SAMA runs a stock exchange in Sa'udi Arabia, created in 1990 as an over-the-counter market in which the commercial banks buy and sell shares by means of an electronic trading system. Although this system has facilitated easy access to transacting, the market remains relatively illiquid because of the small numbers of issuers and the narrow investor base. There are 76 companies listed on the exchange. The value of traded shares was \$22.2 billion in 2001, a turnover ratio of 31.7%. Total market capitalization was just over \$73 billion. The new IFCG Sa'udi Index closed up 7.4% in 2001, its fourth year of existence, after surging increases of 49% and 16.3% in 1999 and 2000, respectively. The market is closed to direct foreign investment, but foreigners can buy and trade shares of Sa'udi companies within a closed-end fund listed in the United Kingdom. In 2002 there were 10 commercial banking houses, the largest of which was The National Commercial Bank. Cumulatively, the total size of the bank's balance sheets stood at over SR110 billion, with operating profits of SR2 billion in 2001. Eight of the ten are joint venture banks. The major foreign partners include Citibank, Arab Bank Ltd., Banque Indosuez, HSBC Holdings, and ABN

Amro. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$48.0 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$88.4 billion.

### 34 INSURANCE

There were at least 70 insurance firms operating in Sa'udi Arabia in 1998 offering all categories and classes of insurance. The National Company for Cooperative Insurance, founded by royal decree in 1985 and owned by three government agencies, had share capital of SR250 million. In all, insurance premiums amounted to over \$760 million. Premiums covering oil facilities, major projects, marine and aviation represent over 44% of total premiums, motor insurance accounts for 23%, medical 18%, and fire 14%. Insurance organizations in Sa'udi Arabia are regulated by the Ministry of Commerce. One insurer is officially licensed by the kingdom, the National Company for Cooperative Insurance, which is primarily owned by the government. Insurance companies operating in the country adhere to the tenets of Islam, which does not recognize insurance. For this reason, there are no insurance laws on the books, except those dealing with benefits for injured employees.

### 35 PUBLIC FINANCE

Public expenditures typically have acted as the vanguard for economic growth and development since the early 1970s. After completing the infrastructure in the 1970s and early 1980s, the emphasis of development expenditures moved to education and training, to encourage private enterprise. By 1987, 70% of non-oil GDP was coming from the private sector. Deficits have been common since 1983, as oil revenues have declined. Oil revenues typically account for nearly 75% of government revenues. Deep budget cuts over the past years; higher charges on energy, electricity, water, telephone, worker and visa fees; and reduced subsidies on fuels, utilities, and airline fares; have combined to reduce the deficit. To finance the deficit, the government borrows from domestic financial markets.

However, Sa'udi government finances are not transparent; a perennial uncertainty being the difference between the revenues received by the national oil company, Aramco, and what is turned over the Ministry of Finance to fund government expenses. The difference goes to Aramco's operating expenses and numerous off-budget expenditures. Observers believe that one major use of the off-budget money has been to pay down arrears on contracts, amounting to an estimated \$30 billion in 1995. Estimates are that such arrears had been reduced to \$3 billion by 2000. With the exception of the year 2000, the Sa'udi government has run a deficit every year since 1982. Rising oil prices in 2000, recovering from near-record lows in 1999, helped produce a \$12 billion surplus as oil revenues came in 60% higher than expected. The accumulated domestic debt in 2000, however, was an estimated 105% of GDP, which has been financed by government pension funds and bonds held by banks and some companies. External debt from transactions in the privatized portions of the economy had reached nearly \$40 billion in 2001, but this represents a still manageable 21% of the annual GDP.

The US Central Intelligence Agency (CIA) estimates that in 2002 Sa'udi Arabia's central government took in revenues of approximately \$42 billion and had expenditures of \$54 billion. Overall, the government registered a deficit of approximately \$12 billion.

### 36 TAXATION

The taxing authority in Sa'udi Arabia is the Department of Zakat and Income Tax. During the early 1970s, a progressive income tax was levied on all personal income of foreign residents in excess of sr6,000, at the rate of 5–30%; there was also a

progressive tax of 25–45% on the profits of foreign companies. These taxes were abolished in 1975; in January 1988, an attempt was made to revive them, but it was rescinded almost immediately after widespread complaint. However, foreign companies that have not obtained exemption under the Foreign Investment Code and foreigners who are self-employed professionals or general partners in Sa'udi partnerships are subject to these taxes.

Corporate taxes range from 25–45% of net income. The zakat is an Islamic tax derived from the Shari'ah and applied directly to the income and property of Saudis (and resident Gulf state nationals); half of the zakat rate of 2.5% is paid to the government, and the other half is distributed by citizens to the poor. The income of members of the royal family is tax-exempt.

### 37 CUSTOMS AND DUTIES

Sa'udi Arabia has increasingly used the tariff to protect local industries. The general tariff rate is 5%; new Sa'udi industries are protected by a 20% tariff rate. Importation of liquor, firearms, ammunition, and narcotics, and certain other items is strictly forbidden, as are all imports from Israel and South Africa. No import taxes are levied beyond import tariffs. However, the country is seeking admission into the World Trade Organization, so its trade policies and practices may change in the near future in attempts to accommodate to WTO rules.

### 38 FOREIGN INVESTMENT

A small group of upper-class Sa'udis have traditionally held substantial investments overseas. These Sa'udis hold large demand deposits in US and Western European banks and considerable investments in commercial ventures, especially real estate, in Egypt and other Middle Eastern countries. Since the early 1970s, the Sa'udi government has vastly increased its overseas investments in the US, Western Europe, and Japan.

The Sa'udi government generally encourages foreign direct investment, especially in the case of joint ventures with Sa'udi partners. The foreign capital investment code specifies that foreign investments: (1) must be a "development project," (2) must generate technology transfer, and (3) a Sa'udi partner should own a minimum of 25% equity in the project. However, in 1999, the government began revising its laws on foreign investment in an effort to attract more overseas capital and to lure back the large private Sa'udi capital that is invested abroad. Principal foreign investors include the US (41% of the total), Japan, the UK, Switzerland, France, and Germany.

A major milestone was reached in three preparatory agreements signed on 3 June 2001 on natural gas development with eight leading oil companies, the first foreign direct investment (FDI) in Sa'udi Arabia's upstream sector since Aramco was nationalized in the period 1974 to 1980. The Sa'udis hope to attract as much as \$25 billion in FDI through the gas initiative.

### 39 ECONOMIC DEVELOPMENT

Sa'udi Arabia's first two development plans (1971–75 and 1976–80) stressed improvement of the country's economic infrastructure by expanding the highway system, port capacity, electric power output, water supply, and irrigated land. The third plan (1981–85), continuing the Sa'udi program of modernization without Westernization, aimed at diversifying and expanding the productive economic sectors of industry, mining, and agriculture. The government's long-term goal was to reduce the nation's dependence on oil exports and foreign labor. Expenditures for the 1981–85 plan were initially estimated (at current prices) at \$235.8 billion, compared with \$140 billion for the 1975–80 plan. At the end of the third development plan, most of the infrastructure had been put in place. The fourth development plan (1985–90) emphasized consolidation of the gains of the previous 15 years and rational planning of economic activity.

From the plan's emphasis on cost reduction and improvement of economic performance, it was clear that it had been drawn up under the assumption that the days of huge surpluses in the oil sector were over. Planned expenditures for the fourth plan were reduced several times. The fifth plan (1990–95) followed the goals of the fourth plan closely. Stressing economic diversification, this plan supported industry, agriculture, finance, and business services. An important goal of the sixth plan (1995–2000) was to reduce water consumption by 2% annually over the plan's period.

By the late 1990s, low oil prices had substantially reduced the GDP. Low revenues from oil and a rapidly expanding population put pressure on the government to put more emphasis on private sector expansion. Accordingly, the government began the process of privatizing government-owned entities in the telecommunications, transportation, and power generation sectors. However, there is concern that the growth in private sector jobs will not keep pace with the more quickly expanding population.

In April 2000, the government approved a new Foreign Direct Investment (FDI) Law, which allows 100% foreign ownership of investments, and established the General Investment Authority (SAGIA) to provide information and assistance for foreign investors.

### 40 SOCIAL DEVELOPMENT

Social insurance provides health care, disability, death, old age pension, and survivor benefits for workers and their families. Retirement is allowed at age 60, and benefits are provided at 2% of average monthly earnings times the number of years worked. This system is funded by 5% payroll deductions from workers, and 8% of payroll contributions from employers. The government provides an annual subsidy to the program. This program is compulsory for employees of firms with 10 or more workers, and is voluntary for smaller enterprises. The law requires employers to provide 100% of wages for a month of sick leave, and 75% of wages for two additional months.

The customs and regulations governing the behavior of women are strict even by the standards of the Islamic world. Despite the shortage of Sa'udi labor, the government is unsympathetic to the participation of women in the workplace; only 5% of the labor force is female. Extreme modesty of dress is required. Women wear the abaya, a long black garment, and they must also cover their face and head. Women are not permitted to drive motor vehicles. Women must enter public buses through a rear door, and sit in a segregated area. Women may not travel without the written permission of a male member of her family. This provision also applies to travel within the country. Domestic abuse is prevalent.

Segregation also occurs in the workplace, where women may only contact clients by telephone or fax. The Ministry of Commerce will not issue business licenses for women in fields that might require them to be in regular contact with government officials or male clients.

The government does not recognize international standards on human rights. Rights of privacy, freedom of speech, the press, assembly, association, religion, and movement are strictly curtailed. Security forces commit human rights abuses with the acquiescence of the government, even though they are nominally illegal. Corporal punishment, including amputation of limbs, beheading, and stoning, are used. Executions are carried out for crimes including alcohol trafficking, armed robbery, adultery and the practice of witchcraft. Most of those executed were foreigners.

### 41 HEALTH

From 1990 through 1995, the government budgeted SR63.9 billion for health and social services (of a total budget of SR497.6

billion). Targets included improving immunization coverage and achieving better regional coverage of health care provision (which remains inadequate). The public health care system is supplemented by a small but generally excellent private health sector. It is the government's intention to provide integrated health services free of charge, or at a nominal fee, to all citizens. The government also hopes to establish a local manufacturer of pharmaceuticals and medical equipment and supplies. Health personnel in 1990 included 21,110 physicians (about 1.82 per 1,000), 1,967 dentists, and 48,066 nurses (about 3.8 per 1,000). In 1991, there were 1,811 pharmacists. As of 1999, there were an estimated 1.7 physicians and 2.3 hospital beds per 1,000 people.

Despite recent advances, Sa'udi Arabia still suffers from severe health problems. A major cause of disease is malnutrition, leading to widespread scurvy, rickets, night blindness, and anemia, as well as low resistance to tuberculosis. Immunization rates for 1995 for children up to one year old were tuberculosis, 93%; diphtheria, pertussis, and tetanus, 97%; polio, 97%; and measles, 94%. As of 1999 the rates for DPT and measles were, respectively, 96% and 91%. Dysentery attacks all ages and classes and trachoma is common. A government campaign was successful in eradicating malaria. Typhoid is endemic, but acquired immunity prevents serious outbreaks of this disease. HIV prevalence in 1999 was 0.0 per 100 adults. There were 171 cases of AIDS reported in 1996. Sewage disposal and other health and sanitation facilities have been improved, but much still needs to be done. In 2000, 95% of the population had access to safe drinking water and 100% had adequate sanitation.

In 1960, life expectancy at birth was 43 years, but it averaged 73 years in 2000. During the same time period, infant mortality fell from 185 to 18 per 1,000 live births. The infant mortality rate stands considerably above those of middle-income countries. This fact may reflect the high infant death rate among the Bedouin, which has been estimated to account for about one-third of all infant deaths. The maternal mortality rate was 22 per 100,000 live births in 1998. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 37.2 and 5.9 per 1,000 people. Birth control was used by 21% of married women in 2000. In 1992, 97% of the population had access to health care services. As of 1999, total health care expenditure was estimated at 8% of GDP.

## 42 HOUSING

The continuing influx of rural people to towns and cities, coupled with the rise in levels of expectation among the urban population, has created a serious housing problem; improvement in urban housing is one of Sa'udi Arabia's foremost economic needs. Some 506,800 dwelling units were built during 1974–85, 389,000 by the private sector, with the help of the Real Estate Development Fund, and 117,800 by the Deputy Ministry of Housing and other government agencies. In 1984, 78,884 building permits were issued, 84% of these for concrete dwellings and 8% for housing units of blocks and bricks. In the oil districts, ARAMCO, through loans and other assistance, has encouraged construction of private homes and has built accommodations for its unmarried Sa'udi staff members. The Real Estate Development Fund, established in 1975, continues to provide interest-free loans for home construction by individuals as well as private companies.

## 43 EDUCATION

Until the mid-1950s, Sa'udi Arabia's educational system was primarily oriented toward religious schooling that stressed knowledge of the Qur'an (Koran) and Hadith (sayings of Muhammed and his companions). Except for basic arithmetic, reading, and writing, secular subjects were not taught in the schools. There was a highly developed oral culture, however. Nearly all of the students were boys; education of girls was virtually nonexistent and took place in the home, if at all. The

first school for girls was built in 1964, and now girls' schools exist around the country. The General Presidency for Girls' Education administers girls' schools and colleges. By 1999 females accounted for 48% of primary enrollment and 46% of secondary enrollment.

As of 1985, attendance in primary school was required by law. Education is free at all levels, including college and postgraduate study. The literacy rate in the 1960s was 3%. By 1995, it was 62.8%. However, literacy among women remains significantly lower than that of men. For the year 2000, adult illiteracy rates were estimated at 23.0% (males, 15.9%; females, 32.8%).

By 1997 there were 11,506 primary schools, with 2,256,185 pupils and 175,458 teachers. Student-to-teacher ratio stood at 13 to 1. Secondary schools had a total enrollment of 1,542,989 students and 119,881 teachers in the same year. In 1999, the pupil-teacher ratio at the primary level was 12 to 1, and 58% of primary-school-age children were enrolled in school.

Higher education was pursued in seven universities and 83 colleges. The principal universities are King Sa'ud University (formerly Riyadh University), founded in 1957, and King Abd al-'Aziz University of Jeddah, founded in 1967. All higher-level institutions had 273,992 pupils and 15,868 teachers in 1997. As of 1999, public expenditure on education was estimated at 7.5 % of GDP.

## 44 LIBRARIES AND MUSEUMS

The King Fahd National Library, founded in Riyadh in 1968, has 462,000 volumes. The largest library system is that of King Sa'ud University established in 1957, with 14 branches and a collection of more than 1.8 million volumes; the library at King 'Abd al-'Aziz University has 560,000 volumes. The library of the University of Petroleum and Minerals in Dhahran, with almost 335,000 volumes, is the nation's largest specialized collection. The largest public library, at Riyadh, contains 275,000 volumes.

There are 10,150 documented monuments and about a dozen museums in Sa'udi Arabia. The National Museum, originally opened at Riyadh in 1978, focuses on archaeology and ethnography. Major renovations were completed in 1999. Many of the other historic and cultural sites are religious in nature and the high figures for attendance reflect the huge numbers of Muslim pilgrims who visit the kingdom each year. Riyadh is also home to a local museum, an archaeological museum at King Sa'ud University, and a geological museum.

## 45 MEDIA

Postal, telephone, cable, and wireless services are regulated by the Ministry of Communications. Sa'udi Arabia is directly connected by radiotelephone with the US, other Arab countries, and Western Europe, and automatic internal lines connect most of the major cities. The telephone system has been expanded within the last decade and in 1998 some 3.1 million mainline telephones were in use, along with 1 million cellular phones.

All radio and television broadcasting emanates from the government-owned sources of Sa'udi Arabian Broadcasting Service, Sa'udi ARAMCO FM stations, Sa'udi-Arabian TV, and an ARAMCO channel in Dhahran. In 1998, there were 43 AM and 31 FM radio stations. There were 117 television stations in 1997. In 2000, there were 326 radios and 264 television sets for every 1,000 people. In 2001, there were about 42 Internet service providers serving nearly 1 million subscribers. Access to the Internet is very strictly monitored by the government.

The first newspaper in what is now Sa'udi Arabia was *Al-Qiblah*, the official publication of King Hussein of Hijaz, founded in 1915. With the end of the short-lived Hijaz kingdom in 1925, a Sa'udi-sponsored paper, called *Umm al-Qura* (*The Mother of Towns*, Mecca), was established. Newspapers are privately owned; but self-censorship is widely employed. The Ministry of Information appoints all editors-in-chief. Criticism of

the fundamental principles of Islam and of basic national institutions, including the royal family, is not permitted. The largest Arabic daily papers (with 2002 circulations) are *Al-Asharq Al-Awsat* (*The Middle East*, 224,990); *Al-Riyadh* (150,000); *Okaz* (107,600); and *Al-Jazirah* (*The Peninsula*, 94,000). Leading English-language dailies are the *Arab News* (110,000) and *Sa'udi Gazette* (50,000).

The government is said to severely limit freedom of speech and the press, punishing any criticism of Islam, the ruling family, or the government with detention and arrest.

#### 46 ORGANIZATIONS

Sa'udi social tradition, which emphasizes the exclusiveness of family, clan, and tribe, generally militates against the formation of other social organizations. The absence of political and economic organizations also is a result of the prevalence of tradition. However, there are chambers of commerce in Ad-Dammam, Jeddah, Mecca, Medina, and Riyadh.

The King Faisal Center for Research and Islamic Studies serves as a multinational cultural and educational organization. The Muslim World League works for the welfare of women and children. The Red Crescent Society is active.

National youth organizations include the Sa'udi Arabian Assembly of Muslim Youth and the Sa'udi Arabian Boy Scouts Association. There are a number of multinational, Arab sports associations based in the country.

#### 47 TOURISM, TRAVEL, AND RECREATION

Sa'udi Arabia is one of the hardest places in the world to visit. Tourist visas are not issued and foreign visitors must show letters of invitation from Sa'udi employers or sponsors to enter the country. Every year, however, there is a great influx of pilgrims to Mecca and Medina, cities that non-Muslims are forbidden to enter. In 1998 the number of pilgrims totaled over two million. Tourist arrivals totaled 3,700,00 that year, with receipts of \$1.5 million. Evidence of a previous or planned trip to Israel is grounds for denial of admission to Sa'udi Arabia.

Traditional sports include hunting with salukis, falconry, and horse and camel racing. Modern sports facilities include the Riyadh Stadium, complete with Olympic-standard running tracks and soccer fields.

In 2001, the US State Department estimated the cost of staying in Riyadh at \$175 per day. Daily expenses for travel in other areas of the country varied, ranging from \$153 in Jeddah to \$220 elsewhere.

#### 48 FAMOUS SA'UDIS

Although Sa'udi Arabia has a relatively short history as a nation-state, it is heir to an Islamic civilization that developed from the teachings of Muhammad (570–632), born of the tribe of Quraysh in Mecca. The branch of Islam which claims most contemporary Sa'udis is that preached by Muhammad bin 'Abd al-Wahhab (1703?–91), a fundamentalist reformer.

The Sa'udi who has gained greatest renown outside the modern kingdom of Sa'udi Arabia is 'Abd al-'Aziz ibn 'Abd ar-Rahman al-Faysal as-Sa'ud, better known as Ibn-Sa'ud (1880–1953), the father of his country. Forced into exile with his family at a young age, he reconquered his patrimony and left behind him the state of Sa'udi Arabia.

In 1964, Faisal (Faysal ibn-'Abd al-'Aziz as-Sa'ud, 1906–75) was proclaimed king. In his role as prime minister, Faisal instituted many economic and social reforms, including the

abolition of slavery. Upon his assassination in March 1975, he was succeeded as king and prime minister by Khaled (Khalid ibn-'Abd al-'Aziz, 1913–82). Together with Crown Prince Fahd ibn-'Abd al-'Aziz (b.1920), King Khaled broadened the country's development policies.

After Khaled's death, Fahd became king; he has pursued the same cautious program of modernization as his two predecessors. Ahmad Zaki Yamani (b.1930), a former minister of petroleum and mineral resources, gained an international reputation as a spokesman for the oil-exporting countries.

#### 49 DEPENDENCIES

Sa'udi Arabia has no territories or colonies.

# SINGAPORE

Republic of Singapore

**CAPITAL:** Singapore

**FLAG:** The flag consists of a red stripe at the top and a white stripe on the bottom. On the red stripe, at the hoist, are a white crescent opening to the fly and five white stars.

**ANTHEM:** *Long Live Singapore.*

**MONETARY UNIT:** The Singapore dollar (S\$) of 100 cents is a freely convertible currency. There are coins of 1, 5, 10, 20, and 50 cents and 1 dollar and notes of 2, 5, 10, 20, 50, 100, 500, 1,000, and 10,000 dollars. S\$1 = US\$0.5617 (or US\$1 = S\$1.78) as of May 2003.

**WEIGHTS AND MEASURES:** The metric system is in force, but some local measures are used.

**HOLIDAYS:** Major Western, Chinese, Malay, and Muslim holidays are celebrated, some of which fall on annually variable dates because of the calendars used. Major holidays include New Year's Day, 1 January; Chinese New Year; Good Friday; Vesak Day (Buddhist festival); Labor Day, 1 May; Hari Raya Puasa (Muslim festival); National Day, 9 August; Hari Raya Haji (Malay Muslim festival); Dewali; Christmas, 25 December.

**TIME:** 8 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

The Republic of Singapore, the second smallest country in Asia, consists of Singapore Island and several smaller adjacent islets. Situated in the Indian Ocean off the southern tip of the Malay Peninsula, Singapore has an area of 693 sq km (268 sq mi). Comparatively, the area occupied by Singapore is slightly more than 3.5 times the size of Washington, D.C. Singapore Island extends 41.8 km (26 mi) ENE–WSW and 22.5 km (14 mi) SSE–NNW and has a coastline of 193 km (120 mi), including about 84 km (52 mi) along the water channel between the island and the Malay Peninsula. Singapore is connected to the nearby western portion of Malaysia by a causeway 1,056 m (3,465 ft) in length across the narrow Johore Strait. Singapore's position at the eastern end of the Strait of Malacca, which separates western Malaysia and the Indonesian island of Sumatra, has given it economic and strategic importance out of proportion to its small size. Singapore's capital city, Singapore, is located on the country's southern coast.

## <sup>2</sup>TOPOGRAPHY

Singapore Island is mostly low-lying, green, undulating country with a small range of hills at the center. The highest point of the island is Bukit Timah (166 m/545 ft). There are sections of rainforest in the center and large mangrove swamps along the coast, which has many inlets, particularly in the north and west. Singapore's harbor is wide, deep, and well protected.

## <sup>3</sup>CLIMATE

The climate is tropical, with heavy rainfall and high humidity. The range of temperature is slight; the average annual maximum is 31°C (88°F), and the average minimum 24°C (75°F). The annual rainfall of 237 cm (93 in) is distributed fairly evenly throughout the year, ranging from 39 cm (15 in) in December to 28 cm (11 in) in May. It rains about one day in two.

## <sup>4</sup>FLORA AND FAUNA

Singapore Island is mostly denuded, the dense tropical forest that originally covered it being mostly cleared. There is some rain forest in the central area of the island, however, as well as extensive mangrove swamps along the coast. Urban development has limited animal life.

## <sup>5</sup>ENVIRONMENT

Environmental responsibility for Singapore is vested in the Ministry of the Environment and its Anti-Pollution Unit. Air quality is protected by the Clean Air Act, as adopted in 1971 and amended in 1975 and 1980, and by the Clean Air (Standards) Regulations of 1975. Regulations limiting the lead content of gasoline were imposed in 1981, and emissions standards for motor vehicles were tightened in 1986. Air pollution from transportation vehicles is a problem in the nation's growing urban areas. In 1992, Singapore was among 50 nations with the world's highest levels of industrial carbon dioxide emissions, which totaled 49.8 million metric tons, a per capita level of 17.99 metric tons. In 1996, the total rose to 65.8 million metric tons.

Water quality is regulated through the Water Pollution Control and Drainage Act of 1975 and the Trade Effluent Regulations of 1976. Singapore does not have enough water to support the needs of its people. In total, the nation about has 0.1 cubic miles of water. Four percent is used for farming and 51% for industrial purposes. Pollution from the nation's oil industry is also a significant problem, and its cities produce about 0.9 million tons of solid waste per year. Waste water is treated and recycled to conserve water supplies. Altogether, Singapore has lost 20 to 30% of its original mangrove area.

In 2001, two plant species, six mammal species, and nine bird species were considered to be in danger of extinction. Endangered species in Singapore include the Ridley's leaf-nosed bat, Chinese egret, yellow-crested cockatoo, batagur, tigers, and the Singapore roundleaf horseshoe bat.

## 6 POPULATION

The population of Singapore in 2003 was estimated by the United Nations at 4,253,000, which placed it as number 117 in population among the 193 nations of the world. In that year approximately 7% of the population was over 65 years of age, with another 21% of the population under 15 years of age. There were 101 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 1.69%, with the projected population for the year 2015 at 4,707,000. The population density in 2002 was 6,852 per sq km (17,746 per sq mi).

Singapore is virtually a city-state, and the entire population (100%) is considered urban. The capital city, Singapore, and the surrounding area, had a population of 3,522,000 in 2002. According to the United Nations, the urban population growth rate for 2000–2005 was 1.0%.

## 7 MIGRATION

Singapore had only a few Malay fishermen as inhabitants at the time of its founding as a British trading post in 1819. It was subsequently, and quite rapidly, populated by immigrant peoples, primarily Chinese but also Malays (from Sumatra as well as adjacent Malaya) and Indians (who took advantage of common British governance to migrate to Singapore in search of better employment). Thus immigration, rather than natural increase, was the major factor in Singapore's fast population growth through the mid-20th century.

In November 1965, following separation from Malaysia, Singapore's newly independent government introduced measures to restrict the flow of Malaysians entering the country in search of work. These immigrants, who averaged 10,000 a year up to 1964, had to establish residence for several years to qualify for citizenship. In addition, all non-citizens were required to apply for a work permit or employment pass. Immigration is now generally restricted to those with capital or with special skills. In 2000, the net migration rate was 19.6 migrants per 1,000 population. There were 1,352,000 migrants living in Singapore in that year.

## 8 ETHNIC GROUPS

The people of Singapore are predominantly of Chinese origin. In a 2002 report, about 77% were ethnic Chinese (most of them, however, born in Singapore or in neighboring Malaysia). Some 14% were Malays; 8% were Indians (including Pakistanis, Bangladeshis, and Sri Lankans); and 1.4% were of other varied ethnic origins.

## 9 LANGUAGES

There are four official languages: Chinese (Mandarin dialect), Malay, English, and Tamil. English is the principal medium of government and is widely used in commerce. By 1987, under a government mandate, English was made the primary language of the school system. Malay is the national language.

## 10 RELIGIONS

There is complete separation of state and religion in Singapore. Freedom of religion is both constitutionally guaranteed and honored in practice. However, a 2002 report indicated that Jehovah's Witnesses and the Unification Church had been banned by the government. The Chinese for the most part adhere in varying degrees to Buddhism, Taoism, and Confucianism. According to a 2000 census, these faiths, as well as traditional ancestor worship, are practiced by about 51% of the population. Malays and persons with origins in the Pakistani and Bangladeshi portions of the Indian subcontinent are almost exclusively Muslim. About 15% of the population practice Islam. About 15% of the population is Christian, with Protestants

outnumbering Roman Catholics by about two to one. Most of the Indian minority (4%) are Hindus. There are also small Sikh, Jewish, Zoroastrian, and Jain communities.

## 11 TRANSPORTATION

Singapore's history is partly the history of the island-country's important regional role as a transportation link between East and West and between the mainland and insular portions of Southeast Asia. As long ago as 1822—only three years after the establishment of a British colonial presence on the island—1,575 ships called at the new port of Singapore from nearby islands, Europe, India, and China. With a natural deepwater harbor that is open the year round, Singapore now ranks as the largest container port in the world, with anchorage facilities that can accommodate supertankers. Ships of some 600 shipping lines, flying the flags of nearly all the maritime nations of the world, regularly call at Singapore. In 2001, Singapore's merchant fleet was comprised of 876 ships, totaling 20,686,612 GRT.

Commercial air service was inaugurated in Singapore in 1930. In 2001 there were 9 airports, all of which had paved runways. The two principal air facilities are Changi International and Seletar Airport. Singapore's own flag carrier is Singapore Airlines. In 2001, 16,373,600 passengers were carried on scheduled domestic and international flights.

There were 3,150 km (1,957 mi) of roadways in 2002, of which 3,066 km (1,905 mi) were paved, including 150 km (93 mi) of expressways. In 2001, there were 545,251 motor vehicles, of which 405,354 were automobiles. Singapore's sole rail facility is a 38.6-km (24-mi) section of the Malayan Railways, which links Singapore to Kuala Lumpur. There is also an 83-km (52-mi) mass transit system with 48 stations.

## 12 HISTORY

Some historians believe a town was founded on the Singapore Island as early as the 7th century, while other sources claim that "Singapura" (Lion City) was established by an Indian prince in 1299. Historians believe that during the 13th and 14th centuries, a thriving trading center existed until it was devastated by a Javanese attack in 1377. Singapore, however, was virtually uninhabited when Sir Stamford Raffles, in 1819, established a trading station of the British East India Company on the island. In 1824, the island was ceded outright to the company by the Sultan of Johore, the Malay state at the extreme southern end of the Peninsula. In 1826 it was incorporated with Malacca (Melaka, Malaysia) and Penang (Pinang, Malaysia) to form the Straits Settlements, a British Crown Colony until World War II. The trading center grew into the city of Singapore and attracted large numbers of Chinese, many whom became merchants.

With its excellent harbor, Singapore also became a flourishing commercial center and the leading seaport of Southeast Asia, handling the vast export trade in tin and rubber from British-ruled Malaya. In 1938, the British completed construction of a large naval base on the island, which the Japanese captured in February 1942 during World War II, following a land-based attack from the Malay Peninsula to the north.

Recaptured by the United Kingdom in 1945, Singapore was detached from the Straits Settlements to become a separate crown colony in 1946. Under a new constitution, on 3 June 1959, Singapore became a self-governing state, and on 16 September 1963, it joined the new Federation of Malaysia (formed by bringing together the previously independent Malaya and Singapore and the formerly British-ruled northern Borneo territories of Sarawak and Sabah). However, Singapore, with its predominantly urban Chinese population and highly commercial economy, began to find itself at odds with the Malay-dominated central government of Malaysia. Frictions mounted, and on 9 August 1965, Singapore separated from Malaysia to become wholly independent as the Republic of Singapore. Harry Lee

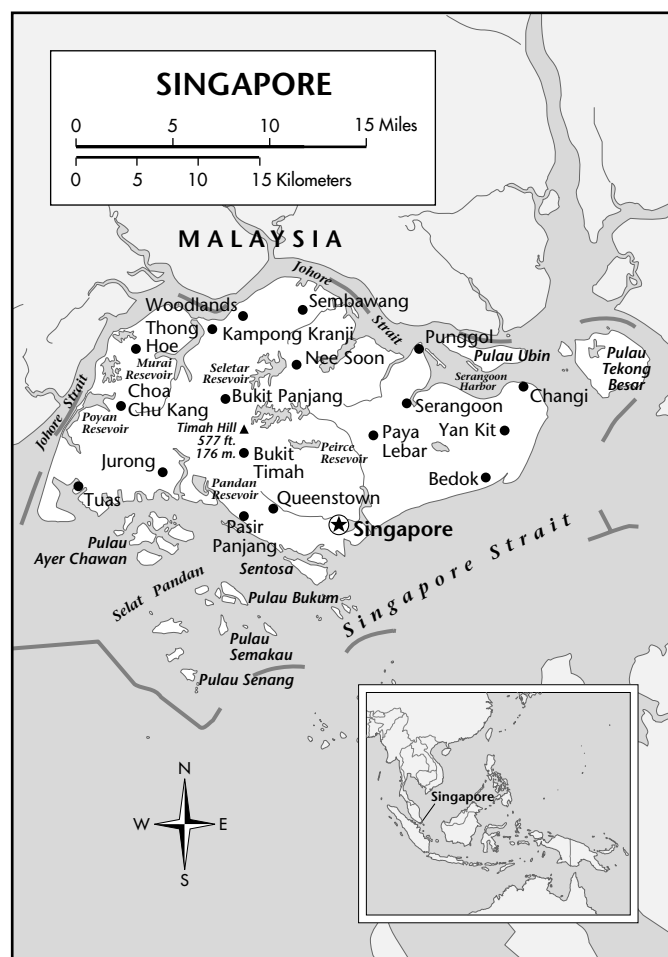

Kuan Yew, a major figure in the move toward independence, served as the country's prime minister from 1959 until 1990. Singapore, Indonesia, Malaysia, the Philippines, and Thailand formed the Association of South-East Asian Nations (ASEAN) in 1967.

The People's Action Party (PAP) founded in 1954 has been the dominant political party winning every general election since 1959. The PAP's popular support rested on law and order policies buttressed by economic growth and improved standards of living. Although the PAP regularly carried 60–75% of the popular vote, it managed to capture virtually all seats repeatedly in the National Assembly. The PAP won all parliamentary seats in the general elections from 1968 to 1980. In the 1981 by-election J. B. Jeyaretnam, secretary-general of the Workers' Party, won a seat; he maintained it in the 1984 general election. Chiam See Tong, leader of the Singapore Democratic Party (SDP), won another seat for the opposition in the same election. (See Political Parties and Government.) In March 1985 the third state president, Devan Nair, former trade unionist and member of the Singapore's "old guard," resigned from office under allegations related to alcoholism. The new president, Wee Kim Wee, took office in August. In May and June 1987 the government detained 22 persons under the Internal Security Act (ISA) for alleged involvement in a "Marxist conspiracy." These detentions triggered international protests by those critical of the government's abuse of human rights, including detention without trial and allegations of torture. Most of the alleged conspirators were released by December, but eight were rearrested in April 1988 after issuing a joint press statement regarding the circumstances of their detention. Two of the eight remained in custody until June 1990.

The September 1988 general election took place under an altered electoral system that increased the total seats in parliament from 79 to 81. The new constituencies consisted of 42 single-member districts and the reorganization of the other 39 seats into 13 group representation constituencies (GRCs). Teams of three representatives for each party contested the GRCs; at least one of which must be from an ethnic minority, i.e., non-Chinese. Ostensibly these changes were to ensure minority participation, but at the same time small and/or resource-poor opposition parties were handicapped by a requirement to field three candidates.

In November 1992 the media announced that Deputy Prime Minister Lee Hsien Loong (son of Lee Kuan Yew) and Ong Teng Cheong were diagnosed with cancer. (The former was pronounced fully cured in 1994, but has been little seen in political circles.) On 28 November 1990 Lee Kuan Yew, prime minister of Singapore for over thirty-one years, transferred power to Goh Chok Tong, the former first deputy prime minister. Lee remained in the cabinet as senior minister to the prime minister's office and retained the position of secretary-general of the PAP. Singapore's first direct presidential elections were held on 28 August 1993 with Ong Teng Cheong becoming the first elected president.

An incident that garnered worldwide attention was the Singapore government's arrest in October 1993 of nine foreign youths charged with vandalism involving the spray painting of some 70 cars. Michael Fay, an 18-year-old American student and the oldest in the group, was suspected to be the leader. Under police interrogation Fay admitted his guilt, pleaded guilty in court to two counts of vandalism and one count of receiving stolen property. In March 1994 Fay was sentenced to four months in prison, a fine of US\$2,230 and six strokes of the cane. On 7 March 1994 President Clinton urged Singapore to reconsider the flogging of Fay amid a failed appeal. A plea to the Singaporean president for clemency was rejected, but as a "goodwill gesture towards President Clinton," the sentence of caning was reduced

LOCATION: 1°9' to 1°29' N; 103°38' to 104°6' E. TERRITORIAL SEA LIMIT: 3 miles.

from six strokes to four. The sentence was carried out on 5 May 1994.

In 1994, Singapore made international news when the government sued the *International Herald Tribune* for libel over an editorial the paper published suggesting that Prime Minister Goh was simply a figurehead and that ultimate power rested, as it always had, with Senior Minister and former Prime Minister Lee. The Singapore High Court, in a move that halted critical comments from the press, ruled in favor of the government and ordered the *Herald Tribune* to pay \$667,000 in damages to Goh, Lee, and Deputy Prime Minister Lee. In 1995, the government again was criticized in the international press, this time in *The New York Times*, in which columnist William Safire called the country a dictatorship. Singaporean leaders took center stage in the international arena and proclaimed their right to reject Western values. They claimed that Asian values eschewed individual liberty taking precedence over social stability and that these values promoted an increasingly wealthy, clean, and hospitable city-state devoid of social pathologies that plague both the West and other large Asian cities. The subsequent sentencing, on December 1, 1995 of Nick Leeson, an investment banker who single-handedly destroyed Barings through speculative investments in the Japanese stock market, seemed to confirm the bankruptcy of individual greed.

Parliamentary elections were held in 1997 and, unsurprisingly, the PAP retained its vast majority—opposition parties won only 2 of 83 seats. One seat, that won by Tang Liang Hong, remained

vacant in 1997 as Tang fled the country fearing government persecution—including lawsuits, freezing of bank accounts, and restrictions on travel—which began in earnest after his election. Tang's victory was seen as especially threatening to the rigid regime of the PAP because during the campaign Tang suggested that the English-speaking section of the ruling class monopolized power and that the Chinese needed to assert more control. These statements branded Tang as a Chinese chauvinist, an inflammatory label in the ethnically divided country.

In February 2000, finance minister Richard Hu rescinded some tax cuts introduced previously but also announced positive economic growth of 4.5% to 6.5% for calendar year 2000. Coming after two years of budgetary uncertainty related to the Asian economic crisis, the government also announced a budget surplus. As a result of the world economic slowdown in 2001–2002, growth was expected to reach 3.1% in 2003 and accelerate to 5.1% in 2004.

On 28 April 2001, an unprecedented anti-government rally was held, the first legally sanctioned demonstration outside of an election campaign. Over 2,000 people gathered in support of opposition leader J. B. Jeyaretnam who faced bankruptcy and thus expulsion from parliament. Jeyaretnam owes hundreds of thousands of dollars in defamation lawsuits brought by senior government officials and their supporters.

In September 2001, Malaysia and Singapore came to a series of agreements over issues that had strained relations between them for years. Largely prodded by concern over the growing influence of Islam in Malaysian politics, Singapore agreed to a Malaysian proposal that the causeway linking the two countries be demolished and replaced by a bridge and undersea tunnel after 2007. Malaysia agreed to supply water to Singapore after two water agreements expire in 2011 and 2061. Also discussed were disputes over the use of Malaysian-owned railway land in Singapore, and requests by Singapore to use Malaysian air space.

On 3 November 2001, parliamentary elections were held in which the PAP won 82 out of 84 seats. Opposition candidates contested only 29 of the seats. The next elections are due to be held 25 June 2007.

Following the 11 September 2001 terrorist attacks on the United States, the US urged countries around the world to increase anti-terrorist measures they might take. Southeast Asia was a primary focus of attention. In May 2002, the 10 members of ASEAN pledged to form a united anti-terror front and to set up a strong regional security framework. The steps include introducing national laws to govern the arrest, investigation, prosecution, and extradition of suspects. As well, they agreed to exchange intelligence information and to establish joint training programs such as bomb detection and airport security. As of December 2002, 5 of the ASEAN nations (Indonesia, the Philippines, Malaysia, Cambodia and Thailand) had acceded to the “Agreement on Information Exchange and Establishment of Communication Procedures” to fight terrorism and other transnational crime. Singapore said it was not ready to join the pact.

In December 2001, Singapore arrested 15 individuals believed to be part of a terrorist cell with links to Osama bin Laden's al-Qaeda network. Two suspects were released, but the others belonged to Jemaah Islamiya (JI), an Islamic organization with cells in Singapore, Malaysia, and Indonesia. The cell's plot was to destroy key buildings in Singapore, including the American Embassy. JI's ambition initially was to create an Islamic Indonesia. However, the group expanded its goals to include an Islamic archipelago, Dauliah Islam Nusantara, to include Malaysia, the southern Philippines, and Singapore in a larger Islamic Indonesia. In August 2002, Singapore arrested 21 terrorist suspects who allegedly carried out “reconnaissance and surveys” of potential terrorist attack targets in Singapore. They were purportedly members of Jemaah Islamiyah.

## <sup>13</sup>GOVERNMENT

The constitution of the Republic of Singapore, as amended in 1965, provides for a unicameral parliamentary form of government, with a president who, prior to 1991, served as titular head of state. Singapore practices universal suffrage, and voting has been compulsory for all citizens over 21 since 1959.

In 1993 the unicameral legislature consisted of an 81 elected-member parliament and six nominated members (NMPs) appointed by the president. The maximum term for parliamentary sessions is five years, although elections may be called at any time within that period. A general election is held within three months of dissolution. The number of parliamentary seats has increased with each general election, since the general election seating Singapore's first parliament, 58 seats (1968), 60 seats (1972), 69 seats (1976), 75 seats (1980), 79 seats (1984), 81 seats (1988), and 84 seats (2002).

Until the 1988 election, all constituencies were single-member constituencies. In 1988, sixty of the original 81 constituencies (out of the increased number for 1988, i.e., from 79 in 1984 to 81 in 1988) were reorganized into 13 group representation constituencies (GRCs). In each GRC teams of three candidates must be fielded, one of who must be from a minority community, i.e., of an ethnic minority group, Malay, Indian, or an Other (all persons other than Chinese, Malay, or Indian). A 1984 constitutional amendment allowed for the presence of at least three opposition representatives as non-constituency (nominated) members of parliament (NMPs), and in 1990 a law increasing their number was passed. Accordingly, up to six NMPs could be appointed from among opposition candidates who were unsuccessful in an election; these NMPs are given limited voting rights.

In the 1991 general election, 60 members were elected from the 15 four-member GRCs, 21 from single-member constituencies, and the president appointed 6 nominated members of parliament. Changes to the electoral procedures included the increase to a minimum of four candidates to contest a GRC and the maintenance of minority qualification for the one person representing the minority community.

The prime minister, who commands the confidence of a majority of parliament, acts as effective head of government. The prime minister appoints a cabinet that, in 1993, consisted of a senior minister, two deputy prime ministers, and 11 other ministers. Prior to 29 November 1991 the president of the republic was elected by parliament to a four-year term. Since 1991, under an amendment to the constitution passed by parliament, the president is no longer elected by parliament but by the electorate, and has custodial powers over the country's reserves, as well as a major role in deciding key appointments to the judiciary, civil service and statutory boards. The president is elected for a term of six years. The first direct presidential elections were held on 28 August 1993, electing Ong Teng Cheong. In July 1999, as his wife was dying of cancer, Ong announced he was not seeking a second term. Ong himself had been diagnosed with lymphoma in 1992 when he was deputy prime minister. He underwent treatment but the illness recurred in July 1998. Sellapan Rama (S. R.) Nathan was elected president unopposed on 28 August 1999. Ong died 7 February 2002.

Several constitutional reforms were enacted in 1996 and 1997. In 1996, parliament enacted governmental reforms limiting the power of the president, curtailing his veto power—only granted in 1991. Under the new rules, parliament can call a referendum if the president vetoes constitutional changes or other measures. In 1997, the number of nominated members of parliament increased from six to nine. However, the government also moved to tighten control over the political process in 1999 with the PAP filing a petition to close the Workers Party for failure to pay damages and costs associated with a defamation case. Earlier in 1998, the

government banned all political parties from producing videos and appearing on television to discuss politics.

## 14 POLITICAL PARTIES

Singapore in the late 1980s was effectively a single-party state. The ruling People's Action Party (PAP) of former prime minister Lee Kuan Yew has dominated the country since 1959. In 1961, the radical wing of the PAP split from Lee's majority faction to form a new party, the Socialist Front (SF), also known as the Barisan Socialis. In 1966, 11 SF members resigned their seats in parliament, and 2 others joined the underground opposition to the Lee government, leaving the PAP as the sole party represented in parliament. In the general elections of 1972, 1976, and 1980, the PAP won all seats in parliament, but carried a declining percentage of the total votes; 65 seats (84.4%); 69 seats (72.4%); and 75 seats (75.5%) [Far Eastern Economic Review (FEER) 77.7%], respectively. The Workers' Party (WP), the strongest opposition party, won its first parliamentary seat in a 1981 by-election; under its leader, Joshua B. Jeyaretnam, the WP has been critical of undemocratic practices within the PAP government. In the 1984 general elections, the PAP won 77 of the 79 seats, even though it captured only 62.9% of the popular vote, compared with 75.5% in 1980.

In the 1984, 1988, and 1991 general elections opposition parties gained small ground, and the PAP continued to garner a declining percentage of the total votes: 77 seats (62.9%) PAP [FEER 64.8%], 1 seat Workers Party (WP), 1 seat Singapore Democratic Party (SDP); 80 seats (61.7%) PAP [FEER 63.2%], 1 seat SDP; 77 (61%) PAP [FEER 61%], 1 seat WP, 3 seats SDP, respectively. In the 1991 elections Chiam See Tong was again the winner for the SDP, along with Ling How Doong and Cheo Chai Chen. The Workers' Party MP was Low Thai Khiang.

The two other seats went to J. B. Jeyaretnam (WP) and to Chiam See Tong of the Singapore Democratic Party (SDP), the two main opposition parties that are tolerated but subject to almost continual harassment by the government. For instance, in 1984, Jeyaretnam was accused of making false statements involving irregularities in the collection of WP's funds; he was acquitted of two of three charges and fined. In 1986 the government appealed the case and the higher court set aside the initial judgment; Jeyaretnam was again fined and jailed for one month, enough to disqualify him from parliament and ban him from contesting elections for five years. On the basis of his criminal convictions he was disbarred and denied a pardon. He was refused permission to appeal against the conviction and sentence that resulted in his disqualification as an MP. But on appeal to the Privy Council against the decision to disbar him, he was vindicated and allowed to practice law again. In October 1991 Jeyaretnam avoided bankruptcy by paying legal costs in a defamation suit he lost, filed by Lee Kuan Yew over remarks made by Jeyaretnam in a 1988 election rally. On 10 November 1991, the ban on Jeyaretnam standing election expired. By avoiding bankruptcy he would be able to contest the by-elections that Prime Minister Goh promised to hold in the next 12–18 months. However, the WP failed to field the four required candidates for a GRC.

Then, in March 1993 Dr. Chee Soon Juan, an opposition politician from the SDP who ran against Prime Minister Goh Chok Tong in the 1992 by-election, was expelled from his post as lecturer in the Department of Social Work and Psychology at the National University of Singapore (NUS) based on claims of "dishonest conduct" for using US\$138 out of his research grant to courier his wife's doctoral thesis to a US university. In the end, Dr. Chee ended up losing his case to be reinstated.

The main opposition parties are the SDP and the WP. Smaller minority parties are the United People's Front, which is also critical of antidemocratic aspects of the government rule and is

pro-Malaysian; the Singapore Malays' National Organization; and the Singapore Solidarity Party, formed in 1986 by three former leaders of the SDP. There were 22 registered political parties at the beginning of 1993: Singapore Chinese Party; Persatuan Melayu Singapura; Partai Rakyat, Singapore State Division; Angkatan Islam; The Workers' Party; Pertubohan Kebangsaan Melayu Singapura; People's Action Party (PAP); United People's Party; Barisan Socialis (BS), Socialist Front (SF); Parti Kesatuan Ra'ayat (United Democratic Party); Singapore Indian Congress; Alliance Party Singapura; United National Front; National Party of Singapore; The People's Front; Justice Party, Singapore; Democratic Progressive Party; People's Republican Party; United People's Front; Singapore Democratic Party (SDP); National Solidarity Party (NSP); Singapore National Front. The Malay Communist Party and the underground Malayan National Liberation Front are illegal.

In 1997, parliamentary elections were again held and, again, the PAP maintained its virtual monopoly of seats. Of 83 seats up for election, the long-ruling party captured 81 with 47 unopposed. The two opposition leaders Jeyaretnam and Tang Liang Hong, both with the WP, won seats. After the election, in a move that has been commonplace in Singapore, leaders of the PAP, including Prime Minister Goh and Senior Minister (and longtime leader) Lee sued Tang for defamation. Tang promptly fled the country, saying he feared for his safety as the government froze his assets and imposed travel restrictions on his family. Jeyaretnam continued to face bankruptcy and the loss of his parliamentary seat as well, from a defamation payment awarded against him for allegedly defaming a PAP parliamentarian and nine other members of the Tamil community in an article written by a colleague in 1995. In the 1997 elections, the SDP lost all three seats it had won in the 1991 round.

In parliamentary elections held on 3 November 2001, the PAP won 82 out of 84 seats with 75.3% of the vote. Opposition candidates contested only 29 of the seats. The WP took one seat, as did the Singapore Democratic Alliance (SDA), which includes the Singapore People's Party (SPP), Singapore Democratic Party (SDP), National Solidarity Party, Singapore Justice Party, and Singapore Malay National Organization SDA. The opposition parties complained that constituency changes and a range of regulations imposed by the PAP made it more difficult for them to win votes. The Parliamentary Elections Act was amended, curbing the use of the Internet for political campaigning and banning the publication of opinion polls during elections.

## 15 LOCAL GOVERNMENT

Singapore, veritably a city-state, has no local government divisions. When the People's Action Party (PAP) came to power in 1959, the post-colonial City Council was abolished. The former city council and rural board were integrated into departments of the central government. The Town Councils Act enacted in June 1988 reintroduced a local organizational structure. Town councils were formed to take over the management and maintenance of the common properties of housing estates within towns. As of 1 March 1991, 27 town councils had been formed. After the general elections of August 1991, five town councils were dissolved and three new town councils were established, bringing the number of town councils to 25. In 1997, the number of town councils was reduced to 16.

Prime Minister Goh announced the concept of the creation of Community Development Councils (CDCs) in 1996. Set up after the 1997 general election as social parallels to the town councils, the CDCs were established to improve community bonding and to manage a spectrum of social services, from child-care centers to public welfare assistance. Originally 9 CDCs were established; in November 2001, their number was reduced to 5. They are South West, North West, Central Singapore, South East, and

North East. They are managed by a council comprising a mayor and between 12 and 80 council members.

## 16 JUDICIAL SYSTEM

Singapore's legal system is based on British common law. The judiciary includes the Supreme Court as well as subordinate courts. The subordinate courts are the magistrates' courts, trying civil and criminal offenses with maximum penalties of three years' imprisonment or a fine of S\$60,000; the district courts, trying cases with maximum penalties of ten years' imprisonment or a fine of S\$250,000; the juvenile courts, for offenders below the age of sixteen; the coroners' courts; and the small claims courts, which hear civil and commercial claims for sums of less than S\$10,000. The Supreme Court is headed by a chief justice and was divided into the High Court, the Court of Appeal, and the Court of Criminal Appeal. The High Court has unlimited original jurisdiction in both criminal and civil cases but ordinarily chooses to exercise such jurisdictional authority only in major cases. In its appellate jurisdiction, the High Court hears criminal and civil appeals from the magistrates' and district courts. Appeal in a civil case heard by the High Court in its original jurisdiction was to the Court of Appeal, and in a criminal case, to the Court of Criminal Appeal.

In 1993 the former Court of Appeal (for civil cases) and the Court of Criminal Appeal were combined to form a single Court of Appeal. This reform was part of an overall plan to the eventual elimination of referrals to the Privy Council in London. All appeals to the Privy Council in London were eliminated in 1994.

The president appoints judges of the Supreme Court on the recommendation of the prime minister after consultation with the chief justice. A Legal Service Commission supervises and assigns the placement of the subordinate court judges and magistrates who have the status of civil servants; however, the president appoints subordinate courts judges on the recommendation of the chief justice. While the constitution provides for an independent judiciary and the judicial system provides a fair and efficient judicial process, the Internal Security Act allows the government to arrest, detain, and prosecute those who are deemed to threaten national security. Defendants have the right to be present at the trials, to have an attorney, and to confront witnesses against them.

## 17 ARMED FORCES

In 2002 Singapore's armed forces numbered 60,500 active personnel supported by around 312,500 reservists. The army had an estimated 50,000 personnel, including 3 combined arms divisions; the navy had 4,500 personnel and a fleet of 24 ships, including six corvettes and six missile craft, and two *Challenger* submarines. The air force totaled 6,000 personnel operating 126 combat aircraft and 28 armed helicopters. Paramilitary forces numbered an estimated 96,300 including a police force and a civil defense force. Singapore participated in three international peacekeeping operations, and had troops abroad in five different regions. The 2001–02 defense budget was \$4.5 billion or approximately 4.9% of GDP.

## 18 INTERNATIONAL COOPERATION

Singapore follows a policy of cooperation with international bodies and the community of nations. Having joined the UN on 21 September 1965, Singapore participates in ESCAP and all the nonregional specialized agencies except FAO, IDA, IFAD, UNESCO, and UNIDO. It is a participant in the Asian Development Bank, the Colombo Plan, the Commonwealth of Nations, and G-77 and has joined the WTO and signed the Law of the Sea. Probably its most important international association is its membership—along with Cambodia, Laos, Myanmar,

Vietnam, Indonesia, Malaysia, Thailand, the Philippines, and Brunei—in ASEAN. Singapore has played a leading part in this important regional grouping, which has sought to maximize economic cooperation among its member states, to regularize political consultation on the part of the constituent governments, and to limit foreign political and military interference in the area.

## 19 ECONOMY

Historically, Singapore's economy was based primarily on its role as an entrepôt for neighboring countries due to its strategic geographic location at the entrance to the Straits of Malacca. It did not have minerals or other primary products of its own to export, but it served a major economic function by processing and transshipping the goods of nearby lands. Its most significant natural resource is a deep water harbor. As a result of these circumstances, Singapore became highly active in shipbuilding and repair, tin smelting, and rubber and copra milling. Until about 1960, however, its economy was frequently shaken by major fluctuations in its export earnings (particularly from rubber and tin) as a consequence of often adverse commodity and price trends. Since the early 1960s, Singapore has attempted to break away from this economic pattern. Its government embarked on an ambitious and largely successful program of promoting industrial investment (both from abroad and locally), developing industrial estates, and providing industrial financing and technical services.

By the early 1980s, Singapore had built a much stronger and diversified economy, which gave it an economic importance in Southeast Asia out of proportion to its small size. Government plans during the first half of the 1980s called for realigning industrial activities from traditional labor-intensive, low-wage activities to capital-intensive, high-wage and high-technology activities, notably the electronic industries and oil refining. In 1985, however, Singapore's economy declined for the first time in 20 years. One of the reasons for the decline was high wages, which made Singaporean products less competitive on the world market. Other reasons for the economic downturn included a slumping demand for oil and electronic products and the economic woes of Malaysia, Indonesia, and other important trading partners.

By the late 1980s, Singapore had begun to further diversify its economy, making it capable of providing manufacturing, financial, and communications facilities for multinational firms. In the late 1980s one of the fastest growing sectors of Singapore's economy was international banking and finance, accounting for some 25% of GDP. It ranked behind Tokyo and Hong Kong amongst financial service centers in the Southeast Asia region. In 1989 earnings from manufacturing accounted for 30% of GDP.

In the 1990s productivity increased as did labor costs. Export growth in high-technology manufactured goods signaled Singapore's success in shifting to higher value-added production. The electronics industry accounted for the largest share of value-added in manufacturing. Manufacturing was dominated by the production of computer peripherals and oil processing. Between 1992 and 1995, property prices double, reaching their peak in 1996. In the five years 1993 to 1997, GDP growth averaged 8.84%. In June 1997, Hong Kong reverted to Chinese rule, triggering the Asian financial crisis. In Singapore, GDP growth dropped to 1.5% in 1998 and residential property prices fell 40%. Singapore's sensitivity to the external economic environment, with trade running 300% of GDP, is extreme. Nevertheless, Singapore weathered the crisis without a contraction, and in 1999 growth had recovered to 5.4%. Driven by the world-wide boom in IT demand and robust recoveries in domestic consumption and investment, GDP growth soared to 9.9% in 2000. However, the dot.com bust in 2001 to the

economy's first yearly contraction since 1985, of 2%. Recovery began in the second quarter of 2002, and though weak because continued low export demand, growth was a positive 2.2% for the year. Projections for 2003 are for only a 4.8% growth.

Other constraints on Singapore's economic performance are labor shortages, rising labor costs, and the declines of productivity—although in by the second and third quarter of 2002, gains in productivity were averaging 6.1% compared to decreases averaging 7.75% in the last half of 2001. Singapore maintains one of the most liberal trading regimes in the world, and has regularly been ranked one of the least corrupt and most competitive countries. The government is a major and active player in the economy, owning substantial productive assets (land and capital). The government directs and targets the economy through laws, regulations and incentives, and participates in business ventures through Singapore's unique hybrid, the government-linked company (GLC). Monetary discipline hold inflation tightly in check, with consumer prices show mild deflation (-0.4% to -0.9%) in 2002. Unemployment rose to 4.7% in 2001, and remained above 4% throughout 2002, a high level for Singapore. Per capita income estimate by the CIA in purchasing power parity terms was \$24,700, one of the highest in the world.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Singapore's gross domestic product (GDP) was estimated at \$106.3 billion. The per capita GDP was estimated at \$24,700. The annual growth rate of GDP was estimated at -2.2%. The average inflation rate in 2001 was 1.5%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that industry accounted for 33% of GDP and services 67%.

The World Bank reports that in 2001 per capita household consumption (in constant 1995 US dollars) was \$10,755. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the same period private consumption declined at an annual rate of 2%. Approximately 15% of household consumption was spent on food, 5% on fuel, 3% on health care, and 14% on education.

## 21 LABOR

In 2000, Singapore's employed workforce totaled 2.19 million. Of this number, 30% were employed in industry and 70% in the service sector. About 24% of the labor force consists of some 600,000 foreign workers. The unemployment rate was 4.7% in 2001.

In 2001, there were 72 registered trade unions in Singapore, with some 350,000 members. All but nine were affiliated with Singapore's National Trade Unions Congress (which represents, as a result, about 99% of the country's organized workers). The government generally asserts a strong influence over trade policies. Workers have the right to strike but rarely do so. Collective bargaining is utilized.

The standard legal workweek is 44 hours, with one day off each week. An annual bonus equal to at least one month's salary is customarily paid. Minors as young as 12 may work with the permission of the commissioner of labor but there are few applications for such permission and one has never been granted. In practice, the minimum working age is 14 and violations of this regulation are very rare. The government has set minimum workplace health and safety regulations which are effectively enforced. There is no minimum wage.

## 22 AGRICULTURE

Urbanization and industrialization have taken ever larger amounts of land away from agricultural activity in post-World War II Singapore. (World War II was fought 1939–45.) Many of the rubber and coconut plantations that dominated Singapore's landscape before the war have disappeared altogether. Housing for a growing population—and factories for its employment—stand where rubber and coconut trees used to grow. Nonetheless, agriculture remains part of Singapore's total economic activity. Growing methods on the island are the most intensive in all of Southeast Asia.

About 1.6% of the land area is used for farming, and vegetables remain a significant source of income. Remarkably, through the decades of the 1960s and 1970s and into the 1980s, Singapore was able to increase its primary produce annually through intensification. In 1999, production of fresh vegetables totaled 5,000 tons, resulting in a decreased need to rely on foreign produce imports. Singapore's trade deficit in agricultural products was US\$1.22 billion in 2001. Orchids are grown for export.

## 23 ANIMAL HUSBANDRY

Singapore has been self-sufficient (or nearly so) in the production of pork, poultry, and eggs since 1964, a notable achievement considering the modest amount of land available and the demands of growing urbanization and industrialization. Hog and poultry farming together constitute Singapore's largest primary products industry. However, hog farming is being phased out because of environmental pollution; domestic pork requirements are increasingly being met by imports. In 2001, the livestock population included two million chickens and 190,000 pigs. That year also, about 16,000 tons of eggs were produced.

The Pig and Poultry Research and Training Institute and Lim Chu Kang Veterinary Experimental Station conduct research on feeding, housing, breeding, management, and disease control.

## 24 FISHING

Local fishermen operate chiefly in inshore waters, but some venture into the South China Sea and the Indian Ocean. Traditional fishing methods are in use along coastal waters, but there is a trend toward mechanization in both offshore and deep-sea fishing. In 2000, Singapore's fishermen caught 5,371 tons of fish.

All fresh fish are auctioned at the Jurong Central Fish Market and at the Punggol Fishing Port and Wholesale Fish Market. The Jurong facility provides modern shore-support assistance and processing plants. Aquaculture concentrates on the breeding of grouper, sea bass, mussels, and prawns; a marine fish-farming scheme to encourage aquaculture in designated coastal waters was implemented in 1981; by the end of 1985, 60 marine fish farms were in operation. In 2000, total exports of fish products were valued at US\$452.5 million.

## 25 FORESTRY

In 2000, about 3.3% of Singapore's land area was classified as forest. There is little productive forestry left on the island, but Singapore continues to have a fairly sizable sawmilling industry, processing timber imported largely from Malaysia (with some additional imports from Indonesia). Both Malaysia and Indonesia are expanding their processing capacities, however, and the industry is declining in Singapore in the face of the government's policy shift to high-technology industries. Roundwood imports totaled 17,000 cu m (600,100 cu ft) in 2000. Imports of forestry products totaled US\$868.2 million while exports amounted to US\$603.6 million.

## 26 MINING

There was no mining in Singapore. However, although the city-state had limited natural resources, it was one of the most important shipping centers in the world. Singapore was the world's third-largest oil-refining center, behind Houston and Rotterdam, and was the major oil and metal futures trading market in Asia. The production of chemicals was the second leading industry in 2002, and the manufacture of oil drilling equipment and petroleum refining ranked fourth and fifth, respectively. Chemicals, mineral fuels, and petroleum products ranked among the top five export commodities. Because of environmental concerns, the government planned to close down all grinding operations by 2000; Singapore had no integrated cement plant and local operations ground imported clinker to produce cement.

## 27 ENERGY AND POWER

Total installed electrical capacity in 2001 was 6.7 million kW. All power was generated thermally, largely from imported mineral fuels. Electricity generated in 2000 totaled 27.9 billion kWh, more than six times the 1974 total of 3.9 billion kWh. Consumption of electricity in 2000 was 25.9 billion kWh. A new 815 MW gas-fired power plant built by independent producer SembCorp began operation in 2001. As of 2002, reorganization of the electric power sector was behind schedule; state-owned Singapore Power still owned majority stakes in its major subsidiaries, although they had been scheduled to be divested by 2001. The target date for divestiture had been moved to 2004.

Singapore, a major petroleum-refining center, produced gasoline in 1994 at a rate of 100,490 barrels per day; distillate fuel oil, 372,200; residual fuel oil, 288,120; jet fuel, 147,740; and kerosene, 19,060. The total refinery capacity of nearly 1.3 million barrels per day in 2002 ranked Singapore among the top producers in the Far East, alongside Japan, China, and South Korea. Consumption of natural gas was increasing rapidly as of 2002, when 4.4 million cu m per day of natural gas was transmitted through a pipeline from Malaysia—the first transnational gas pipeline in the region.

## 28 INDUSTRY

Singapore's major industries were once rubber milling and tin smelting. The modern industrialization of Singapore began in 1961 with the creation of the Economic Development Board to formulate and implement an ambitious manufacturing scheme. Most of the first factories set up under this program were of an import-substitute nature requiring tariff protection, but many such protective tariffs were subsequently withdrawn. Large-scale foreign manufacturing operations in Singapore commenced in 1967 with the establishment of plants by several major multinational electronics corporations. The Jurong Town Corporation was established under the Jurong Town Corporation Act of 1968 to develop and manage industrial estates and sites in Singapore. The emphasis was on upgrading facilities to attract high-technology and skill-intensive industries. The manufacturing sector grew by an average annual rate of about 20% during the 1962–74 period, and it registered an average annual increase of over 10% from 1975 to 1981.

Industry's share of the GDP rose from 12% in 1960 to 29% in 1981. Such dramatic achievements were in large measure made possible by the existence in Singapore even before the 1960s of one of the most developed economic infrastructures in Southeast Asia, as well as by government efforts to provide a skilled, disciplined, and highly motivated work force. Labor-intensive operations are encouraged to move offshore by the government, and service and high-technology industries are encouraged. Major industries are electronics, financial services, oil drilling

equipment, petroleum refining, rubber processing and rubber products, processed food and beverages, ship repair, and biotechnology. In 1998, industry accounted for 35% of GDP, and manufacturing for 22%. In 2001, estimates were that industry contributing 33% of GDP and employed about 33% of the labor force. Of the components of the industrial sector, manufacturing contributes about 25% to GDP and construction about 6.8%. Within manufacturing, electronics have in recent years been dominant, account for about half manufactured output, with chemicals second. According to Singapore's Economic Development Board, the electronics sector accounts for about 48% of investment in manufacturing; chemicals, about 24%; engine ring, 17%; and the biomedical sector, about 9%. In 2000 electronics grew by 15%, and it was mainly the contraction in this sector by 5.3% in 2001 that led to the overall GDP contraction of 2%. Countercyclically, construction declined 4.6% in 2001, but grew 11.9% in the first quarter of 2001 primarily due increased public sector spending on infrastructural projects such as land reclamation and mass transit railways

Petroleum refining is a well-established industry in Singapore. After Rotterdam and Houston, Singapore is the world's third largest refining center. Production capacity from five refineries (capable of processing 40 different types of crude oil) was 1.3 million barrels per day. The petrochemical industry has grown rapidly as a direct result of Singapore's refinery capacity. Current a large project to reclaim seven islands to form a 12-square mile petrochemical complex on Jurong Island is in progress. A \$200 million synthetic gas plant has recently been built on Jurong Island by the Messer Group of Germany and Texaco of the US. Also, Singapore's second naphtha cracking plant was launched in 2002 by the Petrochemical Corporation of Singapore and its partners, Phillips Petroleum, the Polyolefin Company, Hoechst and Seraya Chemicals. The Petrochemical Corporation of Singapore is a government-linked company (GLC). GLCs are majority government-owned but operate commercially, unlike traditional parastatals. GLCs account for more than 60% of Singapore's GDP. Industrial GLCs include Singapore Technologies (aerospace and electronics manufacturer); Keppel Corporation (oil drilling and related equipment manufacturer); Sembawang Corporation (construction and environmental engineering); Chartered Semiconductor Manufacturing, Singapore Telecom Petrochemical Corp. of Singapore, and Singapore Refining Corp.

## 29 SCIENCE AND TECHNOLOGY

The Science Council, established in 1967, advises the Minister for Trade and Industry on scientific and technological matters relating to research and development and to the training and utilization of manpower. The Singapore National Academy of Science promotes the advancement of science and technology, and the Singapore Association for the Advancement of Science, founded in 1976, disseminates science and technology. Other major scientific and technical learned societies and research facilities include an academy of medicine, an institute of physics, an institute of technical education, botanical gardens, a mathematical society, and a medical association. Scientific education is stressed at the university level and supported by training programs for more than 20,000 students (1990) in the nation's technical and vocational institutes. Special centers have been established for research on cancer, human reproduction, viruses, and immunology. Two new research institutions were established in 1985: the Institute of Systems Science, which does research in the area of information technology, and the Institute of Molecular and Cell Biology, a center for biotechnological research. The Singapore Science Park, located near the National University of Singapore, was developed in 1987. In 1993, the National Computer Board announced an effort to create an

“intelligent island” through an information infrastructure linking all of Singapore. In the 1987–97, Singapore had 2,318 scientists and engineers and 301 technicians per million population engaged in research and development. In 1998, high-technology exports were valued at \$54.8 million and accounted for 59% of manufactured exports.

In 1991, the government announced a \$250 million spending program to create science and high technology parks. Expenditures for research and development totaled 1.13% of GNP in 1987–97 and were funded by both the private sector and government incentives.

Courses in basic and applied sciences are offered at Nanyang Technical University (founded in 1981), the National University of Singapore (founded in 1980 by merger), Ngee Ann Polytechnic (founded in 1963), Singapore Polytechnic (founded in 1954), and Temasek Polytechnic (founded in 1990).

### 30 DOMESTIC TRADE

Marketing has always been an activity in which Singapore's Chinese, Indian and Arab merchants have played a major role. Their participation has increased in recent years as local branches of European firms have become less important. Warehousing, packaging, freight forwarding, and related services are of a high standard. A wide range of consumer goods, such as luxury, electronic, handicraft, and food items, are available in Singapore from international department stores, brand name specialty stores, local department store chains, and neighborhood shops and markets. Prices are fixed in most larger retail establishments; however, haggling is still common in smaller shops. Within the industrial sector, prices are inflated to account for bargaining.

Advertising is done by radio and television, outdoor displays, slides in motion picture theaters, and newspapers. There are several advertising agencies. Consumers are highly brand-conscious, and advertising concentrates considerably on product trademarks.

Usual business hours are 8:30 AM to 5:30 PM, with many businesses closed from 1 to 2 PM. Most major enterprises and foreign firms operate Monday through Friday and are open a half-day on Saturday. A number of Chinese and Indian businesses maintain longer hours, with some open seven days a week. Bank hours are 9:30 AM to 3 PM Monday through Friday, and Saturday from 9:30 AM to 11:30 AM. Government offices are open from 8 AM to 5 PM Monday through Friday, and 8 AM to 1 PM on Saturday. Retail stores are open from 10 AM to 9:00 PM Monday through Saturday, with most shops also open on Sunday.

### 31 FOREIGN TRADE

Since World War II, Singapore has changed from an entrepôt center for the incoming and outgoing traffic of its neighbors in Southeast Asia to an exporting power in its own right. The leading exports of the mid-1960s—rubber, coffee, pepper, and palm oil—were replaced in the early 1980s by a variety of capital-intensive manufactures. Except for an occasional slowing, annual levels of trade regularly record double-digit expansion. During the late 1990s, expansion in the high-end manufacturing and services sectors began replacing capital-intensive production.

Most of the advanced electronics that Singapore exports also take up a substantial percentage of the world export market. The following chart shows the top eight exports:

	% OF COUNTRY TOTAL
Automatic data processing equipment	14
Electronic microcircuits	19
Refined petroleum products	9.4
Telecommunications equipment	4.3
Organic chemicals	2.2
Circuit breakers	2.4
Sound recording tapes/discs	1.8
Optical equipment	1.5

In 2000 Singapore's imports were distributed among the following categories:

Consumer goods	9.6%
Food	2.7%
Fuels	12.1%
Industrial supplies	14.0%
Machinery	56.5%
Transportation	4.3%
Other	0.8%

Singapore's main trading partners are the ASEAN group—principally Malaysia—the US, Malaysia, China and Hong Kong, and Japan. Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
Malaysia	25,026	22,832	2,193
United States	23,891	20,270	3,621
China (inc. Hong Kong)	16,216	10,627	5,589
Japan	10,400	23,154	-12,754
Thailand	5,865	5,800	65
Korea	4,913	4,815	98
Germany	4,275	4,233	42
United Kingdom	3,550	2,736	814
Philippines	3,383	3,357	26
Australia	3,207	2,298	909

### 32 BALANCE OF PAYMENTS

The traditional current account surplus is largely due to demand for non-oil exports (especially electronics) from the US, Japan, and regional countries with electronics production facilities. The account also benefits from high net investment income receipts. Total official reserves are estimated to be equal to 8.8 months of imports. A sharp contraction of imports in 1998 due to the financial crisis caused a high current account surplus, while the devalued currency caused an even larger outflow of cash from the financial accounts. Singapore's balance of payments weakened in 2001, largely due to that year's decline in trade.

The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Singapore's exports was \$122 billion while imports totaled \$116 billion resulting in a trade deficit of \$115.878 billion.

The International Monetary Fund (IMF) reports that in 2001 Singapore had exports of goods totaling \$122.5 billion and imports totaling \$109.6 billion. The services credit totaled \$26.2 billion and debit \$20.4 billion. The following table summarizes Singapore's balance of payments as reported by the IMF for 2001 in millions of US dollars.

<b>Current Account</b>	<b>17,884</b>
Balance on goods	12,872
Balance on services	5,725
Balance on income	663
Current transfers	-1,378
<b>Capital Account</b>	<b>-161</b>
<b>Financial Account</b>	<b>-18,768</b>
Direct investment abroad	-10,216
Direct investment in Singapore	8,609
Portfolio investment assets	-5,256
Portfolio investment liabilities	720
Other investment assets	-15,472
Other investment liabilities	2,847
<b>Net Errors and Omissions</b>	<b>184</b>
<b>Reserves and Related Items</b>	<b>861</b>

### 33 BANKING AND SECURITIES

Singapore was founded as a trading outpost by Raffles of the East India Co. in 1819. The country's rigid development was closely

linked to the government's efficient financial management. Conservative fiscal and monetary policies generated high savings, which, along with high levels of foreign investment, allowed growth without the accumulation of external debt. The banking system was open to foreign banks in the late 1960s. In 1988, Singapore had foreign reserves worth about \$533 billion, which, per capita, put it ahead of Switzerland, Saudi Arabia, and Taiwan. Many sources of finance are available to organizations doing business in Singapore. The Monetary Authority of Singapore (MAS) requires banks to observe its policy of discouraging the internalization of the Singapore dollar. The MAS performs the functions of a central bank, except for the issuing of currency. The Board of Commissioners of Currency deals with currency issues. The MAS seeks to strike a balance between supervision on the one hand, and development of the financial markets on the other.

Singapore has not encouraged the freewheeling financial services culture of Hong Kong; nor has it resorted to a *divigiste* approach, as in South Korea or Taiwan. Until quite recently, Singapore has tried to enjoy the best of both worlds. This is now starting to change, as Singapore's own major banks, long regarded as complacent due to their domestic oligopoly, are beginning to venture overseas. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$20.1 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$101.0 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 1.99%. As of 1999, Singapore had more than 700 financial institutions, including approximately 230 commercial and merchant banks, 142 of them commercial banks. Some 9 of the 31 banks with full banking licenses were locally incorporated; the remainder were branches of various overseas banks. Since 1971, the government has sought to attract representation by a variety of foreign banks in terms of countries and geographical regions. Most of the new foreign banks allowed into Singapore have been offshore banks that have concentrated on foreign-exchange transactions. The Post Office Savings Bank (POSBank) is the national savings bank (est. 1877). Thirteen commercial banks have restricted licenses, and 98 banks operate offshore. Singapore's four largest banks: DBS Bank, United Overseas Bank (UOB), OCBC Bank, and Overseas Union Bank Ltd. (OUB) had a 90% jump in profits in 1999 over 1998, recovering from the financial crisis quickly.

Over 350 companies are listed on the Stock Exchange of Singapore. In October 1992, the Kuala Lumpur Stock Exchange severed all links with the Singapore Stock Exchange. All the Singapore stocks moved to the Singapore exchange and the Malaysian companies moved to the Kuala Lumpur Stock Exchange. As of mid-1999, the SES had a total market capitalization of \$130 billion.

The Singapore International Monetary Exchange (SIMEX) opened in 1984. SIMEX traded, as of the end of 1985, futures contracts in gold, Eurodollar time deposit interest rates, and US/Deutschmark and US/yen currency exchanges. Trading in Japanese stock index and sterling futures began in 1986. In 1989, SIMEX also became Asia's first energy market with the introduction of the High-Sulphur Fuel Oil futures, the world's most active contract of its kind. In 1999, SIMEX achieved its second highest annual volume of 25.8 million contracts. It was voted International Exchange of the Year in 1989, 1992, 1993, and 1998.

### 34 INSURANCE

Most insurance firms are branches or agencies of UK (or other Commonwealth), European, and US companies, although local participation in insurance—particularly business insurance—is

increasing. Marine and warehouse insurance constitutes most of the business insurance, but almost all types of commercial insurance are available. Workers' compensation, third-party automobile liability, and professional liability are all compulsory insurance in Singapore. These compulsory coveragers must be placed with local companies.

The regulatory authority is the Insurance Commissioner of the Monetary Authority of Singapore. In 1998, total insurance premiums amounted to S\$7.8 billion. As of 30 June 1999, there were a total of 160 registered insurers.

### 35 PUBLIC FINANCE

The US Central Intelligence Agency (CIA) estimates that in 2000 Singapore's central government took in revenues of approximately \$27.9 million and had expenditures of \$19.5 billion including capital expenditures of \$5.4 billion. Overall, the government registered a deficit of approximately \$19.5 billion. External debt totaled \$8.3 billion.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

REVENUE AND GRANTS	100.0%	28
Tax revenue	55.0%	15
Non-tax revenue	33.8%	9
Capital revenue	11.2%	3
EXPENDITURES	100.0%	19,500
General public services	6.0%	1,170
Defense	24.1%	4,692
Public order and safety	5.4%	1,055
Education	19.4%	3,791
Health	5.5%	1,076
Social security	12.4%	2,422
Housing and community amenities	10.5%	2,046
Recreation, cultural, and religious affairs	0.1%	14
Economic affairs and services	15.1%	2,946
Interest payments	1.5%	288

### 36 TAXATION

Individual and commercial incomes are taxed whether derived in Singapore or from outside sources. Types of direct taxation include income, property, estate duty, and payroll taxes; the Inland Revenue Department is responsible for the assessment and collection of all such levies. Effective in 2002, the top marginal personal tax rate was reduced to 22% and tax bands were consolidated from 10 to 7. The first \$20,000 of an individual's chargeable income is not taxed. The corporate income tax rate was reduced from 25.5% to 24.5% in 2002, and then to 22% in 2003 in line with the government's commitment to reduce the rate to 20% over a three year period. Industrial establishments, companies, and various other businesses are eligible to deduct from their gross profits varying and usually generous depreciation allowances for building, plants, and machinery. There are tax holidays of 5 to 10 years for investing in robotics and other approved "pioneer" industries; other tax incentives for investing in export industries and for expansion of established enterprises; and special incentives for research and development companies to locate in Singapore. Other taxes include a goods and services tax (GST) at a rate of 3% and a stamp tax. The general property tax is 12% annually.

### 37 CUSTOMS AND DUTIES

Prior to the 1960s, Singapore was essentially a free port, with import duties levied only on alcoholic beverages, tobacco and tobacco products, petroleum products, and certain soaps. In 1959, however, a law was passed empowering the government to

levy import duties on other products to protect local industries. In the 1960s, many new tariffs were established with the primary aim of helping to support development of local manufacturing firms. In the early 1970s, many items were withdrawn from the tariff list, and by 1982 there were only 176 items on the list, compared with 349 in 1972. In 1985, excise duties on sugar and sugar substitutes and import and excise duties on fuel oil were lifted. By 1993, there were almost no import tariffs except for duties on alcoholic beverages, tobacco products, petroleum products, and a few other items. Duties ranged from 5–45%. There are no export duties. As of 2002, the average tariff in Singapore was below 1%, as more than 99% of goods entered duty-free. In 2000, duties were levied on tobacco products, alcoholic beverages, gasoline, automobiles (31%), and motorcycles (12%).

Singapore has six free trade zones, five for seaborne cargo (in the five gateways of the port) and one for air cargo. The GST (goods and service tax) of 3%, which is levied on all imports, is not levied on goods stored in the free trade zones.

### 38 FOREIGN INVESTMENT

Legislation to attract new foreign investments, the Economic Incentives Act, was passed in 1967; it granted exemption from taxation for a five-year period to investors for export development and provided inducements and guarantees with respect to repatriation of profits and capital. Overseas offices to promote such foreign investment were set up in New York, Chicago, San Francisco, London, Paris, Frankfurt, Zürich, Tokyo, Hong Kong, Stockholm, and Melbourne. The Capital Participation Scheme, adopted in 1973, permitted high-technology industries to set up branches in Singapore with 50% equity participation by the government. With changes in Singapore's industrial development, there have also been alterations in incentives. In the early 1980s, the main criteria for granting tax incentives were capital investment ratios (including training costs) per worker, value added per worker, and the ratio of technical personnel and skilled workers to the total workforce. Major investment activity focused on petroleum refining, general manufacturing, electronics, and hotel construction, as well as on traditional endeavors.

Since the mid-1980s the government's incentive policies have broadened to include Singapore's development as a total international business center, an international air-sea cargo center, a location for the regional operational headquarters of multinational corporations, and a major exporter of services. Investment in the manufacturing sector is encouraged in areas of medium-range or higher technology, or the design and production of higher value-added products. Singapore does not require that foreign investors take on private sector or government joint venture partners.

In 2000, foreign companies net investment commitments in manufacturing were \$4.2 billion, somewhat ahead of the \$4.016 billion reached in 1997 before the Asian financial crisis, and \$1 billion more than the level in 1998. US companies accounted for 51% of the total; European companies, 23.8%; Japan, 21%, and all other countries, 4.26%. As of 1999, cumulative foreign investment in Singapore was a little over \$31 billion, of \$12.2 billion (39%) is from US companies; 31.6% is from Japanese companies; and 25% is from Europe. Foreign investments account for about one-quarter of cumulative gross fixed assets in the manufacturing sector.

### 39 ECONOMIC DEVELOPMENT

Technological change and political considerations in the post-World War II period—not least of all the nationalism that accompanied the quest for independence among the region's European colonies—have combined to alter dramatically the economic self-perception and public policies of this diminutive

island-state. By the late 1950s, it was obvious that prospects for economic growth would be severely limited if Singapore remained bound by its old economic role as *entrepôt*. The decision to industrialize—and to do so rapidly—was deliberate policy. Initial emphasis in the government's economic development program was upon employment. The increasing trend toward economic self-sufficiency in neighboring Indonesia and Malaysia—and the steady retreat of the UK from defense responsibilities in the region as a whole (centered on its large Singapore naval and air facilities)—prompted the government to focus completely on finding alternative employment for the island's highly skilled and disciplined workforce. By the end of the 1960s, this problem was effectively solved, with Singapore boasting one of the lowest unemployment rates in all of Asia.

Emphasis in the mid-1970s was on labor skills and technology, especially as these were identified with such modern industries as machine tools, petrochemicals, electronics, and other precision work. A high level of participation by private foreign capital provided an important cornerstone to this development. In 1979, the government abandoned its earlier policy of stimulating low-wage industries and adopted a policy of encouraging capital-intensive and technologically sophisticated industries. Especially targeted for investment promotion in the 1980s were computers, computer peripherals, electronic medical instruments, automotive components, specialty chemicals and pharmaceuticals, and optical and photocopying equipment. Following the recession of 1985–86, the government concentrated on developing new markets and on turning Singapore into a manufacturing, financial, and communications center for multinational corporations.

In the 1990s the economic development strategy emphasized both the manufacturing and service sectors. The Economic Development Board (EDB), formed in 1961, has guided Singapore's industrialization. Early emphasis was placed on promoting investment in manufacturing. The Strategic Economic Plan (SEP) announced in 1991 focused on education and human resources to enhance export competitiveness. Emphasis on developing the service sector has been supported and enhanced by the Operational Headquarters (OHQ) program, encouraging companies to use Singapore as regional headquarters or as a central distribution center. The Creative Business Program promotes investment in the film, media, and publishing, arts and entertainment, textile, fashion and design sectors. Currently the EDB works toward Singapore's vision of its future as a developed country through the promotion of business. Singapore's globalization strategy hinges on making a transformation from a production-driven economy to an innovation-driven one. Other key elements of this strategy are the reversal of downward trends in productivity, and sustaining foreign investment in Singapore's capital investment. Singapore initiated the formation of a growth-triangle, linking Johor, Malaysia, Singapore and Indonesia's Riau province focusing on Batam Island. Singapore benefits by tapping a supply of low-wage workers and offshore land to sustain its more labor-intensive industries.

The Asian financial crisis was only a temporary setback for the healthy economy of Singapore. Roadblocks to further economic development include rising labor costs; which have threatened investment in Singapore's industrial sector, causing the government to implement strategies to cut costs and increase productivity. The rise of Singapore's currency has also prompted the dispersion of new industrial enterprises from the country, which the government has answered by promoting the development of high-capital industries.

The collapse of the dot.com bubble in 2001 presented a more serious challenge, particularly as subsequent events—the 11 September 2001 terrorist attacks on the United States and global uncertainties attending the confrontation with Iraq—have resulted in continued low export demand. As of 2003, the

Singapore economy was set to register its second year of positive growth, although at the less than robust rate of 4.8%. At this point the government has not made any fundamental adjustments in its economic development strategy.

#### 40 SOCIAL DEVELOPMENT

Government-provided social welfare services are directed by the Ministry of Community Development, which is often assisted by various voluntary organizations, most of them affiliated with the Singapore Council of Social Service. Besides institutionalized care, the Ministry of Community Development administers foster and homemaker service schemes for needy young persons. In January 1986, the government operated 88 child care centers and three welfare homes for aged and destitute persons. Social welfare assistance is also provided by mutual-benefit organizations and voluntary services.

All employers and employees earning more than S\$50 per month must contribute to the Central Provident Fund, a public pension and retirement program which provides lump-sum benefits for old age, disability, death, sickness, and maternity. Retirement is at age 55. Employee contributions are based on income; employers pay 10% of monthly earnings. If employees earn less than S\$200 per month, they are exempt from contribution requirements. There is a special system for public employees, and employers may choose a private plan if approved. Employers also fund workers' compensation benefits for job-related injuries. In addition, employers are required to provide 14 days of paid sick leave and eight weeks of paid maternity leave to their employees.

Women's legal rights are equal to those of men in most areas, including civil liberties, employment, business, and education. Women comprise 42% of the labor force and are well represented in the professions. Despite the legal principle of equal pay for equal work, women earn approximately 75% of the average male salary. This is due in part to the fact that most women work in the lower paying administrative jobs. Women also have a limited ability to transmit their citizenship to their children if they live overseas. In addition, the health benefits of female civil servants do not cover their spouses, as is the case for male employees. In 1999, however, women won the right to sponsor foreign-born husbands for citizenship. Spousal abuse and domestic violence are not widespread problems and the laws provide protection to women.

Prison conditions are considered to be good, but there are reports of the mistreatment of detainees. Caning is a common form of punishment for many different offenses. Cases of police abuse are generally investigated by the government and reported in the media. Freedom of assembly and association are restricted.

#### 41 HEALTH

Singapore's population enjoys one of the highest health levels in all of Southeast Asia. This achievement is largely attributed to good housing, sanitation, and water supply, as well as the best hospitals and other medical facilities in the region. Fully 100% of the population had access to safe drinking water and 99% had adequate sanitation in 1994–95. Nutritional standards are among the highest in Asia. Singapore is financing medical care with a combination of personal contribution and government assistance. In 1984, Singapore initiated a Medisave scheme, a compulsory savings plan for medical expenses. About half the population pays hospital bills through this plan, although as of 1990 the plan did not cover outpatient expenses. Workers must contribute 3–4% of their earnings to a medical savings account to be used for medical expenses. The contribution of workers is matched by employers. As of 1999, total health care expenditure was estimated at 3.2% of GDP.

In 1990, there were 19 hospitals, five of which were administered by the government, and five were “government

restructured” (as of 1989, given a large degree of administrative autonomy). The remaining nine hospitals were privately run. The main multidisciplinary hospitals are Alexandra Hospital, Changi Hospital, Tan Tock Hospital (all government run); and National University Hospital, Singapore General Hospital, and Toa Payoh Hospital (all government restructured). In 1991, there were 3,779 doctors, 600 dentists, and 10,240 nurses; in addition, there were almost 600 pharmacists (80% of whom worked in privately-owned establishments). As of 1999, there were an estimated 1.6 physicians and 3.6 hospital beds per 1,000 people.

An estimated 74% of married women (ages 15 to 49) used contraception in 1993. The fertility rate in 2000 was 1.5 children per woman during her childbearing years. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 12.8 and 4.3 per 1,000 people. Life expectancy in 2000 was 78 years and infant mortality was 3 per 1,000 live births. In the same year, 100% of the population had access to health care services.

According to a national health survey by the Ministry of Health, high cholesterol had fallen from 27% in 1984 to 19% in 1992; hypertension levels were also down from 15.3% to 13.6% in the same period. There were 5,457 deaths due to cardiovascular disease in 1995. More men than women smoked in Singapore in 1995 (31.9% vs. 21.7%). However, smoking had increased among 18–19 year olds, from 12% in 1984 to 15.2% in 1992; for 20–39 year olds, the increase was 15.8% to 19.4%. The occurrence of diabetes increased from 4.7% in 1984 to 8.6% in 1992 among people 18–69 years; cancer increased as well. Fourteen percent of Singaporeans exercise regularly.

Leading causes of death per 100,000 people in 1990 were communicable diseases and maternal/perinatal causes, 114; noncommunicable diseases, 498; and injuries, 39. There were 48 cases of tuberculosis per 100,000 people reported in 1999. In 1995, vaccination rates for children up to one year old were as follows: tuberculosis, 97%; diphtheria, pertussis, and tetanus, 95%; polio, 93%; measles, 88%; and hepatitis B, 91%. In 1999, rates for DPT and measles were, respectively, 94% and 93%.

The slow growth of the HIV epidemic in Singapore may be attributed to general awareness and programs promoting condom use at STD clinics. As of 1999, the number of people living with HIV/AIDS was estimated at 4,000 and deaths from AIDS that year were estimated at 210. HIV prevalence was 0.2 per 100 adults.

#### 42 HOUSING

Sustained rapid population growth in the years preceding and following World War II provided Singapore with an acute housing shortage. In 1947, a housing committee determined that, with a squatter problem worsening each year, 250,000 persons required immediate housing, while another 250,000 people would need new housing by the late 1950s. In 1960, the Housing and Development Board was established by the new PAP government. During its first five-year building program (1960–65), the board spent S\$230 million to construct 53,000 dwelling units for more than 250,000 people. It was in this period that Queens Town, Singapore's first satellite community, was developed. By the mid-1970s, Queens Town had a total of 27,000 living units in seven neighborhood complexes, housing upwards of 150,000 people.

In the second five-year building program (1966–70), 67,000 additional units, accommodating 350,000 persons and costing S\$305 million, were built. About 113,000 more units were erected by the board in the third building program (1971–75), and over 130,000 in the fourth building program (1976–80). Another 100,000 units were constructed in the fifth building program (1981–85), and 160,000 were planned for the sixth building program (1986–90). In 1985, as a result of these government-sponsored efforts, 2,148,720 persons—or 84% of

the total population of Singapore—lived in 551,767 apartments under the management of the Housing and Development Board. Some 397,180 units had been sold to the public. As of 1998, there were about 949,000 housing units nationwide. As of 2002, about 85% of the population resided in flats constructed through Housing and Development Board Programs. About 92% of all units are owner occupied. The average household contains 3.7 people.

### 43 EDUCATION

For the year 2000, adult illiteracy was estimated at 7.6% (males, 3.6%; females, 11.5%). All children who are citizens are entitled to free primary education. Primary schooling is available in all four official languages. Under the education system implemented in stages after 1980, the first three years of primary schooling emphasize the learning of English and any other official language, after which students are streamed, on the basis of performance, into an additional three or five years of primary school. Upon completion of primary school, they can join the Vocational and Industrial Training Board for vocational training, or if they qualify, they can take four or five years of secondary schooling leading to two-year courses in junior colleges or three-year courses in school centers at the pre-university level.

In 1996, there were 269,668 students in 198 primary schools, with 10,618 teachers. Student-to-teacher ratio stood at 25 to 1, where it remained as of 1999. Also in 1996, secondary schools had 207,719 students and 10,354 teachers. Fifteen vocational institutes offered training courses in the metal, woodworking, electrical, electronic, and building trades. As of 1995, public expenditure on education was estimated at 3.1% of GDP.

The National University of Singapore was established on August 8, 1980, through the merger of the University of Singapore and Nanyang University. In addition, there are the Singapore Technical Institute, Ngee Ann Polytechnic, Singapore Polytechnic, and Nanyang Technological Institute. In 1996, all institutions of higher education had 6,689 teaching staff and enrolled a total of 92,140 students.

### 44 LIBRARIES AND MUSEUMS

The National Library of Singapore (founded in 1844 and known, until 1960, as Raffles National Library) contains 5.6 million volumes, including books in the four official languages. The National Library houses the government archives and serves as a repository for official publications printed in Singapore since 1946. The library has nine full-time branches, and a mobile library service for rural portions of the island. The National University of Singapore Library contains almost 2.2 million volumes, including extensive medical and science/technology collections. (The National University of Singapore was formed in 1980 with the merger of the former University of Singapore and Nanyang University.) Singapore Polytechnic holds 196,000 volumes, and the Institute of Southeast Asian Studies holds 140,000.

The National Museum (formerly Raffles Museum), established in 1849, has collections of natural history, ethnology, and archaeology. Since 1965, it has also specialized in the art, culture, and way of life of Singapore's multiracial communities. The National Art Gallery, established in 1976, features works by the peoples of Southeast Asia, and is a part of the National Museum. The Art Museum and Exhibition Gallery of the National University of Singapore includes in its collections Asian art objects and contemporary Singaporean and Malaysian painting and textiles. The new Singapore Art Museum opened in 1996 with a permanent collection of more than 3,000 contemporary paintings and sculptures from Southeast Asian artists. The Asian Civilisations Museum, concerning ethnology, at Empress Place, opened in 2003 and is the largest museum in Singapore. The Lee

Kong Chian Art Museum, the Centre of Fine Arts, and Singapore Science Center are also found in the city-state.

### 45 MEDIA

Postal, telephone, and telegraph services in Singapore are among the most efficient in Southeast Asia. National and international telecommunications services are administered by the Telecommunication Authority of Singapore. Service is available on a 24-hour basis for worldwide telegraph, telephone, and telex communication. There were 1.95 million mainline telephones in 2000, with an additional 2.74 million cellular phones in use.

Broadcasting services are operated by the government-linked Singapore Broadcasting Corporation, created in 1980; Radio Singapore, inaugurated in 1963, which broadcasts in Chinese, Malay, English, and Tamil; and Television Singapore. As of 1999, there were 13 AM and 4 FM radio stations. In 2000, there were six television stations. In 2000, Singapore had 672 radios and 304 television sets for every 1,000 people. The same year, there were 483 personal computers in use for every 1,000 people. By 2001, there were 2.12 million Internet subscribers served by about nine service providers.

There are English, Chinese, Malay, and Tamil daily newspapers. Foreign publications reporting on Southeast Asian political and social affairs must obtain an annual permit to distribute more than 300 copies of each edition in Singapore. Singapore has 10 daily newspapers, with at least one printed in each of the four official languages. The oldest and most widely circulated daily is the English-language *Straits Times*, founded in 1845.

In 2002 Singapore's largest newspapers, with their estimated daily circulations, were as follows:

	LANGUAGE	CIRCULATION
<i>Straits Times</i>	Chinese/Malay/English	392,600
<i>Lianhe Zaobao</i>	Chinese	205,160
<i>The New Paper</i>	English	121,000
<i>Shin Min Daily News</i>	Chinese	120,130
<i>Lianhe Wanbao</i>	Chinese/English	85,500
<i>Berita Harian</i>	Malay/English	60,000
<i>Business Times</i>	Chinese/English	36,000
<i>Tamil Murasu</i>	Tamil	14,000

*The Sunday Times*, published in all four of the major language, had a weekly circulation of 387,000 in 2002.

Although freedom of the press is guaranteed by law, the International Press Institute has on various occasions cited Singapore for interference with press freedom. Magazines, motion pictures, and plays are censored for sexual content and presentation of ethnically sensitive matters. In August 1986, parliament passed a bill enabling the government to restrict sales and distribution of foreign publications "engaging in domestic politics." Two months later, the government announced that the distribution of *Time* magazine would be reduced because the magazine had refused to print the entire text of a letter from a government official. In 1987, similar distribution restrictions were placed on the *Asian Wall Street Journal*.

### 46 ORGANIZATIONS

Singapore has a wide variety of organizations, some private in their origin and direction and others essentially government controlled. There are service clubs belonging to international associations; Chinese, Indian, and Malay chambers of commerce; and a multicomunal Singapore chamber of commerce. In addition to such largely private organizations, the government established in 1960 the People's Association, to organize and promote mass participation in social, cultural, educational, and recreational activities. In Singapore, there is a comprehensive network of 133 community centers throughout the country set up by the People's Association. Management, women's, youth, and

senior-citizen subcommittees exist as active units of the association.

National youth organizations include the Singapore Scout Association, Youth for Christ, Student Christian Movement of Singapore, the Association of Singapore Students in Economics and Commerce, YMCA/YWCA, and the Singapore Boy's Brigade. Women's organizations include the Association of Women for Action and Research, Singapore Council of Women's Organizations, and the Singapore International Foundation.

The Academy of Medicine, the Singapore National Academy of Science, and the Institute of Physics serve to promote public interest and education as well as professional advancement in various branches of science. Culture and arts organizations are represented by the Indian Fine Arts Society and the Singapore Art Society.

#### 47 TOURISM, TRAVEL, AND RECREATION

Shopping, with bargaining the usual practice, is a major tourist attraction. Points of interest include the Van Kleef Aquarium at Fort Canning Park, the Singapore Zoological and Botanical Gardens, and the resort island of Sentosa. Singapore has a number of other attractions, including an amusement park at Haw Pav Village, site of historic Chinese statues, and the restoration of the Alkaff Mansion.

Singapore has many sports clubs and associations, notably in the areas of badminton (in which Singaporeans have distinguished themselves internationally), basketball, boxing, cricket, cycling, golf, hockey, horse racing, motoring, polo, swimming, tennis, and yachting.

