, but power supply remained inadequate to meet the country's needs and shortages were on the rise across the country.

## 28 INDUSTRY

Industry is geared largely to the processing of agricultural, mineral, and forest products. More than half of Myanmar industrial production is accounted for by the public sector. Principal industrial products are cement, steel, bricks and tiles, fertilizers, and processed foods. Consumer goods that were imported before 1962 and are now manufactured domestically include blankets, paper, glass products, bicycles, and water pumps. Other major consumer manufactures are aluminum ware, jute and cotton cloth, pharmaceuticals, beverages, matches, and cigarettes. There is also a growing segment engaged in the assembly of television sets and motor vehicles. The main industrial area is Bago (formerly Pegu). Some manufacturing industries are privately owned and operated under government supervision.

Industrial production grew by 9.2% in fiscal year 1995–96, and represented about 11% of the gross domestic product in 1997. In 1998, in spite of the of the Asian financial crisis, industrial production grew 6.1%. Growth increased to 13.8% in 1999, when an estimated 10% of the labor force was employed in the industrial sector. In 2000, it was estimated that industry constituted 17% of GDP. In 1995, production of pig iron totaled 1,500 tons; crude steel, 25,000 tons; and refined tin, 190 tons. The petroleum and petrochemical sector in Myanmar is entirely state-owned (excluding indigenous fuels such as charcoal). In 2002, Myanmar had two state-owned refineries with a total refining capacity of 32,000 barrels a day, about twice the level being produced in 1995. The \$1.2 billion natural gas pipeline connecting to Thailand began operations in 1999, and plans for a \$1 billion Myanmar-Bangladesh-India gas pipeline were being considered in 2003.

## 29 SCIENCE AND TECHNOLOGY

Scientific research is conducted by the private Burma Research Society, founded in 1910, and by the government's Central Research Organization, consisting of various departments of the state ministries. Four institutes conduct research in applied sciences, medicine, and atomic energy. In addition, the Department of Land Management Studies Research of the Institute of Economics investigates problems posed by modernization techniques and industrial development. The Universities of Mandalay, Mawlamyine, and Yangon offer degrees in basic sciences. In 1987–97, science and engineering students accounted for 56% of college and university enrollments.

## 30 DOMESTIC TRADE

In 1964, the Ne Win government nationalized all wholesale businesses and the large private and cooperative shops; small retail shops, hotels, restaurants, and village cooperatives were exempted. The People's Stores Corp., established in 1964, was initially responsible for the importation and distribution of essential foreign goods, the distribution of consumer goods produced in Myanmar, and the sale of domestic products in foreign markets. The corporation was administered by a council headed by the Ministry of Supplies and Cooperatives. In 1970, the "people's stores," most of which had been unsuccessful, were replaced by consumer cooperatives. Beginning in 1966, the government set all commodity prices and controlled distribution systems; in September 1987, the Burmese people were told that they could buy, sell, and store rice and other grains free of government restrictions. As of 1997, these liberalization measures have been most effective in the agricultural sector, although overall, the military still controls the lion's share of the economy. As of 1999, about 65% of the work force was employed in agriculture.

Although significant marketing is done at Bago (Pegu), Mandalay, Mawlamyine (Moulmein), Patheingyi (Bassein), Henzada, Akyab (Sittwe), and Dawei (Tavoy), Yangon (Rangoon) is Myanmar's most important business center. Myanmar's domestic economy is paralleled by a huge black market economy that co-exists with the official one; the underground economy may be at least as large as the legal economy. A factor in the decline of Myanmar's domestic production is dependence on border trade, which undermines Myanmar's manufacturing sector with cheap foreign consumer goods. Credit cards are not widely accepted.

Normal business hours are 9:30 AM to 1 PM and 1:30 to 4 PM, Monday–Friday, and 9:30 AM to 12:30 PM on Saturday; small private shops keep longer hours than government offices and enterprises. Banks are usually open 10 AM to 2 PM, Monday–Friday, and 10 AM to noon on Saturday.

### 31 FOREIGN TRADE

It is estimated that from 1992 to 1995 the legal merchandise trade deficit (excluding military imports) grew from \$412 million to \$737 million. All financial estimates are suspect because of the exclusion of a large extralegal sector and substantial military imports, neither of which are included in official figures. The value of opiate exports alone may now be roughly comparable to all legal merchandise and service exports receipts. Border areas not under the control of the government also engage in unreported exports of timber, rice, jade, gems, minerals, and rare animals.

### 32 BALANCE OF PAYMENTS

The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Myanmar's exports was \$1.8 billion while imports totaled \$2.2 billion resulting in a trade deficit of \$400 million.

The International Monetary Fund (IMF) reports that in 2001 Myanmar had exports of goods totaling \$2.3 billion and imports totaling \$2.56 billion. The services credit totaled \$420 million and debit \$377 million. The following table summarizes Myanmar's balance of payments as reported by the IMF for 2001 in millions of US dollars.

<b>Current Account</b>	<b>-306</b>
Balance on goods	-269
Balance on services	43
Balance on income	-363

Other investment liabilities	187
<b>Net Errors and Omissions</b>	<b>88</b>
<b>Reserves and Related Items</b>	<b>-178</b>

### 33 BANKING AND SECURITIES

Effective 23 February 1963, all 24 commercial banks in Myanmar—10 foreign and 14 indigenously owned—were nationalized and amalgamated into 4 state banks. In addition to the Central Bank of Myanmar, Union of Burma Bank, which serves as a central bank, the other state banks were the State Agricultural Bank, the State Commercial Bank, and the Industrial Bank. After subsequent reorganizations of the banking system, these became the Myanma Investment and Commercial Bank, Myanma Economic Bank, and the Myanma Foreign Trade Bank. Agricultural credit is provided by a separate Myanmar

Agricultural and Rural Development Bank. Public savings increased sharply in 1977 after the banks raised interest rates. Efforts to attract the considerable liquidity in the hands of the public into the banking sector, and thence into investment, have not had much success.

By the end of 1994, licenses to open representative offices had been issued to 19 banks from overseas—six from Thailand, five from Singapore, three from Malaysia, and one each from France, Indonesia, Cambodia, Hong Kong, and Bangladesh. Eventually, 54 foreign banks had offices in Myanmar, but 2000–2002, 21 of them left the country, and nine more downgraded their operations there. As of the end of 2002, 27 foreign banks have representative offices in Burma, but none from the US. Since 1994 four private domestic banks have been permitted to conduct foreign exchange transactions for the first time. Various types of foreign exchange licenses have been issued recently to the private sector by the Central Bank. It issued seven authorized dealer licenses, three money changer licenses, 396 acceptor and holder licenses, and 66 FEC changer licenses in August 1994. Despite the liberalization of its economy, the country still lacks a capital market. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$103.9 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$170.7 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 10%.

### 34 INSURANCE

All 78 foreign insurance companies registered in Myanmar were nationalized on 1 March 1963. All forms of insurance, including life, fire, marine, automobile, workers' compensation, personal accident, and burglary, are handled by the Myanma Insurance Corp. Life insurance coverage is compulsory for government employees.

### 35 PUBLIC FINANCE

The government presents its budget in March for the 1 April–31 March fiscal year. The public sector budget typically shows an overall deficit because of economic mismanagement.

The US Central Intelligence Agency (CIA) estimates that in 1997 Myanmar's central government took in revenues of approximately \$7.9 billion and had expenditures of \$12.2 billion including capital expenditures of \$5.7 billion. Overall, the government registered a deficit of approximately \$4.3 billion. External debt totaled \$6 billion.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

<b>REVENUE AND GRANTS</b>	<b>100%</b>	<b>7,900</b>
Tax revenue	56.0%	4,425
Non-tax revenue	41.3%	3,264
Capital revenue	0.9%	72
Grants	1.8%	139
<b>EXPENDITURES</b>	<b>100%</b>	<b>12,200</b>
General public services	8.9%	1,085
Defense	30.6%	3,735
Education	9.4%	1,141
Health	3.5%	428
Social security	2.3%	279
Housing and community amenities	0.4%	45
Recreation, cultural, and religious affairs	2.3%	280
Economic affairs and services	34.9%	4,261
Other expenditures	7.7%	945

### 36 TAXATION

Residents pay a progressive individual income tax of 3–30%. The corporate tax rate is 30% with a 10% capital gains tax (40% for non-residents). Indirect taxes include a commercial tax on prescribed services, ranging from 5% to 30%, and on goods, ranging from 5% to 200%. There are also social security taxes, customs duties, royalties on natural resources, stamp tax, and property tax. The ratio of tax revenues to GDP is very low, estimated at between 2.3% to 3.6%, of which it is also estimated that 87% goes to the military.

### 37 CUSTOMS AND DUTIES

Duties are primarily intended to raise revenue, although their financial importance is limited by the fact that the government itself—through its Myanmar Export-Import Corp.—is by far the country's predominant importer. Import licenses are required for shipment of almost anything into the country. The official exchange rate overvalues the domestic currency by 100 times. Until Myanmar joined ASEAN in July 1997, customs tariffs ranged from zero to 500%; in 1997, a new tariff schedule went into effect ranging from zero to 15% for most industrial inputs to a maximum of 40% for cars and luxury items. In spring 1998 a 10% service fee (reduced to 8% by September) was enacted on all border-trade exports.

### 38 FOREIGN INVESTMENT

Foreign investment in Myanmar was heavy before World War II, but in the postwar period, and particularly after independence, a government policy of economic nationalism (and later socialism) strongly discouraged private foreign investment. After the nationalization of industry in 1963–64, private foreign investment in Myanmar was eliminated entirely. In 1976, the government indicated a willingness to establish “mutually beneficial economic cooperation” with foreign enterprises having the technology that Myanmar needed. The scope of state capitalism was expanded when the Saw Maung regime legalized internal and external trade without giving up control of major industries.

Foreign investment in Myanmar has been permitted only since 1988 under the Union of Myanmar Foreign Investment Law, and the level and variety of investment is limited. Sectors eligible for foreign investment include manufacturing, oil and gas exploration and development, mining (except gold and precious stones), jewelry production, and agriculture. The Foreign Investment Commission (FIC) screens foreign investment proposals for export generation potential, technology transfer, and the size of the investment. Various investment incentives are provided, such as exemption from income tax, and relief or exemption from customs duties. Bureaucratic procedures and a antiquated and inadequate infrastructure hamper foreign and local investments alike. Foreign entities cannot own land in Myanmar. The government's maintenance of an official exchange rate for the domestic currency, the kyat, which was overvalued by some 60 times its unofficial value; by the start of 2002 the disparity had reached about 100 to 1, constituting a major obstacle to foreign investment. Foreign investors must also fear being criticized in the West for investing in a country with a long record of human rights violations. In 1996 a lawsuit was brought against Unocal for its predication in the joint venture building the natural gas pipeline with Thailand, and the forced labor and other human rights abuses connected with the construction. The Clinton administration pressured Unocal to sell its shares in the Myanmar Oil and Gas Company (MOGC). The French company, Total (now TotalFinaElf) had earlier been pressed to sell its share in MOGC to Unocal.

In 1997, Myanmar was admitted to the Association of Southeast Asian Nations (ASEAN), a step that might have

relieved some of the international pressure against doing business in the country; however, in May of that year, the US government enacted restriction against new investment in Myanmar by US companies or citizens.

As of January 2001, foreign investment under the liberalized regime of 1988 totaled about \$7.4 billion. Of that amount, investment from the US totaled only \$582 million, with the majority, 51.35%, coming from ASEAN countries, including \$1.5 billion from Singapore, \$1.2 billion from Thailand, \$597 million from Malaysia, \$240 million from Indonesia, and \$147 million from the Philippines. The United Kingdom, however, was the second-largest source of approved investments, at \$1.4 billion. Investments from France and Japan totaled \$470 million and \$233 mil, respectively.

After the Asian financial crisis, however, foreign investment dropped off considerably. Of the total, only \$1.17 billion (16.8%) represents approved investment value after 1996, \$673.6 million or 57.59% from ASEAN countries. In 1996/97, annual foreign investment peaked at \$2.6 billion and then fell to \$29.5 million in 1997/98. The continuance of the declining trend was made starkly apparent in the first six months of 2002 when investment from ASEAN members fell to zero, compared to an already-low \$32.28 million from these countries in the first six months of 2001. In March 2003 the government introduced a measure that stopped the issue of import and export permits to Myanmar-based foreign companies, making the regime less attractive to foreign investors.

### 39 ECONOMIC DEVELOPMENT

The major aim of Myanmar's government has been to rehabilitate, modernize, and diversify an economy that was extensively disrupted by World War II and that failed to develop from the 1940s through the 1960s. To this end, all foreign companies, all banks, the entire transport system, all foreign and much domestic trade, and all the main branches of industry have been nationalized. Some nationalized industries initially showed declines in output, while others were hard pressed to hold their own. By 1974, the government had no choice but to modify some of its more rigidly Socialist economic policies. Economic development proceeded slowly under the four-year plan for 1974–78 and the 1978–82 development program, which was allocated 60% more funding than its predecessor and which achieved an annual growth rate exceeding 6%. The four-year plan for 1982–86, costing an estimated \$5 billion, set an average annual growth target of 6.2%. The plan stressed infrastructural development, with particular emphasis on agriculture, construction, and energy production. The four-year plan for 1986–90 encouraged foreign investment. Since 1990, private investment has been encouraged as the government attempts to revitalize the economy. As of January 2001, the value of approved investment had reached about \$7.4 billion. However, most of this—\$6.23 billion or 84%—came before the Asian financial crisis of 1997. Before 1997, foreign investment approvals had averaged close to \$900 million a year; from 1997 to 2000, the average was \$234 million a year. The economy has not recovered from the effects of the 1997 crisis, and problems have only worsened with the global slowdown in 2001, and the worldwide decline of foreign direct investment in the aftermath of the 11 September 2001 terrorist attacks on the United States. In 2001, the government introduced its third five year short-term plan, with a targeted average growth rate of 6%. However, both continued reform and substantial foreign investment would be necessary to meet the goals of the plan. Such needed reforms include dismantling unproductive state-owned enterprises, establishing an independent state bank, making available private sector credit, controlling government spending, and adjusting the official exchange rate. However, in 2002, the gap between the official exchange rate and the market rate had widened to an

astounding 100 to 1, and foreign investment has slowed to a trickle. In the first six months of 2002, investment from other ASEAN countries, the source of most of Myanmar's foreign investment to date, was actually zero.

#### 40 SOCIAL DEVELOPMENT

Although considerable advances have been made in health services, Myanmar's goal of establishing a welfare state has been limited by lack of public funds. In 1956, the government inaugurated a social security program that compensates workers for wage losses arising from sickness, injury, and maternity leave, provides free medical care, and establishes survivors' benefits. The program is funded by contributions from employers, employees, and the government. As yet, Myanmar does not have unemployment insurance, but public employees are entitled to old age pensions.

Women have a high status in Myanmar's society and economic life. They may retain their maiden name after marriage, may obtain divorces without undue difficulty, and enjoy equal property and inheritance rights with men. Spousal abuse is infrequent; married couples often live with extended family which deters abuse. Traditional views of women often prevent them from entering male dominated occupations, and they do not always receive equal pay for equal work.

Myanmar's military regime continues to systematically engage in human rights abuses. Prison conditions are poor and mistreatment of prisoners is widespread. Arrests are often made arbitrarily and many detainees are held incommunicado.

Many ethnic minorities are denied full citizenship. Those of Muslim, Indian and Chinese descent, for example, are not free to travel domestically and are barred from certain university programs. The ethnic Chinese face discrimination and harassment by officials.

#### 41 HEALTH

Until the 1980s and 1990s, few people in rural areas had the benefit of modern medicine. To correct this deficiency, the country's health services were reorganized by sending more doctors to rural areas and increasing the number of rural health centers. Doctors in private practice were inducted for two years of national service. The progress of the health services in the 1980s is reflected in the reduction of the physician/population ratio from 1 per 15,560 in 1960 to 1 per 3,578 by 1986. To staff the new hospitals and dispensaries, medical schools have been expanded, nurse and midwife training courses increased, an institute of paramedical science was established, and a new college of dentistry opened. As of 1999, there were an estimated 0.3 physicians and 0.6 hospital beds per 1,000 people.

A team of nutritionists conducts research on the nation's diet and disseminates its findings and recommendations through the press, radio, and demonstrations in offices and factories. One result of these efforts has been that the average height and weight of Myanmar's populace have increased.

Smallpox and plague have been virtually eliminated as health hazards and programs are under way to eradicate malaria and tuberculosis. However, gastrointestinal diseases such as typhoid, dysentery, and cholera remain prevalent. One of the problems yet to be overcome is the lack of potable water for residents; in 2000, 68% of the population had access to safe drinking water and 46% had adequate sanitation. Another serious health problem is drug addiction, exacerbated by the easy availability and low cost of opium. Under a drug abuse control program financed by the United States and the UN, a new 300-bed hospital for addicts opened in 1982 at Thayetmyo, along the Irrawaddy in central Myanmar; smaller facilities have been established in about two dozen other towns.

The infant mortality rate dropped from 129.9 deaths per 1,000 live births in 1960 to about 89 in 2000, while average life

expectancy rose to 51 years. Between 1990 and 1995, 60% of the population had access to health services. During 1987–1990 immunization was estimated to have saved 60,000 young children and averted 2.4 incidences of vaccine-preventable diseases. Between 1990–1994, the immunization rates for children under one were as follows: tuberculosis, 83%; diphtheria, pertussis and tetanus, 77%; and polio, 77%. The level of measles immunization rose by more than 50% between 1988 and 1994. By 1999, 83% of children were immunized for DPT and 85% for measles.

The total fertility rate decreased from 5.1 in 1990 to 3 in 2000. The maternal mortality rate was 230 per 100,000 live births in 1998. As of 1999, 29% of children under the age of five were malnourished.

There were 1,093 new cases of AIDS in 1996; that year, international health organizations estimated the number of Myanmar infected in the north alone to be 350,000–400,000. HIV prevalence as of 1999 was 1.99 per 100 adults.

#### 42 HOUSING

Prewar housing in Myanmar compared favorably with that in other Southeast Asian nations, but housing conditions have deteriorated. In 2000, about 68% of the population had access to improved water sources and 46% of the population had access to improved sanitation. Urban dwellings are overcrowded and often unsafe. The last available statistics indicate that over 50% of all housing units were built of wood and bamboo. The government has been working on projects to alleviate homelessness and the prevalence of squatter communities in many areas by building apartment-style structures to replace hut dwellings.

#### 43 EDUCATION

Education is free, although informal fees were increasingly imposed in the late 1990s. Primary education is compulsory for five years, although observers estimate that between two-thirds and three-fourths of students drop out before completing five years. Generally, Burmese is the language of instruction, and English is taught in the secondary schools; as of 1982, however, English became the medium of instruction in the universities.

The system of education initiated by the Ne Win government in 1964 equates learning with livelihood. At that time, the government announced its intention of opening at least one agrarian high school and one technical high school in each district. By 1967 there were six agricultural high schools, seven industrial trade schools, and one technical high school in the country, and the government had taken over about 880 private schools. In 1996, Myanmar had 35,752 primary schools with 5,413,752 students. In the same year, secondary schools had approximately 107,000 teachers and 1,923,323 students. The pupil-teacher ratio at the primary level was 33 to 1 in 1999. In the same year, 83% of primary-school-age children were enrolled in school.

Primary education lasts for five years followed by four years of secondary education at the first stage and two years at the second stage. Postsecondary institutions, including 18 teacher-training colleges, six agricultural institutes, eight technical institutes, and 35 universities and colleges, had a total enrollment of 245,317 students with 5,730 teaching staff in 1996.

The Mass Education Council has attempted to increase literacy through special programs. The 2000 adult illiteracy rate was estimated at 15.3% (males, 11.0%; females, 19.4%), although international observers question this figure, estimating illiteracy to be much higher since up to 40% of children in rural areas do not enroll in school and those who do drop out early. As of 1999, public expenditure on education was estimated at 1.2% of GDP.

#### 44 LIBRARIES AND MUSEUMS

The National Library in Yangon (Rangoon), founded in 1952, contains 158,000 volumes. Other large libraries are the Arts and Science University Library in Mandalay, with 175,000 volumes, and the University of Yangon with 350,000 volumes. There are also several small college libraries, as well as state libraries and museums at Patheingyi (Bassein), Kyaukpadaung, Mandalay, and Mawlamyine (Moulmein). The National Museum of Art and Archaeology in Yangon was founded in 1952 and includes among its collection a replica of King Mindon's Mandalay Palace. The National Museum of Mandalay (1905) is housed in the Glass Palace and features historical relics of Burmese culture. Sometimes called the "land of golden pagodas," Myanmar also has thousands of Buddhist temples, many of which have been repaired and restored.

#### 45 MEDIA

The director-general of posts and telegraphs controls the telephone, telegraph, radio, and postal communications systems. In 2000 there were an estimated 250,000 mainline telephones in use; internal communication is mainly by wireless. In 1997, there were 8,492 cellular phones throughout the country. A satellite communications station that began operating in 1979 links Myanmar with more than 100 countries.

The government provides the only radio and television transmissions through Voice of Myanmar and TV-Myanmar (which broadcasts in color). As of 1999, there were 2 AM and 3 FM radio stations and 2 television stations. In 2000, there were 66 radios and 7 television sets per 1,000 population. As of 2000, Internet access is only legally available for government officials, tourist offices, and a few large businesses. There were only 500 Internet subscribers in 2000.

Chinese- and Indian-language newspapers are not allowed by the government, but two daily papers are still published in English. Leading newspapers in 1999 included *Kyemon* (1999 circulation, 100,000), *Myanma Alin* (400,000), and *The New Light of Myanmar* (14,000). There are some privately published magazines, but none has a high circulation or major influence.

The government professes to uphold freedom of the press, but there are no privately owned newspapers and the print media are government-controlled. In 1963, the government established its own press agency, the News Agency of Burma, with a monopoly on internal news distribution. As of 2002, the six daily papers are:

	LANGUAGE	CIRCULATION
<i>Myanmar Alin</i>	Burmese	400,000
<i>Loktha Pyithu Nayziri</i>	Burmese and English	184,000
<i>Kyemon</i>	Burmese	100,000
<i>Botahtuang</i>	Burmese	96,000
<i>The Hanthawaddy</i>	Burmese	23,000
<i>The New Light of Myanmar</i>	English	14,000

#### 46 ORGANIZATIONS

Although Myanmar has most common types of educational, religious, cultural, and social organizations, those associated with capitalist economic activity have all but disappeared. The Rotary Clubs were forced by the government to disband in late 1975, as were numerous other Western-style organizations before them. There are many cooperative and producers' societies, as well as substantial numbers of consumer cooperatives.

The Lanzin Youth Movement, founded in 1984, is a coordinating body for all of the national youth organizations. Youth branches of the Union Solidarity and Development Association and the Myanmar Red Cross Society are extremely popular. The YMCA and YWCA are also major organizations. The Myanmar Maternal and Child Welfare Association, founded in 1991, is the major social welfare organization.

#### 47 TOURISM, TRAVEL, AND RECREATION

Principal attractions include the palaces and Buddhist temples and shrines in the two largest cities and in the ancient city of Pagan. A visitor to Myanmar must have a passport, visa, and certificate of yellow fever inoculation if arriving from an infected area.

With the inception of military rule in 1988, tourism declined sharply but has risen again since 1990. In 2000, there were 206,243 tourist arrivals with tourism receipts at about \$42 million. There were 16,157 rooms with a total of about 32,314 bed-places, at 27% occupancy.

In 2002, the UN estimated the cost of staying in Yangon at \$123 per day, elsewhere daily costs were about \$67.

#### 48 FAMOUS MYANMA

U Nu (Thakin Nu, 1907-1995) was independent Myanmar's first premier (1948-62) and shares fame as founder of modern Myanmar with Aung San (1916-47), called the Father of the Burmese Revolution. Ne Win (Maung Shu Maung, b.1911) became premier in March 1962 and was president from 1974 to 1981. U Thant (1909-74) served as UN secretary-general from 1961 through 1971. Human rights activist Aung San Suu Kyi (b.1946) was awarded the 1990 Sakharov Prize for Freedom of Thought by the European Parliament, the 1990 Thorolf Rafto Human Rights Prize by Norway, and the 1991 Nobel Peace Prize. Anawrahta, who founded the early Burmese kingdom of Pagan in 1044 and established Hinayana Buddhism as the official religion, is a great figure in Burmese history, as are the Toungoo warrior-king Bayinnaung (r.1551-81) and Alaungpaya (r.1752-60), who established the dynasty that ruled Myanmar until 1886. Great writers of the Burmese past include Bhikkhu Rattasara, author of the poem *Hatthipala Pyo*, on the life of Gautama Buddha; Nawedegyi and Natshinnaung, poets of the Toungoo dynasties; and Binnyadala, who wrote of the long struggles of the Burmese king of Ava. In more recent times, U Ba Nyan and U Ba Zaw, well-known painters of the 1920s, introduced Western-style art into Myanmar; both died in the 1940s.

#### 49 DEPENDENCIES

Myanmar has no territories or colonies.

# NAURU

Republic of Nauru

*Naoero*

**CAPITAL:** There is no formal capital. The seat of government is in the district of Yaren.

**FLAG:** The flag has a blue background divided horizontally by a narrow gold band, symbolizing the equator. Below the band is a white 12-pointed star, representing the island's 12 traditional tribes.

**ANTHEM:** *Nauru Ubwema (Nauru, Our Homeland)*.

**MONETARY UNIT:** The Australian dollar (A\$) of 100 cents is the legal currency. A\$1 = US\$0.61728 (or US\$1 = A\$1.62) as of May 2003.

**WEIGHTS AND MEASURES:** Imperial weights and measures are used.

**HOLIDAYS:** New Year's Day, 1 January; Independence Day, 31 January; Angam Day, 26 October (a celebration of the day on which the population of Nauru reached the pre-World War II level); Christmas Day, 25 December; and Boxing Day, 26 December.

**TIME:** 11:30 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Situated in the western Pacific, Nauru is one of the world's smallest independent nations, with an area of 21 sq km (8.1 sq mi), extending 5.6 km (3.5 mi) NNE–SSW and 4 km (2.5 mi) ESE–WNW. Comparatively, the area occupied by Nauru is about one-tenth the size of Washington, D.C. It lies between two island groups, the Solomons and the Gilberts, 53 km (33 mi) s of the equator and 3,930 km (2,442 mi) NNE of Sydney; its nearest neighbor is Banaba (formerly Ocean Island, now part of Kiribati), situated 305 km (190 mi) to the E. Nauru has a coastline of 30 km (18.6 mi). The Yaren district, which holds the seat of the government, is located on the southern coast of the Nauru.

## <sup>2</sup>TOPOGRAPHY

Nauru, one of the largest phosphate-rock islands in the Pacific, is oval-shaped and fringed by a wide coral reef. It has no natural harbor or anchorage. A relatively fertile belt varying in width from 150 to 300 m (490–980 ft) encircles the island. From this belt a coral cliff rises to a central plateau about 60 m (200 ft) above sea level. Buada Lagoon, a permanent, often brackish lake, covers some 300 acres (1.2 km/0.47 sq mi) in the southeastern end of the plateau. Apart from some brackish ponds and an underground lake, the nation's water supply is provided by rainfall.

## <sup>3</sup>CLIMATE

Nauru has a dry season, marked by easterly trade winds, and a wet season with westerly monsoons extending from November to February. The average annual rainfall is about 200 cm (79 in), but the amount varies greatly from year to year, and long droughts have been a recurrent problem. Temperatures remain steady, between 24° and 33°C (75–91°F) the year round, and relative humidity is also constant at about 80%.

## <sup>4</sup>FLORA AND FAUNA

The plateau area contains large phosphate deposits that almost completely inhibit any natural growth useful for subsistence or

commerce. Large areas of scrub and creeper, with occasional coconut and tamanu trees, grow in this region. On the coastal belt, coconut palms and pandanus (a type of screw pine) thrive. Some hibiscus, frangipani, and other tropical flowers grow, but they do not abound here as on other Pacific islands. Bird life is not plentiful, although noddies, terns, and frigate birds frequent the island. There are no indigenous land animals; however, hogs and poultry were introduced many years ago. Fish life is abundant in the seas encircling Nauru and good catches of tuna and bonito are taken.

## <sup>5</sup>ENVIRONMENT

Nauru's phosphate mining industry has done significant damage to the land. In 1987, the Nauruan government began to investigate the nation's mining operations with the goal of developing a plan to regenerate the land and replace lost vegetation. Land in the coastal region, however, has not been affected by the development of the country's mining industry. Vegetation in the coastal areas, such as pandanus and coconut palms, is plentiful. Nauru has limited freshwater resources. Its residents collect rainwater in rooftop storage tanks. Periodic droughts pose an additional hazard to the environment. Nauru is also affected by the global warming trend which has caused sea levels to rise, placing low-laying areas at risk from tidal surges and flooding. The bristle-thighed curlew and Finsch's reed warbler are vulnerable animal species.

## <sup>6</sup>POPULATION

The population of Nauru in 2003 was estimated by the United Nations at 12,000, which placed it as number 191 in population among the 193 nations of the world. In that year approximately 2% of the population was over 65 years of age, with another 40% of the population under 15 years of age. There were 101 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 2.29%, with the projected population for the year 2015 at 17,000. The population density in 2002 was 545 per sq km (1,412 per sq mi). Most Nauruans live around the coastal fringes,

in their traditional districts. About half the population consists of immigrant contract laborers, technicians, and teachers. Most Chinese, as well as immigrants from Kiribati and Tuvalu, are settled in communities near the phosphate works.

It was estimated by the Population Reference Bureau that 100% of the population lived in urban areas in 2001. The Yaren District, which functions as the capital city, had a 2002 population of 11,000. According to the United Nations, the urban population growth rate for 2000–2005 was 1.5%.

## 7 MIGRATION

Immigration to Nauru is strictly controlled by the government. Nauruans are free to travel abroad. In 1999 the net migration rate was zero migrants per 1,000 population. The government views the migration levels as satisfactory. There were a total of 5,000 migrants living in Nauru in 2000, which accounted for more than 30% of the total population.

## 8 ETHNIC GROUPS

The Nauruan people are the only indigenous ethnic group on the island. They are of mixed Micronesian, Melanesian, and Polynesian origin and resemble the last strain most closely. Nauruans are traditionally divided into 12 clans or tribes in which descent is matrilineal, although kinship and inheritance rules have some patrilineal features. The 12 clans are Eamwit, Eamwidumwit, Deboe, Eoar, Emea, Eano, Emangum, Ranibok, Eamwidara, Iruwa, Irutsi (extinct), and Iwi (extinct). Admixtures of Caucasian and Negroid lineage in the 19th century and frequent intermarriage with other Pacific islanders have changed the present-day features of Nauruans from those of their forebears.

The Caucasians on the island are almost all Australians and New Zealanders employed in administrative or teaching posts or in the phosphate industry. The Chinese and immigrants from Kiribati and Tuvalu originally came to the island as laborers in the phosphate industry, some being accompanied by their families. Filipino contract workers are also present but are not permitted to bring their families.

As of 2002, 58% of the population was Nauruan, 26% other Pacific Islander, 8% Chinese, and 8% European.

## 9 LANGUAGES

Nauruan, which is distinct from all other Pacific tongues, is the official language. However, English is still commonly used in the schools, in government, and in business transactions. Most Nauruans are bilingual but use Nauruan in everyday life.

## 10 RELIGIONS

The Nauruans have accepted Christianity as a primary religion since the end of the 19th century. A 2002 report indicates that about two-thirds of the population are Protestant and one-third are Roman Catholic. Buddhism and Taoism are also represented, particularly among the Chinese community.

## 11 TRANSPORTATION

Transport to and from Nauru has traditionally been by ships calling at the island to unload freight and pick up phosphates for delivery to Australia, New Zealand, and other countries. There is no merchant marine, but the public Nauru Pacific Line has a fleet of six ships. In 2001, there was one airport with a paved runway. The government-owned Air Nauru flies regular air services to the Pacific islands, Taiwan, the Philippines, Hong Kong, Japan, Australia, and New Zealand. In 1997 it carried 137,000 passengers on scheduled flights.

The road system extended for a total of 30 km (19 mi) in 2002, of which 24 km (15 mi) were paved. Apart from a 5 km (3.1 mi) railway (used to carry phosphates), a school bus service, and

fewer than 2,000 registered motor vehicles, there is no local transport.

## 12 HISTORY

The original settlers are thought to have been castaways who drifted to Nauru from another Pacific island. The first recorded discovery of Nauru by a Westerner was made by Captain John Fearn of the whaling ship *Hunter* in November 1798. He named the island Pleasant Island. From the 1830s to the 1880s, the Nauruans had a succession of visitors—runaway convicts, deserters from whaling ships, and other men who can be classed as beachcombers. The beachcombers provided the Nauruans with their first real contact with Western civilization and introduced them to firearms and alcohol. They acted as a buffer between two cultures but were often a bad influence on the Nauruans. Several times beachcombers and Nauruans attempted to cut off and capture visiting ships, so that eventually Nauru came to be avoided as a watering place by ships whaling in the area. The advent of firearms also disturbed the balance of power between the tribes on the island; sporadic tribal warfare culminated in a 10-year civil war from 1878 to 1888 that reduced the native population to less than 1,000.

The British and German imperial governments agreed to the partition of the Western Pacific in 1886. Their purely arbitrary line of demarcation left Nauru in the German sphere of influence quite accidentally. It was not until 1888, on the petition of the beachcombers-turned-traders, that the German government annexed Nauru as a protectorate and disarmed the people. Christian missionaries arrived in 1899 and had a greater impact on the Nauruan culture than did the German administration.

In 1901, Sir Albert Ellis, a New Zealand geologist, discovered that there were large deposits of phosphate on both Nauru and Banaba (then called Ocean Island). Phosphate mining on Nauru began in 1907, after the German government had granted a concession to the British-owned Pacific Phosphate Co. Laborers from the German Caroline Islands were hired because the Nauruans had no interest in working in the mines.

Nauru was occupied by the Australian Expeditionary Force in 1914, and phosphate continued to be shipped all through World War I. In 1919, Nauru was made a League of Nations mandate of the British Empire, and the governments of Australia, New Zealand, and the United Kingdom agreed to administer the island jointly through an administrator to be appointed by Australia. At the same time the three governments obtained the mandate, they jointly purchased the Pacific Phosphate Co.'s rights to Nauruan phosphate for UK£3.5 million and began to work the deposits through a three-man board called the British Phosphate Commissioners (BPC).

The phosphate industry expanded greatly in the years between the wars. Australian and New Zealand farmers enjoyed substantial savings, for Nauru phosphate was sold at a much lower price than phosphate from other countries. As for the Nauruans, with their small royalty of eightpence a ton in 1939, they opted out of the industry completely and turned to their own culture for sustenance.

War came to Nauru in December 1940, when the island was shelled by a roving German raider, and four phosphate ships were sunk. Nauru was flattened by Japanese bombings beginning in December 1941, and all its industrial plant and housing facilities were destroyed. The Japanese occupied the island from August 1942 until the end of the war three years later. They deported 1,200 Nauruans to build an airstrip on Truk, a small atoll about 1,600 km (1,000 mi) northwest of Nauru, and many died there. Australian forces reoccupied Nauru in September 1945, and the surviving Truk Nauruans, who had been reduced in number to only 737, were repatriated in January 1946. Nauru's population thus fell from 1,848 in 1940 to 1,369 in 1946.

The three mandatory governments placed the mandate of Nauru before the UN. On 1 November 1947, the UN approved an agreement by which the island became a trust territory administered jointly by Australia, New Zealand, and the United Kingdom, who were to share the task of developing self-government on the island. The Nauruans had a Council of Chiefs to represent them since 1927, but this body had advisory powers only. Dissatisfied Nauruans made a number of complaints to the administering authority and to the UN Trusteeship Council, with the result that a Nauruan local government council was established by the election of nine council members in December 1951. Since control of the council was exercised by the administrator, however, the Nauruans continued to press for further political power. They asked for positions of importance in the administration and an increase in royalty payments, and expressed concern about the future of the island because the increased rate of phosphate exportation would, it was feared, exhaust the deposits by the end of the century. By constant negotiations, the Nauruans forced the BPC to pay royalties on a rights rather than needs basis, and with the establishment of a world price in 1964, phosphate royalties were raised. The Nauruans achieved control of the industry in 1967 by purchasing the plant and machinery owned by the BPC, and in 1970 they took over the industry completely.

Meanwhile, in 1964, Australia had attempted to resettle the Nauruans on Curtis Island, off the coast of Queensland. The Nauruans, although in principle not averse to resettlement, refused it because of political considerations. They wanted to own their island and to maintain their identity by political independence. Australia would not agree to this, and the plan collapsed. This failure reinforced the Nauruans' desire for political independence. With the support of the Trusteeship Council, they established an elected Legislative Council in 1966. Although Australia wished to maintain control of defense and external affairs, the Nauruans insisted on complete self-determination. Thus, on 31 January 1968, the 22nd anniversary of the return of the Nauruan survivors from Truk, Nauru became the smallest independent republic in the world. Since that time, Nauru has pursued a policy of isolation and nonalignment, although it does have a role in Commonwealth affairs. In October 1982, Queen Elizabeth II visited the island, the first British monarch to do so. Nauru established diplomatic ties with the former Soviet Union in 1988. Nauru filed a claim in 1989 for compensation from Australia at the International Court of Justice for the loss of nearly all its topsoil from phosphate mining during the League of Nations mandate and the UN trusteeship. In July 1992 Nauru hosted the 24th South Pacific Forum heads of government meeting, which focused on environmental issues, including opposition to nuclear testing in the area. Nauru's first president Hammer DeRoburt died on 15 July 1992 in Melbourne, Australia. Australia agreed to pay A\$2.5 million for 20 years, and New Zealand and the United Kingdom additionally agreed to pay a settlement of \$12 million each in August 1993 to settle the loss of topsoil case.

Nauru's government announced plans to rehabilitate the island at the 1994 Small Island States Conference on Sustainable Development.

Incumbent president Bernard Dowiyogo lost his 1995 bid for reelection to Lagumot Harris in 22 November 1995. However, a series of no-confidence votes over the succeeding years brought several changes in what has come to be called a "revolving door" presidency. Dowiyogo was returned to office for the fifth time, following an election in April 2000. On 29 March 2001, he was forced from office in a political crisis over the alleged involvement of a Russian organized crime syndicate in Nauru's financial activities. Nauru has been blacklisted by international financial monitoring organizations and banks for its role as a tax haven and money laundering center. Dowiyogo was replaced by

LOCATION: 0°32' S and 166°56' E. TERRITORIAL SEA LIMIT: 12 miles.

René Harris, who held the presidency until 8 January 2003, when a no-confidence motion was passed against him. His ouster from office was linked to his support for Australia's "Pacific Solution" to exclude asylum-seeking boat people. In 2001, Nauru agreed to accept hundreds of Afghan and Iraqi asylum seekers from Australia in return for millions of dollars in aid. Harris was also accused of corruption and was blamed for Nauru's dire financial situation: Nauru had a budget deficit in 2002 of approximately US\$40 million, almost half of its GDP. Following the vote of no-confidence against Harris on 8 January 2003, parliament voted numerous times on who would be elected president. He was replaced by Dowiyogo, who then died following heart surgery in the United States on 9 March 2003. Derog Gioura was named acting president. General elections were held on 3 May 2003, and Harris was returned to parliament, along with Gioura. As of 8 May, it was unknown who would be named president of Nauru.

Nauru became a member of the Commonwealth of Nations in May 1999 and joined the United Nations in September of the same year.

### 13 GOVERNMENT

The constitution of the Republic of Nauru, adopted at the time of independence and subsequently amended, provides that the republic shall have a parliamentary type of government. It contains provisions for the protection of fundamental rights and freedoms—a subject of particular importance because many of the inhabitants are short-term migrants ineligible for citizenship (defined in the constitution as being restricted to those of

Nauruan or of Nauruan and Pacific islander parentage). Legislative power is vested in the parliament, composed of 18 members elected for a three-year term by Nauruan citizens who have attained the age of 20 years. Seven of the eight constituencies (representing 10 out of 14 districts) return two members each, and the constituency of Ubenide (representing 4 districts) returns four members. The first woman was elected in 1986.

Executive power is exercised by the president, who also fulfills the residual duties of head of state; he is elected by parliament and is assisted by a cabinet, which he appoints. Hammer DeRoburt became president at independence in 1968 and was reelected in 1971 and 1973. He was defeated for reelection after the legislative voting in 1976, and Bernard Dowiyogo was chosen to succeed him as president. After DeRoburt's supporters forced Dowiyogo's resignation in 1978, DeRoburt again became president. He was reelected in 1980 and in 1983; after the 1983 victory, he persuaded his opponent Dowiyogo to become a cabinet member. In 1986, DeRoburt resigned in protest over opposition to his budget and was replaced by Kennan Adeang; however, DeRoburt's supporters quickly forced Adeang to resign, and DeRoburt was elected again. Because he did not have a clear majority, he called for a new election in 1987 and was reelected decisively. A vote of no confidence forced DeRoburt to resign in August 1989. He was replaced by Kenas Aroi, who then resigned in December 1989 for reasons of ill-health. The December 1989 general election resulted in Bernard Dowiyogo's election to the Presidency. He was reelected President for a second three year term in November 1992, but lost his 1995 bid for reelection to Lagumot Harris. However, a series of no-confidence votes brought seven changes in the presidency over the next five years. The election of April 2000 returned Dowiyogo to office, but he was replaced by Rene Harris in March 2001. Harris lost a vote of no-confidence in parliament in January 2003, and as of late February, the question of who would be president of Nauru was unresolved.

#### 14 POLITICAL PARTIES

There have been ad hoc political parties since independence in Nauru, but politics is generally based on personal loyalties and occasionally on issue-based coalitions. After DeRoburt's reelection in 1987, Kennan Adeang formed the Democratic Party of Nauru, which aimed to curb the power of the presidency. Eight members of parliament joined the party. As of 2003, the Nauru Party was headed by Bernard Dowiyogo, and the Center Party was headed by former president Kinza Clodumar.

#### 15 LOCAL GOVERNMENT

Acting as a local government and providing public services, the Nauru Island Council (NIC) was elected from the same constituencies as parliament, except that seven of the eight constituencies returned one member, and the constituency of Ubenide returned two members, making nine in all. The council elected a chairman, treasurer, and secretary. It held its sessions in the Domaneab, a Nauruan meetinghouse. Many members of parliament also served as councilors. The Nauru Island Council was dissolved in 1999; all assets and liabilities became vested in the Government of Nauru.

Besides fulfilling the traditional functions of local government, the Nauru Local Government Council manages the Nauru Corporation, the Nauru Pacific Line, and is responsible for overseas investments.

#### 16 JUDICIAL SYSTEM

The constitution provides for a supreme court, with a chief justice presiding. Cases are also heard in the district court or family court. There are two other quasi-courts: the Public Service Appeal Board and the Police Appeal Board. The chief justice presides

over both as chairman of the panel, with two members for each board.

The supreme court, which has original and appellate jurisdiction, is the supreme authority on the interpretation of the constitution. Appeals against decisions of the supreme court on certain matters go to the appellate court of Nauru, which is comprised of two judges. Cases also may be appealed to the high court of Australia. Parliament cannot overturn court decisions.

The judiciary is independent of the executive. The constitution guarantees protection of fundamental human rights which in practice are generally respected.

Many cases never reach the formal legal system. Most of the conflicts are resolved by the traditional reconciliation process.

#### 17 ARMED FORCES

Nauru has no armed forces. Although there is no formal agreement, Australia ensures its defense. There is a police force of 60 officers under civilian control.

#### 18 INTERNATIONAL COOPERATION

Nauru was admitted to the UN on 14 September 1999 and participates in the Asian Development Bank, ESCAP, FAO, ICAO, ITU, UNESCO, UPU, and WHO. The nation belongs to the South Pacific Commission and South Pacific Forum and is a special member of the Commonwealth of Nations, taking part in some Commonwealth functions but not represented at heads-of-government conferences. Nauru has signed the Law of the Sea.

#### 19 ECONOMY

The economy of Nauru has long been dependent on phosphates. Estimates are that the deposits will be exhausted within a few years. In anticipation of this event, substantial amounts of phosphate income are invested in trust funds to help cushion the transition. By 1987, an estimated \$450 million had been set aside to support the country after the phosphates run out. At one point, the value of the Nauru Phosphate Royalties Trusts reached \$1 billion, making Nauruans on paper the richest people in the Pacific. However, dividends from the trusts have declined sharply since 1990 and the government has been borrowing from the trusts to finance fiscal deficits. In addition, a 1994 audit of the trust revealed that about \$8.5 million had been lost due to bad investments and corruption.

By 1996 deficit spending had caused the country to default on servicing its external debt and was also creating problems in meeting the government payroll. A strict government austerity program reduced government spending 38% in 1998-99. Money has been lost through failed investments in property, aviation and fishing, but the evidence is indirect since there is no public accounting. In 2002, Air Nauru Pacific service was grounded because of arrears on bills to Qantas maintains. The air service is vital for food supply. Telephone service has also been occasionally cut because of unpaid bills.

The government has attempted to use the now-dwindling revenue from phosphates to diversify the island's economy, mainly through overseas investment and the development of a national airline and shipping line. Aside from phosphates, Nauru has few domestic resources, and many food products and virtually all consumer manufactures are imported. The government subsidizes imports so that food and other necessities are available at nominal cost. Nauru's economy is currently very weak and increasingly dependent on Australia. Offshore financial operations were begun in 1993, but the economy suffered in that year due to a major financial scandal. In 2000, the OECD listed Nauru one of 38 "noncooperative" tax havens. In 2002, it was one of only seven jurisdictions that remained on the list for not taking sufficient corrective action. A temporary infusion of funds was promised through Nauru's agreement with Australia to act as

an off-shore location for the processing of asylum seekers. For the use of its land, Nauru has been promised up to A\$30 million.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Nauru's gross domestic product (GDP) was estimated at \$60 million. The per capita GDP was estimated at \$5,000. The average inflation rate in 1993 was -3.6%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange.

## 21 LABOR

The workforce is primarily engaged in the state-owned phosphate industry, with public administration, education and transportation providing employment as well. Only about 1% of employment is in the private sector. As of 1992, there were some 3,000 guest workers in Nauru, mostly from Vanuatu or Kiribati. Unemployment is virtually nonexistent. There were no trade unions or labor organizations as of 2002. The right to strike is neither protected or prohibited. Collective bargaining does not take place.

In 2002, the annual minimum wage in the public sector was \$6,562 for workers over 21 years of age. This provides an adequate standard of living for a family. The workweek for office employees is set at 36 hours, and for manual laborers the standard is 40 hours. The minimum age for employment is 17 years, although some younger children work in the few family-owned small operations. The government enforces health and safety standards in the workplace.

## 22 AGRICULTURE

Since the cultivated area is limited to about 200–240 ha (500–600 acres), there is little commercial agriculture. The main crop is coconuts; in 1999, production amounted to 2,000 tons. Some vegetables are grown, mainly by the Chinese population.

## 23 ANIMAL HUSBANDRY

Pigs and chickens roam uncontrolled on the island; hence, there is no organized production. In 2001, there were an estimated 2,800 pigs.

## 24 FISHING

There is as yet no organized fishing industry on Nauru, although the government plans to develop fishing facilities. The Nauru Fishing Corp., formed in 1979, is owned by the Local Government Council. Fish are plentiful and consumption is high, since almost all meat has to be imported from Australia. The total catch in 2000 was 250 tons.

## 25 FORESTRY

There are no forests on Nauru. All building timber has to be imported.

## 26 MINING

High-grade phosphate rock was virtually Nauru's only natural resource, its only export commodity and leading industry, and the basis of the Nauruan economy—GDP varied according to the world market price of phosphate. The government-owned Nauru Phosphate Corp. was the country's sole producer of phosphate rock, and the island nation's primary producer, employer, and exporter. Production of phosphate rock in 1998 was 487,000 tons, down from 613,000 in 1994. Phosphate rock reserves were expected to be depleted by 2004. In 1998, Nauru also produced common clays, sand and gravel, and stone.

Phosphate rock was extracted from the surface mine on the central plateau in the island's interior, using mechanical shovels

from between the coral pinnacles. Phosphate rock was trucked to a central storage pile and transported to storage hoppers by rail. After being crushed and dried, the rock was placed on conveyor belts to pass to the arm of two cantilevers, each about 60 m long, that projected out over the reef to waiting ships. All phosphate rock was exported—to New Zealand, Australia, the Philippines, and South Korea—and the associated coral was used domestically for road aggregate.

In 1999, the government planned to launch a program to rehabilitate and develop the phosphate lands that have been mined for nearly a hundred years—as of 1990, 61 million tons of phosphate had been mined. The plan was agreed to in 1994 with Australia and New Zealand, and the United Kingdom agreed to help Australia pay its \$73 million compensation package to Nauru for environmental damage; the rehabilitation would cost \$210 million over 23 years. Nauru's phosphate mine was the last active mine of three historic phosphate-producing islands of the Pacific. The other two, Makatea (in French Polynesia) and Banaba (formerly known as Ocean Island, in the Gilbert Islands group in the Republic of Kiribati), were depleted, respectively, in 1966 and 1979, making Nauru the sole Pacific Island producer.

## 27 ENERGY AND POWER

Power requirements on the island are met by a diesel oil generator to which nearly all buildings are connected. In 2001, total installed electrical power capacity was 10,000 kW. Production in 2000 was 30 million kWh, of which 100% was from fossil fuels. Consumption of electricity in 2000 was 27.9 million kWh. Imports of refined petroleum products amounted to 950 barrels per day in 1994.

## 28 INDUSTRY

The phosphate industry is the only industry on the island. It is under the control of the Nauru Phosphate Corp., a statutory corporation that is responsible to the president of the republic in his capacity as minister for island development and industry. About 75% of the profit from phosphate sales is invested in long-term trust funds that have been established to take care of the Nauruans after phosphate deposits are depleted. By 2002, the primary deposits were largely exhausted and expensive to mine; the mining equipment was poorly maintained and the mining operation overstuffed.

## 29 SCIENCE AND TECHNOLOGY

Nauru has little advanced technology, and Nauruans must travel abroad, usually to Australia, for scientific training.

## 30 DOMESTIC TRADE

The Nauru Cooperative Society conducts most of the nation's retail trade. The island is completely dependent on imported goods; foodstuffs come mainly from Australia. A majority of the population is employed in the phosphate mining industry, which is currently the nation's primary export.

## 31 FOREIGN TRADE

Nauru's only export is phosphate rock, with most going to Australia and New Zealand. The value of exports fluctuates as world phosphate prices rise or decline. Imports consist of pretty much everything, including machinery and construction materials for the phosphate industry, food, fresh water (from Australia), fuel, and other necessities. About half of the imports come from Australia, and almost all the rest from New Zealand, the UK, and Japan. Virtually all manufactured goods must be imported.

## 32 BALANCE OF PAYMENTS

Nauru has a strongly favorable balance of trade, and investments abroad are substantial.

### 33 BANKING AND SECURITIES

The government-owned Bank of Nauru was founded in 1976. The Commonwealth Savings Bank of Australia and the Bank of New South Wales have branches in Nauru. The only commercial bank in the country is the Jefferson Bank and Trust Co. (1980). Most of the income from phosphates is invested in long-term funds overseas.

There is no stock exchange.

### 34 INSURANCE

The Nauru Insurance Corp., founded in 1974, is the only licensed insurer and reinsurer on the island. It underwrites all classes of insurance, including aviation and marine.

### 35 PUBLIC FINANCE

Administrative costs in Nauru are met from the proceeds of phosphate sales, which are in decline as reserves approach exhaustion. In 1993, the governments of Nauru and Australia reached a US\$73 million out-of-court settlement as restitution for Nauruan lands ruined by Australian phosphate mining. This payment assisted the government (which relies almost entirely on phosphate receipts for revenue) in facilitating economic diversification. The fiscal year extends from 1 July to 30 June.

The US Central Intelligence Agency (CIA) estimates that in 1995/1996 Nauru's central government took in revenues of approximately \$23.4 million and had expenditures of \$64.8 million. Overall, the government registered a deficit of approximately \$41.4 million. External debt totaled \$33.3 million.

### 36 TAXATION

There is no income or other tax in Nauru, although Parliament has power to impose taxes. In 2000, the OECD listed Nauru as one of 38 "uncooperative tax havens." In 2002, it was one of only seven countries that had not gotten themselves removed from the list by taking some corrective action.

### 37 CUSTOMS AND DUTIES

Duties are payable only on imported cigarettes, tobacco, and alcoholic beverages.

### 38 FOREIGN INVESTMENT

Apart from the investment in the phosphate industry, now owned by the government of Nauru, there has been little investment on the island. The government of Nauru has large investments overseas in long-term funds financed from phosphate royalties. Nauru also has invested in commercial property development, notably a 53-story office building in Melbourne, Australia.

Plans were approved in 1985 to build an industrial, commercial, and residential complex in Honolulu and, with the help of Japanese companies, a 19-story, 450-room hotel on Guam. Nauru received US\$6.7 million from the Japanese government to build the new Anibare Community Boat Harbor at Yaren, scheduled to open in the spring of 2000. In 2002–03, the government is scheduled to receive up to A\$30 million for allowing Australia to use the island as a processing centre for asylum seekers.

### 39 ECONOMIC DEVELOPMENT

Government policy is to exploit the phosphate deposits to the fullest extent for the highest returns. The government has diversified into aviation and shipping and plans to develop fishing and tourism. It acquired the Grand Pacific Hotel on the Fijian Island of Suva and, in 1993, undertook a F\$18 million renovation of the facility. In 1993, Australia agreed to provide US\$73 million in compensation for pre-independence mining of phosphate to aid in restoring the extensive areas damaged by it.

In December 1998 Nauru won approval for a \$5 million loan from the Asian Development Bank to aid in implementing structural reforms, including privatization. A National Economic Summit was held in 1999, but the proceedings were not made public. The true state of the Nauru Phosphate Royalties Trust Fund (NPRTF) is not known, nor are the reasons for its apparent substantial decline. In 2002 and 2003 the economy received a small boost from money paid by Australia for housing asylum seekers. Nauru remains on the OECD's list of uncooperative tax havens.

### 40 SOCIAL DEVELOPMENT

Medical, dental, and hospital treatment and education are free. Other benefits—old age and disability pensions, widows' and sickness benefits, and child endowment—are administered by the Local Government Council.

The Constitution guarantees women equal rights with men, although traditional social values still discourage many from pursuing careers. In particular, women face great social pressure to marry and raise families because Nauru's population was decimated in World War II due to massive removals by the Japanese. Women's educational and employment opportunities are severely limited by these traditional views on the roles of women, and there have been reports of educational scholarships being suspended for young women contemplating marriage. Domestic abuse is not prevalent, and the government treats reports of violent incidents in a serious manner.

Human rights are generally well respected.

### 41 HEALTH

There are two modern hospitals. One hospital serves phosphate industry employees; the other provides free medical treatment for the rest of the population. Patients who need specialized care are flown to Australia. In 1995, there were 1.6 physicians and 5.9 nurses per 1,000 people.

Tuberculosis, leprosy, diabetes, and vitamin deficiencies have been the main health problems, partly due to the switch to a Westernized diet. A national foot care education program was launched in 1992 to decrease the number of diabetic amputations. With modern facilities and treatments, many of these diseases have been brought under control. Cardiovascular disease has also been a major cause of illness and death.

Life expectancy as of 2002 was estimated at 61.6 years. The infant mortality rate was an estimated 10.5 per 1,000 live births. The crude birth rate and overall mortality rate were estimated at, respectively, 26.6 and 7.1 per 1,000 people. The immunization rates for children under one year old in 1990 were as follows: diphtheria, tetanus, and pertussis, 74%; polio, 74%; measles, 74%; and tuberculosis, 93%.

There were no reported cases of polio or AIDS in 1995. Tuberculosis was reported in only four cases during 1994.

### 42 HOUSING

Ownership of houses built for Nauruans under a housing scheme is vested in the Local Government Council, but some Nauruan homes are privately owned. Nearly all houses have electricity and newer homes have a greater number of amenities.

### 43 EDUCATION

Attendance at school is compulsory for Nauruan children from 5 to 16 years old. Two types of schools are available, both coeducational: those run by the government and those conducted by the Roman Catholic Church. Education is provided free by the government. Education on Nauru is available up to the intermediate level; higher education overseas, mainly in Australia, is assisted by the government in the form of competitive scholarships. There is also a university extension center affiliated with the University of the South Pacific. In the early 1990s,

Nauru had six preprimary and two primary schools, one secondary school, and a technical school, as well as a mission school.

#### 44 LIBRARIES AND MUSEUMS

Nauru has one small lending library but no museums. There is a university library with 1,000 volumes.

#### 45 MEDIA

Communication with the outside world is maintained by a ground satellite station established in 1975, providing 24-hour telephone, telegraph, and telex services worldwide. A small telephone exchange, handling 2,000 telephones in 1996, provides on-island communication. In 1994, there were 450 cellular phones in use. A satellite earth station was commissioned in 1990.

Government-owned Radio Nauru, the only radio station, broadcasts in English and Nauruan. Though there is no local news reporting; the station rebroadcasts new services from Radio Australia and the BBC. As of 1997 there was one television station in operation. In the same year, there were 374 radios in use per 1,000 population. Internet service is available.

Most newspapers are imported. There are two regular publications: the private fortnightly newspaper, the *Central Star News* and the government *Gazette*.

The constitution provides for free expression, and the government is said to support this in practice.

#### 46 ORGANIZATIONS

The Boy Scouts, Girl Guides, and similar organizations function on the island. The Nauru National Youth Council was

established in 1990 to encourage the development of various youth organizations. The Women's Information and News Agency monitors issues relating to women and government.

#### 47 TOURISM, TRAVEL, AND RECREATION

With its sandy beach, coral reef, tropical climate, and sea breezes, Nauru has great potential for the development of tourism. Visas are required for entry, but inoculations are not mandatory.

In 1999, the US State Department estimated that daily expenses required by travelers in Nauru was \$105 per day. Hotel costs account for over 50% of this expenditure.

#### 48 FAMOUS NAURUANS

The best-known Nauruan is its first president, Hammer DeRoburt (1923–92), who led the Nauruan people to political independence; he was president from 1968 to 1976 and again from 1978 until his death in 1992 (except for a brief period in 1986).

#### 49 DEPENDENCIES

Nauru has no territories or colonies.

# NEPAL

Kingdom of Nepal  
*Nepal Adhirajya*

**CAPITAL:** Kāthmāndu

**FLAG:** The national flag consists of two red adjoining triangles, outlined in blue and merging at the center; the points are at the fly. On the upper triangle, in white, is a symbolic representation of the moon; on the lower triangle, that of the sun.

**ANTHEM:** The national anthem begins “May His Majesty, solemn and supremely valiant, be prosperous forever.”

**MONETARY UNIT:** The Nepalese rupee (NR) is a paper currency of 100 paisa. There are coins of 1, 2, 5, 10, 20, 25, and 50 paisa and 1, 2, 5, 10, 20, 25, 50, and 100 rupees, and notes of 1, 2, 5, 10, 20, 50, 100, 500, and 1,000 Nepalese rupees. NR1 = \$0.01294 (or \$1 = NR77.25).

**WEIGHTS AND MEASURES:** The metric system is in use, but some traditional Indian standards also are employed.

**HOLIDAYS:** National Unity Day, 11 January; Martyrs’ Day, 30 January; Rashtriya Prajatantra Divas—National Democracy Day, 18 February; Nepalese Women’s Day, 8 March; Navabarsha—Nepalese New Year’s Day, mid-April; UN Day, 24 October; Queen Aishworya’s Birthday, 7 November; Constitution Day, 9 November; National Day (King Birendra’s Birthday), 28 December. Hindu and Buddhist religious holidays are based on the lunisolar calendar. Saturday is the general day of rest.

**TIME:** 5:45 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

A comparatively narrow strip of territory dividing India from China, landlocked Nepal has an area of about 140,800 sq km (54,363 sq mi), extending 885 km (550 mi) SE–NW and 201 km (125 mi) NE–SW. Comparatively, the area occupied by Nepal is slightly larger than the state of Arkansas. In its length lie some 800 km (500 mi) of the Himalayan mountain chain. Nepal is bounded on the N by China and on the E, S, and W by India, with a total boundary length of 2,926 km (1,818 mi). Nepal’s capital city, Kāthmāndu, is located in the central part of the country.

## <sup>2</sup>TOPOGRAPHY

Nepal is made up of three strikingly contrasted areas. Southern Nepal has much of the character of the great plains of India, from which it extends. Known as the Terai, this region comprises both cultivable land and dense jungle, the latter being for the most part a game preserve inhabited by the wild elephant, tiger, and other typically South Asian fauna. Besides being a hunting ground, the forests are worked for their valuable timber. The Terai contains about one-third of Nepal’s population and makes up about one-fourth of the total area. The second and by far the largest part of Nepal is formed by the Mahabharat, Churia, and Himalayan mountain ranges, extending from east to west. Their altitude increases toward the north, culminating on the Tibetan border in Mt. Everest (Sagarmatha in Nepali), standing amid other noble peaks. Three principal rivers originate from glaciers and snow-fed lakes, break southward through deep Himalayan gorges, and enter, respectively, the Karnali, Gandak, and Kosi basins. Flowing toward India, they become tributaries (as are all Nepal’s rivers) of the Ganges system. The third area is a high central region, some 890 km (344 sq mi) in extent between the main Himalayan and Mahabharat ranges; this region is known as the Kāthmāndu Valley, or the Valley of Nepal. Overlooked by mountains, the valley, with its fertile soil and temperate climate, supports a thriving agriculture. Here Kāthmāndu, the capital, is situated,

with the foothill towns of Bhaktapur and Patan nearby. This is the only region of Nepal that has any considerable population density.

Eight of the world’s highest mountains are situated in the Himalaya range on the Tibetan border. Triangulated in 1850, Mt. Everest was officially given the status of the world’s highest peak in 1859. The summit (8,850 m/29,035 ft) was reached for the first time on 29 May 1953 by Sir Edmund Hillary, a New Zealander, and Tenzing Norgay, a Sherpa guide.

## <sup>3</sup>CLIMATE

Below the Kāthmāndu Valley and throughout the Terai, the climate is subtropical and, in the swamps and forests, extremely humid. The valley itself enjoys the temperate conditions generally found between altitudes of 1,200 and 3,400 m (4,000–11,000 ft). At 1,300 m (4,300 ft) above sea level, the elevation of Kāthmāndu, the rainy season lasts from June to October; 80% of annual precipitation falls during this monsoon season. Colder weather follows, lasting until the middle of March, when the warm season begins. The warm season increases in intensity until broken by the rains, which account for precipitation of about 150 cm (60 in) annually. Temperatures in Kāthmāndu in January range from an average minimum of 2°C (36°F) to an average maximum of 18°C (64°F); the July range is 20–29°C (68–84°F). Northward of the Kāthmāndu Valley, a subalpine zone continues to altitudes of about 4,300 m (14,000 ft); above that elevation, the country is covered with snow during the long winter, and extreme cold is experienced in the upper Himalayas.

## <sup>4</sup>FLORA AND FAUNA

The wide range of climate accounts for correspondingly marked contrasts in flora and fauna between different regions of the country. In the south, the sal (the wood of which is used for railroad ties), sisu, and other subtropical trees are abundant in forests; in the extreme north, junipers are seen even at the altitude

of the glacial moraines. Many kinds of conifers also exist in the alpine zone, along with the yew, various hollies, birch, dwarf rhododendrons, and other alpine flora.

Dominant in the Langtang Valley are the chir pine, willow, alder, and evergreen oak. Blue pine and silver fir are frequent in the subalpine zone, which also supports tree rhododendrons—magnificent plants often reaching a growth of 12 m (40 ft). Ground orchids, lilies, yellow and blue poppies, and crimson anemones are prevalent in central Nepal. The profusion of wild flowers extends to very high altitudes; at 5,200 m (17,000 ft), several varieties of primula, pink and white cotoneaster, and white erica have been gathered, along with many kinds of alpine mosses and ferns.

The tiger, hyena, and jackal still exist in southern Nepal, although in decreasing numbers. Rhesus monkeys and a variety of other small jungle mammals and rodents are common. At middle altitudes are found the black bear, several species of cats, squirrel, hare, deer, and antelope. Higher in the mountains, wild sheep and goats, marmots, and a species of tailless mouse-hare are numerous. Small black spiders were found at 6,900 m (22,500 ft) on rocky ledges traversed by the Mt. Everest expedition of 1953. Birds of Nepal include the green finch, dove, woodpecker, nuthatch, warbler, flycatcher, bulbul, and other familiar species. At about 2,700 m (9,000 ft) are found the hill partridge, pheasant, yellow-backed sunbird, minivet, and many of the flowerpeckers; the redstart, pipit, wagtail, snow pigeon, snowcock, and golden eagle thrive in both the alpine and subalpine zones.

## 5 ENVIRONMENT

Nepal's environment has suffered the effects of agricultural encroachment, deforestation and consequent soil erosion, and contamination of the water supply. Between the mid-1960s and the late 1970s, forestland declined from 30% to 22% of the total area, mainly because of the felling of timber for firewood, which supplies over 90% of Nepal's fuel requirements. Moreover, it is estimated that erosion causes the loss of about 240 million cu m of topsoil each year.

All of Nepal's forests were nationalized in 1957, but reforestation efforts have been minimal. A forest conservation program, begun in 1980, includes the establishment of village tree nurseries, free distribution of seedlings, and provision of wood-burning stoves of increased efficiency. By 1985, however, deforestation averaged 324 sq mi per year, while reforestation was only 4,000 hectares (9,900 acres) per year. An additional 4.4% of forest and woodland were lost between 1983 and 1993. The FAO estimates that at the present rate of depletion, the forests will be virtually wiped out by 2015.

Air and water pollution are significant environmental problems in Nepal. According to United Nations sources, the nation produces 18,000 tons of carbon monoxide and 3,300 tons of hydrocarbons per year. Roughly one-third of the nation's city inhabitants and two-thirds of all rural dwellers do not have pure water, and the use of contaminated drinking water creates a health hazard. Untreated sewage is a major pollution factor: the nation's cities produce an average of 0.4 million tons of solid waste per year.

In 2001, 28 of Nepal's mammal species and 27 of its bird species were endangered, as were 7 plant species. Species classified as endangered in Nepal include the snow leopard, tiger, Asian elephant, pygmy hog, great Indian rhinoceros, Assam rabbit, swamp deer, wild yak, chir pheasant, and gavia.

## 6 POPULATION

The population of Nepal in 2003 was estimated by the United Nations at 25,164,000, which placed it as number 43 in population among the 193 nations of the world. In that year approximately 4% of the population was over 65 years of age,

with another 41% of the population under 15 years of age. There were 104 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 2.23%, with the projected population for the year 2015 at 32,011,000. The government seeks to reduce the population growth rate through social, cultural, economic, and educational reforms, as well as child health and family planning programs. The population density in 2002 was 162 per sq km (420 per sq mi). Population distribution is uneven, with about 45% of all Nepalese concentrated in the hilly central region, 47% in the fertile Terai plain, and only 8% in the mountains.

It was estimated by the Population Reference Bureau that 12% of the population lived in urban areas in 2001. The capital city, Kāthmāndu, had a population of 669,000 in that year. According to the United Nations, the urban population growth rate for 2000–2005 was 5.1%.

## 7 MIGRATION

Nearly 20,000 Tibetans arrived in Nepal between the Chinese annexation of Tibet in 1959 and 1989. Hundreds of thousands of Nepalese were believed to be working in India in the 1980s, and over 100,000 Indians were working in Nepal, particularly in the garment industry and on the building of highways.

An influx of Bhutanese refugees into Nepal began in late 1991 and peaked in 1992; the flow of new arrivals has slowed since 1997. As of May 1997, there were 91,000 refugees and asylum seekers from southern Bhutan. As of 1999, there were 96,000 Bhutanese in seven refugee camps in eastern Nepal. In 2000, the net migration rate was -1.1 per 1,000 population. The total number of migrants in that year was 619,000 including refugees. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

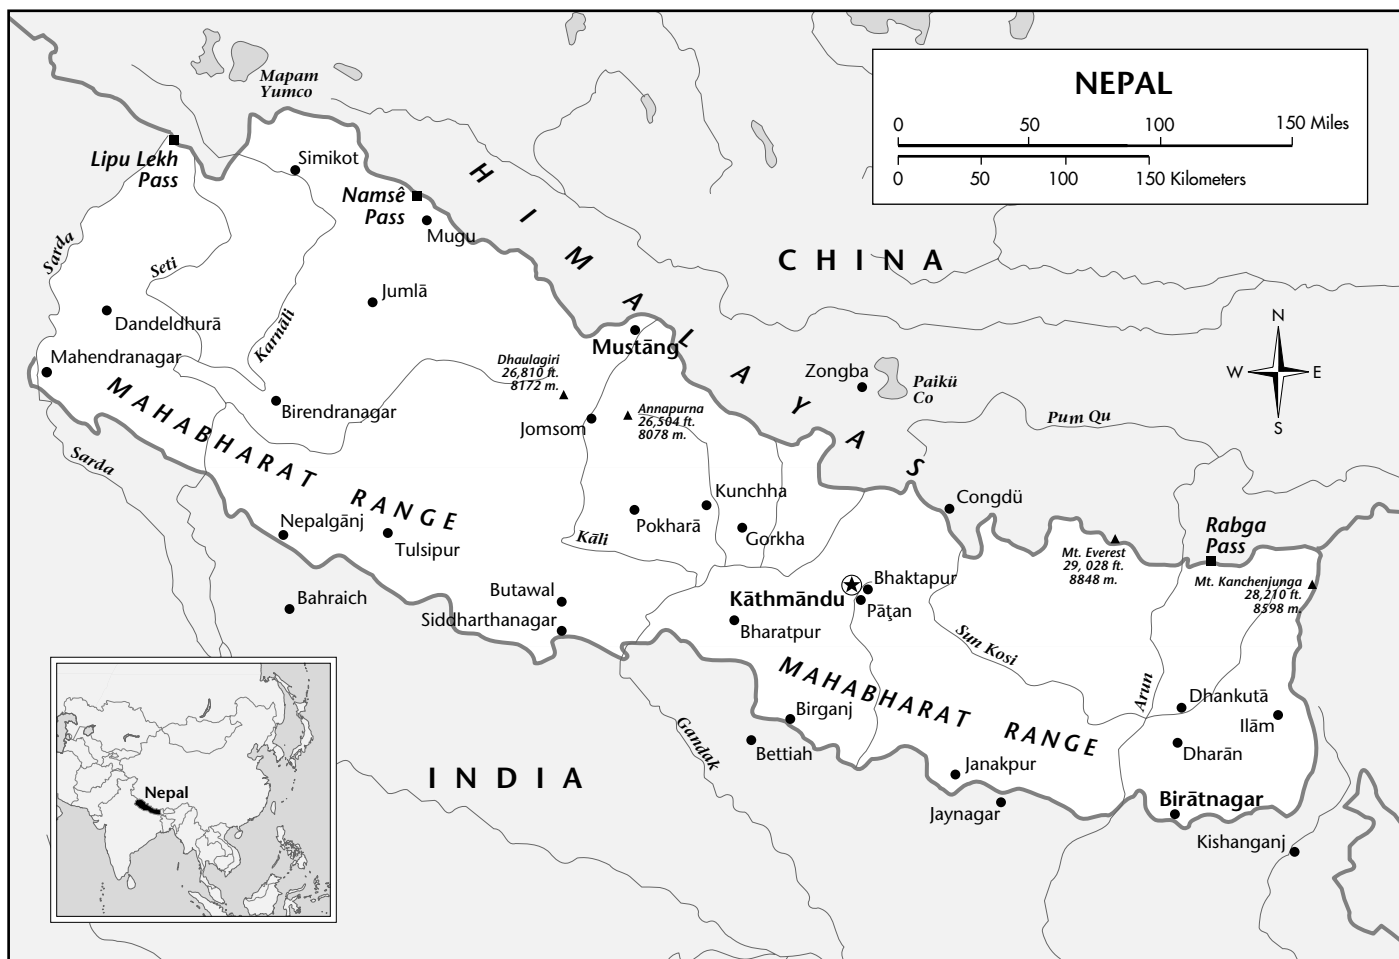

Nepal consists of two primary ethnic elements: Mongoloids, who migrated to Nepal by way of Tibet, Sikkim, Assam, and northern Bengal; and Indo-Aryans, who came from the Indian plains and from the sub-Himalayan hill areas to the west of Nepal. There are also small remnants of Dravidian tribes. Bhotas, of Tibetan origin, are the principal occupants of northern Nepal. In the central valley, Newars and Murmis predominate, the former being responsible for most of the agriculture and trade. Less numerous groups include Gurungs and Magars in west-central Nepal and Kirantis and Rai in the east. Sherpas, a Himalayan people, have become well known as guides for mountain-climbing expeditions.

## 9 LANGUAGES

Nepali is the official language, although some 20 different languages divided into numerous dialects are spoken. Nepali is spoken by about 90% of the population and is the language for most intertribal communication; it is used in government publications and has been the language of most of the written literature since the Gurkha unification of Nepal. More than 11% of the people speak Maithili as their first language, 7.6% Bhojpuri, 4% Tharu, and about 3% Newari and Tamang each. Except in primary schools, where children are taught in their own language, Nepali is the medium of instruction. English is taught as a second language in secondary schools and colleges and is widely understood in business and government circles.

## 10 RELIGIONS

Hinduism and Buddhism exist side by side in Nepal and to some extent are intermingled. The importance of both in the national life is everywhere manifest; more than 2,700 temples and shrines have been counted in the Kāthmāndu Valley alone, while innumerable others are scattered along trails and roads extending to the most distant mountain passes. Bodhnath and Shambunath are famous Buddhist temples. The ancient temple of

LOCATION: 26°20' to 30°16' N; 80°15' to 88°15' E. BOUNDARY LENGTHS: China, 1,236 kilometers (772 miles); India, 1,690 kilometers (1,046 miles).

Chandragiri is dedicated to both religions. The Bagmati River, flowing through central Nepal, is considered sacred and is visited by pilgrims, as are certain mountains and lakes. The constitution does not establish a state religion but does describe the nation as a "Hindu Kingdom."

A 2002 report indicates that about 81% of the population are nominally Hindu while 11% are Buddhist. Muslims constitute about 4% of the population. Minorities include Christians, Baha'is, Jains, and Kirants (followers of an indigenous animist religion). The constitution forbids proselytizing.

## 11 TRANSPORTATION

Nepal's ratios of road mileage to area and to population are among the lowest in the world, and the principal means of land transport is by porters with pack animals. The main highways are the 190-km (118-mi) road that penetrates the Kathmandu Valley, connecting it with the Indian border; the 87-km (54-mi) road between Kathmandu and Kodari on the Tibetan (Chinese) border, which was severely damaged by flooding in late 1982 and was later rebuilt with Chinese assistance; the 862-km (536-mi) east-west Mahendra Highway; and the 200-km (124-mi) Kathmandu-Pokhara highway, which is being extended to Surkhet. In all, Nepal had 13,223 km (48,217 mi) of roadway in 2002, of which 4,073 km (2,531 mi) were paved.

There are no waterways in Nepal. The only practical seaport for goods bound for Kathmandu is Calcutta in India.

Nepal had a total of 59 km (37 mi) of railways in 2002, all in Kosi close to the Indian border. A narrow gauge railway, opened in 1927, runs from Jayanagar, in India, to Janakpur, a distance of 52 km (32 mi), of which 10 km (6 mi), running from Raxaul, India, to the frontier town of Birganj, is government owned. An electrically driven ropeway, inaugurated in 1925 and improved with US aid in 1962, carries 25 tons an hour a distance of 43 km (27 mi), to a height of nearly 1,400 m (4,500 ft) from Hetaura to Kathmandu.

Much of Nepal is easily accessible only by air. In 2001 there were 45 airports, of which 9 had permanently surfaced runways. The leading air terminal is Tribhuvan airport at Kathmandu. Domestic flights are operated by the Royal Nepal Airlines Corp., which also schedules flights to Great Britain, Germany, India and eight other Asian countries. In 2001, 641,100 passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

Fact, myth, and legend are intertwined in Nepal's historical literature, which, in the Vamshavali, traces the origins of the country in the distant past when Nepal was allegedly founded by Ne-Muni and derived its name from this source. A reliable chronology can be established only after the conquest of Nepal by Harisinha-deva, rajah of Simraun in about 1324. Under the Malla dynasty, Nepal was administered in four separate states:

Banepa, Bhadgaon (now Bhaktapur), Kantipur (modern Kāthmāndu), and Lalitpur (now Patan).

Prithwi Narayan Shah, the ruler of Gorkha, a small principality west of Kāthmāndu, established the modern kingdom of Nepal in 1768 by incorporating the Kāthmāndu Valley into his domain and unifying with it many small independent principalities and states. Under his descendants, most of the present boundaries of Nepal were established and Hinduism was introduced from India as the official religion.

Nepal came in contact with the influence of larger powers outside South Asia in the late 18th century as a consequence of the British East India Company's conquest of India to its south and a trade dispute with Tibet that led to a Nepalese confrontation with China. Peace was imposed by China in 1792, after Chinese forces had invaded, then withdrawn from Nepal. In the same year, a commercial treaty was ratified between Britain and Nepal. Relations with the British in India remained peaceful until 1814 when a border dispute led to inconclusive hostilities between Nepal and the British East India Company. When the fighting ended two years later, Nepal's independence was preserved in an agreement in which Nepal yielded a large piece of territory to the Company on its southern border and agreed to the establishment of a permanent British resident at Kāthmāndu.

The 1816 agreement (reaffirmed by a formal treaty of friendship between Nepal and Great Britain in 1923) also laid the groundwork for more than a century and a half of amicable relations between Britain and Nepal. Included under the agreement was Nepalese approval for British recruitment of Nepalese Gurkha mercenaries for the British-officered Indian army. During the Indian Mutiny of 1857, Nepal's Rana prime minister sent some 12,000 additional Nepalese troops in support of British garrisons; he also offered troops to US president Abraham Lincoln in 1866 during the US Civil War. Over the years, the Gurkha regiments serving in the British Indian army (and after 1947 under both Indian and British flags) won renown for their bravery, skill, and endurance—in Afghanistan in 1879 and Tibet in 1904, in Europe, Asian, and Africa in the 20th century's two world wars, in the UN action in the Belgian Congo in the 1960s, in India's conflicts with China and Pakistan, and in 1982, in Britain's conflict with Argentina over the Falkland Islands.

In 1846, Shumshere Jung Bahadur (Rana) became Nepal's de facto ruler, banishing the king and ruling as regent for the king's minor heir. The prime ministership became a hereditary office in his Rana family, not unlike the Tokugawa Shogunate in Japan, ruling successively until 1951. Following the end of World War II, the termination of British rule on the South Asian subcontinent in 1947 caused deep stirrings of change in Nepal. Resentment grew against the autocratic despotism of the Ranas, who—as regents—had kept successive monarchs virtual prisoners. A political reform movement, begun in 1946 with the founding of the Nepali Congress Party on the model of the Indian Congress Party, won the support of King Tribhuvana Bir Bikram Shah, but in a power struggle in 1950, the king was forced to flee from the Ranas to India. With Indian support, insurgents began operations against the Rana government until, with the mediation of Indian Prime Minister Nehru, a political compromise was reached that returned the king to Kāthmāndu and ended a century of hereditary Rana family rule. By late 1951 a new government took office, headed by Matrika Prasad Koirala, with his brother, a co-founder of the Nepali Congress Party (NC).

Political life in Nepal in the years since the restoration of the monarchy in 1951 has been dominated by the struggle between the monarchy and the country's political elements to define the terms under which they will co-exist and bring the country into the modern world. Six different cabinets, each lacking popular support and riddled with dissension, held office in rapid succession between 1951 and 1957, and in 1957-58, King

Mahendra Bir Bikram Shah, who had succeeded to the throne upon the death of his father in 1955, ruled directly for a period of months. In April 1959, he promulgated a democratic constitution, providing for a constitutional monarchy, two houses of parliament, and a cabinet and prime minister responsible to the lower house, in the Westminster model. Bisweswar Prasad (B. P.) Koirala of the NC assumed office on 24 July 1959 as first prime minister under this constitution.

Less than 18 months later, on 15 December 1960, the king suspended the constitution, dissolved parliament, dismissed the cabinet, and again established his own government, this time with an appointed council of ministers. He ruled directly until April 1962 when he promulgated a new constitution establishing an indirect, non-party system of rule through a tiered system of panchayats (council) culminating in a National Panchayat. Five years later, after growing agitation and hit-and-run attacks by NC elements based in India, the king—again under Indian pressure—promulgated a series of amendments introducing gradual liberalization.

In January 1972, Mahendra died suddenly and was succeeded by his 27-year-old son, Birendra Bir Bikram Shah Dev. The young monarch, who had attended Harvard University in the United States, was committed to maintaining the authority of the monarchy while keeping Nepal on the course of gradual political and social reform set by his father. Student demonstrations in early 1979 led him to call for a national referendum on whether to continue the panchayat system or create a more conventional multi-party system. With the king promising further liberalization, the existing panchayat system was endorsed by 55% of the voters in May 1980, and later that year, the king's subsequent constitutional amendments established direct elections and permitted the Panchayat, not the king, to choose the prime minister. The king's failure to lift the ban on political parties led party members—ineffectively—to boycott the elections of 1981 in which Surya Bahadur Thapa, a former civil servant who had become prime minister in 1979, was reaffirmed in June 1981 and continued in office until 1983 when he was replaced by Lokendra Bahadur Chand following the government's loss of its majority on an opposition "no confidence" motion.

In non-party elections to the National Panchayat in May 1986, again in the face of a major party boycott, a majority of the incumbents were defeated, and Marich Man Singh Shrestha became prime minister. Most new members were opponents of the panchayat system, foreshadowing a new struggle between the king and his legislators. By early 1990, the NC and the United Leftist Front (ULF), a Communist alliance of seven parties, again went to the streets, organizing agitations that forced the king to make further constitutional changes in April; included were an end to the ban on political parties and their activities. The king dissolved the National Panchayat and appointed NC president Krishna Prasad Bhattarai interim prime minister, who was assisted by a cabinet made up of members of the NC, the ULF, independents, and royal appointees. A Constitutional Reforms Commission produced a new constitution in November 1990 that ended the panchayat era and restored multi-party democracy in a constitutional monarchy. In May 1991, the first openly partisan elections in 32 years were held, resulting in an NC majority in the new House of Representatives which chose Girija Prasad Koirala as prime minister. As of December 2002, Koirala had held the office of prime minister four times in his career.

On 1 June 2001, the former Crown Prince Dipendra Bir Bikram killed most of the royal family with an assault rifle as they sat around a dinner table. Although many theories circulated as to the motive for the killings, it is generally accepted that he turned against his family because his mother did not approve of a young woman as his choice of bride. Dipendra murdered his father, King Birendra, his mother, Queen Aishwarya, his sister,

Princess Sruti, his brother, Prince Nirajan, and five others. He then shot himself in the head. Dipendra was anointed king while in a coma; two days later he died, and his uncle, Gyanendra Bir Bikram Shah Dev, was named king.

In addition to the slayings, Nepal has been embroiled in civil war. In 1996, a “people’s war” was launched by several Maoist organizations in the central-western hill districts of Nepal. The Maoists’ aims are the removal of the constitutional monarchy and the eradication of rural poverty. As of December 2002, more than 7,000 people had been killed in the fighting. The insurgents call themselves the Communist Party of Nepal (Maoist), modeled after Peru’s Maoist Shining Path guerrillas. As of December 2002, they controlled 40% of Nepal, and brought the economy and political system to a virtual standstill. They are led by Chhabi Lal Dahal, or “Prachanda,” who is seen by his followers as charismatic and by his enemies as fanatical. In July 2001, the Maoists came into direct combat with the Nepalese army for the first time, and stepped up their campaign of violence. Koirala, who was prime minister at the time, resigned after losing support from his ruling coalition, and alluded to the violence as a reason why the country needed to work for national consensus. Sher Bahadur Deuba became prime minister. In November 2001, after more than 100 people were killed in four days of violence, the king called a state of emergency. The emergency measures restricted freedom of the press, as well as freedom of assembly, expression and movement. Suspects could be detained for three weeks without charges.

In February 2002, international donor agencies and individual nations pledged US\$2.5 billion to Nepal, and the government increased military activity against the insurgents. In April, more than 300 people were killed in two of the most serious attacks of the rebellion, and the Maoists ordered a five-day national strike. Parliament was dissolved on 22 May, and national elections were scheduled for 13 November. In October, Prime Minister Deuba asked the king to put off the national elections for a year due to the mounting Maoist violence. King Gyanendra dismissed him and indefinitely put off the elections. Lokendra Bahadur Chand was appointed prime minister until elections are held.

In the area of foreign policy, Nepal has remained generally nonaligned, maintaining friendly relations with China and with India, despite efforts to minimize traditional Indian influence and the occasional clash of policies on matters relating to trade. In 1961, Nepal signed an agreement with China (which had earlier absorbed Tibet) defining the boundary between the two countries along the traditional watershed. Nepal was uninvolved in the 1962 hostilities between India and China on portions of the border to the east and west of Nepal. One result of this conflict however, was India’s occupation of Kalapani, a border region of northwestern Nepal which, as of December 2002, was still a matter of dispute with India. The refugee issue of some 100,000 Bhutanese in Nepal remained unresolved as of December 2002. Ninety percent of these displaced persons are housed in seven United Nations Offices of the High Commissioner for Refugees (UNHCR) camps. Nepal also has pursued friendly relations with the great powers and has been the recipient of economic aid from India, the United States, the former USSR, and the World Bank.

### 13 GOVERNMENT

The 1990 constitution, Nepal’s third (with variations) since 1951, established a constitutional monarchy in which the legislature consists of the king and two houses of parliament, the lower house, called the House of Representatives and the upper house, the National Council. The House of Representatives has 205 members elected to terms of five years; at least 5% of the contestants from every party must be women. The National Council has 60 members, 35 of whom are elected by the House of Representatives. The National Council members included three

elected women as of 2003. Suffrage is universal at 18 years of age.

The National Council is a permanent body, retiring one-third of its members every two years in elections that take place in May of even-numbered years. The king appoints 10 of the 60 members in the National Council. The remaining 15 members are selected by an electoral college.

In May 2002, parliament was dissolved, and elections were scheduled for 13 November of that year. However, King Gyanendra removed his prime minister who had called for a postponement of national elections for a year due to mounting Maoist violence. King Gyanendra subsequently indefinitely postponed the elections, which, as of December 2002, had not been held.

Nepal’s supreme court chief justice is appointed by the king on recommendation of the Constitutional Council.

For development purposes, the country is also divided into five regions by geography (Eastern, Central, Western, Mid-Western, and Far-Western), each of which serves also as a parliamentary constituency, electing three members of the lower house. In 1992, the government undertook a reform of the civil service, lowering the age of retirement from 60 to 58, committing itself to reducing its overall size by 25% by 1993, and engaging in wholesale dismissals of those with 20 or more years of service.

The king is Gyanendra Bir Bikram Shah Dev, the descendent of an unbroken Rajput line going back more than 200 years. Prime Minister Lokendra Bahadur Chand was named prime minister on 11 October 2002, after King Gyanendra removed Prime Minister Sher Bahadur Deuba on 4 October 2002.

### 14 POLITICAL PARTIES

The 1962 constitution originally prohibited the formation of political parties and associations, even though political groups continued to exist and operate underground, at times on a quasi-legal basis. Parties were legalized in 1990 and now operate freely in Nepal’s multi-party constitutional monarchy. The main party through Nepal’s modern history—providing nearly all of the country’s prime ministers even when the ban on parties prohibited party activity—is the Nepali Congress Party (NC). Inspired by the socialist wing of the Indian National Congress and founded by the Koirala brothers, M. P. and B. P., in 1946, the party led Nepal’s first democratic government in 1959. Most of its leaders were imprisoned during the 1960s, but with Indian help, the party operated from India, mounting hit-and-run attacks and maintaining an underground presence in Nepal.

The NC leadership led the opposition to King Mahendra’s tiered panchayat system of indirect government. Although NC leaders called for a boycott of the May 1986 elections to the National Panchayat, 1,547 candidates ran for office, and only 40 of the previously elected members retained their seats. After these elections, a Democratic Panchayat Forum (DPF) was formed by NC members to mobilize voters on a non-party basis to counter the influence in local elections of the Communist Party of Nepal (CPN), whose members had won 16 seats in the National Panchayat.

The communist movement in Nepal has been severely fragmented for years by personal and ideological schisms, some of them occasioned by splits and the loss of orthodoxy in the communist movement worldwide in the 1960s and 1980s. Operating for electoral and agitational purposes in the 1980s as the United Leftist Front (ULF), the Communist Party (CPN) and its several communist allies have since split, fragmenting the movement into a number of splinter parties but leaving the CPN, now reassembled as the United Marxist-Leninists (UML) as the leading opposition party in the parliament. The latest elections to the House of Representatives were held on 3 and 17 May 1999. The results were: Nepali Congress (NC), 113 seats; Communist Party of Nepal/United Marxist-Leninist (CPN/UML), 69 seats;

National Democratic Party (NDP), also called the Rastriya Prajantra Party, 11 seats; Nepal Sadbhavana Party (NSP), 5 seats; Rastriya Jana Morcha, 5 seats; Samyukta Janmorcha Nepal, 1 seat; Nepal Workers and Peasants Party (NWPP), 1 seat. Elections scheduled to be held on 13 November 2002 were indefinitely postponed by the king.