Tourists wishing to enter or visit Singapore must have a valid passport or other internationally recognized travel document. Visas are required by nationals of Afghanistan, India, Cambodia, Laos, China, Russia, Viet Nam, and holders of Palestinian refugee papers and Hong Kong certificates of identity. Vaccinations are required against yellow fever for travelers from an infected country.

In 2000, 7,691,399 visitors arrived in Singapore, mostly from East Asia and the Pacific. That year Singapore earned US\$6 billion from tourism. There were a total of 35,625 hotel beds, filled to 84% of capacity.

According to 2002 US government estimates, the cost of staying in Singapore was approximately \$211 per day.

#### 48 FAMOUS SINGAPOREANS

Sir Thomas Stamford Bingley Raffles (1781–1826) played the major role in the establishment of a British presence on Singapore Island in 1819; he introduced policies that greatly enhanced Singapore's wealth, and he suppressed the slave trade. Raffles also distinguished himself as a collector of historical and scientific information. The English writer and educator Cyril Northcote Parkinson (1909–93), formerly a professor at the University of Singapore, became internationally known as the originator of Parkinson's Law. Singapore's dominant contemporary figure is Lee Kuan Yew (b.1923), prime minister of the Republic of Singapore from 1965 to 1990.

#### 49 DEPENDENCIES

Singapore has no territories or colonies.

# SOLOMON ISLANDS

**CAPITAL:** Honiara

**FLAG:** The flag consists of two triangles, the upper one blue, the lower one green, separated by a diagonal gold stripe; on the blue triangle are five white five-pointed stars.

**ANTHEM:** *God Save the Queen.*

**MONETARY UNIT:** The Solomon Islands dollar (SI\$), a paper currency of 100 cents, was introduced in 1977, replacing the Australian dollar, and became the sole legal tender in 1978. There are coins of 1, 2, 5, 10, 20, and 50 cents and 1 dollar, and notes of 2, 5, 10, 20, and 50 dollars. SI\$1 = US\$0.14306 (or US\$1 = SI\$6.99) as of May 2003.

**WEIGHTS AND MEASURES:** The metric system is in force.

**HOLIDAYS:** New Year's Day, 1 January; Queen's Birthday, celebrated as a movable holiday in June; Independence Day, 7 July; Christmas, 25 December; Boxing Day, 26 December. Movable religious holidays include Good Friday, Easter Monday, and Whitmonday.

**TIME:** 11 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

The Solomon Islands consists of a chain of six large and numerous small islands situated in the South Pacific, some 1,900 km (1,200 mi) NE of Australia and about 485 km (300 mi) E of Papua New Guinea. Extending 1,688 km (1,049 mi) ESE-WNW and 468 km (291 mi) NNE-SSW, the Solomon Islands has an area of 28,450 sq km (10,985 sq mi). Comparatively, the area occupied by the Solomon Islands is slightly smaller than the state of Maryland. The largest island is Guadalcanal, covering 5,302 sq km (2,047 sq mi); other major islands are Makira (formerly Malaita), San Cristobal, Vella Lavella, Choiseul, Rennell, New Georgia, and the Santa Cruz group. The total coastline of the Solomon Islands is 5,313 km (3,301 mi).

The capital city of the Solomon Islands, Honiara, is located on the island of Guadalcanal.

## <sup>2</sup>TOPOGRAPHY

The topography varies from the volcanic peaks of Guadalcanal to low-lying coral atolls. Densely forested mountain ranges are intersected by precipitous, narrow valleys. The highest peak is Mt. Makarakomburu, at 2,447 m (8,127 ft), on Guadalcanal, an island that also contains the country's most extensive alluvial grass plains. Rivers are narrow and impassable except by canoe. Extensive coral reefs and lagoons surround the island coasts.

## <sup>3</sup>CLIMATE

The climate is tropical. From December to March, northwest equatorial winds bring hot weather and heavy rainfall; from April to November, the islands are cooled by drier southeast trade winds. Damaging cyclones occasionally strike during the rainy season. The annual mean temperature is 27°C (81°F); annual rainfall averages 305 cm (120 in), and humidity is about 80%.

## <sup>4</sup>FLORA AND FAUNA

Dense rain forest covers about 90% of the islands, with extensive mangrove swamps and coconut palms along the coasts. The islands abound in small reptiles (61 species), birds (163 breeding

species), and mammals (53 species), as well as insect life. There are over 230 varieties of orchids and other tropical flowers.

## <sup>5</sup>ENVIRONMENT

Most of the coral reefs surrounding the islands are dead or dying. As an island nation, the Solomon Islands are concerned with the effects of global warming and rising sea levels. Deforestation is another significant environmental problem. United Nations sources estimate that the nation's forests will be exhausted in 10–15 years. The related problem of soil erosion threatens the country's agricultural productivity.

The nation has about 10.7 cu mi of water, of which 40% is used for farming and 20% for industrial activity. Only 65% of the nation's rural population have access to pure drinking water. Sources of pollution include sewage, pesticides, and mining by-products.

Twenty mammal species and 18 bird species are endangered, as are 21 types of plants. Endangered species include the gizo white-eye and the hawkbill, green sea, and leatherback turtles. The Solomon Islands' crowned pigeon and the Nendo tube-nosed fruit bat have become extinct.

## <sup>6</sup>POPULATION

The population of Solomon Islands in 2003 was estimated by the United Nations at 477,000, which placed it as number 161 in population among the 193 nations of the world. In that year approximately 3% of the population was over 65 years of age, with another 43% of the population under 15 years of age. There were 106 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 2.88%, with the projected population for the year 2015 at 643,000. The population density in 2002 was 17 per sq km (43 per sq mi), but there are significant variations from island to island; moreover, most mountainous and heavily wooded areas are inaccessible (except to tribal groups of the interior), and most of the population is concentrated in the coastal regions.

It was estimated by the Population Reference Bureau that 20% of the population lived in urban areas in 2001. The most

populous islands are Malaita and Guadalcanal. Honiara, on Guadalcanal, is the largest town and chief port. Also the capital city, Honiara had a 2002 population of 68,000. According to the United Nations, the urban population growth rate for 2000–2005 was 5.2%.

## 7 MIGRATION

Since 1955, immigrants from the Gilbert Islands (now Kiribati) have settled in underpopulated areas. Movements from the countryside to Honiara and north Guadalcanal have created problems of overcrowding. The resentment engendered by those who moved from the heavily populated island of Malaita to Guadalcanal resulted in violence in 1999. The net migration rate for 1999 was zero. In 2000 the total number of migrants was 4,000. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

In 1999, Melanesians constituted 93% of the total population. Also enumerated were Polynesians at 4%, Micronesians at 1.5%, Europeans at 0.8%, Chinese at 0.3%, and others accounting for 0.4%. Melanesians live mainly on the larger islands; Polynesians tend to inhabit the smaller islands and atolls.

## 9 LANGUAGES

English is the official language but is only spoken by approximately 1–2% of the population. Melanesian pidgin is the lingua franca. Some 120 indigenous languages and dialects are spoken, each within a very restricted geographical area. Melanesian languages are spoken by about 85% of the population, Papuan languages by 9%, and Polynesian languages by 4%.

## 10 RELIGIONS

Christianity, introduced by missionaries, is the principal organized religion. As of 2002, 45% of the islanders were Anglicans; 18% were Roman Catholics; 12% were United (Methodist/Presbyterian); 9% were Baptists; 7% were Seventh-Day Adventist; 5% were other Protestant; and 5% adhered to traditional indigenous religions. Indigenous churches that are offshoots of other established Christian churches are attended by about 2% of the population. There is also a small Baha'i community. The most recent census indicated that there were only 12 Muslims in the country.

## 11 TRANSPORTATION

In 2002, there were an estimated 1,360 km (845 mi) of roads in the Solomons, of which only 34 km (21 mi) were paved. Of the 1,326 km (824 mi) of unpaved roads, about 800 km (497 mi) belong to private plantations. Shipping services link the Solomons with other Pacific islands, Australia, Japan, and Europe. Honiara is the principal port, followed by Ringi Cove. A fleet of government vessels provides interisland connections and handles about one-third of total tonnage carried. There were 31 airports in 2001, only 2 of which had paved runways. Henderson's Field, on the northern coast of Guadalcanal, is the site of Honiara's civil airport. Solomon Airlines provides regular flights between islands and to nearby Papua New Guinea and Vanuatu. In 1997, Solomon Airlines carried 94,000 passengers on domestic and international flights.

## 12 HISTORY

The islands now known as the Solomons are thought to have been inhabited originally by Melanesians, whose language has affinities with Malay but whose precise origin has not been determined. The first European contact with the Solomons, in 1567, was the sighting of Santa Isabel Island by the Spanish explorer Alvaro de Mendaña; the following year, Mendaña and another Spaniard, Pedro de Queirós, explored some of the

islands. Mendaña named the islands *Islas de Salomon*, thinking that the gold source for King Solomon's riches was located there.

European contact with the Solomons was cut off for nearly two centuries until they were visited by the English navigator Philip Carteret in 1767. Following Carteret's visit, the British navy began to make periodic calls at the islands. During the period 1845–93, the Solomons were frequently visited by missionaries and traders. Indigenous peoples were also subjected to exploitation by "blackbirders," who impressed their captives into forced labor, often on colonial sugar plantations in Fiji, Hawaii, Tahiti, or Queensland. The brutality of the kidnapers provoked reprisals by the islanders, resulting in mass slayings of both Europeans and local peoples.

In 1893, the British government stepped in and established a protectorate over certain islands in the southern Solomons, including Guadalcanal, Malaita (now Makira), San Cristobal, and the New Georgia group. The remainder of the Solomons had by this time fallen under German dominion; some of these, including Choiseul and Santa Isabel, were transferred by treaty to the UK in 1900. The British Solomon Islands Protectorate, as the entire group came to be known, initially was under the jurisdiction of the Office of the British High Commissioner for the Western Pacific.

During World War II, the Solomons provided the theater for some of the most bitter fighting of the Pacific war after Japanese troops invaded and occupied Guadalcanal in 1942. A Japanese airfield on the island's northern coast—later known as Henderson's Field—was captured by US Marines on 7 August 1942, the opening foray in the Battle of Guadalcanal, which cost the lives of about 1,500 US soldiers and 20,000 Japanese. Guadalcanal was evacuated by Japan in February 1943, although Japanese forces remained elsewhere in the Solomons until 1945. Widespread destruction and loss of life were visited on the local peoples during the war, and the legacy of social dislocation gave impetus to the development of a pro-independence nationalist movement in Malaita known as the Marching Rule.

In 1953, local advisory councils were set up in Malaita, eventually spreading to other islands of the protectorate. In 1960, the territorial government appointed executive and legislative councils, which were granted their first elected minority in 1964. A new constitution promulgated in April 1970 provided for replacement of the two councils by a unitary Governing Council, the majority of whose members were to be elected. During May and June, the Solomon Islands' first general election was held, with voters selecting 17 of the council's 26 members. On 21 August 1974, a new constitution introduced a ministerial system of government headed by a Council of Ministers. A Legislative Assembly subsequently chose Solomon Mamaloni as the Solomons' first chief minister. In May 1975, a delegation from the Solomon Islands, led by Mamaloni, met with UK officials in London and set up a timetable for internal self-government and for full independence. On 22 June 1975, the territory's name was officially changed from the British Solomon Islands Protectorate to the Solomon Islands.

The islands achieved internal self-government in 1976 and became an independent member of the Commonwealth of Nations on 7 July 1978. Peter Kenilorea was prime minister until his coalition government collapsed in August 1981, after which Mamaloni returned to power. In October 1984, Sir Peter Kenilorea (as he had become) was reelected prime minister, but he resigned in November 1986, following allegations of mismanagement of funds; Ezekiel Alebu, deputy prime minister, succeeded him. In the general elections of February 1989 the People's Alliance Party (PAP), led by Solomon Mamaloni, defeated the Alebu government. Mamaloni became the new prime minister in March 1989. Mamaloni resigned as PAP leader in October 1990 and formed a coalition government with several members of the opposition. Francis Billy Hilly, an independent

supported by members of the National Coalition Partners (a loose six-party coalition), became the Solomon Islands' new prime minister in June 1993. Hilly worked with the Melanesian Spearhead Conference to ease tension between the Solomon Islands and Papua New Guinea. In 1994, Parliament voted to replace Hilly with Mamaloni, leader of the Group for National Unity and Reconciliation (GNUR), the largest political party in parliament.

In the 1997 National Parliament elections, GNUR retained its majority, and Bartholomew Ulufa'alu was elected prime minister. He pledged to resolve the Solomons' financial crisis by improving revenue collections and downsizing government ministries. He also grappled with the problem of finding a resolution to the ethnic conflict in Guadalcanal which dominated all other domestic political issues since late 1998. Disputed were issues of land ownership, access to education, employment and economic development between the people of Guadalcanal and Malaitan settlers on the island. That year, the Isatubu Freedom Movement (IFM), representing Guadalcanal's native people, began to forcibly evict Malaitans, who responded by forming the Malaita Eagle Force (MEF). In May 2000, the MEF took Ulufa'alu hostage, staging a coup. Ulufa'alu resigned, and in June he was replaced by Manasseh Sogavare. Fighting between the two factions had left over 100 people dead and more than 20,000 displaced. A peace agreement was signed in October 2000, but it failed to end the violence. Unarmed peacekeepers from Australia and New Zealand were sent to supervise disarmament and demilitarization. In September 2001, IFM rebel leader Selwyn Sake was killed, threatening the peace agreement. In November, the MEF reported that 90% of its weapons had been surrendered. Allan Kemakeza of the People's Alliance Party was elected prime minister in December 2001. In February 2003, a member of the country's National Peace Council, Sir Frederick Soaki, was assassinated. He worked with the UN to demobilize former militants still employed by the government as police officers on Malaita. As of early 2003, Kemakeza's government was criticized for failing to curb the actions of militia members.

### 13 GOVERNMENT

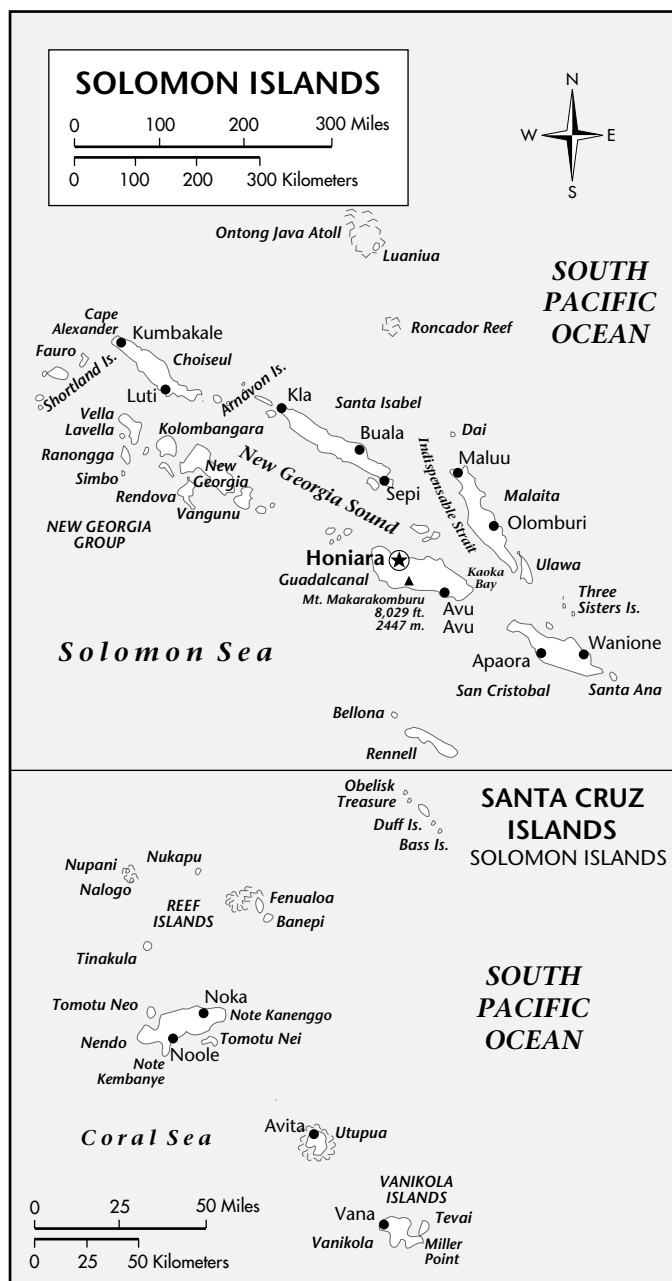

Under the independence constitution of 1978, the Solomon Islands is a parliamentary democracy with a ministerial system and a unicameral national parliament, consisting of 50 members elected to four-year terms; suffrage is universal for citizens over the age of 21. The prime minister, who must command a parliamentary majority, selects the 20-member cabinet. The head of state is the British monarch, represented by the governor-general. Governor-general since 1994, Sir Moses Pitakaka, was replaced in May 1999 by Anglican priest Father John Lapli, who was elected by the national parliament over six other candidates, including Pitakaka. There is a constitutionally provided Ombudsman to provide protection against improper administrative treatment.

### 14 POLITICAL PARTIES

The members of the first parliament formed after independence in 1978 had no party affiliations. However, political parties emerged shortly before the elections of August 1980, in which the Solomon Islands United Party, headed by Peter Kenilorea, won 14 seats; the People's Alliance Party (PAP), led by Solomon Mamaloni, received 8 seats; the National Democratic Party (NDP), 2 seats; and independents, 14 seats.

In the August 1997 elections, the Group for National Unity and Reconciliation (GNUR) retained its 21 seats, the PAP won 7 seats; the National Action Party (NAPSI), 5; Labor (SILP), 4; United Party (UP), 4; and independents, 6, and other parties, 3.

In the December 2001 elections, the PAP, led by Kemakeza, won 16 seats; the Alliance for Change Coalition, led by Ulufa'alu, took 13 seats; the People's Progressive Party, led by Sogavare,

LOCATION: 5° to 12°30' S; 155° to 170°E. TERRITORIAL SEA LIMIT: 12 miles.

took 2 seats; the Labor Party, led by Joses Tuhunu, won 1 seat; and independents held 18 seats. The next elections are scheduled for December 2005.

### 15 LOCAL GOVERNMENT

The islands are divided into nine administrative districts, of which eight are provinces, each with an elected assembly and a premier; the ninth is the town of Honiara, governed by an elected council. In outlying areas, village headmen exercise administrative responsibilities.

### 16 JUDICIAL SYSTEM

The judicial system is based on a blend of British and traditional systems and consists of the high court, magistrate's courts, and

local courts. Appeals from magistrate's courts go to the high court; customary land appeals courts hear appeals from the local courts.

Defendants in criminal cases are entitled to counsel and to the writ of habeas corpus. Violations of civil liberties are punishable by fines and jail sentences. An ombudsman with the power of subpoena can investigate complaints of violations of civil liberties. The traditional culture, in addition to legal provisions, provides strong protection against arbitrary interference with privacy, home, family, and correspondence.

## 17 ARMED FORCES

The Solomon Islands has no military forces. There is a 500-member police force which also engages in border protection. Maritime surveillance is also provided by this police force, which is headed by a commissioner.

## 18 INTERNATIONAL COOPERATION

The Solomon Islands joined the UN on 19 September 1978 and belongs to ESCAP, FAO, IBRD, ICAO, IDA, IFAD, IFC, ILO, IMF, UNCTAD, UPU, and WHO. It participates in the Asian Development Bank, Commonwealth of Nations, G-77, and South Pacific Commission and Forum. The nation is a member of the WTO and a signatory of the Law of the Sea. In December 1997, Solomon Islands achieved full membership in UNESCO. The Solomon Islands has resident diplomatic representation only at the UN; the UN ambassador is also accredited to the US. The minister for foreign affairs serves as a roving envoy. The United Kingdom, Australia, New Zealand, Japan, China, and Papua New Guinea maintain diplomatic missions in Honiara; US interests are handled by its ambassador to Papua New Guinea.

## 19 ECONOMY

At least 80% of the population is tied to subsistence agriculture. The capital sector is dependent on the production of copra, timber, and fish for export, but outputs of other cash commodities—particularly cocoa, spices, and palm oil—have grown in recent years. The development of large-scale lumbering operations has increased timber production considerably, and concern about the preservation of forest resources led to government restriction of log exports in 1993. In the late 1990s, the economic downturn in Asia led to the collapse of the export market for logs—primarily Japan and South Korea. In late 1997, the government devalued the currency to encourage development of other export products and to discourage the growth of imports. The economy declined by 10% in 1998, and the government initiated cutbacks in government agencies. The islands are rich in undeveloped mineral resources such as lead, zinc, nickel, and gold.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 the Solomon Islands' gross domestic product (GDP) was estimated at \$800 million. The per capita GDP was estimated at \$1,700. The annual growth rate of GDP was estimated at -10%. The average inflation rate in 2001 was 7.9%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 42% of GDP, industry 11%, and services 47%. aid receipts amounted to about \$137 per capita and accounted for approximately 22% of the gross national income (GNI).

## 21 LABOR

The wage labor force in 2002 totaled approximately 27,000. As of that year, 80% worked in agriculture, 5% had jobs in industry, and the remainder were in services. The country suffers from an

acute shortage of skilled workers, and an estimated 80% of professional and technical employees are recruited from overseas.

Most employed persons have a standard workday of between five and six hours, six days a week, with overtime bringing the average workweek to 45 hours. The minimum working age is 12, or 15 years old for work in factories or on ships. In practice, given low wages and high unemployment, there is little reason to hire children. The minimum wage was \$0.31 per hour in 2002. The Solomon Islands' largest trade union is the Solomon Islands National Union of Workers. Unions are free to organize and strike, although unions seldom strike. About 60% to 70% of wage earners were unionized as of 2001. Government regulations require employers to provide housing for workers whose jobs do not permit them to travel to and from home each day. Unions regularly engage in collective bargaining.

## 22 AGRICULTURE

About 2% of the total land area is utilized for temporary or permanent crops. Agriculture accounts for about 42% of GDP. Copra (coconut meat) is typically the dominant export and the economic lifeline of the Solomons; world copra prices strongly affect the economy, so that a decline in copra prices in 1985 inaugurated an economic slump, exacerbated by the effects of Cyclone Namu. In 1992, production of copra increased by over 30% from 1991, for a total of 38,500 tons. The rebound in 1992 came from a near doubling of world prices and better coordination of domestic shipping. Copra production in 1999 was estimated at 22,000 tons. About 75% of the copra is produced by small holders, principally on Guadalcanal, Choiseul, the Russell Islands, San Cristobal, Santa Isabel, and Vella Lavella. Development plans called for crop diversification and the construction of a copra mill on the islands. The overseas marketing of copra is a monopoly of the government's Solomon Islands Copra Board. Other agricultural products in 1999 included cocoa, 3,000 tons; palm oil, 31,000 tons; and palm kernels, 7,000 tons. In 2001, agricultural products accounted for 72.7% of exports and 41.1% of imports. Exports of palm, copra, and cocoa typically account for over 20% of total exports.

The major food crops are coconuts, yams, taro, sweet potatoes, cassava, and green vegetables. The government has encouraged the cultivation of rice, rotated with soybeans, in the Guadalcanal plains; however, cyclone losses resulted in increased dependence on imported rice.

## 23 ANIMAL HUSBANDRY

Cattle were traditionally kept on coconut plantations as a means of controlling the growth of grass, and many large copra plantations raised cattle for slaughter. There were 12,500 head of cattle and 67,000 pigs on the islands in 2001. Over 40% of the cattle are raised by small holders. The government's Livestock Development Authority (LDA) maintains about 3,200 head on Guadalcanal and Western Province. The LDA is now mostly a producer of trader pigs and poultry, raising 25,000 chicks and 120 piglets per month for sale. Production of pork has doubled since the early 1980s, yet still has not kept up with domestic demand. About 3,000 tons of meat were produced in 1998.

## 24 FISHING

Fish are an essential part of the local diet, and fishing has become an important commercial activity. In 1991, the total catch reached a record high of 69,292 tons; the total catch in 2000 was 23,443 tons. In 2000, the annual catch of skipjack tuna was 8,276 tons. Exports of fish products in 2000 were valued at nearly \$10.3 million.

## 25 FORESTRY

Forests cover about 88.8% of the total area, with about 2,536,000 ha (6,266,000 acres) of timber stands providing an estimated timber yield in 2000 of 872,000 cu m (30.8 million cu ft) of which about 700,000 cu m (24.7 million cu ft) was exported as logs. Exports of forest products were valued at \$51.2 million in 2000, 97% of it from logs. Important forest timbers are kuari, balsa, teak, Honduras and African mahoganies, Queensland maple, silky oak, and black bean. Several hundred chainsaw operators and about 40 portable sawmills produce over one-fifth of all sawn timber. Logging at current rates (15–16,000 ha/37–39,000 acres per year) exceeds the estimated maximum sustainable annual cut by three times, which means that logging at current rates will presumably exhaust commercially loggable forests in less than 10 years. Forest preservation and management legislation has been proposed, but there is no long-term viable silvicultural plan in place.

## 26 MINING

Although the archipelago was named in the 16th century for the fabled gold mines of King Solomon and had long-term mining potential, there have been insufficient high-quality mineral deposits to justify extensive mining investment. Mining was nevertheless the second-leading industry in 2002. Because of political and ethnic violence, mineral production in 2001 was limited to small quantities of common clays, crushed stone, and sand and gravel, and no gold or silver mining was reported (a minor amount of gold, and possibly associated silver, was obtained from primitive panning and sluicing by individuals); in 1999, production was 3,456 kg of gold and 2,138 of silver. The Gold Ridge Mine, at Mavu, which was closed from mid-2000 through the end of 2001, had undertaken a study to upgrade production from 3,100 kg per year to 4,500–4,700 kg per year, which could increase the mining sector's contribution to GDP from 1% to 15%. The country's main industrial prospects focused on its undeveloped mineral resources of gold-silver, lead-zinc, nickel, and phosphate. Deposits of bauxite, copper, chromite, and manganese ores have also been found.

## 27 ENERGY AND POWER

Most electric power is supplied by the government-controlled Solomon Islands Electricity Authority, although some private undertakings produce their own electricity. Electric generating capacity was 12,000 kW in 2001, and electrical output was 32 million kWh. Honiara accounts for 90% of electricity consumption, which totaled 29.7 million kWh in 2000. Oil and natural gas exploration continues, especially in Iron Bottom Sound, north of Guadalcanal. The government regulates petroleum exploration and production. In 1996, mineral fuels accounted for 11.3% of the total value of imports.

## 28 INDUSTRY

Industrial activity in the Solomons is rudimentary, lacking in both the capital and the skilled labor necessary for significant development. The leading industries are fish processing and timber milling; soaps are made from palm oil and coconut oil. Small firms produce a limited array of goods for the local market: biscuits, tobacco products, rattan furniture, baskets and mats, concrete blocks, boats, and fiberglass products.

## 29 SCIENCE AND TECHNOLOGY

The Solomon Islands College of Higher Education has schools of nursing, natural resources, marine and fisheries studies, and industrial development.

## 30 DOMESTIC TRADE

Honiara is the commercial center with a highly developed port and a wide variety of services to support trade and tourism. However, growth in both domestic trade and tourism has been hindered by inadequate infrastructure and security concerns. Most commercial enterprises have been controlled by Chinese or Europeans. A large segment of the population still relies on bartering. Normal banking hours are 9 to 11:30 AM and 1:30 to 3 PM, Monday–Thursday, and 9 AM to 3 PM on Friday. Normal office hours are 8 AM to 12 PM and 1 PM to 4:30 PM, Monday through Friday.

## 31 FOREIGN TRADE

Overseas trade volume expanded rapidly in the mid-1990s, but the economic woes in Asia in the late 1990s caused the export market to contract significantly. The distribution of the Solomon Islands' trade continues to be limited by the huge distances to potential export markets. The Solomon Islands' major exports are timber (68%) and fish (14%). Other exports include palm oil (6.5%), oil seeds (4.3%), and cocoa (1.7%).

In 1996 the Solomon Islands' imports were distributed among the following categories:

Consumer goods	13.4%
Food	13.7%
Fuels	24.7%
Industrial supplies	20.1%
Machinery	13.2%
Transportation	12.8%
Other	2.1%

Principal trading partners in 1998 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
Japan	55	9	46
Thailand	39	3	36
United Kingdom	13	2	11
Philippines	11	2	9
Korea	10	9	1
Germany	9	1	8
Singapore	6	12	-6
China (inc. Hong Kong)	6	5	1
Australia	4	60	-56
New Zealand	1	7	n.a.

## 32 BALANCE OF PAYMENTS

In 1992, export earnings were exceptionally high, due to a massive income windfall from the steep rise in the volume of log exports at a time when prices in Asian markets were being driven up by a supply shortage. By the late 1990s, the market for logs had collapsed, causing strain to the Solomon Islands balance of payments. Most manufactured goods and petroleum products must be imported.

The US Central Intelligence Agency (CIA) reports that in 1999 the purchasing power parity of the Solomon Islands' exports was \$165 million while imports totaled \$152 million resulting in a trade surplus of \$13 million.

The International Monetary Fund (IMF) reports that in 1999 the Solomon Islands had exports of goods totaling \$165 million and imports totaling \$110 million. The services credit totaled \$56 million and debit \$87 million. The following table summarizes the Solomon Islands' balance of payments as reported by the IMF for 1999 in millions of US dollars.

<b>Current Account</b>	21

### 33 BANKING AND SECURITIES

The Solomon Islands Monetary Authority became the Central Bank of the Solomon Islands (CBSI) in January 1983. Three commercial banks also operate on the islands: The Australia and New Zealand Banking Group, Westpac (which took over the Hong Kong and Shanghai Banking Corp.'s local operations in mid-1988), and the National Bank of Solomon Island (NBSI). Only the NBSI has branches outside the capital. Most villages rely on credit unions. The government's 49% shareholding in the NBSI was sold to the National Provident Fund as a part of a privatization program in 1992. The remaining 51% is held by the Commonwealth Banking Corp. of Australia (CBC).

The government participates in private investment projects through a holding company, the Investment Corp. of Solomon Islands (ICSI), the successor to the Government Shareholding Agency. It holds the government's equity in other financial institutions, notably the Development Bank of Solomon Islands (DBSI), as well as in many other companies, some of which are foreign-controlled. The government, via the ICSI, uses locally borrowed funds and foreign aid to assist industry. The government also guarantees commercial bank loans to companies in which the ICSI has an equity holding. The International Monetary Fund reports that in 1999, currency and demand deposits—an aggregate commonly known as M1—were equal to \$55.1 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$95.2 million.

### 34 INSURANCE

Insurance is sold through representatives of foreign firms. In 1997, GRE Insurance, the National Insurance Co. of New Zealand, QBE Insurance, and Zurich Australian Insurance were operating in the Solomon Islands.

### 35 PUBLIC FINANCE

The US Central Intelligence Agency (CIA) estimates that in 2001 the Solomon Islands's central government took in revenues of approximately \$38 million. Overall, the government registered a deficit of approximately 8% of GDP. External debt totaled \$137 million. Foreign aid accounts for 50% of government expenditures.

### 36 TAXATION

Individual incomes are taxed on a graduated scale ranging for single taxpayers from 14% on the first S\$2,100 of taxable income to 42% on taxable income exceeding S\$14,700. Companies incorporated in the Solomon Islands are taxed at a fixed rate of 35%; a rate of 50% applies to those incorporated elsewhere. A value-added tax on telephone services, restaurant food, and overseas travel tickets went into effect in August 1990. Employers contribute 7.5% of employee wages for social security; employees contribute 5% minimum. On 1 July 1990, a

resident withholding tax went into effect for royalties, fishing operations, sales of copra and cocoa, and certain other sources of income.

### 37 CUSTOMS AND DUTIES

All products imported into the Solomon Islands are subject to customs duties and a 20% surcharge is levied on all ad valorem goods. Specific duties apply to alcoholic beverages, tobacco, rice, and sugar. Concessionary rates have been granted to imports of industrial machinery and equipment, raw materials, chemicals, and building materials. Licenses are required for the importation of firearms, ammunition, animals, seeds, soil, and plant material.

### 38 FOREIGN INVESTMENT

The government encourages direct foreign investment through tax concessions, remission of customs duties, and other forms of assistance. Foreigners may repatriate profits (after taxes) and, under most conditions, capital investments. A primary role in the development of resources is reserved to the government. In 1990, Lever Brothers opened a coconut oil plant at Yandina.

### 39 ECONOMIC DEVELOPMENT

The government has attempted to diversify agricultural production in order to make the economy less vulnerable to world price fluctuations of such key cash crops as copra. Important development projects during the 1980s included new sawmills, a fish cannery, a spice industry, and the Lungga hydroelectric plant. Fisheries receive significant portions of development funds. A rubber industry is being developed, and plans are under way to export the indigenous ngali nut as an upscale confectionery product under the name "Solomons nut." In 1991, plans were announced for a S\$60 million hydroelectric plant on Guadalcanal, financed by the Asian Development Bank.

Foreign assistance plays an essential role in the nation's development strategy, with Australia and Japan the largest donors. In 1996, the Solomon Islands received US\$46.4 million in aid. Aid is also received from the IBRD, ADB, and EC.

### 40 SOCIAL DEVELOPMENT

A National Provident Fund covering certain categories of wage workers provides old age, disability, and survivor benefits in lump-sum payments. This program is financed from worker and employer contributions. Employers cover the cost of workers' compensation. The Employment Act mandates that employers pay dismissal indemnity of 2 weeks' wages for each year of employment. The bulk of organized welfare services are provided by church missions. In small villages and outlying areas, assistance is traditionally provided through the extended family.

Although women are accorded equal rights by law, their role is limited by customary family roles in most Solomon Islands societies. Due to cultural barriers, a majority of women are illiterate, which contributes to a general shortage of employment opportunities for women. Domestic abuse and violence are common.

The government generally respects the human rights of its citizens. However, the armed conflict between rival militias has resulted in the deterioration of human rights.

### 41 HEALTH

Poor standards of general hygiene and inadequate sanitation continue to make malaria and tuberculosis endemic. Adequate sanitation was available to 60% of the entire Solomon Islands population in 1989-90.

Infant mortality was estimated at 23.7 deaths per 1,000 live births as of 2002; average life expectancy was an estimated 72 years for both men and women. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 33.3 and 4.2 per 1,000 people. The immunization rates for children

under one year were as follows in 1995: diphtheria, pertussis, and tetanus, 69%; polio, 68%; measles, 68%; and tuberculosis, 77%.

The overwhelmingly most prevalent disease reported was malaria. Reports documented 153,359 cases in 1992. The incidence per 1,000 people was 437.6 in 1991. Many of the five island nations in the South Pacific have insufficient vitamin A levels. The incidence of xerophthalmia was present in 1.55% of all children in the Solomon Islands.

In 1999, 15 new cases of leprosy were reported by the World Health Organization, which is advocating multidrug therapy and screening of people in high risk areas to counter the spread of this disease that was once believed to have been eradicated.

## 42 HOUSING

The government has built low-cost housing projects in Honiara to help ease congestion. Outside Honiara, housing is primitive, with overcrowding a problem even in the smaller villages. As of 1996, 80% of the population lived in villages of less than 300 people. According to a 1999 census, there were 65,014 households, 98% of which were single family households. The average household had 6.3 members. Only 52% of all households had access to piped drinking water, 23% had modern toilet facilities, and 16% had access to electricity.

Since 1998, the government, through the Ministry of Lands and Housing, has been focusing on programs for improved housing and utilities for all.

## 43 EDUCATION

About 60% of the adult population is estimated to be literate. Education is not compulsory, and many schools charge fees. In 1976, the government began substantial aid to primary as well as secondary schools. Christian missions (mainly Anglican), supported by government grants, continue to provide some primary schooling. In 1994 there were 60,493 students and 2,514 teachers at the primary school level. Student-to-teacher ratio stood at 24 to 1. Secondary schools (general) had 7,811 pupils and approximately 400 teachers in 1994. Higher education is provided by the Solomon Islands Teachers College (Honiara), the Honiara Technical Institute, and the University of the South Pacific Solomon Islands Center, also in Honiara.

## 44 LIBRARIES AND MUSEUMS

The National Library (founded in 1974) in Honiara has two branches and a collection of over 100,000 volumes. The library at the Solomon Islands Center of the University of the South Pacific holds 9,000 volumes. The Solomon Islands National Museum and Cultural Center began collecting in the 1950s and opened a permanent site in 1969. The Center promotes and provides research into all aspects of Solomons culture.

## 45 MEDIA

The main post office is at Honiara. As of 1997, there were some 8,000 main telephone lines on the islands, with an additional 658 cellular phones in use; a radiotelephone service provides overseas links. A government-owned radio service has 5 transmitters. As of 1999 there were 4 AM radio stations, 2 FM stations, no television stations, and two weekly newspapers. There were 80 radios and 4 televisions per 1,000 population in 1997. In 2000, Internet access was available through one service provider, which

served 3,000 subscribers that year. Periodicals include the *Solomon Voice* (weekly, 2002 circulation 10,000), *Solomon Star* (weekly, circulation 4,000), and the *Solomon Nius* (monthly, 2,000). The government is said to generally respect constitutional provisions for freedom of speech and of the press.

## 46 ORGANIZATIONS

Cooperative societies are important in rural areas for the distribution of locally produced goods. Honiara has a chamber of commerce. YMCA and YWCA chapters are active. There are also chapters of Habitat for Humanity and the Red Cross.

## 47 TOURISM, TRAVEL, AND RECREATION

Tourism, although encouraged by the government's Tourist Authority, is not seen as a major growth area, owing to lack of investment. In 1999, approximately 21,000 tourists visited the Solomon Islands, the vast majority arriving from East Asia and the Pacific. Tourism receipts totaled US\$7 million. A passport and an onward ticket are required for entry.

The cost of staying in Honiara, according to 1999 UN estimates, ranges from US\$87. Travel expenses in Gizo are estimated at \$103, and in Auki at \$61.

Popular pastimes include rugby football, soccer, basketball, and water sports.

## 48 FAMOUS SOLOMON ISLANDERS

Sir Peter Kenilorea (b.1943), Solomon Mamaloni (b.1943), and Ezekiel Alebua (b.1947) were the Solomons' political and government leaders from independence to the 1990s.

## 49 DEPENDENCIES

The Solomon Islands has no territories or colonies.

# SRI LANKA

Democratic Socialist Republic of Sri Lanka  
*Sri Lanka Prajathanthrika Samajavadi Janarajaya*

**CAPITAL:** Colombo

**FLAG:** The national flag contains, at the hoist, vertical stripes of green and saffron (orange-yellow) and, to the right, a maroon rectangle with yellow bo leaves in the corners and a yellow lion symbol in the center. The entire flag is bordered in yellow, and a narrow yellow vertical area separates the saffron stripe from the dark maroon rectangle.

**ANTHEM:** *Sri Lanka Matha (Mother Sri Lanka).*

**MONETARY UNIT:** The Sri Lanka rupee (R) of 100 cents is a paper currency with one official rate. There are coins of 1, 2, 5, 10, 25, and 50 cents and 1 and 2 rupees, and notes of 10, 20, 50, 100, 500, and 1,000 rupees. R1 = \$0.0103 (or \$1 = R96.34; as of April 2003).

**WEIGHTS AND MEASURES:** The metric system is the national standard, but British weights and measures and some local units also are used.

**HOLIDAYS:** Independence Commemoration Day, 4 February; May Day, 1 May; National Heroes Day, 22 May; Bank Holiday, 30 June; Christmas Day, 25 December; Bank Holiday, 31 December. Movable holidays include Maha Sivarathri Day, Milad-an-Nabi, Good Friday, 'Id al-Fitr, Dewali, and 'Id al-'Adha'; in addition, the day of the rise of the full moon of every month of the Buddhist calendar, called a Poya day, is a public holiday.

**TIME:** 5:30 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Sri Lanka (formerly Ceylon) is an island in the Indian Ocean situated S and slightly E of the southernmost point of India, separated from that country by the 23 km- (14 mi-) wide Palk Strait. Including 870 sq km (336 sq mi) of inland water, Sri Lanka has a total area of 65,610 sq km (25,332 sq mi), extending 435 km (270 mi) N-S and 225 km (140 mi) E-W. Sri Lanka's total coastline is 1,340 km (833 mi). Comparatively, the area occupied by Sri Lanka is slightly larger than the state of West Virginia. Sri Lanka's capital city, Colombo, is located on the southwest coast.

## <sup>2</sup>TOPOGRAPHY

The south-central part of Sri Lanka is a rough plateau cut by a range of mountains whose highest peak is Pidurutalagala, 2,524 m (8,281 ft). Narrow coastal plains skirt the mountainous section on the east, south, and west, but in the north the extensive coastal plain fans out, reaching from the eastern to the western shores of the island. Five-sixths of the land is less than 300 m (1,000 ft) in elevation. Numerous rivers and streams flow seaward in all directions from the central mountain area; the longest river, flowing northeastward, is the Mahaweli Ganga (332 km/206 mi).

## <sup>3</sup>CLIMATE

The climate, although tropical and monsoonal, varies from warm in the coastal plains and lowlands to temperate in the hill and mountain regions. The lowlands in the northeast receive an average rainfall of about 130 cm (50 in), and the hill country in the southwest has an average of 254 to 508 cm (100 to 200 in), most of the rain coming during the monsoon season. Elsewhere, average rainfall varies from 63 cm (25 in) to 190 cm (75 in). Located only 879 km (546 mi) north of the equator, Sri Lanka has neither summer nor winter but only rainy and dry seasons. Average temperature is 27°C (80°F).

## <sup>4</sup>FLORA AND FAUNA

Most plants and animals are those common to southern India, but there are additional varieties. The plant life ranges from that of the equatorial rain forest to that of the dry zone and the more temperate climate of the highlands. Tree ferns, bamboo, palm, satinwood, ebony, and jak trees abound. The wide range of mammals, birds, and reptiles once found in Sri Lanka has been reduced by the conversion of forests into rice fields, but water buffalo, deer, bear, elephants, monkeys, and leopards are among the larger animals still present. The Ceylon elk (*sambhur*) and the polonga snake are unique to Sri Lanka. Birds are numerous, many varieties from colder countries wintering on the island. Sri Lanka has well-organized game and bird sanctuaries. Insects abound and numerous fish are found in the shallow offshore waters.

## <sup>5</sup>ENVIRONMENT

Sri Lanka's principal environmental problem has been rapid deforestation, leading to soil erosion, destruction of wildlife habitats, and reduction of water flow. In 1985, the total amount of land affected by deforestation was 224 sq mi. The government began a reforestation program in 1970, and since 1977, it has banned the export of timber and the felling of forests at elevations over 1,500 m (5,000 ft) and the export of timber. Nevertheless, between 1981 and 1985, some 58,000 hectares (143,000 acres) of forestland were lost each year and the nation lost an additional 21.4% of its forest and woodland between 1983 and 1993.

The nation's water has been polluted by industrial, agricultural, and mining by-products along with untreated sewage. As a result, only 70% of the people living in rural areas have pure water. Air pollution from industry and transportation vehicles is another significant environmental concern. The main environmental agency is the Central Environmental Authority within the Ministry of Industry and Scientific Affairs. Although legislation to protect flora and fauna and to conserve forests has

been enacted, there has been inadequate enforcement of the laws, and the nation's wildlife population has been reduced by poaching.

Wildlife has been protected since 1937; by 2001, protected areas covered about 13.3% of the country's total land area. As of 2001, 14 of Sri Lanka's mammal species and 11 of its bird species are endangered. Endangered species include the Asian elephant, green labeo, spotted loach, and four species of turtle (green sea, hawksbill, olive ridley, and leatherback). In addition, 431 types of plants are threatened with extinction.

## 6 POPULATION

The population of Sri Lanka in 2003 was estimated by the United Nations at 19,065,000, which placed it as number 53 in population among the 193 nations of the world. In that year approximately 6% of the population was over 65 years of age, with another 27% of the population under 15 years of age. There were 107 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 0.81%, with the projected population for the year 2015 at 20,640,000. The low growth rate is a result of concerted family planning programs. The population density in 2002 was 289 per sq km (748 per sq mi). About 50% of the population is concentrated in the southwestern quarter of the island.

It was estimated by the Population Reference Bureau that 24% of the population lived in urban areas in 2001. Colombo, the commercial capital and chief city, had a population of 690,000 in that year. Other urban centers are Dehiwala-Mt. Lavinia, 96,000; Moratuwa, 70,000; Jaffna, 129,000; Kotic, 109,000; and Kandy, 104,000. According to the United Nations, the urban population growth rate for 2000–2005 was 2.8%.

## 7 MIGRATION

Under an agreement signed in 1964, India pledged to repatriate 525,000 of the 975,000 persons of Indian origin (Tamils) then on the island, while Ceylon agreed to absorb 300,000 and grant them Ceylonese citizenship. Of the remaining 150,000, 75,000 were repatriated by a separate agreement concluded in 1974, and an equal number became citizens of Sri Lanka.

In recent years, many Sri Lankan workers have migrated to work in Middle Eastern countries. Others—over 200,000 in all—have emigrated to Western Europe, Australia, and North America, in part as a result of the Tamil insurgency.

Due to the military activities in 1995 and 1996, an estimated 650,000 people have been internally displaced. As of May 1997, India's Tamil Nadu state had around 56,000 refugees from Sri Lanka with another 36,000 throughout India. Repatriation to Sri Lanka has ceased since the military conflicts started again in 1995. Over 54,000 refugees have returned from southern India since 1992. In 2000, the net migration rate was -1.7 migrants per 1,000 population. There were 397,000 migrants living in Sri Lanka that year. Worker remittances amounted to \$1,142,000,000, or 7% of GDP. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

According to official 1999 data, the Sinhalese constitute the largest population group, making up 74% of the total population. Sri Lankan Tamils (descendants of medieval invaders from India) total 18%; Sri Lankan Moors 7%; Burghers (descended from the Dutch), Malays (mostly of Arab extraction), and Veddas account for 1%. The Veddas are a small aboriginal tribe located in the most inaccessible forest regions of southeastern Sri Lanka.

## 9 LANGUAGES

English was the official language under the British and remained so until 1956, when Sinhala became the nation's one official

language. This measure was bitterly opposed by the Tamil minority. Riots, disorders, and dissension grew, leading to a Tamil civil disobedience campaign and a temporary state of emergency. The 1978 constitution recognized Sinhala as the official language but also recognized Tamil as a national language. Sinhala is a member of the Indo-Aryan subgroup of the Indo-European language family, related to Pali. Tamil is a Dravidian language spoken in northern and eastern Sri Lanka and in southern India. It became an official language in December 1988. In 1999, Sinhala was spoken by approximately 74% of the population; Tamil was spoken by 18%. English is also commonly used in government and is spoken by about 10% of the population.

## 10 RELIGIONS

Of the total population, Buddhists constitute nearly 70% and are almost without exception ethnic Sinhalese; Hindus amount to 15% of the total population and are almost exclusively ethnic Tamils; Muslims account for 8% (and may or may not be Tamil speakers) and include the Moor and Malay communities; and Christians, accounting for 7%, are to be found in the Sinhalese, Burgher/Eurasian, and Sri Lankan Tamil communities (not to be confused with the so-called Indian Tamils, who were imported as plantation workers in the last century and are exclusively Hindu). A majority of Christians are Roman Catholic, with Anglicans and Baptists also significant, the latter the result of American missionary activity in the north in the 19th century.

The religious atmosphere is traditionally tolerant, and the issues involved in the Tamil insurgency are communal and ethnic rather than religious in origin. The 1978 constitution established Sri Lanka as a secular state and guarantees freedom of religion, while stipulating that Buddhism enjoys the foremost place in the republic.

## 11 TRANSPORTATION

In 2002, the country had an estimated 11,285 km (7,012 mi) of highways, of which 10,721 km (6,662 mi) were paved. Registered motor vehicles numbered 291,000 in 2000, including 153,500 passenger cars and 137,500 commercial vehicles.

In 2002, there were 1,463 km (909 mi) railroad track, state-owned and state operated.

Colombo, one of the great commercial seaports of Asia, formerly was an open roadstead, but the construction of breakwaters has made it one of the world's greatest artificial harbors. In 2002, the merchant fleet consisted of 18 ships with a capacity of 137,321 GRT. Ports of the open roadstead type are Trincomalee, Galle, Batticaloa, Kankasanturai, Kayts, and Jaffna. A car ferry service links Mannar Island with the Indian mainland.

Sri Lanka had 15 airports in 2001, 14 of which had paved runways. The principal international airport is Katunayaka, 39 km (24 mi) north of Colombo. Air Lanka (formerly Air Ceylon), the national airline company, serves international routes only. Upali Travels, a private carrier, provides domestic service. In 2001, 1,718,500 passengers were carried on scheduled domestic and international flights.

## 12 HISTORY

The earliest Indo-European speaking settlers in present-day Sri Lanka, the Sinhalese, came late in the 6th century BC, probably from northern India. Later arrivals from India brought Buddhism beginning about 240 BC, and at such cities as Anuradhapura and Polonnaruwa, the Sinhalese developed a great civilization, much of which was later destroyed by civil wars and by the incursions of Hindu Dravidian-speakers from across the Palk Strait, who established a Tamil kingdom in the northern part of the island.

The Portuguese East India Company brought the first European rulers in the early 16th century, and in time, the Portuguese conquered the entire island with the exception of the

LOCATION: 5°55' to 9°50' N; 79°42' to 81°53' E. TERRITORIAL SEA LIMIT: 12 miles.

Sinhalese kingdom in Kandy in the central plateau. By the middle of the 17th century, the Portuguese were driven out of Sri Lanka (and southern India) by the Dutch East India Company, which governed for more than 100 years, introduced plantation agriculture, developed trade, and left a legacy that includes Roman-Dutch law. But they too found themselves displaced.

Having won their struggle with France for mastery in India (and in North America), the British laid claim to Sri Lanka, which they called Ceylon, at the end of the 18th century after the Netherlands fell under French control. After a brief period as part of the British East India Company's Indian domain, Ceylon was designated a crown colony in 1802, and by 1815, the entire island was united under British rule. The British introduced

coffee, tea, coconut, and rubber plantations, and efficient and enlightened administration.

With the development of a nationalist movement across the Palk Strait in India in the 20th century, nationalists in Ceylon also pressured for greater self-rule, leading to further democratic political reforms in constitutions enacted in 1910, 1920, 1924, 1931, and 1947; included in the 1931 enactment was limited self-rule under universal suffrage. In 1948, with little actual struggle, and a year after Indian independence, Ceylon became a self-governing dominion within the British Commonwealth.

The period from 1948 through 1970 saw the evolution of Ceylon's multiparty parliamentary system in which orderly and constitutional elections and changes of government took place. Beginning in 1970, executive power began to be highly centralized under Prime Minister Sirimavo Bandaranaike, who from 1971–77 ruled with the use of unpopular emergency powers in support of her socialist, pro-Sinhalese policies. She introduced a new constitution in 1972, converting the dominion of Ceylon to the republic of Sri Lanka, reaffirming a parliamentary system under a weak, ceremonial presidency, and making the protection of Buddhism a constitutional principle.

The Sri Lanka Freedom Party (SLFP) defeat in the July 1977 elections brought Junius Richard Jayewardene of the more moderate United National Party (UNP) to power. He became Sri Lanka's first elected executive president in February 1978, under a constitutional amendment of fall 1977 establishing a presidential form of government. Seven months later, a new, more liberal constitution came into effect, rejecting many of the authoritarian features of the 1972 constitution, introducing proportional representation, and defining the presidential executive system. As his prime minister, he chose Ranavive Premadasa, a long-time follower with lower caste support. In October 1982, Jayewardene was popularly elected to a new six-year term, and two months later, in a successful effort to avoid general elections, the life of the sitting parliament was extended through July 1989 by means of a constitutional amendment endorsed by popular referendum.

Since 1978, rising tensions and violence between the majority (mostly Buddhist) Sinhalese and minority (mostly Hindu) Sri Lankan Tamil communities that have long shared the island have dominated political life. Going back to 1956, when the Sinhalese-dominated government had declared Sinhala the official language and replaced English with separate language tracks in education for Sinhala and Tamil speakers, a chasm had been developing between the communities. In the late 1970s, moderate Sri Lankan Tamils looked to the leadership in the Tamil United Liberation Front (TULF) and to negotiations with the new UNP government in 1978 to pursue changes aimed at protecting their cultural heritage by giving greater control to elected officials at the local level in Sri Lankan Tamil majority areas of the island.

By the early 1980s, their efforts had failed. Participation in parliament as a responsible opposition had brought no changes, despite government promises; and many rounds of talks with Jayewardene and the majority Sinhalese community had netted no progress in redressing Tamil grievances. Violence was on the rise, and a spasm of communal bloodletting in summer 1983 had left hundreds, if not thousands, dead in Colombo and elsewhere. By 1984–85, Sri Lankan Tamil leadership had fallen into the hands of extremists advocating violence, dooming to failure before it began the government's eleventh-hour convening of an All-Party conference in 1984 to seek a political solution to the ethnic conflict.

Fighting between the Sinhalese-dominated army and well-armed Sri Lankan Tamil separatists escalated in 1986 and 1987, with no solution in sight. It should be noted that the insurgency is limited to the larger group of Sri Lankan Tamils; the so-called Indian Tamils who were imported in the last century and continue to work the plantations in the highlands at the center of

the island, and whose partial repatriation to India has been at times a subject for separate negotiations with India, have played no role in the insurgency.

In the spring of 1987, the government began a military offensive against Tamil forces in the Jaffna Peninsula in the Northern Province. India, sensitive to its own large Tamil population just across the strait, served as a base for rebels. Earlier, the Indian government had attempted to negotiate a settlement between the Sri Lankan government and the rebels, but in 1987 India reacted to the offensive by airlifting food and supplies to the rebels, creating considerable tension between the two countries. On 29 July, Jayewardene and Prime Minister Rajiv Gandhi of India signed an agreement by which the Sri Lankan government reluctantly accepted the need for devolution of power to the provinces, agreed that Tamil would have official status, and conceded that a semiautonomous administrative unit would be created for the Tamils in the Northern and Eastern provinces, subject to a vote by the Eastern Province on joining such a unit. An Indian peacekeeping force which grew eventually to more than 100,000 troops was sent to Sri Lanka to implement the agreement and enforce a cease-fire. But it was already too late. In the fall of 1987, Tamil separatists—notably and most prominently, the extremist Liberation Tigers of Tamil Ealam (LTTE)—resumed their attacks, killing about 300 people. When they refused the protection of the Indian Peacekeeping Force (IPKF), the IPKF launched an offensive against the rebel stronghold in Jaffna. Fighting continued, inconclusively, between the IPKF and (mainly) the LTTE for 18 months thereafter, with heavy casualties on both sides.

Meanwhile, through 1988 and 1989, the government was under attack from the militant Sinhalese nationalist political party, Janatha Vimukthi Peramuna (JVP), which sought its overthrow by agreeing to the presence of Indian forces in Sri Lanka. The rebellion was put down firmly and brutally by President Premadasa, who succeeded Jayewardene in 1988 in a close race against Sirimavo Bandaranaike.

In 1990, V. P. Singh, who had replaced Rajiv Gandhi as Indian Prime Minister, agreed to Sri Lanka's request that India pull its forces out of the country; the Indian effort to crush the rebellion had failed at the cost of an estimated 1,200 Indian lives alone. With the JVP opposition eliminated and the Indians gone, Premadasa turned his attention to the possibility of expanding the new situation, including a de facto cease-fire with LTTE, into a negotiated settlement. But a new spasm of LTTE violence in the eastern province led him to order an all-out army and air force campaign against the north in the second half of 1990, and guerrilla warfare resumed. Through 1991 and 1992, Premadasa's government continued to pursue the possibility of a negotiated settlement with the LTTE, denying it sought a military solution. But the LTTE's Velupillai Prabhakaran, dominating the separatist side, rejected most government terms.

Under President Wijetunga, who replaced Premadasa when the latter was assassinated by Tamil rebels on May Day 1993, the warfare, and the search for a solution, continued inconclusively, with frequently announced cease-fires and resummptions. The death toll and the cost, reportedly \$1 million per day, continued to mount.

Chandrika Bandaranaike Kumaratunga, 49-year-old daughter of former prime minister Sirimavo Bandaranaike and widow of a Communist Party leader assassinated nearly a decade earlier, became prime minister when her seven-party alliance of leftist parties won a plurality in snap elections to parliament in August 1994. With President Wijetunga's approval, she made resolution of the conflict her first priority on taking office by arranging for the economic blockade of the insurgent-held Jaffna peninsula to be partially lifted and offering to restore electric power to the area. She also offered unconditional talks for a resolution of the dispute, actions welcomed by the LTTE's Prabhakaran, who

responded by releasing ten police constables held prisoner by the LTTE since mid-1990. Talks were scheduled for mid-October 1994 and the situation calmed for a time. The optimism that characterized the political situation in Sri Lanka at the beginning of 1995 quickly vanished as the nation lapsed again into a savage civil war. Hostilities between the Sri Lankan government and ethnic separatist Tamil rebels came to a temporary end on 3 January 1995, when the parties announced a cease-fire. The war that raged for twelve years and killed over 34,000 people halted abruptly with government promises of negotiations and an \$816 million aid package for the northern portion of the island.

The peace was shattered, however, after only three months. The LTTE had given the government a 19 April deadline to make additional concessions. When their demands were not met, rebels attacked and badly damaged two government gunboats, killing eleven sailors and wounding twenty-two. Before the end of May the Tamil Tigers had attacked an army base, ambushed two government military patrols, and shot down two troop transport planes, killing more than 350 government fighters. In response, on 22 May Sri Lankan President Chandrika Bandaranaike Kumaratunga pronounced the peace talks dead and vowed to crush the Tamil rebels.

Full scale war continued through the summer of 1995 as the government went on the offensive. Incensed by a series of June terrorist attacks against targets in Hikkadawa and Colombo, President Kumaratunga asked the Indian government for assistance in setting up a naval blockade of the Tamil stronghold of Jaffna on the island's north coast. The Sri Lankan army then attacked rebel positions on the Jaffna peninsula, announcing on 15 July that the operation had left 300 Tamil troops dead in six days of fierce fighting. The government capped the offensive by unveiling in early August a plan to end the civil war by sharing power with eight new states, one of which would be reserved for the minority Tamils.

Rebel leader Velupillai Prabhakaran rejected the proposal out of hand and ordered that the Tamil terror campaign continue. On 7 August a bomb destroyed a government building in Colombo, killing twenty-four and wounding fifty. At the end of the month rebels hijacked a ferry carrying 136 passengers and sank two government gunboats. During the first week of October, the Tamil Tigers blew up the house of Douglas Devananda, a Sri Lankan legislator and severe critic of the militant separatist group. Less than two weeks later rebels attacked three villages on the northeastern portion of the island, killing over 100 civilians.

Deaths of non-military personnel strengthened the government's resolve to end the fighting quickly. By the beginning of November the Sri Lankan army had marched to within three miles of Tamil headquarters at Jaffna, displacing at least a half million civilians in the process. After days of savage combat, government forces captured the rebel political capital, and sealed off the area, trapping over 2,000 guerrillas. At the end of November, Sri Lanka authorities offered to work out a political settlement with the separatists, but the Tamil fighters announced that they would resume talks only if government troops left Jaffna. Fighting continued, culminating in a 31 January rebel attack on the financial district in Colombo which killed more than 90 and wounded 1,400. By the end of 1996 the death count for almost 15 years of civil war had surpassed 50,000.

By late spring 1996 government forces again appeared to have the upper hand. Pushing further into rebel territory, Sri Lankan army officials claimed in mid-May to have control of the northern Jaffna peninsula. On 30 May, the government chief general offered amnesty to 20,000 deserters and announced plans to recruit 10,000 additional soldiers to end the civil war once and for all. Still, the war went on through the end of 1996 with no cease-fire in sight.

A strong showing in local elections in March 1997 was seen by the government as a mandate to continue with its plans for

offering the Tamils limited autonomy. Despite opposition from the UNP, the government presented its proposals to Parliament in October. However, a series of bombing incidents diminished the prospects for peace. In mid-October a truck bomb exploded near a Colombo hotel, with foreign tourists apparently deliberately targeted by the LTTE. In late January 1998, following a suicide bombing in Kandy at the "Temple of the Tooth," Sri Lanka's most sacred Buddhist shrine, the government formally outlawed the LTTE. This, in effect, indicated that the government had put peace negotiations on hold and was leaning towards a military solution.

Following a spate of bombings and the assassinations of moderate Tamil leaders in Jaffna, the government declared a national state of emergency in August 1998. Its war against the LTTE, however, fared badly. In December 1998, the army abandoned its costly campaign to capture the main northern highway to Jaffna. Disaster struck in November 1999 when, in one week, Tamil guerrillas regained nearly all the territory lost during the previous two years. LTTE successes continued, with the capture of Elephant Pass in April 2000 trapping some 35,000 government troops on the Jaffna peninsula.

Citing the failure of parliament to accept her plan for regional autonomy for the Tamil areas in October 1999, President Kumaratunga decided to hold presidential elections 10 months ahead of schedule. Surviving an assassination attempt a few days before polling in December, Kumaratunga was returned to office for a second term as president.

Parliamentary elections were held 7 December 2001. They were the most violent held in 53 years, with 61 people killed and over 700 injured from 21 October to the election. The vote was also marked by allegations of intimidation and fraud. The army prevented tens of thousands of Tamil voters from traveling out of rebel-controlled areas to vote. It was a victory for the opposition United National Party (UNP) and its candidate Ranil Wickremasinghe, defeating President Kumaratunga's People's Alliance. Muslim and Tamil parties backed the UNP.

As of February 2003, the number of people killed in the fighting was approximately 65,000, and the number displaced was 1.6 million. In February 2002, Sri Lanka and the LTTE signed a cease-fire agreement that implied the two sides would move toward peace talks. The LTTE insisted the government lift its ban on the group before peace talks could begin. In May, the two sides held their first direct talks in 7 years. In early September, the Sri Lankan government lifted its ban on the LTTE, and on 16 September formal peace talks were held in Thailand. The most difficult issue to be resolved, whether the north and east will be independent or autonomous, was initially shelved. However, in four days of peace talks held in Oslo, Norway in December, the government and the LTTE agreed to share power in a federal system. The Tamils would have autonomy in the north and east of the island, but not a separate state. A round of talks held in February 2003 in Berlin, Germany focused on humanitarian issues, including a pledge by the rebels to cease recruiting child soldiers and to reintegrate them into society. The question of power sharing was due to take place in March in Japan. The issue is contentious since any formal agreement must be approved by President Kumaratunga, who says she supports the peace process, but has chided the government of Prime Minister Ranil Wickremasinghe for making concessions to the Tamil Tigers. That February, the two main opposition parties in parliament, the People's Alliance and the People's Liberation Front, agreed to join forces to attempt to replace Wickremasinghe's government. Wickremasinghe's coalition, led by his United National Party, held 114 seats in the 225-member parliament, and the two opposition parties controlled a total of 93 seats, making it unlikely the alliance would be able to obtain a majority. The two parties were upset with rising prices on commodities and concessions made to the LTTE.

## <sup>13</sup>GOVERNMENT

The constitution of September 1978 established the Democratic Socialist Republic of Sri Lanka as a free, sovereign, independent state based on universal suffrage at 18 years of age. The president of the republic is directly elected for a six-year term and serves as head of state and as executive head of government, appointing and heading the cabinet of ministers whom he or she chooses and who are (or must quickly become) members of parliament. A prime minister, similarly selected, serves mainly as parliamentary leader.

Legislation approved by parliament cannot be vetoed by the president, and the president may be removed by parliament upon a two-thirds majority vote, following a finding by the Supreme Court of incapacity, treason, corruption, or intentional constitutional violation. The constitution can be amended by two-thirds' majority vote in the parliament, subject to ratification (for certain provisions) by popular referendum. The constitution provides that popular referenda also may be held on issues of national importance, but the normal business of legislation is in the hands of a unicameral parliament consisting first of 168—now 225—members elected for six-year terms under a proportional representation system. The sitting parliament elected in July 1977 took the unusual step of extending its own life for another six years by a national referendum in 1982, thus avoiding elections in which the competition for places on the ballot might have weakened the UNP's constitution-amending two-thirds majority.

In June 1994, the Wijetunga government scheduled "snap" elections for parliament on 16 August 1994, six months earlier than would have been required; elections to the presidency followed parliamentary polling. Paced by the electoral appeal of SLFP deputy leader Chandrika Bandaranaike Kumaratunga, the People's Alliance of seven leftist parties won a clear plurality in the elections, ousting the UNP after 17 years in power. To the 91 parliamentary seats the Alliance won directly were added an additional 14 under the proportional system, and with the further support of 9 members of the Sri Lanka Muslim Congress, the new Peoples' Alliance government was able to command a majority of 114 seats in the 225-member house and to elect Kumaratunga as leader of the house, facilitating her prompt appointment as prime minister—an office previously held by both her ailing 80-year old mother and her late father, S.W.R.D. Bandaranaike.

Because the presidential system incorporated in the 1978 constitution vests the substantial powers of head of state and head of government in the hands of the president, Kumaratunga's capacity for independent action remained limited. As prime minister, she was actually little more than leader of the house but in the November 1994 presidential elections, Kumaratunga, who is the daughter and the widow of prominent Sri Lankan politicians (both of whom were assassinated) was elected president by a sizeable majority. After assuming office, she appointed her mother, Sirimavo Bandaranaike, prime minister. Upon being elected, she made her primary issue a negotiated peace with the Tamil separatists. Kumaratunga's repeated offers of a limited sovereignty within a greater Sri Lankan state were spurned by the Tamils. Attempts to subdue the Tamils by military force also failed, with the Sri Lankan army suffering serious reversals in November 1999. Despite this, in December 1999 Kumaratunga won a second six-year term in office as Sri Lanka's president. Kumaratunga's People's Alliance party was defeated in parliamentary elections held in December 2001, and Ranil Wickremasinghe of the United National Party became prime minister. A cease-fire between the Tamils and the government was signed in February 2002, and peace talks began later that year. As of February 2003, there was friction between the People's Alliance and its partner the People's Liberation Front, and

Wickremasinghe's government, largely over the terms of the agreements being made with the LTTE.

## 14 POLITICAL PARTIES

Political life in Sri Lanka is open and vigorous, with a wide range of views represented among the political parties, many of which have their roots deep in the pre-independence era. In the time since independence, considerations of religion, language, and culture have largely displaced ideology as the issues around which multi-ethnic Sri Lanka's political life evolves. In the last decade, ethnic struggle—and violence—between the government, dominated by majority Sinhalese, and militant minority Tamil separatists has dominated the political process.

The United National Party (UNP) was the main party of the independence movement, and its widely respected leader, D. S. Senanayake, as head of a coalition of which the UNP was the chief unit, became Ceylon's first prime minister after independence. He won a major victory in 1952 and continued in power until he died in 1956. The divided opposition failed to agree on a leader until 1951, when Solomon Bandaranaike left the UNP to form the Sri Lanka Freedom Party (SLFP). Over the years, the SLFP became the island's other major political party, advocating—like the UNP—a non-aligned foreign policy, with the UNP friendlier to the West, the SLFP, to the former Eastern bloc. Both find their support from within the majority Sinhalese community, and like most other parties, both are led mostly by high caste Sinhalese.

Shortly before the 1956 elections, Bandaranaike formed the People's United Front (Mahajana Eksath Peramuna—MEP), composed of his own SLFP, the Trotskyite Lanka Sama Samaja (LSSP), and a group of independents. The MEP called for the extension of state control, termination of British base rights, nationalization of tea and rubber plantations, and a foreign policy of strict nonalignment. In the elections, the MEP won 51 seats, and Bandaranaike became prime minister, holding power until September 1959 when he was assassinated by a Buddhist monk.

In elections March 1960, the UNP won 50 of the 151 seats at stake, the SLFP, 46 seats, and other parties, the remaining 55. UNP leader Dudley Senanayake failed to muster a majority, and new elections were called for July. In this second round of polling, the UNP won a majority of the popular vote but only 30 seats. The SLFP, led by its slain leader's widow, Sirimavo Bandaranaike, won 75, and with her supporters on the left, she was able to form a government, becoming the first woman in the world to hold office as prime minister. She committed her government to pursuing continuation of her husband's agenda, including nationalization of enterprises.

In the 15 years that followed, the UNP and the SLFP alternated in power for periods no longer than seven years. In 1965, Dudley Senanayake became prime minister after the UNP won 66 of the 151 legislative seats, but the SLFP's Sirimavo Bandaranaike was returned to power in the 1970 elections as the head of a coalition that included the Trotskyite LSSP and the pro-Soviet Ceylon Communist Party (CCP). In response to an insurrection fomented in 1971 by the Janatha Vimukthi Peramuna (JVP), a militant Sinhalese party in the south, Bandaranaike imposed a state of emergency on the island that lasted for 6 years. She pushed through a new constitution in 1972.

By 1977, Banderanaiké's public image had declined. No longer supported by her former coalition partners, she was humiliated at the polls by J. R. Jayewardene's UNP which was returned to power with 51% of the popular vote and 142 of (the then) 168 seats in parliament. The moderate Tamil United Liberation Front (TULF), which had swept Tamil areas of the north and east, became the major opposition party in parliament with 16 seats and the SLFP representation in the house fell to a bare eight seats.

Jayewardene's sweeping victory enabled him to fulfill the UNP's campaign pledge to introduce a French-style presidential system of government. Forsaking the now-eclipsed office of prime minister, he set out as president to use his new powers to open the economy and to make a new effort to reconcile with the increasingly disaffected Tamil minority. In the local elections and parliamentary by-elections of May 1983, the UNP strengthened its commanding position by gaining control of a majority of municipal and urban councils and winning 14 of 18 parliamentary seats contested.

The CCP and two other leftist groups, the People's Liberation Front and the New Socialist Party, were banned in 1983 on charges of playing a role in the ethnic riots which swept the island in July; leaders of the Communist Party were subsequently arrested. In August 1983, TULF members of parliament, after several fruitless years of negotiations with Jayewardene aimed at devolving power to local levels, were confronted with a constitutional amendment aimed at them by the UNP's two-thirds majority that required all MP's to pledge their allegiance to a unitary state. They abandoned parliament, and by now most have been killed, as the leadership of the Tamil movement fell into the hands of those advocating violence and complete independence as the only sure ways to protect Tamil ethnicity. The TULF was decimated in parliamentary elections in February 1989, which saw the emergence of several small Tamil parties with reputed ties to the rebels.

In presidential elections held in December 1988, Prime Minister Premadasa beat the SLFP's Sirimavo Bandaranaike in a close race marred by ethnic violence. He was sworn in as Jayewardene's successor on 2 January 1989. In February, he led the UNP to a strong victory in parliamentary polling, capturing 125 of the 225 seats under a new proportional voting system; he then named Dingiri Wijetunga as prime minister. These elections also saw the debut of the United Socialist Alliance (USA), a new political grouping set up in 1987 and composed of the SLFP's former coalition partners on the far left, including the CCP, the LSSP, and the Sri Lanka Mahajana Party (SLMP); the USA took 4 seats, while the SLFP won 67.

In the summer of 1991, Premadasa beat back a sudden challenge to his position by leading members of his party in parliament, suspending the parliament for a month to delay debate on a motion they had filed to impeach him for abuse of his authority. But in a rising tide of violence and assassinations of governmental officials across the island, President Premadasa himself became a victim of a Tamil bomber on 1 May 1993. The Parliament unanimously elected Prime Minister Wijetunga as his successor on 7 May 1993.

A "snap" election called six months early by President Wijetunga as part of his campaign for re-election himself in November 1994 backfired on 16 August 1994 when the voters rejected the UNP by a small margin. In its place, they elected to office a seven-party, leftist coalition—now dubbed the People's Alliance (PA)—led by the SLFP's Sirimavo Bandaranaike and Chandrika Bandaranaike Kumaratunga—mother and daughter, 80 and 49 years of age, respectively. More vigorous but less experienced, the younger Kumaratunga promptly became prime minister.

The results of the elections, by seats won, were as follows: People's Alliance, 105; United National Party, 94; Eelam People's Democratic Party, 9; Sri Lanka Muslim Congress, 7; Tamil United Liberation Front, 5; People's Liberation Organization of Tamil Eelam, 3; Sri Lankan Progressive Front, 1; and the Upcountry People's Front, 1.

Kumaratunga won election on the promise of ending the civil war. Her offers of limited regional autonomy for Tamils within the Sri Lankan state were initially turned down by the LTTE leader, Velupillai Prabhakaran (most of the moderate Tamil leaders have been assassinated). Her attempts at a military solution were

also unsuccessful until a cease-fire and peace talks emerged in 2002. Citing parliament's rejection of her proposals for strengthening the prime minister's powers and for granting regional autonomy to the Tamils, Kumaratunga called for presidential elections ahead of schedule in December 1999. The race between the president and her UNP rival, Ranil Wickremasinghe, was close. However, three days before polling, Kumaratunga was injured in an assassination attempt, bringing out a sympathy vote. She was returned to office with 51.1% of the votes compared to her opponent's 42.7%. In November 1994, presidential elections were held. UNP leader Gamini Dissanayake fell victim to the island's endemic violence and his widow Srimala Dissanayake was appointed to run against the younger Kumaratunga. While the latter's political party won only a slim plurality and had to govern by coalition, in the presidential race she won a commanding majority (63%–36%) and, upon becoming president, appointed her mother prime minister.

In the parliamentary elections held 7 December 2001, Wickremasinghe's United National Party took 109 seats, and united with the Sri Lanka Muslim Congress's (SLMC) 5 seats to take control of parliament. Kumaratunga's People's Alliance coalition took 77 seats, and the People's United Liberation Front, uniting with the PA, took 16 seats. The Tamil United Liberation Front took 15 seats, the Eelam People's Democratic party took 2 seats, and the Democratic People's Liberation Front secured 1 seat.

## 15 LOCAL GOVERNMENT

Although Sri Lanka is a unitary state, it is nonetheless divided into nine provinces (out of which 2 have been later amalgamated for the purpose of establishing one provincial council) whose borders follow historic and traditional lines. The key administrative unit has traditionally been the district, into which the provinces are further divided. There are a total of 25 districts under the control of senior civil servants who are district officers responsible to the government in Colombo for ensuring justice, maintaining law and order, collecting revenues, and allocating development funds. There is, in addition a system of district ministers that was created after 1978 to assist the district officers and to provide a political input at the district level. Appointed by the president, district ministers are members of parliament but from a constituency other than one in the district for whom they bear district responsibility. Not full members of the cabinet, they nonetheless sit with the president in the Council of Ministers and otherwise enjoy ministerial perquisites.

Districts are also served in rural areas by popularly elected district councils which have limited powers but which assist the district officer and the district minister in assessing public views and mood and in setting development priorities. Municipal councils, urban councils, and Pradeshiya Sabhas perform a similar function in urban and rural areas. Their term of office is four years. Currently there are 14 municipal councils, 37 urban councils and 258 Pradeshiya Sabhas. In general, municipal councils are established for cities and large towns, urban councils for less urbanized areas and Pradeshiya Sabhas for rural areas.

In conformity with Indo-Lankan agreement in 1987 to devolve power to the provinces, the parliament voted to establish, at the provincial level, elected councils headed by chief ministers. In presence of the IPKF in 1988, elections were held to these provincial councils (PC), and the UNP took control of 7 in non-Tamil areas; the ERPLF, a new, anti-LTTE Tamil party supported at the time by the IPKF, took control of the two in the Tamil north and east. While unsettled conditions have slowed progress on devolution, elections to the seven PCs in non-Tamil areas in 1993 reportedly produced more mixed results, with gains and losses for all parties, including the UNP, the SLFP, and the ERPLF. Although the PA was successful in gaining control of provincial councils in elections held in 1997 and 1999, its share of the

popular vote show it running neck and neck with the opposition. For example, in elections held in April 1999 in non-Tamil areas, the PA gained control of all the provincial councils contested, but only achieved 43% of the votes compared to the UNP's 41%. However, district elections for Colombo held on 10 October 2000 saw the UNP take 43.45% of the vote to the People's Alliance's 38.86%. In local elections held in March 2002, the UNP won a sweeping victory, taking all but 5 of the 222 councils that voted.

## 16 JUDICIAL SYSTEM

Civil law is based on Roman-Dutch law introduced during the period of Dutch rule, but in the area around Kandy, an indigenous type of law prevails. Criminal law is British. Tamils and Muslims have their own laws governing property disposition and certain observances. Sri Lanka's judicial system includes district courts, magistrates' courts, courts of request (restricted to civil cases), and rural courts.

In criminal cases, the Supreme Court (composed of a chief justice and from 6 to 10 associate justices, all appointed by the president) has appellate jurisdiction. Under the 1978 constitution, the other high-level courts are the Court of Appeal, High Court, and courts of first instance. The president also appoints judges to the Court of Appeals and the High Court. A judicial service commission appoints transfers and dismisses lower court judges. Sinhala is the official language of the courts.

The constitution declares the independence of the judiciary and the courts appear to be independent in practice.

Defendants are guaranteed a number of procedural due process protections but trials under the Emergency Regulations (ER) and the Prevention of Terrorism Act (PTA) lack significant procedural safeguards.

## 17 ARMED FORCES

In 2002 the armed forces of Sri Lanka totaled 157,900 active personnel with 5,500 reservists. The army numbered 118,000 including 2,960 women. Equipment included 62 main battle tanks. The navy had personnel numbering 20,600, manning five bases with 61 patrol and coastal combatants. The air force of 19,300 operated 22 combat aircraft and 24 armed helicopters. The paramilitary consisted of around 88,600 personnel in a police force, national guard, and home guard. The opposition forces of the Liberation Tigers of Tamil Eelam numbered around 7,000 armed troops. In 1998 defense expenditures amounted to \$719 million or 4.2% of GDP.

## 18 INTERNATIONAL COOPERATION

The government of Sri Lanka is opposed to all military defense alliances but actively participates in other forms of international cooperation. On 14 December 1955, Ceylon was admitted to membership in the UN. Sri Lanka is a member of ESCAP and all the nonregional specialized agencies, the Asian Development Bank, the Commonwealth of Nations, the Colombo Plan, the WTO, and G-77, among other intergovernmental organizations. It also signed the Law of the Sea treaty. Sri Lanka is a member of the South Asian Association for Regional Cooperation (SAARC), which promotes economic and social development for its South Asian member states.

## 19 ECONOMY

Since 1977, the Sri Lankan economy, once dominated by agricultural, has experienced strong growth in its industrial and services sectors. While annual growth in agricultural output averaged only 2% between 1988 and 1998, industry and services expanded at annual rates of 7.1% and 5.4%, respectively. From 1988 to 2000, agriculture's share of GDP declined from 26.3% to 21%, although employing still about 35% of the labor force.

Overall, real GDP has grown at an average annual rate of 5.2% 1991 to 2000.

Economic expansion has been led by manufactures, particularly textiles and apparel, which is also the leading net earner of foreign exchange. In 1998, the manufacturing sector grew 6.3%, only 4.4% in 1999, and then surged ahead 9.2% in 2000. The textile sector grew 16.25% in 2000 (up from 7.5% in 1999), which in turn contributed to a 20% growth in exports. Services, accounting from 54% of GDP in 2000, grew by 4.7% in 1999 and 6.9% in 2000, led by tourism, the second-largest foreign exchange earner. Overall Sri Lanka experienced strong 6% growth in 2000, compared with 4.7% in 1998 and 4.3% in 1999. However, imports of goods and services increased even faster than exports, and the current account deficit jumped to 6.6% of GDP from 3.7% in 1999. The government responded with several devaluations of the rupee, and then on 23 January 2001 switched to a flexible exchange rate system. Inflation, which had been held to 4% in 1999 as measured by the Colombo Consumer Price Index (CPI), rose to nearly 11% in 2001. In April 2001 the government entered into a 14-month stand-by arrangement with the IMF to stabilize the economy.

In the meantime, external and internal events combined to produce a decline in real GDP of 1.5% in 2001, the first annual contraction ever recorded for Sri Lanka's economy. The global economic slowdown from the beginning of 2001 reduced export demand, which fell nearly 13%; the attack on Colombo's international airport in July by the Liberation Tigers of Tamil Eelam (LTTE) sent tourism plummeting with war risk surcharges applied to aircraft and shipping; a severe drought reduced agricultural and hydroelectric output; and the 11 September 2001 terrorist attacks on the United States added the effects of a sharp world-wide reduction in foreign direct investment to contractions in travel and spending. Domestic demand was also sharply contracted, and, aided by a temporary 40% import surcharge aimed at maintaining foreign exchange reserves by discouraging imports, the current account deficit fell to 1.9% of GNP, an ironic note of improvement. Unemployment swelled, particularly in the textile and tourist industries, as did the government's budget deficit, which reached 10.9% of GDP, reflecting in part political resistance to the austerity measures prescribed under the IMF stand-by arrangement. In December 2001 the IMF suspended the arrangement.

In 2002 Sri Lanka experienced a return to real growth of between 1% to 2% due in large part to the Norwegian-brokered cease-fire agreement reached in February between the government and the LTTE, ending, it was hoped, 19 years of violent insurgency and reprisals. Revived consumer and business confidence was reflected in increases in domestic demand and tourism. The drought also eased, bringing down agricultural prices, and, as of May 2002, ending power shortages. The current account deficit remained unchanged at 1.9% of GDP as continued weak demand for commodity exports was compensated for by increased tourist receipts and remittances from abroad. The fiscal deficit fell to 8.9%, an improvement but above the government's 8.5% target. Forecasts are for about 5% growth in 2003, provided the peace process continues to move forward, structural reforms are implemented and fiscal targets are achieved.

From 1973 to 1977, the channeling of resources into social welfare programs, combined with high oil prices and frequent droughts, helped depress the economy and business growth. In 1977, the new UNP government lifted most price controls, shifted government spending into capital investment, liberalized foreign exchange and import restrictions, and eliminated some government monopolies to permit more business competition. These policies help raise the average annual increase in real GDP to 6% 1978 to 1981, compared to 3% 1971 to 1977. However, coinciding with the second oil shock 1978-79, a high level of

inflation accompanied the increased growth. From 1980 to 1985, though exports continued to grow at an average 20% a year, real GDP growth slowed to an average 4.7% a year. In 1983, country-wide riots that left nearly 400 dead and 79,000 homeless signaled the beginning of what proved to be 19 years of separatist violence by the Tamil Tigers. In the latter half of the 1980s, the national economy was faced with grave challenges: escalating defense expenditures to combat the insurgency; recurrent drought; depressed world prices for major export crops, tea and coconut-based goods; and stagnant government revenues. These conditions produced a resurgence of inflation, increasing unemployment, critical current account deficits and stagnating economic growth. By 1989, GDP growth had fallen to 2% (down from 2.8% in 1988) while annual export growth fell to 5% and the official unemployment rate reached 18%. Worsening economic indicators spurred renewed stabilization and structural adjustment efforts by the government with emphases on tightened monetary and fiscal policies, and privatization to stimulate investment.

In the 1990s average economic growth rebounded to above 5% led, as noted, by expansions in manufactures and services. As was true for much of the rest of the world strong growth in 2000 foundered in 2001, with only a moderate recovery in 2002. The IMF currently projects real GDP growth for Sri Lanka at 5.5% in 2003 with inflation reduced to 7% from 11.3% in 2002.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Sri Lanka's gross domestic product (GDP) was estimated at \$62.7 billion. The per capita GDP was estimated at \$3,250. The annual growth rate of GDP was estimated at -1%. The average inflation rate in 2001 was 14.2%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 21% of GDP, industry 27%, and services 52%.

According to the United Nations, in 2000 remittances from citizens working abroad totaled \$1,142 million or about \$60 per capita and accounted for approximately 7.1% of GDP. Worker remittances in 2001 totaled \$1,124 million. Foreign aid receipts amounted to about \$18 per capita and accounted for approximately 2% of the gross national income (GNI).

Approximately 43% of household consumption was spent on food, 7% on fuel, 4% on health care, and 8% on education. The richest 10% of the population accounted for approximately 28.0% of household consumption and the poorest 10% approximately 3.5%. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that in 1997 about 22% of the population had incomes below the poverty line.

## 21 LABOR

In 1998, the economically active population totaled 6,693,000. The agricultural sector accounted for 35%; 22% worked in industry, and 39% were sales and service workers. Unemployment in 2001 was officially estimated at 7.7%.

The country has a strong trade union tradition, and the constitutional right to form unions is respected by the government. Approximately 25% of the nationwide labor force are union members, with over 70% of agricultural workers unionized as well. The largest trade union federations are the Ceylon Workers' Congress, the National Workers' Union, the Democratic Workers' Congress, and the Ceylon Federation of Labor. With the exception of essential workers, employees have the right to strike. It is illegal for an employer to discriminate

against those who engage in union activity. Collective bargaining is widely practiced.

Thousands of Sri Lankan workers are employed abroad, mostly in Saudi Arabia, Kuwait, the United Arab Emirates, Singapore, Hong Kong, Bahrain, Qatar, and Oman; many of them housemaids and nannies valued for their literacy and English language skills.

There is no national minimum wage, but there are minimum wages set in individual sectors and industries. The average such wage was \$33.52 per month in industry, commerce, and the service sector, and \$1.42 per day in agriculture as of 2001. It was estimated that 16,500 children younger than the minimum legal age of 14 were employed full-time, with many thousands more employed in domestic service. The legal workweek is set at 45 hours.

## 22 AGRICULTURE

Agriculture, the mainstay of the economy, employs about 35% of the working population and contributes 21% to GDP. About 75% of those working in agriculture are engaged in the production of tea, rubber, and coconuts, the three crops that comprise nearly 60% of Sri Lanka's agricultural land. Tea production in 1999 was 280,000 tons; plantings were 190,000 hectares (469,000 acres). Rubber production was 96,000 tons, and coconut production totaled 1,850,000 tons.

Rice is the major staple crop, produced over much of the country. The major growing districts are Kurungala in the northwestern province, Ampara in the eastern province, Polonnaruwa and Anuradhapura in the north central province, and the Mahaweli area; together these areas account for 55% of production. The maha rice season crop (63% of production) is planted in the fall and harvested in the spring, while the yala rice crop (37%) is planted in the summer and harvested in the fall. Production of rice reached 2.8 million tons in 2000. Lesser crops include sugar, pepper, cinnamon, chilies, sesame, cardamom, tobacco, cashew nuts, betel leaves, coffee, and cocoa.

Under the Land Reform Law of 1972, all property holdings exceeding 20 hectares (50 acres), except for property controlled by publicly owned companies, were vested in the Land Reform Commission for redistribution; a total of 226,373 hectares (559,377 acres) were redistributed, including one-fifth of the land under tea. Under the Land Reform Amendment Bill of 11 October 1975, all publicly owned estates (including the major British-owned tea and rubber plantations) were nationalized. The Janatha Estate Development Boards and the Sri Lanka Plantation Corporations account for 60% of total tea production and 30% of the total area under rubber cultivation.

## 23 ANIMAL HUSBANDRY

Sri Lanka's livestock population is comparatively small; in 2001 there were 1,565,000 head of cattle, 661,000 water buffalo, 493,000 goats, 68,000 hogs, 12,000 sheep, and 11 million chickens. Animals are not of high quality, partly as a consequence of religious considerations and primitive agricultural conditions. The natural pasturage lacks both nutritional value and palatability, and prospects for new pastures are not promising. In 2001, milk output was 224,000 tons and 53,000 tons of eggs were produced.

## 24 FISHING

Fishing produces less than the country's needs and yields a meager income to fishermen, most of whom use primitive boats and gear in the shallow waters surrounding the island. In 2000, the total fish catch was estimated at 300,316 tons, up from 165,397 tons in 1990. Exports of fish products were valued at nearly \$134.5 million in 2000.

## 25 FORESTRY

About 30% of the total land area consists of forests. In 2000, 6,543,000 cu m (231 million cu ft) of roundwood were cut. Forestry products included 5,000 cu m (176,500 cu ft) of sawn timber and 5,907,000 cu m (208.5 million cu ft) of firewood for domestic use.

## 26 MINING

Sri Lanka's major mineral commodities were graphite and colored gemstones. However, 18 years of civil war, prolonged drought, high oil prices, and an electricity crisis have crippled its economy—GDP declined by 1.3% in 2001, its lowest level in a decade. Graphite production, which was controlled by the government, totaled 6,585 tons in 2001, up from 5,902 in 2000. The island's gem industry was world famous. In the Ratnapura district, there were considerable deposits of sapphire, star sapphire, ruby, star ruby, cats eye, chrysoberyl, beryl, topaz, spinel, garnet, zircon, tourmaline, quartz, and moonstone. A lapidary industry was established for the international marketing of cut and polished precious and semiprecious gemstones. No output figures were available for 2001, but in 2000, 380,500 carats of star sapphire, 173,700 carats of sapphire, and 6.5 million carats of other precious and semiprecious gemstones other than diamond were produced, half that of 1999. Large quantities of kaolin and apatite have been found, and there were large surface deposits of quartz sand—kaolin and quartz sand were mined. Limestone dating from the Miocene era was quarried from the Jaffna peninsula and used in the manufacture of cement. In the dry-zone coastal areas, salt was manufactured by solar evaporation of seawater. In addition, Sri Lanka produced clays (brick, tile, and for cement production), feldspar, and phosphate rock, and presumably produced varieties of stone and sand and gravel. Cement production and petroleum refining were among the country's leading industries in 2002, and diamonds ranked third among export commodities; petroleum products ranked fifth. The beach sands contained large quantities of ilmenite, rutile, monazite, and zircon, although none was produced in 1999–2001; in 1998, 84,118 tons of ilmenite concentrate was produced, 1,930 of rutile, and 8,814 of zircon. There were plans to revive mineral sands operations, including of garnet sands discovered along the southern coastline. Although no rare earth metals were produced in 2000–2001, the cerium, yttrium, zirconium, niobium, tantalum, thorium, and uranium groups have been found, and thorianite appeared to be widely distributed.

## 27 ENERGY AND POWER

The Sri Lanka Electricity Board, a state enterprise, supervises the generation and transmission of electric power in Sri Lanka. Installed capacity in 2001 was 1,607,000 kW, of which almost three-fourths was hydroelectric. Power generation in 2000 totaled 6.6 billion kWh, of which 31.9% was from fossil fuels and 68.1% from hydropower. Consumption of electricity in 2000 was 201.2 billion kWh. The country's heavy dependence on hydropower creates shortfalls in times of drought, so the government plans to diversify the power sector, adding 2,500 MW of new capacity by 2012.

The Mahaweli hydroelectric project, originally begun in 1970, included the construction of four reservoirs and hydroelectric plants at Victoria, Kotmale, Randenigala, and Maduru Oya, all of which are now in place. The four hydroelectric stations have a combined capacity of 580,000 kW (with the Victoria station contributing 210,000 kW). Sri Lanka meets all of its crude oil requirements with imports. As of 2002 it had a refinery capacity of 50,000 barrels per day. Oil consumption doubled in the 1990s. Sri Lanka does not produce or consume natural gas. It has limited coal reserves and consumes a minimal amount of coal.

## 28 INDUSTRY

Since 1977, the government's market-oriented economic policies have encouraged industrial growth in the private sector, particularly in textiles, food and beverages, wood products, rubber and plastics, and other consumer goods. While most small- and medium-sized enterprises are now privately owned, state ownership continues to predominate in basic industries such as oil refining, and electric power generation. In the period 1990 to 2001, 38 manufacturing companies were privatized including Lanka Lubricants (sold to Caltex in 1994), Colombo (bottled) Gas Company (sold to Shell Oil in 1995), Ceylon Steel Corporation (sold to Hanjung of Korea in 1996), and Sri Lanka's only flour mill (built on a build-operate-transfer (BOT) basis in 1977 by Prima Ltd. of Singapore and converted to a buy-own-operate (BOO) arrangement in 2001 with a further investment from Prima of \$65 million) In 2001, industry accounted for about 26.5% of GDP, of which manufacturing were 15.8%; construction, 7.5%; mining, 1.9%; and electrical power and water, 1.2%.

Textiles and apparel is the largest industrial sector, accounting for 40% of manufacturing output, and, with 350,000 textile workers, the largest industrial employer. There are about 800 textile factories, the largest 100 accounting for about half of production. The sector is the leading net earner of foreign exchange, surged ahead 16.2% in 2000 after growing 7.5% but then declined 8.6% in 2001 as export demand fell. Apparel, which accounts for about 35% of industrial output and 34% of manufacturing employment, makes up 50% of total exports. Export earnings from the garment industry dropped 15% in 2001 as opposed to a 23% increase in 2000. The United States is Sri Lanka's main apparel market, buying about 64%, helped by quota allotments under which 70% of apparel exports to the United States fall. The EU lifted quota restriction for Sri Lanka in 2001. In 2005, when quotas under the Multi-Fiber Agreement (MFA) are due to be phased out, Sri Lanka's garment industry will face the challenge of a more competitive world market, although only the largest operations appear presently to have the technological and marketing capacities to effectively compete.

Food, beverages and tobacco, the second-largest manufacturing sector, accounting for 22% of industrial output, depends more on the domestic market and registered growth of 3.1% in 2001 despite the overall downturn after a modeler 6% rise in 2000. The third largest industrial sector—chemicals, petroleum and rubber products, accounting for 19% of industrial output—has been more volatile, growing 13% in 2000 and declining 5.6% in 2001. Sri Lanka's only oil refinery is a state-owned facility with a 68,000 barrels per day capacity. The non-metallic mineral sector, which had grown 2.2% in 2000, declined in 2001, but two other non-traditional sectors—smaller fabricated metal products and basic metal products—grew by about 3% in 2001 after increases in 2000 of 4.5% and 5.6%, respectively. Paper industries also grew about 3% in 2001. The outlook for manufactures in Sri Lanka depends largely on the outlook for exports, particularly to the United States. In the first quarter of 2002, exports were down 16%. A more positive development was the restoration of a reliable power supply in May 2002 with the end of drought conditions.

The government's industrial policy includes encouraging investment in industries in which it believes Sri Lanka has a comparative advantage. The Board of Investment (BOI) offers various incentives for investment in five industry segments: electronics and components for electronic assembling, industrial and machine tools (a new emphasis), ceramics and glassware, rubber-based industries, and light and heavy engineering. Another key policy element is deregulation, and in 2001 a committed on deregulation was formed to study regulatory impediments to Sri Lanka's industrial development.

## 29 SCIENCE AND TECHNOLOGY

With the launching in 1978 of a free-trade zone north of Colombo, Sri Lanka was able to establish such high-technology enterprises as the manufacture of integrated circuits and of control and relay panels. In 1982, two US electronics manufacturers contracted to build semiconductor assembly plants in the zone. The textile industry, located there, ranked nineteenth in 1985 as a supplier to the United States. In 1987–97, 47 technicians and 191 scientists and engineers per 1 million population were engaged in research and development.

The Sri Lanka Association for the Advancement of Science, founded in 1960, is located in Colombo. Also in the city are the Ceylon Institute of Scientific and Industrial Research, founded in 1955; Natural Resources, Energy, and Science Authority of Sri Lanka (founded originally in 1968 as the National Science Council); Colombo Observatory, founded in 1907; and the National Academy of Sciences of Sri Lanka, founded in 1976. The country also has research institutes devoted to coconuts, horticulture, medicine, rice, rubber, tea, and veterinary science. The Royal Botanic Gardens was founded in 1821 at Peradeniya, and a natural history museum was founded at Colombo in 1985. Sri Lanka has 13 universities and colleges offering courses in basic and applied sciences. In 1987–97, science and engineering students accounted for 34% of college and university enrollments.

## 30 DOMESTIC TRADE

Most retail stores are small and unspecialized. Marketing and distribution are dominated by the strong and well-developed cooperative movement, which the government assists with loans, price guarantees, and supervision. Although government monopolies played a major role in the wholesale distribution of imported goods, as well as many domestic commodities during the 1970s and 1980s, liberalization policies since the late 1980s decreased direct state involvement in domestic trade. The government still controls much of the food sector as a matter of national security.

Colombo is the nation's commercial center with a large business section adjoining the traditional bazaar, a large area of small retail shops and stalls. Kandy is a market center for locally produced tea, rubber, rice, cacao, and handicrafts. Galle is an agricultural market center and Negombo is a major market center for fishing and handicrafts. Jaffna hosts a number of local markets for fishing, agriculture, and industries including textiles, tobacco processing, and chemical and cement production. The city also serves as a trading place for elephants, peppers, and other commodities. There are several advertising firms in Colombo, some of which have connections abroad. Products are advertised in newspapers, trade journals, motion picture theaters, and on commercial radio.

The usual business hours are from 8:30 AM to 1 PM and 2 to 5 PM, Monday through Friday. Banks open from 9 AM to 1 PM on Monday and to 1:30 PM, Tuesday through Friday.