As of December 2002, the prime minister was Lokendra Bahadur Chand, who was appointed by King Gyanendra on 11 October 2002, after the king removed Prime Minister Sher Bahadur Deuba on 4 October 2002.

## 15 LOCAL GOVERNMENT

For centuries, the heads of petty principalities within Nepal exercised local judicial, police, and other powers. Under the panchayat reforms introduced in 1962, the country was divided into 14 zones, which in turn were divided into 75 districts. The zones were directly administered by commissioners appointed by the central government, and the zonal panchayats were executive bodies elected from the 11-member panchayats at the district level, the members of which were in turn selected from village and town panchayats. Each of the 3,600 villages with populations of more than 2,000 and each of the 33 towns with populations over 10,000 also had an 11-member panchayat, as well as its own local assembly.

In April 1990, the partyless panchayat system was abolished as a result of a people's movement organized by the Nepali Congress Party and several leftist parties. However, the country remains divided into 14 zones (headed by appointed commissioners) and 75 districts (under the charge of district officers responsible for law and order, collecting revenues, and setting development priorities). The districts are further divided into smaller units—into municipalities and village development committees (VDC). At present, there are 3,913 VDCs and 58 municipalities in the country. A VDC consists of 9 wards and the municipalities consist from 9 to 35 wards. Municipalities and VDCs are directly elected.

In 1997, a royal decentralization ordinance was enacted that allowed for increased political participation by women. The ordinance called for the reservation of 20% of local government ward seats for women. Women currently hold approximately 32,000 local government seats in Nepal.

## 16 JUDICIAL SYSTEM

Each district has a court of first instance, civil and criminal, as well as a court of appeals and 14 zonal courts. There are five regional courts—at Kāthmāndu, Dhankuta, Pokhara, Surkhet, and Dipayal—to which further appeals may be taken. At the apex is the supreme court in Kāthmāndu, which is empowered to issue writs of habeas corpus and decide on the constitutionality of laws. The court is composed of a chief justice, assisted usually by six other judges, with seven additional judges in reserve; all are appointed by the king. The supreme court is the court of last resort, but the king may grant pardons and suspend, commute or remit sentences of any court. There are separate military courts which generally deal only with military personnel. In 1992, the supreme court ruled that civilians may not be tried in the military courts. In April 2001, the supreme court appointed its first female judge.

The 1990 constitution declared the independence of the judiciary. The supreme court has exercised considerable independence in practice, declaring provisions of the Citizenship Act of 1991 and parts of the Labor Act of 1992 unconstitutional. In 1995 the constitutional court also ruled that the dissolution of the parliament at the request of a former premier minister was unconstitutional.

The 1990 constitution affords a number of procedural safeguards for criminal defendants including the right to counsel

and protection from double jeopardy and from retroactive application of laws.

There is no jury system. Special tribunals hear cases involving terrorism or treason under a treason act.

## 17 ARMED FORCES

The armed forces numbered approximately 51,000 in 2002 including the Royal Guard. There was also a paramilitary police force of 40,000 personnel. The army also included a small air wing of 320 with no combat aircraft or helicopters. Opposition forces consisted of the estimated 5,000-member Communist Party of Nepal. The United Kingdom maintained a small military presence. In 2001, Nepal spent \$51.5 million on defense or about 1% of GDP.

Under separate treaty arrangements going back to 1816, gurkhas of the same mountain stock (especially Magars, Gurungs, Rais, and Limbus) are recruited in Nepal by Great Britain and, since 1947, by the Republic of India. Under British and Indian flags, and with arms, training, and officers provided by their foreign recruiters, gurkhas are among the world's most renowned fighting men with extensive service in all parts of the globe in both world wars and several UN actions of this century.

## 18 INTERNATIONAL COOPERATION

Nepal was admitted to UN membership on 14 December 1955 and is a member of ESCAP and all the UN nonregional specialized agencies except IAEA. It also belongs to the Asian Development Bank and G-77, is a signatory to the Law of the Sea, and has applied for membership in the WTO.

Nepal joined the Colombo Plan group in 1952. In 1985, Nepal joined with six other Asian nations to form the South Asian Association for Regional Cooperation (SAARC); the secretariat is in Kāthmāndu.

## 19 ECONOMY

Despite social and economic reforms begun in the 1950s, Nepal's per capita income was only \$1,100 (PPP) in 1998, and general living standards are low. The economy is based on subsistence agriculture, which engages about 80% of the labor force but is inefficiently organized and limited by a shortage of arable land in relation to population. Eight development plans, extending from 1955 to 1992, have slowly built up the nation's infrastructure. Nevertheless, the industrial sector is still small and dominated by traditional handicrafts, spinning and weaving, and similar occupations. Growth in medium-scale and cottage industry-based production of carpets and garments for export, expanding tourism, and some government-promoted development of heavy industry sustained an average GDP growth rate of over 5% from 1980–88. In 1989/90, Nepal weathered a major trade and transit dispute with India, maintaining a GDP growth rate of 2%, despite the potentially debilitating tariffs suddenly placed on trade with its largest import supplier and external market.

Nepal's economic potential is by no means insignificant. Kāthmāndu Valley and the Terai zone are fertile areas; there is great forest wealth, including valuable medicinal plants such as pyrethrum, belladonna, and ipecac; deposits of several minerals are known to exist; and swift Himalayan rivers offer great possibilities for hydroelectric development.

The principal challenge for the Nepalese is to provide for a rising and unequally distributed population and to achieve material progress without irrevocably depleting the environmental resource base. Structural adjustment measures initiated in 1989 have reduced the regulation of industry and imports, and are supported by similar liberalization in India, to which Nepal's economy is closely tied. However, aggregate economic growth remained sluggish during the early 1990s. Gross domestic product growth declined from 4.6% in 1990/91 to only 2.1% in 1991/92, due in large part to declining

agricultural output following poor weather. Gross domestic product growth averaged an annual rate of 5% between 1988 and 1998. International actors fund more than 60% of Nepal's development budget and account for more than 28% of total budgetary expenditures. In 1995 Nepal joined the South Asian Association for Regional Cooperation (SAARC) in the South Asian Preferential Trade Area, scheduling a free trade area by 2001.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Nepal's gross domestic product (GDP) was estimated at \$35.6 billion. The per capita GDP was estimated at \$1,400. The annual growth rate of GDP was estimated at 2.6%. The average inflation rate was 2.1%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 41% of GDP, industry 22%, and services 37%.

According to the United Nations, in 2000 remittances from citizens working abroad totaled \$300 million or about \$5 per capita and accounted for approximately 2.1% of GDP. Worker remittances in 2001 totaled \$409 million. Foreign aid receipts amounted to about \$16 per capita and accounted for approximately 7% of the gross national income (GNI).

Approximately 44% of household consumption was spent on food, 7% on fuel, 5% on health care, and 14% on education. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. The richest 10% of the population accounted for approximately 29.8% of household consumption and the poorest 10% approximately 3.2%. It was estimated that in 1996 about 42% of the population had incomes below the poverty line.

## 21 LABOR

As of 1995, about 80% of the population were subsistence farmers while handicrafts, portage, trade, military service, industry, and government work engaged the remainder. As of 1998, the labor force was estimated to number about 11 million. In 2002, the vast majority, approximately 81% of the workforce, was engaged in agriculture. Most agriculturists are peasant farmers, and there are many wage laborers, but only in the peak seasons. The service sector provides work for 16% of the labor force, and industry accounts for the remaining 3%. There is a severe lack of skilled labor. Among some tribes, women do most of the farm work, while in others, especially among strict Hindus, they do no farming at all. Many occupations are effectively restricted to certain castes, although the practice has been declared illegal. In 2001, the unemployment rate was 47%.

Unions are allowed to organize and strike. The three largest trade unions are associated with political parties, but the government does not restrict union activity. However, the right of a union to strike is limited to nonessential services. About 20% of the workforce is covered by collective bargaining agreements.

Minimum wage rates and working conditions in the small industrial sector are set by the Nepal Factories and Factory Workers' Act of 1959, as amended. In 2002, the minimum wage was \$20 per month for unskilled, \$21 for semiskilled, and \$25 for skilled workers in the organized industrial sector. Wages can be as low as 50% of the minimum in the informal economy and the agricultural sector. The law establishes a minimum employment age of 16 years in industry and 14 years in agriculture.

## 22 AGRICULTURE

In 2001, agriculture provided about 41% of GDP. Only about 19% of the land can actually be cultivated. Regional imbalance and lack of integration also hamper Nepal's agriculture. Although the country produces an overall exportable surplus of food grains, some areas of the country, particularly Kāthmāndu Valley and the hill areas, have a food deficit. Lack of transportation and storage facilities prevents the movement of food grains from the Terai to the hills, with the result that Nepal both exports and imports the same food items.

Agriculture has been hampered by the lack of irrigated land, by the small size of farms (an average of four hectares/10 acres), and by inefficient farming methods. Some of the arable land is still held free of taxation by a few large landowners and farmed by tenants, whose productivity is low. The government has officially abolished tax-free estates (*birta*), eliminated the feudal form of land tenure (*jagira*), set a limit on landholdings, and redistributed the extra land to farm tenants. Its economic plans also include the use of fertilizers, insecticides, improved seeds, and better implements; the extension of irrigation; and the construction of transportation and storage facilities.

Rice, Nepal's most important cereal, is grown on more than half the cultivated land, mainly in the Terai but also on every available piece of ground in the Kāthmāndu Valley during the monsoon season. In 1999, rice production totaled 3,710,000 tons. Production of maize, grown on the carefully terraced hillsides, was 1,346,000 tons in 1999; land under cultivation with maize was 25% of the area allotted to food grains. The output of wheat in 1999 was 1,086,000 tons; millet, 291,000 tons; and barley, 32,000 tons. Cash crops (with 1998 output) included sugarcane, 1,972,000 tons; potatoes, 1,091,000 tons; linseed, 27,000 tons; jute, 15,000 tons; and tobacco, 4,000 tons. Sugarcane, jute, and tobacco are the major raw materials for Nepal's own industries. Potatoes are grown in Ilam and fruit mainly in Dharan, Dhankuta, and Pokhara. Tea is also grown in Ilam and elsewhere. In 2001, exports of agricultural products totaled \$57.7 million, while agricultural imports amounted to \$232.2 million.

## 23 ANIMAL HUSBANDRY

Livestock, adapted to many uses, forms an essential part of the economy. Livestock accounts for about 30% of gross agricultural output. In farm work, bullocks and asses are largely used. Herds of yaks, cows, and their hybrids, zobos, are grazed in the central valley and to some extent along the borders of the foothill jungles. A few hogs usually are kept on the larger farms. Sheep and goats are used for food and also as pack animals, particularly in the distribution of salt over the trade routes; the sheep also supply a valuable type of wool.

In 2001, Nepal had an estimated 6,983,000 head of cattle, 3,624,000 water buffalo, 851,000 sheep, 6,478,000 goats, and 912,000 hogs. Modern poultry farms are operated principally by the Newaris, who carry on most of the agriculture in the Kāthmāndu Valley. There were about 9.8 million chickens in 2001, when 13,500 tons of poultry meat were produced. Traditionally, butter and cheese are among the leading exports of Nepal. Livestock products in 2001 included an estimated 342,000 tons of cow's milk, 20,000 tons of butter and ghee, and 614 tons of wool (greasy basis).

## 24 FISHING

The commercial fish catch amounted to 16,700 tons in 2000 (up from 5,281 tons in 1991). In the Terai are many small fish ponds and several government fish farms. Common fish species are carp, gar, and murrel.

## 25 FORESTRY

In 2000, forests covered an estimated 27.3% of Nepal's total land area. Timber cutting has been contracted out to private firms. About 95% of the 13.4 million cu m (473 million cu ft) of roundwood cut in 2000 was for fuel.

In 1961, the government established a department of medicinal plants to encourage Nepal's commercially important herb exports. There are regional herbal farms at Kāthmāndu and Nepalganj. There is also a royal research laboratory for drug analysis.

## 26 MINING

Although mining in Nepal was an ancient occupation, the country's mineral resources have been little exploited. Mining and quarrying accounted for 0.5% of GDP, and was dominated by the production of cement, red clay, coal, limestone, dead-burned magnesia, and marble. Mineral commodities accounted for 8% of Nepal's export earnings. In 2000, the country also produced small quantities of agricultural lime, quartz, quartzite, salt, sand and gravel, stone, talc, and tourmaline. A lead and zinc deposit near Lari had reserves of 2 million tons, and there were known deposits of iron, copper, graphite, cobalt, mica, and slate. Development plans included the encouragement of small-scale mining, and provided for continuing mineral surveys.

## 27 ENERGY AND POWER

Although Nepal's hydroelectric potential is great and development has been rapid in recent years, the kingdom still lacks an adequate power supply. Only 15% of the population had access to electricity in 2000. It is estimated that only about 1% of Nepal's hydroelectric potential had been activated as of 1999. In 2001, total installed capacity was 388,000 kW. Production in 2000 was 1,454 million kWh, of which 90.4% was from hydropower and 9.6% from fossil fuels. Consumption of electricity in 2000 was 1.4 billion kWh. In the same year, 57% of commercial energy consumption was from petroleum, 24% from hydropower, 14% from coal, and 5% from other sources. There is an integrated grid system in central Nepal.

India has joined with Nepal in the construction of hydroelectric and irrigation projects on the Kosi and Gandak rivers. China has helped build a 10 MW plant on the Kosi as well. India has also constructed a 14 MW hydroelectric station at Devighat, in central Nepal. A 60 MW hydroelectric project on the Kulekhani, funded by the IBRD, Kuwait, and Japan, has been completed. The 144 MW Kaligandhaki "A" on the Kaligandhaki River in central Nepal began operations in 2002. In the same year, a contract was signed for construction of the 750 MW West Seti project, slated for completion in five years. Exploration for oil and natural gas deposits began in the mid-1980s. An exploration concession won by Texana Resources in 1998 was the first such venture in almost a decade.

## 28 INDUSTRY

Until the 1980s, modern industry was almost nonexistent; only 0.66% of Nepal's GDP was derived from industry in 1964/65. Since then, industrial development has been given emphasis in economic planning. Manufacturing as a percent of total GDP at current factor cost rose from 4.2% in 1980 to 6.1% in 1990 to 9.2% in 1995 to an estimated 22% in 2000. However, manufacturing is a sector that has been hit particularly hard by the Maoist insurgency and the intensification of violence since 2001. The CIA estimates that the industrial production growth rate for 1999/2000 was 8.7%. However, this had dropped to less than 1% for 2001/02 according to IMF estimates.

Starting in the 1930s, a number of public enterprises (PEs) were established by the government with an aim of building an industrial and manufacturing base. About 62 PEs in all were

established, close to half in the industrial sector, with others in the trading, service, public utility and financial sectors. The oldest surviving PE is the Biratnagar Jute Mills (BJM), set up in 1936. The jute industry has been in decline since 1966. In 2002 BJM was being operated by a private conglomerate on terms of a five year lease from the government. PEs in the industrial sector include cement factories, brick factories, sugar mills, textile mills, jute products factories, tool factories, foundries, and industrial chemical and fertilizer factories. From the early 1990s, there have been planned campaigns to reform and privatize the PEs. By the beginning of the Ninth Five-Year Plan (1997–2002), 16 PEs, over half industrial, had been handed over to private owners, and four had been shut down. A list of 30 PEs, 13 in the industrial sector, were scheduled for privatization during the Ninth FYP, but, in fact, only one, the Nepal Tea Development Corporation, has been privatized. The slowdown of the reform is attributable to both the outbreak of the Maoist insurgency in 1996 and a growing resistance to the privatization program from many sides, but particularly from workers' unions who perceive jobs as threatened. The PEs were not originally set up as commercial enterprises, and most do not even maintain updated accounts that would allow an auditor to assess their market viability. Analysts generally agree, however, that they are inefficiently overstaffed with low skill labor, and that currently most of the industrial PEs have a negative worth. The IMF estimates that net profits from the PE sector as a whole plunged from around NR3 billion (about \$44 million) in 1998/99 to NR240 million (about \$3.23 million) in 2000/01, despite continued government transfers and investment. That the figure remained positive is due virtually entirely to the profitability of three public utility PEs. Some of the known liabilities in the industrial sector include wage arrears that reached sixteen months for the Agricultural Tool Factory, and four months for the Lumbini Sugar Factory. According to a recent study of eight industrial PEs reported by the IMF, employees of these companies are owed for gratuity, sick and home leaves, medical allowance and insurance premiums to the amount of about NR15.2 billion (about \$204 million or 3–4% of Nepal's GDP). There are also large arrears to banks and suppliers, but monitoring mechanisms are insufficient to make reliable estimates. In February 2002, the government set up a special financing facility at 3% interest to encourage commercial banks to provide concessional loans to ailing industries, particularly those in the garment and hotel industries, which through exports and tourism are major earners of foreign exchange.

According to the CIA, major industries in Nepal include tourism, carpets, textiles, small rice jute, sugar, and oilseed mills; cigarettes, cement and brick factories. Aside from small-scale food processing (rice, wheat and oil mills), light industry, largely concentrated in southeastern Nepal, includes the production of jute goods, refined sugar, cigarettes, matches, spun cotton and synthetic fabrics, wool, footwear, tanned leather, and tea. The carpet, garment and spinning industries are the three largest industrial employers, followed by structural clay products, sugar and jute processing. Sugar production was 49,227 tons in 1995, jute goods, 20,187 tons; and soap, 23,477 tons. That year, 14.7 million m of synthetic textiles and 5.06 million m of cotton textiles were produced. Industrial production from agricultural inputs included 20,800 tons of vegetable ghee, 16.76 million l of beer and liquor, 9 billion cigarettes, and 2,351 tons of tea.

Heavy industry includes a steel-rolling mill, established in 1965, which uses imported materials to produce stainless steel. During the 1980s, the government gave priority to industries such as lumber, plywood, paper, cement, and bricks and tiles, which make use of domestic raw materials and reduce the need for imports. Production by heavy industries in 1995 included 326,839 tons of cement and 95,118 tons of steel rods.

## 29 SCIENCE AND TECHNOLOGY

The only advanced technology is that brought in under the various foreign aid programs. Foreign technicians provide training in cottage industries, and local workers are trained at the Cottage Industry Center in Kāthmāndu. In 1982, the Royal Nepal Academy of Science and Technology was established at Kāthmāndu to aid in socioeconomic development. The National Council for Science and Technology aims to formulate science and technology policy, promote scientific and technological research, coordinate research among ministries and Mehendra Sanskrit University, and disseminate information to the public. Tribhuvan University has faculties of science and technology, medicine, agriculture and animal science, engineering, and forestry. In 1987–97, science and engineering students accounted for 13% of college and university enrollments.

## 30 DOMESTIC TRADE

For the six and one-half years of the Maoist insurgency in Nepal domestic trade has been severely hampered in rural areas. For many Nepalese, local trade is a part-time activity, limited to such products as cigarettes, salt, kerosene, and cloth. Marketing centers are along the main trails and are supplemented by small local markets. Distribution channels generally move from manufacturer, to distributor, to retailer. Poor communications facilities make extensive domestic trade impractical. However, one major impediment, the local tax on trade called “octroi,” was eliminated in 1997. Also, in the early 1990s, domestic airline routes were privatized, quadrupling domestic air traffic.

Most shops are open from 10 AM to 8 PM. Businesses and government offices generally operate from 9 AM to 5 PM. Most stores and businesses are closed on Saturdays.

## 31 FOREIGN TRADE

Traditionally, Nepal's foreign trade was limited to Tibet and India. After 1956, Nepalese trading agencies in Tibet were confined to Xigaze, Gyirong, and Nyalam, with Lhasa, Xigaze, Gyangze, and Yadong specified as markets for trade. In 1980, however, Nepal and China agreed to open 21 new trade routes across the Tibetan frontier. Treaty arrangements with China strictly regulate the passage of both traders and pilgrims in either direction across the border. Up until 1989, treaty agreements between India and Nepal allowed for unrestricted commerce across 21 customs posts along the border, and duty-free transit of Nepalese goods intended for third-party countries through India. In 1989, a breakdown in the treaty renewal negotiations resulted in retaliatory actions on both sides. India's share of Nepali exports plummeted from 38% in 1986/87 to 9% in 1989/90. India's share of the country's imports declined by about 25% to 50%. Despite the severe shock sustained by the Nepali economy, the signing of a new interim agreement in 1990 prevented a prolonged crisis, helping to fuel a robust recovery in export growth as exports increased by 28% in 1990/91 over 1989/90, and again by 35% in 1991/92.

Under the renewal of the bilateral trade treaty with India in 1997, Nepali goods entered India essentially duty free and quota free. As a result, exports to India grew for four years, from 1997 to 2001, at an average rate of 42% a year. The most recent India-Nepal Treaty of Trade, signed in March 2002, continues to allow Nepali manufactures to enter the Indian market on a nonreciprocal, preferential, or duty-free basis, with rules of origin less restrictive than the international norm (Nepal's manufactures can have up to 70% foreign content instead of the international norm of less than 50%). However, it places quotas on four sensitive imports: vegetable fats, acrylic yarn, copper products, and ferro oxide, all at volumes lower than recent Nepali exports to India.

The imposition of some non-tariff barriers (NTBs) by India is just one factor in the estimated recent decline in the growth rate of Nepal's exports. Other factors are the damage to production caused by the intensification of the country's Maoist insurgency in 2001, the global economic slowdown, and a rapid decline in demand from Nepal's main third-country destinations, the United States and Germany, in the post-9/11 atmosphere. The end of the 1990s saw robust growth in Nepal's exports, which increased nearly 12% in 1997/98, nearly 18% in 1998/99 and 37.4% in 1999/2000. The export growth rate fell, however, to 4.6% in 2000/01, according to the IMF. In 2001/02, exports are estimated to have actually declined by 15%.

The CIA reports that for 2000/01, recorded exports from Nepal were an estimated \$757 million (f.o.b.) and that imports for this period were \$1,600 million, indicating an apparently unsustainable merchandise trade deficit of \$843 million, or 111.5% of exports. However, the figure for exports does not include unrecorded border trade with India, including substantial gold smuggling.

The major export destinations in 2000/01 were India (48%), the United States (26%), and Germany (11%). Over the past decade, exports to India, while continuing to account for about half of Nepal's exports, have soared in value and become increasingly diversified as Nepal's manufactures have carved out niches in the Indian market. Exports to the United States consist mainly of apparel, including pashmina (the Indian name for cashmere) products, whereas exports to Germany are dominated by woolen carpets. In the wake of 9/11, exports to the United States declined 15% in 2001, after an increase of 30% in 2000. For 2001/02, the IMF estimates that exports to countries other than India declined more than 40% due to the combination of external slowdown and internal supply disruptions.

The major import sources in 2000/01 were India (39%), Singapore (10%), and China/Hong Kong (9%). Leading imports were gold, machinery and equipment, petroleum products, and fertilizer.

After increasing about 23% between 1998/99 and 1999/2000, the import growth rate slowed to 3.6% in 2000/01. The IMF estimates that imports declined 9% in 2001/01.

In 2000 Nepal's imports were distributed among the following categories:

Consumer goods	7.4%
Food	11.6%
Fuels	16.3%
Industrial supplies	30.7%
Machinery	11.3%
Transportation	15.6%

Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
India	318	576	-258
United States	192	24	168
Germany	106	21	85
Japan	10	41	-31
China (inc. Hong Kong)	7	213	-206
Switzerland	6	143	-137
Singapore	3	113	-110
Korea	1	39	-38
United Arab Emirates	n.a.	28	n.a.
Thailand	n.a.	31	n.a.

## 32 BALANCE OF PAYMENTS

Despite large recorded trade deficits, Nepal often maintains a surplus in its current account thanks to surpluses in services (including tourism), official aid transfers, and increasingly large remittances from Nepalese living abroad, and in spite of

unrecorded trade and smuggling across the Indian border. The IMF reported small surpluses on Nepal's current account of \$24 million and \$28 million respectively, for the fiscal years 1998/99 and 1999/2000, even exclusive of official aid transfers. Adding in official transfers brought the total current account surpluses for these years to \$98 million and \$114 million, respectively, representing 2% to 3% of GDP. Nepal's overall balance of payments was positive for the fiscal years 1998/99 and 1999/2000, at \$136 million and \$192 million, respectively, as outflows of capital and other payments were estimated to be more than offset by inflows of capital grants and official disbursements. However, in 2001/02, by IMF's preliminary estimate, Nepal's overall balance of payments was a negative \$77 million (1.4% of GDP) due primarily to a falling off in foreign aid. Official reserves held by the central bank in 2000/01 were initially estimated to be sufficient to cover 6.7 months of imports, just above the 6 months' coverage deemed financially prudent. However, of these reserves, about \$290 million were being held in Indian rupees, with about \$732 million in convertible currencies, enough to cover only 4.8 months of imports. Total external debt in FY 2000/01 was \$2.55 billion, about 46% of annual GDP. Nepal's debt service ratio (the ratio of annual payments on the debt to annual exports) was a low 6% in this period, reflecting the highly concessional nature of its external finance. Nepal's debt has never been rescheduled. Its last arrangement with the IMF was in October 1992 under the Extended Structural Adjustment Facility (ESAF), for a line of credit of SDR 33.5 million—47% of Nepal's quota—of which only half, SDR 16.79, was ever drawn down by Nepal. The obligation was scheduled to be fully repaid by 2006, with payments of SDR 2.4 million in 2003; SDR 0.8 million in 2004; SDR 0.2 million in 2005; and SDR 0.2 million in 2006.

The International Monetary Fund (IMF) reports that in 2001 Nepal had exports of goods totaling \$721 million and imports totaling \$1.49 billion. The services credit totaled \$413 million and debit \$215 million. The following table summarizes Nepal's balance of payments as reported by the IMF for 2001 in millions of US dollars. The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Nepal's exports was \$757 million while imports totaled \$1.6 billion resulting in a trade deficit of \$843 million.

### 33 BANKING AND SECURITIES

The central bank of Nepal is the Nepal Rastra Bank (NRB), established under the NRB Act of 1955, which, effective 31 January 2002, was replaced by a new NRB Act designed to give the central bank more autonomy in setting monetary policy and more supervisory authority. The new legislation outlines the procedures for appointing and dismissing the NRB Governor, Deputy Governor and board, as well as procedures for intervening with insolvent financial institutions. Further reforms are expected with the implementation of the Banking and

Financial Institutions Act of 2003 which aims, inter alia, to reduce the government's role as owner and strengthen its role as regulator. Nepal's financial sector has historically been weak and non-transparent, characterized by politically-motivated interference, insider trading, weak management, disruptive unions, an inadequate financial information system, and a deeply entrenched culture of non-payment of loans.

A World Bank report found that as of November 2002 Nepal had 15 commercial banks. The two largest, the Rastriya Baniya Bank (RBB), Nepal's largest bank with an estimated 27% of total banking assets, and the Nepal Bank Ltd. (NBL), Nepal's oldest commercial bank, founded in 1937, account for over 50% of banking assets. The RBB is wholly owned by the government (but slated for privatization), whereas the NBL, though founded with 51% government ownership, has sold shares to the public sufficient to reduce the government's share to 41%. There are also nine smaller joint venture banks (JVB's) with mixed public-private ownership, and four local commercial bank. The banking sector also includes two large development banks, the Agriculture Development Bank of Nepal (ADB/P) and the Nepal Industrial Development Corporation (NIDC), the second and third largest banks. The ADB/N maintains a micro-financing window, as does the NRB, the RBB, the NBL, and the regional development banks. According to the World Bank, as of November 2002, Nepal also had 48 finance corporations, 13 insurance companies, numerous finance institutions, 7 Grameen Replicator Banks, 35 financial cooperatives, and 25 financial NGOs.

Both of the largest commercial banks, the RBB and the NBL, are in precarious financial condition. According to a 2000 study by the World Bank, the most recent available, in 1998 the RBB and NBL together had a losses of \$146 million, equivalent to 8.6 % of Nepal's GDP or 46% of the government's budget. The condition of both banks has doubtless deteriorated since then. In 2001 government authorities, in conjunction with the IMF and the World Bank, concluded that external managers, selected by the World Bank and the United Kingdom, were needed to reform the RBB and the NBL. Opposition to these proposals came from all sides: the boards of directors, the employees' unions and the borrowers. In January 2002, the NRB invoked the provisions of the new NRB Act and suspended the board of the NBL, effective 15 March 2002. For the RBB, the government entered into a contract on 31 January, 2002 with the American firm Deloitte Touch Tomatsu (DTT) for that company to take over management of the RBB. DTT, however, soon pulled out of the agreement, citing ambiguities in the contract and security concerns as the Maoist insurgency in Nepal became increasingly violent. In July 2002, a professional management team was installed at NBL, and in late 2002, a new CEO was appointed. The RBB is slated to be privatized in 2003.

Demand for new credit in Nepal was weak in 2001 and 2002, but the demand for credit to refinance from troubled debtors was substantial. Credit expanded in 2001 by about 10%, creating liquidity shortages at some commercial banks. In response, the NRB lowered Cash Reserve Requirements (CRR's) in January 2002 by 1.2% to around 9% (with a 3% of deposits required to be cash-in-vault). Also, refinancing rates were lowered 100-200 basis points to 2% to 5% in January 2002. In February 2002, the NRB set up a special refinancing facility at 3% interest to encourage commercial banks to make concessional loans to ailing businesses, particularly those in the garment and hotel enterprises hit by sharp declines in export demand and tourism.

At the end of FY 2000/01, in July 2001, net foreign assets held by monetary authorities in Nepal totaled \$1 bil., and broad money supply totaled about \$2.87 bil. The broad money supply grew by 21% in 1999, 21.7% in 2000, and 15% in 2001, considerably ahead of inflation rates for those years, mostly due to expansion of paper currency resulting from the progressive

monetization of the Nepalese economy. However, for FY 2001/02, the IMF estimates that broad money growth slowed to 6% because of the weakened economy and stagnant bank deposits due to the voluntary disclosure of income scheme (VDIS) and other asset verification efforts by the tax authorities. Inflation as reflected in consumer prices has been substantially moderated since October 1997 when Nepal shifted its exchange regime to one pegged only to the Indian rupee, instead of to a composite of currencies. Earlier, in February 1993, Nepal had ended its dual currency system where by both the Indian and Nepalese rupee were allowed to circulate freely. In 2001, weak domestic demand and stable Indian prices combined to produce a subdued inflation rate of 3%. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$962.8 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$2.9 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 6.5%.

The NIDC, along with the NRB, controlled the Security Exchange Center (SEC), set up in 1981, which was subsequently converted into the Nepal Stock Exchange (NEPSE) in 1984. In January 2003, there were 55 companies listed on the NEPSE, virtually all actively traded.

### 34 INSURANCE

The World Bank reported in November 2002 that Nepal had 13 insurance companies. All are government owned or have some government participation. Nepal joined the Multilateral Investment Guarantee Agency (MIGA) in 1993. The US Overseas Private Investment Corporation (OPIC) and other investment insurance programs are free to operate in Nepal without restriction. OPIC is authorized to offer its extended-risk guarantee facility to US investments in Nepal.

### 35 PUBLIC FINANCE

Nepal's fiscal year ends on July 15. The continued and increasingly violent Maoist insurgency, entering its seventh year in February 2003, has had crippling impacts on Nepal's public finances, interfering with tax collections and disrupting production while at the same time requiring increased public spending on security and to repair damaged infrastructure. Most fundamentally, the insurgency hampers the government's efforts to address the poverty and other social problems fueling the rebellion. The perception of widespread corruption aggravates the present difficulties as does the global economic slowdown.

Historically, most deficits on capital account have been financed by foreign grants, while domestic revenues have been sufficient to cover current expenditures. During the first three years of Nepal's Ninth Five Year Plan (FY 1997/98 to FY 2001/02) domestic revenues were sufficient to cover current expenditures, although with a decreasing margin, and capital expenditures were met with foreign grants and only small amounts of domestic borrowing. Measured as a percent of GDP, according to IMF estimates total revenues for FY 1997/8 to FY 1999/00 were 10.5%, 10.2%, and 10.7%, respectively, while corresponding current expenditures were 9.2%, 9.3% and 9.6% of GDP, respectively. The overall deficit after grants remained above 3% of GDP, at 4.5%, 3.9%, and 3.5%, respectively, but domestic financing remained low, at 0.6%, 1.4% and 0.9% of GDP, respectively. However, in FY 2000/01, the gap between revenue, at 11.4% of GDP, and current expenditures, at 11.2% of GDP, narrowed and domestic financing of the budget deficit rose to 2.7% of GDP. Projections for FY 2001/02 by the IMF estimate that, for the first time during the Ninth planning period, revenues, at 11.4% of GDP, will not cover current expenditures, at 12.3% of GDP. Even with capital expenditures reduced to 5% of GDP, down from an average of 6.5% of GDP for the previous

four years, and foreign aid increased to 2% of GDP, up from a four year average of about 1.6% of GDP, domestic financing is expected to be at 2.6% of GDP.

Macroeconomic policy in FY 2001/02 was focused on increasing revenue collection, maintaining strict expenditure priorities, and containing domestic borrowing. A voluntary disclosure of income scheme (VDIS) plus other special revenue measures probably contributed to raising domestic revenues collected to 11.4% of GDP in FY 2000/01 and FY 2001/02, up from an average of less than 10.5% for the three previous fiscal years, but the relative rise in expenditures—1.5% of GDP—has outpaced the 0.9% rise in the revenue effort. Domestic public debt is estimated to have risen from about 14% of GDP in FY 1998/99 to about 18% of GDP in FY 2001/02, raising concerns that with increased domestic financing, in an environment in which bank deposit rates are stagnant, banks will have to draw on Nepal's scarce hard currency reserves. For FY 2000/01 the CIA estimated Nepal's external debt at \$2.55 bil. By IMF estimates, total public debt in FY 2000/01 came to 49.9% of GDP, somewhat below the average for the previous five years of 52.2% of GDP.

The US Central Intelligence Agency (CIA) estimates that in 1999/2000 Nepal's central government took in revenues of approximately \$665 million and had expenditures of \$1.1 billion. Overall, the government registered a deficit of approximately \$435 million. External debt totaled \$2.55 billion.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

REVENUE AND GRANTS	100.0%	665
Tax revenue	70.8%	471
Non-tax revenue	13.9%	92
Capital revenue	0.1%	1
Grants	15.2%	101
EXPENDITURES	100.0%	1,100
General public services	5.5%	60
Defense	7.6%	83
Public order and safety	8.9%	97
Education	16.9%	186
Health	5.8%	63
Social security	4.6%	51
Housing and community amenities	4.9%	54
Economic affairs and services	29.2%	321
Other expenditures	16.8%	185

### 36 TAXATION

The principle sources of domestic revenue are customs tariffs, value-added taxes (VAT), excise duties, and income taxes on personal and corporate incomes. There are also local development taxes, as well as license and registration fees for houses, land and vehicles.

The VAT was introduced in November 1997 as a reform designed to replace sales taxes and most excises. The "octroi," a traditional local tax on trade, was also eliminated at this time. Five years after its introduction, however, the VAT had yet to be completely implemented, as indicated by a finding that whereas net taxes from VAT have increased 65% over the first five years, refunds have increased by a factor of 2.3. The VAT rate is 10% collected at every stage of selling goods and services. Small business with annual turnover of less than NR2 million (about \$25,000) are not required to register for the VAT, but businesses who import more than NR10,000 (about \$130) at a time, must register. Goods exempted for the VAT include primary food

stuffs, agricultural products, and industrial machinery, though the government plans to reduce this list as part of its Economic Reform Plan for 2002/03. There is no VAT on goods for export, nor on raw materials imported by an export promotion industry, nor the products of such an industry.

Excise taxes are applied mainly to goods deemed hazardous to health, such as alcoholic beverages, cigarettes and soft drinks. In January 2002, a new Excise Act went into effect that raised rates slightly as part of the government's effort to pay for increased security expenditures since 2001.

On April 1, 2002 the government put into effect a new Income Tax Act, replacing the previous act of 1958, and developed in close cooperation with the IMF. The new act covers all sources of income—from employment, business and investment—and encourages current year self-assessment and pooled depreciation. In July 2002, personal income tax brackets were adjusted upward somewhat. With these adjustments, there are two tax tiers, 15% and 25%. For individuals, income below NR65,000 (about \$850) is exempt, and for couples, NR85,000 (about \$2100). The highest marginal rate, 25%, applies to income above NR140,000 (about \$1850) for individuals, and NR160,000 (about \$2000) for couples.

Companies engaged in construction, transportation, manufacturing and power generation are subject to a 20% corporate income tax, whereas financial institutions are liable for 30%. All other businesses are assessed at 25%.

About 11.1% of state revenue comes from state-owned businesses and property. Under the Industrial Enterprise Act and the Foreign Investment and Technology Act, industries that install pollution-control, environmentally-friendly technology are eligible for a rebate of 50% of its investment from taxable income. After the equipment comes into operation, 10% of gross profits can be deducted from taxable income.

In addition to regular taxes, the government has imposed a number of "security surcharges" to deal with the increased security expenditure needed to deal with the intensifying Maoist insurgency. Special fees of 3% have been added to the taxable income of individuals, couples, companies, partnerships and non-resident taxpayers. Surcharges of 1% to 3% have been applied to imports, plus a NR1 (about \$.013) per liter tax has been added to petroleum products. The government also mounted a voluntary disclosure of income scheme (VDIS), which had questionable results. Over 3,000 new taxpayers were registered, but a simultaneous decline in bank deposits suggests more taxable income was being hidden than disclosed.

Since 1997, Nepal has received technical support in implementing its tax reforms from the Danish International Development Agency (DANIDA) and German Technical Cooperation (GTZ). In 2002, these agencies were working in an alliance they called Revenue Administration Support (RAS). The major structural reforms in which the RAS has assisted were the merger in late 2001 of the Department of Taxation with the VAT Department to form the Inland Revenue Office, and the subsequent consolidation of the 40 income tax offices and 17 VAT offices into 21, one-point-of-service, Inland Revenue Offices distributed around the country. In their division of labor, DANIDA has been supporting the mergers and the implementation of the VAT and the new income tax, while GTZ has focused on the development of Nepal's income tax/VAT system software, and the introduction of the new income tax.

Improvements in revenue collection though 2002 have been minor, however, coming, as they must, in the context of Maoist uprising that targets and competes with the government's tax collection efforts, but also into a culture of pervasive tax evasion, smuggling, and arbitrary tax assessments. Total domestic revenue reached 11.4% of GDP in 2001/2, the same as for 2000/01, and well below the target set by the government of 12.8%. The

budget for 2002/03 set the goal for domestic revenue at lower, and, perhaps attainable, 11.9%.

### 37 CUSTOMS AND DUTIES

Customs and duties are a principle source of domestic revenue. Import tariffs are generally assessed on an ad valorem basis, with duties ranging from 0% to 140%. Most primary products, including live animals and fish, enter duty-free. Machinery and goods related to basic needs are charged 5%. Duties on agricultural imports were fixed in 2003 at 10%. Cigarettes and alcoholic beverages are charged at 100%, although alcoholic beverages with more than 60% alcohol are prohibited altogether. Other prohibited imports include narcotic drugs and beef and beef products. Products that may be imported only under special licenses include arms, ammunition, and explosives; and communication equipment, including computers, TVs, VCRs, and walkie-talkies. Valuable metals and jewelry are prohibited except under bag and baggage regulations. According to the World Bank, Nepal's weighted average tariff rate in 2000, the most recent data available, was 17.7%. This average probably increased in 2001 and 2002 because of "security surcharges" levied on most imports. No special fee was assessed on goods with tariff rates less than 2.5%. For goods with charged duties up to 5%, the surcharge was 1%, and for all those with duties above 5%, the surcharge was 3%.

The export service charge is 0.5% and there are export duties on vegetable ghee and plastic goods of 2 to 10%. Prohibited exports include archeological and religious artifacts; controlled wildlife; narcotics; arms, ammunition and explosives; industrial raw materials; imported raw materials, parts and capital goods; and timber and logs. Since 1960, under the duty refund procedure (DRP), India has refunded to Nepal the excise duties levied on its exports to Nepal. Goods imported from India are granted a rebate of the application of ad valorem of 10% in tariff rates up to 40% and of 7% on rates above 40%.

Nepal, under bilateral trade agreements with India, has in past been afforded duty-free or preferential entry. However, the most recent India-Nepal Treaty of Trade, signed March 2002, while it continues to allow Nepali manufactures to enter the India market on a non-reciprocal, preferential or duty-free basis, with rules of origin less restrictive than the international norm (Nepal's manufacturers can have up to 70% foreign content instead of a international norm of less than 50%), India placed quotas on four sensitive imports: vegetable fats, acrylic yarn, copper products, and ferro oxide, all at volumes lower than recent Nepali exports to India.

In 1995, Nepal joined the seven-member South Asia Association for Regional Cooperation (SAARC), and has ratified SAARC's South Asia Preferential Trading Arrangement (SAPTA). Under SAPTA, members have agreed to about 5000 tariff reductions among two or more of the members. However, plans to establish a free trade area by 2002 have been delayed.

Nepal has applied for accession to the World Trade Organization and submitted the required memorandum on its foreign trade regime in June 1998. The first meeting of the Working Party was in May 2000 and market access negotiations began in September 2000. A second meeting of the Working Party was held in September 2002, but expectations for accession to the WTO by the end of 2002 have not been realized.

Smuggling is substantial across the Indian border, especially on lumber goods, labor, construction equipment, currency and weapons. Gold smuggling is thought to be particularly large. Official records show substantial imports of gold, but few gold exports, even though it is well known that most of the gold imports are intended for the Indian market. Recent efforts to combat smuggling appear to have at least changed the dominant mode from men driving trucks and buses to individuals, many women and children, driving bicycles.

The Customs Act of 1997 sought to simplify custom procedures, but there have been persistent complaints about the gap between policy and practice, particularly in terms of delays and arbitrary assessments. Under the program of economic reforms for FY 2002/03, the government has announced an intention to introduce a post-clearance audit as a means of reducing complaints about customs evaluation.

### 38 FOREIGN INVESTMENT

Foreign direct investment in Nepal, always low in this landlocked kingdom, has seen annual decreases across the five years of the Ninth economic plan (1997/98 to 2001/02), from an annual total of \$11 million in 1997/98 to annual totals of \$6 million in both 2000/01 and 2001/02, according to IMF estimates. The fiscal year 1999/2000 actually had the lowest annual total, at \$3 million. In 2001, according to the government of Nepal, there were 670 foreign investment projects in the country, worth together about \$1 billion. Of these, 35% were Indian and 11% (69 projects) were from the United States with other prominent participants being Japan, China, Germany, and Korea. India's dominance is due not just to its proximity, but also to incentives for Indian investors to take advantage of the preferential trade regime India extends to Nepal's manufactures through their bi-lateral trade agreements. The bi-lateral trade treaty signed 4 December 1996 lifted all customs duties on Nepalese industrial products, while imposing more lenient rules of origin than the international norm. The renewed treaty in March 2002, while imposing quotas on four primary and raw material exports, preserved the preferences on industrial products intact. Besides India, Nepal has negotiated bilateral investment agreements with Bhutan, Germany, and Norway.

In conjunction with the advent of multiparty democracy in 1991, Nepal has undertaken economic reforms that, at least on paper, have been aimed at making Nepal increasingly attractive to foreign investors, beginning with the Foreign Investment and One Window Policy Act of 1992 and the establishment of an Investment Promotion Board. Steps have been taken to privatize dozens of government-owned public enterprises (PEs), and to open up for private investment previous government monopolies in telecommunications, hydroelectric power, and air transportation.

Licensing requirements have been streamlined, and 100% foreign ownership is now permitted. In 1999, minimum investment requirements were also lifted. The legal basis for the full-scale private development of Nepal's massive hydroelectric resources and private export to India have been laid. The first fully private power projects are now in operation, though less than 1% of the potential has been exploited. Repatriation on income by foreign permanent non-residents is taxed at 10%. Foreign investors are entitled to repatriate outside of Nepal the amount received from the sale of all or part of shares in their Nepali investment, and all amounts received as profits or dividends.

The US State Department, however, has reported that the implementation of the liberalizing reforms has been distorted not only by bureaucratic delays and inefficiencies, but by contradictory policies that mitigate and even negate the reforms. Many sectors remain closed to foreign investment, including financial services and management consulting, as well as traditional cottage industries, defense-related industries, alcohol and tobacco. On intellectual property rights both legislation and practice are considered inadequate. All foreign investment and technology transfer must have specific permission from the Department of Industries. Problems doing business in Nepal, even aside from the intensifying insurgency, make a formidable list: lack of direct access to airports, poor ground transportation, lack of skilled labor and technological expertise, unclear rules on labor relations, inadequate power, inadequate water supply, few

local raw materials, non-transparent and arbitrary tax administration, and inadequate and obscure commercial legislation. One result, according to the US State Department, is the necessity for constant interaction with government officials, far from the "One Window" policy set out in the 1992 legislation.

In 2002, the government has spoken about plans for new bankruptcy and debt recovery legislation, new intellectual property legislation, and intentions to open the country to international accounting and auditing firms, but these have not taken concrete form. For 2002/03 perhaps the promising step is the introduction of a 10 year multi-entry visa for non-resident Nepalis (NRNs) willing to invest in Nepal.

### 39 ECONOMIC DEVELOPMENT

In July 2002, Nepal completed its ninth economic planning period, and embarked on its tenth (2002/03 to 2007/08). It has not been a triumphant progression. Buffeted by a sagging world economy, the aftermath of the 11 September 2001 terrorist attacks on the United States, and an increasingly violent Maoist rebellion, Nepal reported its lowest growth rate—0.8% of GDP—in over a decade, and a 23.4% plunge in development spending, a serious stumble in the moderate, but steady progress it had been making in the 1990s.

Planned economic development began in 1953 with construction of roads and airfields and of irrigation projects to bring more acreage under cultivation. In 1956, these projects were integrated into the first five-year plan (1956–61) to assist existing industries, revive and expand cottage industries, encourage private investment, and foster technological training. With the second plan (1962–1965), the government introduced land reform with programs to set ceilings on land holdings, to protect tenancy to redistribute land to the landless, and to initiate a compulsory saving plan. Though declared a success at the time, land holdings have remained seriously skewed in distribution mainly because large land holders were able parcel out land to relatives, and because the poor have been forced to sell their redistributed land to pay debts. The third economic plan (1965–1970), was the first to be administered under the panchayat system, the system overthrown in the economic reforms of the early 1990s. The fourth (1970–75) and fifth (1975–80) five-year plans continued to emphasize infrastructural development, primarily in transportation, communications, electricity, irrigation, and personnel. The sixth development plan (1980–85) allocated nearly one-third of its total expenditure to agriculture and irrigation. However, money targeted for development projects was used for other purposes.

The objectives of the seventh plan (1986–90) were to increase production, create opportunities for employment, and fulfill basic needs. Of the total expenditure, 65% was to be used for investment, allocated as follows: agriculture, irrigation, and forestry, 30.6%; industry, mining, and electricity, 26%; transportation and communications, 17.7%; social services, 25.2%; and other sectors, 0.5%. Foreign aid was expected to fund about 70% of these projects.

With the establishment of multi-party government in 1991, a comprehensive set of reforms affecting all sectors of the economy was initiated under the eighth five-year plan (1992–1997). Nepal's public enterprises (PEs) were slated for privatization, government monopolies in hydroelectric power, telecommunications, and transportation were opened to private investment, customs were streamlined, and the country declared open for foreign investment. The ninth plan (1997–2002) emphasized investments in agriculture and hydroelectric power, liberalization and privatization of the economy, and a thorough reform of the tax system and banking practices. Under the tenth plan, to run until 2007/08, priorities have shifted to security and

poverty reduction, but with a renewed emphasis on privatization and the effort to encourage private investment.

Nepal has considerable development potential. Its vast hydroelectric power resources are estimated at 83,000 MW, of which less than 1% has been brought on line. The legal framework for the full-scale private development of the hydroelectric sector, with private exports to India, is in place. Other promising growth sectors are air transportation and telecommunications, both open to private investment, and tourism. There is growth potential in both malefactors and agricultural products for export. Although there have been many slips in the implementation of the government's economic liberalization program, it has maintained a stable, non-inflationary currency regime, and, until the eruption of problems in 2001, a record of unspectacular but steady 5% annual growth rates in GDP. The government also claims improvement in the reduction of poverty, from 42% of the population in 1997 to 38% in 2003.

Nevertheless, the challenges to Nepal's economic development are formidable. These include limited natural resources, difficult topography, poor infrastructure, landlocked location, weak human capital (with both low levels of education and health), poor public management, and a long history of political interference in the economy. Nepal's economy is characterized by a high vulnerability to shocks, natural and man-made. Its growth has been arrested since 2001, and with a per capita income below \$300 in nominal terms, it remains one of the world's poorest countries. It remains to be seen whether its economic reform programs will be swept away, or prove to be built solidly enough to weather the passing storms.

#### 40 SOCIAL DEVELOPMENT

The government maintains a countrywide village development service, which endeavors to meet the villagers' needs for food, clothing, shelter, health services, and education. Village development workers demonstrate improved methods of sanitation and health and teach the villagers to read and write. The Employee Provident Fund administers a program of old age, disability, and death benefits for government and corporate employees, funded by contributions from both employers and employees. Pensions are provided as a lump sum equal to contributions plus interest. Miners and employees of factories with 10 or more workers are protected by a workers' compensation program run by the Labor Department.

Women are subject to gender discrimination, especially in traditional rural areas. The present constitution has strengthened provisions protecting women, including equal pay for equal work, but few women work in the money economy. Women's inheritance and marriage rights have been strengthened in recent years, but women suffer discrimination in both areas. Domestic abuse and violence against women are serious societal problems that citizens and governmental authorities do not recognize. The abduction of young girls to be taken to India to work as prostitutes is a serious problem.

Members of lower castes suffer from widespread discrimination and many are in positions of bonded labor. Senior positions in politics and the civil service are dominated by urban-oriented castes, such as the Brahmin and Chhetri.

#### 41 HEALTH

Medical personnel in 1990 included 1,124 physicians, 19 pharmacists (in urban areas), 24 dentists (in urban areas), 601 nurses, and 2,380 midwives. In 1994, there was 1 hospital bed per 4,281 inhabitants. As of 1999, there were fewer than 0.05 physicians per 1,000 people and 0.2 hospital beds. In the same year, there were nine private hospitals and at least 10,000 private pharmacies in the country. Most of the medical personnel work in the Kāthmāndu Valley and health services elsewhere are in short

supply. The public sector provides most of the country's health care. Traditional medicine and faith healing are still used frequently, especially in the hill districts. In 1999, only one in 10 rural dwellers lived within one hour of a hospital. In the same year, total health care expenditure was estimated at 5.4% of GDP.

Although protected by mountain barriers, Nepal is in frequent danger from epidemics, notably cholera. Japanese encephalitis is endemic in the Terai plain and inner Terai zone. Overall, 70% of illness is from communicable disease. Common afflictions are black fever (*kala-azar*), amoebic dysentery, eye diseases, typhoid, and venereal diseases. Malnutrition, contaminated water, and inadequate sanitation cause widespread health problems. Improved health programs in rural areas have helped control malaria, leprosy, and tuberculosis. However, tuberculosis remains a significant health problem. In 1999, there were 209 cases of tuberculosis per 100,000 people. In 2000, 81% of the population had access to safe drinking water and 27% had adequate sanitation.

In 1997, immunization rates for children up to one year old were as follows: tuberculosis, 96%; diphtheria, pertussis, and tetanus, 78%; polio, 78%; and measles, 85%. Major causes of illness in children are perinatal conditions, diarrhea, measles, and severe respiratory conditions.

Nepal has a large number of drug addicts. Stringent amendments to the Narcotic Drug Control Act were adopted in 1986 in response to pressure from the United States and the United Kingdom.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 32.9 and 10 per 1,000 people. Birth control was used by 29% of married women in 2000. In the same year, the average life expectancy was 59 years. Malnutrition is a common problem. Over half of all children under five were underweight in 1996. In 2000, 54% of children under five were malnourished.

As of 1999 the number of people living with HIV/AIDS was estimated at 34,000, and deaths from AIDS that year were estimated at 2,500. HIV prevalence was 0.3 per 100 adults.

#### 42 HOUSING

Most of the population lives in rural villages where houses are made of stone or mud bricks, with thatched roofs and raised eaves. Bamboo and reed huts are also prevalent. Most houses have two stories, but some contain only two rooms, a sleeping room and a room for cooking. The well-constructed houses of the Sherpas are generally built of stone and timber, roofed with wooden slats. About four out of five urban dwellings in Nepal are owner occupied. The latest available figures for 1980–88 show a total housing stock of 3.1 million units with 5.6 people per dwelling. Housing shortages in urban areas have resulted in an increase of squatter villages, or slum areas.

#### 43 EDUCATION

The proportion of illiterate persons is declining and was estimated in 2000 at 58.6% of adults (males, 40.9%; females, 76.2%). After free primary education was introduced in 1975, school enrollment for children ages 6–11 increased from about one-fourth of the total to over one-half by the mid-1980s. By 1996, there were 22,218 primary schools with 3,447,607 pupils and 89,378 teachers. Secondary students numbered 1,121,335 and were instructed by 36,127 teachers in 1996. The pupil-teacher ratio at the primary level was 38 to 1 in 1999. In the same year, public expenditure on education was estimated at 2.5% of GDP.

Traditional schools (*pathshalas*) provide a classical education emphasizing languages. Gompas along the northern border train boys and men to become Buddhist religious leaders. English schools are modeled after those in India. Under a 1954 plan, a

national school system with a single curriculum has been replacing the traditional schools, although English schools have increased.

In 1996, 105,694 students were enrolled in all higher-level institutions.

#### 44 LIBRARIES AND MUSEUMS

The National Library in Lalitpur has 45,000 volumes. The Bir Library, founded in the 14th century, contains 15,000 manuscripts. Other important collections are maintained by the library of Tribhuvan University (18,000 volumes) and the Singh Darbar, Nepal-Bharat (41,000), and the British Council libraries, all in Kāthmāndu. The National Museum (1928) and the Natural History Museum (1975) are both in Kāthmāndu, along with a postage museum and the King Tribhuvan Memorial Museum. There is a Museum of Excavated Archeological Antiquities in Lalitpur and a woodworking museum housed in the Palace of Fifty-Five Windows in Bhaktapur.

#### 45 MEDIA

Postal, telephone, and telegraph services are operated by the government. Telephone service connects Kāthmāndu with Birganj on the Indian frontier, and another line links the capital with foothill towns in the eastern Terai. The telecommunications network includes a 5,000-telephone automatic exchange of over 90 radio relay stations, and an earth satellite station established with help from the UK in 1982. In 2000 there were 236,816 telephones in use.

Radio Nepal, a commercial, semi-governmental network, broadcasts in Nepali and English on both short and medium wavelengths. Television was introduced into the Kāthmāndu Valley in 1986 and the Nepalese Television Corporation broadcasts about 23 hours a week. As of 2000 there were 6 AM radio stations. In 2001 there were 16 FM stations in operation and 3 television stations. In 2000, there were 39 radios and 7 television sets per 1,000 population. In 2001, there were 15 Internet service providers serving about 50,000 subscribers.

Dailies, weeklies, and monthlies in Nepali, Newari, Hindi, and English are published mainly in Kāthmāndu. The largest daily newspapers (with 2002 circulation) are the *Gorkhapatra* (75,000), the *Nepali Hindi Daily* (62,000), *Samaya* (18,000), and the English-language *Rising Nepal* (20,000).

Though the constitution specifies that the government may not censor expression, including that of the press, the press is licensed by the government, and licenses have been suspended and individuals arrested for criticism of the monarchy or support of a political party.

#### 46 ORGANIZATIONS

The leading commercial organization is the Federation of Nepalese Chambers of Commerce and Industry. The variety of professional organizations include the Nepal Medical Association, The Garment Association of Nepal, the Nepal Journalist Association, and the Nepal Drivers' Association.

National youth organizations include the Foolchowī Youth Star Club, the All Nepal National Free Students Union, Democratic National Youth Federation, the Nepal Children's Organization, the Council of Free Students Union of Nepal, the Nepal Scouts Associations, YMCA, and Youth for Human Rights, Education and Development. National women's organizations include the Nepal Women's Organization, the Nepal Association of University Women, and the Women's Development Society. Organizations involved in educational pursuits include the Environment, Culture, Agriculture, and Research Development Society in Nepal and the Royal Nepal Academy of Science and Technology.

International Organizations with national chapters include Amnesty International, CARE Nepal, Defence for Children International, Habitat for Humanity, and the Red Cross.

#### 47 TOURISM, TRAVEL, AND RECREATION

In 1951, the government of Nepal reversed its long-standing policy and began to encourage visitors; before then, mountaineering expeditions had been permitted into the country only under severe official scrutiny and restraining regulations. For mountain trekkers, travel agencies in Kāthmāndu provide transportation to mountain sites, as well as Sherpa guides and porters. Tents, sleeping bags, and other mountain-climbing gear are available in Kāthmāndu. Travel is difficult; roads are generally poor.

Tourism was first officially included among the country's major potential assets in 1956. There were 463,646 foreign tourists in 2000 and receipts from tourism totaled \$167 million. There were 18,203 hotel rooms and a total of 34,958 bed-places that same year.

In 2002, the US State Department estimated the cost of staying in Kāthmāndu at \$161. Travel elsewhere in the country can be significantly less expensive.

#### 48 FAMOUS NAPALEASE

Buddhism, one of the world's great religions, is based on the teachings of Siddhartha Gautama, who became known as the Buddha ("Enlightened One"). He was born (traditionally about 624 BC but according to most modern scholars about 563 BC) in Lumbini, near Kapilavastu in the Terai, then part of India, and died at Kushinagara (traditionally about 544 BC but according to the modern view about 483 BC).

Amar Singh Thapa, Nepalese military leader of the 19th century and rival of Gen. David Ochterlony in the war between British India and Nepal, is a national hero. The two best-known Rana prime ministers were Sir Jung Bahadur Rana (1817–77) and Sir Chandra Shamsher Jang Rana (1863–1929). The most highly regarded writers are Bhanubhakta, a great poet of the 19th century, and the dramatist Bala Krishna Sama (Shamsher, b.1903).

King Mahendra Bir Bikram-Shah (1920–72), who introduced the partyless political system, based on the Nepalese tradition of the village panchayat (council), was succeeded on the throne by his son, King Birendra Bir Bikram Shah Dev (b.1945), who democratized the panchayat system. Well-known political leaders include the brothers Matrika Prasad Koirala (b.1912), head of the Nepali Congress Party and the first post-Rana prime minister of Nepal (1951–52 and 1953–55), and Bisweswar Prasad Koirala (1915–82), head of the Nepali Congress Party and the first elected prime minister of Nepal (1959–60).

World renown was gained for Nepal by a Sherpa porter and mountaineer, Tenzing Norgay (Namgyal Wangdi, 1914–86), who, with Sir Edmund Hillary, a New Zealander, ascended to the summit of Mt. Everest in 1953.

#### 49 DEPENDENCIES

Nepal has no territories or colonies.

# NEW ZEALAND

**CAPITAL:** Wellington

**FLAG:** The flag has two main features: the red, white, and blue Union Jack in the upper left quarter and the four-star Southern Cross in the right half. On the blue state flag the stars are red outlined in white. On the red national flag, used by individuals or commercial institutions at sea, the stars are white.

**ANTHEM:** *God Save the Queen* and *God Defend New Zealand* have had equal status since 1977.

**MONETARY UNIT:** The New Zealand dollar (NZ\$) is a paper currency of 100 cents; it replaced the New Zealand pound on 10 July 1967. There are coins of 5, 10, 20, and 50 cents and 1 and 2 dollars, and notes of 5, 10, 20, 50, and 100 dollars. NZ\$1 = US\$0.5555 (or US\$1 = NZ\$1.8) as of May 2003.

**WEIGHTS AND MEASURES:** Metric weights and measures are used.

**HOLIDAYS:** New Year's Day, 1 January; Waitangi Day, 6 February; Anzac Day, 25 April; Queen's Birthday, 1st Monday in June; Labor Day, 4th Monday in October; Christmas Day, 25 December; Boxing Day, 26 December. Movable holidays are Good Friday and Easter Monday. Each province has a holiday on its own anniversary day.

**TIME:** 12 midnight = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Situated in the southwest Pacific Ocean, New Zealand proper, with a total area of 268,680 sq km (103,738 sq mi), consists of the North Island, covering 114,669 sq km (44,274 sq mi) including small islands nearby; the South Island, 149,883 sq km (57,870 sq mi); Stewart Island, 1,746 sq km (674 sq mi); and various minor, outlying islands. Comparatively, the area occupied by New Zealand is about the size of the state of Colorado. The Chatham Islands, lying 850 km (528 mi) E of Lyttelton, on South Island, have a land area of 963 sq km (372 sq mi). Other outlying islands have a combined area of 778 sq km (about 300 sq mi). New Zealand extends 1,600 km (994 mi) NNE–SSW and 450 km (280 mi) ESE–WNW. It has a total coastline of 15,134 km (9,404 mi).

New Zealand's capital city, Wellington, is located on the southern tip of North Island.

## <sup>2</sup>TOPOGRAPHY

Less than one-fourth of the land surface of New Zealand lies below the 200-m (656-ft) contour. The mountain ranges in the North Island do not exceed 1,800 m (6,000 ft) in height, with the exception of the volcanic peaks of Egmont, or Taranaki (2,518 m/8,261 ft), Ruapehu (2,797 m/9,176 ft), Ngauruhoe (2,290 m/7,513 ft), and Tongariro (1,968 m/6,457 ft), the last three of which are still active. This volcanic system gives rise to many hot springs and geysers.

The South Island is significantly more mountainous than the North Island, but is without recent volcanic activity. The Southern Alps, running almost the entire length of the South Island from north to south, contain 19 peaks of 3,000 m (9,800 ft) or above, of which the highest is Mt. Cook or Aorangi, 3,764 m (12,349 ft). There are also several glaciers in the Southern Alps, the largest being the Tasman Glacier, 29 km (18 mi) long and 1 km (0.6 mi) wide. The rivers are mostly swift-flowing and shallow, few of them navigable. There are many lakes, those in the South Island being particularly noted for their magnificent mountain scenery.

## <sup>3</sup>CLIMATE

New Zealand has a temperate, moist ocean climate without marked seasonal variations in temperature or rainfall. The prevailing winds are westerly, with a concentration of strong winds in the Cook Strait area. The generally mountainous nature of the country, however, causes considerable variation in rainfall (e.g., between the eastern and western sides of the Southern Alps), and, by preventing stratification of air into layers of different density, results in an absence of extensive cloud sheets and a consequent high percentage of sunshine. Mean annual temperatures at sea level range from about 15°C (59°F) in the northern part of the North Island to 12°C (54°F) in the southern part of the South Island. Mean annual rainfall ranges from around 30 cm (12 in) near Dunedin to more than 800 cm (315 in) in the Southern Alps.

## <sup>4</sup>FLORA AND FAUNA

Like other regions separated from the rest of the world for a long period, New Zealand has developed a distinct flora. About 75% of the native flora is unique, and it includes some of the world's oldest plant forms. However, the flowering plants, conifers, ferns, lycopods, and other vascular tracheophytes that constitute much of the land vegetation do show affinities with plants of the Malayan region, supporting the theory of an ancient land bridge between the two regions. More than 250 species are common to both Australia and New Zealand. The Antarctic element, comprising more than 70 species related to forms in the flora of South America and the Southern Ocean islands, is of great interest to botanists. The kauri pine, now found only in parts of the North Island, for more than a century has been world famous for its timber. The rimu and the totara also are timber trees. Other handsome trees include the pohutukawa and other species of rata and kowhai. New Zealand flax, formerly of great importance in the Maori economy, is found in swampy places. Undergrowth in the damp forests consists largely of ferns, of which there are 145 species; they clothe most of the tree trunks and branches, and tree ferns form part of the foliage. Tussock

grass occurs on all mountains above the scrub line and over large areas in the South Island.

Apart from seals and two species of bats, New Zealand has no indigenous land mammals. Some of the land mammals introduced to New Zealand have become pests, such as the rabbit, the deer, the pig (now wild), and the Australian possum. Sea mammals include whales and dolphins.

There is a great diversity of birds, some 250 species in all, including breeding and migratory species. Among the flightless birds the most interesting is the kiwi, New Zealand's national symbol and the only known bird with nostrils at the tip of the bill instead of at the base. Other characteristic birds are the kea, a mountain parrot, and the tui, a beautiful songbird. All but one of the genera of penguins are represented in New Zealand. Several species of birds, the most famous being the Pacific godwit, migrate from breeding grounds in the Arctic Circle to spend spring and summer in New Zealand. There are many flightless insects and a diversity of small life forms.

## 5 ENVIRONMENT

Because of its relatively small population, New Zealand's natural resources have so far suffered less from the pressures of development than have those of many other industrialized nations. Air pollution from cars and other vehicles is an environmental concern in New Zealand. The use of fossil fuels contributes to the problem. New Zealand's concern about the effects of air pollution on the atmosphere is, in part, due to the fact that the nation is among the world leaders in incidence of skin cancer. In 1996, New Zealand produced 29.7 million metric tons of carbon dioxide emissions from industrial sources.

Water pollution is also a problem due to industrial pollutants and sewage. The nation has 327 cu km of renewable water resources, of which 55% is used for farming activity and 13% for industrial purposes. The nation's cities produce an average of 2.3 million tons of solid waste per year.

Another environmental issue in New Zealand is the development of its resources—forests, gas and coal fields, farmlands—without serious cost to natural beauty and ecological balance. Two-thirds of the nation's forests have been eliminated. Principal governmental agencies with environmental responsibilities are the Commission for the Environment (established in 1972), an investigatory and advisory agency that audits environmental impact reports; the Environmental Council (1970), an advisory body that publishes information on environmental issues; and the Nature Conservation Council (1962), an advisory body that may inquire into the environmental effects of proposed public or private works projects and is free to make its reports and recommendations public.

In 2001, 3 of New Zealand's mammal species and 44 types of birds were endangered, as were 165 plant species. Native species have been seriously endangered by species introduced from outside the country. Endangered animal species in New Zealand include the takahe, two species of petrel (black and New Zealand Cook's), the black stilt, orange-fronted parakeet, kakapo, and Codfish Island fernbird. Extinct are the bush wren, laughing owl, Delcourt's sticky-toed gecko, South Island kokako, New Zealand quail, and New Zealand grayling. Endangered species on the Chatham Islands were the Chatham Island petrel, magenta petrel, Chatham Island oystercatcher, New Zealand plover, Chatham Island pigeon, Forbes's parakeet, and Chatham Island black robin. The Chatham Island swan and Chatham Island rail are extinct.

## 6 POPULATION

The population of New Zealand in 2003 was estimated by the United Nations at 3,875,000, which placed it as number 122 in population among the 193 nations of the world. In that year approximately 12% of the population was over 65 years of age,

with another 23% of the population under 15 years of age. There were 97 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 0.77%, with the projected population for the year 2015 at 4,173,000. The population density in 2002 was 14 per sq km (37 per sq mi), with nearly 75% of the population living on the North Island.

It was estimated by the Population Reference Bureau that 86% of the population lived in urban areas in 2001. The two largest of the urban areas are Auckland (1,014,000), and Wellington, the capital (326,000). Other large cities include Christchurch (307,179), Dunedin (109,503), Hamilton (148,625), Palmerston North (70,951), and Tauranga (70,803). According to the United Nations, the urban population growth rate for 2000–2005 was 1.0%.

## 7 MIGRATION

Between 1946 and 1975, New Zealand experienced a net gain from migration of 312,588; from 1975 to 1990, however, there was a net outflow of 110,877. Under new immigration policy guidelines issued by the government in May 1974, immigrants are selected according to specific criteria, such as job skills, health, character, age, and family size. The same restrictions now apply to British subjects as to others who wish to take up permanent residence. Citizens of Fiji, Tonga, and Western Samoa may be admitted under special work permits for up to 11 months. About 7,000 Indochinese refugees settled in New Zealand between 1975 and 1990. The number of asylum applications increased from 712 in 1995 to 1,964 in 1998. New Zealand is one of only ten countries in the world with an established resettlement program, with an annual quota of 750 as of 1999.

Australia is the preferred destination for New Zealanders departing permanently or long term. In 1999, the net migration rate was 3.01 migrants per 1,000 population.

## 8 ETHNIC GROUPS

About 74.5% of the population is classified as New Zealand European; 9.7% Maori; 4.6% are considered other European; 3.8% Pacific Islander; and 7.4% Asian and others. The most significant minority group, the indigenous Maori people, is a Polynesian group with a distinctive culture and a well-ordered social system.

Although the Treaty of Waitangi (1840) guaranteed to the Maori people all the rights and privileges of British subjects and full and undisturbed possession of their lands, these guarantees were often overlooked. As a result of war and disease, the Maori population declined to fewer than 42,000 by 1896. At the turn of the century, however, a group calling itself the Young Maori Party began to devote itself to the promotion of Maori welfare and status. In the 20th century, and especially after World War II, a more enlightened government policy prevailed.

In the early 1990s there were 321,396 Maoris or part-Maoris (those reporting a Maori ancestry of 50% or more). In all, there were 511,947 people with Maori ancestry, representing 14.9% of the census population. About 90% live on North Island. Although Maori acquisition and development of land have been promoted, there is not enough land to afford a livelihood to more than about 25% of the Maori population. Thus, many Maoris leave their tribal villages to seek job opportunities in the towns and cities. By 1981, four-fifths of all Maoris lived in urban areas.

During recent years, increasing numbers of migrants from New Zealand's former colonies and from other Pacific islands have come to New Zealand. Many of these, especially the Cook Islanders, are Polynesians having ethnic and linguistic ties with the Maoris.

LOCATION: 33° to 53°S; 162°E to 173°W. TERRITORIAL SEA LIMIT: 12 miles.

**9 LANGUAGES**

English is the universal language, although Maori, a language of the Polynesian group, still is spoken among the Maori population and is taught in Maori schools. It is the first language of about 50,000 Maori New Zealanders and became an official language in 1987, with the right of use in courts of law and before a

number of tribunals. There are Maori-language preschools, immersion primary schools, and many radio stations.

**10 RELIGIONS**

New Zealand has no state church. According to the 2001 census, about 55% of the population are Christian. Anglicans are the largest denomination with about 15% of the population. About

13% are Roman Catholic, 11% Presbyterians, 3% Methodists, 1% Baptist, 1% Mormon, and 1% Ratana, a Maori Christian group. Ringatu and Ratana are small Christian sects that are indigenous to New Zealand. About 1% of the population is Hindu and 1% Buddhist. There are also small numbers of Sikhs, Muslims, and Rastafarians.

## 11 TRANSPORTATION

The mountainous nature of New Zealand has made the development of rail and road communications difficult and expensive, particularly on the South Island. In 2002, 3,908 km (2,428 mi) of state-owned railways were operative. New Zealand has electrified some 506 km (314 mi) of its rail lines in order to reduce dependence on imported fuel.

Capital investment in roads exceeds that for all other forms of transport service. Total length of maintained roadways as of 2002 was 92,200 km (52,293 mi), of which 53,568 km (33,287 mi) were paved, including 144 km (89 mi) of expressways. As of 2000, registered motor vehicles included 1,719,077 passenger cars and 479,281 commercial vehicles. The 1,609 km (999 mi) of waterways are of little importance in satisfying total transportation requirements.

With a registered merchant marine of only eight ships, totaling 68,427 gross tons in 2002, New Zealand is largely dependent on the shipping of other nations for its overseas trade. In 1974, a government-owned firm, the Shipping Corp. of New Zealand, was set up to operate shipping services; its trade name, the New Zealand Line, was adopted in 1985. Auckland and Wellington, the two main ports, have good natural harbors with deepwater facilities and modern port equipment. Other ports capable of efficiently handling overseas shipping are Whangarei, Tauranga, Lyttelton (serving Christchurch), Bluff, Napier, Nelson, Dunedin, and Timaru.

New Zealand had 106 airports in 2001, 46 with paved runways. Thirteen are major air facilities, of which those at Auckland, Christchurch, and Wellington are international airports. The government-owned Air New Zealand Ltd. operates air services throughout the Pacific region to Australia, Singapore, Hong Kong, Tokyo, Honolulu, and Los Angeles, among other destinations. In 2001, 11,094,800 passengers were carried on scheduled domestic and international flights.

## 12 HISTORY

New Zealand's first people were the Maoris. Owing to the absence of written records, it is impossible to give any accurate date for their arrival, but according to Maori oral traditions, they migrated from other Pacific islands to New Zealand several centuries before any Europeans came, with the chief Maori migration taking place about 1350. It seems likely, however, that the Maoris arrived from Southeast Asia as early as the end of the 10th century. The first European to discover New Zealand was Abel Tasman, a navigator of the Dutch East India Company, who sighted the west coast of the South Island in 1642. He did not land, because of the hostility of the Maori inhabitants. No other Europeans are known to have visited New Zealand after Tasman until Captain James Cook of the British Royal Navy made his four voyages in 1769, 1773, 1774, and 1777. In this period, he circumnavigated both islands and mapped the coastline.

In the 1790s, small European whaling settlements sprang up around the coast. The first mission station was set up in the Bay of Islands in 1814 by Samuel Marsden, chaplain to the governor of New South Wales. In 1840, the Maori chieftains entered into a compact, the Treaty of Waitangi, whereby they ceded sovereignty to Queen Victoria while retaining territorial rights. In the same year, the New Zealand Company made the first organized British attempt at colonization. The first group of British migrants arrived at Port Nicholson and founded the city of Wellington. The New Zealand Company made further settlements in the

South Island: in Nelson in 1842, in Dunedin in 1848 (with the cooperation of the Presbyterian Church of Scotland), and in Canterbury in 1850 (with the cooperation of the Church of England). After the Maori Wars (1860-70), which resulted largely from discontent with the official land policy, the colony of New Zealand rapidly increased in wealth and population. Discovery of gold in 1861 resulted in a large influx of settlers. The introduction of refrigerated shipping in 1882 enabled New Zealand to become one of the world's greatest exporters of dairy produce and meat. The depression of the early 1930s revealed to New Zealand the extent of its dependence on this export trade and led to the establishment of more local light industry.

The British Parliament granted representative institutions to the colony in 1852. In 1907, New Zealand was made a dominion, and in 1947 the New Zealand government formally claimed the complete autonomy that was available to self-governing members of the British Commonwealth under the Statute of Westminster, enacted by the British Parliament in 1931.

New Zealand entered World Wars I and II on the side of the United Kingdom; New Zealand troops served in Europe in both wars and in the Pacific in World War II. After World War II, New Zealand and US foreign policies were increasingly intertwined. New Zealand signed the ANZUS Pact in 1951 and was a founding member of the Southeast Asia Treaty Organization (SEATO) in 1954. New Zealand troops fought with UN forces in the Korean conflict and with US forces in South Vietnam. The involvement in Vietnam touched off a national debate on foreign policy, however, and all New Zealand troops were withdrawn from Vietnam by the end of 1971. New Zealand's military participation in SEATO was later terminated.

In 1984, a Labour government led by Prime Minister David Lange took office under a pledge to ban nuclear-armed vessels from New Zealand harbors; a US request for a port visit by one of its warships was denied because of uncertainty as to whether the ship carried nuclear weapons. The continuing ban put a strain on New Zealand's relations within ANZUS, and in 1986 the United States suspended its military obligations to New Zealand under that defense agreement, also banning high-level contacts with the New Zealand government. The United States ended its ban on high-level contacts in March 1990; however, New Zealand's official stance against nuclear presence in its territory remained strong.

In the late 1990s, New Zealand's environmental concerns extended beyond nuclear issues. In 1999, when pirates decimated the population of Patagonian toothfish in the Southern Ocean off Antarctica, threatening not only fish, but also the sea birds that fed upon them, New Zealand responded to the threat to the fragile ecosystem by sending a patrol frigate to the area.

Extensive Maori land claims (to all the country's coastline, 70% of the land, and half of the fishing rights) led, in December 1989, to the formation of a new Cabinet committee designed to develop a government policy towards these claims. The committee, including former Prime Minister Lange, aimed to work with the 17-member Waitangi Tribunal, established in 1975 to consider complaints from Maoris.

The 1993 general election resulted in the governing National Party (NP) winning a bare majority of 50 seats to the Labour Party's 45. In 1996 the NP formed a coalition government with the New Zealand First Party. The coalition was led by James Bolger, who in 1994 lobbied to convert New Zealand into a republic—a move that was met by NP resistance and public apathy. This was the first election under New Zealand's 1993 referendum on proportional representation. It issued in Bolger's third term as prime minister. Winston Peters, a fierce critic of Bolger, became the country's deputy prime minister and treasurer—a new post responsible for New Zealand's budget. Peters brought the First Party into the coalition over the Labour Party, which won 37 of the 120 seats in the 1996 election. In

1996 the government settled a NZ\$170 million agreement with the Waikato Tainui tribe in the North Island for its wrongful confiscation of lands during the 1860s. The Queen signed the legislation, which also contained an apology.

The National Party-First Party coalition government remained in power until 1999, when the Labour Party won 49 seats and again became the majority government. The Labour Party formed a government in coalition with the progressive Alliance Party, with Helen Clark as prime minister. In 1999 tension arose between the Maori and white New Zealanders, centering on the growing Maori claims to the natural resources of the country. The Clark administration expressed its commitment to goals aimed at benefiting all New Zealanders, and closing the economic gap between the Maori and the rest of the population. The Labour-Alliance coalition also built alliances with other non-nuclear states and worked to strengthen the Nuclear Free Zone in the South Pacific.

General elections were held 27 July 2002, which resulted in a Labour Party victory, returning Helen Clark as prime minister. The Labour Party entered into coalition with Jim Anderton's Progressive Coalition Party, and received support from the United Future Party. The National Party recorded its worst showing in 70 years.

### 13 GOVERNMENT

New Zealand is an independent member of the Commonwealth of Nations. Like the United Kingdom, it is a constitutional monarchy, the head of state being the representative of the crown, the governor-general, who is appointed for a five-year term.

The government is democratic and modeled on that of the United Kingdom. The single-chamber legislature, the House of Representatives, has 120 members (2003), elected by universal adult suffrage for a term of three years. Adult male suffrage dates from 1879; adult women received the right to vote in 1893. The voting age was lowered to 18 in November 1974. Since 1867, the House has included representatives of the Maoris, and in 1985, the Most Reverend Paul Reeves, Anglican archbishop of New Zealand, became the first person of Maori descent to be appointed governor-general. As of 2003, six seats in the 120-member parliament were reserved for its native Maori minority population. Persons of at least half-Maori ancestry may register in either a Maori electoral district or a European district. Members are elected by simple majority. Although recent elections have resulted in coalition governments, a two-party system usually operates. The party with a majority of members elected to the House of Representatives forms the government; the other party becomes the opposition.

On his appointment, the prime minister, leader of the governing party, chooses 20 other ministers to form the cabinet. Each minister usually controls several government departments, for which he is responsible to the House of Representatives. Although the cabinet is the de facto governing body, it has no legal status. Members of the cabinet and the governor-general form the Executive Council, the highest executive body.

An act of 1962 established the post of ombudsman, whose principal function is to inquire into complaints from the public relating to administrative decisions of government departments and related organizations. In 1975, provision was made for the appointment of additional ombudsmen under the chief ombudsman.

In a September 1992 referendum, nearly 85% of voters rejected the established electoral system of simple plurality (first-past-the-post) in favor of a system based upon a mixed member proportional system, as used in Germany. Final approval came in a second referendum held as part of the 1993 general election, and the proportional voting system was introduced during the 1996 elections. Under New Zealand's proportional representation system each voter casts two votes, one for a

candidate and one for a political party. Each party is awarded seats according to its share of the overall vote, with a minimum set at 5%.

### 14 POLITICAL PARTIES

Although the New Zealand legislature began to function in 1854 under an act of 1852, it was not until near the end of the century that political parties with a national outlook began to form. This development was hastened by abolition of the provincial parliaments in 1876.

From 1890 to 1912, the Liberal Party was in power. It drew its strength from small farmers and from the rapidly increasing working class in the towns. It enacted advanced legislation on minimum wages, working conditions, and old age pensions, and established the world's first compulsory system of state arbitration. A Reform Party government replaced the Liberal government in 1912; the main items in the Reform platform were the "freehold" for certain types of farmers (i.e., the right to purchase on favorable terms the land they leased from the crown) and the eradication of patronage in the public service. During part of World War I, there was a coalition of Reform and Liberal parties. The Labour Party was formed in 1916 when several rival Labour groups finally came together. This party derived partly from old Liberal tradition, but its platform on socialization and social welfare was more radical.

The Reform Party continued in office until 1928 and was then succeeded by the United Party, a revival of the old Liberal Party. In 1931, these two parties came together, governing as a coalition until 1935. In that year, after a severe economic depression, a Labour government came to power. Labour remained the government until 1949, although for periods during World War II a coalition war cabinet and later a war administration were created, in addition to the Labour cabinet. During its term of office, Labour inaugurated an extensive system of social security and a limited degree of nationalization.

After their defeat in 1935, the old coalition parties joined to form the National Party. Coming to power in 1949, this party held office until 1957, when it was replaced by Labour. The National Party returned to power in the 1960 election, and maintained its majority in the elections of 1963, 1966, and 1969. A Labour government was elected in 1972, but in 1975 the National Party reversed the tide, winning 55 seats and 47.4% of the total vote; a National Party cabinet was formed, with Robert Muldoon as prime minister. Led by Muldoon, the National Party was returned again in the 1978 and 1981 elections, but by much lower margins.

On 14 July 1984, the National Party was defeated at the polls, winning only 37 seats (36% of the vote), to 56 seats (43%) for Labour. The Social Credit Political League won 2 seats (8%), and the New Zealand Party, a conservative group formed in 1983, won most of the remaining popular vote, but no seats. David Lange formed a Labour government and was reelected in August 1987, when Labour won 56 seats and 47.6% of the vote, and the National Party won 41 seats and 45% of the vote. No other parties won seats.

David Lange resigned as prime minister on 7 August 1989 after Roger Douglas, a political foe in the Labour Party, was reelected to the Cabinet. Labour's MPs selected Geoffrey Palmer as prime minister and party leader. Palmer resigned as prime minister in September 1990 and was replaced by Michael Moore, also of the Labour Party. In October 1990 the National Party, led by Jim Bolger, won a general election victory. Bolger's government instituted major cuts in New Zealand's welfare programs. The National Party won reelection in the November 1993 general election, capturing 50 of 99 seats. The Labour Party won 45, and both the New Zealand First Party, led by Winston Peters, and The Alliance, led by Jim Anderton, won 2 seats. In December 1993 Helen Clark replaced Michael Moore as leader

of the Labour Party, becoming the first woman to lead a major party in New Zealand.

The 1996 elections were the first under proportional representation. James Bolger was elected as prime minister for a third term, to lead a coalition government formed by the National Party and the First Party. The National Party won 44 seats; Labour, 37; New Zealand First Party, 17; Alliance Party, 8; and the United Party, 1.

In the November 1999 elections, the balance of power once again shifted, with the New Zealand National Party losing 5 seats and capturing only 30.5% of the total vote, while the New Zealand Labor Party gained 12 seats and took 38.7% of the vote, thus becoming the majority party. Under Prime Minister Helen Clark, a coalition government was formed between the Labour Party and the Alliance Party, which consisted of five small parties: the New Labor Party, the Democratic Party, the New Zealand Liberal Party, the Green Party, and Mana Motihake.

In the July 2002 elections (held early), the Labour Party captured 41.3% of the vote and 52 seats to the National Party's 20.9% and 27 seats. The New Zealand First Party took 10.4% of the vote and 13 seats. It was the worst showing for the National Party in 70 years. Prime Minister Helen Clark formed an alliance with the United Future Party, after forming a coalition with Jim Anderton's Progressive Coalition Party. United Future claimed it would not form a coalition with the Labour Party, but would support the government.

While the Liberal and Reform Parties, and in more recent times, the Labour and National Parties, have played the major roles in New Zealand's government, many other political groups have existed over the years, with varying agendas and membership. In 2002, those with enough support to win parliamentary seats included ACT New Zealand (libertarian), the New Zealand First Party (nationalistic), the Green Party of Aotearoa (ecologist), the United Future Party (liberal), and Jim Anderton's Progressive Coalition (progressive). There were 21 registered political parties as of June 2002.

## 15 LOCAL GOVERNMENT

The Local Government Act (1974), with subsequent modifications, substantially changed the structure of local government in New Zealand. The previous system was based on territorial local authorities: boroughs, which served concentrated populations of at least 1,500; counties, which were predominantly rural; and town districts, an intermediate form. In addition, there were special-purpose authorities to administer harbors, hospitals, electricity and water distribution, and other public services. The 1974 legislation added two tiers to this structure. Regional bodies—including united councils, which are appointed by the constituent territorial authorities in a region, and regional councils, which are directly elected—are charged with two mandatory functions, regional planning and self-defense, and may undertake other regional functions. Moreover, within territorial local authorities, communities may be established. Each community may have either a district community council (if the population is 1,500 or more), which exercises nearly all the powers of its parent territorial authority, or a community council, to which the parent authority may delegate powers. The purpose of these community bodies is to increase residents' participation in local government. The Local Government Act also introduced a new form of territorial local authority, the district council, established to serve areas of mixed rural and urban character.

The Local Government Commission was charged with the task of constituting the regional bodies, of which there were 22 (2 regional councils and 20 united councils) by 1983. As of 1996 there were also 93 county councils, 9 district councils, and 3 town districts. By 1999, a new administrative structure was instituted that divided local government into 17 regions that were

subdivided into 57 districts and 16 cities. In 2003, there were 12 regional councils, 59 district councils and 15 city councils. Most units of local government are elected at three-year intervals. In boroughs the mayor is elected directly by the voters, while the council itself elects the chairman of a county council.

## 16 JUDICIAL SYSTEM

In most civil and criminal cases heard first in district courts (known until 1980 as magistrates' courts), there is the right of appeal to the High Court (formerly Supreme Court), which is usually the court of first hearing for cases where a major crime or an important civil action is involved. Family courts were established in 1980 to hear cases involving domestic issues. The highest court, the Court of Appeal, exercises an appellate jurisdiction only. Its decisions are final unless leave is granted to appeal to the Privy Council in London. There are also several special courts, such as the Arbitration Court, the Maori Land Court, and the Children and Young Persons Court. The judicial system is based on British common law. The judiciary is independent and impartial. The judicial system provides citizens with a fair and efficient judicial process.

The law prohibits arbitrary interference with privacy, family, home, or correspondence and the authorities respect these provisions in practice.

## 17 ARMED FORCES

In 2002 the active armed forces numbered 8,710 including 1,280 women. Reservists were estimated at 5,870. The army had a full-time regular force of 4,530; the navy had 1,980; and the air force numbered 2,200. Army forces included two infantry battalions, one artillery regiment, one engineer regiment, and two special forces squadrons. The navy had three frigates and four patrol and coastal combatants. The air force was equipped with six combat aircraft and no armed helicopters. New Zealand forces participate in peacekeeping and other UN missions in 11 countries. Defense expenditures were estimated at 515.6 million in 2002, or 1.2% of GDP.

## 18 INTERNATIONAL COOPERATION

A charter member of the UN, New Zealand joined the world organization on 24 October 1945. It participates in ESCAP and all the nonregional specialized agencies. In addition, New Zealand belongs to the Asian Development Bank, Colombo Plan, Commonwealth of Nations, OECD, South Pacific Commission, and South Pacific Forum, among other intergovernmental organizations. A member of the WTO and signatory to the Law of the Sea and the South Pacific Regional Trade and Cooperation Agreement, New Zealand also forms part of the ANZUS alliance with Australia and the United States; in 1986, however, following New Zealand's decision to ban US nuclear-armed or nuclear-powered ships from its ports, the United States renounced its ANZUS treaty commitments to New Zealand.

## 19 ECONOMY

New Zealand's economy has traditionally been based on pastoral farming. The last decades, however, have seen the beginnings of heavy industry, and there has been a large expansion in light industries such as plastics, textiles, and footwear, mostly to supply the home market. In recent years there has been a trend toward the development of resource-based industries, and the forest industry has greatly expanded. Pulp, log, and paper products are now a major earner of overseas exchange. As of 1995, 10% of the work force was employed in agriculture, hunting, forestry, and fishing; 25% in industry; and 65% in services. In 2001, agricultural production amounted to approximately 8% of GDP, industry 23%, and services 69%.

For financing imports both of raw materials and of a high proportion of manufactured goods, New Zealand has

traditionally relied on the receipts from the export of its restricted range of primary products (mainly wool, meat, and dairy products). This dependence on the income from so few commodities makes the economy vulnerable to fluctuations in their world prices, and sharp drops in these prices, as have occurred periodically, inevitably result in the restriction of imports or a substantial trade deficit. Other important industries in 2002 were the manufacture of machinery and transportation equipment, banking and insurance, and eco-tourism.