## 31 FOREIGN TRADE

Clothing and apparel is now the country's leading foreign exchange earner, accounting for over half of export receipts. Sri Lanka's traditional primary exports have been tea, natural rubber, and coconut products, especially desiccated coconut and coconut oil. However, the share of total export earnings accounted for by these three commodities declined steadily from 87% in 1972 to 48% in 1985 and 16% in 1999; tea decreased from its 58% share of total export value in 1972 to a low of 8.2% in 1995. Declining export shares for the country's agriculturally based exports are due to adverse weather conditions in recent years as well as rapid growth in the export earnings of industrial products.

In 1999 garments accounted for 51% of Sri Lankan exports. Other commodity exports are tea (14%), diamonds and other precious gems (2.9%), and coconut products (1.7%). Sri Lanka produces a large portion of the world's tea exports (25%).

In 1999 Sri Lanka's imports were distributed among the following categories:

Consumer goods	7.9%
Food	13.4%
Fuels	5.8%
Industrial supplies	51.0%
Machinery	13.2%
Transportation	8.6%
Other	0.1%

Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
United States	2,193	255	1,938
United Kingdom	737	311	426
Germany	230	157	73
Japan	230	646	-416
Belgium	156	161	-5
China (inc. Hong Kong)	69	767	-698
Singapore	61	496	-435
India	58	600	-542
Iran	33	203	-170
Korea	31	396	-365

### 32 BALANCE OF PAYMENTS

Sri Lanka's balance-of-payments position is highly sensitive to price changes in the world market because it depends in large part upon a few export crops to pay for its imports. Since 1983, sharply rising defense expenditures, a decline in tourism caused by continuing civil violence, and slumping world tea and coconut prices combined to exert pressure on the balance of payments. The deficit has also been partially offset by substantial foreign exchange earnings from tourism and from remittances by Sri Lankans working abroad. The current account deficit has declined each year since 1994 when it stood at \$860 million. Export growth in 1999, however, slowed considerably to 2% and earnings from tea exports had declined 40% due to the impact of the Russian economic crises in 1998.

In 2000, exports increased by close to 20% to \$5.5 billion, and exports of garments and tea did very well. Other exports, such as food, rubber products, machinery, and processed diamond exports, also performed well that year. Sri Lanka floated the rupee in 2001, and the central bank began employing currency controls. Since then, the controls were relaxed. In addition, the government imposed an import duty surcharge to stem the flow of imports. The country's external debt stood at \$9.9 billion at the end of 2000, equal to 60% of GDP.

The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Sri Lanka's exports was \$4.9 billion while imports totaled \$6 billion resulting in a trade deficit of \$1.1 billion.

The International Monetary Fund (IMF) reports that in 2001 Sri Lanka had exports of goods totaling \$4.82 billion and imports totaling \$5.38 billion. The services credit totaled \$1.37 billion and debit \$1.76 billion. The following table summarizes Sri Lanka's balance of payments as reported by the IMF for 2001 in millions of US dollars.

<b>Current Account</b>	-265
Balance on goods	-554
Balance on services	-390
Balance on income	-281

Other investment liabilities	207
<b>Net Errors and Omissions</b>	165
<b>Reserves and Related Items</b>	-329

### 33 BANKING AND SECURITIES

The Central Bank of Sri Lanka, established in 1949, began operations in 1950 with a capital of R15 million contributed by the government. The sole bank of issue, it administers and regulates the country's monetary and banking systems.

Although Sri Lanka has a fairly well diversified banking system, the two largest banks, the Bank of Ceylon and Peoples Bank, are state owned and operate inefficiently. They are considered to be incompetent, primarily owing to excessive government influence in their lending operations and overstaffing. The World Bank has identified the dominance of these two banks as a major constraint on the development of the financial sector. The simple solution, privatization, is not an option given the current political climate. Together, they accounted for two-thirds of commercial bank deposits in 1999.

In addition to the central bank and the two state owned banks, there are 9 private domestic commercial banks, 14 foreign banks, a national savings bank, 6 regional rural development banks, 2 large development finance institutions, a mortgage bank, and 13 merchant banks. US banks operating in Sri Lanka include Citibank and American Express. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$1.4 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$6.1 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 21.24%.

The Colombo's Brokers Association operates an organized stock market, whose transactions have grown significantly since the 1984 tea export boom increased liquidity in the economy. The Colombo Stock Exchange was established by the Association of Stock Brokers in 1987 and has established itself as one of the most efficient in the region. In 2001, there were 238 companies listed on the exchange with a combined market capitalization of \$1.3 billion. The turnover ratio was 13.2%. The exchange was adversely affected by the pull out of foreign investors from the region after the nuclear tests in India and Pakistan. The market was also affected by the Asian economic crisis and the Russian financial crisis, suffering a 14% decline in 1998 and a 26% decline in 2000. The CSE Milanka was up 47.6% in 2001, at 1,031.

### 34 INSURANCE

Insurance was almost wholly a foreign enterprise until 1 January 1962, when the life insurance business was nationalized. The state-owned Insurance Corp. of Sri Lanka now has a monopoly on life insurance and all other insurance. In 1997, there were six insurance companies (two of which were state-owned), the National Savings Bank, and two pension funds. Foreign insurers operate in the market in reinsurance and share holding. In 2001, 83 million dollars worth of life insurance premiums was written.

### 35 PUBLIC FINANCE

Fiscal targets are of particular concern because the government's chronic high fiscal deficits, which averaged a little over 9% of GDP 1997 to 2002, more than three times the ratio considered prudent, have led to problematic national debt. Total government debt as a percent of GDP rose from 85.8% in 1997 to 113.6% in 2002. The main causes of the persistent high budget overruns are an associated combination of welfare and pension expenditures, weak tax administration, and losses by the Ceylon Electricity Board (CEB). In September 2002, the government enacted a Welfare Benefit Law aimed at clarifying welfare eligibility and establishing penalties to reduce politicization and mistargeting. In January 2003, the government also passed the Fiscal Management Responsibility Act (FMRA) setting medium-term deficit targets and mandating "pre-election budget reports" to discourage pre-election handouts, as well as a new Board of Investment (BOI) Law eliminating the BOI's power to grant extra-legal incentives. These measures helped secure IMF approval on 8 April 2003 of a three-year program under the combined Poverty Reduction and Growth Facility and Extended Fund Facility (PRGF and EFF), with a total available credit line of SDR413.4 (\$567 million). The PRGF-EFF program is in direct support of the government's program for 2003–2006 aimed at poverty reduction through private sector growth. Historically, Sri Lanka, though low on per capita income, has been relatively high on other social welfare indicators such as adult literacy (90%), school enrollment, infant mortality and life expectancy (72 years). The challenge will be to maintain welfare and educational standards while bringing the budget deficit under control.

The US Central Intelligence Agency (CIA) estimates that in 2001 Sri Lanka's central government took in revenues of approximately \$2.8 billion and had expenditures of \$4.1 billion. Overall, the government registered a deficit of approximately \$1.3 billion. External debt totaled \$9.9 billion.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

REVENUE AND GRANTS	100.0%	2,800
Tax revenue	86.4%	2,419
Non-tax revenue	11.3%	315
Capital revenue	<0.1%	1
Grants	2.3%	65
EXPENDITURES	100.0%	4,100
General public services	5.5%	228
Defense	14.7%	604
Public order and safety	3.8%	157
Education	7.7%	315
Health	5.1%	209
Social security	12.3%	502
Housing and community amenities	2.8%	116
Economic affairs and services	15.2%	621
Other expenditures	7.2%	297
Interest payments	25.6%	1,051

### 36 TAXATION

A new value-added tax (VAT) was introduced 1 August 2002 after two delays designed to replace both the VAT-like goods and services tax (GST), in effect since April 1998 and abolished 1 June 2002, as well as the National Security Levy. The new VAT has three rates: a standard 20% rate (up from the GST 12.5% rate) for most goods and services supplied in or imported into Sri Lanka; a 10% rate (up from 0%) on essentials like food, petroleum, public transport services, and health care; and a 0%

rate on export-related services and on services consumed outside Sri Lanka and paid for with foreign exchange credited to a bank in Sri Lanka. In this low income country, the VAT is the most important source of government revenue. In 2003, the government has also introduced a new debits tax of 0.1% to be applied to all current account debits, a reflection of the pressure to maintain adequate foreign exchange reserves. Withdrawals up to about \$200 a month are exempt from the debits tax. Exempt from the debits tax are the accounts of the government and international organizations, accounts at foreign currency banking units (operated by all commercial banks) and accounts maintained for stock exchange transactions, the share investment external rupee accounts (SIERAs) through which foreign purchases on Colombo Stock Exchange are directed. Individual income taxes are graduated, with rates of 0% up to about \$2,500; 10% for income between \$2,500 and \$4,300; 20% for income between \$4,300 and \$6,000; and 30% on the balance. Noncitizens employed in enterprises licensed by the Board of Investment (BOI) are taxed at a flat concessional rate of 15%. There are two corporate income tax rates: a 20% rate for companies with taxable income below about \$51,500 (i.e., R5 million), and a 30% rate for those with taxable income above this limit (down from a previous top rate of 35%). Extensive tax holidays and concessional rates are offered to foreign investors and joint ventures that meet specified performances requirements. Income from unit trust funds in specified areas are taxed at a preferential 10% rate, while other unit trusts and mutual funds are taxed at 20%. Dividends are taxed at 10% and capital gains taxes have been abolished. As of 1 January 2003 the tax free limit on interest income was raised from R73,000 to R108,000 (about \$1,100).

Other taxes include excise taxes on over 250 items, and local property taxes.

### 37 CUSTOMS AND DUTIES

Sri Lanka has a two-band import tariff schedule based on the Harmonized System of Classification. In 2002, the standard import tariff rates were 10% or 25%, although a few items carried tariffs of 5% or 35%. The tariff on automobiles is 25%. All imports of textile materials, yarn, and all related intermediate and capital goods required for the garment export industry are free of import duty as are a number of products critical to economic development like computers, medical and dental equipment, telecommunications equipment, and agricultural seeds and machinery. Within Sri Lanka's free trade zone, imports of industrial and construction equipment, base metals, and coal and coke are duty-free. Export duties are levied on tea, rubber, and coconut products.

### 38 FOREIGN INVESTMENT

The great agricultural enterprises, insurance companies, and banks were developed originally by foreign capital. In 1959, foreigners owned almost 36% of the country's rubber acreage and 6% of the tea plantations; 80% of the insurance business was written by foreign companies, and the banking business was largely a monopoly of British and Indian firms. After 1961, when nationalization became widespread, private investors were reluctant to place new funds in Sri Lanka. Consequently, during the 1960s, the country had to depend almost entirely on loans and short-term credits. During the 1970–77 period, foreign companies, principally Japanese, were more willing to collaborate with public sector enterprises.

With the change of direction in the government's economic policy since 1977, foreign investment has flowed more freely into the private sector. The Greater Colombo Economic Commission (GCEC)—replaced in 1992 with the current Board of Investment (BOI)—and the Foreign Investment Advisory Committee promoted outside investment in export-oriented and high-

technology industries, largely through joint ventures in which majority equity was held by Sri Lankan companies. Exceptions to this policy were the large luxury hotels and construction projects for the Mahaweli development program, in which foreign partners hold majority shares. The GCEC's Investment Promotion Zone, the country's first free trade zone (established in 1978), had attracted 116 foreign companies by 1985; 96 firms operating in the zone, chiefly clothing manufacturers, employed 35,786 workers and made capital investments with a total value of R286 million during that year. As of 2003, Sri Lanka has six free trade zones, also called export processing zones, administered by the BOI, plus three industrial parks that contain both export-oriented and non-export-oriented enterprises.

The main law governing foreign investment is Law No. 4 of 1978 as amended in 1980, 1983 and 1992, after which it has been generally known as the BOI Act. Under the BOI Act, foreign companies are separated into two categories: those that falling under Section 16 are subject to the "normal" laws, and those falling under Section 17 that qualify for special BOI-specified incentives. In general, incentives are targeted at investments that are export-oriented, infuse substantial capital into the economy and/or transfer advanced technology. On 1 April 2002 the BOI announced a new investment incentive structure for Section 17 enterprises that consists of two incentive programs, one for medium-sized investments and one for large infrastructure projects. Incentive program 1 is focused on "designated industries"—non-traditional export sectors for which the government has determined Sri Lanka has a comparative advantage, which are electronics, industrial and machine tools manufactures, ceramics, glassware, mineral-based industries, rubber-based industries, and light and heavy engineering industries—plus export-oriented services, IT-related companies, regional operating headquarters, agri-business investments over R5 million (about \$51,000) and small scale infrastructure projects. These are eligible for a three-year tax holiday, preferential income tax rates of 10% in the fourth and fifth years, and a preferential income tax rate of 15% thereafter, as well as duty-free imports during the project. Incentive Program 2 is for projects over R1.2 billion (about \$15.5 million) involving electrical power, highways, airports, seaports, railways waterways, etc. According to the size of the investment, their infrastructural projects qualify for tax holidays of five to ten years, a preferential 15% tax rate thereafter, and duty-free imports of capital goods. All BOI-approved projects include no restrictions on the repatriation of profits and dividends, and free transferability of shares. The BOI's new structure of incentives is part of Sri Lanka new program of initiatives designed to attract more foreign direct investment (FDI), averaging about \$125 million per year. In 1999, FDI reached \$210 million, but then fell to \$175 million in 2000 and a meager \$82 million 2001, year of devastating terrorist attacks in both Sri Lanka and the United States. In 2002, net FDI flow increased to \$122 million. The total stock of FDI in Sri Lanka as of 2002 is estimated at about \$3 billion. The largest investments have been in the power sector, followed by the textiles, telecommunications and chemises. Reliable statistics on FDI by country are not available, but the US State Department estimates that the largest investors have been South Korea, Japan, the United States (about \$200 million in all), Australia, Hong Kong, Singapore and the United Kingdom. Sri Lanka has negotiated bilateral investment treaties (BITs), including investment protection provisions, with 24 countries.

Net flows of foreign indirect investment (FII), as reflected in portfolio investment through the Colombo Stock Exchange (CSE), have been negative since 1998, the year of the nuclear tests by Pakistan and India, and of the aftermath of the Asian financial crisis. The value of the CSE peaked in 1994, and as of mid year 2002, had recovered only about 70% of this high value,

and was at levels not seen since 1991. The net outflow was an estimated \$11 in 2001.

A major step towards increasing investor confidence was taken with the institution of the peace process following the cease-fire between the government and the LTTE in February 2002. At the end of 2002, the government relaxed its investment rules allowing 100% foreign equity in a number of services—banking, finance, insurance, stock-brokerage, construction of residential buildings and roads, supply of mass transportation, telecommunications, production and distribution of energy and professional services. Other sectors remain restricted and subject to case-by-case approval for foreign equity exceeding 49%, including most plantation enterprises—tea, rubber, cocoa, sugar and spices—and there remains a short prohibited list, which, except for franchises, keeps foreigners out of small scale enterprises. The government's policy of deregulation of the investment climate reflects pressure from the IMF, the World Bank, the Asian Development Bank (ADB), and its own precarious foreign reserve position, which dropped to level equivalent to 1.5 months of imports in 2001, and in 2003 was still below a level equivalent to 3 months imports.

### 3<sup>9</sup>ECONOMIC DEVELOPMENT

Since independence, successive governments have attempted ambitious economic development programs with mixed results. The nationalization in 1962 of three Western oil companies and in 1975 of large rubber and tea plantations was intended to end the nation's economic dependence and neocolonialism, and to create an egalitarian socialist society. The goals of the last five-year plan for 1972–76—to achieve an economic growth rate of 6% annually, to create new jobs, and thereby to ameliorate unemployment—were not met, in part because of drought and unexpected increases in the costs of crude oil, fertilizer, and other imports.

The UNP government elected in 1977 chose as the centerpiece of its development strategy the Mahaweli hydroelectric-irrigation-resettlement program, the largest development project ever undertaken in Sri Lanka. The project involved diverting the Mahaweli Ganga in order to irrigate 364,000 hectares (900,000 acres) and generate 2,037 million kWh of hydroelectricity annually from an installed capacity of 507 Mw. Launched in 1978, construction was largely completed by 1987, at a cost of about \$2 billion. Even as the UNP government launched this massive capital program, it sought to encourage private investors, limit the scope of government monopolies, and reduce subsidies on consumer products. Foreign trade, investment, and tourism were all encouraged by the government authorities. In 1986, foreign aid rose 23% in real terms over 1985, largely to finance further massive hydroelectric projects.

While government development policies resulted in moderate growth during the late 1970s and early 1980s, the outbreak of civil war in 1983 led to a rapid rise in defense spending (from 1% of GDP in 1980 to over 4% in 1996), exacerbating structural weaknesses in the Sri Lankan economy. By 1989, rapidly declining economic growth and worsening fiscal and balance of payment problems reached crisis proportions, prompting renewed stabilization and adjustment efforts. Corrective policies involved stimulating savings through new banking regulations and other monetary-tightening measures, reduction of subsidies on wheat and fertilizers, government expenditure reductions, currency devaluation, privatization of many state enterprises, and other incentives for private investment. These measures resulted in greatly improved economic performance in the early 1990s, despite unfavorable weather and the on-going insurgency.

In 1996, as the market showed signs of weakening, the government reaffirmed its free-market policies. From 1997 to 2001, however, the economy was whipsawed between a series of exogenous shocks and political pressures to maintain welfare

expenditures. In 1998 the insecurity arising from the Tamil Tiger separatist campaign was aggravated by Pakistan's and India's the nuclear tests, and the aftermath of the Asian financial crisis. Recovery in 1999 and 2000 was cut short in 2001 by the global economic slowdown, the LTTE terrorist attack on the country's international airport in July, the 11 September terrorist attacks on the United States, and the onset of severe drought, all of which combined to produce Sri Lanka's first year of economic contraction on record. 2002, by contrast, was marked by hopeful developments. In February, the Norwegian-brokered ceasefire between the LTTE and the government was reached, and in May, the end of drought conditions meant the restoration of reliable power supplies, which also helped bring down agricultural prices.

Laws encompassing welfare reform, tax reform and investment deregulation were passed, and, in January 2003, the Financial Responsibility Act (FRA) was adopted setting a course to bringing the budget deficit down to below 5% of GDP by 2006, and of limiting government borrowing to less than 10% total revenue. In all, 36 new laws were introduced by the government to buttress the economy's financial stability and the government's economic program adopted for 2003–2006. The three-year program aims at the reduction of poverty through private-sector growth. The strategy focuses on creating conditions conducive to private sector growth and a sound fiscal position, and for helping establish lasting peace through relief, rehabilitation, and reconstruction (RRR). The program is being pursued in close conjunction with a three-year arrangement with the IMF under its Poverty Reduction and Growth Facility and Extended Fund Facility (PRGF/EFF) with a credit line of SDR413.4 (\$567 million) approved in April 2003. Although aiming at sustained growth of 8–10% in the long run, the medium term goal is an average 61/2% real GDP growth for 2003–06. To achieve program's objectives, government policies are focused on four areas: 1) restoring fiscal sustainability, including raising revenues by 21/2% of GDP; 2) implementing structural reforms mainly involving deregulation and privatization; 3) creating opportunities for the poor to share more fully in the benefits of economic growth through improvements in infrastructure and education; and 4) garnering resources for reconstruction, including through donor assistance and government investments.

#### 40 SOCIAL DEVELOPMENT

Despite low per capita income, Sri Lankans have enjoyed a relatively high standard of living because of generous social welfare programs. Through a provident fund system, the government pays monthly allotments to the aged, sick, and disabled, to destitute widows, and to wives of imprisoned or disabled men. The program is financed by 8% employee contributions and 12% employer contributions. Old age benefits are paid as a lump sum grant equal to total contributions plus interest. Medical care is available free of charge in government hospitals and clinics. The law provides for a system of family allowances, paid by the government, for families earning less than 1,000 rupees per month.

To stimulate private efforts, the government makes grants to supplement the funds of volunteer agencies engaged in various welfare activities, particularly orphanages, homes for the aged, and institutions for the mentally and physically handicapped.

Although women have equal rights under law, their rights in family matters, including marriage, divorce, child custody, and inheritance, are often dictated by their ethnic or religious group. Recent legislative changes have strengthened the rights of women. New laws address sexual harassment in the workplace. However, discrimination against women in hiring, promotion and salary practices remains. Changes to the Penal code make the burden of proof more equitable in rape cases. Sexual assault and spousal abuse continue to be serious problems.

Sri Lanka's Tamil population, numbering 1 million, are not entitled to either Indian or Sri Lankan citizenship, and face systemic discrimination. Human rights abuses are committed by both the government and Tamil separatist forces as part of ongoing hostilities between the two sides. These included poor prison conditions, torture, and arbitrary arrests, including mass arrests.

#### 41 HEALTH

The government provides medical service free or at a nominal cost to almost everyone, but its health program is hampered by a worsening shortage of trained personnel and hospital beds. Medical standards, traditionally British, are considered excellent, but in recent years many Sri Lankan physicians and surgeons have moved their practices abroad—particularly to the United States and the United Kingdom, where remuneration is much higher. There are a limited number of private hospitals and medical practitioners. In 2000, 83% of the population had access to safe drinking water and the same percentage had adequate sanitation. As of 1999, total health care expenditure was estimated at 3.5% of GDP. As of 1999, there were an estimated 0.4 physicians and 2.7 hospital beds per 1,000 people.

Malaria, smallpox, cholera, and plague have been virtually eliminated. Malnutrition, tuberculosis (3,405 cases in 1994), and the gastrointestinal group of infectious diseases are the chief medical problems. In 1991–95, 38% of children under 5 years of age were considered malnourished. In 1995, immunization rates for children up to one year old were tuberculosis, 89%; diphtheria, pertussis, and tetanus, 91%; polio, 91%; and measles, 88%. As of 1999 rates for DPT and measles were, respectively, 99% and 95%.

The infant mortality rate in 2000 was 16.1 per 1,000 live births while the maternal mortality rate was 60 per 100,000 live births for 1998. Birth control was used by 66% of married women in 1993. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 16.4 and 6.4 per 1,000 people. Between 1984 and 1992, there were 32,000 civil war-related deaths. Other leading causes of death from 1990 statistics included communicable diseases and maternal/perinatal causes (232 per 100,000 people); noncommunicable diseases (459 per 100,000); and injuries (194 per 100,000). Average life expectancy in 2000 was 73 years. As of 1999, the number of people living with HIV/AIDS was estimated at 7,500 and deaths from AIDS that year were estimated at 490. HIV prevalence was 0.07 per 100 adults.

#### 42 HOUSING

Rapid population increase, coupled with a lag in construction during and immediately following World War II, led to an acute housing shortage, high rents, high building costs, and many unsanitary and unfit houses in Sri Lanka's first decades after independence.

Preliminary results from the 2001 census indicated a total of 4,687,157 housing units nationwide. As of 2000, the average household had 4.5 members. About 64% of all households were nuclear families. About 96% of urban dwellings and 73% of rural dwellings had access to safe drinking waters. Only 73% of all households had access to safe sanitation systems.

#### 43 EDUCATION

For the year 2000, 8.4% of the adult population was estimated to be illiterate (males, 5.5%; females, 11.1%). All education from kindergarten up to and including university training is free. Education is compulsory for 10 years, except when schools are not within walking distance of the pupil's home.

The public educational system was consolidated in 1970 into five years of elementary, six years of lower secondary, and two years of higher secondary. In 1996, there were 9,554 primary

schools, with 1,843,848 students and 66,339 teachers. Student-to-teacher ratio stood at 28 to 1. In 1995, secondary schools had 2,314,054 students and 103,572 teachers. As of 1999, an estimated 97% of primary-school-age children were enrolled in school. In the latter part of the 1990s, the estimated expenditure on education was 8.9% of the central government budget. As of 1995, public expenditure on education was 3% of GDP. Since 1986, the educational system has been separated into two systems based on language, one in which Sinhalese is the medium of instruction and the other in which the medium is Tamil.

Beginning in 1978, Sri Lanka reorganized its higher education system; in 1986 there were nine universities: Colombo, Peradeniya, Moratuwa, Sri Jayawardhanapura, Kelaniya, Jaffna, Ruhuna, Open University, and Batticaloa. These universities operate as independent units under the University Grants Commission, which is funded by the Ministry of Education. Included in the consolidated university system are the former Vidyalankara University (established 1959), previously known as the Vidyalankara Pirivena (established 1875), a celebrated seat of learning for Oriental studies and Buddhist culture; the former Vidyodaya University (established 1959); and the former University of Ceylon (founded 1942). In 1995, universities and equivalent institutions had 2,636 teachers and 63,660 students.

#### 44 LIBRARIES AND MUSEUMS

The National Library in Colombo holds 206,300 volumes and is the largest public library in the country. Apart from the libraries in Anuradhapura, Jaffna, Kandy, and a few other towns, most public libraries have only small collections of books. The University of Peradeniya has holdings of 670,000 volumes, while the University of Colombo has 240,000. There are several special libraries in Colombo, including the National Museum Library, which contains 681,000 volumes (147,000 which are monographs) and has been a depository for Ceylonese and Sri Lanka publications since 1885.

The five national museums, at Colombo, Galle, Jaffna, Kandy, and Ratnapura, contain collections pertaining to paleontology, zoology, prehistory, archaeology, and ancient art. One of Asia's finest zoological collections, as well as the largest known collection of Sinhala palm-leaf manuscripts, is in the Colombo museum. Three national botanical gardens, located at three different elevations above sea level, represent Sri Lanka's three distinct zones of vegetation. There are several archeological, ethnographic, and folk museums in the country. The Dutch Period Museum, the Art Gallery of the Sri Lankan Society of Art, the Natural History Museum, and a university archaeological museum are all in Colombo.

#### 45 MEDIA

The central government owns and operates all telephone, telegraph, cable, and radio facilities, except in a few rural districts, which are served by private exchanges. In 1998 there were 494,509 telephones, more than half of which were in Colombo. In 1999, cellular subscribers numbered 228,604. Domestic telephone service is reportedly inadequate, while international service is good.

The government operates both commercial and noncommercial radio broadcasting services in Sinhala, Tamil, and English and began television service in 1982. The Sri Lanka Broadcasting Corporation airs broadcasts on AM, FM, and shortwave. As of 1999, there were 12 AM and 5 FM radio stations and 21 television stations. In 2000 there were 208 radios and 111 television sets for every 1,000 people. In 2001, Internet service was available through about five service providers, who were serving 121,500 subscribers that year.

As of 2002, Sri Lanka had more than 10 daily newspapers. The principal morning and evening dailies (with 2002 daily circulation) were the following:

	LANGUAGE	CIRCULATION
COLOMBO		
<i>Daily Lankadeepa</i>	Sinhala	259,172
<i>Dinamina</i>	Sinhala	140,000
<i>Divaina</i>	Sinhala	100,000
<i>Dawasa</i>	Sinhala	108,000
<i>The Island</i>	English	80,000
<i>Daily News</i>	English	65,000
<i>Virakesari</i>	Tamil	48,500

Sri Lanka also has several weekly and monthly publications.

The constitution provides for free speech and a free press; however, restrictions on national security grounds are said to be sometimes arbitrary and overly broad. In 1972, a five-member national Press Council with extensive powers over the press was established; since then varying degrees of censorship have been imposed with changing political conditions.

#### 46 ORGANIZATIONS

Chambers of commerce include the National Chamber of Commerce of Sri Lanka, the Ceylon Chamber of Commerce, the Indian Chamber of Commerce, and the Moor Chamber of Commerce. There are numerous trade and industrial organizations.

The Royal Asiatic Society of Sri Lanka promotes national history, culture, and the arts. National youth organizations include the Ceylon Student Federation, YMCA/YWCA, Communist Youth Federation of Sri Lanka, General Union of Youth and Students, Sri Lanka Catholic Student Movement, Sri Lanka Freedom Party Youth Organization, Girl Guides Association, Sri Lanka Mahajana Youth Federation, and the Sri Lanka Scout Association. Women's organizations include the Hindu Women's Society, the Muslim Women's Research and Action Front, and the Center for Women and Development.

Social action organizations include the Center for Society and Religion and the Civil Rights Movement of Sri Lanka. The Red Cross is also active.

#### 47 TOURISM, TRAVEL, AND RECREATION

The principal tourist attraction is the sacred city of Anuradhapura, home of the Seated Buddha, Buddhist temples, palaces, and the sacred bo tree, grown from a sapling of the tree under which the Buddha is said to have attained enlightenment. Other popular sites include the ancient cities of Polonnaruwa and Kandy, with its Dalada Maligawa temple, where a sacred tooth relic of the Buddha is preserved. The botanical gardens near Kandy and the Dehiwela Zoo at Colombo are also popular.

Sri Lanka's recreational facilities include the beach resorts of Bentota and Negombo, which, like Colombo, have modern hotels. Popular water sports are swimming, fishing, sailing, surfing, water skiing, and skin diving. The island has excellent facilities for golf, tennis, squash, soccer, rugby, and cricket.

Visitors need a valid passport and a visa, except for nationals of most Western European, ASEAN, and ANZUS countries, as well as Japan, who may stay for up to a month without a visa. Passengers traveling through infected areas must also possess valid certificates of vaccination against yellow fever.

International tourism has grown in Sri Lanka in response to the governments promotion of the industry. Europe is the leading generating region of tourists, accounting for over 60% of the 400,414 tourists in 2000. Tourism receipts were estimated at \$253 million that year. The country had 15,860 hotel rooms with 29,363 bed-places and a 52% occupancy rate.

According to 1999 UN estimates, the cost of staying in Colombo was \$94 per day. Elsewhere in the country, travel expenses averaged \$60 per day.

#### 48 FAMOUS SRI LANKANS

One of the great rulers of the Anuradhapura period was Dutugemunu (fl.100 BC), who is famous for having saved Ceylon and its religion from conquest by Indian invaders. Mahasen, a king in the 3d century AD, built many fine dagobas and other monuments that delight and amaze visiting art lovers. The classic period of Ceylonese art flourished under Kassapa, a king of the 5th century. The great figure of the Polonnaruwa period was Parakramabahu I (the Great, r.1153–86), who unified the government of Ceylon, built many magnificent structures, and organized the economy. The most famous political figure in modern Ceylon was Don Stephen Senanayake (1884–1952), leader of the independence movement and first prime minister of independent Ceylon. Solomon West Ridgway Dias Bandaranaike (1899–1959), prime minister from 1956 to 1959, is regarded as the founder of Ceylon as a socialist state. His widow, Sirimavo Bandaranaike (b.1916), was prime minister during 1960–65, 1970–77, and was appointed again in 1994. Her daughter, Chandrika Bandaranaike Kumaratunga (b.1946) was elected president in 1994. Junius Richard Jayewardene (1906–96), who helped usher in economic reforms and a free enterprise system, became Sri Lanka's first president in 1978 and served until 1982. Science-fiction writer Sir Arthur C. Clarke (b. England, 1917) is one of Sri Lanka's most famous expatriate residents. Born in Sri Lanka, Canadian author and poet Michael Ondaatje (b.1943) received the 1992 Booker McConnell Prize for his novel *The English Patient*.

#### 49 DEPENDENCIES

Sri Lanka has no territories or colonies.

# SYRIA

Syrian Arab Republic

*Al-Jumhuriyah al-‘Arabiyah as-Suriyah*

**CAPITAL:** Damascus (Dimashq)

**FLAG:** The national flag is a horizontal tricolor of red, white, and black stripes; in the white center stripe are two green five-pointed stars.

**ANTHEM:** *An-Nashid as-Suri (The Syrian National Anthem)* begins “Protectors of the nation, peace be upon you.”

**MONETARY UNIT:** The Syrian pound (S£) is a paper currency of 100 piasters. There are coins of 25 and 50 piasters and 1 Syrian pound and notes of 1, 5, 10, 25, 50, 100, and 500 Syrian pounds. S£1 = \$0.0194 (or \$1 = S£51.50) as of January 2003.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but local units are widely used.

**HOLIDAYS:** New Year’s Day, 1 January; Revolution Day, 8 March; Egypt’s Revolution Day, 23 July; Union of Arab Republics Day, 1 September; National Day, 16 November. Muslim religious holidays include ‘Id al-Fitr, ‘Id al-‘Adha’, Milad an-Nabi, and Laylat al-Miraj. Christian religious holidays include Easter (Catholic); Easter (Orthodox); and Christmas, 25 December.

**TIME:** 2 PM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Situated in southwest Asia, at the eastern end of the Mediterranean Sea, Syria has an area of 185,180 sq km (71,498 sq mi). Comparatively, the area occupied by Syria is slightly larger than the state of North Dakota. Included in this total is the Golan Heights region (1,176 sq km/454 sq mi), which Israel captured in 1967 and annexed on 14 December 1981; the annexation was denounced by Syria and unanimously condemned by the UN Security Council. Syria extends 793 km (493 mi) ENE–WSW and 431 km (268 mi) SSE–NNW. It is bounded on the N by Turkey, on the E and SE by Iraq, on the S by Jordan, on the SW by Israel, and on the W by Lebanon and the Mediterranean Sea, with a land boundary length of 2,253 km (1,400 mi) and a coastline of 193 km (120 mi).

## <sup>2</sup>TOPOGRAPHY

There are five main geographic zones: (1) the narrow coastal plain along the Mediterranean shore; (2) the hill and mountain regions, including the Ansariyah (‘Alawite) Mountains in the northwest paralleling the coast, the eastern slopes of the Anti-Lebanon Mountains, and the Jabal Ad-Duruz in the southeast; (3) the cultivated area east of the Ansariyah and Anti-Lebanon ranges, which is widest in the north, discontinuous between Homs and Damascus; (4) the steppe and desert region, traversed by the Euphrates (Al-Furat) River; and (5) the Jazirah in the northeast, steppe country with low rolling hills.

The Anti-Lebanon Mountains, extending southward along the Lebanese border, serve as a catchment for the rainfall of central Syria. To the north of this range, the Ansariyah Mountains, which reach heights of over 1,500 m (5,000 ft), slope westward to the Mediterranean. The Orontes (Asi) River irrigates areas on the eastern side of the Ansariyah Mountains.

## <sup>3</sup>CLIMATE

The climate varies from the Mediterranean type in the west to extremely arid desert conditions in the east. The coastal regions have hot summers and mild winters; in the mountains, summer

heat is moderated according to elevation and the winters are much more severe.

The steppe and desert areas have extremely hot, arid summers and greatly varying winter temperatures ranging from 21°C (70°F) to below freezing. Average temperatures for Damascus range from about 21° to 43°C (70–109°F) in August and from about –4° to 16°C (25–61°F) in January. Rainfall averages about 75 cm (30 in) on the coast, around 125 cm (50 in) in some mountain areas, and less than 25 cm (10 in) in the eastern three-fifths of the country. In dry years, rainfall may be reduced by half.

## <sup>4</sup>FLORA AND FAUNA

The coastal plain is highly cultivated and the little wild growth found is mainly of the brushwood type, such as tamarisk. On the northern slopes of the Ansariyah range are remnants of pine forests, while oak and scrub oak grow in the less well-watered central portion. Terebinth is indigenous to the low hill country of the steppes and wormwood grows on the plains. Some sections of the Jabal Ad-Duruz are covered with a dense maquis.

The wildlife of Syria includes types common to the eastern Mediterranean region, together with typical desert species. There is a diminishing number of bears in the mountains. Antelope are found wherever grazing is available and human competition not too severe. There are also deer in some sections. Smaller animals include squirrel, wildcat, otter, and hare. In the desert, the viper, lizard, and chameleon are found in relatively large numbers. Native birds include flamingo and pelican, as well as various ducks, snipe, and other game birds.

## <sup>5</sup>ENVIRONMENT

Much of Syria’s natural vegetation has been depleted by farming, livestock grazing, and cutting of trees for firewood and construction. The thick forests that once covered western Syria have been drastically reduced; as a result, soil erosion and desertification are extensive. The salinity of the soil is also a problem, causing a loss of more than \$300 million worth of agricultural products per year. Other environmental problems include pollution of coastal waters from oil spills and human

wastes and contamination of inland waterways by industrial wastes and sewage.

Only 64% of the people living in rural areas have pure water. The pollution of the nation's water supply also leads to the spread of diseases. The nation's cities produce an average of 1.3 million tons of solid waste per year.

Environmental awareness has been a growing concern in the Arab world. The UN and Middle Eastern environmental organizations have sponsored Arab Environment Day to bring the focus of the nation's attention on environmental problems. The quantity of native wildlife had been so seriously depleted that in 1979 the government banned hunting for five years. In 2001, four of Syria's mammal species and seven of its bird species were endangered. Seven types of plants were also endangered. The Mediterranean monk seal, bald ibis, and African softshell turtle are endangered. The Anatolian leopard, cheetah, Syrian wild ass, Israel painted frog and Persian fallow deer are extinct.

## 6 POPULATION

The population of Syria in 2003 was estimated by the United Nations at 17,800,000, which placed it as number 55 in population among the 193 nations of the world. In that year approximately 3% of the population was over 65 years of age, with another 41% of the population under 15 years of age. There were 102 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 2.38%, with the projected population for the year 2015 at 23,018,000. The population density in 2002 was 95 per sq km (245 per sq mi), but most of it was concentrated in a small area; 70% of Syria's people live in Damascus and the six western provinces. Desert areas in the east are largely uninhabited.

It was estimated by the Population Reference Bureau that 55% of the population lived in urban areas in 2001. The capital city, Damascus, had a population of 2,270,000 in that year. The population of Aleppo (Halab), a northern trading and agricultural center, was an estimated 2,173,000. Other main cities are Homs (Hims), 481,000; Hamath (Hama); and Latakia (Al-Ladhiqqiyah). According to the United Nations, the urban population growth rate for 2000–2005 was 3.3%.

## 7 MIGRATION

In the past there was sizable emigration by Syrians to Europe, Africa, and the Western Hemisphere, but emigration had virtually ceased by the late 1940s. Since World War I there has been substantial internal migration from the coastal mountains to the central plains and, in general, from rural areas to the towns. There is considerable migration across the borders with Lebanon and Jordan. About 150,000 Syrians working in Kuwait returned during 1990–91. As of October 1995, there were 300,000 Palestinian refugees in Syria. In 1997, the Syrian government accepted the UNHCR's protection mandate for all recognized refugees in the country. As of 1999, there were 7,210 registered refugees in Syria, including 3,950 urban refugees in Damascus and another 3,260 refugees living in El Hol Camp in Hassakeh Governorate. In 2000 the net migration rate was -0.2 migrants per 1,000 population. The total number of migrants that year was 903,000 including approximately 391,000 refugees. The government views the emigration level as too high, but the immigration level as satisfactory.

## 8 ETHNIC GROUPS

Racially, the Syrians are varied, and except where ethnic distinctions have found religious expression, racial types are generally intermixed. It is estimated that Arabs make up about 90.3% of the population. Other ethnic groups make up the remaining 9.7%, including Kurds, Armenians, and others.

## 9 LANGUAGES

The official language and language of the majority is Arabic, but dialect variations are distinct from region to region and even from town to town. The written language, classical Arabic, based on the Koran (Qur'an), is the basis of the standard spoken form. Kurdish and Armenian are the principal minority languages. Aramaic, the language of Jesus, and Circassian are also widely understood. French and English are somewhat understood.

## 10 RELIGIONS

Islam is the religion of the vast majority. About 74% of the population are Sunni Muslims. Alawite, Druze, Ismailis, Shi'a, and Yazidis account for another 16% of the population. The Alawite constitute an important minority in Syria and hold a disproportionate share of political power; although they consider themselves Muslims, they combine their avowed creed with Christian rituals and esoteric cults. Also important are the Druzes (most of whom live in the Jabal Ad-Duruz), whose religion is an offshoot of Shi'a Islam. Orthodox Muslims, Alawites, and Druzes together constituted about 90% of the population in 1999. About 10% of the population is Christian, with Greek Orthodox being the largest denomination. Other Christian churches include Armenian Catholic, Armenian Orthodox (Gregorian), Syrian Catholic, Syrian Orthodox, Maronite Christian, Baptist, Mennonite, The Church of Jesus Christ of Latter-Day Saints, and Nestorian (Chaldean). The small Jewish population is urban, living primarily in Damascus, Al Qamishli, and Aleppo.

Under the 1973 constitution, Islam is no longer declared to be the religion of the state, but the president of Syria must still be a Muslim, and Islamic law is a major source of legislation. Freedom of worship is guaranteed by the constitution. Armed opposition to the government by Muslim fundamentalists grouped in an Islamic Front took many lives during 1976–82. The movement collapsed following the government's suppression of a major uprising in Hamath in February 1982, an action in which upwards of 5,000 died. Jehovah's Witnesses have been banned by the government, which considers them to be a politically motivated Zionist organization. Certain Christian and Muslim holidays are officially observed.

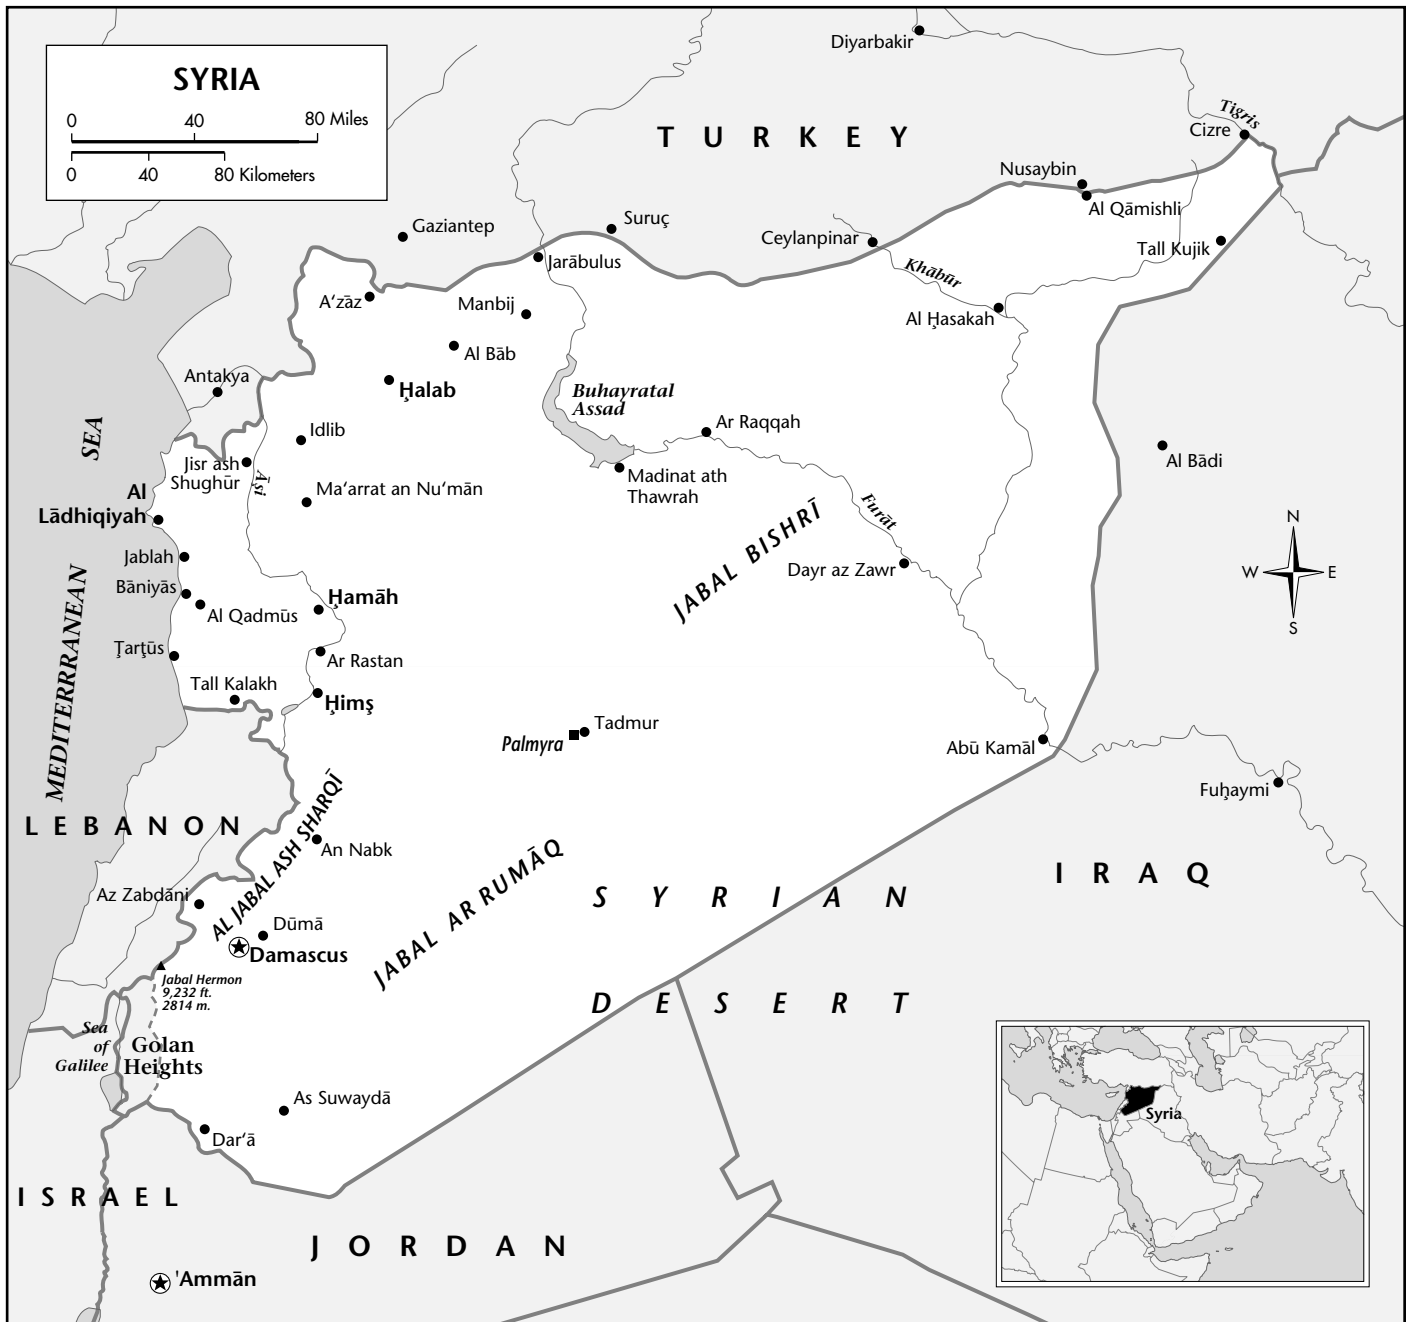

## 11 TRANSPORTATION

The Syrian national railway system consists of 2,750 km (1,709 mi) of which 2,423 km (1,506 mi) is standard gauge line: three sections are the Syrian section of the old Baghdad Railway; the main line from Damascus to Aleppo, with connections to Tartus, points in Lebanon, and the phosphate mines; and the railway linking Latakia, Aleppo, and Al-Qamishli, built with Soviet help and completed in 1981. There are also 327 km (203 mi) of narrow-gauge line-part of which is the pre-World War I Hejaz Railway, linking Damascus to Jordan and Lebanon. Syria is also connected by rail with Turkey (thus with Europe) and Iraq.

The road system, though growing, remains inadequate in view of the demands imposed by increased economic activity. In 2002, Syria had 41,451 km (25,758 mi) of roads, of which only 9,575 km (5,950 mi) were paved, including 877 km (545 mi) of expressways. There are road connections between the major towns and with Iraq, Jordan, Lebanon, and Turkey.

Tartus and Latakia are the main ports. Jablah and Baniyas are minor ports. In 2002, the merchant fleet was comprised of 143 vessels with a capacity of 482,958 GRT. Also in 2001, Syria had 99 airports, of which 24 had paved runways. Damascus is a connecting point for a number of major airlines; the main passenger terminal of its international airport was completed in 1982. Another principal airport is Aleppo International at Aleppo. Syrian Arab Airlines provides service to Aleppo, Al-Qamishli, Latakia, and other airports; it also flies to other Arab

LOCATION: (1949): 32°30' to 37°30' N; 35°50' to 42°E. BOUNDARY LENGTHS: Turkey, 822 kilometers (510 miles); Iraq, 605 kilometers (378 miles); Jordan, 375 kilometers (234 miles); Israel, 76 kilometers (47 miles); Lebanon, 375 kilometers (234 miles); Mediterranean coastline, 193 kilometers (117 miles). TERRITORIAL SEA LIMIT: 35 miles.

countries and to Europe and Africa. In 2001, 760,900 passengers were carried on scheduled domestic and international flights.

## 12 HISTORY

Archaeological excavations at Ebla, in northern Syria, have revealed that Syria was the center of a great Semitic empire extending from the Red Sea north to Turkey and east to Mesopotamia around 2500 BC. At that time, Damascus, traditionally the world's oldest continuously occupied city and certainly one of the world's oldest cities, was settled. Later, an advanced civilization was developed along the Syrian and Lebanese coastlands under the Phoenicians (c.1600–c.800 BC),

among whom trade, industry, and seafaring flourished. The wealth of the land attracted many conquerors, and Syria was invaded successively by Hittites, Egyptians, Assyrians, Persians, and others. In the 4th century BC, Syria fell to Alexander the Great, first in a long line of European conquerors. After the breakup of his empire, dominion over Syria was disputed by the Seleucid and Ptolemaic successor states, and Persians invaded when the opportunity arose; eventually the Seleucids gained control. In the 1st century BC, all of Syria, Lebanon, Palestine, and Transjordan was conquered by the Romans and organized as the province of Syria; these areas are termed “geographic” Syria. Christianity, particularly after its official recognition in the early

4th century AD by Constantine the Great, spread throughout the region.

In 637, Damascus fell to the Arabs. Most Syrians were converted to Islam, and Arabic gradually became the language of the area. Under the Umayyad caliphs, Damascus became the capital of the Islamic world and a base for Arab conquests. Under the 'Abbasids, the caliphate was centered at Baghdad, and Syria was reduced to provincial status. Thereafter, geographic Syria fell prey to a succession of invaders, including Byzantines and Crusaders from Western Europe. Some parts of Syria came under the sway of Seljuks and Ayyubids, a Kurdish dynasty. The latter was most prominent under its leader Saladin (Salah ad-Din). During the 13th century, Mongols frequently invaded Syria, and for 200 years parts of Syria were controlled by Mamluks, who ruled it from Egypt through local governors. In 1516, the Ottoman forces of Sultan Selim I defeated the Mamluks, and for the next four centuries, Syria was a province of the Ottoman Empire.

During World War I, Sharif Hussein (Husayn Ibn-'Ali) of Mecca threw in his lot with the Allies and revolted against Ottoman rule. After the war, with British forces in control, the formal entry of Allied troops into Damascus was made by Arab forces under Faisal (Faysal), Hussein's son, on 30 October 1918. Faisal and the Arab nationalists, whose number had been growing since 1912, opposed French aspirations to Syria and claimed independence under the terms of agreements between the British government and Hussein. In March 1920, Faisal was proclaimed king by a congress representing Syria, Lebanon, and Palestine. However, geographic Syria was divided into British and French mandates. In June, the French, who had been allotted a mandate for Syria and Lebanon by the Agreement of San Remo (April 1920), ejected Faisal and installed local administrations of their own choosing. Arab nationalists resented French rule; there was a major revolt from 1925 to 1927, and unrest persisted until the outbreak of World War II. In 1941, Free French and British forces wrested control of Syria from Vichy France. Two years later, under pressure from the UK and the United States, the French permitted elections and the formation of a nationalist government. The United Kingdom and the United States recognized Syria's independence in 1944, and the last French troops departed on 17 April 1946.

Two parties that had led the struggle for independence, the Nationalist Party and the People's Party, dominated Syrian political life in the immediate postwar period. However, the Palestine War of 1948-49, which resulted in the defeat of the Arab armies and the establishment of Israeli statehood, discredited the Syrian leadership. In December 1948, riots against the government were put down by the army, and several army factions struggled for more than a year to gain control of the Syrian state. Col. Adib Shishakli ruled Syria for most of the period from December 1949 to March 1954, when he was ousted by another army coup.

The years from 1954 to 1958 were marked by the growth of pan-Arab and left-of-center political forces at the expense of the traditional merchant-landowner class, which dominated the Nationalist and People's parties. Foremost among these forces was the Arab Socialist Ba'ath Party, which saw in Gamal Abdel Nasser (Nasir), the president of Egypt, a kindred pan-Arabist. Military officers remained active in political affairs but were split into competing factions. Some elements of the Nationalist and People's parties sought to counter the left by seeking help from Iraq and other countries. In late 1957, influential military officers decided to seek unity with Egypt as a means of suppressing factionalism. Enthusiastically supported by the Ba'ath and other pan-Arabists, they appealed to Cairo. Nasser agreed, and on 1 February 1958, Egypt and Syria proclaimed the union of Syria and Egypt as the United Arab Republic (UAR).

A monolithic single-party structure replaced the lively Syrian political tradition; decisions were made in Cairo; land reforms were introduced. Syrians chafed under Egyptian rule, and in September 1961, after a military coup, Syria seceded from the UAR. A period of political instability followed until, on 8 March 1963, power was seized by a group of leftist army officers calling themselves the National Council of the Revolutionary Command, and a radical socialist government dominated by the Ba'ath Party was formed.

The period that followed was marked by internal struggles between the founders of the Ba'ath Party and a younger generation of party militants, many in the military. That generation came to power in 1966 but split in succeeding years. In the June 1967 war between Israel, on one side, and Syria, Egypt, and Jordan on the other, Israel gained control of the Golan Heights. Gen. Hafez al-Assad (Hafiz al-Asad), a former chief of the Air Force and Defense Minister, became chief of state on 16 November 1970; he assumed the presidency, a reinstated office, for the first of four seven-year terms beginning in March 1971, and a permanent constitution was ratified by popular referendum on 12 March 1973. On 6 October of that year, Syrian troops launched a full-scale attack against Israeli forces in the Golan Heights, as the Egyptians attacked in the Suez Canal area. After the UN cease-fire of 24 October, Israel remained in control of the Golan Heights, and Syria boycotted peace negotiations in Geneva. However, on 31 May 1974, Syria signed a US-mediated disengagement accord with Israel, restoring part of the Golan Heights to Syria and creating a buffer zone, manned by a UN peacekeeping force. The occupied sector of the Golan Heights was annexed by Israel in 1981; outside powers criticized and did not recognize the annexation.

In recent years, Syria has intervened militarily in neighboring Arab states to secure political ends. In September 1970, Syrian armored forces crossed the border into Jordan to support the Palestinians during the Jordanian civil war, but the Syrians were driven back by troops loyal to Jordan's King Hussein (Husayn) and by the threat of Israeli intervention. In 1976, Syrian troops entered Lebanon, nominally to enforce a cease-fire between Christian and Muslim forces but actually to help the Christian forces prevent a victory by leftist Muslims and Palestinians. Syria strongly opposed the Egyptian-Israeli peace treaty of 1979 and was one of the few Arab states to support Iran in its war against Iraq, with which Syria earlier had hoped to merge. Another merger plan, this one with Libya, was announced in September 1980, but the effort was stillborn. In October, Syria signed a 20-year friendship treaty with the USSR; subsequently Syria received large quantities of Soviet arms, including anti-aircraft missiles, which it deployed in the Bekaa (Biqā') Valley in Lebanon. After Israel invaded southern Lebanon in June 1982, the Israelis knocked out the missile batteries, crippled Syria's Soviet-equipped air force, and trapped Syrian as well as Palestinian fighters in Beirut before allowing their evacuation. Having reequipped its army with Soviet weapons, Syria has maintained 25,000-35,000 troops in Lebanon ever since. In the continuing Lebanese civil war, Syria supported the Druze and Muslim militias against the Maronite Lebanese Forces.

Syria made repeated attempts to establish a cease-fire among Lebanon's factions. In 1989, it endorsed the Taif Accord for ending the conflict and, later, when Christian militia General Michel Aoun declared himself president of Lebanon and sought to expel the Syrian forces, assaulted his enclave with artillery and drove him out of the country. In 1991, Syria backed moves to disarm and disband the militias and signed a treaty with Beirut to put relations on a stable and peaceful basis. Under the Taif Accord, Syria was to have withdrawn its forces from Beirut and coastal areas by September 1992. Syria's withdrawal from Beirut took place in June 2001.

The authoritarian Assad regime has been condemned by outsiders for assisting terrorist and drug smuggling groups. Both charges have been played down since Syria joined the coalition of forces against Iraq in 1990 and agreed to participate in direct peace talks with Israel in 1991. The collapse of the Soviet Union removed Syria's most important external support, nullifying Assad's proclaimed strategy of refusing to negotiate with Israel until Syria had gained military parity.

Internally, the regime is resented for its denial of democracy and the concentration of power with members of Assad's minority religious sect, the Alawis. The most serious internal threat came from Islamic militants in the late 1970s and early 1980s. In 1982, Assad sent the army against their stronghold in Hama, devastating a section of the city and causing tens of thousands of casualties. There has been no serious threat to the regime since then and the Ba'ath Party has continued to be used as a means of control throughout the country. In the 1990s, Assad took steps to liberalize economic controls and to permit some political freedoms. About 300 political prisoners were released in 1992 and Syrian Jews were again allowed to travel. Still, the country remains on the US State Department list of countries which support terrorism and US trade is severely restricted. In 1994 Syrian officials met with representatives of Israel's Yitzhak Rabin-led government on the return of the Golan Heights—something Assad had wanted for decades. After Rabin's assassination, however, the talks were discontinued, and the stalemate between Syria and Israel continued. In 1997, US Secretary of State Madeleine Albright announced that she would visit Syria in an effort to get the stalled peace process back on track. Syria was officially guarded about the prospects for success as it remained deeply suspicious of Israel's right-wing government led by Benjamin Netanyahu. In the same year, the Assad regime entered into negotiations with Iraq to open up its ports to the latter. Syria broke off diplomatic relations with Iraq after backing Iran in the 1980–88 war.

With the election of Labor leader Ehud Barak as prime minister of Israel in May 1999, new hope arose for improved relations with Israel, and a new round of peace talks between Syria and Israel was held in the United States, near Washington, D.C., in January 2000. In May 2000 Israel withdrew from southern Lebanon. By the late 1990s, serious concerns had been raised about the health and mental status of Syria's president, who was reportedly having "mental lapses" and suspected to be suffering from some form of dementia, as well as other infirmities. Nevertheless, Assad was elected to a fifth seven-year term in 1999 in a nearly unanimous vote. Since the 1994 death in an automobile accident of Basel, the son whom the Syrian leader had been grooming to succeed him, another of Assad's sons, Bashar, had been given increased responsibilities. Assad died on 10 June 2000 of a heart attack; 34-year-old Bashar Assad was unanimously elected secretary-general by the Ba'ath Party one week later. Parliament amended the constitution to lower the minimum age for a president from 40 to 34. In a July referendum, Bashar won overwhelming support to succeed his father, and he officially began a seven-year term as president on 17 July 2000.

In November 2000, President Assad ordered the release of more than 600 political prisoners. However, in September 2001, members of parliament and pro-reform activists were detained, which dulled hopes that Bashar had ushered in a new climate of reform in the aftermath of his father's death. Although more than 100 dissidents were released from prison in November, human rights organizations maintained that hundreds of political prisoners remain in jail in Syria. In April 2001, the outlawed Muslim Brotherhood, whose members were targeted during the 1982 Hama massacre, announced its intention to resume political activity.

Syrian troops withdrew from Beirut in June 2001 to redeploy in other parts of Lebanon, in response to greater Lebanese

criticism of Syria's presence there. Following the terrorist attacks on the United States on 11 September 2001, Assad publicly emphasized Syria's stance on terrorism, although it did not support the US-led War on Terror, stating military action was not the appropriate response to terrorism. The United States still lists Syria on its State Department list of countries supporting terrorism. In late 2002, Israel's Prime Minister Ariel Sharon accused Syria of supplying Hezbollah in southern Lebanon with thousands of surface-to-air rockets that could strike northern Israel. Israel has repeatedly called on Syria to exercise control over Hezbollah.

One of the main reasons Israel has not pulled out of the Golan Heights has to do with water. The Golan Heights provides approximately 30% of Israel's water needs. The Dan, the Banyas, and the Hatzbani, tributaries of the upper Jordan River, originate in the Golan Heights. Israel's water needs are also tied to Lebanon. Lebanon has begun to divert 50 million cubic meters a year from the Wazzani and Hatzbani Rivers to supply villages in southern Lebanon with water. The Wazzani feeds into the Hatzbani, which in turn flows into the Jordan River watershed and Lake Kinneret (Lake Tiberias or the Sea of Galilee), a major source of Israel's water supply. In 2002, Sharon identified measures to divert water from Israel as a cause for war. In 1964 Syria tried to dam the waters that fed Lake Kinneret, but Israel destroyed the dams as one of the events leading to the 1967 Six-Day War. Since then, Syria has built 23 dams on the Yarmouk River, a tributary flowing into the Jordan River south of Lake Kinneret, affecting the water supplies of Israel and Jordan.

### 13 GOVERNMENT

After independence, Syria made several attempts at establishing a constitution. The constitution of 1950 was revived in amended form in 1962 and then abrogated. A provisional constitution adopted in April 1964 was suspended in 1966 and replaced to some extent by a continuing series of edicts. The fundamental law that thus emerged considered Syria a socialist republic forming part of the Arab homeland, required that the head of state be a Muslim, recognized Islamic law as a main source of legislation, ordained collective ownership of the means of production, but permitted some private ownership.

The constitution of 12 March 1973, embodying these principles and ratified by popular referendum, vests strong executive power in the president, who is nominated by the Ba'ath Party and elected by popular vote to a seven-year term. The president, who appoints the cabinet (headed by a prime minister), also serves as commander-in-chief of the armed forces and as secretary-general of the Ba'ath Party; three vice presidents were named in March 1984, including President Assad's younger brother Rifaat, who was dismissed from this post in 1998. There were two vice presidents in 2003. The unicameral people's assembly (Majlis al-shaab) has 250 members who are elected every four years, but who have no real power. Suffrage is universal, beginning at age 18. Syria has been under a state of emergency since 1963 (except for 1973–74). Although Bashar Assad announced in January 2001 that the emergency law was "frozen" and "not applied," the state of emergency was still in force as of February 2003.

Bashar Assad began a seven-year term as president in July 2000 following his father's death in June.

### 14 POLITICAL PARTIES

The Arab Socialist Ba'ath Party is Syria's dominant political institution. It has a countrywide organization and controls mass organizations for youth, students, women, and the like. Only the Ba'ath may carry on political activity in the armed forces. It is far larger and more influential than the combined strength of its five partners in the National Progressive Front (NPF). This official political alignment, formed by President Assad in 1972, groups

the Communist Party of Syria (SCP) and small leftist parties—the Syrian Arab Socialist Union (ASU), the Socialist Unionist Movement (ASUM), the Democratic Socialist Union Party (DSUP), and the Arab Socialist Party (ASP)—with the Ba'ath. The Ba'ath Party was founded in 1947 with goals of Arab liberation, Arab unity, and socialism. Ba'athists attained control of the government in 1963, but the party became divided into two factions, a wing of doctrinaire socialists and a more pragmatic wing. Assad, then minister of defense and a strong nationalist, seized power in a bloodless coup in November 1970 and purged the doctrinaire Ba'athists from the government. The Ba'athists have relied for public support on the minority Alawi sect, of which Assad was a member, and on the rural sector of the population generally. During his years as president, Assad appointed Ba'athist Alawis to influential positions in the government and in the military and security services. When Assad died on 10 June 2000 the Ba'ath Party held a party congress—its first since 1985—and elected Bashar Assad secretary-general. Bashar Assad succeeded his father as president the next month.

Hafez Assad, the sole presidential candidate for over 20 years, won national plebiscites by 99% majorities on 12 March 1971, 8 February 1978, 13 March 1985, 2 December 1991, and 10 February 1999. His son, Bashar, won in July 2000 by a vote of 8.6 million to 22,000. In elections on 1 December 1998, the Ba'ath won 135 seats; the ASU, 8; SCP, 8; ASUM, 7; ASP, 5; DSUP, 4; and independents, 83. Parliamentary elections were set for 2 March 2003.

## 15 LOCAL GOVERNMENT

Syria is divided into 14 provinces (*muhafazat*); every province has a governor (*muhafiz*) and council. Each province is in turn divided into districts (*mantiqat*), each headed by a *qaimmaqam*. Each district is further subdivided into subdistricts, each in the charge of a *mudir*. Governors are appointed by and are directly responsible to the authorities in Damascus.

## 16 JUDICIAL SYSTEM

The Syrian legal system is based partly on French law and partly on Syrian statutes. Investigating magistrates determine whether a case should be sent to trial. Minor infringements are handled by peace courts, more serious cases go to courts of first instance. There are civil and criminal appeals courts, the highest being the Court of Cassation. Separate state security courts have jurisdiction over activities affecting the security of the government. In addition, *Shari'ah* courts apply Islamic law in cases involving personal status. The Druze and non-Muslim communities have their own religious courts.

A Supreme Constitutional Court investigates and rules on petitions submitted by the president or one-fourth of the members of the People's Assembly challenging the constitutionality of laws or legislative decrees. This court has no jurisdiction to hear appeals for cases from the civil or criminal courts.

The constitution provides for an independent judiciary. The regular court system is independent; however, the state security courts are not completely independent from the executive.

There are no jury trials. The regular courts respect constitutional provisions safeguarding due process. The Supreme State Security Court tries political and national security cases. The Economic Security Court tries cases involving financial crimes. Both courts operate under the state of emergency rules overriding constitutional defendants' rights.

## 17 ARMED FORCES

In 2002 the active armed forces numbered some 319,000, with 354,000 reservists among the three services. The army had an estimated 215,000 regular troops, and included seven armored divisions, three mechanized infantry divisions, a Republican

Guard division, four independent infantry brigades, three SCUD missile brigades, two artillery brigades, nine special forces battalions, and one border guard brigade. The army had more than 4,700 heavy and medium tanks and sophisticated antitank and antiaircraft weapons. The navy had 4,000 personnel with vessels including two frigates and 18 patrol and coastal combatants. Naval aviation includes 16 armed helicopters. The air force had 40,000 personnel, 611 combat aircraft, and 90 armed helicopters. The air defense command numbered approximately 60,000 with 25 air defense brigades and 2 SAM regiments. Paramilitary forces included a gendarmerie of 8,000 and a workers' militia with an estimated 100,000 members. Military expenditures were reported to be \$921 million in 2000, but that may underestimate actual spending. Syria had 18,000 troops in Lebanon and employs 150 Russian advisors. The UN provides 1,037 troops to Syria.

## 18 INTERNATIONAL COOPERATION

Syria is a founding member of the UN, having joined on 24 October 1945, and belongs to ESCWA and all the nonregional specialized agencies except WIPO. It is a charter member of the Arab League, set up in 1945 to foster cooperation in foreign and domestic affairs. Syria also belongs to G-77 and OAUPEC.

Between February 1958 and September 1961, Syria and Egypt were joined in the United Arab Republic. During that period, the UAR was technically joined with Yemen in the United Arab States, though with little practical effect. Another federation, established formally in April 1963 between Syria, Egypt, and Iraq, was never implemented; it was officially terminated in July 1963 after Nasserite loyalists attempted unsuccessfully to overthrow Syria's Ba'athist regime. On 1 January 1972, Syria formally became part of the Federation of Arab Republics, with Egypt and Libya; the federation also had little practical effect because of a deterioration in Egypt's relations with Syria and especially with Libya. In June 1974, Syria and Jordan established a joint commission to coordinate foreign and military policy. Subsequent efforts to establish unions with Iraq and Libya bore little fruit. Diplomatic relations between Syria and the United States, which had been suspended after the 1967 Arab-Israeli war, were resumed on 16 June 1974, after US Secretary of State Henry Kissinger successfully mediated a Golan Heights disengagement agreement.

## 19 ECONOMY

Despite repeated announcements of economic reforms, Syria's economy continues to be dominated by the state with the government budget acting as the principle tool for managing the economy. In 2002 the government announced that its program for privatization had been replaced by a priority on making state enterprises more efficient.

Statistics on the Syrian economy are subject to government manipulation and revision, and may be inaccurate and inconsistent. Traditionally, Syria is an agricultural economy, and by 2001 estimates, this sector accounted for 40% of the labor force and 27% of the GDP. Subsistence agriculture has given way in recent years to modern production and marketing methods, although 80% is still rain-fed and vulnerable to drought. Droughts in 1997 and 1999 were significant factors lowering GDP growth. Wheat and barley constitute two-thirds of the cultivated area but cotton is the main cash crop.

Development of the state-owned oil industry and exploitation of other mineral resources, notably phosphates, have helped to diversify Syrian industry, which was formerly concentrated in light manufacturing and textiles. Although Syria's oil production is small by Middle Eastern standards, in 2001 oil accounted for 70% of Syria's exports and 20% of its GDP. Syria became an oil exporter in 1987, but at present levels of proven reserves it will become an importer against within ten years.

In recent years economic growth in Syria has depended on oil prices, foreign aid and good weather. Low oil prices and drought dampened growth in the late 1980s, but in the first half of the 1990s due to increased oil production, recovery from drought and nearly \$5 billion in foreign aid as a "reward" for its participation in the Gulf War, combined, to help the economy to register average annual growth rates of 5.3% in the late 1990s. Oil production peaked in 1996 at about 600,000 bbl/d, after which it declined due to technical problems and depletion. Modest growth was restored in 2000 and 2001 (about 2.1% and 2.0%, respectively) with the increase in oil prices. For 2002, real GDP growth is an estimated 3.2%.

On 14 July 1998 Iraq and Syria signed a Memorandum of Understanding reopening the Iraqi Petroleum Company (IPC) pipeline built in 1934 connecting the Kirkuk oil fields with the Syrian port of Banias on the Mediterranean. Syria had closed the pipeline in 1982 when it broke off diplomatic relations with Iraq and shifted to Iran as an oil supplier. The IPC pipeline had been severely damaged during the Gulf War and it was not until March 2000 that it was reported serviceable. From mid-November 2000, numerous press reports began circulating claiming that the IPC pipeline was being used to ship Iraqi oil to Syrian refineries on favorable terms, allowing Iraq to obtain oil revenues above the limits set by the United Nation's oil-for-food program. Iraq and Syria denied the allegations, but according to the US Department of Energy (DOE), independent analysts determined that Syria's export levels of crude oil in 2001 could not have been attained without importing from Iraq in the range of 150,000 and 200,000 bbl/d. In November 2001 Iraq and Syrian reportedly signed an agreement on building a new, \$200 million pipeline to replace the aging IPC line. In April, 2003, as part of the invasion of Iraq, American troops shut down the IPC pipeline. The cost to Syria of the shutdown was estimated at \$500 million to \$1 billion a year.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Syria's gross domestic product (GDP) was estimated at \$54.2 billion. The per capita GDP was estimated at \$3,200. The annual growth rate of GDP was estimated at 2%. The average inflation rate in 2001 was 0.3%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 27% of GDP, industry 23%, and services 50%. Foreign aid receipts amounted to about \$9 per capita and accounted for approximately 1% of the gross national income (GNI).

The World Bank reports that in 2001 per capita household consumption (in constant 1995 US dollars) was \$481. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the same period private consumption declined at an annual rate of 1%.

## 21 LABOR

The Syrian labor force is well educated and well trained in comparison with those of other Arab countries, but its size is small because about half the population is under 15 years of age and because many skilled workers are employed abroad in OPEC member nations. It has been estimated that 4.7 million persons were employed in 1998. As of 1996, 40% worked in agriculture, 40% in services, and 20% in industry. There is a high level of underemployment, and unemployment was last officially reported at 20% in 2000. Many unskilled persons in agriculture and industry work only seasonally. The government is attempting

to meet the demand for trained workers by establishing vocational schools.

The statutory workweek is 36 hours. In 2002, the minimum wage was \$57 per month in the public sector and between \$49 and \$53 per month in the private sector. The law mandates one day of rest per week. These regulations are enforced through the Minister of Labor and Social Affairs. Generally, the legal minimum age for employment is 16 years, with some exceptions. The Labor Law of 1959 established the right of workers to form unions and empowered the government to regulate hours of work, vacations, sick leave, health and safety measures, and workers' compensation. However, unions must belong to the government's bureaucratic labor confederation. The confederation acts merely as a conduit to transfer directives from government decision makers to unions and workers. Thus there is no meaningful right to strike or bargain collectively. The government also is authorized to arbitrate labor disputes.

## 22 AGRICULTURE

About 6.1 million hectares (15.1 million acres) are arable, but the area actually cultivated is about 5.5 million hectares (13.6 million acres), or 30% of the total area. Since only one-third of cultivated land is irrigated, agriculture depends on rainfall, which is uncertain, and in lean years Syria becomes a net importer of wheat and barley; this strains the whole economy and hampers development. The government has two approaches to this problem: to increase the use of fertilizers in low rainfall areas and to add substantially to irrigated cultivation. The irrigated area was expected to be doubled through the Euphrates Dam project, which was completed in 1978. Lake Assad, formed by the dam, was planned eventually to provide irrigation for some 640,000 hectares (1,581,000 acres). Costs of land reclamation, technical difficulties due to gypsum in the soil, and low water, in part caused by Turkish damming upstream, have slowed progress. Total irrigated area had reached an estimated 1,213,000 hectares (2,997,000 acres) in 1998. The government has allocated an increasing share of its investments to irrigation, but full development of irrigation schemes is expected to take at least another 20 years. However, given the current water management policies, Syria could face a serious water shortage much sooner.

Traditionally, much of Syria's agricultural land was held by landowners in tracts of more than 100 hectares (250 acres); sharecropping was customary. This picture was greatly altered by the government's agrarian reform program, begun in 1958. The law, as modified in 1963, fixed the maximum holding of irrigated land at 15–50 hectares (37–124 acres) per person and that of nonirrigated land at 80 hectares (198 acres) per person. All expropriated land available for cultivation has been allotted to farmers.

The principal cash crop is cotton, but cotton's share of total export value declined from 33% in 1974 to 3.3% by 2001. Other cash crops are cereals, vegetables, fruit, and tobacco. Since the government suspended convertibility of the Syrian pound, grain and other agricultural products have been smuggled to Lebanon in exchange for goods not available through the state importing agencies. Production (in thousands of tons) for major agricultural commodities in 1999 was: wheat, 2,691; barley, 424; corn, yellow, 125; tomatoes, 250; potatoes, 250; olives, 401; grapes, 452; apples, 273; oranges, 275; cotton lint, 305; sugar beets, 950; and tobacco, 20.

## 23 ANIMAL HUSBANDRY

Grazing land occupies 8.3 million hectares (20.5 million acres), or about 45% of Syria's total area. Stock raising contributes significantly to the Syrian economy. Between 1963 and 1981, livestock herds more than doubled in number, and since 1975 the number of model farms, veterinary units, and livestock artificial insemination centers has increased considerably.

Sheep are the most important livestock animals in Syria, grazing on poorly developed wheat and barley fields and on the remains of crops such as wheat and corn. In 2001 there were an estimated 12.4 million sheep. Mutton production was an estimated 169,000 tons in 2001; sheep milk production, 483,000 tons. The price of mutton of the Awassi breed, which is in high demand in Syria, was about 35% higher than beef in 1995.

There were also 1,979,000 goats, 837,000 head of cattle, 13,500 camels, 2,500 buffaloes, and 21,200,000 chickens in 2001. Animals and animal products account for 40% of total agricultural output by value. Production of cow's milk in 2001 totaled 1,032,000 tons; cheese, 91,900 tons; butter and ghee, 15,200 tons; and eggs, 133,500 tons.

## 24 FISHING

There is some fishing off the Mediterranean coast and from rivers and fish farms. The commercial catch was 6,572 tons in 2000, with common carp and tilapias from inland waters accounting for 20%.

## 25 FORESTRY

Syria is almost entirely denuded of native forests. Approximately 461,000 hectares (1,139,000 acres) were forestland in 2000, but only about 50,000 cu m (1.77 million cu ft) of roundwood were produced in 2000. Most of the designated forestland consists either of wholly barren land or of rangeland with arboreous shrubs. The substantial forests are mainly on the northern slopes of the Ansariyah range, on the windward side of the Anti-Lebanon Mountains, and in the Latakia region.

## 26 MINING

Syria's mineral resources were not extensive, but deposits of iron, petroleum, and phosphate have been exploited in recent years; Syria was the fifth-leading exporter of phosphate rock. Petroleum was the leading industry in 2002—the oil and gas industry accounted for nearly three-quarters of Syria's export earnings and more than one-third of its GDP—and phosphate rock mining was its sixth-leading industry. Production of phosphate rock (gross weight) was 2 million tons in 2001, down from 2.5 in 1998; 74% was exported, most to Europe. Other mineral deposits included asphalt, salt, chromite, and marble. Marble and salt were mined in commercial quantities, although no marble was produced in 2001. Output of salt totaled 106,000 tons. The country also produced hydraulic cement, refractory-grade dolomite, natural gas, natural gas liquids, gravel and crushed rock, gypsum, nitrogen, phosphatic fertilizers, phosphoric acid, construction and industrial sand, steel, dimension stone, sulfur, and volcanic tuff. No metal was mined in 2001, and no marble was produced. Deposits of silica sand in al-Qaristyn had resources of 150 million tons. The mineral industry was owned and controlled by the government. In 2001, the government announced its intentions to open the mineral industry to local and foreign private investors. The rapid expansion of the construction sector in the near future was expected to increase Syria's demand for cement, gypsum, limestone, gravel, sand, and steel.

## 27 ENERGY AND POWER

Oil in commercial quantities was first discovered in the late 1950s. In 1986, production of 2.5 million tons a year of low-sulphur crude from a new field near Deir ez-Zor in eastern Syria began lessening Syrian dependence on external sources. Total production steadily increased to 14.5 million tons in 1988 and 31.7 million tons in 1995. By 1994, Syria was exporting 57% of its oil output. Oil output peaked at 604,000 barrels per day in 1996. At that point it started to decline as reserves began to become depleted, and also due to technological problems. By 2001, production had declined to 527,000 barrels per day. The proven reserves of Syria's five oil fields, all located in the

northeastern part of the country, amounted to an estimated 2.5 billion barrels (400 million tons) of crude petroleum at the beginning of 2002. Oil output in recent years has reached a plateau, because older fields such as the Karatchuk (discovered in 1968) are reaching maturity. Production of oil is expected to steadily decline in upcoming years, and proven oil reserves are only expected to last until about 2010, while consumption increases as the population grows. As of 2000, however, it was estimated that only 36% of Syria's potential oil and gas deposits had been drilled.

Oil remains crucial to Syria's economy, accounting for about 60% of export earnings in 1999. A 663-km (412-mi) pipeline linking the oil fields, the coast at Tartus, and the refinery at Homs was completed in 1968. The pipeline, carrying Iraqi oil across Syria to Lebanon, was closed by Syria in April 1982, showing Syrian support for Iran in the Iraqi-Iranian war. Syria also refused to support Iraq during the 1991 Persian Gulf War, for which it was "rewarded" with billions of dollars in foreign aid. In 1998, Syria and Iraq signed an agreement to reopen the pipeline. In April, 2003, as part of the invasion of Iraq, American troops shut down the IPC pipeline. The cost to Syria of the shutdown was estimated at \$500 million to \$1 billion a year.

All oil concessions were granted exclusively in 1964 to the General Petroleum Authority, a government agency that owns the Homs refinery. In 1972, the pipelines and facilities in Syria of the Iraq Petroleum Co. were nationalized; the same year, Syria joined OAPC. During the early 1980s, the government-owned Syrian Petroleum Co. and three Syrian subsidiaries of US oil companies—Marathon, Shell, and Coastal States—were engaged in further oil exploration. Oil exploration has slowed in recent years; only four of the 14 companies present in Syria in 1991 remained there in 1999.

Syria's natural gas production, however, has increased ten-fold since the mid-1980s. Proven natural gas reserves were officially estimated at about 200 billion cu m in early 2002. Production in 1999 totaled 6 billion cu m. Syria's current energy strategy relies heavily on the substitution of natural gas for oil in power generation in order to free up as much oil as possible for export.

Prior to 1983, as much as 70% of the production of electricity was hydroelectric, primarily from the Euphrates River plant. Thermal production, primarily oil-fueled plants, supplied 64.5% of electricity production in 2000, while hydropower accounted for 35.5%. Total electricity production in 2000 was 21.7 billion kWh. Consumption of electricity in 2000 was 17.7 billion kWh. Installed capacity in 2001 was 4,745,000 kW, up from 3,230,000 kW in 1988. The addition of electricity supply capacity has become a national priority; since 1993 several contracts have been awarded for new gas turbine power stations. These include the 600 MW al-Zara oil and gas plant completed in 2000.

## 28 INDUSTRY

Syria has been renowned since ancient times for such handicrafts as Damascus brocade and Syrian soap. Some of these traditions endured even after 1933, when the first mechanized plant for spinning and weaving was set up in Aleppo. In 1965, the textile industry was nationalized and reorganized into 13 large state corporations. A series of nationalization measures after 1963 resulted in public control of most industry, but recent efforts have been made to stimulate the expansion of the private sector, as state-owned industries suffer from low productivity. In the 1970s, government policy began emphasizing domestic industrial production (coupled with high tariffs on imported consumer goods) of iron and steel, fertilizers, chemicals, and household appliances. In 1995, manufacturing and mining accounted for 14% of GDP. By 2000, this proportion had reached 23%. In 2002, the government announced that priority would be shifted from efforts to privatize the state-owned enterprises (SOEs) to continued efforts to increase their efficiency.

Important industries include the chemical and engineering industries, the food industry, and oil refining. The largest component of the General Establishment of Chemical Industries (GECI) is the cement industry, which is considered a strategic and is wholly state-owned. The General Organization for Cement and Building Materials consists of 7 state-owned but independently operated cement companies. The total capacity in 2001 was about 5 million tons per year, with government plans to increase this to 8 million tons per year. Another subsidiary of GECI is the General Fertilizer Company (GFC). It has two nitrogenous fertilizer plants and one phosphate-based unit, all located at Homs. Under construction in 2002 was a 500,000 ton/year triple-super-phosphate plant near Palmyra being built by Bechtel and Makad International. Also planned is a 450,000 nitrogenous complex near Hasaka to use natural gas from the Omar field in northeast Syria. Syria's fertilizer industry rests on its ample deposits of natural gas and phosphates, and produces ammonia, urea and nitrogenous fertilizers. Syria also has an iron-rolling mill at Homs and factories producing furniture, refrigerators, paper, glass and plastic products, and television sets. Some 70,000 tons of crude steel were produced in 1995. Syria has a total refinery capacity of 239,860 barrels per day from two refineries: a 132,725 barrels per day capacity refinery at Banias and a 107,140 barrels per day capacity refinery at Homs. Plans to upgrade both have been announced.

### 29 SCIENCE AND TECHNOLOGY

Courses in basic and applied science are offered at Al-Baath University (founded in 1979 at Homs), the University of Aleppo (founded in 1960), the University of Damascus (founded in 1903), and Tishreen University (founded in 1971 at Lattakia). In 1987-97, science and engineering students accounted for 23% of college and university enrollments. Major scientific research institutions in Syria include the International Center for Agricultural Research in the Dry Areas (ICARDA), founded in 1977 at Aleppo and the Arab Center for the Study of Arid Zones and Dry Lands (ACSAD), founded in 1971 at Damascus. The country's advanced petrochemical technologies have been installed by foreign oil companies. In early 1987, an estimated 2,500 Soviet military technicians were stationed in Syria; civilian personnel also provided assistance in various fields.

### 30 DOMESTIC TRADE

Damascus and Aleppo are the principal commercial centers. Virtually all importers, exporters, and wholesalers have offices in one or both cities. The chief retail centers have general and specialized stores as well as large bazaars. Smaller bazaars and open markets are found in many Syrian towns and villages. Advertising agencies use newspapers, magazines, moving picture theaters, signs on buses, and other media.

The Syrian government cracked down on smuggling in May 1993. Most of the previously smuggled commodities can now be imported through official channels. Commodity smuggling from Lebanon, however, is still present and provides an "unofficial market" for imported products at the free market exchange rate reflective of world price levels.

Usual business hours are from 9 AM to 1 PM and from 3:30 PM to 7 PM. Friday is the weekly day of rest. Banking hours are Saturday-Thursday, 8 AM to 2 PM.

The Damascus International Fair and the Syrian Industrial Marketing Fair are annual events.

### 31 FOREIGN TRADE

During the 1980s, Syria focused on increasing its trade with socialist nations. However, when the Soviet Union broke apart in 1991, Syria increased trade with European nations. In 2000, the EU countries took 66% of exports and supplied 31% of imports, while countries of the Middle East took 28% of exports and

supplied 14% of imports. Syria's main export commodities are crude petroleum (69%) and refined petroleum products (7.0%). Other exports include cotton (4.3%), vegetables (2.9%), garments (2.8%), and fruits and nuts (2.0%).

In 2000 Syria's imports were distributed among the following categories:

Consumer goods	2.7%
Food	12.9%
Fuels	3.7%
Industrial supplies	51.7%
Machinery	14.0%
Transportation	7.5%
Other	7.5%

Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
Italy	1,484	237	1,247
France	1,045	180	865
Turkey	482	191	291
Saudi Arabia	272	160	112
Lebanon	189	n.a.	n.a.
Spain	180	83	97
Germany	137	258	-121
United States	49	258	-209
Ukraine	n.a.	236	n.a.
China (inc. Hong Kong)	n.a.	204	n.a.

### 32 BALANCE OF PAYMENTS

Syria had serious deficits in its trade balance since 1976, but import restrictions, foreign aid (especially from other Arab governments), and drawdown of foreign exchange holdings enabled the government to cover the losses. Since the late 1980s, the government has been encouraging private sector trade. Private sector exports consequently skyrocketed from \$79 million in 1987 to \$517 million in 1990, thus reducing the trade deficit. An upturn in world oil prices at the end of the 1990s and into the early 2000s and an improvement in the country's agricultural exports greatly improved the balance of payments situation.

The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Syria's exports was \$5 billion while imports totaled \$4 billion resulting in a trade surplus of \$1 billion.

The International Monetary Fund (IMF) reports that in 2000 Syria had exports of goods totaling \$5.15 billion and imports totaling \$3.7 billion. The services credit totaled \$1.7 billion and debit \$1.67 billion. The following table summarizes Syria's balance of payments as reported by the IMF for 2000 in millions of US dollars.

<b>Current Account</b>	<b>1,062</b>
Balance on goods	1,423
Balance on services	33
Balance on income	-879
Current transfers	485
<b>Capital Account</b>	<b>63</b>
<b>Financial Account</b>	<b>-392</b>
Direct investment abroad	270
Direct investment in Syria	...
Portfolio investment assets	...
Portfolio investment liabilities	...
Other investment assets	1,049
Other investment liabilities	-1,711
<b>Net Errors and Omissions</b>	<b>-192</b>
<b>Reserves and Related Items</b>	<b>-541</b>

### 33 BANKING AND SECURITIES

Syria's financial services sector is underdeveloped. Besides the Central Bank, there are five banks in the country, all of which are state-run. The Central Bank, founded in 1956, is the bank of issue for currency, the financial agent of the government, and the cashier for the treasury. The Agricultural Bank makes loans to farmers at low interest; the Industrial Bank (nationalized in 1961), the People's Credit Bank and the Real Estate Bank (both founded in 1966), and the Commercial Bank of Syria (formed in 1967 by a merger of five nationalized commercial banks) make loans in their defined sectors. Unused Syrian pounds cannot be sold back to the Commercial Bank and the private exchange of foreign currencies and Syrian pounds is a criminal act. These strict currency controls are the largest disincentives to investment and foreign trade. So decrepit is the country's financial services sector that most Syrian businessmen and foreigners use banks in either Lebanon or Cyprus. Foreign diplomats in Damascus, for instance, use accounts in the Chtaura, in Lebanon's Beqaa valley, around one hour by car from Damascus.

Private sector groups have called for reforms such as private participation in banking, the creation of a stock exchange, and separation of the Central Bank of Syria from the government. Privatization of banks, which had been prohibited for 30 years, arrived in 2001 with new banking reform laws. The country's four banks are all owned by the government and interest rates are fixed by law. In March 2001 President Bashir issued Law 28 authorizing the establishment of private and joint venture banks, with foreigners permitted up to 49% ownership. To date none has been established but in January 2003 the government identified five banks to be licensed in the third quarter.

The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$37.4 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$62.0 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 5%.

### 34 INSURANCE

All insurance in Syria was nationalized in 1963 and is controlled by the government-owned General Insurance Organization of Syria (formerly the Syrian Insurance Co.). Motor vehicle insurance is compulsory. In 1999, 337.2 million dollars of premium was written in Syria. Twenty-two million was spent on these premiums, making the insurance sector's share of the Gross Domestic Product .40%.

### 35 PUBLIC FINANCE

Although Syria was able to balance its budget in 1992, large military expenditures and continued subsidization of basic commodities and social services have produced deficits in subsequent years. State intervention in business and price controls put a damper on growth.

The US Central Intelligence Agency (CIA) estimates that in 2001 Syria's central government took in revenues of approximately \$5 billion and had expenditures of \$7 billion. Overall, the government registered a deficit of approximately \$2 billion. External debt totaled \$22 billion.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

REVENUE AND GRANTS	100.0%	5,000
Non-tax revenue	27.2%	1,360
Tax revenue	72.8%	3,639
Capital revenue	<0.1%	1
EXPENDITURES	100.0%	7,000
General public services	3.7%	262
Defense	23.6%	1,655
Education	9.2%	645
Health	2.3%	164
Social security	5.3%	372
Housing and community amenities	1.0%	70
Recreation, cultural, and religious affairs	1.5%	108
Economic affairs and services	44.0%	3,083
Other expenditures	9.2%	641

### 36 TAXATION

Relatively low salaries have kept the tax base narrow, and price controls have restricted the taxable profits from industry. By decree in 2001, the president raised the minimum exemption for income taxes to 1000 Syrian pounds (about \$22). There are taxes on individual income (at progressive rates 5% to 12.5%) and business profits (at progressive rates 10 to 45%). Shareholding companies and industrial limited liability companies are taxed at a flat rate of 32% and 42% respectively. For Syrian residents, income from movable capital—interest, royalties, and foreign sources of dividends—are taxed at a flat rate of 7.5%; for nonresidents, the rate is 15% unless reduced by an applicable tax treaty. There is no general sales tax, but taxes are assessed on specific items like petrol, rice and sugar.

### 37 CUSTOMS AND DUTIES

Goods imported into Syria are subject to a customs duty and "unified" tax. Rates are progressive and, as of 2002, range from 1% to 250% depending on the government's view of the necessity for the products. Food and industrial raw materials carry low rates while luxury goods, such as automobiles, have rates of 150–250%. The unified tax is a surcharge on all imported goods and ranges from 6% to 35%. The tax helps to support the military, schools, and municipalities.

Syria has free trade agreements with Bahrain, Kuwait, Iraq, Jordan, Lebanon, Qatar, Sudan, Sa'udi Arabia, and the United Arab Emirates. Trade agreements with Libya, Morocco, Oman, and Tunisia are in negotiations. There is a single-column tariff modified by trade and transit agreements with other Arab League states, under which member countries are granted preferential duties on some products and duty-free entry for others. Syria accepts the Arab League boycott of Israel.

### 38 FOREIGN INVESTMENT

Although a government decree prohibits confiscation of foreign investments, there are no safeguards against nationalization of property. In principle the judicial system upholds the obligations of contracts but in practice decisions are subject to outside pressures. In addition, poor infrastructure, power outages, lack of financial services, and complex foreign exchange regulations have all contributed to Syria's failure to attract significant amounts of foreign investment. Four major pieces of legislation have been passed to encourage foreign investment. Decision 186 issued in 1985 was aimed at encouraging investment in tourism. Decree 10 in 1986 was designed to encourage joint-venture agricultural companies. In June 1991, in the wake of the Gulf War, the government issued Investment Law 10 aimed at promoting investment in all sectors of the economy by providing the same incentives to local and foreign investors. Qualifying investors are granted tax holidays and duty-free privileges for the import of capital goods. The law succeeded in attracting investments particularly in textiles, pharmaceuticals, food-processing, and other light industries. The primary investors have been from the

Gulf states. In 1999 it was estimated that nearly 1,500 projects valued at \$6.5 billion had been approved since the reforms of 1991. In May 2000, Decree 7 amended Law 10 of 1991 to make investment more attractive by extending tax holiday periods, increasing hard currency flexibility, reducing income taxes on shareholding companies, and offering sector and regional incentives. A tax holiday of five years is extended to seven years for enterprises that export over 51% of their output.

The most significant foreign investment in Syria had been in gas and oil. In 1990, twelve foreign oil firms had operations in Syria but as of mid-2002, only five remained—Shell, Total-Fina-Elf, Mol (Hungary), INA-Naftaplin (Croatia) and Conoco. Other foreign investors include Mitsubishi, Samsung, Mobil, Nestle, and Prince Walid Bin Talal of Saudi Arabia. Foreign investment is complicated by Syrian requirements of import and export licenses on every item imported and then reexported, no matter the value, and with US sanctions on supplying Syria any “dual” use items such as computers, oil exploration equipment. Despite a recent 20% increase, the average wage in the public sector remains below minimum subsistence levels, and provides a strong motivation for widespread corruption. In 2002, also, an increasingly strict enforcement of the Arab League’s boycott of Israeli goods adds more complications to obtaining supplies and more layers of red tape. US government insurance programs for foreign investors, such as OPIC, are not available for investors in Syria, and the country is on the State Department’s list of Sponsors of Terrorism. USAID ended assistance to Syria in 1983, and financing cannot be obtained through government agencies like the Export-Import Bank. There are six duty free zones in Syria: near the border town of Dar’a (a joint venture with Jordan), north of Damascus at Adra, in Damascus, at the Damascus Airport, and at the ports of Latakia and Tartus. According to official estimates, there were 350 foreign and joint-venture investment projects in the country as of 2002, with a total value of about \$3 billion.

### 39 ECONOMIC DEVELOPMENT

The transformation of Syria’s economy began with the Agrarian Reform Law in 1958, which called for the expropriation of large tracts of land. During the union with Egypt, laws were passed for the nationalization of banks, insurance companies, and large industrial firms. After the Ba’ath Party came to power in 1963, the socialist trend reasserted itself with greater force. A series of laws created a new banking system and instituted public ownership of all large industries. By the early 1970s, however, the government had relaxed many restrictions on trade, foreign investment, and private-sector activity, in an effort to attract private and foreign, especially Arab, contributions to Syria’s economic growth.

Since 1961, a series of five-year plans has concentrated on developing the nation’s infrastructure and increasing agricultural and industrial production. Investments reached 60% of the target under the first plan (1961–65); the second plan (1966–70) aimed to expand real GDP by 7.2% annually but achieved a yearly growth rate of only 4.7%. The third plan (1971–75) was disrupted by the 1973 Arab-Israeli war, but thanks to aid from other Arab states and large oil price increases, Syria experienced an economic boom with a high annual growth rate of 13%. The fourth plan (1976–80) was hampered by the high cost of Syria’s military intervention in Lebanon and a cutoff of aid from Gulf states; economic growth varied widely, from 2.8% in 1977 to 9.2% in 1980.

Under the fifth plan (1981–85), development projects begun during the previous plan were to be continued or completed. Total investment was estimated at \$101 billion, of which 23% was to be provided by the private sector. Real GDP was to grow by 7.7% annually; actual growth rates ranged from 10.2% in 1981 to 3.6% in 1984, averaging 2.3% for the period.

Syria’s sixth development plan (1986–90) emphasized increased productivity rather than new projects, with special emphasis on agriculture and agro-industries. Actual investment in agriculture accounted for 18.7% of total spending. The share of the industry and energy sector was at 19.7%, far below the planned 30.9%. Services received the highest share, with 53% of the total.

The seventh five-year plan (1991–95) proposed total investments of \$259 billion, more than double the amount spent under the previous plan. It aims at spending 81.7% of the total on the public sector and 18.3% on the mixed sector/private-sector cooperatives. Officials at the Supreme Planning Commission have stated that agriculture and irrigation continue to receive top priority, with self-sufficiency in cereal production a policy objective. Output in agriculture and manufacturing is planned to expand by 5.6% per annum.

During 1949–86, multilateral assistance to Syria totaled \$822.7 million, of which 77% came through the IBRD. US loans and grants during the same period amounted to \$581.9 million. Financial aid to Syria from Arab oil-producing states is not made public. Since 1982, Syria has received a million tons of oil annually from Iran, free of charge. Since Syria is in arrears on payments to the World Bank, disbursements were halted in 1988 and projects canceled. Syria has been in violation of the Brooke Amendment since 1985. The improvement in Syria’s external payment position in 1989 as well as the resumption of aid flows to Syria in 1990 due to its participation in the coalition against Iraq helped to restore its ability to repay its debt.

### 40 SOCIAL DEVELOPMENT

The Ministry for Social and Labor Affairs was formed in 1956 to protect the interests of the working population, provide hygienic housing conditions for workers, and support philanthropic endeavors. A system of social insurance provides old age pensions and disability and death benefits. The pension system is funded by 14% contributions from employers and 7% from employees. Retirement is set at age 60 with 180 months of contributions, or age 55 with 240 months. Survivors’ pensions are paid to widows only; widowers are covered only if disabled. Employers also contribute 3% of payroll to fund workers’ compensation providing temporary and permanent disability benefits, as well as medical and survivor benefits.