The economy has been subjected to two major crises in last 30 years: first, in 1968, the loss of the protected market for its agricultural goods when the United Kingdom joined the European Community (now the European Union), and second, inflation and stagnation in the early 1980s in the aftermath of the second international oil shock. The first produced a government-led program to transform the economy into an independent, more industrialized competitor in the world market, and the second, a neoliberal transformation of the economy combining a strict monetary regime to eliminate inflation, liberalization of the country's trade and investment regimes, and deregulation and privatization of the domestic economy. The liberalization and stabilization program transformed New Zealand from a heavily protected and regulated economy to one of the most market-oriented and open in the world. By 1996, New Zealand was posting annual growth rates in real GDP of 5–6%, surpluses in the government's budget, and a per capita GDP in line with those of the big European economies. Subsequent disruptions, however, resulting in declines in industrial production and per capita income, have raised concerns that the gap is no longer closing. The Asian financial crisis erupting in the second half of 1997 helped lower annual growth to 3.1% in 1997, and, combined with a summer drought, push the economy into recession in the first half of 1998. The economy recovered sufficiently to register a positive 1.9% growth for 1998, and 3.5% in 1999. Despite increased fuel cost that sent inflation to 4% in 2000 (outside the government's target range of 0 to 3%), real GDP growth improved to 4.6%. The global slowdown in early 2001, exacerbated by the effects of the 11 September 2001 terrorist attacks on the United States, had a relatively mild impact on New Zealand's economy, reducing real GDP growth to 2.3%. While inflation moderated to 2.1% the government continued operating in the black with an operating surplus and positive returns from state enterprises, although the budget surplus has been steadily declining from 2.6% of GDP in 1999/98 to 0.8% of GDP in 2000/01. Part of the operating surplus fed the first contribution in 2002 to the New Zealand Superannuation (NZS) Fund established in 2001. The NZS is an investment fund designed to generate money to assure that public pensions are covered for the country's aging population. The current account deficit, a combination of a small merchandise trade surplus and a large deficit on investment income, fell from 7% of GDP to 4.8% of GDP in 2001. Gross public debt fell from 36% of GDP in 1999 to 30% of GDP in 2002, in line with the target set by government planners.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 New Zealand's gross domestic product (GDP) was estimated at \$75.4 billion. The per capita GDP was estimated at \$19,500. The annual growth rate of GDP was estimated at 3.1%. The average inflation rate in 2001 was 2.6%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 8% of GDP, industry 23%, and services 69%.

According to the United Nations, in 2000 remittances from citizens working abroad totaled \$215.3 million or about \$60 per

capita and accounted for approximately 0.4% of GDP. Worker remittances in 2001 totaled \$216.3 million.

The World Bank reports that in 2000 per capita household consumption (in constant 1995 US dollars) was \$10,548. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. Approximately 21% of household consumption was spent on food, 12% on fuel, 3% on health care, and 2% on education. It was estimated that for the same period private consumption grew at an annual rate of 1%.

## 21 LABOR

In 2001, employment amounted to an estimated 1.92 million. Services accounted for 65% of employment, with industry accounting for 25% and agriculture the remaining 10% of the labor force. Before 1978, New Zealand had maintained virtually full employment, but the oil crisis had a major impact, and from 1978, unemployment climbed from about 3% to 10.6% in 1991. After peaking in 1991–92, unemployment was reduced to 5.5% by 2001.

The Industrial Relations Act of 1973 restructured New Zealand's industrial legislation and institutions, setting up three bodies to aid in the settlement of disputes: the Industrial Mediation Service, the Industrial Conciliation Service, and the Industrial Commission. The Commission is involved only if conciliation fails, and its arbitration is binding. The 1973 act also provides for the right to strike, although there are restrictions once a dispute is before conciliation. Higher unemployment and lower welfare benefits created a decreased willingness for workers to strike. In 1984, there were 364 work stoppages; by 1990 that number had fallen to 137, and in 1999 to 35. Legislation enacted in 1991 prohibits strikes designed to force an employer to become a party to a multi-company contract. Compulsory unionization during the 1936–61 period resulted in the creation of many small unions; the law was modified in 1962, and abolished in 1991 with the Employment Contracts Act, which radically deregulated the labor market and put the employer-employee relationship on a civil contract basis. In 1987, the private sector Federation of Labor and the public sector Combined State Unions merged to form the New Zealand Council of Trade Unions (NZCTU). A smaller federation, the New Zealand Trade Union Federation, was formed in 1993.

In 2001, the minimum wage rate was \$3.20 per hour for workers over 18 years of age. The minimum for those between 16 and 18 years old is 60% of the adult minimum. Employment may not interfere with education. By law, employees in most occupations have a 40-hour workweek, eight hours a day, five days a week. Excess hours are generally paid at overtime rates. Legislation or industrial contracts secure sick leave, paid holidays, and accident compensation for all workers. The safety, health and welfare benefits, holiday provisions, hours of work, and overtime of all workers are closely regulated.

## 22 AGRICULTURE

Over 14% of the total land area of New Zealand is devoted to agriculture. Capital investment in land improvement and mechanization has contributed greatly to the steady growth in agricultural production without an increase in the farm labor force. About 76,000 tractors and 3,100 combines were in use in 1998. Agriculture contributes about 8% to GDP and 11% of exports in 2001.

Cereal cultivation, more than 90% of which takes place on the South Island plains and downlands, fluctuates in terms of both acreage and size of crop. In 1999, areas harvested to wheat totaled an estimated 53,000 ha (131,000 acres), with a yield of 290,000 tons; 11,000 ha (27,000 acres) yielded 40,000 tons of

oats; and 80,000 ha (198,000 acres) yielded 400,000 tons of barley.

New Zealand is largely self-sufficient in horticultural products and exports some of these, such as apples and honey. In 1999, 988,000 tons of fresh fruit (excluding melons) were produced. The kiwi, a fruit that has become popular in the United States, Japan, and elsewhere, represented 90% of horticultural exports. In 1985, New Zealand accounted for more than half the world's supply of kiwi fruit. Since the mid-1980s, New Zealand has lost some of its market share in the production of kiwi, as other countries began or expanded their own domestic kiwi production—by the late 1990s, New Zealand accounted for one-third of world kiwi supply. Due to unfavorable weather, kiwi production in 1999 was estimated at 221,000 tons, down 10% from 1998. In 1999, New Zealand produced 536,000 tons of apples, 57,000 tons of peas, and 170,000 tons of corn. About 70% of apple exports is derived from the Braeburn, Gala, and Royal Gala varieties developed in New Zealand. In 2001, exports of 261,861 tons of apples were valued at \$134 million.

The Department of Agriculture and the Department of Scientific and Industrial Research provide farmers and horticulturalists with advice and encouragement on new farming methods, elimination of plant diseases, and improvement of unproductive land. Government subsidies have assisted in improving and bringing under cultivation marginal and hitherto unused scrub land. However, since the mid-1980s there has been a shift in government policy, and many subsidies to agriculture have been removed or phased out.

### 23 ANIMAL HUSBANDRY

Relatively warm temperatures, combined with ample rainfall, make New Zealand one of the world's richest pastoral areas. In 1996, pastures occupied 13.7 million ha (33.9 million acres), or 51% of the total land area. Even in the south, where winters may be quite severe, animals need not be housed. In 2001, there were 45.7 million sheep, 9.3 million head of cattle (half of which are dairy cattle), and about 355,000 pigs. Dairying and beef production are concentrated in the North Island, and sheep farming is more evenly distributed between the North and South islands. The natural tussock land in the mountainous areas of the South Island and the surface-sown grassland in the less steep parts of the North Island are used to raise sheep for wool. The extensive use of aircraft for the spread of top dressing has greatly improved hill pasture, most of which is not readily accessible to normal top dressing with fertilizers. Some 24,000 farms stock mainly sheep, occupying over 11 million ha (27.1 million acres), with an average flock of 1,800 head. Although fine-woolen Merino sheep have grazed in New Zealand since the 1830s, most of the clip nowadays comes from Romney sheep, whose coarser, thicker wool is ideal for carpet-making and knitting yarns.

Products of animal origin account for more than half the total value of New Zealand's exports, with meat industry products accounting for about 18% of exports. New Zealand is the world's largest exporter of mutton and lamb, second largest exporter of wool, and a leading exporter of cheese. The wool clip, which, having increased steadily since 1948, had fallen during the early 1970s, later rose to 380,700 tons in 1980/81; in 2000, 237,000 tons were produced. Exports of greasy and scoured wool were valued at NZ\$347 million in 2001. Beef and veal production in that year reached 590,000 tons; and mutton, 562,000 tons. New Zealand accounts for over 50% of the world's mutton exports.

With many more cows than people to milk them, New Zealand pioneered and relies on mechanical milking. In 1999, New Zealand had 20,000 milking machines. Whole milk is pumped through coolers to vats where it is transferred to tanker trucks. In 2001, 13,162,000 tons of fresh milk were produced. Milkfat production averages about 330,000 tons annually, of which 13%

is consumed as milk or fed to stock. The balance is used for dairy products.

Although wild goats and deer were once regarded as vermin, over the last decade, the profitability of venison and mohair exports led to the domestication of both animals. About 1.2 million deer and 227,000 goats are being farmed. Alpacas, llamas, and water buffalo have recently been imported to improve the breeding potential as well as wool and meat production.

### 24 FISHING

Although many kinds of edible fish are readily obtainable in New Zealand waters, the fishing and fish-processing industry has remained relatively small. Since the 1960s, however, the government has taken a number of measures to expand the industry and increase fishery exports. In 1978, the government began implementing a 322-km (200-mi) exclusive economic zone. During the next four years, it approved nearly 40 joint ventures with foreign companies in order to exploit the zone, which, with an area of about 1.3 million sq mi (nautical), is one of the world's largest. These waters support over 1,000 species of fish, about 100 of which have commercial significance. The volume of fish landed in New Zealand increased from 6,488 tons in 1936 to 561,324 tons in 2000. New Zealand's domestic vessels account for about 60% of the catch. With the rapid growth of fishing in the 1980s, about 75% of the catch is exported (with a value of \$665.7 million in 2000), mostly to the United States, Japan, and Australia. The principal finfish species caught included blue grenadier, mackerel, whiting, snoek, and orange roughy. In addition, New Zealand fishermen in 2000 landed 20,952 tons of squid and 15,319 tons of New Zealand dredge. The most valuable part of the catch is made of orange roughy, hoki, squid, and rock lobster. Oyster and mussel aquaculture are well established; scallop, salmon, and abalone farming are developing. In 2000, exports of fish and shellfish totaled NZ\$84 million; Australia, Japan, and the United States were the major markets.

### 25 FORESTRY

At the time Europeans began coming to New Zealand, about 70% of the land was forest. The major indigenous tree species are beech, kauri, rimu, taraire, and tawa. This proportion has been reduced by settlement, farming, and exploitation to about 29%. Much of the remaining natural forest is reserved in national parks, or as protected forest on mountain land. About 5% of New Zealand is covered by planted forests, which provides a large and sustainable volume of wood. The Ministry of Agriculture and Forestry (MAF) estimated the planted forest area at 1.8 million ha (4.4 million acres) in 2001, with 71% on North Island and 29% on South Island.

For wood production, New Zealand relies heavily on its planted forests of quick-growing exotic species, mainly radiata pine, which can be harvested every 25–30 years. These provide over 90% of the wood for production of sawn timber, wood panel products, pulp, paper, and paperboard. Due to these replanting efforts and privatization of forest lands, exports of softwood logs have skyrocketed since the early 1980s. Exports of forestry products in 2001 amounted to \$1.67 billion. Most of New Zealand's softwood logs and lumber go to Australia, the ROK, and Japan. Forestry accounts for about 4% of GDP. Imports of forest products consist mostly of specialty papers.

The MAF put roundwood production in 2001 at an estimated 19,418,000 cu m (685.5 million cu ft). Softwood logs for export and lumber production that year were estimated at 6.9 million and 3.9 million cu m (137.7 million cu ft), respectively. Plywood production for 2001 was estimated at 190,000 cu m (6.7 million cu ft).

The Forestry Corporation (FC) was established as a state-owned enterprise in April 1991. The FC manages 188,000 ha

(465,000 acres) of forest in the Bay of Plenty on North Island. The FC consists of three principal forests: Rotoehu Forest, Whakarewarewa Forest, and the Kaingaroa Forest in the Rotorua district that covers 149,735 ha (370,001 acres) and is claimed to be the largest planted forest in the world. In 1996, the government sold FC for NZ\$2 billion to a joint venture consortium, which planned to invest NZ\$260 million over the next several years.

## 26 MINING

Because of its diverse geology and dynamic tectonic history, New Zealand had a wide variety of potentially profitable mineral deposits, although few have been extensively exploited. Mining was a leading industry in 2002, and gold continued to dominate the mining sector. The mining industry contributed 1% to GDP in 2001, with another 2%–3% provided by the mineral processing sector. The main exports were ironsand, halloysite clay (for the manufacture of high-quality ceramics), limestone, cement, salt (by solar evaporation of seawater), sulfur, and pumice. Most output of industrial minerals was for domestic use, because the distances to overseas markets limited most exports to the high-value commodities or products with unique applications or specifications.

Gold production for 2001 was 10,000 kg, from two large hard-rock mines—the Martha Hill, at the base of the Coromandel Peninsula, at Waihi, southeast of Auckland, and the Macraes, north of Dunedin—as well as alluvial gold from three dredging operations on South Island. The Macraes Mine, which accounted for more than 50% of the country's production, received approval for expansion of throughput to 4.5 million tons per year, having successfully commissioned pressure oxidation autoclaves for treating refractory ores; it was to absorb 65,000 tons per year of concentrate from the new Globe-Progress Mine, which was planned to mill 1 million tons per year. In addition, the Reefton Goldfield, which closed in 1951, was expected to pour gold again in 2002.

In 2001, 2.7 million tons of ironsand (titaniferous magnetite) was extracted and exported to Japan. Iron ore in the form of titanomagnetite-rich sand derived from the coastal erosion of the Mount Taranaki volcanics was mined from beach and dune sands, concentrated at two sites along the western coast of North Island. Although the existence of large quantities of iron-bearing sands has been known for more than a century, the steelmaking industry was not able to exploit them until the late 1960s.

Silver mine output in 2001 was 23,000 kg. Output of building materials in 2001 included 7.5 million tons of sand and gravel for building aggregate, and 550,000 tons of limestone for roads. New Zealand also produced bentonite, clays for brick and tile, diatomaceous earth (which included zeolite), dolomite, kaolinite (pottery), lime, marl, marble, nitrogen, perlite (which included zeolite), quartzite, rock for harbor work, salt, sand and gravel (including silica [glass] sand and amorphous silica), serpentinite, and dimension stone. Considerable potential for platinum and platinum-group metals from hard-rock deposits and alluvial concentrations existed, the most promising area being the Longwood Range, in western Southland. Uranium-bearing minerals have been located on the South Island.

State-owned "Crown minerals," based on the British legal system, were owned and regulated by the New Zealand Crown Minerals Act 1991 and the Crown Minerals Amendment Act (No. 2), passed in 1997. Crown-owned minerals included all naturally occurring gold, silver, and uranium; substantial amounts of coal; other metallic and nonmetallic minerals and aggregates; and all petroleum. Minerals not designated as Crown owned were privately owned. New Zealand has not enacted native title legislation to gain access to Maori lands, claims for which were handled through the Treaty of Waitangi Tribunal.

Gold was discovered in New Zealand in the early 19th century when European sealers and whalers were first exploring the country. The mining industry began in 1852, upon the discovery of hard-rock gold on the Coromandel region, North Island, by European settlers. Gold deposits were discovered on the South Island in 1861. By 1870, copper, iron, lead, and silver deposits had been discovered and worked, and deposits of antimony, arsenic, chromium, zinc, and other minerals had been located. After World War II, industrial minerals, aggregate, and stone production grew steadily, coal mining fluctuated, and gold output declined. Extensive exploration in the 1950s and 1960s found natural gas and gas condensate, ironsand, and geothermal energy.

## 27 ENERGY AND POWER

New Zealand's per capita consumption of electricity is among the highest in the world. A network of transmission lines links all major power stations, bringing electricity to 99% of the population. Future hydroelectric potential is limited, however, and thermal power based primarily on coal and natural gas is becoming increasingly important. Total installed generating capacity was 8,512,000 kW in 2001. In 2000, net electricity generation was 37.8 billion kWh, of which 26.6% came from fossil fuels, 66.4% from hydropower, and 7% from other renewable sources. Consumption of electricity in 2000 was 33.3 billion kWh. The geothermal power station at Wairakei has been operating since 1958, while a second at Ohaaki was commissioned in 1989.

In 1995, petroleum accounted for 43% of New Zealand's primary energy consumption; natural gas, 30%; coal, 17%; and hydroelectricity, 10%. The Kapuni natural gas field, discovered in 1959, began production in 1970; the Maui offshore natural gas and condensate field, one of the largest in the world, began production in 1979. Oil and gas exploration and development of indigenous resources continue to be stressed, in efforts to reduce dependence on imports. Crude oil and natural gas liquid production levels in 1998 were 47,000 barrels per day and 4.8 million cu m, respectively. Proven reserves of natural gas total 100 billion cu m (3.5 trillion cu ft); oil reserves, 200 million barrels. Coal mining began in the 1850s; over the last 40 years, coal's contribution to the energy supply has fallen from 50% to about 11%. In the 1990s, new coal mining activity was undertaken to meet increased demands for electricity and steel production. In 2002 coal production reached its highest level in New Zealand history (4 million tons). Coal reserves are estimated at 129 million tons, of which 85% is located in the untapped lignite fields in Southland.

## 28 INDUSTRY

Industrial production has increased rapidly since the end of World War II, stimulated by intermittent import controls that often enabled domestic industry to increase output without competition. A most significant feature of New Zealand industry in recent decades has been the establishment of heavy industry with Commonwealth and US capital. Plants include metal and petroleum processing, motor vehicle assembly, textiles and footwear, and a wide range of consumer appliances. The New Zealand Steel company manufactures billet slabs and ingots using domestically produced iron sands; Pacific Steel, which processes scrap metal, uses billets from New Zealand Steel. In 1995, crude steel production totaled 800,000 tons. The Tiwai Point aluminum smelter, operated by an Australian-Japanese consortium, has an annual capacity of 244,000 tons. New Zealand's aluminum smelter production amounted to 280,296 tons in 1995. The small but growing electronics industry produces consumer goods as well as commercial products, such as digital gasoline pumps. Wool-based industries have traditionally been an important part of the economy, notably wool milling, the oldest sector of the textile industry. Other significant industrial areas include a

diverse food-processing sector, tanneries, sheet glass, rubber, and plastics.

Progressive withdrawal of government support beginning in 1985 led manufacturing to decline from 1987–89 due to a more competitive environment. However, after cutting overcapacity, many firms increased productivity and were ultimately in a stronger financial position. Industrial output has recovered since 1990. Manufacturing's contribution to GDP (at current prices) rose by 2.3% annually between 1988 and 1998.

## 29 SCIENCE AND TECHNOLOGY

Most scientific research in New Zealand is funded by the government, principally by the Department of Scientific and Industrial Research (DSIR) and the Ministry of Agriculture and Fisheries. The Cawthron Institute at Nelson, established in 1919, conducts research in chemistry, biology, and environmental and marine studies. New Zealand has 20 other institutes conducting research in agriculture, veterinary science, medicine, and general sciences and 17 universities and technical institutes offering degrees in basic and applied sciences. In 1987–97, science and engineering students accounted for 20% of college and university enrollments. Among New Zealand's 42 scientific and technical learned societies, the most prominent is the Royal Society of New Zealand, founded in 1867.

In 1987–97, research and development expenditures totaled 1.04% of GNP; 1,663 scientists and engineers and 809 technicians per million people were engaged in research and development.

## 30 DOMESTIC TRADE

New Zealand has developed an open market economy over the past two decades, as the government has given up control of many areas of domestic economic regulation, including the elimination of agriculture subsidies and controls on prices and wages. The trend in retail establishments is moving from small shops to supermarkets and shopping centers. Several retail establishments have converted to self-service operations. There is very little retail mail-order trade. Automobiles and large appliances are increasingly being sold on the installment (hire-purchase) plan. General and trade papers, regional publications, and television and radio are used extensively as advertising media.

Business hours vary, especially since the introduction of staggered work hours, known as glide time. Offices open as early as 7:30 AM and remain open until about 6 PM. Stores may be open at any time between 7 AM and 9 PM, Monday through Saturday. Saturday trading is becoming more prevalent at popular beach resorts near the larger urban areas. Sunday trading is confined to "dairy shops," permitted by law to sell a restricted range of foodstuffs. All offices and banks are closed on Saturdays, Sundays, and statutory holidays.

## 31 FOREIGN TRADE

New Zealand's trade per capita and as a percentage of GNP is among the highest in the world. In 1974/75, more than 70% of export receipts derived from meat, dairy products, and wool; but this figure was down to 56% by 1984/85 and was only 32% in 1994/95, as manufactured goods and forest products have taken an increasing share of the total. Imports consist mainly of manufactured goods, petroleum and petroleum products, and raw materials for industry. Foreign trade more than doubled in value between 1976 and 1981 and again from 1981 to 1985. Between 1992/93 and 1995/96, the value of trade increased by nearly 16%. However, 1996 would prove to be a peak for New Zealand's foreign trade; it has not quite reached that level since.

New Zealand produces a large amount of food, including meat, dairy products, fruits and nuts, and fish. Other important exports include wool, aluminum, wood, and starch. The top 10 exports are as follows:

	% OF COUNTRY TOTAL
Meat	12.6
Milk and cream	8.3
Glues	4.2
Aluminum	3.9
Butter	3.8
Cheese and curd	3.7
Fruit and nuts	3.7
Wool	3.1
Fish	3.0
Wood in the rough or squared	2.5

In 2000 New Zealand's imports were distributed among the following categories:

Consumer goods	18.4%
Food	6.9%
Fuels	10.1%
Industrial supplies	24.7%
Machinery	22.9%
Transportation	16.7%
Other	0.3%

Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
Australia	2,708	3,078	-370
United States	1,930	2,418	-488
Japan	1,789	1,559	230
China (inc. Hong Kong)	769	948	-179
United Kingdom	711	531	180
Korea	596	306	290
Germany	313	591	-278
Malaysia	272	361	-89
Italy	223	277	-54
Singapore	221	232	-11

## 32 BALANCE OF PAYMENTS

Since New Zealand's foreign trade depends on agricultural and livestock products, and since prices for these commodities are volatile, New Zealand's balance of payments may swing sharply from one year to the next. Generally, deficits outweighed surpluses during the 1950s and 1960s. Consistent surpluses were recorded between 1969 and 1973, when international reserves nearly quadrupled. However, a poor trade performance in 1974, largely attributable to increased oil import costs, contributed to a large current accounts deficit. Since then, New Zealand has continued to register payments deficits, which have been partially offset by compensatory financing, including overseas loans.

The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of New Zealand's exports was \$14.2 billion while imports totaled \$12.5 billion resulting in a trade surplus of \$1.7 billion.

The International Monetary Fund (IMF) reports that in 2001 New Zealand had exports of goods totaling \$13.9 billion and imports totaling \$12.5 billion. The services credit totaled \$4.3 billion and debit \$4.2 billion. The following table summarizes New Zealand's balance of payments as reported by the IMF for 2001 in millions of US dollars.

<b>Current Account</b>	<b>-1,403</b>
Balance on goods	1,474
Balance on services	127
Balance on income	-3,145
Current transfers	141
<b>Capital Account</b>	<b>439</b>
<b>Financial Account</b>	<b>1,927</b>
Direct investment abroad	-297
Direct investment in New Zealand	1,731
Portfolio investment assets	-1,146
Portfolio investment liabilities	-355
Other investment assets	-3,297
Other investment liabilities	5,291
<b>Net Errors and Omissions</b>	<b>-1,150</b>
<b>Reserves and Related Items</b>	<b>187</b>

### 33 BANKING AND SECURITIES

The Reserve Bank of New Zealand, established in 1933, exercises control over monetary circulation and credit. It is the bank of issue, handles all central government banking transactions, manages the public debt, and administers exchange control regulations. The Reserve Bank of New Zealand Amendment Act (1973) empowers the Bank to regulate credit from all sources and requires it to make loans (as the minister of finance may determine) in order to ensure continued full employment.

New Zealand's financial services sector is dominated by the commercial banks, leaving only a minor role for non-bank finance companies and savings institutions. In part this reflects the impact of deregulation since the mid-1980s. Before 1984, the financial sector was highly segmented with tight government controls on what different institutions could offer. (For example, only trading banks could offer checking accounts to clients.) The easing of regulations means that there are now only two formal categories of financial institution: registered banks and other financial institutions. However, both can offer a wide range of financial and banking services.

In 2001, the government of New Zealand dedicated NZ\$78 million (US\$ 63 million) to the establishment of a new People's Bank, to be run by the New Zealand Post and offer personal banking services, but not corporate or commercial banking. The fees of the People's Bank were expected to be 30% lower than those at other banks.

To be defined as a bank, a financial institution must register with the central Reserve Bank and meet a range of eligibility criteria, such as minimum capital adequacy, experience in the financial intermediation industry, and a commitment to stability of the financial system. The number of registered banks peaked at 24 in 1994, but in 2000 there were 18.

A number of bank mergers has increased the concentration of total banking assets in foreign ownership. Over 95% of total banking assets are foreign-owned, compared with 65% in 1990. The New Zealand banking industry is increasingly influenced by developments in Australia, since Australian banking groups control over two-thirds of banking assets in New Zealand; this share is unlikely to increase further, with the announcement in April 1996 of a conditional buy-out by Westpac Banking Corp. of Trust Bank, New Zealand's last domestically owned bank with a national branch network. The Post Office Savings Bank (established in 1865) has about 1,270 offices and agencies throughout New Zealand.

New Zealand is advantageously placed, since its trading day opens before the US market closes and before the Asian and Australian markets open. The main functions of the New Zealand Exchange Limited (NZX) are to provide an orderly market for the trading and transfer of securities, to protect investors' interests, and to ensure that the market is fully informed. As of 2003, there were 196 companies listing 213 securities worth NZ\$42.3 billion on the NZX. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$7.4 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$43.4 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 5.76%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 4.75%.

The Stock Exchange Association of New Zealand, the forerunner to the New Zealand Stock Exchange (NZSE), was founded in 1915. In May 2003, the NZSE became the New Zealand Exchange Limited (NZX). The stock exchanges in Auckland, Wellington, Christchurch, Dunedin, and Invercargill are members of the NZX, with headquarters in Wellington. Official listing is granted to companies that comply with the Exchange's requirements. These do not impose qualifications as to share capital but do provide that the company must be of sufficient magnitude and its shareholding sufficiently well distributed to ensure a free market for its shares. Subject to the recommendation and approval of the stock exchange nearest to the registered offices, companies may secure unofficial listing for their shares. All transactions in shares quoted in the unofficial list are subject to special brokerage rates.

### 34 INSURANCE

The government provides insurance through the Government Life Insurance Office and the State Insurance Office, which undertakes accident, fire, and marine insurance.

New Zealand has one of the world's highest ratios of value of life insurance policies to national income. Life insurance offices mobilize long-term household savings in conjunction with the provision of life insurance coverage, and are also closely associated with the management of pension and superannuation funds. The long-term contractual nature of household-sector savings through life insurance offices gives them the capacity to acquire long-term government and corporate debt instruments and to take equity positions in commercial property and company shares. In addition, they may provide mortgage financing to policy holders. General insurance companies have substantial funds available for investment to cover claims outstanding and unexpired risks. These funds are available on a short-term basis and are invested mainly in marketable securities and liquid assets. New Zealand has a no-fault compensation scheme for personal injury, established in 1992 under the Accident Rehabilitation and Compensation Insurance Act of 1992. All people, including visitors are eligible for the benefits. Under the same act, however, the right to sue for compensation was abolished.

Like its Australian counterpart, the New Zealand insurance market is one of the most competitive in the world, with some 50 general insurers and the same number of life insurers. The top five general insurers accounted for more than 70% of the total premiums written in 1997; the same pattern exists for life business.

### 35 PUBLIC FINANCE

In 1994, in response to a decade of economic reforms that have opened the economy to foreign investment and triggered strong economic growth, the budget produced a surplus for the first time

in 50 years. In 1995, public debt service dropped to 1.9% of GDP and 12% of expenditures. External debt accounted for 23% of total government debt. Interest on external debt equaled 3.5% of exports of goods and services plus investment income. The surpluses continued in 1996, but showed signs of weakness in 1997 as forecasts of slower economic growth and uncertainty over the intentions of the newly elected government prompted a drop in business confidence. Nevertheless, in June of 1997, the new government proposed a three-year program of increased spending on social programs and postponed a round of promised tax cuts. As a result of privatization and restructuring, New Zealand now has one of the most open economies in the world.

The US Central Intelligence Agency (CIA) estimates that in 2000/2001 New Zealand's central government took in revenues of approximately \$16.7 billion and had expenditures of \$16.6 billion. Overall, the government registered a surplus of approximately \$100 million. External debt totaled \$31.3 billion.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

REVENUE AND GRANTS	100.0%	16,700
Tax revenue	93.7%	15,646
Non-tax revenue	6.2%	1,027
Capital revenue	0.2%	27
EXPENDITURES	100.0%	16,600
General public services	4.6%	757
Defense	3.7%	612
Public order and safety	4.5%	739
Education	16.5%	2,731
Health	17.7%	2,943
Social security	37.9%	6,293
Housing and community amenities	0.1%	22
Recreation, cultural, and religious affairs	1.1%	190
Economic affairs and services	6.3%	1,042
Other expenditures	0.6%	105
Interest payments	7.0%	1,166

### 36 TAXATION

Earnings are taxed in one combined general income and social security tax, which for wage and salary earners is deducted by the employer on a pay-as-you-earn basis (called PAYE), with annual adjustments. As of 2002/2003, effective personal income tax rates, that is, including low-income rebates, were 15% on taxable income up to \$9,500; 21% for income between \$9,501 and \$38,000; 33% for income between \$38,000 and \$60,000, and 39% for income above \$60,000. The system of rebates includes, in addition to standard deductions for the taxpayer and dependents, rebates for housekeeping or child-care expenses, and tuition. There are also rebates for certain dividend and interest income, life insurance premiums, and contributions to retirement funds. The income tax rate for corporations, including subsidiaries of overseas corporations, is 33%, applied to net income after certain deductions. There are tax incentives for exporters. On 1 October 1986, the government introduced a value-added tax (VAT), called the goods and services tax or GST, set at 10%, but later raised to 12.5%. Exported goods, goods held overseas, services in connection with temporary imports and exported goods are zero-rated for the GST. In 2003, the government is planning to zero-rate financial services. Excise taxes are imposed on motor vehicles, gasoline, tobacco products, and alcoholic beverages. There is a fringe benefits tax (FBT) payable quarterly by employers on the value of fringe benefits provided to employees and shareholders. Employers can choose to pay a flat rate of 64% or fully or partially attribute the value

of the fringe benefits to the individual's income and pay at the appropriate rate. Capital gains are charged as the same rate as other income. The government ratified the Kyoto Protocol on climate change in December 2002, and plans to introduce an appropriate carbon tax.

Local authorities are largely dependent on property taxes. There are three main systems of rating: (1) capital (land improvements) value; (2) annual value; (3) unimproved value. The actual amount of the rate is fixed by each local authority.

### 37 CUSTOMS AND DUTIES

Customs taxation is based principally on an ad valorem scale, but specific duties are applied to some goods. Rates of duty payable depend on the country of origin. With the exception of some automotive products, preferential rate scales for the United Kingdom were phased out by 1 July 1977, as a result of that nation's entry into the European Community. In 1978, preferential rates for Commonwealth countries were also discontinued. Two years earlier, New Zealand had introduced a revised generalized system of preferences (GSP) favoring the developing countries. Tariffs range from 0% to 30%. New Zealand hopes to reduce all tariffs to 0%–15% after the year 2000. There is also a goods and services tax (GST) of 12.5% that applies to CIF (cost, insurance, and freight) value.

### 38 FOREIGN INVESTMENT

Investment in New Zealand's economy by overseas companies through New Zealand subsidiaries has increased steadily, with the largest contribution from Australian sources, outstripping both US and UK sources in recent years. At the end of 1991, total foreign direct investment (FDI) in New Zealand was \$11 billion whereas as of 31 March 2001 total FDI stock was \$49.3 billion. FDI from Australia rose from \$4.8 billion to \$17.2 billion in the period 1991 to 2001; from the United States, \$2.8 billion to \$7 billion; and from the United Kingdom, \$1.9 billion to \$6.7 billion. In 2000/01, FDI flow peaked at \$7.7 billion, more than double the rates in the previous four years: \$2.9 billion in 1997, \$3.4 billion in 1998, \$1.78 billion in 1999, and \$2.96 billion in 2000. Foreign portfolio investment has been more volatile. A small net outflow of \$285 million in 1997 was followed by two years of positive inflow (\$927 million in 1998 and \$747 million in 1999), and by then a large outflow of \$6 billion in 2000. In 2001, according to government's statistics, portfolio investment was a record \$3.89 billion.

In contrast, the stock of FDI held by New Zealanders in other parts of the world totaled \$14.7 billion as of 31 March 2001.

The legal framework for FDI in New Zealand is laid out in the Overseas Investment Regulations of 1995, administered by the Overseas Investment Commission (OIC). Under the regulations an overseas persons must obtain consent to acquire 25% or more any New Zealand business, property worth more than \$30 million; acquisition of land is also restricted.

### 39 ECONOMIC DEVELOPMENT

Economic policy is implemented through taxation, Reserve Bank interest rates, price and monopoly controls, and import and export licensing. From 1958 to about 1975, import controls, tightened in 1961 and again in 1973, were employed to correct deficits in the balance of payments. Then in the mid-1970s the government began an industrial restructuring program focused on certain industries, such as textiles, footwear, automobiles, and electronics, whose domestic prices were much higher than those of foreign substitutes, with the aim of reducing the protection granted such products. In 1977, the New Zealand Planning Council was charged with advising the government on economic, social and cultural planning, and on the coordination of planning. In 1978 the Economic Monitoring Group was established to make reports on economic trends working

independently of the Planning Council. The government gradually liberalized import controls, and by 1981 about 79% of private imports to New Zealand were exempt from licensing.

In June 1982, in an effort to control mounting inflation, the government announced a freeze on wages, prices, rents, and dividends. The freeze was lifted in March 1984, temporarily reimposed by a new Labour government, and then terminated late in 1984. In March 1985, the New Zealand dollar was floated as part of a broad-based deregulation of the economy, and the Reserve Bank has not intervened since. The termination of the freeze, combined with a devaluation of the dollar, led to a resumption of high inflation, which lasted until the crash of financial markets in October 1987. From this point the government began implementing a strict monetary policy designed to achieve a stable price level. The immediate cost was a sharp rise in unemployment (from 7% to 10.4%), but by 1991 inflation had been brought down to the low levels that have prevailed since. The target set by the government is a range between 0% and 3% per year. For the year ending September 1991, inflation was 2.2%. The average inflation rate for the five years 1997 to 2001 was 1.5%, with a low of negative 0.4% in 1999 and a high of 3.2% in 2001. Also from the mid-1980s, the New Zealand government has embarked on a major restructuring program to transform the economy from an agrarian economy dependent on preferences in the British market to a competitive and more industrialized free market economy with per capita incomes on par with the leading industrialized nations. In the course of the last 18 years, New Zealand has been changed from being one of the most regulated in the OECD to one of the most deregulated. For most of the 1990s, the economy grew strongly, but then was slowed by the Asian financial crisis. Real growth rates dropped to 1.9% and 0.4% in 1998 and 1999, respectively. Recovery in 2000 to 4.6% growth was reduced to 2.6% in 2001 as the economy felt the impact of the global slowdown.

The Labour-Alliance government elected in November 1999 set as its goals the transformation of New Zealand into a competitive, knowledge-based economy with emphasis on the development of high skills, high employment and high value-added production. Monetary policy remains guided by the Reserve Act of 1989, which aimed at maintaining price stability. Fiscal policy is guided by the framework set out in the Fiscal Responsibility Act of 1994. Specific goals include keeping gross governmental debt below 30% of GDP, holding government expenditures to around 35% of GDP, and running an operating surplus in order to build up a fund (the New Zealand Superannuation Fund or NZS Fund) to meet the future costs of publicly provided retirement income. In 2002, the first contribution to the NZS Fund was made, equivalent to 0.5% of GDP. By 2007, it is envisioned that through the combination of contributions to the NZS and returns on its investments, accumulated assets will have risen to 8% of GDP. Fiscal policy is based on a macroeconomic approach, essentially Keynesian, which allows automatic fiscal stabilizers to operate during both the upturns and the downturns in the economy. The major foci of the government's economic policy in 2002 is building conditions for enhancing New Zealand's sustainable economic growth rate and making it back into the top half of the OECD in terms of per capita income. The government's Growth and Innovation Framework, released in February 2002, identified several key policy areas: an open, competitive microeconomy, macroeconomic stability, and improving skills and talents, innovation and global connectedness. The main barriers to New Zealand's economic development are largely external, including a vulnerability to economic and geopolitical shocks in a world in which global recovery in 2002 has been weaker than expected.

In 1984/85, New Zealand contributed a total of \$36.25 million in Official Development Assistance, \$30 million in technical and capital assistance and direct aid or loans to

developing nations, and \$6.25 million in multilateral aid through the UN, the South Pacific Commission, ADB, and other organizations. In 1995, New Zealand's ODA reached \$123 million, and then peaked at \$154 million in 1997. In 1998, under the strains of the Asian financial crisis, New Zealand's total aid declined to \$130 million, and in 2000/01 fell further to \$99.1 million. Projections are for New Zealand to increase its ODA .5% in 2002. New Zealand's international aid effort has normally amounted to between 25% and 27% of GNP. The major recipients of its development assistance are the nations of the South Pacific, who receive about 70% of New Zealand's bilateral aid and about 62% of its total overseas aid.

#### 40 SOCIAL DEVELOPMENT

A dual system of universal and social assistance is provided to all residents. Monetary benefits are paid for retirement, unemployment, sickness, and emergencies; and to widows, orphans, families, invalids, and miners. Retirement is set at age 65. Benefits are funded by ordinary government revenues and provide a percentage of the average weekly wage after tax. Benefits are taxable, but are not subject to an income test. Medical benefits include medical, hospital, and pharmaceutical payments. Work injury compensation legislation provides for dual universal and compulsory insurance systems. The plan is financed by insurance premiums paid by employers and the self-employed and by a contribution from general revenue. Compensation for temporary disability is 80% of average earnings. Maternity benefits are provided for single women for six months.

Although prohibited by law, discrimination in the workplace still exists. Women continue to earn less than men, and sexual harassment is a serious problem. Domestic violence and abuse is a growing concern, although the law penalizes spousal rape. The law broadened the definition of domestic violence to include various kinds of psychological abuse. The government provides support to victims of domestic violence.

The government respects the human rights of its citizens.

#### 41 HEALTH

For over 50 years, comprehensive health services, most of them supported by the state, have been available to all New Zealanders. About 80% of all health care costs are met by the public sector. Treatment at public hospitals is free for people ordinarily resident in New Zealand. In private hospitals, medical care is subsidized; a full range of maternity services is paid for by the Department of Health. The Health Service provides hospital treatment, maternity services from a general practitioner, most prescribed drugs, laboratory diagnostic services, dental care, routine immunizations for children under 16, and some health appliances free of charge. Partial benefits are paid for private hospitalization, X-ray services, physiotherapy, and hearing aids. Care is free for infants and preschool children. Most children are immunized free by their family doctors, but the Department of Health also has immunization clinics. In 1994, children up to one year old were vaccinated against tuberculosis, 20%; diphtheria, pertussis, and tetanus, 84%; polio, 84%; measles, 87%; and hepatitis B, 81%. In 1999, rates for DPT and measles were, respectively, 88% and 83%. In 1991, the government announced plans to expand health care resources for those in financial need.

Area health boards, formed to combine primary and hospital care facilities for each region under a single administrative unit, were established in 1985. Market-oriented health care reforms were introduced in the 1990s, but many were reversed at the end of the decade when a Labour-Alliance government came to power. The country's health care system is still mostly tax funded. Twenty-one district health boards were formed by the New Zealand Public Health and Disability Act of 2000. As of 1999, total health care expenditure was estimated at 8.1 % of GDP.

Public hospitals are managed under the supervision of the Minister of Health by local hospital boards, whose members are elected; all costs are borne by the state. Private hospital costs are partly paid for by the state; additional fees may be claimed from patients. Voluntary welfare organizations make valuable contributions to public health and are assisted by grants from public funds. Most physicians practice under the National Health Service, established by the Social Security Act of 1938, but private practice outside the scheme is permitted. As of 1999, there were an estimated 2.3 physicians and 6.2 hospital beds per 1,000 people.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 14.2 and 7.6 per 1,000 people. About 70% of married women (ages 15 to 49) were using contraceptives in 1990–95. In 2000, the total fertility rate was two children per woman living throughout her childbearing years. Infant mortality in 2000 was 6 per 1,000 live births for the total population. Life expectancy at birth was 78 years. The principal causes of death are heart disease, stroke, chronic obstructive pulmonary disease, and lung and colorectal cancer. There were about six reported cases of tuberculosis per 100,000 people in 1999.

The health of the Maori people, although greatly improved over recent decades, is still not on a par with that of the general population. Alcoholism is a significant public health problem in New Zealand. Estimates of the number of chronic alcoholics range upward from 53,000 and another 250,000 New Zealanders may be classified as excessive drinkers. Tobacco consumption in New Zealand has decreased from 2.3 kg (5.1 lbs) a year per adult in 1984–86 to 2.0 kg (4.4 lbs) in 1995. The heart disease mortality rate for those over 65 years old is higher than the average for countries defined as high human development by the World Bank. As of 1999, the number of people living with HIV/AIDS was estimated at 1,200 and deaths from AIDS that year were estimated at fewer than 100. HIV prevalence was 0.06 per 100 adults. New Zealand has adopted needle exchange programs to reduce HIV spread among IV users.

## 42 HOUSING

The number of houses and apartments built in New Zealand fell steadily from 1974/75, when 34,000 new houses and flats were built, to 1981, when only 14,300 were constructed; since then, numbers have generally risen, reaching 18,000 in 1992, when New Zealand's housing stock totaled 1,220,000. As of 2001, there were 1,359,843 private dwellings nationwide. About 80% were separate, single family houses. There were about 5,265 temporary dwellings (i.e., cabins, tents, mobile homes). The average household had 2.7 people. The average private dwelling has three bedrooms, a living room, dining room, kitchen, laundry, bathroom, toilet, and garage. Most units are built of wood and have sheet-iron or tiled roofs.

In recent decades, the government has introduced measures designed to assist the financing of housing by contractors and private owners. These include increases in the maximum housing loans advanced by the State Advances Corporation, low-interest loans for families with low incomes, and the establishment of a home savings scheme through the Post Office Savings Bank. Since 1937, the government Housing Corp. has built houses and flats for rental, with preference given to low-income families; by March 1985, 90,469 of these had been completed. Since 1951, the government has generously subsidized local authorities to provide pensioners' housing.

## 43 EDUCATION

Education in New Zealand is compulsory for 10 years for children between ages 6 and 16, although most children attend school from the age of five. The adult literacy rate is 99%. Public primary and secondary schools are administered by district education boards (or boards of governors) and school committees

(the latter elected by householders), under the authority of the Department of Education. Kindergartens are run either by private persons or by voluntary organizations with partial state subsidies. Primary education is given at primary and intermediate schools (the latter giving the last two years of primary education), and post-primary education at secondary schools, technical high schools, or consolidated schools for pupils who live in rural areas. Evening classes are given by technical and secondary schools, and adult education classes are offered by the universities. Most state schools are coeducational, but some private schools are not. New Zealand has 2,300 state primary schools and 60 privately owned schools. At the secondary level, there are 315 state-run schools and 15 private schools. As of 1999, public expenditure on education was estimated at 7.2 % of GDP.

In 1997, 357,569 students attended 2,296 primary schools, with 19,523 teachers. Student-to-teacher ratio stood at 18 to 1. In the same year, secondary schools had 433,347 students and 28,548 teachers. The pupil-teacher ratio at the primary level was 15 to 1 in 1999. In the same year, 100% of primary-school-age children were enrolled in school, while an estimated 90% of those eligible attended secondary school. Attendance at vocational schools has grown tremendously in recent years, from a total enrollment of 3,071 in 1980 to 63,658 in 1994. For children in isolated areas, there is a public Correspondence School. In some regions there are special state primary and secondary schools for Maori children, but most Maori children attend public schools. Private primary and secondary schools are operated by individuals and religious bodies. Since 1975, under new legislation, many private schools have been voluntarily integrated into the public system.

There are six universities, all operating under the aegis of the University Grants Committee and the Universities Entrance Board: the University of Auckland, University of Waikato (at Hamilton), Massey University (at Palmerston North), Victoria University of Wellington, University of Canterbury (at Christchurch), and University of Otago (at Dunedin). All universities offer courses in the arts, social sciences, commerce, and science. An agricultural institution, Lincoln College, is associated with the University of Canterbury. Law is offered at Auckland, Waikato, Victoria, Canterbury, and Otago, and medicine at Auckland and Otago. The Central Institute of Technology, near Wellington, is the leading institution in a network of 24 polytechnic institutions. There are evening classes for adults interested in continuing their education at secondary schools, institutes and community centers. University tuition fees are low, and financial assistance is given to applicants who have passed special qualifying examinations. A total of 169,656 students were enrolled in tertiary institutions in 1997, with 10,833 teaching faculty.

## 44 LIBRARIES AND MUSEUMS

The Alexander Turnbull National Library of New Zealand was founded in 1966 by the amalgamation of three state libraries and service divisions. It contains 300,000 volumes, not including material in certain special collections. Its Extension Division provides services to public and school libraries throughout the country, and the Library School offers courses for the training and certification of librarians. The two largest libraries are at the University of Auckland (1.6 million volumes) and the University of Canterbury at Christchurch (571,000). The largest public libraries are in Auckland, Christchurch, Dunedin, and Wellington.

Outstanding art galleries and museums are the Auckland City Art Gallery (European and New Zealand paintings); the Canterbury Museum, Christchurch (ornithology, anthropology, and history); the Dunedin Public Art Gallery (paintings, period furniture, and china); the Otago Museum, Dunedin

(ethnography, classical antiquities, ceramics); and the National Museum, Wellington (botany, ethnology, history). The nation's largest collection of Maori and Polynesian artifacts is found in the War Memorial Museum in Auckland. The Auckland Museum, founded in 1852, also has a fine collection of Maori artifacts. There is also a Museum of Puppets in Auckland and a Melanesian Mission House highlighting the Christian conversion of the indigenous peoples. There are hundreds of other historical and anthropological museums and sites throughout the country.

#### 45 MEDIA

The government is in the process of privatizing and deregulating the telecommunications sector. In 1990, Telecom Corp., which runs the country's telephone services, was sold to a consortium led by American Information Technologies Corp. and Bell Atlantic. The number of mainline telephones as of 2000 was at 1.92 million. The same year, there were 2.2 million cellular phones in use nationwide.

After undergoing decentralization in the early 1970s, the national broadcasting system was again reorganized in the latter half of the decade, and united under one central board, the Broadcasting Corp. of New Zealand. Under its authority are the Radio New Zealand network, a unified television service operating the two formerly competing national networks, TV1 and TV2, and one privately owned channel. As of 1998 there were 124 AM and 290 FM radio stations and 41 television broadcast stations. Color television was introduced in October 1973, and most households now have color sets. In 2000, there were 997 radios and 522 television sets for every 1,000 people. The same year, there were 360 personal computers for every 1,000 people and Internet access was available through 36 service providers. In 2001, there were 1.78 million Internet subscribers.

The largest daily newspapers and their estimated 2002 circulation figures are:

	LOCATION	CIRCULATION
<i>New Zealand Herald</i>	Auckland	240,000
<i>The Press</i>	Christchurch	98,070
<i>The Dominion</i>	Wellington	70,000
<i>Evening Post</i>	Wellington	64,440
<i>Otago Daily Times</i>	Dunedin	51,110

Major weeklies include:

	LOCATION	CIRCULATION
<i>Sunday Star Times</i>	Auckland	199,420
<i>Sunday News</i>	Auckland	135,229
<i>The New Zealand Listener</i>	Auckland	96,000
<i>Dunedin Star Weekender</i>	Dunedin	43,000

The law provides for freedom of expression including free speech and a free press. Aside from the usual British legal limit for libel, the press enjoys complete editorial freedom.

#### 46 ORGANIZATIONS

Almost all aspects of New Zealand life have their appropriate organizations. A few of the more important ones are the Federated Farmers of New Zealand, the New Zealand Fruitgrowers' Association, the New Zealand Employers' Federation, the Chamber of Commerce (represented in almost every large town), the Returned Servicemen's Association, the New Zealand Federation of Labour, the Plunket Society (which deals with child welfare), the Royal Society of New Zealand, "Heritage" (devoted to the assistance of children deprived of one parent), the New Zealand Medical Association, the New Zealand Press Association, the New Zealand Institute of Public Administration, and the New Zealand Public Service Association.

Important cultural organizations are the New Zealand Symphony Orchestra, the New Zealand Opera Company, Creative New Zealand, the New Zealand Ballet, the Queen

Elizabeth II Arts Council, the New Zealand Academy of Fine Arts, and the New Zealand Music Federation.

National youth organizations include the Girl Guides Association of New Zealand, New Zealand Scouting Association, National Council of the YMCA/YWCAs of New Zealand, New Zealand Federation of Young Farmer Clubs, New Zealand Student Association for the United Nations, New Zealand University Student Association, and Young Socialists. There are numerous sports associations for all ages, including a National Rifle Association.

Social action groups include the National Advisory Council on the Employment of Women, the National Council of Women of New Zealand, and New Zealand Men for Equal Rights Association.

International organizations with national chapters include Amnesty International, Greenpeace, Habitat for Humanity, Salvation Army, Save the Children Fund, and the Red Cross.

#### 47 TOURISM, TRAVEL, AND RECREATION

New Zealand draws many thousands of tourists to its shores because of the beauty, diversity, and compactness of its natural attractions and its varied sporting facilities. There are 10 national parks and 3 maritime parks. Of these, Fiordland is the largest, with some portions still unexplored. Urewera, noted for its forests and bird life, is the park in which early Maori culture is most strongly preserved; Tongariro includes two active volcanoes and is an important ski resort; and Mount Cook National Park includes Tasman Glacier, the largest glacier outside the polar regions. New Zealand has numerous thermal spas, particularly in the Rotorua area, which also offers Maori villages where traditional arts and crafts may be observed. The Waitomo Cave, on the North Island, is lit by millions of glowworms and may be toured all year. Lake Taupo and its streams form one of the world's richest trout fishing areas; Christchurch is home to one of the world's finest botanical gardens. Skiing is available on both the North and South Islands, and good deep-sea fishing along the North Island coast. New Zealand has first-class golf courses. Spectator sports include horse racing, soccer, cricket, and rugby.

All overseas visitors (except Australian nationals) need passports valid for at least six months beyond their intended stay in New Zealand. No visas are required for persons who are traveling on valid British passports; for citizens of Belgium, Canada, Denmark, Finland, France, Germany, Ireland, Liechtenstein, Luxembourg, Monaco, the Netherlands, Norway, Sweden, or Switzerland; or for US or Japanese nationals not planning to stay in New Zealand more than 30 days. There are no vaccination requirements.

In 2000, there were 1,786,765 visitor arrivals in the country, with 32% from Australia, 11% from the United States, 11% from the United Kingdom, and 8% from Japan. Tourism receipts totaled US\$2.1 billion. That year there were 25,911 hotel rooms with a 52% occupancy rate. The average daily cost of staying in New Zealand, according to a 2003 US government estimate, was between US\$140 and US\$193 per day.

#### 48 FAMOUS NEW ZEALANDERS

Among New Zealand's best-known statesmen are Sir George Grey (1812–98), governor and later prime minister; Richard John Seddon (1845–1906), prime minister responsible for much social legislation; William Ferguson Massey (1856–1925); and Peter Fraser (1884–1950), World War II prime minister. Robert David Muldoon (1921–92) was prime minister from 1975 to 1984, when David Lange (b.1942) became the youngest man to hold that office in the 20th century. Sir John Salmond (1862–1924) was an eminent jurist. William Pember Reeves (1857–1932), outstanding journalist, politician, and political economist, was the director of the London School of Economics. Frances Hodgkins (1869–1947) was a highly regarded painter. Katherine

Mansfield (Kathleen Beauchamp Murry, 1888–1923), author of many evocative stories, was a master of the short-story form. Other well-known authors include Sylvia Ashton-Warner (1908–84) and Maurice Shadbolt (b.1932). Two outstanding leaders of the Maori people were Sir Apirana Ngata (1874–1950) and Sir Peter Buck (1880–1951). Sir Truby King (1858–1938) pioneered in the field of child care.

Lord Ernest Rutherford (1871–1937), pioneer in atomic research and 1908 Nobel Prize winner for chemistry, was born in New Zealand. Other scientists include Sir Harold Gillies (1882–1960) and Sir Archibald McIndoe (1900–62), whose plastic surgery methods did much to rehabilitate war victims; Sir Brian G. Barratt-Boyes (b.1924), a researcher in cardiac-thoracic surgery; and Albert W. Liley (b.1929), a researcher in perinatal psychology. Prominent in the arts have been ballet dancers Alexander Grant (b.1925) and Rowena Jackson (b.1926); the singer and actor Inia Watene Te Wiata (1915–71); and the soprano Kiri Te Kanawa (b.1944). Sir Edmund Percival Hillary (b.1919) was the conqueror of Mt. Everest. The celebrated political cartoonist David Low (1891–1963) was born in New Zealand.

## 49 DEPENDENCIES

### Cook Islands

Part of New Zealand since 1901, the Cook Islands became internally self-governing on 4 August 1965. The Cook Islands Constitution Act of 1964 established the island group as wholly self-ruling but possessed of common citizenship with New Zealand as well as of a common head of state (the Queen). New Zealand exercises certain responsibilities for the defense and external affairs of the islands, in consultation with the Cook Islands government. Full independence from New Zealand is planned for 2007.

A parliamentary type of government, like New Zealand's, characterizes the new political relationship, with a cabinet composed of a prime minister and six other ministers. The 24-member Legislative Assembly—to which the prime minister and other cabinet members are responsible—is elected by the adult population of the islands every four years and can void the applicability of New Zealand laws to the territory under its jurisdiction. The constitution of the autonomous islands also allows a declaration of independence, if ever this should be the wish of the political leadership. The office of New Zealand high commissioner was abolished in 1975 and replaced by the office of Queen's representative. Cook Islands products continue to enter New Zealand freely, and the level of subsidies to the islands from the New Zealand government has persisted.

The population (estimated in 2002 at 20,811) is Polynesian and close in language and tradition to the New Zealand Maori. They are converts to Christianity. The islands are visited by government and freight vessels, and interisland shipping services are provided by commercially owned boats. An international airport opened for full services in 1973. There are three radio stations (1 AM and 2 FM). The Cook Islands, 15 islands lying between 8° and 23°S and 156° and 167°W, more than 3,220 km (2,000 mi) northeast of New Zealand, were discovered by James Cook in 1773. They became a British protectorate in 1888 and were annexed to New Zealand in 1901. They consist of the Southern Group—8 islands, the largest of which are Rarotonga (6,666 ha/16,472 acres) and Mangaia (5,191 ha/12,827 acres); and the Northern Group—7 islands varying in size from Penrhyn (984 ha/2,432 acres) to Nassau (121 ha/299 acres). The total area is 241 sq km (93 sq mi). The northern islands are low-lying coral atolls, while the southern islands, including Rarotonga, the administrative seat, are elevated and fertile, and have the greater population. Except for Rarotonga, the islands suffer from lack of streams and wells, and water must be conserved. The islands lie

within the hurricane area and sometimes experience destructive storms.

The economy is based on agriculture, with the main exports being copra, papayas, fresh and canned citrus fruit, and coffee. Other exports are fish, pearls, pearl shells, and clothing. Total exports were valued at US\$9.1 million in 2000. The main imports are foodstuffs, textiles, fuels, timber, and capital goods. In 2000, imports amounted to US\$50.7 million.

Revenue for public finances is derived mainly from import duties and income tax. The 2000–01 budget envisioned expenditures of US\$27 million. The New Zealand government provided grants and subsidies for capital development in health, education, other social services, economic development, and other purposes, covering one-third of the budget.

Free compulsory education is provided by the government at primary and secondary levels for all children between the ages of 6 and 15, and an estimated 95% of the population is literate. All Cook Islanders receive free medical and surgical treatment, and schoolchildren receive free dental care.

### Niue

An isolated coral island, Niue is 966 km (600 mi) northwest of the southern Cook Islands, and located at 19°02' S and 169°52' W. Niue became a British protectorate in 1900 and was annexed to New Zealand in 1901. Although Niue forms part of the Cook Islands, because of its remoteness and cultural and linguistic differences it has been separately administered. Niue has an area of 258 sq km (100 sq mi). Its population (of Polynesian stock) was 2,134 in 2002, up slightly from 1,997 in 1993, but still below the peak of 5,194 in 1966. The population decline was principally due to emigration to New Zealand, where Niueans outnumber those remaining on the island by two to one.

Niue became self-governing on 19 October 1974, in free association with New Zealand. Under the constitution, the former leader of government became the premier. An assembly of 20 members is elected by universal suffrage; 14 members represent village constituencies, and 6 are elected at large. The constitution provides for New Zealand to exercise various responsibilities for the external affairs and defense of Niue and to furnish economic and administrative assistance.

Niue's soil, although fertile, is not plentiful; arable land is confined to small pockets of soil among the coral rocks, making agriculture difficult, although the economy is based mainly on agriculture. Since there are no running streams, the island is dependent on rainwater. Exports include canned coconut cream, copra, honey, vanilla, passionfruit products, pawpaws, root crops, limes, footballs, stamps, and handicrafts; in 1999 income from exports was \$137,200. As of 2001, there were 234 km (146 mi) of road, 86 km (54 mi) of which are paved. A telephone system, with nearly 400 main lines as of the 1990s, connects the villages, and an airport became fully operational in 1971.

Budget deficits are met by the New Zealand government, which also makes grants for capital development. Health services and education are free. Education is compulsory for children 5 to 14 years of age.

### Tokelau Islands

The Tokelau Islands, situated between 8° and 10°S and 171° and 173°W, about 483 km (300 mi) north of Western Samoa, consist of three atolls, Fakaofu, Nukunonu, and Atafu. Total area is about 10 sq km (4 sq mi). Each atoll has a lagoon encircled by a number of reef-bound islets varying in length from about 90 m to 6.4 km (100 yards to 4 mi), in width from 90 m to 360 m (100–400 yards), and extending more than 3 m (10 ft) above sea level. All villages are on the leeward side, close to passages through the reefs. Lying in the hurricane belt, the islands have a mean annual rainfall of 305 cm (120 in). The inhabitants, of Polynesian origin, are British subjects and New Zealand citizens. Total population

in 2002 was estimated at 1,431, down from 1,760 in 1992. Formerly part of the Gilbert and Ellice Islands group, the Tokelau were transferred to New Zealand at the beginning of 1949. There is no resident European staff; executive functions are carried out on each atoll by appointed Tokelau mayors, magistrates, clerks, and other officials. An administrative officer based in Samoa coordinates administrative services for the islands. Samoan is the official language.

Subsistence farming and the production of copra for export are the main occupations. The total fish catch was 190 tons in 1994. Visits are made regularly by New Zealand Air Force planes, and a chartered vessel makes regular trading visits. Sources of revenue are an export duty on coconuts, copra, customs dues, postage stamps, and trading profits.

Government expenditure is devoted mainly to agriculture, the provision of social services, and administrative costs. Annual deficits are met by New Zealand government subsidies. New Zealand's annual budgetary aid was estimated at US\$4 million in 2000. Nutrition and health are reasonably good.

### Ross Dependency

The Ross Dependency (between 160°E and 150°W and south of 60°S) is a section of the Antarctic continent that was brought under the jurisdiction of New Zealand in 1923. Its area is estimated at 414,400 sq km (160,000 sq mi). It is almost entirely covered by ice and is largely uninhabited. New Zealand activities in the dependency are coordinated and supervised by the Ross Dependency Research Committee (a government agency) and implemented by the Antarctic division of the Department of Scientific and Industrial Research. Exploitation of the region, apart from scientific expeditions, has been confined to whaling. A joint US-New Zealand scientific station established at Cape Hallett in 1957 for participation in the International Geophysical Year continues to operate for purposes of scientific research.

# OMAN

Sultanate of Oman

*Saltanat 'Uman*

**CAPITAL:** Muscat (Masqat)

**FLAG:** The flag is red with a broad stripe of white at the upper fly and green at the lower fly. In the upper left corner, white crossed swords overlay a ceremonial dagger.

**ANTHEM:** *Nashid as-Salaam as-Sutani (Sultan's National Anthem)*.

**MONETARY UNIT:** The Omani riyal (RO), established in November 1972, is a paper currency of 1,000 baizas. There are coins of 2, 5, 10, 25, 50, 100, 250, and 500 baizas, and notes of 100, 250, and 500 baizas (the last two being replaced by coins) and 1, 5, 10, 20, and 50 riyals. RO1 = \$2.60417 (or \$1 = RO0.384) as of January 2003.

**WEIGHTS AND MEASURES:** The metric system was adopted on 15 November 1974. The imperial and local system also are used.

**HOLIDAYS:** Accession of the Sultan, 23 July; National Day, 18 November; Sultan's Birthday, 19 November. Movable Muslim religious holidays include 'Id al-Fitr, 'Id al-'Adha', and Milad an-Nabi.

**TIME:** 4 PM = noon GMT. Solar time also is observed.

## **<sup>1</sup>LOCATION, SIZE, AND EXTENT**

The Sultanate of Oman is the second-largest country after Sa'udi Arabia on the Arabian Peninsula, with an area officially estimated at 212,460 sq km (82,031 sq mi). Comparatively, the area occupied by Oman is slightly smaller than the state of Kansas. Oman's territory includes the tip of the strategically important Ra's Musandam, which juts into the Strait of Hormuz. Oman's part of the peninsula is separated from the rest of the country by the territory of the United Arab Emirates (UAE). Oman proper extends 972 km (604 mi) NE-SW and 513 km (319 mi) SE-NW. It is bordered on the N by the Strait of Hormuz, on the NE by the Gulf of Oman, on the E and S by the Arabian Sea, on the SW by the People's Democratic Republic of Yemen (PDRY), on the W by the Ar-Rub' al-Khali (Empty Quarter) and Sa'udi Arabia, and on the NW by the United Arab Emirates. The total estimated boundary length is 3,466 km (2,154 mi), of which 2,092 km (1,300 mi) is coastline.

## **<sup>2</sup>TOPOGRAPHY**

Physically, Oman, except for the Dhofar (Zufar) region, consists of three divisions: a coastal plain, a mountain range, and a plateau. The coastal plain varies in width from 16 km (10 mi) to practically nothing near Muscat, where the hills descend abruptly to the sea. The highest point, Jabal Shams, is at 2,980 (9,777 ft) in the Al Jabal range of the north. The plateau has an average height of about 300 m (1,000 ft) and is mostly stony and waterless, extending to the sands of the Ar-Rub' al-Khali. The coastline southward to Dhofar is barren and forbidding. From Salalah, a semicircular fertile plain extends to the foot of a steep line of hills, some 1,500 m (4,920 ft) high, and forms the edge of a stony plateau also extending to the sands of the Empty Quarter.

## **<sup>3</sup>CLIMATE**

Annual rainfall in Muscat averages 10 cm (4 in), falling mostly in January. Dhofar is subject to the southwest monsoon, and rainfall up to 64 cm (25 in) has been recorded in the rainy season from late June to October. While the mountain areas receive more plentiful rainfall, some parts of the coast, particularly near the

island of Masirah, sometimes receive no rain at all within the course of a year. The climate generally is very hot, with temperatures reaching 54°C (129°F) in the hot season, from May to October.

## **<sup>4</sup>FLORA AND FAUNA**

Desert shrub and desert grass, common to southern Arabia, are found. Vegetation is sparse in the interior plateau, which is largely gravel desert. The greater rainfall in Dhofar and the mountains makes the growth there more luxuriant. Coconut palms grow plentifully in Dhofar and frankincense grows in the hills. Oleander and varieties of acacia abound.

Indigenous mammals include the cheetah, hyena, fox, wolf, and hare. Birds include the Arabian see-see partridge, redleg chukor partridge, and Muscat bee eater.

## **<sup>5</sup>ENVIRONMENT**

Maintaining an adequate supply of water for agricultural and domestic use is Oman's most pressing environmental problem. The nation has only 1 cubic kilometer of renewable water resources, with 94% used in farming and 2% for industrial activity. Only 30% of all rural dwellers have pure drinking water. Both drought and limited rainfall contribute to shortages in the nation's water supply. The nation's soil has shown increased levels of salinity. Pollution of beaches and other coastal areas by oil tanker traffic through the Strait of Hormuz and Gulf of Oman is also a persistent problem.

In 2001, the nation had nine endangered species of mammals and five endangered types of bird. Nineteen plant species are also threatened with extinction. Decrees have been passed to protect endangered species, which include the South Arabian leopard, Arabian oryx, mountain gazelle, goitered gazelle, Arabian tahr, green sea turtle, hawksbill turtle, and olive turtle.

## **<sup>6</sup>POPULATION**

The population of Oman in 2003 was estimated by the United Nations at 2,851,000, which placed it as number 134 in population among the 193 nations of the world. In that year

approximately 2% of the population was over 65 years of age, with another 35% of the population under 15 years of age. There were 135 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 2.93%, with the projected population for the year 2015 at 3,908,000. The population density in 2002 was 12 per sq km (31 per sq mi). The greatest concentrations are around Muscat and on the Batinah coast; together, they have more than half the population.

It was estimated by the Population Reference Bureau that 84% of the population lived in urban areas in 2001. The capital city, Muscat, had a population of 887,000 in that year. Salalah is the principal town of the south. According to the United Nations, the urban population growth rate for 2000–2005 was 4.4%.

## 7 MIGRATION

There is frequent movement of workers between Oman and neighboring states. In 2000 there were 682,000 migrants living in Oman, primarily foreign laborers. The net migration rate was 1.7 migrants per 1,000 population. The government views the immigration level as too high, but the emigration level as satisfactory.

## 8 ETHNIC GROUPS

The indigenous population is predominantly Arab except on the Batinah coast, where there is significant Baluchi, Iranian, and African representation, and in Muscat and Matrah, where there are Khojas and other Indians, Baluchis, and Pakistanis. Tribal groups are estimated to number over 200.

## 9 LANGUAGES

The official language is Arabic. Urdu, Baluchi, and several Indian dialects are also spoken, especially in the cities of Muscat and Matrah. English is taught as a second language.

## 10 RELIGIONS

The state religion is Islam. Most of the population belong to the Ibadhi or Sunni sects. Tribes in the north are mainly Sunni Muslims of the Hanbali, Shafai, and Wahhabi rites. A minority of the population is Shi'a Muslim. There is a small community of Indian Hindu citizens, and there is reportedly a very small number of Christians. Non-Muslims, the majority of whom are non-citizen immigrant workers from South Asia, are free to worship at churches and temples, some of which are built on land donated by the Sultan.

## 11 TRANSPORTATION

As of 2002, there were 32,800 km (20,382 mi) of roadways, of which only 9,840 km (6,115 mi) were paved, including 550 km (342 mi) of expressways. A major 800-km (500-mi) highway links Nazwa in the north to Thamarit and Salalah in the Dhofar region. A main coastal road has been laid from Muscat to Suhar, a distance of 240 km (150 mi), and the road from Muscat to Buraymi on the United Arab Emirates border has been completed. In 2000, passenger car registrations totaled 262,400,000 and commercial vehicle registrations totaled 124,900. There are no railways or waterways in Oman.

In 2001, there were 143 airports, only 6 of which had paved runways. Seeb International Airport, 30 km (19 mi) northwest of Muscat, is served by numerous international carriers, including Gulf Air, in which Oman holds a 20% interest. A second modern airport, at Salalah in the south, serves domestic flights. In 2001, 1,980,100 passengers were carried on scheduled international and domestic airline flights.

Mina's Qabus, near Muscat, is the main port in the north, serving international and regional shipping. Port Salalah, 1000 km (621 mi) down the coast from Muscat is the main port for the south. Opened in 1998, Port Salalah is the only port between

Europe and Singapore that can accommodate the S-class, the world's largest class of container vessel. It is now among the top twenty container ports in the world in terms of handling capacity, and among the top ten in terms of efficiency. All Omani crude oil is exported from Mina's al-Fahl, west of Matrah. In 2002, Oman had 3 merchant vessels totaling 17,291 GRT.

## 12 HISTORY

Oman's history can be traced to very early times. In Genesis 10:26–30, the descendants of Joktan are said to have migrated as far as Sephar (now Dhofar). The area was already a commercial and seafaring center in Sumerian times, and Phoenicians probably visited the coastal region. Other groups that probably came to the area in ancient times include the Baida and Ariba, Semitic tribes from northern Arabia, now extinct; the first Himyar dynasty from Yemen, which fell to the Persians in the time of Cyrus, about 550 BC; ancient Greek navigators; and the Parthians (174–136 BC).

The entire population was converted to Islam during the lifetime of Muhammad, but Oman soon became—and remains today—the center of the Ibadhi sect, which maintained that any pious Muslim could become caliph or imam and that the imam should be elected. Omani tribes have elected their imams since the second half of the 8th century.

The first prolonged contact with Europe came in 1507–08, when the Portuguese overran Muscat. They maintained control until they were driven out with Persian aid in 1649. During the next 75 years, Oman conquered Mombasa, Mogadishu, the island of Zanzibar, and the Portuguese possessions in East Africa. Later it held parts of what are now Iran and Pakistan.

The first sultanate was established in Muscat about 1775. In 1798, Britain concluded its first treaty with Muscat. Sa'id bin Sultan (r.1804–56) became dependent on British support, and after his death his sons quarreled over his succession (the basic Ibadhi tenet having been rejected). Thus weakened by political division, Muscat lost control of the interior. In 1920, the Treaty of Seeb was signed between the sultan of Muscat and the imam of Oman, acknowledging the autonomy of the imamate of Oman under the sovereignty of the Sultan. From 1920 to 1954 there was comparative peace. On the death of the imam in 1954, Sultan Sa'id bin Taymur moved to succeed him.

That year, Sa'id concluded a new agreement with Petroleum Development (Oman) Ltd., a British-managed oil company that had the oil concession for Oman. By this agreement, the company maintained a small army, the Muscat and Oman Field Force (MOFF), raised and led by the British. In early 1955, it subdued the area up to and including the town of 'Ibri. When British troops took Buraymi, MOFF occupied the rest of Oman and expelled the rebellious new imam. By 1959 when the last of the insurgents supporting the imam were defeated, the sultan voided the office and declared the Treaty of Seeb terminated. The imam, exiled in Sa'udi Arabia, tried in vain to muster Arab support for his return.

Under the terms of the Anglo-French Declaration of 10 March 1962, the sultanate of Muscat was proclaimed an independent and sovereign state. Certain Arab states charged, however, that the UK was maintaining a colonial presence in the former imamate of Oman. In 1965 and repeatedly thereafter, the UN called unsuccessfully for the elimination of the British presence. Oman joined the UN late in 1971.

Meanwhile, as early as 1964, a tribal rebellion had been brewing in the Dhofar region. The rebel tribes, organized as the Dhofar Liberation Front and aided by South Yemen, later joined forces with the Marxist Popular Front for the Liberation of Oman and the Arab Gulf. The insurgency was suppressed in 1975 with direct military assistance from Jordan and Iran. A treaty with Yemen defining the border was ratified in 1992.

Qabus bin Sa'id ousted his father, Sa'id bin Taymur, on 23 July 1970 and has ruled as sultan since that time. He immediately changed the name of the country from Muscat and Oman to the Sultanate of Oman and has presided over an extensive modernization program, easing his father's harsh restrictions and opening the country to the outside world, while preserving political and military ties with the British. Oman has been a proponent of cooperation among the Gulf states. A member of the Gulf Cooperation Council (GCC), it has also sought to keep good relations with Iran. Because Oman dominates the Strait of Hormuz, which links the Gulf of Oman with the Persian Gulf, its strategic importance drew it and the United States closer together with the start of the Iran-Iraq war in 1979. Under the terms of a pact signed in 1980, US military personnel and ships have been given access to Omani military and naval bases and are permitted to preposition military material for use in contingencies.

Oman pursues a moderate, independent foreign policy. Unlike most Arab states, it supported the Camp David accords and did not break relations with Egypt following its peace treaty with Israel. Similarly, during the Gulf War, Oman sent forces to Sa'udi Arabia and granted strategic facilities to the United States, but did not sever diplomatic relations with Iraq during the conflict.

In 1994 reports began appearing of arrests of critics of the Omani government. It was estimated that nearly 500 such critics with points of view ranging from the Arab nationalist Ba'th movement to Islamists supporting the Sunni Muslim Brotherhood were detained by the Omani government.

Through 1995 Oman was considered as having "graduated" from the ranks of under-developed nations needing World Bank loans. Its ambitious economic goals included a 10-year plan for cultivating tourism and plans to improve its infrastructure, including water desalinization. However, in 1998, the economy was adversely affected when the price of oil dropped below \$10 per barrel, a 25-year low. Oman agreed with the Organization of Oil Exporting Countries (OPEC), of which Oman is not a member, to reduce global oil production by 2.1 million barrels of crude per day until April 2000 in the hope of raising oil prices to \$18 per barrel. In October 1999, the Omani oil minister recommended extending oil production cuts beyond the date originally proposed. Meanwhile, Oman has sought to diversify its economic base and ease its dependence on oil. A gas liquefaction plant at Sur was slated for completion in 2000.

As of 1999, Oman held to a middle-of-the-road stance of conciliation and compromise in Middle Eastern politics. In January 1999, Oman's foreign minister met with his counterparts from Egypt, Sa'udi Arabia, Syria, and Yemen at a closed meeting in Cairo to forge a position on the question of Iraq. Also in 1999, Oman's sultan, Qabus bin Sa'id, signed an agreement with the president of the United Arab Emirates defining the borders between Oman and the emirate of Abu Dhabi.

During 2002 and into 2003, Oman, along with the other countries of the Persian Gulf, were confronted with the situation of a potential US-led war with Iraq. On 8 November 2002, the UN Security Council unanimously passed Resolution 1441, calling on Iraq to immediately disarm itself of weapons of mass destruction (WMD) and WMD weapons capabilities, to allow the immediate return of International Atomic Energy Agency (IAEA) and UN weapons inspectors, and to comply with all previous UN resolutions regarding the country since the end of the Gulf War in 1991. If Iraq was found to be in "material breach" of the resolution, "serious consequences" were to result. The United States and the UK began amassing troops in the region, and by the end of February 2003, the number of troops in the Persian Gulf was approximately 200,000. As of 1 February, there were 3,600 US military personnel, 100 elite British special forces, and approximately 40 aircraft in Oman. As well, a new airbase was under construction, which would have a 14,000-ft. runway. However, Oman has said it would not act in a conflict with Iraq

LOCATION: 51°50' to 59°40' E; 16°40' to 26°20' N. BOUNDARY LENGTHS: Total coastline, 2,092 kilometers (1,301 miles); Yemen, 288 kilometers (179 miles); Sa'udi Arabia, 676 kilometers (420 miles); United Arab Emirates, 410 kilometers (255 miles). TERRITORIAL SEA LIMIT: 12 miles.

without UN approval. At an Arab League summit held at Sharm el-Sheik, Egypt, on 1 March, sharp divisions between Arab leaders on the Iraq situation emerged, particularly between Libya and Sa'udi Arabia. However, the leaders issued a declaration expressing "complete rejection of any aggression on Iraq," and called for continuing UN weapons inspections. It also called upon Iraq to disarm itself of WMD and the missiles needed to deliver

them. At the summit, some leaders argued war was inevitable and that the countries of the region should prepare for its aftermath; some argued that war could be avoided if Iraq were to comply with weapons inspections; and a third group argued that the summit should issue an unequivocal anti-war declaration.

### 13 GOVERNMENT

Oman's sultan is an absolute monarch. The sultanate has no constitution, legislature, or suffrage. In 1970, Sultan Qabus appointed a cabinet of ministers responsible for various government departments and functions.

A State Consultative Council, established in 1981, consisted of 55 appointed representatives of government, the private sector, and regional interests.

This body was replaced in 1991 by a Majlis Al-Shura, a 59-seat Consultative Council, which was seen as a first step toward popular participation in government. The Sultan expanded the membership to 80 seats after the country's first national census in 1993.

The Council has no formal legislative powers but may question government ministers, and recommend changes to new laws on economic and social policy. These recommendations have led to amendments to proposed decrees.

On 6 November 1996 the Sultan decreed the country's first "basic law" which provides for citizens' basic rights in writing and a body known as the Majlis Oman (Council of Oman) which includes a new Council of State (Majlis Al-Dawla) and the current Consultative Council.

In 2000, the Consultative Council was expanded to 83 seats, and members were chosen by the vote of 175,000 government-selected electors. In January 2001, the sultan appointed 53 members of the Majlis Al-Dawla, including 5 women.

In November 2002, the sultan extended voting rights to all citizens over the age of 21. Voters in Oman were previously chosen from among tribal leaders, intellectuals, and businessmen.

### 14 POLITICAL PARTIES

There are no legal political parties nor, at present, any active opposition movement. As more and more young Omanis return from education abroad, it seems likely that the traditional, tribal-based political system will have to be adjusted.

### 15 LOCAL GOVERNMENT

The nation is divided into six regions, two governates (Musandam, Dhofar) and 59 wilayats (districts), governed by walis, who are responsible to the Ministry of the Interior. The Governate of the Capital is responsible for the administration of Muscat.

### 16 JUDICIAL SYSTEM

*Shari'ah* courts based on Islamic law administer justice, with the Central Magistrate Court at Muscat. There are four additional magistrate courts in Sohar, Sur, Salalah, and Nizwa. Qadis, or religious judges, appointed by the sultan, function within each wilayat. Appeals from the Central Magistrate Court are made to the sultan, who exercises powers of clemency. The *Shari'ah* courts, adhering to Islamic law, equate the testimony of one man with that of two women. There is also a security court, rarely used, which handles internal security cases. A commercial dispute may be resolved at the Authority for Settlement of Commercial Disputes.

In 1996, a basic law providing for citizens' basic rights was promulgated by the sultan. The basic law affirms the independence of the judiciary. There are no jury trials.

### 17 ARMED FORCES

Oman's armed forces, including Royal Household troops foreign personnel numbered 41,700 in 2002. The army had 25,000 personnel equipped with over 100 main battle tanks and 37 *Scorpion* tanks. The air force of 4,100 operates 40 combat aircraft. The navy numbers 4,200 with 13 patrol and coastal combatants. Paramilitary includes the Tribal Home Guard (Firqats) of 4,000 organized in small tribal teams, a police coast guard of 400, and a small police air wing. The elite Royal Household brigade, naval unit, and air unit number 6,400, including 2 special forces regiments. In 2001 Oman spent \$2.4 billion on defense or 12.2% of GDP.

### 18 INTERNATIONAL COOPERATION

On 7 October 1971, Oman gained membership in the UN; the nation belongs to ESCWA and all the nonregional specialized agencies except IAEA. Oman also participates in G-77, GCC, and the Arab League, as well as the Islamic Conference. Oman is a member of the WTO.

### 19 ECONOMY

Oman's location at the entrance to the Persian Gulf for centuries made it an *entrepôt* for trade, including a substantial traffic in arms and slaves. Its prosperity declined in the 19th century, when, as a result of Western dominance in Asia, traditional trade patterns and communications routes were radically changed. Oman's economy then became predominantly dependent on agriculture and fishing.

The situation changed with the discovery of oil in 1964. Production began in August 1967, and by the mid-1970s most of the economy revolved around oil. The hydrocarbons sector accounted for 77% export earnings and government revenues in 2000. Despite diversification efforts, petroleum's share of GDP rose from 37% in 1994 to 38.2% in 1995 to 40% in 1999. In 2000, petroleum's share jumped to 49% of GDP as oil prices rose sharply from near-record lows in early 1999. As of January 2001, Oman's proven oil reserves were 5.5 billion barrels. At the estimated high production level of 959,816 barrels per day in 2001, the reserves would last another 15.7 years. The government's Oman 2020 program looks to a fundamental transformation of the economy by that time. In recent years, the production of natural gas has become a significant factor of the economy. Gas reserves increased from 9.8 trillion cubic feet in 1990 to 29.3 trillion cubic feet 2001, and government predictions are that this will eventually expanded to some 40 trillion cubic feet. in 1999 and are further increasing. Two major extensions of Oman's pipeline connections from gas deposits in the center of the country were completed in August 2002: a pipeline to the north coast at Sohar and a pipeline to the south coast at Salalah. With the recovery of gas prices from in the latter half of 1999, GDP grew at extraordinarily high rates of 15.6% in 1999 and 19.6% in 2000. Inflation was negligible at 0.4% in 1999 and 1.4% in 2000.

### 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Oman's gross domestic product (GDP) was estimated at \$21.5 billion. The per capita GDP was estimated at \$8,200. The annual growth rate of GDP was estimated at 7.4%. The average inflation rate in 2001 was 1%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 3% of GDP, industry 40%, and services 57%. Foreign aid receipts amounted to about \$1 per capita.

Approximately 22% of household consumption was spent on food, 25% on fuel, 13% on health care, and 21% on education. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings.

## 21 LABOR

The estimated workforce was 920,000 in 2002. A large proportion of the population were still engaged in subsistence agriculture or fishing. The skilled local labor force is small, and many of the larger industries depend on foreign workers from India, Pakistan, the Philippines, Bangladesh, and Sri Lanka—foreign laborers constituted over 80% of the modern-sector workforce in 1996.

Omani law does not provide the right of union formation. The law forbids a strike for any reason. Collective bargaining is not permitted, however there exist labor-management committees in firms with more than 50 workers. These committees are not authorized to discuss conditions of employment, including hours and wages. The Labor Welfare Board provides a venue for grievances.

The minimum working age is 13, but this provision is not enforced against the employment of children in family businesses or on family farms. The minimum wage for nonprofessional workers was \$260 per month in 2002. However, many classes of workers (domestic servants, farmers, government employees) are not required to receive the minimum wage and the government is not consistent in its enforcement of the minimum wage law. The private sector workweek is 40 to 45 hours long, while government officials have a 35-hour workweek.

## 22 AGRICULTURE

Agriculture contributes only about 3% to GDP, but engages 37% of the economically active population, mostly at a subsistence level. The potential for expanding agriculture in Oman is good. Land use is determined primarily by the availability of water. There is extensive cultivation along the Batinah and Shumailiyah coasts; in the interior, however, cultivation is confined to areas near wadis, where water is taken off by a system of water channels (fallaj). The total area under cultivation is estimated to be about 63,000 hectares (155,600 acres).

The principal agricultural product is the date, at 135,000 tons in 1999. On the Baunah coast, groves containing some 10 million date palm trees form a strip 240-km (150-mi) long and 40-km (25-mi) wide. Fruits grown in Dhofar include bananas, mangoes, and coconuts. Citrus fruits (notably limes), nuts, melons, bananas, coconuts, alfalfa, and tobacco are also grown. Tomatoes, cabbages, eggplant, okra, and cucumbers are important winter crops. Frankincense is traditionally produced from about 8,000 trees growing wild in Dhofar. Along the Batinah coast, a wide variety of produce is grown, including fruits, wheat, rice, and durra. Agricultural exports were valued at \$615.6 million in 2001, while agricultural imports amounted to \$1.3 billion that year.

## 23 ANIMAL HUSBANDRY

Goats, sheep, donkeys, and camels are widely raised. In 2001 there were 998,000 goats, 354,000 sheep, 314,000 head of cattle, 121,000 camels, and 28,000 donkeys. There is a relatively large-scale cattle-raising industry in Dhofar. Total meat production in 2001 was 35,000 tons. Oman estimates that it is 53% self-sufficient in milk production, 46% in beef, 44% in eggs, and 23% in milk. The camels of Oman are famous for their fine riding qualities.

## 24 FISHING

The waters of the Gulf of Oman are rich in sardines, mackerel, shrimp, lobsters, crayfish, tuna, barracudas, groupers, and sharks. The annual catch in 2000 was 415,885 tons, mainly sardines. Fishing employs about 26,000 persons. Recent investment in onshore processing and refrigeration plants, harbors, and repair yards has facilitated commercial fishing development. Exports of fish products amounted to \$51.3 million in 2000. The government subsidizes the cost of boats and engines to promote employment in fishing. Fish stocks and breeding patterns are studied at a research center south of Muscat. In 1996, three new fishing harbors were opened (at Bukha in Musandam, Quriyat, and Shinas), at a combined cost of r 10.3 million and with a capacity for about 1,000 small boats.

## 25 FORESTRY

Forest coverage is less than 1%. The use of wood as the sole fuel and overgrazing by goats have depleted the forests of Oman, but the interior of the country is fairly well wooded. Oman imported \$17.1 million in forest products during 2000.

## 26 MINING

Petroleum and natural gas dominated Oman's economy. Large deposits of copper, which supports a leading industry, have been discovered northwest of Muscat. The first evidence of copper production dated at Wadi Jizzi indicated that Oman has been a mineral producer for more than 5,000 years. Deposits at the Sohar mine were nearly exhausted by 1991; other deposits were discovered at Hajl al-Safi and at Rakah, in Ibri. More than half of Oman's copper production was taken from the Lasail Mine, with much of the remaining output from the Aarja surface mine. The Ministry of Petroleum and Minerals has reported proven copper reserves at 8 tons and proven chromite ore reserves at 1.6 tons. Gold was mined from the Rakah deposit, near Yanqui; the Rakah plant processed 100,000 tons per year of ore. In 2000, National Mining Co. of Oman explored for copper, gold, and silver near Sohar, and the Metal Mining Agency of Japan completed exploration for copper and gold in the South Batinaha area. Construction of an industrial port at Sohar to service the mineral industry continued in 2000, and a number of mineral-processing projects were under consideration, including an aluminum smelter, a number of ammonia and urea plants, a ferrochrome project, a methanol plant, and a unit to recover sulfur. Output of chromite in 2000 was 15,110 tons, down from 28,684 in 1998; sand and gravel, 22.45 million tons, up from 9.8 in 1998; gold, 604 kg; silver, 306 kg, up from 95 in 1998; and marble, 147,686 tons. Oman in 2000 also produced, and had large deposits of, limestone, manganese, gypsum, asbestos, and dimension stone.

## 27 ENERGY AND POWER

Oil, discovered in 1964 in western Oman, has transformed the nation's economic life. As of 1998, oil export revenues totaled \$5.2 billion and accounted for 80% of all export revenues. When production began in 1967, several foreign interests combined to form a majority backing in Petroleum Development Oman (PDO). In July 1974, foreign participation dropped to 40%, with the remaining 60% held by the government. PDO was the lone oil producer in the country until the Elf-Sumitomo-Wintershall group was granted a concession in 1980. Oman is unlike the other Middle Eastern oil producers, because its oil was discovered decades after that of most of its neighbors, and its oil fields are generally smaller, less productive, and more costly to maintain. Also, Oman is not a member of Organization of the Petroleum Exporting Countries (OPEC), but a leader in IPEC, the main independent petroleum exporter's organization. In 1998,

however, Oman cooperated with OPEC in reducing its oil production to help stabilize world oil prices.

Output of oil in 2001 averaged 963,816 barrels per day. Petroleum reserves were estimated at 5.5 billion barrels in early 2002, enough to last until around 2020 at the current rate of production. Proved reserves of natural gas were estimated to be 829.5 million cu m (29.2 billion cu ft) at that time (over 100 years' supply at current production levels), and it is anticipated that Oman will increasingly replace oil with gas as fuel. The 6.6-million-ton per year liquefied natural gas (LNG) plant at Qalhat began exporting liquefied natural gas in early 2000.

With limited oil reserves, Oman is currently trying to reduce its reliance on oil as the chief source of revenue. Oman is trying to establish itself as a consultant to other independent oil and natural gas producing nations, like Kazakhstan and India.

In 2001, total installed electric capacity was 2,410,000 kW. Production in 2000 totaled 8.6 billion kWh, of which 100% was from fossil fuels.

## 28 INDUSTRY

Besides oil, industry in Oman still consists largely of small-scale food-processing enterprises. Many new industries were set up in the 1980s, including a cement plant with an annual capacity of 609,000 tons. In 1995, Oman's cement production totaled 1.4 million tons. The majority of these manufacture non-metallic mineral products followed by wood and wood products, and fabricated metal products. The Rusail industrial estate had 81 working factories by 1996, with 15 more under construction. The \$250 million Salalah Container Port opened in 1998 its hoped to be a magnet for value-added manufacturing enterprises. Another \$250 industrial port in the Sohar on which construction began in 1999 is expected to be operational in 2003. By the latest available estimate, industry comprised 40% of the GDP in 1999.