Although the government supports equal pay for equal work and encourages education for women, Islamic precepts govern many areas of women’s lives, including marriage, divorce, child custody, and inheritance. Women are making slow gains in the workplace. Victims of domestic violence do not seek redress due to social stigma.

The human rights situation is poor and fundamental rights are denied. Arbitrary arrest and incommunicado detention are common. Detainee’s relatives are also arrested to force confessions. Torture is common. Public criticism of the Ba’ath Party or of government officials is not permitted. Local human rights organizations are banned, although one international organization was allowed to conduct a limited fact-finding mission.

### 41 HEALTH

In 1947, Syria had only 37 hospitals, with a total of 1,834 beds, but by 1985, the number of hospitals had increased to 195, with 11,891 beds. As of 1999, there were an estimated 1.3 physicians and 1.4 hospital beds per 1,000 people. The government also maintains mobile hospital units, modern laboratories, X-ray centers, sanatoriums, and dispensaries. In 1991, there were 10,114 physicians, 3,362 dentists, 3,634 pharmacists, and 11,957 nurses. In 1990–97, was a nurse to doctor ratio of 1:2. The population per nursing professional in 1993 was 1:159. In 1993, about 99% of the population had access to health care

services. As of 1999, total health care expenditure was estimated at 2.5% of GDP.

Since World War II, malaria has been virtually eliminated with the aid of the World Health Organization, but intestinal and respiratory diseases associated with poor living conditions are still common, particularly in rural areas. In 1995, there were 185 cases of leprosy and 1,235 cases of measles reported; in 1993 there were 961 cases of malaria. In 1999, there were an estimated 85 cases of tuberculosis per 100,000 reported. In 2000, 80% of the population had access to safe drinking water and 90% had adequate sanitation.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 30.1 and 5.1 per 1,000 people. About 45% of married women (ages 15 to 49) used contraception in 2000. In the same year, the infant mortality rate was 24 per 1,000 live births. In 1998, maternal mortality was 110 per 100,000 live births. Average life expectancy was 70 years for both men and women. Immunization rates for children up to one year old in 1995 were tuberculosis, 100%; diphtheria, pertussis, and tetanus, 100%; polio, 100%; and measles, 98%. Rates for DPT and measles as of 1999 were, respectively, 94% and 97%.

Tobacco consumption rose from 3.3 kg (7.3 lbs) in 1984–86 to 3.4 kg (7.5 lbs) a year per adult in 1995. There were 36 cases of AIDS in 1996, with an HIV prevalence rate of 0.0 per 100 adults in 1999.

## 42 HOUSING

The 1981–85 development plan allocated \$2.6 billion to construction projects, including housing. According to the latest available information for 1980–88, total housing units numbered 1,670,000 with 6.4 people per dwelling.

## 43 EDUCATION

Elementary schooling is free and compulsory for six years. The adult illiteracy rates for the year 2000 were estimated at 25.6% (males, 11.7%; females, 39.6%). The school program starts with a primary course, after which the student may obtain an elementary-school certificate. In 1997 there were 2,690,205 primary-school pupils with 114,689 teachers in 10,783 schools. Student-to-teacher ratio stood at 23 to 1. At the secondary level in the same year, there were 957,664 students and 64,661 teachers. As of 1999, 92% of primary-school-age children were enrolled in school, while 38% of those eligible attended secondary school. Syria has four universities: the University of Damascus (founded in 1923); the University of Aleppo (1960); Tishrin University (Latakia, 1971); and Al-Ba'ath University in Homs (1979). In 1995, all higher-level institutions had a total of 4,733 teachers and 215,734 students. As of 1999, public expenditure on education was estimated at 2.8% of GDP.

## 44 LIBRARIES AND MUSEUMS

The Assad National Library founded in 1984 in Damascus and an adjunct of the Arab Academy, has 262,000 volumes and is well known for rare books and manuscripts. There are three other national libraries, located in Aleppo, Homs, and Latakia. The library of the University of Damascus has 169,000 volumes. The Al Zahiriah public library in Damascus has 100,000 volumes.

The most important museum is the National Museum in Damascus, founded in 1919. It contains ancient Oriental, Greek, Roman, Byzantine, and Islamic collections and houses the Directorate-General of Antiquities, established in 1947, which supervises excavations and conserves antiquities under the Antiquities Law. There are small museums in Aleppo, Hama, Homs, Palmyra, Tartos, and other cities.

## 45 MEDIA

All communications facilities are owned and operated by the government, including postal service, telegraph, telephone, radio, and television. There were 1.3 million main telephone lines in use in 1997. cellular service was introduced in the country in 2000, but the cost has limited the number of subscribers to about two of every 1,000 people.

The Syrian Broadcasting Service transmits on medium wave and shortwave, and broadcasts in Arabic and 10 foreign languages. Syrian Arab TV has two stations. Altogether, there were 9 AM and 1 FM radio station in 1999, and 54 television stations. In 2000, Syria had 276 radios and 67 television sets in per 1,000 population. In 2001, there were 32,000 Internet subscribers served by one government-controlled and limited service provider.

Most Syrian newspapers are published by government ministries and popular organizations. Principal dailies in Arabic (with 2002 circulations) include *Al-Ba'ath* (40,000), published by the Ba'ath Arab Socialist Party; *Tishrin* (50,000), and *Al-Thawrah* (40,000), all in Damascus. In 2000, the government authorized publication of the first private paper since 1963. That paper, *The People's Voice*, is published by the National Progressive Front (Communist Party). The Union Socialist Party has since published its own paper, *The Unionist*. A private satirical paper, *The Lamplighter*, has also been allowed, but has maintained content which is, for the most part, politically nonsensitive.

Though the constitution provides for free expression of opinion in speech and writing, in practice the government is reported to restrict these rights significantly. Written criticism of the president, the president's family, the Ba'ath party, the military, and the regime are not permitted.

## 46 ORGANIZATIONS

Syria has chambers of commerce, industry, and agriculture, most of which are members of the Federation of Syrian Chambers of Commerce. The International Center for Agricultural Research in the Dry Areas is based in Aleppo. Other multinational groups based in Syria include the Arab Institute for Occupational Health and Safety and the Arab Inter-Parliamentary Union. The cooperative movement is well developed.

The most prominent organizations are the Arab Academy and the Arab Club, both in Damascus. The General Women's Federation was established in 1967 as one of several organizations through which the Ba'ath Party has tried to mobilize popular energies and consolidate its control. Analogous groups include the General Union of Peasants, the General Federation of Trade Unions, the General Union of Students, and the Revolutionary Youth Organization. The Red Crescent Society is active.

## 47 TOURISM, TRAVEL, AND RECREATION

Syria has many famous tourist attractions, such as the Krak des Chevaliers, a Crusaders' castle; Ra's Shamrah, site of the ancient city of Ugarit; Ar-Rusafah, with its early Christian monuments and a Muslim palace; and the ancient town of Dura Europus (now As-Salihyah). Palmyra, the capital of Queen Zenobia, is a fairly well preserved ruin of an Arabo-Hellenic city. The Umayyad Mosque, which incorporates parts of the Byzantine Cathedral of St. John the Baptist, in Damascus, is popular. Syria's mountains and Mediterranean beaches also attract visitors.

Passports, visas, and smallpox vaccinations are required of visitors. In 2000, there were 3,014,758 visitor arrivals, mostly from neighboring Middle Eastern countries, and tourist expenditures totaled \$1 billion. As of that year, Syria had 15,461 hotel rooms with 34,209 bed-places, and the hotel occupancy rate was 23%.

According to 2002 US government estimates, the cost of staying in Damascus was \$218 per day.

#### 48 FAMOUS SYRIANS

Among famous Syrians of an earlier period are Queen Zenobia of Palmyra (3d century AD), who led a series of military campaigns against the Romans in order to reopen trade routes; the philosopher Al-Farabi (Muhammad bin Muhammad bin Tarkhan abu Nasr al-Farabi, 872–950), considered by the Arab world as second only to Aristotle; the poet Al-Mutanabbi (Abu at-Tayyib Ahmad bin al-Husayn al-Mutanabbi, 915–65); the mystic-philosopher Shihab ad-Din as-Suhrawardi (d.1191); and the theologian-philosopher Taqi ad-Din Ahmad bin Taymiyah (1263–1328).

Of the Umayyad caliphs, Umar bin 'Abd-al-'Aziz (r.717–20) is still revered as a restorer of true Islam. In a later era, Nureddin (Nur ad-Din, 1118–74), ruler of Aleppo, annexed Damascus and brought Egypt under his control. By unifying Muslim forces against the Crusaders, he made possible the victories of the renowned Saladin (Salah ad-Din, 1138–93), sultan of both Syria and Egypt, whose tomb is in Damascus. Hafez al-Assad (Hafiz al-Assad, 1928–2000) ruled Syria from 1970–2000.

#### 49 DEPENDENCIES

Syria has no territories or colonies.

# TAIWAN

Republic of China  
*Chung Hwa Min Kuo*

**CAPITAL:** T'aipei

**FLAG:** The flag is red with a 12-pointed white sun on the blue upper left quadrant. The 12 points of the sun represent the 12 two-hour periods of the day in Chinese tradition, and symbolize progress. The colors red, white, and blue represent the Three Principles of the people (San Min Chu I) of Sun Yat-sen, father of the Republic of China, and symbolize the spirit of liberty, fraternity, and equality.

**ANTHEM:** *Chung Hwa Min Kuo Kuo Ke (Chinese National Anthem).*

**MONETARY UNIT:** The new Taiwan dollar (NT\$) is a paper currency of 100 cents. There are coins of 50 cents and 1, 5, and 10 dollars, and notes of 50, 100, 500, and 1,000 new Taiwan dollars. NT\$1 = US\$0.0289 (or US\$1 = NT\$34.60) as of 2002.

**WEIGHTS AND MEASURES:** The metric system is employed in government and industrial statistics. Commonly used standards of weights and measures are the catty (1.1 lb or 0.4989 kilograms), the li (0.5 kilometers or 0.31 miles), the ch'ih (0.33 meters or 1.09 feet), and the chia (0.97 hectare or 2.39 acres).

**HOLIDAYS:** New Year's Day and the Founding of the Republic of China (1912), 1 January; Youth Day (formerly known as Martyrs' Day), 29 March; Tomb-Sweeping Day and Anniversary of the Death of Chiang Kai-shek, 5 April; Birthday of Confucius and Teachers' Day, 28 September; National Day (Double Tenth Day), 10 October; Taiwan Retrocession Day, 25 October; Chiang Kai-shek's Birthday, 31 October; Sun Yat-sen's Birthday, 12 November; Constitution Day, 25 December.

**TIME:** 8 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Taiwan, the seat of the Republic of China, lies in the western Pacific Ocean astride the Tropic of Cancer, less than 161 km (100 mi) from the southeast coast of mainland China, from which it is separated by the Taiwan (Formosa) Strait. To the NE, less than 129 km (80 mi) away, is the W end of the Japanese Ryukyu Islands; to the E is the Pacific Ocean; the Philippine island of Luzon lies 370 km (230 mi) to the S.

Besides the island proper, Taiwan comprises 21 small islands in the Taiwan group and 64 islands in the Penghu (Pescadores) group; the total area is 35,980 sq km (13,892 sq mi). Comparatively, the area occupied by Taiwan is slightly larger than the states of Maryland and Delaware combined. Leaf-shaped Taiwan island extends 394 km (245 mi) NNE–SSW and 144 km (89 mi) ESE–WNW; it has a coastline of 1,566 km (973 mi). The Penghu group, lying 40 km (25 mi) west of Taiwan island, has a total area of 127 sq km (49 sq mi).

Also under the control of the Taiwan government are Quemoy (Chinmen) and Matsu, two island groups located strategically close to the mainland Chinese province of Fujian (Fukien). Quemoy is the biggest of a group of six islands, two of which are occupied by the People's Republic of China; it is situated in Xiamen (Amoy) Bay at 118°23'E and 24°27'N and has a total area of 176 sq km (68 sq mi). The Matsu group, consisting of Nankan (the largest), Peikan, Tungyin, and about 10 small islets, is located at 119°56'E and 26°9'N, 30.6 km (19 mi) off the mainland port city of Fuzhou; it has a total area of 28.8 sq km (11.1 sq mi).

The capital city of T'aipei is located on northern Taiwan.

## <sup>2</sup>TOPOGRAPHY

Taiwan perches on the margin of the continental shelf. Along the west coast the sea is rather shallow, averaging 90 m (300 ft) and not exceeding 210 m (690 ft) at the deepest point; however, it

deepens abruptly along the east coast, dropping to a depth of 4,000 m (13,000 ft) only 50 km (31 mi) offshore. The terrain is precipitous on the east coast, with practically no natural harbor except Suao Bay in the north. The west coast is marked by wide tidal flats. Kaohsiung, the southern port, is situated in a long lagoon called Haochiung Bay. The north coast with its many inlets provides Taiwan with its best harbor, Chilung (Keelung).

The eastern two-thirds of the island is composed of rugged foothill ranges and massive mountain chains. A low, flat coastal plain, extending from north to south, occupies the western third. Yü Shan, with an elevation of 3,997 m (13,113 ft), is the highest peak on the island. Mild earthquake tremors are common.

All the rivers originate in the mountains in the central part of the island. They have short courses and rapid streams. The longest river, Choshui, draining westward, is only 190 km (118 mi) long. Only the Tanshui, which flows past T'aipei in the north, is navigable.

## <sup>3</sup>CLIMATE

Taiwan enjoys an oceanic, subtropical monsoon climate. The warm and humid summer lasts from May until September, the mild winter from December until February. The average lowland temperature in January is 16°C (61°F) in the north and 20°C (68°F) in the south; the average July temperature is 28°C (82°F) in both the north and south. The growing season lasts throughout the year, except at elevations above 1,200 m (4,000 ft), where frost and snow occasionally occur.

The average rainfall is 257 cm (101 in), ranging from 127 cm (50 in) at the middle of the western coast to 635 cm (250 in) and more on exposed mountain slopes. Southwest monsoon winds blow from May through September and northeast monsoon winds from October to March. Only the extreme southwest has a distinct dry season. As a result of the tropical cyclonic storms that

sweep out of the western Pacific, typhoons occur between June and October.

#### 4 FLORA AND FAUNA

The flora is closely related to that of southern China and the Philippines. Taiwan has almost 190 plant families, about 1,180 genera, and more than 3,800 species, of which indigenous members constitute about one-third of the total flora. Mangrove forest is found in tidal flats and coastal bays. From sea level to a height of 2,000 m (6,600 ft) is the zone of broad-leaved evergreen tropical and subtropical forest, where ficus, pandanus, palms, teak, bamboos, and camphors are commonly found. The mixed forest of broad-leaved deciduous trees and conifers occupies the next zone, extending from a height of 2,000 to 3,000 m (6,600–9,800 ft). Pines, cypresses, firs, and rhododendrons are grown in this region. Above this level is the zone of coniferous forests, composed mainly of firs, spruce, juniper, and hemlock.

The mammals so far discovered number more than 60 species, 45 of which appear to be indigenous to the island. The largest beast of prey is the Formosan black bear. Foxes, flying foxes, deer, wild boar, bats, squirrels, macaques, and pangolins are some of the mammals seen on the island. There are more than 330 species and subspecies of birds, of which 33 are common to the island, China, and the Philippines, and about 87 are peculiar forms. More than 65 species of reptiles and amphibians inhabit the island. There is an abundance of snakes, of which 13 species are poisonous. The insect life is rich and varied.

#### 5 ENVIRONMENT

The Environmental Protection Agency (EPA) has the main responsibility for environmental policy. Water pollution from raw sewage and industrial effluents is a significant problem in Taiwan. Outside the larger hotels and urban centers, the water is likely to be impure. Health problems like hepatitis result from waterborne contaminants. Water quality is regulated under provisions of the sanitary drinking water legislation of 1972 and the 1974 Water Pollution Control Act.

Air pollution is another significant problem, complicated by a high pollen count. Solid waste disposal regulations and air quality standards were adopted in 1975. All factories are required to comply with established standards, the cost of installing antipollution devices being written off as a depreciable item over two years. Taiwan in 1978 adopted the safety procedures for nuclear facilities issued by the IAEA. In the mid-1980s, the government began tightening emission standards for automobiles and ordered many factories and power plants to install filters and dust collectors. The EPA announced plans in 1987 to install an island-wide pollution-monitoring system.

Wildlife management is the responsibility of the National Wildlife Protection Association of the Republic of China. The nation's marine life is threatened by the use of driftnets. Endangered species include the Formosan sika, hawksbill turtle, Oriental white stork, and Lan Yü scops owl. Trade in endangered species has been reported.

#### 6 POPULATION

The population of Taiwan in 2003 was estimated by the United Nations at 22,500,000, which placed it as number 48 in population among the 193 nations of the world. In that year approximately 9% of the population was over 65 years of age, with another 21% of the population under 15 years of age. The projected population for the year 2005 is 23,325,000, assuming a crude birthrate of 14 per 1,000 population and a death rate of 6, resulting in a natural rate of change of 0.8% for the period 2000–2005. The population density in 2002 was 621 per sq km (1,608 per sq mi), one of the highest in the world. Approximately 90% of the inhabitants live west of the Central Range.

It was estimated that 75% of the population lived in urban areas in 2001. T'aipei, the capital and principal city, had a metropolitan population of 2,880,000 in 2001, followed by Kaohsiung, with 1,534,000. Other large cities include T'ainan (794,960), T'ainan (694,930), and Panch'iao (543,982).

#### 7 MIGRATION

In 1963, the Nationalist government stated that since the completion of the Communist conquest of the mainland in 1949/50, a total of 146,772 Chinese refugees had come to Taiwan for resettlement. The number of refugees has varied from year to year. There may be as many as 100,000 illegal immigrants.

In 1986, the Taiwan government reported that there were 28,714,000 overseas Chinese (25,799,000 in Asia, 2,044,000 in the Americas, 584,000 in Europe, 214,000 in Oceania, and 73,000 in Africa), including those with dual nationality.

The net migration rate in 2002 was an estimated -0.03 migrants per 1,000 population.

#### 8 ETHNIC GROUPS

The term "Taiwanese" is often used when referring to those Chinese who are natives of the island as distinct from the 2 million "mainlanders" who migrated from China after the end of World War II. Most of the more than 20 million inhabitants of Taiwan are descendants of earlier immigrants from Fujian and Guangdong (Kwangtung) provinces in South China. They form several distinct groups. The Hakka are descendants of refugees and exiles from Guangdong who came to Taiwan before the 19th century; they are farmers and woodsmen who occupy the frontiers of settlement. The more numerous Fujians are descendants of peasants from Fujian who migrated to Taiwan in the 18th and 19th centuries; they form the bulk of the agricultural population.

The aboriginal population is primarily of Indonesian origin. They live mainly in central and eastern Taiwan. They are mainly divided into nine major tribes, with the Ami, Atayal, Paiwan, and Bunun accounting for about 88%; the balance is mainly distributed among the Puyuma, Rukai, Saisiyat, Tsou, and Yami. The language and customs of the aborigines suggest a close resemblance to the Malays.

In 1999, Taiwanese constituted 84% of the population; mainland Chinese 14%; and aborigine 2%.

#### 9 LANGUAGES

Most people on Taiwan now speak Mandarin Chinese (Peking dialect). It is the official language and is used in administration, jurisprudence, education, and, to a large extent, in commerce; it has come into increasingly common use during the last three decades. The Wade-Giles system of romanization, which has been replaced on the mainland by the pinyin system, is still used in Taiwan.

Native Taiwanese speak a variety of southern Chinese dialects, but mainly Southern FuKienese. This is the native tongue of about 70% of the population. It has also influenced the vocabulary of Mandarin spoken on Taiwan. There is also a sizable population of Hakka speakers. This dialect is mainly spoken in Kwantung Province on the mainland. As a result of 50 years of Japanese rule, most Taiwanese and aborigines over the age of 60 speak or understand Japanese. Tribal peoples speak dialects of the Malay-Polynesian family which have no written script.

#### 10 RELIGIONS

The Chinese are traditionally eclectic in their religious beliefs. The Taiwan folk religion is a fluid mixture of shamanism, ancestor worship, magic, ghosts and spirits, and aspects of animism. These commonly overlap with an individual's belief in Buddhism, Confucianism, Taoism, or other traditional Chinese

religions. Natural phenomena have been deified, and ancestors, sages, virtuous women, and historical personalities have been given the status of gods. In 2002, observers estimated that about 80% of the population practiced some mixture of traditional Chinese folk religion in conjunction with Buddhism, Confucianism, and Taoism. About 24% of the population are nominally Buddhist and about 20% are Taoist. Only about 12,500 people practice Confucianism.

The first Westerners to bring Christianity to Taiwan were the Dutch (1624). However, a great persecution of Christians took place when the island was lost to Cheng Ch'eng-kung in 1662. Christianity made another beginning in 1860, when a missionary from Scotland came to the island. The English Presbyterian Mission started its work in the southern part of Taiwan about 100 years ago. Since the end of World War II, more than 80 Protestant denominations have been established on the island, and the activities of Christian missions, many coming over from the mainland, have become widespread. As of 2002, Christians constituted about 4% of the total population. Denominations represented include Roman Catholic, Presbyterians, Mormons, Baptists, Lutherans, Seventh-Day Adventists, Episcopalians, and Jehovah's Witnesses.

Other faiths include Tien Ti Chiao (Heaven Emperor Religion), Tien Te Chiao (Heaven Virtue Religion), Li-ism, Hsuan Yuan Chiao (Yellow Emperor Religion), Maitraya Great Tao, Chinese Holy Religion, Hai Tzu Tao (Innocent Child Religion), Tien Li Chiao (Heaven Reason Religion), the Baha'i Faith, Mahikari, and Judaism. About 14% of the population are atheists.

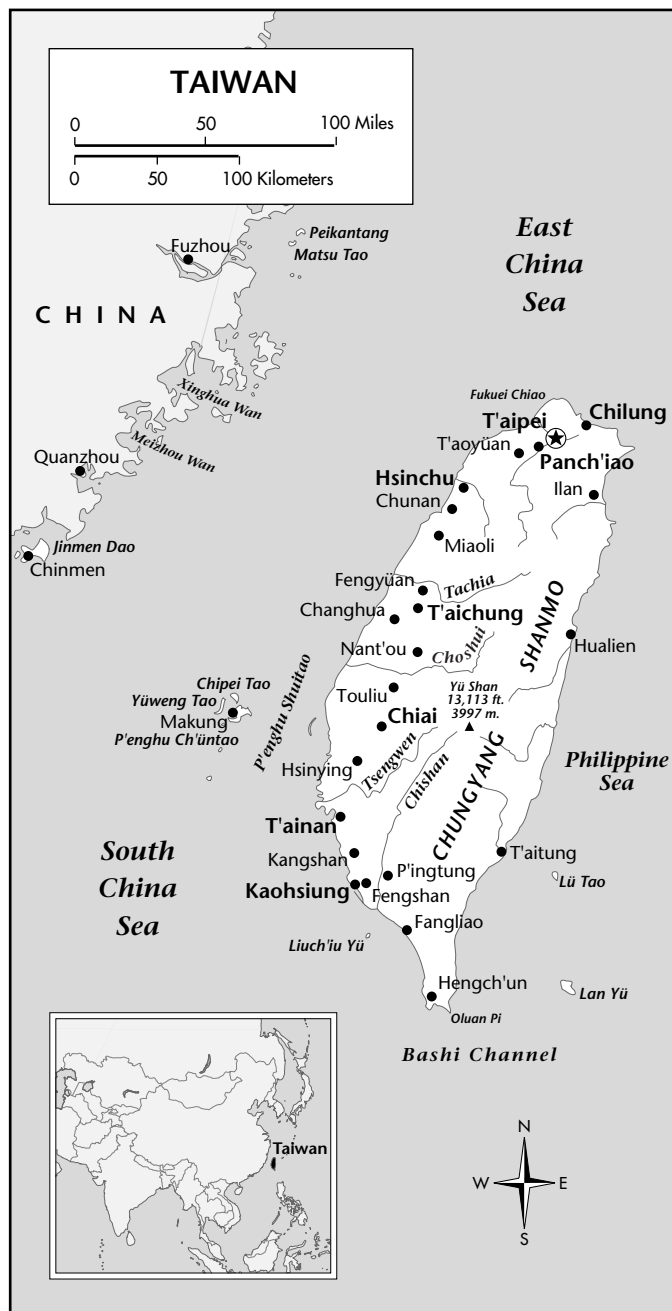

## 11 TRANSPORTATION

At last estimate, Taiwan had 1,108 km (688 mi) of railroad track in common carrier service, and several thousand kilometers of narrow gauge track dedicated to industrial use. The main trunk line, now electrified, links the main cities of the populous west coast between Chilung and Kaohsiung. A second trunk line, the North Link between T'aipei and Hualien on the east coast, was completed in 1979. It connects with an eastern line between Hualien and T'aitung, which was modernized in the early 1980s. Construction of the 98-km (61 mi) South Link (between T'aitung and P'ingtung) has been completed. Forming the last link in the round-the-island rail system, the South Link opened on 6 December 1991, taking over 11 years and \$770 million to complete. Construction of a US\$6.5 billion rapid-transit system was just starting in T'aipei in 1989.

As of 2002, Taiwan had an estimated 34,901 km (21,687 mi) of highways, of which 31,271 km (19,431 mi) were paved, including 538 km (334 mi) of expressways. By 2000 there were 5,548,726 registered motor vehicles, 4,716,217 of which are passenger cars.

Taiwan has five international seaports, all of them extensively modernized in the 1970s. Kaohsiung in the southwest is by far the largest, handling about two-thirds of all imports and exports. Other major ports are Chilung, on the north coast; Hualien and Suao, both on the east coast; and T'aichung, on the west coast. As of 2002, Taiwan's merchant marine consisted of 152 vessels totaling 4,262,451 GRT.

Also in 2001, there were 39 airports, of which 37 had paved runways. There are two international airports. The main one, opened in 1979, is Chiang Kai-shek International Airport, at T'aoyüan, southwest of T'aipei; the other serves Kaohsiung. T'aipei Airport handles only domestic flights. Regular domestic flights also reach Hualien, T'aitung, Chiai, T'ainan, and several other cities. Principal air service is provided by China Air Lines, Taiwan's international airline, and other international carriers, and by Taiwan's leading domestic airline, Far Eastern Air Transport.

LOCATION: 21°45' 25" to 25°56' 39" N; 119°18' 3" to 124°34' 30" E.  
TERRITORIAL SEA LIMIT: 12 miles.

## 12 HISTORY

Although Taiwan can be seen on a clear day from the China mainland, ancient Chinese accounts contain few references to the island. The earliest inhabitants were Malayo-Polynesian aborigines. Historians have surmised from the brief information available in the early dynastic histories that Chinese emigration to Taiwan began as early as the T'ang dynasty (618–907). During the reign of Kublai Khan (1263–94), the first civil administration was established in the neighboring Pescadores. Taiwan itself, however, remained outside the jurisdiction of the Mongol Empire. During the Ming dynasty (1368–1644), Japanese pirates and Chinese outlaws and refugees wrested the coastal areas from the native aborigines. The Chinese settled in the southwest

region, while the Japanese occupied the northern tip of the island. Significant Chinese settlement, by immigrants from Fujian and Guangdong, began in the 17th century.

In 1517, the Portuguese sighted the island and named it Ilha Formosa (Beautiful Island). The Dutch, who were disputing the monopoly of Far Eastern trade held by the Portuguese, captured the Pescadores in 1622 and used them as a base for harassing commerce between China, Japan, and the Philippines. Two years later, the Chinese offered the Dutch a treaty that gave them certain commercial privileges if they withdrew from the Pescadores and occupied instead a trading post on Taiwan. The Dutch complied by building Fort Zeelandia and Fort Providentia in the southwestern part of the island. The Spaniards, wishing to compete, seized the northern part of Chilung in 1626 and later extended their domain to nearby Tanshui. The Japanese, constrained by the policy of national seclusion adopted by the Tokugawa Shogunate, withdrew voluntarily in 1628. The Dutch captured the Spanish settlement in 1642 and, after putting down a Chinese uprising in 1656 with the aid of the aborigines, gained complete control of the island.

While the Dutch were consolidating their hold on Taiwan, the Ming dynasty on the China mainland was overthrown by the Manchus, who established the Qing (Ch'ing) dynasty (1644–1912). Remnants of the Ming forces, led by Zheng Chenggong (Cheng Ch'eng-kung Koxinga, 1624–62), son of a Chinese pirate and a Japanese mother, decided to establish an overseas base in Taiwan. They landed on the island in 1661 and ousted the Dutch in the following year. It was not until 1683 that the Manchus succeeded in wresting Taiwan from Zheng Chenggong's successors.

From 1683 to 1885, Taiwan was administered as a part of Fujian Province. During this period, Chinese colonization proceeded steadily, as the aborigines were either assimilated into the Chinese population or pushed back into the mountains. The imperial government, however, paid scant attention to the island administration. As a result, official corruption and inefficiency often provoked armed rebellions. In the latter part of the 19th century, the strategic importance of Taiwan for the defense of the South China coast was recognized by the authorities, particularly after the French bombardment and blockade of the island in 1884 during the Sino-French War over Annam. The local administration was reorganized, and the island was made into a separate province in 1885.

Upon the conclusion of the First Sino-Japanese War in 1895, Taiwan was ceded to Japan. Refusing to submit to Japanese rule, the islanders declared their independence and established a republic, although organized resistance against the Japanese lasted only a few months. Ineffective armed resistance, chiefly by aborigines, continued. Under the Japanese, the island's agricultural resources were developed rapidly to supply the needs of the home islands and the transportation infrastructure experienced modernization. A policy of Japanization of the Taiwan population was adopted and, by 1944, 71% of children attended primary school. During World War II, Japanese administrators began to orchestrate the island's industrialization in support of Japanese expansionism in south Asia.

In accordance with the Cairo Declaration of 1943 and the Potsdam Proclamation of 1945, Taiwan was restored to China in September 1945. The carpetbagging malpractices of the mainland Chinese officials, however, aroused the resentment of the local population. In February 1947, a police incident touched off a popular revolt, which was suppressed with bloodshed. In May, more troops were brought from the mainland and the Taiwanese leadership was systematically killed. Estimates of the dead range from 5,000 to 50,000. On 8 December 1949, as the Chinese Communists were sweeping the Nationalist armies off the mainland, the government of the Republic of China (ROC), led

by General Chiang Kai-shek (Jiang Jieshi), was officially transferred to Taiwan.

### The Republic of China

With the removal of the ROC government to Taiwan, two million mainland Chinese came to the island where they instituted an authoritarian rule under martial law. Initially Chiang Kai-shek remained myopically focused on retaking the mainland, but as the stalemate continued, the government gradually shifted its attention to industrializing Taiwan. Strong government policies contributed to steady economic progress, first in agriculture and then in industry. In the 1950s, with US aid and advice, the ROC undertook a successful program of land redistribution. Japan built an infrastructure; the Nationalists brought skills and capital; and the United States poured in excess of \$2 billion in aid by 1968. Furthermore, Japanese investment and procurement boom during the Vietnam War in the 1960s further stimulated economic growth.

In 1951, Japan signed the San Francisco Peace Treaty, thereby formally renouncing its claim to the island of Taiwan. In 1954, the ROC and the United States concluded a Mutual Defense Treaty and the United States and Western nations supported Taiwan possession of a UN Security Council seat, while the Eastern bloc nations supported the People's Republic of China (PRC). Support for Taiwan's representation gradually eroded over the years, and on 25 November 1971 the General Assembly voted 75–36 (with 17 abstentions) to remove recognition from the ROC and recognize the PRC. In a significant policy reversal, the United States voted with the majority to seat the mainland government. Although maintaining full diplomatic ties with Taiwan, the United States took the occasion of President Nixon's visit to China to acknowledge, in what became known as the Shanghai communiqué of February 1972, that "all Chinese on either side of the Taiwan Strait maintain there is but one China and that Taiwan is part of China. The United States government does not challenge that position."

By 1975, most nations shifted recognition from the ROC to the PRC. On 1 January 1979, the United States formally recognized the PRC as the sole legal government of China and severed diplomatic ties with Taiwan. It also announced the unilateral termination of the 1954 US-ROC Mutual Defense Treaty, effective 1 January 1980, and withdrew its remaining military personnel. Nonetheless, the United States continued to sell arms to Taiwan, and commercial and cultural contacts were unofficially maintained through the American Institute in Taiwan and the Coordination Council for North American Affairs. Taiwan successfully warded off worldwide political and economic isolation by maintaining a host of similar contacts with other countries.

When President Chiang Kai-shek died at age 87 on 5 April 1975, he was succeeded in office by former Vice-President Yen Chia-kan (Yan Jiagan). Leadership of the Nationalist Party (Kuomintang, Guomindang) and, hence, of the government, passed to Chiang's elder son, Chiang Ching-kuo (Jiang Jingguo). The younger Chiang was elected to a six-year term as president in March 1978 and reelected in 1984. While control of the central government had remained in the hands of mainlanders in the first decades of the Nationalists' rule on Taiwan, Taiwanese Chinese increasingly won elections at local levels, and Chiang Ching-kuo instituted a policy of bringing more Taiwanese into the Nationalist Party. By the 1980s, economic development had produced a new middle class, and the passage of time, together with intermarriage between mainlanders and Taiwanese, had brought a new generation for which the distinction between mainland and Taiwanese held diminished importance. These factors contributed to popular pressure for a more democratic government. In November 1986, 5,000–10,000 demonstrated in support of an exiled dissident, Hsu Hsin-liang (Xu Xinliang),

when he was not allowed to return to Taiwan. Thousands protested the 38th anniversary of martial law in May 1987. And, in March 1990, more than 10,000 demonstrators demanded greater democracy and direct presidential elections. This was followed in the same month by a demonstration involving some 6,000 students.

In 1987 martial law was revoked and with that press restrictions were eased, citizens were allowed to visit relatives on the mainland, and opposition political parties formed. Then in January 1988, Chiang Ching-kuo died and was succeeded as president by the Vice-President, Lee Teng-hui (Li Denghui, b. 1923). Lee, a protégé of Chiang Ching-kuo, was a native Taiwanese. In March 1990, the National Assembly reelected Lee as president for a six-year term. In July, he was also named Chairman of the Nationalist Party by the Party Congress.

In the early 1990s, as Taiwan increasingly opened its political system to greater democracy, the KMT's corrupt practices were revealed. However, after the 1992 legislative elections, the KMT emerged victorious as it still controlled most national media and opposition parties failed to mobilize voters. Vote-buying and other forms of fraud were also widespread. By the 1995 elections, however, the political environment changed because the KMT lost control of the media. Furthermore, the Control Yuan, the branch of government responsible for oversight, began to assert its independence by investigating KMT corruption. In local elections of 1994, for instance, state prosecutors convicted more than one third of 858 city and county representatives for vote-buying. Just prior to the 1995 national elections, it was revealed that the Minister of Justice had evidence of another extensive ring of vote-buying. The KMT took 54% of the vote (83 seats), its lowest majority ever and its major rival, the Democratic People's Party (DPP) obtained 54 seats and the Chinese New Party (CNP) captured 21 with 6 going to various independents. The constitution was also rewritten in 1995, calling for direct election of the president with the first election slated to be held in 1996.

Amid these democratic reforms, Taiwan faced a major international crisis in 1995 when President Lee was given a US visa to visit Cornell University, his alma mater. China objected vociferously and threatened military action against Taiwan. In a show of support for Taiwan and in opposition to PR China's launching of missiles into Taiwan's territorial waters, the United States dispatched a naval force to the region, only to further irritate PR China.

Prior to the presidential elections of March 1996, the formerly united KMT began to splinter. Dissidents within the party and those who had previously left the KMT announced their intentions to run against Lee, who had been chosen by a party plenum in August 1995 as the official KMT candidate. Primary among these were Lin Yang-gang, a former Judicial Yuan president and current vice-chairman of the KMT, and Chien Li-an, president of the Control Yuan and former Minister of National Defense. Campaigning was intense, with scandals being revealed on all sides, but Lee received a resounding 54% compared to 21% for his nearest competitor.

President Lee was criticized by political opponents in 1997 as an increased wave of crime swept the island. In May 1997, more than 50,000 protestors gathered in the capital protesting the government's lack of action on issues of crime. Multiple members of the Executive Yuan resigned and Lee reshuffled his cabinet. However, late in 1997, the KMT suffered severe losses in local and magistrate elections. The main opposition, the DPP, won 12 of the 23 constituency positions contested and led to the reorganization of the KMT following the resignation of the party's Secretary General. In 1998, the KMT recovered in the next set of elections but only to suffer a setback in summer elections that year. As the economy weakened from the Asian financial crisis, the government sought to deregulate the economy and decrease taxes. Relations with PR China again worsened as

Taiwan prepared for presidential elections in 2000. On 18 March 2000, Chen Shui-bian, the DPP candidate and a former dissident leader imprisoned for his opposition to the KMT was elected president in a hotly contested race. He obtained 39.3% of the vote and Lien Chan (KMT) captured 23.1% while ex-KMT businessman James Soong ran as an independent and garnered 36.8%. Leading up to and following the election, the PRC warned the Taiwanese that the election of a pro-independence DPP candidate would lead to possible military action. In his inaugural address in May, Chen stated that he would not declare independence as long as China did not attack the island. He said he would not call for a referendum on independence, nor abolish Taiwan's plan for an eventual reunion with the PRC. China responded by saying that Chen had evaded the question as to whether he considered Taiwan to be part of China.

In April 2001, the Dalai Lama met with President Chen during a visit which drew strong opposition from China. That month, the United States announced it would sell submarines, warships, and anti-submarine aircraft to Taiwan, but not the Aegis naval combat radar system, as Taiwan had requested. China protested the sale, and US president George W. Bush pledged to come to Taiwan's aid in the event of a Chinese invasion. That November, Taiwan lifted a 50-year ban on direct trade and investment with China.

In parliamentary elections held 1 December 2001, the DPP won 87 out of 225 seats, compared with the KMT's 68. It was the first time the KMT lost its parliamentary majority since 1949. In January 2002, Prime Minister Chang Chun-hsiung led the cabinet to resign en masse, stating he had "accomplished his mission" during a time of political instability in the transfer of power from the KMT to the DPP, and during an economic downturn that was worse than the Asian financial crisis of 1997-98. President Chen nominated his chief-of-staff, Yu Shyi-ku, as prime minister.

As of April 2002, academics from Taiwan and China were discussing the possibility of building an underwater tunnel to join Taiwan and the mainland. The shortest possible route would be 78 miles. Currently there is no direct passenger access between the mainland and Taiwan by air or sea. All travel between the ROC and the PRC is required by both sides to go through another regional location. The ROC and the PRC declared that technical considerations for the tunnel posed no problems; the question to be resolved is the political one.

In August 2002, President Chen referred to Taiwan and China as two countries, and stated he supported legislation for a referendum to be held on independence, contrasting with his inaugural pledge not to hold a referendum. No timetable for a referendum was set.

### 13 GOVERNMENT

The government of the Republic of China in Taipei claims to be the central government of all of China. Its constitution was drafted by a constitutional convention at Nanjing (Nanking) on 15 November 1946; it was adopted on 25 December 1946 and promulgated by the national government on 1 January 1947. All governmental powers originally emanated from the National Assembly; however, the powers of the National Assembly have been curtailed. The first National Assembly, which was elected in November 1947, had 2,961 delegates, selected on the basis of regional and occupational representation. The original delegates held their seats "indefinitely," until control of the mainland could be reestablished. Since 1969, the number of seats gradually increased with the addition of new seats for Taiwan. In April 1990, President Lee Teng-hui revoked the emergency decree of 1948 which had allowed the 1,947 deputies to remain in office and the "indefinite" deputies had to retire by December 1991. With the promulgation of constitutional amendments on 25 April 2000, the National Assembly's functions are limited to amending the constitution and altering the national territory after a public

announcement by the Legislative Yuan. In addition, the Assembly may impeach the president or vice president within three months of a petition initiated by the Legislative Yuan. The National Assembly's 300 delegates are selected by proportional representation of the political parties in the Legislative Yuan.

The president is the head of state and of the Executive Yuan, which functions as a cabinet. Previously, the National Assembly chose the president. After amendments to the constitution in 1992, however, citizens now elect the president by direct popular vote. The president may serve a maximum of two consecutive four-year terms. Under the president, there are five government branches known as yuans (councils or departments): legislative, executive, control, examination, and judicial. The legislative yuan, elected by popular vote, is the highest lawmaking body. As in the National Assembly, many members of the 1948 legislative yuan held their seats until 1991.

The executive yuan, comparable to the cabinet in other countries, is the highest administrative organ in the government. There are eight ministries, two commissions, and a number of subordinate organs under the executive yuan. The premier—the president of the executive yuan—is appointed by the president of the republic, with the consent of the legislative yuan. The president is empowered to compel the premier to resign by refusing to sign decrees or orders presented by the latter for promulgation.

The legislative yuan is the highest legislative organ of the state. It has a binding vote of no confidence which would lead to the dissolution of the executive yuan. Of its 225 members, 168 are chosen by universal suffrage and the remaining members are appointed through a system of proportional representation. Members serve three-year terms.

The control yuan, the highest supervisory organ, exercises censorial and audit powers over the government and may impeach officials. It also supervises the execution of the government budget. It has 29 members, all of whom serve six-year terms and are appointed by the president with the consent of the legislative yuan.

The examination yuan is the equivalent of a civil service commission. It consists of two ministries. The Ministry of Examination appoints government personnel through competitive examination. The Ministry of Civil Service registers, classifies, promotes, transfers, retires, and pensions. Its president, vice president, and 19 commissioners are appointed by the president of the republic with the consent of the control yuan.

## 14 POLITICAL PARTIES

The Chinese Nationalist Party, better known as the Kuomintang—KMT, was, until 2000, the dominant political party in Taiwan. The teachings of Sun Yat-sen (Sun Zhongshan), which stress nationalism, democracy, and people's livelihood, form the ideology of the party. After the fall of the mainland to the Communists in 1949, a reform committee was organized to chart a new program for the party.

The KMT's organization is similar to that of the Chinese Communist Party. The basic unit is the cell, which represents neighborhoods. The next levels include the district, county, and provincial congresses and committees. The highest levels include the National Congress and the Central Committee. The National Congress delegates serve four-year terms and is charged with the tasks of amending the party charter, determining the party platform and other important policies. It also elects the party chairman and the Central Committee members, and approves candidates nominated by the chairman to serve as vice chairmen and members of the Central Advisory Council. When the National Congress is in recess, the supreme party organ is the Central Committee, which holds a plenary session every year.

The Central Standing Committee, which represents the Central Committee when that body is not in session, is the most

influential organ in the KMT. The day-to-day affairs of the party are managed by the secretariat. All organization within the KMT are funded by profits from party-owned and operated business enterprises, ranging from newspapers and TV stations to electrical appliance companies and computer firms.

At the party's 14th National Congress held in August 1993, significant changes to the conduct of party affairs were made. It decided that the party chairman was to be elected by the National Congress through secret ballot. President Lee Teng-hui won 83% of the votes cast and was reelected chairman of the party. In addition, four vice-chairmen were added to the Central Committee after being nominated by the chairman and approved by the National Congress. It also decided that the chairman would appoint only ten to 15 of the 31 members of the Central Standing Committee, with the remaining members elected by the Central Committee. Finally, it decided to hold the National Congress every two years instead of four years.

Under martial law, from 1949 through 1986, the formation of new political parties was illegal, although there were two nominal, previously formed parties. Non-KMT candidates ran as independents or "Nonpartisans," with increasing success by the end of the 1970s. In September 1986, a group of "nonpartisans" formed a new opposition party, the Democratic Progressive Party (DPP), which had an orientation toward the Taiwanese population and advocated "self-determination." Although technically illegal, the DPP's candidates took 22% of the vote in the December 1986 elections, winning 12 out of 73 contested seats in the Legislative Yuan; the KMT won 59. The lifting of martial law in 1987 made the formation of new parties legal, although a new security law continued to restrict political activity. In the first fully competitive, democratic national elections, in December 1992, the KMT won 53% and the DPP 31% of the votes for the Legislative Yuan. Before the 1995 legislative elections, the KMT began to splinter and in 1994 the Chinese New Party (CNP) was formed by KMT defectors who favored strengthened ties with the mainland. In the 1995 balloting, however, the KMT was able to maintain its majority, winning 83 of the 164 seats in the Legislative Yuan. The DPP took 54, the CNP took 21 and six seats were won by independents. In the National Assembly (334 seats) the KMT took 183, the DPP 99, the CNP 46, and six were won by others.

The Democratic Progressive Party was formed on 28 September 1986. The party's organizational structure closely resembles that of the Kuomintang. The DPP's National Congress elects members to the Central Executive Committee and to the Central Advisory Committee. The Central Executive Committee in turn elects the members of the Central Standing Committee. Its leader is President Chen Shui-bian. At the party's sixth National Congress, held in April and May of 1994, a two-tier primary system was initiated under which ordinary members of the DPP voted for candidates in one primary election and party cadres vote in a second primary. The results of the two would then be combined, with equal weight given to both. At the second plenary meeting of the sixth National Congress held in March 1995, the nomination process for the presidential and gubernatorial candidates was modified to add open primaries for DPP members and nonmembers. It was further decided at the meeting that the party chairman would be elected directly by all members of the party starting in 1998. What most distinguishes the DPP from the two other major parties is its support of Taiwan independence, or the permanent political separation of Taiwan from the Chinese mainland. Although the DPP has incorporated Taiwan independence into its official platform, the urgency accorded to its realization is a source of factional contention within the party.

The Chinese New Party (NP) was formed in August 1993, shortly before the Kuomintang's 14th National Congress by a group of KMT reformers who broke away from the party in protest of the undemocratic practices of the KMT. The NP

adopted an anticorruption platform and championed social justice. The goal of the NP was to attract voters who were dissatisfied with the performance of the ruling KMT and opposed to the DPP's advocacy of Taiwan independence.

As of early 2003, there were 4 significant political parties operating in Taiwan. The DPP, which won the presidential and legislative elections of 2000 and 2001, respectively, is the largest party. It took 87 seats in the Legislative Yuan in December 2001 election. The KMT took 68 seats, and is currently the second largest party in the Legislative Yuan. The People First Party (PFP), founded by James Soong following his second-place finish in the 2000 presidential election, is now the third largest party with 46 seats. The fourth major political party, based on its membership in the Legislative Yuan, is the Taiwan Solidarity Union (TSU), winning 13 seats. As of June 2002, a total of 99 political parties had registered with the Ministry of the Interior.

## 15 LOCAL GOVERNMENT

The Taiwan provincial government holds jurisdiction over the main island of Taiwan, 21 smaller islands in adjacent waters, and the 64 islands of the Penghu (Pescadores) group. The provincial capital is located at Taichung. The province is divided into 16 county (hsien) administrative areas and 5 municipalities under the direct jurisdiction of the provincial government. In addition, Taipei (since 1967) and Kaohsiung (since 1979) are self-governing "special" municipalities. Subdivisions of the county are the township (*chen*), the rural district or group of villages (*hsiang*), and the precinct. Quemoy and Matsu are administered by the military. At the local level and under the Taiwan Provincial Government, there are five cities—Keelung, Hsinchu, Taichung, Chiayi, and Tainan—and 16 counties, and under each county there are county municipalities.

The province is headed by a governor who is nominated by the president of the executive yuan and appointed by the president of the republic. Department heads and members of the provincial council are recommended by the governor for appointment by the executive yuan. The governor is the ex officio chairman of the appointed provincial council, the policy making body, and holds veto power over its resolutions. The provincial government can issue ordinances and regulations for the administration of the province as long as they do not conflict with laws of the central government. The mayors and city councils of Taipei and Kaohsiung are elected.

The provincial assembly, an elected body, meets for two yearly sessions of two months each. Nominally it possesses broad legislative powers; however, its prerogatives are circumscribed by a provision in its organic law that in the event of a disagreement between the provincial executive and the Assembly, the former may request a reconsideration. Should the assembly uphold its original resolution, the provincial executive may submit the dispute to the executive yuan for final judgment. The executive yuan may dissolve the provincial assembly and order a new election if it holds that the assembly is acting contrary to national policy.

At the end of 1996, the National Development Conference was convened to streamline local government operations. The county government is headed by an elected magistrate (*hsien-chang*) and the municipal government by a mayor (*shih-chang*). Each county or municipality has a representative body called the *hsien*, or municipal assembly. Further down are the councils and assemblies of townships and rural districts, each headed by a chief officer. All of these officials are elected by universal suffrage of citizens over age 20.

## 16 JUDICIAL SYSTEM

The judicial yuan is Taiwan's highest judicial organ. It interprets the constitution and other laws and decrees, adjudicates administrative suits, and disciplines public functionaries. The

president and vice president of the judicial yuan are nominated and appointed by the president of the republic, with the consent of the legislative yuan. They, together with 15 grand justices, form the Council of Grand Justices, which is charged with the power and responsibility of interpreting the constitution, laws, and ordinances. The judicial system is based on the principle of three trials in three grades of courts: district court, high court, and supreme court. The Supreme Court, the highest tribunal of the land, consists of a number of civil and criminal divisions, each of which is formed by a presiding judge and four associate judges. The judges are appointed for life.

In 1993 a separate constitution court was established. Staffed by the then-16 grand justices of the judicial yuan, but with the judicial yuan excluded from the court, the new court was charged with resolving constitutional disputes, regulating the activities of political parties and accelerating the democratization process.

There is no right to trial by jury, but the right to a fair public trial is protected by law and respected in practice. Defendants are afforded a right to counsel and to a right to appeal to the High Court and the Supreme Court in cases in which the sentence exceeds three years. Those sentenced to three years or less may appeal only to the High Court. The Supreme Court automatically reviews all sentences to life imprisonment or death. There is also an administrative court.

The judicial system is based on civil law and Taiwan accepts compulsory jurisdiction of the International Court of Justice.

## 17 ARMED FORCES

In 2002, the armed forces totaled approximately 370,000 with reserves numbering 1,657,500. The army had 240,000 members including military police. Equipment included more than 900 main battle tanks. The navy numbered 62,000, including 30,000 marines, and operated four submarines and 32 principal surface combatants. The navy also had a naval aviation wing equipped with 32 combat aircraft and 20 armed helicopters. The air force had personnel numbering 68,000 operating 479 combat aircraft. Paramilitary included security groups of 25,000, including a National Police Administration, a Bureau of Investigation, Military Police and Coast Guard. Taiwan spent \$8.04 billion on defense in 2001, or 2.8% of gross domestic product.

## 18 INTERNATIONAL COOPERATION

The ROC, a charter member of the UN, became the first government to lose its recognition from that body following a General Assembly vote on 25 November 1971 to recognize the PRC as the sole legitimate representative of China. The ROC subsequently lost its membership in most UN bodies, as well as in several other international organizations—usually with its place taken by the PRC. As of 2003, the Asian Development Bank was one of the few major intergovernmental groups to which Taiwan still belonged; others included the ICC, IOC, and WCL. Taiwan is a member of APEC, and in January 2002, Taiwan officially became a member of the WTO.

As of August 2002, Taiwan had formal diplomatic ties with only 27 countries. The government claims to have "substantive" trade relations with more than 140 countries and territories, however. In November 2001, Taiwan lifted a 50-year ban on direct trade and investment with China.

## 19 ECONOMY

Under the Japanese, the island was developed as a major source of foodstuffs for Japan. Production of rice and sugar increased rapidly, but little effort was directed toward industrialization until after 1937. Immediately after World War II, a number of factors—including repatriation of Japanese technicians, dismantling of industrial plants, and lack of fertilizer for agriculture—caused a rapid deterioration of the economy, which was aggravated by the influx of refugees from the mainland. The

situation improved after 1949 with the removal of the ROC government to Taiwan. The arrival of technical and experienced personnel and capital equipment from the mainland facilitated the island's economic rehabilitation. Currency and tax reforms stabilized the monetary situation. The supply of fertilizer from the United States and a land reform program aided the revival of agricultural production.

Energetic government measures in the form of successive four-year plans, at first supplemented by US aid, resulted in substantial economic progress. In the first decade (1951–60), the stress was on agricultural development and the establishment of textile and other labor-intensive industries. From 1961 to 1970, the promotion of industrial products for export was emphasized. In 1963, Taiwan registered its first favorable trade balance. By 1965, the economy appeared stable enough to warrant the cessation of US economic aid programs. Medium and light industry led the expansion, with striking gains registered in electronics, household goods, and chemicals. The decade 1971–80 saw the development of such capital-intensive industries as steel, machinery, machine tools, and motor vehicle assembly. Such industries, based on imports of raw materials, were encouraged through massive government support for major infrastructural improvements in roads, railroads, ports, and electricity. During the 1980s, emphasis was placed on the development of high-technology industries. As a result, between 1981 and 1991, the share of high-technology industries in total manufactures increased from 20% to 29%, making Taiwan the 7th largest producer of computer hardware on the global market. The 1990s brought an influx of capital-rich investment, especially after 1996 when the first democratic elections were held. High-technology industries accounted for over 73% of total manufacturing, and 67% of exports in 1999. Growth accelerated in the late 1990s, measuring 4.6% in 1998, 5.4% in 1999 and 6% in 2000, spurred by the boom in the PC and IT industries. Exports played an increasing role, accounting for 47.8% of GDP in 1998, 48.3% in 1999 and 54% in 2000. Growth in high-tech exports peaked at 54% in the third quarter of 2000.

Taiwan's GNP advanced at an average annual rate of 9% in real terms between 1952 and 1980. In contrast to Taiwan's industry-led economic growth of previous decades, since the late 1980s the country has undergone a shift towards a services-dominated economy. As of 2000, services made up about 66% of the GDP, compared to less than 50% in the mid-1980s and 44% in the early 1960s. Taiwan has the world's third largest foreign exchange reserves and over \$230 billion in two-way trade. Though still expanding in absolute terms, industry's share of the GDP declined from 52% in 1986 to 32% in 2000. Agriculture has continued to claim only a small share of the economy, making up 2% of the GDP in 2000. A lack of domestic resources hampers the development of agriculture and primary industries. An earthquake in September of 1999 caused major damages to Taiwanese lives and property, but reconstruction was complete by 2000. What affected the economy was the burst of the dot.com bubble beginning in late 2000, and the global slowdown in 2001, aggravated by the aftermath of the 11 September 2001 terrorist attacks on the United States. Taiwan experienced its first recorded decline in real GDP, -2.2%. Recovery began in the last quarter of 2001, and in 2002 real growth of 3.2% was recorded. Inflation has been generally falling in the late 1990s, from 3.1% in 1996 to 0% in 2001 and a slightly negative -0.2% in 2002. Unemployment, by contrast, has increased steadily, from 2.6% in 1996 to 5.2% in 2002.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Taiwan's gross domestic product (GDP) was estimated at \$386 billion. The per capita GDP was estimated at \$17,200. The annual growth rate of GDP was estimated at -2.2%. The average

inflation rate in 2001 was 0.5%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 2% of GDP, industry 32%, and services 66%. It was estimated that in 2000 about 1% of the population had incomes below the poverty line.

## 21 LABOR

The civilian labor force in Taiwan was estimated at 9.8 million in 2001. The share of persons employed in farming, forestry, and fishing has been declining steadily, while the share of the workforce employed in mining, manufacturing, construction, and utilities has increased. As of 2001, about 8% of the labor force was engaged in agriculture, 56% in services, and 36% in industry and commerce. In that year the unemployment rate was estimated to be 4.5%.

Trade unions are weak and cannot be called unions in the real sense of the term, for the law does not provide for effective collective bargaining and also prohibits strikes, shutdowns, and walkouts in vital industries. The trade unions, organized under government supervision, tend to be used for carrying out government policies, but they carry on a considerable amount of welfare work. In 2002, there were 3,854 registered unions in Taiwan, with membership totaling 29% of all employed persons.

The minimum age for employment is 15. Current occupational health and safety regulations provide only minimal protection and have a mixed record of enforcement. The law provides for an eight-hour day (which may be extended to 11 hours for men and 10 for women) and a six-day workweek; overtime is paid at 40–100% above the regular wage. Most large firms give allowances for transportation, meals, housing, and other benefits, which can increase base pay by 60–80%. A minimum of one week's vacation is provided after a year's employment, and there are 14 or 15 other paid holidays. In 2002, the monthly minimum wage was \$452. This amount provides a decent standard of living in rural areas, but is not sufficient for urban life.

## 22 AGRICULTURE

About 24% of the land is under cultivation. Although still important as both an export earner and a domestic food source, agriculture has fallen far from the preeminent position it long held in the Taiwan economy. From 1973 to 1987, the crop production growth rate increased on average only 0.1% per year. In 2001, agriculture accounted for 2% of GDP. About 8% of the labor force was employed in agriculture. High production costs and low return have driven much of the agricultural work force away to industry. In 1997, there were some 780,000 farm households, down from 822,395 in 1993. Part-time farming households have accounted for over 80% of all farming households since 1980.

Rice, the principal food crop, is grown along the western plain and in the south. In 2001, paddy rice production was 1,723,895 tons; brown rice, 1,396,274 tons. Taiwan's annual rice production exceeds demand; the island's per capita rice consumption has declined by over 50% since the mid-1970s due to changing diet preferences. Other food crops include sweet potatoes, bananas, peanuts, soybeans, and wheat. Sugar, pineapples, citrus fruits, crude tea, and asparagus are plantation-grown and are the principal cash and export crops. Small amounts of Taiwan's world-famous oolong tea, cotton, tobacco, jute, and sisal are also produced. A fast-rising industry, mushroom canning, led to the development of mushroom cultivation, a specialty crop well suited to Taiwan since it is labor-intensive and requires little space and small investment. Betel nuts

have become Taiwan's second most valuable cash crop after rice. In 2001, betel nut production totaled 165,076 tons.

Generally, Taiwanese agriculture is characterized by high yields, irrigation, terracing, multiple cropping, intertillage, and extensive use of fertilizers. Farms are small, averaging 1.1 hectares (2.7 acres) of cultivable land per farm family. Mechanization, once confined largely to sugarcane and rice production, is increasing rapidly as a result of government subsidies and other incentives. Since there is an oversupply of rice, the government has encouraged farmers to grow soybeans, wheat, and corn, which are more profitable. The growing scarcity of land on Taiwan is causing serious disagreements over land resources between agricultural, industrial, and housing interests.

### 23 ANIMAL HUSBANDRY

Pastures in Taiwan occupy only 0.1% of the total land area. In 2001, livestock sector production was valued at \$141.1 million. That year, Taiwan produced 961,948 tons of pork and 502,313 tons of poultry from chickens. Hog production is Taiwan's most valuable farm product. In 1997, a major outbreak of hoof and mouth disease affected 6,147 hog farms. As a result, one-third of the hog population had to be destroyed. The government helped compensate pig farmers with \$1.1 billion in low interest loans. Livestock production declined by 13% from 1996 to 2001. Chickens and ducks are raised by most households.

### 24 FISHING

Production of fish products totaled 1.09 million tons in 2000 (18th in the world). Exports of seafood products totaled \$1,756 million in 2000. In 2000, Taiwan accounted for 6.4% of the world's fresh, chilled and frozen fish exports, valued at \$1,517 million, and 2.3% of the canned fish exports, valued at \$127.9 million. Squid, skipjack and yellowfin tuna, chub mackerel, shark, and milkfish are the main species of the marine catch. Deep-sea fishing, which was practically wiped out by World War II (1939-45), has shown strong gains following heavy investments in vessels and harbors. Milkfish, tilapias, clams, oysters, and eels are the main species farmed.

### 25 FORESTRY

The total forest area was estimated at two million ha (4.9 million acres) in 2001. The roundwood harvest was estimated at 49,000 cu m (1.73 million cu ft) in 2001 (90% softwood). Domestic timber production only meets 1% of total demand; the value of wood imports totaled \$837.5 million in 2001. Taiwan's timber production has declined since the 1980s due to local labor shortages, intensifying environmental concerns, and logging restrictions. Principal timbers are oak, cedar, and hemlock. Taiwan is a major furniture exporter that relies heavily on imported wood products to support the industry. Furniture exports in 2001 were valued at \$601 million.

### 26 MINING

Mining accounted for less than 1% of GDP. Coal, oil, and natural gas were the country's most valuable mine products. Petroleum refining was the country's second-leading industry in 2002, chemicals ranked third, and iron and steel and cement were other leading industries; chemicals were the fifth-leading export commodity. Dolomite, limestone, and marble were the most important nonfuel mineral commodities. The western third of the island had adequate amounts of sand, gravel, and limestone for building purposes, although there has been a recent slowdown in the construction sector. The demand for mineral products has increased over the years, while local supplies were dwindling. The value of mineral exports increased by 9.4% in 2001, to \$1.9 billion. Mineral production in 2001 included (in tons): dolomite, 71,000, down from 201,000 in 1999; limestone, 4.9 million tons, down from 15.45 in 1997; marble, 20.48 million tons, up from

18.01 in 1997; and serpentine, 276,000, down from 436,000 in 1997. Taiwan also produced hydraulic cement, fire clay, feldspar, precipitated gypsum, lime, mica, marine salt, caustic soda, soda ash, sulfur, and talc. No kaolin clay was produced in 1998-2001, and no nitrogen was produced in 2001.

### 27 ENERGY AND POWER

The island's installed power capacity reached 29,634,000 kW in 2001. Total electric power output reached 149,800 million kWh in 2000 (more than 60 times the 1,966 million kWh generated in 1955). Of this total, 69.5% was from fossil fuels, 5.8% from hydropower, and 24.7% from nuclear power. Consumption of electricity in 2000 was 139.3 billion kWh. As of 1998, Taiwan had six nuclear reactors at three plants with a combined installed capacity of 4,884 MW. Construction of the 2,700 MW Kungliiao nuclear plant had become a controversial issue by 2000, when the Democratic People's Party government had it halted, but through legislative and judicial efforts work on the project was resumed in 2001. Primary energy requirements increased from about 33.3 million tons of oil (equivalent) in 1985 to about 66.1 million tons in 1995. Power is controlled by the Taiwan Power Co. (Taipower), a government-owned corporation, but some enterprises generate power for their own consumption. In 1999 oil accounted for 49.2% of primary energy consumption and coal for 31.6%.

In 2000, Taiwan consumed 782,000 barrels of oil per day and produced less than 1,000 barrels per day. Oil is imported from the Middle East, Indonesia, Brunei, and Venezuela. River basin development is being vigorously pushed for irrigation, flood control, and power generation. In addition, experiments during the late 1970s and 1980s concentrated on developing Taiwan's geothermal potential. In 2000 a subsidiary of Formosa Plastics opened a refinery at Mailiao, with production reaching 150,000 barrels per day at midyear. Full capacity was projected to reach 450,000 barrels per day. In 1999 Taiwan imported 5.7 billion cu m of liquefied natural gas from Indonesia and Malaysia. Total gas consumption in the same year was 6.2 billion cu m. Taiwan's government intends to triple LNG consumption by 2010.

Coal production was 100,000 tons in 1999, down from 403,000 tons in 1991. The decline was due to government policies designed to close unsafe coal mines, high production costs, and reduced domestic reserves. The number of operating mines fell from 108 in 1985 to 41 at the start of 1995. Coal reserves at the end of 1996 amounted to 1.1 million tons. Natural gas reserves were 76 billion cu m at the beginning of 2001.

### 28 INDUSTRY

Under the Japanese, about 90% of the industrial enterprises were owned by the government or by Japanese corporations with government assistance. After the restoration of Taiwan to China in 1945, the ROC government took over these enterprises. Some were sold to private owners, and the rest were grouped under the management of 18 public corporations, operated either by the national government or by the provincial government, or by both. Added to the confiscated enemy properties were public enterprises evacuated from the mainland. As a result, government-operated enterprises came to dominate Taiwanese industry. Although the proportion accounted for by these enterprises in the production value of manufacturing industries has been falling in recent years in contrast to the private sector, it still accounts for a significant amount of value added. Beginning in 1992, Taiwan authorities have made efforts to reduce the size of the public sector. These efforts have gained momentum after democratization in 1996. By 2002, the government had sold equity shares and reduced public ownership to below 50% in 23 state-owned enterprises (SOEs), mostly banks and insurance companies, but including a steel mill and one fertilizer company. In 1998 and 1999 privatization announcements included the

Chinese Petroleum Corp., Chunghwa Telecom Corp., and Taiwan Power Corp. Plans for privatization have been announced for SOEs involved in power, oil, tobacco, wine, railway transport, mining and telecommunications. Since 1998, also, a number of construction projects—the north-south high speed railway, the mass rapid transit (MRT) systems in Kaohsiung (KMRT) and the between Taipei and the CKS Airport—were given to private firms, including many foreign companies, on a build-operate-transfer (BOT) basis.

The average annual growth rate in manufacturing was 13% during 1953–62, 20% during 1963–72, 9.6% during 1973–85 and 5.9% for 1986–92. The private sector outpaced the public sector during each of these periods. The number of workers in manufacturing rose from 362,000 in 1952 to 736,000 in 1967 and to almost 2.8 million in 1987. By 1992, however, this number declined to about 2.6 million as the rapidly expanding service sector absorbed more of the workforce. Manufacturing for export has been encouraged by the establishment of free-trade export-processing zones (EPZs) in the Kaohsiung harbor area, at Nantze (near Kaohsiung), and at T'aichung. Since the late 1980s rising production costs and a 40% appreciation of the New Taiwan dollar have prompted many export-oriented companies to relocate their manufacturing plants to mainland China and Southeast Asia. In particular; labor-intensive industries, such as toys, footwear, umbrellas, and garments, have relocated. In 1986, industrial production accounted for nearly half of GDP. By 1997 this figure had dropped to about 35% and in 2000, it was an estimated 31/9%, including manufacturing at 26.4% of GDP; construction at 3.4% and electricity, gas and water at 2.1% of GDP. For to June 2001, industrial production accounted for 29.4% of GDP, with manufacturing accounting for 24%.

Production rose spectacularly after the end of World War II, especially between 1952 and the early 1980s. Slower economic growth since the mid-1980s and greater investment emphasis on heavy and high-technology industries as well as services has resulted in declining production figures for traditional manufactures such as cotton yarn and fertilizer. Labor intensive industries have gradually been replaced by capital and technology intensive industries. In 2000 electronics and information technology (IT) products accounted for 27% of industrial output. The two largest made-to-order computer chip manufacturers are Taiwan Semiconductor Manufacturing Company (TSMC), Taiwan second-largest company, and United Microelectronics Company (UMC). In 2000, Taiwan global share in scanner production was 90%; in motherboards, 65%; monitors, 57%; in notebook PCs, 57%; in digital cameras, 45%, and in D/DVD drives, 39%. Strong growth in IT products continued in many IT products despite the overall 10.4% contraction in industrial production in 2001. Sales of LCD monitors, for instance, reached \$3.13 billion, a 66% increase over 2000, while sales of digital cameras reached \$7.132 billion, a 95.5% yearly increase. In 2000, Taiwan was the world's fourth-largest computer hardware supplier. Taiwan has become the world's leading supplier of computer peripherals, including motherboards, monitors, mice, interfaces, network cards, and graphic cards; and holds the largest market share of notebook computers and semiconductor. The structure of Taiwan's IT industry is a pyramid with a handful of large companies that make the major investments in research and development, and over 1000 small and medium-sized operations that account for about 85% of the output. The sector employs about 130,000.

Taiwan's petrochemical industry consists of mainly of 45 upper and middle-stream manufacturers, many concentrated in the Kaohsiung special chemical zone. In 1999, Taiwan's petrochemical production capacity was only 51% of domestic demand. As of 2000, this was raised to 79% with the completion of a naphtha cracking plant in the more recently developed Mailiao industrial zone. The Mailiao zone also includes its

newest oil refinery, a 450,000 barrels per day facility built by Formosa Petrochemical Company (FPC), which, with Taiwan's three other refineries—a 270,00 barrels per day refinery at Kaohsiung, a 270,000 barrels per day refinery at Ta-Lin, and a 200,000 barrels per day refinery at Taoyuan—establishes refinery capacity in excess of domestic demand. In December 2002, an export contract was concluded with the mainland China state petroleum company

In heavy industry, Taiwan has 10 manufacturing companies, most of them contractual joint ventures with Japan. The production value of the automotive industry reached \$10 billion in 2000, about 4% of its aggregate manufacturing. Taiwan's small size and the availability of efficient MRT lines limits the demand for automobiles. Domestic demand for vehicles fell from 542,000 in 1995 to 420,000 in 2000.

Textiles were the leading export until the 1980s when labor costs, land prices and environmental protection concerns led to a relocation of much of the industry to Southeast Asia and China. The domestic industry is based on man-made fibers. In 2000, Taiwan was third in the world in the production of man-made fibers, and second in the production of polyester, which constitutes 80% of its output.

Overall industrial production fell 2.6% in 1998 from an increase of 7.4% in 1997, due largely to the effects of the Asian financial crisis. Industrial production recovered quickly to growth rates of 7.5% and 7.4% in 1999 and 2000, but then slid 10.4% in 2001 in the wake of the dot.com bust. In 2002, the economy recovered, registering a 3.3% growth rate, and in the first quarter of 2003, industrial production had risen 6.4%.

## 29 SCIENCE AND TECHNOLOGY

In the 1970s, Taiwan instituted its Science and Technology Development Program. Coordinated by the National Science Council, the program seeks to encourage the development of "knowledge-intensive" industries through grants for the training of scientific personnel, subsidies for recruitment of distinguished scientists from abroad, and grants to universities to promote scientific research. Specific goals of the program are to integrate and promote research in geothermal energy, battery-powered vehicles, electronics, cancer treatment, pharmaceuticals, nuclear safety, and the development of high-precision instrumentation and computers.

The Industrial Technology Research Institute is charged with the transfer of pertinent technologies developed to manufacturing and other industries. College students are encouraged to build careers in engineering and science. In 1979, the Science-Based Industrial Park was established at Hsinchu, near the National Tsinghua University, with the objective of encouraging computer manufacturing and other high-technology industries by offering loans, tax incentives, and low-cost housing and factory buildings. By 1990, over 60 companies had established research and development and joint production facilities there. These include computer, semiconductor, precision electronics and instrumentation, telecommunications, and biotechnology firms.

The highest institution for scientific research on Taiwan is the Academia Sinica (Chinese Academy of Sciences), founded in 1928 and now located in T'aipei. Its 18 associated institutes carry on research in mathematics, statistics, history and philology, economics, modern history, physics, botany, zoology, ethnology, chemistry, molecular biology, biological chemistry, biomedical sciences, atomic and molecular sciences, earth sciences, information science, nuclear energy, social sciences and philosophy, and American culture. An Atomic Energy Council, founded in 1955, promotes atomic research.

In T'aipei, the National Taiwan Science Education Center has a planetarium and various exhibits; the Taiwan Museum has exhibits on natural history, geology, and ethnography, and a spectroscopic dating laboratory for fossils. Taiwan has 23 universities and colleges that offer courses in basic and applied sciences.

### 30 DOMESTIC TRADE

The marketing system is partly free and partly controlled. Salt, tobacco, alcoholic beverages, and certain commodities are produced and distributed by the government. Prices of basic living commodities are controlled. Retail sales in cities are handled by small department stores, specialty shops, general stores, convenience stores, roadside stands, and peddlers. In 2000, Taiwan had over 1,000 supermarkets and 3,200 convenience stores. Since roadside stands and peddlers have little overhead and are satisfied with a small profit, their prices are generally lower than those of the large stores and shops, if the customer bargains. In recent years, wholesale discounters, hypermarkets and franchises have become significant distribution channels for consumer goods, increasing the efficiency of the marketing system overall. The nation's first shopping malls opened in 1999 and 2001, with development plans to build 20 to 30 more within the next few years.

Chilung and T'aipei are the distribution centers for the northern end of the island, while Kaohsiung and T'ainan are the principal distribution centers for the southern area. Most registered import and export trading firms are located in T'aipei. Accounts are usually settled during festival periods, according to Chinese custom.

Local markets open about 7 AM and close at 6 PM or later. Business firms and stores are usually open from 9 AM to 5:30 PM, and in the morning on Saturdays, and some stores close as late as 10 PM. Most stores are open seven days a week. Banks are open six days a week: Monday–Friday, 9 AM to 3:30 PM, and Saturday, 9 AM to noon. As of January 1998, government employees (excepting the police, health bureau, and customs) and most private companies take the second and fourth Saturday of the month off.

### 31 FOREIGN TRADE

Foreign trade is of ultimate importance to the island economy. To fulfill both production and consumer needs, Taiwan must import large quantities of energy, industrial raw materials, food, and manufactured goods. With rising consumer wealth within Taiwan as well as tariff reductions and other liberalization measures by the government, imports have risen rapidly from \$24 billion in 1986 to an estimated \$122 billion in 2000.

The export pattern has changed significantly since the end of World War II. In 1952, industrial products represented only 10% of Taiwan's total exports and agricultural exports made up the rest; but by 1992, industrial exports (excluding processed agricultural products) had jumped to an overwhelming 95.7% share of the total. Exports increased from \$8.2 billion in 1976 to an estimated \$112 billion in 2000. However, the export growth rate has declined steeply in recent years, from 23% in 1986 to 13% in 1991 and 0.4% in 1992, due to recession in Taiwan's major markets and the movement of export-oriented manufacturing plants to China and Southeast Asia. Exports leveled off in 1997, and dropped by 9.4% in 1998, in part due to the financial crisis in all of Asia. The growth in services has overtaken that of industrial production.

Most of Taiwan's export commodities are electronic equipment and other small manufactured goods. The top 10 exports are as follows:

	% OF COUNTRY TOTAL	% OF WORLD
TOTAL		
Transistors and valves	7.2	5.0
Office machine parts	6.8	8.3
Automatic data processing equipment	6.6	5.9
Telecom equipment	3.7	3.6
Toys and sporting goods	2.9	10
Bicycles and motorcycles	2.8	18
Woven man-made fiber fabric	2.8	9.2
Articles of plastic	2.7	6.2
Base metal	2.4	7.1
Special textile fabric and products	2.3	14

The United States remains Taiwan's single most important trade partner, although Japan has made major gains, becoming Taiwan's major supplier in the 1970s and 1980s. Over 18% of imports come from the United States, while Taiwan exports more than 27% of goods to the United States. Trade with mainland China via Hong Kong expanded rapidly during the late 1980s and early 1990s, resulting in a sharp increase in Taiwan's trade surplus with the latter country. Following cross-strait tension from 1995 onwards, Taiwan investors have limited their relations with mainland China, resulting in a 50% drop in investment during 1998. Exports to China fell by 13% in 1998.

### 32 BALANCE OF PAYMENTS

There was a consistent trade surplus after the mid-1970s, which exceeded \$10 billion after the mid-1980s through the mid-1990s. The current account surplus was \$19 billion in 2001 and was forecast to remain substantial in 2003. Taiwan's total foreign exchange reserves are the world's third largest after Japan and China; they stood at a record \$175.2 billion in May 2003. Total foreign debt was only \$24 million in 2001.

The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Taiwan's exports was \$122 billion while imports totaled \$109 billion resulting in a trade surplus of \$13 billion.

### 33 BANKING AND SECURITIES

Many banking institutions are either owned or controlled by the government. There were eleven public banks in 1998, with total assets of \$261 billion, or 44%. The Bank of Taiwan (with 75 branches) used to issue currency notes, handle foreign exchange, act as the government's bank, and perform central banking functions in addition to its commercial banking activities; before reactivating the Central Bank of China (CBC) in T'aipei in 1961. The functions of the Central Bank include regulation of the money market, management of foreign exchange, issuance of currency, and service as fiscal agent for the government. The Bank of China is a foreign exchange bank with branch offices in major world capitals. The Bank of Communications is an industrial bank specializing in industrial, mining, and transportation financing. The Export-Import Bank of China, inaugurated 1 February 1979, assists in the financing of Taiwan's export trade. The Central Trust of China acts as a government trading agency and handles most of the procurements of government organizations. The Postal Savings System accepts savings deposits and makes domestic transfers at post offices.

At the end of 2002 there were 48 domestic commercial banks, five medium business banks, and 39 foreign banks. There were also 48 credit cooperatives, 287 farmers' credit unions, and 27 fishermen's credit unions. The government holds majority status in several of the most important banks, including the Bank of Taiwan, the Cooperative Bank of Taiwan, and the First

Commercial Bank. The two largest private banks are the International Commercial Bank of China and the Overseas Chinese Commercial Banking Corp. By 1998, three large government-owned provincial banks were privatized, and others were set to follow.

In 1990 the government announced the goal of establishing the island as a regional financial center. Its original target of 1996 was far too optimistic, and liberalization will have to be far more thoroughgoing than that to which the authorities are at present committed, but various steps are being taken towards this end. Restrictions on bringing in capital from abroad, limits on capital transfers both in and out of Taiwan by domestic firms and individuals, and the operations of foreign banks have been liberalized. On 18 February 1997, the Finance Ministry set up a 37-member financial reform task force, headed by the finance minister. This group spent ten months devising proposals in the following four areas: improving the overall efficiency of the banking system; development of capital and derivatives markets, and relaxation of the rules governing the kinds of business banks may conduct; improving market-regulating procedures such as credit evaluation systems, asset management, investor insurance, and insider trading rules; and strengthening banks' internal financial controls.

Taiwan's first private corporate bond issue was floated in 1958. The first stock exchange in Taiwan opened on 4 February 1962. Volume was low until liberalization measures opened the market to foreigners, and the Taiwan stock market surged in the early months of 1997, with the index smashing through the 8,000-point barrier for the first time since 5 March 1990. This milestone immediately prompted rumblings from the CBC that the market was overheated. Yet by May 1997, the market was flirting with the next resistance level, at 8,500 points. Authorities raised the limits to foreign ownership in companies listed on the TAIEX from 30% to 50% in 1999. Most limits on foreign ownership were ended in 2000, and the index was up by the 10,000 mark in that year. However, it has since dropped off considerably, especially in the wake of the Asian financial crisis of 1998. The TAIEX was at 5,551.2 at the end of 2001, and trading value, at \$545 billion, was only slightly more than half of the previous year's level.

### **34 INSURANCE**

Insurance in Taiwan is supervised by the Ministry of Finance and may be written only by a limited liability company or a cooperative association. Aside from group insurance operated by the government, life and annuity insurance are comparatively undeveloped in Taiwan. The Chinese tradition that the family should take care of its members in sickness and old age lowered demand in the past, but social change and rapid economic growth have modified this situation, especially in industrial areas. In 1986, the Taiwanese government agreed to allow US companies to compete equally for insurance business. In 1999, nine foreign nonlife insurers were authorized to run full branches in Taiwan. Foreign insurers must receive approval from the government, however, and secure a business license. In Taiwan, third-party automobile liability, health insurance, pension, unemployment insurance, and workers' compensation are all compulsory.

### **35 PUBLIC FINANCE**

Central government revenues come mostly from taxation, customs and duties, and income from government monopolies on tobacco and wines; other revenues are derived from profits realized by government enterprises. Government accounts showed surpluses through the early 1980s.

Public authorities anticipated a growing fiscal deficit throughout the 1990s as Taiwan's six-year development plan required over \$300 billion of investment in public infrastructural construction projects and in upgrading industries. In 1996, the

government's deficit was equal to 4% of GDP. Growing demands for social welfare spending and increased defense spending (up 20% in 1996/97, the largest rise in over a decade) continued to put pressure on the budget. Outstanding debt reached 16% of GDP in 1998, up from 6% in 1991, and debt service payments consumed 15% of the central budget in 1999. The government was committed to balancing the budget by 2001. Austerity measures included controlling public sector consumption expenditures, limiting expansion of government expenditures, freezing government employment, limiting public employee pay raises, and encouraging private participation in major public projects. The government was also committed to reducing the public sector's role in the economy. National defense expenditures as a portion of the central budget dropped from over 40% in 1960 to 20% in 1999, and were set to fall to 15% in 2000.

The US Central Intelligence Agency (CIA) estimates that in 2002 Taiwan's central government took in revenues of approximately \$36 billion and had expenditures of \$36.1 billion. Overall, the government registered a deficit of approximately \$100 million. External debt totaled \$40 billion.

### **36 TAXATION**

All taxes are collected by the local government and transferred to the relevant provincial or central government agency. Tax revenues reserved for the central government include the income tax, estate (inheritance) tax, gift taxes (4% to 50%); customs duty, stamp tax, commodity tax, securities transaction tax, and mine tax. The rates for income tax payment for individuals ranges from 6% to a top rate of 40%. Corporate income taxes range from 0 to 25%. A VAT introduced in April 1986, with a common rate of 5%. Sales taxes are 1% for reinsurance activities; 5% for bank activities, insurance and brokerage services; and 15% to 25% for bars and restaurants. There is a 60% ad valorem merchandise tax on petrol. There are no social security or local income taxes in Taiwan.

### **37 CUSTOMS AND DUTIES**

Customs duties are important revenue earners and consist principally of import duties and tonnage dues; the former are levied on dutiable commodities, the latter on ships that call at Taiwan ports. The average rate was 8.2% in 2002. Duties range from 2% to 60%. The seven duty categories include rubber tires, cement, beverages, oil and gas, electrical appliances, glass, and automobiles. In 1998, Taiwan reduced tariffs on a wide range of items. Articles imported for military use, for relief, or for educational or research purposes are exempted from import duty. Duties on imported raw materials for business can be rebated. Some agricultural products are prohibited from importation, such as rice, sugar, chicken, some pork cuts, peanuts, and certain dairy products. Imports from Japan and mainland China are restricted due to balance of payments problems.

### **38 FOREIGN INVESTMENT**

From 1952 to 2000 cumulative foreign direct investment approvals came to \$44.8 billion of which 24% was in the electronics and electrical industries. Other industries attracting relatively heavy foreign investment include banking and insurance services, chemicals, trade and basic metals. The government reported Taiwan received \$3.27 billion in foreign investments in 2002, and had received an average of \$2.7 billion a year 1991 to 1999. The rate of foreign investment has been rapidly accelerating as in preparation for its accession to the World Trade Organization (WTO) Taiwan has liberalized its economy and improve its investment environment. Foreign firms are generally accorded national treatment and trade-related capital flows are unrestricted. In January 2001 the 50% foreign ownership limit was lifted with exceptions in a few designated

industries. Most limits on the amount of portfolio investment in companies listed on the Taiwan Stock Exchange (TSE) were also lifted. About 1% of manufacturing industries and 5% of services industries continue to have limits on foreign ownership. Investment incentives are offered for investments in emerging or strategic industries, pollution control systems, production automation, and energy conservation. Since the goal was first announced in 1995, increasing effort has been put in making Taiwan an Asia-Pacific Regional Operations Center (APROC). A goal is to have about 1,000 corporations establish headquarters in Taiwan by 2011.

The United States has been the largest source of foreign investments in Taiwan with investment approvals totaling \$10.7 billion in the period 1952 to 2000, 24% of the total. Another \$9.2 billion is approvals during this time from the British Virgin Islands, the Cayman Islands, and other off-shore havens in Central America, should also be largely attributed to US multinationals. Japan has ranked second with approved investments totaling \$9.2 billion or 21% of the total. Twenty-seven percent has been in electronic and electrical products and 20% in services and trade. Investment approvals totaled 1,410 equal to potential investment of \$7.6 billion, an increase of 80% over 1999. Most of these investment applications came from British territories in Central America (mainly the British Virgin Islands, the Cayman Islands, and other conduits of mostly US investments), the United States, Singapore, Japan and the United Kingdom.

Taiwan outward investment has been such that by 2000 over 50% of Taiwan manufacturing was being conducted outside of the country, and by 2001, 53% was being out-sourced. The top five sectors for outward investment were banking and finance, services, electronics and electrical appliances, marketing, and transportation. In 1992, investment in mainland China was legalized and despite a fall off due to tensions in 1996, by 2001 Taiwan had become China's fourth-largest source of foreign investment. In 2002, the government changes its official investment stance towards China from "patience over haste" to "active opening and effective management."

### 39 ECONOMIC DEVELOPMENT

Since 1950, the government has adopted a series of economic plans to help guide and promote economic growth and industrialization. The first four-year economic development plan (1953–56) emphasized reconstruction and increased production of rice, fertilizers, and hydroelectric power; it resulted in an increase of 37% in GNP and 17% in income per capita. In the second four-year plan (1957–60), import substitution industries were encouraged. Industry and agriculture both registered significant gains; GNP increased by 31%, and national income per capita by 13%. The third four-year plan (1961–64) emphasized labor-intensive export industries, basic services, energy development, industries contributing to agricultural growth, and exploration and development of the island's limited natural resources. The results were a 42% increase in GNP and a 31% increase in per capita income. US loans and grants, totaling \$2.2 billion, and foreign (mostly overseas Chinese) investment financed these early stages of development.

Following the curtailment of AID assistance in 1965, the fourth four-year plan (1965–68) was introduced, followed by the fifth four-year plan (1969–72); increases in GNP for these periods were 46% and 55%, respectively. By 1971, exports of manufactured goods had registered spectacular increases, and Taiwan's foreign trade pattern changed from one of chronic deficit to consistent trade surpluses. At this point, the government began to redirect its priorities from labor-intensive industries to the development of such capital-intensive sectors as shipbuilding, chemicals, and petrochemicals. The sixth four-year plan (1973–76), adversely affected by the worldwide recession, was

terminated in 1975 after producing only an 19% increase in GNP. It was replaced by a six-year plan (1976–81) that focused on expansion of basic industries and completion of 10 major infrastructural projects, including rail electrification, construction of the North Link railroad, development of nuclear energy, and construction of the steel mill at Kaohsiung and of the new port of T'aichung.

In 1978, the six-year plan was revised, and 12 new infrastructural projects were added, including completion of the round-the-island railroad, construction of three cross-island highways, expansion of T'aichung Port's harbor, and expansion of steel and nuclear energy facilities. A subsequent four-year plan (1986–89), designed to supplement a longer-range 10-year plan (1980–89), had as a target average annual GNP increase of 6.5%. Among its goals were price stability, annual growth of 7.5% in the service sector, trade liberalization, encouragement of balanced regional development, and redirection of new industrial growth into such high-technology industries as computers, robotics, and bioengineering. In response to flagging export growth and a slowdown in private investment following a stock market collapse in 1990, the government devised a Six-Year Plan for 1991–97 aimed at economic revitalization. This plan targeted investment mainly in transportation, telecommunications, power generation, and pollution control. A "Statute for Upgrading Industries" enacted in early 1991 continued the government's efforts to provide incentives for private investment in research and development and high-technology sectors of the economy. Economic development in the late 1990s focused on a continuing privatization of government enterprises, the opening of the Taiwan market to foreigners, and high investment in the technological sector.

Taiwan's six-year national development plan for 2002–08 is titled "Challenge 2008." It is estimated to cost \$75 billion and has seven specified goals: 1) expanding the number of products and technologies that meet the world's highest standards; 2) doubling the number of foreign visitors; 3) increasing expenditures on research and development to 3% GDP; 4) reducing unemployment to less than 4%; 5) increasing the average growth rate to over 5%; 6) increasing number of broadband internet users to over 6 million; and 7) creating about 700,000 jobs. There are 10 major areas of emphasis, including cultivating talent for the E-generation (with a special emphasis on mastering English); developing the cultural arts industry; developing a digital Taiwan, using information technologies to make government more efficient and industries more competitive; developing Taiwan as a regional headquarters for multinational corporations; and constructing culturally rich hometown communities as a means of retaining talent, in addition to more standard goals of increasing value-added, improving the transportation infrastructure, conserving water resources and doubling the number of tourists.

### 40 SOCIAL DEVELOPMENT

A social insurance system provides medical, disability, old age, survivor, and other benefits, with employers paying 4.6% of payroll and workers contributing 1.3% of earnings. Benefits are paid in lump sums depending on years of contribution. The National Health Insurance Bureau provides medical care for all workers and dependents. Firms with five or more employees are required to fund a workers' compensation program, contributing up to 3% of payroll, depending on risk level of work. Unemployment benefits are funded by employers, employees, and the government.

All enterprises and labor organizations must also furnish welfare funds for workers and "welfare units," such as cafeterias, nurseries, clinics, and low-rent housing. Fishermen, farmers, and salt workers have their own welfare funds. Government

programs include relief for mainland refugees, calamity-relief assistance, and direct assistance to children in needy families.

Most laws discriminating against women in regard to property, divorce, and child custody were only eliminated in the latter part of the 1990s. Among other measures, laws passed during this period allowed married women to retain their maiden names, gave them an equal voice in child custody disputes, and clarified their property rights. The law now provides for equitable distribution of conjugal property in divorce cases. In the workplace, women tend to receive lower salaries and less frequent promotion, and are often denied federally mandated maternity leave. Taiwanese women married to foreigners may not transmit their citizenship to their children. Violence against women, especially domestic abuse, is extremely widespread. Child abuse is also a serious problem. The Child Welfare Act mandates that any citizen aware of child abuse or neglect must report it to the authorities.

Human rights are generally well respected, but some cases of police abuse continue to be reported.

#### 41 HEALTH

As a result of improved living conditions and mass vaccinations, significant progress has been made in controlling malaria, tuberculosis, venereal disease, leprosy, trachoma, typhoid, diphtheria, and encephalitis. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 14.2 and 6.1 per 1,000 people. The infant mortality rate was 6.8 per 1,000 live births and life expectancy was 76.7 years. At the end of 1985, Taiwan's public health facilities included 55 general hospitals and 888 health stations. In 1990, there were 22,300 doctors.

#### 42 HOUSING

The evacuation of more than two million persons from the mainland to an already densely populated island in 1949 made the provision of low-cost housing an early priority. By 1979, more than 150,000 units of public housing had been built. Since the 1970s, government housing programs have focused on the cities, with slum clearance and the construction of high-rise apartment dwellings for low-income groups the major priorities. Two new towns were constructed in the early 1980s and a third was planned. The government set a target of 600,000 new housing units for the 1979–89 decade, but only 236,106 units were completed as of 1986. In 2000, the total housing stock was at about 6,993,099 units with about 3.4 people per dwelling. About 83% of all dwellings were owner occupied.

#### 43 EDUCATION

Taiwan enjoys one of the world's highest literacy rates because of its emphasis on education. In 1997 about 93% of people ages six or older were estimated to be literate. All children receive nine years of free and compulsory education provided at government expense, including six years in public primary school and three years in junior high. Salaries of the teaching staff are paid by local governments. While textbooks and tuition are free, children must buy their own notebooks and pencils. In 1968 the curriculum was revised with more emphasis on science, while maintaining the Chinese cultural tradition. In order to attend high school, students must pass an examination after junior high. After completing nine years of compulsory schooling, approximately 90.7% of students in the latter half of the 1990s continued their studies at a senior high or vocational school. Agriculture, engineering, commerce, maritime navigation, home economics, and nursing are some of the skills taught in vocational schools, which offer three-year programs.

As of 1997, Taiwan had over 100 institutions of higher education. More than 100,000 students take the joint college entrance exam each year. Approximately 61.9% of the candidates are admitted to a college or university. The government relaxed

many restrictions which prevented students from studying abroad in the 1980s. Although Taiwan has a highly developed college curriculum, many students do travel abroad to study. Taiwanese college and graduate students are particularly interested in engineering, computer science, natural science, and business management. In the latter half of the 1990s, about 13,000 students annually pursued graduate study in the United States.

#### 44 LIBRARIES AND MUSEUMS

The National Central Library in T'aipei holds more than 1,615,000 items, including a collection of rare Chinese books (180,000 volumes). The National Taiwan University in T'aipei has more than 1,500,000 volumes in collected holdings.

The major museums, all in T'aipei, are the National Palace Museum, National Museum of History, and the Taiwan Museum. The National Palace Museum houses one of the world's largest collections of Chinese art—the collection consists primarily of treasures brought from the mainland. The Taipai Contemporary Arts Museum was completely renovated in 2001. The National Museum of History, founded in 1955, has more than 30,000 items in its collections of oracle bones and ritual vessels of the Shang and Chou dynasties, earthenware of the Sui and T'ang dynasties, stone engravings of the Han dynasty, and jade articles of the Chou dynasty. The Taiwan Museum has the most complete collection of natural history specimens in the country. The National Taiwan Science Education Center in T'aipei houses a planetarium and scientific exhibits.

#### 45 MEDIA

Telecommunications services are owned by the government. By 2000 there were 12.5 mainline telephone subscribers in Taiwan with an additional 16 million cellular phone subscribers. Nearly all telephone service is automatic. The postal service is managed by the Directorate General of Posts under the Ministry of Communications.

Radio broadcasting stations in Taiwan are under the supervision of the Ministry of Communications. As of 1999 there were 218 AM and 333 FM radio stations and 29 television stations. The largest network is the Broadcasting Corp. of China, which operates three systems: an overseas service, known as the Voice of Free China; the mainland service, known as the Central Broadcasting Station, aimed at the Chinese mainland; and the domestic service. These stations broadcast in 14 languages and dialects. Television was introduced in 1962. In 1997 there were 386 radios and 48 television sets per 1,000 population. In 2001, there were 11.6 million Internet subscribers served by about eight service providers.

The leading newspapers and estimated 2002 daily circulation are as follows:

	CIRCULATION
T'AIPEI	
<i>United Daily News</i>	1,200,000
<i>China Times</i>	1,200,000
<i>Central Daily News</i>	600,000
<i>Min Sheng Daily</i>	556,640
<i>Liberty Times</i>	500,000
<i>Taiwan Hsin Sheng Pao</i>	460,000
<i>China Times Express</i>	400,000
TAINAN	
<i>China Daily News</i>	670,000

The Central News Agency was established on the mainland by the KMT in 1924.

Though authorities generally respect constitutionally provided rights to free speech and free press, these rights are formally circumscribed by a law excluding the advocacy of communism or division of national territory. Controls over radio and television are said to be under a process of liberalization and privatization.

## 46 ORGANIZATIONS

The most influential private organizations are the occupational or trade associations. These include associations of farmers, fishermen, trade unions, business leaders, and professional persons. Organizations devoted to social welfare and relief work are sponsored by the government, by religious groups, and by civic clubs. The Taiwan Federation of Chambers of Commerce has branches in all the principal cities.

Cooperatives are an important adjunct to economic life, especially in the urban centers. In rural areas, agricultural cooperatives help the farmers transport and market special farm products such as fruits, tea, citronella oil, and handicrafts. Cooperative farms, organized with the help of the government, operate either on a community basis, with the products distributed among the members, or on an individual basis, with the cooperative functioning as a purchasing, processing, and marketing agency.

Agricultural services and 4-H clubs in various parts of Taiwan provide training and social activities for boys and girls. Both the YMCA and YWCA are active in Taiwan, as is Little League baseball. Cultural and educational organizations include the Historical Research Commission of Taiwan and Modern Fine Arts Association of Southern Taiwan. Social action groups include the Taiwan Grassroots Women Worker's Center and the Taiwan Association of Human Rights.

## 47 TOURISM, TRAVEL, AND RECREATION

T'aipei is the chief tourist attraction, with such popular sites as the seat of government in Presidential Square, Lungshan Temple, and the nearby National Palace Museum and famous Yangmingshan Park. Attractions outside the capital include Shihmen Dam recreation area, Lake Tzuhu, and the mausoleum of Chiang Kai-shek. The many temples and Dutch relics of T'ainan, Taiwan's oldest city, and Sun Moon Lake near T'aichung also attract numerous visitors. The national sports are baseball, soccer, and basketball.

In 2000, tourist arrivals totaled 2,624,037, of whom 65% were from East Asia and the Pacific. Tourism receipts totaled US\$3.7 billion. Hotel construction has boomed as a result of government investment. In 2000, there were 19,928 rooms. Visitors need a valid passport and tourist visa good for two weeks to 60 days.

In 2002, the US State Department estimated that the daily expense for a stay in T'aipei was US\$232.

## 48 FAMOUS TAIWANESE

Among the many Chinese scholars who have lived in Taiwan since 1949 are Hu Shih (1891–1962), philosopher and president of the Academia Sinica; Chiang Monlin (1886–1964), educator and chairman of the Joint Commission on Rural Reconstruction; Li Chi (1896–1979) and Tung Tso-pin (1895–1963), archaeologists, whose discoveries at the Anyang site laid the foundation for modern Chinese archaeology; and Tsiang Ting-fu (Ting-fu Fuller Tsiang, 1895–1965), historian and long-time delegate to the UN. Chang Ta-chien (1899–1983) is known for his painting of landscapes and figures and his copies of the famous Buddhist mural paintings of Tunhwang caves in Gansu Province. Lin Yutang (1895–1976), poet, philosopher, lexicographer, and historian, was one of China's foremost interpreters for Western cultures.

The outstanding political and military figure of Nationalist China and postwar Taiwan was Chiang Kai-shek (Chiang Chung-cheng, 1887–1975), who was responsible for sustaining the spirit of anticommunism in Taiwan. His son, Chiang Ching-kuo (1910–88), assumed leadership of the Taiwan government from Chiang Kai-shek's death to his own.

## 49 DEPENDENCIES

Taiwan has no territories or colonies.

# TAJIKISTAN

Republic of Tajikistan

*Jumhurii Tojikistan*

**CAPITAL:** Dushanbe

**FLAG:** The flag consists of a broad white horizontal stripe in the center, with a red stripe at the top and a green stripe at the bottom. The national emblem is centered in the white stripe.

**ANTHEM:** The flag consists of a broad white horizontal stripe in the center, with a red stripe at the top and a green stripe at the bottom. The national emblem is centered in the white stripe.

**MONETARY UNIT:** The Tajik ruble (TR) was replaced by the somoni in October 2000. s1 = \$0.3125 (or \$1 = s3.20) as of May 2003.

**WEIGHTS AND MEASURES:** The metric system is used.

**HOLIDAYS:** New Year's Day, 1 January; Navruz ("New Day"), 21 March; Independence Day, 9 September.

**TIME:** 6 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Tajikistan is located in central Asia, between Uzbekistan and China. Comparatively, it is slightly smaller than the state of Wisconsin with a total area of 143,100 sq km (55,251 sq mi). Tajikistan's boundary length totals 3,651 km (2,269 mi).

Its capital city, Dushanbe, is located in the western part of the country.

## <sup>2</sup>TOPOGRAPHY

The topography of Tajikistan features the Pamir and Alai mountains which dominate the landscape. The western Fergana Valley lies in the north with the Kafirnigan and Vakhsh valleys in the southwest. The major geographic feature in the south is the Panj River, which separates southern Tajikistan from northern Afghanistan. About 5% of Tajikistan's land is arable.

## <sup>3</sup>CLIMATE

The climate is semiarid to polar in the Pamirs. The mean temperature in July is 30°C (86°F). The mean temperature in January is 0°C (32°F). Rainfall in most of the country averages 70 to 160 cm (28 to 63 in).

## <sup>4</sup>FLORA AND FAUNA

Wildflowers can be found in the valleys and Marco Polo sheep, yak, and snow leopards can be found in the mountains.

## <sup>5</sup>ENVIRONMENT

Industrial emissions and excessive use of pesticides are leading causes of environmental damage in Tajikistan. Over the last 30 years, increased irrigation to support agricultural activity has resulted in harmful levels of soil salinity, which damage the soil and threaten its productivity.

The nation's water supply is threatened by pollution and inadequate sanitation facilities. Overutilization of the shrinking Aral Sea for irrigation purposes has caused it to become polluted. Only 47% of the nation's rural population have access to safe drinking water. As of 2001, 4.1% of the country's total land area

is protected. Five mammal species and nine bird species are threatened. Threatened species include the argali, Aral salmon, Tadjik markhor, tiger, and snow leopard.

## <sup>6</sup>POPULATION

The population of Tajikistan in 2003 was estimated by the United Nations at 6,245,000, which placed it as number 99 in population among the 193 nations of the world. In that year approximately 4% of the population was over 65 years of age, with another 42% of the population under 15 years of age. There were 99 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 0.86%, with the projected population for the year 2015 at 7,252,000. The population density in 2002 was 44 per sq km (114 per sq mi). The northern and western lowlands have the greatest population density.

It was estimated by the Population Reference Bureau that 28% of the population lived in urban areas in 2001. The capital and largest city, Dushanbe, had a population of 523,000 in that year. Khojand (formerly Leninabad) had a population of about 163,000. According to the United Nations, the urban population growth rate for 2000–2005 was 1.3%.

## <sup>7</sup>MIGRATION

As a result of the civil war that began in 1991, more than 600,000 people were internally displaced, and 60,000 were forced into Northern Afghanistan by January 1993. Also between 1991 and 1995, 300,000 Russians, 30,000 Ukrainians, and 10,000 Belarussians all left Tajikistan. By April 1997, virtually all of the internally displaced people had returned to their homes. When the peace agreement was reached in June 1997, the UNHCR completed the repatriation of Tajik refugees from northern Afghanistan to Tajikistan. In 1998 the UNHCR started the voluntary repatriation of Tajik refugees from other countries. By 1999, some 20,000 refugees had returned to their places of origin. The net migration rate in 2000 was -10.3 migrants per 1,000 population. The total number of migrants that year was 330,000 including refugees. The government views the

emigration level as too high, but the immigration level as satisfactory.

## 8 ETHNIC GROUPS

In 2002, Tajiks constituted 64.9% of the population and Uzbeks (who live in the northwest) 25%. The Russian population, declining because of emigration, comprised only 3.5%, down from 7.6% in 1989. Other varied ethnic groups made up the remaining 6.6%.

## 9 LANGUAGES

Tajiki is an Indo-European language, related to Farsi and Pashto. In 1989, Tajiki became the sole official language of the country, displacing Russian and Uzbeki. Since 1995, Russian, which had retained its status as the language of international communication in government and business, has regained its previous status, albeit alongside Tajiki. Uzbeki is spoken in regions predominantly inhabited by Uzbeks.

The Tajiki language has no genders or cases, and its vocabulary is borrowed from Arabic, Uzbeki, and Russian. Since the 1940s, the Tajik alphabet has been a modified version of the Russian Cyrillic alphabet. Since the adoption of Tajiki as the national language, instruction of the Arabic-based Persian alphabet in schools has been encouraged, with teaching materials provided by Iran.

## 10 RELIGIONS

An estimated 95% of citizens consider themselves to be Muslims, but the degree of observance varies widely. About 3% of these are Ismailis, almost all residing in the remote Gorno-Badakhshan region. About 90% of the Muslim population is Sunni and about 4% are Shi'a. There are approximately 230,000 Christians, mostly ethnic Russians. The largest Christian group is Russian Orthodox; however, there are also Baptists, Roman Catholics, Seventh-Day Adventists, Korean Protestants, Lutherans, and Jehovah's Witnesses. Other religious minorities include Baha'is, Zoroastrians, Hare Krishnas, and Jews, each totaling less than 1% of the population.

## 11 TRANSPORTATION

Some 482 km (298 mi) of railroads are in common carrier service (not including industrial lines) in Tajikistan. A 258-km (160 mi) line connects Dushanbe with Termez, Uzbekistan, and ultimately with the other rail systems of the former Soviet Union.

In 2002, there were some 29,900 km (18,580 mi) of roadways, of which 21,400 km (13,298 mi) were hard-surfaced. The major roads connect Khudzhand in the north to Kulyab in the south via Dushanbe. Only one main road services the eastern Gorno-Badakhshanskaya region, meandering from Khrugh to Kyrgyzstan. Transportation in urban areas has suffered in recent years, primarily because supplies of gasoline from Russia have become unreliable. Roads connecting residential suburban areas with cities are not designed to handle large volumes of commuter traffic. Dushanbe has a system of electric trolleys and gas powered buses, but operation has been erratic due to a lack of spare parts and fuel.

Tajikistan had 53 airports at last estimate, of which 2 had paved runways. In 2001, the country's airlines carried 274,100 passengers on scheduled domestic and international flights.

## 12 HISTORY

The territory of Tajikistan has been continuously inhabited since the early Stone Age. The first Central Asian states of Sogdia and Bactria in the first millennium BC, included portions of Tajikistan. The territory was Persian-controlled from the 6th century BC, until conquered by Alexander the Great in 329 BC. Much of Tajikistan was included in the Greco-Bactrian kingdom in 3rd century BC, and after displaced by the Tochari tribes who invaded

Sogdia a century later. The Kushana kingdom was established in the first centuries of the Christian era, when a number of cities were established, and agriculture and commerce grew. In the 5th and 6th centuries, parts of Tajikistan were conquered by nomadic tribes, the Chionites and, later, the Ephthalites.

At the end of the 6th century the large Ephthalite empire was displaced by the Eastern Turkic Kaganate. Arabs conquered the area in the 8th century, introducing Islam. Later in the 9th century they were displaced by the Samanides, who encouraged the development of trade and of material culture. From the 10th to the 13th centuries a number of kingdoms succeeded one another in Central Asia; among the ones which included parts of Tajikistan were the Ghaznavids, the Karakhanids, the Ghorids, the Karakitai, and the Khwarazmites.

In 1219–1221 Genghiz Khan's troops conquered the entire area, destroying many cities. Tajikistan became part of the lands given to Genghiz Khan's son, Chagatai. In the 14th century Timur (Tamerlane) created a large empire, with its capital in Samarkand. In the 16th century Tajikistan was conquered by the Sheibanids, who had their capital in Bukhara. Portions of territory were included later in the Ashtarkhanid state and then in the Kokand Khanate, which emerged in the Fergana Valley in the mid-18th century. Present-day Tajikistan was split between the Khanates of Bukhara and Kokand in the 18th and 19th centuries.

In 1863, Russia asserted a right to exercise dominance in Central Asia, and began the military conquest of the khanates. Bukhara and Samarkand were incorporated into Russia in 1868. Kokand was eliminated in 1876, and the border with Afghanistan was set by accord with England in 1895. At that point, part of Tajikistan was in the Emirate of Bukhara, part was in Turkestan. When the Tsar's draft call-up of 1916 was announced, rebellions broke out all over Central Asia, including in Tajikistan. These were suppressed, at great loss of life.

Northern Tajikistan was conquered by the Bolsheviks in 1918, who extended control to the rest of the country when Bukhara was captured, in 1920. Muslim guerrilla warfare termed the Basmachi Rebellion was finally suppressed in 1924. Tajikistan was established as an autonomous republic within the Uzbek Soviet Socialist Republic in 1924. The republic became a full Soviet Socialist Republic in 1929.

Border delineations in Central Asia were very arbitrary. For several hundred years educated Central Asians had used Persian and Turkic languages essentially equally, so that separation into Turkic-speaking Uzbeks and Persian-speaking Tajiks, as if to create separate nationalities, was primarily administrative. Bukhara and Samarkand, the major Tajik cities, were included in Uzbekistan, while Tajikistan was left only with smaller cities, and little arable land. People were forced to assume one nationality or another.

In the late Soviet period Tajikistan was the poorest and least developed of the republics. It comprised four separate areas, the elites of which competed for power. Traditionally power was held by people from Khojent, which is geographically and culturally closest to Uzbekistan's Fergana valley. They were contested by families and clans from Kulyab, south of Dushanbe. Poorest were people from the Gorno Badakhshan Autonomous Province, most of which is in the Pamir Mountains. The final area was Kurgan-Tyube, in the extreme south, where the influence of Islam was strong; public calls for establishing an Islamic state were heard there as early as 1976.

In 1985, Mikhail Gorbachev replaced longtime republic leader Rakhmon Nabiyev with Kakhar Makhkamov, whose control never penetrated to the most local levels. Riots in February 1990 exposed his weaknesses, and encouraged a proliferation of political parties and groups. When the August 1991 Soviet coup attempt came, Makhkamov was the only republic leader to welcome it. When the coup failed, Makhkamov was forced to resign, and Nabiyev returned to power.

LOCATION: 15°0' N; 39°0' E. BOUNDARY LENGTHS: Total boundary lengths, 3,651 kilometers (2,269 miles); Afghanistan, 1,206 kilometers (749.4 miles); China, 414 kilometers (257.3 miles); Kyrgyzstan, 870 kilometers (541 miles); Uzbekistan, 1,161 kilometers (721.4 miles).

The republic declared independence on 9 September 1991, and presidential elections were hotly contested 27 October 1991. Nabiyeu used communist control of the media and cells in the workplace to influence the election. Despite this influence, his opponent Davlat Khudonazarov, a popular filmmaker, received more than 30% of the vote. Opposition to Nabiyeu continued, however, resulting in massive demonstrations and the formation of a national guard by Nabiyeu and militias by the oppositionists. In April 1992, demonstrators for and against Nabiyeu took over two public squares in Dushanbe, about a mile apart. Clashes between the two caused several deaths, and tensions mounted. In May, the Russian garrison in Dushanbe stepped in to mediate tensions, brokering a compromise that called for Nabiyeu to form a coalition government in which one-third of the ministerial posts would go to oppositionists. Nabiyeu named his supporter,

Akbarsho Iskandarov, the new legislative speaker to help form a coalition government, and brought token democrats and Islamists into the government, including Kazi-kolon Khojiakbar Turajonzoda, the senior Muslim cleric in the republic.

Civil disorder grew throughout summer 1992. In August 1992, Nabiyeu was seized at gunpoint and forced to resign, and Iskandarov assumed control of the government. By this time full civil war had erupted, with thousands of casualties. In November, Iskandarov gave up his efforts to govern, and Uzbekistan and Russia joined in the efforts by hard-liners to drive the Iskandarov government and its supporters out of the country, mostly into neighboring Afghanistan. The rump Supreme Soviet, dominated by hard-liners, met in Khojand, and Imomali Rakhmonov became the leader. Rakhmonov, a Kulyabi, was a former collective farm chairman linked to a major hard-line warlord.

Kulyabi and Khojenti hard-liners, assisted by Uzbekistan and Russia, launched a successful counteroffensive that by the end of 1992 had resulted in 20,000-40,000 casualties and up to 350,000 refugees or displaced persons, about 80,000 of whom fled to Afghanistan.

In 1993, the Commonwealth of Independent States (CIS) authorized "peacekeeping" in Tajikistan under the auspices of its Collective Peacekeeping Forces (CPF) treaty to protect what Russia terms "CIS borders." CPF consisted of Russia's 201st Rifle Division, based in Tajikistan, and token Kazakh, Kyrgyz, and Uzbek troops (the Kyrgyz and Uzbek troops pulled out in 1998-99). Russian media reported in late 1999 that there were about 20,000 CPF, border, and other Russian troops in Tajikistan. The commander of the CPF troops in August 1999 stated that the role of his forces had largely shifted to the delivery of humanitarian cargoes, clearing mines, and giving medical assistance. Nonetheless, plans to withdraw the CPF have not been announced, perhaps because in April 1999, Russia and Tajikistan signed a basing agreement for the 25-year presence of Russian troops.

After Tajik government and opposition emissaries agreed to a cease-fire in September 1994, the UNSC formally established a UN Mission of Observers in Tajikistan (UNMOT) in December 1994 with a mandate to monitor the cease-fire, later expanded to investigate cease-fire violations, monitor the demobilization of opposition fighters, assist ex-combatants to integrate into society, and offer advice for holding elections. The UN reported in late 1999 that UNMOT comprised 167 civilian staff and 37 military observers. The mission successfully accomplished its assigned tasks and on 15 May 2000 its mandate was terminated.

In November 1994, Rakhmanov held presidential elections in an attempt to legitimize his government. The main Tajik opposition groups boycotted this election and a constitutional referendum because they had no say in drawing up the draft constitution and would not be allowed to field their own candidates. Only one candidate besides Rakhmanov was permitted to run, Abdumalik Abdullojanov, a prominent politician in the northern Leninabad region and a former Tajik prime minister. Rakhmanov was elected president by a wide margin and his constitution was overwhelmingly approved. The Organization for Security and Cooperation in Europe (OSCE) declined to send monitors because it viewed the electoral process as not meeting its standards. Elections to a new 181-member legislature took place in February 1995. Four parties were allowed to compete, but restrictive nomination procedures ensured that about 40% of candidates ran unopposed. The election excluded virtually all opposition parties, and Western groups refused to monitor the "seriously flawed" vote.

In December 1996, the two sides agreed to set up a National Reconciliation Commission (NRC), an executive body composed equally of government and opposition emissaries. On June 27, 1997, Rakhmanov and United Tajik Opposition (UTO) leader Seyed Abdullo Nuri signed the comprehensive peace agreement, under which Rakhmanov remained president but 30% of ministerial posts were allocated to the opposition and Nuri headed the NRC.

As part of the peace process, in early September 1999, the Tajik legislature set presidential elections for 6 November 1999. Only after a popular referendum approved constitutional changes in late September, however, were the opposition Islamic Renaissance and Democratic parties legalized and allowed to gather 100,000 signatures to register nominees. Nominees complained that they did not have enough time to gather signatures and that Rakhmanov's appointees at the local level blocked signature-gathering. The Central Electoral Commission (CEC), controlled by Rakhmanov, then pronounced him the only candidate. This prompted the resignation of opposition members of the NRC and calls for an electoral boycott. To provide the

gloss of a multi-candidate race, the CEC "registered" IRP nominee Davlat Usmon, though he refused to run. The CEC announced that 98% of 2.85 million Tajiks had turned out and 96.9% had voted for Rakhmanov, and only 2% for Usmon. Seeking to avert renewed civil war, Nuri agreed on 5 November to respect the outcome of the election and rejoin the NRC in return for pledges by Rakhmanov to allow fair legislative elections that were held in March 2000.

On 26 March 2000, Tajikistan disbanded its National Reconciliation Commission (NRC), created to implement 1997 peace accords ending the civil war. The accords set legislative elections held in March as the culmination of the peace process. Former rebel Seyed Abdullo Nuri, chairman of the NRC, called for quick settlement of remaining peace issues. The UN Security Council on 21 March praised the legislative elections and work of the NRC, and withdrew UN observers in May 2000.

Although benchmarks of the peace process have been largely met, including the return of refugees, demilitarization of rebel forces, legalization of rebel parties, and the holding of presidential and legislative elections, stability in Tajikistan remains fragile.

The Islamic Movement of Uzbekistan (IMU), a radical Islamic organization seeking to establish an Islamic state in Central Asia, carried out operations in Tajikistan in the summer of 2000. Tajik authorities increased the number of customs checkpoints and deployed additional military troops to prevent the infiltration of Islamic militants. In addition to the IMU, the Hizb-ut-Tahrir ("Freedom Party"), another radical Islamic organization, operates in the country, although unlike the IMU, it is non-violent. Following the 11 September 2001 terrorist attacks on the United States, and its subsequent military campaign in Afghanistan to oust the Taliban regime and al-Qaeda forces, all radical Islamic groups in the Central Asian nations were linked to terrorism. Tajikistan became a strategic partner in the US-led anti-terrorism campaign when it offered the use of its airports. Leaders of Tajikistan's opposition Islamic Renaissance Party (IRP) have vigorously denied Rakhmanov's claim that it promotes extremism, and accuse him of using the US-led campaign against terrorism to neutralize his mainstream Islamic political opponents.

In April 2001, Rakhmanov and Russian President Vladimir Putin agreed on the establishment of a 3,000-man tactical air base in Tajikistan. Russia announced it would increase its border troops along the Tajik-Afghan border. It is Russia's goal to establish a rapid reaction military presence in Central Asia.

### 13 GOVERNMENT

The Tajik government has been in a state of flux as it has implemented the comprehensive peace settlement. President Rakhmanov retains extensive power and his supporters from the Kulyab region remain dominant in the government, though some high-level posts have been given to the opposition.

According to a Rakhmanov-designed constitution approved by referendum in November 1994, the Oliy Majlis (legislature) enacts laws, interprets the constitution, determines basic directions of domestic and foreign policy, sets dates for referenda and elections, and approves key ministerial and other appointments. The legislature also approves the state budget, determines tax policy, ratifies treaties, and approves a state of war or emergency as decreed by the president. The constitution also calls for creation of a presidium to "organize work," to be elected by the legislators and to be headed by the speaker. Laws are required to be passed by a two-thirds majority of the total number of deputies, and a presidential veto may be overridden by the same margin. The prime minister is appointed by the president. The Tajik legislature in June 1999 rubber-stamped constitutional changes proposed by Rakhmanov calling for a seven year presidential term, a two-house Supreme Assembly

(legislature), and the legalization of religious parties. A popular referendum approved the changes on 26 September 1999.

An electoral law was approved with input from the opposition on 10 December 1999. The law calls for the upper legislative chamber, the National Assembly (representing regional interests), to consist of 33 members, and the lower chamber, the Assembly of Representatives, 63 members.

Elections to the lower legislative chamber were set for 27 February 2000 (and a runoff on 12 March). In all, 191 candidates contested 41 single mandate seats and 107 candidates on six party lists competed for 22 seats. Turnout was reported by the CEC at 93.23% of 2.87 million voters. In the party list voting, Rakhmanov's People's Democratic Party (PDP) won fifteen seats, the Communist Party won five seats, and the Islamic Renaissance Party won two seats. Twenty-seven single mandate seats were filled in the 1st round, and twelve in the 2nd. Most winners of these seats are PDP members. Over 107 UN and OSCE observers monitored the race. They praised the "political pluralism" of the vote, since voters "were presented with a genuine and broad range of alternatives," but concluded that the electoral process must be improved "to meet the minimum democratic standards for equal, fair, free, secret, transparent, and accountable elections." They raised questions about freedom of the media, the independence of electoral commissions, the questionable de-registration of some candidates, apparently inflated turnout figures, and the transparency of vote tabulation. Thirty-three upper legislative chamber seats were filled on 23 March by indirect voting by local assemblies and the appointment of eight members by Rakhmanov. The UN Security Council on 21 March praised the legislative elections and work of the NRC, and withdrew UN observers in May 2000.

According to the US State Department's *Country Reports on Human Rights Practices for 2001*, Tajikistan is an authoritarian regime that has established some nominally democratic institutions. Although the 2000 parliamentary elections improved citizens' right to change their government, this right remained restricted. Tajik government security forces in 2001 were responsible for some killings and beatings of detainees, and also engaged in threats, extortion, looting, and other abuse of civilians. Prison conditions were life threatening, and the judicial system was subject to political and paramilitary pressure. Opposition forces were responsible for serious abuses of civilians, including killing, kidnaping, threats, and extortion. The November 1999 presidential election was not viewed by the OSCE as "free and fair." In December 1999, Rakhmanov issued a decree pledging to "contribute in every way possible to the exercise of freedom of speech, freedom of the press, and the right of access to the news media" as part of the comprehensive peace settlement.

#### 14 POLITICAL PARTIES

As part of the ongoing peace process, all parties had to undergo re-registration by March 1999. The parties registered at that time were the People's Democratic Party (PDP), Communist Party (TCP), the Party of Justice and Progress, Socialist Party, the Democratic Party ("Tehran platform"), Agrarian Party, and the Party of Justice and Accord. The main opposition parties were registered later. In late 1994, Rakhmanov orchestrated the creation of the PDP, and in April 1998 became its head. The TCP is headed by former Rakhmanov client Shodi Shabdolov. The TCP has fallen into Rakhmanov's disfavor, and some of its assets were nationalized in May 1998. A social democratic Party of Justice and Progress was formed by intellectuals and others in April 1998. The Democratic Party, founded in 1990, was banned in 1993. It split in 1994, with one new group forming the "Tehran platform." The remaining wing ("Almaty platform") was reregistered in December 1999. The main parties of the United Tajik Opposition (UTO) are the Democratic Party

(Almaty platform) and the Islamic Rebirth Movement (primarily the Islamic Renaissance Party, IRP). The Society of Lali Badakhshan split from the UTO in 1999. The IRP was registered in September 1999. The IRP has traditionally drawn its strength from many unofficial (as opposed to state-sponsored) Islamic clerics. Emboldened by international support for Tajikistan's role in aiding the US-led coalition in its war against terrorism beginning in 2001, Rakhmanov has implied that connections exist between the IRP and the radical Islamic organizations Hizb-ut-Tahrir and the Islamic Movement of Uzbekistan (IMU). The IRP has vigorously denied any connections to these groups.

#### 15 LOCAL GOVERNMENT

In the late Soviet era the republic was divided into three oblasts or regions and the Gorno Badakhshan Autonomous Region. The region surrounding the capital, Dushanbe, also was separately administered by the central government. A new region, Khatlon, was formed by Rakhmanov, comprising the former Qurghonteppa and Kulyab regions. Currently, there are two provinces (*viloyat*), Khatlon and Sughd, and one autonomous province, Gorno Badakhshan. Uzbekistan has some influence in the northern Leninabad (Khojenti) region, while Russian troops patrol the borders with Afghanistan and China. Regions, districts (*nobiy*, of which there are 52), and cities (*shahr*, of which there are 17), are governed by elected assemblies of people's deputies headed by a chairman. The chairman is appointed by the president, and the national legislature can dissolve local assemblies if it decides they are breaking the law. The self-governing authority of settlements (*shabrak*, of which there are 46) and villages (*deba*, of which there are 358) is the *jamoat* (local organization).

#### 16 JUDICIAL SYSTEM

The judicial system from the Soviet period remains largely in place. There are courts at the city, district, regional, and national levels with a separate but parallel system of military courts. National level courts include a supreme court, a constitutional court, a supreme economic court, and a military court. Regional and national level courts function in an appellate capacity to the lower courts. The establishment of extraordinary courts is forbidden.

The president appoints judges and the procurator general to five-year terms with confirmation by the legislature, and the president has the power to dismiss them. The court system suffers from a lack of trained judges and lawyers and from pressures applied by local political factions and the central government.

The law requires public trials except in cases involving national security or protection of minors. There is a right to appointed counsel in criminal cases. As in the Soviet period, the procurators are responsible for arrests, investigations, and prosecutions of defendants.

#### 17 ARMED FORCES

There were an estimated 6,000 personnel in the armed forces in 2002. The army was equipped with 35 main battle tanks. The air force had some 800 personnel, operating 4 or 5 armed helicopters and no combat aircraft. A plan exists to acquire aircraft and form an air squadron. There were an estimated 1,200 paramilitary border guards. The defense budget for 2001 was \$35.4 million, or 3.9% of GDP. Russia had 12,000 federal border guards in Tajikistan. An opposition Islamic movement of 5,000 signed a peace agreement with the government in 1997 and was in the process of being integrated into the government forces.

#### 18 INTERNATIONAL COOPERATION

Tajikistan became a member of the UN on 2 March 1992. It also is a member of the Asian Development Bank, ESCAP, FAO, OSCE, IAEA, IMF, IDA, IFAD, ILO, NACC, UNCTAD,

UNESCO, UNIDO, UPU, WHO, WIPO, WMO, and the World Bank, and is applying for membership in other international organizations. It has observer status at the WTO. A member of the CIS, the country is recognized by the United States and the EU countries. Western nations are especially concerned with the security of the country's uranium reserves. Tajikistan has especially close ties with Iran.

In June 2001, leaders of China, Russia, Kazakhstan, Kyrgyzstan, Tajikistan and Uzbekistan met in China to launch the Shanghai Cooperation Organisation (SCO) and sign an agreement to fight ethnic and religious militancy while promoting trade.

## 19 ECONOMY

Tajikistan is the poorest of the post-Soviet republics with a per capita income in 2001 of less than \$300 (\$1,140 in purchasing power parity terms—PPP—terms) and an estimated 80% of the population below the poverty line. Two thirds of the labor force is still in agriculture, which is dominated by cotton production and accounts for 19% of GDP. Industry is poorly developed, providing 25% of GDP and only 7.5% of total employment, and consisting of one large aluminum smelter operating at a fraction of its capacity, electric power facilities producing only a fraction of the country's potential hydroelectric power, and small plants engaged in food processing and light industry, virtually all in need of upgrading and modernization. Imports provide the large majority of manufactured consumer goods. Deposits of nonferrous metals are significant but undeveloped.

Tajikistan's economy was among the most affected by the problems of transition from a command economy, with hyperinflation and the collapse of industrial production aggravated by a five-year, three-way civil war (1992 to 1997) that claimed 150,000 lives, produced thousands of refugees, and delayed the reforms needed to make the adjustment. Already beginning to falter in the late 1980s, GDP declined 0.6% and 8.7% in 1990 and 1991. Legislation in 1992 aimed at laying the groundwork for the transition to a market economy and creating conditions hospitable to foreign investment was overtaken by spiraling inflation and the outbreak of civil war in the that summer. The economy emerged dependent—on volatile world prices for cotton and aluminum, on neighbors Russia and Uzbekistan, on imports of capital goods, and on international humanitarian assistance for much of its basic subsistence needs. Inflation spiraled to 1500% in before being brought down to single digits—5% in 1996 and 2.7% in 1997—by a tight monetary policy, but GDP continued to shrink, by 12.4% in 1995 and by almost 17% in 1996. In all, GDP fell 32.6% 1991 to 1996. The financial crisis in Russia, source of 16% of Tajikistan's imports and market for 30% of its exports, was transmitted to the economy, throwing it back into double digit inflation. End of period inflation as measured by the consumer price index (CPI) reached 30.1% in 1999 and 60.6% in 2000 before being brought down by corrective actions to 12.5% in 2001. Nevertheless, after the ceasefire in 1997 Tajikistan has had five years of real GDP growth, 5% in 1998 and 3.7% in 1999, accelerating to 8.3% in 2000, 10.1% in 2001 and 9% in 2002.

The economy is far from out of the woods. Despite accumulated growth of more than 32% from 1997 to 2001 output had still only reached 43% of the 1991 level. Besides the damage done to the infrastructure during the civil war, the economy became saddled with a large external debt, estimated at 113% of GDP in 2000. By early 2003, progress had been made in reducing the relative size of the foreign debt to 88% of GDP (\$985 million), down from 98% the year before. Despite the concessional nature of most of its external finance, the grace periods have expired and substantial repayments are due, most to the IMF, and will likely require a Paris Club rescheduling. The increased cotton and aluminum production that is the basis of

recent growth, moreover, has contributed little to solving the country's unemployment and underemployment problems. The official unemployment rate for 2001 was 20% but observers estimate that the true figure is about one-third unemployed. Many Tajiks are forced to go abroad for work, and as of 2001, an estimated 500,000 to 700,000 live and work abroad, permanently or seasonally. With the formal economy failing to lift most of the population out of poverty, it is not surprising that added to the country's problems are reports of increased drug smuggling from neighboring Afghanistan. Tajikistan has rich mineral resources, including silver and tungsten and huge hydroelectric potential, but foreign investment in this politically and economically unstable region has been small to date, amounting to less than \$30 million in 2002.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Tajikistan's gross domestic product (GDP) was estimated at \$7.5 billion. The per capita GDP was estimated at \$1,140. The annual growth rate of GDP was estimated at 8.3%. The average inflation rate in 2001 was 33%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 19% of GDP, industry 25%, and services 56%. Foreign aid receipts amounted to about \$25 per capita and accounted for approximately 16% of the gross national income (GNI).

The World Bank reports that in 2000 per capita household consumption (in constant 1995 US dollars) was \$282. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the same period private consumption grew at an annual rate of 23%. Approximately 48% of household consumption was spent on food, 10% on fuel, and 14% on education. The richest 10% of the population accounted for approximately 25.2% of household consumption and the poorest 10% approximately 3.2%. It was estimated that in 2001 about 80% of the population had incomes below the poverty line.

## 21 LABOR

The labor force numbered approximately 3.2 million in 2000. Agriculture accounted for 67% of the workforce, with services 25%, and industry 8% in that year. Unemployment in 2001 was estimated at 20%.

With the demise of the Soviet Union, there is no longer the mandate for a single labor union structure. As of 2002, the Federation of Trade Unions remained the dominant labor organization even though it no longer is subordinate to the Communist Party. Approximately 90% of workers were unionized in 2002. Strikes are permitted after mandatory arbitration. Collective bargaining is permitted and practiced, although it is becoming less prevalent in the economic decline.

Employment in Tajikistan may legally begin at age 16, or at age 15 with local trade union permission. Children from the age of seven often help with harvests, but their work is considered "family assistance." The 40-hour workweek is standard. The minimum monthly wage was \$1.60, which does not provide a decent standard of living for the worker and family. An estimated 20% of industrial laborers worked in unhealthy or otherwise hazardous conditions, although it is believed that the number of persons working in substandard conditions is vastly underreported.

## 22 AGRICULTURE

Tajik agriculture relies extensively on irrigation. About 6% of the total area is cropland, although 23% is used for permanent

pastures. A network of canals expands agriculture into semidesert areas. Agriculture accounted for 19% of GDP in 2000. During 1990–2000, agricultural output shrank by an annual average of 5.8%.

Cotton is the major commercial crop; three irrigated valleys (Vakhsh, Kofarnihon, and Zeravshan) are the sites of most production. As a result of chronic problems with machinery and the lack of spare parts, machine harvesting is declining. The 1999 cotton harvest was 95,000 tons, but less than 10,000 tons were picked by machine.

Wheat is the staple grain and is grown mainly in the northern and southern plains. About one-third of the wheat crop is irrigated. In 1999, wheat production was 450,000 tons. Production has been declining in recent years because of lack of machinery and civil war. During the 1996/97 growing season, the government eliminated most of the state order for wheat, legalized contract farming, freed wheat prices, established commodity markets, and privatized 50,000 ha (124,000 acres) of land in order to encourage wheat production. Barley, potatoes, vegetables, and various fruits and melons are widely grown for domestic consumption.

Horticulture has been important since antiquity. Most orchards and vineyards are located in the northern valleys, where apricots, pears, plums, apples, cherries, pomegranates, figs, and nuts are grown.

### 23 ANIMAL HUSBANDRY

Livestock herding is a major part of Tajikistan's economy. As of 2001, the livestock included 1,000,000 chickens, 1,475,000 sheep, 1,062,000 cattle, 744,000 goats, and 72,000 horses. Meat production in 2001 included 14,800 tons of beef, 12,900 tons of mutton, and 1,800 tons of poultry. Livestock products in 2001 included cow's milk, 315,600 tons; goat's milk, 25,500 tons; cheese, 6,900 tons; wool (greasy), 2,200 tons; and silk, 300 tons.

### 24 FISHING

Some fishing occurs in the upper Amu Darya River; the Kayrakkum Reservoir, and the Syrdar'ya River. The total catch was 59 tons in 2000, primarily carp.

### 25 FORESTRY

Tajikistan's forests and woodlands occupied about 2.8% of the total land area in 2000. Forestry is of little commercial importance.

### 26 MINING

Tajikistan was significant to world mineral markets as a gold producer. It also possessed the largest deposits of antimony in the former Soviet Union, and had more than 400 explored mineral deposits, containing 70 types of minerals. Aluminum, zinc, lead, chemicals, fertilizers, and cement were the top industries in 2002, and aluminum was the country's leading export commodity.

In 2000, gold production was 2,700 kg (3,000 in 1998 and 1,100 in 1996); gypsum, 35,000 tons (31,700 in 1998); and antimony, 2,000 tons (1,000 in 1996). Tajikistan also produced bismuth, lead, mercury, silver, cement, and fluorspar. No copper, molybdenum, tungsten, or zinc has been produced in recent years. The Darvaz joint venture did not mine for gold in 1997–1999, because its equipment was severely damaged by hostilities in the region. Gold was mined southeast of Gharm, in the Pamir Mountains, in the Yakhsu Valley, in Chkalovsk, and in the Jilau, Taror, and Aprelevka deposits; mercury was mined at the Dzhizhikrutskoye deposit, north of Dushanbe; antimony, at Isfara and Dzhizhikrutskoye; arsenic, cadmium, tungsten, and lead-zinc, in the Yuzhno-Yangikanskiy deposit, north of the Zeravshan River; and uranium and graphite, northeast of Khudzhand. Uranium mining ceased in the mid-1980s.

Other metal and industrial resources included alunite, bauxite, iron, manganese, nepheline syenite, nickel, rare metals, selenium, strontium, tin, barite, boron, construction materials, dolomite, phosphates, precious and semiprecious stones, and salt.

## 27 ENERGY AND POWER

More than 95% of Tajikistan's electricity production is hydropower, provided by a series of dams and reservoirs on mountain rivers. As of 2002 seven large hydroelectric facilities produced most of the country's power. Two major facilities on the Vakhsh River have attracted aluminum, chemical, and other energy-intensive industries oriented toward inexpensive energy. The Qayroqqum Dam on the Syrdar'ya River in the north (which forms a reservoir known as the "Tajik Sea") has a hydroelectric station that provides energy for the Fergana Valley in Uzbekistan. Further expansion of hydroelectric power was planned, especially around Khojand, with the potential of exporting energy to Pakistan. In 2001, total installed electrical capacity was 4,443,000 kW. Production of electricity in 2000 amounted to 14 billion kWh, of which 98% was from hydropower and 2% from fossil fuels. Consumption of electricity in 2000 was 12.5 billion kWh.

Brown coal, though declining in production, is mined in the northeast and shipped by rail to Dushanbe; coal production totaled about 22,000 tons in 2000. Natural gas is extracted from fields in the lower Kakhsh and elsewhere; reserves have been estimated at about 5.7 billion cu m, but production has been minimal. Tajikistan also has small deposits of petroleum, estimated at 12 million barrels in 2002; production in 2001 amounted to only about 350 barrels per day, contrasted with consumption of 29,000 barrels per day in the same year. Tajikistan opened its first oil refinery, with a capacity of 400 barrels per day, in 2001.

## 28 INDUSTRY

A small number of state-owned enterprises dominate Tajikistan's industrial sector. The government's post-independence plans to extensively privatize industry have been hampered, first, by the five-year civil war 1992–1997, and then by the effects of the Russian financial crisis in mid-1998 that have put concerns about financial stability ahead of privatization. By early 1992, the state accounted for about 84% of asset ownership in the industrial sector, as compared to a high of 98% in the late 1980s. The civil war damaged an already weakly developed industrial sector, and basic security remains a concern. Industry in Tajikistan consists in sum of one large aluminum smelter, hydroelectric power installations and a number of small plants engaged in light industry and food processing. Virtually all are in need of upgrading and modernization.

Tajikistan's aluminum plant, the Tursunzade Aluminum Smelter (TADAZ), built in 1975 and located in Tajikistan because of access to cheap electric power, is the third-largest in the world, with a capacity of 517,000 tons a year. In 2001, it was operating at 25% capacity (producing 113,000 tons), down from 86.5% capacity in 1990 (producing 450,000 tons, the closest it has come to full capacity utilization.) The \$210 million earned in export revenues constituted 53% of total export receipts for the year. In 202, TADAZ's output increased to 307,000 tons, and plans are for it to reach 346,000 tons annual output by 2005. Almost all of its output is exported, though there are small downstream cable and foil operations. The plant directly employs 12,000 to 14,000, and indirectly supports a community of 100,000. The government announced its intention to sell shares in TADAZ, retaining a majority control. However, the plant has accumulated a large external debt, probably over \$100 million, lessening its attractiveness to outside investors. In early 2003, the IMF somewhat uncharacteristically advised against privatization of either TADAZ or the country's hydroelectric facilities.

Tajikistan is the world's third-largest producer of hydroelectric power, behind the United States and Russia. However, TADAZ uses about 40% of the country's electricity production, and Tajikistan has the lowest electricity usage rates among the former Soviet counties, enough for only a few hours a day of electricity in the winter. Furthermore, only about 5.5% of its hydroelectric power production potential has been developed. In 2001, only 16.5 billion kilowatt hours per year (kWh/y) out of a potential 300 kWh/y were produced, 3.9 billion kWh/y of which were exported. About 12 power projects are at some stage of construction but most are stalled for lack of financing. The energy shortage in turn has shut down much of the country's industry. About 85% of Tajikistan's current hydroelectric power is produced by stations along the Vakhsh River. The largest of these is at Nurik (11 billion kWh/y capacity). A larger facility (13.3 billion kWh/y) at Rogun on the Vakhsh is unfinished because of lack of financing related to concerns about both security and vulnerability to earthquake. If completed, the Rogan Dam would be the tallest in world at 335 m (1,105 ft). Even larger, although only in the planning stage, is a 14.8 billion kWh/y facility for Dashtijum on the Panj River along the Afghan border.

The production, transportation and distribution of electricity is under the state-owned joint-stock company Barki Tojik. Light industry includes the Tokof 1997, the government was in the process of privatizing Glavkhloprom, the state organization that controls the ginning and partly the selling of cotton fiber. In 2000, 18 cotton ginneries were sold at two auctions, bringing in a disappointing \$9 million. The food industry is the second-largest contributor to gross industrial output, processing domestically harvested fruit, wheat, tobacco, and other agricultural products. Aside from aluminum and other processed metals, the country's small intermediate and heavy industry subsectors produce engineering goods, hydroelectricity, power transformers, cables, and agricultural equipment.

## 29 SCIENCE AND TECHNOLOGY

The Tajik Academy of Sciences, founded in 1951 at Dushanbe, has departments of physical-mathematical, chemical, and technical sciences; earth sciences; biological and medical sciences; and ten associated research institutes. Tajik State University has faculties of mechanics and mathematics, physics, chemistry, geology, and biology. Tajik Abu-Ali Ibn-Cina (Avicenna) State Medical Institute was founded in 1939. Tajik Agricultural Institute was founded in 1951. Tajik Technical University was founded in 1956. All four educational institutions are in Dushanbe. In 1987-97, science and engineering students accounted for 17% of college and university enrollments. In the same period, Tajikistan had 666 scientists per million population engaged in research and development.

## 30 DOMESTIC TRADE

Although trade is still dominated by the state sector, the government has been working on programs to transfer of much of the retail and wholesale trade sector into private ownership. As of 1999, the government reported that most small enterprises were in private hands. Privatization of medium and large-sized businesses, land reform, and banking reforms are still in the works. Price liberalization lifted controls on most consumer and wholesale trade, although subsidies and lowered ceilings have been applied to staple goods like flour, sugar, oil, bread, meat, and children's footwear. Most large towns have large marketplaces, or bazaars, where individual merchants sell a variety of consumer goods, many of which are imported. Trade on the black market has expanded significantly in the growing economic disarray since independence.

## 31 FOREIGN TRADE

Aluminum, raw cotton, and textile products account for about 68% of Tajikistan's exports. Other exports include fruits and vegetable oils. Fuel, chemicals, intermediate industrial goods and equipment, manufactured consumer goods, textiles, and food are its principal import items. Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
Russia	259	104	155
Netherlands	178	n.a.	n.a.
Uzbekistan	98	185	-87
Italy	20	17	3
Latvia	14	n.a.	n.a.
Kazakhstan	6	82	-76
Turkmenistan	5	29	-24
Ukraine	2	84	-82
Azerbaijan	n.a.	63	n.a.
Romania	n.a.	41	n.a.

## 32 BALANCE OF PAYMENTS

Foreign income earnings depend highly upon cotton exports; since independence, the centrally planned economy has suffered from the effects of civil war, the severing of trade relations with other former Soviet republics, and a series of natural disasters. Short term, high interest debt accumulated in 1993-94 resulted in a national debt exceeding \$780 million with debt service totaling \$12 million in 1995. About \$440 million of the total was owed to Russia, Uzbekistan, and Kazakhstan. Other major creditors include the United States, Turkey, China, and India. External debt totaled \$1.23 billion in 2000.

The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Tajikistan's exports was \$640 million while imports totaled \$700 million resulting in a trade deficit of \$60 million.

## 33 BANKING AND SECURITIES

The National Bank of Tajikistan (NBT) is the country's bank charged with implementing a monetary policy and issuing currency. It was formally established as the central bank in 1991. Commercial and state banks include the Bank for Foreign Investment, three large banks formed from the former Soviet state bank, and three branches from the Russian Commercial Bank. The Law on Banks and Banking Activities, adopted in February 1991, allows banks to compete for resources freely (including the setting of deposit rates) and lifts specialization boundaries. However, competition is very limited. Under IMF pressure, the Tajik government is now seeking to introduce tighter regulation over the banking sector.

There is no securities exchange.

## 34 INSURANCE

Until recently, the insurance sector in Tajikistan consisted of the state insurance company Gosstrakh only. The market was opened up in 1992. Gosstrakh remains the dominant provider of insurance, however. It provides compulsory insurance of agricultural production, insurance of passengers, insurance for accidents, property, cargo, and residential homes. In addition, it offers insurance on life, livestock, state enterprises, collateral, marriage, and children.

## 35 PUBLIC FINANCE

Revenues from domestic taxes and resources are limited. Expenditures are largely for grain, the supply of fuel and raw materials for industry, and to maintain the military. Despite proposals to liberalize the economy, the government continues to subsidize inefficient state enterprises. Only 11% of medium and large enterprises were privatized as of 1997, but the continuance

of privatization has gained momentum. In December 1999, the government announced that all small enterprises had been privatized, and that privatization of medium and large enterprises was a high priority.

The US Central Intelligence Agency (CIA) estimates that in 2000 Tajikistan's central government took in revenues of approximately \$146 million and had expenditures of \$196 million. Overall, the government registered a deficit of approximately \$50 million. External debt totaled \$1.23 billion.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

REVENUE AND GRANTS	100.0%	146
Tax revenue	91.2%	133
Non-tax revenue	8.8%	13
EXPENDITURES	100.0%	196
General public services	16.1%	32
Defense	9.4%	18
Public order and safety	8.8%	17
Education	3.7%	7
Health	1.6%	3
Social security	20.3%	40
Housing and community amenities	0.8%	2
Recreation, cultural, and religious affairs	3.6%	7
Economic affairs and services	14.4%	28
Other expenditures	16.7%	33
Interest payments	4.7%	9

### 36 TAXATION

Tajikistan's maximum personal income tax rate is 40%; corporate taxes range from 25–60% with a standard rate of 30%. Also levied are a 20% VAT; a 10–90% excise tax; and a social security combination of 37% by employers and 1% by employees.

### 37 CUSTOMS AND DUTIES

The government maintains a list of commodities and services subject to import licensing and quotas. Generally, imports are free of restrictions, including tariffs and quotas, with the exception of narcotics and firearms, which are forbidden. Goods traded within the former Soviet Union are mostly free from import duties. There is a 28% value-added tax and excise taxes are levied on some products.

### 38 FOREIGN INVESTMENT

After independence, Tajikistan's government emphasized the promotion of foreign investment particularly to develop labor-intensive manufacturing industries. With ongoing civil unrest, however, few investments have flowed into the country and most foreign aid except that of Russia has been stalled. Difficulties also exist with currency convertibility, a prohibition on land ownership, and repatriation of profits and capital. In 1996 the government amended the foreign investments law to offer a two year exemption from taxes on profits to enterprises with investments of \$100,000–500,000, and a four year exemption to enterprises with investments totaling \$2–5 million. The peace agreement of 1997 did not bring in an immediate rush of foreign investment capital. Only \$20 million was invested in that year.

### 39 ECONOMIC DEVELOPMENT

Soviet development policy in Tajikistan prioritized the development of the country's agricultural and other primary resources, while capital goods and manufactured consumer goods

were imported from elsewhere within the former USSR. Since the late 1970s, greater development of small food processing and consumer plants had been urged by local government officials in order to absorb more of the republic's rural labor force; however, these proposals found little favor with Soviet central planners. After independence, the government targeted the development of hydroelectric power production and a number of other industries (silk, fertilizer, fruit and vegetables, coal, nonferrous metals, and marble production), seen as particularly important for improving the country's export base.

In 1991, a "Program of Economic Stabilization and Transition to a Market Economy" was adopted by the newly independent government. In accordance with the program's principles, price liberalization, privatization measures, and fiscal reform were initiated in 1991 and 1992. The government's overthrow in the course of civil war in 1992, however, brought economic development to a virtual standstill and slowed the pace of economic reform. Renewed efforts during 1996–97, as the civil war was brought to a formal end, to move from a state-directed economy to a market-oriented one resulted in proposals to convert medium and large state enterprises to joint-stock companies and to create a securities market. Other proposals were aimed at turning land over to private farmers and at privatizing the cotton industry, which continues to dominate agricultural production. In 1997, the private sector accounted for less than 30% of GDP. That percent had risen to about 40% in 2001, about half in the formal economy and half in the informal, family-run economy. In 2000 18 cotton ginneries were auctioned off, bringing about \$9 million dollars. Local silk operations have also been privatized. The majority of enterprises have been bought by insiders rather than outside investors. Despite the return of real growth in 1997, the Russian financial crisis brought financial problems—inflation and external debt—to the top of the agenda ahead of market-oriented restructuring. As of early 2003, in fact, the IMF was advising against privatizing either the Tadaz aluminum plant or the country's hydroelectric facilities. In agriculture, the government remained undecided between allowing privatization and maintaining the large-scale, industrialized cotton operations that showed a 35% increase in productivity in 2001 over a drought-depressed 2000. Private farmers, however, show promise of leading the way to greater diversification in agriculture, expanding into higher value-added fruits and vegetables. However, a lack of credit facilities and distrust of the privatization process hampers movements towards diversification.

In pursuit of financial stability, on 24 June 1998 the government entered into a three-year arrangement under the IMF's PRGF (Poverty Reduction and Growth Facility) to run from 1998 to 2001. However, the IMF staff was unable to complete the third and fourth reviews of the third year of the program because of slow progress in improving the operations of the treasury and tax administrations, problems with the lack of transparency, and problems with the lack of independence of the Tajik Central Bank. However, in January 2002, a more successful structural reform program was implemented, including the creation of a new Ministry of State Revenues and Duties that has improved tax and customs collections. As the IMF program concluded in June 2002, the Tajikistan parliament adopted a three-year National Poverty Reduction Strategy (NPRS). The objectives of NPRS are to increase real income, achieve a fair distribution of growth benefits, and ensure a rise in living standards among the poorest groups. On 11 December 2002, the IMF Executive Board approved a second three-year program under the PRGF that will run in tandem with the Tajikistan's NPRS. IMF's approval of the government's debt and financial management is prerequisite to its ability to obtain the external finance it needs to develop its productive potential.

## 40 SOCIAL DEVELOPMENT

The government's social security systems have been threatened by war and economic turmoil. Refugees returning from Afghanistan after the war suffered from malnutrition and had high mortality rates in resettlement camps. Resettlement payments to refugee families had been promised by the government, but were not implemented in practice. Financial constraints have also led the government to fall behind in the payment of pensions. More than 80% of the population fall below the poverty line, while the monetary crisis devalues benefits.

There is no formal discrimination against women in employment, education, or housing. Women are increasingly working outside the home and are found in both the public and private sectors. Although under law women are supposed to receive the same pay for equal work as men, in practice this does not always occur. Women in rural areas are less likely to receive a higher education or work outside the home, and were likely to marry early. Violence against women, including spousal abuse, is a serious social problem and appears to be particularly prevalent in rural areas. The number of women in government has declined since the Soviet era.

Serious human rights abuses continue to be committed by the government and security forces. Ethnic tensions persist and prison conditions remain life-threatening.

## 41 HEALTH

As of 2000, Tajikistan retained the centralized health care system instituted during the Soviet era, with the state funding and providing for most health care services through the Ministry of Health. Although most hospitals have remained open, the number of beds decreased by about one-third during the 1990s. Training of medical personnel is a priority, as the country lost many skilled workers during its civil war. The shortage of skilled nurses is especially pressing. As of 1999, there were an estimated 2 physicians and 8.8 hospital beds per 1,000 people. As of 1999, total health care expenditure was estimated at 6.1% of GDP.

In 2000, there was an infant mortality of 21 per 1,000 live births. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 33 and 8.5 per 1,000 people. The total fertility rate of 5.7 in 1980 had decreased to 3.1 in 2000. The maternal mortality rate was 65 maternal deaths per 100,000 live births in 1998. Life expectancy was 69 years in 2000. The immunization rates for a child under one were as follows in 1990–96: tuberculosis, 69%; diphtheria, pertussis, and tetanus, 82%; polio, 74%; and measles, 97%.

Leading causes of death per 100,000 people in 1990 were communicable diseases and maternal/perinatal causes, 182; noncommunicable diseases, 558; and injuries, 53. In 1992, there were approximately 20,000 war-related deaths. The likelihood of dying after age 65 of heart disease in 1990–93 was 364 per 1,000 for men and 378 per 1,000 for women. In 1991, there were 10,099 deaths due to cardiovascular disease in Tajikistan.

Diphtheria has spread widely throughout the former Soviet Union. In Tajikistan, reported diphtheria cases increased 180% from 680 cases in 1993 to 1,993 cases in 1994. Most cases were reported from the southern region of Kurgan Tyube, which borders Afghanistan. As of 1999, both the number of people living with HIV/AIDS and the number of deaths from AIDS were estimated at fewer than 100. HIV prevalence was lower than 0.01 per 100 adults.

## 42 HOUSING

The government's 1994 Conceptual Plan for the Provision of Housing called for the construction of 1,390,000 square meters of housing per year until the year 2000. Unfortunately, by 1995, only about 10% of the goal had been reached. Part of the housing shortage was brought on by the civil war, which accounted for

the destruction of over 35,000 homes. The government was able to rebuild about 21,000 homes by the end of 1995 through international assistance. In 1993, the government also initiated a fund for no-interest credit to help war victims in the reconstruction and repair of their own homes.

The most common building materials for new homes are prefabricated ferro-cement slabs. In rural areas, traditional materials of paksha, brick, mortar, and stone are used.

## 43 EDUCATION

The adult illiteracy rate was estimated at 0.8% for the year 2000 (males, 0.4%; females, 1.1%). Before the country came under Soviet control in 1920, there were no state-supported schools, only Islamic ones. Since then, many schools have been built. Education is free and compulsory between the ages of 7 and 17. Since 1989, there has been an increased emphasis on Tajik language, literature, and culture. In 1997 there were 638,674 primary students in 3,432 schools, with 27,172 teachers. Student-to-teacher ratio stood at 24 to 1. In the same year, secondary schools enrolled 688,150 students and had 112,532 teachers. The pupil-teacher ratio at the primary level was 22 to 1 in 1999. In the same year, 87% of primary-school-age children were enrolled in school. There are 10 schools of higher education including the Universities of Dushanbe and Khudzhand. In 1995, all higher-level institutions had a total of 108,203 pupils. In 1997, universities enrolled 76,613 students.

## 44 LIBRARIES AND MUSEUMS

The Fardousi Tajik National Library in Dushanbe holds nearly three million volumes. The Republican Scientific and Technical Library of Tajikistan has holdings that include two million volumes and 11 million patent records, and the Tajik State University holds 1.03 million volumes. The Republican Historical, Regional and Fine Arts Museum is in Dushanbe. There are regional museums in Chodsent, Sorog, Isfara, Kulyab, Nurek, Pendzikent, and Ura Tyube.

## 45 MEDIA

Telephone links to other former Soviet republics is by land line or microwave and to other countries through Moscow. Service is considered to be poorly developed and is not adequately maintained. Several towns are not within reach of the national network. As of 1997, there were 363,000 mainline telephones and 2,500 cellular phones in use.

Tajik Radio broadcasts in Russian, Tajik, Persian, and Uzbek; Tajik Television, with four channels, broadcasts in Tajik, Russian, and Uzbek. Repeater television stations relay programs from Russia, Iran, and Turkey. Satellite earth stations receive Orbita and INTELSAT broadcasts. As of 2001 there were 8 AM and 7 FM radio stations and 13 television stations. In 2000, there were 141 radios and 326 television sets per 1,000 population. The same year, there were about 2,000 Internet subscribers. In 2001, there were five Internet service providers.

In 2002 there were two major daily newspapers, *Turkmenkaya Iskra*, with a circulation of 62,946, and *Narodnaya Gazeta*. There are several publishing houses in Dushanbe, including educational, literary, and reference publishers.

Despite a 1991 law protecting already constitutionally provided free speech and press, the government is presently said to restrict these freedoms severely. Editors and journalists practice careful self-censorship, and supplies of newsprint, broadcasting facilities, and operating monies are controlled by the authorities.

## 46 ORGANIZATIONS

The Tajikistan Chamber of Commerce and the Tajikistan Industrial Association are important economic organizations. The most important mass movement in the country is the People's

Front. The members of the Writers Union and intellectuals in the country formed the “Rascokbez” (Rebirth) Popular Front, an opposition movement opposed to the government of Tajikistan.

Tajikistan’s Academy of Science coordinates and finances the scientific research of 19 affiliated natural sciences, social sciences, and humanity research institutions. The Ali Somon Foundation, established in 1994, works to promote economic development and modernization while preserving national culture.

Youth organizations include scouting groups; the Aurora Children and Teenagers’ Club, focusing on social and educational development programs; and the Tajikistan Youth Center, focusing on vocational training programs. The Women for Progress Association and the Association for Women and Society promote health, education, and equality for women. The Red Crescent Society is active.

#### 47 TOURISM, TRAVEL, AND RECREATION

Civil strife has dampened Tajikistan’s potential as a tourist site, which was already limited by the destruction of most ancient monuments and buildings by numerous earthquakes (500 in this century alone). Visas are required for entry into Tajikistan and are obtainable upon arrival or through Russian embassies abroad. There are daily flights from Moscow to the capital city of Dushanbe.

According to 1999 UN estimates, the cost of staying in Dushanbe was \$187 per day. Elsewhere in the country, estimated travel costs averaged \$75 per day.

#### 48 FAMOUS TAJIKISTANIS

Outstanding representatives of culture and literature in Tajikistan are the Tadjik poet Rudaki (d. 941) and the scientist and poet Avicenna (Hussayn ibn ‘Abd’ Addallah ibn Sine, 980?–1037), born near Bukhara. Avicenna wrote an encyclopedia of science. Pre-Soviet Tajik cultural figures include the author Abdalrauf Fitrat, who wrote *Last Judgement*, and Sadridalin Aymi, author of the novels *Slaves* and *Dokhunala*.

#### 49 DEPENDENCIES

Tajikistan has no territories or colonies.

# THAILAND

Kingdom of Thailand

*Prates Thai*

**CAPITAL:** Bangkok (Krung Thep)

**FLAG:** The national flag, adopted in 1917, consists of five horizontal stripes. The outermost are red (symbolizing the Thai people); those adjacent are white (symbolizing Buddhism); the blue center stripe (representing the monarchy) is twice as high as each of the other four.

**ANTHEM:** There are three national anthems: *Pleng Sansen Phra Barami (Anthem Eulogizing His Majesty)*; *Pleng Chard Thai (Thai National Anthem)*; and *Pleng Maha Chati (Anthem of Great Victory)*, an instrumental composition.

**MONETARY UNIT:** The baht (฿) is divided into 100 satang. There are coins of 1, 5, 10, 25, and 50 stangs and 1, 5, and 10 baht, and notes of 50 satang and 1, 5, 10, 20, 50, 60, 100, and 500 baht. ฿1 = \$0.0235 (or \$1 = ฿42.58) as of May 2003.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but some traditional units also are used.

**HOLIDAYS:** New Year's Day, 1 January; Chakkri Day, 6 April; Songkran Day, mid-April; Coronation Day, 5 May; Queen's Birthday, 12 August; Chulalongkorn Day, 23 October; King's Birthday, 5 December; Constitution Day, 10 December. Movable holidays include Makabuja Day, Plowing Festival, and Visakabuja Day.

**TIME:** 7 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Comprising an area of 514,000 sq km (198,456 sq mi) in Southeast Asia, Thailand (formerly known as Siam) extends almost two-thirds down the Malay Peninsula, with a length of 1,648 km (1,024 mi) N-S and a width of 780 km (485 mi) E-W. Comparatively, the area occupied by Thailand is slightly more than twice the size of the state of Wyoming. It is bordered on the NE and E by Laos, on the SE by Cambodia and the Gulf of Thailand (formerly the Gulf of Siam), on the S by Malaysia, on the SW by the Andaman Sea, and on the W and NW by Myanmar, with a total boundary length of 8,082 km (5,022 mi), of which 3,219 km (2,000 mi) is coastline.

Thailand's capital city, Bangkok, is located on the Gulf of Thailand coast.

## <sup>2</sup>TOPOGRAPHY

Thailand may be divided into five major physical regions: the central valley, the continental highlands of the north and northwest, the northeast, the southeast coast, and the peninsula. The heartland of the nation is the central valley, fronting the Gulf of Thailand and enclosed on three sides by hills and mountains. This valley, the alluvial plain of the Chao Phraya River and of its many tributaries and distributaries, is 365 km (227 mi) from north to south and has an average width of 160–240 km (100–150 mi). On this plain, and most especially on its flat delta land bordering the Gulf, are found Thailand's main agricultural wealth and population centers.

The continental highlands lie north and west of the central valley. They include North Thailand, surrounded on three sides by Myanmar (Burma until June 1989) and Laos, which is a region of roughly parallel mountain ranges between which the Nan, Yom, Wang, Ping, and other rivers flow southward to join and create the Chao Phraya in the central valley. In the northernmost tip, drainage is northward to the Mekong River; on the western side, drainage runs westward to the Salween in

Myanmar. Most of the people of North Thailand live in small intermontane plains and basins that are generally widenings in the major river valleys. Doi Inthanon (2,576 m/8,451 ft) is the highest point in Thailand. Along the Myanmar border from North Thailand to the peninsula is a sparsely inhabited strip of rugged mountains, deep canyons, and restricted valleys. One of the few natural gaps through this wild mountain country is Three Pagodas Pass along the Thailand-Myanmar boundary, used by the Japanese during World War II for their "death railway" (now dismantled) between Thailand and Myanmar.

The northeast, much of it often called the Khorat, is a low, undulating platform roughly 120 to 210 m (400–700 ft) above sea level in the north and west, gradually declining to about 60 m (200 ft) in the southeast. Hill and mountain ranges and scarps separate the northeast from the central valley on the west and from Cambodia on the south; its northern and much of its eastern boundaries are marked by the Mekong River. Most of the northeast is drained by the Mun River and its major tributary, the Chi, which flow eastward into the Mekong. The northeast, in the rain shadow of the Indochina Cordillera, suffers from shortage of water and from generally thin and poor soils.

The small southeast coast region faces the Gulf of Thailand and is separated from the central valley and Cambodia by hills and mountains that rise in places to over 1,500 m (5,000 ft). This is a well-watered area, and the vegetation is, for the most part, lush and tropical. Most of the people live along the narrow coastal plain and the restricted river valleys that drain southward to the Gulf.

Peninsular Thailand extends almost 960 km (600 mi) from the central valley in the north to the boundary of Malaysia in the south and is anywhere from 16 to 217 km (10–135 mi) wide between the Gulf of Thailand on the east and the Andaman Sea (Indian Ocean) and Myanmar on the west. At the Isthmus of Kra, the Peninsula itself is only 24 km (15 mi) wide. A series of north-south ridges, roughly parallel, divide the Peninsula into distinct west and east coast sections. The west coastal plain is narrow—

nonexistent in many places—and the coast itself is much indented and often very swampy. The east coastal plain is much wider, up to 32 km (20 mi) in sections, and the coast is smooth, with long beach stretches and few bays. Well-watered (especially the west coast), hot, and densely forested, the Peninsula, unlike most of Thailand, lies within the humid tropical forest zone.

### 3 CLIMATE

Thailand has a tropical climate. For much of the country there are three distinct seasons: the hot season, from March through May; the rainy or wet monsoon, June to October; and the cool season, November through February. While continental Thailand receives most of its precipitation from June through October, rain occurs at all seasons in peninsular Thailand, the largest amount along the west coast from May to October, and along the east coast from October to January. For most of Thailand the temperature rarely falls below 13°C (55°F) or rises above 35°C (95°F), with most places averaging between 24°C and 30°C (75°F and 86°F). The annual rainfall ranges from 102 cm (40 in) in the northeast to over 380 cm (150 in) in the peninsula. Bangkok has an average annual temperature of 28°C (82°F); monthly mean temperatures range from a low of around 25°C (77°F) in December to a high of around 30°C (86°F) in May, and annual rainfall is about 150 cm (59 in).

### 4 FLORA AND FAUNA

Many distinctive forms of plant and animal life are found. Forestlands support hardwoods (notably teak), pine, bamboos, and betel and coconut palms; in the coastal lowlands, mangroves and rattan abound. Among the larger mammals are the bear, otter, and civet cat. Climbing animals include the gibbon and many species of monkeys. There are also sheep, goats, oxen, single-horned rhinoceroses, deer, tapirs, wild cattle, wild hogs, and snakes. There are over 600 breeding bird species. Crocodiles, lizards, and turtles are numerous. Fish abound in the rivers and coastal waters.

### 5 ENVIRONMENT

The Promotion and Enhancement of Environmental Quality Act of 1975 charges the National Environment Board with coordination of environmental protection programs in Thailand. The nation's water supply is at risk due to contamination by industry, farming activity, sewage, and salt water, especially in the Bangkok area. Thailand has 210 cu km of renewable water resources, with 91% used for farming activities and 4% for industrial purposes. Only 81% of the rural dwellers have pure drinking water.

Thailand's cities produce an average of 2.5 million tons of solid waste per year. Industry produces about 2 million tons of toxic pollutants annually. Watershed regions, undergoing rapid deforestation as a result of increased cultivation of upland areas, have been targeted for protection in the fourth and fifth national plans; overexploitation and pollution of freshwater and marine fisheries have yet to be remedied. By the 1980s, Thailand had lost about 25% of its original mangrove area. Land use in urban areas is regulated by the City Planning Act of 1975, the Control of Construction of Buildings Act of 1936, and the 1960 Act for Cleanliness and Orderliness of the Country. Parts of Bangkok were reportedly sinking at a rate of 10 cm (4 in) a year because of depletion of the water table.

Urban air and noise pollution was also severe, largely as a result of increasing automobile traffic. In 1992 Thailand was among 50 nations with the world's highest levels of industrial carbon dioxide emissions, which totaled 112.4 million metric tons, a per capita level of 2.02 metric tons. In 1996, the total rose to 205.3 million metric tons.

Wildlife is partially protected under the Wild Animals Preservation and Protection Act of 1960, but species have been

depleted through illegal hunting and trapping. In 2001, 34 of the nation's mammal species and 45 bird species were endangered. About 355 types of plants were also endangered. Endangered species in Thailand include the pileated gibbon, tiger, Asian elephant, Malayan tapir, Sumatran rhinoceros, Fea's muntjac, Thailand brow-antlered deer, kouprey, green turtle, hawksbill turtle, olive ridley, leatherback, river terrapin, estuarine crocodile, Siamese crocodile, false gavia, and the Javan rhinoceros. Schomburgk's deer and the redtail shark have become extinct.

### 6 POPULATION

The population of Thailand in 2003 was estimated by the United Nations at 62,833,000, which placed it as number 19 in population among the 193 nations of the world. In that year approximately 6% of the population was over 65 years of age, with another 24% of the population under 15 years of age. There were 96 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 1.01%, with the projected population for the year 2015 at 69,585,000. The population density in 2002 was 122 per sq km (316 per sq mi), but there are great regional variations in density.

It was estimated by the Population Reference Bureau that 22% of the population lived in urban areas in 2001. The capital city and only major urban area, Bangkok, had a population of 7,133,000 in that year. Outside of Bangkok, most major cities are provincial capitals, each generally centered in a changwat (province or county) with the same name as the city. According to the United Nations, the urban population growth rate for 2000–2005 was 2.7%.

### 7 MIGRATION

Immigration to Thailand, except for the Chinese, has traditionally been comparatively small. The decade of the 1920s was a period of large-scale Chinese immigration of 70,000 to 140,000 a year. Strict immigration regulations have all but stopped the legal flow of Chinese into the country, but during the Franco-Indochinese war some 45,000 Vietnamese refugees settled in Thailand. An immigration quota, introduced in 1947, now limits migration from any one country to 100 persons annually.

As of December 1992, the UN estimated that 63,600 refugees were living in Thailand; these represented part of the flood of over 4 million refugees who had left Cambodia, Laos, and Vietnam since the 1970s. Some 370,000 Cambodians on the Thai–Cambodian border were repatriated during 1992–93. The 36,000 Cambodian refugees who fled their country after the political and military events of 1997 were repatriated by 1999, and three border camps were subsequently closed. In 1986, the Thai government began forcibly repatriating many refugees from Laos. The last refugee camp for Vietnamese was closed in February 1997.

In June 1998, the Thai government formally requested increased UNHCR assistance for some 100,000 Karen and Karenni refugees living in 11 camps in Thailand along the Myanmar border. A comprehensive registration of the border population was completed through the joint efforts of the Thai government and UNHCR in 1999. UNHCR is also working with the government to establish uniform criteria for accepting new arrivals from Myanmar, as it is unlikely that repatriation will be possible in the near future.

The net migration rate in 2000 was -0.01 migrants per 1,000 population.

### 8 ETHNIC GROUPS

Thailand contains more than 30 ethnic groups varying in history, language, religion, appearance, and patterns of livelihood. However, the Thai, akin to the Lao of Laos, the Shan of Myanmar (Burma prior to June 1989), and the Thai groupings of

southern China, comprise about 75% of the total population of Thailand. The Thai may be divided into three major groups and three minor groups. Major groups are the Central Thai (Siamese) of the Central Valley; the Eastern Thai (Lao) of the Northeast (Khorat); the Northern Thai (Lao) of North Thailand; and the Southern Thain (Chao Pak Thai) of peninsular Thailand. Minor groups are the Phuthai of northeastern Khorat, the Shan of the far northwestern corner of northern Thailand, and the Lue in the northeastern section of northern Thailand. The several branches of Thai are united by a common language.

A major ethnic minority is the Chinese (about 14%), engaged in business and commerce throughout the country. Other varied ethnic groups account for the remaining 11% of the population. Malays (3–4%), in the southern peninsula near the border and, to a lesser extent, along the southeast coast; Khmers (1%), all along the Cambodian border from the Mekong to the Gulf of Thailand; and Vietnamese or Annamese, in the southern Khorat and on the southeast coast. Small numbers of residents from India, Europe, and the United States live mainly in urban areas. Principal tribal groups, mainly hill peoples, include the Kui and Kaleung, in the northeast; the Mons, living mainly on the peninsula along the Burmese border; and the Karens, living along the northern Burmese border. There are, in addition, some 20 other minority groups, including the Akha, Musso, Meo, Kamuk, Tin, Lawa, and So; most of these peoples, primitive and small in number, live by shifting cultivation in rugged, isolated mountain or dense forest terrain.

## 9 LANGUAGES

The Thai language, with northern, eastern, central (Bangkok or official Thai), and southern dialects, all distantly related to Chinese, prevails throughout the country. Thai, written in a distinctive alphabet, is thought to be part of the Sino-Tibetan language family, although links to Indian languages are also evident. The Thai dialects for the most part are mutually intelligible only with difficulty. Although the ethnic minorities (including the Malays) generally speak their own languages, Thai is widely understood. The Chinese population is largely bilingual. All official documents are in the central Thai language and script, although English, taught in many secondary schools and colleges, is also used in official and commercial circles.

## 10 RELIGIONS

Therevada Buddhism is the state religion of Thailand; only Buddhists are employed by the government, and the Thai monarch is legally required to be a Buddhist. According to 2000 government statistics, Buddhism was the religion of an about 94% of the population. However, other government agencies and religious groups estimate that the number of Buddhists is only about 85% to 90%. Although virtually all Thai are nominally Buddhists, the dominant form of religion in Thailand might be described as a spirit worship overlaid or mixed in varying degrees with Buddhist and Brahman beliefs imported from India.

An estimated 10% of the population, including the Malay ethnic minority, are Muslim. Among the other ethnic minorities, the Chinese practice a traditional mixture of Mahayana Buddhism, Taoism, Confucianism, and ancestor worship. Most Vietnamese are Mahayana Buddhists and most Indians are Hindus (0.1% of the population). Christians have been active in Thailand since the 17th century and account for an estimated 1% to 2% of the population. There are small Baha'i and Jewish communities.

At least six tribal groups (500,000 to 600,000 people) are animists.

## 11 TRANSPORTATION

Thailand's transportation system is not fully developed, but it is growing rapidly. Owned and operated by the government, the

railways, consisting in 2002 of 4,071 km (2,530 mi) of track, radiate from Bangkok to Malaysia in the south, to the Cambodian border in the east, to Ubon Ratchathani and Nong Khai in the northeast, and to Chiang Mai in the north.

The highway system, significantly expanded during the 1960s and 1970s, serves many areas inaccessible to railway. In 2001 there were 64,600 km (40,142 mi) of roadway, including 62,985 km (39,139 mi) of paved road. Modern two-lane highways now connect Bangkok with the rest of the country. In 2000, registered motor vehicles totaled 4,667,700, including 1,529,000 passenger cars.

Waterways, both river and canal, are Thailand's most important means of inland transport; they carry much of the nation's bulk freight over a network of some 4,000 km (2,500 mi). The Chao Phraya River with its tributaries is the main traffic artery, and Bangkok is its focal point. The modern port of Bangkok at Klong Toey is the chief port for international shipping. Lying some 40 km (25 mi) inland from the sea, its harbor is navigable for vessels up to 10,000 tons, but constant dredging of the Chao Phraya is necessary. To relieve the congestion at Klong Toey, a new modern port was being developed at Sattahip, a former US naval base, and new seaports at Laem Chabang and Hap Ta Phut. Phuket Harbor in southern Thailand has been improved to accommodate 15,000-ton cargo ships. An extensive shipping service also exists along the Gulf of Thailand, and a small Thai merchant fleet plies between local and neighboring ports. In 2002, there were 297 oceangoing vessels of more than 1,000 gross tons in the Thai merchant fleet (up from only 80 in 1986), totaling 1,616,314 GRT.

Since the end of World War II, Bangkok has become an important center of international aviation. In 2001 there were 110 airports, of which 62 had paved runways. Principal airports include Bangkok International at Bangkok, Chiang Mai, Hat Yai at Haadyai, and Phuket International at Phuket. The government-owned Thai Airways International and Thai Airways Co. handle international and domestic air traffic, respectively. In 2001, scheduled airline traffic carried 17,392,100 passengers and 1,699 million ton-km (1,055 million ton-mi) of freight.

## 12 HISTORY

Archaeological excavations in the 1970s in Ban Chiang, northeastern Thailand, yielded traces of a Bronze Age people, dating as far back as 3600 BC predating Bronze cultures in China and the Middle East. The technical achievements of the Ban Chiang society, as surmised from archaeological evidence, indicate the existence of a settled agrarian people with advanced knowledge of bronze and iron metallurgy. Moreover, the skills demonstrating in their pottery, housing, and printing of silk textiles reflect at least 2,000 years of prior development, a finding that challenges previous concepts of incipient civilization and technology, and Southeast Asia's role in it.

The Thai descended from the ancient Pamir plateau peoples, who are racially related to the Chinese, that migrated from southern China to mainland Southeast Asia. While in southern China, the Thai created the powerful Nan-Chao kingdom, but continued pressure from Chinese and Tibetans and the final destruction by Kublai Khan in 1253 forced the Thai southward across the mountain passes into Southeast Asia. After entering the valley of the Chao Phraya River, they defeated and dispersed the Khmer settlers, ancestors of the Cambodians, and established the Kingdom of Thailand.

By the mid-14th century, the Thai expanded and centralized their kingdom at the expense of the Lao, Burmese, and Cambodians. Although Thailand developed trading contacts with the Dutch and Portuguese and with the French and British in the 16th and 17th centuries respectively, it remained a feudal state with a powerful court of nobles. During the reigns of Mongkut (1851–68) and his son Chulalongkorn (1868–1910), however,

LOCATION: 97° to 106°E; 6° to 21° N. TOTAL BOUNDARY LENGTH: 8,082 kilometers (5,022 miles).

Thailand emerged from feudalism and entered the modern world. A cabinet of foreign advisers was formed; commercial treaties of friendship were signed with the British (1855) and with the United States and France (1856); the power of nobles was curtailed, slavery abolished, and many court practices, such as prostration in the royal presence, were ended.

The Thai government continued as an absolute monarchy despite the progressive policies of Mongkut and Chulalongkorn. In 1932, however, a bloodless revolution of Westernized intellectuals led to a constitutional monarchy. Since then, Thailand experienced multiple constitutions, changes of government, and military coups. With the government in a state of flux, political parties tended to cluster around strong personalities rather than political ideologies. At the start of World War II, Thailand, after annexing Burmese and Malayan territories, signed an alliance with Japan and declared war on the United States and the United Kingdom. From 1932 through the 1940s, political life in Thailand centered around Pridi Banomyong and Marshal Phibul Songgram and thereafter around Marshal Sarit Thanarat, until his death in 1963. Sarit's handpicked heir, Marshal Thanom Kittikachorn, subsequently emerged as the country's political leader.

After the war, however, Thailand became an ally of the United States through their common membership in the Southeast Asia Treaty Organization (SEATO), and various other bilateral treaties and agreements. In January 1965, China announced the formation of the Thailand Patriotic Front, whose purpose was "to strive for the national independence" of Thailand. A limited insurgency subsequently developed in the North and Northeast, growing in intensity in the late 1960s and early 1970s as the Southeast Asian conflict raged on Thailand's northern and northeastern borders. As a SEATO member, Thailand took a direct role in the Vietnam war and supplied a small number of troops in support of the Republic of Vietnam (RVN). Furthermore, it granted US forces the use of air bases in Thailand for massive bombing sorties against the Democratic Republic of Vietnam and the Vietcong. US forces stationed in Thailand increased to as many as 25,000 by the end of 1972. With the termination of the direct US combat role in Vietnam in early 1973, the United States began a gradual withdrawal of military personnel from Thailand. In March 1976, the Thai government ordered the United States to close its remaining military installations in the country and to remove all but a few military aid personnel by July. The communist insurgency continued, with sporadic armed attacks on the government in remote northeastern border provinces.

Internally, Thailand weathered a series of political upheavals in the 1970s. In November 1971, Marshal Thanom, who had been reconfirmed as prime minister in the 1969 general elections, led a bloodless military coup that abrogated the constitution and imposed a state of martial law. In December 1972, an interim constitution that preserved military rule caused student and labor groups to agitate for greater representation in Thai politics. By early October 1973, demonstrations erupted into riots, and on 14 October, Marshal Thanom resigned and quit the country. King Bhumibol Adulyadej stepped into the vacuum and named a national legislative assembly to draft a new constitution. On 7 October 1974, the new constitution—the tenth such document to be promulgated in Thailand since 1932—went into effect. On 26 January 1975, Thailand held its first truly open parliamentary elections since 1957. Some 42 parties competed in the balloting, which produced a coalition government under Seni Pramroj. In March 1975, Seni's government resigned following a no-confidence vote and a right-wing coalition government led by Kukrit Pramroj (Seni's brother) subsequently assumed control, but it too resigned in January 1976. Elections held in April restored Seni Pramroj to power as head of a four-party coalition, but when civil disorder again erupted among students in Bangkok, he was overthrown by the military. The military-led government declared

martial law, banned strikes and political parties, and enacted yet another constitution. Promulgation of a subsequent constitution in December 1978 paved the way for elections in 1979, 1983, and 1986. On 9 September 1985, the military swiftly diffused an abortive military coup within several hours. It was the 16th coup or attempt at a coup since 1932. General Prem Tinsulanonda was appointed for a third term as prime minister following the 1986 elections.

Insurgents based in Laos and Cambodia contributed to the nation's political instability by launching guerrilla attacks on the country. Furthermore, an upsurge in the number of refugees from Laos and Cambodia contributed to a humanitarian crisis. In 1979, the government estimated the number of insurgents at 10,000. Following the Vietnamese victory in Cambodia in January 1979, thousands of insurgents took advantage of a government offer of amnesty and surrendered to Thai security forces while others were apprehended subsequently. By the beginning of 1986, fewer than 1,000 Communist insurgents remained active, according to government estimates.

During 1985 and 1986, the Progress Party gained power when cabinet ministers were replaced. A parliamentary defeat over proposed vehicle tax legislation resulted in the dissolution of the House of Representatives. In July 1986 a general election for an enlarged house took place. General Prem formed a coalition government and served as prime minister but opposition parties accused his government of corruption and mismanagement. Additional dissent arose over proposed copyright legislation aimed at controlling counterfeiting of Western products and intellectual property. In 1988 General Prem dissolved summarily the House of Representatives and announced a general election. In the July 1988 election, the Chart Thai gained the largest number of seats. Although its leader, General Chatichai Choonhavan, declared his unsuitability for prime minister, he was appointed nonetheless. General Chatichai took an active role in foreign affairs and made bold initiatives to improve relations with Laos, Vietnam, and Cambodia. His support declined as his preoccupation with foreign affairs was considered a detriment to his handling of domestic issues, especially regarding government response in the aftermath of a devastating typhoon in November 1989. In July 1990, accusations of corruption led to a motion of "no confidence" that failed to muster a majority in the House of Representatives. In December of that year, General Chatichai resigned as prime minister, only to be reappointed the next day, enabling him to form a new coalition government.

On 23 February 1991, a bloodless military coup led by the National Peace Keeping Council (NPKC) ousted Chatichai's government alleging massive and systemic corruption. The NPKC declared martial law, abrogated the constitution, and dissolved the cabinet. An interim constitution approved by the king was published in March 1991. A former diplomat and business executive, Anand Panyarachun, was appointed prime minister. Despite public protest, a draft constitution presented in November was approved on 7 December 1991.

In March 1992, General Suchinda became prime minister amid continued unrest. Two months later, Major General Chamlong called for the resignation of Suchinda and an amendment to the constitution at a rally attended by 100,000 demonstrators. Chamlong pledged that he would fast to death, but gave the government a one-week grace period to amend the constitution to prohibit the appointment of an unelected prime minister. When it appeared that the government might renege on this agreement, the peaceful demonstrations resumed. On 17 May 1992, about 150,000 demonstrators met at Sanam Luang parade grounds in central Bangkok. Leaders called for the demonstrators to walk toward Government House down Ratchadamnoen Avenue. With police considering the demonstrators' plan threatening and demonstrators looking for a confrontation, the venue for a violent clash existed. Demonstrators broke through roadblocks

established by the police and set fire to vehicles and a nearby police station. At 4 AM on 18 May the demonstrators were counterattacked with armored vehicles and machine-guns. Government forces arrested Chamlong and killed over 100 demonstrators and detained several thousands. Four days of violence ended with intervention by the king. On 24 May, Suchinda resigned after political leaders guaranteed amnesty to military officers that participated in quelling the demonstrations. On 10 June, the national assembly approved the constitutional amendments, including the prohibition of unelected politicians from forming a cabinet. A general election followed on 13 September 1992, and Chuan Leekpai, leader of the winning Democratic Party, became prime minister.

Chuan's policies emphasized four goals: to eradicate corrupt practices, to reduce the powers of the appointed Senate, to decentralize government from Bangkok to the provinces, and to enhance rural development. Beginning in 1993 and into 1994, Chuan's government faced two "no confidence" motions in parliament, but the government emerged stronger after they failed. In 1994, Chamlong and Palang Dharma became more assertive in demands for constitutional reform, decentralization of state power, and progress in solving Bangkok's traffic problems, which are some of the worst in the world—some commutes reportedly taking up to six hours.

Ultimately corruption charges brought Chuan's governing coalition down. In late 1994, the New Aspirations Party (NAP), led by Chavalit Yongchaiyudh, left the ruling coalition over a planned electoral reform. In May 1995, prior to a vote of no confidence, Chuan dissolved parliament and called for new elections. Having served two years of a four-year term as prime minister, Chuan became Thailand's longest serving civilian leader in the modern era.

During the campaigning leading to the July 1995 elections, politicians spent 17 billion baht buying votes, a seemingly intractable problem. However, the otherwise fair balloting was won by the Chart Thai party, which took 92 (of 391) seats. The former PM, Chuan's Democrats secured 86; the NAP took 57; and Palang Dharma lost heavily, going from 47 to 23 seats. Chart Thai selected as its PM Banharn Silpa-archa. In appointing his cabinet, however, Banharn was immediately perceived as favoring the old corrupted elite, especially when he gave important ministerial posts to Montri Pongpanich and Chalerm Yubamroong, both of whom were well known for their ill-gotten wealth. Even the king, who is revered by Thai society, expressed dissatisfaction with the caliber of the new ministers.

Not surprisingly, Banharn's government collapsed before the end of 1996 and elections took place on 17 November 1996. Chart Thai went from 96 seats to 39 as the NAP, led by coalition parties, and Minister of Defense Chavalit Yongchaiyudh, emerged victorious. They swept into power going from 57 seats to 125. Placing second in the balloting was the Democratic Party. Chavalit, one of Thailand's more respected politicians, vowed to appoint a cabinet of technocrats (he called them the "dream team") rather than cronies, and to rescue the Thai economy which had been faltering. Despite his pledge, however, 1997 was a disastrous year for the Thai economy. In mid-May, the stock market collapsed and speculative currency trading hammered the baht. The government intervened, but conditions deteriorated so badly that by July the government decided to float the baht, which had been pegged to the US dollar, causing a precipitous drop. In one day, the currency fell more than 17% against the dollar. The floating of the baht caused international headlines as neighboring Asian countries frantically scrambled to protect their own currencies. By September 1997, the crisis had spread to Singapore, the Philippines, Malaysia, and Indonesia.

Failing to adjust to the crisis, the Minister of Finance Thanong resigned in October 1997 while students demanded the resignation of Chavalit. Despite a reshuffling of the cabinet in an

attempt to placate Chart Pattana, Prime Minister Chavalit resigned on November 6. In November, Chuan Leepkai formed a coalition government that included his Democratic Party, Chart Thai, the SAP, Ekkaparb, the Seirtham Party, Palang Dharma, the Thai Party, and a majority of the Prachakorn Thai Party. Despite the perceived integrity of Chuan, the Thai baht continued to experience devaluation. The fragile government survived a no confidence vote in March 1998.

By May 1998, the Thai economy stabilized and began to recover slowly despite the swirling of allegations of corruption that led to the resignation of two ministers. The government accepted a significant International Monetary Fund bailout package and promised to deregulate the economy and adopt transparency. In March 1999, a major privatization bill passed the National Assembly, which allowed government enterprises to become corporate entities without legislative action. On 5 October 1998, Chuan reorganized the government and invited Chart Pattana into the government, extending the coalition's majority in the House of Representatives to 257. In April 1999, the leader of the NAP, Chavalit temporarily resigned as leader of the party in order to prepare for upcoming general elections.

In March 2000, the first ever Senate elections took place in accord with the 1997 constitution. The nonpartisan elections fielded 1,521 candidates who, by law, refrained from campaigning.

In general elections held in January 2001, media tycoon Thaksin Shinawatra's Thais Love Thais Party won a major victory, making him prime minister. The new party took 248 of 500 seats in the House of Representatives, and Thaksin formed a coalition government with the Chart Thai (Thai Nation) Party and New Aspiration Party. The elections were marked by voting irregularities. Thaksin promised to help small businessmen and farmers in Thailand, pledging to postpone farmers' debts for three years and allocate credit of approximately US\$23,000 each to more than 70,000 villages.

In March, a plane Thaksin was due to board in Bangkok exploded, in what was regarded as an attempted assassination plot. There were speculations that the bombing had to do with Thaksin's campaign promise to crack down on drug traffickers, particularly drug lords in Myanmar moving their product through Thailand. There were 149 passengers booked to be on the plane. One person was killed and seven were injured.

Thailand officials reported that 2001 was the worst year on record for the use of methamphetamine, called *ya ba* ("crazy medicine") in Thailand. The rise in users was deemed by the military to be a threat to national security. More inexpensive to produce, smuggle, and market than heroin, methamphetamine is produced largely in Myanmar.

During 2001 and 2002, relations between Myanmar and Thailand improved. The two countries held talks in June 2001, attempting to ameliorate disagreements over the drug trade and border tensions. By September, Myanmar pledged to eliminate drug trade in the Golden Triangle by 2005. Thailand committed funds to finance a crop substitution program, and the two countries regarded themselves as good neighbors. However, in May 2002, Myanmar closed its border with Thailand after the Thai army fired shells into Myanmar's territory during a battle between Myanmar's army and ethnic Shan rebels. The border was reopened in October.

On 29 January 2003 riots broke out in the Cambodian capital of Phnom Penh over comments attributed to a Thai actress that Cambodia's Angkor Wat temple complex was stolen from Thailand. Thailand initially suspended all economic cooperation and business dealings with Cambodia, and closed the border. Cambodian Prime Minister Hun Sen promised to pay US\$46.7 million in compensation for the damage done to Thai businesses. Thailand was due to partially reopen its border with Cambodia on 8 February.

## 13 GOVERNMENT

Thailand has been a constitutional monarchy since 1932. The present king, Bhumibol Adulyadej, ascended to the monarchy in 1946 and became Rama IX on 5 May 1950. Until 1958, Thailand was governed under a constitution originally promulgated in December 1932. In October 1958, however, the constitution was suspended, and three months later the king proclaimed an interim basic law providing for a constituent assembly to draft a new constitution. Nine years in the making, a new constitution was promulgated in June 1968, and the first elections under it were held in 1969. In November 1971, Marshal Thanom Kittikachorn overturned the document despite being chosen by its rules.

A period of martial law under a national executive council ensued, with the military continuing in power through an interim constitution. A new constitution, promulgated in 1974, was suspended and replaced by martial law in 1976 when civil disorder ensued. The 1976 constitution was abrogated after an October 1977 coup and under an interim constitution, the king empowered a legislative assembly to draft a new governing document. This constitution, approved by the legislature on 18 December 1978, lifted the ban on political parties and eased some of the martial law provisions imposed in 1976.

On 23 February 1991, the National Peacekeeping Council (NPKC), led by the supreme commander of the Royal Thai Armed Forces, General Sundhara Kongsompong, took over the administration of the country. On 9 December 1991, the NPKC promulgated a new constitution. It provided for a national assembly comprised of elected representatives and an appointed senate, and a cabinet headed by an appointed prime minister. This charter was sympathetic to the needs of the military and gave the junta power over the senate. Protests that resulted in the deaths of pro-democracy demonstrators between 17–20 May 1992 quickly led to a constitutional amendment to provide for an elected prime minister and to curb some of the appointed senate's power. This constitutional amendment was approved by the national assembly on 10 June 1992 and required the prime minister to be a member of the house of representatives. In addition, the revised constitution significantly cut back the powers of the senate by ruling that the speaker of the lower house will be president of the parliament (previously it was the speaker of the senate). The senate is also barred from initiating, or taking part in, "no-confidence" motions. The first elections under these reforms were held on 13 September 1992.

Efforts to amend the constitution again came before parliament in April 1994, and the seven government-sponsored amendments were defeated. These amendments sought to reform Thailand's political structure by institutionalizing political parties and increase the role of the legislature. Prolonged debate and political indecision prevented the passage of these amendments until 27 September 1997, when the new constitution passed with the king's endorsement. According to this constitution, the house of representatives would consist of 500 members, with 400 selected by respective constituencies and 100 seats allocated by proportional representation of all parties exceeding the 5% threshold of popular votes. In an attempt to stabilize the political situation and institutionalize parties, the new constitution requires representatives to resign their seat if they renounce or switch their party membership. The senate, to consist of 200 nonpartisan members, requires all members to hold at least a baccalaureate. Members of both the house and senate serve four-year terms.

## 14 POLITICAL PARTIES

Constitutional government in Thailand has been hindered by traditional public apathy, and political parties generally have been formed by military personalities rather than around political issues and programs. Military leader Phibul Songgram, who

became prime minister in 1938, did not favor political parties. Phibul's immediate postwar successor, the pro-Japanese Pridi Banomyong, encouraged the growth of parties, but these were generally ineffective, primarily because of Thai inexperience with such institutions.

Upon Phibul and other military leaders' return to power in 1947, parties were banned. In a move designed to undercut a growing threat from other soldiers, Phibul reinstated political parties in 1955 in preparation of the elections for 1957. A new coup, led by Marshal Sarit Thanarat, deposed Phibul in 1957 and again banned political parties. Following the promulgation of a new constitution in June 1968, parties were again legalized and hotly contested the 1969 parliamentary elections. Prime Minister Thanom Kittikachorn's United Thai People's Party won a plurality (76) of the 219 seats in the House of Representatives, giving it a majority in partnership with 72 "independents" supported by Deputy Premier (and army chief) Praphas Charusathien. The Democrat Party, led by civilian politician Seni Pramoj, won 56 seats, becoming the chief opposition party. Following Marshal Thanom's 1971 coup, political activity again subsided in favor of the military. The collapse of military rule in October 1973 led to a resurgence of civilian political groups. In the parliamentary elections of 26 January 1975, 2,193 candidates from 42 political parties contested 269 seats in the House of Representatives. Voter apathy remained a problem, however, as only 47% of the electorate (33% in Bangkok) took part. The conservative Bangkok-based Democrat Party emerged with a meager plurality of 72 seats, thereby failing to secure a majority coalition. On 13 March, Kukrit Pramoj, leader of the Social Action Party (SAP), which held 18 seats, was elected prime minister in a controversial vote; he formed a ruling right-wing coalition with the Social Justice Party (45 seats), the Chart Thai (28 seats), and four smaller groups. The coalition collapsed in January 1975, and in new elections held on 4 April, Seni Pramoj gained the premiership.

In the bloodless military coup of 23 February 1991 by the National Peacekeeping Council (NPKC), General Chatichai's government was turned out. The NPKC promulgated a provisional constitution, and after a brief period paved the way for a civilian interim government headed by Anand Panyarachun. A general election was held 22 March 1992, with 15 parties contesting 360 seats with 2,185 candidates. Persistent vote buying marred an election in which 59.2% of the electorate voted. Results were: Samakkhi Tham (79), Chart Thai (74), New Aspiration Party (72), DP (44), and Palang Dharma (41). A coalition government controlling 195 seats in the House of Representatives was comprised of Samakkhi Tham, Chart Thai, Pratchakorn Thai, the SAP and Rassadorn parties. Narong Wongman was proposed as prime minister until the United States made allegations of Narong's involvement in illegal drug trafficking. In April 1992, General Suchinda was named prime minister. His appointment as an unelected prime minister met with immediate protest. Agreement was reached to amend the constitution to prevent an unelected prime minister, but an apparent change of mind by the government resulted in violent rioting. Suchinda resigned and constitutional amendments were approved by parliament on 10 June. The National Democratic Front, four parties that had opposed the military government, the DP, the New Aspiration Party, Palang Dharma, and Ekkaparb, formed an alliance to contest the elections called for in September 1992. In the wake of the 1976 coup, massive arrests were made of liberal and leftist political elements; political parties were banned, and martial law instituted. Political activity was restored and martial rule partially relaxed under the 1978 constitution. Subsequent elections, held on 22 April 1979, gave no party a clear majority. The SAP won a plurality of 82 seats, and the Thai Nation Party finished second with 38. Gen. Prem Tinsulanonda, who became prime minister in March 1980, formed a new

coalition government after the April 1983 elections, in which the SAP emerged with a plurality of 92 seats. Several days after the elections, the Thai Nation Party, which had won 73 seats, subsumed the Siam Democratic Party, which controlled 18. In subsequent elections on 27 July 1986, the Bangkok-based Democrat Party improved its position greatly, winning 100 seats. The Thai Nation Party won 63, and the SAP, 51. These three parties, along with the small Rassadorn—or People's—Party which won 18 seats, formed a new coalition, but with Gen. Prem again as prime minister. The election campaign and balloting were marred by scattered incidents of violence.

In the 13 September 1992 general election 12 parties contested 360 seats in the House of Representatives. Voter turnout was 62.1%. Election results were: the DP (79), Chart Thai (77), Chart Pattana (60), New Aspiration Party (51), and SAP (22). The DP formed a coalition party with Palang Dharma (47 seats) and Ekkaparb (Solidarity) for control of 185 of the 360 seats. The SAP was invited to join the coalition. The leader of the DP, Chuan Leekpai, was named prime minister. Chuan served for two years—the longest continuous civilian rule in modern times—before scandal brought his government down in May 1995. Elections were held in July 1995 which were won by Chart Thai, taking 92 of the expanded body's 391 seats. Chuan's Democratic Party was next with 86 seats; the NAP took 57 and Phalang Dharma slipped from 47 to 23 seats. Banharn Silpa-archa was appointed prime minister, and was almost immediately assailed by the press—and even the king—for assembling a government of largely discredited cronies.

Banharn's coalition lasted barely 14 months and new elections were held in November 1996, the results of which were as follows: NAP, 125 seats; Democratic Party, 123; Chart Pattana, 52; Chart Thai, 39; SAP, 20; Prachakorn Thai Party, 18; Solidarity Party, 8; Seritham Party, 4; Muan Chan Party, 2; Phalang Dharma, 1; Thai Party, 1. Chavalit Yongchaiyudh became prime minister in January 1997. He resigned in November, and Chuan Leekpai once again formed a coalition government including his Democratic Party, Chart Thai, the SAP, Ekkaparb, the Sirtham Party, Palang Dharma, the Thai Party, and a majority of the Prachakorn Thai Party. Constitutional changes, promulgated on 11 October 1997 increased party discipline and loyalty. It requires representatives to resign their seat if they switch or renounce their party affiliations.

General elections were held on 6 January 2001, which were won by the new Thai Rak Thai ("Thais Love Thais") Party, led by Thaksin Shinawatra, who became prime minister. Thaksin, a multi-millionaire telecommunications tycoon, took almost twice as many seats as his rivals, but fell short of an outright majority. Thai Rak Thai took 248 of 500 seats in the House of Representatives, and the Democratic Party of outgoing Prime Minister Chuan Leekpai won 128 seats. Thaksin's coalition included the New Aspiration Party and the Chart Thai Party. The elections were marred by allegations of fraud and vote-buying. The results of 62 constituencies were thrown out because of voting irregularities, more than half of the disqualifications earned by candidates from Thai Rak Thai. Those constituencies held re-elections on 29 January. Thaksin was indicted by the National Counter Corruption Commission (NCCC) in December 2000 for failing to report some of his wealth. In August 2001, the Thai constitutional court voted 8–7 to acquit Thaksin of assets concealment.

## <sup>15</sup>LOCAL GOVERNMENT

Thailand is divided into 76 administrative provinces (*changwats*), each under the control of an appointed governor responsible to the Ministry of the Interior. Bangkok is sub-divided into 37 districts or "*khets*." As of 2001, in addition to the provinces, there were 795 districts, 81 minor districts, 7,255 subdistricts or *tambon* and 70,865 villages. Numerous changes went into effect

with the promulgation of the new constitution in 1997. Effectively immediately, all local administrators must now be elected directly by popular suffrage or by the approval of a local assembly. Furthermore, local government officials are prohibited from holding a permanent national position or receiving additional compensation from government related positions.