## 29 SCIENCE AND TECHNOLOGY

Most research conducted in Oman has been done at the behest of the government; agriculture, minerals, water resources, and marine sciences have drawn the most attention. Sultan Qaboos University, founded in 1985, has colleges of science, medicine, engineering, and agriculture. In 1987-97, science and engineering students accounted for 13% of college and university enrollments. The Institute of Health Sciences, under the Ministry of Health, was founded in 1982. Muscat Technical Industrial College, founded in 1984, has departments of computing and mathematics, laboratory science, and electrical, construction, and mechanical engineering. The Oman Natural History Museum, founded in 1983, includes the national herbarium and the national shell collection. All of these organizations are located in Muscat.

## 30 DOMESTIC TRADE

Though oil is the strongest basis for the Omani economy, agriculture and fishing are still very much a part of the traditional lifestyle. Most of the government's development plans are aimed at industry to support greater foreign trade, rather than to provide consumer products for the domestic market. Muscat and Matrah are the primary commercial centers. Much of the business is carried on by long-established and settled Khoja and Hindu merchants, but supermarkets and other larger retail establishments are beginning to take root.

Normal business hours are 8:30 AM to 1:30 PM and 4 to 7 PM, Saturday-Wednesday; banking hours are generally 8 AM to noon, though some banks reopen from 4 to 6 PM. Banks and businesses close at 11:30 AM on Thursday and remain closed Friday. Business hours are reduced during the Ramadan fast.

## 31 FOREIGN TRADE

Oman runs a considerable trade surplus. Since 1967, oil has been the chief export. In 2000 Oman's major export commodities were crude petroleum (80%) and motor vehicles and parts (3.4%). Other exports included tobacco (1.2%) and apparel (1.1%). In 2000 Oman's imports were distributed among the following categories: consumer goods, 18.2%; food, 13.2%; fuels, 1.7%; industrial supplies, 20.2%; machinery, 18.4%; transportation, 25.7%; and other, 2.6%.

Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
United Arab Emirates	9,505	1,487	8,018
Saudi Arabia	163	138	25
Iran	152	61	91
Yemen	152	n.a.	n.a.
United States	107	270	-163
United Kingdom	74	293	-219
China (inc. Hong Kong)	18	127	591
Germany	17	187	-109
Korea	8	174	-166
Japan	8	913	-905

## 32 BALANCE OF PAYMENTS

Oman's balance of payments account is dominated by crude oil export earnings, consumer and capital goods and services, imports payments, and by large outgoing remittances by foreign workers.

The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Oman's exports was \$10.9 billion while imports totaled \$5.4 billion resulting in a trade surplus of \$5.5 billion.

The International Monetary Fund (IMF) reports that in 2001 Oman had exports of goods totaling \$11.1 billion and imports totaling \$5.31 billion. The services credit totaled \$349 million and debit \$1.68 billion. The following table summarizes Oman's balance of payments as reported by the IMF for 2001 in millions of US dollars.

<b>Current Account</b>	<b>2,315</b>
Balance on goods	5,763
Balance on services	-1,329
Balance on income	-588
Current transfers	-1,532
<b>Capital Account</b>	<b>-10</b>
<b>Financial Account</b>	<b>-887</b>

Portfolio investment liabilities	13
Other investment assets	229
Other investment liabilities	-1,170
<b>Net Errors and Omissions</b>	<b>-384</b>
<b>Reserves and Related Items</b>	<b>-1,034</b>

## 33 BANKING AND SECURITIES

The Central Bank of Oman, set up in April 1975, has powers to regulate credit and is authorized to make temporary advances to the government.

Banks in Oman are generally in good financial shape because of close regulation by the Central Bank of Oman. All commercial banks in the sultanate instructed to raise their paid-up capital to RO10 million for local banks and RO3 million for foreign banks. The Central Bank of Oman advised all banks which were unable to comply with these new requirements to merge with other commercial banks. The Central Bank has been encouraging

banks to merge in order to cut down on the oversupply of banking services. Banks are required to maintain a 12% level of capital adequacy and restrict consumer lending to 30% of the loan portfolio. In 2002, there were 15 local and foreign commercial banks and four specialized banks. The largest local bank is Bank Muscat, created through a merger of the former Bank Muscat and the Commercial Bank of Oman. In 2002, it had assets of \$3.4 billion, deposits of \$2.4 billion, and was followed in size by the National Bank of Oman, Oman International Bank, Oman Arab Bank, and Bank Dhofar Al Omani Al Fransi.

The British Bank of the Middle East (BBME) was the first foreign bank to establish itself in Oman in 1948. Today, foreign banks, in descending order of local branch asset size, include British Bank, Standard Chartered Bank, The British Bank, Bank of Baroda, Bank Saderate Iran, Bank Melli Iran, Banque Banorabe, National Bank of Abu Dhabi, and Citibank. The banking sector has been under pressure to increase its proportion of Omani staff to 90%, but the deadline for such a move has been progressively delayed. Because of the proliferation of branches concentrated in coastal areas, commercial banks now have to open two branches in the interior for every branch opened along the coast. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$1.8 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$6.8 billion.

An Omani stock market, the Muscat Securities Market (MSM), was officially established in 1988, but trading did not begin until the following year. By 2001 there were 91 companies listed on the exchange with a combined capitalization of \$2.6 billion. The MSM has now established a link with the Bahrain Stock Exchange (BSE) where shares can be cross-listed. A similar agreement with Kuwait is expected. The MSM Index showed a 25.4% loss in 2001 a mere four years after posting a spectacular 141% gain in 1997. The drop-off has been attributed to speculation, over-valued offerings, the impact of the Asian financial crises, and the drop in oil prices.

### 34 INSURANCE

By 1997, one national insurance firm, the Oman National Insurance Co. (SAOG), and around 17 foreign-owned firms were operating in Oman. Gross premiums for the Oman National Insurance Co. in 1995 were RO5.75 million. In 2001, \$35 million in life insurance alone was written in Oman.

### 35 PUBLIC FINANCE

Although Oman is a relatively small oil producer, oil revenues support 69% of government expenditures. The government owns 60% of Petroleum Development (Oman) Ltd. (PDO), the main oil company. Higher oil prices in 1997 and a 5% cut in capital spending produced a budget deficit of only \$47 million, a substantial improvement over 1996. With the fall in global oil prices in 1998, however, the government's budget fell deeply into deficit, and had to be financed by loans and by drawing down the State General Reserve Fund. In anticipation of still further drops in the price of oil, the government increased a number of taxes and imposed spending cuts of between 5 and 10% on most government ministries.

The US Central Intelligence Agency (CIA) estimates that in 2000 Oman's central government took in revenues of approximately \$9.2 billion and had expenditures of \$6.9 billion. Overall, the government registered a surplus of approximately \$2.3 billion. External debt totaled \$5.3 billion.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary

Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

REVENUE AND GRANTS	100.0%	9,200
Tax revenue	27.2%	2,506
Non-tax revenue	72.2%	6,643
Capital revenue	0.4%	38
Grants	0.1%	13
EXPENDITURES	100.0%	6,900
General public services	9.1%	631
Defense	35.3%	2,436
Public order and safety	5.9%	407
Education	15.9%	1,100
Health	6.6%	459
Social security	5.6%	386
Housing and community amenities	6.4%	440
Recreation, cultural, and religious affairs	1.8%	123
Economic affairs and services	9.2%	634
Interest payments	4.1%	284

### 36 TAXATION

Introduced in 1971, a corporate income tax on commercial enterprises other than individual traders remains the only tax in the country. Rates range from 5% to 50%. Legislation in 1981 reduced the maximum tax rate to 15% for companies in which Omanis hold at least a 51% equity, and to 20% for companies in which the Omani equity is between 35% and 50%. Companies engaged in agriculture, fishing and any other essential activity deemed by the government are exempt from income taxes. Oman has a comprehensive double taxation treaty with France.

### 37 CUSTOMS AND DUTIES

General import duties are 5% ad valorem on the CIF (cost, insurance, and freight) value of the good. There are a number of exempt goods, including many imports from GCC member states. Protective tariffs are levied seasonably on a number of fruits and vegetables.

### 38 FOREIGN INVESTMENT

The principal foreign investment is in the oil sector. Foreign private investment is officially encouraged in certain areas—such as industry, agriculture, and fishing—through an initial five-year tax exemption, which may be renewed for another five years. Foreign participation in a local company cannot exceed 65% (this also applies to the sharing of profits). Companies holding commercial agencies must also have at least 51% Omani participation. In 2002, the largest foreign investor was Royal Dutch Shell Oil, which holds a 34% of the shares of the state oil company, Petroleum Development Oman, and 30% of Oman Liquid Natural Gas. Other investors in the oil industry include Occidental Petroleum, Hapex, Amoco, and Elf Aquitaine. The Sultanate does not publish estimates of inbound and out-bound investment. Foreign investment in the Muscat Securities Market (MSM) has averaged 15% to 16%, but has dropped in absolute terms. In December 1999, foreign investment in the MSM was \$867.8 million. A year later this had fallen to \$730.5 million, and at the end of May 2001, foreign investment in the SMS was \$708.9 million. No systematic information is available on foreign direct investment (FDI).

### 39 ECONOMIC DEVELOPMENT

Oman's economic policy operates under five-year development plans. Oman's second five-year plan (1981–85) suffered to some extent from the impact of declining oil prices in the early 1980s. The objectives of the third development plan (1986–90) were to encourage the private sector to play a larger role in the economy and to expand such areas as agriculture, fishing, manufacturing,

and mining. The fourth five-year development plan (1991–1995), aimed to achieve average annual GDP growth rates of just over 6% and the diversification of the sources of national income in order to reduce the dependence on the oil sector. The declared aim of the fifth five-year plan (1996–2000) was to achieve a balanced budget. The fall in oil prices to near-record lows in 1998 subverted the goal of a zero budget deficit in 2000, but rising oil prices in 2000 allowed the government to cut the deficit to only 1.5% of GDP (\$301 million) in 2000. Oman's sixth five-year development plan (2001–2005) aims at lessening dependence on government spending and employment, and at making the private the engine of growth for the economy. The government's long-run development strategy is the Sultan's "Oman Vision 2020," which is designed to see the economy through the depletion of oil reserves. The emphases are on processes of "Omanization," industrialization, and privatization. One of the most successful diversification projects has been the Salalah Container Port opened in November 1998. In 2000, it handled over 500,000 FEUs (forty-foot equivalency unit) and ranked among the top ten container ports in efficiency. A new industrial port is also being built at Sohar, to be operational in 2003. In terms of developing its natural gas potential, the government took a major step in October 2000 with the inauguration of the \$2.64 billion liquefied natural gas project in Sur. Other gas development projects include plans for urea fertilizer plant in Sur, an aluminum smelter in Sohar, and petrochemical plant at Salalah. An emphasis on income diversification has opened the country to foreign participation in the form of joint ventures.

#### 40 SOCIAL DEVELOPMENT

Oman maintains a social security system that provides old-age pensions, disability and survivorship benefits to employed citizens ages 15–59. This program is funded by 5% contributions from employees and the government, and 8% contribution by employers. Retirement is set at age 60 for men and age 55 for women. Work injury legislation provides disability and medical benefits for injured workers.

Oman does not have a written constitution or anti-discrimination laws. Islamic precepts result in de facto discrimination against women in a number of areas, such as inheritance. Traditional views on the subordinate role of women in society lead most women to work exclusively inside the home. Land grants and housing loans are rarely given to females. Some progress is being made, however, and women have begun to enter professional areas such as medicine and communications in greater numbers. The government has made efforts to increase educational opportunities for women. Women comprise roughly half of the 5,000 students at Sultan Qaboos University, and 50% of the total student body in the public school system. Women are required to get permission from a male relative to leave the country. Domestic abuse remains within the confines of the family, and sexual abuse of domestic employees remains a problem.

Ethnic tensions exist in Oman, and the Shihuh tribe in the province of Musadam complain about police harassment. There have been periodic episodes of violence between Shihuh and security forces. Human rights abuses include arbitrary arrest, prolonged detention and the mistreatment of prisoners. Human rights organizations are prohibited by law from operating in Oman, and international monitors are unable to inspect prisons.

#### 41 HEALTH

As of 1999, there were an estimated 1.3 physicians and 2.2 hospital beds per 1,000 people. In 1993, 89% of the population had access to health care services. In 2000, 39% of the population had access to safe drinking water and 92% had adequate sanitation.

Average life expectancy in 2000 was 74 years. Infant mortality was 17 per 1,000 live births. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 37.8 and 4 per 1,000 people. About 24% of married women (ages 15 to 49) were using contraception in 2000. The fertility rate was 4.3 children per woman living through her childbearing years.

In 1995, children up to one year old were vaccinated against tuberculosis, 96%; diphtheria, pertussis, and tetanus, 99%; polio, 99%; measles, 98%; and hepatitis B, 99%. As of 1999, the rates for DPT and measles were, respectively, 86% and 99%. About 12% of children under five were malnourished as of 1999 and goiter was prevalent in 10% of school-age children.

There were only 59 AIDS cases reported in 1996. The HIV-1 prevalence rate was 0.1 per 100 adults in 1999.

#### 42 HOUSING

In May 1973, Sultan Qabus approved the Law of People's Housing to make housing loans to needy Omanis. By 1985, 5,300 low-income units had been built. In 1989, 34% of all housing units were traditional Arabic houses, 30% were flats, and 27% were villas. Owners occupied 70% of all dwellings, 20% were rented, and 9% were provided by employers. In 2002, the government distributed 210,329 plots of land for residential development.

#### 43 EDUCATION

Pre-university education in Oman has three stages: primary, preparatory, and secondary. Six years of primary schooling are followed by preparatory school. Academic results of the preparatory exams determine the type of secondary education the student will receive.

The adult illiteracy rate was estimated at 28.1% for the year 2000 (males, 19.6%; females, 38.3%). In 1998, there were 411 primary schools with 313,516 students and 12,052 teachers. Student-to-teacher ratio stood at 26 to 1. In secondary schools in 1998, there were 12,436 teachers and 217,246 students. As of 1999, 65% of primary-school-age children were enrolled in school, while 59% of those eligible attended secondary school. In the same year, public expenditure on education was estimated at 3.9% of GDP.

In 1993, there were 252 literacy centers and 176 adult education centers. Three teachers' colleges were functioning as of 1986. The Institute of Agriculture at Nazwa became a full college by 1985. Sultan Qaboos University opened in 1986. In 1998, all higher-level institutions had 1,307 teachers and 16,032 students.

#### 44 LIBRARIES AND MUSEUMS

The library at Sultan Qaboos University has 145,000 volumes, and the Muscat Technical and Industrial College has 10,000 volumes. A British Council Library of almost 8,000 volumes was founded in 1973 in Matrah. The Ministry of National Heritage and Culture administers the National Museum of Ruwi, the Qurm Museum, and the Oman Natural History Museum, which includes the National Herbarium of Oman (a botanical garden) and the National Shell Collection.

#### 45 MEDIA

Postal, telephone, and telex systems are supervised by the Ministry of Posts, Telegraphs, and Telephones. By the end of 1991, the entire country was connected to a 79,000-line telephone network. As of 1997, there were 201,000 main telephone lines and 59,822 cellular phones. Oman now has international direct dialing to most major countries.

Radio and television facilities are government owned; color television was introduced in 1974. As of 1999 there were 3 AM and 9 FM radio stations and 13 television broadcast stations, all controlled by the government. In 2000 there were 621 radios and

563 television sets for every 1,000 people. In 2001, there were 90,000 Internet subscribers.

Newspapers and journals in Arabic include the daily *Al-Wattan* (2002 circulation, 32,500) and *Oman Daily Newspaper* (15,560) and weekly periodicals such as *Al-Aqida* and *Al-Usra*. There are two English-language newspapers: *Oman Daily Observer* (22,000) and *Times of Oman* (15,000).

A 1984 Press and Publication Law authorizes the state to censor domestic and imported foreign publications. Journalists are said to practice self-censorship to avoid harassment. Criticism of the sultan is explicitly illegal.

#### 46 ORGANIZATIONS

There is a Chamber of Commerce and Industry in Muscat. Among the social and cultural organizations are the Oman Women's Association, the Oman Cultural Club (for university graduates), the Omani National Organization for Scouts and Guides, the National Union of Oman Students, and the Omani Historical Association (open to non-Omanis).

#### 47 TOURISM, TRAVEL, AND RECREATION

Oman is cautiously developing tourism, which was discouraged by previous rulers. All travelers except citizens of other Gulf states, must obtain a visa and a No Objection Certificate. Most large hotels have clubs that offer various recreational activities; water sports are popular, but spear fishing has been prohibited as a conservation measure. In 1998, 612,000 foreign tourists visited Oman, spending an estimated \$112 million. There were 3,065 hotel rooms with 4,460 beds and a 49% occupancy rate in 1996.

According to 1999 UN estimates, the cost of staying in Muscat was \$151 per day, and \$156 per day in Salalah.

#### 48 FAMOUS OMANIS

Oman's great Islamic religious leader, whose followers are called Ibadhis, was 'Abdallah bin Ibad (fl.8th century); many of his

teachings are still followed in Oman. Ahmad ibn Sa'id (r.1741–83), founder of the present dynasty, freed Muscat from Persian rule. Sultan Qabus bin Sa'id (b.1940) has ruled Oman since his removal of Sa'id bin Taymur (1910–72), his father, in 1970.

#### 49 DEPENDENCIES

Oman has no territories or colonies.

# PAKISTAN

Islamic Republic of Pakistan  
*Islami Jamhooria Pakistan*

**CAPITAL:** Islāmābād

**FLAG:** The national flag is dark green, with a white vertical stripe at the hoist and a white crescent and five-pointed star in the center.

**ANTHEM:** The opening lines of the national anthem, sung in Urdu, are “Blessed be the sacred land, Happy be the bounteous realm, Symbol of high resolve, land of Pakistan, Blessed be thou citadel of faith.”

**MONETARY UNIT:** The rupee (R) is a paper currency of 100 paisa. There are coins of 1, 2, 5, 10, 25, and 50 paisa and of 1 rupee, and notes of 1, 2, 5, 10, 50, 100, 500, and 1,000 rupees. R1 = \$0.0175 (or \$1 = R56.90) as of May 2003.

**WEIGHTS AND MEASURES:** The metric system was introduced in 1966 and made mandatory as of 1 January 1979.

**HOLIDAYS:** Pakistan Day, 23 March; May Day, 1 May; Independence Day, 14 August; Defense of Pakistan Day, 6 September; Anniversary of Death of the Quaid-e-Azam, Mohammad Ali Jinnah, 11 September; Christmas and Birthday of the Quaid-e-Azam, 25 December. Religious holidays include ‘Id al-Fitr, Id al-‘Adha’, 1st of Muharram, and Milad an-Nabi.

**TIME:** 5 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Situated in southern Asia, Pakistan has an area of 803,940 sq km (310,403 sq mi), extending 1,875 km (1,165 mi) NE–SW from the ranges of the Hindu Kush and the Himalaya to the Arabian Sea and 1,006 km (625 mi) SE–NW. Comparatively, the area occupied by Pakistan is slightly less than twice the size of the state of California. The enclave of Junagadh, claimed by Pakistan, and Jammu and Kashmir, divided between Pakistan and India by the 1971 “line of control,” are not included in the area. Pakistan is bordered on the NE by China, on the E by Jammu and Kashmir to the Karakoram Pass, on the E and SE by India, on the S by the Arabian Sea, on the SW by Iran, and on the W and NW by Afghanistan. The total land boundary length is 6,774 km (4,209 mi). The coastline is 1,046 km (650 mi). Pakistan’s capital city, Islāmābād, is located in the northern part of the country.

## <sup>2</sup>TOPOGRAPHY

More than two-thirds of Pakistan is arid or semiarid. The west is dominated by the Baluchistan plateau, consisting of arid plains and ridges. Rivers, streams, and lakes exist only seasonally. The arid south ends at the rugged Makran coast and rises to the east into a series of rock-strewn ranges, the Kirthar, and to the north, the Sulaiman, which extends to the Indus plains. A semiwatered plateau surrounds Rawalpindi, bounded to the south by the salt range. Southward, the extensive Punjab plains support about 60% of the country’s population.

In the northern areas of Pakistan, the forest-clad hills give way to lofty ranges, including 60 peaks over 6,700 m (22,000 ft) high. K-2 (Godwin Austen), at 8,611 m (28,250 ft), is the second-highest mountain in the world.

The principal ranges, trending NW–SE, include several Himalayan ranges—notably the Pir Panjal and Zaskar—leading into the Karakoram Mountains. The Indus is the principal river of Pakistan. Its major tributaries are the Jhelum, Chenab, Ravi, and Sutlej.

## <sup>3</sup>CLIMATE

Pakistan’s climate is dry and hot near the coast, becoming progressively cooler toward the northeastern uplands. The winter season is generally cold and dry. The hot season begins in March, and by the end of June the temperature may reach 49°C (120°F). Between June and September, the monsoon provides an average rainfall of about 38 cm (15 in) in the river basins and up to about 150 cm (60 in) in the northern areas. Rainfall can vary radically from year to year, and successive patterns of flooding and drought are not uncommon.

## <sup>4</sup>FLORA AND FAUNA

The mangrove forests of the coastal region give way to the mulberry, acacia, and date palms of the sparsely vegetated south; the foothills support phulai, kao, chinar, and wild olive, and the northern forests have stands of oak, chestnut, walnut, pine, ash, spruce, yew, and fir. Above 3,000 m (10,000 ft), birch, dwarf willow, and juniper are also found.

Pakistan’s wide range of animal life includes the Siberian ibex, wild sheep, buffalo, bear, wolf, jackal, fox, wildcat, musk cat, hyena, porcupine, gazelle, peacock, python, and boar.

## <sup>5</sup>ENVIRONMENT

Relatively high population growth contributed to the depletion of forestland from 9.8% of Pakistan’s total area in 1947 to 4.5% by 1986, despite the forest conservation measures mandated by the Forest Act of 1927. Pakistan lost 14.5% of its remaining forest and woodland between 1983 and 1993. Deforestation has contributed to increased soil erosion, declining soil fertility, and severe flooding.

Primary responsibility for environmental matters belongs to the Environmental and Urban Affairs Division of the Ministry for Housing and Works. Laws to set air and water quality standards and regulate coastal zones to prevent pollution were under consideration in the 1980s. In the mid-1990s, Pakistan was among the 50 nations with the world’s highest levels of industrial carbon dioxide emissions, which totaled 71.9 million metric tons

per year, a per capita level of 0.59 metric tons per year. The nation's water supply is at risk due to untreated sewage along with agricultural and industrial pollutants. Only 85% of rural dwellers have pure drinking water. It is estimated that about 80% of the nation's diseases are related to impure water.

In 2001, 13 mammal species were endangered, as were 25 bird species and 5 plant species. Endangered species include the Indus dolphin, Baluchistan bear, tiger, Pakistan sand cat, snow leopard, Indian wild ass, green sea turtle, olive ridley turtle, gaviel, Central Asian cobra, Kabul markhor, chi pheasant, western tragopan, great Indian bustard, and Siberian white crane. Hunting or capturing wild animals was banned in 1981.

## 6 POPULATION

The population of Pakistan in 2003 was estimated by the United Nations at 153,578,000, which placed it as number 6 in population among the 193 nations of the world. In that year approximately 4% of the population was over 65 years of age, with another 42% of the population under 15 years of age. There were 105 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 2.44%, with the projected population for the year 2015 at 204,465,000. The population density in 2002 was 180 per sq km (467 per sq mi).

It was estimated by the Population Reference Bureau that 37% of the population lived in urban areas in 2001. Karāchi is the largest city with over twelve million people in that year. The capital city, Islamabad, had a population of 1,018,000. Other large cities include Lahore, Faisalabad, and Rawalpindi, Gujranwala, Mutlan, Hyderabad, and Peshawar, each with well over one million people. According to the United Nations, the urban population growth rate for 2000–2005 was 4.1%.

## 7 MIGRATION

Some 6,000,000 Muslims migrated to Pakistan from India at the time of independence in 1947, and Muslims have continued to arrive from India in much lesser numbers since then. The Soviet military intervention in Afghanistan in December 1979 led to an influx of Afghan refugees.

After the Taliban captured Kabul on 27 September 1996, there was a new outflow of Afghan refugees to Pakistan. By March of 1997, around 50,000 new Afghan refugees entered the country. As of 1999, there were still around 1.2 million Afghan refugees living in refugee villages in Pakistan. An unknown number of unregistered Afghans were living in the main Pakistani cities of Rawalpindi, Lahore, and Karāchi. Pakistan also hosts non-Afghan refugees, including Iraqis, Iranians, and Somalis. In 2000, the net migration rate was -0.5 migrants per 1,000 population. The total number of migrants living in Pakistan was 4,243,000 in that year. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

The majority of the population is Punjabi (an estimated two-thirds). Other major ethnic groups include the Sindhi, Pathan, Baloch, and Muhajirs (immigrants from India and their descendants). The Rajputs and the Jats are the most numerous of the Punjabi castes. In the area of the delta and the lower course of the Indus River are Sindhi peasant tribesmen. In the north and northwest are the hardy, warlike nomadic and seminomadic Pathans. The Balochi live in the vast western section of Pakistan and are divided into 12 major tribes, some of them purportedly of Dravidian origin. Native speakers of Urdu, the Muhajirs are refugees, or descendants of refugees, from pre-partition India. They are well represented in the cities.

## 9 LANGUAGES

Punjabi is spoken by 48% of the population; Sindhi by 12%; Siraiki (a Punjabi variant) by 10%; Pashtu by 8%; Urdu by 8%; Balochi by 3%; Hindko by 2%; Brahui by 1%; English, Burushaski, and other by 8%. During the Mughal (or Mogul) period, a fusion of local dialects and Persian produced Urdu, a "language of the camp" (*zaban-i-urdu*). Although regional languages and dialects persist, Urdu is the official language of Pakistan; while it is spoken by only a minority, it is understood everywhere except in the rural or mountainous areas on the western frontier. English also claims official status and is the lingua franca of Pakistani elite and most government ministries.

## 10 RELIGIONS

The country of Pakistan was essentially created as a Muslim homeland. Islam is the state religion and actions or speech contrary or derogatory to Islam are illegal. According to a 1998 census, some 98% of the population was Muslim, giving Pakistan one of the largest Islamic communities in the world. While most Muslims are of the Sunni and Shi'a sects, there are a few members of the Isma'ili sect concentrated at Karāchi. Ahmadis, who consider themselves Muslims but are not accepted as orthodox by other Muslim groups and were officially declared non-Muslims by the government in 1974, numbered perhaps 2,500,000 by 1985. In the 1998 census, about 2% of the population were Christians with the largest group belong to the Church of Pakistan, an umbrella Protestant organization. Roman Catholics are the next largest group of Christians. About 2% of the population are Hindus with about 2,000 temples and shrines, mostly in Sindh and Baluchistan. About 5,000 Parsis, believers in Zoroastrianism, live in Karāchi.

## 11 TRANSPORTATION

Railways are a major carrier of passenger and freight traffic. In 2002, Pakistan Railways operated 8,163 km (5,072 mi) of track.

Also in 2002, Pakistan's road system totaled 247,811 km (153,989 mi) of roads, of which 141,252 km (887,774 mi) were paved. Road traffic drives on the left. The 800 km (500 mi) Karakoram highway, built jointly by Pakistan and China to connect Islāmābād with western China, was opened in 1979. In November, 1997, the Lahore-Islāmābād motorway was opened for traffic. There were 391,400 passenger cars and 208,100 commercial vehicles in use in 2000. The road network carries 85% of all goods and passengers moving within the country. The harbor of Karāchi, which provides Pakistan with its major port, covers an area of 6.5 sq km (2.5 sq mi) and handles over 10.5 million tons annually. Port Qasim, 22 km (14 mi) south of Karāchi, was developed during the 1970s to help handle the increased shipping traffic. As of 2002, Pakistan's merchant marine operated 17 oceangoing vessels, totaling 241,832 GRT (367,093 DWT).

Pakistan had 120 airports in 2001, of which 87 had paved runways. Karāchi Airport is the main international terminus. As of July 2001, along with the government-run Pakistan International Airlines (PIA), two private carriers, Aero Asia and Shehann Air International (SAI), were operating on domestic as well as flights to Europe, the US, and the Far East. In 2001, 4,871,400 passengers were carried in scheduled domestic and international flights.

## 12 HISTORY

The ruins of ancient civilizations at Mohenjodaro and at Harappa in the southern Indus Valley testify to the existence of an advanced urban civilization that flourished in what is now Pakistan in the second half of the third millennium BC during the same period as the major riverain civilizations in Mesopotamia and Persia. Although overwhelmed from 1500 BC onward by

LOCATION: 23°41' to 37°5' N; 60°52' to 77°49' E. BOUNDARY LENGTHS: China, 523 kilometers (325 miles), including boundary of Jammu and Kashmir to the Karakoram Pass; India, 2,912 kilometers (1,812 miles); Arabian Sea coastline, 1,046 kilometers (655 miles); Iran, 909 kilometers (568 miles); Afghanistan, 2,430 kilometers (1,510 miles). TERRITORIAL SEA LIMIT: 12 miles.

large migrations of nomadic Indo-European-speaking Aryans from the Caucasus region, vestiges of this civilization continue to exist in the traditional Indic culture that evolved from interaction of the Aryans and successive invaders in the years following. Among the latter were Persians in 500 BC, Greeks under Alexander the Great in 326 BC, and—after AD 800—Arabs, Afghans, Turks, Persians, Mongols (Mughals), and Europeans, the last of whom first arrived, uniquely, by sea beginning in AD 1601.

Islam, the dominant cultural influence in Pakistan, arrived with Arab traders in the 8th century AD. Successive overland waves of Muslims followed, culminating in the ascendancy of the

Mughals in most of the subcontinent. Led initially by Babur, a grandson of Genghis Khan, the Mughal empire flourished in the 16th and 17th centuries and remained in nominal control until well after the British East India Company came to dominate the region in the early 18th century. Effective British governance of the areas that now make up Pakistan was not consolidated until well into the second half of the 19th century.

In 1909 and 1919, while the British moved gradually and successfully to expand local self-rule, British power was increasingly challenged by the rise of indigenous mass movements advocating a faster pace. The Indian National Congress, founded in 1885 as little more than an Anglophile society, began to attract

wide support in this century—especially after 1920—with its advocacy of nonviolent struggle. But because its leadership style appeared to many Muslims to be uniquely Hindu, Muslims formed the All-India Muslim League to look after their interests. National and provincial elections held under the Government of India Act of 1935 confirmed many Muslims in this view by showing the power the majority Hindu population could wield at the ballot box.

Sentiment among Muslims began to coalesce around the “two-nation” theory propounded by the poet Iqbal, which declared that Muslims and Hindus were separate nations and that Muslims required creation of an independent Islamic state for their protection and fulfillment. A prominent Bombay (now Mumbai) attorney, Muhammad Ali Jinnah, who came to be known “Quaid-i-Azam” (Great Leader), led the fight—formally endorsed by the Muslim League at Lahore in 1940—for a separate Muslim state to be known as Pakistan.

Despite arrests and setbacks during the Second World War, Jinnah’s quest succeeded on 14 August 1947 when British India was divided into the two self-governing dominions of India and Pakistan, the latter created by combining contiguous, Muslim-majority districts in British India, the former consisting of the remainder. Partition occasioned a mass movement of Hindus, Muslims, and Sikhs who found themselves on the “wrong” side of new international boundaries; more than 20 million people moved, and up to three million of these were killed.

The new Pakistan was a state divided into two wings, East Pakistan (with 42 million people crowded mainly into what had been the eastern half of Bengal province) and West Pakistan (with 34 million in a much larger territory that included the provinces of Baluchistan, Sind, the Northwest Frontier, and western Punjab). In between, the wings were separated by 1600 km (1000 miles) of an independent, mainly Hindu, India professing secularism for its large Muslim, Christian, and Sikh minorities.

From the capital in Karāchi, in West Pakistan, the leaders of the new state labored mightily to overcome the economic dislocations of Partition, which cut across all previous former economic linkages, while attempting to establish a viable parliamentary government with broad acceptance in both wings. Jinnah’s death in 1948 and the assassination in 1951 of Liaquat Ali Khan, its first prime minister, were major setbacks, and political stability proved elusive, with frequent recourse to proclamations of martial law and states of emergency in the years following 1954.

Complicating their task were the security concerns that Pakistan’s new leaders had regarding India in the aftermath of the bitterness of partition and the dispute over Jammu and Kashmir. In the early 1950s, they sought security in relationships external to the subcontinent, with the Islamic world and with the United States, joining in such American-sponsored alliances as the Baghdad Pact (later—without Baghdad—the Central Treaty Organization or CENTO) and the Southeast Asia Treaty Organization (SEATO). They received extensive American economic and security assistance.

In the years leading up to 1971, the domestic political process in Pakistan was dominated by efforts to bridge the profound political and ethnic gap that—more than geography—separated the east and west wings despite their anxiety about India and shared commitment to Islam. Economically more important, the Bengali east wing, governed as a single province, chafed under national policies laid down in a west wing dominated by Punjabis and recent refugees from northern and western India. Seeking greater autonomy, voters in East Pakistan voted the Muslim League (ML) out of office as early as 1954, resulting in a period of direct rule from Karāchi.

In 1958, the Army chief, Gen. Muhammad Ayub Khan, seized control of Pakistan, imposing martial law and banning all political activity for several years. Ayub later dissolved provincial

boundaries in the west wing, converting it to “one unit,” to balance East Pakistan. Each “unit” had a single provincial government and equal strength in an indirectly elected national legislature; the effect was to deny East Pakistan its population advantage, as well as its ability, as the largest province, to play provincial politics in the west wing.

Ayub’s efforts failed to establish stability or satisfy the demands for restoration of parliamentary democracy. Weakened by his abortive military adventure against India in September 1965 and amid rising political strife in both wings in 1968, Ayub was eventually forced from office. General Muhammad Yayha Khan, also opposed to greater autonomy for the east wing, assumed the presidency in 1969. Again martial law was imposed and political activity suspended.

Yahya’s attempt to restore popular government in the general elections of 1970 failed when the popular verdict supported those calling for greater autonomy for East Pakistan, even in the national assembly. The results were set aside, and civil unrest in the east wing rapidly spread to become civil war. India, with more than a million refugees pouring into its West Bengal state, joined in the conflict in support of the rebellion in November 1971, tipping the balance in Bengali favor and facilitating the creation of Bangladesh from the ruins in early 1972.

### Bhutto and his successors

The defeat led to the resignation on 20 December 1971 of Yahya Khan and brought to the presidency Zulfikar Ali Bhutto, whose populist Pakistan Peoples Party (PPP) had won a majority of seats in the west wing. A longtime minister under Ayub Khan, the experienced Bhutto quickly charted an independent course for West Pakistan, which became the Islamic Republic of Pakistan. He distanced Pakistan from former close ties with the United States and the west, seeking security from India by a much more active role in the Third World and especially in the growing international Islamic movement fueled by petrodollars.

At the polls, the PPP was opposed by the Pakistan National Alliance (PNA), a nine-party coalition of all other major parties including the Jamaat-i-Islami (JI) on the Islamic right, the National Democratic Party on the secular left, the Pakistan Muslim League (PML/Pagaro) in the center, Asghar Khan’s Tehrik Istiqlal (TI) on the secular right, and others. Although the results gave the PPP a two-thirds majority in parliament, allegations of widespread fraud and rigging undercut its credibility. PNA leaders demanded new elections, and Bhutto’s exercise of emergency powers to arrest them led to widespread civil strife. On 5 July 1977, the army intervened, with the support of the civil and uniformed services and tacit acceptance of the PNA leaders. In ousting Bhutto, army chief General Muhammad Zia-ul-Haq partially suspended the 1973 constitution, imposed martial law, and assumed the post of Chief Martial Law Administrator (CMLA). As calm returned to Pakistan, Zia promised elections for October 1977, but for the first of many times to come, he reversed himself before the event, arguing that he needed more time to set matters aright. And as the months passed, he began to assume more of the trappings of power, creating a cabinet-like Council of Advisers of made up of serving military officers and senior civil servants, chief among whom was longtime Defense Secretary, Ghulam Ishaq Khan, who became Finance Advisor and Zia’s strong right arm. His political base broadened by his promises of “clothing, food, and housing” to the rural and urban poor, Bhutto launched limited land reform, nationalized banks and industries, and obtained support among all parties for a new constitution promulgated in 1973, restoring a strong prime ministership, which position he then stepped down to fill. In the years following, Bhutto grew more powerful, more capricious, and autocratic. His regime became increasingly dependent on harassment and imprisonment of foes and his popular support seriously eroded by the time he called for

elections in March 1977. His PPP had lost many of its supporters, and he came to rely increasingly on discredited former PML members for support.

In mid-1978, Zia brought Bhutto to trial for conspiracy to murder a political rival in which the rival's father was killed. He also expanded his "cabinet" with the addition of several PNA leaders as advisors, and, when the incumbent resigned, he assumed the added responsibilities (and title) of president. He allowed a return of limited political activity but put off elections scheduled for fall when he was unable to get agreement among the PNA parties on ground rules that would keep the PPP from returning to power.

Bhutto's conspiracy conviction was upheld by the Supreme Court in March 1979, and he was hanged on 4 April. In the fall, and with the PNA now in disarray, Zia again scheduled, then postponed elections and restricted political activity. But he did hold "non-party" polling for district and municipal councils, only to find at year's end confirmation of his concerns about PPP strength when PPP members, identifying themselves as "Friends of the People," showed continuing appeal among the electorate.

Opposition to martial law began slowly to coalesce in 1980 when most of the PNA leadership joined with PPP leaders Ghulam Mustafa Jatoi and Nusrat Bhutto, Zulfikar's widow, to form the Movement for the Restoration of Democracy (MRD) and to demand Zia's resignation and the restoration of the 1973 constitution. But Zia, benefiting from excellent monsoons and from Ishaq Khan's sound economic policies, proceeded by a series of measures to expand the role of Islamic values and institutions in society. The public mood stayed quiescent, encouraged by Zia's regular reminders of the turmoil his predecessors had created.

Meanwhile, in neighboring Afghanistan, following a communist coup in 1978 and a Soviet invasion in 1979, Zia assumed a strong anticommunist leadership role, rallying the Islamic world and the UN. He resurrected close ties with the United States to enhance Pakistan's security and in the 1980s signed US\$3.2 and US\$4.02 billion economic and security assistance agreements with the United States. He also improved relations—normally parlous—with India with normalization in trade, transport, and other non-sensitive areas. Nonetheless, Pakistan's anxiety about the much more powerful India on its borders remained high in the absence of a solution of the dispute with India over the status of the former princely state of Jammu and Kashmir.

The Kashmir dispute cuts to the heart of the "two-nation" theory and as such is part of the unresolved legacy of the 1947 partition of British India which did not address the future of the over 500 princely states with which the British Crown had treaty ties. Most chose one or the other dominion on grounds of geography, but Kashmir bordered both new nations and thus had a real option. A Muslim-majority state, with a Hindu ruler, Kashmir opted first for neither but then chose to join the Indian Union when invaded by tribesmen from Pakistan. Open warfare ensued in Kashmir between Indian and Pakistani troops in 1948–49 and brought the dispute to the fledgling United Nations.

A UN cease-fire left a third of Kashmir under Pakistani control and the remainder, including the Vale of Kashmir, under Indian control. A 1949 agreement to hold an impartial plebiscite broke down when the protagonists could not agree on the conditions under which it would be held. Pakistan today administers its part—Azad (free) Kashmir—legally separate from the rest of Pakistan; Indian Kashmir is a state in the Indian Union, which has held stateside elections but no plebiscite.

The Kashmir issue has defied all efforts at resolution, including two additional spasms of warfare in 1965 and 1971, and subsequent Indo-Pakistan summits at Tashkent (1966) and Simla (1972). In the late 1980s, India's cancellation of election results and the dismissal of the state government led to the beginning of an armed insurrection against Indian rule by Kashmiri Muslim

militants. Indian repression and Pakistan's support of the militants has threatened to spark new Indo-Pakistan conflict and keeps the issue festering.

In Pakistan in 1984, President Zia held a referendum on his Islamization policies in December and promised that he would serve a specified term of five years as president if the voters endorsed his policies. The MRD opposed him but did not prevent what Zia claimed was a 63% turnout, with 90% in his favor. On the strength of this disputed showing, Zia announced national and provincial elections, on a non-party basis, for February 1985. The MRD again boycotted, but the JI and part of the Pakistan Muslim League (PML) supported Zia. Deemed reasonably fair by most observers, the elections gave him a majority in the reconstituted National Assembly and left the opposition in further disarray.

Ten months later, on 30 December 1985, Zia ended martial law, as well as the state of emergency he had inherited from Zulfikar Bhutto, turning over day-to-day administration to the PML's Mohammad Khan Junejo, whom he had appointed prime minister in March. He also restored the 1973 constitution but not before amending it to strengthen presidential powers vis-a-vis the prime minister. As the Eighth Amendment to the constitution, these changes were approved by the National Assembly in October 1985. They remain a contentious issue today, having subsequently played a key role in institutional tension between incumbents of the presidency and the prime ministership. In the first such instance, frictions developed slowly through 1987, but on 29 May 1988, Zia suddenly fired Junejo, alleging corruption and a lack of support for his policies on Islamization and on Afghanistan. He called for new elections in November, and in June he proclaimed the *Shari'ah* (Islamic law) supreme in Pakistan.

However, Zia was among 18 officials (including the American Ambassador) killed in the crash of a Pakistan Air Force plane two months later, leading to the succession to power of the Chairman of the Senate, Ghulam Ishaq Khan. As acting president, Ghulam Ishaq scheduled elections for November 1988 in which the PPP emerged with a strong plurality in the National Assembly. Benazir Bhutto, Zulfikar's daughter, who had returned from exile abroad in April 1986, became prime minister with a thin majority made up of her party members and independents. With her support Pakistan's electoral college chose Ghulam Ishaq President of Pakistan in his own right on 12 December 1988.

On 20 August 1990, with Bhutto and Ghulam Ishaq in a growing constitutional struggle over their respective powers, the president, with the support of the army chief, used his Eighth Amendment powers to oust her, alleging corruption, illegal acts, and nepotism. Declaring a state of emergency, he dissolved the National Assembly, named Ghulam Mustafa Jatoi (then leader of the opposition) prime minister, and called for new elections on 24 October. The Punjab high court upheld the constitutionality of his actions, and on 24 October, the voters gave a near-majority to the Islamic Jamhoori Ittehad (IJI), a multi-party coalition resting mainly on a partnership of the PML and the JI. Mian Muhammad Nawaz Sharif, PML leader and former chief minister of Punjab, became prime minister on 6 November and quickly ended the state of emergency.

During late 1992 and early 1993, the president and the new prime minister moved toward a new confrontation over the exercise of their respective powers. Challenged by Nawaz Sharif on the president's choice of a new army chief, Ghulam Ishaq again used his eighth amendment powers to dismiss the government and dissolve the assembly on 18 April, alleging mismanagement and corruption. But public reaction to the president's actions was strong, and on 26 May, a supreme court ruling restored Nawaz Sharif to power, creating a period of constitutional gridlock until 18 July when the army chief brokered a deal in which both Ghulam Ishaq and Nawaz Sharif

left office. Sharif resigned and was replaced by Ishaq Khan as interim prime minister by Moeen Qureshi, a former World Bank vice president; the president was then replaced by Wasim Sajjad, chairman of the senate.

Under Qureshi, Pakistan entered a period of fast-paced nonpartisan rule and reform in which widespread corruption was exposed, corrupt officials dismissed, and political reforms undertaken. In his actions, Qureshi was strengthened by public support and his disavowal of interest in remaining in power. He held elections as promised on 19 October, and the PPP, leading a coalition called the People's Democratic Alliance (PDA), was returned to power, with Benazir Bhutto again prime minister, this time with a thin majority. On 13 November, with her support, longtime PPP stalwart Farooq Leghari was elected president. Three years later in 1996, Leghari dismissed Bhutto and her cabinet and dissolved the National Assembly. Bhutto challenged her dismissal and the dissolution of the National Assembly in the Supreme Court. In a 6–1 ruling, the Court upheld the president's actions and found her ousted government corrupt.

Nawaz Sharif won the general election held in February 1997 with one of the largest democratic mandates in Pakistan's history. He immediately set about consolidating his hold on power by repealing major elements of the 1985 Eighth Constitutional Amendment. This transferred sweeping executive powers from the president to the prime minister. Within the next few months Nawaz Sharif dismissed his Chief of Naval Staff, arrested and imprisoned Benazir Bhutto's husband for ordering the killing of a political opponent, and froze the Bhutto family's assets. In March 1998, a warrant was issued for the arrest of Benazir Bhutto (who was abroad at the time) on charges of misuse of power during her tenure as prime minister.

The early months of 1998 were marked by increasing civil disorder in Pakistan, with sectarian killings, terrorist bombings, and violent demonstrations against a controversial Islamic blasphemy law. In January 1999, Nawaz Sharif himself escaped an apparent assassination attempt when a bomb exploded near his residence in the Punjab.

Despite increasing political opposition and a deteriorating economic situation, Nawaz Sharif's popularity received a temporary boost when Pakistan successfully tested five nuclear devices on 28 May and 30 May 1998. This was in response to India's nuclear tests earlier in the month and raised international concerns over a potential nuclear confrontation between Pakistan and India. Tensions eased when Nawaz Sharif and India's prime minister, Atal Behari Vajpayee, signed the historic "Lahore Declaration" on 21 February 1999, committing their countries to a peaceful solution of their problems.

In May 1999, however, several hundred Pakistani troops and Islamic militants infiltrated the Indian-held Kargil region of Kashmir. Two months of intense fighting brought Pakistan and India to the brink of all-out war. Under intense diplomatic pressure from the United States, but against the wishes of Pakistan's military, Nawaz Sharif ordered a withdrawal from Kargil in July 1999. This unpopular decision, plus the widely held view that Sharif was preparing to impose one-man dictatorial rule in the name of Islam, contributed to the prime minister's eventual downfall.

Distrustful of his army chief of staff, General Pervez Musharraf, Nawaz Sharif dismissed Musharraf on 12 October 1999 while he was in the air returning from a visit to Sri Lanka. However, when the general's plane was denied permission to land at Karāchi Airport, army troops loyal to Musharraf seized the airport, arrested Sharif, and returned Pakistan to military rule for the fourth time in the country's short history.

General Musharraf did not impose full martial law. Instead, he declared a state of emergency, suspended the constitution and assumed power as chief executive. Many Pakistanis welcomed the military takeover as a change from the corruption and abuses of

Nawaz Sharif's rule. Musharraf introduced modest economic reforms (mostly in the area of revenue collection), restricted the activities of Islamic extremists, and instituted policies to curb lawlessness and sectarian violence. On 23 March 2000, Musharraf announced local elections to be held over a period of seven months between December 2000–July 2001. Significantly, however, no mention was made of national elections or a return to civilian rule. Moreover, the independence of the judiciary was seriously compromised in January 2000, when Musharraf required all judges to take an oath of loyalty to his regime. Nawaz Sharif was tried and found guilty of hijacking and terrorism for trying to prevent Musharraf's plane, a commercial flight with civilians on board, from landing at Karāchi in October 1999. Sharif was sentenced on 16 April 2000 to life in prison. In December he went into exile in Sa'udi Arabia after being pardoned by military authorities.

On 20 June 2001 General Musharraf named himself president of Pakistan while remaining head of the army.

After 11 September 2001, US-Pakistani relations were transformed. Prior to the 11 September terrorist attacks on the United States, US policy toward Pakistan was restrained, stressing the need for Pakistan to curtail acts of terrorism, and a need for better Pakistani relations with India. After 11 September, Musharraf supported the US-led bombing campaign in Afghanistan and ties between the two countries were greatly strengthened. The United States removed some sanctions imposed on Pakistan after its 1998 nuclear tests, but retained others imposed after Musharraf's coup. After the Taliban were removed from power in Afghanistan in late 2001, the United States moved to strengthen counterterrorism operations in Pakistan, and to prevent al-Qaeda and Taliban fighters from regrouping in Pakistan (Pakistan shares a 1,510-mile porous border with Afghanistan). In addition, Islamic extremists from Pakistan crossed over into Afghanistan to fight against the US-led coalition.

Relations with India were seriously strained throughout 2002 and into 2003. On 13 December 2001, the Indian Parliament was attacked by 5 suicide fighters, and India blamed the attack on two Pakistan-based Islamic organizations, Lashkar-e-Taiba and Jaish-e-Muhammad, accusing Pakistan of supporting the groups and giving their leaders sanctuary. Tensions between the two countries flared, and they began to amass hundreds of thousands of troops along their shared border. Pakistan banned Jaish-e-Muhammad and Lashkar-e-Taiba, although it claimed India had not provided evidence of the groups' involvement in the attack. In January 2002, India successfully test-fired the Agni, a nuclear-capable ballistic missile. In May, Pakistan test-fired three medium-range surface-to-surface Ghauri missiles, which are capable of carrying nuclear warheads. President Musharraf stated Pakistan did not want to engage in war, although the country would be prepared to respond with full force if attacked. The standoff between India and Pakistan continued for 10 months—close to one million troops were stationed on the India-Pakistan border, the largest military build-up since the 1971 war. Most of the troops were withdrawn by October 2002, but tensions remained. In December, three Indian men were sentenced to death for aiding in the planning of the assault on Parliament. Relations between India and Pakistan worsened once again at the end of January 2003, with each nation expelling diplomats from the other, accusing them of spying. Throughout 2002 and into 2003, the two countries continued to test-fire ballistic missiles capable of carrying nuclear weapons.

During 2002, Pakistan was home to a series of violent acts directed at Western or Christian targets. In January 2002, Wall Street Journal reporter Daniel Pearl was abducted in Karachi, and was later brutally murdered. In March, a grenade attack on a church in Islamabad killed five people, including two US citizens. In May, 14 people were killed in a suicide attack on a bus in

Karāchi, including 11 French engineers. In June, 12 people were killed in a suicide attack on the US consulate in Karachi. In August, a Christian school north of Islamabad was attacked by gunmen, leaving 6 people dead. In September, 7 employees of a Christian charity in Karachi were murdered, marking the eighth high-profile attack on Christian or Western targets in Pakistan since General Musharraf began to support the US-led campaign against terrorism begun in September 2001.

In April 2002, Pakistan's military regime held a referendum on General Musharraf's presidency; 98% of the votes cast were in favor of Musharraf, giving him another 5-year term as president. In August, he unilaterally implemented 29 amendments to the constitution to grant himself the power to dissolve parliament and to remove the prime minister. He also gave the military a formal role in governing the country for the first time by setting up a National Security Council that would oversee the performance of parliament, the prime minister, and his or her government. Parliamentary elections were held on 10 October, with Quaid-e-Azam, a political faction of the Muslim League supportive of Musharraf, taking the most seats.

In October 2002, the United States confronted North Korea with evidence of its program to build nuclear weapons using enriched uranium. In November, the United States warned Pakistan not to engage in nuclear transactions with North Korea, stating it had evidence Pakistan continued to receive missile parts from North Korea possibly in exchange for nuclear plans and materials, including gas centrifuges needed to create weapons-grade enriched uranium.

On 19 March 2003, the US-led coalition launched war in Iraq. The war has been seen to have set a precedent for authorizing pre-emptive strikes on hostile states. The notion that India and Pakistan might adopt such a policy toward one another has caused international concern. In April 2003, spokesmen from both India and Pakistan asserted that the grounds on which the US-led coalition attacked Iraq also existed in each other's country.

### 13 GOVERNMENT

Pakistan came into being as a self-governing dominion in the British Commonwealth in 1947 and declared itself a republic in 1956. Under a constitution framed by Zulfikar Bhutto and effective as of 14 August 1973, it is federal in nature, and Westminster-style cabinet systems operate at the federal and provincial levels. All powers not otherwise specified are reserved for the federal government, which is armed also with extensive emergency powers in the event of a breakdown in constitutional government.

Pakistan is governed under the constitution of 14 August 1973 (as amended) which declared Islam the state religion and provided for a president as a nominal head of state and a prime minister as executive head of government. The president and prime minister were chosen by members of parliament, and the prime minister was responsible to that body, which was elected under universal suffrage at 18 years of age (the voting age was subsequently raised to 21, but then lowered once again to 18 in the October 2002 elections). In 1973, the parliament consisted of a national assembly of 200 elected members plus 10 seats reserved (until 1982) for women and 6 for tribal areas, these reserved seats filled by vote of the elected members. A senate of 63 members included 14 legislators from each of the four provincial legislatures, plus 5 seats reserved for tribal areas and 2 for the federal capital area.

This constitution was suspended in part by the martial law administration that seized power in 1977; army chief General Zia-ul Haq retained his military position while exercising executive powers as chief martial law administrator (CMLA). He took on the position of president in 1978 when the incumbent stepped down. In an interim document of 24 March 1981, Zia revived much of the 1973 constitution, although its Fundamental

Principles and its electoral provisions remained suspended until martial law was lifted in 1985. The CMLA was initially assisted by an appointive council of advisors, then by an advisory Federal Council of 277 appointed members that was formed in 1982 to assist and advise the martial law government.

The 1973 constitution was fully restored with the lifting of martial law in December 1985, although amended in a number of ways. It redressed—in favor of the presidency—the balance of powers between the positions of prime minister and president, who also remained commander-in-chief of the armed forces. It established term limits of five years for the incumbents, and provided that their successors in 1990 would be elected, the president by an electoral college composed of members of the national assembly, the senate, and the provincial assemblies, and the prime minister, by the national assembly.

In May 1994, after what appeared to be an encouraging start, Benazir Bhutto's government again appeared haunted by ineffectiveness when she failed to get her candidate elected president of the senate—effectively vice president. Instead, she was forced to acquiesce in the reelection, one more time, of the PML's Wasim Sajjad.

Bhutto was ousted in 1996 after President Leghari's charges that her government was corrupt, a move that was supported by a 6–1 supreme court ruling. Nawaz Sharif was elected in February 1997 and immediately instituted sweeping changes affecting the government, military, and economy. On 1 April 1997, both houses of the parliament voted unanimously to repeal the eighth constitutional amendment. The measure, introduced by Sharif, curtailed the president's power to dismiss elected governments and placed the appointment of provincial governors and the chiefs of the armed services in the hands of the prime minister. Sharif reduced the influence of the military in government by dissolving the Council for Defence and National Security. The prime minister also announced he was intending to place plans for introducing "Islamic government" to Pakistan before the legislature in March 2000.

President Leghari stepped down from office in December 1997, and Nawaz Sharif's strengthened his hold on the government when his nominee for president, Mohammad Rafiq Tarar, was elected by a record margin on 31 December 1997.

Sharif's government was overthrown on 12 October 1999, in a military coup staged by the army chief, General Pervez Musharraf, who suspended the constitution and assumed the title chief executive. On 20 June 2001, Musharraf appointed himself president. On 30 April 2002, a referendum held on Musharraf's presidency reaffirmed him in office for an additional five years. Musharraf promised to restore democracy, and parliamentary elections were scheduled for 10 October. On 21 August, Musharraf announced 29 amendments to the constitution. A National Security Council was established, with the president as chairperson, and the joint chiefs of staff and three service chiefs as members. It was established as a consultative body, but is to deal with matters pertaining to the "sovereignty, integrity, and security" of the state. Its complete jurisdiction has not been defined. In addition, Musharraf granted new powers to the president, including the right to dissolve the national assembly at his or her discretion, to appoint governors and to dissolve provincial assemblies in consultation with them, and to appoint the joint chiefs of staff and the three service chiefs in consultation with the prime minister. Musharraf indicated the changes would introduce a system of checks and balances between the president, prime minister, and chief of the army staff. He stated the constitutional amendments incorporated by his government were irreversible and needed no validation by the parliament to be formed after the 10 October 2002 elections.

The parliament, or Majlis-i-Shura, has two chambers. As of October 2002, the national assembly had 342 members, elected for five year terms, 272 of whom are elected in single seat

constituencies; 10 seats for minorities are filled by the nominees of political parties on the basis of the latter's strength in national assembly elections; and 60 seats for women are nominated by political parties in accordance to their share of national assembly seats per province. The senate has 100 members, elected by the provincial parliaments. Of the 66 general seats, 14 have been allocated to each of the four provinces, while the federally administered tribal areas (FATA) and the federal capital are assigned 8 (directly elected) and 2 seats (according to national assembly elections) respectively. The general seats are open to all, irrespective of gender or religion. In addition, each province has been conferred four seats for technocrats and four for women. Two seats, one for technocrats and another for women, are reserved for the federal capital.

On 10 October 2002, in the first general election since Gen. Musharraf seized power in 1999, Quaid-e-Azam, a political faction of the Muslim League supportive of Musharraf, won 118 of the 342 parliamentary seats. The Pakistan People's Party, aligned with former prime minister Benazir Bhutto, who was banned from participating, took 81 seats, and the religious 6-party coalition Muttahida Majlis-e-Amal (United Action Front or MMA) won 60 seats. The party aligned with former prime minister Nawaz Sharif, the Pakistan Muslim League-Nawaz, won 19 seats. Twelve other party groupings took seats in parliament. Although President Musharraf declared the elections to be free and fair, the European Union declared the elections to be flawed. In November, parliament elected Zafarullah Khan Jamali prime minister, to head a coalition government for three years.

## 14 POLITICAL PARTIES

Political parties have existed in Pakistan during all of its turbulent political history but have been regulated by legislation to ensure that they support the concept of Pakistan—a vestige of an early effort to repress the activities of the National Democratic Party (NDP) and the Jamaat-i-Islami (JI), which had opposed Partition in 1947. Parties have been frequently banned or restricted by the government, beginning with the 1952 ban on—and suppression of—the Communist Party of Pakistan (CPP). In most instances, banning of political activity has simply limited overt, outdoor rallies and demonstrations, while banning of parties has left the parties essentially intact, merely forcing them underground, as in the most recent ban in 1979.

In February 1981, leaders of nine political parties opposing the martial law regime, and led by the Pakistan Peoples Party (PPP), formed the Movement for the Restoration of Democracy (MRD) and by declaration called for an immediate end to martial law and restoration of the parliamentary system of 1973. Following the end of martial law in 1985, political parties were legalized, although regulated by the Political Parties Act that required all parties to register to be eligible for election. The elections that followed President Zia's sacking of Prime Minister Junejo in 1986, coupled with national elections called after Zia's subsequent death in an airplane crash in 1988, have resulted in a rebirth of full and open political activity.

The populist Pakistan Peoples Party (PPP) led by Benazir Bhutto, daughter of the late Prime Minister Zulfikar Bhutto, won a plurality in the National Assembly and formed a government with the support of appointed members and independents. The opposition coalesced around other parties, especially the Pakistan Muslim League (PML), and the Jamaat-i-Islami (JI), as well as disaffected PPP members who had been displaced when Benazir Bhutto claimed the party leadership on her return from exile overseas in 1986. One of these, Ghulam Mustafa Jatoi, joined with Nawaz Sharif, the PML chief minister of Punjab, to become leader of the opposition in the Assembly. In 1990, Jatoi became interim prime minister when Benazir Bhutto was dismissed by the president.

In the elections of fall 1990, Nawaz Sharif emerged as prime minister and leader of the Islamic Jamhoori Ittehad (IJI), a multi-party coalition based on Sharif's PML and the JI. But in elections in the fall of 1993, following the resignations of both the president and the prime minister, Bhutto's PPP, the lead party in the PDA, commanded a thin majority in the National Assembly, guaranteeing her return to power. The IJI came in a close second even though the Islamic parties suffered severe reverses nationally.

In the 1990s, party politics in Pakistan became increasingly regional, and party lines relatively porous, with much shifting of supporters into and out of the PPP and the PML. Each of these parties drew nearly 40% of the popular vote, and emerged as the only parties with national scope; both improved their positions in provincial assemblies.

In 1994, the PPP government depended on the support of former PML members and nonelected assembly members, plus leaders like Jatoi, a charter PPP member who had been in and out of the party in recent years. Similarly, during its period in power from 1990 to 1993, the PML formed a government only with the support of other parties, most of which have strength only in regional terms, mainly the JI, the Jamhoori Watan Party (JWP), the Jamiat Ulema-i-Pakistan (JUP), and the Jamiat-ul-Ulema-Islam (JUI). And both the PPP and the PML have competed successfully in forming governments in provincial assemblies only when they have recruited (or neutralized) strong regional parties, like the Awami National Party (ANP) in the Northwest Frontier Province (NWFP) and the Muhajir Quami Movement (MQM) in Sindh.

The two main political parties up until the elections of October 2002 were Sharif's Muslim League and Bhutto's Pakistan Peoples Party, with the Muslim League winning a resounding victory in the national elections held in February 1997. In 1996, noted Pakistan cricketer Imran Khan founded the Pakistan Tahreek-e-Insaf (PTI) or "Movement for Justice," a new political party dedicated to creating an "egalitarian, modern Islamic state" in Pakistan.

Unlike in the past, political parties were not banned under General Musharraf's military government, but they were sidelined from the political process until the 10 October 2002 parliamentary and provincial elections. In the general election, Quaid-e-Azam, a political faction of the PML supportive of Musharraf, came in first place. Bhutto's Pakistan Peoples Party came in third, and Sharif's PML-Nawaz was a distant fourth (both Bhutto and Sharif were barred from running). A 6-party hard-line Islamic coalition, Muttahida Majlis-e-Amal (United Action Front or MMA), came in third in the polls. The MMA is dominated by Jamaat-i-Islami, and it campaigned on an anti-American platform, voicing support for the Taliban in Afghanistan. It secured voters from the middle class and in urban areas in addition to rural ones.

## 15 LOCAL GOVERNMENT

Pakistan is divided into four provinces, each with deep historic roots and both linguistic and cultural associations, since 1972. Outside the provinces, there are Federally Administered Tribal Areas (FATA) along the border with Afghanistan, and the federal capital of Islamabad. In addition, provincial governments directly administer tribal areas within their territories.

The provinces, in order of population size, are Punjab (with its capital at Lahore), Sindh (Karachi), Northwest Frontier Province (Peshawar), and Baluchistan (Quetta), the largest in area. Under the 1973 constitution, provinces have popularly elected provincial assemblies, a governor appointed by the president, and a chief minister in whom executive power is vested. The governor acts on the advice of a chief minister who is elected from the party commanding the support of the assembly.

The senior administrative officer of each province is the chief secretary. Each province is divided administratively into divisions headed by commissioners who, like the chief secretary and the secretaries of provincial ministries, are senior members of the Pakistan Civil Service (CSP). Divisions are further subdivided into districts headed (depending on local usage) by deputy commissioners, district officers, or collectors, also members of the CSP, who manage development funds, collect the revenues, supervise the police, adjudicate disputes, administer justice, and interface with the elected councils at the local level which have limited taxing authority, decide on priorities for local development programs, and try certain local legal cases.

The Pakistan-controlled third of the original state of Jammu and Kashmir is divided into two areas. The southern portion, referred to as Azad Kashmir, is administered from Muzaffarabad by an appointed president and council of ministers. The larger portion to the north is known as the Northern Areas and is administered by a Commissioner and an elected council.

The number of seats in the provincial assemblies was increased in October 2002, and seats were reserved for women and non-Muslims. In the provincial assembly elections held on 10 October, the MMA won a landslide victory in the Northwest Frontier Province. In Punjab, the Quaid-e-Azam faction of the PML took the most seats, with Bhutto's Pakistan People's Party coming in second. The PPP came in first in Sindh, and the MMA came in first in Baluchistan.

## 16 JUDICIAL SYSTEM

Pakistan's judicial system stems directly from the system that was used in British India. The Supreme Court has original, appellate, and advisory jurisdictions. The president of Pakistan appoints the justices. Each province has a high court, the judges of which are also named by the president. Below the high courts are district and session courts, and below these are subordinate courts and village courts on the civil side and magistrates on the criminal side. There are no jury trials in Pakistan.

The British tradition of an independent judiciary has been undermined in Pakistan by developments over the last 50 years. In May 1991, for example, the National Assembly adopted legislation which incorporated the Islamic legal code, the *Shari'ah* into Pakistan's legal system. A Federal *Shari'ah* Court has the power to nullify any law it finds repugnant to Islam.

Courts in Pakistan are also subject to pressure from the executive branch, in part because of presidential power over transfer and tenure of high court justices and lower court judges. Judges in the special courts are retired jurists hired on renewable contracts so that their decisions may be influenced by a desire for contract renewal. Nonetheless, the provincial high courts and the supreme court have exercised some degree of independence in handing down a number of cases against the government. In 1996 the supreme court issued orders curtailing the powers of the executive to appoint and transfer high courts' judges.

Again, in late 1997, the issue of the appointment of judges to the supreme court led to deteriorating relations between Prime Minister Nawaz Sharif and the chief justice of the supreme court, Sajjad Ali Shah. In November, the supreme court brought charges of contempt against Nawaz Sharif, but the chief justice was forced out of office before a verdict could be handed down (a guilty verdict would have disqualified Sharif from office).

The position of the judiciary in Pakistan has also been affected by periods of military rule in the country. When General Zia al-Huq imposed martial law in 1977, military courts were given jurisdiction over trial and punishment of civilians found guilty of violating martial law regulations. The verdicts could not be appealed to a higher civilian court. Moreover, a provision of the 1973 constitution that judges could be removed only by the supreme judicial council, consisting of the chief justice and two ranking judges from the supreme court and the high courts, was

revoked by the military government in June 1979. Under the 1981 interim constitution, a new oath was imposed on all supreme court, high court, and *Shari'ah* court judges, and all laws promulgated by the martial law regime were exempted from judicial review. The supreme court chief justice and several other judges were replaced after refusing to take the oath. Although the military courts were abolished in December 1985, their decisions still cannot be appealed to civilian courts.

Similarly, in January 2000, Musharraf required all judges to take an oath of loyalty to his regime. The supreme court chief justice, Saiduzzaman Siddiqui, and five colleagues refused and were dismissed. This was just a week before the court was due to hear the first of several cases challenging the legality of the new government. Legal experts argue this action did irreparable harm to Pakistan's judiciary; with all sitting judges having accepted the military regime, there is no independent judiciary to protect the constitution.

## 17 ARMED FORCES

In 2002, Pakistan's armed forces totaled 620,000 active personnel with reserves numbering 513,000. The army of 550,000 comprised 2 armored divisions and 19 infantry divisions. The navy of 25,000 included approximately 1,200 marines and a small naval air arm. The air force, with a total strength of 45,000, had 366 combat aircraft. Paramilitary forces, including the Pakistan rangers, the frontier corps, a maritime security agency, a national guard and local defense units, totaled an estimated 290,000. It is suspected that Pakistan's nuclear arsenal has between 24 and 48 weapons, and has the capability to produce more. that Pakistan was a participant in UN and peacekeeping operations in seven regions. Defense expenditures in 2001 were \$2.6 billion, or 4.6% of GDP.

## 18 INTERNATIONAL COOPERATION

Pakistan became a member of the UN on 30 September 1947 and is a member of its specialized agencies, including ESCAP.

As an Islamic state, Pakistan is an active member of the Organization of the Islamic Conference (OIC) and participates in various Muslim Afro-Asian organizations. Pakistan also belongs to the Asian Development Bank, the Colombo Plan, G-77, and the WTO and has signed the Law of the Sea. Following the establishment of Bangladesh, Pakistan withdrew from the Commonwealth of Nations in 1972; it rejoined in 1989.

In 1960, Pakistan and India signed an Indus water basin treaty opening the way to the peaceful use and development of water resources. Pakistan, Turkey, and Iran established a tripartite arrangement, called Regional Cooperation for Development (RCD), in 1964. In 1985, Pakistan and six other South Asian countries, including India and Bangladesh, formed the South Asian Association for Regional Cooperation (SAARC).

## 19 ECONOMY

Despite steady expansion of the industrial sector during the 1990s, Pakistan's economy remains dominated by agriculture. Agriculture and industry made roughly the same contribution to GDP—26% and 25%, respectively—in 2001, although 44% of the labor force was in agriculture and only 17% industry. About 70% of export revenues are generated by agriculture or agriculture-based manufactures, with cotton alone accounting for 58.9% of the total in 2000/01. Exports of primary agricultural products are concentrated in cotton and rice. One-fourth of the land is farmed or used for grazing, and much of this is planted to food crops for domestic consumption. Pakistan is generally poor in natural resources, although extensive reserves of natural gas and petroleum are being exploited. Iron ore, chromite, and low-quality coal are mined.

This strong performance notwithstanding, a growing debt-servicing burden, large government expenditures on public

enterprises, low tax revenues, high levels of defense spending, and a rapid rise in imports with burgeoning domestic demand contributed to serious fiscal and current account deficits during the late 1980s. In response, in 1988 the government initiated a major structural reform program with World Bank and IMF support. When the country was created in 1947, there were no industries, and few banks, or mercantile firms. Since that time, industrial production has risen significantly. In 1998, industry accounted for about 26% of the GDP, compared with only 7% in 1950. Thanks in part to significant expansion of power facilities, largely in the Indus basin, the pace of economic development was particularly rapid during the 1980s. For most of the decade, the annual GDP growth rate averaged 6.5%, reflecting an expansion of over 4% annually in the agricultural sector and over 7% in value added in the industrial sector.

The government pursued policies aimed at private sector-led development, macro economic stability, and structural reforms. Overall growth indicators remained promising with the reform measures, as GDP increased by 5.5% in 1990/91 and 7.8% in 1991/92, and export growth averaged a robust 14% between 1989 and 1992. These improvements notwithstanding, reform efforts secured less than expected reductions in the country's balance of payment deficits, due in part to deteriorating terms of trade in the wake of rising oil prices during the 1991 Gulf War. Severe floods in the Sindh and Punjab provinces in late 1992 and a contraction in international commodity markets weakened Pakistan's export sector during 1992/93, further exacerbating the country's trade and current account deficits and helping to reduce GDP growth to only 3% in 1993. In March of 1994 the government received IMF approval of a three-year Enhanced Structural Adjustment Facility (ESAF) to support reforms. The IMF wanted austerity measures aimed at reducing the government deficit to 4% of GDP, a reduction in the maximum tariff rate from 70% to 45%, increased privatization of large state-owned enterprises, and a tax on agricultural income. However, the government's failure to follow the IMF recommendations and liberalize the economy caused the IMF to suspend the \$1.5 billion loan in mid-1995. The suspension of the loan worried investors and damaged Pakistan's debt ratings. The trade deficit grew, foreign exchange reserves dwindled, and inflation remained high.

After the government recommitted itself to reform, the IMF approved a new \$600 million standby arrangement in September. Still, by 1996 the economy was in its worst recession in 25 years. Tax receipts were falling well below their targets and export earnings had declined, leaving the government with a deepening foreign-exchange crises as reserves fell to only \$500 million by the end of the year. By mid-1997, the government owed \$1.6 billion in interest on \$30 billion owed to foreign creditors, putting the country perilously close to default. Growth in GDP was only 1.2% in 1997, down from 6.1% in 1996. Growth rebounded to 4.2% in 1998/99 as per capita income reached \$434, up from \$400 in 1990. However, Pakistan came under international economic sanctions following its six nuclear bomb tests in May 1998, and then again after the elected government was overthrown in a military coup in 1999. The growth rate declined to 3.9% in 1999/00 and then to 2.5% in 2000/01, as per capita income fell to \$397. Net public debt in 2000/01 rose to 103.8% of GDP. In November 2000, the government entered into a 10-month stand-by agreement with the IMF preliminary to the rescheduling of \$1.8 billion of sovereign debt with the Club of Paris countries in January 2001. After the 11 September 2001 terrorist attacks on the United States, more concessional finance was made available. In December 2001, Pakistan entered into a three-year arrangement with the IMF under its Poverty Reduction and Growth Facility (PRGF), and under a new Paris Club agreement, over \$12 billion of national debt was rescheduled. Net public debt in 2001/02 decreased marginally to 96.2% of

GDP. GDP growth rose slightly to 3.6% and inflation eased to 2.7%, down from 4.4% the year before. The most improved economic indicator was foreign reserves, which rose from about \$900 million in 1999 to over \$10 billion in March 2003.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Pakistan's gross domestic product (GDP) was estimated at \$299 billion. The per capita GDP was estimated at \$2,100. The annual growth rate of GDP was estimated at 3.3%. The average inflation rate in 2001 was 4%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 26% of GDP, industry 24%, and services 50%.

According to the United Nations, in 2000 remittances from citizens working abroad totaled \$1.075 billion or about \$8 per capita and accounted for approximately 1.7% of GDP. Worker remittances in 2001 totaled \$1.086 billion. Foreign aid receipts amounted to about \$14 per capita and accounted for approximately 3% of the gross national income (GNI).

The World Bank reports that in 2001 per capita household consumption (in constant 1995 US dollars) was \$388. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the same period private consumption declined at an annual rate of 1%. Approximately 45% of household consumption was spent on food, 19% on fuel, 6% on health care, and 5% on education. The richest 10% of the population accounted for approximately 27.6% of household consumption and the poorest 10% approximately 4.1%. It was estimated that in 2001 about 35% of the population had incomes below the poverty line.

## 21 LABOR

In 2002, the labor force was estimated at 40.4 million. In 1999, agriculture accounted for 44% of the total workforce, services 39%, and industry for 19%. Some 70% of rural residents engage in agricultural pursuits. Unemployment and underemployment are major problems; while unemployment was officially 6.3% in 2001, underemployment has frequently gone as high as 25%.

There are sizable numbers of Pakistani workers in the Middle East and European countries, most of them from the poor regions of Pakistan's NWFP. There are also several million refugees from Afghanistan who have become part of the Pakistan labor force in those regions and in Karachi.

The trade union movement is of recent origin. The principal federations include the National Labor Federation and the All Pakistan National Federation of Trade Unions. Labor-management differences are handled by the central conciliation machinery, established under the provisions of the Industrial Disputes Act of 1947. Benefits such as bonuses, paid holidays, and job security regulations are set forth in the basic West Pakistan Industrial and Commercial Employment Ordinance of 1968. In 2002, approximately 10% of the industrial labor force was unionized, and 3% of the total workforce. The government curtails union activity. Although collective bargaining is protected by law, government restrictions preclude bargaining by large segments of the labor force.

The practice of child labor is widespread. According to a government survey, three or four million children between the ages of five and 14 worked as of 2002. However, informal estimates have placed this figure as high as 8 to 10 million. There may also be some 20 million bonded laborers in Pakistan. Bonded labor is particularly common among the persecuted Christian minority. Children are often kidnapped to serve as forced labor. The minimum wage for unskilled workers was \$30

per month in 2002. There is a maximum workweek of 48 hours, but most employees are unaware of these work restrictions.

## 22 AGRICULTURE

Agriculture engaged 44% of the economically active population in 1999. Agricultural production increased by an annual average of 4.4% during 1990–2000, accounting for 26% of GDP in 2001. The development of a huge irrigation network covering two-thirds of the total cultivated area—together with massive land reclamation projects—has made possible the farming of vast tracts of previously barren and unusable land. The Indus Valley of Punjab is Pakistan's agricultural heartland. There are two principal growing seasons: the kharif season starts between April and June and ends between October and December, while the rabi season starts between October and December and ends during April or May. Grains constitute the most important food crops, with wheat, rice, corn, and citrus the major products. Cotton, the most important cash crop, generates more foreign trade income than any other export item. Cotton production suffered in the late 1990s from leaf curl virus. In 2001/02, production totaled 8.3 million bales. Rice, sugarcane, tobacco, rapeseed, and mustard are also large export earners. Rice covers 11% of all cropland—production in 2001/02 totaled 3.88 million tons.

Improved government policies over the past decade have made Pakistan a net exporter of guar products, tobacco, cotton, and rice. Other major agricultural exports include molasses, fruits and vegetables, guar and guar products, and tobacco. Principal crops with 1999 output (in thousands of tons) were wheat, 17,790; sugarcane, 53,104; and rice, 6,900. Production of sunflower seed amounted to 120 tons in 1999. Other crops include millet, barley, sesame, flax, groundnuts, mangoes, citrus fruits, and vegetables. Opium poppies are grown in the North-West Frontier Province (with an estimated 95 tons produced in 2001), government efforts to stamp out the opium and heroin trade have helped reduce production by over 95% since the mid-1980s.

Farming production remains limited by primitive methods, and mechanization is uncommon. The introduction of improved wheat and rice varieties has met with some success, although the greatest impact on agriculture has derived from the Indus basin irrigation schemes, which by the 1970s had provided Pakistan with the largest irrigated network in the world. The availability of water has made possible increased use of chemical fertilizers, with the most intensive consumption occurring in cotton production. The government has instituted soil conservation, farm mechanization, land reclamation, and plant protection programs.

To increase smallholders' equity and provide further incentives for agricultural improvement, the government decreed in 1959 that the maximum holding for any person should be 200 ha (500 acres) of irrigated land or 400 ha (1,000 acres) unirrigated. Land in excess of these amounts was acquired by the government and paid for in interest-bearing 30-year bonds. In March 1972, the maximum permissible size of a holding, measured in terms of production index units, was reduced by two-thirds, with the government empowered to confiscate without payment all excess land for free redistribution to landless peasants and small tenants. To help the new landowners, the government provided loans for purchase of seed, feed, and bullocks. In accordance with a statement of national agricultural policy issued in 1980, the Agricultural Price Commission was established to provide incentives to Pakistani farmers through higher prices for farm products.

## 23 ANIMAL HUSBANDRY

Some 30 to 35 million people are engaged in the livestock industry. Camels are used for transport throughout the more barren south and west, and bullocks and donkeys elsewhere.

Sheep range widely over the grazing lands of middle and northern Pakistan; the bulk of their wool is exported. Among local breeds of cattle, the Red Sindhi, the Tharparker, the Sahiwal are renowned for milk, and the Bhagnari and Dhanni for draft purposes. The production of powdered milk, cheese, butter, and ice cream is carried out by several large dairy plants. From 1984 to 1990, milk production increased by 41%, and meat production rose 48%. Even so, domestic milk production still falls short of demand. Poultry production has recently become prominent, especially through scientific research in breeding, feeding, and disease control. With the assistance of the Asian Development Bank, several livestock development projects are currently underway.

In 2001 there were 23.3 million buffaloes, 22.4 million head of cattle, 49.1 million goats, and 24.2 million sheep. Commercial poultry numbered 170.1 million broilers and 10.36 million layers in 1999. There were also an additional 108 million poultry kept by people in rural areas. Modern poultry production in Pakistan is constrained by high mortality and incidence of disease in chicks and an inefficient marketing system. The livestock industry contributed 37% to the total value of agricultural output in 1998/99, and 9% to GDP. Production estimates for 2001 included (in tons): beef, 428,000; mutton, 508,000; poultry, 338,000; wool, 39,200; and milk, 7,338,000. In an effort to increase domestic milk production, the government has initiated a comprehensive livestock development program with \$55 million in assistance from the Asian Development Bank. The government has also broadened extension and artificial breeding services, taken measures to improve slaughterhouses, and introduced high-yield fodder varieties. Cattle dung is an important cooking fuel and fertilizer.

## 24 FISHING

With a coastline of 814 km (506 mi), Pakistan is rich in fishery resources that remain to be fully developed. Almost the entire population of the coastal areas of Sindh and Balochistan depends on fisheries for its livelihood. During 1998/99, fisheries engaged 404,500 persons, of which 113,850 were in the marine sector and 290,600 were involved with inland fishing. The fish catch in 2000 was 614,829 tons, 70% of it landed off coastal waters. Species include salmon, mullet, pomfret, mackerel, shrimp, and local varieties. About 10% of the annual catch is exported. Export earnings from fish products amounted to \$149.4 million in 2000.

To exploit potential fishery resources, the government has undertaken such projects as construction of a modern harbor for fishing vessels at Karāchi, procurement of diesel-powered vessels, establishment of cold storage and marketing facilities, export of frozen shrimp, and encouragement of cooperative fish-marketing societies. An aquaculture project financed by the Asian Development Bank and the EU aimed to increase the annual fish catch and to promote prawn farming.

## 25 FORESTRY

Of Pakistan's depleted forest resources, amounting to about 3.1% of the total area, only about 1,748,000 ha (4,319,500 acres) are classified as commercial or productive forests. Privately-owned forests cover some 3,783,000 ha (9,348,000 acres), located primarily in the North Western Frontier Province (NWFP) and Punjab. Hill forests predominate in the north and northwest temperate and subtropical regions. Fir, spruce, deodar, bluepine, chirpine, Chalghoza, and juniper, as well as broadleaved species like oak, maple, walnut, poplar, and chestnut are found in the hill forests. These forests are the main source for constructional timber and supply great quantities of fuelwood, while providing groundcover to the fragile mountain ecosystems (thereby lessening floods and droughts in the plains). Forests in the foothills consist of broadleaved evergreens, with main species of olive and phulai. Irrigated plantation forests grow such species

as sheesham, mulberry, bakain, and semal, mostly for timber, furniture, and sporting goods production.

About 500,000 cu m (17.6 million cu ft) of timber is produced annually by state forests, which are under the authority of the Pakistan Forest Institute. During 1990–2000, the annual average rate of deforestation was 1.5%. In its 1999–2004 five-year plan, the government plans to implement 151 reforestation projects, and a cost of r1.6 billion. The total timber cut in 2000 was 20,848,000 cu m (735.9 million cu ft), with 91% consumed as fuelwood. Since forest resources are limited, Pakistan must import wood and wood products in increasing volumes to satisfy rising demand. In 2000, forest product imports totaled \$137 million.

## 26 MINING

Except for petroleum and natural gas, mineral reserves in Pakistan were meager and of poor quality. Chromite was one of the few valuable minerals available; production of chromium content rose to 12,080 tons in 2000, from 3,998 in 1998. It had previously risen from 1,090 tons in 1988 to 10,380 in 1991. Construction materials were a leading industry in the country. In 2000, small quantities were produced of aragonite; barite; bauxite; bentonite; celestite; chalk; dolomite; emery; feldspar; fire clay; fluorspar; fuller's earth; crude gypsum; kaolin (china clay); limestone and other stone; crude magnesite; marble; nitrogen, in ammonia; phosphate rock; natural mineral pigments; rock and marine salt; bajir, common, and glass sand; caustic soda; soapstone; strontium minerals; native sulfur; and talc and related materials.

Pakistan's inadequate infrastructure, poorly educated workforce, and pervasive violence have been major obstacles to attracting foreign investment. The Minister for Petroleum and Natural Resources invited the Iranian government in 2000 to invest in copper exploration and development, and to manage the mothballed Saindak copper-gold-molybdenum-silver mining and metallurgical complex, in Baluchistan's Chagai Hills. Also interested in acquiring the Saindak project were China—whose China Metallurgical Construction Corp. built the mine and plant—and BHP of Australia; mining stopped at Saindak in 1996. BHP and Australia's Mincor Resources formed an alliance to explore and develop large porphyry-style copper deposits in the Chagai Hills; the joint venture initially was to focus on the Reko Diq Complex, possibly one of the world's largest copper deposits with more than 7 million tons of copper and 342,000 kg of gold. The Geological Survey of Pakistan reportedly discovered a total of 400 million tons of commercially viable iron ore in Baluchistan and the North West Frontier (NWF), to be mined by open-cut methods. The NWF government was considering reviving the Swat emerald mine, at Mingora. The discovery of a large low-ash, low-sulfur lignite deposit in the Tharparkar desert may increase the importance of Pakistan's coal.

## 27 ENERGY AND POWER

In early 2002 Pakistan had crude oil reserves estimated at 298 million barrels (chiefly at the Meyal oil field, near Rawalpindi) and large natural gas reserves of 611 billion cu m (mainly at Sui, Baluchistan). In the early and mid-1980s, accelerated exploitation of these resources reduced the nation's oil imports and improved its trade balance. Crude oil production peaked in 1991 at 62,000 barrels per day.

Oil, about two-thirds of which is imported, satisfies about 43.5% of primary energy needs, natural gas (38.3%), coal (5.1%), while the remainder is met by hydroelectricity and nuclear power. Energy production in 2001 included petroleum, 57,000 barrels per day; natural gas, 22.6 billion cu m (798 billion cu ft); and coal, 3.8 million tons. Electricity generation in 2000 totaled 64.1 billion kWh, of which 64.1% came from thermal plants, 35.3% from hydroelectric sources, and less than 1% from nuclear power. Consumption of electricity in 2000 was 7.5 billion

kWh. Installed electrical generating capacity in 2001 was 17,726,000 kW.

Two factors have contributed to the growth of the electric power sector: the initial harnessing of the vast hydroelectric potential of the Indus basin (estimated at 25,000 MW) and the increased availability of natural gas as a fuel for thermal generators. The Tarbela Dam, the world's largest earth- and rock-filled dam, completed in 1976 at a cost of \$1.1 billion, generates 2.1 million kW of hydroelectric power. Pakistan's nuclear plant at Karāchi has a single 137 MW reactor that began commercial operation in 1972.

Despite increases in installed generating capacity, Pakistan faces chronic electricity shortages due to rapid demand growth, transmission losses due to outdated infrastructure, power theft, and seasonal reductions in the availability of hydropower. Rotating power outages are common and many villages are not yet electrified. As of 2002, less than half of Pakistan's population was connected to the nation's power grid.

Since 1947, the government has given the highest priority to development of the industrial sector, and by 2002 had developed a fairly broad industrial base. In 2000/01 industry accounted for 25.2% of GDP, of which 17.4% was from manufacturing; 3.9% from electricity and gas utilities; 3.4% from construction and 0.5% from mining. Industry employs about 17% of the work force (1999 est.)

## 28 INDUSTRY

During the 1960s and 1970s, light industry expanded rapidly—especially textiles, sugar refining, fertilizers, and other manufactures derived from local raw materials. Large government investments in the 1970s established the country's first large-scale ship-building and steel milling operations; the production of chemical fertilizers was also given special government support. The Pakistan Industrial Development Corp., established in the early 1980s with IDA credit, developed industrial estates for small- and medium-scale industries, assisting their occupants in obtaining credit, raw materials, technical and managerial assistance, access to production facilities, as well as marketing support. Despite steady overall industrial growth during the 1980s, the sector remains concentrated in cotton processing, textiles, food processing and petroleum refining.

The 1973 nationalization program, which placed 10 basic industries wholly within the public sector, was reversed in 1991 with the enactment of an ambitious privatization program. In 1992, the government began auctioning off majority control in nearly all public sector industrial enterprises, including those manufacturing chemicals, fertilizers, engineering products, petroleum products, cement, automobiles, and other industrial products requiring a high level of capital investment, to private investors. In 1995, however, the speed of privatization began to slow as the sale of some large state-owned units were stalled and postponed. In 2002, the public industrial sector, under the Production Wing of the Ministry of Industries and Production consisted of eight public holding companies—Pakistan Steel, the State Cement Corporation (PACO), Federal Chemical and Ceramics Corporation (FCCC), State Petroleum Refining and Petrochemical Corporation (PERAC), State Engineering Corporation (SEC), the Pakistan Industrial Development Corporation (PIDC), the state fertilizer corporation and Pakistan Automobile Corporation. The majority of the 74 production enterprises controlled by these holding companies have been privatized, and most of those remaining are scheduled to be sold. The public sector continues to dominate in steel, heavy engineering, automobiles, petroleum and defense-related production.

Cotton textile production is the most important of Pakistan's industries, accounting for about 19% of large-scale industrial employment, and 60% of total exports in 2000/01. Pakistan has become self-sufficient in cotton fabrics and exports substantial

quantities. Some long and extra-long staple cotton is imported to meet demand for finer cottons. About 80% of the textile industry is based on cotton, but factories also produce synthetic fabrics, worsted yarn and jute textiles. Jute textile output amounted to 70,100 tons in 1999/00. The textile industry as a whole employs about 38% of the industrial work force, accounts for 8.5% of GDP, 31% of total investment, and 27% of industrial value-added.

Other important industries include food processing, chemicals manufacture, and the iron and steel industries. Food processing is considered Pakistan's largest industry, accounting for slightly more than 27 of value-added production. Pakistan Steel, the country's only integrated steel mill, employs about 14,500 workers and has an annual production capacity of 1.1 million tons. The government plans to expand the mill's annual capacity to 3 million tons. Pakistan Steel produces coke, pig iron, billets, hot and cold rolled coils and sheets, and galvanized sheets. In June 1999, the first tin-plating plant began operation, a joint venture with Japan.

Pakistan has ten fertilizer plants, six state-owned and four private, with a total annual production capacity of 4.65 million tons. Production in 2000/01 was 3.66 million tons, up 10.5% from 1999/00. There are 21 cement plants, four state-owned and 17 private, with an annual production capacity of 19.2 million tons. Production in 1999/00 was 9.9 million tons., up 4% from 1999/98. Pakistan's chemical industry produces an number of basic chemicals used in its other industries, including soda ash, caustic soda and sulfuric acid. Industrial output from other major industries also includes refined sugar, vegetable ghee, urea, rubber tubes, electric motors, electrical consumer products (light bulbs, air conditioners, fans refrigerators, freezers, TV sets, radios, and sewing machines), and pharmaceuticals

## 29 SCIENCE AND TECHNOLOGY

Pakistan has made notable advances in nuclear technology since the 1980s, when its Atomic Energy Commission (AEC) developed a nuclear plant for electric power generation and research programs. The AEC's three nuclear centers for agricultural research have employed nuclear techniques to improve crop varieties. Six nuclear medical centers provide diagnosis and treatment of patients with radioisotopes produced from Pakistan's own uranium resources. In May 1998, Pakistan conducted nuclear weapons tests in the desert of the Chagai Hills in response to Indian testing earlier that month. Five nuclear bombs were fired on 28 May and a sixth on 30 May.