## 16 JUDICIAL SYSTEM

The 1997 constitution provided for an independent judiciary and the guarantee of basic civil liberties. Courts of the first instance, juvenile courts, and magistrates' courts exist in Bangkok and in each of the provincial capitals. There are nine regional courts of appeal, and a Court of Appeal, sitting in Bangkok, hears cases for the entire kingdom. The Supreme Court, also in Bangkok, consists of at least three judges and decides only on points of law. Judges in Thailand are appointed (and removed) by the king. All appointments are subject to initial approval by a judicial commission. There is no trial by jury in Thailand.

The constitution also provided for establishment of a constitutional tribunal to adjudicate disputes among the courts. Military courts deal primarily with military justice, but have broader jurisdiction when martial law is in force. There is no appeal of decisions by military courts. Defendants in ordinary criminal courts are afforded a wide range of procedural due process protections. Although there is no right to counsel during the investigative phase of cases, detainees are afforded access to counsel during trial.

Islamic courts hear civil cases concerning members of the Muslim minority. The legal system is based on civil law with common law influence.

## 17 ARMED FORCES

The armed forces in Thailand consist of 306,000 active duty personnel and 200,000 reservists. The army numbered 190,000 personnel in 2002 and was equipped with 333 main battle tanks and 460 light tanks. The air force consisted of 48,000 personnel with 194 combat aircraft, plus transport, training, and helicopter rescue units. The navy had 68,000 personnel which included 18,000 marines, 7,000 coastal defense personnel, and 1,700 naval aviators. Naval equipment included one aircraft carrier, 12 frigates, and 88 patrol and coastal combatants. In addition, a volunteer defense corps of 50,000 was available for the maintenance of national security, along with other police forces for a total of approximately 113,000 paramilitary troops. In 2000 Thailand spent \$1.78 billion on defense, or 1.4% of GDP.

## 18 INTERNATIONAL COOPERATION

Thailand, a member of the UN since 16 December 1946, is the headquarters for ESCAP and belongs to all the nonregional specialized agencies. Bangkok has served as regional headquarters for several other UN agencies, and for the former Southeast Asia Treaty Organization (SEATO). Thailand is identified more closely than most Asian countries with the Western nations largely because of its alliance with the US. The country is a member of the Asian Development Bank, Asian and Pacific Council, ASEAN, the Association of Natural Rubber Producing Countries, G-77, and the International Tin Council. Thailand is a member of the WTO, and a signatory of the Law of the Sea.

Thailand is a participant in the Colombo Plan, and it receives economic aid from UN agencies for agricultural, industrial, and health projects. US assistance has been a vital factor in Thailand's economic development since World War II. Although never engaged in direct combat on Thai soil, the United States has been Thailand's paramount military ally in recent decades, supplying funds, equipment, advisers, and large-scale training programs for personnel. On order of the Seni government, the US military presence in Thailand was almost completely withdrawn by mid-

1976, although some US assistance, including military aid, continued.

Prior to the military and political upheavals of the 1970s, Kampuchea (known as Cambodia until 1976 and again from 1989), Laos, Thailand, and the Republic of Vietnam had been cooperating on the development of the lower Mekong Basin in terms of hydroelectric power, irrigation, navigation improvement, and flood control. The Greater Mekong Subregion (GMS) has a population of approximately 245 million and covers an area approximately 2.3 million sq km (0.88 million sq mi). Progress on GMS projects moved forward in 1992 when Thailand, Cambodia, Myanmar, Laos, Vietnam, and the Yunnan Province of China engaged in closer cooperation. The goal was to facilitate economic growth and improve the standard of living in the Mekong region by greatly expanding trade and investment. Transportation, including cross-border roads, and power generation and distribution are all priorities. In addition to and in support of GMS projects, in 1995 Thailand, Cambodia, Laos and Vietnam established the Mekong River Commission (MRC) to coordinate development in the region.

## 19 ECONOMY

Thailand's economy more than tripled in the decade after 1986, achieving approximately 9% real growth annually from 1989 to 1996, before it became an epicenter of the Asian financial crisis of 1997, a regional crisis of investor confidence flowing from Hong Kong's return to Chinese rule. Thailand's real GDP declined 1.4% in 1997, and then plunged 10.5% in 1998. In early 1997, the Bank of Thailand spent about \$30 billion in foreign exchange reserves trying to defend the baht's value in terms of a basket of currencies against speculation against it, and then on 2 July 1997 abandoned the peg, and allowed the currency to float. The subsequent rapid fall in the baht's value—from 25 bahts to 1 US dollar down to 32 bahts to 1 US dollar before the end of the month, and to a low of about 53 bahts to 1 US dollar by January 1998—was the proximate cause of the financial crisis that left most business in Thailand technically bankrupt. A \$17.2 billion international bailout package was quickly arranged through the IMF, which seeded the loans with a stand-by line of credit running from 20 August 1997 to 19 June 2000 of SDR2.9 billion (about \$2 billion) subject to a program of economic reform conditionals. Moderate growth returned in 1999 and 2000 (4.4% and 4.6%, respectively), but then dropped to an anemic 1.8% in 2001 in the face of the global economic slowdown and the halving of foreign direct investment worldwide following the 11 September 2001 terrorist attacks on the United States. Nevertheless, according to IMF staff estimates, by 2001 the economy had recovered to its pre-crisis level, and was projected to grow 3.5% in 2002.

The main legacies of the crisis are a low industrial capacity utilization rate (at 53.3% in 2001 down from 56% in 2000), a massive load of non-performing loans (NPLs) on the financial system, and a high, though declining, external debt and debt service ratios. External debt as a percent of GNP was projected at 47.8% in 2002 down from the high of 93.9% in 1998, and debt service was projected at 17.5% of export earnings in 2002, up from the pre-crisis level of 6.4%, but down from 20.8% in 2001.

Structurally the economy has continued to mature. From 1986 to 1996, agriculture employed about 57% of the labor force while agriculture's contribution to the GDP dropped from 16.7% to about 10%. In 2001, agriculture employed a reported 38% of the labor force while accounting for 11% of the GDP. Thailand has evolved a mobile labor market in which many workers migrate between agricultural jobs in the country and self-employment and/or light industry jobs in the cities and industrialized zones. Official unemployment was at a low of 1.5% in the last boom years, 1996 and 1997, and then peaked at 4.4% in 1998. Post-crisis, unemployment rates have slowly

declined to 4.2% in 1999, 3.6% in 2000, 3.3% in 2001 and a projected 3.2% in 2002. The government's decision not to forcibly repatriate a large number of foreign workers, implementing instead its first "amnesty" program in September 2001 (which gave work permits to about 360,000 foreign migrants employed mostly in semi-skilled jobs in the fisheries and construction), has helped slow the decline of the unemployment rate. Official figures, moreover, do not adequately reflect the seasonal unemployment of about 2 million agricultural workers during one third of the year. Overall, the shift of workers out of agriculture continues particularly in the northeast where agriculture is less productive, providing a steady inflow of workers to Bangkok and other industrialized areas who contribute to Thailand's expanding and diversified manufacturing and construction sectors. Manufacturing grew by 17% in 1995 and accounted for 33% of GDP, up from 22% in 1992. In 2002, manufacturing's share of GDP was up to 36.5%. In all, industrial production in 2002 was at 22% above the level attained in 1995 according to the country's industrial production index.

The Thai manufacturing sector is notable for its wide diversity, with rapid growth the production of computers and electronics, automobiles, garments, footwear and synthetic fibers, furniture and wood products. In its efforts to recover economic momentum, Thailand faces strong competition from China, Indonesia, Vietnam, Pakistan and Bangladesh, where cheap labor cheap labor diminishes the competitiveness of Thailand's labor-intensive industries. According to Bank of Thailand data, total trade fell in 2001 for \$130.3 billion to \$124 billion, with exports showing a 6.9% drop and imports down 2.5%, reducing the annual trade surplus from \$5.5 billion to \$2.5 billion. Besides intense export competition in the context of a global economic slowdown of 2001, many analysts have attributed the sluggishness of Thailand's recovery to the reluctance of many companies, a high percentage of which are still family-owned conglomerates, to cut excess capacity, divest non-core operations, or declare bankruptcy. Financial institutions have shown a similar reluctance to rid themselves of NPLs. NPLs reached a height of 48% of total banking assets in May 1999. Officially, NPLs were at 10.75% of financial system assets in 2002 but the true figure is considered closer to 30% when the whole range of asset management corporations is taken into account.

Several years of post-crisis deficit spending by the government in addition to the liabilities incurred in the international bailout program also weigh down the economy. Inflation, however, appears to be under control. In the last years of the 1986–1996 boom, the annual inflation rate averaged between 5 and 6% as measured by the consumer price index (CPI). The rate increased to 8% in 1998, but in 1999 had fallen to a negligible 0.3%. In 2000 and 2001, inflation was less than 2% (1.6% and 1.7%), and was projected to be only 1% for 2002. Initial estimates of the economic effects of the US-Iraq war begun 20 March 2003 are that it would be minimal, costing about \$2 billion in foreign reserves due to higher oil costs and reduced trade.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Thailand's gross domestic product (GDP) was estimated at \$410 billion. The per capita GDP was estimated at \$6,600. The annual growth rate of GDP was estimated at 1.4%. The average inflation rate in 2001 was 1.6%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 11% of GDP, industry 40%, and services 49%. Foreign aid receipts amounted to about \$5 per capita.

The World Bank reports that in 2001 per capita household consumption (in constant 1995 US dollars) was \$1,524. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the same period private consumption grew at an annual rate of 3%. Approximately 23% of household consumption was spent on food, 5% on fuel, 3% on health care, and 13% on education. The richest 10% of the population accounted for approximately 32.4% of household consumption and the poorest 10% approximately 2.8%. It was estimated that in 1998 about 19% of the population had incomes below the poverty line.

## 21 LABOR

The labor force in 2001 totaled some 33.4 million (compared with 21.7 million in 1981 and 15.1 million in 1967). In 1996, the last year reported, about 50% were engaged in agriculture and related occupations, 20% in industry, and 30% in services. In 2001, unemployment amounted to 3.9% of the economically active population.

Because of persisting government opposition to unions, organized labor was not a major factor in Thai life prior to the 1970s. Labor legislation in 1969 delineated certain basic workers' rights, and unions were granted greater freedom to organize under the Labor Relations Act of 1975. The Thai Trade Union Congress is the largest labor federation. As of 2002, only 2% of the labor force (11% of industrial workers) was unionized. Minimum daily wage rates in 2002 ranged from \$3.01 to \$3.71 depending on the cost of living in different provinces. Legislation regulating hours and conditions of labor, workers' compensation, and welfare also exists, however, these laws are weakly enforced.

While forced labor is prohibited by the Thai constitution, there are reports that workers are physically prevented from leaving some sweatshops, especially ones which employ illegal immigrants from Laos, Cambodia, and Burma. These same sweatshops have also been accused of using physical coercion to meet production goals.

The minimum working age was raised to 15 in 1998, but this law has not traditionally been effectively enforced. As of 2002, it was estimated that there were one million children working on family farms. Another 240,000 to 410,000 children were working in urban areas.

## 22 AGRICULTURE

With some 20.4 million hectares (50.4 million acres) of farm land, of which about 10 million hectares (24.7 million acres) are under rice cultivation, Thailand continues to rely heavily on agriculture, although the country has suffered from declining export prices in recent years. Rice is the major crop grown; Thailand is the world's biggest rice exporter. Total rice production amounted to 17.5 million tons in 2001/02. The government has embarked on large-scale irrigation projects and introduced higher-yielding varieties of rice in an effort to increase production. In 2001, agricultural products accounted for 11.7% of exports and Thailand's agricultural trade surplus was nearly \$4.5 billion (10th in the world).

Rubber, also a major export, is grown on the peninsula and, to a lesser extent, on the southeast coast. Total production in 1999 was 2,198,000 tons, the highest in the world and accounting for 34% of all production that year. Demand for natural rubber is growing along with the international concern about AIDS. Sugarcane production reached 52.8 million tons, while output of cassava (tapioca), traditionally important in Thailand, totaled 16.5 million tons. Thailand provides about 95% of the world's cassava exports. Much of the harvest is processed into chips and pellets and exported to the EU for fodder. Higher EU tariffs, however, have caused the Thai government to promote dairy, fruit, rubber, and cashew farming instead. Corn production,

which has increased significantly in recent decades, reached 4.6 million tons in 1999. One third of annual corn production is consumed annually as fodder, with the remainder being exported to Europe and Japan. Kenaf, tobacco, cotton, and kapok are cultivated mainly for domestic use, but quantities of jute, cocoa, peanuts, soybeans, and medical plants are exported. Canned pineapple and fresh flowers, especially orchids, are important exports. The Thai government's official policy of encouraging mountain villagers to grow coffee, apples, strawberries, kidney beans, and other temperate crops instead of the lucrative opium poppy and marijuana has had some success; another aim of the project is to discourage deforestation through slash-and-burn cultivation. In 1987, King Bhumibol Adulyadej received a Magsaysay Award for International Understanding for his 20 years of effort in this area.

In the mid-1970s, farmers began to organize to express their discontent over the disparity between farm and nonfarm incomes. To improve farm conditions, the government legitimized squatters' rights to nearly 500,000 hectares (1,236,000 acres) of land classified as forest reserve and established credit and crop insurance programs for farmers. The government Marketing Organization for Farmers, founded in 1975, allows farmers to buy fertilizers, machinery, and equipment at the lowest possible prices and assists in crop marketing. It is also government policy to channel revenues from agricultural export taxes to a welfare fund called the Farmers Assistance Fund.

### 23 ANIMAL HUSBANDRY

Cattle, used for plowing and harrowing, are important to rice farming, and most rural households have some cattle as well as hogs, chickens, and ducks. In 2001, Thailand had 4.6 million head of cattle, 1.5 million head of buffalo, 6.7 million hogs, and 43,000 sheep. Other livestock included 114 million chickens and 28 million ducks. Elephants, important as draft animals in rural areas, are used to haul teak. Crocodiles, raised for their skins, are a specialty livestock product. Leading exports of animals and animal products in 2000 included (in millions of dollars): meat and meat products, \$986.2; dairy products and eggs, \$95.8; live animals, \$4.7; and hides and skins, \$1.9.

### 24 FISHING

Fish is a major protein element in the Thai diet. Freshwater fish, abundantly found in rivers and canals, and marine fish (from the waters along the lengthy coastline) produced a catch of 2,923,579 tons in 2000 (9th in the world), as compared with 846,600 tons in 1967. Leading marine species in the 2000 harvest included (in tons): sardines, 187,772; anchovies, 158,833; Indian mackerels, 152,564; and threadfin breams, 95,500. Thailand exports cured fish to neighboring countries, and frozen shrimp and prawns mainly to Japan. In 2000, Thailand accounted for 7.9% of the world's exports of fish and fish products, valued at over \$4,367 million. Giant tiger prawn, tilapias, hybrid catfish, and green mussels accounted for most of the aquacultural volume.

### 25 FORESTRY

Thailand's forested area declined from 53% of the nation's land area in 1961 to only 28% by 2000, mainly as a result of the continued use of slash-and-burn practices by farmers. Of Thailand's 14.8 million ha (36.3 million acres) of forest, about 56% lies in the north, where teak and pine predominate. Rubber trees, planted mostly in the south, make up 10% of the forest area. The remainder consists of yang (keruing) plantations and rosewood, other species used as fuel, and smaller mangrove forests and conifers. Teak, once a major export, has declined in importance, largely because of government restrictions on cutting and past depletion of the forests through excessive harvesting and inadequate replanting. Yang, pradu, takien, krabak, and krabok

are other traditional hardwoods that have suffered severe production declines. Thailand imposed a ban on logging government-owned timber in 1989. Lac, a resinous insect substance found on trees, has always had value for the Thai, but its derivatives—seedlac, sticklac, and shellac—have also found a ready international market. Other important forestry products include charcoal, gums and resins, and kapok fiber and seed.

In 2001 production of roundwood was estimated at 41.3 million cu m (1.46 billion cu ft). Production of tropical hardwood products in 2000 included (in cubic meters): sawn wood, 294,000; wood pulp, 764,000; veneer, 89,000; and plywood, 91,000. Thailand is a negligible exporter of tropical logs and lumber. However, Thailand now exports primarily value-added wood products (mostly furniture, picture frames, utensils, and other items). Exports of wood products in 2000 totaled \$805.9 million. Imports of logs, timber, and wood products in 2000 were valued at \$1,323 million.

### 26 MINING

Thailand ranked second in tungsten and third in tin production in 2002, and ranked fifth in feldspar and eighth in gypsum in 2001. The country also had considerable resources of diatomite, dolomite, limestone, potash, rock salt, and a wide variety of other industrial minerals. In 2000, Thailand produced 50 mineral products and had 730 operating mines, of which 34% were limestone quarries; 652 of the sites were industrial mineral mines, 55 were metal mines, and 23 were coal mines. The mining industry employed 19,619, 24% of whom worked in limestone quarrying. Other important minerals were barite, natural gas, gemstones, lead, crude petroleum, silica, and zinc. Most mineral production was for domestic consumption, except for gypsum, and tin and its byproducts (ilmenite, monazite, struverite, tantalum, and zircon), 70% of which were exported. Thailand was a net importer of minerals, mainly because of its large import bills for coal, crude petroleum, iron and steel, primary aluminum, refined copper, gold, refined lead, and silver. Thailand's resources of most metallic minerals and fuel minerals were small. The mining and quarrying sector, which accounted for 2% of GDP in 2000, grew by 7.5% in 2000 and 9.1% in 1999, mainly as a result of a substantial increase in the production of crude petroleum and natural gas. Cement production was a leading industry in 2002.

Tin ore production in 2000 totaled 1,930 tons (metal content), most of it exported; tin was mined mainly on the southern peninsula—52% was produced from offshore dredging. Tin production has been steadily declining in the face of falling world prices and output curbs. Tungsten output (metal content) was 30 tons. Other metal minerals exploited on a small scale included antimony, cadmium, iron ore, lead, manganese, tantalum, zinc, and zirconium. Exports of 155 tons of tantalum metal powder earned \$42 million in 2000. Iron ore production dropped to 50 tons (metal content), from 61,000 tons in 1999, because iron ore mining operations stopped in the provinces of Nakhon Si Thammarat, Phetchabun, and Prachuap Khiri Khan. No gold or silver was produced in 1997–2000, nor monazite rare earths in 1998–2000. Development of Akara Mining's open-pit operation began in 2000 on the Chatree gold project (eastern edge of Chao Phraya Basin), and the 1.5 million ton per year operation was expected to produce 4,449 kg per year during its first three years, beginning in 2001. Total measured, indicated, and inferred resources for Akara Mining's area of exploration were 14.5 million tons (2.6 grams per ton of gold and 12 grams per ton of silver), of which proven and probable reserves were 8.2 million tons (3.1 grams per ton of gold and 14 grams per ton of silver).

Among industrial minerals, feldspar output was 542,991 tons, down from 684,983 in 1996; gypsum production was 5.83 million tons, down from 8.56 million tons in 1997—72% of gypsum came from Nakhon Si Thammarat and Surat Thani, and

4.2 million tons were exported, earning \$46 million. Hydraulic cement production was 25.5 million tons, down from 37.1 million tons in 1997. Thailand also produced barite, ball clay, kaolin clay, diatomite, metallurgical-grade fluorspar, gemstones (rubies, sapphires, topaz, and zircon), phosphate rock, salt, silica sand (glass), stone (calcite, dolomite, limestone, marble, marl, quartz, and shale), and talc and pyrophyllite. In addition, resources of bentonite and copper have been identified; bentonite has been mined. Exploration in the past five years has focused on copper, gold, and potash. Thailand could soon become an important producer of potash in Asia and the Pacific region—the Somboon deposit was estimated to contain more than 300 million tons of sylvinitic ore, with prospects for a 2 million ton per year potash mine, and the Udon deposit was estimated to contain more resources than the Somboon deposit. One copper deposit, at the Puthep project, near Loei, had ore reserves of 42 million tons of heap-leachable ore at a grade of 0.52% copper.

The government's underlying policy has been to conserve the country's mineral resources and to shift the emphasis to exploration, development, and exploitation of minerals consumed domestically, such as ball clay, feldspar, gypsum, kaolin, silica sand, limestone, lignite, phosphate, potash, rock salt, and zinc, and away from minerals that were predominantly exported, such as antimony, barite, fluorite, tantalum-columbium, tin, and tungsten. Thailand's mining industry consisted of a small mining and mineral-processing sector of ferrous and nonferrous metals and a large mining and mineral-processing sector of industrial minerals. All mining and mineral-processing businesses except coal, natural gas, and crude petroleum were owned and operated by private companies.

## 27 ENERGY AND POWER

From 1975 to 1994, total installed generating capacity increased from 2,755,000 kW to 13,861,000 kW. In 2000, 57.8% of primary energy consumed was derived from oil, 25% from natural gas, 9.3% from coal, and the remainder from other sources. Distribution, however, is far from adequate, with only about 20% of the population having access to the system. The Metropolitan Electrical Authority serves Bangkok; the Provincial Electricity Authority provides service to the rest of the kingdom. Total national output in 2000 was 94,300 million kWh, up from 15,948 million kWh in 1981 and only 1,092 million kWh in 1964. Fossil fuels accounted for 92.3% hydropower for 6.3%, and other renewable sources for the rest. Consumption of electricity in 2000 was 90.3 billion kWh. Installed capacity in 2001 was 20.8 billion kW.

Thailand is heavily dependent on imports of foreign oil. Proven and potential domestic deposits were estimated at 516 million barrels in early 2002, but exploitation and development have been inhibited by declining oil prices. In 2001, crude oil production amounted to about 175,027 barrels per day, mostly from the Sirikit oil field. Natural gas reserves were estimated at about 354 billion cu m in early 2002, and production has been aided by the exploitation of new fields in the Gulf of Thailand. Production in 2000 was put at 16 billion cu m, almost double the 1995 amount. The state-owned oil company, PTT, was partially privatized in 2001 when the government divested 32% of its stake. In 1999, the government introduced a new energy policy favoring increased use of natural gas. By 2001 it had completed the conversion of nearly all oil-fired power plants to natural gas.

## 28 INDUSTRY

Seven government agencies supervise the Thai industrial sector: the Ministries of Finance, Commerce, and Industry, the Board of Investment, the Industrial Finance Corporation, the Bank of Thailand, and the National Economic and Social Development Board, (NESDB) in charge of formulating five year development plans. In 1982, an eighth agency, the Industrial Restructuring

Committee, was created to coordinate the other seven and to formulate policy proposals in line with economic development plans. The main protective measures Thailand has used are import tariffs and price controls. Tariffs, low in the 1960s, were increased in the 1970s, some to above 90%, and price controls were pervasive. As part of the fifth economic development plan, 1982–1986, the government began to lower tariffs and relax price controls. In the economic boom of the early 1990s trade liberalization was continued particularly as the protection of infant industries became less important for Thailand's industrial growth than reducing the cost of imported capital goods and spare parts for rapidly expanding sectors like the automotive industry and electronics.

Manufacturing grew at an average rate of 12% annually in the 1960s and 10% in the 1970s. However, in the wake of the second oil shock in 1978–1979, rising interest rates, reduced global demand and falling commodity prices adversely affected manufacturing growth. In the period 1971 to 1985 Thailand continued to import most its manufactures, although there was impressive growth in some sectors. The production of food products nearly tripled, textiles grew by over 500% and transportation equipment showed even greater growth.

With the collapse of oil prices in 1986, Thailand was propelled into a decade-long boom led by its industrial sector in which the economy more than tripled, ending in the collapse of the baht in early July, 1997. Automobile production increased 750% 1986 to 1996, from 74,162 vehicles to a peak of 559,428. Annual growth for automobile production averaged 42.6% 1986 to 1990, and, after a 7% decline in the global recession of 1991, 15% 1992 to 1996. It was the world's fastest expanding automotive industry and Thailand also became the world's second-largest producer of motorcycles and pick-up trucks. Thai automobile producers invested in capacity expansion on the expectation that demand would grow to about one million cars a year, but the onset of the Asian financial crisis meant that these expectations were unmet. Production fell 35.6% to 360,303 units in 1997 and then another 56.1% to 158,130 units in 1998. Recovery began in 1999, with a 106.9% increase to 327,101 units, and 2000, with a further 25.9% increase to 411,721 units. By 2002, Thailand was on track to match the pre-crisis peak, with a projected production of 560,000 (56% of capacity). Similarly, motorcycle production by 2001 and 2002 had recovered to match the one-million-plus record set in 1997. Thailand's automobile sector consists of seventeen companies, the four largest being Auto Alliance Thailand (only pickup trucks in 2000), Toyota Motor Thailand, MMC Sittiphol, and Isuzu Motor Thailand, which together account for over 70% of production capacity.

By contrast, the cement industry, dependent more on the recovery of domestic demand, has not achieved pre-crisis production levels. Construction, one of the three leading growth sectors in the boom (with manufacturing and financial services), was the most severely impacted by the financial crisis. While the overall economy decreased 1.4% in 1997 and 10.5% in 1998, construction fell about 25% in 1997 and then over 38% in 1999, as landscapes that had been dominated by construction cranes were transformed into ones dominated by "For Sale" signs and unfinished buildings. Growth did not return to construction until 2002. Annual cement production, which grew from 18,834 tons in 1990 to a peak of 36,943 tons in 1997, was at 28,611 tons in 2002.

Textiles and garments remain Thailand's largest industry and second-largest source of exports (after electronics). This includes synthetic fibers production, which in 1995 was growing at a 25% annual rate, one of the fastest in the economy. About two-thirds of the output are ready-to-wear garments destined for markets in the United States and Western Europe. In 2000, there were an estimated 2,500 textile firms employing more than one million workers. By 2002 pre-crisis production levels had been achieved

and slightly bettered, but with a significant proportion of capacity unutilized.

Since 1985, electronics has been Thailand's leading manufacturing export sector, employing about 300,000 workers. Annual growth in electronics production has averaged over 20% over the past decade, with about 80% of the output exported. In 2000, electronics constituted one-third of all exports. Unlike most other manufacturing sectors, electronics production continued to grow during the financial crisis: the devaluation of the baht only made Thai electronic exports more competitive. Leading products include fully assembled computers, computer accessories, and integrated circuits in addition to a wide range of consumer electronics products.

Among the ASEAN nations during the decade of boom, Thailand became the largest producer of petrochemicals as well as cement, and textiles. Unlike most other industries, the refineries continued running near capacity during the crisis years 1997 to 1999. Refinery outputs reached 777,000 barrels per day in 1997, up 225% from 1990, then fell 4.6% in 1998 before recovering to a new high of 809,000 barrels per day (up 9.2%) in 1999. As of 2002, Thailand has seven oil refineries and a total refining capacity of 860,000 barrels per day. The four largest refineries are run by Shell Company of Thailand Ltd. at Rayong (275,000 barrels per day capacity), Thai Oil Company Ltd. at Sriracha (185,000 barrels per day), Esso Standard Thailand Ltd., at Sriracha (160,000 barrels per day) and Star Petroleum Refining Company at Rayong (130,000 barrels per day), respectively, accounting for over 87% of total refining capacity. Over a third of refined production is distillate fuel oil, production of which increased 350% 1990 to 1999. Motor gasoline and residual fuel oil each account for about 18% of refined outputs, which grew in triple digits, 186% and 126%, respectively, during the 1990s. Other important refinery outputs include jet fuel (about 9% of the total), and liquefied petroleum gases (about 10%).

One industry that showed uninterrupted annual increases during the crisis was the production of beer, the output of which grew 6.7% 1997 to 1998, and another 6.2% 1998 to 1999. Across the 1990s beer production increased 370%.

Overall industrial capacity utilization was 65% in 1997, and fell to 50% in 1998. By May 2002, utilization levels had reached 59.1%. The Bank of Thailand's manufacturing production index using 1995 as the base year was 107 in 1997 and had reached 122.9 in May 2002.

## 29 SCIENCE AND TECHNOLOGY

The lack of skilled workers remains a drag on industrial development. Many students seek technical training overseas, and some receive postgraduate education in specialized technical subjects at the Asian Institute of Technology in Bangkok (founded in 1959), which offers advanced degrees in agricultural engineering, human settlements, and computer applications. The institute also operates receiving equipment for LANDSAT transmissions that provide Southeast Asian countries with the aerial surveys vital to agricultural development, forest inventories, and city planning.

Scientific organizations include the Medical Association of Thailand (founded in 1921); the Thailand Institute of Scientific and Technological Research (1963), the principle government research agency; and the Science Society of Thailand (1948), all headquartered in Bangkok. National science policy is the responsibility of the Ministry of Science, Technology and Energy. Research and development expenditures in 1987-97 totaled 0.13% of GNP; 103 scientists and engineers and 39 technicians per 1 million population were engaged in research and development.

In addition to the Asian Institution of Technology, 15 other universities offer courses in basic and applied sciences. In 1987-

97, science and engineering students accounted for 18% of college and university enrollments. In 1998, high-tech exports were valued at \$12.6 billion and accounted for 31% of manufactured exports.

## 30 DOMESTIC TRADE

Bangkok, the port of entry and distribution point for the whole country, is the commercial center of Thailand; all foreign firms have their main offices there. Other commercially important cities are Chiang Mai (teak, rice, and textiles), Ubon Ratchathani (rice, jute, and leather), Phuket (tin), and Songkhla (rubber).

Many essential commodities are grown and consumed by the producer, or distributed at the local level. Production for the domestic market has continued to increase led by high growth industries such as construction materials, foods and beverages, and electronic appliances. In the greater Bangkok metropolitan area, almost every kind of retail outlet is represented, including specialty shops and over 40 department stores. As of 2002, there were about 250,000 retail outlets within the country, mostly small establishments. Department stores, discount stores, hypermarkets, and convenience stores are all available. Both local and foreign franchise firms have been successful. Rather than shop in traditional "wet markets," a growing number of Thai consumers are utilizing western-style supermarkets. Direct marketing, mail order, and television shopping have all become popular, particularly as credit cards have become more widely accepted. Newspaper, radio, television, and motion picture advertising is available.

Usual business hours are from 8 AM to 5 PM, Monday through Friday. Shops are open from 9 AM to 8 or 9 PM, and banks from 8:30 AM to 3:30 PM.

The annual Bangkok fair in December, originally conceived for entertainment, has developed into a trade fair.

## 31 FOREIGN TRADE

Thailand supplies the world with a large proportion of its natural rubber, rice, and seafood exports. The top 10 exports are as follows:

	% OF COUNTRY TOTAL
Transistors and valves	8.5
Automatic data processing equipment and parts thereof	12.4
Apparel	5.5
Telecommunications equipment	3.1
Preserved fish	3.0
Articles of plastic	3.0
Textiles	2.9
Shellfish	2.7
Rice	2.4
Natural rubber and gums	2.3

In 2000 Thailand's imports were distributed among the following categories:

Consumer goods	5.8%
Food	3.3%
Fuels	12.3%
Industrial supplies	33.2%
Machinery	39.7%
Transportation	5.1%
Other	0.6%

Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
United States	14,728	7,295	7,433
Japan	10,210	15,286	-5,076
China (inc. Hong Kong)	6,293	4,253	2,040
Singapore	6,016	3,402	2,614
Malaysia	2,820	3,342	-522
United Kingdom	2,366	949	1,417
Netherlands	2,251	529	1,722
Germany	1,639	1,948	-309
Australia	1,618	1,161	457
Korea	1,271	2,164	-893

### 32 BALANCE OF PAYMENTS

In 1996, a weakening economy and a decline in export growth created a current account deficit that amounted to 8% of GDP. Simultaneously, high interest rates and a currency tied to the dollar attracted money to an economy without sufficient productive assets to support the inflow. The government was forced to pursue a high interest-rate policy to protect the currency. When the cost of doing so got too high, the government let the currency float against the dollar, which resulted in a 20% devaluation. By mid-1997, Thailand's short-term debt obligations had reached \$23.4 billion, consuming three-quarters of its foreign reserve holdings. In August of 1997, Thailand agreed to an economic restructuring package with the IMF that included \$10–20 billion in standby credits. The GDP contracted by 10.8% in 1998, compared with an average growth rate of 8.5% from 1990 to 1996. The economy since the 1997–98 crisis subsequently rebounded, and strong export performance drove economic growth in 1999–2000. Nevertheless, structural reform was still needed, especially in agriculture, education, and small- and medium-sized businesses. Growth declined in 2001, due in part to the global economic downturn, a downturn in export demand, a slow pace of corporate debt restructuring, and a struggling financial sector. Severe Acute Respiratory Syndrome (SARS) negatively impacted trade and travel in 2003. Export and investment growth was expected to increase in 2004, which was expected to lead to an increase in import demand, and thus a slight slowdown in growth.

The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Thailand's exports was \$65.3 billion while imports totaled \$62.3 billion resulting in a trade surplus of \$3 billion.

The International Monetary Fund (IMF) reports that in 2001 Thailand had exports of goods totaling \$63.2 billion and imports totaling \$54.6 billion. The services credit totaled \$13 billion and debit \$14.6 billion. The following table summarizes Thailand's balance of payments as reported by the IMF for 2001 in millions of US dollars.

<b>Current Account</b>	6,227
Balance on goods	8,582
Balance on services	-1,595
Balance on income	-1,361
Current transfers	601
<b>Capital Account</b>	...
<b>Financial Account</b>	-3,908
Direct investment abroad	-162
Direct investment in Thailand	3,820
Portfolio investment assets	-287
Portfolio investment liabilities	-932
Other investment assets	250
Other investment liabilities	-6,597
<b>Net Errors and Omissions</b>	155
<b>Reserves and Related Items</b>	-2,475

### 33 BANKING AND SECURITIES

The central bank is the Bank of Thailand, established in 1942. It operates as an independent body under government supervision; its entire capital is owned by the government. The Bank issues notes, a function previously handled by the Ministry of Finance.

The financial sector is broad and diverse. In 2002 there were 33 commercial banks operating the Thailand, 13 domestic and 19 foreign owned. The top three Thai banks are Krung Thai Bank, Bangkok Bank, and Thai Farmers Bank. Many of Thailand's domestic banks are owned by a few wealthy Chinese families. Shareholdings in even the largest banks, led by Bangkok Bank and the Thai Farmers Bank, are structured to insure family control. US banks with full branches in Thailand include Citibank, Chase Manhattan Bank, and Bank of America.

In general, Thai banks have suffered management problems in recent years and are having difficulty in complying with capital-adequacy and other requirements set by the Bank for International Settlements (BIS). The baht currency crisis dealt a severe blow to the banking industry and has prompted a major restructuring of the banking industry. By mid-2000, nonperforming loans accounted for about a third of total lending, down from a peak of almost 48% mid-1999. Thai banks are being forced to accept big write-offs by selling non-performing loans for as little as 30% of the loan's face value.

The Thai domestic banking system has been criticized for failing to mobilize adequate domestic savings and for not offering adequate incentives to savers. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$14.4 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$119.3 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 2%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 3.75%.

Thailand's first public stock exchange was opened in Bangkok on 30 April 1975 (the Securities Exchange of Thailand-SET). All of its 30 members were Thai-owned securities firms. The Ministry of Finance encourages companies to go public by reducing income tax for listed companies and also by according favorable tax treatment of dividends. It was not until the late 1980s that the market was taken seriously by the international and domestic financial communities. Because of the Asian financial crisis, the stock exchange lost its appeal as a source of corporate funds. In 1998, however, a four-year downward trend was reversed on news of a strengthened baht. The rally could not be sustained and by year end the SET index was down 4.5%, a substantial improvement over the 55% decline in 1997. In all, the exchange lists 449 companies with a combined market capitalization of just over \$36 billion. The turnover ratio is high at over 109%. The SET index was up 12.9% in 2001, at 303.9.

### 34 INSURANCE

There is a wide variety of insurance companies doing business in Thailand, including the American International Assurance Co., the Asian Reinsurance Corp., Assets Insurance Co., Bangkok Insurance Public Co., Commercial Union Assurance Co., Guardian Assurance Co., Indara Insurance Public Co., Navakij Insurance Public Co., Paiboon Insurance Co., Phatra Insurance Co., Safety Insurance Co., Samaggi Insurance Co., the Thai Insurance Public Co., the Viriyah Insurance Co., and Wilson Insurance Co. In Thailand, both workers' compensation and third-party automobile liability are compulsory. The government's company, however, holds a monopoly on workers' compensation insurance. As of 2003, foreign investors were only allowed to own 25% of a Thai insurance company, but these regulations were slated to be relaxed within ten years.

### 35 PUBLIC FINANCE

Only a few utilities—power generation, transportation, and communications—are owned by the government, which is fiscally conservative in what is essentially a free-enterprise system. Following the Asian financial crisis of 1998, the Royal Government of Thailand has taken strong macroeconomic steps to stimulate the economy. However, several years of post-crisis deficit spending by the government in addition to the liabilities incurred in the international bailout program continue to weigh down the economy. The government's annual budget deficit as a percent of GDP was a manageable 1.4% in 1997, and then soared to a peak 5% of GDP in 1998. Although this ratio had declined to 3.3% by 2001 (still above a financially prudent 3% limit), the budget deficit was projected to increase to a near-record 4.8% in 2002.

The US Central Intelligence Agency (CIA) estimates that in 2000 Thailand's central government took in revenues of approximately \$19 billion and had expenditures of \$21 billion. Overall, the government registered a deficit of approximately \$2 billion. External debt totaled \$69.4 billion.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

REVENUE AND GRANTS	100.0%	19,000
Tax revenue	82.1%	15,606
Non-tax revenue	17.4%	3,311
Capital revenue	<0.1%	3
Grants	0.4%	80
EXPENDITURES	100.0%	21,000
General public services	8.6%	1,800
Defense	7.4%	1,553
Public order and safety	5.8%	1,227
Education	19.9%	4,169
Health	7.1%	1,499
Social security	6.0%	1,250
Housing and community amenities	5.1%	1,062
Recreation, cultural, and religious affairs	0.7%	144
Economic affairs and services	26.7%	5,605
Other expenditures	6.5%	1,371
Interest payments	6.3%	1,321

### 36 TAXATION

Personal income tax rates are graduated from 5–37%. Business and individual citizens are also subject to a host of indirect taxes, including customs duties, sales tax, and excise taxes. Corporate income taxes on net profits are levied at the flat rate of 30%. Stock dividends and capital gains are taxed as regular income.

As of September 2001, there are three value-added tax (VAT) rates. All VAT is refunded on exported goods, and small enterprises with less than 600,000 baht annual sales do not have to register for the VAT. Business with annual sales between 600,000 baht and 1.2 million baht can choose whether to pay a 7% VAT or a 1.2% tax on gross turnover. For larger companies, the VAT rate has been raised to 10%. Remittances out of Thailand in the form of profits, income, or dividends are taxed at 25%. In addition, a municipal tax of 10% is levied on certain businesses. Reductions are available under the Investment Promotion Act. Import surcharges, designed to deter imports, were imposed in 1981 at rates between 5% and 30% on certain fibers, piston rings, palm oil, and telephones.

There are excise taxes on tobacco, petroleum products, alcoholic beverages and soft drinks, and other products. Automobiles are subject to a special tax based on engine size.

Thailand has double taxation treaties with 33 countries, including the United States, Canada, Australia, Belgium, Denmark, Finland, France, and Germany. The US treaty has been in force since January 1998.

### 37 CUSTOMS AND DUTIES

Thailand's customs tariff is primarily for revenue, although in a limited fashion it protects local industry. No preferential treatment is afforded any country and all goods are subject to the general rate. Only a few goods require import licenses, including some foods, materials, and industrial products. Products banned from import include aerosol mixtures of vinyl chloride monomers (for health reasons) and products constituting trademark infringement.

The Thai government began to reduce tariffs in 1994, although progress was impeded in 1997 due to a shortfall in government revenue. Still, duties that had ranged between 30–60% have been cut to between 1–45% with the total number of tariff bands reduced from 39 to 6. There is a zero rate for essential items like medical equipment and fertilizer. The rate is 30% for certain items designated as needing special protection, like fabrics, clothing, refrigerators, and air conditioners. In addition to tariffs, some imports designated as luxury goods are subject to an excise tax.

Thailand is a member of the Association of Southeast Asian Nations (ASEAN) and the World Trade Organization (WTO). ASEAN members have established the ASEAN Free Trade Area (AFTA), which aims to reduce tariffs on most processed agricultural and industrial products traded among ASEAN countries to 0–5% by the year 2003. A proposal to link the economies of Australia and New Zealand to AFTA is also under discussion.

### 38 FOREIGN INVESTMENT

Growth of the Thai economy has been directly related to the flow of investments from abroad. In order to stimulate such investment, the government passed the Industrial Promotion Act (1962), which established the Board of Investment for Industry, renamed the Board of Investment (BOI) in 1972. National Executive Council Announcement Number 218, otherwise known as the Alien Business Law of 1972, restricted the participation of non-Thai nationals in certain types of business activities. The BOI, the powers and responsibilities of which were broadened in 1977, grants the following benefits to promoted industries: guarantees against nationalization and competition from government industries; exemption from import duties and business tax on plant, machinery, spare parts, and raw materials; exemption from duty on exports; exemption from tax on corporate income for a specified period; and repatriation of capital and remittance of profits abroad. In the wake of the Asian Financial Crisis, the Thai government embarked on an IMF-supervised program designed to make the economy more open and transparent for foreign investment. The 1972 Alien Business Law was replaced by the Alien Business Act of 1999, which opened additional business sectors to foreign investors, and raised the maximum ownership in some cases to above the old 49% limit. Limits on foreign ownership is most prominent in the financial sector, although now up to 100% ownership is permitted in Thai financial institutions for up to 10 years. A number of restrictions affect portfolio investments so that Thai authorities can track foreign investment.

In 1999 legislation was passed establishing a new bankruptcy court as well as new bankruptcy and foreclosure procedures, allowing, for instance, creditors to pursue payment from loan guarantors. Restrictions on property ownership were liberalized through amendment to the Land Code, the Condominium Act and the Property Leasing Act. Many of the reforms met political and were only partially and inconsistently implemented. In 2001

in the wake of the 11 September 2001 terrorist attacks on the United States there was a world wide contraction in foreign direct investment (FDI) and the government instituted a number of incentives to compete for scarcer investment funds., including tax incentives for firms to locate their regional headquarters in Thailand and several new government-backed investment funds to attract foreign money. To support its industrial exports, Thailand has ten export processing zones located within industrial estates to which businesses may import raw materials and export finished products duty free. Also, factories may apply to establish bonded warehouses on their premises to which raw materials used exclusively to produce exports may be imported duty free.

According to the BOI, in 1997 the net flow of FDI to Thailand was about \$3.3 billion and then more than doubled to \$7.4 billion in 1998. Net portfolio investment, by contrast, peaked at \$4.6 billion in 1997 and then fell to \$0.3 billion in 1998. Since 1998 net portfolio investment has been near zero and slightly negative, while FDI has decreased from \$5.7 billion in 1999 to \$3.8 billion in 2001 to an estimated \$2.7 billion in 2002. The inflow of foreign investment has in any case been insufficient to offset the loan repayments Thailand has been making since the onset of the financial crisis. The balance on its capital and financial account reached a low of -\$12.6 billion in 1998, but in 2002 this had moderated to a -\$4.2 billion. The major sources of FDI in 2001, excluding bank recapitalization, were Singapore and Malaysia, both the source of direct investment totaling over \$1.5 billion, followed by Japan, contributing about \$1.3 billion. Industry and services, particularly tourism, were the two major recipients of FDI in 2001. According to the Bank of Thailand, net direct investment from Thailand to other countries was negative in both 2000 and 2001, at -\$52 million and -\$171 million, respectively.

### 39 ECONOMIC DEVELOPMENT

The Thai government, vulnerable in its financial dependence on a few primary commodities (rice, rubber, tin, and teak), has pursued a policy of economic diversification through industrial development and increased agricultural production. With the beginning of the first development plan in 1961, the government committed itself to the primacy of private enterprise and to a policy of fostering and assisting it. Thailand has also followed a policy of foreign trade and exchange liberalization. Foreign exchange control is nominal.

Thailand's first five-year plan, covering the period 1961–66, aimed to raise the standard of living by means of greater agricultural, industrial, and power production. In the second development plan (1967–71), emphasis was placed on agricultural development, highways, irrigation, education, and industrial development in the private sector. The third development plan (1972–76) placed special emphasis on improvements in the rural infrastructure, growth in the financial and commercial sectors, and further assistance to crop diversification and to import-substitution industries. The government also committed itself to a reduction in the role of state-owned enterprises. The first three plans did much to increase the standard of living and to bring new roads, irrigation schemes, and land reform to the prosperous Bangkok region. But these changes also increased the income gap between rural and urban Thailand and drew increasing numbers of migrants to the city in search of work. Accordingly, the fourth economic plan, covering the years 1977–81, emphasized decentralization of industry and economic growth from the capital region to the provinces. It also ended the policy of encouraging import-substitution industries and began the promotion of export-oriented industries able to benefit from the nation's low wage rates. Plans were made for the establishment of industrial estates under the direction of the Industrial Estate Authority of Thailand.

The first estate, at Bangchan, 30 km (19 mi) from Bangkok, was fully occupied in 1980 by 51 companies, producing a range of industrial products, including automotive and electrical equipment, chemicals, and processed food. Another industrial estate, established in 1979 at Lard Krabang, also in the Bangkok vicinity, includes, in addition to a general industrial area, a duty-free export-processing zone open to manufacturers willing to establish high value-added and labor-intensive industries for export.

The fifth development plan, covering the years 1982–86, stressed reduction of rural poverty and social tensions and expansion of employment opportunities in the poorer regions. To this end, four investment promotion zones were established. After completion in 1981 of the natural gas pipeline from the Gulf of Thailand, investment priority was reassigned to the Eastern Seaboard Development Program. This ambitious program called for the creation of a new urban-industrial complex in the Rayong-Sattahip region that was expected to draw industries from the congested Bangkok area. Heavy industries were to be emphasized, with early construction of a natural gas separator and plants for the manufacture of soda ash, fertilizers, and petrochemicals. The sixth national economic and social development plan (1986–91) stressed continuing export promotion, streamlining of the public sector, and strict monetary and fiscal policies, with growth targeted at only about 5% yearly. Emphasis was placed on the less capital-intensive industries, and more emphasis was given to improved utilization of resources. The plan targeted private sector investment and initiatives. Privatization of state enterprises would proceed in clear-cut phases, and enterprises were required to seek their own revenue. Agricultural production was forecast to grow at 2.9% per year. The development of small-scale industry, particularly in rural areas, was emphasized. In 1993, the Eastern Seaboard Development Plan southeast of Bangkok—began 10 years before as a US\$4 billion investment—demonstrated results with the new port, Laem Chabang. This plan extends greater Bangkok, and the next phases include extending all main national arteries into four-lane highways and double-tracking the railway.

The sixth national development plan coincided with the early part of Thailand's ten-year boom, and most of its economic targets were more than met. The actual average annual rate of real GDP growth—10.5%—was more than twice the targeted 5%. In the seventh development plan, 1992 to 1997, coinciding with the second half of the decade of boom, targets had shifted to a stronger emphasis on balanced, sustained development, and less on growth per se. The plan was formally titled the seventh national development and social development plan. The three official emphases were 1) sustained, moderate growth (though with the target set at a rather heady 8.2% annual real growth rate); 2) redistribution of income and decentralization of planning to achieve reductions in the percent in poverty and in the widening gap between rich and poor; and 3) human resource development. To attain the goals, four sets of policy guidelines were stipulated: policies for stable, noninflationary growth; policies of income redistribution; policies for human resource development and policies for environmental protection. The real GDP growth target was met, though with concern that this was through a combination of a explosive industrial sector growing at an above-target average annual rate of 11.4% and a moribund agricultural sector, growing as below-target annual rate of 1.5%. Inflation averaged only 4.13% a year, better than the 5.6% targeted, but goals to eliminate Thailand's large balance of trade and current account deficits were not met. The average annual savings rate of 9.1% also fell below the plan's ambitious target of 12.8%. Poverty reduction, however, was substantial, with the percent of the population living in poverty falling from 32.6% in 1988 to 11.4% in 1996, which would prove to be its lowest point due to the on-set of the Asian Financial Crisis the next

year. Themes for each region guided development. In the north (Chiang-mai, Lamphrun, and Lampang), light and clean industries are encouraged, such as clothing, high-value electronics, and agro-industry. In the south, transport links and natural gas networks developed between the Andaman Sea and the Gulf of Thailand would attract heavy industry such as petrochemicals, and cross-border development with Malaysia would link with Penang's industrial sector. Development plans for the impoverished northeast included linking with Laos, Cambodia, and Viet Nam for processing raw materials from those countries, and for providing services involved with investment and manufacturing in those countries.

Thailand's eighth national development and social development plan, emphasizing again the concern with qualitative as well as quantitative growth, coincided with the onset of the Asian Financial Crisis and Thailand's struggle back to pre-crisis levels of economic activity, 1997 to 2001. The Plan, assuming a continuation of economic growth, put priority on two long-range economic development goals: human development and the replacement of top-down administration with bottom-up processes. Virtually none of the goals of the plan were met as the economy was plunged into recession and high inflation with the collapse of baht in July 1997. Whereas about a million people a year had been lifted out of poverty during the decade of boom, from 1997 to 1999 about a million and a half a year were plunged back into poverty, as the estimated number in poverty rose from 6.8 million to 9.8 million (16% of the population), and probably continued to increase into 2001. In August 1997 the eighth economic plan was essentially superseded by the IMF-guided international bailout program that involved a three-year, \$17.2 billion support package conditioned on a program of economic reforms. The IMF program did provide from the outset for "the protection of vital health and education expenditures in the central government budget," and, in fact, health expenditures rose by 8% 1997/98 even as revenues fell. The government adhered sufficiently close to the reform program to bring down inflation and replenish foreign reserves, undergirding the reforms with a new constitution. Thailand began repaying the IMF in November 2000 and repaying other lenders in 2001. Net capital flows were negative throughout the five-year planning period but by 2001 had improved to a -\$4.9 billion balance from -\$12.6 billion in 1998.

The introduction of the ninth national development and social development plan, to run 2001 to 2006, took a philosophical turn as the government presented it as embodying the king's concept of "sufficiency economy" as its guiding principle bestowed on the people as a means of helping his subjects overcome the economic crisis. "Sufficiency economy" was explained as based on adherence to the middle path, and involving moderation not just as a guide for economic policies but as a way of life. Balanced development was to be achieved through a combination of patience, perseverance, diligence, wisdom and prudence. The four pillars of the holistic approach of the ninth plan are social protection, competitiveness, governance, and environmental protection. Within this relatively abstract framework, the more specific elements of the Thaksin government's economic policy strategy in 2001 included the following seven elements: 1) farm debt restructuring, including a three year suspension of some debts owed by poor farmers to state banks; 2) village funds financed by grants of one million baht (about \$24,000) to each of the country's roughly 70,000 villages to provide locally administered micro-loans; 3) the transfer of non-performing loans (NPLs) to the newly established (as of June 2001) Thai Asset Management Corporation (TAMC), required of state-owned operations and voluntary for private ones, to promote more efficient debt restructuring; 4) special attention to small- and medium-sized enterprises (SMEs) by state-owned lending agencies; 5) promotion of product specialization

by village groups, called the "one tambon (group of five or six villages), one product" scheme inspired by a similar Japanese program; 6) the establishment of the People's Bank, administered through the Government Savings Bank (GSB), allowing GSB account-holders to apply for small loans (up to about 30,000 baht or \$370) mainly for small retailing or commercial ventures; and 7) a restructuring of the economy away from heavy dependence on imports and towards more reliance on local resources, especially agricultural.

#### 40 SOCIAL DEVELOPMENT

Since 1940, social welfare has been the responsibility of the government, and it is only in recent years that private organizations have actively engaged in social welfare programs. A 1990 law established a social security system which began paying disability and death benefits in 1991. Old age benefits (pensions) were introduced in 1998. The pension system is funded by employers, employees, and the government; each source contributed an amount equal to 1% of the employee's wages. The social security law also provides for sickness and maternity benefits, which are provided to employees of firms with 10 or more workers. Employers are required to provide workers' compensation coverage, including temporary and permanent disability benefits, and medical and survivor benefits.

Women have equal legal rights in most areas, but inequities remain in domestic areas, including divorce and child support. The 1997 constitution protects women through the inclusion of six gender-related articles pertaining to equal rights. In addition, gender-equality clauses have been included in legislation setting up new government entities mandated by the constitution. Women made up 44% of the work force, and hold professional positions. Discrimination in hiring persists, and there is a gender gap in wages. Domestic abuse and violence remain a huge problem.

Many women are trapped into prostitution through a system of debt bondage. Brothels provide a loan to parents of young women, and these women are required to work as prostitutes to pay off the loan. In many cases, this is done without the consent of the woman involved. Under the Penal Code, furthermore, prostitutes are considered criminals, but brothel owners and clients are not.

Many Thai minorities, including many of the hill tribe members, lack any type of documentation. As noncitizens, they do not have full access to education and health care. They lack titles to their land, and may not vote in elections. The government has announced its intention to process and document these groups.

Human rights are generally well respected, but some abuses occur. Coerced confessions and the torture of suspects are occasionally reported. Overcrowding in prisons has resulted in poor conditions.

#### 41 HEALTH

In the 1960s, the government, with UN and US assistance, extended free medical treatment, expanded health education activities in schools and rural areas, and built many hospitals. In the private sector, two-thirds of health care funding comes from employers and private households. A national social security scheme is under way, but private insurers are few. Owing largely to success in eradicating malaria and other tropical diseases, as well as to better sanitation and medical care, health conditions have steadily improved in Thailand.

Health care facilities are concentrated in the Bangkok metropolitan area, where about 15% of the population is located. In 1989, there were 180 private hospitals and more than 11,000 private clinics. Thai hospitals tend to be small in size. In 1990-97, there was a nurse to doctor ratio of 5.5. In 2000, 80% of the population had access to safe drinking water and 96% had

adequate sanitation. In 1993, about 59% of the population had access to health care services. As of 1999 total health care expenditure was estimated at 6% of GDP.

Common diseases as of 1995 are malaria (115,220), tuberculosis (20,260), and leprosy (5,126). As of 2000, 13% of children under five years of age were considered malnourished. About 7% of births in 1999 were of low birth weight. The 1990–95 immunization rates for a child under one were as follows: diphtheria, pertussis, and tetanus, 93%; polio, 93%; measles, 86%; and tuberculosis, 98%. As of 1999 the rates for DPT and measles were, respectively, 97% and 96%.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 16.4 and 7.6 per 1,000 people. In 2000, 72% of married women (ages 15 to 49) used contraception. In the same year, life expectancy was 69 years and infant mortality was 28 per 1,000 live births. Maternal mortality was 44 per 100,000 live births in 1998.

The HIV epidemic in Thailand is among the best documented in the world. Among brothel sex workers, the HIV infection rose from 3.5% in 1989 to 33% in late 1994. There were 22,135 AIDS cases reported in 1995, the most cases reported in all of Asia. As of 1999, the number of people living with HIV/AIDS was estimated at 755,000 and deaths from AIDS that year were estimated at 66,000. HIV prevalence was 2.2 per 100 adults.

Tobacco consumption has risen from 1.9 kg (4.2 lbs) in 1984–86 to 2.0 kg (4.4 lbs) a year per adult in 1995.

## 42 HOUSING

Most families in Thailand live in dwellings that compare favorably with living facilities anywhere in Southeast Asia. The Thai government has stimulated housing and community development by means of a housing plan that provides government mortgages for building, renovation, or purchase of government land and houses. Under a self-help settlement scheme, the government sets up whole new communities, surveys sites, constructs roads and irrigation systems, and provides public utilities and medical care.

In 1973, to house Bangkok residents who had been living in makeshift shelters, the government formed the National Housing Authority (NHA), which undertook overall responsibility for coordination of public and private housing programs. By 1979, the NHA had completed 54,780 housing units. From 1979 to 1984, a total of 1,442,250 housing units were built in Thailand.

According to the preliminary results of the 2000 census, there were about 15,662,300 households nationwide. The average household had 3.9 people. About 79.7% of all households lived in detached houses. About 81.6% of all households were in owned dwellings.

## 43 EDUCATION

The rate of adult illiteracy has been in decline. For the year 2000, adult illiteracy rates were estimated at 4.4% (males, 2.8%; females, 6.0%), a drop from an overall adult illiteracy rate of 6.2% in 1995. Compulsory education provisions, first introduced in 1921, call for universal school attendance starting at age seven through the fourth year of primary school or through age 15. In 1998 primary schools enrolled 5,927,902 students. Secondary schools in the same year enrolled 4,097,331 students. The pupil-teacher ratio at the primary level was 21 to 1 in 1999. In the same year, 81% of primary-school-age children were enrolled in school, while 55% of those eligible attended secondary school. Both teacher training and technical and vocational training (especially in agriculture) have been stressed in recent development plans. As of 1999, public expenditure on education was estimated at 4.7% of GDP.

In 1998, about 1,522,142 students were enrolled in higher education programs. In Bangkok, Chulalongkorn University (founded 1917) is Thailand's most eminent university. Also in

Bangkok are the University of Thammasart (founded 1933), specializing in social and political sciences, and Kasetsart University (founded 1943) specializing in agriculture. Newer universities established in provincial areas include Chiang Mai University (founded in 1964), Khon Kaen University (founded in the northeast in 1966), and Prince of Songkhla University (founded in 1968). King Mongkut's Institute of Technology was formed in 1971 through the amalgamation of three institutes, and eight colleges of education were combined into Sri Nakharinwirot University in Bangkok in 1974. A correspondence school, the University of Ramkhamhaeng, opened in Bangkok in 1974 and the Sukhothai Thammathirat Open University began operations in 1978. In total there are 16 state universities in addition to 26 privately run colleges. There are also a large number of teacher training colleges.

## 44 LIBRARIES AND MUSEUMS

The National Library (founded in 1905) contains about 2.4 million books and over 300,000 manuscripts. Other important libraries in Bangkok include the Asian Institute of Technology (200,000 volumes), Chulalongkorn University (264,700), the University of Thammasat (231,000), Kasetsart University (313,000), and Sri Nakharinwirot University (299,500). The Library of the Department of Science Services maintains a special collection of 450,000 volumes. Outside Bangkok, sizable collections are maintained at the University of Chiang Mai (655,000) and Khon Kaen University (340,000). The Economic and Social Commission for Asia and the Pacific holds 150,000 volumes.

The National Museum in Bangkok (founded in 1926) has an extensive collection of Thai artifacts, including sculptures, textiles, ceramics, jewels, coins, weapons, and masks. Many of Bangkok's temples and palaces contain excellent examples of Thai frescoes and sculptures. The Temple of the Emerald Buddha has a famous mural of the Ramayana, the Sanskrit epic, and the Marble Temple contains a fine collection of bronze and stone Buddhas.

Bangkok also houses the Bhirasi Institute of Modern Art, the Hill Tribes Museum, the Science Museum, and the Sood Sanquichien Prehistoric Museum and Laboratory. There are dozens of other provincial museums throughout the country. The Hall of Opium Museum is set to open in 2003 near Chiang Rai.

## 45 MEDIA

The Ministry of Communications is responsible for Thailand's public postal, telegraph, and telephone services. The postal service, employing both railway and air mail, operates from the central post office in Bangkok and covers the entire country. Telephone service now reaches the principal towns, with 5.6 million main telephone lines in use in 2000, of which over 70% were in metropolitan areas. In 2002, there were an additional 3.1 million cellular phones in use. Thailand is a member of INTELSAT and maintains trans-Pacific and Indian Ocean satellite communications stations.

Ownership of broadcasting is both public and private. There are about six government and military radio networks. The first mainland Asian television station was established in Bangkok in 1955. As of 1999, there were 204 AM and 334 FM radio stations, and 5 television stations. In 2000 Thailand had 235 radios and 234 television sets, and 33 mobile phones per 1,000 population. In 2000, there were 2.3 million Internet subscribers served by 15 service providers.

The first daily newspaper, the *Siam Daily Advertiser*, appeared more than a century ago. In 2002 there were at least 35 daily newspapers published in Bangkok, including seven in Chinese and four in English. The provinces have weekly and semiweekly publications, all in Thai, but no daily papers. Bangkok also has a variety of weekly and monthly periodicals, most appearing in

Thai. Among Bangkok's leading daily newspapers (with language and estimated 2002 daily circulation) were:

	LANGUAGE	CIRCULATION
<i>Thai Rath</i>	Thai	800,000
<i>Naew Na</i>	Thai	200,000
<i>Matichon Daily News</i>	Thai	180,000
<i>Diao Siam</i>	Thai	120,000
<i>Khoa Sod Daily News</i>	Thai	120,000
<i>Siam Rath</i>	Thai	120,000
<i>Phaya Crut</i>	Thai	100,000
<i>Srinakorn Daily News</i>	Chinese	80,000
<i>Sing Sian Yit Pao</i>	Chinese	70,000
<i>Daily Mirror</i>	English	60,000

Citizens are said to enjoy constitutionally provided freedom of speech and a free press. However, the law prohibits criticism of the royal family, threats to national security, and insults to Buddhism.

#### 46 ORGANIZATIONS

Thailand has an extensive cooperative movement. Credit societies are the dominant type of cooperative; consumer cooperatives are the next largest, followed by agricultural marketing and processing cooperatives. Other kinds of cooperatives, mostly formed during and since the 1930s, include colonization and land improvement cooperatives. Trade organizations under the Ministry of Economic Affairs include the Thai Chamber of Commerce, the Board of Trade, and several foreign trade associations.

Professional associations promoting research and development include the Agricultural Science Society of Thailand, the Medical Association of Thailand, and Science Society of Thailand. There are a number of ASEAN organizations with a base in Thailand, including the ASEAN Institute for Health Development, ASEAN Institute for Physics, and the ASEAN Solar Energy Network.

Cultural organizations include the Royal Institute (founded 1933); the Thai-Bhara Cultural Lodge (founded 1940), which sponsors studies in the fields of linguistics, philosophy, and religion; and the Siam Society (founded 1904), which issues studies on Thai art, literature, and science. The National Culture Commission was established in 1979. The multinational organization of the World Fellowship of Buddhists is based in Bangkok.

National youth organizations include the Student Federation of Thailand, the National Scout Organization of Thailand, and YMCA/YWCA. Social action groups include the Asian Coalition for Housing Rights, Asian Forum for Human Rights and Development, and the National Council of Women of Thailand. The Red Cross is also active.

#### 47 TOURISM, TRAVEL, AND RECREATION

Tourism has become a vital industry in Thailand, offering a range of attractions from outdoor activities to museums and cultural events. Most tourists visit Bangkok and its Buddhist temples (wats). Major sports include soccer and baseball. Thai bull, cock, and fish fighting are also popular (though illegal), along with Thai boxing, golf, badminton, and kite fighting. All visitors must have passports; visitors from most countries may stay up to 15 days without a visa. Typhoid, tetanus, and gamma globulin immunizations are recommended, especially for travel in rural areas. Yellow fever inoculation is required of tourists arriving from an infected area.

In 2000, \$7 billion was spent in the country by 9,578,826 foreign visitors. That year there were 318,812 hotel rooms with a 51% occupancy rate.

The average daily cost of staying in Bangkok, according to 2000 US government estimates, was \$182 per day. Elsewhere in Thailand, estimated travel costs range from \$80+ in Cha Am to \$98+ in Nakhon Ratchasima.

#### 48 FAMOUS THAI

Many ancient Thai kings enjoy legendary reputations. Rama Khamheng (the Great), a 13th-century monarch, is traditionally regarded as the inventor of the Thai alphabet; Rama Tibodi I in the 14th century promulgated the first-known Thai laws; Trailok instituted lasting governmental reforms in the 15th century; and Phya Tak in the 18th century rebuilt a war-defeated Thailand. Two great monarchs, Mongkut (r.1851–68) and his son Chulalongkorn (r.1868–1910), became famous for introducing Thailand to the modern world. They are, respectively, the king and his young successor in Margaret Landon's *Anna and the King of Siam*. Further progress toward modernization was accomplished in by three outstanding premiers: Phibul Songgram (1897–1964), Pridi Banomyong (1900–83), and Sarit Thanarat (1900–63). Prince Wan Waithayakon (1891–1976), foreign minister and Thailand's representative to the UN, played a major role in diplomacy following World War II. Marshal Thanom Kittikachorn (b.1911) was leader of Thailand from 1963 until October 1973, when political protests compelled his resignation as prime minister. King Bhumibol Adulyadej (b.US, 1927) ascended the throne in 1946.

Prince Akat Damkoeng was the author in 1940 of the first modern novel written in Thailand, *Yellow Race, White Race*. Modern styles in painting and sculpture are reflected in the work of Chitr Buabusaya and Paitun Muangsomboon (b.1922), and the traditional manner in the art of Apai Saratani and Vichitr Chaosanket.

#### 49 DEPENDENCIES

Thailand has no territories or colonies.

# TONGA

Kingdom of Tonga  
*Pule'anga Tonga*

**CAPITAL:** Nuku'alofa, Tongatapu

**FLAG:** The flag, adopted in 1862, is crimson with a cross of the same color mounted in a white square in the upper left corner.

**ANTHEM:** *Koe Fasi Oe Tu'i Oe Otu Tonga (Tongan National Anthem)* begins "‘E ‘Otua Mafimafi Ko homau ‘Eiki Koe" ("O Almighty God above, Thou art our Lord and sure defense").

**MONETARY UNIT:** The Tongan pa'anga (T\$) of 100 seniti is a paper currency at par with the Australian dollar. There are coins of 1, 2, 5, 10, 20, and 50 seniti, and 1 and 2 Tongan pa'angas, and notes of ½, 1, 2, 5, 10, 20, and 50 pa'angas. T\$1 = US\$0.4926 (or US\$1 = T\$2.03; in March 2003).

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but some imperial and local weights and measures also are employed.

**HOLIDAYS:** New Year's Day, 1 January; ANZAC Day, 25 April; Crown Prince's Birthday, 4 May; Independence Day, 4 June; King's Birthday, 4 July; Constitution Day, 4 November; Tupou I Day, 4 December; Christmas, 25–26 December. Movable religious holidays include Good Friday and Easter Monday.

**TIME:** 1 AM (the following day) = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

The Tonga archipelago, also known as the Friendly Islands, lies scattered east of Fiji in the South Pacific Ocean. Nuku'alofa, the capital, is about 690 km (430 mi) from Suva, Fiji, and about 1,770 km (1,100 mi) from Auckland, New Zealand. Consisting of 171 islands of various sizes, only 45 of which are inhabited, Tonga has a total area of 748 sq km (289 sq mi), including inland waters as well as Teleki Tokelau and Teleki Tonga (formerly the Minerva Reefs). Comparatively, the area occupied by Tonga is slightly more than four times the size of Washington, D.C. It extends 631 km (392 mi) NNE–SSW and 209 km (130 mi) ESE–WNW. The major islands are Tongatapu and 'Eua, Ha'apai, Vava'u, Niuatoputapu and Tafahi, and Niuafu'ou. Tonga's total coastline is about 419 km (260 mi).

The capital city of Nuku'alofa is located on Tongatapu.

## <sup>2</sup>TOPOGRAPHY

The islands run roughly north–south in two parallel chains; the western islands are volcanic and the eastern are coralline encircled by reefs. At 10,800 m (35,400 ft) deep, the Tonga Trench is one of the lowest parts of the ocean floor. The soil on the low-lying coral islands is porous, being a shallow layer of red volcanic ash, devoid of quartz, but containing broken-down limestone particles.

The volcanic islands range in height to a maximum of 1,033 m (3,389 ft) on Kao. Fonuafo'ou (formerly Falcon Island), about 65 km (40 mi) northwest of Nuku'alofa, is famous for its periodic submergences and reappearances, as a result of earthquakes and volcanic action. There are few lakes or streams. Tofua, Vava'u, Nomuka, and Niuafu'ou each have a lake, and there are creeks on 'Eua and one stream on Niuatoputapu. Other islands rely on wells and the storage of rainwater to maintain a water supply.

## <sup>3</sup>CLIMATE

The climate of Tonga is basically subtropical. Because the islands are in the southeast trade wind area, the climate is cooler from May to December, when the temperature seldom rises above 27°C

(81°F). The mean annual temperature is 23°C (73°F), ranging from an average daily minimum of 10°C (50°F) in winter to an average maximum of 32°C (90°F) in summer. Average annual rainfall, most of which occurs from December to March during the hot season, is 160 cm (63 in) on Tongatapu, 257 cm (101 in) on Niuatoputapu, and 221 cm (87 in) on Vava'u. The mean relative humidity is 80%.

## <sup>4</sup>FLORA AND FAUNA

Coconut palms, hibiscus, and other tropical trees, bushes, and flowers are abundant. Tonga is famous for its flying foxes.

## <sup>5</sup>ENVIRONMENT

Agricultural activities in Tonga are exhausting the fertility of the soil. The forest area is declining because of land clearing, and attempts at reforestation have had limited success. Water pollution is also a significant problem due to salinization, sewage, and toxic chemicals from farming activities. The impurity of the water supply contributes to the spread of disease. The nation is also vulnerable to cyclones, flooding, earthquakes, and drought. The government has established a Water Master Plan to manage the nation's water resources for two decades. The National Development Plan is a more comprehensive attempt to address the nation's environmental concerns.

There has been some damage to the nation's coral reefs from starfish and from coral and shell collectors. The Fiji banded iguana, and the loggerhead, green sea, and hawksbill turtles are endangered. Overhunting threatens the native sea turtle populations. The Tonga ground skink has become extinct.

## <sup>6</sup>POPULATION

The population of Tonga in 2003 was estimated by the United Nations at 104,000, which placed it as number 178 in population among the 193 nations of the world. In that year approximately 4% of the population was over 65 years of age, with another 41% of the population under 15 years of age. There were 103 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is

0.97%, with the projected population for the year 2015 at 115,000. The population density in 2002 was 135 per sq km (349 per sq mi). However, only 45 of the nation's 171 islands are inhabited.

It was estimated by the Population Reference Bureau that 38% of the population lived in urban areas in 2001. The capital city, Nuku'alofa, had a population of 37,000 in that year. The city is on the island of Tongatapu, where two-thirds of the population resides. According to the United Nations, the urban population growth rate for 2000–2005 was 1.7%.

## 7 MIGRATION

There is considerable movement toward the larger towns as population pressure on agricultural land increases. Some ethnic non-Tongans born on the islands migrate mainly to Fiji and New Zealand. Emigration by Tongan workers, both skilled and unskilled, has long been of concern to the government. In 1989 approximately 39,400 Tongans lived in the United States, Australia, and New Zealand. There are expatriate Tongan communities in Brisbane and Sydney (Australia), Auckland (New Zealand), San Francisco (United States), and on Hawaii. Persons wishing to reside in Tonga must obtain a government permit; permission is granted only to those taking up approved employment. Immigrant settlement is not encouraged because of the land shortage. The net migration rate in 1999 was -1.19 migrants per 1,000 population. There were an estimated 2,000 migrants in Tonga in the year 2000. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

The Tongans are a racially homogeneous Polynesian people. Less than 2% of the population is of European, part-European, Chinese, or non-Tongan Pacific island origin.

## 9 LANGUAGES

Tongan, a Polynesian language not written down until the 19th century, is the language of the kingdom, but government publications are issued in both Tongan and English, and English is taught as a second language in the schools.

## 10 RELIGIONS

Over 98% of Tongans are Christian. According to the 1996 census, 41% of the population are members of the Free Wesleyan Church of Tonga (Methodist); 16% are Roman Catholics; 14% are members of the Church of Jesus Christ of Latter-Day Saints; 12% are of the Free Church of Tonga; and 17% belong to other churches, including Seventh-Day Adventists, the Assembly of God, the Tokaikolo Church (a local offshoot of the Methodist Church), Anglicans, the Baha'is, Muslims, and Hindus.

## 11 TRANSPORTATION

In 2002, Tonga had 680 km (423 mi) of roadways, of which 184 km (114 mi) were paved. There are no bridges in Tonga, but three islands in the Vava'u group are connected by two causeways. Tonga has no railways.

Nuku'alofa and Neiafu are the ports of entry for overseas vessels. In 2002, the merchant fleet consisted of 80 ships, some of them foreign owned ships registered as a flag of convenience, with a total of 292,139 GRT. Work on extending the port at Nuku'alofa began in 1985. The Pacific Forum Line and the Warner Pacific Line maintain scheduled service from Australia and New Zealand to Tonga via the Samoas and other islands, and cargo ships visit the group from time to time for shipments of copra. Internal sea connections are maintained by the Polynesia Triangle and by the Shipping Corp. of Polynesia.

In 2001, there were six airports, only one of which had a paved runway. Fua'Amotu International at Tongatapu is Tonga's principal airport. Air Pacific, Air New Zealand, Polynesian

Airlines, and Hawaiian Air operate scheduled international flights from Fua'Amotu. The government-owned Friendly Island Airways has scheduled flights between Tongatapu, Ha'apai, 'Eua, Vava'u, and Niuatoputapu. In 2001, 56,800 passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

Since the Tongan language was not written down until the 19th century, the early history of Tonga (which means "south") is based on oral tradition. Hereditary absolute kings (Tu'i Tonga) date back to Ahoaitu in the 10th century. Around the 14th century, the twenty-third king, Kau'ulufonua, while retaining his sacred powers, divested himself of much of his executive authority, transferring it to his brother Ma'ungamotu'a, whom he thereafter called the Tu'i Ha'atakalaua. About the middle of the 17th century, the seventh temporal king, Fotofili, transferred the executive power to his brother Ngala, called the Tu'i Kanokupolu, and thereafter the powers gradually passed into the hands of the latter and his descendants. According to tradition, in the mid-19th century, upon the death of the then Tu'i Tonga, those powers were conferred upon the nineteenth Tu'i Kanokupolu, Taufa'ahu Tupou, founder of the present dynasty.

European chronicles disclose that the island of Niuatoputapu was discovered by the Dutch navigators Jan Schouten and Jacob le Maire in 1616. In 1643, Abel Tasman discovered Tongatapu, and from then until 1767, when Samuel Wallis anchored at Niuatoputapu, there was no contact with the outside world. Capt. James Cook visited the Tongatapu and Ha'apai groups in 1773 and again in 1777, and called Lifuka in the Ha'apai group the "friendly island" because of the gentle nature of its people—hence the archipelago received its nickname, the Friendly Islands. It was in the waters of the Ha'apai group that the famous mutiny on the British ship *Bounty* occurred in 1789. The first Wesleyan missionaries landed in Tonga in 1826.

The first half of the 19th century was a period of civil conflict in Tonga, as three lines of kings all sought dominance. They were finally checked during the reign of Taufa'ahu Tupou, who in 1831 took the name George. By conquest, George Tupou I (r.1845–93) gathered all power in his own hands and united the islands; he abolished the feudal system of land tenure and became a constitutional monarch in 1875. Meanwhile, by the middle of the century, most Tongans had become Christians, the great majority being Wesleyans, and the king himself was strongly influenced by the missionaries.

In the latter part of the century, there were religious and civil conflicts between the Wesleyan Mission Church and the newly established Free Wesleyan Church of Tonga. After the dismissal of the prime minister, the Rev. Shirley Waldemar Baker, in 1890, the new government allowed full freedom of worship. Ten years later, during the reign (1893–1918) of George II, a treaty of friendship was concluded between the United Kingdom and Tonga, and a protectorate was proclaimed. During World War II, Tongan soldiers under Allied command fought the Japanese in the Solomon Islands, and New Zealand and US forces were stationed on Tongatapu, which served as an important shipping point.

Two more treaties of friendship between the United Kingdom and Tonga were signed in 1958 and 1968, according to which Tonga remained under British protection, but with full freedom in internal affairs. On 4 June 1970, Tonga ceased being a British protectorate and became an independent member of the Commonwealth of Nations, with King Taufa'ahau Tupou IV—who had succeeded to the throne upon the death of his mother, Queen Salote Tupou (r.1918–65)—as head of state. The new status brought few immediate changes, apart from the fact that it added Tongan control of foreign affairs to self-rule in domestic matters.

In 1972, Tonga claimed the uninhabited Minerva Reefs (now Teleki Tokelau and Teleki Tonga), situated about 480 km (300 mi) southwest of Nuku'alofa, in order to prevent an Anglo-American corporation from founding an independent Republic of Minerva on the reefs in order to gain certain tax advantages. The nation in 1973 celebrated the bicentennial of Cook's first visit by inaugurating the new runway for jet aircraft at the main airport, near Nuku'alofa. The worst tropical storm in Tonga's history, Cyclone Isaac, devastated the islands in March 1982.

Many of the government's strongest critics gained seats in the 1987 legislative elections; the unprecedented turnover was thought to reflect changing attitudes toward traditional authority. However, the traditional leaders continued in charge of the government, with Prince Fatafehi Tu'iipelehake elected as prime minister. The island's dissident pro-democracy movement, led by Akilisi Pohiva, won the February 1990 general election, but it remained a minority within the legislature. A government scandal over selling Tongan passports to Hong Kong Chinese led to popular support for the opposition. Baron Vaea replaced Prince Fatafehi Tu'iipelehake as prime minister in August 1991. King Taufa'ahu Tupou IV organized the Christian Democratic Party in time for the 1993 election to provide greater coordination for his supporters and to weaken the democracy movement. However, pressure from the pro-democracy forces continued in the February 1993 general election when the People's Democratic Movement won six of the nine seats open.

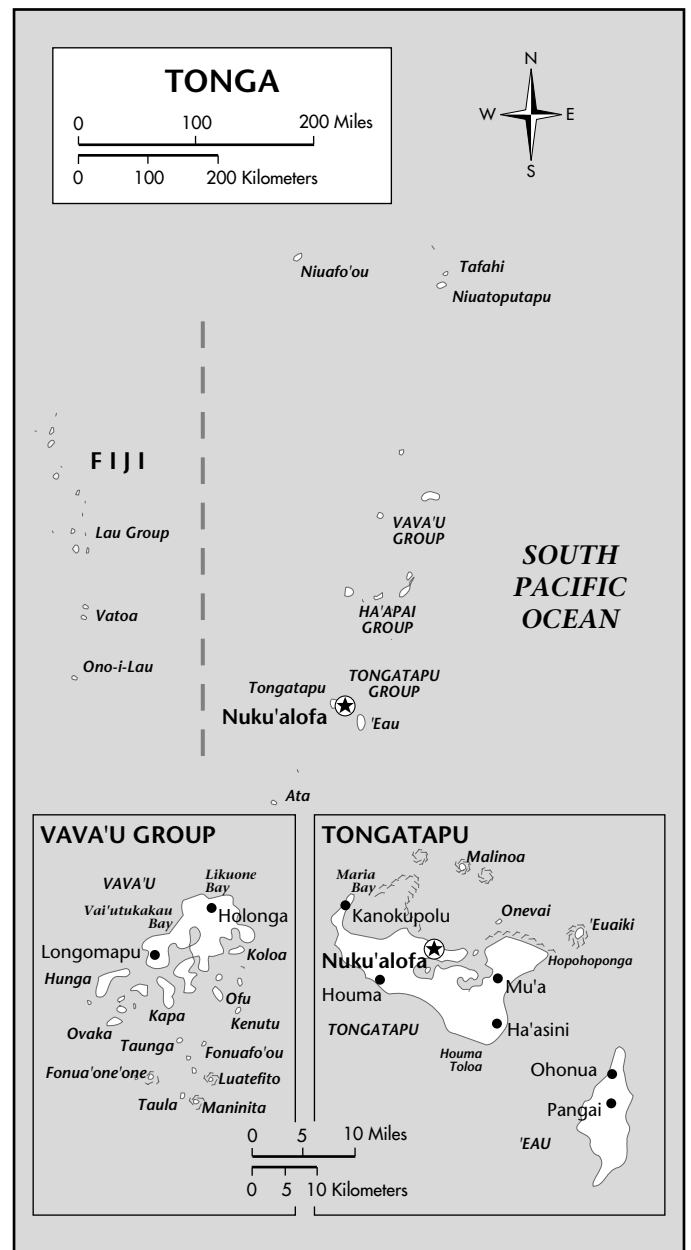

Parliamentary elections were held in March 1999, when about 51% of eligible voters cast ballots, the lowest voter turnout in the country's history. Five of the nine members elected were from the Human Rights and Democracy Movement (HRDM). King Taufa'ahu Tupou IV appointed his youngest son, 41-year-old Prince Lavaka Ata Ulukalala prime minister in January 2000. When the previous prime minister retired, observers speculated that the king's oldest son, Crown Prince Tupouto'a, would be named prime minister. It is likely that Tupouto'a was passed over for the post because of his stated opposition to preserving the king's right to make lifetime appointments. His younger brother, who became the country's fourth prime minister since 1950, has been outspoken in his criticism of the country's democracy movement.

Fifty-two candidates ran for the nine people's representative seats in the legislature in March 2002; the HRDM won seven of the seats. Although the movement's improvement in electoral standing may signal popular support for democratic reform, it is seen as the king's prerogative to initiate change.

Tonga experienced a financial scandal in 2001, when the king's official court jester, an American businessman, invested \$26 million in a government trust fund that subsequently disappeared. The money had been raised by the sale of Tongan citizenship and special passports to Asians, especially Hong Kong Chinese concerned with the transfer of Hong Kong to China. The \$26 million represented more than half the government's annual budget.

### 13 GOVERNMENT

Tonga is an independent kingdom. According to the constitution of 1875, as amended, the government is divided into three main branches: the sovereign, Privy Council, and cabinet; the Fale Alea (Legislative Assembly); and the judiciary. The King-in-Council is the chief executive body, and the cabinet, presided over by the appointed prime minister, makes executive decisions of lesser importance. The prime minister is appointed for a life term. Lawmaking power is vested in the 30-member Legislative Assembly, which consists of 12 members of the cabinet sitting *ex officio*, 9 nobles elected to three-year terms by the 33 hereditary nobles of Tonga, and 9 representatives popularly elected to three-year terms. Sessions must be held at least once in every calendar year. Legislation passed by the Privy Council is subject to

LOCATION: 15° to 23°30' S; 173° to 177° W. TERRITORIAL SEA LIMIT: 12 miles.

approval at the next meeting of the Legislative Assembly. Women voted for the first time in 1960, and the first woman was elected to the legislature in 1975. All literate citizens 21 years of age or older are eligible to vote.

### 14 POLITICAL PARTIES

The Tonga People's Party (TPP), led by Viliami Fukofuka, and the pro-democracy Human Rights and Democracy Movements, led by Akilisi Pohiva's were the principal political parties active in 2003.

### 15 LOCAL GOVERNMENT

The islands are divided administratively into three districts: Vava'u in the north, Ha'apai in the center, and Tongatapu in the south. Ha'apai, Vava'u, and the outlying islands are administered

by governors who are members of the Privy Council and are responsible to the prime minister. Minor officials perform statutory duties in the villages. Town and district officials have been popularly elected since 1965. They represent the central government in the villages; the district official has authority only over a group of villages.

Titles of nobility were first bestowed in 1875, and later in 1882, 1887, 1903, and 1923. With the hereditary titles were granted villages and lands.

## 16 JUDICIAL SYSTEM

The Supreme Court exercises jurisdiction in major civil and criminal cases. Other cases, heard in the Magistrate's Court or the Land Court, may be appealed to the Supreme Court and then to the Court of Appeal, the appellate court of last resort. The Privy Council has jurisdiction over cases on appeal from the Land Court dealing with titles of nobility and estate boundaries. With the ratification of the 1968 friendship treaty, UK extraterritorial jurisdiction lapsed, and British and other foreign nations became fully subject to the jurisdiction of the Tongan courts. The judiciary is independent of the king and the executive branch, although Supreme Court justices are appointed by the king. Criminal defendants are afforded the right to counsel and the right to a fair public trial is protected by law and honored in practice. The king may commute a death sentence. In addition, the court system consists of a court martial for the Tonga Defense Services, a court tribunal for the police force, and a court of review for the Inland Revenue Department.

## 17 ARMED FORCES

The Tonga Defense Force was organized during World War II, became defunct in 1946 and was reactivated in 1952. It consists of a regular cadre and volunteers serving an initial training period, followed by attendance at annual training camps. Forces are organized into marines, royal guards, a navy, a police force, and a newly created air wing. The naval squadron consists of several fast patrol boats policing territorial waters.

## 18 INTERNATIONAL COOPERATION

Tonga was admitted to the UN on 14 September 1999. It participates in ESCAP, FAO, ICAO, IDA, IFAD, IMF, ITU, UNCTAD, UNESCO, UPU, and WHO. Tonga is also a member of the Asian Development Bank, Commonwealth of Nations, G-77, IBRD, and South Pacific Forum. It has also applied for WTO membership. Tongan representatives have attended and taken a leading part at South Pacific conferences. Since 1965, Tonga has received aid under the Australian South Pacific Technical Assistance Program. Tonga has only one diplomatic mission overseas, in the United Kingdom.

## 19 ECONOMY

The economy is largely agricultural and still contains a substantial non-monetary sector. The principal cash crops are squash, fish, copra and coconut products, vanilla bean extract and bananas. One third to one half of export earnings come from the sale of squash to Japan, though the main source of foreign exchange is tourism. A proportion of food is imported and the economy remains dependent on external aid and remittances from expatriate Tongalese (including an estimated 46,000 in the United States) to offset its chronic trade deficit. As of 2002, it is estimated that there are more expatriates (over 102,000) than current citizens. Real GDP growth, which had peaked at 6.5% in fiscal year 1999/2000, fell to 0.5% in 2000/01, attributable to the global slowdown, and, in particular, its impact on tourism. The IMF reports net services for Tonga in 2000/01 as -\$8.7 million, down from positive balances of \$4.5 million and \$1.9 million in the previous two fiscal years.

In 2002, the year was ushered in by Tonga's worst cyclone since 1961, Cyclone Waka, which tore through the northern islands of Niuafu'ou and Vava'u on 30–31 December 2001, destroying an estimated 90% of the crops. About 350 homes were destroyed, with another 750 homes, 23 schools, and numerous hospitals, churches, and other structures seriously damaged. Water supply, electricity, and communications were also severely disrupted, with total damage estimated at \$50 million. Donor countries—principally New Zealand, Australia, French Polynesia, and the United States—responded with food aid and emergency assistance, as did several missions and charities. The government lifted import duties on construction materials. The net result was a slight uptick in real GDP growth in 2001/2002 to 1.5% despite the cyclone damage due to the stimulus given the construction industry as well as record high prices for squash and vanilla beans.

Tonga's overall balance of payments was also helped by a sharp increase in private transfers, which were an estimated \$65.2 million in 2001/02, up 21.6% from the year before, and up 62.2% from 1998/99. Inflation, however, increased from 10.4% from 6.9% because of expanded credit.

Another economic shock in 2002 was the discovery of the loss of most of the assets (about \$26.5 million) from the Tonga Trust Fund (TTF) through failed investments and, perhaps, simple fraud, while under management by American businessmen. The assets came primarily from selling Tongan passports to nervous residents of Hong Kong before its reversion to Chinese rule in 1997.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2000 Tonga's gross domestic product (GDP) was estimated at \$225 million. The per capita GDP was estimated at \$2,200. The annual growth rate of GDP was estimated at 5.3%. The average inflation rate in 2001 was 9.4%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 30% of GDP, industry 10%, and services 60%.

Worker remittances in 2001 totaled \$52.53 million. Foreign aid receipts amounted to about \$201 per capita and accounted for approximately 14% of the gross national income (GNI). Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings.

## 21 LABOR

The total wage labor force in 1996, the last year reported, was 33,908. As of 1997, approximately 65% of the workforce engaged in agriculture. The unemployment rate that year was 13.3%.

The government has issued a labor code establishing a wage structure, a system of job classification, and provisions for workers' compensation. Holidays are prescribed by law. According to the constitution, it is not lawful to work, to play games, or to engage in trade on Sunday. Workers have the right, in theory, to form unions under the 1964 Trade Union Act, but as of 2002, none had been formed. Various government agencies and public enterprises offer vocational training.

Child labor is not used in the wage sector and is virtually nonexistent throughout the economy. The workweek is limited to 40 hours. There is no set minimum wage. Generally, labor laws are well enforced on the main island of Tongatapu but are more inconsistently enforced on the outer islands.

## 22 AGRICULTURE

About 69% of Tonga is agricultural land, including small amounts of permanent pasture. With increasing population pressure on the land, more land is being intensively cultivated and less is available for fallow. The use of fertilizers, high-protein strains of corn, and similar methods to improve the efficiency of land use has become increasingly necessary.

According to the constitution of 1875, all the land in the kingdom belongs to the crown and cannot be alienated. Much of it, however, consists of hereditary estates that were bestowed upon various chiefs, who lease the lands to farmers at a nominal annual rent. Since 1890, the crown has been responsible for the collection of rents and the granting of allotments.

On reaching the age of 16, every Tongan male taxpayer is entitled under the constitution to a tax allotment of one *api* (3.34 ha/8.25 acres). These allotments are hereditary, pass from generation to generation in accordance with the law of succession, and may not be sold. A tenant may be ejected for nonpayment of rent or for failing to comply with the planting regulations, under which every Tongan holder of a tax allotment is legally required to plant 200 coconut trees, which he must keep free from weeds. In recent years, however, population increases have made it impossible to guarantee the *api* to all those entitled to one.

Principal subsistence crops are yams, taro, sweet potatoes, and manioc. Estimated production in 1999 included coconuts, 25,000 tons; sweet potatoes, 5,000 tons; cassava, 28,000 tons; oranges, 3,000 tons; and bananas, 1,000 tons. Vanilla beans have become an important cash crop, especially on Vava'u. Agricultural products accounted for 67% of exports in 2001.

## 23 ANIMAL HUSBANDRY

Beef cattle are generally kept for grazing in coconut plantations to keep the undergrowth in check and to provide additional income. Every householder has several hogs, which generally are not sold but are used for feasts. Sheep were brought into Tonga in 1954 but did not thrive, and in 1956 the entire flock was slaughtered. Livestock in 2001 included 81,000 hogs, 12,500 goats, 11,400 horses, and 11,250 head of cattle.

## 24 FISHING

Fish are abundant in the coastal waters, but the fishing industry is relatively undeveloped, and the supply of fish is insufficient to meet local demand; thus, canned fish has been imported in recent years. Principal species caught are tuna and marlin. The fish catch was 3,531 tons in 2000; exports of fish products were valued at almost \$3.45 million that year.

## 25 FORESTRY

Forestland covers about 5.5% of Tonga's total area, mainly on Eua and Vava'u, but this diminishing resource has not been efficiently exploited, and much wood for construction must be imported. Roundwood production in 2000 was 2,000 cu m (70,600 cu ft). There is a government sawmill on Eua. Charcoal is manufactured from logs and coconut shells.

## 26 MINING

Tonga had few known mineral resources. A limited amount of crushed stone is produced at local quarries.

## 27 ENERGY AND POWER

All power is derived from thermal sources. Installed capacity in 2001 was about 7,000 kW; electricity production in 2000 totaled 30 million kWh. Consumption of electricity in 2000 was 27.9 million kWh. Oil has been discovered through seepage into water wells, but test wells have been unproductive.

## 28 INDUSTRY

Encouragement of new industries was the goal of Tonga's six five-year plans (1966–2006). Industries include the manufacture of concrete blocks, metal products, woolen knitwear, leather goods, furniture, soft drinks, soap, sports equipment, yachts, and paint. Ten-meter (33-foot) epoxy-veneer molded yachts are produced by Marine Tonga, an Tongan-German joint venture. At the government-backed Small Industry Centre in Nuku'alofa the more advanced products are made including refrigerators, jewelry, bicycles, toys, furniture, wheelbarrows, mini-excavators, and other consumer goods are assembled for use locally and in neighboring countries. A small but growing construction sector is developing in response to the inflow of relief monies following Cyclone Waka, which hit during the last two days of 2001, and the need for construction services for hospitals, schools, wharves, etc. Long-established industries are coconut processing, sawmilling, and local handicrafts. Nuku'alofa is the only commercial and urban center. Industry accounts for just 10% of GDP and manufacturing about 8%.

## 29 SCIENCE AND TECHNOLOGY

Hango Agricultural College, part of the Free Wesleyan Church Education System, offers diploma and certificate courses. Tonga Maritime Polytechnical Institute is located in Nuku'alofa.

## 30 DOMESTIC TRADE

Village stores carry a stock of flour, sugar, canned meats, textiles, hardware, soap, kerosene, tobacco, and matches; in the larger towns, these shops are managed by Tongans for European trading firms. Storekeepers act as agents for the Commodities Board and often extend credit to their customers until the end of the harvest. The board's produce division helps market bananas, melons, and pineapples. The development of cooperatives, which serve as savings-and-loan, produce-marketing, and handicraft-manufacturing organizations, has been actively pursued.

Usual banking hours are weekdays from 9:30 AM to 3:30 PM.

## 31 FOREIGN TRADE

Tonga suffers from chronic trade deficits. Vegetables, including squash, are Tonga's main export commodities (54%). Other exports include fish (15%), spices and vanilla (13%), and shellfish (3.8%).

In 1995 Tonga's imports were distributed among the following categories:

Consumer goods	13.8%
Food	25.0%
Fuels	12.3%
Industrial supplies	30.2%
Machinery	11.7%
Transportation	6.6%
Other	0.3%

Principal trading partners in 1998 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
India	18	n.a.	n.a.
Japan	7	8	-1
United States	6	13	-7
Fiji	1	18	-17
Australia	1	10	-9
Samoa	1	n.a.	n.a.
United Kingdom	n.a.	2	n.a.
China (inc. Hong Kong)	n.a.	1	n.a.
New Zealand	n.a.	21	n.a.
Indonesia	n.a.	1	n.a.

### 32 BALANCE OF PAYMENTS

Since 1960, Tonga has had a growing trade deficit, offset by funds from the United Kingdom, New Zealand, Australia, and the Asian Development Bank (ADB).

The US Central Intelligence Agency (CIA) reports that in 2000 the purchasing power parity of Tonga's exports was \$9.3 million while imports totaled \$70 million resulting in a trade deficit of \$60.7 million.

The International Monetary Fund (IMF) reports that in 2001 Tonga had exports of goods totaling \$6.66 billion and imports totaling \$63.7 billion. The services credit totaled \$17.1 million and debit \$27.2 billion. The following table summarizes Tonga's balance of payments as reported by the IMF for 2001 in millions of US dollars.

<b>Current Account</b>	<b>-12,858</b>
Balance on goods	-57,031
Balance on services	-10,027
Balance on income	3,409
Current transfers	50,791
<b>Capital Account</b>	<b>9,152</b>

<b>Net Errors and Omissions</b>	<b>4,349</b>
<b>Reserves and Related Items</b>	<b>-1,645</b>

### 33 BANKING AND SECURITIES

The Bank of Tonga was formed in 1971, with the government holding 40% of the shares and 20% each held by the Bank of Hawaii, the Bank of New Zealand, and the Bank of New South Wales. The overseas banks provided staff and supervision for the Bank of Tonga, which offers all commercial services and has assumed responsibility for government savings, traders' current accounts, and foreign exchange dealings. The Tongan Development Bank (TDB) was founded in 1977.

Tonga's fiscal policy has traditionally been cautious, with taxation and expenditure measures balancing in the recurrent budget and the development budget being financed mainly through grants and soft loans. Legislation to set up a central bank was passed in late 1988 and the National Reserve Bank came into existence the following year. The Ministry of Finance, the Board of Currency Commissioners, the Board of Coinage Commissioners, and the island's only commercial bank, the Bank of Tonga, had until then jointly performed central bank functions. A second commercial bank, MBF Bank, was launched in late 1993.

Legislation has been passed to enable Tonga to become an international banking center. The legislation permits up to four foreign banks to establish operations in the capital. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$20.6 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$67.0 million.

Tonga has no stock issues or securities trading.

### 34 INSURANCE

Blue Shield (Oceania) Insurance covers life, health, travel, workers' compensation, total permanent disability, accident, and local consultation services. There were at least seven other major insurers doing business in Tonga in 1999.

### 35 PUBLIC FINANCE

About half of all public revenues accrued from customs duties on imported goods; the remainder came mainly from export duties, port fees, income taxes, and stamp revenues. Principal items of expenditure were public health, medical services, education, and agriculture.

The US Central Intelligence Agency (CIA) estimates that in 1999/2000 Tonga's central government took in revenues of approximately \$39.9 million and had expenditures of \$52.4 million including capital expenditures of \$1.9 million. Overall, the government registered a deficit of approximately \$12.5 million. External debt totaled \$57.5 million.

### 36 TAXATION

Income tax is levied at progressive rates. Resident businesses pay 15% on profits up to \$100,000, and 30% thereafter. Non-resident businesses pay 37.5% on profits up to \$50,000 and 42.5% thereafter. All male Tongans 16 years of age and older, except the aged and infirm, pay an annual head tax, the receipts of which are used to finance free education and medical benefits. There is also a 5% sales tax.