The Karāchi Export Processing Zone (EPZ), established in 1980, has attracted foreign capital investment in advanced technologies. Another EPZ has been proposed for Lahore. EPZ now include those for computer assembly and parts manufacture, television assembly, other electrical and electronic products, and engineering.

Scientific learned societies include the Pakistan Academy of Science (founded in 1953 at Islāmābād), the Pakistan Association for the Advancement of Science (founded in 1947 at Lahore), and the Scientific Society of Pakistan (founded in 1954 at Karāchi). The Pakistan Council for Science and Technology is the chief government advisory body. The Pakistan Council of Scientific and Industrial Research and the Pakistan Medical Research Council (both in Karāchi), and the Pakistan Agricultural Research Council (in Islāmābād) promote research in their respective fields. In 1987–97, research and development expenditures totaled 0.92% of GNP; 72 scientists and engineers and 13 technicians per million people were engaged in research and development in Pakistan in the 1990s. In 1996, Pakistan had 28 universities and colleges offering courses in basic and applied sciences. In 1987–97, science and engineering students accounted for 32% of college and university enrollments.

## 30 DOMESTIC TRADE

The government supervises the supply and pricing of essential commodities, including fruits, vegetables, livestock, and dairy products, and has established several cooperative marketing and distribution organizations. Foreign goods are brought in by large importing concerns, centered at Karāchi, and distributed to retailers through many intermediaries.

There are several produce exchanges at Karāchi, and the trade organizations are represented by the Federation of Chambers of Commerce and Industry. Large supermarkets and department stores have not yet developed in the nation. Chain stores for clothing have become popular in major cities, with shops carrying locally produced goods. Most retail establishments are small or medium-sized, owned by a family or an individual. Government-owned "Utility Stores" carry food and household items at controlled prices. As of 2002, there were about 200,000 retail outlets throughout the country. Steps have been taken to improve marketing and distribution facilities throughout the country. Advertising remains small in scope, in part because of the high rate of illiteracy. Outlets include television, newspapers, posters, handbills, and color slides shown in the motion-picture houses.

Banks are customarily open from 9 AM to 1 PM. Private businesses and multinationals usually operate from 9 AM to 5 PM during weekdays. Most businesses are closed on Sunday. Many international firms are also closed on Saturdays.

## 31 FOREIGN TRADE

Pakistan has suffered a weak trade position since the early 1970s, as the cost of oil imports have risen while prices for the country's main exports have declined on the international market. Exports fell 2.5% and imports dropped 20% in 1998, but by 2000 they were back on the upswing, growing at 8.3% and 19%, respectively. Pakistan's commerce ministry estimates that up to \$1.5 billion of unregistered trade occurs annually, mostly from smuggled imports.

The important commodity exports for Pakistan are cotton, textiles, and clothes. Other major exports include rice and leather. The following chart shows the top 10 exports:

	% OF COUNTRY TOTAL
Made-up textile articles	14.7
Textile yarn	12.9
Cotton fabrics	11.7
Woven manmade fiber fabric	11.1
Rice	5.8
Knitted undergarments	5.7
Headgear	5.1
Men's outerwear, not knit	4.5
Toys and sporting goods	2.3
Leather	2.2

In 2000 Pakistan's imports were distributed among the following categories:

Consumer goods	3.7%
Food	13.1%
Fuels	33.2%
Industrial supplies	30.3%
Machinery	13.9%
Transportation	5.3%
Other	0.5%

Smuggled goods (tea, soap, domestic appliances, batteries, tires, bicycles, and televisions) enter the country primarily from Afghanistan.

During the 1980s, the United Kingdom, traditionally Pakistan's most important trading partner, slipped behind the United States, Japan, and Germany. Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
United States	2,276	667	1,609
China (inc. Hong Kong)	788	550	238
United Kingdom	601	351	250
United Arab Emirates	574	1,191	-617
Germany	518	395	123
France	284	214	70
Korea	265	362	-97
Sa'udi Arabia	246	1,163	-917
Japan	238	618	-380
Kuwait	n.a.	1,293	n.a.

### 32 BALANCE OF PAYMENTS

Pakistan's payments problems have been chronic since the 1970s, with the cost of oil imports primarily responsible for the trade imbalance. The growth of exports and of remittances from Pakistanis working abroad (mostly in the Middle East) helped Pakistan to keep the payments deficit in check. Since the oil sector boom began subsiding in the early 1980s, however, remittances declined. Remittances from overseas workers peaked at \$2.9 billion in 1982/83, then dropped to \$1.4 billion by 1997/98 and \$1 billion from 1999 to 2001. This trend especially accelerated during the Gulf War, when nearly 80,000 Pakistanis in Kuwait and Iraq lost their jobs. Only about 25% of these jobs had been regained a year after the end of the conflict. Increased imports and softer demand for Pakistan's textiles and apparel in major markets also caused the current account deficit to further increase. The balance of payments position weakened in 1995/96 as imports grew by 16% and exports by only 6%. The rupee was devalued by 11% during 1995 and 1996 to encourage exports. Nevertheless, foreign reserves fell to around \$800 million by mid-1997. By 2000, foreign debt equaled 100% of GDP.

The government took steps in the early 2000s to liberalize and deregulate the exchange and payments regime. Pakistan moved to a dual exchange rate system in 2000. An increase in liquid foreign exchange reserves in 2001 was due in part to outright purchases from the kerb market and inflows from international financial institutions. Export growth in 2000/01 was primarily due to higher exports of primary commodities such as rice, raw cotton, and fish, and other manufactures such as leather, carpets, sporting goods, and surgical instruments. Imports increased in 2000/01 primarily due to higher imports of petroleum and petroleum products, and machinery.

The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Pakistan's exports was \$8.8 billion while imports totaled \$9.2 billion resulting in a trade deficit of \$399.9 million.

The International Monetary Fund (IMF) reports that in 2001 Pakistan had exports of goods totaling \$9.13 billion and imports totaling \$9.74 billion. The services credit totaled \$1.46 billion and debit \$2.33 billion. The following table summarizes Pakistan's balance of payments as reported by the IMF for 2001 in millions of US dollars.

<b>Current Account</b>	1,880
Balance on goods	-608
Balance on services	-871
Balance on income	-2,079

### 33 BANKING AND SECURITIES

The central banking institution is the State Bank of Pakistan (SBP), established in 1948 at Karāchi and with branches in the larger cities. The government holds 51% of the bank's paid-up capital; 49% is held by corporations, societies, and individuals. The State Bank has exclusive responsibility for the issuance of currency; it is the financial agent of the central and provincial governments, and is responsible for the flotation and management of the public debt. As of 2002, there were 44 commercial banks and 36 non-banking financial institutions (NBFI's) in Pakistan. Of the commercial banks, 25 were domestic (with over 7,000 branches) and 19 were foreign (with 78 branches). Citibank is the largest foreign bank operating in Pakistan. NBFI's included 10 development financial institutions, 16 investment banks, four housing finance companies, two venture capital companies, and four discount houses. Consumer banking in Pakistan is largely undeveloped; commercial banks lend predominantly to corporations. There is a minimum capital level of 8% on all risk assets. The total volume of default loans from all financial institutions in 1998 was \$2.8 billion.

The nation's largest commercial banks were nationalized in 1974 and regrouped under five state banking institutions: the National Bank of Pakistan, Habib Bank, United Bank, Muslim Commercial Bank, and Allied Bank of Pakistan. The government-controlled banking system thus comprised all but a few of the nation's banks and accounted for a large share of total bank deposits and outstanding domestic credit. In 1981, in accordance with the Islamic condemnation of usury, virtually all banks opened special accounts for depositors who preferred, in lieu of interest, to share in the profits or losses from investments made with their money. In 1985, all savings accounts stopped yielding interest and converted to sharing in profit and loss. Pakistan instituted banking reforms in 1991. The Muslim Commercial Bank and the Allied Bank of Pakistan Ltd. reverted to private ownership shortly thereafter. In 1991 banking licenses were granted to private commercial banks that wanted to establish foreign bank branches in the country. Major weaknesses persist and are particularly marked in the case of the four remaining government-run commercial banks, which account for the bulk of deposits and advances. The government announced plans to privatize Habib Bank in 1998.

The portfolios of the state-owned development finance institutions, which provide the bulk of long-term lending to industry and agriculture, likewise tend to be of poor quality. Their lending is less diversified and more risky than that of commercial banks, while their costs are higher and margins lower. The state provides credit through the Agricultural Development Bank of Pakistan and the House Building Finance Corp. Industrial loans are made available through the Pakistan Industrial Credit and Investment Corp. (established in 1957), the Industrial Development Bank of Pakistan (1961), and the National Development Finance Corp. (1973). The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$15.6 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$26.6 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 8.49%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 10%.

There are stock exchanges at Lahore, Karāchi, and Islāmābād, with Karāchi accounting for a major share of the business. In 2001, there were 747 listings on the Karāchi Stock Exchange, the largest of the country's three bourses, down from a peak of 782 in 1996. Total market capitalization was \$4.9 billion, down 25% from the previous year and well below the peak of \$12.2 billion

in 1994. The KSE 100 Index was also lower than the previous year, by 15.6% at 1,273.

### 34 INSURANCE

Pakistan's life insurance sector, nationalized in 1972, operated under the aegis of the State Life Insurance Corp. and Postal Life Insurance until 1992, when the government opened it to private sector participation. Foreign companies are no longer barred from the life insurance business, but they are restricted to minority ownership. Private companies function in nonlife insurance areas, but the government insurance business is controlled by the National Insurance Corp. One of the state's first steps was to standardize and reduce premium rates and to encourage coverage among a wider segment of the population. In 2001, there was US\$168 million of life insurance written in Pakistan.

### 35 PUBLIC FINANCE

The fiscal year extends from 1 July to 30 June. The federal government frames two separate budgets: revenue (current account) and capital. Deficits have appeared since 1971/72, a combined result of the loss of revenues from East Pakistan, stepped-up defense expenditures, lax spending controls, and a low and inelastic tax base. Current expenditures (debt service, defense, administration) now consume over 70% of the budget, while development needs (education, health, energy, and rural development) receive the remainder. Tax revenues have not kept pace with expenditure growth due to widespread evasion, corruption among tax officials, overreliance on foreign trade taxes, and a tax exemption for agricultural income, which comprises 24% of GDP.

The budget deficit was hovering at about 6.2% of GDP in 1995 and 1996 and was projected to reach almost 7% in 1997. Interest payments on the accumulated debt threatened to bankrupt the government by mid-1997. As a condition for a \$1.6 billion loan from the IMF and World Bank, the government agreed to reduce the deficit to 4% of GDP. To do so, the government attempted to raise revenues by expanding the tax base beyond the 1% of Pakistanis who then paid income tax. Other proposals included a reduction in government payrolls, improved tax administration, and an end to the tax exemption for agricultural income. The IMF approved an Enhanced Structural Adjustment Facility in January 1999, when Pakistan was almost halfway through the three-year Structural Adjustment Program worth \$1.6 billion. In April 2000, the IMF discovered that the former Prime Minister Nawaz Sharif had purposely minimized reports of the government's budget deficit, by about 1%, in order to keep the extra \$2 billion in funds. Despite the dismal financial situation, the government has yet to reduce defense spending which accounts for almost 25% of the budget.

The US Central Intelligence Agency (CIA) estimates that in 2000/2001 Pakistan's central government took in revenues of approximately \$8.9 billion and had expenditures of \$11.6 billion. Overall, the government registered a deficit of approximately \$2.7 billion. External debt totaled \$31.5 billion.

The following table shows an itemized breakdown of government revenues. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

REVENUE AND GRANTS	102.5%	9,122
Tax revenue	67.4%	5,999
Non-tax revenue	22.8%	2,032
Grants	12.3%	1,091

### 36 TAXATION

Pakistan lives predominantly by foreign trade, and its import tariffs and export tariffs are essentially revenue-producing. The national government does not levy income tax on agricultural income; only about 1% of the population pays income taxes. Rates are progressive, rising from 5% in the lowest category to 35% in the highest, with a net wealth tax of up to 2.5%. The basic corporate tax is 43%. This rate is higher for banks (58%) and lower for certain other public companies (33%). A value-added tax of 15% is levied on the value of goods. Shopkeepers went on strike in May of 2000 after hearing news that the sales tax would actually be enforced.

Established proportions of the various taxes levied by the federal government are distributed to the provincial governments. In addition, the provinces collect, for their exclusive use, taxes on land revenue, immovable property, vehicles, professions and services, and mineral rights, as well as excise taxes. Municipalities and other local governments also levy taxes.

### 37 CUSTOMS AND DUTIES

Pakistan's customs tariffs bring in the largest single share of national revenue. Most dutiable items are subject to ad valorem duties that range from 0% to 30%. There is, in many cases, a 15% sales tax on imported goods (food, raw materials, and capital goods are exempt from this tax). Alcohol is levied at a rate up to 65%, but can be as high as 225%. These rates were substantially lowered in the late 1990s from an average high of 30% in the early 1990s.

Tariffs are levied on major items of export, but these rates are subject to change as measures are taken to encourage or discourage the export of raw materials. Exports of certain foods, used copper and brass utensils, and some hides and skins are banned. Trade with Israel, South Africa, and Taiwan is prohibited.

### 38 FOREIGN INVESTMENT

Foreign aid and investment have played a critical role in Pakistan's economic development since the first years of independence. Since 1954, the government has tried to attract foreign investment to maintain economic development, provide specialized technical knowledge, and bring in much-needed foreign exchange. Incentives for private investment include guarantees for the repatriation of capital invested in approved industries, facilities for remittance of profits, and guarantees for equitable compensation in the event of nationalization of an industry. In addition, special tax concessions available to certain local industries are also available to foreign investors. Since the late 1980s, a series of regulatory reforms related to exchange controls, repatriation of profits, credit for foreign-owned firms, issuing of equity shares, foreign currency accounts, and transactions on the stock exchange have significantly reduced the restrictions on general foreign investor activity in the wider Pakistani economy.

Foreign direct investment (FDI) peaked in 1995/96 at \$1.1 billion, then dropped to \$548 million in 1996/97 in response to a foreign-exchange crisis. Investors were also deterred by Pakistan's listing as the second-most-corrupt nation in the world, after Nigeria. In the tension leading up to the nuclear bomb tests in May 1998, FDI fell to \$432.7 million of 1998/99, and then decreased further after the military coup in 1999, to \$420 million, in 1999/00. In 2000/01, FDI fell to an annual rate of less than \$275 million. After the 11 September 2001 terrorist attacks on the United States, Pakistan received a windfall in foreign assistance, raising foreign reserves from \$908 million in 1999/00 to \$4.3 billion in 2001/02. In March 2003, on the eve of the US-led invasion of Iraq, foreign reserves stood at more than \$10 billion. However, to date the overall investment climate in terms

of security has only been worsened by its role in the War on Terror.

The United States has been the largest source of FDI in Pakistan, with total investment of \$1.2 billion as of mid-2002. Over the three years 1998/99 to 2000/01, the US-based investment totaled \$250 million. The United Kingdom was the second-largest source, with \$241 million. The total for 1998/99 was \$327 million, including \$135 million from US sources, \$77 million from the United Kingdom, and \$51 million from Japan.

### 39 ECONOMIC DEVELOPMENT

After the founding of the Pakistani state in 1947, the government's economic policy concentrated attention on developing an economic infrastructure, achieving self-sufficiency in food, and developing export industries. A major new land reform program introduced in March 1972 had resulted by March 1975 in the confiscation (for eventual redistribution) of 45.3% of all privately cultivated farmland. By November 1973, the government had nationalized industries in 10 major categories of production. In a third major step, most of the commercial banks were nationalized on 1 January 1974, resulting in control of more than 90% of all banking business by the State Bank and the five newly created units.

By the late 1970s, however, Pakistan's martial law government, claiming the nationalization program had stifled production and discouraged private investment, moved to restore private sector confidence by fostering economic stability and by redressing the balance-of-payments deficit, which was causing large overseas debt obligations. A new five-year plan (1978–83), Pakistan's fifth, reserved 48% of industrial investment for the private sector and set goals for an annual economic growth rate of 7.2%, a 4.2% rise in per capita income, and increases of 6% in agricultural output and 10% in industrial production. The plan was allocated a budget of \$21 billion, of which 25% was to come from external sources. Indications were that the agricultural sector would meet its target, but that rising oil costs and the burden of providing for the Afghan refugees had impeded progress in other sectors.

The sixth five-year plan (1983–88), with a proposed outlay of R210 billion, envisioned further investments in water and power development, deregulation to increase private sector activity, and a new emphasis on provision of social services and infrastructural improvements for rural areas. Prime Minister Junejo announced a program for 1986–90, with an outlay of R70 billion, focusing on rural development, particularly in the areas of education, village electrification, potable water supply, roads, health care, and employment.

By the late 1980s, a number of structural factors resulted in increasingly critical fiscal and balance of payment deficits. With less than 30% of the budget devoted to infrastructural development and other needs in health and education, the prognosis for long-term social and economic development remained poor. In response, a medium-term structural reform program was developed under the government of Prime Minister Benazir Bhutto for implementation in 1989–91. Aimed at correcting fiscal and external imbalances, the program targeted a reform of the tax collection system, tighter government spending controls and monetary management, the privatization of state-owned industrial enterprises, banks and utilities, the phasing out of state monopolies in the transportation, insurance, telecommunications and energy sectors, and liberalization of investment and foreign exchange regulations. Implementation of the ambitious program proceeded under the government of Nawaz Sharif who assumed the prime minister's office in 1991. Results were somewhat uneven, with little effective improvements scored in the country's tax system or its fiscal and balance of payments deficits. While the rapid change of government in 1993 and ongoing political tensions dampened private investment,

officials assured that structural reform and privatization would continue.

Fiscal indecision and post-nuclear test economic sanctions dried up foreign investments while budget and trade deficits soared in 1999. The United States lifted some sanctions, clearing the way for the IMF to negotiate a bailout package of \$1.5 billion with Pakistan. Key demands included cuts in government budget deficits, further privatization, and improved tax collections. After suspension of payments under a previous arrangement, Pakistan interlard into a 10-month stand-by arrangement as a prerequisite to rescheduling. In December 2001, the government entered into a three-year program under the Poverty Reduction and Growth Facility (PRGF) in preparation for a second rescheduling of debt by Paris Club members, in this case for over \$12 billion.

Since the early 1950s through 1993, Pakistan is estimated to have received about \$37 billion in aid disbursements, including both long-term and medium-term loans and grants, making it one of the largest recipients in the developing world. For the Indus Valley project, Pakistan received funding of more than \$1.3 billion from the IBRD, IDA, ADB, United States, United Kingdom, and other countries. In addition to US aid, Pakistan has also received aid from Iran and the Arab states. New economic aid from the United States was halted in 1990, under the terms of a Congressional amendment requiring certification of Pakistan's status as a nuclear weapons-free country. These sanctions were alleviated in 1996 by the Brown Amendment, but the nuclear tests of 1998 caused further economic sanctions that were only partially lifted by 2000. Since the 11 September 2001 terrorist attacks on the United States, Pakistan has substantial international financial resources and concessions have been mobilized in exchange for the government's support of the War on Terror.

### 40 SOCIAL DEVELOPMENT

The current social security plan covers employees of firms with 10 or more workers. Family and self-employed labor is excluded, and there are separate systems for the armed forces, police, and other public employees. Social security coverage includes old age, disability, and survivor benefits, as well as sickness and maternity payments, workers' compensation, and unemployment benefits. This program is funded by 5% contributions from employers and any necessary subsidies from the government. The Worker's Compensation Act is supplemented by a Social Insurance Law and provides disability and worker's injury benefits to workers earning 3,000 rupees or less a month. The labor code requires employers with more than 20 employees to pay a severance gratuity in the amount of 30 days wages for each year of employment.

An Islamization program to promote social welfare in accordance with Islamic precepts was introduced in 1977 under martial law. Islamic welfare taxes, the zakat and ushr, were levied to redistribute wealth. The ushr tax on landowners took effect in 1983. Islamic beliefs are inculcated in the public schools and disseminated widely by the mass media. Laws against drinking alcoholic beverages, adultery, and bearing false witness have been strictly enforced.

The government's 1991 *Shari'ah* Bill, aimed at bringing Pakistani society more fully into conformity with Islamic tenets, included provisions to protect women's constitutional and property rights. Despite these provisions, women face serious social and legal discrimination. In a court of law, the testimony of women is not permitted in serious cases which may result in harsh corporal punishment (lashing, stoning, amputation). In cases dealing with financial matters, the testimony of two women must be introduced as evidence. The Hadood Ordinances, introduced in 1979, engrained Islamic precepts into the Penal Code. Women who have been raped may be subject to charges of adultery under these provisions. The incidence of rape is high in

Pakistan, and most women are afraid to file charges. Honor killings are on the rise, and domestic violence is prevalent. Between 70 and 90 percent of women are victims of family violence; women are killed by their husbands for trivial matters. Most women are unaware of their legal rights concerning inheritance, and in following with Muslim custom, widows give up their share of the joint assets. Women's rights were further weakened in 1992, when the Supreme Court decided that men may divorce their wives without any legal or written notification.

The use of child labor in Pakistan is widespread. Children not only work in the agricultural sector, but are also engaged in low-paying work in carpet weaving centers. Bonded child labor, in which the employer makes a payment to the child's parent and keeps the child to work off the long-term debt, has been made illegal but still may affect hundreds of thousands, if not millions, of children.

Human rights violations include arbitrary arrest, prolonged detention, and torture. Pakistan's human rights situation declined with the coup, led by General Musharraf, that ousted the Sharif government.

#### 41 HEALTH

Health facilities in Pakistan are inadequate, mainly due to a lack of resources and a high population growth rate. In 1993, 85% of the population had access to health care. Public health care expenditures in 1995 equaled 1% of GDP. As of 1999, total health care expenditure was estimated at 4% of GDP.

The country needs food, a proper water supply, and adequate sanitation. However, Pakistan is the first country to nearly completely eradicate dracunculiasis, having reported fewer than 100 cases in 1995. Pakistan is also working toward universal immunization, disease prevention, health promotion, and curative and rehabilitative services. In the 1990s there were several programs under way to improve health care coverage and control tuberculosis, leprosy, and cancer. One such program was a Child Survival/Primary Health Care program to reduce mortality, malnutrition, and deaths due to diarrheal diseases. As of 1999, 36% of children under five years old were considered malnourished. The goiter rate was high in 1996; 40 of every 100 school children were affected by goiter. In 1997, 90% of children up to one year of age were immunized against tuberculosis; 74% against diphtheria, pertussis, and tetanus; 74% against polio; and 74% against measles. In 1999, there were 177 reported cases of tuberculosis per 100,000 people. There were 80 cases of malaria per 100,000 in 1996.

In 1991–92, there were 60,250 physicians, 2,410 dentists, and 33,740 nurses, and 20,000 registered homeopathic medical practitioners. Many medical students have been sent abroad under an advanced medical training program. Special attention has been given to the training of nurses, and several training centers are in operation. However, medical personnel ratios, though much improved, remain inadequate. As of 1999, there were an estimated 0.6 physicians and 0.7 hospital beds per 1,000 people. In 1993, there were 302 health centers with 2,462 beds serving the rural population. In 1991, centers for the disabled included 11 physical therapy centers, 12 mental retardation centers, 11 centers for the visually impaired, and 12 centers for the hearing impaired.

Malaria, tuberculosis, intestinal diseases, venereal diseases, and skin diseases remain Pakistan's main public health problems. Common diseases and recent rates of occurrence or death were as follows: diarrheal diseases (157,660 deaths in 1995), leprosy (6,104 cases in 1994), malaria (92,634 cases in 1993), and tuberculosis (11,020 cases in 1993). Drug addiction, especially among university students, is an increasing concern, and government detoxification centers have helped many addicts recover.

In 2000, the infant mortality rate was 83 per 1,000 live births. Major causes of infant mortality are immunizable diseases, diarrhea, malnutrition, and poor environmental sanitation. In 2000, 88% of the population had access to safe drinking water and 61% had adequate sanitation. The estimated overall mortality rate was 9 per 1,000 people in 2002. The leading causes of death were diarrhea, pneumonia, tuberculosis, cardiovascular diseases, and cancer. Average life expectancy in 2000 was estimated at 63 years.

As of 1999, the number of people living with HIV/AIDS was estimated at 74,000 and deaths from AIDS that year were estimated at 6,500. HIV prevalence was 0.1 per 100 adults.

#### 42 HOUSING

The rapid increase in urbanization, coupled with the rising population, has added to the housing shortage in urban areas. About 25% of the people in large cities live in katchi abadis (shantytowns). The Public Works Department has built more than 8,000 units in Islāmābād, Lahore, Peshāwar, and Quetta at a cost of R1,588 million. Under the 1986–90 program, the residents in the katchi abadis were to be given proprietary rights. In 1987, the National Housing Authority was created to coordinate the upgrading of the existing katchi abadis and prevent the growth of new ones.

As of 1991, 171 abadis had been renovated at a cost of R454 million, and 522 more were under development. In 1998, there were 19,211,738 housing units nationwide with an average of 6.8 occupants per unit. About 54.97% of all units had two to four rooms; 38.11% had one room. About 81% of all dwellings were owner occupied.

#### 43 EDUCATION

The education system is poor, notwithstanding a massive educational reform announced in 1972 and aimed at providing free and universal education through the 10th year of formal schooling for both boys (by 1983) and girls (by 1987). In addition, the study of Islam was to be compulsory at all levels. For the year 2000, adult illiteracy rates were estimated at 56.7% (males, 42.4%; females, 72.2%). As an initial step, private educational institutions at all levels were nationalized. Additional steps included a reform of the curriculum away from general education and in favor of agricultural and technical subjects, equality of access to formal schooling for low-income groups and females, financial aid programs for poor students, and broad expansion and improvement of higher-level facilities. Curriculum bureaus were set up at federal and provincial levels, and the National Council of Education was established to formulate and evaluate educational development policy. As of 1999, public expenditure on education was estimated at 2.7% of GDP.

As of the mid-1990s, there were 15,532,000 pupils attending primary schools; 31% were female. In that same year, 5,022,416 students attended secondary schools. Girls attend separate schools at both primary and secondary levels. The pupil-teacher ratio at the primary level was 55 to 1 in 1999.

In the same period, 1,656,815 students were enrolled at institutions of higher learning. Arts and sciences colleges are affiliated with the universities of the Punjab (at Lahore, established 1882), Sind (at Hyderabad, 1947; at Karāchi, 1951), Peshawar (1950), Baluchistan (1970), and Multan (1975). An agricultural university was established in 1961 at Lyallpur (now Faisalabad). Two engineering and technological universities have been founded at Lahore (1961) and Islamabad (1966). Research institutions include the Institute of Islamic Studies at Lahore, the Iqbal Academy at Lahore, and the Pakistan Institute of International Affairs at Karachi. In 1995, there were a total of 29 universities, seven of which are privately operated. Urdu and English are the languages of instruction.

Many adult literacy centers, including women's literacy centers, have been established in recent years, the majority in Sind. In addition, the People's Open University was established at Islamabad (1974) to provide mass adult education via correspondence and the communications media.

#### 44 LIBRARIES AND MUSEUMS

The National Library of Pakistan in Islamabad holds 130,000 volumes. The largest university library in Pakistan is that of the Punjab University at Lahore, with a collection of about 398,000 volumes, including some 20,000 manuscripts. Sizable collections are also found at the University of Karāchi (105,000 volumes) and the University of Sindh (244,000 volumes). Other important libraries are the Punjab Public Library in Lahore (259,000 volumes), the Liaquat Memorial Library (147,000 volumes), the Central Secretariat Library (110,000 volumes), and the National Archives (35,000 volumes), all in Karāchi. The International Islamic University in Islāmābād holds 100,000 volumes.

The National Museum of Pakistan (Karāchi) contains prehistoric material from the Indus Valley civilization, Buddhist statues and carvings, and material from the Islamic centuries, including the renowned Mughal period. The Peshawar Museum has a splendid collection of Buddhist sculpture of the Gandhara style. The Lahore Museum has an outstanding collection of Greco-Buddhist sculpture. Fine mosques, shrines, and mausoleums of the Islamic centuries are scattered throughout the country. Among the best of the surviving gardens of the Mughal period are those at Lahore, including the Shalimar gardens. There is a museum dedicated to the work of Shakir Ali in Lahore and the Pakistan Army Museum is in Rawalpindi.

#### 45 MEDIA

Postal, telegraph, and telephone services are owned and operated by the state. In 1999, the number of mainline telephones in use totaled 2.8 million. In 1998, there were 158,000 cellular phones in use. Automatic telephone service has been installed in most cities and large towns. Radiotelephone and radiotelegraph services are available within the country and to foreign countries.

Pakistan's Indian Ocean INTELSAT communications stations began service in 1971 near Karāchi. Through Azad Kashmir Radio and the Pakistan Broadcasting Corporation, the government operates 18 shortwave radio stations. Karāchi is the broadcasting center, and there are important transmitters at Hyderabad, Quetta, Lahore, Rawalpindi, Peshawar, Multan, Bahawalpur, and Islāmābād. Government-run Pakistan-TV broadcasts at least 10 hours a day through 28 transmitters. In total, as of 1999, there were 26 AM, 3 FM, and 22 television stations in use. In 200 the country had 105 radios and 131 television sets for every 1,000 people. In 2000, there were 1.2 million Internet subscribers served by 30 service providers.

Daily newspapers—most of them with very small circulations—are published in Urdu, English, and a few other languages. English-language newspapers are read by less than 1% of the population but are very influential, especially *Dawn* (2002 estimated circulation, 80,000), published in Karāchi, and *Pakistan Times* (50,000), published in Lahore and Rawalpindi. Leading Urdu-language dailies (with 2002 circulations) are *Jang* (750,000) and *Hurriyat* (600,000), both in Karāchi, and *Jang Lahore* (1,200,000) and *Nawa-e-Waqt* (560,000), in Lahore.

While freedom of the press has always been provided for constitutionally, censorship was imposed on the press by the martial law governments. Between 1979 and 1982, local censors reviewed items prior to publication, and some books and periodicals were confiscated. Even after the lifting of censorship, the government continued to influence press coverage by controlling the availability of newsprint, which must be imported, and the placement of government advertising, which is a source of newspapers' revenue. There are no longer restrictions

on the importation of newsprint. There is a constitutional prohibition on the ridicule of Islam, the armed forces, or the judiciary.

#### 46 ORGANIZATIONS

Most major cities contain chambers of commerce and there are numerous employers' associations, such as the All-Pakistan Textile Mills Association, the Pakistan Carpet Manufacturers' and Exporters' Association, and the Pakistan Shipowners' Association.

The Islamic community is represented by several flourishing organizations, and other religious communities, such as the Zoroastrians, have their own groups. The Pakistan Historical Society, the Scientific and Cultural Society of Pakistan, and the Research Society of Pakistan all serve to promote interest and study in national and Islamic culture.

National youth organizations include the Baloch Student Organization, the Pakistan Progressive Student Alliance, the Adventure Foundation of Pakistan, the Pakistan Boy Scouts Association, and the YMCA. There are also a number of sports associations for all ages. National women's organizations include the All Pakistan Women's Association, the Pakistan Association for Women's Studies, the Pakistan Federation of University Women, the Women's Resource Center, and the Revolutionary Association of the Women of Afghanistan.

International organizations with national chapters include Amnesty International and the Red Crescent Society.

#### 47 TOURISM, TRAVEL, AND RECREATION

The government actively promotes tourism to boost its foreign-exchange earnings. Pakistan Tours, a government subsidiary, provides daily tours of Karachi, Rawalpindi, and other main cities. In Karāchi are the National Museum and the Mausoleum of the Quaid-e-Azam. In Lahore, the "city of gardens" and Pakistan's foremost cultural and educational center, remnants of the Mughal Empire are resplendently preserved. Islāmābād, the wholly planned capital, offers notable examples of architecture in the modern style. Popular recreations include mountain climbing in the Himalaya foothills, sailing, and deep-sea fishing off the Arabian Sea coast. Hockey and cricket are the leading sports, but golf is also popular, with courses in Lahore, Rawalpindi, Islāmābād and other cities.

Most visitors to Pakistan are required to have a visa and a valid passport. Tourists planning to stay more than 30 days must register with the government. Road permits are available for land crossings into India at Wagah (between Lahore and Amritsar in India). There are no health restrictions on visitors entering Pakistan except in regard to cholera and yellow fever immunizations for those who have been in infected areas.

In 2000, 556,805 tourists visited the country and receipts were valued at \$84 million. That year there were 35,524 hotel rooms and 53,286 bed-places.

The US State Department estimated the cost of staying in Islāmābād in 2001 at about \$212 per day. Estimated daily expenses in Karāchi were \$108 per day.

#### 48 FAMOUS PAKISTANIS

Several figures of monumental stature are associated with the creation and establishment of Pakistan. The poet and philosopher of a revitalized Islam, Mohammad Iqbal (1873–1938), who wrote in Urdu, Farsi, and English, first called for the establishment of a Muslim state on the subcontinent in a statement made in 1930. Mohammad Ali Jinnah (1876–1948), the Quaid-e-Azam, or "Great Leader," rallied the Muslims to this cause and became the first governor-general of the Commonwealth of Pakistan. His "right hand," Liaquat Ali Khan (1896–1951), was the first prime minister of the nation until his assassination. Chaudhury Mohammad Ali (1905–80), a former

prime minister, played a key role in the organization of the new government in 1947. Field Marshal Mohammad Ayub Khan (1908–74) served as commander-in-chief of the Pakistani army, as minister of defense in 1954–55, and as president of Pakistan from October 1958 to March 1969. Sir Mohammad Zafrulla Khan (1893–1985), a distinguished jurist, was several times minister of foreign affairs and later a member of the World Court at The Hague; in 1962, he served as president of the 17th UN General Assembly. Zulfikar Ali Bhutto (1928–79), who rose to prominence as founder and leader of the socialist-leaning Pakistan People's Party, was prime minister during 1973–77 and guided the country's political and economic transformation following the loss of East Pakistan. After Bhutto's execution in 1979, his elder daughter, Benazir (b.1953), became titular head of the Pakistan People's Party. Gen. Mohammad Zia-ul-Haq (1924–1987) came to power in 1977 and assumed the presidency in 1978. The Pakistani-born scientist Abdus Salam (1926–96) shared the 1979 Nobel Prize for Physics for his work in electromagnetism and the interaction of elementary particles.

In literature, the paramount position is still held by the great Urdu writers who lived before the establishment of Pakistan. Ghalib (1796–1869) and Iqbal are recognized as the two greatest Urdu poets. Contemporary writers who have won fame include the Urdu poet Faiz Ahmad Faiz (1911–84), imbued with a strongly socialist spirit, and the Urdu short story writer Saadat Hasan Manto (1912–55). Foremost among Pakistan's artists is Abdur Rahman Chughtai (1899–1975).

#### 49 DEPENDENCIES

Pakistan has no territories or colonies.

# PALAU

Republic of Palau  
*Belau*

**CAPITAL:** Koror, Koror Island

**FLAG:** The flag, adopted 1 January 1981, is light blue, with a yellow disc set slightly off center toward the hoist.

**ANTHEM:** *Belau er Kid.*

**MONETARY UNIT:** The US dollar is the official medium of exchange.

**WEIGHTS AND MEASURES:** British units are used, as modified by US usage.

**HOLIDAYS:** New Year's Day, 1 January; Youth Day, 15 March; Senior Citizens Day, 5 May; Constitution Day, 9 July; Labor Day, 1st Monday in September; United Nations Day, 24 October; Thanksgiving Day, 4th Thursday in November; Christmas, 25 December.

**TIME:** 8 PM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Palau (also known as *Belau*) is located in the western extremities of the Pacific Ocean. It consists of the Palau group of islands, in the western Caroline Islands, and four remote islands to the SW. Palau is isolated from larger land masses, with Papua New Guinea/Irian Jaya (Indonesia) 660 km (410 mi) to the S, the Philippines 885 km (550 mi) to the W, and Japan 3,042 km (1,890 mi) to the N. Yap Island in the Federated States of Micronesia lies 579 km (360 mi) to the NE. The country consists of more than 200 islands, with a total land area of 458 sq km (177 sq mi). Babelthup is the largest island, with an area of 397 sq km (153.2 sq mi); Koror Island, containing the capital, has an area of 18 sq km (7.1 sq mi). The islands of Peleliu and Angaur are about 50 km (30 mi) S of Koror. Sonsorol and Hatohebei, the two smallest island states, lie 560–640 km (350–400 mi) SW of Koror. Kayangel is a coral atoll 45 km (28 mi) N of Babelthup.

## <sup>2</sup>TOPOGRAPHY

The islands include four types of topographical formation: volcanic, high limestone, low platform, and coral atoll. The Palau barrier reef encircles the Palau group, except Angaur Island and the Kayangel atoll. The reef encloses a lagoon (1,267 sq km/489 sq mi) on the western side, containing a large number of small elevated limestone islets known as the Rock Islands. Babelthup and Koror, with peak elevations of 217 m (713 ft) and 628 m (2,061 ft), respectively, contain elevated limestone and volcanic formations. Arakabesan, Malakal, and several small northern islands are volcanic formations. Peleliu and Angaur are low-platform reef islands.

## <sup>3</sup>CLIMATE

Located near the equator, Palau's climate is maritime tropical, characterized by little seasonal and diurnal variation. The annual mean temperature is 28°C (82°F) in the coolest months. There is high precipitation throughout the year and a relatively high humidity of 82%. Heavy rainfall occurs from May to November. The short torrential nature of the rainfall produces up to 381 cm

(150 in) of precipitation annually. Typhoons and tropical storms occur from June through November.

## <sup>4</sup>FLORA AND FAUNA

Plant life, abundant throughout most of the islands, includes mangrove swamps, savanna land, and rain forest in upland areas. Food crops, such as taros, cassavas, sweet potatoes, coconuts, bananas, papayas, and citrus fruits, are mostly wild. Marine life is also abundant, with more than 1,500 species of tropical fish and 700 species of coral and anemones in the lagoons and reefs. Fauna includes the sea turtle, which is consumed as a delicacy, and the dugong, or sea cow, a marine mammal that is close to extinction.

## <sup>5</sup>ENVIRONMENT

While much of Palau's fragile natural environment remains free of environmental degradation, there are several areas of concern, including illegal fishing with the use of dynamite, inadequate facilities for disposal of solid waste in Koror, and extensive sand and coral dredging in the Palau lagoon. Like the other Pacific island nations, a major environmental problem is global warming and the related rising of sea level. Water coverage of low-lying areas is a threat to coastal vegetation, agriculture, and the purity of the nation's water supply. Palau also has a problem with inadequate water supply and limited agricultural areas to support the size of the population. The nation is also vulnerable to earthquakes, volcanic activity, and tropical storms. Sewage treatment is a problem, along with the handling of toxic waste from fertilizers and biocides.

## <sup>6</sup>POPULATION

The population of Palau in 2003 was estimated by the United Nations at 19,000, which placed it as number 190 in population among the 193 nations of the world. In that year approximately 5% of the population was over 65 years of age, with another 27% of the population under 15 years of age. There were 114 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is

2.11%, with the projected population for the year 2015 at 26,000. The population density in 2002 was 44 per sq km (113 per sq mi). The government has curbed the high birth rate with family planning programs.

It was estimated by the Population Reference Bureau that 72% of the population lived in urban areas in 2001. The capital city, Koror, had a population of 14,000 in that year. According to the United Nations, the urban population growth rate for 2000–2005 was 2.7%.

## 7 MIGRATION

In 1999, persons not Palau-born accounted for nearly 30% of the total population. Most were born in the Philippines, China, and Bangladesh; there were also significant numbers from the Federated States of Micronesia, the United States, and Japan. Most were workers, whose numbers have been rapidly increasing; in 1999, foreigners made up 46% of the total work force. The vast majority of these foreigners were located in Koror. About one-fifth of all Palauans live abroad, many on Guam. In 1999, the net migration rate was 5.63 migrants per 1,000 population. The government views the migration levels as too high.

## 8 ETHNIC GROUPS

Palauans are a composite of Polynesian, Malayan, and Melanesian races. At last estimate, the largest non-Palauan ethnic groups included Filipinos (9.8%), other Micronesians (1.8%), Chinese (1.3%), and people of European descent (0.8%).

## 9 LANGUAGES

English is the official language in all of Palau's 16 states. However, Palauan, a Malayo-Polynesian language related to Indonesian, is the most commonly spoken language. It was the language spoken at home by 81% of the people five years of age or over in 1990, in contrast to 3% who spoke only English at home. Palauan is used, in addition to English, as an official language in 13 states. Sonsorolese is official in the state of Sonsoral; Anguar and Japanese in the state of Anguar; and Tobi in the state of Tobi.

## 10 RELIGIONS

Most Palauans are Christians. The Roman Catholic Church holds the largest number of members at about 65% of the population. Other significant denominations include the Evangelical Church, the Seventh-Day Adventists, The Church of Jesus Christ of Latter-Day Saints, and Jehovah's Witnesses. A significant percentage of the population observes the Modekngai religion, which is indigenous to Palau and combines both pagan and Christian beliefs and customs. There are a small number of Bangladeshi Muslims. Several foreign missionaries are active in the country.

## 11 TRANSPORTATION

The nation's roads at last estimate totaled 61 km (37.9 mi), of which 36 km (22 mi) were paved. Asphalt roads are found only in Koror, Airai, and Melekeok. A two-lane concrete bridge, constructed in 1976, links Koror with Airai. The Koror state government provides a public bus service. Palau's deepwater harbor at Malakal in Koror offers international port facilities. Heavy reliance is placed on small private watercraft throughout the country.

As of 2001, there were 3 airports, 1 with a paved runway. The international airport is located in Airai, 10 km (6 mi) from Koror. Three airlines provide international service: Air Micronesia/Continental, Air Nauru, and South Pacific Island Airways. There are 3 domestic airlines: Palau Paradise Air, Aero Belau, and Freedom Air.

## 12 HISTORY

As part of the Carolinian archipelago, the islands were sighted by European navigators as early as the 16th century. In 1686, the Spanish explorer Francisco Lezcano named Yap Island (now in the Federated States of Micronesia) "La Carolina" after King Charles II of Spain. The name was later generalized to include all the islands. Spanish sovereignty was established in 1885. In 1899, after Spain's defeat in the Spanish-American War of 1898, Palau, with the rest of the Carolines, was sold to Germany. At the outbreak of World War I in 1914, the islands were taken by the Japanese. As a member of the League of Nations, Japan was given a mandate over Palau in 1920, and Koror was developed as an administrative center of Japanese possessions in the north Pacific.

In 1947, following occupation by US forces in World War II, Palau became part of the UN Trust Territory of the Pacific Islands, which was administered by the United States. After the adoption of a constitution in 1980, Palau became a self-governing republic in 1981. Since 1982, the republic has been involved in negotiating a Compact of Free Association (CPA) with the United States. Negotiations were stalled because the 1980 constitution prohibits any placement of nuclear weapons, and the United States has wanted to use the islands as a military site. In June 1985, President Haruo Remeliik was assassinated; Vice-President Alfonso Oiterang served as acting president until August 1985, when he was defeated in an election by Lazarus E. Sali. President Sali committed suicide in August 1988. Kuniwo Nakamura was elected president in November 1992. On 1 October 1994 Palau became an independent nation in free association with the United States; under the CPA the United States is responsible for Palau's defense. In 1995, Palau entered into diplomatic talks with the United States, Japan, and Taiwan. In February 1999, Palau opened an embassy in Tokyo, Japan.

Under the 1994 CPA, Compact funds were allocated to finance the building of roads and infrastructure on Babelthup, across from the capital Koror, in order to attract people and economic activity. As of 1999, despite President Nakamura's support, Paramount Chief Ibedul Yutaka Gibbons of Koror, the most powerful traditional leader in Palau, opposed the Compact and its channeling of resources away from Koror and to Babelthup, arguing the Compact will erode Palau's autonomy and threaten traditional values.

In March 1999, a strong movement emerged in the Palau Congress to change the existing bicameral congress (House of Representatives and Senate) to a unicameral form of government to reduce the cost of government. As of early 2003, the congress remained bicameral.

In July 1999, Palau hosted the First Micronesian Traditional Leaders' Conference. In October 1999, Palau hosted the 30th South Pacific Forum with more than 300 foreign delegates, observers, and media members. The Forum considered issues on climate and sea level change, regional security and law enforcement, fisheries, and the United Nations Special Session on Small Island Developing States. Trade ministers of the South Pacific Forum endorsed the proposal for a Pacific Free Trade Area (FTA) that would create a regional market of six million people. The FTA allows goods produced in the fourteen island countries to be traded freely.

Tommy E. Remengesau, Jr. was elected president in general elections held 7 November 2000; Sandra Pierantozzi became the first woman vice-president.

## 13 GOVERNMENT

The government comprises three branches: the executive, the legislative, and the judicial. The executive branch is headed by the president, who is elected by popular vote for not more than two terms of four years each. The president is assisted by a cabinet of

ministers, one of whom is the vice-president and is also elected by popular vote. The president and vice-president run on separate tickets. A council of chiefs, based on Palau's clan system, advises the president on traditional and customary matters.

The legislative branch, known as the Olbiil Era Kelulau, or National Congress, is a bicameral form of legislature, comprising 9 senators and 16 delegates. The senators, elected for four-year terms, are apportioned throughout Palau on the basis of population and traditional regional political groupings. The delegates are elected from each of the 16 states and have the same four-year term as the senators.

In November 1992 Kuniwo Nakamura was elected Palau's new president, with 50.7% of the vote. Palau's Vice President, Tommy E. Remengesau, Jr. was also elected at that time. Both Nakamura and Remengesau were reelected president and vice president, respectively, in 1996. In the 2000 general elections, Remengesau was elected president, and Sandra Pierantozzi became Palau's first woman vice president.

## 14 POLITICAL PARTIES

No political parties currently exist in Palau.

## 15 LOCAL GOVERNMENT

Each of Palau's 16 states has a government headed by a governor, who is popularly elected, in most cases, for a four-year term. The members of the state legislatures are popularly elected for a four-year term, although in a few states, the term of office is limited to two years. The states are empowered to make their own laws, which must not be in conflict with the national constitution or any existing laws.

## 16 JUDICIAL SYSTEM

The Supreme Court is the highest court in the land. Other courts include the National Court and the lower court system, consisting of the Court of Common Pleas and the Land Court. Court appointments are for life. In October, 1990 US Interior Secretary Manuel Lujan issued an order granting the Interior Department in Washington the power to veto laws and reverse decisions by Palau's courts. This reassertion of legal authority by the United States was partially in response to the decade of unsuccessful negotiations concerning a plan for eventual self-government.

The constitution provides for an independent judiciary and the government respects this provision in practice. Palau has an independent prosecutor and an independent public defender system.

## 17 ARMED FORCES

The United States is responsible for defense. Palau has no armed forces and does not have US armed forces within its borders except for a small contingent of US Navy Seabees who undertake civil action projects.

## 18 INTERNATIONAL COOPERATION

Palau is a member of the UN and participates in the World Bank, FAO, ICAO, IMF, UNCTAD, UNESCO and WHO. Palau is a full member of the SPC and of ESCAP.

## 19 ECONOMY

The economy has a narrow production base as a result of limited natural resources and few skilled personnel. The services sector consists largely of government administration and trade. Large gaps exist between government revenues and expenditures and between imports and exports. These gaps are financed largely by grant assistance from the United States. Unemployment is a major problem. Recently, expansion of air travel in the Pacific has fueled growth of the tourist sector. Tourist arrivals number 50,000 in 2000/01, down a from a peak of 66,441 in 1996/97. Long-run prospects of the tourist sector have improved with the

LOCATION: 131° to 135° E; 3° to 8° N.

development of Pacific air travel. Real GDP growth slid precipitously after booming post-independence rates of 24.3% in 1994/95 and 18.1% in 1995/96. In 1996/97 growth moderated to 5.5%, but in the wake of the Asian financial crisis, the economy contracted 5.4% in 1997/98. The economy remained flat in 1998/99, and 1999/00, the last years for which reliable data is available, with growth rates of 1.1% and 1%, respectively. The Compact Trust Fund balance, at \$70.8 billion at independence, reached \$161.8 billion by 1999/00, but had fallen to \$135 billion in 2000/01.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Palau's gross domestic product (GDP) was estimated at \$174 million. The per capita GDP was estimated at \$9,000. The annual growth rate of GDP was estimated at 1%. The average inflation rate in 2000 was 3.4%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. Foreign aid receipts amounted to about \$1,753 per capita and accounted for approximately 25% of the gross national income (GNI).

## 21 LABOR

The economically active population was 8,300 persons in 1999. The service sector employed 75.7% of the population, construction 15%, and mining 9.3%. In 2000, the unemployment rate was 2.3%.

There are no specific provisions granting the right to strike or organize unions, but the issue has never come up and there were no organized trade unions.

There is no minimum age for employment, but children do not typically work, except to help out in small scale family enterprises such as fishing or agriculture. Education is compulsory until age 14, and this is enforced by the government.

Palau's first minimum wage law, passed in 1998, set a rate of \$2.50 per hour. This was still in effect in 2002, and generally provides for a decent standard of living for a family. There are many foreign workers in Palau, and these workers often receive housing and food in addition to wages. There are no legally proscribed work hours, but most businesses are closed on Saturday or Sunday.

## 22 AGRICULTURE

Agricultural production belongs almost entirely to the nonmonetary, or subsistence, sector. Most households outside Koror are fully or partially engaged in subsistence agriculture. Staple subsistence crops include taros, cassavas, sweet potatoes, bananas, and papayas. Commercial produce is marketed mainly in Koror, consisting mostly of copra and coconut oil, vegetables, and a wide variety of tropical fruits.

## 23 ANIMAL HUSBANDRY

Livestock is limited to pigs, chickens, ducks, cattle, and goats. Pigs and chickens are raised by most households. Several small commercial egg-producing operations supply eggs to the Koror market. The Livestock Branch of the Division of Agriculture maintains breeding herds of pigs, cattle, and goats.

## 24 FISHING

Palau's marine resources are rich and diverse. Subsistence fishing within the reef is a major activity and dominates market production. The total catch was 2,000 tons in 2000. Deep-sea fishing for pelagic species resulted in a tuna catch of 51 tons in 2000. Seasonal trochus harvesting for shell button manufacture is an important source of income for most fishermen. Other marine resources include pearls, shrimp, ornamental fish, seaweed (agar agar), and mollusks. Palau is known for having some of the best diving, snorkeling, and sport fishing areas in the world.

## 25 FORESTRY

About 76% of Palau was forested in 2000. Forestry resources consist of coastal mangrove, coconut and pandanus palms, and rain forest species in upland areas. Palau is heavily dependent on imported forestry products, including furniture and lumber for house construction. The government's forestry station at Nekken on Babelthuap Island, of which more than half of the 1,257 ha (3,105 acres) consists of natural forest, provides primarily mahogany seedlings to farmers. Palau imported \$1.1 million in forest products during 2000.

## 26 MINING

Crystalline calcite from glistening limestone caves was first quarried as many as 1,500–2,000 years ago. The doughnut-shaped finished carved products would be transported by canoe some 400 km (250 mi) to Yap (now part of the Federated States of Micronesia), and used as currency.

The Koror state government engages in commercial production of dredged coral from the Palau lagoon, with a production capacity of 800 cu m per day. Other states are also involved in

coral dredging. A private company supplies aggregates for concrete from crushed basalt rock and beach sand.

## 27 ENERGY AND POWER

The economy is almost totally dependent on imported petroleum for energy. Electricity is supplied from the Malakal power plant, located in the state of Koror, with an installed capacity of approximately 8,000 kW. There are state-owned power plants with capacities ranging from 30 kW to 120 kW in Peleliu, Angur, Ngiwal, Ngeremlengui, Airai, Ngaraard, and Ngerchelong. Per capita consumption of electricity in 1995 was 11,704 kWh. Both production and consumption of electricity were 200 million kWh in 1996; of the power produced, 85% came from fossil fuels and 15% from hydropower.

## 28 INDUSTRY

Manufacturing plays a limited role in the economy. A copra-processing plant is located in Malakal. Concrete blocks are manufactured, utilizing imported cement, and there is a small-scale sawmill industry.

## 29 SCIENCE AND TECHNOLOGY

Palau's Micronesian Mariculture Demonstration Center, established in 1973, promotes the cultivation of commercially valuable and ecologically threatened marine species. The center attracts visiting marine scientists; its giant clam hatchery was the first and remains the largest of its kind.

## 30 DOMESTIC TRADE

Domestic trade is centered in Koror. Private-sector activities in tourism, restaurants and hotels, small workshops, banking, wholesale and retail outlets, transportation, and freight handling are located in Koror and, to a limited extent, the adjacent state of Airai. Most of the work force is employed in services related to tourism. The country relies heavily on imports for basic goods.

## 31 FOREIGN TRADE

Palau's economy sustains a large trade deficit. Food, beverages, and tobacco account for 19% of imports; manufactured goods, 20%; machinery and transportation equipment, 28%; mineral fuel and lubricants, 13%; and other imports, 20%. The country's low volume and limited range of exports include shellfish, tuna, copra, and garments. The United States, Japan, and Singapore are Palau's predominant trading partners.

## 32 BALANCE OF PAYMENTS

Standardized balance-of-payments accounts have not yet been prepared by the government. The chronic trade deficit is largely offset by US grant assistance.

The US Central Intelligence Agency (CIA) reports that in 1999 the purchasing power parity of Palau's exports was \$11 million while imports totaled \$126 million resulting in a trade deficit of \$115 million.

## 33 BANKING AND SECURITIES

In 1993, there were five commercial banks. Two are branches of foreign banks, the Bank of Hawaii and the Bank of Guam; the other, a local bank which started in 1985, is the Bank of Palau.

## 34 INSURANCE

Social security and pension fund contributions are made by the government on behalf of its employees.

## 35 PUBLIC FINANCE

The US Central Intelligence Agency (CIA) estimates that in 1997 Palau's central government took in revenues of approximately \$52.9 million and had expenditures of \$59.9 million, including capital expenditures of \$17.1 million. Overall, the government

registered a deficit of approximately \$7 million. Total external debt is estimated to exceed \$100 million.

### 36 TAXATION

Graduated income taxes are levied on wages and salaries. Business gross revenue tax is imposed at a flat rate minus employees' remuneration. There is also a profits tax on financial institutions.

### 37 CUSTOMS AND DUTIES

There are no import duties on raw materials if they are processed for sale outside Palau. There is also an import duty rebate offered by Palau as an investment incentive.

### 38 FOREIGN INVESTMENT

There is a Foreign Investment Board for processing applications from foreign investors; the Division of International Trade of the Bureau of Foreign Affairs is responsible for establishing contacts with foreign companies to promote Palau's trade interests.

### 39 ECONOMIC DEVELOPMENT

When Palau became independent in 1994 it entered into a Compact of Free Association with the United States. Under the Compact, Palau is to receive grants of totaling about \$600 million over a fifteen-year period to 2009. In the meantime, the government is to be engaged in developing ways to make the economy self-sufficient. A major part of the strategy was the building of a trust fund. The government's first five-year national development plan (1987-91) was the first phase of its fifteen-year development program. The plan focuses on the development of a private-sector production-based economy, efficient public-sector management, development of natural resources to earn foreign exchange, personnel development, regional development, and environmental preservation.

Long term prospects for the tourist sector have brightened because of the expansion of air travel in the Pacific and the rising prosperity of leading East Asian countries.

### 40 SOCIAL DEVELOPMENT

Social organization is based on the maternal kin group, or clan. Villages ideally consist of ten clans, with the leader of the highest ranking clan serving as village chief. Rapid socioeconomic change has given rise to a range of social problems for communities and social groups, particularly youth. Most social development activities in the areas of health and education are funded by US government programs.

A system of old age, disability and survivor's pensions was first introduced in 1967. This program covers all gainfully employed persons, and provides old age pensions after the age of 60. It is financed by 4% of employee earnings, matched by an equal contribution from employers.

In the traditional social structure, rank and inheritance are matrilineal. Women are accorded considerable respect within the clan system. However, weakening extended family ties and the rise of alcohol abuse are leading to an increase in domestic violence and abuse of women. In urban areas, women face minimal gender based discrimination in employment.

Foreigners residing in Palau are barred from owning land or obtaining citizenship. Some foreigners complain of discrimination in access to housing, education and employment.

Human rights are well respected in Palau, and nongovernmental organizations operate without government interference.

### 41 HEALTH

Hospital services are provided by the MacDonald Memorial Hospital in Koror, which has 60 beds. Medical services in Koror are also provided by the Belau Medical Clinic and the Seventh-

Day Adventist Eye Clinic. In 1998, there were 1.1 physicians, 1.4 nurses, and 0.1 dentists per 1,000 people.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 19.3 and 7.1 per 1,000 people. Life expectancy averaged an estimated 69.2 years and the fertility rate was 2.5 children per woman. The infant mortality rate was 16.2 per 1,000 births.

Immunization rates for children under one were as follows in 1995: diphtheria, pertussis and tetanus, 100%; polio, 100%; measles, 100%; and hepatitis B, 100%. No measles or polio cases were reported in 1995.

Only one case of AIDS was reported in 1996.

### 42 HOUSING

There were 2,501 occupied houses in 1986, of which 72% were located in Koror and the adjacent state of Airai. Most house walls are constructed from metal sheets, wood, or concrete blocks, and roofs are of corrugated material. About 80% of all houses have water and electricity. The majority of homeowners finance their house construction under the traditional "ocheraol" system, whereby clan members contribute to construction costs.

### 43 EDUCATION

Elementary education is free and compulsory for all Palauan children ages 6-14. In 1990, there were 369 students in private schools and 1,756 in public schools. The gross enrollment ratio in primary school for 1990 to 1996 (i.e. the number of pupils enrolled divided by the number of children of primary-school age) was 103, indicating some attendance by students not in the primary age group. The Palau High School in Koror, the only public high school, enrolls 64% of the total secondary-school enrollment. In 1990, 445 secondary students attended private schools, and 165 were in public schools. Post-secondary education is provided by the College of Micronesia's Micronesian Occupational College (MOC) in Koror. The adult literacy rate is 98%.

### 44 LIBRARIES AND MUSEUMS

There is a small public library in Koror, with a collection comprising about 17,000 books. The Belau National Museum, established in 1973, is also located in Koror.

### 45 MEDIA

The Palau National Communications Corp., established in 1982, provides domestic and international telephone connections, radio broadcasting, telex and telegram communications, and navigational and weather services. In 2002, there were 6,700 mainline telephones and 1,000 cellular phones in use. A radio station in Koror broadcasts to listeners in the outer islands. As of 2002, there were five radio stations, 1 AM and 4 FM. Television is limited to one channel in the Koror area, provided by a local private company. As of 1997, there were 478 radios and 85 television sets in use per 1,000 population. Internet access is available.

There are no daily papers. Two popular periodicals are *Palau Gazette* (monthly, 1995 circulation 3,000), and *Tia Belau* (weekly, 5,000).

The constitution provides for free speech and a free press, and the government respects these rights in practice.

### 46 ORGANIZATIONS

The clan system forms the basic unit of social organization. Youth, women's, and community development organizations provide economic self-help, community involvement and leadership training, skills training, and sports and recreation. The Lion's Club has programs in the country.

## 47 TOURISM, TRAVEL, AND RECREATION

Palau's scenic areas include the Rock Islands, a large number of small, mushroom-shaped islands that are unique in the region. The marine environment is rich in live coral formations and tropical fish, making the country a prime destination for snorkeling and scuba diving. Many tourists visit the World War II battlefields, war memorials, and shrines.

In 2000, Palau had 55,493 tourist arrivals. According to 2002 US government estimates, the daily cost of staying in Koror was \$218.

## 48 FAMOUS PALAUANS

Lazarus E. Salii (1937–1988) became the third president of Palau in September 1985.

## 49 DEPENDENCIES

Palau has no territories or colonies.

# PAPUA NEW GUINEA

## Independent State of Papua New Guinea

**CAPITAL:** Port Moresby

**FLAG:** The flag is a rectangle, divided diagonally. The upper segment is scarlet with a yellow bird of paradise; the lower segment is black with five white stars representing the Southern Cross.

**ANTHEM:** *O, Arise All You Sons.*

**MONETARY UNIT:** The kina (K) of 100 toea is linked with the Australian dollar. There are coins of 1, 2, 5, 10, 20, and 50 toea and 1 kina, and notes of 2, 5, 10, 20, and 50 kina. K1=US\$0.2881 (or US\$1=K3.47) as of May 2003.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; Queen's Birthday, 1st Monday in June; Remembrance Day, 23 July; Independence Day, 16 September; Christmas, 25 December; Boxing Day, 26 December. Movable religious holidays include Good Friday and Easter Monday.

**TIME:** 10 PM=noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Situated to the north of Australia, Papua New Guinea has a total land area of 462,840 sq km (178,704 sq mi), including the large islands of New Britain, New Ireland, and Bougainville and hundreds of smaller islands. Comparatively, the area occupied by PNG is slightly larger than the state of California. The country extends 2,082 km (1,294 mi) NNE–SSW and 1,156 km (718 mi) ESE–WNW. Mainland Papua New Guinea shares the island of New Guinea, the second-largest island in the world, with Irian Jaya, a province of Indonesia. To the N is the US Trust Territory of the Pacific Islands; to the E, the Solomon Islands; to the W, Irian Jaya; and about 160 km (100 mi) to the S, the nearest neighbor, Australia. Papua New Guinea has a total boundary length of 5,972 km (3,711 mi), of which 5,152 km (3,201 mi) is coastline.

PNG's capital city, Port Moresby, is located on the country's southern coast.

## <sup>2</sup>TOPOGRAPHY

Papua New Guinea is situated between the stable continental mass of Australia and the deep ocean basin of the Pacific. The largest section is the eastern half of the island of New Guinea, which is dominated by a massive central cordillera, or system of mountain ranges, extending from Indonesia's Irian Jaya to East Cape in Papua New Guinea at the termination of the Owen Stanley Range, and including the nation's highest peak, Mt. Wilhelm (4,509 m/14,793 ft). A second mountain chain fringes the north coast and runs parallel to the central cordillera. Active and recently active volcanoes are prominent features of New Guinea landscapes; there are no glaciers or snowfields. In the lowlands are many swamps and floodplains. Important rivers are the Sepik, flowing about 1,130 km (700 mi) to the north coast, and the Fly, which is navigable for 800 km (500 mi) in the southwest.

The smaller islands of Papua New Guinea are also areas of extreme topographic contrast and generally feature mountain ranges rising directly from the sea or from narrow coastal plains. Volcanic landforms dominate the northern part of New Britain

and Bougainville, and some of the smaller islands are extremely volcanic. The Bougainville–New Ireland area comprises Bougainville and Buka islands, the Gazelle Peninsula of New Britain, New Ireland, New Hanover, the St. Matthias group, and the Admiralty Islands.

## <sup>3</sup>CLIMATE

The climate of Papua New Guinea is chiefly influenced by altitude and by the monsoons. The northwest or wet monsoon prevails from December to March, and the southeast or dry trade winds from May to October. Annual rainfall varies widely with the monsoon pattern, ranging from as little as 127 cm (50 in) at Port Moresby to an average of 584 cm (230 in) in the western river basin. Most of the lowland and island areas have daily mean temperatures of about 27°C (81°F), while in the highlands temperatures may fall to 4°C (39°F) at night and rise to 32°C (90°F) in the daytime. Relative humidity is uniformly high in the lowlands at about 80% and averages between 65 and 80% in the highlands.

## <sup>4</sup>FLORA AND FAUNA

The flora of Papua New Guinea is rich and varied, with habitats ranging from tidal swamps at sea level to alpine conditions. In low-lying coastal areas, various species of mangroves form the main vegetation, together with the beautiful casuarina, sago, and palm. Most of the country is covered by tropical and savanna rain forest, in which valuable trees such as kwila and cedar are found. Orchids, lilies, ferns, and creepers abound in the rain forests. There are large stands of pine at elevations of 910 to 1,220 m (3,000–4,000 ft). At the highest altitudes, mosses, lichens, and other alpine flora prevail.

Papua New Guinea supports a great diversity of bird life. About 650 breeding species have been recognized. Papua New Guinea is the major center for a number of bird families, particularly the bird of paradise, bower bird, cassowary, kingfisher, and parrot. There are about 222 species of mammals, many nocturnal, of which rodent and marsupial orders

predominate. Butterflies of Papua New Guinea are world famous for their size and vivid coloring.

## 5 ENVIRONMENT

Papua New Guinea's environmental concern includes pollution, global warming, and the loss of the nation's forests. Coastal waters are polluted with sewage and residue from oil spills. The nation has 801 cu km of renewable water resources, of which 49% are used to support farming and 22% for industrial activity. Only 88% of the nation's city dwellers and 32% of the rural population have pure drinking water. Another significant source of pollution is open-pit mining. The country's cities produce an average of 0.1 million tons of solid waste per year. Global warming and the resulting rise in sea level are a threat to Papua New Guinea's coastal vegetation and water supply.

The Department of Physical Planning and Environment is responsible for integrating environmental planning and conserving natural resources. In 2001, 57 of the nation's mammal species and 31 of its bird species were threatened, as were 66 types of plants. Endangered species in Papua New Guinea include four species of turtle (green sea, hawksbill, olive ridley, and leatherback) and Queen Alexandra's birdwing butterfly.

## 6 POPULATION

The population of Papua New Guinea in 2003 was estimated by the United Nations at 5,711,000, which placed it as number 101 in population among the 193 nations of the world. In that year approximately 4% of the population was over 65 years of age, with another 39% of the population under 15 years of age. There were 106 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–05 is 2.22%, with the projected population for the year 2015 at 7,169,000. The population density in 2002 was 11 per sq km (28 per sq mi). The major areas of population are in the highlands and eastern coastal areas of the island of New Guinea.

It was estimated by the Population Reference Bureau that 17% of the population lived in urban areas in 2001. The capital city, Port Moresby, had a population of 293,000 in that year. Other large cities include Lae, 80,665; Goroka, 17,855; Madang, 27,057; Wewak, 23,224; and Rabaul, on New Britain, 17,855. According to the United Nations, the urban population growth rate for 2000–2005 was 4.0%.

## 7 MIGRATION

The numbers of emigrants and immigrants have been roughly equal in recent years. In 1982–86, an average of 4,079 residents left the country each year, while 5,109 persons entered intending residency. Many more came as refugees from Irian Jaya. In 1993, some 3,750 such immigrants were living in a camp in Western Province, while another 6,000 or so had land or kinship ties with Papuan New Guineans and were living near the border. The emigration in earlier years of nonindigenous residents may have been influenced by constitutional provisions that restricted eligibility for naturalization to those with eight years' residency, but limited their tax and business rights to the same status as those of aliens. Many rural dwellers migrated to Port Moresby and other urban centers during the 1970s and 1980s. In 1999, the net migration rate was zero. The number of migrants in 2000 totaled 23,000, including 5,900 refugees. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

Papua New Guinea has more than 1,000 different ethnic groups. Indigenous Papua New Guineans vary considerably in ethnic origins, physical appearance, and spoken languages. The indigenous people are Melanesians. They are usually classified by language group, with Papuans representing the descendants of the original Australoid migration and Austronesian speakers

descended from later migrants. The former are generally found in the highlands and the latter in coastal areas and on the islands other than New Guinea. Other groups with significant populations include Negritos, Micronesians, and Polynesians.

## 9 LANGUAGES

Under the Australian administration of the former Territory of Papua and New Guinea, English became the official language; however, it is only spoken by 1–2% of the population. More widely spoken, there are now two other official languages: Pidgin, a Melanesian lingua franca with roots primarily in English and German, and Hiri Motu, another lingua franca of Papuan derivation. In all, there are more than 700 indigenous languages, most of them spoken by a few hundred to a few thousand people.

## 10 RELIGIONS

Indigenous religions, varying widely in ritual and belief, remain important in tribal societies in Papua New Guinea, with about 34% of the population practicing some form of traditional belief either exclusively or in conjunction with another faith. However, most of the population is nominally Christian. Of these, about 22% are Roman Catholics; 16% are Lutheran; another 8% are Presbyterian, Methodist, or London Missionary Society; 5% are Anglican; 4% Evangelical Alliance; and 1% Seventh-Day Adventist. Other Protestant sects account for 10% of the population. Baha'ism is the only other nonindigenous faith that has gained a foothold. The Muslim community maintains a mosque in Port Moresby.

## 11 TRANSPORTATION

Transportation is a major problem in Papua New Guinea because of the difficult terrain. Major population centers are linked chiefly by air and sea, although road construction has increased to supplement these expensive means of transport. Of some 19,600 km (12,179 mi) of roads in 2002, only 686 km (426 mi) were paved. In 2000, there were 87,800 passenger vehicles and 5,049 commercial vehicles. Papua New Guinea has no railroads. However, there are 10,940 km (6,798 mi) of waterways.

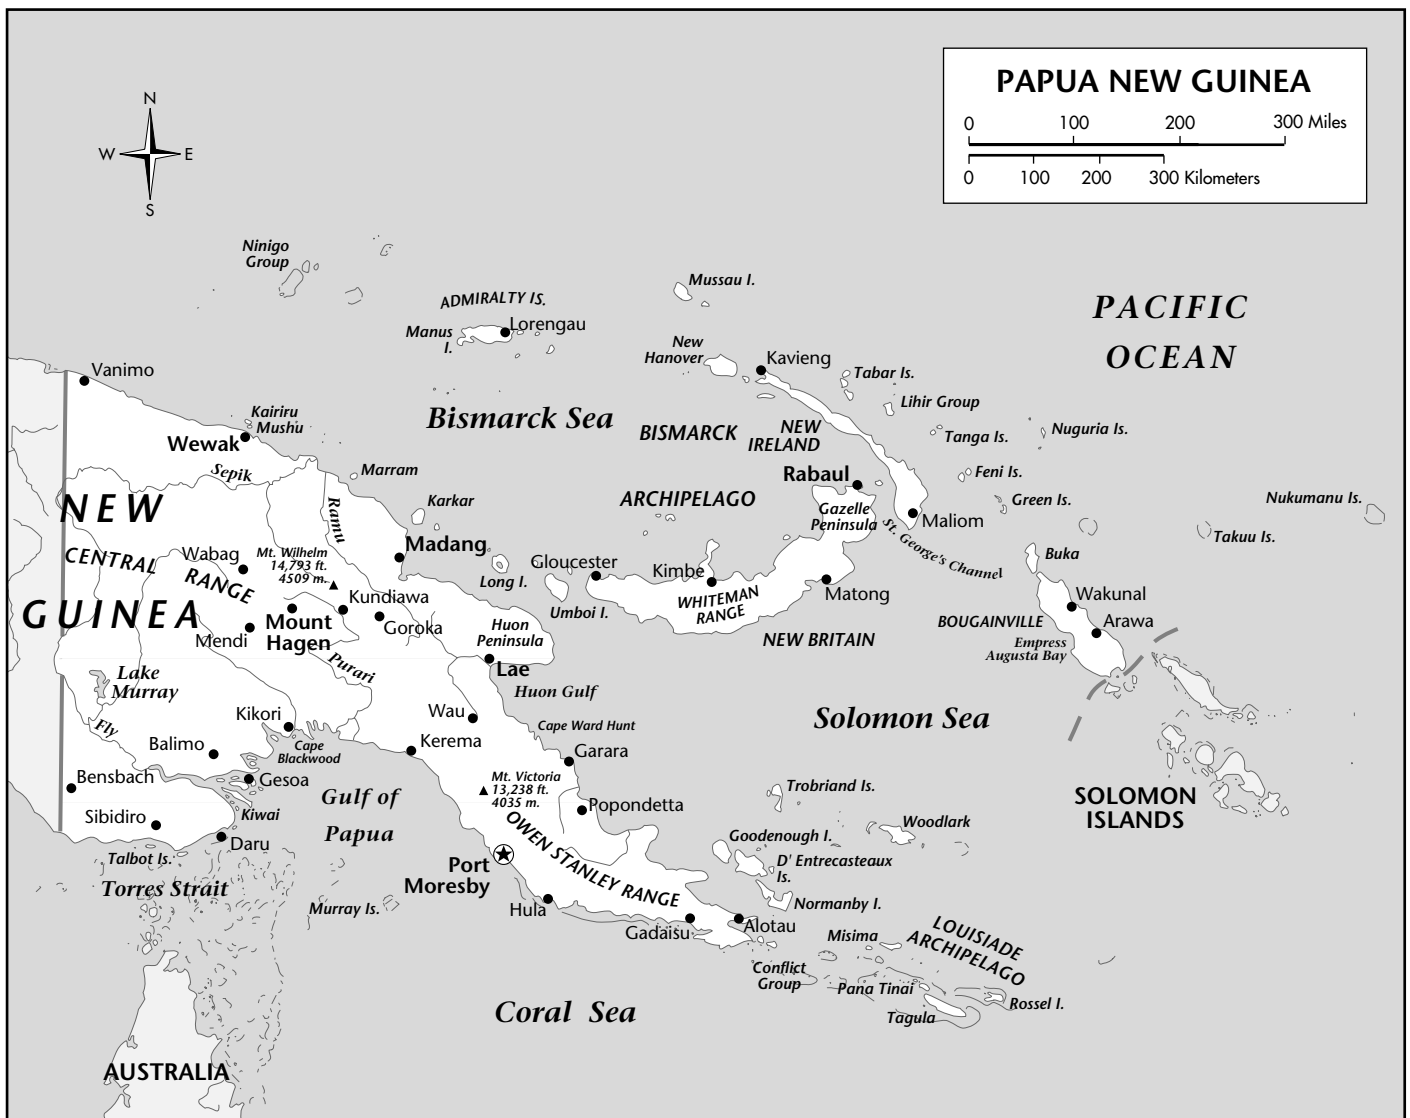

The government operates a fleet of coastal work boats, none more than 9 m (30 ft) long. The principal harbors are Madang, Port Moresby, Lae, and Rabaul. There are international shipping services by refrigerated container ships, other cargo vessels, and some passenger service to Australia, Southeast Asian and Pacific island countries, the US west coast, and Europe. The main shipping lines are government owned. In 2002, the merchant fleet was comprised of 22 ships with a total of 40,911 GRT.

Papua New Guinea had 490 airports in 2001, of which 21 were principal airports with paved runways. Papua New Guinea's national air carrier, Air Niugini, established in 1973, has undertaken most of the services previously provided by Australian lines. In 2001, 1,188,100 passengers were carried on scheduled domestic and international flights.

## 12 HISTORY

Papua New Guinea appears to have been settled by 14,000 BC, with migrations first of hunters and later of agriculturists probably coming from the Asian mainland by way of Indonesia. Early communities had little contact with each other because of rough terrain and so maintained their autonomy, as well as their distinct languages and customs.

New Guinea was first sighted by Spanish and Portuguese sailors in the early 16th century and was known prophetically as *Isla del Oro* (Island of Gold). The western part of the island was claimed by Spain in 1545 and named New Guinea for a fancied resemblance of the people to those on the West African coast. ("Papua" is a Malay word for the typically frizzled quality of Melanesian hair.) Traders began to appear in the islands in the

LOCATION: 140°51' to 160°E; 0° to 12° S. BOUNDARY LENGTHS: Total coastline, 5,152 kilometers (3,202 miles); Indonesia, 820 kilometers (509 miles). TERRITORIAL SEA LIMIT: 12 miles.

1850s, and the Germans sought coconut oil available in northern New Guinea about that time. The Dutch and the British had earlier agreed on a division of their interests in the island, and from 1828, the Dutch began to colonize the western portion.

Although the British flag was hoisted on various parts of eastern New Guinea, the British government did not ratify annexation. Some Australian colonists were eager to see New Guinea become a British possession, for trade, labor, gold mining, and missionary reasons. However, it was not until 1884, after an abortive Australian annexation attempt and under fear of German ambitions in the area, that Britain established a protectorate over the southern coast of New Guinea and adjacent islands. The Germans followed by laying claim to three different parts of northern New Guinea. British and German spheres of influence were delineated by the Anglo-German Agreement of 1885. Germany took control of the northeastern portion of the island, as well as New Britain, New Ireland, and Bougainville, while Britain took possession of the southern portion and the adjacent islands.

British New Guinea passed to Australian control in 1902 and was renamed the Territory of Papua in 1906. German New

Guinea remained intact until the outbreak of war in 1914, when Australian forces seized it. Although the territories retained their separate identities and status, they were administered jointly by Australia from headquarters at Port Moresby. In 1921, the former German New Guinea was placed under a League of Nations mandate administered by Australia; in 1947, it became the Trust Territory of New Guinea, still administered by Australia but now subject to the surveillance of the UN Trusteeship Council.

Both territories were merged into the Territory of Papua and New Guinea in 1949. A Legislative Council, established in 1953, was replaced by the House of Assembly in 1964. Eight years later, the territory was renamed Papua New Guinea, and on 1 December 1973, it was granted self-government. Separatist movements in Papua in 1973 and secessionist activities on the island of Bougainville in 1975 flared briefly and then subsided, though debates over citizenship and land-reform provisions were vigorous until the passage of a constitution in 1975. Papua New Guinea achieved complete independence on 16 September 1975, with Michael Somare as prime minister of a coalition government.

Somare was voted out of office in 1980 but reelected in 1982; subsequently, he put through a constitutional change giving the central government increased authority over the provincial governments. Soon after, he suspended three provincial administrations for financial mismanagement. Somare also had to contend with social unrest, which culminated in June 1985 in a state of emergency after a prolonged wave of violent crime in Port Moresby. At the same time, his Pangu Pati was split by his deputy, Paias Wingti, who then founded a new party, the People's Democratic Movement (PDM). In November 1985, Somare was again voted out of office on a no confidence motion, and Wingti formed a cabinet. Though unrest continued, with serious riots in the Highlands in 1986, elections in mid-1987 returned Wingti to office at the head of a shaky five-party coalition.

Wingti's government was defeated in a no confidence vote in July 1988; a coalition government led by Rabbie Namaliu replaced the PDM government. A secessionist crisis on Bougainville dominated domestic politics during 1990–91. The Bougainville Revolutionary Army (BRA) declared the island of Bougainville to be independent from Papua New Guinea in May 1990, and in response government forces landed on the north of Bougainville in April 1991. Namaliu adjourned parliament early in 1991 to avoid a vote of no confidence over the Bougainville crisis. Paias Wingti, the leader of the People's Democratic Movement (PDM), was reelected prime minister in July 1992 as the leader of a new coalition government with the support of the People's Progress Party, and the League for National Advancement.

During 1993 the government continued to extend its control over Bougainville, partly because of popular revulsion against human rights violations by members of the BRA. In September 1994, rebel troops withdrew to the surrounding hills of the Bougainville copper mine allowing government forces to reclaim it. In 1995, the prime minister halted cease-fire talks.

In 1997, reformist premier Bill Skate, governor of Port Moresby, was elected by members of PNG's 109-seat parliament defeating Michael Somare who was also defeated for the post of parliamentary speaker by John Pundari who is a member of Pangu. Skate represented Julius Chan who lost his seat in the elections but who supported Skate's selection as premier. Chan had hired a group of mercenaries to put down the rebellion in Bougainville, angering Brigadier General Jerry Sinigirok. Chan dismissed Sinigirok; a decision that led to rioting by 2,000 Sinigirok loyalists. Ultimately Chan made the decision to step aside pending a judicial inquiry into the hiring of mercenaries. Chan had been elected prime minister on 30 August 1994.

Resolution to the Bougainville problem remained elusive until the government of Bill Skate reached a truce with the rebels in 1998. In April 1998, a permanent cease-fire agreement was signed and the reconstruction of war-torn Bougainville commenced. Up to 20,000 people had been killed during 9 years of conflict. In 1999, the rebel leaders and the PNG government signed an agreement known as the Matakana and Okataina Understanding which established an agreement to continue discussions about the island's political future. In August 2001, the Bougainville Peace Agreement was signed, which would provide for an autonomous Bougainville government and secure a plan of disarmament. A referendum on independence would be conducted in 10 to 15 years' time.

Throughout the 1990s, crime increased in PNG, especially in the capital of Port Moresby, leading to a dusk-to-dawn curfew and a ban on the sale of alcohol in 1997. In July 1999, Bill Skate resigned as prime minister as allegations regarding the misappropriation of development funds arose. On 14 July 1999, the national assembly chose Sir Mekere Morauta as prime minister in a 99 to 5 vote. Morauta sought to restore damaged relations with the People's Republic of China, which was angered by the Skate government's decision to accept normal relations

with Taiwan in return for economic assistance. The Morauta government engaged in a privatization program, and successfully negotiated with the IMF and World Bank for an aid package in 2000. On 14 March 2001, hundreds of soldiers led a mutiny against Morauta's government in protest of a proposed defense force restructuring plan. They seized an armory, and only relinquished their weapons a week later when Morauta promised a full amnesty for the soldiers involved in the revolt and a withdrawal of the controversial military restructuring plan.

Former Prime Minister Michael Somare became prime minister once again on 5 August 2002 when his National Alliance won the parliamentary elections in June that year. The elections were marked by violence and widespread irregularities, including vote-rigging. Somare was elected unopposed by a vote of 88 to 0, with members from Morauta's People's Democratic Movement and a section of the Pangu Party abstaining. Somare immediately set out to halt Morauta's privatization program, stating that the government would need more time to assess state assets. Somare headed a coalition of 13 parties and 20 independent members of parliament. He named a 28-member cabinet, including 19 new members of parliament.

### 13 GOVERNMENT

Papua New Guinea is an independent, parliamentary democracy in the Commonwealth of Nations, with a governor-general representing the British crown.

Under the 1975 constitution, legislative power is vested in the national parliament (formerly the house of assembly) of 109 members, including 20 representing provincial electorates and 89 from open electorates, serving a term of up to five years. Suffrage is universal and voting compulsory for adults at age 18. The government is formed by the party or coalition of parties, that has a majority in the national parliament, and executive power is undertaken by the national executive council, selected from the government parties and chaired by the prime minister.

The government has constitutional authority over the defense force, the Royal Papua New Guinea Constabulary, and intelligence organizations.

### 14 POLITICAL PARTIES

Political parties in PNG lack ideological conviction and rely almost exclusively on patronage politics, personalism, and regional bases. Several parties have emerged in Papua New Guinean politics. In the House of Assembly elected in 1973, the Pangu Pati, headed by Michael Somare, formed a coalition government with the People's Progress Party, and Somare became prime minister. Opposition parties at the time were the United Party, which maintains a strong following in the Highlands, and the Papua Besena Party, which stands for the secession of Papua from Papua New Guinea and has had fluctuating support even on its home ground.

Generally, party allegiances have been fluid, with regional and tribal politics impacting greatly on political events. The People's Democratic Movement, formed in 1985 by dissident members of the Pangu Pati, won 18 seats in the 1987 elections, while the Pangu Pati captured 25. Parties that participated in the 1997 elections were the Pangu Pati, People's National Congress, the People's Progress Party, and the People's Democratic Movement. In April 1998, Skate announced the formation of a new political alliance; the Papua New Guinea First Party led by his People's National Congress Party. More than 40 parties registered to participate in the June 2002 elections. In those elections, Michael Somare's National Alliance Party took 19 seats, and formed a 13-party coalition. Former Prime Minister Mekere Morauta's People's Democratic Movement took 13 seats.

## 15 LOCAL GOVERNMENT

Papua New Guinea is divided into 20 provinces, including the National Capital District. Each province has its own government, headed by a premier. In addition, there are more than 160 locally elected government councils. The local government system went through a process of reform in 1995, when the then-19 provincial governments were replaced by regional authorities. Bougainville presently exercises significant autonomy in its administrative affairs.

## 16 JUDICIAL SYSTEM

The legal system is based on English common law. The Supreme Court is the nation's highest judicial authority and final court of appeal. Other courts are the National Court; district courts, which deal with summary and non-indictable offenses; and local courts, established to deal with minor offenses, including matters regulated by local customs.

The Papua New Guinea government has undertaken a process of legal reform under which village courts have been established to conserve and reactivate traditional legal methods. Special tribunals deal with land titles and with cases involving minors. An Ombudsman Commission has been established to investigate and refer to the public prosecutor cases involving abuse of official authority.

The constitution declares the judiciary independent of executive, political, or military authority. It also provides a number of procedural due process protections including the right to legal counsel for criminal defendants. The chief justice of the supreme court is appointed by the governor-general upon nomination by the national executive council in consultation with the minister for justice. The Judicial and Legal Services Commission appoint other judges.

## 17 ARMED FORCES

Armed forces in 2002 had an estimated total of 3,100 personnel. The army of 2,500 consisted of two infantry battalions and one engineering battalion. Maritime forces (400) were equipped with four patrol and coastal craft and two amphibious craft. The air force (200) had no armed aircraft. Australia provides a 38-member training unit. Defense expenditures totaled \$42 million in 1998 or 1% of GDP. The Bougainville peace monitoring group includes some 55 troops from Australia, New Zealand, and Fiji.

## 18 INTERNATIONAL COOPERATION

Papua New Guinea became a member of the UN on 10 October 1975 and participates in ESCAP and all the UN nonregional specialized agencies. It also belongs to the Asian Development Bank, Commonwealth of Nations, G-77, South Pacific Forum, and South Pacific Commission. Papua New Guinea has signed the Lomé Convention, the Law of the Sea, and the Antarctic Treaty, and it has observer status at ASEAN. It also formally acceded to the WTO in June 1996.

## 19 ECONOMY

Economic activity is concentrated in two sectors, agriculture and mining. The subsistence sector, which occupies more than two-thirds of the working population, produces livestock, fruit, and vegetables for local consumption; agricultural products for export include copra, palm oil, coffee, cocoa, and tea. Rubber production has declined in recent years, and in the mid-1980s, coffee crops were threatened by the spread of coffee rust fungus through Western Highlands Province. New mining operations have compensated for the 1989 closure of the Bougainville mine, which had been a chief foreign exchange earner since the early 1970s. Currently, the main gold and silver mines are located at Ok Tedi in the Star Mountains, on Misima Island, and at Porgera. Oil and natural gas have been discovered in Southern

Highlands Province. Forestry and fishing hold increasing importance.

Economic growth, which averaged 3.7% in the late 1980s, rose to 9% in 1991, 11.8% in 1992, and 16.6% in 1993. The growth was driven by a mineral and petroleum boom centered in the Highlands region. Growth slowed to 3% in 1994, 2.9% in 1995, and 1.6% in 1996 and 1997 due to an anticipated drop in production from Papua New Guinea's aging mines and oil fields, and a 1997 drought that cut the coffee crop in half. To halt the economic decline, the government awarded a lease to private developers for the \$800 million Lihir gold project. In addition, construction projects involving airports, highways, disaster rehabilitation, development of the Gobe oil field, and a petroleum refinery are planned or being implemented. These projects, together with the onset of new production at the mine, generated a slightly improved GDP growth rate of 1.6% in 1998. The economy did not reach the expected 4.5% increase in part because of the Asian financial crisis, and recurring drought. Growth in 1999 was 3.6%, and in 2000 and 2001, the economy experienced small contractions of -0.8% and -3.3%, respectively. Inflation persisted in double digits, averaging just over 10%. In 2002, positive growth returned, but at an anemic 1.2%, while the annual inflation rate rose to 12%.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Papua New Guinea's gross domestic product (GDP) was estimated at \$12.2 billion. The per capita GDP was estimated at \$2,400. The annual growth rate of GDP was estimated at -2.5%. The average inflation rate in 2001 was 10.3%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 30% of GDP, industry 37%, and services 33%. Foreign aid receipts amounted to about \$39 per capita and accounted for approximately 7% of the gross national income (GNI).

The World Bank reports that in 1999 per capita household consumption (in constant 1995 US dollars) was \$566. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the same period private consumption grew at an annual rate of 12%. The richest 10% of the population accounted for approximately 40.5% of household consumption and the poorest 10% approximately 1.7%. It was estimated that about 37% of the population had incomes below the poverty line.

## 21 LABOR

The labor force numbered 2.3 million in 1999. Agriculture accounted for 85% of the workforce, particularly in small farming communities and isolated villages. Legislation covers working conditions and wages, and provides for collective bargaining. The Papua New Guinea Trade Union Congress is the main union federation. About one-half of the wage earners were unionized, and there were about 50 trade unions. Unions have the right to organize and bargain collectively but the government may cancel wage agreements if they are deemed to be against "public policy." The right to strike is protected, and it is prohibited to discriminate against union activity. However, there have been some reports of retaliation against union members. Approximately half of the 250,000 wage earners are union members.

The minimum working age is 18, although children may be employed in family-related work as young as 11. However, few children work in any capacity outside of subsistence farming. The minimum weekly wage in urban areas was \$9.87 as of 2001. The law provides for minimum occupational health and safety

standards; however, due to a shortage of inspectors, workplaces are not inspected regularly but only when a union or worker requests.

## 22 AGRICULTURE

Agriculture in Papua New Guinea is divided into a large subsistence sector and a smaller monetary sector for export. Agriculture's importance has steadily declined since 1985, when it made up 34% of GDP—in 2001, agriculture only contributed about 30% to GDP. About 85% of the population engages in subsistence agriculture. Subsistence crops include yams, taro, and other staple vegetables. Cash crops are increasing in rural areas, stimulated by government-financed development programs. Production by small farmers of coffee, copra, cocoa, tea, rubber, and oil palm is important for export, although production on plantations, which are usually foreign owned, is also significant. Such plantations are gradually being sold back to nationals. Principal crops and 1999 output (in tons) included sweet potatoes, 460,000; sugar cane, 400,000; copra, 140,000; coffee, 40,000; cocoa, 25,000; and rubber, 7,000. Papua New Guinea grows very little rice, the staple food for many of its inhabitants. A single Australian company imports over 150,000 tons per year to satisfy demand.

## 23 ANIMAL HUSBANDRY

Livestock in 2001 included an estimated 1,650,000 hogs, 6,500 sheep, and 3.7 million chickens. That same year there were 86,000 head of cattle, and production was being encouraged with the aim of achieving self-sufficiency in meat supplies. Local poultry and beef production is sufficient to almost meet domestic demand. Beef imports are subject to quota controls. The farming of crocodiles, whose hides are exported, has also been expanded.

## 24 FISHING

In many coastal parts of Papua New Guinea, fishing is of great economic importance. The government is involved in the development of fishing through supply of freezers and of transport and research facilities. The total catch in 2000 was 50,537 tons, 27% from inland fishing. Fish exports in 2000 were valued at \$36.4 million.

## 25 FORESTRY

Forests and woodlands covered about 67% of the land area in 2000. Exploitable forests account for roughly 40% of the total land area and include a great variety of hardwood and softwood species. The total roundwood production in 2000 was 8,597,000 cu m (303.5 million cu ft), as compared with about 7,058,000 cu m (249 million cu ft) in 1981. About 64% of all the timber cut in 2000 was used for fuel; production of sawn timber was estimated at 218,000 cu m (7.70 million cu ft). Plywood, hardwoods, and logs are regularly exported to Japan, New Zealand, Australia, and Europe.

## 26 MINING

The mining of gold, silver, and copper was a leading industry in Papua New Guinea—mining contributed 17.1% of GDP in 2000, when the country ranked 11th in gold mining and 13th in copper. Crude oil production and construction were other leading industries. Oil, gold, and copper ore ranked as the top three export commodities in 2002. Mining and petroleum supplied 70% of export earnings in 2000 and employed 2% of the workforce. The country also produced cement, common clays, sand and gravel, stone, natural gas, natural gas liquids, and crude petroleum.

Gold output in 2000 was 74,300 kg (metal content), up from 48,482 in 1997. In 1888, gold was discovered on Misima Island, marking the start of mining on Papua New Guinea. Prior to World War II, gold mining contributed 75% of export earnings.

This proportion declined greatly in subsequent years, reaching 40% in 1995. Reserves on Lihir Island have been estimated to contain 613 tons of recoverable gold, and deposits at Porgera, near Ok Tedi, in the Star Mountains, were considered to hold another 470 tons. Production of silver in 2000 totaled 73,200 kg, up from 59,294 in 1998.

Copper output (metal content) in 2000 was 200,900 tons. All copper came from the Ok Tedi mine, near the Indonesian border. In 1971/72, the Bougainville copper mine, one of the richest in the world, began to export copper ores and concentrates, which totaled 220,000 tons in 1988 and accounted for 44% of all exports in the years the mine operated. The mine closed in 1989 because of civil unrest caused by Bougainville Revolutionary Army militants. Nine years of civil unrest were temporarily halted by a cease-fire in 1997.

Mineral exploration was being expanded. Bauxite was known to exist on Manus Island, in the Admiralty Islands, and on New Ireland Island. Additionally, lead, manganese, molybdenum, zinc, limestone, and phosphate guano and rock deposits were present. Major deposits of chromite, cobalt, and nickel were believed to be recoverable at a site on the Ramu River, northeast of Ok Tedi. Mineral resources in Papua New Guinea were difficult and expensive to mine, and exploration and mining were hampered by rugged terrain, the nation's poor road infrastructure, and the high cost of developing infrastructure. Ethnic strife has become commonplace, and has had a negative impact on mining exploration and investment. Land disputes have become common as well, because land was communally held and there was no real system of land registration. To revive waning mineral exploration interest, the government announced a major overhaul of the tax system, which has been criticized for making investment in mining too expensive. The new tax regime was applicable only when a project was under way, and included guaranteed fiscal stability for the financing period of a project, the lowering of corporate tax rates, and the reduction of dividend holding tax. Companies were also able to deduct 25% of exploration expenditure against income, and were required to pay an additional profit tax. The mining levy would be phased out within a four-year period.

## 27 ENERGY AND POWER

As of 2001, Papua New Guinea had a total installed electrical capacity of 554 MW. Electricity generated in 2000 was 1,700 million kWh. Of this total, 54.6% came from fossil fuels and 45.4 29% came from hydroelectric facilities. Consumption of electricity in 2000 was 1.5 billion kWh.

Exploration for oil and gas has been conducted in the Gulf of Papua, on the Turama River, and off Bougainville. The Kutubu oil project (the nation's first oil production project) in the Southern Highlands began exporting in June 1992. In 1998, Kutubu produced 79,000 barrels of oil per day; proved reserves were estimated at 100 million tons (400 million barrels) at the beginning of 1996.

## 28 INDUSTRY

The industrial sector, constrained by the small domestic market and the population's low purchasing power, is largely undeveloped. Industries are concentrated in industrial metals, timber processing, machinery, food, drinks, and tobacco. Although industrial production, including construction and the provision of utilities, electricity and water, has increased to about 40% of GDP, the manufacturing component has been decreasing as a percent of GDP, from 9.5% in 1980 to 9% in 1990 to 8.2% in 2001, according to Asian Development Bank statistics. This relative decline is mainly due to double digit growth in the construction sector, a boom led by work on the Lihir gold mine and the Gobe petroleum project. The growth rate in construction peaked in 1997 and 1998, at 21.7% and 25.4%, respectively, but

the sector continues strong. In 2002, a number of construction projects involving housing, airports, highways, disaster rehabilitation, and a petroleum refinery were planned or under way.

Handicraft and cottage industries have expanded. A government-sponsored program assists Papua New Guineans in setting up businesses and purchases equity in existing firms. It has also encouraged small-scale import-substitution operations.

### 29 SCIENCE AND TECHNOLOGY

The Papua New Guinea Scientific Society, founded in 1949 at Boroko, promotes the sciences, exchanges scientific information, preserves scientific collections, and establishes museums. The University of Papua New Guinea, founded in 1965 at Waigani, and the Papua New Guinea University of Technology, founded in 1965 at Lae, provide scientific and technical training. The Lowlands Agricultural Experiment Station, founded in 1928, is in Kerevat. The Papua New Guinea Institute of Medical Research was founded in 1968. In 1987–97, science and engineering students accounted for 10% of college enrollments.

### 30 DOMESTIC TRADE

Trade in rural areas is mostly informal and cash is used in transactions. The local market, particularly in fruit and vegetables, is an important feature of economic and social life. Domestic trade in urban centers is primarily through modern supermarket chains and independent stores. The companies sponsoring supermarkets tend to be in both the importing and wholesale businesses and take responsibility for distribution of goods to outlying villages, which are generally somewhat isolated. Domestic trade is hampered by street gangs that terrorize local and foreign residents and merchants. There are a few Australian-based franchises within the country.

Most stores are open weekdays from 8 AM to 5 PM and until noon on Saturdays. Banks are open from 9 AM to 2 PM Monday to Thursday and from 9 AM to 5 PM on Fridays. Other businesses operate from 8 AM to 4:30 PM weekdays. Most businesses and government offices do not open on the weekends.

### 31 FOREIGN TRADE

In 2000, Papua New Guinea's exports totaled \$2.4 billion while imports totaled \$1 billion, down from \$1.1 billion in 1999. Consumer goods accounted for 9.3% of imports; machinery, 17.8%; industrial supplies, 18.3%; transportation equipment, 15.1%; food and beverages, 17.2%; and other imports, 0.3%. Of its natural resources, Papua New Guinea mainly exports crude petroleum (29%), copper ore (8.9%), and coffee (6.1%). Other exports include palm oil (6.0%) and rough wood (1.8%).

Through most of the period when Papua New Guinea was a territory administered by Australia, the two were also major trading partners. In the 1970s, Papua New Guinea's trade with other countries, especially Japan and Germany, increased. Principal trading partners in 1998 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
Australia	442	641	-199
Japan	291	97	194
Germany	166	23	143
United States	124	65	59
Korea	106	23	83
United Kingdom	81	11	70
China (inc. Hong Kong)	45	37	8
Singapore	26	120	-94
New Zealand	16	51	-35
Malaysia	15	31	-16

### 32 BALANCE OF PAYMENTS

Papua New Guinea relies heavily on imported goods and services, both for consumption and as inputs for its exports. The country registered deficits on current accounts during the early 1980s, after recording annual surpluses in the late 1970s. In the late 1980s, mine closings, civil unrest, and sustained deterioration in prices for the country's principal agricultural exports severely tested the economy and led to a program of structural adjustment supported by the World Bank and IMF. When the economy rebounded in the early 1990s, however, the government lost interest in the reforms and instituted expansionist fiscal policies that led to a decline in international reserves. To restore foreign exchange levels, the government devalued the currency in 1994. When that failed to solve the problem, the government let the kina float, resulting in a depreciation of about 28% by 1996. In 1995, Papua New Guinea reached an agreement with the World Bank and IMF on a series of economic reforms. The subsequent receipt of approximately \$200 million in loans in August 1995 substantially bolstered foreign reserves. Another agreement with the IMF in 2000 brought in an additional \$115 million in loans to the country.

The International Monetary Fund (IMF) reports that in 2001 Papua New Guinea had exports of goods totaling \$1.81 billion and imports totaling \$932 million. The services credit totaled \$285 million and debit \$662 million. The following table summarizes Papua New Guinea's balance of payments as reported by the IMF for 2001 in millions of US dollars. The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Papua New Guinea's exports was \$1.8 billion while imports totaled \$1.024 billion resulting in a trade surplus of \$776 million.

### 33 BANKING AND SECURITIES

The Bank of Papua New Guinea, the country's central bank, was established in 1973, and the currency, the kina, was first issued in April 1975. The kina is backed by a standby arrangement with Australia, and the value of the kina is tied to the Australian dollar.

The Papua New Guinea Banking Corp. was set up in 1973 to take over the savings and trading business of the former Australian government-owned bank operating in Papua New Guinea. It competes with seven other private commercial banks, three of which are subsidiaries of Australian banks. Liquidity increased over the first six months of 1996, with total liquid assets held by the commercial banks standing at \$2.1 billion at the end of 1996. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$376.6 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$846.1 million. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 11.25%.

There is no securities exchange in Papua New Guinea.

### 34 INSURANCE

In 1997, there were at least 11 insurance companies operating in Papua New Guinea.

### 35 PUBLIC FINANCE

Papua New Guinea receives most of its bilateral aid from Australia, which donates about \$200 million a year in assistance. Foreign budgetary support was phased out in 2000; aid is now concentrated on project development. Other major sources of aid include Japan, the EU, China, Taiwan, the UN, the Asian Development Bank, the IMF, and the World Bank.

The US Central Intelligence Agency (CIA) estimates that in 2000 Papua New Guinea's central government took in revenues of approximately \$849 million and had expenditures of \$1.1 billion including capital expenditures of \$344 million. Overall, the government registered a deficit of approximately \$251 million. External debt totaled \$2.6 billion.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

REVENUE AND GRANTS	100.0%	849
Tax revenue	76.6%	650
Non-tax revenue	3.8%	32
Capital revenue	1.1%	9
Grants	18.5%	157
EXPENDITURES	100.0%	1,100
General public services	7.4%	82
Defense	3.3%	37
Public order and safety	7.0%	77
Education	21.8%	240
Health	6.2%	68
Social security	2.0%	23
Housing and community amenities	2.4%	26
Recreation, cultural, and religious affairs	0.6%	7
Economic affairs and services	19.9%	219
Other expenditures	15.4%	169
Interest payments	14.0%	153

### 36 TAXATION

Company incomes are taxed at a rate of 25% to 50%. Additional profits tax is calculated on the net profits of mining and petroleum companies at a rate of 35% to 50%. In addition, progressive tax rates are applied to individuals' wages and salaries, with taxes automatically withheld from paychecks. Tax rates range from 10% to 35%. Land and property taxes, estate and death taxes, gift taxes, stamp taxes, excise taxes, and sales taxes are also imposed.

### 37 CUSTOMS AND DUTIES

Papua New Guinea acceded to the World Trade Organization in 1996 and has liberalized its trade to conform to WTO standards, removing all non-tariff barriers to trade including quotas, bans, and license requirements. The government put a value-added tax (VAT) into effect in 1998 and intends to reduce all non-protective tariffs to zero using the VAT. Currently, there are import duty rates of 5%, 8%, and 11%. The protective tariff is 40% and there are higher rates applied to luxury items such as tobacco and liquor.

### 38 FOREIGN INVESTMENT

The bulk of foreign investment is in the mining and petroleum sector. Statistic on foreign equity holdings for 1995 show that Australia was the largest investor with K1,446 million, followed

by the United Kingdom with K160 million and the United States with K91 million. Overall, foreign equity holdings fell from 55% of GDP in 1990 to 33% in 1994, primarily due to the completion of major mining and petroleum projects. In 1995, developers RTZ and Niugini Mining were awarded a lease for the \$800 million Lihir gold project raising foreign equity holdings to 37% of GDP.

The Investment Promotion Authority (IPA), established in 1992, facilitates and certifies foreign investment. Corruption, civil unrest, and bureaucratic delays, however, frustrate the process. A number of free trade zones are in the early stages of development.

Foreign investment in Papua New Guinea took on an air of international intrigue when it was revealed that in early 1997 Prime Minister Julius Chan had entered into a \$46 million contract with Sandline Incorporated, a mercenary military organization, to retake Bougainville Island and in particular the copper mining complex there that had been occupied by separatists since 1989. Money behind the contract was traced to the British-Australia mining company, RTZ-CRA. The army prevented the use of the mercenaries. Chan lost his parliamentary seat in the 1997 elections, and a peace agreement was signed with the Bougainville Revolutionary Army (BRA) in 1998.

Foreign direct investment (FDI) was only \$87.6 million in 1997 and \$109.6 million in 1998. FDI nearly tripled in 1999, however, to \$296.5 million, before falling back to \$130.7 million in 2000. FDI in 2002 was \$178.7 million.

### 39 ECONOMIC DEVELOPMENT

The fundamental purposes of Papua New Guinea's economic strategy have been distilled into the nation's eight aims: a rapid increase in the proportion of the economy under the control of Papua New Guineans; a more equal distribution of economic benefits; decentralization of economic activity; an emphasis on small-scale artisan, service, and business activity; a more self-reliant economy; an increasing capacity for meeting government spending from locally raised revenue; a rapid increase in the equal and active participation of women in the economy; and governmental control and involvement in those sectors where control is necessary to achieve the desired kind of development.

In March 2000, Papua New Guinea's economic reform efforts came under the supervision of an IMF Structural Adjustment Program (SAP) financed by a stand-by credit line of SDR85.54 million (about \$120 million) that ran from 29 March 2000 to 29 September 2001. The IMF is critical of policies through which the government has intervened heavily in the economy—through tax incentives, licensing and approval requirements, trade restrictions, tariffs and price controls—to create an economy dominated by a few privately-owned, highly protected, non-competitive, import substitution enterprises. The SAP called for privatization of the few state owned enterprises, liberalization of trade and investment, reduction in public service employment and the decontrol of prices. In 2002, the government was implementing many of these reforms either as conditionals under the IMF stand-by agreement and/or as requirements for participation in APEC and accession to the WTO.

### 40 SOCIAL DEVELOPMENT

A social security system, called the National Provident Fund, was formed in 1981 and covers persons employed by firms with 25 or more workers, providing old age, disability, and survivor benefits. Businesses involving cocoa, copra, palm oil, rubber, and tea are exempt, and there is a separate program for public employees. The system is financed by 5% contribution of earnings from employees, and 7% of payroll from employers. Retirement is set at age 55, or at any age with 15 years of contributions. Benefits are provided as a lump sum, and include total contributions plus interest. Workers' compensation is provided by employers

through direct provision of benefits or insurance premiums. Medical services, where available, are provided free or at a nominal cost. Rural communities traditionally assume communal obligations to those in need.

Despite a constitution guaranteeing them equal rights, women remain second-class citizens due to traditional patterns of discrimination. Village courts tend to enforce these patterns, and intertribal warfare often involves attacks on women. Polygyny is common, and the tradition of paying a bride-price persists. Violence against women is widespread, and few victims press charges. Much of the violence is committed by women against another of their husband's wives. The government is working to improve the status of women, and has instituted an Office of Women's Affairs.

In 1999, human rights violations included excessive use of police force, poor prison conditions, and limits on freedom of assembly.

#### 41 HEALTH

Government policy is to distribute health services widely and to provide comprehensive medical care, both preventive and curative. In the years 1985–1995, 96% of the population had access to health care services. Medical personnel in 1990 included 301 doctors and 2,447 nurses. As of 1999, there were an estimated 0.1 physicians and 4 hospital beds per 1,000 people. In 2000, 42% of the population had access to safe drinking water and 82% had adequate sanitation. As of 1999, total health care expenditure was estimated at 3.2% of GDP.

The main health problems are malaria, tuberculosis, leprosy, and venereal disease. Significant malnutrition occurs in some areas and pneumonia and related respiratory infections are major risks. In 1999, there were about 250 reported cases of tuberculosis per 100,000 inhabitants. There were 797 malaria, 5,335 tuberculosis, and 6,821 measles cases in 1994. The increased incidence of malaria has been linked to importation from neighboring islands. Immunization rates for children up to one year old were fairly high in 1994: tuberculosis, 91%; diphtheria, pertussis, and tetanus, 66%; polio, 66%; and measles, 39%. In 1999, the rates for DPT and measles were, respectively, 56% and 58%. While malnutrition remains a major problem, dramatic changes have occurred in some groups with exposure to more Westernized diets. Diabetes in the highland populations is low but has been documented to be as high as 16% in major cities of Papua New Guinea.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 31.6 and 7.8 per 1,000 people. As of 2000, 26% of married women (ages 15 to 49) were using contraception. The infant mortality rate decreased from 110 deaths per 1,000 live births in 1974 to 56 in 2000. In 1999, 16% of all births were low birth weight babies. The maternal mortality rate was 370 per 100,000 live births in 1998. Life expectancy was still only 59 years in 2000.

In 1996, Papua New Guinea had the highest per capita HIV prevalence in the North and South Pacific regions. As of 1999, the number of people living with HIV/AIDS was estimated at 5,400 and deaths from AIDS that year were estimated at 450. HIV prevalence was 0.2 per 100 adults.

Coronary heart disease, previously rare or nonexistent, has become more prevalent in past years. Total cholesterol values are higher in urban coastal and periurban subjects than in rural locations.

#### 42 HOUSING

Traditional housing in rural areas appears to be adequate, but in urban areas there are acute shortages because of migration. In most urban areas, squatter settlements have been established. New housing has generally fallen far short of meeting the demand, especially for medium- and low-cost units. As of 1988,

the housing stock totaled 555,000 and the number of people per dwelling averaged 5.8.

#### 43 EDUCATION

Education in Papua New Guinea is not compulsory, and in the mid-1980s only one-third of the population was literate. The present government aims at upgrading and improving the system and quality of education. Children attend state-run community schools for primary education and provincial and national high schools for secondary education. After grade six, they are tested and screened for continuing their studies in provincial high school. After grade 10, students have to qualify through an examination to enter one of the four national senior high schools, where they attend grades 11 and 12. After grade 10, students may enter one of the many technical or vocational schools that train them in various careers and skills, depending on their interests.

The adult illiteracy rate for the year 2000 was estimated at 24.0%, (males, 16.3%; females, 32.3%). In 1995, 2,790 primary schools had 13,457 teachers and a total enrollment of 516,797 students. Also in 1995, secondary schools had approximately 3,400 teachers and enrolled 78,759 students. The pupil-teacher ratio at the primary level was estimated at 36 to 1 in 1999. In the same year, 84% of primary-school-age children were enrolled in school, while 21% of those eligible attended secondary school.

In addition to the national government system, there is an international school system that ends at high school. Fees are considerably higher than the government run schools, and the curriculum is based on the British system. There are also privately run preschools and primary schools.

The University of Papua New Guinea in Port Moresby offers degrees in law, science, medicine and arts. The University of Technology in Lae offers degrees in technical subjects such as engineering, business, architecture, and forestry. The Pacific Adventist College, a privately run university outside Port Moresby, offers courses in education, business, accounting, secretarial studies, and theology. In 1995, there were a total of 13,663 students enrolled at institutions of higher education. Approximately 32% of these students were female.

#### 44 LIBRARIES AND MUSEUMS

The largest libraries are at the University of Papua New Guinea (440,000 volumes) and at the Papua New Guinea University of Technology (130,000). Local libraries are well established in urban centers. The National Library Service in Boroko has 85,000 volumes. The Papua New Guinea Institute of Public Administration in Boroko holds 90,000 volumes. The Papua New Guinea National Museum and Art Gallery, in Boroko, has a good collection of art and general ethnography. The museum is implementing the National Cultural Property Act to protect the country's cultural heritage and to further establish appropriate museums. In 1981 the country opened the Madang Museum, Culture and Tourism Center in Yomba. The J. K. MacCarthy Museum, an ethnological collection, is located in Goroka.

#### 45 MEDIA

Telephone, telegraph, and telex services are available; there were 61,152 mainline telephones in use in 1999. In 1996, there were 3,053 cellular phones in use. A coastal radio service provides communications between land-based stations and ships at sea.

The National Broadcasting Commission operates three radio networks and one national television station. It broadcasts in English, Pidgin, Hiri Motu, and a dozen other vernaculars. As of 1999 there were 31 AM and 2 FM radio stations and 3 television stations. As of 2002, there were four additional television stations in the planning stages. In 2000 there were 86 radios and 17 television sets per 1,000 population. In 2001, three Internet service providers were serving 135,000 subscribers.

*The Papua New Guinea Post-Courier* is published daily in English with a 2002 circulation of about 30,480. *The National*, another daily, is published on Boroko and had a 2002 circulation of 20,000. Other local news sheets are published, many in Pidgin. *Niugini Nius*, also in Boroko, is published Tuesday–Friday (circulation 31,000) and also has a weekend edition (16,000).

The constitution provides for free speech and free media, and the government is said to generally respect these rights in practice.

#### 46 ORGANIZATIONS

Chambers of commerce and industry, service clubs, farmers' associations, professional organizations and various trade unions form the nucleus of formal organizations in Papua New Guinea. National youth organizations include the Papua New Guinea National Union of Students, YMCA, and the Scout Association of Papua New Guinea. Women's organizations include the East Sepik Women and Children's Health Project and the Simbu Women's Resource Center. The Red Cross is active.

#### 47 TOURISM, TRAVEL, AND RECREATION

Water sports, golf, tennis, and rock climbing are popular pastimes. Tourists must have a valid passport, obtain an entry visa to Papua New Guinea, and hold an onward ticket; malaria suppressants are advisable, although Port Moresby is considered a low-risk area.

In 2000, 58,448 tourists visited Papua New Guinea, about half from Australia. There were 2,640 rooms in hotels and other establishments in 1995, with 5,280 bed-places and an occupancy rate of 54%. Tourism receipts totaled \$76 million in 1999.

According to 2003 US government estimates, the cost of staying in Port Moresby was \$123 per day. UN reports of 1999, indicate that outside the capital, travel was less expensive. Daily expenses were estimated at \$83 in Madang, \$63 in Vanimo, and \$102 in Minj. In smaller towns where commercial hotels exist, estimated daily expenses dropped to \$35 per day.

#### 48 FAMOUS PAPUA NEW GUINEANS

The best known Papua New Guineans are Michael Thomas Somare (b.1936), chief minister during colonial rule and the nation's first prime minister; Sir Albert Maori Kiki (1931–93), author of *Kiki: Ten Thousands Years in a Lifetime*; and Vincent Eri, author of *The Crocodile*.

#### 49 DEPENDENCIES

Papua New Guinea has no territories or colonies.

# PHILIPPINES

Republic of the Philippines

*Republika ng Pilipinas*

**CAPITAL:** Manila

**FLAG:** The national flag consists of a white equilateral triangle at the hoist, with a blue stripe extending from its upper side and a red stripe extending from its lower side. Inside each angle of the triangle is a yellow five-pointed star, and in its center is a yellow sun with eight rays.

**ANTHEM:** *Bayang Magiliw (Nation Beloved)*.

**MONETARY UNIT:** The peso (P) is divided into 100 centavos. There are coins of 1, 5, 10, 25, and 50 centavos and 1 and 2 pesos, and notes of 5, 10, 20, 50, 100, and 500 pesos. P1 = \$0.0191 (or \$1 = P52.30; as of May 2003).

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but some local measures also are used.

**HOLIDAYS:** New Year's Day, 1 January; Freedom Day, 25 February; Labor Day, 1 May; Heroes' Day, 6 May; Independence Day (from Spain), 12 June; Thanksgiving, 21 September; All Saints' Day, 1 November; Bonifacio Day, 30 November; Christmas, 25 December; Rizal Day, 30 December; Last Day of the Year, 31 December. Movable religious holidays include Holy Thursday and Good Friday.

**TIME:** 8 PM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

The Republic of the Philippines consists of an archipelago of 7,107 islands situated SE of mainland Asia and separated from it by the South China Sea. The total land area is approximately 300,000 sq km (115,831 sq mi), 67% of which is contained within the two largest islands: Luzon, 108,171 sq km (41,765 sq mi) and Mindanao, 99,078 sq km (38,925 sq mi). Other large islands include Samar, Negros, Palawan, Panay, Mindoro, Leyte, Cebu, Bohol, and Masbate. Comparatively, the area occupied by the Philippines is slightly larger than the state of Arizona. The Philippines' length is 1,851 km (1,150 mi) SSE-NNW, and its width is 1,062 km (660 mi) ENE-WSW.

The Philippines is separated from Taiwan on the N by the Bashi Channel (forming part of the Luzon Strait) and from Sabah, Malaysia (northern Borneo), on the SW by the Balabac Strait (off Palawan) and the Sibutu Passage (off the Sulu Archipelago). Bordering seas include the Philippine Sea and the Pacific Ocean on the E, the Celebes Sea on the S, the Sulu Sea on the SW, and the South China Sea on the W. The Philippines has a total coastline of 36,289 km (22,549 mi).

The Philippines claims the Spratly Islands, in the South China Sea, as do China, Malaysia, Taiwan, and Vietnam. About 1,000 Philippine marines were stationed in the Spratlys in 1983. The Philippines also has a claim on Sabah, dating back to 1670.

The Philippines' capital city, Manila, is located on the island of Luzon.

## <sup>2</sup>TOPOGRAPHY

The topography is extremely varied, with volcanic mountain masses forming the cores of most of the larger islands. The range culminates in Mt. Pulog (elevation 2,928 m/9,606 ft) in northern Luzon and in Mt. Apo, the highest point in the Philippines (elevation 2,954 m/9,692 ft), in Mindanao. A number of volcanoes are active, and the islands have been subject to destructive earthquakes. Lowlands are generally narrow coastal strips except for larger plains in Luzon (Cagayan Valley and Central Plains), Mindanao (Cotabato and Davao-Agusan

valleys), and others in Negros and Panay. Rivers are short and generally seasonal in flow. Important ones are the Cagayan, Agno, Abra, Bicol, and Pampanga in Luzon and the Cotabato and Agusan in Mindanao. Flooding is a frequent hazard. The shores of many of the islands are embayed (Manila Bay is one of the finest harbors in East Asia); however, several islands lack adequate harbors and require offshore lightering for sea transport. The only two inland water bodies of significant size are Laguna de Bay in Luzon and Lake Sultan Alonto in Mindanao.

## <sup>3</sup>CLIMATE

The Philippine Islands, in general, have a maritime tropical climate and, except in the higher mountains, temperatures remain warm, the annual average ranging from about 23° to 32°C (73 to 90°F) throughout the archipelago. Daily average temperatures in Manila range from a minimum of 21°C (70°F) to a maximum of 30°C (86°F) in January and from 24°C (75°F) to 33°C (91°F) in June. Annual normal relative humidity averages 80%. Rainfall and seasonality differ markedly throughout the islands, owing to varying exposures to the two major wind belts, northeast trades or monsoon (winter) and southwest monsoon (summer). Generally, the east coasts receive heavy winter rainfall and the west coasts heavy summer rainfall. Intermediate and southern locales receive lesser amounts more equally distributed. The average annual rainfall in the Philippines ranges from 96 to 406 cm (38 to 160 in).

## <sup>4</sup>FLORA AND FAUNA

The Philippines supports a rich and varied flora with close botanical connections to Indonesia and mainland Southeast Asia. Forests cover almost one-half of the land area and are typically tropical, with the dominant family, Dipterocarpaceae, representing 75% of the stands. The forest also has vines, epiphytes, and climbers. Open grasslands, ranging up to 2.4 m (8 ft) in height, occupy one-fourth of the land area; they are man-made, the aftermath of the slash-and-burn agricultural system, and most contain tropical savanna grasses that are nonnutritious and difficult to eradicate. The diverse flora includes 8,000 species

of flowering plants, 1,000 kinds of ferns, and 800 species of orchids.

Common mammals include the wild hog, deer, wild carabao, monkey, civet cat, and various rodents. There are about 196 breeding species of birds, among the more numerous being the megapodes (turkey-like wildfowl), button quail, jungle fowl, peacock pheasant, dove, pigeon, parrot, and hornbill. Reptilian life is represented by 190 species; there are crocodiles and the larger snakes include the python and several varieties of cobra.

## 5 ENVIRONMENT

Primary responsibility for environmental protection rests with the National Pollution Control Commission (NPCC), under whose jurisdiction the National Environmental Protection Council (NEPC) serves to develop national environmental policies and the Environmental Center of the Philippines implements such policies at the regional and local levels. Uncontrolled deforestation in watershed areas, with consequent soil erosion and silting of dams and rivers, constitutes a major environmental problem, together with rising levels of air and water pollution in Manila and other urban areas. The NPCC has established standards limiting automobile emissions but has lagged in regulating industrial air and water pollution. In 1996, industrial carbon dioxide emissions totaled 63.2 million metric tons. The nation's cities create an average of 5.4 million tons of solid waste per year and 38 of the country's rivers contain high levels of toxic contaminants.

The nation has 479 cu km of renewable water resources, with 88% used to support farming and 4% used for industrial activity. Only 79% of the rural population has access to safe drinking water. Pollution has also damaged the coastal mangrove swamps, which serve as important fish breeding grounds. Between the 1920s and 1990s, the Philippines lost 70% of its mangrove area. About 50% of its coral reefs are rated dead or dying as a result of pollution and dynamiting by fishermen. The nation is also vulnerable to typhoons, earthquakes, floods, and volcanic activity.

In 2001, 49 of the nation's mammal species, 86 bird species, and 320 plant species were threatened with extinction. Endangered species in the Philippines include the monkey-eating eagle, Philippine tarsier, tamarau, four species of turtle (green sea, hawksbill, olive ridley, and leatherback), Philippines crocodile, sinarapan, and two species of butterfly. The cebu warty pig, Panay flying fox, and Chapman's fruit bat have become extinct.

## 6 POPULATION

The population of Philippines in 2003 was estimated by the United Nations at 79,999,000, which placed it as number 14 in population among the 193 nations of the world. In that year approximately 4% of the population was over 65 years of age, with another 37% of the population under 15 years of age. There were 101 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 1.79%, with the projected population for the year 2015 at 96,338,000. The population density in 2002 was 267 per sq km (691 per sq mi). The population is unevenly distributed, being most densely concentrated in Luzon and the Visayan Sea islands.

It was estimated by the Population Reference Bureau that 59% of the population lived in urban areas in 2001. The capital city, Manila, had a population of 10,546,000 in that year. Created in 1975, metropolitan Manila includes four cities—Manila proper, Quezon City, Caloocan City, and Pasay City—and 13 surrounding municipalities. Other major cities include Davao, Cebu, Zamboanga, Bacolod, Cagayan de Oro, and Iloilo. According to the United Nations, the urban population growth rate for 2000–2005 was 3.1%.

## 7 MIGRATION

The rapid growth of the Philippine population has led to considerable internal migration. On Luzon, frontier-like settlements have pushed into the more remote areas. Mindoro and Palawan islands also have attracted numerous settlers, and hundreds of thousands of land-hungry Filipinos have relocated to less densely populated Mindanao. There also has been a massive movement to metropolitan Manila, especially from central Luzon. Emigration abroad is substantial. In 1989 it came to 55,703. Emigration to the United States particularly has been considerable: as of the 1990 US census, 1,406,770 Americans (chiefly in California and Hawaii) claimed Filipino ancestry. To reduce domestic unemployment, over 500,000 Philippine citizens were working abroad in the late 1980s and early 1990s, mainly in the Middle East, but also in Hong Kong and Singapore.

As of 1998, there were still 1,589 asylum-seekers from Vietnam in a Palawan camp, who were refused refugee status but allowed to stay pending a repatriation solution. Distinctions between Indochinese and other nationalities have been dropped, and all are now referred to as urban refugees. As of 1999, the Philippines hosted 306 urban refugees and their dependents. More than half of these were from the Middle East, including 33 Iranians, 24 Iraqis, 19 Palestinians, and 21 Somalis. Many refugees became legal exiles while studying in the Philippines following political or military upheavals in their homelands; a majority have since married Filipino nationals. In 2000, the net migration rate was -2.6 migrants per 1,000 population, amounting to a loss of 190,000 people. The number of migrants that year was 160,000. The government views the emigration level as too high, but the immigration level as satisfactory.

## 8 ETHNIC GROUPS

Filipinos of Malay (Malayan and Indonesian) stock constitute about 95.5% of the total population. They are divided into nine main ethnic groups: the Tagalog, Ilocanos, Pampanguenos, Pangasinans, and Bicolanos, all concentrated in Luzon; the Cebuanos, Boholanos, and Ilongos of the Visayas; and the Waray-Waray of the Visayas, Leyte, and Samar. The Chinese minority totaled about 1.5% of the population in 1999. In addition, 10 Muslim groups, mainly of Mindanao and the Sulu Archipelago, comprised about 4% of the population. Numerous smaller ethnic groups inhabit the interior of the islands, including the Igorot of Luzon and the Bukidnon, Manobo, and Tiruray of Mindanao. These other groups accounted for the remaining 3% of the population in 1999.

## 9 LANGUAGES

There are two official languages: Pilipino (based on Tagalog), the national language adopted in 1946 and understood by a majority of Filipinos; and English, which is also widely spoken and understood. Spanish, introduced in the 16th century and an official language until 1973, is now spoken by only a small minority of the population. More than 80 indigenous languages and dialects (basically of Malay-Indonesian origin) are spoken. Besides Tagalog, which is spoken around Manila, the principal languages include Cebuano (spoken in the Visayas), Ilocano (spoken in northern Luzon), and Panay-Hiligaynon. The teaching of Pilipino is mandatory in public and private primary schools, and its use is encouraged by the government.

## 10 RELIGIONS

Most of the population (about 85%) belong to the Roman Catholic Church. Other Christian churches represent about 9%. Among Christian and Protestant groups, there are numerous denominations. In addition, there are three churches established by Filipino religious leaders, the Independent Church of the Philippines or Aglipayan, and the Iglesia ni Cristo (Church of

Christ), and the Ang Dating Daan (an offshoot of the Church of Christ). Muslims (representing about 5%), commonly called Moros by non-Muslims, are concentrated in Mindanao and the Sulus. Most Muslims are Sunni. Buddhists, Baha'is, Chinese folk religionists, and tribal religionists, mainly in the more inaccessible mountainous areas of Luzon and Mindanao, constitute the remaining 3%. There are also small communities of Hindus and Jews. It is believed that a majority of the indigenous population includes elements of native religions within their practice of other faiths.

Freedom of religion is guaranteed by the constitution. In an effort to reduce tensions between Christians and Muslims in the southern islands and to answer Muslim autonomist demands, the government established an Office of Muslim Affairs in 1981 and allocated funds for Islamic legal training and for Muslim schools and cultural centers. Part of its role as of 1999 involved coordinating the travel of pilgrims to Mecca, Saudi Arabia, and coordinating diplomatic ties with countries that have contributed to Mindanao's economic development and to the "peace process" with insurgent groups.

## 11 TRANSPORTATION

The total length of roadways in 2002 was 199,950 km (124,248 mi), of which only 39,590 km (24,601 mi) were paved. Luzon contains about one-half of the total road system, and the Visayas about one-third. There were 755,100 passenger cars (including jeepneys, or minibuses) in 2001, nearly half of them registered in Manila; there were also 579,800 commercial vehicles. In 2002, there were 897 km (557 mi) of common-carrier railroad track on Luzon and Panay, which only plays a minor role in transportation. There are 3,219 km (2,000 mi) of waterways, but their use is limited to vessels with a draft of less than 1.5 m (4.5 ft).

Water transportation is of paramount importance for inter-island and intra-island transportation. A small offshore fleet registered under the Philippine flag is engaged in international commerce, but most ocean freight is carried to and from the Philippines by ships of foreign registry. In 2002, the merchant fleet numbered 416 ships, totaling 5,179,029 GRT. There are 25 major ports. Manila is the busiest Philippine port in international shipping, followed by Cebu and Iloilo. Other ports and harbors include Batangas, Cagayan de Oro, Davao, Guimaras Island, Iligan, Jolo, Legaspi, Masao, Puerto Princesa, San Fernando, Subic Bay, and Zamboanga.

In 2001 there were 275 airports, of which 82 had paved runways. Ninoy Aquino International Airport, formerly Manila International Airport, is the principal international air terminal. Five other airports serve international flights as well. Philippine Air Lines (PAL), the national airline, provides domestic and international flights. Under the Aquino government there were plans to sell PAL stock to the private sector. In 2001, 5,651,700 passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

Evidence of human habitation dates back some 250,000 years. In more recent times, experts believe that the Negritos, who crossed then existing land bridges from Borneo and Sumatra some 30,000 years ago, settled the Philippine Islands. Successive waves of Malays, who arrived from the south, at first by land and later on boats called *barangays*—a name also applied to their communities—came to outnumber the Negritos. By the 14th century, Arab traders made contact with the southern islands and introduced Islam to the local populace. Commercial and political ties also linked various enclaves in the archipelago with Indonesia, Southeast Asia, India, China, and Japan. Ferdinand Magellan, a Portuguese-born navigator sailing for Spain, made the European discovery of the Philippines on 15 March 1521 and

LOCATION: 4°23' to 21°25' N; 116° to 127°E. TERRITORIAL SEA LIMIT: 12 miles.

landed on Cebu on 7 April, claiming the islands for Spain, but the Filipino chieftain Lapulapu killed Magellan in battle. The Spanish later named the islands in honor of King Philip II, and an invasion under Miguel Lopez de Legaspi began in 1565. The almost complete conversion of the natives to Christianity facilitated the Spanish conquest; by 1571, it was concluded, except for the Moro lands (Moro is the Spanish word for Moor). The Spanish gave this name to Muslim Filipinos, mostly

inhabitants of southern and eastern Mindanao, the Sulu Archipelago, and Palawan. The Spanish administered the Philippines, as a province of New Spain, from Mexico. Trade became a monopoly of the Spanish government; galleons shipped Oriental goods to Manila, from there to Acapulco in Mexico, and from there to the mother country.

Although Spain governed the islands until the end of the 19th century, its rule was constantly threatened by the Portuguese, the Dutch, the English (who captured Manila in 1762, occupying it for the next two years), the Chinese, and the Filipinos themselves. After the 1820s, which brought the successful revolts of the Spanish colonies in the Americas, Filipinos openly agitated against the government trade monopoly, the exactions of the clergy, and the imposition of forced labor. This agitation brought a relaxation of government controls: the colonial government opened ports to world shipping, and the production of such typical Philippine exports as sugar, coconuts, and hemp began. Filipino aspirations for independence, suppressed by conservative Spanish rule, climaxed in the unsuccessful rebellion of 1896–98. Jose Rizal, the most revered Filipino patriot, was executed, but Gen. Emilio Aguinaldo and his forces continued the war. During the Spanish-American War (1898), Aguinaldo declared independence from Spain on 12 June. When the war ended, the United States acquired the Philippines from Spain for \$20,000,000. US rule replaced that of the Spanish, but Philippine nationalists continued to fight for independence. In 1899, Gen. Aguinaldo became president of the revolutionary First Philippine Republic and continued guerrilla resistance in the mountains of northern Luzon until his capture in 1901, when he swore allegiance to the United States. Over the long term, the effect of US administration was to make the Philippines an appendage of the US economy, as a supplier of raw materials to and a buyer of finished goods from the American mainland. Politically, US governance of the Philippines was a divisive issue among Americans, and the degree of US control varied with the party in power and the US perception of its own security and economic interests in the Pacific. In the face of continued nationalist agitation for independence, the US Congress passed a series of bills that ensured a degree of Philippine autonomy. The Tydings-McDuffie Independence Law of 1934 instituted commonwealth government and further stipulated complete independence in 1944. In 1935, under a new constitution, Manuel Luis Quezon y Molina became the first elected president of the Commonwealth of the Philippines.

On 8 December 1941, Japan invaded the Philippines, which then became the focal point of the most bitter and decisive battles fought in the Pacific during World War II. By May 1942, the Japanese had achieved full possession of the islands. US forces, led by Gen. Douglas MacArthur, recaptured the Philippines in early 1945, following the Battle of Leyte Gulf, the largest naval engagement in history. In September 1945, Japan surrendered. On 4 July 1946, Manuel A. Roxas y Acuna became the first president of the new Republic of the Philippines. Both casualties and war damage wreaked on the Philippines were extensive, and rehabilitation was the major problem of the new state. Communist guerrillas, called Hukbalahaps, threatened the republic. Land reforms and military action by Ramon Magsaysay, the minister of national defense, countered the Huks revolutionary demands. Magsaysay was elected to the presidency in 1953 but died in an airplane crash in 1957. Carlos P. Garcia succeeded Magsaysay and then won election to the office in 1958. Diosdado Macapagal became president in November 1961. He was succeeded by Ferdinand Edralin Marcos following the 1965 elections. Marcos was reelected in 1969 with a record majority of 62%. The Marcos government brutally suppressed the renewed Hukbalahap insurgency, but armed opposition by Muslim elements, organized as the Moro National Liberation

Front (MNLF), the Maoist-oriented New People's Army (NPA), and by other groups gathered force in the early 1970s.

Unable under the 1935 constitution to run for a third term in 1973, President Marcos, on 23 September 1972, placed the entire country under martial law, charging that the nation was threatened by a "full-scale armed insurrection and rebellion." Marcos arrested many of his more vehement political opponents, some of whom remained in detention for several years. In January 1973, the Marcos administration introduced a new constitution, but many of its provisions remained in abeyance until 17 January 1981, when Marcos finally lifted martial law. During the intervening period, Marcos consolidated his control of the government through purges of opponents, promotion of favorites, and delegation of leadership of several key programs—including the governorship of metropolitan Manila and the Ministry of Human Settlements—to his wife, Imelda Romualdez Marcos. Although Marcos made headway against the southern guerrillas, his human-rights abuses cost him the support of the powerful Roman Catholic Church, led by Jaime Cardinal Sin. Elections were held in April 1978 for an interim National Assembly to serve as the legislature until 1984, but local elections held in 1980 were widely boycotted. Pope John Paul II came to Manila in February 1981, and even though martial law was no longer in effect, he protested the violation of basic human rights. In June 1981, Marcos won reelection for a new six-year term as president under an amended constitution preserving most of the powers he had exercised under martial rule. New threats to the stability of the regime came in 1983 with the rising foreign debt, a stagnant economy, and the public uproar over the assassination on 21 August of Benigno S. Aquino, Jr. Aquino, a longtime critic of Marcos, was shot at the Manila airport as he returned from self-exile to lead the opposition in the 1984 legislative elections. The gunman was immediately killed, and 26 others suspected of conspiracy in the assassination were acquitted in December 1985 for lack of evidence. Public sympathy gave opposition parties 59 out of 183 elective seats in 1984.

In 1985, political pressures forced Marcos to call for an election in February 1986 in view of a widespread loss of confidence in the government. The Commission on Elections and the National Assembly, controlled by his own political party, proclaimed Marcos the winner. His opponent, Maria Corazon Cojuangco Aquino, the widow of Benigno S. Aquino, claimed victory, however, and charged the ruling party with massive election fraud. The National Movement for Free Elections, the United States, and other international observers supported Aquino's charge. Accordingly, other countries withheld recognition of Marcos. On 21 February 1986, a military revolt grew into a popular rebellion, urged on by Jaime Cardinal Sin. US president Ronald Reagan gave Marcos an offer of asylum, which Reagan guaranteed only if Marcos left the Philippines without resistance. Marcos went into exile in Hawaii.

#### After Marcos

On 25 February 1986, Corazon Aquino assumed the presidency. Her government restored civil liberties, released political prisoners, and offered the NPA a six-month cease-fire, with negotiations on grievances, in exchange for giving up violence. Because Aquino came to power through the forced departure of an officially proclaimed president, the legality of her regime was suspect. Consequently, she operated under a transitional "freedom constitution" until 11 February 1987, when the electorate ratified a new constitution. On 11 May 1987 the first free elections in nearly two decades were held under the new constitution. More than 83% of eligible voters cast their ballots, 84 candidates ran for the 24 senate seats, and 1,899 candidates ran for the 200 house seats. There were 63 election-related killings. Old-line political families still controlled the system, as

169 House members out of the 200 elected either belonged to or were related to these families.

On 20 December 1987 one of the worst disasters in maritime history occurred when an overcrowded passenger ship collided with an oil tanker off Mindoro Island and at least 1,500 people perished. This delayed local elections until 18 January 1988. Nationwide 150,000 candidates ran for 16,000 positions as governor, vice governor, provincial board member, mayor, vice mayor, and town council member. In 1988 election-related violence killed more than 100 people. Members of the pro-government parties, a faction of the PDP-Laban and Lakas ng Bansa, formed a new organization, Laban ng Demokratikong Pilipino (LDP) in June 1988. In March 1989 the thrice-postponed election for barangay officials was held, electing some 42,000 barangay captains. In August 1989 President Aquino signed a law giving limited autonomy to provinces where most Philippine Muslims lived: Mindanao, Palawan, Sulu, and Tawi-Tawi islands.

There were five coup attempts between the time Aquino took office and the end of 1987. This continuing succession of coup plots culminated in a large, bloody, well-financed attempt in December 1989. Led by Colonel Gregorio Honasan (who participated in the 1987 coup attempt, and was a close associate of Senator Juan Ponce Enrile) and involving more than 3,000 troops that targeted several bases; US air support helped to quell this attempt. The Senate granted Aquino emergency powers for six months. President Aquino's administration lost international credibility with the appeal for US military support to quell the coup attempt. The authorities made arrests, but the Supreme Court ruled that Senator Juan Ponce Enrile could not be charged with murder, nullifying a criminal case against him. He was charged in a lower court with rebellion. In September 1990, 16 military members were convicted of the assassination of Senator Benigno Aquino in 1983 and sentenced to life in prison.

Former president Ferdinand Marcos had appealed to Aquino to allow him to attend the funeral of his mother, as he had appealed several times to visit his mother while she was ill; Aquino denied each request. The Philippine government had traced at least \$5 billion in deposits to Swiss bank accounts made by Marcos. Marcos attempted to negotiate his return to the Philippines, promising his support for Aquino and the return of \$5 billion to the Philippines. Aquino also rejected his wife Imelda's plea for her husband's return. The Philippine government filed an antigraft civil suit for \$22.6 billion against Marcos in 1987. Marcos and his wife, Imelda, were indicted in the United States, charged with the illegal transfer of \$100 million in October 1988. On 28 September 1989 former President Ferdinand Marcos died in Honolulu. Aquino refused to allow his burial in the Philippines.

Under pressure from Communist rebels Aquino removed the US military bases from the Philippines in 1989. Three US servicemen were murdered outside Clark Air Force Base and the Communists took responsibility for the murders. A Communist guerrilla who admitted participating in the 21 April 1989 assassination of US Army Colonel James Row was arrested. In September 1989 US vice president Dan Quayle met with Aquino to discuss the renewal of the lease on US military bases. Prior to his arrival two American civilians working on the bases were killed; the government attributed these deaths to Communist guerrillas. The Communists continued to threaten US servicemen and local politicians. Anti-American demonstrations at Clark Air Base and in Manila led to clashes with the police and to injuries. The Communists continued their threats and two more US servicemen were killed near the Clark Air Base. In June of 1990 the Peace Corps removed 261 volunteers from the Philippines after Communist threats against them. In September 1990 Aquino said it was time to consider an "orderly withdrawal" of US forces from the Philippines.

Within a year the Philippines was pummeled with three major natural disasters. In July 1990 an earthquake measuring 7.7 on the Richter scale struck. The epicenter was 55 mi north of Manila and more than 1,600 people were killed. A super-typhoon devastated the central Visayas in November 1990. An even more destructive natural disaster occurred on 12 June 1991 when Mount Pinatubo in Zambales province, a volcano dormant for more than 500 years, violently erupted, causing the abandonment of Clark Air Base in Angeles City; 20,000 US military, their dependents, and civilian employees evacuated to the United States from Clark and the Subic Bay Naval Station.

The Philippine-American Cooperation Talks (PACT) reached agreement on military base and non-base issues, but Philippine Senate refused to ratify the proposed treaty. On 6 January 1992 the Philippines government served notice of the termination of the US stay at Subic Naval Base in Zambales. After almost a century of US military presence, on 30 September 1992 the United States handed over Subic Naval Base to the Philippines. The Philippine government turned it into a free port, headed until 1998 by Dick Gordon.

Amnesty International (AI), the human rights organization, published a report in 1992 critical of the Aquino administration's assent to human rights violations perpetrated by the military; AI alleged that 550 extra judicial killings occurred during 1988-91. The military refuted the AI report citing its oversight of rebel activities.

In March 1991 President Aquino stated that Imelda Marcos could return to the Philippines, but that she faced charges that her husband stole \$10 billion during his 20 years as president. Mrs. Marcos returned in November, after five years in Hawaii, to face civil and criminal charges, including tax fraud. In January 1992 Imelda Marcos announced that she would run for election in 1992; in the same month she was arrested, and then released, for failing to post bail on charges that she unlawfully maintained accounts in Switzerland. In September 1993 the government permitted the embalmed body of Ferdinand Marcos to return to the Philippines for burial near his home in northern Luzon. On 24 September 1993 Imelda Marcos was found guilty of participating in a deal that was "disadvantageous to the government" under the Anti-Graft and Corruption Practices Act. She faced a maximum prison sentence of 24 years, but she remained free on bail while her appeal was considered.

In national and local elections held 11 May 1992, Fidel V. Ramos and Joseph E. Estrada were elected president and vice president, respectively. On 30 June 1992 Fidel Ramos succeeded Corazon Aquino as president of the Philippines with a plurality of 23.6%. Nearly 85% of eligible voters turned out to elect 17,205 officials at national, regional, and local levels. The election was relatively peaceful with only 52 election-related deaths reported. Rules required voters to write the names of the candidate they wanted for office. This, combined with the number of candidates, meant it was several weeks before the votes were completely tallied. Ramos, a Methodist and the Philippine's first non-Catholic president, considered the country's population growth rate as an obstacle to development. A rally of 300,000 Catholics led by Cardinal Sin took place in Manila in 1993 to protest the Ramos administration's birth control policies and the public health promotion of prophylactics to limit the spread of AIDS.

Domestic insurgency by the Muslim population continued throughout the 1980s. By the 1990s, however, internal divisions among the Muslims, reduced external support, military pressure, and government accommodations, including the creation of the Autonomous Region in Muslim Mindanao in 1990 had greatly reduced the threat. In January 1994 the government signed a cease-fire agreement with the Moro National Liberation Front, ending 20 years of guerrilla war. Splinter groups among the

Muslim population continue, however, to cause difficulties for both the MNLF and the government.

The last remaining communist insurgency in Asia was reduced temporarily by the Ramos government's peaceful signal, the 1992 Anti-Subversion Law, and the 1993 split in the ranks of the NPA that created a lull until issues related to the weakened leadership were resolved. The NPA returned to violent opposition sporadically throughout the 1990s, especially by the Revolutionary Proletarian Army, an offshoot of the NPA. The NPA significantly increased its use of children as armed combatants and noncombatants during this same time.

In January 1994 the congress pass a law passed restoring the death penalty for 13 crimes including treason, murder, kidnapping and corruption. Police reform was a particular goal of the legislation. This legislation was partly in response to a series of abductions of wealthy ethnic Chinese Filipinos abducted for ransom, in which the Philippine National Police were found to be involved. The result, however, was that in February of 1999, the Philippines carried out its first execution in 23 years when Leo Echegaray, 38, a house painter convicted of raping his 10-year-old stepdaughter, was put to death.

Conflicting claims to the Spratly Islands in the South China Sea are a source of tension between the Philippines and the People's Republic of China. In 1989 Chinese and Philippine warships exchanged gunfire in the vicinity of the Spratly Islands. The incident was resolved by diplomatic means. In June 1994 China protested an oil exploration permit granted to Vaalco Energy of the United States, and to Alcorn Petroleum and Minerals, its Philippine subsidiary. The Philippine response was to refer to a principle of "common exploration" and development of the Spratlys. China had employed this same principle when the Philippines had protested China's granting the United States permission to explore in the Spratlys in 1993. China, Vietnam, Taiwan, the Philippines, Malaysia, and Brunei all lay claim to all, or a portion, of the Spratly Islands. In June 1994 a 5-day conference on East Timor held in Manila ended with an agreement to establish a coalition for East Timor in the Philippines and proposed a peace plan based on the gradual withdrawal of Indonesian troops. But turmoil in the Spratlys did not end. In 1995, China briefly occupied Mischief Reef in a part of the islands claimed by the Philippines. In spring of 1997, Chinese warships were seen near Philippine-occupied islands in the chain. The two countries have also traded occupation of Scarborough Shoal, heightening tensions and prompting Manila to seek renewed American military presence. In May 1999 the Philippine Senate ratified a new Visiting Forces Agreement with the United States, despite claims by opponents that the VFA would give the US military the opportunity to bring nuclear weapons, without declaration, into the Philippines, violating the Philippine constitution.

The issue of Filipino women forced to work abroad, long a controversy in the country's large impoverished class, came to a head in 1995. In March, Filipina domestic worker Flor Contemplacion was executed in Singapore for the murder of a maid and a child. Outraged Filipinos claimed the girl was framed; they filled the streets of Manila in protest. The crisis, the product of unemployment and underemployment forcing families to export their children to low-wage overseas jobs, culminated in Mr. Ramos's sacking of two cabinet ministers.

In January 1996, Philippine police uncovered and thwarted a plot by Islamic extremists to assassinate Pope John Paul II during his visit to Manila that month.

Muslim rebels in Mindanao continued their insurgencies against the government, raiding the trading town of Ipil in April 1996. The terrorists killed 57 people and burned the town's business district. The rebels also took part in the resurgence of kidnappings and bank robberies in Manila and Mindanao. More than 100 kidnappings were reported in 1996, many in which

police officers were also suspected. A peace agreement between the Philippine government and the MNLF was signed on 2 September 1996, that ended the 24-year-old war in Mindanao. The agreement was signed by the government chief negotiator Manuel Yan, Nur Misuari, Indonesian Foreign Minister Ali Alatas, and Secretary General Hamid Algabid of the Organization of Islamic Conference (OIC). Later, Misuari ran for and won the governorship of the Autonomous Region for Muslim Mindanao (ARM) in the 9 September 1996 elections.

The Philippine economy suffered a harsh blow in 1995 when a typhoon ravaged the rice harvest, trebling the destruction of the rice acreage lost to the Mount Pinatubo eruption. But the economy rebounded in late 1995 and through 1996, buoyed by the government's massive infrastructure improvements and plans to develop former US military bases Subic Bay and Clark Air Force Base as tourist attractions and economic zones.

President Ramos introduced the Philippines 2000 movement, which was both a strategy and a movement; he called it the Filipino people's vision of development by the year 2000. As envisioned, the Philippines by the year 2000 would have a decent minimum of food, clothing, shelter, and dignity. The major goal of Philippines 2000 was to make the Philippines the next investment, trade, and tourism center in Asia and the Pacific. The Ramos administration achieved several of its economic goals but few of the social changes envisioned.

On 30 June 1998 the newly elected President, Joseph Ejercito Estrada, took office. The new Vice President was Gloria Macapagal-Arroyo. In November 2000, impeachment proceedings began against Estrada on allegations of corruption, betrayal of the public trust, and violation of the constitution. Estrada stepped down as president on 20 January 2001 after months of protests, and Arroyo was sworn in as president. Estrada in April 2001 was charged with taking more than US\$80 million from state funds while in office; he was arrested and placed in custody. Arroyo faced a sluggish economy upon coming into office; the economy was still recovering from the 1997-98 Asian financial crisis. She initiated privatization and deregulation policies, especially in agriculture and the power-generating industry. On 30 December 2002, Arroyo declared she would not seek a second term in the 16 May 2004 presidential elections, so that she could focus on her economic reform agenda, restore peace and order, reduce corruption, and "heal political rifts."

The separatist conflict on Mindanao had claimed more than 120,000 lives in three decades as of December 2002. In March 2001, the 12,500-member Moro Islamic Liberation Front declared a cease-fire and declared it was ready to hold talks with the government. However, on 11 February 2003, more than 2,000 government soldiers advanced toward an MILF base near Pikit, attempting to disband a group of kidnappers known as the "Pentagon gang," which is on the list of US terrorist organizations. Approximately 135 MILF fighters were killed in three days of fighting. In January 2002, nearly 700 US troops, including 160 Special Forces soldiers, were sent to Mindanao to assess the military situation, provide military advice, and train the 7,000 Philippine soldiers pursuing the guerrillas of the Abu Sanyaf group operating in the southern islands of Basilan and Jolo. The Philippine constitution forbids foreign troops fighting on its territory.

Following the 11 September 2001 terrorist attacks on the United States, the United States urged countries around the world to increase anti-terrorist measures they might take. Southeast Asia was a primary focus of attention. In May 2002, the 10 members of ASEAN pledged to form a united anti-terror front and to set up a strong regional security framework. The steps include introducing national laws to govern the arrest, investigation, prosecution, and extradition of suspects. As well, they agreed to exchange intelligence information and to establish

joint training programs such as bomb detection and airport security.

The militant Islamic group Abu Sayyaf (“Bearer of the Sword”) is one of several guerrilla organizations involved in a resurgence of violence in the Philippines since 2000. It split off from the Moro National Liberation Front (MNLF) in 1991 to pursue a more fundamentalist course against the government. Actions taken since the early 1990s include bombings, assassinations, and kidnappings of priests and businessmen. One of its goals is an independent Islamic state in Mindanao, but its activities have been linked to international terrorism as well, including ties to Osama bin Laden’s al-Qaeda network, according to the US government. In May 2001, Abu Sayyaf kidnapped 20 people, including 3 Americans, demanding ransom. They beheaded one of the American captives, and held the others—a missionary couple—hostage. In June 2002, Philippine commandos attempted to rescue the couple and a Filipino nurse being held with them. Two of the hostages were killed in a shootout, and one of the missionaries was freed. In August, Abu Sayyaf kidnapped six Filipino Jehovah’s Witnesses and beheaded two of them. In October 2002, a series of bombings took place—on a bus in Manila and in locations in Zamboanga City that were blamed on Abu Sayyaf.

### 13 GOVERNMENT

Under the constitution of 11 February 1987 the Philippines is a democratic republican state. Executive power is vested in a president elected by popular vote for a six-year term, with no eligibility for reelection. The president is assisted by a vice president, elected for a six-year term, with eligibility for one immediate reelection, and a cabinet, which can include the vice president. Legislative power rests with a bicameral legislature. Congress consists of a senate, with 24 members elected for six-year terms (limited to two consecutive terms). Senators are chosen at large. Senators must be native-born Filipinos and at least 35 years old. A house of representatives is elected from single-member districts for three-year terms (limited to three consecutive terms). Districts are reapportioned within three years of each census. In 1998, 221 members were elected. Up to 50 more may be appointed by the president from “party lists” and “sectoral lists,” but the constitution prohibits the house of representatives from having more than 250 members. Representatives must be native-born Filipinos and at least 25 years of age. Presidential and legislative elections are next scheduled for 16 May 2004.

### 14 POLITICAL PARTIES

The first Philippine political party, established in 1900, was the Federal Party, which advocated peace and eventual statehood. Later, the Nationalist Party (NP) and the Democratic Party were established. They did not produce an actual two-party system, since the Nationalists retained exclusive control and the Democrats functioned as a “loyal opposition.” However, following Japanese occupation and the granting of independence, an effective two-party system developed between the Liberal Party (LP) and the NP. The Progressive Party, formed in 1957 by adherents of Ramon Magsaysay, polled more than one million votes in the presidential election of 1958. In the elections of November 1965, Senator Ferdinand Marcos, the NP candidate, received 55% of the vote. In the 1969 election, he was elected to an unprecedented second term. All political activity was banned in 1972, following the imposition of martial law, and was not allowed to resume until a few months before the April 1978 elections for an interim National Assembly. The Marcos government’s New Society Movement (Kilusang Bagong Lipunan-KBL) won that election and the 1980 and 1982 balloting for local officials, amid charges of electoral fraud and attempts by opposition groups to boycott the voting. The principal opposition

party was the People’s Power Movement-Fight (Lakas Ng Bayan-Laban), led by Benigno S. Aquino, Jr., until his assassination in 1983. This party joined with 11 other opposition parties in 1982 to form a coalition known as the United Nationalist Democratic Organization (UNIDO). Following Aquino’s murder, some 50 opposition groups, including the members of the UNIDO coalition, agreed to coordinate their anti-Marcos efforts. This coalition of opposition parties enabled Corazon Aquino to campaign against Marcos in 1986. In September 1986 the revolutionary left formed a legal political party to contest congressional elections. The Partido ng Bayan (Party of the Nation) allied with other left-leaning groups in an Alliance for New Politics. This unsuccessful attempt for electoral representation resulted in a return to guerrilla warfare on the part of the Communists.

After assuming the presidency, Aquino formally organized the People’s Power Movement (Lakas Ng Bayan), the successor to her late husband’s party. In the congressional elections of May 1987, Aquino’s popularity gave her party a sweep in the polls, making it the major party in the country. Marcos’s KBL was reduced to a minor party. Some of its members formed their own splinter groups, such as the Grand Alliance for Democracy (GAD), a coalition of parties seeking distance from Marcos. Others revived the LP and the NP, seeking renewed leadership. The left-wing People’s Party (Partido Ng Bayan), which supports the political objectives of the NPA, was a minor party in the elections. In May 1989 Juan Ponce Enrile reestablished the Nacionalista Party. A new opposition party, the Filipino Party (Partido Pilipino), organized in 1991 as a vehicle for Aquino’s estranged cousin Eduardo “Danding” Cojuangco’s presidential campaign. He ran third in the election, taking 18.1% of the vote, behind Miriam Defensor Santiago with 19.8% of the vote. On 30 June 1992 Fidel Ramos succeeded Corazon Aquino as president of the Philippines with a plurality of 23.6%. In September 1992 Ramos signed the Anti-Subversion Law signaling a peaceful resolution to more than 20 years of Communist insurgency, with the repeal of the antsubversion legislation in place since 1957. On 26 August 1994 Ramos announced a new political coalition that would produce the most powerful political group in the Philippines. Ramos’ Lakas-National Union of Christian Democrats (Lakas/NUCD) teamed with the Democratic Filipino Struggle (Laban ng Demokratikong Pilipino, Laban). Following the 1995 elections, the LDP controlled the Senate with 14 of the 24 members. The elections in 1998 changed the political landscape once more. In the Senate the newly created Laban Ng Masang Pilipino, led by presidential candidate, Joseph Estrada, captured 12 seats to the Lakas 5, PRP 2, LP 1, independents 3. The LAMP party also dominated the House of Representatives with 135 seats to the Lakas 37, LP 13, Aksyon Demokratiko 1, and 35 independents.

Political parties and their leaders in 2002 included: Kilusang Bagong Lipunan (New Society Movement), led by Imelda Marcos; Laban Ng Demokratikong Pilipino (Struggle of Filipino Democrats) or LDP, led by Eduardo Angara; Lakas, led by Jose De Venecia; Liberal Party or LP, led by Florencio Abad; Nacionalista Party, led by Jose Oliveros; National People’s Coalition or NPC, led by Eduardo Cojuangco; PDP-Laban, led by Aquilino Pimentel; and the People’s Reform Party or PRP, led by Miriam Defensor-Santiago.

### 15 LOCAL GOVERNMENT

Under the constitutions of 1935, 1973, and 1987, the country has been divided into provinces, municipalities, and chartered cities, each enjoying a certain degree of local autonomy. Each of the 73 provinces and subprovinces elects a governor, a vice-governor, and two provincial board members for terms of six years. There are 61 chartered cities headed by a mayor and a vice-mayor. Chartered cities stand on their own, are not part of a province, do not elect provincial officials, and are not subject to provincial

taxation, but have the power to levy their own taxes. Municipalities, of which each province is composed, are public corporations governed by municipal law. There are approximately 1,500 municipalities, and within each municipality are communities (*barangays*), each with a citizens' assembly. There are about 42,000 *barangays*. The 1987 constitution provides for special forms of government in the autonomous regions created in the Cordilleras in Luzon and the Muslim areas of Mindanao. Any region can become autonomous by a referendum. The Local Government Code of 1991 provided for a more responsive and accountable local-government structure. Local governments are to be given more powers, authority, responsibilities and resources through a system of decentralization.

## 16 JUDICIAL SYSTEM

Under the 1973 constitution, the Supreme Court, composed of a chief justice and 14 associate justices, was the highest judicial body of the state, with supervisory authority over the lower courts. The entire court system was revamped in 1981, with the creation of new regional courts of trials and of appeals. Justices at all levels were appointed by the president. Philippine courts functioned without juries. Delays in criminal cases were common, and detention periods in national security cases were long. Security cases arising during the period of martial law (1972–81) were tried in military courts. The 1987 constitution restored the system to what it had been in 1973. Despite the reinstatement of many procedural safeguards and guarantees, the slow pace of justice continues to be a major problem.

Currently, the national court system consists of four levels: local and regional trial courts; a national Court of Appeals divided into 17 divisions; the 15-member Supreme Court; and an informal local system for arbitrating or mediating certain disputes outside the formal court system. A *Shari'ah* (Islamic law) court system, with jurisdiction over domestic and contractual relations among Muslim citizens, operates in some Mindanao provinces. Supreme Court justices may hold office, on good behavior, until the age of 70.

The constitution calls for an independent judiciary and defendants in criminal cases are afforded the right to counsel. The legal system is based on both civil and common law. It is especially influenced by Spanish and Anglo-American laws. The Philippines accepts the compulsory jurisdiction of the International Court of Justice.

An informal local system for arbitrating or mediating certain problems operates outside the formal court system. There is no jury system. Defendants enjoy a presumption of innocence and have the right to confront witnesses, to present evidence and to appeal.

## 17 ARMED FORCES

The active armed forces numbered 106,000 in 2002 with reserves of 131,000. The army, with 73,000 personnel, with 8 infantry divisions and 5 engineer battalions. Equipment included 40 *Scorpion* tanks. The navy had a total of 24,000 personnel (including 7,500 marines), with one frigate and 58 patrol and coastal combatants. The air force had a strength of 16,000, with 49 combat aircraft and 67 armed helicopters. The Coast Guard had 3,500 personnel. The Philippine national police totaled 40,500, and the Citizen Armed Forces militia had 40,500 personnel. Defense expenditures in 1998 were \$995 million or 1.5% of GDP.

The government had a cease-fire agreement with the Bangsa Moro Army (5,700) and the Moro Islamic Liberation Front (11,000). Active rebel groups included the New People's Army (9,500), the Moro Islamic Reformist Group (900), and the Abu Sayaf Group (200). The numbers for opposition forces are

approximate. The Philippines sent troops and observers to participate in the UN mission in East Timor.

## 18 INTERNATIONAL COOPERATION

The Philippines is a charter member of the UN, having joined on 24 October 1945, and belongs to ESCAP and all the nonregional specialized agencies. It participates in the International Sugar Agreement and the International Wheat Agreement. The Philippines is a member of ASEAN and led in the formation of the Asian Development Bank, which opened its headquarters in Manila in 1966. The International Rice Research Institute and the Southeast Asia Research Center for Agriculture are both located in Los Banos, south of Manila. The Philippines is also a member of G-77 and the WTO and a signatory to the Law of the Sea.

## 19 ECONOMY

Efforts to transform the Philippine economy from a primarily agricultural producer of crops for subsistence and export to a more diversified growth economy led by manufactured exports commanding more favorable terms of trade like its Asian tiger neighbors have been repeatedly hindered by natural disasters and external economic shocks. In 1990–91 the islands suffered the triple blow of earthquake, super-typhoon, and volcanic eruption. In succession, there has been the even more devastating typhoon of 1995, the Asian financial crisis of 1997, and the global economic slowdown of 2001, continuing into 2002. The United States Central Intelligence Agency (CIA) estimates that in 1998 almost 40% its labor force was engaged in agriculture, with only 15.6% in manufacturing and construction.

The Philippine government's survey of labor and employment for 2001 and 2002 suggests that agriculture's dominance has become greater, not less, in recent years. The government's preliminary results show 61.3% of employed persons engaged in agriculture in 2002, up slightly from 61.1% in 2001, whereas the percent employed in industry (including manufacturing, construction, mining and quarrying, and power production) decreased from 10.2% in 2001 to 9.5% in 2002. The manufacturing sector, though expanded and diversified since political independence, depends on imported raw materials and cannot supply internal needs. Electronics and telecommunications exports, which had been growing by double digits before 2001 and had accounted for at least 75% of export revenues in 1999, proved vulnerable to the worldwide slowdown in consumer demand in the recession of 2001, and the contraction by half in foreign investment as a result of the 11 September 2001 terrorist attacks on the United States.

The Philippines has great potential as a tourist destination. However, since the early 1990s the tourist industry has, in addition to natural disasters and high fuel costs, been afflicted with political difficulties, particularly with the emergence of the Abu Sayyaf (Bearers of the Sword) Islamic fundamentalist group, empowered, ironically, like Osama bin Laden, by the US government support in the 1980s as "freedom fighters" in the Cold War end game in Afghanistan and known particularly for the beheading of hostages that are not otherwise released for large ransoms. On 27 May 2001 ASG kidnapped twenty people including three Americans from the upscale Dos Palomos resort in Palawan, causing a large exodus of foreign tourists. Tourism receipts peaked in 1997 at close to \$3 billion, but in 2000 were less than \$2 billion.

Though the Philippine economy, according to IMF data, had a real GDP growth rate in 2001 of 3.4%, down from 4.8% in 2000, this positive showing was due primarily to a 4% growth in agriculture, and in spite of a 15% fall in exports, and 61.1% decline in its trade surplus (to \$2.6 billion) compared to 2000. For the first three quarters of 2002, the government reported growth in all three sectors, with services leading at 5.1% increase

over 2001, industry second, at 3.8% growth, and agriculture at 2.3%. The improvement in services is ascribed to liberalization and deregulation that have encouraged innovations in telecommunications, retail, transportation and financing. The Malampaya natural gas project is central to industrial performance, while agriculture suffered from adverse weather conditions.

Widespread unemployment and underemployment plague the labor market. The government figures for January 2002 reported an unemployment rate of 10.3% and an underemployment rate of 15.9%. High rates of labor migration abroad provide some relief and accounts for a substantial portion of the country's foreign exchange earnings.

Throughout the 1990s the shortage of electric power has been a notorious constraint on the economy. In Manila, the industrial hub, power outages lasted from four to six hours per day. In 2000, in its Philippine Energy Plan (PEP) the government set as a goal 100% electrification by 2004. As of March 2002 it reported the project 85.6% complete. Consumer price protection was provided by the Price Act of 1992 through the stabilization of the price of basic necessities and prime commodities and by measures against undue price increases during emergency situations. In 1993 the inflation rate continued to decline and real economic growth accelerated through the beginning of 1997, before the onset of the Asian financial crisis in August. As measured by the consumer price index (CPI), inflation peaked in 1998 at 9.7%, but had declined to 4.4% in 2000. Though there was an increase to 6.1% in 2001, IMF staff projections for 2002 are for a new low of 4% CPI inflation. Between 1993 and 1999, the Philippine government liberalized telecommunications, deregulated transportation, privatized water, and resolved the power crisis.

Real GDP growth averaged 3% from 1988 to 1998, peaking at 5.3% in 1997 and bottoming out in 1998 at .4%. From 1999 to 2002 real growth has averaged close to 4%.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 the Philippines' gross domestic product (GDP) was estimated at \$335 billion. The per capita GDP was estimated at \$4,000. The annual growth rate of GDP was estimated at 2.8%. The average inflation rate in 2001 was 6%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 17% of GDP, industry 30%, and services 53%.

The World Bank reports that in 2001 per capita household consumption (in constant 1995 US dollars) was \$875. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the same period private consumption grew at an annual rate of 1%. Approximately 37% of household consumption was spent on food, 11% on fuel, 1% on health care, and 14% on education. The richest 10% of the population accounted for approximately 36.6% of household consumption and the poorest 10% approximately 2.3%. It was estimated that in 2001 about 40% of the population had incomes below the poverty line. According to the United Nations, in 2000 remittances from citizens working abroad totaled \$125 million or about \$2 per capita and accounted for approximately 0.2% of GDP. Worker remittances in 2001 totaled \$122 million. Foreign aid receipts amounted to about \$7 per capita and accounted for approximately 1% of the gross national income (GNI).

## 21 LABOR

The Philippines had a labor force estimated at 32 million in 2000. In 1998, 40% were engaged in agriculture, forestry, and fishing

(compared with 58% in 1968), 17% worked in industry, and 43% in the service sector. In 2001, the unemployment rate was estimated at 10% of the workforce.

In May 1974, the government passed a new labor code that restructured the trade union movement on a one-industry, one-union basis. Most of the more than 3,700 trade unions are small; industrial unions have been united in the Philippines Trade Union Congress, and agricultural workers in the Federation of Free Farmers. Strikes are prohibited in such essential services as transportation, communications, and health care. In 2001, about 11% of the labor force was unionized, although only 2% were covered by collective bargaining agreements. While the right to strike and bargain are recognized by law, numerous instances of intimidation of union officials have been reported.

In 2002, the average legal daily minimum wage was \$5.60 for nonagricultural workers. This does not provide a family with a decent living standard. Perhaps as many as one-fifth of businesses in the Philippines do not pay the minimum wage. Agricultural wages are even lower, at a minimum of \$2.60 per day. The minimum working age is 15, although children even younger may work under the supervision of a parent or guardian. In practice, many children work in the informal economy, although serious efforts are being made by the government to reduce the number of children who are working.

## 22 AGRICULTURE

About one-third of the total land area is classified as arable. Three-fourths of the cultivated area is devoted to subsistence crops and one-fourth to commercial crops, mainly for export. Farms tend to be small, and many areas are double-cropped. Soils are generally fertile, but 30% of the agricultural land is suffering erosion.

In 1973, the Marcos government began a land-reform program that undertook to transfer landowners to about half of the country's 900,000 tenant farmers. By February 1986, over one-half of the area—about 600,000 ha (1,482,600 acres)—had not been distributed. The Aquino administration proposed a program in two stages: the first, covering 1.5 million ha (3.7 million acres) in 1987–89, involved previously undistributed land and other land held by the state; the second, covering 3.9 million ha (9.6 million acres) in 1990–92, involved land cultivating sugar, coconuts, and fruits. A more detailed 1990–1995 plan sought to increase productivity of small farms, maintain self-sufficiency in rice and corn production, and to increase the agricultural sector's role in the trade balance.

Roughly half the cultivated land is devoted to the two principal subsistence crops, palay (unhusked rice) and corn. Production of palay was 11,388,000 tons in 1999; long-term production has increased, mainly through the use of high-yielding hybrid seeds under a government development program begun in 1973. The Philippines attained self-sufficiency in rice in 1974 and became a net exporter of rice for the first time in 1977. A similar development plan was aimed at raising yields of corn, which is the chief food crop in areas unsuitable for rice-growing and is increasingly important as feed for use in the developing livestock and poultry industries. The Philippines has been self-sufficient in corn for human consumption since the late 1970s, but since production of animal feed lags behind the demand, imports are still necessary. Corn output in 1999 was 4,643,000 tons. Lesser crops include peanut, mango, cassava, camote, tomato, garlic, onion, cabbage, eggplant, calamansi, rubber, and cotton.

Commercial agriculture, dominated by large plantations, centers on coconuts and copra, sugarcane, tobacco, bananas, and pineapples. Coconuts are the most important export crop, accounting for 23% of world production; in 1999, 11,000,000 tons were produced. Copra production, in which the Philippines leads the world, rose from 1,470,000 tons in 1965 to an estimated 1,510,000 tons in 1999. As oil milling capacity rose,

the domestic market for copra expanded, accounting for almost all of the output and leaving only marginal amounts for exportation. The government put a ban on copra exports in March 1983, but it was lifted in March 1986. Sugarcane production provided the country's single largest export item until 1978, when output and prices fell. Production was 26.3 million tons in 1999 (compared with an annual average of 31.5 million tons during 1979–81). Pineapple production rose to 1,495,000 tons in 1999; production of coffee was 121,000 tons, and 3,561,000 tons of bananas were produced that year. Other important cash crops in 1999 included mangos, 932,000 tons; tobacco, 71,000 tons; and rubber, 64,000 tons.

### 23 ANIMAL HUSBANDRY

Animal husbandry never has been important, meat consumption being very low. The carabao, or water buffalo, are the principal draft animals, particularly in the rice paddies; hogs are the chief meat animals (except in Muslim sections). The Philippines is self-sufficient in pork and poultry, but imports of beef and dairy products are still necessary. In 2001 there were 11 million hogs, 6.2 million goats, 3 million buffaloes, 2.5 million head of cattle, and 116 million chickens. Meat production in 2001 included (in thousands of tons): pork, 1,849; chicken, 741; beef from cattle, 183; beef from carabao, 72; and goat, 35. Dairy production totaled 11,000 tons from cows and 19,000 tons from carabao in 2001; and eggs, 445,000 tons. The livestock and poultry sectors each contribute about 13% to the total value of agricultural production. In 2001, exports of livestock, meat, and skins were valued at \$6.8 million.

### 24 FISHING

Fish is the primary source of protein in the Filipino diet. Some 2,000 species abound in Philippine waters. Despite more than a doubling in output since the 1960s, the fishing industry remains relatively undeveloped, and large quantities of fish are imported. The Bureau of Fisheries and Aquatic Resources (BFAR) cites the continued environmental degradation of Philippine waters as a major constraint on fish production. In 2000, the total domestic fish catch was 1,892,832 tons (12th in the world), of which 8% came from inland waters. Exports of fish products in 2000 were valued at \$400 million.

Six species are most important, according to BFAR, because each has yielded 100,000 tons per year or more since the mid-1980s. These species are: sardines, roundscad, frigate tuna, anchovies, milkfish, and tilapia. Indian mackerel, skipjack and yellowfin tuna, sea bass, red snapper, mullet, kawakawa, squid, and prawn are also plentiful. Principal commercial fishing grounds are off Palawan, north of Panay and Negros, and to the south and west of Mindanao. Subsistence fishing is conducted throughout the archipelago. Fish ponds, chiefly for cultivation of bangos or milkfish, are principally in the swampy coastal areas of western Panay and around Manila Bay. Pearl shells (including cultured pearls), sponges, sea cucumbers (trepane), shark fins, and sea turtles are exported.

### 25 FORESTRY

Forests are an important economic resource in the Philippines. As of 2000, remaining forests occupy 5,789,000 ha (14,300,000 acres), equivalent to 19.4% of the total Philippine land area. Major commercial forest reserves are located in Mindanao, Luzon, Samar, Negros, and Palawan. Areas devoted to industrial tree plantations in 2000 were estimated at 753,000 ha (1,860,000 acres). Some 28,000 ha (69,000 acres) were reforested in 2000, 21% by the private sector.

Roundwood production in 2000 was estimated at 17.3 million cu m (610.7 million cu ft). Production of lumber in 2000 was estimated at 128,000 cu m (4.5 million cu ft); wood pulp, 175,000 cu m (6.2 million cu ft); and plywood, 282,000 cu m

(9.96 million cu ft). In the early 1980s, the Philippines was a significant exporter of tropical hardwood logs and lumber, but production fell by over 50% over the decade, leaving the country a net importer of tropical hardwood logs by 1990. The trade deficit for forest products was \$481.1 million in 2000.

Among other forest products are bamboo, rattan, resins, tannin, and firewood.

### 26 MINING

The mining and quarrying sector continued to decline in importance, accounting for 1% of GDP in 2000 and employing 1.5% of the labor force. Production for much of the last quarter of the 20th century was slowed by political instability, declining foreign investment, low international prices, high operation and production costs, labor problems, an inadequate mining law, and natural disasters such as earthquakes, volcanic eruptions, landslides, tsunamis, typhoons, floods, and drought. Nevertheless, the Philippines ranked second in the Asia-Pacific region, after Indonesia, in terms of mineral prospectivity and resources. Mining for metals accounted for 44% of the industry's production value and nearly 100% of mineral export earnings; Japan was the primary market, copper and gold were the principal commodities, and the mining industry generated \$1 billion in 2000. The Philippines reportedly had the world's largest source of refractory chromite, from Masinloc, and substantial resources of copper, gold, nickel, and silver. The production of chemicals and petroleum refining were leading industries in 2002.

Copper, from northern Luzon, Cebu, Negros, Marinduque, and Mindanao, was the leading mineral; 26,300 tons (metal content) was produced in 2000, down from 37,600 in 1999, 48,600 in 1997, and 61,600 in 1996. Gold output, from northern Luzon, Mindanao, Masbate, and the Negros islands, was 36,513 kg; and nickel, from Surigao and Palawan, Hinatuan, and the Dinagat islands, 23,000 tons, up from 8,450 in 1999 and 18,137 in 1997. The Nonoc nickel laterite project was to be redeveloped, with a new industrial partner; the project had a resource of 144 million tons with an average grade of 1.1% nickel and 0.11% cobalt, and projections for the 40-year life of the mine envisioned output of 41,000 tons per year of Class I nickel and 4,000 tons per year of high-purity cobalt. The Philippines also produced sizable quantities of metallurgic chromite, from western Luzon; chromite ore production totaled 20,900 tons (gross weight), down from 53,871 in 1998, 87,500 in 1997, and 107,068 in 1996, although Benguet Corp.'s Masinloc open-cut mine had a capacity of 105,000 tons per year. Silver was also produced for export. The industrial mineral sector was dominated by the production of limestone, marble, and sand and gravel. In 2000, the Philippines also produced platinum-group metals (as a byproduct), bentonite, hydraulic cement, clays (including red and white), feldspar, lime, magnesite, perlite, phosphate rock, pyrite and pyrrhotite (including cuprous), marine salt, silica sand, stone (including dolomite, volcanic cinder, tuff, quartz), and sulfur. No guano phosphate was produced in 1999 and 2000.

Exploitation of the Philippines' potentially rich mineral resources has been stimulated somewhat by the Mining Act of 1995, which was designed to promote the mining industry to the international community and to provide incentives to ensure efficiency and economic viability for mining endeavors. The law also aimed to help the domestic mining industry regain its competitiveness by allowing companies (contractors) to obtain an exploration permit for a specific area for up to four years. For a viable deposit, the code provided four production agreements—production sharing, co-production, joint-venture, or financial/technical assistance—with a duration of up to 50 years. A serious accident in 1996 involving spilled mine tailings from a copper mine on Marinduque led the government to freeze almost all applications for exploration licenses by foreign companies for one year. Through 2000, 59 exploration permits had been issued,

and more than 400 applications were pending. The mining industry employed 400,000 people—300,000 of them engaged in small-scale mining and panning activities, chiefly in artisanal gold workings.

## 27 ENERGY AND POWER

Net installed electrical capacity as of 2001 amounted to 13,242,000 kW, of which geothermal energy contributed about 24% and oil-fired plants 47%. Total electrical output in 2000 was 43.1 billion kWh, of which 57.6% was from fossil fuels, 19.9% from hydropower, and the rest from geothermal sources. The Philippines is the world's second-largest producer of geothermal energy, which is produced on Luzon, Leyte, and Negros. Consumption of electricity in 2000 was 37.8 billion kWh. Large hydroelectric plants have been installed on the Agno and Angat rivers on Luzon and at María Cristina Falls on the Agusan River in Mindanao.

The Power Development Program (PDP) calls for capacity additions of 13 million kW during 1996–2005, at an estimated cost of \$1.2–\$1.4 billion per year. Several nuclear power plants have been initiated, but they were all abandoned because of ceilings on foreign borrowing and, in the case of the completed plant at Bataan, the location of the site near a seismic fault line. The government announced in 2000 that it would build a 600 MW nuclear plant similar to the Bataan plant at a different location by 2020. The Power Industry Reform Act of 2001, which mandated deregulation and eventual privatization of the power industry, had the goals of developing indigenous power sources, reducing the cost of electricity, and encouraging foreign investment.

Commercial oil deposits were found in 1978, with production beginning the following year. The largest oil production field is located at West Linapacan. Domestic production increased from 1.4 million barrels in 1981 to 3.3 million barrels in 1982 but decreased to less than 0.5 million barrels in 1994. In 2001, oil production amounted to about 8,460 barrels per day, compared with consumption of 356,000 barrels per day. In October 1996, exploration began in the potentially oil-rich Cotabato Basin of the southern Philippines. As of 2002, it was expected that recent deep-sea offshore oil discoveries in the Malampaya field would substantially lessen the amount of oil imported by the Philippines. The Malampaya field also contains gas reserves estimated at 73.6 billion cu m (2.6 trillion cu ft), and development of the field to provide gas for three power plants represents the largest such project in the country's history, with one of the highest levels of foreign investment to date. At the beginning of 2002 the Philippines had natural gas reserves of 104.5 billion cu m (3.689 trillion cu ft), and the government had set a goal of increasing production to 42.4 billion cu m (1.5 trillion cu ft) per year. The Philippine government has developed an alternative energy program, including, for example, the use of "alcogas" (gasohol) and "cocodiesel" (coconut oil in diesel fuels).

In 1998, as a step toward removal from International Monetary Fund (IMF) supervision, the Philippines deregulated its oil industry, removing price controls, instituting a uniform tariff duty, and eliminating inventory requirements. However, due in part to the Asian economic crisis, the three established oil companies still controlled over 90% of the market in early 1999.

## 28 INDUSTRY

In January 2001 the Philippine government estimated that employment in industry had decreased by 86,000 since January 2000, or by 1.8%, and that its share of total employment had declined 1.2%. In this same period it reported a 7.4% increase in agricultural employment and a .6% increase in agriculture's share of the economy. These statistics reflect the setbacks the Philippines have encountered in its long-run strategy of converting to a more diversified economy with growth led by

high value-added manufactured exports. These problems were aggravated by the global economic recession in 2001 and the aftershocks of the 11 September 2001 terrorist attacks on the United States. Over half of the value of Philippine exports in 2000 were accounted for by information technology (IT) products, which were particularly affected by the global recession in 2001 and the aftershocks of the terrorist attacks. Measured on year to year basis, merchandise trade declined -19.5% in the fourth quarter of 2001 due in large part to a -28.8% decline in electronic components exports, which registered a further -5.8% decline for the first quarter of 2002, according to Philippine National Statistics.

Exports of electronics first surpassed food products and textiles in value in the late 1990s, as the government sought to shift from an economy based on agricultural produce and sweatshop factory output to an economy anchored by the assembly of computer chips and other electronic goods, many of them computer peripherals. Over 50 chip assemblers and computer components makers have invested in Philippine operations. Intel with two locations, in Manila and Cavite, has invested over \$3 billion and has been the Philippines leading exporter by value since 1997. Philips Semiconductors Philippines, Inc., which has been producing computer chips since 1985, opened a \$300 million facility in 1999. Other technology companies with major investments include Acer, Toshiba, Hitachi, Fujitsu, Cypress Semiconductor, and Amkor Technology. In a 1999 World Bank study, the Philippines was credited with one of the world's most technologically advanced export structures. The potential remains but it is dependent on recovery of the international economy. A promising development was a major natural gas discovery in the Malampaya field, formally inaugurated in 16 October 2001 with the completion of a 312 mile (504 km) sub-sea pipeline and the conversion of three power plants in Batangas to natural gas usage. Foreign investment increased 171% in 2001 to \$3.4 billion (almost \$2 billion FDI and \$1.4 billion portfolio investment), drawn also by a newly deregulated and privatized energy sector, contrary to the global trend that saw foreign investment decline by half. In the Philippine Energy Plan (PEP) 2000–2009 the government envisioned domestic energy production increasing to over 50% self-sufficiency from about 42% self-sufficiency in 2001. Oil production has not been promising: in 2001 only 2.3% of the oil consumed was produced in the Philippines. The Malampaya Deepwater Gas-to-Power Project has shifted the government focus to an emphasis on the development of natural gas resources.