### 37 CUSTOMS AND DUTIES

Tonga has a single-column tariff based on the Customs Cooperation Council Nomenclature with custom duties ranging from 30–65% of the CIF (cost, insurance, and freight). A 20% port and services tax is involved in the percentages. Tariffs are applied to most private sector imports, primarily for revenue purposes. Higher tariffs apply to cigarettes, alcoholic beverages, and petroleum, while public sector goods are exempt.

### 38 FOREIGN INVESTMENT

Although some non-Tongans have leased large plantations and residential and business sites, there is little private foreign investment. In 1997, foreign direct investment (FDI) was reported as \$3 million, and then for the next four years, 1998 to 2001, \$2 million a year. Government policy is that foreign investment is welcome. The statutory framework was laid out in the Industrial Development Incentives Act (IDI Act) of 1978 that provides for a tax holiday of five year extendable to 15 years, with additional tax holidays for expansions of an enterprise. Raw materials and semi-processed goods imported to manufacture an exported finished product are exempt from customs duties for two years, and all imports of capital goods, machineries and construction materials are assessed at 50% of port and service taxes. With a view to husbanding the country's foreign currency resources, there are restrictions, mostly on a pro rata basis, on the ability to move hard currency out of the country. Under current IMF-guided efforts at fiscal reform, this regime has been criticized for overbroad tax exemptions and is scheduled to be replaced with a new investment incentives law. Aside for the obvious problems of remoteness and lack of development, the main impediment to foreign investment is not the legal framework but its administration, which is reported to lack transparency and predictability. There are no free trade zones in Tonga, but in 1980 the government established the Small Business Centre near Nuku'alofa that serves as an improved industrial park for small enterprises.

The bulk of Tonga's foreign reserves are invested in Australia. In 2002, in an extraordinary financial scandal it was revealed that all by about \$2.2 million of the Tonga Trust Fund (TTF)—\$26.5 in all—had been lost.

### 39 ECONOMIC DEVELOPMENT

Tonga's seven five-year plans (1966–2000) emphasized development of the islands' economic infrastructure, increasing agricultural production by revitalizing the copra and banana

industries, improvements in telecommunications and transport, and expansion of tourism, industry, and exports. Through the nonprofit Commodities Board, the government has a trading monopoly in copra, bananas, melons, and other produce. In the 1990s, tourism revenues helped offset Tonga's large merchandise trade deficits, but substantial amounts of foreign aid continued to be required. From 1993–98, the economic growth was driven by a rise in exports of squash, increases in aid, and several large construction projects. Growth peaked in 1999/2000 at 6.5% but then plunged to only 0.5% in 2000/01 in the global recession that began the first quarter of 2001.

In 2001, with the appointment of a reform-minded finance minister, Tonga embarked on its seventh strategic development plan (SDP7) for 2001–2003. The overarching goal is improvement of the quality and standard of living for all Tongans. This is to be achieved through policy initiatives in five areas: 1) currency stabilization; 2) privatization; 3) updating and restructuring of the operations of state-owned enterprises (SOEs); 4) maintenance and improvements in the infrastructure; and 5) environmental protection. The economic and fiscal objectives were affirmed in early 2002 when the Cabinet approved the comprehensive Economic and Public Sector Reform Program (EPSRP). The three core objectives of the EPSRP are continuing support for public sector reform; promotion of the private sector as the engine of growth; and sustainable environmental management and equitable social development. The economic reforms are being pursued in conjunction with political reforms that aim at bringing more democracy to the government.

#### 40 SOCIAL DEVELOPMENT

Every family is provided by law with sufficient land to support itself. There is no social welfare department; the medical and education departments and the missions provide what welfare services are available. The only pension scheme is one for civil servants.

Polynesian cultural traditions have kept most women in subservient roles, and few have risen to positions of leadership. Inheritance laws discriminate against women, and women may not own land. Domestic violence is prevalent and dealt with according to tribal law and custom. The government created a National Council of Women despite opposition from women's nongovernmental organizations who feared that its independence would be limited.

Human rights are generally well respected in Tonga. However, political dissent is suppressed.

#### 41 HEALTH

Tongans receive free medical and dental treatment, but must pay for dentures. Non-Tongans are charged on a fixed scale. There is one government medical department hospital each in Tongatapu, Vava'u, Ha'apai, and Eau Island, with several dispensaries. There are 4 hospitals and 14 health care centers, with a total of 307 beds on the islands. In 1991, Tonga had 49 physicians. In 1997 there were 0.4 physicians, 3.2 nurses, 0.3 midwives, and 0.09 dentists per 1,000 people.

Tonga is free of malaria and most tropical diseases, but tuberculosis, filariasis, typhoid fever, dysentery, and various eye and skin diseases remain common health problems. Nevertheless, in comparison with many other Pacific islands, Tonga is a healthy country. Approximately 85% of children were vaccinated against measles in 1994. By 1969, a joint WHO-UNICEF project had considerably reduced the incidence of yaws. Other health projects deal with school sanitation, community water supplies, maternal and child health, and nursing education. The population has access to safe water and adequate sanitation.

There were no cases of polio, malaria, or neonatal tetanus in 1994. Tuberculosis was seen in only 23 cases in 1994. Twelve

AIDS cases were reported in 1999, with eight resulting in death from the disease.

Life expectancy as of 2002 was estimated at 68.6 years. In the same year, infant mortality was an estimated 13.7 per 1,000 live births. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 24 and 5.6 per 1,000 people. The fertility rate was three children per woman.

#### 42 HOUSING

Village houses usually have reed sides and a sloping roof thatched with sugarcane or coconut leaves; the posts are of ironwood, and braided cord takes the place of nails. More modern houses, especially in the towns, are built of wood, with roofs of corrugated iron. Unlike the village houses, they often contain more than one room and have verandas. In 1986, the housing stock totaled 15,091 units, of which 60% were European-style wooden houses, 17% were European houses of bricks or cement, 8% were Tongan houses of wood with iron roofs, 7% were Tongan thatch houses, and 4% had wooden walls with thatch roofs.

Rainwater is stored in concrete cisterns. With the help of WHO, underground fresh water has been tapped to improve the water supply. The success of the plan has led to the extension of fresh water supplies to villages on all major islands.

Tongan taxpayers are entitled to an allotment of land from the governments. Each urban Tongan taxpayer receives an annual rent subsidy in lieu of this land allotment.

#### 43 EDUCATION

The first schools in Tonga were started by the Wesleyan Mission in 1828, even before the conversion to Christianity of the Tongans, and practically all primary education was controlled by the Mission until 1882 when the government took over the educational system. In 1906, various missionary organizations again were allowed to establish schools.

A teacher-training college, established in 1944, provides a two-year course. A government scholarship program provides the opportunity for Tongan students to pursue higher education abroad. Primary education is compulsory for all Tongans. Adult literacy is estimated at higher than 90%. Mission schools, which follow a government syllabus, enroll about 8% of all primary pupils and 89% of students at post-primary level. No tuition is charged at government schools (except the high school), but small fees are charged at mission schools. In 1993 there were 16,792 pupils in Tonga's 115 primary schools, with 754 teachers. In the same year, secondary schools enrolled 16,750 students. The pupil-teacher ratio at the primary level was 21 to 1 in 1999. Elementary instruction is given in the Tongan language; English is also taught. Selected Tongan students prepare for the New Zealand school certificate examination.

#### 44 LIBRARIES AND MUSEUMS

Since 1971, the Ministry of Education has operated a joint library service with the University of the South Pacific. Its library in Nuku'alofa has 9,000 volumes covering agriculture, small business management, adult education, and an important collection of Pacificana. The Ministry of Education library has 12,500 volumes. The Tonga College Museum's collection includes artifacts of Tonga's history. Notable monuments include the great trilithon known as the *Ha'amanga* and some 45 *langis*, great rectangular platforms of recessed tiers of coral limestone blocks that were erected as the tombs of medieval kings.

#### 45 MEDIA

The government's radiotelegraph station at Nuku'alofa has substations at Neiafu (Vava'u), Pangai, Ha'afeva and Nomuka (in the Ha'apai group), 'Eua, and Niuatoputapu. There is also a direct overseas telegraph service linking Nuku'alofa with

Wellington, Suva, Apia, and Pago Pago. An internal radiotelephone service connects Nuku'alofa, 'Eua, Nomuka, Ha'afeva, and Vava'u, and a direct overseas radiotelephone service links Nuku'alofa to other Pacific island capitals. As of 1996, there were an estimated 8,000 mainline telephones in use and 302 cellular phones.

The Tonga Broadcasting Commission's Radio Tonga was established in 1961. It has two medium-wave transmitters of 10 kw each, and broadcasts about 75 hours a week in Tongan, English, Fijian, and Samoan; commercial advertising is accepted. As of 2001, there were four radio stations and three television stations. In 1997 Tonga had 600 radios and 18 television sets in use per 1,000 population. In 2000, there were two Internet service providers serving 1,000 subscribers.

The government publishes a weekly newspaper, the *Tonga Chronicle*, which has an average circulation (in 2002) of 7,000 copies in Tongan and English. There are also church newspapers issued by missions and a few private publications printed at regular intervals.

The constitution provides for free speech and a free press, although occasional infringements of press freedoms do occur. A 1999 US report on human right criticized the government for stifling freedoms of speech and the press. In non-government publications, opposition opinion appears regularly, usually without interference, but journalists were being targeted for prosecution in civil lawsuits by the minister of police.

#### 46 ORGANIZATIONS

Every Tongan village has a community house where ceremonial cloth (tapa) is made by groups of women. Extension of consumer cooperatives has been actively encouraged by the government. The Tongan Women's Progressive Association, formed in 1956, conducts programs for the betterment of village conditions and holds classes in a variety of subjects. The Red Cross is active in the country.

National youth organizations are typically affiliated with religious or educational institutions, including the Catholic Youth Association, Free Church of Tonga Youth Associations, Free Wesleyan Church Youth Association, Tonga Ex-Commonwealth Youth Programme Diplomats Association, and Tupou Farmers. Scouting and YMCA/YWCA programs are also available. Meetings of Christian Endeavor societies and Bible classes are well attended by all ages.

#### 47 TOURISM, TRAVEL, AND RECREATION

Popular tourist sites are the royal palace and terraced tombs in Nuku'alofa. Most visitors enjoy a traditional evening feast of suckling pig, crayfish, chicken, and assorted accompaniments. Fishing, swimming, and sailing are popular, and rugby is a favorite spectator sport.

The minister of police grants prior-arrival visitors' permits up to a maximum of six months. Permits are not required from persons in direct transit, holders of Tongan passports, or foreign

government officials traveling on official business. Vaccination against yellow fever is required.

The tourist industry is a small but growing source of foreign exchange revenues. In 2000 there were 34,694 tourist arrivals, with 46% of travelers coming from Australia and New Zealand. Tourism receipts totaled \$7 million.

In 2001 the US State Department estimated the cost of staying in Nuku'alofa at \$94 per day.

#### 48 FAMOUS TONGANS

King George Tupou I (Taufa'ahu Tupou, 1797–1893) ruled for 48 years; during his reign, Tonga became a Christian nation, abolished serfdom, and acquired a constitution. His prime minister, Shirley Waldemar Baker (1831–1903), was a Wesleyan clergyman who, after being deposed in 1890, became an Episcopal minister and then returned to Tonga. The most famous Tongan of this century was Queen Salote Tupou (1900–1965), whose rule began in 1918. Her dynasty, the Tupou, is the third branch of the royal family and traces its descent back to Ahoaitu, the first Tu'i Tonga of whom there is record. Queen Salote's son, King Taufu'ahau Tupou IV (b.1918), succeeded to the throne in 1965 and was formally crowned in 1967.

#### 49 DEPENDENCIES

Tonga has no territories or colonies.

# TURKEY

Republic of Turkey  
*Türkiye Cumhuriyeti*

**CAPITAL:** Ankara

**FLAG:** The national flag consists of a white crescent (open toward the fly) and a white star on a red field.

**ANTHEM:** *Istiklâl Marşı (March of Independence)*.

**MONETARY UNIT:** The Turkish lira (TL) is a paper currency of 100 kuruş. There are coins of 1, 5, 10, 20, 25, 50, and 100 liras, and notes of 5,000, 10,000, 20,000, 50,000, 100,000, 250,000, and 500,000 liras. TL1 = \$0.000000626 (or \$1 = TL1,597,000.00) as of May 2003.

**WEIGHTS AND MEASURES:** The metric system is the legal standard.

**HOLIDAYS:** New Year's Day, 1 January; National Sovereignty and Children's Day, 23 April; Spring Day, 1 May; Youth and Sports Day, 19 May; Victory Day, 30 August; Independence Day (Anniversary of the Republic), 29 October. Movable religious holidays include Şeker Bayramı (three days) and Kurban Bayramı (four days).

**TIME:** 3 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

The Republic of Turkey consists of Asia Minor, or Anatolia (Anadolu); the small area of eastern Thrace (Trakya), or Turkey in Europe; and a few offshore islands in the Aegean Sea, with a total area of 780,580 sq km (301,384 sq mi), extending about 1,600 km (994 mi) SE–NW and 650 km (404 mi) NE–SW. Comparatively, the area occupied by Turkey is slightly larger than the state of Texas. Of the overall area, 97% is in Asia, and 3% in Europe. Turkey lies athwart the important Black Sea straits system—the Dardanelles, the Sea of Marmara, and the Bosphorus. It is bordered on the N by the Black Sea, on the NE by Georgia and Armenia, on the E by Iran, on the SE by Iraq, on the S by Syria and the Mediterranean Sea, on the W by the Aegean Sea, and on the NW by Greece and Bulgaria, with a total boundary of 2,648 km (1,645 mi) and a coastline of 7,200 km (4,474 mi). Turkey's capital city, Ankara, is located in the northwest central part of the country.

## <sup>2</sup>TOPOGRAPHY

Other than the low, rolling hills of Turkish Thrace, the fertile river valleys that open to the Aegean Sea, the warm plains of Antalya and Adana on the Mediterranean, and the narrow littoral along the Black Sea, the country is wrinkled by rugged mountain ranges that surround and intersect the high, semiarid Anatolian plateau. Average elevations range from 600 m (2,000 ft) above sea level in the west to over 1,800 m (6,000 ft) amid the wild eastern highlands. The highest point is Mount Ararat (Büyük Agri Dagi, 5,166 m/16,949 ft), which rises just within Turkey at the intersection of the Turkish, Armenian, and Iranian frontiers. There are over 100 peaks with elevations of 3,000 m (10,000 ft) or more. Other than the Tigris and Euphrates, which have their sources in eastern Anatolia, rivers are relatively small. Because the watersheds of these streams are semibarren slopes, the seasonal variations in flow are very great. The largest lake is Lake Van (3,675 sq km/1,419 sq mi); the other major lake is Lake Tuz, whose water has a salinity level so high that it serves as a

commercial source of salt. Turkey's 7,200 km (5,474 mi) of coastline provide few good natural harbors.

Most of Turkey lies within an earthquake zone, and recurrent tremors are recorded. On 29–30 March 1970, more than 1,000 earthquakes were felt in the Gediz region of western Turkey, killing 1,086 persons. The record destructive earthquake, however, was that of 29 December 1939—near Erzincan—which killed 30,000 persons.

## <sup>3</sup>CLIMATE

Turkey's southern coast enjoys a Mediterranean climate, and the Aegean coastal climate as far north as Izmir is much the same. The mean temperature range in these regions is 17–20°C (63–68°F), and the annual rainfall ranges from 58 to 130 cm (23 to 51 in). The Black Sea coast is relatively mild (14 to 16°C/57 to 60°F) and very moist, with 71 to 249 cm (28 to 87 in) of rainfall. The central Anatolian plateau is noted for its hot, dry summers and cold winters: the average annual temperature is 8–12°C (46–54°F), and annual precipitation is 30–75 cm (12–30 in). With the exception of some warmer pockets in the valleys, the eastern third of Turkey is colder (4–9°C/39–48°F), and rainfall averages 41–51 cm (16–20 in). The little precipitation there is on the central plateau tends to be concentrated during the late fall and winter months.

## <sup>4</sup>FLORA AND FAUNA

A wide variation of flora is found, from semitropical to temperate, and desert to alpine. In the mountains of southern, southwestern, and northern Turkey there are extensive coniferous stands of commercial importance and some deciduous forest. Licorice, valonia oaks, and wild olive trees grow in the southwest. Principal varieties of wild animals are the fallow deer, red deer, roe deer, eastern mouflon, wild boar, hare, Turkish leopard, brown bear, red fox, gazelle, beech marten, pine marten, wildcat, lynx, otter, and badger. There is a large variety of birds, including the snow partridge, quail, great bustard, little bustard, widgeon, woodcock, snipe, and a variety of geese, ducks, pigeons,

and rails. About 30 species of snakes are indigenous. Bees and silkworms are grown commercially.

## 5 ENVIRONMENT

Environmental responsibilities are vested in the Under Secretariat for Environment and in the Ministry of Energy and Natural Resources. Among Turkey's principal environmental problems is air pollution in Ankara and other cities. The smog in Ankara grew worse after 1979, when the government banned oil heating systems in new buildings in order to reduce costly oil imports; the resultant increased burning of Turkish lignite, which is high in sulfur content, greatly increased the levels of sulfur dioxide and dust in the air. In 1983, the government reversed itself and banned the conversion of heating systems to coal. At the same time, it introduced an antipollution program designed to reduce air pollution levels by more than 50% within a year. In addition to heating restrictions, the plan called for strict traffic controls, the closing of the worst industrial polluters, a prohibition on the import of high-sulfur fuel oil, special emergency hospital wards for smog victims, and the building of green areas and parks in and around cities. In 1992, Turkey had the world's highest level of industrial carbon dioxide emission, which totaled 145.5 million metric tons, a per capita level of 2.49 metric tons. In 1996, the total rose to 178.3 million metric tons.

A \$220-million project to clean up the polluted water in the Golden Horn, an inlet of the Bosphorus forming a harbor in Istanbul, was implemented in the 1980s. The nation's rivers are polluted with industrial chemicals. Among them, mercury has created a serious threat to the nation's water supply. As of 2000, only 81% of urban dwellers and 86% of rural residents have access to safe drinking water. Soil erosion affects both coastal and internal areas. The combination of water and wind eliminates 500 metric tons of soil each year.

In 2001, 15 of Turkey's mammal species and 14 of its bird species were endangered. About 1,600 types of plants were threatened with extinction. Endangered species include the Anatolian leopard, Mediterranean monk seal, bald ibis, slender-billed curlew, Atlantic sturgeon, and hawksbill and green sea turtles.

## 6 POPULATION

The population of Turkey in 2003 was estimated by the United Nations at 71,325,000, which placed it as number 16 in population among the 193 nations of the world. In that year approximately 6% of the population was over 65 years of age, with another 30% of the population under 15 years of age. There were 102 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 1.42%, with the projected population for the year 2015 at 82,150,000. The population density in 2002 was 87 per sq km (225 per sq mi).

It was estimated by the Population Reference Bureau that 75% of the population lived in urban areas in 2001, up from 44% in 1980. Istanbul (formerly Constantinople), the largest city, had a 2002 metropolitan population of 9,413,000. The largest metropolitan areas after Istanbul were Ankara, the capital city, with a 2002 metropolitan population of 3,131,000; Izmir (formerly Smyrna), 2,399,000; Adana, 1,289,000; Bursa, 1,299,000; and Gaziantep, 926,000. According to the United Nations, the urban population growth rate for 2000–2005 was 2.6%.

## 7 MIGRATION

Much Turkish emigration has consisted of workers under contract for employment in EC countries. Germany alone had 1,779,600 Turks at the end of 1991. There are also large numbers of Turks in prosperous Muslim countries such as Sa'udi Arabia, the Gulf states, and Libya. In 1994, there were 14,000 Turkish

Kurds in northern Iraq. The military conflict in southeastern Turkey has internally displaced hundreds of thousands of persons; however, this problem has not been officially recognized by Turkey.

After the 1991 Gulf War, 500,000 Iraqi Kurds fled to Turkey. Most of these refugees have since repatriated or resettled in third countries. In 1992, 20,000 Bosnians came to Turkey, though all have left except for 4,000 as of March 1997. In 1999, nearly 18,000 Kosovar refugees sought asylum in Turkey, including 8,000 people evacuated from Macedonia; nearly all have since voluntarily repatriated. In addition to these mass arrivals, there are individual asylum seekers from Iran and Iraq. Non-European refugees are granted only temporary protection in Turkey, so nearly all must be resettled. In 1998, 1,629 refugees were resettled in the United States, Canada, Australia, and the Nordic countries; approximately the same number was expected for 1999. The net migration rate was zero in 1999.

## 8 ETHNIC GROUPS

About 80% of the population is Turkish. The major ethnic minority (by mother tongue), the Kurds, is estimated at 20%. Arabs, Turkmen, Circassians, Greeks, and others do account for a small percentage of the population. Hundreds of thousands of Armenians were either killed or forced to flee during and immediately following World War I; bitterness between Armenians and Turks continues to this day, and during the late 1970s and early 1980s, Armenian terrorists took the lives of more than two dozen Turkish diplomats. The Greek component in Turkey was reduced as a result of the 1919–22 hostilities with Greece, the 1923 Treaty of Lausanne (which provided for an exchange of population with Greece), and the post-World War II Cyprus controversy. The Kurds, some of whom were forcibly dispersed after an uprising in 1935, still tend to be concentrated in the southeastern provinces. The Arabs live in the south along the Syrian and Iraqi frontiers, and the Greeks, Armenians, and Jews live in Istanbul and, to a lesser extent, in Izmir. Separatist Kurdish groups are outlawed, and there is a heavy military presence in the nine provinces where a state of emergency has been in effect since 1987.

## 9 LANGUAGES

Turkish, which belongs to the Ural-Altai group, is the official language. In addition to the Roman alphabet, modern Turkish uses the letters *ç*, *ğ*, *i* (undotted), *ö*, *ş*, and *ü*, but no *q*, *w*, or *x*. With only minor exceptions, words are spelled phonetically. The language is agglutinative. A 1928 language reform substituted the Roman alphabet for the Arabic script, which had been used by the Turks since their conversion to Islam. During the 1930s there was a state-sponsored effort to rid the language of Arabic and Persian words and grammatical constructions. Turkish grammatical rules are now applied for all words, regardless of origin, though many Persian and Arabic expressions persist. Traditionally, there was a great difference between vernacular Turkish and written Ottoman Turkish, the latter being heavily influenced by Arabic and Persian and almost unintelligible to the mass of Turks. This difference has been almost obliterated, though some regional differences in dialect, particularly in the villages, still make effective communication difficult.

Kurdish and Arabic are also spoken. Kurdish is a language of the Iranian group and is written in Arabic script in Turkey. Two of the three major dialects are spoken in Turkey.

## 10 RELIGIONS

Religious freedom is provided for by the constitution. About 98% of the population is Muslim. Though there is no official state religion, the state maintains urban mosques and other Muslim religious properties, licenses Muslim religious leaders, and provides Muslim religious education in the public schools.

LOCATION: 25°40' to 44°48' E; 35°51' to 42°6' N. BOUNDARY LENGTHS: Armenia, 268 kilometers (167 miles); Azerbaijan, 9 kilometers (5 miles); Georgia, 252 kilometers (157 miles); Iran, 499 kilometers (311 miles); Iraq, 331 kilometers (206 miles); Syria, 822 kilometers (500 miles); Greece, 206 kilometers (128 miles); Bulgaria, 240 kilometers (150 miles); total coastline, 7,200 kilometers (4,482 miles). TERRITORIAL SEA LIMIT: 6 miles, Aegean Sea; 12 miles, Mediterranean and Black Seas.

Proselytizing by either Muslim or non-Muslim is proscribed by law. Laws against the use of religion for political purposes are rigorously enforced. The vast majority of Turkish Muslims are Sunni, but there is a substantial Shi'a minority. Although at times suppressed by law, secret dervish orders have remained active in some areas. In 1999, religious minorities included Christians and Jews, accounting for 0.2% of the population. The Greek Orthodox patriarch at Istanbul is considered first among equals of the seven patriarchs in the Eastern Orthodox churches. Turkey was a haven for Jewish refugees from Spain and Portugal in the late 15th and 16th centuries, and Jews have lived there in relative peace until recent years.

## 11 TRANSPORTATION

Turkey's size and difficult terrain, together with limited economic resources, have proved great obstacles to the construction of transportation facilities. When the republic was founded in 1923 there were about 4,000 km (2,500 mi) of railway track and 7,400 km (4,600 mi) of motor roads in Anatolia and Thrace, all in disrepair. By 2001, 8,607 km (5,348 mi) of track connected most of the important points in the country with Ankara, Istanbul, and the Black Sea and Mediterranean ports. The railways are owned and operated by the Turkish State Railways, a public corporation.

Animal transportation in most of the country has gradually given way to trucks and buses that use roads provided by

extensive construction programs since World War II. In October 1973, the Bosphorus Bridge in Istanbul was opened, facilitating the crossing of the Straits of the Bosphorus by motorists; this six-lane steel suspension bridge had a main span of 1,074 m (3,524 ft). As of 2002, there were 382,397 km (237,621 mi) of roadways, of which 106,976 km (66,475 mi) were paved, including 1,726 km (1,073 mi) of expressways.

The Turkish merchant fleet in 2002 consisted of 531 vessels of all types, totaling 5,913,171 GRT (9,108,819 DWT). The leading ports were Mersin (Icel), Istanbul, Izmir, Iskenderun, and Izmit (Kocaeli).

Turkey had 120 airports in 2001, of which 86 had paved runways. Three international airports—Atatürk (Istanbul), Adnan Menderes (Izmir) and Esenboga (Ankara)—are served by some 20 international air carriers. A new international passenger terminal in Istanbul is one of the largest in Europe able to handle 30 simultaneous gate arrivals and departures. The new Sabiha Gokcen International Airport on Istanbul's Asian side can handle 3.5 million passengers with a potential capacity for 10 million. Other international airports include Antalya, Dalaman, and Adnan Menderes at Izmir. With minor exceptions, domestic air transportation is the monopoly of the semipublic Turkish Airways Corp. (Türk Hava Yollari), which connects most major centers within the country on a regular schedule and operates some international flights. In 2001, scheduled airlines moved 339 million freight ton-km (211 million freight ton-mi); 9,905,400

passengers were carried on scheduled domestic and international flights.

## 12 HISTORY

In ancient times, Turkey was known as Asia Minor or Anatolia. Among the many inhabitants were the Hittites (c.1800–c.1200 BC), the first people to use iron; the Greeks, who, according to legend, destroyed Troy (or Ilium) about 1200 BC and who colonized the Aegean coast from about 1000 BC on; the Phrygians (c.1200–c.600 BC); the Lydians (c.700–546 BC), the first people to mint coins; the Persians (546–333 BC); and the Romans, beginning in the 2d century BC. Roman Emperor Constantine I (the Great) changed the name of the city of Byzantium to Constantinople (now Istanbul) and made it his capital in AD 330; a division between the Western and Eastern Roman Empires, with their respective capitals at Rome and Constantinople, became official in 395. Constantinople, seat of the Byzantine Empire, became the center of Eastern Orthodox Christianity, which officially separated from Roman Catholicism in 1054, when the pope and the patriarch of Constantinople excommunicated each other.

The Turks are a Ural-Altaic people who emerged from the plains between the Ural Mountains in Europe and the Altay Mountains in Asia. The forerunners of the inhabitants of present-day Turkey, known as the Seljuk Turks (named after the Turkish conqueror Seljuk, fl.10th century), defeated the Byzantines in the battle of Malazgirt (1071) and established themselves in Anatolia. They attained a highly developed Muslim culture in their great capital at Konya, in central Turkey. The Turkish conquest of Syria, including Palestine, led to the Crusades (1096–1270), a series of intermittent and inconclusive wars. Various Latin (Roman Catholic) and Greek (Eastern Orthodox) states were formed in parts of the Turkish Empire, but none lasted. The sack of the Christian city of Constantinople by Crusaders in 1204, followed by the establishment of the Latin Empire there (1204–61), shocked Europe and tended to discredit the Crusading movement.

Seljuk power was shattered when the Mongols, another Ural-Altaic people, swept across Asia Minor in 1243. As the Mongols withdrew, Turkish power revived and expanded under the Ottoman Turks, a group of frontier warriors whose first chief was Osman I (called Ottoman in the West, r.1300?–1326). In 1453, the Ottomans under Mehmet II (the Conqueror) occupied Constantinople and made it their capital. In 1516, they conquered Syria; in 1517, Egypt. In 1529, they were at the gates of Vienna, at which point the European expansion of Turkish power was stopped. The Turkish fleet was decisively defeated in a battle near Lepanto (now Navpaktos) in Greece in 1571. At its peak, generally identified with the reign of Sultan Süleyman I (the Magnificent, r.1520–66), the Ottoman Empire encompassed an estimated 28 million inhabitants of Asia Minor, much of the Arabian Peninsula, North Africa as far west as modern Algeria, the islands of the eastern Mediterranean, the Balkans, the Caucasus, and the Crimea. During the 17th, 18th, and 19th centuries, as a result of the rise of nationalism and encroachment by the European powers, it gradually shrank in size, the independence of the remainder being maintained only by shrewd balance-of-power diplomacy.

The process of modernization began with the Imperial Rescript of 1839, promulgated by Sultan Abdul Mejid (r.1839–61), and by a body of reforms known as the Tanzimat, which to some extent curbed the absolute powers of the sultan-caliph. (The Turkish sultans had added the title “caliph” following the conquest of Egypt in 1517.) The Illustrious Rescript of 1856 was largely dictated by Britain, France, and Austria as part of the negotiations leading to the settlement of the Crimean War (1853–56), a clash between the Russian and Ottoman Empires; it ensured equal rights for non-Muslims, provided for prison reform

and the codification of Turkish law, and opened Turkey to European skills and capital. A constitution was introduced in 1876 by Sultan Abdul Hamid II (r.1876–1909) but was suspended in the following year. Thereafter, an absolute monarchy prevailed until the Young Turk revolution of 1908, at which time the constitution of 1876 was reinstated. In 1913, leaders of the Committee for Union and Progress (the organizational vehicle of the Young Turks) took effective control of the government under Sultan Mehmet V (r.1909–18). The principal leaders were Talat and Enver Pasha, who, at the outbreak of World War I, threw what little remained of Ottoman strength behind the Central Powers, which had sided with Turkey in its fruitless attempt to retain its last major European possessions in the Balkan Wars of 1912–13. Although the Turks were unable to make any headway against British forces defending the Suez Canal, they did offer a heroic defense at Gallipoli (the Gelibolu Peninsula) and the Dardanelles, in a prolonged battle between Turkish and British-French forces that lasted from February 1915 to January 1916 and took the lives of about 100,000 soldiers on each side. In 1917, however, Turkish resistance collapsed, and the British pushed Turkey out of Syria, Palestine, Iraq, and Arabia. An armistice was concluded on 30 October 1918, and Enver Pasha and his colleagues fled the country.

On the basis of a series of earlier Allied agreements, the Ottoman Empire was to be stripped of all non-Turkish areas, and much of what remained—Asia Minor—was to be divided among the United Kingdom, France, Greece, and Italy. A substantial portion was actually occupied. In 1919, with Allied assistance, the Greeks invaded Anatolia through Izmir, but a Turkish nationalist resistance movement under the leadership of Mustafa Kemal (later called Atatürk), who had commanded a division at Gallipoli, finally defeated them in 1922. The sultan, being virtually captive in Istanbul, was disgraced in Turkish eyes by his identification with Allied policy. After much maneuvering, a rival nationalist government under Mustafa Kemal was established in Ankara and gained national and international recognition. On 1 November 1922, the sultanate was abolished by Mustafa Kemal's provisional government. The following year, the Ankara government negotiated the Treaty of Lausanne with the Allies, which recognized Turkish sovereignty over Asia Minor and a small area in Thrace. There was a massive exchange of Greek and Turkish populations. On 29 October 1923, a republic was proclaimed, with Ankara as its capital, and on 3 March 1924, the caliphate was abolished and all members of the dynasty banished. Before and during the war, Armenians sought to establish their independence and were brutally repressed by the Turks. Over a million people are said to have died being driven from their homes; many survived in exile.

During the next few years, a series of social, legal, and political reforms were accomplished that, taken collectively, became known as the Atatürk Reforms. They included the substitution of secular law for religious law, the writing of a republican constitution based on popular sovereignty, suppression of religious education in Turkish schools, introduction of a Roman alphabet to replace the Arabic script, and the legal upgrading of the position of women. With minor exceptions, political power resided in a single party, the Republican People's Party, and to a very substantial extent in Mustafa Kemal personally until his death in 1938. His chief of staff, Ismet İnönü (Pasha), became president and established a two-party system of government with the formation of the opposition Democrat Party (DP) in 1946.

Although pro-Allied, Turkey remained neutral during most of World War II, but early in 1945 it declared war on the Axis and became a charter member of the UN. In 1947, the Truman Doctrine pledged US support to Turkey in the face of mounting Soviet pressure. This move was followed by large-scale military and economic assistance from the US. Turkey thus became firmly

committed to the Western alliances—NATO and the Central Treaty Organization, or CENTO (Baghdad Pact).

The DP came to power in 1950. Under Prime Minister Adnan Menderes, the government stressed rapid industrialization and economic expansion at the cost of individual liberties. Restrictive press laws were passed in 1954 and 1956, and by 1960 the Menderes government had curtailed judicial independence, university autonomy, and the rights of opposition parties. On 27 May 1960, after student demonstrations (joined by War College cadets and some army officers) were harshly suppressed, Prime Minister Menderes, President Celâl Bayar, and other government leaders were arrested by a newly formed Committee of National Unity. Gen. Cemal Gürsel became acting president and prime minister. Menderes was found guilty of violating the constitution and was hanged in 1961. A new constitution was popularly ratified in 1961, and elections were held in October. Gen. Gürsel was elected president by the New Grand National Assembly, and İnönü became prime minister of a coalition government.

The opposition Justice Party (JP) won 52.3% of the vote in the 1965 elections and formed a new government under Süleyman Demirel. Four years later, the JP was returned to power, and Prime Minister Demirel began a new four-year term. But Turkey's four top military commanders forced the resignation of Demirel's government in 1971 and called for a "strong and credible government" that would restore economic and political stability and suppress student disorders, which had steadily grown more frequent and more violent since 1968. Martial law had been imposed from June to September 1970, and a new "above party" government under Nihat Erim reimposed martial law in 11 provinces (including Ankara and Istanbul) from 1971 to 1973.

Political stability proved no easier to achieve: a succession of weak coalition governments, headed alternately by Demirel and Republican leader Bülent Ecevit, held office between 1973 and 1980. Ecevit's government was in power during the Greco-Turkish war on Cyprus in July–August 1974. Relations with Greece, strained by a dispute over mineral rights on the Aegean continental shelf, reached the breaking point on 15 July, when Cypriot President Makarios was overthrown in a Greek-led military coup. Fearing the island would be united with Greece, Turkish forces invaded on 20 July. A UN cease-fire came into effect two days later, but after peace talks at Geneva broke down, Turkish troops consolidated their hold over the northern third of the island by 16 August. As the result of this action, the United States embargoed shipments of arms to Turkey until 1978; as of 1994, an estimated 25,000 or more Turkish troops remained on Cyprus to support the Turkish Republic of Northern Cyprus which only Turkey recognizes. In 1997, Turkish and Greek representative met with a UN mediator in an attempt to resolve the issue. No results were reported.

During the late 1970s, escalating acts of violence by political groups of the extreme left and right, coupled with economic decline, threatened the stability of Turkey's fragile democracy. By April 1980, 47,000 people had been arrested, and martial law had spread to 20 of Turkey's 67 provinces; at midyear, more than 5,000 persons had been killed (including former Prime Minister Nihat Erim), and the factional strife was claiming an average of 20 victims each day. With the legislature deadlocked, the military intervened in the political process for the third time in 20 years. A five-man military National Security Council (NSC), headed by Gen. Kenan Evren, took power in a bloodless coup on 12 September 1980. The NSC suspended the 1961 constitution, banned all political parties and activities, and arrested thousands of suspected terrorists. With the entire country under martial law, factional violence was drastically reduced. By April 1982, 40,000 alleged "political extremists" had been arrested; 23,000 had been tried and convicted in martial law courts, some 6,000 of them for "ideological offenses." Under an NSC edict forbidding Turkey's former political leaders from speaking out on political matters,

former Prime Minister Ecevit was twice arrested and imprisoned during 1981–82. In protest against the treatment of Ecevit, the EEC froze payment of \$650 million in loans and grants previously pledged to Turkey.

In a national referendum on 7 November 1982, Turkish voters overwhelmingly approved a new constitution (prepared by a constituent assembly chosen by the NSC) under which Gen. Evren became president of the republic for a seven-year term; campaigning against ratification had been illegal under martial law. Parliamentary elections were held in November 1983, although martial law remained in effect. Following the elections, Turgut Özal, leader of the victorious Motherland Party, was installed as prime minister. Martial law was lifted in most provinces over the next two years, but emergency rule remained in effect; legislation was passed to broaden police powers, freedom of expression remained limited, and trials of alleged extremists continued. Human-rights groups complained of torture, suspicious deaths, overcrowding, and substandard conditions in Turkish jails; the government denied any improprieties. Özal's Motherland Party retained its parliamentary majority in November 1987 elections, and he was reelected for a second five-year term. In 1989, Özal was elected president. His Motherland Party continued in power but with declining popularity as shown in 1989 municipal elections. Özal's ambition was to tie Turkey closely to Europe but, despite improvements in Turkey's human rights record, its application for full membership in the European Union was deferred indefinitely. Özal also sought to give Turkey a leading role with the Turkic republics of former Soviet Central Asia. He continued Turkey's long-standing policy of quiet contacts with Israel while seeking better ties with the Arab states. During the Gulf War, he joined the embargo against Iraq, closed Iraq's oil pipelines, provided facilities for allied air raids and later supported protective measures for Iraqi Kurds. In compensation, Turkey received increased aid worth \$300 million.

In October 1991 elections, the Motherland Party lost its parliamentary majority to the True Path and Social Democratic Party in coalition. True Path leader Demirel was named prime minister. He succeeded to the presidency in May 1993 following the death of Özal. Tansu Ciller, True Path chairperson, became Turkey's first female prime minister in July. In 1994, Ciller faced three major tasks: dealing with the problems of high inflation (about 70%) and unemployment as she continued Özal's free market policies of export-led growth (7–8%), reducing government regulations and privatization; pacifying the rebellious Kurdish areas of eastern Turkey where large numbers of troops have been tied down in a conflict that has taken thousands of lives and millions in treasure; and responding to the rising challenge to Turkey's secular nationalism from politically militant Islamic groups.

These problems continued, and in some cases escalated, and the Ciller government also faced scandals and a weakened resolve due to its fragile coalition majority.

Problems with Kurdish separatists, long-standing disagreements with Greece, and an unstable political environment plagued Turkey throughout 1995 and 1996.

The battle between the Turkish government and members of the Kurdistan Workers Party (PKK) that began in 1984 continued in late 1994 and the first half of 1995. The PKK sought the establishment of a separate Kurdish state. In fighting from 1984 until February 1995, more than 14,000 people had died. The battle spilled beyond Turkey's borders on 20 March 1995, as 35,000 troops backed by tanks and jets pursued rebels into northern Iraq. In the biggest military operation in the history of the Turkish republic, the troops hunted for suspected PKK bases. The PKK maintained the area was home only to Iraqi Kurds, not the PKK. Turkey said it was targeting 2,400 guerrillas who had been mounting cross-border raids and that it would not pull out until a buffer zone or other plan was set up to keep the PKK from

moving back into the area. Western leaders condemned the incursion, and the eventual Turkish pullout was seen as a reaction to that negative pressure. Meanwhile, Turkey promised reforms to improve the lives of the 11 million Kurds living there. It said it would lift restrictions on broadcasts in Kurdish and allow Kurds to establish their own schools after the PKK was crushed. The battle would continue until 27 April, when Turkey declared that its mission to wipe out PKK base camps, arms depots, and supply routes in northern Iraq was a success. It said it would go back into Iraq if it again became necessary to strike at the rebels. Turkey said its next task would be to secure the border.

At the same time territorial conflicts with Greece erupted. On 1 June 1995, the Greek parliament ratified the international Law of the Sea treaty, drawing protests from Turkish leaders who saw the move as an attempt by Greece to extend its territorial waters. Almost eight weeks later the two nations narrowly avoided confrontation over a cluster of uninhabited islands in the Aegean Sea. Though on 31 January Greek prime minister Constantine Simitis withdrew forces from the area, tensions remained high through April, when a Greek coast guard patrol boat fired on Turkish fishermen suspected of smuggling illegal migrants to the Greek islet of Strongili. Meanwhile in May tensions between Greek and Turkish soldiers on Cyprus escalated, culminating in the fatal shooting of a Greek soldier early in June.

The Kurdish and Greek issues were complicated by political instability within Turkey through the spring of 1996. On 20 September 1995, Prime Minister Tansu Ciller resigned when her coalition fell apart over budgetary matters. When Ciller lost a vote of confidence on 15 October, her own party, the True Path, called for national elections on 24 December. Turkey's president Suleyman Demirel asked Ciller to form a new interim government, a coalition destroyed almost two months later by the triumph of the Islamic Welfare Party in the December elections. In an effort to block Islamic fundamentalists from gaining power, Ciller made overtures to her longtime rivals in the conservative Motherland Party. When negotiations failed, President Demirel in early January invited Islamic Welfare Party leader Necmettin Erbakan to form a government. This effort was unsuccessful, as was the early February attempt by Motherland Party head Mesut Yilmuz. The stalemate ended early in March when Ciller and Yilmuz agreed on a government that left the Islamic Welfare Party out. The following month, in retaliation, Islamic representatives in parliament successfully moved to investigate allegations of corruption against Ciller. As a result of infighting, the center-right coalition fell apart in early June, allowing Erbakan to become modern Turkey's first conservative Islamic prime minister. The instability, as well as Erbakan's anti-West, antisecular slogans, caused Turkey's economy to lapse and slowed foreign investment significantly.

Beginning in early 1997, Turkey's military leaders began to speak openly of their displeasure with the Islamist turn the country had taken under Erbakan's government—even intimating that if the government did not return to secular policies instituted by Ataturk nearly a century earlier, it would overthrow the government militarily. Erbakan had angered the military, which considers itself the defenders of the country's secularism, by proposing mandatory Islamic education and by making political overtures to Libya and Iran. Pressure from the military increased in late spring and early summer, and Turkey's neighbors in Europe and allies in the United States also expressed concern over the direction the NATO member was taking. The crisis was resolved in July 1997, when the Welfare Party's coalition fell apart, and its leader, Erbakan, resigned his post. After the resignation, Mesut Yilmaz, leader of the Motherland Party, was asked by President Demirel to form a government. Erbakan, upon resigning, said he did so with the full intention of returning to office one day and predicted his ultraconservative welfare party

would win more than 21% in the next elections, then scheduled for 2000.

Ciller came under heavy scrutiny again in early 1997 in a renewed round of allegations concerning her financial affairs. Opponents in parliament and within her own party accused her and her husband of enriching themselves during her term as prime minister. The parliamentary investigations came as Ciller was defending herself against charges that her government and previous administrations condoned death squads. The scandal came to light in November 1996 after an automobile accident that killed a senior police official. Also in the car was a convicted drug smuggler wanted by Interpol and a high-ranking member of parliament.

By November 1998, Yilmaz's government fell victim to another corruption scandal and Ecevit returned as interim prime minister. Within two months of returning to power, Ecevit scored a major victory for his government through the capture of Kurdish terrorist leader Abdullah Ocalan in Nairobi, Kenya. Ocalan had taken refuge in the Greek embassy in Nairobi and was apprehended while on the way to the airport (and an African country willing to provide him with asylum). Ocalan's capture brought relations with Greece to a new low as Ecevit accused Greece of being a state sponsor of terrorism.

In the wake of the terrorist leader's arrest, Ecevit called for early elections to be held in April 1999. The balloting resulted in a plurality for Ecevit's DSP (Democratic Left Party) which captured 136 out of 550 seats (22.3% of the vote) in the parliament. The MHP came second with 129 (18.1%), the Virtue Party (successor to the outlawed Welfare Party) dropped to 111 seats (15.5%), while the Motherland Party received 86 seats (13.3%). Ecevit formed a coalition with MHP and Motherland thus strengthening his position with the secularist military and isolating the Islamists.

Ecevit continued to make progress in foreign affairs throughout 1999 and into 2000. Relations in Greece saw marked improvement following a major earthquake that killed 20,000 Turkish citizens in August 1999. Greece was among the first nations to send aid—an act of humanitarian assistance warmly received by the Turkish government and public. When Greece suffered a smaller earthquake the following month, Turkey returned the favor. A dialogue on cooperation between the two countries in areas of mutual interest subsequently resulted in accords in the areas of trade and the fight against terrorism. Many international observers placed emphasis on the warm personal relationship between Turkish foreign minister Ismail Cem and his Greek counterpart George Papandreou. Finally, at the December 2000 EU summit in Helsinki, the EU member-states placed Turkey's name on the list of candidates for entry. Although most observers ruled out Turkish membership for at least 10-15 years, the decision was a symbolic victory for Turkey as it symbolized the efforts of most Turks to identify with the West.

In October 2001, the Turkish parliament voted for 34 changes to the constitution, as a way of improving Turkey's chances of joining the EU. Among the reforms were the abolition of the death penalty except in times of war and for acts of terrorism, ending torture in prisons, and allowances for the use of the Kurdish language in broadcasting and education. However, in May 2002, parliament approved a law increasing government control over the media, including the Internet. At an EU summit held in Copenhagen in December 2002, Turkey was not included in a list of 10 countries to be included in an expanded EU. US president George W. Bush had pressed for early accession talks on Turkey, but EU members stated the country needed more time to demonstrate progress on improving human rights, the economy, and on reducing the influence of the military on Turkish politics. Talks on Turkey's application were deferred until December 2004. The situation on EU enlargement was made more difficult

for Turkey as Cyprus was included in the group of 15 prospective new members: the EU is hoping for the reunification of Cyprus prior to its accession, but will accept the Greek Cypriot government as a member if reunification is not achieved.

Ahmet Necdet Sezer was elected president on 5 May 2000. He was the first president in modern Turkish history to be neither an active politician nor a military commander. He is seen as a secularist. Early parliamentary elections were held on 3 November 2002, after eight ministers, including foreign minister Ismail Cem, resigned in July, protesting Prime Minister Ecevit's refusal to leave office despite a dire economic and political climate. Ecevit's health was poor, Turkey was in its most severe recession since World War II, the domestic political situation was volatile, and a US-led war with Iraq was looming, one that would depend upon Turkish cooperation. In the November elections, the newly formed Islamist-based Justice and Development Party (Adalet ve Kalkınma Partisi or AK) won a landslide victory, allowing it to rule without a coalition and amend the constitution by taking 363 of 550 seats in parliament. The AK pledged to adhere to the secular principles of the constitution. Abdullah Gül was named prime minister, largely because the party's leader, Recep Tayyip Erdoğan, was barred from the National Assembly due to a 1998 criminal conviction for inciting religious hatred, after he recited a religious poem deemed to be seditious. In February 2003, parliament amended the constitution, allowing Erdoğan to be eligible as a candidate in parliamentary by-elections in March, which would pave the way for him to become prime minister.

During 2002 and into 2003, the international community, led by the United States, placed pressure on Iraq to rid itself of weapons of mass destruction (WMD). On 8 November 2002, the UN Security Council voted unanimously to call on Iraq to disarm itself of chemical, biological, and nuclear weapons and weapons capabilities, to allow for the return of IAEA and UN weapons inspectors (they had been expelled in 1998), and to comply with all previous UN resolutions regarding the country since the end of the Gulf War in 1991. Weapons inspectors returned to Iraq, and a rift in the international community emerged as to whether "serious consequences" should result if Iraq was found to be in material breach of UN Resolution 1441. ("Serious consequences" were read as war). In December 2002, Erdoğan stated the AK-led government was ready to support a military strike against Iraq. He stated that Turkey was concerned that the territorial integrity of Iraq be preserved after a war, that the economic effects of such a conflict should be taken into consideration, but that weapons of mass destruction in Iraq could not be tolerated. Turkey is also concerned about the possible effects of war on its Kurdish population: if the 3.5 million Kurds in northern Iraq organize following a defeat of Iraqi President Saddam Hussein's forces, Turkey fears they may want to form an independent Kurdish state, and to potentially unite with the 12 million Kurds in southeastern Turkey.

In February 2003, the United States was negotiating a deal with Turkey for the use of its military bases in the event of an attack on Iraq, and in exchange, promised to prevent the Kurds from imposing a federation-style form of government in Iraq, ensuring their continued autonomy. The United States also agreed to allow Turkish troops to cross into Iraq to observe the disarmament of Kurds once fighting had stopped. The Turkish parliament was to vote on allowing as many as 62,000 US troops and 320 military aircraft to use Turkish bases in the event of war, in exchange for \$26 billion in aid. As of February 2003, 95% of the Turkish population was against a war with Iraq.

For years, foreign companies have been involved in plans for a hydro-electric dam, the Ilisu Dam project, to supply Turkey with irrigation and electricity. In November 2001, British contractor Balfour Beatty pulled out of the project, as did the Swiss bank

UBS in March 2002, due to claims that the dam would have an adverse social and environmental impact on the region.

In January 2003, France, Germany, and Belgium blocked an agreement in NATO to have the 19-member alliance come to the defense of Turkey in the event of an attack from Iraq. The three countries stated providing military aid to Turkey at that time would be counterproductive to UN-led weapons inspections in peacefully disarming Iraq. Tensions were high within the alliance. The issue was resolved in February, with NATO stating it would stand behind Turkey. NATO-deployed Patriot missiles and AWACS surveillance aircraft arrived in Turkey in late February.

### 13 GOVERNMENT

The 1961 constitution vested legislative power in the Grand National Assembly, consisting of the House of Representatives, with a membership of 450 (elected for four-year terms), and the Senate of 165 members, of whom 150 were elected and 15 appointed by the president. The president of the republic—the head of state—was elected for a single seven-year term by a joint session of the National Assembly. The president was empowered to designate the prime minister from among the Assembly members; the prime minister in turn chose other cabinet ministers, who were responsible for general government policy.

The constitution ratified in November 1982, which replaced the 1961 document, declares Turkey to be a democratic and secular republic that respects the human rights of its citizens and remains loyal to the nationalistic principles of Atatürk. It vests executive powers in the president of the republic and the Council of Ministers. The president is elected by the National Assembly for a seven-year term. Legislative functions are delegated to the unicameral National Assembly, consisting originally of 400 members elected for five-year terms (the Senate was abolished). Under the constitution's "temporary articles," the five-person National Security Council (NSC) remained in power until the new parliament convened, at which time the NSC became a presidential council, to function for a period of six years before dissolving. These "temporary" provisions expressly forbade all former leaders of either the Justice or the Republican People's Party from participating in politics for 10 years; all former members of the previous parliament were forbidden to found political parties or to hold public office for five years. A referendum in September 1987 approved a proposal to lift the 10-year ban on political participation by leaders of the Justice and Republican People's Parties and numerous other politicians. Proposals to change the voting age from 21 to 20 years and expand the National Assembly from 400 to 450 members were approved in May 1987. By 2003, there were 550 seats in the National Assembly and the voting age had been lowered to 18.

Although the constitution guarantees individual freedoms, exceptions may be made in order to protect the republic and the public interest, or in times of war or other national emergency. The provision holding that an arrested person cannot be held for more than 48 hours without a court order may likewise be suspended in the case of martial law, war, or other emergency.

### 14 POLITICAL PARTIES

The first significant nationwide party, the Republican People's Party (Cumhuriyet Halk Partisi—CHP), was organized by Mustafa Kemal in 1923. Strong, centralized authority and state economic planning marked its 27 years of power (1923–50). It deemphasized everything religious to the point of subordinating religious activity and organization to state control.

Not until 1946 did a second popular party, the Democrat Party (Demokrat Parti—DP), come into being. Initially formed by a small group of dissident CHP members of parliament, the DP demanded greater political and economic liberalism and specifically a relaxation of central controls. When they came to power in 1950, the Democrats put into effect their policies of

economic expansion through rapid mechanization and free enterprise; they also emphasized rural development through liberal credit terms to farmers. These policies, aimed at broadening the base of the economy, helped to return the Democrats to power three times in succession. After 1954, however, the Democrat regime reinstated many of the former controls and instituted others, notably over the press. The CHP condemned these moves as well as what it regarded as lack of economic planning and of adequate fiscal and commercial controls. Both the Democrats and the CHP supported a firmly pro-Western, anti-Communist foreign policy.

In the first elections of the Second Republic (October 1961), none of the four competing parties won a controlling majority in either chamber, and a coalition government was formed for the first time in 1962. The coalition, however, was short-lived, for the newly formed Justice Party (Adalet Partisi—AP) withdrew from the governing group of parties and became the chief political opposition. The AP, which became the main political force in the country after the 1965 elections, favored private enterprise (in this respect it can be considered the successor of the DP, which was banned in 1960). Organized originally by local Democrat leaders, the AP came to reflect the views of modernization-minded professionals as well as workers and villagers. In the 1965 elections, the AP won 53.8% of the seats in the House of Representatives and 61% of the Senate seats. The elections of October 1969 confirmed its legislative predominance.

In December 1970, dissident members of the AP created the Democratic Party (Demokratik Parti). Another new organization, the Republican Reliance Party (Cumhuriyetçi Güven Partisi—CGP), formed by dissident members of the CHP, put up its first candidates in the 1969 elections. The National Salvation Party (Millî Selâmet Partisi—MSP) was created in March 1973 for the purpose of preserving Islamic traditions and bringing about economic and social reforms. In the general elections of 14 October 1973, the CHP replaced the AP as the most popular party in Turkey, although it did not achieve a parliamentary majority, and the CHP and MSP formed a coalition government under Bülent Ecevit. After the Ecevit government fell in September 1974, more than six months passed before a new permanent government was formed by Süleyman Demirel. His minority government of the Nationalist Front, which included representatives of the AP, CGP, MSP, and National Action Party (Milliyetçi Hareket Partisi), commanded 214 out of 450 National Assembly seats. After the CHP won 213 Assembly seats in the 1977 elections, Ecevit, having formed a minority cabinet, lost a parliamentary vote of confidence and had to resign. But his rival, Demirel, fared little better as prime minister, and his coalition government soon dissolved. Each served another brief stint as head of government prior to the 1980 military coup.

The new military government banned all political parties and, under the 1982 constitution, forbade the leaders of the AP and CHP from active participation in politics for 10 years. After the new constitution was approved, however, the government allowed the formation of new political groups. The first new party, the Nationalist Democracy Party, was formed in May 1983 by certain retired military officers, former government officials, and business leaders; it received support from the military but fared poorly in local and national elections and was disbanded three years later. Another new group, the rightist Great Turkey Party, was abolished by the government soon after its founding because of alleged close resemblances to the banned AP; the True Path Party (Doğru Yol Partisi—DYP) was established in its place but was not allowed to participate in the elections to the National Assembly on 6 November 1983. Also barred were the newly formed Welfare Party and the Social Democratic Party, and Demirel and other politicians were temporarily placed under military detention. The Populist Party, which the military was said to regard as a loyal opposition, and the Motherland Party

(Anatavan Partisi—ANAP), formed by conservative business leaders and technocrats, did win approval to run. In the balloting, the ANAP won a majority in the National Assembly, with 212 out of 400 seats, and its leader, Turgut Özal, became prime minister on 13 December.

Subsequently, all parties were allowed to participate in local elections. In 1985, the Populist Party merged with the Social Democratic Party to form the Social Democratic Populist Party (Sosyal Demokrasi Halkçı Partisi—SDHP). The Free Democrat Party was formed in 1986 as a successor to the Nationalist Democracy Party. In September 1987, the 10-year ban on political participation by over 200 leaders of the AP and CHP was lifted after a referendum indicated approval by a bare majority of just over 50%. At the same time, Özal announced elections in November of that year and had a law passed requiring nomination of candidates by party leaders rather than by popular choice. After challenges from opposition groups, the Constitutional Court declared the new procedure illegal. In the November 1987 elections, Özal was reelected as prime minister, with 36.3% of the vote; the ANAP won 292 of the 450 seats in the National Assembly (although polling only 36% of the vote), the SDHP won 99 seats, and the DYP took 59 seats. A coalition of True Path and Social Democrats defeated the Motherland Party in 1991. Outside the established political system are the Kurdistan Workers Party (PKK) and other smaller separatist parties which have been banned.

In 1993, Motherland Party leader Turgut Özal died while serving as president. He was succeeded by True Path leader Süleyman Demirel. In July of that year, Tansu Ciller, chairperson of True Path, became prime minister (Turkey's first female prime minister). Ciller headed a shaky coalition and in a budgetary debate in September 1995, her government collapsed. She lost a vote of confidence in October and new elections were held in December. The elections were won by the Welfare Party, which took 158 of 550 seats; although hardly a majority, this was 23 more seats than Ciller's True Path. Fearing an Islamic government, secularists scrambled to form a majority but failed, and in January 1996 President Demirel invited Welfare Party leader Necmettin Erbakan to form a government.

The Erbakan government lasted barely a year and a half. While popular in rural areas, it faced strong opposition from the business elite—which tends to be pro-Western—and the military. Beginning in 1997, the military let it be known that if Erbakan did not uphold Turkey's secular traditions, it would overthrow the government and return it to secular parties. In July 1997 Erbakan resigned and Motherland Party leader Mesut Yılmaz was asked to form a government. Following allegations of corruption, the Yılmaz government fell in November 1998 and was replaced by an interim minority government headed by Ecevit pending early elections.

Ecevit returned to head a minority government pending early elections in 1999. On 18 April 1999, Turkish voters gave Ecevit's DSP a plurality with 136 seats (22.3% of the vote). Ecevit went on to form a coalition government with the MHP and Motherland. In May 2000, President Demirel's long political career came to an end with the election of Ahmet Necdet Sezer as his successor.

Political pressure brought to bear on the Ecevit government in mid-2002 led to the resignation of 8 of his cabinet ministers and a call for early parliamentary elections. The elections were won by the Islamic-based Justice and Development Party (Adalet ve Kalkınma Partisi, or AK), in a landslide victory. The AK took 363 of 550 seats in parliament with 34.3% of the vote; the CHP took 178 seats with 19.4% of the vote; and independents took 9 seats, as other parties participating in the elections did not meet the 10% threshold for obtaining seats. Abdullah Gül became prime minister, but the AK leader, Recep Tayyip Erdoğan, retains power in the party. The rise of the AK is one demonstration of the

popularity of Islamic parties in Turkey, although the country is officially attempting to align itself with the West. The Islamic Welfare Party, which had appeal among the middle class, was banned and closed in 1998, and Erbakan was banned from participating in politics for 5 years. The Welfare Party's successor, the Virtue Party (Fazilet Partisi), was the main opposition party in 2001 when it was banned that June by the Constitutional Court for posing a threat to the state. A new party, the Felicity or Happiness Party (Saadet Partisi) was established by banned members of the Virtue Party. The AK also had its roots in the Virtue Party.

Former foreign minister Ismail Cem formed a new party, the New Turkey Party (Yeni Türkiye Partisi), which is centrist in orientation and polled 1% of the vote in the 2002 elections.

In April 2002, the PKK changed its name to the Kurdistan Freedom and Democracy Congress (KADEK).

## 15 LOCAL GOVERNMENT

The chief administrative official in each of Turkey's 81 provinces (vilayets or iller) is the provincial governor (vali), an appointee of the central government who is responsible to the Ministry of Internal Affairs. During the military takeover in 1980s, governors were made responsible to the military authorities, and provincial assemblies were suspended. In 11 mainly Kurdish southeastern provinces, a regional governor exercised authority under a state of emergency declared in 1987. The state of emergency was lifted in November 2002. For administrative purposes, provinces are subdivided into districts (kazas or ilces), which in turn are divided into communes (nahiyes or bucaks), comprising kasabas and villages. In municipalities and villages, locally elected mayors and councils perform government functions. Both levels of government have specified sources of income and prepare budgets for the allocation of such income, which are then subject to approval by the central government. Most public revenue, however, is collected by the Ministry of Finance in Ankara.

## 16 JUDICIAL SYSTEM

The judicial system was left substantially intact by the 1982 constitution, except for the addition of special state security courts to handle cases involving terrorism and state security. There are four branches of courts: general law courts, military courts, state security courts, and a constitutional court.

The general law courts include civil, administrative, and criminal courts. Decisions of civil courts with original jurisdiction are appealable to a high court of appeals in Ankara. The high court of appeals also hears cases involving charges against members of the cabinet and other high functionaries. It also hears appeals for criminal cases, including appeals from the state security courts. A council of state hears appeals from administrative cases.

The military courts have jurisdiction over military personnel and include courts of first instance and a military court of appeals.

The state security courts are composed of five-member panels. They are found in eight cities and try defendants accused of crimes dealing with terrorism, gang-related crimes, drug smuggling, membership in illegal organizations, and sedition.

The constitutional court reviews the constitutionality of legislation at the time of passage both when requested by the required percentage of members of parliament and in the context of review of constitutional issues which emerge during litigation.

The constitution guarantees the independence of the judiciary from the executive and provides for life tenure for judges. It also explicitly prohibits state authorities from issuing orders or recommendations concerning the exercise of judicial power. A high council of judges and prosecutors selects judges and prosecutors for the higher courts and oversees those in lower courts. In practice, the courts act independently of the executive.

The constitution guarantees defendants the right to a public trial. The bar association is responsible for providing free counsel to indigent defendants. There is no jury system. All cases are decided by a judge or a panel of judges.

The European Court of Human Rights is the final arbiter in cases concerning human rights.

## 17 ARMED FORCES

The total armed forces strength in 2002 was 514,850 active personnel and 378,700 reserves. The army numbered 402,000 and included 14 armored brigades, 17 mechanized brigades, 9 infantry brigades, and 26 border defense battalions. Army equipment included 4,205 main battle tanks. The navy had 52,750 personnel including 3,100 marines and 1,050 Coast Guards. Vessels included 13 submarines, 19 frigates, 49 patrol and coastal combatants, 24 mine warfare vessels, and about 27 auxiliary ships. Naval aviation provides 29 ASW aircraft and armed helicopters. The air force had 60,100 personnel and 485 combat aircraft. Paramilitary forces included a 150-member national guard. An estimated 36,000 Turkish soldiers were stationed on Cyprus. Turkey participated in peacekeeping missions in seven regions. Defense expenditures were estimated at \$8.1 billion in 2002, or 4.3% of GDP.

## 18 INTERNATIONAL COOPERATION

Turkey is a charter member of the UN, having joined on 24 October 1945, and belongs to ECE and all the nonregional specialized agencies. In December 1964, Turkey became an associate member of the former EEC; Turkey applied in 1987 for membership in the EC, including full membership in the EEC, but the application was opposed by Greece (unanimous consent of all EEC—now EU—members is required for admission). Talks on Turkey's accession to the EU were delayed until December 2004. Turkey is also a member of the WTO and a member of the Council of Europe, NATO, and OECD.

Relations with the United States, Turkey's principal aid benefactor, were strained during the 1970s over the Cyprus issue. After the Turkish military forces, using US-supplied equipment, had occupied the northern third of the island, the US Congress in 1975 embargoed military shipments to Turkey in accordance with US law. In response, Turkey abrogated its 1969 defense cooperation agreement with the United States and declared that it would take over US military installations in Turkey (except the NATO base at Adana). The US government then relaxed the arms embargo and finally ended it in 1978, after which Turkey lifted its ban on US military activities. Turkish-US relations improved markedly thereafter, and a new defense and economic cooperation agreement between the two countries was signed in 1980. In 1986, the 1980 agreement was renewed, allowing the United States to use some 15 Turkish military bases in exchange for continuing military and economic subsidies.

Turkey's once state-directed economy is a mix of modern industry and commerce and village agriculture and crafts. The trend towards urbanization, however, is clear as farmers and towns people are increasingly drawn to industrial cities like Istanbul, Denizli, and Bursa. From 1980 to 1999 state control of the manufacturing sector decreased from 41% to 22% as the number of public enterprises fell from 400 to 300, and private enterprises increased from 8300 to 11,000. Private sector employment increased from 64% to 88% of the labor force. However, the state remains in majority control of the utility sector—telecommunications, electricity generation and distribution, and gas distribution—steel manufacturing, petroleum refining, mining, transportation and agricultural processing, though the government is under considerable international pressure to proceed with privatization. Turkey also has a large black economy that some analysts estimate to be as large as 25–50% of the official economy. The government's continued subsidies to

state economic enterprises (SEEs) and its inability to tax the "unofficial" segment of the economy contributed to large budget deficits that most analysts identify as Turkey's primary impediment to sustained economic growth.

## 19 ECONOMY

Since the end of World War II, the agricultural share of the economy has declined, while that of the industrial sector (including construction) has expanded. This shift in economic activity is in part the result of deliberate government policy. Mechanization of agriculture has produced a significant shift in population from farms to cities, necessitating substantial urban and industrial development and, hence, a high rate of investment. However, this heavy investment, plus an explosion of consumer demand, has also contributed to severe inflation and balance-of-payments problems.

During the late 1960s and early 1970s, Turkey enjoyed a high economic growth rate, averaging about 7% annually. This growth was financed largely by foreign borrowing, increased exports, and remittances from Turkish workers in Western Europe. As a result of the large increases in oil import costs during 1973–74, however, Turkey's economic growth declined in real terms during 1974–80, and the country suffered a severe financial crisis. Stabilization programs implemented in 1978 and 1979 under a standby agreement with the IMF proved inadequate, but in January 1980, as a condition of further IMF aid, Turkey imposed a more stringent economic reform program, involving currency devaluation, labor productivity improvements, and restructuring of the nation's inefficient state enterprises.

In response to the reforms, the GNP grew on average by 4.8% from 1980 to 1994, the highest rate of any OECD economy. In 1994, structural problems, including inflation rates of between 60–90% and budget deficits of between 6–12%, eventually took their toll, plunging the economy into its worst recession since WWII. Real GNP declined by 6% and the inflation rate exceeded 130%. The underlying strength of the economy, together with a government austerity program designed to rein in spending, led to a turnaround in 1996, and in 1997 GNP grew by 8%. In 1998, real GNP growth slowed and then turned negative as the economy was effected by the Russian financial crisis and domestic political turmoil. Conditions worsened in 1999 as on 17 August 1999 Turkey was hit by the Kocaeli Earthquake (between Bursa and Izmit), the worst ever to hit the country, killing over 15,000, seriously injuring over 28,000, leaving about 500,000 homeless, and causing an estimated \$5 billion worth of damage. In 1999, nominal GNP growth was 46.3%, but inflation, as measured by the consumer price index (CPI), was 68.8% and real GNP declined 6.1%.

At the end of 1999, Turkey entered into a three-year standby arrangement with the IMF with a approved credit line of SDR15.038 billion (1560% of its quota, well in excess of the 300% of quota that is IMF's normal limit), with a stringent set of conditions designed to bring Turkey's chronic inflation under control. The World Bank followed in 2000 with a Country Assistance Strategy (CAS) that provided external program lending, technical assistance, analytical and policy advice. In 1999, the government took over ten insolvent private banks and then began criminal investigations into their operations. Several arrests were made of key bankers, including the nephew of a former president, accused of siphoning off funds in various ways. During 2000 real GNP grew at 6.3% and CPI inflation decreased to 39%. However, in late November the economy was suddenly beset with a banking crisis as foreign investors, apparently more concerned about what further investigations might reveal than convinced that banking was being cleansed, began to rapidly sell their Turkish assets and cut lending. An estimated \$6 billion left Turkey in 10 days, \$2.5 billion on 22 November 2000 alone.

Overnight interbank interest rates climbed to an annualized 1700%, at one point reaching 1950%. Domestic interest rates rose to 60%, almost double the precrisis level.

By early 2001, Turkey's stock market had lost nearly half of its value. A break in the precipitous divestment was achieved when the IMF announced an agreement to supply an additional \$7.5 billion credit in a one-year program under its Supplemental Reserve Facility (SRF) to run from 21 December 2000 to 20 December 2001. The reversal of the outflow proved only temporary, however. By late February 2001 the economy was plunged into a full-blown financial crisis, precipitated by the president's criticism of the prime minister's handling of the banking investigations during a meeting on 19 February 2001. The interbank overnight rate reached an annualized 7500% and the stock market lost nearly 18% of its value within a day. The central bank reportedly sold \$5 billion of its \$28 billion of reserves trying to defend the lira's exchange rate, but on 22 February 2001 it announced its decision to allow the lira to float. Its value dropped 36% in two days, as the exchange rate for the lira moved to 1,223,140 per 1 US dollar. For the year, real GNP fell 9.4% and inflation, measured by twelve-month end-of-period CPI, increased nearly 30% to 68.5%. Net public debt rose to 93.4% of GNP, up from 57.7% the year before. Net external debt doubled as a percent of GNP from 18.5% to 37.1%. In a step designed to restore investor confidence, Kemal Dervish, former vice president of the World Bank, was appointed head of the Turkish central bank. In July 2001 the World Bank revised its 2000 CAS program to include an additional \$1.2 billion on Special Structural Adjustment Loan (SSAL) terms, for a total possible lending of \$6.2 billion in the period 2001 to 2003. On 4 February 2001, the day Turkey's three-year stand-by arrangement with the IMF expired, the government entered into a new two-year stand-by arrangement with a SDR8.194 billion (\$11.3 billion) line of credit.

As of 30 April 2002, Turkey had outstanding with the IMF over SDR14 billion (\$19.3 billion). Turkey's economic prospects seem balanced between the confidence that can be engendered by its strict adherence to anticorruption, fiscal, monetary, and privatization reform programs and the political resistance and instability such strict adherence might provoke. Real GNP growth for 2002 was projected to be 3% with inflation held to the official target of 35%. To date Turkey remains far from its long-held objective of qualifying for membership in the EU. In December 2002 it was not among the 10 countries invited to join in the next EU expansion.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2002 Turkey's gross domestic product (GDP) was estimated at \$468 billion. The per capita GDP was estimated at \$7,000. The annual growth rate of GDP was estimated at 4.2%. The average inflation rate in 2002 was 45.2%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 13% of GDP, industry 30%, and services 57%.

According to the United Nations, in 2000 remittances from citizens working abroad totaled \$4,560 million or about \$68 per capita and accounted for approximately 2.3% of GDP. Worker remittances in 2001 totaled \$2,786 million. Foreign aid receipts amounted to about \$3 per capita.

The World Bank reports that in 2001 per capita household consumption (in constant 1995 US dollars) was \$2,002. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the same period private consumption declined at an annual

rate of 10%. Approximately 45% of household consumption was spent on food, 18% on fuel, 6% on health care, and 5% on education. The richest 10% of the population accounted for approximately 32.3% of household consumption and the poorest 10% approximately 2.3%.

## 2<sup>1</sup>LABOR

The labor force numbered approximately 24 million in 2002. Of these, 40% worked in agriculture, 38% in services, and 22% in industry. The unemployment rate was 10.8% in 2002. Another 6.1% of the workforce was underemployed.

A 1946 law authorized the formation of labor unions and enabled them to engage in collective bargaining, and the right to strike was legally permitted in 1963, although general, solidarity, and wildcat strikes are explicitly prohibited. Employers' unions also exist, but members of one kind of union are prohibited from joining the other. There are four confederations, three public employees' unions, and 27 independent unions. As of 2002, slightly more than 13% of the total labor force was unionized. Union membership was largest in the textile industry, tobacco manufacturing, public utilities, transport and communications, and coal mining. After the 1960 overthrow of the Menderes government, trade unions pressed the government to act upon their demands for the right to strike, for collective labor contracts, and for various social benefits, which were provided for in law but had not been fully implemented. The right to strike and the right to bargain collectively remain restricted.

A detailed labor code administered by the Ministry of Labor controls many aspects of labor-management relations. Turkey has a basic 45-hour workweek, with a maximum of 7.5 hours per day and Saturday a partial holiday. Overtime is limited, and must be paid for at a 50% premium. No overtime is permitted in night work, underground work, or in industries considered dangerous to health. The minimum wage was \$124 per month in 2002. Workers usually are entitled to one paid day off per week. The minimum working age is 15, but in practice many children work out of economic necessity. It was estimated that one-third of Turkish workers were between the ages of 6–19.

## 2<sup>2</sup>AGRICULTURE

About 29.2 million hectares (64.6 million acres), or 38% of Turkey's total land area, are considered arable; in any given year, about two-thirds of arable land is under crops, and one-third is fallow. Little uncultivated arable land remains. The average holding is not more than four or five hectares (10–12 acres). Dry grain farming—in which half the land must lie fallow each year—offers little more than a subsistence standard of living. About 40% of the labor force is engaged in agriculture, which provided 13% of GDP in 2001. Large farms are concentrated mainly in the Konya, Adana, and Izmir regions. Agricultural methods still tend to be primitive, but modern machinery has been introduced. Much new land has been brought under cultivation since World War II (1939–45), and the increased use of chemical fertilizers and expansion of irrigated lands have increased yields per acre overall. In 1998, about 16% of all arable land was irrigated. Nevertheless, crop yields are still extremely sensitive to variations in rainfall. In good crop years, Turkey exports cereals, but in drought years, it must import them.

About 90% of the cultivated area is devoted to cereals. Wheat is the principal crop, accounting for 59% of total grain production in 1999; 18,000,000 tons of wheat were grown in that year, followed by barley with 9,000,000 tons. Turkey also produced 20,000,000 tons of sugar beets and about 3,650,000 tons of grapes. Other agricultural products were grown in lesser but still important quantities in 1999: maize, 2,400,000 tons; sunflower seeds, 860,000 tons; cotton, 802,000 tons; and oranges, 830,000 tons.

Turkish tobacco is world famous for its lightness and mildness. Most of the crop is grown in the Aegean region, but the finest tobacco is grown around Samsun, on the Black Sea coast. Tobacco and tobacco products represented 11% of total agricultural exports in 2001 and 1.4% of all Turkish exports that same year. Some 262,000 tons of tobacco were produced in 1999. Most of the cotton crop is grown around Adana and Izmir. Other crops of commercial importance include olives (1,650,000 tons in 1999), tea (120,000 tons), fruits, nuts, and vegetable oil. Turkey usually leads the world in the production and export of hazelnuts (about 580,000 tons produced in 1999) and ranks after Iran and the United States in pistachio nuts (40,000 tons).

The government stimulates production through crop subsidies, low taxation, price supports, easy farm credit, research and education programs, and the establishment of model farms. The government also controls the conditions under which farm products can move into world markets. For some products, such as grain, the government is the sole exporter. Turkey has recently begun exporting vegetables and fruits abroad, which has affected domestic market prices. Cotton and tobacco production levels are increasing as demands by the textile and cigarette industries have risen.

Turkey is one of seven countries authorized under the 1961 UN Convention on Narcotic Drugs to grow opium poppies for legitimate pharmaceutical purposes. In June 1971, after persistent US complaints that up to 80% of all opiates smuggled into the United States were derived from Turkish poppies, the Turkish government banned poppy growing; however, after efforts to find substitute crops failed, the government decided to rescind the ban on 1 July 1974. Areas authorized for poppy cultivation were estimated at 37,500 hectares (92,700 acres) in 1983; 5,000 hectares (12,350 acres) of opium capsule were sown in 1985. Government steps to curtail illegal cultivation, refining, and export of opiates were reportedly successful; in fact, Turkey has been one of the few opium-growing countries to crack down hard on drug smuggling.

## 2<sup>3</sup>ANIMAL HUSBANDRY

Turkey is heavily overgrazed. Many animals are used for transport and draft purposes as well as to supply meat and dairy products. The principal animals of commercial importance are mohair goats and sheep. The sheep wool is used mainly for blankets and carpets, and Turkey is a leading producer of mohair. Nevertheless, animal husbandry is generally poorly developed despite the great number of animals. In 2001 there were 28.5 million sheep, 10.7 million head of cattle, 7.2 million goats, and 258 million chickens. Production of wool was estimated at 40,900 tons in 2001. Other livestock products included cow's milk, 8.5 million tons; poultry meat, 631,000 tons; and hen eggs, 529,000 tons. Turkish apiculture produced some 60,190 tons of honey in 2001, fourth in the world.

## 2<sup>4</sup>FISHING

The total marine catch by Turkey's deep-sea fishermen was 460,521 tons in 2000, most of it anchovies and sardines caught as they migrate seasonally through the Bosphorus. In addition, 42,824 tons of freshwater fish were caught. Fishing equipment and methods have been substantially upgraded in recent years. For most of the population, however, the sea is not an important source of food. Exports of fish and fish products amounted to \$90.9 million in 2000.

## 2<sup>5</sup>FORESTRY

Forests, occupy 10,225,000 hectares (25,266,000 acres), or 13.3% of Turkey's total land area. State forests include almost all the forestland, while community or municipal forests and private forests are small. Care of state forests and all cutting therein are the responsibility of the directorate-general of forestry within the

Ministry of Agriculture. The timber cut in 2000 yielded 17,767,000 cu m (627 million cu ft) of roundwood, with 41% used as fuel wood. Production of sawn wood in 2000 was 4,683,000 cu m (165.3 million cu ft); wood pulp 304,000 tons; particleboard, 1,650,000 cu m (58 million cu ft) and paper and paperboard, 1,566,000 tons.

## 26 MINING

Although Turkey had a wide variety of minerals, its resources were only partially developed. Turkey was the world's largest producer of boron, accounting for half of world output, and was known for such industrial minerals barite, celestite (strontium), clays, emery, feldspar, limestone, magnesite, marble, perlite, pumice, and trona (soda ash). Other minerals actively exploited and marketed were copper, chromite, iron ore, sulfur, pyrite, manganese, mercury, lead, zinc, and meerschaum. Mining (of coal, chromite, copper, and boron) was Turkey's fourth-leading industry in 2002, followed by steelmaking, petroleum, and construction. The primary mineral sector's contribution to GDP has been in the 1.1–1.5% range; total revenues of the mineral industry (primary and processed mineral commodities, including refined petroleum products and steel) contributed 10%, and accounted for two-thirds of Turkey's manufacturing output. Turkey was a significant exporter of borates and steel, and also exported chromite, copper, zinc, and a wide variety of industrial minerals and derived chemicals; exports of crude mine and quarry materials accounted for 1.4% of Turkey's total exports in 2000, and those of processed mineral commodities accounted for 16%. Among crude minerals, copper exports earned \$221 million (\$180 million in 1999); dimension stone, \$189 million (\$151 million in 1999); and borates, \$108 million (\$123 million in 1999).

Production of copper (metal content) in 2000 was 76,053 tons, up from 40,000 in 1998; dolomite, 957,182 tons; limestone (other than for cement), 30.3 million tons, down from 52.4 million tons in 1998; marble, 647,160 cu m, compared to 739,240 in 1999 and 275,000 in 1996; quartzite, 2.74 million tons; chromite (gross weight), 545,725 tons, down from 1.7 million tons in 1997 (70% was salable); boron concentrates, 1.45 million tons, down from 1.65 million tons in 1998; bauxite from the public sector, 458,537 tons (30,000 tons per year were produced by the private sector); feldspar, 1.15 million tons; iron ore (metal content), 2.45 million tons, down from 3.2 million tons in 1998 and 3.5 million tons in 1996; celestite strontium concentrates, 25,000 tons; and meerschaum, 500 kg, down from 10,350 kg in 1989. Eskisehir, in northwestern Anatolia, was the world center of meerschaum (sepiolite)—Turkey was famous for its meerschaum pipes. Also produced in 2000 were alumina, antimony, gold, lead, manganese, silver, alumina sulfate (alunite), barite, hydraulic cement, clays (including bentonite and kaolin), emery, fluorspar, crude glass, graphite, gypsum, lime, magnesite, nitrogen, perlite, pumice, cupreous pyrite, sand and gravel, silica sand, sodium compounds (salt, soda ash [trona], and sodium sulfate), stone (basalt, diabase, granite, onyx, sandstone, serpentine, slate, and travertine), sulfur, talc, and zeolite. No zinc or cadmium was produced in 2000.

Despite the divestment of a large portion of the state-owned minerals sector holdings, to domestic and foreign investors, the government remained a significant factor in most sectors of the minerals industry, through shareholdings in a number of private companies and various state-owned industrial corporations. In recent years, the government has been encouraging mineral exports as well as domestic and foreign private mining investment. Ongoing privatization costs were expected to result in layoffs and the closure of inefficient operations. Most of the nation's 3,000 mines were small. Resources of metallic commodities minable by large-scale methods were known for bauxite, chromite, copper and copper-zinc, gold, iron, and silver.

## 27 ENERGY AND POWER

The bituminous coal field at Zonguldak on the Black Sea coast produces excellent coking coal. In 2000, output of coal totaled 74.2 million tons (about 90% soft coal). In recent years, Turkey has had to import several times as much petroleum as it produced. As of 1999, oil provided nearly half of Turkey's energy requirements, and about 90% of oil supplies were imported. In 2001, production of crude oil came to 56,142 barrels per day, while consumption totaled 617,000 barrels per day. Oil accounted for 42% of primary energy consumption as of 2002. In 2000 natural gas consumption was 14.7 billion cu m, or about 17% of its primary energy consumption. In the same year, natural gas production was 651 million cu m.

Turkey's geographical location makes it a natural transshipment route between the major oil producing areas in the Middle East, Central Asia, and the Caucasus on the one hand, and consumer markets in Europe on the other. Oil is shipped via supertankers through the Bosphorus, the narrow strait that connects the Black Sea to the Mediterranean Sea. Botas, a joint Turkish-Iraqi venture with its headquarters in Ankara, created a system of oil pipelines running from Iraq to Turkey, thus bypassing the Persian Gulf. The pipeline was shut down during the 1991 Gulf War, but in February 1996 Turkey and Iraq agreed to reopen the pipeline if Iraq and the UN could reach an agreement regarding the exchange of Iraqi oil for humanitarian aid. In 1998, it was reported that Iraq was smuggling up to 100,000 barrels per day of fuel and fuel products into Turkey.

Hydroelectric and thermal power plants in 2000 produced 119 billion kWh of electricity, of which 74.1% was from thermal, 25.7% from hydropower, and less than 1% from other renewable sources. Consumption of electricity in 2000 was 114.2 billion kWh. Total installed capacity in 2001 was 27.2 million kW. In the 1960s, lignite and water increased in importance as sources of energy, while coal and diesel oil dropped, but from the 1970s into the early 1980s, the importance of oil increased relative to other sources. In the 1980s, lignite again came to play an increasing role. Privatization of state assets has been underway since 1986, and Turkey's electricity sector, which is over 90% state-owned, is a chief target of this effort. Turkey's Electricity Market Law, passed in 2001, was a major step in the privatization of the power industry and the creation of a free market for power production and distribution.

Between 1980 and 1994, Turkish electric power demand grew at an average annual rate of 9.1%, among the highest such rates in the world. Continuing electricity shortages, resulting in frequent blackouts and brownouts, have made it a priority for Turkey to increase electrical capacity. As of 2002, the government was planning to nearly double the country's generating capacity by 2020 by adding more than 23,000 MW in additional power. Geothermal power could supply up to an estimated 31.5 million kW of additional capacity, but little progress has been made on exploiting the potential.

## 28 INDUSTRY

Overall industrial production, which had increased by annual rates of close to or over 10% from 1973 to 1977, fell sharply because of Turkey's financial crisis in 1978–79 and actually declined by 5% in 1979 and 1980. After the government's economic reform program slowed inflation and stabilized the lira, industrial production improved. Production rose 28% during 1985–87. State enterprises were restructured to reduce their government subsidies and to make them more productive and competitive with private firms. However, industry has continued to suffer from structural weaknesses and, in many firms, production facilities are obsolete. Production rose by an annual average of almost 5% 1980 to 1993, but fell more than 6% in the recession of 1994 as the chronic double digit inflation rose to

triple digits at 128%. Manufacturing output recovered strongly from 1994 to 1995, rising 30% from \$34.3 billion to \$44.7 billion, and then another 4.25% in 1996 to \$46.6 billion. The industrial production index (1992=100) rose to a peak of about 132 in May 1997, and capacity utilization peaked in September at 82%. The Russian financial crisis helped throw both indicators into decline and by August 1999 the industrial production index had fallen 20% to about 111 (1992=100) and capacity utilization to about 67%. Another period of recovery lasted until the banking crisis of late 2000, although capacity utilization remained below 77%. From November 2000 to October 2001 the industrial production index fell 20%, from 130 to 110 (1992=100), and capacity utilization dipped below 74%. The Turkish State Institute of Statistics (DIE) reported that for the 2001 industrial output declined 8.9% including a 9.9% decline in manufacturing, a 7.9% decline in mining, and a 1.5% decline in utility outputs. Continuing its roller coaster pattern, in the first quarter of 2002, the industrial production index was back up to 132 as capacity utilization rose marginally to 75%.

The textile industry, Turkey's largest manufacturing sector, is centered in Izmir, Istanbul, Adana, and Kayseri. The removal of EU quotas on imports of textiles and apparel when Turkey joined in a customs union with the EU in 1996 has improved growth prospects, and there is anticipation that the removal of global quotas in 2005 will offer even greater opportunities if carried out as scheduled.

Secondary mineral commodities, including refined petroleum products, steel, cement, glass, and certain chemicals account for over two-thirds of manufacturing output. Turkey's largest industry is petroleum refining. Turkey has very limited energy resources—it produced less than 8% of its oil consumption in 2001—but because of its strategic location between Europe and Asia, Christian and Moslem, oil consumers and oil producers, it is crossed by several major oil and gas pipelines. Turkey has six oil refineries, four operated by the state. The four state refineries—at Izmit (226,440 barrels per day capacity), at Aliaga (226,440 barrels per day), at Kirikkale (113,220 barrels per day), and at Batman (22,015 barrels per day)—are operated by the Turkish Petroleum Refineries Corporation (Tupras), which by 2002 had been 35% privatized in two public offerings with a third, aimed at bring the private share to 51%, delayed by the aftermath of the 11 September 2001 terrorist attacks on the United States. The government has announced the intention of privatizing Tupras 100%. The major private refinery in Turkey is Anadolu Tasfiyehanesi AS (ATAS), 51% owned by ExxonMobil, with participation by Shell (27%), BP Amoco (17%), and the Marmara Petrol (5%), and refinery capacity of 100,000 barrels per day. A small 6,000-barrels-per-day refinery in southeast, built in 1970 by the Texas oil engineering firm Baker-Howe, was bought in 1997 by Aladdin Middle East Ltd., a US-based company concerned mainly with oil exploration and development in this Kurdish-dominated region. The production of most refined petroleum products progressed Total refinery production suffered in the Russian financial crisis of 1998 and the Izmit earthquake of 1999, which damaged the Izmit Refinery in Kocaeli Province, epicenter of the earthquake. The production of motor gasoline, jet fuel, and liquefied petroleum gases peaked in 1997, while distillate fuel oil and total production of refined products peaked in 1998 (559,000 barrels per day). Residual fuel oil production peaked in 1995. In 2000, 141,000 barrels per day of residual fuel was produced, 135,000 barrels per day of residual fuel oil, 63,000 barrels per day of motor oil, 22,000 barrels per day each of jet fuel and liquefied petroleum gases, and 1,000 barrels per day of kerosene for a total production of 481,000 barrels per day.

Major industrial complexes include the government-owned iron and steel mill at Karabuk and the Eregli iron and steel works. Other important Turkish enterprises are brick and tile,

glass, leather, chemicals and pharmaceuticals, metalworking, cordage, flour milling, vegetable-oil extraction, fats and oils, paper products, printing and publishing, plastic products, and rubber processing. The sugar-beet industry ranks first among food-processing industries and produces more than domestic consumption requires. The automobile industry expanded rapidly in the 1970s. Tofas, a joint venture between Fiat and Koc Holding A.S, Turkey's biggest industrial conglomerate, is the leading automotive producer. In view of the collapse of domestic demand in its worst economic slump since 1945, Turkey is looking to automotive exports of over \$700 million in 2003 to help revitalize the economy. Much of the production of machines, consumer goods, and tools takes place in hundreds of small machine shops and foundries, where little special-purpose machinery is used. Industry accounted for 28.4% of GDP in 2000 (up from 25.9% in 1995) and, as of third quarter 2001, employed 22.4% of the labor force.

## 29 SCIENCE AND TECHNOLOGY

Turkey's industrial economy has just begun to apply advanced technology to basic industries. The government body that coordinates scientific research is the Scientific and Technical Research Council of Turkey (founded in 1963), in Ankara. The Mavmara Scientific and Industrial Research Institute (1972), in Istanbul, conducts research on basic and applied sciences, and industrial research. The Ankara Nuclear Research and Training Center (1967), attached to the Turkish Atomic Energy Authority, studies health physics, nuclear electronics, and plasma physics. The General Directorate of Mineral Research and Exploration (1935), also in Ankara, conducts the Geological Survey of Turkey and evaluates mineral resources. The Turkish Natural History Museum was founded in 1968 at Ankara. Turkey has 29 universities that offer courses in basic and applied sciences. In 1987–97, science and engineering students accounted for 45% of college and university enrollments.

In 1987–97, total expenditures on research and development amounted to 0.5% of GNP; 291 scientists and engineers per 1 million population were engaged in research and development.

## 30 DOMESTIC TRADE

Individual firms tend to be small and specialized. There is virtually no commercial activity in villages; the villager comes into the market town to buy and sell. Government-operated exchanges for cereals are located in municipalities. If the price of grain in the free market falls below the supermarket price, the government-operated exchanges purchase the grain and market it. In this manner, the government controls the price range of cereals. Franchising has grown in the past few years, primarily in foreign fast-food and apparel firms. Value-added taxes apply to most goods and services with different rates for different products.

Because of the scarcity of some commodities, the government controls the distribution of various essential goods, notably cement, coal, lignite, and steel. Under a 1954 law, municipal authorities enforce specified profit margins on designated commodities. These margins are established at four levels: importer or manufacturer, distributor, wholesaler, and retailer. Customarily, a Turkish wholesaler supplies credit to retailers who, in turn, often extend credit beyond their own means to consumers. Wholesalers' margins tend to be small because of low overhead and keen competition. Due to Turkey's high inflation rate, wholesalers usually try to maintain minimal stocks to reduce carrying costs.

Most commercial firms belong to chambers of commerce, which exist in all cities. Chambers of industry are increasingly important in larger manufacturing centers. The government sponsors an international trade fair every year at Izmir.

Shops are normally open from 9 AM to 1 PM and from 2 to 7 PM, Monday through Saturday; smaller establishments tend to stay open later and not close for lunch. Banking hours are from 8:30 AM to noon and 1:30 to 5 PM, Monday through Friday.

### 31 FOREIGN TRADE

Turkey's trade balance has long been negative, but the deficit reached crisis proportions in 1974/75 and again in 1980/81, when import value was nearly double that of exports and the annual trade deficit approached \$5 billion. In 1985, the government mandated the creation of four free trade and export processing zones aimed at expansion and diversification of exports. By 1990, the deficit had risen to over \$9 billion and the ratio of exports to imports fell to 58%, compared to 81% in 1988. The gap narrowed slightly in 1991 and 1992, but widened in 1993. Exports have increased from \$18.1 billion in 1994 to \$21.6 billion in 1995 to \$24.5 billion in 1996. Total imports in 1994 amounted to \$23.3 billion, and rose to \$35.7 billion in 1995 and \$45 billion in 1996. Since 1994, strong domestic demand has caused imports to surge, along with the reduction of import duties that accompanied the introduction of the customs union in 1996. By 2000, exports equaled only slightly more than half of imports (50.8%), bringing back memories of trade balances of the 1970s and '80s.

The garment and textile industry in Turkey accounts for the largest amount of commodity exports (37%). Other exports include iron and steel (6.8%), fruits and nuts (3.6%), and televisions (3.0%).

In 2000 Turkey's imports were distributed among the following categories:

Consumer goods	7.8%
Food	2.4%
Fuels	13.8%
Industrial supplies	33.9%
Machinery	23.6%
Transportation	14.5%
Other	4.0%

Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
Germany	5,171	7,163	-1,992
United States	3,074	3,887	-813
United Kingdom	2,024	2,702	-678
Italy	1,755	4,319	-2,564
France	1,652	3,515	-1,863
Netherlands	872	1,573	-701
Spain	704	1,666	-962
Russia	639	3,880	-3,241
Belgium	641	1,651	-1,010
Japan	n.a.	1,590	n.a.

### 32 BALANCE OF PAYMENTS

In 2000 and 2001, a trade deficit and a weak banking sector forced Turkey to float the lira, which caused the country to fall into recession. The economy improved in 2002, however, due in part to support from the IMF and tighter fiscal policies. The share of exports of goods and services in GDP rose to 31.5% in 2001, the first time it surpassed 25%. That year, imports of goods and services amounted to 29.2% of GDP. A current account deficit in 2003 was expected to widen to 2.5%–3% of GDP by the end of that year, but was forecast to move into surplus in 2004, due to a devaluation of the currency expected in 2004, and a decline in domestic demand. Total external debt by September 2001 stood at \$118.3 billion. In 2002, the IMF approved a three-year \$16 billion standby arrangement for Turkey, the fifth review of which,

by July 2003, was delayed due to the government's failure to agree with all of the conditions set by the IMF.

The US Central Intelligence Agency (CIA) reports that in 2002 the purchasing power parity of Turkey's exports was \$37.6 billion while imports totaled \$43.9 billion resulting in a trade deficit of \$6.3 billion.

The International Monetary Fund (IMF) reports that in 2001 Turkey had exports of goods totaling \$34.4 billion and imports totaling \$38.9 billion. The services credit totaled \$16.1 billion and debit \$6.93 billion. The following table summarizes Turkey's balance of payments as reported by the IMF for 2001 in millions of US dollars.

<b>Current Account</b>	<b>3,396</b>
Balance on goods	-4,537
Balance on services	9,130
Balance on income	-5,000
Current transfers	3,803
<b>Capital Account</b>	<b>...</b>
<b>Financial Account</b>	<b>-14,198</b>
Direct investment abroad	-497
Direct investment in Turkey	3,266
Portfolio investment assets	-788
Portfolio investment liabilities	-3,727
Other investment assets	-156
Other investment liabilities	-12,296
<b>Net Errors and Omissions</b>	<b>-2,086</b>
<b>Reserves and Related Items</b>	<b>12,888</b>

### 33 BANKING AND SECURITIES

The Central Bank of the Republic of Turkey was founded in 1930 as a privileged joint-stock company. It possesses the sole right of note issue and has the obligation of providing for the monetary requirements of the state agricultural and commercial enterprises by discounting the treasury-guaranteed bonds they issue. All foreign exchange transfers are handled exclusively by the Central Bank, which operates the clearing accounts under separate agreements with foreign countries. The bank has 25 domestic branches, plus a banknote printing plant and foreign branch offices in New York, London, Frankfurt, and Zürich.

As of 2002, Turkey had 69 banks. Banks supervised by the Central Bank play a declining role in the banking system, but 49% of total bank assets are still concentrated in three state-owned banks. The major private banks are mostly linked to industrial conglomerates, such as the Cukurova Group, owning the Construction and Credit Bank (Yapi ve Kredi Bankasi), Pamukbank, and Interbank; and the Sabanci Group, which owns Akbank. Several Western commercial banks are also active, as are some Middle Eastern trading banks. There are also three so-called special finance houses, which have adopted Islamic banking practices. Many observers predict large-scale bank consolidation as Turkey continues liberalizing its economy.

The five big state banks suffer from serious structural problems. These include overstaffing, political interference, and non-performing loans to other state institutions, which are not recorded as such. Many small and medium-sized banks are also poorly run. Some of these were badly hit by the financial crash of early 1994, and three were forced to close. A widespread shakeout in the banking system is regarded as likely in the longer term.

Two of Turkey's most important banks, the Sümerbank and Etibank, are also state investment-holding companies. Another important state financial institution is the Agricultural Bank, which supplies credit to the farm population. The largest private commercial bank is the Business Bank. Another private bank, the Industrial Development Bank of Turkey, stimulates the growth of private industrial development and channels the flow of long-

term debt capital into the private industrial sector for both short- and long-range development programs. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$8.7 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$86.8 billion. The money market rate, the rate at which financial institutions lend to one another in the short term, was 91.95%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 60%.

The first securities market in the Ottoman Empire was the Dersaadet Securities Exchange, established after the Crimean war in 1866. The Istanbul Stock Exchange opened in 1985 and the Istanbul Gold Exchange commenced operations ten years later.

Turkey's only securities exchange is located in Istanbul. Because of the shortage of foreign exchange, there are no transactions in foreign bonds and stocks. With few exceptions, trading is in government bonds. Virtually all securities issued by private enterprises are sold privately through personal arrangements between buyers and sellers. Still, the Istanbul Stock Exchange has developed impressively, if not erratically, in recent years. In 2001, there were 310 companies listed, the most in the exchange's history. Total market capitalization was \$47 billion, and trading value was nearly \$78 billion with a sky-high turnover rate of 162%.