By value, according to CIA estimates for 2001, the leading industries were textiles, pharmaceuticals, chemicals, wood products, food processing, petroleum products, electrical machinery, textiles, electronics assembly, petroleum refining, and fishing, with significant production in transport equipment, nonmetallic mineral products, fabricated metal products, beverages, rubber products, paper and paper products, leather products, publishing and printing, furniture and fixtures, and tobacco. Following the 11 September 2001 terrorist attacks on the United States, there were five months of contraction in industrial production before a return to growth in 2002. Year-on-year growth was strongest in lower-tech, more domestically oriented sectors such as leather products (57.7%), rubber products (31.1%), textiles (27%) and food processing (11.9%), while high-tech, export-oriented sectors such as electrical machinery and transport equipment grew more moderately, at 7.2% and 18.7% respectively. Overall industrial production index rose 4.7% in November 2002 on a year-on-year basis, according to Philippine official statistics.

The industrialization strategy proposed by the government in 1981 stressed development of exports and the accelerated implementation of 11 major industrial projects—a copper

smelter, a phosphate fertilizer plant, an aluminum smelter, a diesel-engine manufacturing plant, an expansion of the cement industry, a "cocochemical" complex (based on coconuts), an integrated pulp and paper mill, a petrochemical complex, heavy engineering industries, an integrated steel mill, and the production of "alcogas." The copper smelter, the phosphate fertilizer plant, and the "cocochemical" complex went into operation in 1985. Exports of power train components from Honda's plant in the Philippines are due to begin in 2003. Local cement and steel manufacturers are seeking protection from foreign imports as part of the government's announced policy to reimpose tariffs to the maximum allowed by the WTO on imports that are locally produced. Historically manufacturing production has been geographically concentrated in the Metro Manila area and the adjoining regions of Southern Tagalog and Central Luzon. With the progress in electrification, this geographic concentration has begun to decrease. Most industrial output is concentrated in a relatively few large firms. Although small and medium-sized businesses account for about 80% of manufacturing employment, they account for only about 25% of the value-added in manufacturing.

### 29 SCIENCE AND TECHNOLOGY

Leadership in formulating and implementing national science policy is exercised by the Department of Science and Technology. Special training in science is offered by the Philippine Science High School, whose graduates are eligible for further training through the department's scholarship program. The International Rice Research Institute in Los Banos, founded by the Rockefeller and Ford foundations and US AID in 1960, conducts training programs in the cultivation, fertilization, and irrigation of hybrid rice seeds. The Southeast Asian Regional Center for Graduate Study and Research in Agriculture maintains genotype and information banks for agricultural research.

The Philippine Nuclear Research Institute, founded in 1958, is located in Quezon City. The French Institute of Scientific Research for Development and Cooperation has an institute in Manila conducting research in molecular biology. In 1996, the Philippines had 68 universities and colleges offering courses on basic and applied sciences. In 1987-97, science and engineering students accounted for 14% of college and university enrollments. In the same period, research and development expenditures amounted to 0.22% of GNP; 157 scientists and engineers and 22 technicians per million people were engaged in research and development. In 1998, high-tech exports were valued at \$18.9 billion and accounted for 71% of manufactured exports.

### 30 DOMESTIC TRADE

The archipelagic structure of Philippine marketing requires the establishment of regional centers and adds considerably to distribution costs, foreign domination of much of marketing, direct government participation, and the proliferation of small firms. About 90% of all imported goods come through the Port of Manila. Makati City is the business center of the country and hosts a number of distribution centers, trading firms, commercial banks, and high-end retail establishments. Cebu City is the trading center of the south.

Small stores typify retail trade. Manila has major shopping centers and malls. Generally, sales are for cash or on open account. Retailing is conducted on a high markup, low-turnover basis. A law provides for price-tagging on retail items. Direct marketing, particularly of foreign name-brand products, has gained in popularity. English is the general language of commercial correspondence. Most advertising is local; the chief media are newspapers, radio, television, posters, billboards, and sound trucks.

Shops are usually open from 10 AM to noon and from 2 to 7:30 PM, Monday through Saturday; banking hours are weekdays from 9 AM to 3 PM. Office hours, and hours for the Philippine government are generally from 10 AM to 5 PM. Staggered hours, with up to three shifts, are common in the metropolitan Manila area.

### 31 FOREIGN TRADE

Between 1996, exports surged from \$20.5 billion to \$38.1 billion. Imports peaked in 1997 at \$38.6 billion, but by 2000 had dropped to \$33.8 billion. The 1999 and 2000 trade surpluses were the first since 1973; during the intervening period, expensive mineral fuel imports had thrown the balance into a deficit.

The Philippines' traditional exports were primary commodities and raw materials. However, by 2000, machinery and transport equipment made up the majority of exports. In 2000, exports of electric machinery (mostly microcircuits, diodes, and transistors) accounted for 51% of total exports, and garments contributed 6.8% to the total value of exports. In 2000, the Philippines exported a majority of electronics, including microcircuits, transistors and valves (44%); automatic data processing equipment (12.2%); and telecommunications equipment (2.7%). Other exports included garments (6.8%), vegetable oil (1.2%), and fruits and nuts (1.1%). The Philippines account for 6.6% of the world's soft vegetable oil exports. In 2000, machinery and electronics accounted for over three-fourths of all exports.

In 2000 the Philippines' imports were distributed among the following categories:

Consumer goods	5.0%
Food	6.1%
Fuels	12.1%
Industrial supplies	24.9%
Machinery	47.5%
Transportation	4.4%

The US and Japan continue to be the Philippines' primary trading partners. Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
United States	11,405	5,713	5,692
Japan	5,609	6,457	-848
Singapore	3,124	2,288	836
Netherlands	2,983	360	2,623
China (inc. Hong Kong)	2,570	2,180	390
United Kingdom	1,506	375	1,131
Malaysia	1,377	1,236	141
Germany	1,329	770	559
Thailand	1,207	966	241
Korea	1,173	2,476	-1,303

### 32 BALANCE OF PAYMENTS

Since World War II, the Philippines experienced frequent trade deficits, aggravated by inflationary pressures. Deficits were counterbalanced by US government expenditures, transfer of payments from abroad, official loans (US Export-Import Bank, IBRD, and private US banks), net inflow of private investment, tourist receipts, remittances from Filipino workers overseas, and contributions from the IMF.

In 1996, trade liberalization policies helped to push imports up by 22% while exports rose by only 18%. The result was a widening trade deficit that amounted to 13% of GDP. Foreign investment in the stock market and remittances from overseas workers helped to offset the deficit and avert a balance-of-payments crisis. In 1998, the Philippines recorded a trade surplus at about 2% of GNP in the current account due to high electronics exports and low imports due to the devaluation of the peso. This was the first surplus in 12 years.

Merchandise exports, in double digits through most of the 1990s, slowed to a single-digit growth pace in 2000, reflecting fewer export receipts from electronics and telecommunications parts and equipment. This decline was attributed by the electronics industry to weaker prices for maturing products and technologies, and to the decline in electronic industry investments from the 1994–97 boom years (when investment averaged \$1.5 billion a year).

Traditionally, exports of primary products failed to balance imports, leading the government to restrict imports. Structural change accelerated in the 1970s, as the contribution of industry (including construction) to GDP rose from 29.5% in 1970 to 36.5% by 1980, primarily as a result of export-oriented industrialization promoted by the Marcos government. The Aquino assassination in August 1983 had immediate economic consequences for the Marcos government, as did the broader Third World Debt Crisis. Hundreds of millions of dollars in private capital fled the Philippines, leaving the country with insufficient foreign exchange reserves to meet its payments obligations. The government turned to the IMF and its creditor banks for assistance in rescheduling the nation's foreign debt, and an austerity program was set up during 1984–85. In December 1986, under IMF guidance, the Aquino government launched a privatization program with the establishment of the Assets Privatization Trust (APT). Monopolies established under the Marcos administration in coconuts, sugar, meat, grains, and fertilizer were dismantled and a ban on copra exports was lifted. All export taxes were abolished; and the government allowed free access to lower-cost or higher-quality imports as a means of improving the cost-competitiveness of domestic producers.

Many difficulties remained, however. The prices of commodity exports, such as sugar, copper, and coconut products, were still weak, while demand for nontraditional manufactured products, such as clothing and electronic components, failed to rise. The structural reforms produced an initial recovery between 1986 and 1989, but this was arrested by the series of natural disasters in 1990–1991. In 1986, Aquino had also embarked on a Comprehensive Agrarian Reform Programme, but its goals remain unfulfilled.

In the 1990s, the government concluded three additional financial arrangements with the IMF—a stand-by agreement signed 20 February 1991 for about \$240 million (all drawn); an arrangement under the Extended Fund Facility (EFF) signed 24 June 1994 for about \$554 million (all drawn), and a stand-by agreement signed 1 April 1998 for about \$715 million (76.7% drawn down as of 31 December 2002). At the end of 2002, the Philippines owed over 140% of its quota to the Fund. Scheduled debt repayments to the IMF for 2003 are about \$330 million, and outstanding loans and purchases are not due to be retired until at least 2007. The country also had five debt reschedulings in the period 1984 to 1991 with the Paris Club—for official debt owed to aid donor countries—on which some payments are still owing. In January 2003, the Trade and Development Department announced at least a partial retreat from its 15 years of trade and investment liberalization, stating that it plans to bring tariff rates to the maximum allowed by the WTO for industrial imports, particularly petroleum imports, and for products produced in the Philippines. This would entail raising some duties that had previously been lowered. Exempted would be imports needed by its local manufacturers. Industrialization of the economy, and, therefore a major improvement in the country's terms of trade, remains elusive.

The US Central Intelligence Agency (CIA) reports that in 2000 the purchasing power parity of the Philippines's exports was \$37 billion while imports totaled \$30 billion resulting in a trade surplus of \$7 billion.

The International Monetary Fund (IMF) reports that in 2001 the Philippines had exports of goods totaling \$31.2 billion and

imports totaling \$28.5 billion. The services credit totaled \$3.15 billion and debit \$5.09 billion. The following table summarizes the Philippines's balance of payments as reported by the IMF for 2001 in millions of US dollars.

<b>Current Account</b>	<b>4,503</b>
Balance on goods	2,746
Balance on services	-1,939
Balance on income	3,252
Current transfers	444
<b>Capital Account</b>	<b>-12</b>
<b>Financial Account</b>	<b>-4,317</b>

Other investment liabilities	7,211
<b>Net Errors and Omissions</b>	<b>-854</b>
<b>Reserves and Related Items</b>	<b>-476</b>

### 33 BANKING AND SECURITIES

The Philippine banking structure consists of the government-owned Central Bank of the Philippines (created in 1949), which acts as the government's fiscal agent and administers the monetary and banking system; and some 45 commercial banks, of which 17 are foreign-majority-owned. Other institutions include more than 111 thrift banks, 787 rural banks, 38 private development banks, 7 savings banks, and 10 investment houses, and two specialized government banks. The largest commercial bank, the Philippine National Bank (PNB), is a government institution with over 194 local offices and 12 overseas branches. It supplies about half the commercial credit, basically as agricultural loans. The government operates about 1,145 postal savings banks and the Development Bank of the Philippines, the Land Bank of the Philippines, and the Philippine Amanah Bank (for Mindanao). There are also 13 offshore banking units in the country, and 26 foreign bank representative offices. Total assets reached approximately \$65 billion in March 2001, 39% of which belonged to the five largest banks. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$7.7 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$41.9 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 8.298%.

Philippine stock exchanges are self-governing, although the Philippine Securities and Exchange Commission, established in 1936, has supervisory power over registrants. The country's two stock exchanges, Manila and Makati (both in the capital), were formally merged in the Philippines Stock Exchange in March 1993. A computer link-up was effected a year later, although the two retained separate trading floors until November 1995. Only 220 companies were listed as of 1998. But the process of privatization is expected to push up listings, while domestic participation in the equity market is being specifically promoted by new regulations requiring that all initial public offerings reserve a 10% tranche for small investors. Before the Asian crisis, market capitalization of publicly listed companies had grown to \$89 billion, or six times the amount of 1992. But in 1998, only 10 of the largest companies accounted for more than half of trading volume. In 2000, a financial scandal in which the SEC failed to regulate the market properly drove the stock market down by a quarter and destroyed investor confidence. In 2000, market capitalization was a mere 38% of the previous year, and only 12% of the peak level in 1996.

### 34 INSURANCE

The Government Service Insurance System (GIS), a government organization set up in 1936, provides life, permanent disability, accident, old age pension, burial insurance and salary and real estate loan benefits. Compulsory third-party motor liability insurance went into effect on 1 January 1976. In addition, workers' compensation and personal accident insurance for workers abroad are compulsory. The Insurance Commission of the Department of Finance oversees the insurance industry.

Life and nonlife insurance companies provide coverage against theft, fire, marine loss, accident, embezzlement, third-party liability, and other risks. In 2001 US\$906 million in direct insurance premiums were written, US\$493 of which were for life insurance and US\$414 for nonlife insurance.

### 35 PUBLIC FINANCE

The principal sources of revenue are income taxes, taxes on sales and business operations, and excise duties. Infrastructural improvements, defense expenditures, and debt service continue to lead among the categories of outlays.

The government's commitment to fiscal balance resulted in a budget surplus for the first time in two decades in 1994. The surplus was achieved by higher taxes, privatization receipts, and expenditure cuts. The Philippines was not affected as severely by the Asian financial crisis of 1998 as many of its overseas neighbors, as a result of over \$7 billion in remittances annually by workers overseas.

The US Central Intelligence Agency (CIA) estimates that in 2001 the Philippines's central government took in revenues of approximately \$10.9 billion and had expenditures of \$13.8 billion. Overall, the government registered a deficit of approximately \$2.9 billion. External debt totaled \$50 billion.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

REVENUE AND GRANTS	100.0%	10,900
Tax revenue	86.9%	9,472
Non-tax revenue	12.5%	1,367
Capital revenue	0.2%	23
Grants	0.4%	38
EXPENDITURES	100.0%	13,800
General public services	4.7%	652
Defense	4.6%	640
Public order and safety	6.8%	932
Education	17.2%	2,371
Health	1.9%	267
Social security	3.9%	541
Housing and community amenities	0.4%	52
Recreation, cultural, and religious affairs	0.7%	98
Economic affairs and services	12.9%	1,774
Other expenditures	22.2%	3,058
Interest payments	24.8%	3,416

### 36 TAXATION

The individual income tax consists of taxes on compensation income (from employment), business income, and passive income (interests, dividends, royalties, and prizes). In 1998 compensation income tax rates were restructured into 6 bands with marginal rates ranging from 5% to 35%. Exemption levels are 20,000 pesos (about \$400) for individuals, and 32,000 pesos (about \$640) for married couples. In 2000, the business income tax rate was lowered from 33% to 32%. The tax rate on passive income is 30%. For resident foreign corporations, after-tax profits

remitted abroad are subject to a 15% tax, except for corporations registered with the Philippine Economic Zone Authority (PEZA), the Board of Investment (BOI), the Bases Conversion Development Authority, or operating in independent special economic zones (ecozones), all of which are eligible for special tax and customs incentives, exemptions and reductions designed to attract foreign, new, necessary and/or export-oriented foreign investment. The Omnibus Investment Code of 1987 lays out tax incentives administered by the BOI of the Department of Taxation and Development, and the annual Investment Priorities Plan (IPP) sets out the investment areas, national and regional, to which these incentives currently pertain. In 2002 the national list included export activities, industrial development and mining, agricultural/ fishery production and processing, logistics, drugs and medicine, engineered products, environmental projects, IT services, Infrastructure, mass housing projects, R and D activities, social service, tourism, patriotic and documentary motion pictures and new projects with a minimum cost of \$2 million. Special economic zones (SEZs) can be designated as export processing, free trade and/or information technology (IT) parks, each designation providing a schedule of tax holidays, exemptions from import duties on capital goods and raw material, and preferential income tax rates with more favorable treatment accorded pioneer industries over nonpioneer or expanding companies.

Taxes on transactions include a value-added tax (VAT) of 10%. For smaller businesses not registered with the VAT a percentage sales tax of 3% to 5% is applied, although higher for activities involving issues of public morality: cockpits are taxed 18%, caberets, 18% and jai-lai and racetracks, 30%.

Excise taxes are imposed on selected commodities such as alcoholic beverages, tobacco products, jewelry and petroleum products. In addition, the government levies a variety of other taxes, including mining and petroleum taxes, residence taxes, a head tax on immigrants above a certain age and staying beyond a certain period, document stamp taxes, donor (gift) taxes, estate taxes, and capital gains taxes. A document stamp tax is charged on stock certificates, proofs of indebtedness, proofs of ownership, etc, and normally amount to .75% to 1% of the par or face value of the certificate. A progressive schedule of donor taxes begins with gifts above P100,000 (about \$18,500), and lays out seven bands (2%, 4%, 6%, 8%, 10%, 12%, and 15%) with the top marginal rate applying to gifts above P10,000,000 (about \$186,520). The progressive estate tax begins at P200,000 (about \$37,000) and lays out five bands (5%, 8%, 11%, 15% and 20%) up to P10,000,000 (about \$186,520). The capital gains tax is 6% on real property; 5% on gains of P100,000 or less from the sale of stock not listed on the stock exchange, and 10% on gains over P100,000. Some cities, such as Manila, levy their own wholesale and retail sales taxes.

Government revenues in 2001 amounted to 14.8% of GDP, short of total expenditures and net lending for the year, which came to 19.1% of GDP, leaving a deficit of over 4% of GDP. The US State Department reports that the main factor underlying the deficit is inadequate revenue collections due to widespread tax evasion. Attempts by the Bureau of Internal Revenue to increase compliance have met with strong resistance.

### 37 CUSTOMS AND DUTIES

The Philippines, under its commitments to ASEAN, must accelerate its tariff reductions as part of in its AFTA Common Preferential Tariff (CEPT) Inclusion List. As of 2000, the Philippines was the furthest behind of any of the six original ASEAN members in implementing this plan. The Philippines, as a member of the Asia Pacific Economic Cooperation (APEC) forum, is also committed to the establishment of free trade in the region and is expected to eliminate intra-regional barriers by 2020. The government developed a separate plan in 1996 to

lower tariffs to no more than 3% on raw materials and 10% on finished products by January 2003, and a uniform 5% tariff rate by January 2004. There is also a value-added tax (VAT) of 10% on almost all imports and excise taxes are levied on alcohol and tobacco products, automobiles, and other luxury items.

### 38 FOREIGN INVESTMENT

Investments have been concentrated in manufactures for exports, utilities, mining, petroleum refining, and export-oriented agriculture, with accelerating interest in labor-intensive textiles, footwear, electronics, and other nontraditional export industries. Investment is affected by import controls, exchange controls, and equity controls that favor Filipino participation in foreign ventures. Attempts to liberalize the economy of the Philippines are fighting three centuries of entrenched interests. Filipino political science research points out the influence and effects of Spanish colonialism that delivered the control of politics and economics into the hands of a small number of families. In the name of nationalism these families legislated against foreign competition in the 1950s. Serious restructuring began in the wake of the Third World debt crisis and the turn to the IMF for assistance. The Omnibus Investments Code of 1987 generally limited foreign equity ownership to 40%, but allowed 100% foreign ownership in a "pioneer" priority industry identified in the annual Investment Priorities Plan (IPP). Special encouragement was given to pioneer manufacturing endeavors, export-oriented and labor-intensive industries, projects outside metropolitan Manila, and to joint ventures with a minimum of 60% Filipino capitalization. The structural reforms produced an initial recovery between 1986 and 1989, but this was arrested by the series of natural disasters in 1990–1991.

The Foreign Investment Act of 1991 (FIA) further liberalized the investment climate of the Philippines. The FIA permits 100% foreign ownership, without prior BOI approval, of companies engaged in any activity not included in the foreign investment negative list. The foreign investment negative list is comprised of three categories where foreign investment is fully or partially restricted by the constitution or by specific laws. In all three categories foreign ownership is restricted to between zero and 40%. Restriction on setting up export processing zones has also been considerably relaxed. The development of special economic zones began with the transformation of the former US military bases into enterprise zones, the Subic Bay Freeport Zone (SBFZ) and the Clark Special Economic Zone (CSEZ) according to the Bases Conversion Act of 1992.

The Export Development Act of 1994 signaled the government's conversion from an import substitution model of industrial development to an export-led growth model, more in line with its Asian tiger neighbors. The banking and insurance sectors were also significantly liberalized by legislation in 1994. Since 1948 the four existing foreign banks had not been allowed to open branches. Under a 1994 law, each was allowed to open up to six new branches, plus up to 10 new foreign full service banks could be licensed with up to six branches each. Insurance was opened to 100% foreign ownership but such that the higher the percent foreign ownership, the higher minimum capital requirements. Rural banking, however, continues to remain closed to foreign investment. The next year, in 1995, the Special Economic Zone Act, and separate laws for independent ecozones in Zoambanga and Cayagyu, established the framework for the current collection of four government-managed ecozones and over 40 private ecozones, all with liberalized incentives to attract foreign investment. Amendments to the FIA in 1996 enhanced the investor-friendly framework, albeit leaving the country vulnerable to the rapid divestments of the Asian financial crisis the next year. With recovery, the government embarked on further reforms aimed at attracting foreign investors.

In May 2000, the General Banking Law (GBL), in addition to strengthening the supervisory role of the Bangko Sentral ng Philippines (BSP), allowed 100% ownership of distressed banks. Also in 2000, the Estrada administration opened the retail trade and grain milling businesses to foreign investment.

There remain, however, major restrictions on foreign investments in the Philippines besides the natural hindrances that this most disaster-prone of countries is liable to, not the least of which is the complexity and detail of the investment regime. Under the FIA, the government is obliged to promulgate a Foreign Investment Negative List (FINL) consisting of a List A of foreign ownership limited by the constitution and specific laws, and a List B of foreign ownership limited for reasons of security, defense, risk to health and morals and protection of small- and medium-scale enterprises.

On 22 October 2002 President Arroyo issued the Fifth FINL. On List A, by its terms, no foreign equity was to be allowed in the mass media except recording, nor in any of the licensed professions including law, medicine, accounting, engineering, environmental planning, interior design, teaching, and architecture. Small scale retail and mining, private security, utilization of marine resources, the operation of cockpits, and the manufacture of fireworks, are off-limits to foreigners, as are, on another level, the manufacture and stockpiling of nuclear, biological, chemical and radiological weapons. Only a maximum of 20% ownership is allowed a private radio communications network; only up to 25% in employee recruitment industries, public works construction projects (though with important exceptions for infrastructure/development projects, and those built with foreign aid); only up to 30% in ad agencies; only up to 40% in natural resource extraction projects (though the president can authorize up to 100%), ownership of private lands, ownership of condominiums, educational institutions, public utilities, commercial deep sea fishing, government procurement contracts, adjustment companies, and rice and corn processing (with at least 60% divestment to Filipino citizens required after 30 years of operation); and only up to 60% in financial and investment houses. On the B list for 2002, foreign ownership is restricted to 40% in manufacture of firearms, ammunition, explosives, military ordnance, dangerous drugs, saunas, steam-baths, massage parlors, all forms of gambling, local businesses not engaged in exporting with paid-in capital of less than \$200,000 and local businesses that involve advanced technology or employ at least 50 persons with paid-in capital of less than \$100,000.

In January 2001, President Arroyo, a trained economist, launched a high profile campaign to attract foreign investment. Former president Fidel Ramos and four other senior government officials were appointed as envoys to promote trade and investment. Against strong nationalist opposition, her administration passed the Electric Power Industry Reform Act that requires the National Power Corporation (NPC) to privatize at least 70% of its generating assets by 2004. NPC's transmission assets were fully privatized and opened up to the maximum 40% foreign ownership allowed for public utilities. 2001, in fact, turned out to be a banner year for foreign investment in the Philippines, which increased 171% to \$3.4 billion (about \$2 billion FDI and \$1.4 billion portfolio investment), all the more remarkable because of the decline by 50% worldwide in foreign investments that year, and because of the Philippines' emergence as a front in the War of Terrorism, thanks to the Abu Sayyaf (Father or Bearer of the Sword) Group and its close links to al-Qaeda. The Philippines' newly deregulated and privatized energy sector was the main draw, the center piece being the Malampaya natural gas project, which was officially inaugurated on 16 October 2001 following the completion of its 312-mile (504-km) undersea pipeline and the conversion of three power plants in Batangas to natural gas usage.

### 39 ECONOMIC DEVELOPMENT

Beginning in 1972, the main tenets of the Marcos government's economic policies, as articulated through the National Economic Development Authority, included substantial development of infrastructure, particularly through the use of labor-intensive rather than capital-intensive (i.e., mechanized) methods, and a shift in export emphasis from raw materials to finished and semifinished commodities. The policies of the Aquino administration have stressed labor-intensive, small and medium-scale agricultural projects and extensive land reform. In addition, wealth believed to have been amassed by President Marcos was actively being pursued all over the world. Long-range planning has followed a series of economic plans, most of them covering five-year periods. The development program for 1967–70 aimed to increase the growth rate of per capita income from the 0.9% level in 1961–65 to 2.4%; to increase national income by 5.7% per year during the plan period, and to reduce the unemployment rate from 13% (1965) to 7.2% (1970). The government invested \$3.5 billion in integrating the traditional and modern sectors of the economy. Marcos's first long-range plan following the 1972 declaration of martial law was a four-year (1974–77) infrastructure development program calling for 35% to be expended on transportation, 33% on energy and power, 20% on water resources, 10% on education, health, and welfare, and 2% on telecommunications. A 1974–78 plan, announced in late 1975, envisioned energy as the major focus of the new plan, with 34% of expenditures, followed by transportation, 30%; water resources, 23%; social programs, 7%; and other sectors, 6%. The goals of the 1978–82 plan included an 8% annual growth in GNP, rural development, tax incentives for export-oriented industries, continued self-sufficiency in grain crops despite rapid population growth, and accelerated development of highways, irrigation, and other infrastructure. The 1983–87 plan called for an annual expansion of 6.2% in GNP, improvement of the rural economy and living standards, and amelioration of hunger.

Under the Aquino administration the goals of the 1987–92 plan were self-sufficiency in food production, decentralization of power and decision making, job creation, and rural development. Economic performance for real growth fell far short of plan targets by 25% or more. Structural changes to provide a better investment climate were carried out. The Foreign Investment Act of 1991 liberalized the environment for foreign investment. An executive order issued in July 1991 reduced the number of tariff levels over five years and reduced the maximum duty rate from 50% to 30%. Quantitative restrictions were removed from all but a few products. The foreign exchange market was fully deregulated in 1992.

A new six-year medium-term development plan for 1993–98 was presented by the government in May 1993. The plan stressed people empowerment and international competitiveness within the framework of sustainable development. To do this, the government planned to disperse industries to regions outside the metropolitan Manila area. The plan also called for technological upgrading of production sectors, poverty alleviation, and human/social development. Over the six year period, agriculture's share of GDP was expected to decline from 23% to 19% of GDP while industry's share was to increase from 34% to 39%. The Medium-Term Philippine Development Plan (MTPDP) for 1999 through 2004 focused on rural development, especially on the modernization of the agricultural sector. The MTPDP targeted agricultural growth from 2.6% to 3.4% during the plan's time-frame, as well as growth in the industrial and service sectors. The Philippines finished three years of IMF supervision in March 1998, only to be hit by the Asian financial crisis. Financial assistance continued in 1998 and 1999 through the Asian Development Bank, World Bank, and Japan's Overseas Economic Cooperation Development Fund.

### 40 SOCIAL DEVELOPMENT

The government social program includes the purchase and subdivision of big estates for resale on installment plans, the settlement of landless families in new areas, building of rural roads, schools, and medical clinics, and the distribution of relief supplies to the needy. Other programs directly geared to social change fall under the Ministry of Human Settlements and Community Development. Among these are nutrition programs for infants, the Bagong Lipunan Improvement of Sites and Services (BLISS) program for depressed areas, and the Livelihood Improvement Program (Kilusang Kabuhayan at Kaunlaran—KKK) designed to channel economic growth into projects—notably in agriculture, fishing, and cottage and light industries—capable of enhancing self-sufficiency at the village level.

The Social Security System (SSS) covers both temporary and permanent employees, including domestic workers. Membership for employers is compulsory. Benefits include compensation for confinement due to injury or illness, pensions for temporary incapacity, indemnities to families in case of death, old age pensions, and benefits to widows and orphans. Charges to cover the system are paid jointly by employers and employees and according to 23 wage classes. A medical care plan for employees provides hospital, surgical, medicinal, and medical-expense benefits to members and their dependents, as well as paid maternity leave.

A handful of women enjoy high prestige and visibility, but most women occupy traditional social roles and occupations. Women on average earn about half as much as men. Most, but not all, of the legal rights enjoyed by men are extended to women. Spousal abuse and violence remain serious concerns. The absence of divorce laws and lack of economic opportunity keep women in destructive relationships.

The government has enacted various measures in recent years to safeguard the rights of children. Child prostitution, while illegal, is widespread and has contributed to the growing sex-tourism industry. A new family court system strengthened safeguards against the sale of children.

Some human rights violations remain, including arbitrary arrest and detention, torture, and disappearances.

### 41 HEALTH

In the mid-1990s, there were 1,663 hospitals, 562 of which were operated by the government and 1,101 in the private sector. In the same period, there were 31,375 physicians, 1,523 dentists, 10,117 nurses, and 12,408 midwives. As of 1999, there were an estimated 1.2 physicians and 1.1 hospital beds per 1,000 people. Government-financed child health malnutrition and early education programs are already well established in the Philippines. These programs suffer from chronic underfunding in terms of inadequate equipment, numbers of field-level staff, and other operating expenses. Government hospitals had 46,388 beds and private hospitals had 35,309. In addition, there were 2,299 rural health units. As of 1999 total health care expenditure was estimated at 3.6% of GDP.

Pulmonary infections (tuberculosis, pneumonia, bronchitis) are prevalent. Malnutrition remains a health problem despite government assistance in the form of Nutripaks (consisting of indigenous foods such as mung beans and powdered shrimp) that are made available for infants, children, and pregnant women. In 2000, 32% of children under five years old were considered malnourished. Protein malnutrition, anemia, and vitamin A and iodine deficiencies are commonly found in children. The goiter rate was 6.9 per 100. Heart disease is the third most common cause of death in the Philippines.

During the 1980s, a nationwide primary health care program was implemented. As a result, community involvement in health services increased, the prevalence of communicable diseases

decreased, and the nutritional state of the population improved. Obesity and hypertension are more common in the cities. In 2000, 87% of the population had access to safe drinking water and 83% had adequate sanitation. Children up to one year of age were immunized in 1995 against tuberculosis, 91%; diphtheria, pertussis, and tetanus, 85%; polio, 86%; and measles, 96%. In 1999 the rate for both DPT and measles was 79%.

The infant mortality rate declined from 78.4 per 1,000 live births in 1972 to 31 in 2000. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 26.9 and 6 per 1,000 people. Maternal mortality was 170 per 100,000 live births in 1998. In 2000, 47% of married women (ages 15 to 49) were using contraception. Average life expectancy was 69 years in 2000.

As of 1999, the number of people living with HIV/AIDS was estimated at 28,000 and deaths from AIDS that year were estimated at 1,200. HIV prevalence was 0.07 per 100 adults. Tuberculosis incidence has been high. In the mid-1990s, 180,444 tuberculosis cases were reported per year. Incidence of TB was 314 per 100,000 people in 1999. In 1995, there were 525 cases of malaria per 100,000 people.

## 42 HOUSING

In 1981, government officials placed the need for new housing at over 1.1 million units. Tens of thousands of barrios are scattered throughout the Philippines, each consisting of a double row of small cottages strung out along a single road. Each cottage is generally built on stilts and has a thatched roof, veranda, and small yard. Construction is largely undertaken by the private sector, with the support of government agencies. The Ministry of Human Settlements (MHS), created in 1978, sets housing programs in motion. Its first major program was the Bagong Lipunon Improvement of Sites and Services (BLISS), which undertook 445 projects involving 6,712 units housing 40,272 people. As with many programs begun during the Marcos administration, the projects became ridden with scandal. More creditable was the Pag-IBIG fund, which was set up to promote savings for housing and provide easy-term housing loans, with contributions from individuals, banks, industries, and the government. By the end of 1985, P98 million in loans had been provided to 171,585 members. In 1985, membership contributions totaled P1.34 billion, and 1,451 housing loans were approved.

The Aquino administration offered tax exemptions to domestic corporations and partnerships with at least 300 employees that invest funds in housing. From 1984–87, an annual average of about 103,150 units were built by the private sector with minimal assistance from the government.

According to recent estimates, at least 90% of all housing units were detached houses. Owners occupied about 80% of all dwellings. In 2000, there were 15,278,808 households with an average of five people per household.

## 43 EDUCATION

Education is free and compulsory in the primary schools and is coeducational. In 1987, a bill to provide free public secondary education for all students was due for approval in Congress. English is the main medium of instruction, although Pilipino or the local vernacular is used for instruction in the lower primary grades. For the year 2000, adult illiteracy rates stood at 4.6% (males, 4.5%; females, 4.8%).

In 1998, 38,631 primary schools had an enrollment of 12,159,495 students, and secondary schools had 4,979,795 students. The pupil-teacher ratio at the primary level was estimated at 35 to 1 in 1999. As of 1999, only 51% of those eligible attended secondary school. The University of the Philippines, in Quezon City, with branches in major islands, is the leading institution of higher learning. In addition, there are some

50 other universities, including the University of Santo Tomás, founded in 1611 and run by the Dominican friars. In 1996, post-secondary institutions had a total enrollment of 2,017,972 students. Approximately 15.7% of central government expenditure was allocated to education in the latter part of the 1990s. As of 1999, public expenditure on education was estimated at 3.2% of GDP.

## 44 LIBRARIES AND MUSEUMS

The National Library in Manila has an estimated 1.2 million volumes. The Filipiniana and Asia Division contains over 100,000 Filipiniana books. Large libraries are in the universities, notably the University of the Philippines (948,000 volumes), the University of Santo Tomás (822,000), the University of the East (177,900), and the University of San Carlos. The International Rice Research Institute in Manila holds 160,000 volumes.

The National Museum in Manila collects and exhibits materials and conducts research in anthropology, ethnography, archaeology, botany, geology, history, and maps. The University of Santo Tomás Museum contains an art gallery and archaeology and anthropology collections. Three relatively new museums in Manila exhibit primarily art: Lopez Memorial Museum (1960) exhibits Filipino painters; Metropolitan Museum (1976) exhibits a variety of art forms; and the Philippines Presidential Museum (1986) exhibits fine and decorative arts. The Ateneo Art Museum in Quezon City features post-World War II Philippine paintings, and there is a Mabini Shrine in Tonauan, featuring relics of Apolinaria Mabina, a leader of Philippine independence.

## 45 MEDIA

There are four nationwide telephone networks, including the Philippine Long Distance Telephone Company, run mainly by the private sector, with services concentrated in urban areas. Overseas communications operate via satellites and undersea cables. In 2000 there were 3.1 million mainline telephones and 6.5 million cellular phones nationwide. Radio and television are operated by both government agencies and private concerns. Radio transmitting stations numbered 656 (366 AM and 290 FM) in 2002, and there were 75 television stations in 2000. In 2000, there were 161 radios and 144 television sets per 1,000 population. In 2001, there were about 33 Internet service providers serving 2 million subscribers.

In 2002 there were about 50 major daily newspapers, as compared with six during the Marcos era. The following are among the leading dailies published in metropolitan Manila (with estimated 2002 circulation):

	LANGUAGE	CIRCULATION
<i>People Tonight</i>	English/Filipino	500,000
<i>Abante</i>	English/Filipino	350,000
<i>Ang Filipino Ngayon</i>	Filipino	286,450
<i>Philippine Star</i>	English	275,000
<i>Manila Bulletin</i>	English	265,000
<i>Philippine Daily Inquirer</i>	English	250,000
<i>Tempo</i>	English/Filipino	230,000
<i>People's Journal</i>	English/Filipino	219,000
<i>Manila Times</i>	English	194,000
<i>Malaya</i>	English	175,000
<i>Balita</i>	Filipino	151,000

Under martial law, censorship of the press, radio, and television was imposed by the Marcos government. Many reporters, editors, and publishers were arrested during this period. Censorship was revoked under the Aquino administration. However, there are reports of threats, assaults, and killings of journalists who report on illegal activities such as gambling, logging, prostitution, and the drug trade among powerful individuals or groups, especially outside Manila.

## 46 ORGANIZATIONS

Between 1939 and 1949, some 1,370 cooperative associations with 260,134 members were organized. In general, however, consumer cooperatives were ineffectual before 1952. In that year, the first effective cooperative movement, the Agricultural Credit Cooperative Finance Administration, was established with an authorized capital of P100 million; its general aims were to promote organization of small farmers, assist in obtaining credit, establish orderly and systematic marketing, and upgrade agriculture. However, because of graft and corruption within the agency and other parts of the cooperative movement, the cooperative associations slowly died out.

The Philippine Chamber of Commerce and Industry has branches in metropolitan Manila and other important cities, and there are associations of producers and industrial firms in many areas. There are many associations of persons active in such fields as agriculture, architecture, art, biology, chemistry, economics, library service, literature, engineering, medicine, nutrition, veterinary service, and the press. The Philippine Academy is the oldest and best-known scholarly organization.

National youth organizations include the National Youth Parliament, League of Filipino Students, National Indigenous Youth, National Union of Students of the Philippines, Student Christian Federation of the Philippines, Young Christian Workers of The Philippines, Boy Scouts of the Philippines, and YMCA/YWCA. Kiwanis and Lion's Clubs have programs in the country. There are several national organizations focusing on women's rights, including the Philippine Association of University Women and the National Commission On The Role Of Filipino Women.

The Asian Volunteers' Network for Human Rights in the Philippines is based in Quezon City. International organizations with national chapters include CARE Philippines, Defence for Children International, Habitat for Humanity, Amnesty International, and the Red Cross.

## 47 TOURISM, TRAVEL, AND RECREATION

The increase in tourism that followed the ouster of Ferdinand Marcos was dampened by the national disasters of the early 1990s. The tourism industry has since rebounded. Manila remains the chief tourist attraction. Other points of interest are the 2,000-year-old rice terraces north of Baguio; Vigan, the old Spanish capital; Cebu, the oldest city; numerous beaches and mountain wilderness areas; and homes formerly owned by the Marcoses. Basketball is the national sport, followed in popularity by baseball and soccer. Jai-alai is popular in Manila and Cebu. Cockfighting is legal and often televised. Each tourist must have a valid passport and an onward or return ticket; no visa is required for a stay of less than 21 days.

In 2000, 1,992,169 tourists arrived in the Philippines. Over 50% of tourists arrived from East Asia and the Pacific and North Americans accounted for close to 25%. Revenues from tourism totaled \$2.1 billion. There were 29,841 hotel rooms with 53,752 bed-places and a 59% occupancy rate.

According to 2003 US government estimates, the cost of staying in Manila is \$194 per day. Travel expenses are estimated at \$182 per day for Cebu City.

## 48 FAMOUS FILIPINOS

Filipinos have made their most important marks in the political arena. Foremost are José Rizal (1861–96), a distinguished novelist, poet, physician, linguist, statesman, and national hero; Andrés Bonifacio (1863–97), the leader of the secret Katipunan movement against Spain; and Emilio Aguinaldo y Famy (1869–1964), the commander of the revolutionary forces and president of the revolutionary First Philippine Republic (1899). Notable Filipinos of this century include Manuel Luis Quezon y Molina (1878–1944), the first Commonwealth president; Ramón

Magsaysay (1907–57), a distinguished leader in the struggle with the Hukbalahaps; and Carlos Peña Rómulo (1899–1985), a Pulitzer Prize-winning author and diplomat and the president of the fourth UN General Assembly. Ferdinand Edralin Marcos (1917–89), who won distinction as a guerrilla fighter during the Japanese occupation, was the dominant political figure in the Philippines from his first election to the presidency in November 1965 to his ouster in February 1986. His wife, Imelda Romualdez Marcos (b.1930), emerged as a powerful force within her husband's government during the 1970s. Leading critics of the Marcos government during the late 1970s and early 1980s were Benigno S. Aquino, Jr. (1933–83) and Jaime Sin (b.1928), who became the archbishop of Manila in 1974 and a cardinal in 1976. Maria Corazon Cojuangco Aquino (b.1933), the widow of Benigno, opposed Marcos for the presidency in February 1986 and took office when he went into exile in the same month.

Lorenzo Ruiz (fl.17th cent.) was canonized, along with 15 companion martyrs, as the first Filipino saint. Fernando M. Guerrero (1873–1929) was the greatest Philippine poet in Spanish. Two painters of note were Juan Luna y Novicio (1857–99) and Félix Resurrección Hidalgo y Padilla (1853–1913). Contemporary writers who have won recognition include Claro M. Recto (1890–1960), José García Villa (1914–97), and Carlos Bulosan (1914–56). José A. Estella (1870–1945) is the best-known Filipino composer. Filipino prizefighters have included two world champions, Pancho Villa (Francisco Guilledo, 1901–25) and Ceferino García (1910–81).

## 49 DEPENDENCIES

The Philippines has no territories or colonies.

# QATAR

State of Qatar  
*Dawlat Qatar*

**CAPITAL:** Doha (Ad-Dawhah)

**FLAG:** Maroon with white serrated border at the hoist.

**ANTHEM:** *Qatar National Anthem.*

**MONETARY UNIT:** The Qatar riyal (QR) of 100 dirhams was introduced on 13 May 1973. There are coins of 1, 5, 10, 25, and 50 dirhams, and notes of 1, 5, 10, 50, 100, and 500 riyals. QR1 = \$0.2747 (or \$1 = QR3.64) as of January 2003.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, although some British measures are still in use.

**HOLIDAYS:** Emir's Succession Day, 22 February; Independence Day, 3 September. Muslim religious holidays include 'Id al-Fitr, 'Id al-'Adha', and Milad an-Nabi.

**TIME:** 3 PM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Comprising an area of 11,437 sq km (4,416 sq mi), the State of Qatar consists of a peninsula projecting northward into the Persian Gulf, extending about 160 km (100 mi) N-S and 90 km (55 mi) E-W. Comparatively, the area occupied by Qatar is slightly smaller than the state of Connecticut. It is bordered on the S by the United Arab Emirates (UAE) and Sa'udi Arabia and has a total boundary length of 623 km (387 mi), of which 563 km (350 mi) is coastline. Qatar also includes a number of islands, of which the most important is Halul.

Qatar's capital city, Doha, is located on the Persian Gulf coast.

## <sup>2</sup>TOPOGRAPHY

The terrain is generally flat and sandy, rising gradually from the east to a central limestone plateau. About 56 km (35 mi) long, the Dukhan anticline rises from the west coast as a chain of hills of up to 100 m (325 ft) in height. Some low cliffs mark the northern end of the east coast. The presence of extensive salt flats at the base of the peninsula supports the theory that Qatar was once an island.

## <sup>3</sup>CLIMATE

Qatar's summer, from May to October, is extremely hot. Mean temperatures in June are 42°C (108°F), dropping to 15°C (59°F) in winter. Humidity is high along the coast. Rainfall is minimal.

## <sup>4</sup>FLORA AND FAUNA

Vegetation is generally sparse and typical of Gulf desert regions. The gazelle, once common in Qatar, is now rarely seen. Jerboas (desert rats) and an occasional fox are found. Birds include flamingo, cormorant, osprey, kestrel, plover, lark, and other migrants. Reptiles include monitors, other lizards, and land snakes. Life in the seas around Qatar is considerable and varied, including prawn, king mackerel, shark, grouper, and swordfish.

## <sup>5</sup>ENVIRONMENT

Environmental responsibility is vested in the Ministry of Industry and Agriculture. An Environmental Protection Committee was created in 1984 to monitor environmental problems. Conservation of oil supplies, preservation of the natural wildlife heritage, and increasing the water supply through desalination are high on Qatar's environmental priority list. Air, water, and land pollution are also significant environmental issues in Qatar. In addition to smog and acid rain, the nation has been affected by the air pollution generated during the Persian Gulf War. Pollution from the oil industry poses a threat to the nation's water. The nation's soils have been damaged by pesticides and fertilizers, and its agricultural land is in danger of desertification. Endangered species include the hawksbill turtle, green sea turtle, and white oryx.

## <sup>6</sup>POPULATION

The population of Qatar in 2003 was estimated by the United Nations at 610,000, which placed it as number 158 in population among the 193 nations of the world. In that year approximately 1% of the population was over 65 years of age, with another 26% of the population under 15 years of age. There were 173 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 1.54%, with the projected population for the year 2015 at 711,000. The population density in 2002 was 56 per sq km (146 per sq mi). However, much of the country is uninhabited desert.

It was estimated by the Population Reference Bureau that 93% of the population lived in urban areas in 2001. The capital city, Doha, had a population of 391,000 in that year. Two other major towns have grown up around the oil industry: Dukhan, on the west coast, and the port of Umm Sa'id, south of Doha. According to the United Nations, the urban population growth rate for 2000–2005 was 1.5%.

## **7**MIGRATION

In 1993, the number of immigrant workers was about 85,000, including Pakistanis, Indians, and Iranians. In 2000 there were 409,000 non-citizen residents in Qatar, amounting to more than two-thirds of the population. In that year the net migration rate was 3.7 migrants per 1,000 population. The government views the migration levels as satisfactory.

## **8**ETHNIC GROUPS

In 1999, Gulf and Palestinian Arabs constituted 40% of the population, Pakistanis 18%, Indians 18%, Iranians 10%, and others 14%. The indigenous population (about 100,000) descends from Bedouin tribes which migrated to Qatar during the 1700s.

## **9**LANGUAGES

Arabic is the national language, but English is widely spoken, and Farsi is used by smaller groups in Doha.

## **10**RELIGIONS

Islam is the official religion of Qatar and is practiced by the great majority (95%) of the people. The Qataris are mainly of the Wahhabi sect of the Hanbali school of Islam. There are also small populations of Christians, Jews, Hindus, Bahais, and other faiths; however, it they are mainly foreigners. The constitution does not protect freedom of religion. Public worship of non-Muslim faiths is prohibited. Private worship is permitted for Christians and Jews (known in Islam as "People of the Book").

## **11**TRANSPORTATION

The modern road system dates from 1967. As of 2002, there were 1,230 km (764 mi) of highways, of which 1,107 km (688 mi) were paved. Qatar has overland truck routes from Europe through Sa'udi Arabia via the Trans-Arabia Highway and road links with the United Arab Emirates and Oman. In 2000, there were 101,700 passenger cars and 71,000 commercial vehicles registered. Qatar has no railways or waterways. In 2001, there were 4 airports, 2 with paved runways. Doha International Airport is served by twenty international airlines. In 2001 1,134,600 passengers were carried on scheduled domestic and international flights. Qatar maintains modern deepwater ports at Doha and Umm Sa'id, where a tanker terminal is located. Qatar's National Navigation and Transport Co. enjoys a monopoly on arriving shipments. In 2002, the merchant fleet consisted of 25 vessels with 679,0181 GRT.

## **12**HISTORY

Archaeological evidence shows that human habitation existed in Qatar for many centuries prior to the modern age; however, little is known of Qatar's history until the 18th century. The al-Thani family, forebears of the present rulers, arrived in Qatar then from what is now Sa'udi Arabia. During the same century, the al-Khalifah family, who currently rule Bahrain, arrived from Kuwait.

In 1868, Britain intervened on behalf of the Qatari nobles and negotiated the Perpetual Maritime Truce, signed by Muhammad bin Thani, an accord that terminated the Bahraini claim to Qatar in exchange for a tribute payment. In 1872, however, Qatar fell under Ottoman occupation, and Jasim bin Muhammad bin Thani became Turkish deputy-governor of Qatar. Turkish dominion prevailed until the outbreak of World War I and the subsequent withdrawal of the Turks from the Arabian Peninsula. Qatar thereupon established its independence and, in 1916, Sheikh 'Abdallah bin Jasim al-Thani signed a treaty with the United Kingdom granting British protection in exchange for a central role for the United Kingdom in Qatar's foreign affairs. A 1934 treaty further strengthened this relationship. Commercial

quantities of high-quality oil were discovered at Dukhan in 1940, but full-scale exploitation did not begin until 1949.

In 1960, Sheikh Ahmad bin 'Ali al-Thani succeeded his father, who had become too old to rule effectively. Social and economic development during the subsequent decade was disappointing, especially in view of the increasing availability of oil revenues. In January 1968, the United Kingdom announced its intention to withdraw its forces from the Persian Gulf States by the end of 1971. Discussions took place among the Trucial States, Bahrain, and Qatar, with a view to forming a federation. The Trucial States formed the United Arab Emirates, but Qatar could not agree to the terms of the union. On 3 September 1971, the independent State of Qatar was declared. A new treaty of friendship and cooperation was signed with the United Kingdom, and Qatar was soon admitted to membership in the Arab League and the UN.

On 22 February 1972, Sheikh Khalifa bin Hamad al-Thani, the deputy emir and prime minister, seized power in a peaceful coup, deposing his cousin, Sheikh Ahmad. Since his accession, Sheikh Khalifa pursued a vigorous program of economic and social reforms, including the transfer of royal income to the state. On 31 May 1977, Sheikh Khalifa appointed Sheikh Hamad bin Khalifa al-Thani, his son, as heir apparent and minister of defense.

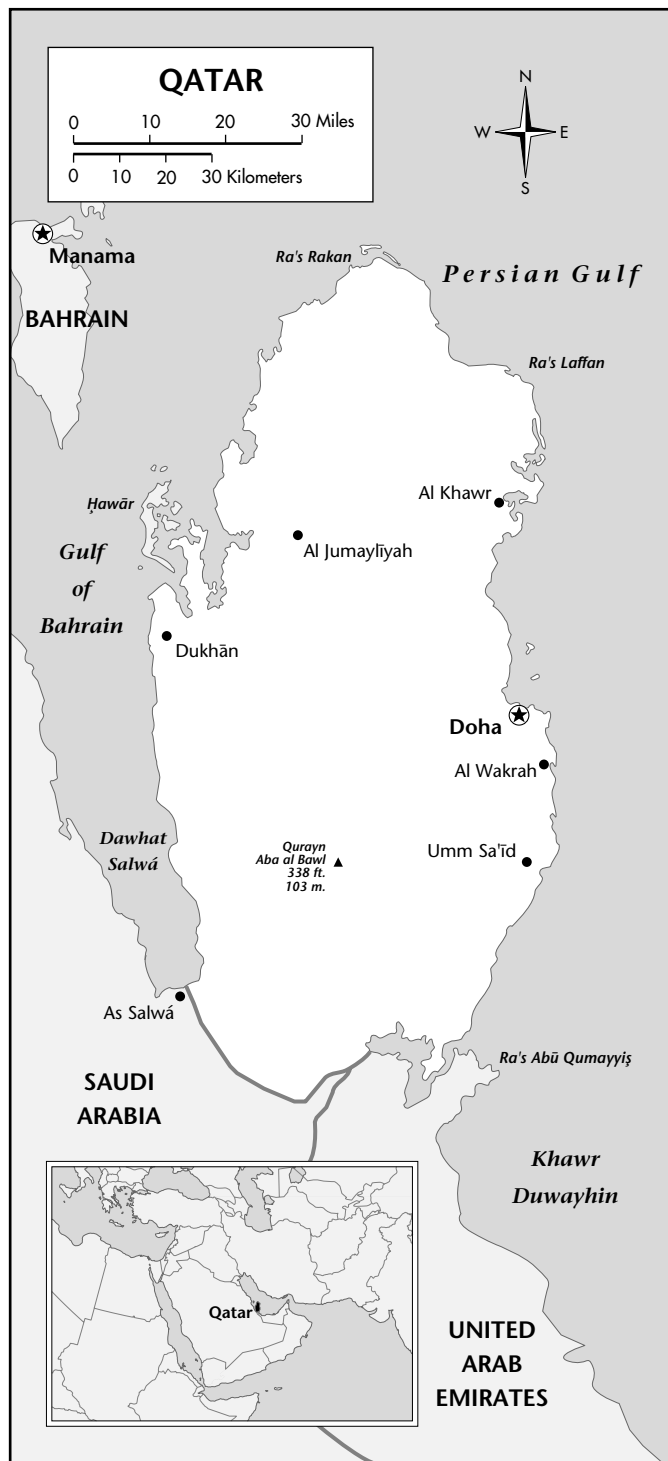

In 1981, Qatar, along with the other Persian Gulf states of Bahrain, Kuwait, Oman, Sa'udi Arabia, and the United Arab Emirates, established the Gulf Cooperation Council (GCC). The GCC attempted to mediate the war between Iran and Iraq, which had erupted in September 1980, but at the same time gave support to Iraq. Qatar's boundary disputes with Bahrain disrupted relations between the two countries in the mid-1980s. In 1991, they agreed to refer their dispute over the Hawar Islands to the International Court of Justice at The Hague. In 1992, there was a minor clash between Qatari and Sa'udi troops over a disputed border. That quarrel was resolved with a boundary agreement signed in Cairo in December 1992.

Qatari forces, although small in size, are active in the collective defense of the GCC and played a helpful role on the allied side in the Gulf War against Iraq.

In 1995, Sheikh Hamad seized power from his father amid a turbulent and secretive attempted coup in February of that year by unknown forces. Sheikh Khalifa, the aging ruler, had spent much of his time before being ousted sailing the Mediterranean on the royal yacht. Also a problem was the aging emir's eccentric method of funding the government, which was to siphon off half of the revenue generated from the country's oil into his personal bank accounts, and pay for government services from those funds. In the late 1980s and early 1990s, the emir felt less inclined to withdraw money than to deposit, and the resulting revenue drain was crippling the economy. When Sheikh Hamad took control of the government, while his father was away on business, the now former emir froze his personal bank accounts, which held, essentially, Qatar's treasury. Estimates of Sheikh Khalifa's personal accounts range from \$4-\$30 billion.

In 1996, the former emir set up a government in exile in the United Arab Emirates. The hostile transfer of power led to friction among the normally contention-free members of the GCC. Also that year, Sheikh Hamad issued writs demanding that his father turn over control of his assets to the state. Initially, the emir had resigned himself to the loss of revenue, but severe budget constraints caused him to cut government spending and, in order to develop the huge off-shore natural gas reserves the country will rely on in the future, huge infrastructure expenses needed to be made.

In 1999, the former emir still claimed to be the legitimate ruler of Qatar, and his allies within the ruling elite were still a source of problems for Sheikh Hamad. However, Sheikh Hamad has

LOCATION: 26°23' to 24°31' N; 50°43' to 51°41' E. BOUNDARY LENGTHS: Persian Gulf coastline, 563 kilometers (350 miles); United Arab Emirates, 45 kilometers (28 miles); Sa'udi Arabia, 60 kilometers (38 miles). TERRITORIAL SEA LIMIT: 3 miles.

continued to rule and implement change in spite of outside threats.

In 1999, Qatar supported the Organization of Oil Exporting Countries (OPEC) efforts to increase oil prices by cutting back crude oil production from March 1999 to April 2000. Qatar was also practicing fiscal discipline and creating low-cost efficiencies.

The government was developing a tariff structure with a monthly ceiling on water and electricity services, previously free of charge. In addition, plans were in the works to implement a foreign investment code in agriculture, industry, tourism, and education ventures.

Perhaps most striking, Sheikh Hamad was encouraging political openness. In 1999, women voted and ran for office in municipal elections for the first time. A constitutional committee was charged with drawing up a permanent constitution under which Qatar would have an elected parliament. Political openness was even extended to the media as Qatar's satellite news channel, Al Jazeera, broke a previous taboo with an open discussion and criticism of the state funding of the ruling family.

On 16 March 2001, the International Court of Justice (ICJ) resolved a territorial dispute between Bahrain and Qatar over the potential oil-and gas-rich Hawar Islands. The islands were controlled by Bahrain since the 1930s but were claimed by Qatar. Bahrain also claimed the town of Zubarah, which is on the mainland of Qatar. The dispute has lasted for decades and almost brought the two nations to the brink of war in 1986. In its judgment, the ICJ drew a single maritime boundary in the Gulf of Bahrain, delineating Bahrain and Qatar's territorial waters and sovereignty over the disputed islands within. The ICJ awarded Bahrain the largest disputed islands, the Hawar Islands, and Qit'at Jaradah Island. Qatar was given sovereignty over Janan Island and the low-tide elevation of Fasht ad Dibal. The Court reaffirmed Qatari sovereignty over the Zubarah Strip.

During 2002 and into 2003, Qatar, along with the other countries of the Persian Gulf, were confronted with the situation of a potential US-led war with Iraq. On 8 November 2002, the UN Security Council unanimously passed Resolution 1441, calling on Iraq to immediately disarm itself of weapons of mass destruction (WMD) and WMD weapons capabilities, to allow the immediate return of International Atomic Energy Agency (IAEA) and UN weapons inspectors, and to comply with all previous UN resolutions regarding the country since the end of the Gulf War in 1991. If Iraq was found to be in "material breach" of the resolution, "serious consequences" were to result. The United States and the United Kingdom began amassing troops in the region, and by the end of February 2003, the number of troops in the Persian Gulf was approximately 200,000. As of 1 February, there were approximately 3,500 US military personnel in Qatar. In December 2002, a computer-assisted exercise entitled "Internal Look" was carried out in Qatar, involving approximately 1,000 military planners and a mobile command center, which would eventually be staffed by 1,600 US and UK troops. As of March 2003, an aerial command-and-control center was being constructed at Al Udeid, in the event that US forces could not use their control center in Sa'udi Arabia. The Al Udeid air base has the longest runway in the Gulf region (approximately 5,000 m/15,000 ft), and can accommodate nearly 100 aircraft. Operating at Al Udeid in early 2003 was air-to-air refueling of tanker aircraft in support of US-led forces in Afghanistan and to patrol Iraq's southern no-fly zone in the aftermath of the 1991 Persian Gulf War. In December 2002, the United States and Qatar signed a bilateral defense agreement that US Secretary of Defense Donald Rumsfeld stated was not connected to Iraq.

However, Qatar has said it would not act in a conflict with Iraq without UN approval. At an Arab League summit held at Sharm el-Sheik, Egypt, on 1 March, sharp divisions between Arab leaders on the Iraq situation emerged, particularly between Libya and Sa'udi Arabia. However, the leaders issued a declaration expressing "complete rejection of any aggression on Iraq," and called for continuing UN weapons inspections. It also called upon Iraq to disarm itself of WMD and the missiles needed to deliver them. At the summit, some leaders argued war was inevitable and that the countries of the region should prepare for its aftermath; some argued that war could be avoided if Iraq were to comply

with weapons inspections; and a third group argued that the summit should issue an unequivocal anti-war declaration.

### 13 GOVERNMENT

Qatar is a monarchy ruled by an emir. In 1970, in anticipation of independence, Qatar promulgated a Basic Law, including a bill of rights, that provides for a 9-member executive Council of Ministers (cabinet) and a 30-member legislative Advisory Council, whose members serve three-year terms. The Council of Ministers, appointed by the emir and led by a prime minister (the head of government), formulates public policy and directs the ministries. Sheikh Khalifa served as acting prime minister from the time of the 1972 coup until ousted by his son, Sheikh Hamad bin Khalifa al-Thani, in 1995. Sheikh Khalifa formed a government in exile in the United Arab Emirates. The ruling al-Thani family continues to hold a majority of cabinet positions and most of the key posts.

In March 1999 elections to a 29-member municipal council were held in which women were allowed to vote and run for office. That July, Sheikh Hamad issued a decree forming a committee to draft a permanent constitution, and has promised a future fully elected parliament.

### 14 POLITICAL PARTIES

There are no organized political parties. Security measures against dissidents are firm and efficient. There is no serious opposition movement. Citizens with grievances may appeal directly to the emir.

### 15 LOCAL GOVERNMENT

Municipal councils have been established in Doha, Khor, Ash-Shamal, and several other towns. The councils manage their own planning and development programs, but they remain directly accountable to the Ministry of Municipal Affairs.

### 16 JUDICIAL SYSTEM

The legal system is based on the *Shari'ah* (canonical Muslim law). The Basic Law of 1970, however, provided for the creation of an independent judiciary, including the court of appeal, which has final jurisdiction in civil and criminal matters; the higher criminal court, which judges major criminal cases; the lower criminal court; the civil court; and the labor court, which judges claims involving employees and their employers. The *Shari'ah* court has jurisdiction in family and criminal cases, and may also assume jurisdiction in commercial or civil cases if requested by a Muslim litigant. Muslims and non-Muslims may request the *Shari'ah* courts to assume jurisdiction in family, commercial, and civil cases.

The losing party in all types of courts may submit their cases to an appeals court. In cases tried by the *Shari'ah* Court, however, it is possible that the same judge will hear both the original case and the appeal.

The judiciary is attached to three different ministries. The civil courts are subordinate to the Justice Ministry. Whereas *Shari'ah* courts fall under the Ministry of Endowments and Islamic Affairs, the prosecutors fall under the Ministry of the Interior.

### 17 ARMED FORCES

The Qatar armed forces consists of 8,500 army, 1,800 naval, and 2,100 air force personnel. Military equipment includes 18 combat aircraft, 19 armed helicopters, and 7 missile-equipped coastal patrol boats and 35 main battle tanks. The army includes a Royal Guard regiment. The US army has approximately 100 troops in Qatar. Defense spending was \$940 million in 2000–01, or 10% of GDP.

## 18 INTERNATIONAL COOPERATION

Following independence, Qatar joined both the UN (21 September 1971) and the Arab League. Qatar participates in ESCWA and all the nonregional specialized agencies except IDA and IFC; it is also a member of the WTO. Qatar belongs to OPEC and OAPEC, as well as to G-77 and the GCC.

## 19 ECONOMY

Until recent decades, the Qatar peninsula was an undeveloped, impoverished area, with a scant living provided by the traditional occupations of pearl diving, fishing, and nomadic herding. In 1940, a major oil discovery was made at Dukhan and, in the ensuing decades, oil has been the dominant factor in the Qatari economy. Oil revenues have provided Qataris with per capita incomes comparable those of the industrialized nations of the West. In 1996, oil revenues accounted for more than 30% of GDP, 70% of export earnings, and 66% of government revenues.

Other economic activities remain limited. Agriculture has received considerable attention in recent years, but most food is still imported. The state encourages free enterprise, provided it does not conflict with the public interest. Real property, however, may be acquired only by Qatari nationals. The discovery of a vast field of natural gas unassociated with Qatar's oil fields promises to add a new dimension to the economy. In 1987, work on the first phase of the North Gas Field project Phase I, with a production capacity of 800 million cubic feet per day, began and was inaugurated in 1991. While Phase I production is meant for domestic consumption, the Phase II development envisages the production of at least an additional 800 million cubic feet per day for export to Japan as liquefied natural gas. The first shipments to Japan began in January 1997. The project was heavily financed by Japanese banks under terms that will limit Qatar's revenues for the next decade. Qatar has 300 trillion cubic feet of proven natural gas reserves; third in the world behind Russia and Iran. Production of natural gas reached 690 billion cubic feet in 1998.

The economy performed sluggishly during the first half of the 1990s but recovered somewhat in 1995 because of a surge in international oil prices and slightly higher rates of oil production. It is estimated that GDP grew by 1.9% in 1995. The government that took over after the coup of 1995 implemented economic reforms that updated the financial sector. In 1998, a temporary drop in international oil prices brought GDP down by 9.2%. However, the recovery of oil prices in the second half of 1999 brought a jump in GDP of 18.9% for the year, and 34.9% in 2000. Per capita income rose from \$20,038 in 1998 to \$24,000 in 2001. Inflation at 2.9% in 1998, dropped to 2.2% in 1999 and -1.0% in 2000.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Qatar's gross domestic product (GDP) was estimated at \$16.3 billion. The per capita GDP was estimated at \$21,200. The annual growth rate of GDP was estimated at 5.6%. The average inflation rate in 2001 was 2%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 1% of GDP, industry 49%, and services 50%.

Foreign aid receipts amounted to about \$2 per capita. Approximately 22% of household consumption was spent on food, 11% on fuel, 5% on health care, and 13% on education. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings.

## 21 LABOR

About 70% of the economically active population is engaged in industry (largely oil-related), commerce, and services. Of the remainder, about 10% work in the agricultural sector and 20% in government. The workforce totaled 280,122, or 53.7% of the population, in 1998. No labor may be recruited without the approval of the Department of Labor, and vacancies must be offered first to Qataris, second to Arabs, and only then to foreigners, who comprised 85% of the workforce in 1992. In 2001, the unemployment rate was 2.7%.

Trade unions are prohibited, and strikes are permitted only after the case has been presented to the Labor Department of the Ministry of Civil Service and an agreement cannot be reached. Government employees, security forces employees, domestic workers, and members of an employer's family are not permitted to strike, nor are workers in public health or security if such a strike would harm the public or lead to property damage. Workers are prohibited from engaging in collective bargaining.

The standard workweek is 48 hours, although most government offices set a 36 hour week. Children as young as 15 may work with parental permission, and some young non-Qataris work in family businesses. However, youths of any nationality do not frequently work in Qatar. While the labor law gives the Amir the authority to set a minimum wage, he has not chosen to do so. Enforcement of safety standards is lax.

## 22 AGRICULTURE

Agriculture is constrained by lack of adequate fertile soil, rainfall, and underground water sources; the aquifers which supply the crops are expected to soon run dry. Recently, treated waste water has been used for irrigation. In 1998, only 1.5% (17,000 hectares/42,000 acres) of the total land area was under cultivation. In 1999, 23,000 tons of dates were produced, mostly for local consumption. Rice is also grown for the domestic market.

## 23 ANIMAL HUSBANDRY

According to 2001 estimates, Qatar had 150,000 sheep, 140,000 goats, 50,000 camels, 14,500 head of cattle, and four million chickens. Output in 2001 included about 18,000 tons of mutton and 4,000 tons of poultry. Dairy and poultry production meets about 25% of domestic needs. Public, private, and foreign financing have all been used recently to establish or expand dairy and poultry farming.

## 24 FISHING

The Qatar National Fishing Co., formed as a Qatar-UK partnership in 1966, was wholly taken over by Qatar in 1980 and has its own shrimp fishing fleet and processing facilities. Fish and shellfish production in 2000 totaled 7,142 tons (up from 4,207 tons in 1999).

Pearl fishing, once important in Qatar, has virtually disappeared. The principal fishing facilities at Doha and Al Khor have been improved. Overfishing and pollution have adversely affected catches, and there is further concern that oil pollution from the Gulf War may worsen conditions even further.

## 25 FORESTRY

There are no forests in Qatar. Imports of forestry products totaled \$14.6 million in 2000.

## 26 MINING

Much of Qatar's economy was based on the production of natural gas, petrochemicals, crude oil, and refined petroleum products. Among other exploitable minerals, production in 2000 was: limestone, 900,000 tons; hydraulic cement, 1.05 million

tons; ammonia, 1.1 million tons; and urea, 748,100 tons. The country also produced clays, gypsum, and sand and gravel.

## 27 ENERGY AND POWER

Qatar's proven recoverable oil reserves, estimated at 15.2 billion barrels in early 2002, dominate the country's economy. For reasons of financial stability and resource conservation, the decision was made in the mid-1970s to limit oil production to no more than 500,000 barrels a day. Production has fluctuated but gradually risen from 310,000 barrels per day in 1983 to 485,000 in 1992. Production in the first half of 2002 amounted to 807,777 barrels per day. Qatar's largest producing oil field is the onshore Dukhan field on the western coast of the peninsula. Offshore production accounts for about 40% of the total, mainly from three of Qatar's six offshore fields about 50 miles from the coast.

Total control over oil production and marketing was assumed by the government in early 1977. The Qatar General Petroleum Corp. (QGPC) controls all oil and gas extraction and production and also acts as an umbrella organization for a number of joint ventures. The National Oil Distribution Company controls refining and distribution. The state-owned oil and gas sector also includes subsidiaries that handle petrochemical production, fertilizer production, and liquefied natural gas. Qatar's gas reserves, the world's third largest, are estimated at 14.4 trillion cu m, representing more than 5% of the world's known reserves; output was about 29 billion cu m in 2000. Nearly all of Qatar's natural gas reserves are in the North Dome Field, considered to be the largest natural gas field (unassociated with oil) in the world.

Qatar's power plants are mostly gas-fired. Electrical capacity was 1,475 MW in 2001, as compared with 70 MW in 1970. Power production in 2000 reached 8.8 billion kWh, of which 100% was from fossil fuels. There are three main electrical power stations, at Ra's Abu Aboud, Al-Arish, and Ra's Abu Fantas. The Ra's Abu Fantas facility, which also includes a water desalination plant, is the largest and newest. A new 380 MW generation unit was added there in June 2002.

## 28 INDUSTRY

Industry in Qatar is restricted by the small size of the population and the paucity of resources other than petroleum and natural gas. Qatar has nevertheless launched an ambitious industrialization plan aimed at diversifying the sources of national income and creating an economy that is not totally dependent on oil revenues. State enterprises include the Qatar Iron and Steel Co. (70% government-owned); the Qatar Fertilizer Co.—QAFCO (70% government-owned, underwent its fourth expansion in 2002); the Qatar National Cement Co. (43% government-owned and no foreign investment); Qatar Petrochemical Company—QAPCO (80% government-owned, produces ethylene, polyethylene, and sulfur); Qatar Liquefied Gas Company—QatarGas (65% owned by Qatar Petroleum); Ras Laffan Liquefied Natural Gas—Ras Gas (70% owned by Qatar Petroleum, began operations in 1999 and expanded in 2001, producing about 10 million tons per year); Qatar Chemicals Company—Q-Chem (51% owned by Qatar Petroleum, established 1997 with expansion into Q-Chem II in 2002); Qatar Fuel Additive Company—QAFAC (50% owned by Qatar Petroleum, commissioned in 1999 to produce 830,000 metric tons per year of methanol and 610,000 metric tons per year of methyl tertiary butyl ether); Qatar Vinyl Company—QVC (25% owned by Qatar Petroleum and 31.9% by QAPCO). It is estimated that industry accounted for almost 10.6% of GDP in 2000, up from 7.5% in 1997.

## 29 SCIENCE AND TECHNOLOGY

The Scientific and Applied Research Center, within the University of Qatar at Doha, coordinates the nation's technological development and seeks to develop ways to utilize the country's natural resources. A soil research station is located at Rodet al-Farassa. The Qatar National Museum, founded at Doha in 1975, has an aquarium and botanical garden, and exhibits dealing with geology, botany, and zoology. In 1986, total expenditures on research and development amounted to 6.7 million riyals; 61 technicians and 229 scientists and engineers were engaged in research and development.

## 30 DOMESTIC TRADE

As elsewhere in the Gulf, wholesale and retail operations in Qatar are frequently combined in the same enterprise. There are a relatively small number of large companies that control most of the retail market, particularly in food imports and distribution. Consumer cooperative societies have also been established for food retail sales. Local laws require that commercial agents be of Qatari nationality; however, a 2000 law has opened up more possibilities for foreign investors. Consumer advertising can be displayed in motion picture theaters, in the press, and on billboards. Radio and television services do not accept advertising.

Normal business hours are from 7:30 AM to 12 noon and from 3:30 to 6 PM. Government offices are open from 7 AM to 2 PM, Saturday through Wednesday. Banks are open from 8 to 12:30 AM. Private sector business hours are usually 8 AM to 12:30 PM and 4 PM to 7:30 PM, Saturday through Thursday. Most businesses are closed on Friday.

## 31 FOREIGN TRADE

Qatar's most important commodity exports are crude petroleum (56%), natural and manufactured gas (30%), and refined petroleum products (2.1%). Other exports include manufactured polymers (3.2%), steel (2.1%), and fertilizers (1.9%).

In 1999, imports were distributed among the following categories:

Consumer goods	17.6%
Food	14.0%
Fuels	0.6%
Industrial supplies	27.1%
Machinery	23.5%
Transportation	17.0%
Other	0.2%

Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
Japan	5,216	358	4,858
Korea	1,952	174	1,778
Singapore	824	14	810
United Arab Emirates	513	225	288
United States	361	335	26
China (inc. Hong Kong)	332	97	235
Thailand	249	35	214
Sa'udi Arabia	115	183	-68
United Kingdom	17	253	-236
Germany	n.a.	266	n.a.
France	n.a.	178	n.a.

## 32 BALANCE OF PAYMENTS

In recent years, Qatar has had a persistent trade surplus, while maintaining an overall balance of payments deficit. The gap in the balance of payments is largely due to massive imports in services and person transfers, and somewhat to outflowing capital transfers.

The Qatar Central Bank reports that in 1998 there was a surplus in the balance of goods of \$358 million, a substantial decline from the surplus of \$897 million posted in 1997. The central bank's numbers were based on an exchange rate of QR3.64 per \$1. The decline was the result of a reduced rate of exports and an increased rate of imports. Although oil exports grew in volume, lower prices for oil resulted in less revenue. More than offsetting the surplus on goods, the balance on services posted a record deficit of \$2.4 billion. Capital and private transfers, as represented in state borrowings from foreign sources and official and private investments in foreign markets recorded a surplus of \$1.34 billion, a 13% increase over 1997. Overall, the 1998 balance of payments registered a deficit of \$736 million. This deficit was largely due to increased borrowing necessary to expand the country's liquefied natural gas (LNG) industry. It is estimated that these deficits will continue for the next several years until revenues from LNG exports from the North Field begin to impact the economy.

The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Qatar's exports was \$11 billion while imports totaled \$3.5 billion resulting in a trade surplus of \$7.5 billion.

## 33 BANKING AND SECURITIES

Qatar's monetary and banking system is headed by the Qatar Central Bank (QCB). The bank supervises all banks and money exchange companies in Qatar. In 1993, the QCB was established to assume the functions of the Qatar Monetary Agency. The bank was set up in part to make it independent of the Ministry of Finance and Petroleum. The QCB is responsible for assuring that all banks operating in Qatar comply with international standards and auditing procedures. Total assets of all banks operating in Qatar was estimated at \$13.8 billion in 2000. As of 1999, there were 14 banks operating in Qatar: seven national, two Arab, and six foreign. There were also 10 money exchange companies. The Qatar National Bank is the largest with total assets exceeding \$5 billion.

The Qatari Riyal was fixed to the US dollar at a rate of US\$1=QR3.65 in June 1980, and has remained at that rate to date. However, for practical purposes the rate is US\$1=QR3.639. Because the exchange rate is fixed, Qatar cannot employ monetary policy for domestic price regulation and employment objectives. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$1.4 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$7.9 billion.

There is no stock exchange. Shares in Qatari public companies are traded through banks.

## 34 INSURANCE

In 1999, there were the eleven insurance companies represented in Qatar, seven of which were foreign owned. The Qatar National Insurance Co. has the largest market share and manages the government's insurance business. In 1999, 1.3% of Qatar's Gross Domestic Product (GDP) was insurance premiums.

## 35 PUBLIC FINANCE

Revenues from oil and gas constitute about 90% of total government income. From 1986 to 1990, the government ran a deficit due to the drop in oil revenues from fallen prices. These deficits often have resulted in the procrastination of payments by the government, which creates a financial difficulty for many private companies.

The US Central Intelligence Agency (CIA) estimates that in 2001/02 Qatar's central government took in revenues of approximately \$5 billion and had expenditures of \$4.8 billion including capital expenditures of \$900 million. Overall, the

government registered a surplus of approximately \$200 million. External debt totaled \$13.1 billion.

### 36 TAXATION

The only tax levied in Qatar (besides customs duties) is an income and profits tax on corporations. The corporate income tax rate ranges from 5% to a maximum of 35% of net profits. There is no other personal or corporate tax liability in Qatar for either foreigners or nationals.

### 37 CUSTOMS AND DUTIES

Import licenses are not required except for liquor (consumption of which is limited to non-Muslims). Customs duties are 4% on almost all commodities except for alcoholic beverages (100%), tobacco and cigarettes (150%), and records and phonographs (15%). A 20% protective tariff is imposed on cement, steel bars, and other products that compete with goods produced in Qatar. The importing of pork and any goods from Israel or South Africa is forbidden. Qatar is a member of the World Trade Organization and the Gulf Cooperation Council, through which it signed a free trade agreement that provides duty-free access to goods from GCC member nations.

### 38 FOREIGN INVESTMENT

The Qatar government encourages overseas investment in Qatar conditioned on a majority Qatari interest. For example, the Qatar Petrochemical Company is jointly owned by the government of Qatar (80%), the French company Cdf Chimie Atochem (10%), and the Italian company Enichem (10%). Qatar Liquefied Gas Company, which began production in 1996, is a venture between the state-owned Qatar General Petroleum Corporation (QGPC) with 65% and four other foreign firms including the US firm Mobil Oil with a 10% stake. In 1992 the firm signed a sales and purchase Agreement with the Chubu Electric Power Company in Japan for the sale of liquefied natural gas (LNG) per year for a period of 25 years. Another US company, Phillips Corporation signed an agreement with QGPC in May 1977 for establishing a new \$750 million petrochemical complex at Umm Said Industrial Area.

Until the mid 1990s, Japanese and European firms were the leading international suppliers to the following industrial sectors: power generation, water desalination, telecommunications, motor vehicles, heavy machinery, and petroleum equipment. Since then, however, the market share of US companies has risen to over 14%. Foreign investment in enhanced oil recovery and production, and in liquefied natural gas (LNG) across the period 1992 to 2002 is estimated to have totaled over \$10 billion. Published Foreign direct investment (FDI) statistics show a peak of \$418.3 million in 1997, declining to \$113.3 million in 1999. In 2000 FDI rose to \$251.6 million, but declined to \$237.4 million in 2001. Average annual FDI 1997 to 2001 was \$273.58 million.

### 39 ECONOMIC DEVELOPMENT

Qatar follows a policy of diversifying and extending its industrial and commercial activities to reduce the current dependence on oil. Infrastructure, heavy and light industry, agriculture, and fishing have all been development targets. The Industrial Development Committee encourages investment and supervises industrial growth. The government also uses surplus oil revenues on the international money market to protect the purchasing power of those revenues. Qatar in the late 1990s launched some major/minor projects worth about \$7 billion: LNG plant expansion of the present fertilizer and petrochemical plants, aluminum smelter, Al Wusail power/water desalination plant, new Doha international airport, and upgrading and expansion of the offshore oil fields. Foreign investment in Qatar's oil sector

and industrial projects is estimated to have reached \$10 billion since 1992.

Qatar has extended economic assistance to other Arab states, to other developing nations, and to Palestinian organizations.

### 40 SOCIAL DEVELOPMENT

Public health services and education are provided free by the state through the Ministry of Labor and Social Affairs, which also provides help to orphans, widows, and other Qatari nationals in need of assistance.

Both law and Islamic customs closely restrict the activities of Qatari women, who are largely limited to roles within the home. Women are not allowed to obtain a driver's license without the permission of her husband. Shari'ah law governs inheritance and child custody matters and favors men. However, growing numbers of woman are receiving government scholarships to study abroad, and some women work in education, medicine, and the media. Women comprise two-thirds of the student body at Qatar University. Although domestic violence occurs, it is not a widespread problem.

Non-Muslims and Shi'a Muslims experience discrimination in employment and education. They are also unable to bring suits as plaintiffs in Shari'ah courts. Noncitizens make up 75% of the workforce yet are discriminated against and sometimes mistreated. A constitutional committee convened in 1999 to draft a permanent constitution that would allow for parliamentary elections. Corporal punishment is allowed by law, although amputation is not. In 1995, an American received 90 lashes for alleged homosexual activities.

### 41 HEALTH

Free public health services are extended to all residents of Qatar, regardless of nationality. The Ministry of Health has tried with some success to keep pace with an expanding population. As of 1985 there were three hospitals, with a total of 885 beds, and 20 health centers. In 1990 there were 2.9 hospital beds per 1,000 inhabitants. The nurse to doctor ratio was 1.5 to 1 in 1992. As of 1996 there were 1.3 physicians, 2.9 nurses, 0.2 dentists, and 0.5 pharmacists per 1,000 people. In 1991-93, 100% of the population had access to safe water and 100% of the population had access to health care services.

Life expectancy was estimated at 72.9 years as of 2002. That same year, infant mortality was an estimated 20.7 deaths per 1,000 live births. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 15.8 and 4.3 per 1,000 people. The fertility rate in 1999 was 2.6 children per woman living throughout her childbearing years.

The immunization rates for a child under one were as follows in 1994: diphtheria, pertussis, and tetanus, 91%; polio, 91%; measles, 86%; hepatitis, 90%; and tuberculosis, 94%. In 1993, there were 310 malaria cases. In 1995, no polio or tetanus cases were reported.

### 42 HOUSING

A "popular housing" scheme provides dwellings through interest-free loans and installment repayments on easy terms. Occupants are required to pay only 60% of the cost of their houses during a period of 20-35 years. To qualify for ownership, an applicant must be a married Qatari national with a limited income, between the ages of 20 and 50 years, and unable to build a house on his own. Qataris facing extreme hardship can receive a free house. Foreign nationals are not permitted to buy real estate. In 1991-93, 100% of the population had access to safe water.

### 43 EDUCATION

Adult illiteracy in the year 2000 was estimated at 18.7% (males, 19.5%; females, 16.8%) and continues to decline. Education is compulsory and free for all residents 6-16 years of age; a 100%

attendance rate for primary levels is the immediate target. As of 1996, there were 174 schools with 5,864 teachers and 53,631 pupils at the primary level. Student-to-teacher ratio stood at nine to one. Secondary level schools had approximately 4,000 teachers and 38,594 pupils in the same year. The pupil-teacher ratio at the primary level was 13 to 1 in 1999. In the same year, 95% of primary-school-age children were enrolled in school, while 78% of those eligible attended secondary school. All children receive free books, meals, transport, clothing, and boarding facilities if required. Scholarships for higher education abroad are given to all who qualify. As of 1995, public expenditure on education was estimated at 3.3% of GDP.

The leading higher educational institution is the University of Qatar, founded at Doha in 1973. In addition to faculties of education, science, humanities, social sciences, Islamic studies, and engineering, the university comprised a Language Teaching Institute (founded in 1972) and a Regional Training Center, established in 1979 with UNDP technical assistance. Enrollment in all higher-level institutions in 1997 was 8,475 pupils, with 643 teaching staff.

#### 44 LIBRARIES AND MUSEUMS

The Qatar National Library in Doha (founded in 1962) has 270,000 volumes. The University of Qatar library has 341,000 volumes. The British Council maintains a collection of 45,000 volumes. The Qatar National Museum in Doha has five major sections: the old Amiri Palace (11 buildings), and a new palace, aquarium, lagoon, and botanical gardens.

#### 45 MEDIA

Qatar enjoys excellent external telephone, telex, and cable facilities. Direct-dial telephone service is available for most parts of Europe, the Middle East, and the US. There were an estimated 142,000 mainline telephones in 1997 with an additional 43,476 cellular phones in use.

Radio transmissions include 12 hours per day of English-language service. A French-language service was instituted in 1985. As of 1998 there were 6 AM and 5 FM radio stations. In 2001, there was one television station. Broadcasts are mostly in Arabic. In 1997 there were 268 radios and 273 television sets per 1,000 population. In 2001, there were 75,000 Internet subscribers, with access available through the private telecommunications monopoly.

In 2002, there were six major daily newspapers. Commercial publications available in Qatar (with 2002 circulation figures) include the daily newspapers *Al-Arab* (25,000), *Ar-Rayah* (25,000), *Al-Sharq* (45,000), *Al-Wattan* (NA), *Daily News Bulletin* (NA), and *Gulf Times* (15,000). As of 1995 there were two major political weeklies (with 1995 circulations) *Al-Orouba* (50,000) and *Al-Ahad* (11,000).

The official censorship of the print media was lifted in 1995. Since then, it is said that the print media have been free of government interference. The censorship function continues for movies, videos, and radio and television programming. Also many foreign publications are banned, or have significant portions blacked out. Items typically censored are those containing sexually explicit material or anything deemed hostile or contrary to the teachings of Islam.

#### 46 ORGANIZATIONS

The Qatar Chamber of Commerce was founded in Doha in 1963. There were numerous family, social, and sporting clubs, including the Beacon Club and the Doha Sailing Association. National youth organizations include the Qatar Boy Scouts Association and the Qatar Student Association. The Red Crescent Society is active.

#### 47 TOURISM, TRAVEL, AND RECREATION

Tourist attractions in Qatar are somewhat limited, with small museums, mosques, and historic sites being the primarily sites of interest. International tourists in Qatar numbered 435,000 in 1997, a 33% increase over the previous year. There have been more international conferences and visa restrictions have been relaxed. Qatar Airways increased routes, and a direct flight to London has been implemented. Most of the tourist arrivals are from Europe. Hotels rooms numbered 1,998 with 2,710 beds and a 78% occupancy rate.

In 2002, the US State Department estimated the cost of staying in Qatar at about \$184 per day.

#### 48 FAMOUS QATARIS

Sheikh Khalifa bin Hamad al-Thani (b.1932) was emir of Qatar from 1972 to 1995. The heir-apparent Sheikh Hamad bin Khalifa al-Thani (b.1948) became emir in June 1995 following a bloodless coup that ousted his father.

#### 49 DEPENDENCIES

The State of Qatar has no territories or colonies.

# SAMOA

Independent State of Samoa

*Malo Sa'oloto Tuto'atasi o Samoa i Sisifo*

**CAPITAL:** Apia

**FLAG:** The upper left quarter of the flag is blue and bears five white, five-rayed stars representing the Southern Cross; the remainder of the flag is red.

**ANTHEM:** *The Flag of Freedom.*

**MONETARY UNIT:** The Samoan tala (s) is a paper currency of 100 sene. There are coins of 1, 2, 5, 10, 20, and 50 sene and 1 tala, and notes of 2, 5, 10, 20, and 100 talas. s1 = US\$0.3333 (or US\$1 = s3.00) as of January 2003.

**WEIGHTS AND MEASURES:** British weights and measures are used.

**HOLIDAYS:** New Year's, 1–2 January; Independence Holidays (first three workdays of June), Anzac Day, 25 April; Christmas Day, 25 December; Boxing Day, 26 December. Movable religious holidays are Good Friday, Easter Monday, and Whitmonday.

**TIME:** 1 AM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Samoa consists of the islands of Savai'i and Upolu and several smaller islands, of which only Manono and Apolima are inhabited. The country, situated almost centrally both in the Pacific Ocean and among the South Sea islands, has a total land area of 2,944 sq km (1,137 sq mi), extending 150 km (93 mi) ESE–WNW and 39 km (24 mi) NNE–SSW. Savai'i and Upolu, separated by the Apolima Strait at a distance of nearly 18 km (11 mi), have a combined coastline of 403 km (250 mi). Comparatively, the area occupied by Samoa is slightly smaller than the state of Rhode Island.

## <sup>2</sup>TOPOGRAPHY

The islands are volcanic, with coral reefs surrounding most of them. Rugged ranges rise to 1,100 m (3,608 ft) on Upolu and 1,857 m (6,094 ft) on Savai'i. Apolima is a volcanic crater whose wall is pierced by a passage that connects its harbor with the sea. Manono, about 70 m (230 ft) high, consists chiefly of coral sand. The islands are in an area of active volcanism. Severe eruptions occurred in Savai'i during 1905–11.

## <sup>3</sup>CLIMATE

The climate is tropical, but because of the oceanic surroundings, temperature ranges are not considerable. The hottest month is December, and the coldest is July; the mean daily temperature is about 27°C (81°F). The year is divided into a dry season (May to October) and a wet season (November to April). Rainfall averages 287 cm (113 in) annually, and the average yearly relative humidity is 83%. Although the islands lie outside the normal track of hurricanes, severe storms occurred in 1889, 1966, and 1968. Trade winds from the southeast are fairly constant throughout the dry season.

## <sup>4</sup>FLORA AND FAUNA

Lush vegetation covers much of the land. Along the coast there are mangrove forests, pandanus, Barringtonia, hibiscus, and strand vegetation, commonly found throughout the Pacific. The

adjacent lowland forest, which originally stretched inland over the lower slopes of the mountains, has been cut down extensively on Upolu and in more limited areas on Savai'i. Inland and at higher elevations, the rain forests contain trees and lianas of many genera and species. The higher elevations of Savai'i contain moss forest and mountain scrub.

Fifty species of birds are found; 16 of these are seabirds, many of which visit Samoa only during the breeding season. Sixteen of the 34 species of land birds are indigenous. Among the latter are small doves, parrots, pigeons, and wild ducks. The most interesting bird, scientifically, is the tooth-billed pigeon (*Didunculus strigirostris* Peale), which some ornithologists regard as the connecting link between bird life of the present and the tooth-billed birds of zoological antiquity.

The only indigenous mammals in Samoa are the rat (*Mus exulans* Peale) and the flying fox (*Pteropus samoensis* Peale). Numerous species of birds and mammals, chiefly domesticated, have been introduced by the Samoans and Europeans. Two species of snakes, several different lizards, and the gecko are found. Insect life includes many species of moths, beetles, spiders, and ants. The mosquito (*Stegomyia pseudoscutellaris*) is a carrier of human filaria.

## <sup>5</sup>ENVIRONMENT

Samoa's environmental problems include soil erosion, damage to the nation's forests, and the need for protection of its wildlife. According to United Nation's sources, the forests are eliminated at a rate of 4–8,000 ha per year due to the expansion of farming activity. The lack of adequate sewage disposal facilities, as well as siltation and industrial by-products, threaten the nation's marine habitat's. Samoa's water supply is too small to support its current population. Threatened species include the insular flying fox, hawksbill turtle, Samoan moorhen, and Samoan flying fox.

## <sup>6</sup>POPULATION

The population of Samoa in 2003 was estimated by the United Nations at 177,000, which placed it as number 173 in population among the 193 nations of the world. In that year approximately

5% of the population was over 65 years of age, with another 41% of the population under 15 years of age. There were 109 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 0.97%, with the projected population for the year 2015 at 203,000. The population density in 2002 was 60 per sq km (156 per sq mi).

It was estimated by the Population Reference Bureau that 22% of the population lived in urban areas in 2001. Apia, the capital city and only major town, had a population of 38,000 in that year. According to the United Nations, the urban population growth rate for 2000–2005 was 3.2%.

## 7 MIGRATION

Under German colonial rule, many Chinese laborers were imported to work on plantations. More recently, there has generally been a net annual loss of population through migration. Emigration (estimated at 5,278 in 1988) consists mainly of students going to New Zealand to continue their education, and Samoans seeking work there. In addition, several thousand Samoans live in American Samoa and other parts of the US. The total abroad in these countries and Australia was estimated at 76,200 in 1989.

The migration rate in 2000 was -22.8 migrants per 1,000 population.

## 8 ETHNIC GROUPS

Samoans comprise 92.6% of the total population. The Samoans are the second-largest branch of the Polynesians, a people occupying the scattered islands of the Pacific from Hawaii to New Zealand and from eastern Fiji to Easter Island. Most of the remaining Samoans are of mixed Samoan and European or Asian descent. Euronians (persons of European and Polynesian descent) make up 7% of the total, and Europeans constitute 0.4%.

For many years, all inhabitants of Samoa were accorded a domestic status as Samoan or European. Residents are now officially classed as either citizens or foreigners. Among Samoan citizens, however, the distinction between persons of Samoan or European status is still recognized. Most Samoans live in foreshore villages, while non-Samoans predominate in Apia and its environs.

## 9 LANGUAGES

Samoan is the universal language, but both Samoan and English are official. Some Chinese is also spoken. Most of the part-Samoans and many others speak English, and it is taught in the schools.

## 10 RELIGIONS

Over 99% of Samoans profess some form of Christianity and religious observance is strong among all groups. The Congregational Christian Church of Western Samoa, a successor to the London Missionary Society, is self-supporting and is the largest religious body in the country, comprising about 43% of the population, according to a 2002 report. The Roman Catholic (21%) and Methodist churches (17%) also have large followings. The Mormon (10%) and Seventh-Day Adventist (about 3%) churches, the Baha'is, Muslims, and a number of other denominations have smaller congregations located in various parts of the country.

## 11 TRANSPORTATION

The road system in 2002 totaled 836 km (519 mi), of which 267 km (166 mi) were paved; most are on the northern coast of Upolu. Buses and taxis provide public transport. In 2000, there were 3,900 passenger cars and 3,300 commercial vehicles.

Diesel-powered launches carry passengers and freight around the islands, and small motor vessels maintain services between Apia and Pago Pago in American Samoa. Fortnightly cargo and passenger connections are maintained with New Zealand, and scheduled transpacific services connect Samoa with Australian, Japanese, United Kingdom, and North American ports. Apia is the principal port; Asau, on Savai'i, was opened as a second deep-sea port in 1972.

As of 2001, there were 3 airports, each of which had a paved runway. Faleolo Airport, 35 km (22 mi) west of Apia, is the principal air terminal. Polynesian Airlines provides daily air connections with Pago Pago and regularly scheduled flights to other Pacific destinations; through Pago Pago there are connecting flights to New Zealand, Australia, and the United States. Air Samoa and Samoa Aviation provide internal air services between Upolu and Savai'i, and Hawaiian Airlines provides direct service between Honolulu and Faleolo and commuter service between Faleolo and Pago Pago. In 2001, 173,500 passengers were carried on scheduled domestic and international flights.

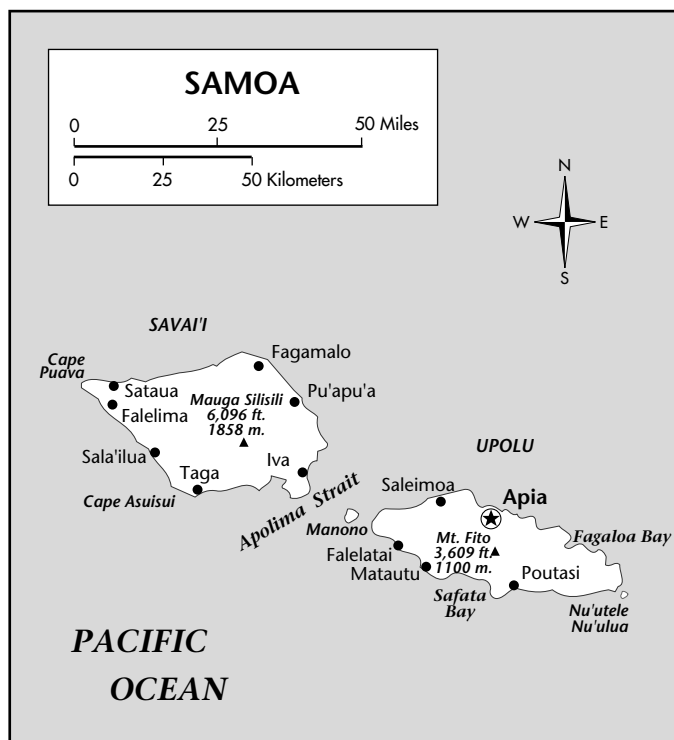

## 12 HISTORY

Archaeological evidence on Upolu indicates that Samoa was colonized by maritime traders of the Lapita culture at least as early as the 1st millennium BC. From the mid-13th century AD, genealogies, important titles, traditions, and legends give considerable information on the main political events. The first Europeans to sight the islands were the Dutch explorer Jacob Roggeveen in 1722 and the French navigator Louis de Bougainville in 1768. But the world knew little about Samoa until after the arrival of the missionary John Williams in 1830 and the establishment of the London Missionary Society.

Williams' arrival coincided with the victory of one group of chiefs over another, ending a series of violent internecine wars. Runaway sailors and other Europeans had already settled among the Samoans and had assisted the chiefs in their campaigns. Whalers also visited the islands, and from time to time the warships of great powers visited Apia to oversee the activities of whaling crews and settlers. Naval officers and missionaries both began to consult with the dominant group of chiefs as if it represented a national government and to treat its leader as a king. In time, semiofficial representatives of Great Britain and the United States were stationed in Apia. Between 1847 and 1861, the United States appointed a commercial agent, and Britain and the city of Hamburg appointed consuls.

Factional rivalries took a new turn as British, US, and German consular agents, aided sometimes by their countries' warships, aligned themselves with various paramount chiefs. Intrigues among the chiefs and jealousies among the representatives of the great powers culminated in civil war in 1889. In the Berlin Treaty, which followed, Britain, the United States, and Germany set up a neutral and independent government under King Malietoa Laupepe, and their consuls were authorized to constitute Apia as a separate municipality. The death of King Malietoa in 1898 led to a dispute over the succession, and the three powers intervened once again. In 1899, they abolished the kingship, and in 1900, they signed a series of conventions that made Samoa a German protectorate. The German administration continued to experience difficulties, leading to the exile of several Samoan leaders and the suspension of others from office. With the outbreak of World War I in 1914, New Zealand military forces occupied Samoa, and from 1919 to 1946, New Zealand administered the islands as a mandate of the League of Nations.

In 1927, local opposition to the New Zealand administration among both the Samoan and the European communities resulted in the formation of a nationalistic organization known as the Mau, which embarked on a program of civil disobedience. Its members withdrew from political life, from schools, and from all

LOCATION: 13° to 15°S; 171° to 173° W. BOUNDARY LENGTHS: Savai'i 188 kilometers (117 miles); Upolu coastline, 183 kilometers (114 miles). TERRITORIAL SEA LIMIT: 12 miles.

contact with the government. The protests lasted in one form or another until 1936, when the leaders of the Mau reached an agreement with the administration and reentered the political life of the territory.

In 1946, a trusteeship agreement was approved by the UN General Assembly, and New Zealand formally committed itself to promote the development of Samoa toward ultimate self-government. The passage of the Samoa Amendment Act of 1947 and a series of further amendments governed Samoa's subsequent evolution toward independence. An executive council was reconstituted in 1957, and the New Zealand high commissioner withdrew from the Legislative Assembly, which thenceforth was presided over by an elected speaker. In 1959, an executive cabinet was introduced, and in 1960, the constitution of the Independent State of Samoa was adopted. This was followed by a plebiscite under UN supervision in 1961 in which an overwhelming majority of voters approved the adoption of the constitution and supported independence.

On 1 January 1962, Samoa became an independent nation under the name of Western Samoa. Tupua Tamasese Meaoli and Malietoa Tanumafili II became joint heads of state. When the former died on 5 April 1963, the latter became the sole head of state. Fiaame Faumuina Mataafa was independent Western Samoa's first prime minister (1962–70) and served again in that post from 1973 until his death in 1975.

During the late 1970s and early 1980s, Western Samoa suffered from a worsening economy and growing political and social unrest. A divisive public-sector strike from 6 April to 2 July 1981 cut many essential services to a critical level. The leadership of Tupuola Taisi Efi, who later became head of the Christian Democratic Party and was prime minister from 1976, was successfully challenged by the Human Rights Protection Party (HRPP), which won the February 1982 general election. Judicial

rulings subsequently nullified some of the election results, and Tupuola returned to power from September to December. On 30 December 1982, however, a second HRPP government was formed, with Tofilau Eti as prime minister. Controversy erupted in 1982 over the signing by the HRPP government in August of a protocol with New Zealand that reduced substantially the right of Western Samoans to New Zealand citizenship. Tofilau resigned in December 1985, and Va'ai Kolone became prime minister in January 1986 as head of a new coalition government comprised of 15 CDP members and 12 former HRPP members. Tupuola was named deputy prime minister of the new government. In April 1988, Tofilau Eti was again appointed prime minister and approved by the legislative assembly.

In 1991, Western Samoa held its first elections under an arrangement of universal suffrage that was instituted after a national referendum passed in 1990. In that election, the HRPP won 28 of 47 seats and Tofilau once again became prime minister. In elections held 26 April 1996, Tofilau Eti retained his post as prime minister.

In July 1997, the country officially changed its name from Western Samoa to Samoa following a June affirmative vote by the legislative assembly. Tofilau Eti resigned due to poor health in November 1998 and died in March 1999 at the age of 74. He was succeeded by deputy prime minister, Tuila'epa Sailele Malielegaoi. In elections held 2 March 2001, Tuila'epa retained his post as prime minister, with the HRPP taking 23 seats in the Fono. The Supreme Court ordered four by-elections, which were won by the HRPP, bringing its total to 30 of 49 parliamentary seats. The HRPP formed a government with the support of several independent members of parliament.

In June 2002, New Zealand Prime Minister Helen Clark issued an apology to Samoans for injustices inflicted upon them during colonial times. During the time when New Zealand ruled the country (from 1919 to 1962), 22% of the population died as the result of an influenza virus introduced to the islands, and in 1929, New Zealand police fired upon and killed 9 people during a rally for independence.

### 13 GOVERNMENT

Executive power is vested in the head of state. Although Malietoa Tanumafili II, head of state in 1962, had lifetime tenure, the constitution took effect 1 January that year; it provides for his successors to be elected for a term of five years by the Fono, or legislative assembly. The powers and functions of the head of state are far-reaching. All legislation must have his assent before it becomes law. He also has power to grant pardons and reprieves and to suspend or commute any sentence by any court. Executive authority is administered by a cabinet consisting of a prime minister and 12 other ministers appointed by him. The head of state and the cabinet members comprise the executive council.

The 49-member parliament consists of the head of state and the Fono. Forty-seven Samoan members are elected out of the approximately 20,000 matai—traditional chiefs or heads of families—in six two-seat and 35 single-seat constituencies. The election of the 47 Samoan members is by universal adult suffrage. Citizens of non-Samoan origin who qualify for registration on the individual voters' roll elect the two other members by universal suffrage.

### 14 POLITICAL PARTIES

Technically, candidates for public office campaign as individuals, but political parties are becoming increasingly important. The Human Rights Protection Party (HRPP) was founded in 1979 as an opposition party to the government of Prime Minister Tupuola Efi. Tupuola's followers, although not yet formally organized, had, in effect, constituted the ruling party. Following the elections of 27 February 1982, the HRPP was able to command 23 votes in the Fono, as compared with 22 for Tupuola's party. The HRPP

leader, Va'ai Kolone, was chosen as prime minister, but in September the Supreme Court, upholding charges of electoral fraud, voided the election of two HRPP candidates, including the prime minister himself. Tupuola was then named prime minister, but by-election victories soon restored the HRPP majority in the Fono, and in December his government fell. On 30 December 1982, Tofilau Eti, the new HRPP leader, was chosen prime minister. He remained prime minister following the February 1985 elections, in which the HRPP captured 31 of the 47 seats, but resigned that December after his budget failed to win approval and the head of state refused to call new elections. In January 1986, a new coalition government led by Va'ai Kolone was formed.

Tofilau Eti, leader of the HRPP, was reelected prime minister in April 1988 as the result of a contested election that was settled by a judge flown in from New Zealand. A gradual deterioration in the bilateral relationship between Samoa and New Zealand continued with a dispute concerning the special immigration quota applied to Samoans. In October 1990 a referendum on the issue of universal suffrage narrowly passed. A proposal to establish an upper legislative chamber composed of traditional chiefs failed. In a general election held in April 1991 the ruling HRPP won 28 of 47 seats in the Fono, and Tofilau was reelected prime minister. Among the new ministers appointed was Fiaame Naomi, the first female cabinet member, as minister of education, youth, sports and culture, and labor. Polling was again held 26 April 1996, and Tofilau Eti remained prime minister. Tuila'epa Sailele Malielegaoi became prime minister in November 1998 as a result of the resignation of Tofilau due to ill health. He was elected prime minister in March 2001, with the HRPP taking 24 seats in the Fono; after 4 by-elections, the HRPP held 30 seats. In the 2001 elections, the Samoan National Development Party took 13 seats, and the Samoa United People's Party took 1 seat. Independents held 11 seats.

## 15 LOCAL GOVERNMENT

With the exception of the Apia area, local government is carried out by the village fono, or council of matai and orators, and where and when necessary, through meetings of matai and orators of a district. The main administrative link between the central government and the outside districts is provided by the part-time officials in each village who act as government agents in such matters as the registration of vital statistics; local inspectors represent the various government departments.

## 16 JUDICIAL SYSTEM

Court procedure is patterned after practices in British courts. Samoan custom is taken into consideration in certain cases. English is the official language of the court, but Samoan is also used. The supreme court has full civil and criminal jurisdiction for the administration of justice in Samoa. It is under the jurisdiction of the chief judge, who is appointed by the head of state, acting on the advice of the prime minister. The court of appeal consists of three judges who may be judges of the supreme court or other persons with appropriate qualifications.

Magistrates' courts are subordinate courts with varying degrees of authority. The highest, presided over by the senior magistrate, may hear criminal cases involving imprisonment of up to three years or cases involving only fines. The land and titles court has jurisdiction in disputes over Samoan land and succession to Samoan titles. Samoan assessors and associate judges possessing a good knowledge of Samoan custom must be present at all sittings of the court. Lawyers are not permitted to appear in the land and titles court; each party appoints its own leader, usually a chief or an orator. Court decisions are based largely on Samoan custom.

Some civil and criminal matters are handled by village "fonos" (traditional courts) which apply a considerably different

procedure than that used in the official western-style courts. The Village Fono Law of 1990 affords legal status to the decision of the village fono and allows appeal from fono decisions to the lands and titles court and to the supreme court. In July 2000, the supreme court ruled that the Village Fono Law could not be used to infringe upon villagers' freedom of religion, speech, assembly, or association.

## 17 ARMED FORCES

Samoa has no armed forces, and relies on its police force for internal security. The government foresees no military development because of financial considerations and the absence of threats from abroad. There are informal defense ties with New Zealand under the terms of the 1962 Treaty of Friendship.

## 18 INTERNATIONAL COOPERATION

Samoa became a member of the UN on 15 December 1976 and belongs to ESCAP, FAO, IBRD, ICAO, IDA, IFAD, IFC, IMF, UNCTAD, UNESCO, and WHO. The nation also participates in the Asian Development Bank, Commonwealth of Nations, G-77, South Pacific Commission, and South Pacific Forum, and is a signatory of the Law of the Sea. Samoa has observer status at the World Trade Organization. An Inter-Samoa Consultative Committee, made up of representatives from Samoa and American Samoa, holds meetings alternately in both countries to discuss matters of mutual interest. By treaty, New Zealand is the exclusive representative of Samoa in the conduct of its foreign affairs outside the Pacific region.

## 19 ECONOMY

The economy is based largely on agriculture, which, including fisheries, provides 50% of the GDP and employs two-thirds of the work force, mostly in subsistence farming of food crops. In addition to agricultural exports, tourist revenues and remittances from overseas workers are also important sources of foreign exchange. Economic performance has suffered since 1990 due to the devastation to crops, tourism, and infrastructure caused by cyclones Ofa and Val. In 1993/94 a fungal disease reduced taro production by 97%, threatening the island's basic food crop and causing negative growth in the economy. Samoa has the highest unemployment rate and the lowest wages in Oceania.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Samoa's gross domestic product (GDP) was estimated at \$618 million. The per capita GDP was estimated at \$3,500. The annual growth rate of GDP was estimated at 6%. The average inflation rate in 2001 was 2.5%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 50% of GDP, industry 18%, and services 32%. Foreign aid receipts amounted to about \$248 per capita and accounted for approximately 17% of the gross national income (GNI).

## 21 LABOR

In 2000, there were approximately 90,000 workers in Samoa. The majority is engaged in agriculture, and cash crops are raised as supplements to subsistence crops. Agriculture, forestry and fishing account for 65% of wage employment; services account for 30% and industry for 5%.

There are only two trade unions in the country, representing workers at the three major banks and the country's only factory. Although small, a trade union movement has been established. Public employees are represented by the Public Service Association. Approximately 20% of the workforce is unionized. Over the years, thousands of skilled and semiskilled Samoans

have left the islands, mainly drawn away by better economic opportunities in New Zealand, Australia, and the United States.

Labor is generally restricted to a 40-hour week. Payment is in cash, and in many cases rations are also supplied to workers either as part of their wages or in addition to them. In most cases, living quarters are provided for plantation workers. The minimum hourly wage was \$0.47 in 2001. Samoan labor law also provides for rudimentary safety and health standards, but these standards are not effectively enforced. Children may not work before the age of 15, but the law does not apply to service rendered to the matai, who sometimes require children to work on village farms. Moreover, increasing numbers of children work as street vendors in Apia.

## 22 AGRICULTURE

Tropical agriculture occupies 43% of the land area, employs about 65% of the labor force, and makes up about 50% of GDP. Most Samoans grow food crops for home consumption and cash crops for export. Village agriculture, in which the family is the productive unit, involves the largest areas of land, occupies the preponderance of the labor force, and produces the major portion of food and cash crops. Coconut products, cocoa, taro, and bananas are produced for export, and bananas, taro, and taamu are grown for local sale. Village plantings are invariably mixed, containing some or all of the following crops: coconuts, cocoa, bananas, taro, taamu, breadfruit, sugarcane, yams, manioc, and various fruits. Plantation agriculture has been controlled mainly by non-indigenous residents.

Exports of unprocessed copra have been largely replaced by coconut oil, coconut cream, and copra cake. Due to a decline in world prices, coconut production fell to 95,000 tons in 1992. In 1999, coconut production was estimated at 130,000 tons. Taro (coco yam) production in 1999 amounted to 37,000 tons. Taro production dropped 97% in 1993/94 due to leaf blight, and the government is working on methods to control the disease. Exports of cocoa have fallen in recent years, thereby discouraging production. Since 1991, no production over 1,000 tons has been reported. Banana exports fluctuate greatly from year to year. Exports of agricultural products in 2001 amounted to \$5.1 million, while agricultural imports totaled \$17.7 million that year.

## 23 ANIMAL HUSBANDRY

Pigs and cattle form the bulk of the livestock. In 2001, pigs, which are common in the villages, were estimated to number 201,000 and cattle 28,000. A small number of cattle are kept for milk; the remainder are raised for beef. Nearly one-half of the cattle population is owned by WSTEC, the most progressive cattle breeder. Other livestock in 1998 included an estimated 7,000 donkeys and 3,000 horses. Meat production in 2001 was 5,100 tons, 75% of it pork.

## 24 FISHING

The government has sought to expand the fishing industry, but most fishing is still conducted along the reefs and coasts; deep-sea fishing, save for bonito and shark, is not developed. A \$3-million fish market and wharf, built with Japanese aid, was completed in Apia in 1982. The local fish catch, however, steadily fell from 4,020 tons in 1982 to 565 tons in 1991; by 2000 the catch rebounded to 13,004 tons, with tuna comprising about 40%.

## 25 FORESTRY

The nation's forest area is estimated at 105,000 ha (259,000 acres). Reforestation projects are concentrated on Savaii, which accounts for 80% of the nation's forest area. A large-scale timber-milling enterprise, established on Savaii in 1970, began to produce kiln-dried sawn timber and veneer sheets for export. Roundwood production in 2000 was 131,000 cu m (4.6 million

cu ft), with 53% used as fuel wood. Timber imports were estimated at \$2.2 million in 2000.

## 26 MINING

No minerals of commercial value were known to exist in Samoa.

## 27 ENERGY AND POWER

Samoa formerly depended heavily on imported energy, but hydroelectric power, first available in 1985, has greatly increased its generating capacity. In 2000, net electricity generation was 0.1 billion kWh, of which 59.2% came from fossil fuels and 40.8% from hydropower. In the same year, consumption of electricity totaled 95.8 million kWh. Total installed capacity at the beginning of 2001 was 25 MW.

## 28 INDUSTRY

The government has encouraged industrial growth, and manufacturing, geared mainly to processing primary products, is increasing steadily. Industries include food- and timber-processing facilities, a brewery, cigarette and match factories, and small individual enterprises for processing coffee and for manufacturing curios, soap, carbonated drinks, light metal products, garments, footwear, and other consumer products. A coconut oil mill, an additional coconut cream factory, a veneer mill, and a meat cannery began operations in the 1980s. In 1991, the Japanese Yazaki Samsa Company began manufacturing automotive seat belts. The firm also produces electrical wiring systems.

## 29 SCIENCE AND TECHNOLOGY

New Zealand provides extensive scientific and technical aid to Samoa. Other donors include Japan, the Federal Republic of Germany (FRG), Australia, the US, the UK, and the UNDP. UNESCO has an integrated field office in Apia to promote science in the Pacific States. The National University of Samoa, founded in 1988 at Apia, has a faculty of science. The University of the South Pacific, founded in 1977 at Apia, has a school of agriculture.

## 30 DOMESTIC TRADE

Apia, the capital, is the center of commercial life. Many firms act as agents for shipping and airlines and for overseas commercial organizations generally. Outside Apia, trading stations, linked with the capital by launch and road transport, collect produce and distribute consumer goods. Several major firms operate about 200 stations in the outer districts and secure a large share of the total commercial business. There are also a number of smaller firms and independent traders. In Apia, various firms and small shops sell imported commodities and domestic products. Open markets sponsoring local produce vendors are a common food retailing situation for a nation where 65% of the work force is employed in agriculture. The largest such market is Meketi Fou in Apia. Office hours are from 8 AM to noon and resume from 1 PM to 4:30 PM.

## 31 FOREIGN TRADE

The fact that Samoa has a limited number of exports—principally agricultural and timber products—renders its economy extremely vulnerable to weather conditions and market fluctuations. Imports consist chiefly of machinery and equipment, industrial supplies, and foodstuffs. The principal exports include fish, coconut oil and cream, copra, taro, garments, and beer. Foodstuffs and industrial supplies account for about 50% of the country's annual imports.

Samoa exports primarily to the United States, New Zealand, and Germany. Imports originate mainly from New Zealand, Australia, Japan, Fiji, and the United States. Principal trading partners in 1999 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
United States	12.6	13.8	-1.2
New Zealand	2.1	36.7	-34.6
Germany	1.9	3.0	-1.1
Australia	0.6	24.0	-23.4
Fiji		0.1	25-24.9
Japan	n.a.	17	n.a.

### 32 BALANCE OF PAYMENTS

In the early 1970s, Samoa's heavy trade deficits were largely offset by tourist revenues, remittances from Samoans working abroad, and long-term investment capital. By the early 1980s, however, rising import costs and declining export earnings led to a critical balance-of-payments situation. By 1992, the external account deficit (excluding grants) had increased to about 28% of GDP. Samoa's external debt stood at \$192 million in 1999.

The US Central Intelligence Agency (CIA) reports that in 2000 the purchasing power parity of Samoa's exports was \$17 million while imports totaled \$90 million resulting in a trade deficit of \$73 million.

The International Monetary Fund (IMF) reports that in 1999 Samoa had exports of goods totaling \$20 million and imports totaling \$116 million. The services credit totaled \$61 million and debit \$25 million. The following table summarizes Samoa's balance of payments as reported by the IMF for 1999 in millions of US dollars.

### 33 BANKING AND SECURITIES

Legislation in 1974 set up the Monetary Board to act as the central bank. The activities of the Monetary Board were taken over in May 1984 by the new Central Bank of Samoa. An Australian bank, ANZ, acquired the government's 25% stake in the Bank of Western Samoa (BWS), becoming its outright owner. The BWS is the largest bank in the country, with assets of about A\$16 million (US\$13 million). The government has also sold its Post Office Savings Bank (POSB) to a consortium of local businesses. The bank, to be renamed the National Bank of Samoa, is the country's first locally owned commercial bank. The other banks are Pacific Commercial Bank (owned by Westpac, the Bank of Hawaii, and local shareholders) and the Development Bank of Western Samoa.

Parliament passed legislation in early 1988 to allow the setting up of an offshore banking center. More than 1,000 companies have registered in Apia under the new tax haven legislation, contributing substantially to the national budget. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$24.5 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$86.6 million.

### 34 INSURANCE

There is a private life insurance company in Apia, National Pacific Insurance Ltd., managed by the National Insurance Co. of New Zealand.

### 35 PUBLIC FINANCE

Samoa's financial year ends on 31 December. Government budgets have commonly shown deficits in recent years. The US Central Intelligence Agency (CIA) estimates that in 1997 Samoa's central government took in revenues of approximately \$52 million and had expenditures of \$99 million including capital expenditures of \$37 million. Overall, the government registered a deficit of approximately \$47 million. External debt totaled \$188 million.

### 36 TAXATION

Individuals and companies are liable for the payment of income tax. The basic nonresident corporate tax rate is 48%, and the resident corporate tax rate is 39%; rates for both domestic and foreign insurance companies are lower. Personal income tax rates range from 5% to 50%. There are also gift, inheritance, and stamp taxes.

### 37 CUSTOMS AND DUTIES

Customs duties provide almost half of current government revenue and are levied on all imports except those specifically exempted. Preferential rates for imports from Commonwealth countries were abolished in 1975.

### 38 FOREIGN INVESTMENT

The government actively promotes the establishment of industries financed by overseas companies. These include milling and logging operations by a US company on Savai'i and by a joint Japanese-Samoan enterprise on Upolu, and a US hotel resort center near Apia.

### 39 ECONOMIC DEVELOPMENT

The government has consistently stressed diversification of agriculture. It has also sought through a series of plans to promote growth in manufacturing, forestry, fishing, hydroelectric power, and tourism, which received a boost when the Faleto Airport got a new terminal and runway extension in 1985. In 1989, an offshore banking center was launched. New Zealand, Australia, the United States, the Asian Development Bank, and the EC are major sources of development aid, and recently, Japan and Germany have provided technical and financial aid. Assistance from the UN family of organizations totaled US\$2.6 million in 1991. The country's fifth development plan (1985-87) called for an investment of ws\$146.9 million, s\$114.2 million of it from external sources. Investment increased significantly in 1990 and 1992, mainly due to increased public capital expenditure. External aid has been a major source of public investment financing, providing approximately 68% of capital expenditure in 1991 and 47% in 1992.

### 40 SOCIAL DEVELOPMENT

A social security system was established in 1972 under the Western Samoan National Provident Fund. It provides for employee retirement pensions, disability benefits, and death benefits. Employees contribute 5% of their earnings, and this amount is matched by their employers. Retirement is allowed at age 55. Workers' compensation is funded by employers and is compulsory. This program covers reasonable medical expenses, and is paid for entirely by employer contributions.

In Samoan society, obligations to the aiga, or extended family, are often given precedence over individual rights. While there is some discrimination against women, they can play an important

role in the traditional social structure, especially female matai, or heads of families. Domestic abuse is common and considered culturally acceptable, except in the most extreme cases. Universal suffrage was enacted in 1990, and the following year a Women's Affairs Ministry was established.

Human rights are generally well respected in Samoa.

#### 41 HEALTH

The Department of Health oversees health care on the islands. The country is divided into 14 health districts, each under a medical officer. In 1990, there were 50 physicians in the country. In 1996 there were 0.3 physicians, 1.6 nurses, and 0.04 dentists per 1,000 people. District nurses are stationed at strategic points throughout the islands. Child health clinics, particularly clinics for young children and infants, are a regular feature of their work. In 1991, 91% of children were vaccinated against measles. A mobile dental clinic operates in the villages, while all schools in Apia are visited at regular intervals by a team of dental practitioners.

Diabetic retinopathy is common in Polynesian Samoans. The increase in diabetes in recent decades is linked the Westernization of the Samoan diet. The life expectancy was estimated at 69.8 years as of 2002. During the same year, the infant mortality rate was an estimated 30.7 per 1,000 births. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 15.5 and 6.4 per 1,000 people.

The immunization rates for children under age one in 1995 were as follows: diphtheria, pertussis, and tetanus, 95%; polio, 95%; measles, 98%; and tuberculosis, 98%. In 1994, there were 18 reported cases of tuberculosis.

In 1994, nearly 53% of men and 18.6% of women were smokers. Only four AIDS cases were reported in 1995.

#### 42 HOUSING

Most Samoans live in villages in traditional Samoan houses called fale. A fale is usually round or oval, with pebble floors and a thatch roof. It has no walls, being supported on the sides by posts. Coconut-leaf blinds can be lowered to exclude wind and rain. In areas more affected by contact with Europeans, the fale may have a concrete floor, corrugated iron roof, and lattice-work walls. Another fused Samoan-European type, much used by chiefs and pastors, is an oblong concrete house with some walls, often with separate rooms in each corner; like the fale it is open at the sides. Fales are grouped around an open area in the center of the village and have separate cookhouses behind them.

More modern housing has been constructed since about the 1990s, primarily through international assistance. Solid wall structures with concrete foundations and iron roofs have been built to withstand the natural elements of harsh wind, rain, and cyclones. However, low-income families are not able to purchase or build such structures without assistance. The Housing Corporation of Samoa was established by the Housing Corporation Act of 1989 to offer loans and assistance for prospective homeowners.

#### 43 EDUCATION

The adult literacy rate is estimated to be over 97%. Formal education is provided by the Department of Education and five religious missions. Government and mission schools have a uniform syllabus and common examinations. The government school system is the more comprehensive, with almost all its teachers holding Samoan teachers' certificates. Village schools provide four years of primary schooling. District schools draw the brighter pupils from village schools and educate them through the upper primary level. In the Apia area, urban schools provide a lower- through upper-primary curriculum. A major educational goal has been to make Samoans bilingual, with English as their second tongue. In the senior classes of the primary schools, all

instruction is in English. In 1989 there were 37,883 primary school pupils. The pupil-teacher ratio at the primary level was 24 to 1 in 1999. In the same year, 97% of all primary-school-age children attended school, while 68% of those eligible attended secondary school.

The government maintains secondary schools, in which the medium of instruction is English. Samoa College is patterned after a New Zealand secondary school; each year, 100 pupils from government and mission schools are selected for admission by competitive examination. Vaipouli High School, in Savaii, provides a general secondary curriculum, and Avele College, in Apia, offers training in modern agricultural methods. In addition, the University of the South Pacific School of Agriculture maintains a campus at Alafua, on the outskirts of Apia. The medium of instruction in mission secondary schools is English, with curriculum and textbooks similar to those used in New Zealand.

Samoa was one of the founders of the regional University of the South Pacific. The National University, which was established in 1984, was upgraded and provided with a new campus in 1997. Other tertiary institutions include the College of Tropical Agriculture and a Trades Training College.

#### 44 LIBRARIES AND MUSEUMS

The Nelson Memorial Public Library in Apia has 90,000 volumes. The library of the University of the South Pacific has around 22,000 volumes, and the Legislative Assembly has a library with 6,000 volumes. A bookmobile service operates on Upolu and Savai'i. The National Museum and Culture Center in Apia, established in 1984, includes a local museum, library, and theater and offers crafts workshops. Vailima is home to the Robert Louis Stevenson Museum, featuring the author's house and estate.

#### 45 MEDIA

In 1998 there were 8,183 mainline telephones in use and 1,545 cellular phones. Internal and overseas wireless telegraph services are available. The government-controlled Samoan Broadcasting Service, in Apia, transmits radio programs on two stations in Samoan and English and provides direct broadcasts from the Fono. As of 2001 there were four private radio stations, 1 AM and 3 FM. The only television station available that year was government owned. In 1997 there were 323 radios and 25 television sets in use per 1,000 population. In 2000, there were two Internet service providers serving 500 subscribers.

There are several bilingual weeklies, including the *Samoa Weekly* (1995 circulation, 4,500), *Samoa Observer* (3,500), and *South Sea Star* (2,000). There is one daily, *Samoa Times*, with a 1995 circulation of 5,000.

The constitution provides for free speech and a free press, and the government is said to respect these provisions in practice.

#### 46 ORGANIZATIONS

Among the numerous clubs, societies, and organizations in Samoa are the Chamber of Commerce, Red Cross, Catholic Club, Boy's Brigade Samoa, University of South Pacific Student Association, YMCA/YWCA, Returned Servicemen's Association, Mothers' Club, Soroptimist International of Samoa, Calliope Lodge of Freemasons, Federation of Women's Committees, and the South-East Asia and Pan-Pacific Women's Association.

#### 47 TOURISM, TRAVEL, AND RECREATION

Until 1965, official policy in Samoa was opposed to tourism, but during 1966–67 there was a complete reversal of policy. The government hired international tourist consultants to advise it on long-term means of developing a tourist industry. Samoa joined the Pacific Area Travel Association, extended tax holidays and

import-duty concessions to hotel building, and appropriated money for the building of new hotels.

The major tourist attractions are the beaches and traditional villages. In Apia is Vailima, the residence of the head of state and once the home of Robert Louis Stevenson; Stevenson's grave is nearby. Pastimes include swimming, water skiing, and fishing. Soccer and cricket are popular local sports.

In 2000, there were 72,895 tourist arrivals and tourism expenditures totaled \$40 million. That year there were 763 hotel rooms. The estimated cost of staying in was \$204 per day, according to 2000 US government estimates.

#### 48 FAMOUS SAMOANS

The Scottish author Robert Louis Stevenson (1850–94) lived principally on Upolu from 1889 until his death. Samoans famous since independence include Malietoa Tanumafili II (b.1913), who was named head of state in 1962, and Fiame Faumuina Mataafa (d.1975), who served as prime minister from 1962 to 1970 and again from 1973 until his death. Tupuola Taisi Efi (b.1938), was prime minister from 1976 to 1982. Tofilau Eti (b. American

Samoa, 1925?) was prime minister from December 1982 to December 1985, when he resigned and was succeeded by Va'ai Kolone.

#### 49 DEPENDENCIES

Samoa has no territories or colonies.

# SA'UDI ARABIA

Kingdom of Sa'udi Arabia

*Al-Mamlakah al-'Arabiyah as-Sa'udiyah*

**CAPITAL:** Riyadh (Ar-Riyad)

**FLAG:** The national flag bears in white on a green field the inscription, in Arabic, "There is no god but Allah, and Mohammad is the messenger of Allah." There is a long white sword beneath the inscription; the sword handle is toward the fly.

**ANTHEM:** The National Anthem is a short instrumental selection.

**MONETARY UNIT:** The Sa'udi riyal (SR) is divided into 20 qursh (piasters), in turn divided into 5 halalah. There are coins of 1, 5, 10, 25, 50, and 100 halalah and notes of 1, 5, 10, 50, 100, and 500 riyals. SR1 = \$0.2666 (or \$1 = SR3.75) as of May 2003.

**WEIGHTS AND MEASURES:** The metric system has been officially adopted.

**HOLIDAYS:** Muslim religious holidays include 1st of Muharram (Muslim New Year), 'Id al-Fitr, and 'Id al-'Adha'.

**TIME:** 3 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Sa'udi Arabia constitutes about four-fifths of the Arabian Peninsula in Southwest Asia. Although Sa'udi Arabia is known to be the third-largest country in Asia, after China and India, its precise area is difficult to specify because several of its borders are incompletely demarcated. According to the UN, the nation has an area of 1,960,582 sq km (756,985 sq mi); it extends 2,295 km (1,426 mi) ESE-WNW and 1,423 km (884 mi) NNE-SSW. Comparatively, the area occupied by Sa'udi Arabia is slightly less than one-fourth the size of the United States. Sa'udi Arabia is bounded on the N by Jordan and Iraq, on the NE by Kuwait, on the E by the Persian Gulf, Qatar, and the United Arab Emirates (UAE), on the SE by Oman, on the S and SW by Yemen, and on the W by the Red Sea and the Gulf of Aqaba, with a total estimated land boundary length of 4,431 km (2,753 mi) and a coastline of 2,640 km (1,640 mi).

An agreement was reached in 1965 whereby the Neutral Zone separating Sa'udi Arabia from Kuwait was divided administratively between the two countries. A dispute between Sa'udi Arabia and the newly formed UAE over control of the Buraymi oasis was settled in 1974, when they reached an accord fixing their common border; however, the details of this treaty had not been made public by late 2002. An agreement dividing the Neutral Zone between Sa'udi Arabia and Iraq was reportedly reached in 1975 and confirmed in 1981, but as of early 1988, no details of the agreement had been filed with the UN. In the Ar-Rub' al-Khali ("Empty Quarter") of the southeast, Sa'udi Arabia's borders with Oman and the PDRY are not yet fully defined.

Sa'udi Arabia's capital city, Riyadh, is located in the east central part of the country.

## <sup>2</sup>TOPOGRAPHY

A narrow plain, the Tihamat ash-Sham, parallels the Red Sea coast, as do, farther north, the Hijaz Mountains (with elevations of 910–2,740 m/3,000–9,000 ft), which rise sharply from the sea. The highest mountains (over 2,740 m/9,000 ft) are in 'Asir in the

south. 'Asir is a region extending about 370 km (230 mi) along the Red Sea and perhaps 290–320 km (180–200 mi) inland. East of the Hijaz, the slope is more gentle, and the mountains give way to the central uplands (Najd), a large plateau ranging in elevation from about 1,520 m (5,000 ft) in the west to about 610 m (2,000 ft) in the east. The Dahna, a desert with an average width of 56 km (35 mi) and an average altitude of 460 m (1,500 ft), separates Najd from the low plateau (Hasa) to the east (average width, 160 km/100 mi; average altitude, 240 m/800 ft). This, in turn, gives way to the low-lying Gulf region.

At least one-third of the total area is sandy desert. The largest of the deserts is the famed Ar-Rub' al-Khali in the south, with an area of roughly 647,500 sq km (250,000 sq mi). An-Nafud, its northern counterpart, has an area of about 57,000 sq km (22,000 sq mi). There are no lakes, and except for artesian wells in the eastern oases, there is no perennially flowing water.

## <sup>3</sup>CLIMATE

The climate is generally very dry and very hot; dust storms and sandstorms are frequent. Day and night temperatures vary greatly. From May to September, the hottest period, daytime temperatures reach 54°C (129°F) in the interior and are among the highest recorded anywhere in the world. Temperatures are slightly lower along the coasts, but humidity reaches 90%, especially in the east, which is noted for heavy fogs. From October through April, the climate is more moderate, with evening temperatures between 16° and 21°C (61° and 70°F). Average annual rainfall is 9 cm (3.5 in), with most rain falling from November to May. Between 25 and 50 cm (10 and 20 in) of rain falls in the mountainous 'Asir area, where there is a summer monsoon.

## <sup>4</sup>FLORA AND FAUNA

Vegetation is sparse, owing to aridity and soil salinity. The date palm, mangrove, tamarisk, and acacia are prevalent. Wild mammals include the oryx, jerboa, fox, lynx, wildcat, monkey, panther, and jackal. The favorite game bird is the bustard. The camel and Arab stallion are renowned, as is the white donkey of

Al-Ahsa. Fish abound in the coastal waters and insects, scorpions, lizards, and snakes are numerous.

## 5 ENVIRONMENT

The Sa'udi government has traditionally not given priority to environmental protection, but in recent years it has become concerned about the continuing encroachment of sand dunes on agricultural land, the preservation and development of water resources, and pollution and sanitation problems. Legislation enacted in May 1978 forbids the felling of trees and regulates the protection of forestland. Sa'udi Arabia's natural environment was threatened by the Persian Gulf War.

The dumping of up to six million barrels of oil in the surrounding waters and the destruction of Kuwait's oil wells by fire polluted the nation's air and water. Sa'udi Arabia has 2.4 cubic kilometers of renewable water resources with 90% used for farming and 1% used for industrial purposes. Only 64% of the nation's rural population have access to safe drinking water. At current rates of consumption, the nation's water supply may be exhausted in 10–20 years. Sa'udi Arabia's cities produce an average of 4.8 million tons of solid waste per year. Sa'udi Arabia has signed the 1954 Convention for the Prevention of Pollution of the Sea by Oil. Under the 1976–80 and 1980–85 development plans, new desalination facilities were built, and urban sewage, waste, and storm drainage facilities were constructed.

The Directorate General for Environmental Protection is responsible for environmental protection measures and preservation of natural resources. In the late 1970s, the 'Asir Kingdom Park, in the southwest, was created to preserve the landforms, flora, and fauna of the 'Asir region, which forms part of the Great Rift Valley.

As of 2001, 2.3% of Sa'udi Arabia's total land area is protected. In the same year, 9 of the nation's mammal species and 11 types of birds were endangered. One type of plant was threatened with extinction. Endangered species in Sa'udi Arabia include the Asiatic cheetah (possibly extinct), South Arabian leopard, northern bald ibis, and two species of turtle (green sea and hawksbill). The Arabian gazelle, Queen of Sheba's gazelle, Sa'udi gazelle, and the Syrian wild ass have become extinct.

## 6 POPULATION

The population of Sa'udi Arabia in 2003 was estimated by the United Nations at 24,217,000, which placed it as number 45 in population among the 193 nations of the world. In that year approximately 3% of the population was over 65 years of age, with another 43% of the population under 15 years of age. There were 116 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 2.92%, with the projected population for the year 2015 at 32,728,000. The population density in 2002 was 11 per sq km (29 per sq mi). Much of the population is concentrated on the coasts or internal oases; desert regions are largely uninhabited.

It was estimated by the Population Reference Bureau that 86% of the population lived in urban areas in 2001. The capital city, Riyadh, had a population of 3,183,000 in that year. Estimates of the population in other major metropolitan areas were: Jeddah, the principal port, 1,812,000; and Mecca (Makkah), containing Islam's holiest shrine, 920,000. Other major cities include At-Ta'if, 204,857; Medina (Al-Madinah), the second-holiest city of Islam, 500,000; Ad-Dammam, 127,884; and Al-Hufuf, 101,271. According to the United Nations, the urban population growth rate for 2000–2005 was 3.4%.

## 7 MIGRATION

Emigration is limited. Immigration of professionals, technicians, and others from the surrounding Arab states and growing numbers from outside the region has been spurred by the

development of the oil industry and by the lack of adequately trained and educated Sa'udi personnel. Palestinian Arabs, displaced by the establishment of the state of Israel, are the chief immigrant group. In the early 1990s there were significant numbers of expatriate workers from the US, European countries, Turkey, Jordan, Syria, Jordan, Kuwait, Yemen, the Republic of Korea (ROK), Pakistan, India, Sri Lanka, and the Philippines. In 1990 when Iraq invaded Kuwait, Sa'udi Arabia reacted by expelling workers from Jordan, Yemen, and Palestinians, for their countries' support of Iraq. The foreign population was 4,624,459 in 1992 (27% of the total population). After the Gulf War, 93,000 Iraqis were granted temporary asylum. Since then, 60,000 Iraqis were returned under the POW exchange. In April 1997, 20,800 had resettled in 33 different countries, 3,010 had voluntarily repatriated, and 9,000 were still in camps in Sa'udi Arabia. By 1999, 5,390 Iraqi and 158 Afghan refugees were living in the Rafha Camp administered by the government. In 2000, the net migration rate was 4.3 migrants per 1,000 population. The total number of non-citizens living in the country in 2000 was 5,255,000. The government views the immigration level as too high, but the emigration level as satisfactory.

## 8 ETHNIC GROUPS

The great majority (90%) of the Sa'udis have a common Arabian ancestry, and the population is homogeneous in religion and language. Divisions are based mainly on tribal affiliation or descent, the primary distinction being between groups with a tradition of being sedentary agriculturalists or traders, and the Bedouins, who have a tradition of nomadic pastoralism. The two groups traditionally have been antagonistic. There has been some loosening of tribal ties, however, caused by rapid economic development. Afro-Asians account for the remaining 10% of the population. Admixtures of Turks, Iranians, Indonesians, Pakistanis, Indians, various African groups, and other non-Arab Muslim peoples appear in the Hijaz, mostly descendants of pilgrims to Mecca.

## 9 LANGUAGES

Arabic, the native language of the indigenous population, is a Semitic language related to Hebrew and Aramaic. Local variations in pronunciation do not prevent oral communication between people from opposite sections of the Arabian Peninsula. The language is written in a cursive script from right to left. The 28 letters of the alphabet have initial, medial, and terminal forms; short vowels are seldom indicated. Most business people and merchants in oil-producing areas and commercial centers understand English. Government correspondence must be written in Arabic.

## 10 RELIGIONS

About 85% of the people of Sa'udi Arabia are Sunni Muslims. The dominant form of Islam is Wahhabism, a fundamentalist Muslim reform movement first preached by the 18th-century religious leader Muhammad bin 'Abd al-Wahhab. Most other Sa'udis up to 15% are Shi'i Muslims. The holy city of Mecca is the center of Islam and the site of the sacred Ka'bah sanctuary, toward which all Muslims face at prayer. A pilgrimage to Mecca is one of the five basic obligations of Islam and is incumbent on every Muslim who is physically and financially able to perform it.

There are several thousand foreign Christian employees—Arab, US, and European. Jews have not been allowed to enter the country since the establishment of the state of Israel in 1948 except under special circumstances.

Islam is the state religion and all citizens must be Muslims. The government claims that the Holy Koran and the Sunna (tradition) of the Prophet are the country's constitution. The public worship of non-Muslim faiths is prohibited. While non-Muslim foreigners are theoretically permitted to worship privately, the guidelines

LOCATION: 16°23' to 32°14' N; 34°30' to 56°22' W. BOUNDARY LENGTHS: Jordan, 728 kilometers (455 miles); Iraq, 814 kilometers (505 miles); Kuwait, 222 kilometers (138 miles); Persian Gulf coastline, 751 kilometers (468 miles); Qatar, 60 kilometers (37 miles); UAE, 457 kilometers (285 miles); Oman, 676 kilometers (420 miles); Yemen 1,458 kilometers (906 miles); Red Sea coastline, 1,889 kilometers (1,170 miles). TERRITORIAL SEA LIMIT: 12 miles.

which designate between public and private worship are ambiguous.

## 11 TRANSPORTATION

Until recent decades, the camel was the chief means of transportation in Sa'udi Arabia, but enormous strides have been made since the early 1970s. By 2002 there were 146,524 km (91,050 mi) of highways, of which 44,104 km (27,406 mi) were paved. Modern roads link Jeddah, Mecca, Medina, At-Ta'if, and

Riyadh; a new highway connects Sa'udi Arabia with Jordan, and a causeway completed in 1986 offers a direct connection with Bahrain. In 2000, passenger car registrations totaled 1.5 million and there were 1.1 million commercial vehicles. Most within-country freight is hauled by truck. The Sa'udi Government Railroad, which operates between Ad-Dammam and Riyadh over a length of 575 km (357 mi), was built by the Arabian American Oil Co. (ARAMCO) during the 1950s. Railroad lines totaled 1,392 km (865 mi) of standard-gauge track at last estimate.

In 2001, there were 209 airports, 71 with paved runways. Major airports include Dhahran International at Dhahran, King Abdul Aziz at Jeddah, and King Khaled International at Riyadh. The government-owned Sa'udi Arabian Airlines (Saudia) operates regular domestic and foreign flights to major cities. Because of the large distances that separate the main cities, air travel is preferred within the Kingdom. In 2001, 12,835,700 passengers were carried on scheduled domestic and international flights.

Jeddah, on the Red Sea, is the chief port of entry for Muslim pilgrims going to Mecca. Sa'udi Arabia has the largest seaport network in the Near East with eight major ports with 183 piers and three smaller ports. Ports include Ad-Dammam, Yanbu' al-Bahr, Jizan, Duba, Jeddah, Jizan, Rabigh, Ra's al Khafji, Mishab, Ras Tanura, Madinat Yanbu' al Sinaiyah, and Jubail (Al-Jubayl). In 2002 there were 71 ships with a capacity of 1,071,315 GRT in the merchant fleet. The traditional dhow is still used for coastal trade.

## 12 HISTORY

For several thousand years, Arabia has been inhabited by nomadic Semitic tribes. Towns were established at various oases and along caravan routes. During the 7th century AD followers of Muhammad expanded beyond the Mecca-Medina region and within a century conquered most of the Mediterranean region between Persia in the east and Spain in the west. Although Arabs were dominant in many parts of the Muslim world and there was a great medieval flowering of Arab civilization, the Peninsula itself (except for the holy cities of Mecca and Medina) declined in importance and remained virtually isolated for almost a thousand years. Throughout this period, Arabia was barely more than a province of successive Islamic caliphates that established their capitals in Damascus, Baghdad, Cairo, and Constantinople (now Istanbul).

The foundations of the kingdom of Sa'udi Arabia were laid in the 18th century by the fusion of the military power of the Sa'ud family and Wahhabism, an Islamic puritan doctrine preached by Muhammad bin 'Abd al-Wahhab. Muhammad ibn-Sa'ud (r.1744–65) and his son 'Abd al-'Aziz (r.1765–1803) gave the religious reformer refuge at Ad-Dar'iyah, in central Arabia, and together they embarked on a program of religious reform and territorial expansion. By 1801, Najd and Al-Ahsa were occupied. 'Abd al-'Aziz's son and successor, Sa'ud (r.1803–14), brought the Hijaz under Sa'udi control and took the holy city of Mecca. The Ottoman Turks called on their governor of Egypt, Muhammad 'Ali, to put down the Sa'udis. A long struggle (1811–18) finally resulted in Sa'udi defeat. During that time, Sa'ud died, and his son 'Abdallah (r.1814–18) was captured and beheaded.

When international conditions forced Muhammad 'Ali to withdraw his occupation forces in 1840, the Sa'udis embarked upon a policy of reconquest. Under Faisal (Faysal, r.1843–67), Wahhabi control was reasserted over Najd, Al-Ahsa, and Oman, with Riyadh as the new capital. (Hijaz remained under the control of the sharifs of Mecca until 1925.) After Faisal's death, conflict between his sons led to a decline in the family's fortunes. Taking advantage of these quarrels, the Ibn-Rashids, a former Sa'udi vassal family, gained control of Najd and conquered Riyadh. The Sa'udi family fled to Kuwait in 1891.

In January 1902, 'Abd al-'Aziz, a grandson of Faisal, who was to gain fame under the name Ibn-Sa'ud, succeeded in driving the Ibn-Rashid garrison out of Riyadh. At a decisive battle in 1906, the Rashidi power was broken. In 1913, the Sa'udis again brought Al-Ahsa under their control, and in December 1915, Ibn-Sa'ud signed a treaty with the British that placed Sa'udi foreign relations under British control in return for a sizable subsidy.

Warfare broke out again in Arabia in 1919, when Hussein ibn-'Ali (Husayn ibn-'Ali), the sharif of Mecca, who had become an independent king, attacked the Sa'udis. Hussein was defeated, and Ibn-Sa'ud annexed 'Asir. In 1921, he finally rid Arabia of the

Rashids, and by 1923, he had consolidated his kingdom by occupying the districts west and north of Ha'il. Hussein of Mecca provoked another conflict with Ibn-Sa'ud in March 1924 by proclaiming himself caliph. War broke out, and the Sa'udis captured At-Ta'if, Mecca, and Medina (December 1925). 'Ali ibn-Hussein ('Ali ibn-Husayn), who had replaced his father as king of Hijaz, then abdicated, and in November 1925, Ibn-Sa'ud entered Jeddah. This increase in Ibn-Sa'ud's territory was acknowledged by the British in a treaty of 20 May 1927 that annulled the 1915 agreement and recognized his independence. On 22 September 1932, the various parts of the realm were amalgamated into the Kingdom of Sa'udi Arabia, with much the same boundaries as exist today.

With the discovery of oil in the 1930s, the history of Sa'udi Arabia was irrevocably altered. Reserves have proved vast—about one-fourth of the world's total—and production, begun in earnest after World War II, has provided a huge income, much of it expended on infrastructure and social services. Sa'udi Arabia's petroleum-derived wealth has considerably enhanced the country's influence in world economic and political forums. Following the 1967 Arab-Israeli war, the Sa'udi government undertook a vast aid program in support of Egypt, Syria and Jordan. Sa'udi Arabia joined the 1973 Arab boycott against the United States and the Netherlands and, as a key member of OPEC, lent its support to the huge rise in oil prices during the 1970s. This move had stunning consequences for the world economy and also caused a dramatic upsurge in Sa'udi Arabia's wealth and power. Since the 1980s, the government has regulated its petroleum production to stabilize the international oil market and has used its influence as the most powerful moderate member of OPEC to restrain the more radical members.

Political life in Sa'udi Arabia has remained basically stable in recent decades, despite several abrupt changes of leadership. In November 1964, Crown Prince Faisal (Faysal ibn 'Abd al-'Aziz as-Sa'ud), a son of Ibn-Sa'ud, became king and prime minister following the forced abdication of his brother King Sa'ud. His first act as prime minister was to announce a sweeping reorganization of the government, and his major social reform was the abolition of slavery. In March 1975, King Faisal was assassinated by a nephew in an apparently isolated act of revenge. Faisal was succeeded by Crown Prince Khaled (Khalid ibn-'Abd al-'Aziz as-Sa'ud), who embarked on an expanded development program. King Khaled died of a heart attack in June 1982, and his half-brother, Crown Prince Fahd ibn-'Abd al-'Aziz as-Sa'ud, ascended the throne. King Fahd has encouraged continuing modernization while seeking to preserve the nation's social stability and Islamic heritage. As the custodian of the holy Moslem shrines at Mecca and Medina, the monarchy has been deeply embarrassed by several incidents in recent years; e.g., seizure of the Grand Mosque in Mecca by about 500 Islamic militants in 1979, which led to the deaths of more than 160; a riot by Iranian pilgrims during the 1987 pilgrimage, which cost 400 lives; and the suffocation of over 1,400 pilgrims in a tunnel at the Grand Mosque in 1990. Misfortune continued in 1994, when a stampede in Mecca killed 270 pilgrims rushing toward a cavern for a symbolic stoning ritual, and in 1997, when as many as 300 pilgrims were killed in a fire at a campsite outside the holy city.

When Iraq invaded Kuwait in 1990, Sa'udi Arabia, fearing Iraqi aggression, radically altered its traditional policy to permit the stationing of foreign troops on its soil. (The government was criticized by senior Sa'udi religious scholars for taking this step.) Riyadh made substantial contributions of arms, oil, and funds to the allied victory. It also expelled workers from Jordan, Yemen, and members of the PLO for giving support to Iraq in the period after the invasion. Sa'udi Arabia's wealth and selective generosity has given it great political influence throughout the world and especially in the Middle East. It suspended aid to Egypt after that

country's peace talks with Israel at Camp David, Md., but renewed relations in 1987. It made substantial funds secretly available to US president Ronald Reagan's administration for combating Marxist regimes in Central America. The kingdom played a key role in creating the Gulf Cooperation Council (GCC) and in working for an end to the civil strife in Lebanon. It actively supported Iraq during the war with Iran and tried, in vain, to prevent the conflict with Kuwait.

Sa'udi Arabia and the United States consult closely on political, economic, commercial, and security matters. The United States, with the United Kingdom, is a major supplier of arms and offers training and other support to the kingdom's defenses. These supports grew more visible following the Gulf War and continued Iraqi intransigence in the face of increased US and international pressure to disarm. The increased US military presence in Sa'udi Arabia in 1993–94 caused considerable irritation among conservative elements of Sa'udi society who felt that the US military presence was blasphemous to Islam. In 1995, seven people, including five Americans, were killed by a terrorist attack on a Sa'udi National Guard Training Center in Riyadh. In June 1996, a car bomb detonated in front of a housing complex for US military personnel killed 19 US servicemen, causing considerable uproar in the United States and leading military planners to relocate US military bases to remote desert areas.

By the end of the 1990s, the Islamist backlash that followed Sa'udi-US cooperation in the Gulf War had been contained through the (mostly) temporary detention of hundreds of Islamic radicals and the long-term detention of their most prominent leaders. Between 1997 and 1999, the reins of government had largely passed to Crown Prince Abdullah, the half-brother of the ailing King Fahd, who was believed to have suffered a stroke in 1995 and whose two-month stay in Spain in the summer of 1999 raised renewed speculations about his health. At the turn of the 21st century, much of the Saudis' attention was focused on unaccustomed economic pressures resulting from a 40% drop in oil prices in 1998. With almost half its GDP coming from oil, the country's budget deficit had soared as export revenues plummeted. Prince Abdullah was instrumental in pushing through the production cutbacks agreed to by the OPEC countries in March 1999.

At a summit held in Beirut in March 2002, the Arab League accepted a Sa'udi proposal for peace between Israel and the Palestinians, put forward by Crown Prince Abdullah. Known as the "Beirut Declaration," the plan offered Israel normalized relations with the Arab states and a guarantee of peace and security in exchange for a full Israeli withdrawal from the territories occupied by Israel after the 1967 Arab-Israeli War, a "just solution to the Palestinian refugee problem," and Israeli recognition of a Palestinian state with its capital at East Jerusalem. The proposal was introduced against the backdrop of an escalation in violence in Israel and the occupied territories in spring 2002, when Israel took over Palestinian-controlled cities and territories in the West Bank and Gaza Strip in response to an increase in suicide bombings and violence resulting from the then 18-month-old al-Aqsa *intifada*. In April, Crown Prince Abdullah met with US president George W. Bush, and presented him with an eight-point list of proposed agreements for immediate peace in the Middle East. It included an end to Israel's military siege of Ramallah, where Palestinian leader Yasser Arafat was sequestered; complete Israeli withdrawal from territories recently occupied in the conflict; introduction of a multinational force in the region; the reconstruction of Palestinian areas; the renunciation of violence; the initiation of peace talks; an end to Israeli settlements; and implementation of UN resolutions calling for Israel's withdrawal from the territories occupied during the 1967 war, including the Golan Heights and West Bank. Palestinian Authority Cabinet Minister Saeb Erekat called the Sa'udi proposal approved in Beirut the most important step

toward peace taken in over 20 years. After Crown Prince Abdullah's peace plan was put forward, the violence in Israel and the West Bank and Gaza increased.

Due to the fact that 15 of the 19 hijackers involved in the 11 September 2001 terrorist attacks on the United States were Sa'udis, in addition to al-Qaeda leader Osama bin Laden, the United States placed pressure on Sa'udi Arabia to undertake counterterrorism measures. The United States during 2002 and into 2003 lobbied Sa'udi Arabia for its support in a possible war with Iraq if it were to be found in "material breach" of UN Security Council Resolution 1441 passed on 8 November 2002, calling on Iraq to immediately disarm itself of weapons of mass destruction (WMD), allow for the reintroduction of IAEA and UN weapons inspectors, and comply with all previous UN resolutions regarding the country passed since the Gulf War in 1991. In early 2003, Sa'udi Arabia was debating what degree of support it would offer the United States in the event of a war with Iraq. Senior members of the royal family indicated in February 2003 that Sa'udi Arabia might call for the withdrawal of American troops from the country following the end of the campaign to disarm Iraq. Although those statements were not confirmed by the US Pentagon, it is clear that Sa'udi Arabia is considering a reevaluation of its relationship with the US. It was assumed that security cooperation would continue, yet any distance Sa'udi Arabia might take from the United States would be seen as paving the way for political reform, including increased democratization and a curtailment of the power of Wahhabi religious authorities. On 26 February, Sa'udi Arabia stated it would allow the use of the Prince Sultan air base, where most of the 5,000 US troops based in the kingdom are located, only for the enforcement of a "no-fly" zone over southern Iraq. It stated it had not agreed to allow US troops and planes based in the country to undertake a war with Iraq. However, Sa'udi Foreign Minister Prince Sa'ud al-Faisal stated the kingdom could reconsider its position with regard to the US military presence if circumstances were to change.

### 13 GOVERNMENT

Sa'udi Arabia is a religiously based monarchy in which the sovereign's dominant powers are regulated according to Muslim law (Shari'ah), tribal law, and custom.

There is no written constitution; laws must be compatible with Islamic law. In a decree of March 1992, the king was granted exclusive power to name the crown prince his successor. The Council of Ministers, first set up in 1953, is appointed by the king to advise on policy, originate legislation, and supervise the growing bureaucracy. The post of prime minister has been reserved for the king, and the crown prince has been appointed first deputy prime minister. Most other important posts in the cabinet are reserved for members of the royal family.

In 1992, King Fahd announced the creation of the Majlis al Shura, an advisory body that would provide a forum for public debate. The king appointed 60 male citizens not belonging to the royal family to four-year terms on this body, which held its first meeting on 29 December 1992. In 1997, King Fahd increased the size of the Majlis to 90 members. In May 2001, membership was increased to 120.

### 14 POLITICAL PARTIES

Although there are no political parties in Sa'udi Arabia, various groups do function as blocs, contending for influence. Important among these groups are the conservative *'ulama* (religious scholars) and the members of the royal family. Other alliances—by merchants, businessmen, professionals, and leading families—are concerned with economic matters. There is also a small but growing middle class that seems to want greater political participation and a less restrictive social environment. Each group brings its weight to bear on the policymaking bodies of the

government and the king, whose leadership is upheld so long as he adheres to Islamic law, tradition, and the collective decisions of the 'ulama. In opposition to the royal family are small, strictly outlawed groups of pro-democracy activists and extremist Islamists, who have engaged in terrorist attacks, principally against signs of Western influence. Identified groups connected with Islamists include the Committee for the Defense of Legitimate Rights, The Reform Movement, and the Islamic Awakening.

### 15 LOCAL GOVERNMENT

The kingdom is divided into 13 emirates, each headed by a crown-appointed governor, often a prince or other member of the royal household or from an allied family. The provinces are subdivided into 103 governorates. Tribal and village leaders (sheikhs) report directly to provincial governors, giving the central government some control over outlying regions. Provincial governors, in turn, report to the Minister of the Interior. Each sheikh traditionally rules in consultation with a council. A large segment of the population remains tribally organized: tribes, headed by paramount sheikhs, are divided into subtribes, headed by local sheikhs. Decisions are made by tribal sheikhs, emirs, or other chiefs and their councils (*majlis*).

### 16 JUDICIAL SYSTEM

The king acts as the highest court of appeal and has the power of pardon; access to the king and the right to petition him are well-established traditions. The judiciary consists of lower courts that handle misdemeanors and minor civil cases; high courts of Islamic law (*Shari'ah*); and courts of appeal. Islamic law of the Hanbali school prevails in Sa'udi Arabia, but justice is also based on tribal and customary law. Capital and corporal punishment are permitted; a 12-member Supreme Council of Justice reviews all sentences of execution, cutting, or stoning. A separate military justice system exercises jurisdiction over uniformed personnel and civilian government authorities.

There is no written constitution. The Justice Ministry is responsible for appointment and promotion of judges, who are confirmed by the Royal Court (Royal Diwan). Judges may be removed only by the Supreme Council of Justice or by royal decree. Although independence of the judiciary is guaranteed by law, courts are subject to the influence of royal family members. At the provincial level, governors also reportedly exercise influence over local judges.

*Shari'ah* summary courts have jurisdiction over common criminal cases and civil suits regarding marriage, divorce, child custody, and inheritance. While summary courts try cases involving small penalties, more serious crimes go to the *Shari'ah* courts of common pleas. Appeals from both courts are heard by the appeals courts in Mecca and Riyadh. There is also a court of cassation, as well as administrative tribunals that deal with the proceedings involving claims against the government and enforcement of foreign judgments.

The military tribunals have jurisdiction over military personnel and civil servants charged with violation of military regulations.

### 17 ARMED FORCES

Sa'udi Arabia's armed forces totaled active 124,500 personnel in 2002, not including the 75,000 members of the national guard. The army had 75,000 personnel, 1,055 main battle tanks, and an army aviation command. The navy's strength was 15,500 personnel including 3,000 marines. The navy was equipped with 4 frigates and 26 other combatants. The air force had 18,000 personnel and manned 294 combat aircraft. The national guard, numbering 75,000, is used chiefly for internal security and is an elite strategic reserve loyal to the Royal family. Sa'udi Arabia also had a 10,500-member frontier force, a 4,500-member coast guard, a helicopter-equipped counterterrorist unit, and 7,000

foreign military personnel under contract from members of the GCC. The armed forces are equipped with the most advanced weaponry, including 5 Airborne Warning and Control Systems (AWACS) aircraft, which were sold to Sa'udi Arabia by the US in 1981, over Israel's strenuous objections, as part of an \$8.5 billion arms deal. In 2000 Sa'udi Arabia spent \$18.3 billion, or 13% of GDP on defense. The US maintains air defense missiles and interceptors on a rotational basis.

### 18 INTERNATIONAL COOPERATION

Sa'udi Arabia is a charter member of the UN, having joined on 24 October 1945, and participates in ESCWA and all the nonregional specialized agencies. It is a founding member of the Arab League and of OPEC (as well as OAPEC), belongs to G-77 and GCC, and has permanent observer status with the OAS. It is also signatory to the Law of the Sea and has applied for membership in the WTO. Although supporting the Palestinian cause and the Arab League's boycott of Israel, the Sa'udi government in 1981 proposed that the Arab nations show willingness to extend diplomatic recognition to Israel in return for its withdrawal from lands occupied in the 1967 war (including the West Bank and East Jerusalem). Relations with Iran have long been tense and have worsened since that nation's Islamic revolution in 1979. In 1987, Iranian pilgrims rioted in Mecca in an attempt to destabilize the royal family. Although Sa'udi Arabia was not a combatant in the Iran-Iraq war, it actively supported Iraq against Iran.

### 19 ECONOMY

The economy is heavily dependent on oil production, which provided over 90% of export value and 75% of government revenues in 2001. The country has the largest reserves of petroleum in the world, 24.9% of the proven total as of the end of 2000, with its northern neighbor, Iraq, holding second place at 10.7%, and two other Arab neighbors, the UAE and Kuwait, third and fourth, at 9.3% and 9.2%, respectively. Rapidly increasing oil income after the first oil shock, 1973-74, led by the Organization of Oil Exporting Countries (OPEC) cartel, were used to increase disposable income, defense expenditures and economic development. OPEC was able to enforce a quadrupling of oil prices (from \$2.50/bbl to \$10/bbl) largely because of King Faisal's agreement to deploy the oil weapon in conjunction with the Yom Kippur War. Per capita income in current dollars peaked at \$15,700 in 1980 after the second oil shock, 1978-79 in conjunction with the Iranian Islamic revolution, sent oil prices to all-time highs, peaking at just over \$40/bbl. In September 1980 at the start of the Iraq-Iran war. From there, population growth (about 350% 1973 to 2003, from 6.76 million to 24.3 million, including an estimated 5 million non-nationals), a decreasing OPEC share of world oil production (from over 50% in 1973 to less than 30% in 1985 to about 40% in 2003), oil conservation efforts among consumers, and limited success in diversifying the economy have combined to reduce per capita income more than 40% to \$6,837 by 2001 (equivalent to \$10,600 in purchasing power parity terms according to CIA estimates). The contribution of the oil sector (crude oil and refined products) to the overall GDP, nevertheless, has substantially decreased, from 70% in 1980 to an estimated 40% to 45% during the period 1999 to 2001.

As an oil producer, Sa'udi Arabia's economy has a rentier structure, profiting from oligopolistic ownership of a factor of production. Marginal production costs for a barrel of oil in Sa'udi Arabia are about \$1.50, which, since 1973, it has generally been able to sell for between \$10/bbl. and \$40/bbl. largely because of cooperation within OPEC, an open producers' cartel. After the collapse of world oil prices in 1986, when benchmark Sa'udi light oil, at \$28/bbl. in 1985, bottomed out at \$8/bbl. (in real terms, lower than 1973 prices), the economy has been more

subject to more normal operations of supply and demand. Maintenance of OPEC target prices rests heavily on Sa'udi restraint, often below its official quotas. Sa'udi restraint reduces its oil revenues as the same time that the high price encourages non-OPEC production and cheating by poorer OPEC members, which, in turn, brings down the world price, which also reduces Sa'udi oil revenues.

The government has always made economic diversification a top priority, seeking to develop industries using petroleum, such as petrochemicals, as well as to finance industrialization. By 1989 the massive Jubail and Yanbu'al-Bahr industrial complexes, combining petrochemicals and steel production had been largely completed. Diversification efforts, however, are made within the context of a number of fundamental restraints, the most pervasive being the rentier structure itself, which blunts incentives to acquire competitive skills. In favor of efforts to maintain monopolistic advantages. Even in the capital-intensive oil industry, the Saudis have relied heavily on foreign workers who make up about 20% of the population. The Kingdom's intolerance of democratic processes, labor unions, women's participation in the work place, and foreign influences are just some of the more obvious impediments to development beyond a rentier-based economy.

There are, however, mounting pressures for economic reform, including falling per capita income, attendant social frustrations, the emergence of government deficits and a sizeable, though still manageable, external debt. In 1998 the government, led by Crown Prince Abdullah, embarked on a privatization strategy as a means of restoring per capita growth. In April 1998, the Sa'udi Telecommunications Company (STC) and the Sa'udi Electricity Company (SEC) took initial steps in privatizing telecommunications and electric power services. In September 1998 Prince Abdullah held meetings in Washington, D.C. with several leading American oil company representatives, beginning what has been called the Crown Prince's Oil Initiative, which is essentially a plan to bring private companies in to develop Sa'udi natural gas resources the way they had developed the country's oil resources.

Real growth of the GDP averaged about 2.6% between 1988 and 1998. The economy shrank by 11% in 1998 due to low world oil prices, but posted a 1% gain in 1999. Nominal GDP growth was 21.3% in 2000 and a negative 10.7% in 2001, reflecting, respectively, a sharp rise and a sharp fall in oil prices. However, the CIA estimates real growth for 2001 at 1.6%. The CIA also estimates that inflation in 2001 was 1.7%.

In 1999, the Crown Prince revitalized efforts to secure Sa'udi Arabia's acceptance in the WTO, although with no apparent intention of eliminating some of the more obvious violations of trade organization's principles, such as a strict enforcement of boycotts against Israel. In 2003, the Sa'udis hired a Texas law firm to lobby on its behalf for accession to the WTO.

The economy remains dominated by large state-owned monopolies. For 2001, the CIA estimated that the private sector accounted for about 25% of GDP, a decrease from an estimate of 35% in 1999. The government is considering privatizing the national airline, petrochemical industries, the telecommunication sector, and electricity companies to foster diversification, but no firm plans have emerged. The government encourages growth in agriculture as a means to reduce Sa'udi Arabia's net reliance on food imports, but dramatic reductions in farm subsidies resulted in a continuing decline in agricultural output.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Sa'udi Arabia's gross domestic product (GDP) was estimated at \$241 billion. The per capita GDP was estimated at \$10,600. The annual growth rate of GDP was estimated at 1.6%. The average inflation rate in 2001 was 1.7%. The CIA defines GDP as the

value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 7% of GDP, industry 48%, and services 45%. Aid receipts amounted to about \$1 per capita.

## 21 LABOR

The total labor force in 2001 stood at seven million. Approximately 35% of those were foreigners working mostly in the oil and construction sector. Of the 1999 workforce, 63% were in the service sector, with 25% in industry and the remaining 12% in agriculture.

Labor unions are illegal and collective bargaining is forbidden as well. Workers have few protections against employers. This is especially true of foreign workers who are often forced to work long hours and beyond the term specified by their contracts. Foreign workers have little redress against Sa'udi employers, since the labor system usually sides with the latter and employers can delay cases until the workers have to return home. Sa'udi employers routinely prevent workers from obtaining exit visas. In 2001, the government allowed the formation of labor committees which are permitted to make recommendations to employers.

By royal decree an eight-hour day and 48-hour week are standard. It is reported that domestic workers labor up to 20 hours a day seven days a week. Labor regulations require protection from hazard and disease for employees except farmers, herdsmen, domestic servants, and family-operated business employees. Labor outdoors is prohibited when the temperature exceeds 50°C (122°F). Foreign workers report that these regulations are seldom enforced. With the consent of parents, children may work as young as 13 and children rarely work in Sa'udi Arabia outside of family businesses. There is no minimum wage.

## 22 AGRICULTURE

Agriculture engaged 12% of the economically active population in 1999 and accounted for about 7% of GDP. Only about 1.1% of Sa'udi Arabia's land area is cultivated, although 40% is suitable for grazing. Small owner-operated farms characterize Sa'udi Arabia's land-tenure system. About 96% of the farm area is owned, and only 4% rented. Less than 3% of the agricultural holdings are of eight hectares (20 acres) or more, and 45% are 0.4 hectare (1 acre) or less in size. About two-thirds of the cropped land is used for cereals and the remainder for vegetables and fruit. Although Sa'udi Arabia has more than 18 million date palms and provides over 12% of the world's supply of dates (an estimated 650,000 tons in 1999), the growing of dates has declined in recent decades in favor of wheat, corn, sorghum, tomatoes, onions, grapes, and a variety of other fruits and vegetables. Nevertheless, dates remain the only major staple food crop with production sufficient to meet local demand. Sa'udi Arabia is 85% self-sufficient for vegetables and 66% for fruit. Wheat output increased from an estimated 150,000 tons in the late 1970s to 1,700,000 tons in 1985, and the government claimed that it met total domestic demand by 1986/87. Production of wheat totaled 1,800,000 tons in 1999; government subsidies have led to a recurring overproduction of wheat. In 1989, the government attempted to discourage production by cutting price supports, but production is still several times higher than domestic demand. Barley production amounted to 400,000 tons in 1999.

Aquifers supply 80% of agriculture's water requirements, but are not renewable. Agricultural irrigation accounts for 90% of total water needs, with wheat production alone using about one-third of the country's annual water supply.

## 23 ANIMAL HUSBANDRY

As of 2001, Sa'udi Arabia had an estimated 8,049,000 sheep, 4,600,000 goats, 415,000 camels, 620,000 head of cattle, 100,000 donkeys, and 3,000 horses. As imports of animal foodstuffs have increased and as greater varieties of agricultural products have been produced locally, camels have declined steadily in importance as a source of food. Arabia has long been famed for its horses, but the importance of the Arabian horse as an export item is now virtually nil. Donkeys and mules are still valued as pack animals, and the white donkeys of Al-Ahsa are well known. Sheep are found in all parts of Sa'udi Arabia where pasturage is available; they are raised for milk, as well as for meat and wool. Goats are kept for milk; their hair is used in rugs and tents, and the skins serve as water bags. Traditional farmers account for 80% of the kingdom's sheep production. Overall sheep production is expected to significantly increase in the next few years as a result of expansion by existing farms and establishment of new sheep breeding and fattening projects. About seven million head of live sheep are imported every year. The import level is expected to remain about the same in upcoming years, partly as a result of the increasing number of pilgrims who come to Mecca for the Hajj. Beef has not been a significant part of the Sa'udi diet and most beef and veal is consumed by expatriates, as traditional Saudis prefer camel meat. The concern over BSE (the so-called "Mad Cow" disease) in 1996 led the government to ban beef imports from Ireland, the United Kingdom, France, Switzerland, and Portugal.

The output of poultry and eggs doubled during 1975–80, and in 1998, Sa'udi Arabia had an estimated 125 million poultry. Sa'udi Arabia is self-sufficient in milk production—in 2001, 740,000 tons were produced. There is no hog raising, and importation of pork products is banned as contrary to Islamic law.

## 24 FISHING

Fishing provides employment and self-sufficiency to some communities on both Sa'udi coasts, although cash earnings are negligible. With rare exceptions, traditional fishing techniques are used. One of the few growth areas in this sector has been the export of Gulf shrimp. The fish catch was estimated at 49,650 tons in 2000.

## 25 FORESTRY

The only forest growth is found in the mountainous area that extends from southern Hijaz to Asir, accounting for no more than 0.6% of the total area. The principal varieties—acacia, date, juniper, wild olive, sidr, tamarind, and tamarisk—are generally not useful for timber, but some wood from date palms is used for construction. The trade deficit in forestry products was \$735.5 million in 2000.

## 26 MINING

Oil continued to dominate Sa'udi Arabia's mining sector—the country supplied 12.3% of the world's crude oil output in 2000, petroleum and petroleum products accounted for 90% of the country's export earnings in 2002 and 70% of government revenues, and crude oil and natural gas accounted for 42% of GDP; other minerals contributed 0.4% of GDP. Sa'udi Arabia has nevertheless diversified by expanding its gold production in recent years, as well as production of cement, fertilizer, petrochemicals, and steel. Cement production, construction, and fertilizer manufacturing ranked fourth, fifth, and sixth, respectively, among the country's leading industries in 2002.

Production of ore concentrate and bullion (metal content) in 2000 included copper, 900 tons, up from 821 in 1999; gold, 3,800 kg, down from 7,530 in 1996; and silver, 9,300 kg, down from 17,200 in 1997. In 2000, the country also produced lead,

zinc, barite, basalt, clays, phosphatic fertilizer, granite, gypsum, lime, limestone, marble, nitrogen, nitrogenous fertilizers, pozzolan, salt, sand and gravel, silica sand, scoria, sodium hydroxide (caustic soda), and sulfur. Mining operations continued at the ancient gold and silver underground mine Mahd adh-Dhahab (literally, "cradle of gold"), which was located southeast of Medina and probably dated from the time of King Solomon (10th century BC). Other gold producers were the open-pit silver and gold Amar Mine, southwest of Riyadh, which began operations in 2000, and the Sukhaybirat surface mine, northwest of Riyadh.

Feasibility studies at Balghah estimated resources to be 40 million tons at a grade of 1 grams per ton of gold. The remote Zabirah bauxite deposit had minable resources of 102 million tons. About 3,000 showings for at least 50 metallic and nonmetallic minerals have been located. Substantial national reserves of gold, iron ore, silver, copper, zinc, lead, pyrites, phosphate, magnesite, barite, marble, and gypsum have been suspected, and an intensive search was being carried on by Sa'udi and foreign companies.

All minerals, including petroleum and natural gas, were owned by the government. A modern mining code encouraged foreign participation, although majority holdings by national interests have increasingly been stressed. The Foreign Investment Act of 2000 gave international investors the same rights and privileges as Sa'udi investors. The government was also considering a revised mineral policy to attract additional investment in the mining sector. In 2000, the government established the Supreme Council for Petroleum and Mineral Affairs. The state-owned Sa'udi Arabian Mining Co. (Ma'aden) was created in 1997, and participated actively in and promoted mineral exploration and mining activities throughout the kingdom. Several metal and industrial mineral mining projects were expected to come onstream within the next 10 years.

## 27 ENERGY AND POWER

Oil was first discovered in Sa'udi Arabia in 1938, and exploitation of the world's largest oil field, Ghawar (west of Al-Hufuf), began 10 years later. By 1975, Sa'udi Arabia had become the world's third-leading producer (after the United States and USSR) and largest exporter of crude oil. With the continued development of Sa'udi Arabia's production capabilities and the dissolution of the Soviet Union in December 1991, Sa'udi Arabia became the world's largest oil producer. Most oil exports are transported by tanker from the Persian Gulf port of Jubail, and the rest moves by pipeline to the Red Sea port of Yanbu al-Bahr. In 2001, oil exports contributed \$54.9 billion and accounted for 90%–95% of the total export revenue. Proven reserves of crude oil, found along the Gulf in a quadrangular area northeast of Riyadh, were estimated at 264.2 billion barrels, or more than 25% of the world's known deposits, in early 2002. ARAMCO, a US-controlled firm that held the original oil concession, divested 60% of its interests to the Sa'udi government in 1974 and the remainder in 1980, but continued to produce 96% of Sa'udi Arabia's oil under a management contract with the Sa'udi government.

After the Iranian revolution of 1979 and the outbreak of war between Iran and Iraq in 1980, the Sa'udi government made up for the diminished oil exports of both countries by increasing its average oil output to a record 9.9 million barrels per day in 1980. Production remained high at 9.8 million barrels a day in 1981 but was cut to 6.5 million barrels daily in 1982. Because of the continued oversupply of oil, Sa'udi Arabia cut its production from 1983 to 1985, when it averaged about 3.3 million barrels per day. In 1986, in an attempt to increase its market share, Sa'udi Arabia temporarily abandoned its role as the swing producer in Organization of the Petroleum Exporting Countries (OPEC) and flooded the market, producing about 5 million

barrels a day, forcing the price to less than \$10 per barrel. Since 1987, when production amounted to 4.2 million barrels per day, Sa'udi Arabia has dramatically intensified production, especially since the end of the 1991 Persian Gulf War. In 2001, an estimated 8.7 million barrels of oil (8 million, crude oil) were produced per day. As of 2002, Ghawar, with remaining reserves estimated at 70 billion barrels, was still the world's largest oil field. Safaniya, with estimated reserves of 19 billion barrels, was the world's largest offshore field.

As of 2002 two major pipelines operated actively in Sa'udi Arabia. The Petroline, used to transport crude oil to refineries in western Sa'udi Arabia and to the Red Sea for export, was constructed in 1981 and expanded in 1987. In 1993 its capacity was increased to 5 million barrels per day. The Abqaiq-Yanbu pipeline, which carried natural gas liquids to petrochemical plants in Yanbu, had a capacity of 290,000 barrels per day. The IPSA pipeline had been closed indefinitely since Iraq invaded Kuwait in 1990.

Natural gas production was 46.1 billion cu m (1.6 trillion cu ft) in 1999. Reserves of natural gas, estimated at 6.2 trillion cu m (219 trillion cu ft) at the beginning of 2002, ranked as the world's fourth-largest (surpassed only by Russia, Iran, and Qatar). About two-thirds of these reserves consisted of gas associated with the onshore Ghawar oil field and the offshore Safaniya and Zuluf fields.

Sa'udi Arabia has limited waterpower resources, and oil-powered diesel engines generate most of its electric power. Electrical service, which reached 2.2 million people in 1975, was extended to 4.2 million in 1979 and, by 1990, reached 92% of the population. Total installed generating capacity was 23,792 MW at the beginning of 2001. Production in 2000 amounted to 120.7 billion kWh, of which 100% was from fossil fuels. As of 2002, demand for power was growing about 5% annually, and it was estimated that capacity would need to be nearly doubled by 2020 to meet the country's needs. Solar energy is becoming increasingly important as an alternative to diesel power, particularly for use in the desalination of seawater.

## 28 INDUSTRY

Although the Sa'udi economy has been virtually synonymous with crude oil, the country is attempting to diversify its manufacturing. Industrial products include cement, steel, glass, metal manufactures, automotive parts, and building materials, along with petroleum refinery products and petrochemicals (primarily methanol, ethylene, and polypropylene).

Industries producing consumer goods for the local market rely for the most part on imported raw materials. The most notable growth has occurred in food processing and includes meat-packing plants, flour mills, ice cream, yogurt, other dairy processing plants, and vegetable canneries. Other companies produce canvas cloth, surgical supplies, paper products, plastic pipes, electric appliances, paints, detergents, and pharmaceuticals.

## 29 SCIENCE AND TECHNOLOGY

The government encourages importation of high technology, especially in the oil industry, but its own commitment to national technological development has been limited. The Industrial Studies and Development Center is located in Riyadh, and the King Fahad University of Petroleum and Minerals, founded in 1963, is in Dhahran. Other institutions offering courses in basic and applied sciences include King Abdulaziz University, founded in 1967 at Jeddah; King Faisal University, founded in 1975 at Dammam and Al-Hassa; King Sa'ud University, founded in 1957 at Riyadh; and Yanbu Industrial College, founded in 1989 at Yanbu al-Sinaiyeh. In 1987-97, science and engineering students accounted for 17% of college and university enrollments. The King Abdul Aziz City for Science and Technology was founded in

1977 at Riyadh to formulate the national policy for science and technology development, and to draw up the strategy and plans for its implementation.

## 30 DOMESTIC TRADE

Jeddah and Riyadh are the commercial and business centers of the country. Most major cities host large, modern supermarkets and specialty retail stores offering wide varieties of goods and services. Franchising has become popular with a wide range of goods and service-based establishments. Barter is the traditional means by which nomads and farmers have obtained each other's products, and weekly markets are held in villages and small towns. However, the economy is being progressively monetized and is now completely so in the towns and cities. Newspapers, magazines, and billboards are the principal means of advertising.

Normal business hours vary in different provinces but are usually from 7:30 AM to 1:30 PM and 2:30 to 8 PM, Saturday through Wednesday. The normal workday is eight hours; during the month of Ramadan, however, the workday is limited to six hours. Banks are generally open from 8:30 AM to 12 noon and 5 to 7 PM, Saturday through Wednesday, and 8:30 to 11:30 AM, Thursday. Friday is the day of rest in Sa'udi Arabia. Most businesses, including stores and restaurants, take breaks at the designated Muslim prayer times, which are spaced at five times throughout the day. These breaks generally last for about a half an hour each.

## 31 FOREIGN TRADE

Sa'udi Arabia's commodity exports are dominated by mineral fuels, which account for 13% of the world's mineral fuel exports. Crude petroleum (79% of total exports, 16.3% of world crude petroleum exports) and refined petroleum products (12% and 7.1%, respectively) are the largest exports. Other exports include polymers (1.2%) and industrial alcohols (1.4%, accounting for 8.1% of the world's industrial alcohol exports).

In 2000 Sa'udi Arabia's imports were distributed among the following categories:

Consumer goods	17.3%
Food	15.9%
Fuels	0.2%
Industrial supplies	24.2%
Machinery	19.9%
Transportation	21.2%
Other	1.3%

Principal trading partners in 1998 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
Japan	6,524	4,392	2,132
United States	6,517	11,577	-5,060
Korea	3,986	1,456	2,530
Singapore	2,982	420	2,562
India	2,338	767	1,571
France	1,622	1,570	52
Netherlands	1,538	691	847
United Kingdom	1,345	4,896	-3,551
Italy	1,259	1,814	-555
Germany	527	2,652	-2,125

## 32 BALANCE OF PAYMENTS

In 2000 foreign worker remittances, approximately \$18 billion per year, continued to drain the current account. There are roughly 6-7 million foreign workers and their families living in the country, and the remittances cause the currency to be subject to a mild devaluating pressure. Strong oil exports in the early 2000s, however, kept the current account in surplus.

The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Sa'udi Arabia's exports was \$66.9 billion while imports totaled \$29.7 billion resulting in a trade surplus of \$37.2 billion.

The International Monetary Fund (IMF) reports that in 2001 Sa'udi Arabia had exports of goods totaling \$73 billion and imports totaling \$28.6 billion. The services credit totaled \$5.18 billion and debit \$19.3 billion. The following table summarizes Sa'udi Arabia's balance of payments as reported by the IMF for 2001 in millions of US dollars.

<b>Current Account</b>	<b>14,502</b>
Balance on goods	44,387
Balance on services	-14,125
Balance on income	-520
Current transfers	-15,240
<b>Capital Account</b>	<b>...</b>
<b>Financial Account</b>	<b>-16,411</b>

<b>Reserves and Related Items</b>	<b>1,909</b>

### 33 BANKING AND SECURITIES

Until the mid-20th century, Sa'udi Arabia had no formal money and banking system. To the degree that money was used, Sa'udis primarily used coins having a metallic content equal to their value (full-bodied coins) for storing value and limited exchange transactions in urban areas. For centuries, foreign coins had served the local inhabitants' monetary needs. Development of banking was inhibited by the Quranic injunction against interest. A few banking functions existed, such as money changers (largely for pilgrims visiting Mecca), who had informal connections with international currency markets. A foreign bank was established in Jeddah in 1926, but its importance was minor. Foreign and domestic banks were formed as oil revenues began to increase. Their business consisted mostly of making short-term loans to finance imports, commercial trading, and businesses catering to pilgrims. Although lending at interest is prohibited by Islamic law, banking has flourished in Sa'udi Arabia as a conduit for the investment of oil money. The Sa'udi Arabian Monetary Agency (SAMA) was established by royal decree in 1952 to maintain the internal and external value of currency. The agency issues notes and coins with 100% cover in gold and convertible foreign exchange and regulates all banks and exchange dealers.