### 34 INSURANCE

Government regulations effective 1929 and subsequently amended require all insurance companies to reinsure 30% of each policy with the National Reinsurance Corp., a state organization; in 1954, life policies were exempted from this requirement. It is possible to secure insurance policies for flood damage, third-party liability, earthquake, commercial shipments, theft, fire, and accident, as well as life. Varied social security schemes are administered directly by the state. Third-party automobile liability, workers' compensation, and employers' liability are all compulsory. Workers' compensation is covered solely by the government as a part of the Social Security scheme. The insurance market is officially regulated through the Ministry of Commerce.

### 35 PUBLIC FINANCE

Beginning in 1983, the fiscal year was changed to start on 1 January instead of 1 March. The consolidated budget includes the general budget of the government (by ministry) and a number of annexed budgets, which pertain to semiautonomous state activities, such as universities. Additionally, each section is divided into operating and investment expenditures. The budget is invariably in deficit.

In early 1994, the budget deficit and high transfers to inefficient state enterprises led to an economic crisis with inflation peaking at 150%. The government replied with an austerity program that succeeded in reducing inflation but sent the economy into recession. The government's commitment to reform waned as the economy began to rebound in 1995. Expenditures again exceeded revenues, forcing the government to incur increasing amounts of expensive debt to fund current expenses and support state enterprises. The Ecevit government restarted structural reforms in 1999 under ongoing programs of standby agreements with the IMF. However, in 2000/01, banking crises, political disputes, and a rapidly growing current account deficit set the economy into a deep downturn that forced the government to adopt a floating exchange rate regime, an ambitious reform program, a tight fiscal policy, additional structural reforms, and unparalleled levels of IMF lending.

The US Central Intelligence Agency (CIA) estimates that in 2001 Turkey's central government took in revenues of approximately \$42.4 billion and had expenditures of \$69.1

billion. Overall, the government registered a deficit of approximately \$26.7 billion. External debt totaled \$118.3 billion.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

REVENUE AND GRANTS	100.0%	42,400
Tax revenue	79.2%	33,593
Non-tax revenue	16.1%	6,843
Capital revenue	4.6%	1,963
EXPENDITURES	100.0%	69,100
General public services	2.5%	1,758
Defense	6.2%	4,265
Public order and safety	3.5%	2,395
Education	7.9%	5,477
Health	3.1%	2,138
Social security	5.9%	4,095
Housing and community amenities	1.8%	1,213
Recreation, cultural, and religious affairs	0.8%	532
Economic affairs and services	7.3%	5,033
Other expenditures	11.1%	7,653
Interest payments	50.0%	34,541

### 36 TAXATION

All persons domiciled in Turkey, whether of Turkish citizenship or otherwise, are subject to taxation on income. Certain categories of foreigners are taxed only on income earned in Turkey—specifically, foreign business representatives, consultants, scientists, government officials, press correspondents, and others who do not intend to become permanent residents regardless of length of stay. Income tax rates are progressive, ranging up to 55%. The basic corporate tax is 25%; however, a withholding tax of 10% for public companies and 20% for private companies is levied. Furthermore, there is a surcharge of 10% assessed. Thus, the total effective corporate tax rate is 45–55%. A tax law of 1961 required farmers, not previously subject to income tax, to file a return.

A value-added system was introduced in 1985 replacing eight indirect taxes. The standard rate is 15%, but there are two reduced rates: 8% for essential food products and 1% for exported goods. A new law on VAT adopted December 2001 abolished two higher rates of 26% and 40% applied to luxury goods.

Turkish law provides for excise taxes on a very wide range of products. On 6 June 2002, parliament enacted the Special Consumption Tax Law that consolidated various excises and gave the Council of Minister power to set aside the earmarking of excise proceeds. Multiple excises on the same product were consolidated reducing taxpayer compliance costs. The tax reform program aimed at producing a primary surplus of 6.5% but not all the elements designed to increase tax collection have been adhered adequately implemented. The personal consumption tax on items excluding natural gas was increased according to the January wholesale price index instead of being increased 1% in real terms. In March 2002, payroll and personal income tax deferrals were introduced to stimulate employment, but contrary to a ban on new exemptions and incentives outside the tax reform plan.

Land and buildings are taxed on the basis of assessed value. Other levies include stamp taxes on documents, vouchers, shares, and securities; fees on legal, bank, and insurance transactions; a 10% tax on interest income on bank loans; output taxes; a petroleum production tax; a sales tax; service taxes; and inheritance and gift taxes. Business establishments are subject to

an old age insurance tax and an illness and disability tax, shared by employers and employees.

### 37 CUSTOMS AND DUTIES

Turkey is a member of the World Trade Organization and aligns its customs policies with WTO regulations. Turkish customs duties are assessed on an ad valorem basis only. Present customs classification conforms to standardized international nomenclature. Duty-free entry is provided for many types of imports. In 1996, Turkey aligned its tariffs with the EU's common external tariff system. Importers no longer need an import license and import authorization from a bank. A government monopoly, TEKEL, controls alcohol and cigarette imports. Narcotics and weapons are strictly prohibited. Other charges include a value-added tax (VAT) ranging from 0–26%, a 15% municipal tax, and a 10% stamp tax.

### 38 FOREIGN INVESTMENT

Although Turkey has been the recipient of considerable foreign aid, its leaders have also recognized the need for private foreign investment. By 1970, foreign capital could operate in any field of economic activity open to Turkish private capital, and there was no limit on the percentage of foreign participation in equity capital. However, direct capital investment by foreign companies from 1960 to 1979 averaged no more than \$20 million annually, very low by OECD standards. This changed dramatically in 1980 with new foreign investment policies that cut red tape to gain more rapid approval for investment applications; inflows of private capital increased to \$97 million in 1980, \$337 million in 1981, and \$913 million in 1992. In 1997, foreign direct investment in Turkey totaled over \$1 billion. A majority (56.8%) of this investment went into manufacturing, while 40.5% was in services, 1.6% in agriculture, and 1.1% in mining.

Total Turkish direct foreign investments abroad totaled over \$1.4 billion in 1997. Just over \$323 million (22.2% of the total) is invested in the UK, \$297.7 million in Germany, \$102.2 million in the Netherlands, and \$86.2 million in Russia. Other destinations for Turkish investors include Azerbaijan, Luxembourg, Romania, and Kazakhstan.

### 39 ECONOMIC DEVELOPMENT

Economic policy is formulated by the State Planning Organization. In June 1961, an integrated fifteen-year plan was announced, consisting of three five-year plans designed to achieve a 7% yearly increase in national income. In March 1963, the first five-year plan was inaugurated; this 1963–68 program to some extent fell short of its goals, but its average annual increase of 6.7% in GNP was still impressive. Two objectives of the second five-year plan (1968–72) were economic viability and social justice. The role of the public sector under this program was twofold: creation and expansion of the economic and social infrastructure and development of modern manufacturing industries. Economic policy, however, still sought the largest possible active role for private enterprise in the development of industries, and the government sought with limited success to encourage private activity through fiscal concessions, financial assistance, and state participation in mixed enterprises. The third five-year plan was inaugurated in 1973 with the objective of helping Turkey prepare for its future membership in the EC. The long-term goals were to increase the per capita GNP from \$400 in 1972 to \$1,500 by 1995, to reduce agriculture's share of the GDP to 12%, and to increase industry's share to 37%. One of the main aims of the third five-year plan, still largely unmet, was to increase the efficiency of the tax-collection service. In agriculture, the objectives were to increase food supplies for export and to feed a growing population through improved irrigation, technical advice to farmers, and the establishment of more cooperative farms.

All these efforts required large new investments and massive foreign loans which, coupled with the huge increases in the cost of oil imports after 1973, led to the financial crisis of 1977–78. Since 1980, Turkey has deliberately pursued a deflationary policy, allowing the international exchange rate of the lira to fluctuate on a daily basis from 1 May 1981. The government also delayed several ambitious development proposals, mainly because new foreign credits were not available. However, a number of smaller projects financed by the IBRD went forward. Meanwhile, the fourth (1979–83) and fifth (1985–90) five-year plans continued to stress industrial development, deflationary monetary policy, and export promotion. The creation of free trade zones, in the mid-1980s, was a major step in line with these policies.

Long-term economic programs adopted in 1991 and 1994 planned to reform social security and subsidy programs, implement tax reforms and improve tax administration, and restructure state enterprises, transferring certain inefficient ones to the private sector. By 1996, these plans had reduced the government's role in the economy, but huge budget deficits continued to plague the economy and further reforms are needed if Turkey is to solve its economic problems.

Turkey's geostrategic significance received a big boost in 1999 when its leaders, along with those of Azerbaijan, and Georgia agreed to the construction of an oil pipeline from the Caspian Sea port of Baku to the Turkish Mediterranean port of Ceyhan. Completion of the pipeline may come as soon as 2004.

Full membership in the European Union (EU) constitutes one of Turkey's chief aims. In December 1997 Turkey was effectively removed from the EU's list of candidates for entry. As a result, Turkey suspended its relations with the EU. However, the 1997 decision was reverse at the December 1999 EU summit in Helsinki as Turkey formally became a candidate for accession in the next round of EU enlargement. Turkey's chronic economic problems along with reservations about human rights preclude Turkish entry for at least a decade according to most observers. Nevertheless, Turkey's status as a candidate member provides clear goals for Turkish development.

### 40 SOCIAL DEVELOPMENT

The social insurance system provides old age, disability, and death pensions for employees in industry, commerce, and the service sector. Special systems cover other workers. The benefits are funded by payroll taxes and employee contributions of 9% of earnings. To qualify for an old age pension, a worker must be at least 55 years old (50 for women) and must have worked at least 15 years or made contributions on at least 5,000 days' wages. Sickness and maternity benefits are also covered. Employers contribute additional funds to cover worker's injury insurance. The labor code requires employers to pay an unemployment indemnity of 30 days wages per year of employment. The Social Insurance Institution provides medical services in its own hospitals and other facilities. Turkey is a secular state and all citizens are proclaimed equal in the constitution.

The civil code explicitly bans sex-based privileges, yet proclaims the male as the legal head of the household. This grants the male the right to choose the place of residence, and most assets are held in the name of the husband. Women in urban areas are increasingly working outside the home. Women generally receive equal pay for equal work in the professions, but are underrepresented in managerial positions. Spousal abuse and violence are widespread. Authorities hesitate to intervene in domestic matters, and violence against women goes largely unreported. Reports of child abuse have increased in recent years. Kurds are the largest ethnic minority and suffer discrimination, especially in less-industrialized areas. The government is responsible for widespread human rights abuses, including beatings, torture, and killings by security forces. Freedom of

speech and of the press are limited. Human rights organizations are subject to harassment and possible closure by the authorities.

#### 41 HEALTH

Free medical treatment, given at state hospitals or health centers, is provided by the state to any Turkish citizen who obtains a certificate of financial need from a local administrator. In 1992, there were 941 hospitals with 139,606 beds (2.4 per 1,000 people). Of this number, 616 were public, with 72,513 beds. As of 1999, there were an estimated 1.2 physicians and 2.6 hospital beds per 1,000 people. In 2000, 83 % of the population had access to safe drinking water and 91% had adequate sanitation.

Malaria, cholera, and trachoma have been effectively controlled by large-scale public preventive measures. In 1999 there were 38 cases of tuberculosis per 100,000 people. Immunization rates for children up to one year old in 1997 were tuberculosis, 73%; diphtheria, pertussis, and tetanus, 79%; polio, 79%; and measles, 76%. In 1995, there were 30,997 deaths of children under five from diarrheal disease. Malaria incidence has decreased from 47,156 in 1993 to 13,467 in 1995.

As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 17.9 and 6 per 1,000 people. About 64% of married women (ages 15 to 49) used contraception in 2000. In the same year the total fertility rate was 2.4 children for every Turkish woman who lived through her childbearing years. Average life expectancy was 70 years in 2000. In the same year infant mortality was estimated at 34 per 1,000 live births. Maternal mortality was 130 per 100,000 live births in 1998. Between 1984 and 1992, there were approximately 5,000 war-related deaths in the Kurd rebellion.

The HIV prevalence rate was 0.0 per 100 adults in 1999. Only 194 AIDS cases were reported in 1996.

Tobacco consumption in Turkey has increased from 2.0 kg a (4.4 lbs) year per adult in 1984 to 2.2 kg (4.9 lbs) in 1995.

#### 42 HOUSING

A traditional village house consists of sun-dried brick (adobe) or rough-hewn stone walls across which are laid timbers piled with brush and then topped with packed earth. The flat roof is often used for storage of feed grain. Floors are often bare earth covered with matting or lightweight carpets. Little furniture is used. Urban housing varies from houses similar to those in villages to modern, centrally heated apartment buildings.

From 1981 through 1985, 305,890 new residential buildings containing 929,104 apartments were completed. As of 1985, over 70% of all housing units were detached houses.

In 1999, major earthquakes in August and November left about 800,000 people homeless. The disasters brought to light the issues of substandard housing and illegal construction permits. The Turkish Chamber of Commerce estimated that about 65% of all buildings were built with illegal permits or below regulations, producing structures that are in no way suited to withstand the earthquakes to which Turkey is prone. International assistance has helped to rebuild and repair a number of homes.

The Collective Housing Administration Directorate, founded in 1984, had provided credit for over 1,125,889 residential construction projects between. The housing need has been estimated at 400,000 new dwellings per year.

#### 43 EDUCATION

For the year 2000, adult illiteracy rates were estimated at 14.8% (males, 6.4%; females, 23.3%). Primary, secondary, and much of higher education is free. Education is compulsory for children ages 6 to 14 or until graduation from primary school (grade five). However, owing to the inadequate number and distribution of schools and teachers, only about 56% of the children attend secondary school. Secondary schooling is for six years.

The regular school system consists of five-year primary schools, three-year junior high schools, and three-year high schools. Parallel to this system is a variety of technical, trade, and commercial schools. Among private schools in operation are a number of foreign schools and those maintained by ethnic or religious minorities. Among Turkey's 28 universities are the universities of Istanbul (founded 1453) and Ankara (founded 1946), the Technical University of Istanbul (founded 1773), and the Middle East Technical University at Ankara (founded 1957).

In 1997 there were 47,313 primary schools, with 6,389,060 students. Also in 1997, enrollment in all secondary-level schools was 4,760,892 students, with 218,829 teachers. As of 1995, an estimated 99% of primary-school-age children were enrolled in school, while 51% of those eligible attended secondary school. In the same year, public expenditure on education was estimated at 2.3% of GDP. The universities and other public higher institutions had 1,434,033 students and 50,313 faculty members in 1997.

#### 44 LIBRARIES AND MUSEUMS

The National Library in Ankara had 960,000 volumes in 2000. There are two provincial branches of the library system as well: the Beyazit State Library in Istanbul with 500,000 volumes and the National Library of Izmir with 350,000 volumes. Major University collections include the Istanbul University and Documentation Center with 1.5 million volumes and one of the Middle East's finest rare book collections; the Middle East Technical University with 145,000 volumes, and the University of Ankara with 750,000 volumes.

The most famous museums and ancient buildings are located in Istanbul. The old seraglio, now Topkapı Museum, is perhaps the most famous; it houses a large collection of paintings, manuscripts, and historically important items. Nearby is the Ayasofya (Saint Sophia), the world-renowned Byzantine church that draws thousands of tourists to Istanbul. Next to it is the Blue Mosque, famous for the beauty of its interior and the grace of its dome. Also in Istanbul are the museums of archaeology and of the ancient Orient, housing one of the world's finest collections of Greek art, including the sarcophagus of Alexander the Great. Additionally, the city is home to the Museum of Turkish written Art, the Istanbul Museum of Painting and Sculpture, and the Museum of Revolution. The Museum of Archaeology in Ankara contains the world's outstanding collection of Hittite works. Also in Ankara are Atatürk's Mausoleum and Museum, the Museum of Anatolian Civilizations, and the Museum of the Turkish Independence War and Turkish Republic. In Konya there are museums of Islamic art, one of which is housed in the mausoleum of Mevlana. Newer facilities include the decorative arts museums at the Beylerbeyi and Dolmabahçe palaces (both opened in Istanbul in 1984) and the Fire Brigade Museum in Fatih (1992). Along Turkey's Aegean coast are situated the ruins of Ephesus, Pergamum, Troy (Ilium), Halicarnassus, and other famous ancient cities. A zoological garden is located in Ankara.

#### 45 MEDIA

Postal, telephone, and telegraph service is owned and operated by a semi-independent government enterprise under the jurisdiction of the Ministry of Transport and Communications. Mainline telephones in 1999 numbered about 19.5 million, with 17.1 million cellular phone subscribers in 2001.

In 2001, there were 16 AM and 107 FM radio stations. In 1995, there were 635 television broadcast stations. All broadcasts are monitored by the government through The High Board of Radio and Television. In 2000, Turkey had 573 radios and 449 television sets for every 1,000 people. In 2001, there were 50 Internet service providers serving 4 million subscribers.

Although the 1982 constitution guarantees freedom of expression, it also authorizes newspaper confiscations and

closures in the cases of crimes against the unity, security, or republican principles of the state. After the 1980 coup, the military government, which had vested control of the press in the provincial martial law administrators, repeatedly closed down newspapers it claimed had published material damaging to the national interest. As of 1999, the government is still said to limit free expression significantly. In 2002, there were over 100 daily newspapers in print many of which had small local circulations. The independent leftist *Cumhuriyet* (1999 circulation 120,000) has been closed and reopened a number of times. Other leading Istanbul dailies (with 2002 circulation figures) are *Sabah* (700,000); *Hurriyet* (542,780); *Gunaydin-Tan* (386,000) and *Bugun* (184,880). *Turkiye* and *Milliyet* are both distributed throughout the major cities; circulation figures were unavailable in 2002.

#### 46 ORGANIZATIONS

Professional organizations, charitable associations, student organizations, and athletic clubs are active in the major cities. Chambers of commerce and chambers of industry are semiofficial agencies for the control of import license and foreign exchange allocations. The Union of Chamber of Commerce, Industry, and Maritime Commerce and Commodity Exchanges of Turkey, established in 1952, is based in Ankara.

There are several Masonic lodges and branches of the Rotary and Lions clubs. Women are active in a number of their own charitable organizations. National women's rights and development organizations include the Federation of Women's Associations, the Turkish Cypriot Association of University Women, Women for Women's Human Rights/New Ways, and the Association of Women's Rights Protection. National youth organizations include the International Islamic Federation of Student Organizations, Youth for Habitat, the Youth Services Center, Scouting and Guiding federation of Turkey, and YMCA/YWCA.

Since World War II, international cultural associations have appeared, chief among them being Turkish-American, Turkish-French, Turkish-German, and Turkish-English. The Research Center for Islamic History, Art and Culture, based in Istanbul, is multinational subsidiary organization of the Organization of the Islamic Conference (OIC). The Scientific and Technical Research Council of Turkey and the Turkish Academy of Sciences promote public interest, education, and research in a broad range of scientific fields. The Red Crescent Society is also active.

#### 47 TOURISM, TRAVEL, AND RECREATION

In addition to the museums and monuments of Istanbul, places of interest include the Aegean ports of Izmir and Bodrum; the ancient cities of Troy (Ilium), Ephesus, Tarsus, Konya, Samsun, Erzurum, and Trabzon; Mt. Ararat, traditionally considered the landing place of Noah's Ark, the remains of which some expeditions have tried to find; the ski resort of Uludag, 36 km (22 mi) south of Bursa; and the sea resort of Antalya, on the Mediterranean coast. Water sports, mountaineering, and football (soccer) are popular forms of recreation, as are such traditional Turkish sports as grease wrestling (*yağlı güreş*), camel fighting (*deve güreşi*), and a horseback javelin competition (*cirit oyunu*) played mainly in eastern Turkey.

Citizens of the United States, Canada, Japan, and most Western European countries need a valid passport but no visa for stays of up to three months. Foreigners entering without a visa and remaining longer than three months must secure a residence permit from the police. No vaccinations or inoculations are required of visitors arriving directly from Europe or the United States.

In 2000, 9,585,695 tourists arrived in Turkey. Tourism receipts totaled \$7.6 billion. There were 155,441 hotel rooms and 322,334 bed-places with a 37% occupancy rate that year.

In 2001, the US State Department estimated the cost of traveling in Istanbul at \$218 per day; the estimated daily cost of staying in Ankara was \$223.

#### 48 FAMOUS TURKS

The most famous rulers before the coming of the Turks were Croesus (r.560–546 BC), a king of Lydia noted for his wealth and for the loss of his kingdom to the Persians; Constantine I (the Great; Flavius Valerius Aurelius Constantinus, b.Moesia, AD 280?–337), the first Roman emperor to accept Christianity and to use Constantinople as a capital; and Justinian I (the Great; Flavius Petrus Sabbatius Justinianus, b. Illyricum, 483–565), a Byzantine emperor whose collection of laws and legal principles has been the model for European law down to modern times. Outstanding political figures since the arrival of the Turks include Sultan Mehmet II (1429–81), conqueror of Constantinople in 1453; Sultan Süleyman I (the Magnificent, 1495–1566); the Barbarossa brothers, Aruj (1473?–1518) and Hayreddin Paşa (Khayr ad-Din, 1466?–1546), naval commanders, born in Mytilene, who established Turkish supremacy in the Mediterranean; Mehmet Köprülü Paşa (1583–1661), Mehmet IV's grand vizier and founder of a family line of outstanding grand viziers; Sultan Abdul Hamid II (1842–1918), a despotic ruler whose tyranny led to the formation of the Young Turk movement; Enver Paşa (1881–1922), Young Turk leader who was the ruler of Turkey during World War I; Mustafa Kemal Atatürk (1881–1938), World War I military commander, nationalist leader, and first president of the republic; İsmet İnönü (Paşa, 1884–1973), Atatürk's chief of staff and prime minister, who succeeded him as president (1938–50) and was the first prime minister of the Second Republic (1961–65); Celâl Bayar (1883–1986), who helped found the Democrat Party and was president (1950–60) until ousted by the military; and Adnan Menderes (1899–1961), prime minister (1950–60) until he was forced to resign and then executed. Outstanding religious figures include Hacı Bektaş Veli (1242–1337), founder of the Bektashi dervishes, and Mevlana (Celâleddin-i Rumi or Jalal al-Din Rumi, 1207–73), author of the epic *Mesnevi* (or *Mathnavi*) and founder of the Mevlevi dervishes.

Revered literary figures include the mystical poets Yunus Emre (1238?–1320?) and Süleyman Çelebi (d.1422), author of *Mevlidi Sherif* (*Birth Song of the Prophet*). Other significant poets of the imperial epoch are Ahmedi (1334–1413), Şeyhi (d.1429?); Fuzulî (1494–1555), renowned for his lyrical verses about platonic love; Ali Şîr Nevâî (1441–1501); Nef'î (1582?–1636); Nabî (1642?–1712); Ahmet Nedim (1681–1730), perhaps Ottoman Turkey's greatest love poet; and Şeyh Galib (1757–98), the last great poet of the mystical and classical tradition. Renowned for his geographical and historical writings is Kâtip Çelebi (known in Europe as Haji Khalifa, 1609–57); the great traveler Evliya Çelebi (1611–82) is noted for his books on travel and history. The greatest folk poet was the 17th-century minstrel Karacaoglan.

Sinasi (1826–71), a dramatist, journalist, and essayist, was the first Turkish writer in the Western tradition. Other significant playwrights are Musaipzade Celal (1870–1959), Haldun Taner (1916–86), and Necati Cumali (b.1921). The poet Ziya Paşa (1825–80) was the outstanding literary figure of the reform period. Namik Kemal (Ahmed Kemal, 1840–88) and Mehmet Emin Yurdakul (1869–1944) dedicated their poetry to the achievement of political ideals. Four widely read novelists are Huseyin Rahmi Gurbinar (1864–1944), Ahmet Rasim (1864–1932), Halit Ziya Usakligil (1865–1945), and Mehmet Rauf (1871–1931). Omer Seyfettin (1884–1920) was a major short-story writer. Ziya Gökalp (1875–1924) was a noted poet and sociologist. Significant contemporary novelists include Halide Edib Adivar (1884–1966), Yakup Kadri Karaosmanoglu (1888–1974), Refik Halit Karay (1888–1974), Reşat Nuri Güntekin (1892–1957), Kemal Tahir Demir (1910–74), Orhan Kemal

(1914–70), and Yasar Kemal Gokceli (b.1922). Two fine modern poets were Yahya Kemal Beyatli (1884–1958) and Nazim Hikmet Ran (1901–60). Two prominent journalists and political writers were Hüseyin Çahit Yalçın (1875–1957) and Ahmet Emin Yalman (1889–1973). Outstanding historians were Naima (1752–1815), Mehmet Fuat Köprülü (1890–1966), and Ahmet Zekî Velidî Togan (1890–1970).

Other famous Turks include the architect Sinan (1490–1588), the miniaturist Abducelil Celebi Levni (d.1732), and the modern painter Bedri Rahmi Eyuboglu (1913–75). Famous contemporary composers include Ulvi Cemal Erkin (1906–72) and Ahmet Adnan Saygun (1907–1993). The operatic soprano Suna Korad (b.1934) and bass-baritone Ayhan Baran (b.1929) have won renown in European musical circles.

#### 49 DEPENDENCIES

Turkey has no territories or colonies.

---

# TURKMENISTAN

**CAPITAL:** Ashgabat (Ashkhabad)

**FLAG:** Green field with claret stripe of five carpet patterns; white crescent and five white stars symbolizing five major regions of Turkmenistan to the right of the stripe. In 1997, two crossed olive branches were added beneath the carpet patterns.

**ANTHEM:** *Independence Turkmenistan.*

**MONETARY UNIT:** Manat (MN), the unit of currency, was introduced by the government in November 1993. In January 2003, \$1 = MN5,200, but exchange rates fluctuate widely.

**WEIGHTS AND MEASURES:** The metric system is used.

**HOLIDAYS:** New Year's Day, 1 January; Flag Day, 19 February; International Women's Day, 8 March; Novruz Bairam (first day of spring), 21 March; Victory Day, 9 May; Revival and Unity Day, 18 May; Independence Day, 27 October; Neutrality Day, 12 December.

**TIME:** 5 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Turkmenistan is located in central Asia, bordering the Caspian Sea, between Iran and Uzbekistan. Comparatively, Turkmenistan is slightly larger than the state of California, with a total area of 488,100 sq km (188,456 sq mi). Turkmenistan shares boundaries with Kazakhstan and Uzbekistan on the N, Afghanistan on the SE, Iran on the SW, and the Caspian Sea on the W. Turkmenistan's boundary length totals 5,504 km (3,420 mi), of which 1,768 km (1,099 mi) is shoreline along the Caspian Sea. Turkmenistan's capital city, Ashkhabad (which means "city of love"), is located in the southwestern part of the country.

## <sup>2</sup>TOPOGRAPHY

The topography features flat to rolling sandy desert with dunes to the Caspian Sea, which lies in the west. The Kara Kum desert occupies over 80% of Turkmenistan's total area. The desert is bounded by oases in the north that are watered by the Amu Dar'ya, and by the Murgab, Tejen, and Atrek rivers in the south. The highest point in Turkmenistan is the Gora Ayribaba (3,139 m/10,299 ft), located along the eastern border near Uzbekistan. Only 4% of Turkmenistan's land is arable with approximately 2.5% under irrigation.

## <sup>3</sup>CLIMATE

The climate is arid continental. In July the mean temperature is 28°C (82°F). The mean temperature in January is -4°C (25°F). It can become very hot in the Kara Kum desert, with daytime temperatures of 50°C (122°F) not unusual. It does not rain much in Turkmenistan. Rainfall averages 25 cm (9.7 in) a year.

## <sup>4</sup>FLORA AND FAUNA

The Kara Kum (Black Sea) desert covers most of the country, and there is little plant or animal life. Herders raise goats, camels, and sheep in the desert. Farmers use reservoirs for irrigation to grow crops not indigenous to the area.

## <sup>5</sup>ENVIRONMENT

The most significant environmental problems in Turkmenistan include salinization of the soil and water pollution. The nation's water supply is threatened by chemical contaminants from farming activity. The problem is complicated by a lack of adequate sewage treatment facilities. A large share of the Amu Darya River's flow is diverted for irrigation, decreasing its contribution to the water supply from the Aral Sea. Water cycles have also affected the Garabogazol Aylagy, a lagoon-like appendage in the northwest that adjoins the Caspian Sea. It became fully enclosed because of a drop in the volume of the Caspian Sea, but is starting to rise again as the sea returns to previous levels. As of 2001, 4.1% of the country's total land area was protected. Eleven mammal species, 12 bird species, and 13 plant species are threatened. Threatened species include the cheetah, tiger, Aral salmon, slender-billed curlew, and white-headed duck.

## <sup>6</sup>POPULATION

The population of Turkmenistan in 2003 was estimated by the United Nations at 4,867,000, which placed it as number 113 in population among the 193 nations of the world. In that year approximately 4% of the population was over 65 years of age, with another 38% of the population under 15 years of age. There were 98 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 1.54%, with the projected population for the year 2015 at 5,820,000. The population density in 2002 was 12 per sq km (30 per sq mi).

It was estimated by the Population Reference Bureau that 45% of the population lived in urban areas in 2001. The capital city, Ashgabat, had a population of 525,000 in that year. Other large cities include Chardzhou (164,000), Tashauz (114,000), Mary (94,000), and Nebit-Dag (89,000). According to the United Nations, the urban population growth rate for 2000–2005 was 2.1%.

## 7 MIGRATION

Emigration to other former USSR republics exceeded immigration by 20,600 during 1979–90. More than 40,000 people fled from Tajikistan to Turkmenistan in 1992 to escape civil war. Repatriation of the Tajik refugees started in early 1998. As of 1999, nearly 5,000 Tajik refugees had voluntarily repatriated. There were also some 13,000 Tajik refugees, mostly ethnic Turkmen, who expressed the desire to remain in Turkmenistan. Also in 1999, UNHCR was assisting a group of some 1,000 Afghan refugees to integrate locally. UNHCR also developed a contingency planning and emergency preparedness mechanism in order to handle potential future refugee influxes.

Between 1993 and 1995, 100,000 Russians left Turkmenistan. In 2000 there were a total of 223,000 migrants, including 14,200 refugees, living in Turkmenistan. The net migration rate was 2.2 migrants per 1,000 population in 2000. The government views the immigration level as satisfactory, but the emigration level as too high.

## 8 ETHNIC GROUPS

There are over 100 distinct ethnic groups living in Turkmenistan. According to the 1995 census, 77% of the population consisted of ethnic Turkmen. That year, Uzbeks accounted for 9.2% of the population; Russians, 6.7%; Kazakhs, 2%; Ukrainians, 0.5%; and Armenians, Azeris, Tatars, and Beluji, 0.8%. Other groups present include Belarusians, Germans, Jews, Georgians, Moldovans, Uighurs, and Koreans. Like the Turkmen, the Uzbeks, Kazakhs, and Azeris are Turkic-speaking peoples.

## 9 LANGUAGES

Turkmen, spoken by about 72% of the population, is mandatory in the schools. It is a Turkic language of the Oghuz group, related to Azeri, Turkish, and Uzbek. Prior to the Soviet era, Turkmen wrote their language using the Arabic script. In Turkmenistan, that script was changed to Latin and then Cyrillic before World War II. The government has begun to institute the Latin script again. The Turkmen language has been influenced by Persian and Arabic elements. In recent decades, many borrowed words from Russian also have been adopted. Russian remains in common use in government and business, and is spoken by 12% of the population. Uzbek is spoken by 9%; various other languages are spoken by 7%.

## 10 RELIGIONS

There is no state religion, but about 89% of the population is Muslim, primarily Sunni, with strong elements of local shamanism and Sufi mysticism included in its practices.

Although the constitution provides for religious freedom, the Law on Freedom of Conscience and Religious Organizations, which was amended in 1995 and again in 1996, also provides for significant government control of religion. For example, religious congregations are required to register with the government in order to hold gatherings and proselytize. A congregation must have at least 500 members within the locality in which it is registering. This restriction has caused problems for a number of minority religions, especially the Baha'i faith. Baha'is have been prevented from conducting services since 1997 and have been questioned by Interior Ministry authorities for holding private prayer meetings in their homes. They were permitted to gather in Ashgabat for a single day to celebrate the Nowruz (spring) holiday in March 1998 and again in 1999.

As of 2002, the only two religions that were officially registered were Sunni Islam and Russian Orthodox Christianity.

In January 1999, members of the Gregorian Armenian faith appealed to authorities to use a church pending their registration, but they have not yet received a reply. Jehovah's Witnesses filed an application for registration in January 1997 but remain

unregistered, pending correction of mistakes in their application. Subsequent efforts to worship at meetings in their homes resulted in fines and seizures of religious materials.

Ethnic Turkmen, Uzbeks, and Kazakhs are nominally Sunni Muslim. Ethnic Russians, who account for about 7% of the population, are largely members of the Russian Orthodox Church. There are small communities of Roman Catholics, Pentecostal Christians, Seventh-Day Adventists, Baptists, Hare Krishnas, Lutherans, and Jews; however, none of these faiths are legally able to maintain churches.

## 11 TRANSPORTATION

Nebit-Dag, Ashgabat, Mary, and Chardzhou are connected by railroad to the nation's main port of Turkmenbashi on the Caspian Sea. Other lines include a railroad from Mary along the Murgab and Kushka rivers to Afghanistan and a line from Chardzhou along the Amu Dar'ya which nearly parallels Uzbekistan's border. Smaller rail spurs are located at Tashauz and Kerki. Rail lines were estimated at a total of 2,440 km (1,498 mi) in 2002. Also in 2002, there were an estimated 22,000 km (13,671 mi) of roadways, of which 18,000 km (11,185 mi) were hard-surfaced. In 2001, Turkmenistan had 76 airports, of which 13 had paved runways. In 2001, 1,407,400 passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

The territory of present-day Turkmenistan has been inhabited since the Stone Age, with evidence of agricultural communities as early as 6000 BC and of planned irrigation works from 3500 BC. The first states were Margiana and Parthia, from about 1000 BC. In 7th–6th centuries BC, Margiana was part of Bactria, while Parthia was part of the Median state. In the 6th–4th centuries BC the region was ruled by the Achaemenids, who were conquered by Alexander the Great at the end of the 4th century. In his wake there emerged a Parthian Empire which lasted until AD 224, when Persians of the Sassanid dynasty seized the territory. In the 5th century much of Turkmenistan was conquered by Ephthalites, who in turn were conquered in the 6th century by the Tiu-chue nomads, of Turkic origin. The Arab caliphate conquered Turkmenistan in 716, and began to introduce Islam. In the 10th century part of Turkmenistan was under Samanid control.

Oghuz Turks began to migrate into Turkmenistan in the 9th century. In 1040 the Seljuk clan took control of the territory, and held sway until the 13th century, when Turkmenistan was part of the Khwarazm-Shah state. The entire region was conquered by Mongols in 1219–1221, and Turkmenistan was split between the Golden Horde and the Chagatai Khanate, as well as the Hulaguid Khanate of Persia.

In the 1380s Turkmenistan became part of the empire of Timur (Tamerlane). By the 16th century part of the territory was ruled by the Khiva Khanate, part by Bukhara, and part by Persia. The course of the Amu Dar'ya river changed, and the Kara Kum desert claimed a great deal of once arable land.

Russia began to make commercial contacts with the Turkmen as early as the 16th century; by the 18th century almost all trade between Europe and Central Asia passed through Turkmenistan. Local tribes were used diplomatically by the Persians, Russians, and British as part of the Great Game of the 18th and 19th centuries. Beginning in 1865, Russia undertook direct annexation, which because of heavy resistance by the Turkmen tribesmen was not complete until the 1885, making Turkmenistan the last portion of the Russian Empire to be conquered. The territory then was called the Transcaspian District.

Turkmen joined the uprising of 1916, when the Tsar attempted to draft Central Asians into work battalions, and remained in general rebellion throughout the period of the revolution and civil war. Muslim and nationalist opposition, whom the Russians

LOCATION: 40°0' N; 60°0' E. BOUNDARY LENGTHS: Total boundary lengths, 3,736 kilometers (2,322 miles); Afghanistan, 744 kilometers (462.3 miles); Iran, 992 kilometers (616.4 miles); Kazakhstan, 379 kilometers (236 miles); Uzbekistan, 1,621 kilometers (1,007.3 miles).

called *basmachi*, resisted the Bolsheviks until 1924, when the area was made part of the Trans-Caspian Republic. In 1925, the present-day territory became a Soviet Socialist Republic.

Throughout the Soviet period, Turkmenistan was the poorest and least assimilated of the republics. In 1985, longtime Communist Party boss M. Gapurov was fired by Mikhail Gorbachev, who picked Sapamurat Niyazov as new republic head. Niyazov has remained in power ever since. On October 27, 1990, Niyazov received 98.3% of the popular vote in an uncontested election to the new post of president of Turkmenistan. Turkmenistan declared independence on 27 October 1991. After independence, Niyazov won another uncontested presidential election in June 1992 with 99.95% of the vote. In a referendum in January 1994, he received the support of 99.99% of the vote for extending his term until 2002. An elaborate cult of personality has grown up around Niyazov, who now prefers the title "Turkmenbashi," or "chief of all Turkmen." Niyazov is president, supreme commander of the armed forces, first secretary of the Democratic Party of Turkmenistan, head of the quasi-legislative Khalk Maslakhaty (People's Council), and chairman of the Cabinet of Ministers and

the National Security Council. Changes to the Constitution were introduced in late December 1999 during a joint meeting of the Mejlis (legislature), the Khalk Maslakhaty, and Niyazov's National Revival Movement, to include naming Niyazov president for life.

Turkmenistan's "neutral" foreign policy is enshrined in its constitution. Niyazov has declared that Turkmenistan's "open door" or "permanent neutrality" policy precludes joining political or military alliances and entails good relations with the East and the West, though priority will be placed on relations with Central Asian and other Islamic states. Turkmenistan joined the Non-Aligned Movement in 1995, and the United Nations General Assembly in 1995 recognized Turkmenistan's status as a neutral state. Turkmenistan has pursued close ties with both Iran and Turkey. In addition to growing trade ties with Iran, Turkmenistan is also interested in cultural ties with the approximately one million Turkmen residing in Iran. Turkey is the largest foreign investor in Turkmenistan and has far surpassed Russia in trade turnover with Turkmenistan. Turkmenistan supports some of Russia's policies in the region while endeavoring, where possible, to resist, contravene, or reduce

Russian influence. Russian military and border troops assisted Turkmenistan until it built up its own forces, and Russia's presence has been used to counter Uzbek policies in the region. In 1993, Russia and Turkmenistan agreed that Russian border guards would work with Turkmen border guards under Turkmen command at borders with Iran and Afghanistan. In 1999, Turkmenistan canceled this agreement, and the last of Russia's 1,000 border troops in Turkmenistan left in late 1999.

The new country has abundant resources that could bring in ample export earnings, ranging from oil, gas, electricity, coal, aluminum, and cotton to wool, grapes, and carpets. Turkmenistan's main natural gas export pipeline runs through Russia, which has closely controlled the volume, price, and destination. Seeking alternatives, Turkmenistan in December 1997 opened a 125-mile gas pipeline to connect with the Iranian pipeline system. On 18 November 1999, Turkmenistan, Azerbaijan, Georgia, and Turkey signed a declaration on a trans-Caspian and trans-Caucasus gas pipeline territory that would deliver Turkmen gas to Turkey (expected to be completed in 2002 with an eventual capacity of sixteen billion meters per year), boosting chances for international financing for the pipeline. In December 2002, Turkmenistan, Afghanistan, and Pakistan signed an agreement to build a 1,500-km pipeline to carry gas from Turkmenistan's Dauletabad-Donmez field through Afghanistan to Pakistan.

In October 2001, Azerbaijan announced the planned trans-Caspian gas pipeline would not be realized. It had discovered its own huge gas reserves in Shahdeniz, and subsequently demanded a share of the exports to the amount of half of the trans-Caspian pipeline's capacity. Turkmenistan regarded such demands as contrary to its interests. In July 2002, an Azerbaijani tanker exploded in the Turkmen port of Turkmenbashi, killing six Azeri sailors. Some blamed the Turkmen government for the incident. Suspicions between the two governments ran deep in 2002, as mutual enmity between Azerbaijan's president Heydar Aliyev and Niyazov has made the gap between the ethnically close nations wide.

Following the 11 September 2001 terrorist attacks on the United States, Turkmenistan offered to aid the US-coalition in its military and humanitarian campaign in Afghanistan. Over one-third of all food aid reaching Afghanistan since 11 September transited Turkmenistan. The United States has stated that Turkmenistan can play a positive role in the rebuilding of Afghanistan.

On 25 November 2002, an assassination attempt was made on Niyazov. Following the attack on his motorcade, the Niyazov government began a wide investigation, and 61 people were arrested in connection with the assassination plot. Turkmenistan's National Assembly granted powers to the Supreme Court to administer "special punishment" to people found guilty of involvement in the plot. The resolution permits the Supreme Court to hand out life sentences to those convicted, with no possibility of amnesty, pardon, early release, or change of prison. Former foreign minister Boris Shikhmuradov was sentenced to life in prison for his involvement. As of January 2003, more than 30 people were given lengthy sentences by Turkmen courts, including at least three life sentences amid reports of torture and coerced confessions. The US State Department expressed concern with Turkmenistan's conduct of the investigations into the assassination plot, stating that while the United States recognized the government's right to apprehend those involved, the US government could not condone actions that violate international practice. The United States claimed the Turkmen government conducted summary trials of alleged suspects without due process of law, and cited credible reports of torture and abuse of suspects.

In January 2003, the Turkmen government announced parliamentary elections would be held on 6 April, nearly two

years ahead of schedule (elections had been scheduled for December 2004). Also in January, Niyazov ordered the forced relocation of ethnic Uzbeks living along the Turkmen border with Uzbekistan. He stated he wanted "unworthy people" to be moved from the border area and replaced with ethnic Turkmen.

### 13 GOVERNMENT

In May 1992, Turkmenistan became the first Central Asian republic to enact a post-independence constitution. It sets up a "secular democracy," and formally upholds the balance of powers between executive, legislative, and judicial branches, but in reality the republic is a presidential autocracy, under the control of President Niyazov. The executive branch of government is the responsibility of a prime minister and his cabinet, all of whom are appointed by the president. The republic's economy is centrally planned and controlled, as in Soviet times, giving the government wide powers. Niyazov issues edicts that have the force of law and appoints and removes judges and local officials. The constitution includes an impressive list of individual rights and safeguards (though not freedom of the press), but cautions that the exercise of rights must not violate national morality and public order, or damage national security.

The new constitution creates a People's Council (Khalk Maslakhaty) with mixed executive and legislative powers, consisting of the president, ministers, the fifty legislators of the Supreme Council (Mejlis), sixty "people's representatives," and others. The people's representatives were elected by district in a virtually uncontested vote in December 1992. The Khalk Maslakhaty serves as a forum and rubber stamp for the president's policy initiatives. Resurrecting pre-Soviet customs, a Council of Elders, hand-picked by Niyazov, was also created to advise the president and choose presidential candidates. Oppositionists complained that both these bodies were designed to stifle dissent. A new Mejlis of 50 members was elected in December 1994. The candidates were all nominated by Niyazov, ran unopposed, and most were members of his Democratic Party of Turkmenistan (DPT). The Mejlis routinely supports presidential decrees and has little legislative initiative.

Elections to the Turkmen 50-seat legislature (Mejlis) were held on 12 December 1999. Niyazov rejected a role for parties, stating that partisanship could lead to clan rivalries. Instead, he directed that nominating groups choose "professional" candidates, and they dutifully selected two candidates per constituency to run. There was no discussion of political issues or problems during the campaign. Prior to the race, Niyazov stepped up his repression of political and religious dissidents, and in late December pushed through a constitutional change naming Niyazov president for life. The OSCE refused to send monitors to oversee the elections, citing the government's control over the electoral process. In 2001 Niyazov published *Rukhname*, a spiritual guide that became an informal legal code for the country. It is a guide to Turkmen national cultural and ethical personal behavior. The lack of democratization in Turkmenistan was accentuated during the 11 April 1998 election of sixty unpaid "people's representatives" to the Khalk Maslakhaty. Turnout was reported at 99.5%, though some of the candidates ran unchallenged and no real campaigning or political party contestation occurred.

In August 2002, the Khalk Maslakhaty met for the first time in almost three years. It was not clear why the session was called.

### 14 POLITICAL PARTIES

The only legally registered party in the republic is the Democratic Party of Turkmenistan, which is what the Communist Party renamed itself in September 1991. Seeking to bring together most major cultural, religious, and public groups in a wider political bloc, in early 1994, Niyazov created a National Revival Movement, which he heads. Unregistered parties are tiny and have been severely repressed. Many of their leaders have been

forced into exile or arrested. Most significant is the “Agzybirlik” (Unity) popular front. Banned in 1990, it mostly consists of Turkmen intellectuals and backs democratization and ties to Turkey. Opposition figure Avdy Kuliye, former foreign minister, is in exile. Physician Pirkuli Tangrikuliyev announced that he wanted to create an opposition party and would run in the 1999 Mejlis election, but he was arrested and convicted of corruption. In late December 1999, a constitutional change was enacted naming Niyazov president for life.

In late 2002, opposition leaders and international observers said fissures were appearing in Niyazov’s regime and that frustration is growing among ordinary people. Opposition and human rights leaders met in Washington, D.C., Vienna, and Moscow, and identified what they called an “awakening of social consciousness” in Turkmenistan.

## 15 LOCAL GOVERNMENT

There are five large regional subdivisions, called *velayets*. Beneath these are *shekbers*, then *etraps*, then *ovs*. Velayets, shekbers, and etraps have executives called *vekils* who are appointed and dismissed by the president. In addition each administrative sub-unit has an elected assembly called a *gengeshchi*, the chairman of which is an *archyn*.

The clan system is said still to be very strong in Turkmenistan, and the velayets reflect distribution of the five major clans, whose totems are represented in the state flag.

## 16 JUDICIAL SYSTEM

The court system remains substantially similar to that which existed in the Soviet era. There are 61 district and city courts, 6 provincial courts (including one for the capital city of Ashkhabad), and a Supreme Court. A supreme economic court hears cases involving disputes between business enterprises and ministries. Military courts were abolished in 1997 and cases involving the armed forces are now tried in civilian courts. Decisions of lower courts are appealable to higher courts.

The constitution declares the establishment of an independent judiciary. In practice, the president’s role in selecting and dismissing judges compromises judicial independence. The president appoints all judges for a term of five years, without legislative review, except for the chairman of the Supreme Court.

Defendants in criminal cases are afforded a number of procedural due process rights, including the right to a public trial and the right to defense counsel. In practice, the government often denies these rights. There are few private lawyers. Defendants may petition the president for clemency. He has traditionally released large numbers of prisoners in periodically declared amnesties, though some political prisoners have appeared exempt from the amnesties.

## 17 ARMED FORCES

In 2002 the total armed forces consisted of 17,500 personnel. The army numbered 14,500 with equipment including 702 main battle tanks and 930 armored infantry fighting vehicles. The 3,000-member air force operates 89 combat aircraft. There are plans to form a navy in the future. The defense budget for 1999 was \$90 million or 3.4% of GDP.

## 18 INTERNATIONAL COOPERATION

Turkmenistan was admitted to the UN on 2 March 1992, and is a member of the Asian Development Bank, ESCAP, OSCE, ECO, IMF, UNESCO, WHO, and the World Bank. It is a member of the CIS, and is recognized by the United States, EU countries, and many other nations of the world. It has observer status with the WTO. The United States established formal diplomatic relations with Turkmenistan in February 1992.

## 19 ECONOMY

Turkmenistan, though one of the poorest and least developed of the former members of the Soviet Union, boasts rich deposits of oil, gas, potassium, sulfur, and salts. It is the fourth-largest producer of natural gas in the world with proven reserves of about 2.9 trillion cu m (101 trillion cu ft), and 17 new deposits discovered in the last 10 years. Proven oil reserves are 541 million barrels, with possible reserves as high as 1.7 billion. Despite this wealth of industrial raw materials, the labor force remains dominantly in agriculture, which, with forestry, generated an estimated 27% of the 2000 GDP. Turkmenistan is the world’s tenth-largest cotton producer. Industry contributes about 48% of the GDP and occupies 15% of the labor force.

Turkmenistan’s transition from a command economy to a free market economy was initially cushioned by its relatively low level of development, as well as by the central government’s plans for a gradual reform over a 10 year period with the state continuing to play strong directive and protective roles in the economy. In 2002, the Asian Development Bank (ADB) estimated that poverty incidence in Turkmenistan was lowest among the transitional economies of Central Asia. Extensive subsidies in a budget nearly 80% directed towards welfare services plus double digit GDP growth since 1999 have reduced absolute poverty to negligible levels. On the other hand, the slow pace of privatization and reliance on central directives has meant that much of the economy has not been exposed to market disciplines, and remains subject to the inefficiencies and distortions inherent in central controls. Although evidence suggests that living standards remain low and that structural development has been impeded, assessment is difficult because the government continues to treat economic statistics like state secrets.

Turkmenistan became independent in October 1991. The initial decontrol of prices resulted in a 90% increase in retail prices in 1991, followed by a megasurge of 800% in 1992. Contraction in output occurred mainly in industrial output while growth in the agricultural and transportation sectors—the latter particularly due to increased government investment—lessened the rate of decline in the overall economy. Enlarged subsidies, increased wages and family allowances, and the reinstatement of some price controls were used to offset the impact of rising prices and the potential for social unrest, particularly in light of the eruption of violence in Tajikistan and other former SSRs. In November 1993 Turkmenistan dropped out of the ruble-based monetary union and introduced its own currency, the Turkmeni manat. In the same month, Russia, on whose Gazprom pipelines Turkmenistan relied to take its natural gas to market, cut Turkmeni access to the hard currency markets of Western Europe, diverting its competitor’s gas instead to the cash-strapped markets of the Ukraine and the ex-SSRs of the Transcaucasus. The result was one of the worst bouts of hyperinflation experienced by one of the newly independent states. The manat, introduced at two to a dollar, was at 125 to the dollar before the end of 1994, with unofficial rates often three times as high. In November 1995, with inflation at over 1000% for the year and the Turkmeni government threatening to cut off gas to its late paying customers, an agreement was reached with Russia for the creation of a joint stock company TurkmanRosGaz (TRAO)—51% Turkmen, 44% Gazprom, and 5% Itera International Energy Corp. (U.S.)—whereby Gazprom would purchase and transport all the gas that Turkmenistan could sell to the Ukraine and the Transcaucasus countries. This did not solve Turkmenistan’s basic problem of getting hard currency export earnings to back its currency. Azerbaijan, Kazakhstan, and the Ukraine had all run up substantial gas debts. Aggravating the situation, a below average cotton harvest extended poor economic conditions into 1996, as inflation raged on at about 992% for the year. GDP continued its post-independence slide,

registering a decline in GDP of -8.2% in 1995 and -7.7% in 1996. Gross domestic product plunged further (-25.9%) in 1997 when Russia cut off access to its pipelines in a dispute over prices to be paid for Turkmeni gas. External debt, which had already increased 86.5% from \$401 million to \$750 million 1995 to 1996, jumped 136% to \$1.77 billion in 1997 as the government was forced to borrow to cover shortfalls in export payments. More promising were the effects of reforms in monetary and fiscal policy adopted in 1996 and 1997.

Although not officially under an IMF program, the government voluntarily undertook to follow IMF recommendations about controlling credit expansion, reducing budget deficits, and liberalizing foreign exchange. From this point inflation began a steady retreat, falling to 84% in 1997, to about 20% in 1998 and 1999, to 14% in 2000, and to a reported 6% in 2001. However, internal evidence from the government's published figures suggest a resurgence of inflation in double digits in 2002. Another positive development in 1997 was the completion in December of the \$190 million, 24 mile Korpedzhe Kurt-Kui pipeline connecting Turkmenistan to the Irani gas pipeline system. In 2001 agreement was reached on a route whereby Turkmenistan gas could be delivered to Armenia through a still-to-be-built Iran-Armenian pipeline. Work on the Armenian section, after delays, is scheduled to begin in 2003, though it is not clear if the scheme will be exempt from US sanctions on countries dealing with Iran. A more ambitious project is the Trans-Afghanistan pipeline, called the Central Asia Gas Pipeline (or Centgas) that would run 1440 km (900 mi) from the Daulat Abad gas field in Turkmenistan through Kandahar, Afghanistan and end at Multan in Pakistan. The Centgas consortium was set up by Unacol in October 1997, but suspended 22 August 1998 in the face of a lack of success in obtaining funding, continuing civil war in Afghanistan (and opposition in the United States to Unacol negotiations with the unrecognized Taliban regime), and, finally, US cruise missile attacks against al-Qaeda training camps.

In May 2002, Turkmenistan led the reopening of discussions on the Trans-Afghan pipeline, now generally referred to as the TAP, and on 27 December 2003 the leaders of Turkmenistan, Pakistan and Afghanistan reached an agreement in principle to build the \$2.5 billion plus project. The ADB was enlisted to carry out a six-month feasibility study, and a summit is planned for September 2003 to put together the consortium that will build the TAP. In February 2003, the three TAP countries extended an invitation to India to join the project, estimated now to cost \$3.2 billion, apparently on the realization that its viability would depend on access to the Indian market. India, not wanting to work with Pakistan, did not accept the offer. A further cloud was cast over the TAP project by the death of the Afghani negotiator, its minister for mines and industries, in a suspect plane crash later in the month. In 2003 the future of the TAP depends on regional situation following the war in Iraq. In any case, the 1997 opening of the pipeline connection to Iran helped make 1998 the last year of post-independence decline in Turkmen GDP, which reportedly fell only 1% despite of the ongoing Russian financial crisis, although earlier reports had put this decline at closer to 11%. Decisive in restoring the economy to growth was the reopening of access to the Russian gas lines in 1998 following the resolution of their price dispute. There followed four years of double digit growth: 16% in both 1999 and 2000, 20.5% in 2001 and a projected 13% in 2002.

By the agreement reached with Russia in 1998, Turkmenistan was supposed export 20 billion cu m (706 billion cu ft) of natural gas to Russia by 2000 and increase this figure by 10 billion cu m (353 billion cu ft) per year until a level of 50–60 billion cu m (1,765–2,118 billion cu ft) was reached in 2004 or 2005. These levels have not been achieved and in 2003 Russia was seeking a new agreement with Turkmenistan. A condition accepted by the

Russians for the negotiation with some apparent reluctance was agreement that a coup attempt 25 November 2002 against President Niyazov, who now prefers to be called Turkmenbashi or Father of the Turkmen, was not staged as a means eliminating political opponents. The Turkmeni economy by US government estimates had reached about 70% of its preindependence level by 2001. The country's production of natural gas in 2001 was at about 60% of its preindependence level in 2001. Unemployment has apparently declined sharply during the last several years, dropping from 24% in 1998 to 14% in 2001, though this series of data incomplete. In the meantime, payments problems with gas customers have continued. In May 1999, Turkmenistan suspended natural gas exports to the Ukraine (for the second time) over arrears of \$281 million, and did not agree to restore supply until October 2000.

On 14 May 2001 Turkmenistan and the Ukraine reached an agreement for the supply of natural gas between 2002 and 2006 in exchange for 60% payment in cash and the rest in participation in 20 construction and industrial projects in Turkmenistan worth \$412 million. In May 2002, with the Ukraine still owing \$46 million in cash, President Niyazov expressed concern that work on the projects was progressing too slowly. In the meantime, cotton production experienced an unprecedented shortfall in 2002. Government planners had set an ambitious target of 2 million tons of cotton for the 2002 harvest despite the fact that the level had fallen from 1.3 million tons to 1.136 million tons (12.6%) from 2000 to 2001. To achieve the envisioned 80% increase the government agreed to sign contracts only with farmers achieving a yield of more than 30 centners (about 1.65 tons) per hectare. The area under cotton cultivation was to be reduced to 750,000 ha in 2002, having been expanded from 570,000 ha in 2000 to 770,000 in 2001. The plan called for 90,000 tons of cotton seed to be sown in 2002, down from 100,000 tons in 2001. The 2002 harvest in fact came in at only 500,000, 25% of the government's target and 56% below the previous year. A problem seems to have been an unusually wet spring, but the President Niyazov blamed "incompetent, irresponsible and dishonest officials," and dismissed a number of people from their jobs, including four regional leaders. The government's long-range targets for cotton 3 million tons of cotton by 2010 processed into 900,000 tons of cotton fiber.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Turkmenistan's gross domestic product (GDP) was estimated at \$21.5 billion. The per capita GDP was estimated at \$4,700. The annual growth rate of GDP was estimated at 10%. The average inflation rate in 2001 was 10%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 27% of GDP, industry 45%, and services 28%. Foreign aid receipts amounted to about \$13 per capita and accounted for approximately 1% of the gross national income (GNI).

Approximately 32% of household consumption was spent on food, 14% on fuel, 6% on health care, and 18% on education. The richest 10% of the population accounted for approximately 31.7% of household consumption and the poorest 10% approximately 2.6%. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that in 2001 about 34% of the population had incomes below the poverty line.

## 21 LABOR

From 1985 to 1991, the size of the labor force grew by 2.7% per year. Of an estimated two million inhabitants of working age in

1998, agriculture engaged 48%; industry and construction 15%, and the remainder in other sectors.

The right to form or join unions is not provided by law. As of 2002, there were no independent unions. The Federation of Trade Unions, now renamed the Colleagues Union, the government-associated organization of the Soviet era, is still present. In 2002, the union claimed 1.3 million members. Although Turkmen law does not protect the right to bargain collectively, strikes are allowed. State economic control is still prevalent, and little progress toward privatization has occurred.

The standard legal workweek is 40 hours. Many industrial workers often labor in unsafe conditions, and agricultural workers especially are subjected to ecological health hazards. The minimum working age is 16 years except for in a few heavy industries where it is 18. Violations of the minimum working age do occasionally occur in rural areas, especially during the cotton harvesting season. There is no set minimum wage. As of 2002, the average wage for public-sector employees was \$77 per month.

## 22 AGRICULTURE

About 30–35% of Turkmenistan is considered arable, but only 3.6% was under cultivation in 1998. Almost all the sown agricultural land is under irrigation. Yields are relatively low because of poor water usage, salinization, inefficient irrigation, and overdevelopment of cotton cultivation. In 2001, agriculture engaged 48% of the economically active population. Agriculture accounts for about 27% of GDP.

Cotton is the main crop, with production on the Mary and Tejen oases and along the Amu Dar'ya. Estimated cotton production for 2001/02 was 185,000 tons, up from 137,000 tons in 1996. Lack of machinery had caused significant portions of the cotton crop to go unharvested. Wheat also is cultivated to avoid dependency on unstable cotton export earnings. In 1999, estimated production was 1,506,000 tons. Citrus fruit, dates, figs, grapes, pomegranates, olives, and sugarcane are grown in irrigated groves and fields in the southwest. Sesame, pistachios, and oilseeds are other important export crops.

## 23 ANIMAL HUSBANDRY

The inability to raise sufficient fodder impedes livestock development. The livestock population in 2001 included sheep, 6,000,000; cattle, 860,000; goats, 375,000; pigs, 45,000; asses, 25,000; horses, 17,000; and chickens, 4.8 million. Karakul sheep are raised for wool export; in 2001, 21,000 tons of greasy wool and 25,000 tons of sheep skins were produced. A private tannery in Mary processes about 100,000 sheepskins per year, selling its product to the state-run leathery factory.

Akhaltekin horses, raised at the Akhaltekin oasis, are a breed which dates date to the 3rd century. Bucephalus, the favorite horse of Alexander the Great, was Akhaltekin. In 1986, an Akhaltekin horse, Dancing Brave, was sold for \$50 million. Akhaltekings have a large share of the racehorse breeding market worldwide, and are depicted on Turkmenistan's national emblem.

## 24 FISHING

The Caspian Sea provides fishing resources; fishing is an important export activity. In 2000, the total catch was 12,228 tons, primarily Azov sea sprat.

## 25 FORESTRY

About 8% of the land is forested. Arid conditions and the expansive Kara Kum desert inhibit the development of commercial forestry.

## 26 MINING

Turkmenistan had the world's third-largest reserves of sulfur, and was a leading producer of natural gas. Its top industries in 2002 were the production of natural gas, oil, and petroleum products;

gas and oil accounted for 33% and 30%, respectively, of its export earnings in 1999, and 90% of foreign direct investment went into the oil and natural gas sectors.

In 2000, outputs included: sulfur (mined at the Gaurdak complex, in the Gora deposit), 9,000 tons; gypsum, 150,000 tons (169,577 in 1996); sodium sulfate (from an extensive mirabilite site in the Garabogazköl), 60,000 tons (30,820 in 1996; supplying 45% of the FSU's production); iodine, 150,000 tons (90,000 in 1998 and 34,600 in 1996); and nitrogen (content of ammonia), 75,000 tons. Turkmenistan also produced bentonite, bentonite powder, bischofite, cement, all of the FSU's supply of epsomite, ferrous bromide, lime, and salt (north of Nebitdag).

Ozocerite, iodine, and bromine were found on the Cheleken Peninsula and in Vyshka, Stantsiya. The Garabogaz Aylagy lagoon, off the Caspian Sea, was one of the world's largest sources of raw materials for the chemical industry; commercial interest in the salts of the region began at the end of the 19th century, and it supplied all of the FSU's supply of medicinal Glauber's salt. Other mineral deposits included potassium and polymetallic ores.

## 27 ENERGY AND POWER

Turkmenistan is essentially self-sufficient in energy resources, with natural gas by far the most plentiful resource. Proven reserves of natural gas are among the world's largest; in early 2002 they amounted to 2.9 trillion cu m, or about 2% of the world's total. Production in 2001 (excluding gas-flared or recycled) totaled 46.5 billion cu m. Natural gas is found primarily near Mary; these fields in south-central Turkmenistan account for 80% of annual production. Turkmenistan is a major exporter of natural gas to the former USSR, and is the only republic, besides Russia, to export to Europe. Several former Soviet republics now owe significant amounts of money to Turkmenistan, including Ukraine, Georgia, Kazakhstan, Uzbekistan, and Azerbaijan. In October 2000 Turkmenistan agreed to resume gas exports to Ukraine, which had been interrupted since spring of 1999 because Ukraine had owed \$281million at that point. Turkmenistan is developing alternatives to Russia's pipeline network as part of its strategy to increase natural gas exports. About 49% of primary energy consumption was fueled by natural gas in 1998, with the remainder coming from oil. In 2001, Turkmenistan's total installed electrical capacity was 3,930,000 kW. In 2000, net electricity generation was 9.3 billion kWh, of which more than 99% came from fossil fuels. In the same year, consumption of electricity totaled 7.7 billion kWh.

Oil is produced in small quantities in the west, on the Cheleken Peninsula, near Nebitdag and Kum Dag, and along the Caspian lowlands. Proven oil reserves totaled 546 million barrels at the beginning of 2002. In 2001 production amounted to about 159,000 barrels per day. A ten-year program was in place to raise production to almost 1 million barrels per day by 2010. Refining capabilities are limited and antiquated; both refineries are slated for modernization and expansion to help meet increased demand.

## 28 INDUSTRY

After growing at an average rate of 2.3% during the 1980s, the industrial sector declined after the breakup of the Soviet Union. Industrial output declined by 15% in 1992, and fell 25% in 1994 when it became clear that Turkmenistan gas exports were going to be diverted from hard currency markets, and therefore from external sources of capital finance. After a further decline of 7% in 1995, gross industrial output reportedly surged ahead 17.9% in 1996, despite a 7.7 decline in the wider economy, as agreements were reached for gas supplies to the Ukraine and the Transcaucasus. However, in 1997 deepening financial problems stemming from Russia's cutoff of Turkmenistan's access to its Gazprom lines over a price dispute, arrears in payments from its ex-Soviet customers, and declines in cotton processing helped to

produce a fall in industrial production of 29.3%. From this low point, however, industrial output has expanded consistently. In December 1997 the \$190 million, 124 mile Korpezhe-Kurt Kui pipeline connecting to Iran's gas pipeline system was completed, and in 1998 access was restored to the Gazprom's pipelines.

Industrial production increased 1% in 1998, damped by the effects of the Russian financial crisis, but then rose 16% in 1999, 29% in 2000, and 8% in 2001. Nevertheless, the Turkmenistan economy remains dominated by primary production—gas, oil and cotton—and there has been little privatization of medium and large enterprises that might promote industrial development. Industry as a percent of the GDP has declined over this period from 50% to 45%, and industrial workers as a percent of the labor force has declined from 19% to 15%. Economic reforms have been held back by the deliberately gradualist approach adopted by the government, which has left over 90% of economic activity in government hands. Industrial development is a secondary goal, subordinated to the primary objectives of gradualism, maintaining state leadership of the economy and maintaining a comprehensive welfare program. As part of the government's economic diversification policies, investment from the public sector and foreign exchange earnings have been used to build textile and garment manufacturing plants, often in joint ventures with Turkish partners. From 1995 to 2000 the share of the textile sector in total industrial production increased from 10.4% to 26%, while the share of cotton processed domestically rose from 3% to 35%. However, the commercial viability of these joint ventures is difficult to assess because of the implicit subsidies provided by the Turkmenistan government, multiple exchange rates, and incomplete data. Evidence is that in the shortfall in cotton production in 2002, where only a fourth of the government's target of two million tons was met, priority is being given to supplying Turkmenistan's textile industry over meeting export demand, even though cotton is an important foreign exchange earner.

Turkmenistan's leading industries are those related to its main raw material exports. Most of country's plants and infrastructure continue to rely on Soviet-style equipment and technology. The textile industry is dominated by large state-owned enterprises (SOEs). As of 1998, only 33 manufacturing enterprises had been privatized, including one knitting factory whose sales price of 43.3 billion manats (about \$8.2 million at official exchange rates) constituted over 40% of the value of all privatized assets. Turkmen carpets are known world wide for their quality and are a source of national pride: ornaments of Turkmen carpets are components of the national flag and the national emblem of Turkmenistan. They are sometimes erroneously identified in Western markets by the label "Bukhara," which is actually just the Uzbekistan city where the carpets are sold. Turkmen carpets feature deep red wool, with stylized geometric patterns.

Fuel-related production (mainly gas and oil) is the second-largest component of the industrial sector, accounting for about 22% of total sector output in value terms. Turkmenistan has two oil refineries and plans for building a third. The older one at Turkmenbashi (formerly Krasnovodsk) has a 116,500 bbl/d capacity and is currently undergoing a \$1.46 billion upgrade and modernization with financing from Germany and Japan. In April 2001, a \$300 million catalytic cracking unit was launched, engineered by France's Technip Geoproductions Company, and Iran's. The unit, with a capacity of 36,150 bbl/d, is designed to produce high octane gasoline, diesel fuel, heating oil and liquefied petroleum gas. Technip was also awarded a contract to build a lubricants and polymers to world standards. Turkmenistan's record, slightly larger, 120,150 bbl/d capacity Chardzou refinery at Seidi was not completed until 1991, but is also slated for modernization and expansion. The Chardzou refinery depends on Russian oil piped in from Western Siberia, and has been operating at about half capacity. In 2002, the president solicited

bids for a third 100,000 bbl/d refinery. Food processing (especially meat and dairy processing), construction materials, and electricity generation account for about 20% of total industrial output. Chemicals and machinery are other important manufacturing subsectors.

## 29 SCIENCE AND TECHNOLOGY

The Turkmen Academy of Sciences, headquartered in Ashkhabad, has 8 attached institutes concerned with natural sciences and technology. In addition, six independent institutes conduct medical research. In 1991, the Academy of Agricultural Sciences was established, and in 1992, the Academy of Medical Sciences was created, both in Ashkhabad. The Turkmen A.M. Gorkii State University, founded in 1950 at Ashkhabad, has faculties of physics, mathematics, and biology. Also in the same city are the Turkmen Agriculture Institute, the Turkmen Polytechnic Institute, and the Turkmen State Medical Institute (founded in 1932).

## 30 DOMESTIC TRADE

Like the rest of the Turkmenistan economy, much of the country's retail and wholesale sector remain under the control of the central government. However, informal markets also operate in the country, at which a wide variety of consumer goods, including food, clothing and household wares, may be purchased. In 1994, the government established the State Commodity and Raw Materials Exchange as a means to regulate all trade and to restrict foreign competitors from controlling the market during the economic transition to a free market economy. Domestic trade involving locally produced goods is free from government regulations. Distribution of these products is generally facilitated through a state wholesale network. Most transactions are conducted only in cash. A value-added tax of 20% applies to most goods and services. Commercial advertising is under government control.

The work week is from 9 AM to 6 PM, Monday to Friday, with an hour for lunch. Many government officials and businesses regularly work on Saturday.

## 31 FOREIGN TRADE

Like other Central Asian countries, Turkmenistan is highly trade dependent. While natural gas and processed cotton fiber are the country's most important export items, Turkmenistan is heavily dependent on imports for industrial equipment, industrial raw materials, and a number of basic food items such as grain, milk and dairy products, potatoes, and sugar. Agricultural products, of which cotton makes up the vast majority, accounted for about 9% of total exports in 2000, while mineral fuels brought in 81% of export receipts.

A disappointing cotton harvest in 1996 caused an 80% decline in cotton processing that year, but production has rebounded in the past few years. Continuing difficulties with gas export payments and use of Russian gas pipelines to reach the European market resulted in a decrease in that sector as well, but the problem seemed to be solved as 2000 production was at an all-time high.

Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
Russia	1,029	255	774
Italy	401	7	394
Iran	242	91	151
Turkey	186	253	-67
Ukraine	165	214	-49
United Arab Emirates	61	63	-2
Azerbaijan	37	37	0
Uzbekistan	6	35	-29
Japan	n.a.	144	n.a.
France	n.a.	76	n.a.

### 32 BALANCE OF PAYMENTS

The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Turkmenistan's exports was \$2.7 billion while imports totaled \$2.3 billion resulting in a trade surplus of \$400 million.

The International Monetary Fund (IMF) reports that in 1997 Turkmenistan had exports of goods totaling \$774 million and imports totaling \$1.01 billion. The services credit totaled \$272 million and debit \$675 million. The following table summarizes Turkmenistan's balance of payments as reported by the IMF for 1997 in millions of US dollars.

<b>Current Account</b>	-580

### 33 BANKING AND SECURITIES

The State Central Bank of Turkmenistan (SCBT) is charged with issuing currency and executing a monetary policy, and represents the top tier of a two-tiered banking system. Commercial banks are responsible for collection, settlement, and handling of assets for clients and other banks. The State Bank for Foreign Economic Activities has been established to provide hard currency credits for foreign economic activities.

The government has not released details of monetary policy since Turkmenistan left the ruble zone in November 1993. The currency reform involved a high degree of confiscation. Since then, the government is thought to have severely contracted the money supply in real terms as part of its bid to tackle inflation.

The banking decree of 20 February 1995 stated that: 75% of 1994 bank revenue was to be used for capital expenditure projects; banks were to lend to state-owned firms at an annual interest rate of 15%; and all excess bank profits were to be transferred to the state. Turkmenistan's banks are shackled with the usual problems of the former communist bloc. The Turkmen banks are poorly capitalized, have large loss-making portfolios to state-owned enterprises, and are burdened by an antiquated payments system which builds up arrears with ease.

Sberbank (the State Savings Bank) ranks second behind the SCBT in significance, holding most household deposits, and is still state-owned. The local branch of Vneshekonombank has been incorporated as an independent foreign trade bank, and is also state-owned. Investbank is the industrial sector bank and Agroprombank the agricultural sector bank. Both are state-owned via stock distributed to state-owned enterprises. In 1994, there were ten further banks owned by state enterprises, two cooperative banks and two private banks.

### 34 INSURANCE

The joint-stock insurance company "TIS" is operating direct insurance lines for aviation, cargo, fire, accident, and auto in Ashgabat.

### 35 PUBLIC FINANCE

Although still a centrally planned economy, Turkmenistan has slowly begun to decrease the size of the public sector's influence.

Among the steps it has taken are a drive toward a unified market-based exchange rate, the allocation of government credits by auction, and stricter limits on budget deficits.

The US Central Intelligence Agency (CIA) estimates that in 1999 Turkmenistan's central government took in revenues of approximately \$588.6 million and had expenditures of \$658.2 million. Overall, the government registered a deficit of approximately \$69.6 million. External debt totaled \$2.3 billion.

### 36 TAXATION

Turkmenistan has significantly lowered income tax rates in 2002. The top rate is 11%, down from 25% in 2000, and 40% in the 1990s. The marginal rate for the average taxpayer is also 11%. The top corporate rate is 25%, down from 45%. A 15% rate is charged on income from dividends, copyrights, licenses, leases, royalties and other forms of passive income, although investors holding more than 30% of hard currency shares in an enterprise's capital fund are exempt from the dividend tax. Enterprises are not required to pay the profit tax until investors have fully recovered their original investment. Also, companies that reinvest profits are exempt from tax payments on the reinvested capital. Equipment contributing to the capital of joint ventures is exempt from import duties. Free economic zones have been created to attract foreign capital. There is a value-added tax (VAT) imposed on all goods and services, sold or bartered, of 10% for foodstuffs and 20% for all other items. In March 1994, the president exempted from the VAT registered foreign investors, private enterprises (other than Turkmenpotrelsoyuz enterprises) and businesses importing and selling consumer goods.

### 37 CUSTOMS AND DUTIES

Technically, Turkmenistan does not levy tariffs except on imports by individuals. However, in practice, the excise tax system applies higher rates to imported goods than domestic, effectively putting an unspoken tariff in place. Additionally, certain domestic products are exempted from the value-added tax (VAT) and, by special presidential decree, government regulatory agencies have the power to go into certain markets and determine the prices of domestically produced goods and the prices for which importers pay for foreign products. Certain imports from countries outside the rural area are prohibited or require a license. Turkmenistan is not a member of any free trade agreements and is not a member of the Commonwealth of Independent States customs union. It has signed trilateral agreements with Iran and Ukraine, Iran and Armenia, Iran and Bangladesh, and Iran and the Philippines and is pursuing more such agreements. Turkmenistan has most-favored nation status with the United States and Austria. Duties run from 10% to 100%, the average being 30%.

### 38 FOREIGN INVESTMENT

A law on foreign investment and other legislation regarding private entrepreneurship passed since 1991 now provide most of the conventional guarantees to foreign investors in Turkmenistan. However, until 1994, the purchase of property by foreign parties remained highly restricted. Reflecting some of this ambiguity, by 1992, only 23 joint ventures had been established, most of a relatively small scale and with negligible impact on foreign trade. Nevertheless, the country's political stability, rich natural resources, and increasingly liberal regulations are likely to make it a favored target for foreign investors in the near future. Significant inflows of foreign assistance have already allowed expansion of the petroleum industry to begin. Negotiations with foreign firms and several countries are underway for establishing a liquefied natural gas plant and the joint construction of a new gas pipeline to Europe that would bypass the need to transverse potentially unstable states of the former USSR.

In 1994, Turkmenistan's laws were modified to offer greater protection for property and rights of foreign investors and

exemptions from duties and taxes for specific categories of investment; foreign investors registered in Turkmenistan, and enterprises importing and selling consumer goods there have been exempt from the value-added tax since March 1994. The Commodity and Raw Materials Exchange, created in 1994 to regulate all commercial transactions in Turkmenistan, registers individual trade contracts concluded by foreign companies and joint ventures, and charges a 0.2% commission. The State Agency for Foreign Investment (SAFI), established by presidential decree in 1996, monitors investments, reviews proposals and foreign currency credits, and may award priority status to projects favored by the government. There were no investment statistics reported by the government in 1998.

### 3<sup>9</sup> ECONOMIC DEVELOPMENT

Turkmenistan's president Niyazov, or Turkmanbashi (Father of the Turkmen) as he has increasingly insisted on being called, has spoken of his country becoming the next Kuwait after its independence in 1991, with the state funding a high standard of living, a comprehensive welfare program, and industrial development from the invested proceeds of state-owned natural gas, oil and cotton operations. To date this vision has founded on Turkmenistan's geographical and political isolation from hard currency markets for its exports, a position that help produce, after an initial soft landing in 1992, to produce a sharp decline in economic activity, hyperinflation, and increasing external debt 1993 to 1998. Although official statistics show double-digit growth since 1999 and inflation reduced to a single digit by 2001 (6%), there is skepticism about the reliability of these statistics that the government treats like state secrets. The country does not submit economic information to the scrutiny of the IMF, which it has avoided by avoiding balance of payments problems (though not without difficulty judging from the harsh measures, including gas cut-offs, it has employed to get delinquent country's to pay their gas debts).

Turkmenistan's relatively well-educated population and natural resources provide a promising foundation for the growth of a diverse set of industries. The government's transition strategy consisted of three overarching principles: a gradualist (not big bang) pace to privatization and liberalization, a leading role for the state in developing the economy, and the maintenance of a full array of welfare supports to minimize the human costs of the economic transition. It is within these constraints that the government has pursued goals of food self-sufficiency and economic diversification.

The guiding principles of this program were detailed in a formal document in early 1991 calling for a series of legislative, fiscal, and monetary measures related to price controls, privatization, and industrial infrastructure development. More specific measures followed, including new laws on privatization and foreign investment adopted in 1992, price decontrol measures taken the same year, adoption of a value-added tax and other tax reform, and measures taken in 1996 and 1997 to control the growth of money supply. Under the liberalized property regime, leasing arrangements have expanded in both the agricultural and industrial sectors, though estimates are that as of 2002 there are no more than 100 private farmers in Turkmenistan. The leasing or purchase of individual enterprises by workers is favored by the current legislation, although land, water, and the oil and gas industries are excluded from the possibility of outright purchase by private individuals or companies. Public money and foreign exchange earnings have been used to establish textile and garment manufacturing plants, often as joint ventures with Turkish partners. The share of the textile sector in total industrial production has increased since independence from about 11% to about 26%, and the percent of Turkmenistan's cotton production processed domestically instead of exported has increased from 3% to 35%. However, it is

difficult to judge the competitiveness of these state-supported enterprises. Overall the gradualist pace in privatization has left over 90% of the economy by value under state control employing about 80% of the work force. Most medium and large industrial enterprises continue to run on the basis of centrally planned state orders and resource allocations, although there has been a substantial amount of privatization among small enterprises and in the service sector.

Following the government's expressed commitment to minimizing the negative impact of post-Soviet economic restructuring on the population, the terms for Turkmenistan's social safety net are more generous than many other former Soviet countries: allowances for large families, social security payments, and pensions have all been increased substantially since 1992, and as of 1993 all citizens were to receive free electricity and free water. Potential fiscal imbalances resulting both from these increased expenditures and the end of transfers from the Soviet government have thus far been avoided by increased profit transfers from key enterprises, export duties, and a variety of smaller revenue sources. Twenty-nine percent of the 1992 budget expenditures was allocated to price-differential subsidies paid to retail agencies required to sell food and medicines below wholesale prices. Capital expenditures claimed a further 12% of total expenditures while combined social and cultural expenditures allocated to education, health care, and social security totaled about 30%. In 2002, an estimated 80% of the government's budget is spent reinforcing the social welfare safety net. The Asian Development Bank (ADB) reports that the number of people in absolute poverty to be negligible in Turkmenistan.

Historically, landlocked Turkmenistan has depended on imports for most its food. Although there has been marked improvement in the government's prime target of wheat production since independence—total grain production, including wheat, rye, barley, corn, rice and miscellaneous grains, was 776 metric tons in 1992 whereas wheat alone had attained the government target of 1.2 metric tons by 1998—the goal has not been fully met. In recent barter deals with the Ukraine over past gas debts Turkmenistan has contracted for shipments of Ukraine wheat and sugar. In early 2002, the president backed away from a planned announcement that food self-sufficiency has been achieved, and in mid-2002 called on party officials to lead the way in pressing towards the goal by planting uncultivated hectares with wheat in their own estates.

A five-year production and investment plan set out in 1992 proposed large investments in the development of infrastructure and the energy sector financed by tax receipts and foreign exchange receipts from gas and cotton exports. The budget for 1993 included financing for projects to expand grain production and cotton processing. Under the government's central planning approach to economic development, the ambitious targets set have often not been met. The most recent setback was in 2002. Though the figures are disputed, annual cotton production was reported to have risen to a record 1.3 million tons in 2000, falling back to a still-substantial 1.03 million tons in 2001. The records reflected increased productivity, as the amount of land under cotton cultivation actually decreased. As a step in a long-range plan to achieve annual production of 3 million tons by 2010, the government set the goal of 2 million tons for 2002, an almost 100% increase. Incentives were given only to the more productive farmers, with actual decreases in the total area given to cotton and the amount of cotton seed made available. 2002 was an unusually wet, however, which caused some of the seed to rot in the ground and later impeded cotton picking. The result was a harvest of only 500,000 tons, one-fourth the official target and the lowest since 1996. In November 2002 the president, blaming "incompetent, irresponsible and dishonest" officials, removed many from office including a deputy prime minister, the minister

of agriculture and four regional leaders. In allotting its reduced cotton production, the needs of the newly expanded domestic industry appear to be given priority over exports, although raw cotton is an important foreign exchange earner.

The key to Turkmenistan's economic success rests on securing development finance through the exploitation of its natural gas resources. The completion of the Korppezhe-Kurt Kui Pipeline to the Iranian gas pipeline system in December 1997 plus restored access to Gazprom's pipelines in 1998 laid the basis for the economy's first return to growth since independence in 1999.

In 1998 the government restructured its oil and gas industries into several state-owned companies to better attract foreign investment. Progress has been made on two other gas pipeline schemes: the Iran-Armenian pipeline that would allow Turkmenistan to deliver its gas to Armenia, and the Trans-Afghanistan Pipeline (TAP), that, as originally envisioned, would pipe Turkmenistan gas across Afghanistan to Pakistan. Neither, however, is free of economic and political problems. Armenia remains a poor and uncertain market, particularly, as a source of hard currency, plus it is not clear if the arrangement would be exempt from US sanctions against countries dealing with Iran. In February 2003, representatives of the three main participants in the TAP project attempted to persuade India to agree to be the final terminus for Turkmenistan's gas apparently on the realization that neither Afghanistan nor Pakistan could, under present circumstances, provide markets large enough to justify the \$2 billion to \$3.5 billion cost of construction. India refused participation because of its conflicts with Pakistan. Later in the month, in another blow to the project, the Afghani negotiator, its Minister of Mines and Industries, Juma Mohammadi, died in a plane crash with four other Afghani officials as their light aircraft went down flying over Karachi. The three main participants set their next meeting on the TAP project for April 2003 in the Philippines. For oil, Turkmenistan's third major export earner, the president has announced a 10-year program to reach an output of one million barrels per day in 2010, up from only 159,000 barrels per day in 2001. The US Department of Energy currently forecasts Turkmenistan's oil production level in 2010 at only 200,000 barrels per day.

#### 40 SOCIAL DEVELOPMENT

Turkmenistan's current social security system was created in 1991, and provides old age, disability and survivor pensions to employed persons. A social pension is provided to those not eligible for employment-related pensions. Old age pensions are provided at age 62 for men who have 25 years of covered employment and at age 57 to women with 20 years of employment. The social security program is financed by 30% contributions from employers, and a voluntary contribution of 4% or more from employees. Unemployment benefits are provided for up to one year. Sickness and maternity benefits and workers' compensation were introduced in 1998. Maternity leave at full pay is provided for 112 days. Women are entitled to equal rights as men under the law, however due to societal constraints the woman's role is primarily that of homemaker and mother. Opportunities for education and careers outside the home are limited. Violence against women, including domestic violence, is not discussed and victims keep silent. Women are underrepresented in management positions in most state economic enterprises. Despite constitutional provisions, Muslims often follow religious practices giving men precedence over women in property and inheritance matters.

There are no international or domestic human rights monitoring groups operating in Turkmenistan. The government funds almost all print media and completely controls television and radio. Academic freedom and publishing are restricted. All forms of religious expression are controlled by the government.

According to most observers, Turkmenistan's human rights record is extremely poor. The US State Department's *Country Reports on Human Rights Practices for 2001* states that the government severely restricts political and civil liberties. Arbitrary arrest, detention, unfair trials, and interference with citizens' privacy and correspondence are reported. Security forces beat and mistreat suspects and prisoners. The government demolishes large numbers of private homes, and many displaced homeowners are not compensated for their loss. The government severely restricts freedom of speech and completely controls and censors the media, forbidding the expression of criticism of the government. In signing the Helsinki Final Act in 1992, Niyazov stated that human rights are defined and limited by Turkmen national interests, namely, law and order and political stability. On 14 September 1999, he denied that there have been political prisoners in Turkmenistan during his rule. According to the State Department's *Annual Report on International Religious Freedom for 2001*, Turkmenistan severely represses religious minorities. On 24 October 1999, Niyazov reported that Turkmenistan in 1998-99 had confiscated tens of thousands of "illegally" imported religious books and expelled "dozens of foreign visitors... for attempting to turn our people against our sacred beliefs." Suppression has included Christian faiths and others.

#### 41 HEALTH

As of 2000, systematic health care reforms had been undertaken, including enhancement of primary care, training programs for medical personnel, and infrastructure improvements. Serious inadequacies remained in the condition of medical facilities and equipment. Primary care was provided by two types of rural health units and by urban health centers. The number of hospital beds has been greatly reduced since independence. As of 1999 total health care expenditure was estimated at 5.2% of GDP. As of 1999, there were an estimated 3 physicians and 11.5 hospital beds per 1,000 people. In 2000, 58% of the population had access to safe drinking water and 100% had adequate sanitation.

Immunization rates for children up to one year old in 1994 were tuberculosis, 97%; diphtheria, pertussis, and tetanus, 87%; polio, 94%; and measles, 90%. As of 1999 the rates for DPT and measles were, respectively, 98% and 97%. The infant mortality rate in 2000 was 27 per 1,000 live births. The maternal mortality rate in 1998 was 65 per 100,000 live births. Average life expectancy was 66 years in 2000.

In this former Soviet republic, mortality rates have increased significantly since the breakup. Cardiovascular disease deaths numbered at 13,638 in 1994. Leading causes of death per 100,000 people in 1990 were communicable diseases and maternal/perinatal causes, 216; noncommunicable diseases, 737; and injuries, 68. There were 90 reported cases of tuberculosis per 100,000 people in 1999. Only one case of AIDS was reported in 1995. As of 1999 the number of people living with HIV/AIDS was estimated at fewer than 100, as were the number of deaths from AIDS. HIV prevalence was fewer than 0.01 per 100 adults.

#### 42 HOUSING

In 1989, 27.3% of all privately owned urban housing had running water, 7.2% had sewer lines, 16% had central heating, and 1% had hot water. In 1990, Turkmenistan had 11.1 sq ft of housing space per capita and, as of 1 January 1991, 108,000 households (or 30.9%) were on waiting lists for urban housing.

#### 43 EDUCATION

The adult illiteracy rate was estimated at 0.3% in 1995 (males, 0.2%; females, 0.4%). Before the Soviet Union established control over the region in the 1920s, few schools, mainly Muslim, existed. Education is now state-funded and compulsory from the age of 7 to 17 (10 years). Upon completion of the eighth grade, students are tested and then directed into technical, continuing,

or discontinuing courses of study. The government reports 1,764 schools with enrollment of 850,000. In 1,400 of the schools, instruction is in the Turkmen language; in the remaining 364, Uzbek, Russian, Kazakh, and Karakalpak languages are used.

In 1990/1991, all higher-level institutions had 76,000 pupils enrolled. There are 14 institutions of higher learning, including one university at Ashgabat, the Turkmen State University (founded in 1950) with an enrollment of over 11,000 pupils. Turkmenistan also has 90 technical colleges. As of 1995, public expenditure on education was estimated at 4.3% of GDP.

#### 44 LIBRARIES AND MUSEUMS

The National Library of Turkmenistan in Ashgabat holds 5.5 million volumes and is the largest in the country. The Republican Scientific and Technical Library of Turkmenistan holds 900,000 volumes and the Turkmen Academy of Sciences, in the capital, holds 2.1 million volumes. Turkmen University has the nation's largest academic library, holding 542,000 volumes. There are several fine museums in Ashgabat, including the National Museum of History and Ethnography, the State Museum of Fine Arts, and the Carpet Museum, as well as museums devoted to history and literature.

#### 45 MEDIA

In 1997, there were some 363,000 main telephone lines in use, with an additional 4,300 cellular phones in use by 1998. Telephone links to other former Soviet republics and Iran are provided by land link or microwave and to other countries through Moscow.

Turkmen Radio in Ashgabat broadcasts transmissions from Moscow, as does Turkmen Television, which also receives Turkish television broadcasts. All broadcasts are controlled by the government. As of 1999 there was one radio station and three television stations. Many programs can be received from Russia and Turkey. Orbita and INTELSAT are received by satellite earth stations. In 2000, there were 256 radio sets and 198 television sets per 1,000 population. Turkmenistan has its own movie studio, Tukmenfilm. In 2000 there were 2,000 Internet subscribers, with access only available through the government-owned Turkmen Telecom.

There were two daily newspapers in 1995: *Turkmenistan* (circulation 73,170) and *Turmenskaya Iskra* (in Russian, 40,000). There are also a number of periodicals, mostly in Ashgabat.

The constitution provides for free expression, but in practice the government is said to severely limit press rights. The government owns and directly controls all radio, television, and print media, and is said to rarely allow criticism or opposition opinion in even the mildest forms.

#### 46 ORGANIZATIONS

The economic affairs and other concerns of workers are handled by the Chamber of Commerce and Industry, and the Federation

of Trade Unions of Turkmenistan, respectively. The most important mass movement in the country is the Communist Party. It controls all aspects of Turkmenistan's politics, society and culture. Its organizations of control are the Committee on National Security, Ministry of Internal Affairs, and various trade unions. The trade unions, all controlled by the state, serve to promote government production plans and policies. The Red Crescent Society is active in the country.

#### 47 TOURISM, TRAVEL, AND RECREATION

Geological and archeological sites are primary tourist spots in this mostly desert state. In 1997, there were 332,425 tourists arriving in Turkmenistan spending \$74 million. The largest country of origin was Iran, with 171,071 visitors. Tourism has been designated a priority area of economic development. Hotel rooms numbered 2,616 with 6,571 beds and an occupancy rate of 24%.

In 2001 the US State Department estimated the cost of staying in Ashgabat at \$152 per day.

#### 48 FAMOUS TURKMENISTANIS

Saparmuryat A. Niyazov (b.1940) has been president of Turkmenistan since December 1991. Outstanding representatives of culture and literature of Turkmenistan include Abdulhekin Qulmukam Medoghli, a writer, researcher and political activist who was killed in 1937 during one of Stalin's purges, and the poet and thinker, Maktum Kuli, who first envisioned an independent Turkmenistan. The country has established the Makhtumkuli International Prize in his name and awarded it to President Niyazov.

#### 49 DEPENDENCIES

Turkmenistan has no territories or colonies.

**CAPITAL:** Funafuti

**FLAG:** The national flag has the Union Jack in the upper quarter nearest the hoist; nine yellow stars on a light blue field are arranged in the same pattern as Tuvalu's nine islands.

**ANTHEM:** *Tuvalu mo te Atua (Tuvalu for the Almighty)*.

**MONETARY UNIT:** Both the Australian dollar (A\$) and the Tuvaluan dollar (T\$) of 100 cents are legal tender. There are coins of 1, 2, 5, 10, 20, and 50 Tuvaluan cents; 1 and 5 Tuvaluan dollars; and notes of 5, 10, 20, 50, and 100 Australian dollars. T\$1 = US\$0.61728 (or US\$1 = T\$1.62) as of May 2003.

**WEIGHTS AND MEASURES:** The metric system is being introduced, but imperial measures are still commonly employed.

**HOLIDAYS:** New Year's Day, 1 January; National Children's Day, first Monday in August; Tuvalu Day, 1 October; Christmas Day, 25 December; Boxing Day, 26 December. Movable holidays include Commonwealth Day (March), Queen's Official Birthday (June), and Prince of Wales's Birthday (November); movable religious holidays include Good Friday and Easter Monday.

**TIME:** Midnight = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Tuvalu (formerly the Ellice Islands) comprises a cluster of nine islands, plus islets, located in the southwestern Pacific Ocean just south of the Equator. These remote atolls are situated about 1,050 km (650 mi) N of Suva, Fiji, and 4,000 km (2,500 mi) NE of Sydney, Australia. They lie in a 595-km-long (370-mi) chain extending over some 1,300,000 sq km (500,000 sq mi) of ocean and have a total land area of 26 sq km (10 sq mi). Comparatively, the area occupied by Tuvalu is about 0.1 times the size of Washington, D.C. Tuvalu has a coastline of 24 km (15 mi).

Tuvalu's capital city, Funafuti is located on the island of Funafuti.

## <sup>2</sup>TOPOGRAPHY

Tuvalu consists entirely of low-lying coral atolls, none of which is more than 5 m (16 ft) above sea level; few of the atolls are more than 0.8 km (0.5 mi) wide. The islands are coral reefs on the outer arc of ridges formed by pressure from the Central Pacific against the ancient Australian landmass. On five islands, the reefs enclose sizable lagoons; the others are mere pinnacles rising abruptly from the ocean floor. Only two of the islands, Funafuti and Nukufetau, have natural harbors for oceangoing ships. There are no rivers on the islands.

## <sup>3</sup>CLIMATE

Tuvalu has a tropical climate with little seasonal variation. The annual mean temperature of 30°C (86°F) is moderated by trade winds from the east. Rainfall averages over 355 cm (140 in), with most rain falling between November and February. Although the islands lie north of the main cyclone belt, Funafuti was devastated in 1894, 1972, and 1990.

## <sup>4</sup>FLORA AND FAUNA

The surrounding sea is rich in flora and fauna, but land vegetation is limited to coconut palm, pandanus, and imported fruit trees. Pigs, fowl, and dogs, all of which were imported in the 19th century, flourish on the islands. The only indigenous

mammal is the Polynesian rat. Birds include reef herons, terns, and noddies. There are 22 known species of butterfly and moth.

## <sup>5</sup>ENVIRONMENT

Environmental dangers include uncontrolled spread of the crown of thorns starfish, which flourishes in deepened channels and is destructive to coral reefs; erosion of beachheads from the use of sand for building materials; and excessive clearance of forest undergrowth for firewood. About 40% of Funafuti is uninhabitable because the United Kingdom authorized the US to dig an airstrip out of the coral bed during World War II. Global warming and the related rise of sea levels are also a significant environmental concern for Tuvalu's residents. The encroachment of sea water also poses a threat of contamination to the nation's limited water supply, whose purity is already at risk due to untreated sewage and the by-products of the mining industry and farming. Natural hazards include earthquakes, cyclones, and volcanic activity.

In 1986, the government approved the first phase of an EC-financed sea-wall system to protect the coast. Current fishing methods threaten Tuvalu's marine life. The green sea turtle, hawksbill turtle, bay shark, and the leatherback turtle are endangered.

## <sup>6</sup>POPULATION

The population of Tuvalu in 2003 was estimated by the United Nations at 11,000, which placed it as number 192 in population among the 193 nations of the world. In that year approximately 3% of the population was over 65 years of age, with another 34% of the population under 15 years of age. There were 95 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 1.23%, with the projected population for the year 2015 at 12,000. The population density is high, with 386 residents per sq km (1,000 per sq mi) in 2002.

It was estimated by the Population Reference Bureau that 52% of the population lived in urban areas in 2001. The most populated island is Funafuti, the capital, with a 2002 population

of 6,000. Only about 15% of the population lives on Vaitupu, followed by Niutao (11%), Nanumea (11%), Nukufetau, Nanumanga, Nui, Nukulaelae, and Niulakita (formerly uninhabited). According to the United Nations, the urban population growth rate for 2000–2005 was 1.7%.

## 7 MIGRATION

During the 19th century, recruitment of Tuvaluans to work on plantations in other Pacific islands, Australia, and South America reduced the resident population from about 20,000 to 3,000; the islands have only recently recovered from the population loss. Migrants account for about 3% of the total population. The net migration rate was zero in 1999. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

Apart from a few Europeans, the islanders are almost entirely Polynesian (96%) and have strong ties with the Samoans and Tokelauans. There is no evidence of pre-Polynesian settlement. Language and tradition indicate that the Tuvaluans were part of a Samoan-Tongan migration from the 14th through the 17th century.

## 9 LANGUAGES

English and Tuvaluan, a Polynesian tongue related closely to Samoan, are the principal languages. A Gilbertese dialect is spoken on Nui.

## 10 RELIGIONS

In 1865, a member of the London Missionary Society reached Tuvalu from Samoa, and Samoan pastors were sent to the islands. The Tuvaluans rapidly embraced the Christian faith, and today about 91% of them are Protestant members of the Church of Tuvalu, a congregationalist group. Seventh-Day Adventists account for 3% of the population; Baha'is for 3%; Jehovah's Witnesses for 2%; and Catholics for 1%. There are also small numbers of Muslims, Baptists, Mormons, and atheists.

## 11 TRANSPORTATION

Transportation is inadequate. Most roads are little more than tracks, although Funafuti has about 19.5 km (12.1 mi) of coral-impacted roads for use by the island's few cars and trucks. Funafuti and Nukufetau are the only seaports, used chiefly by freighters in the copra trade. Ships drawing up to 9 m (30 ft) can dock in Funafuti harbor at a deepwater wharf completed in 1980. In 2002, Tuvalu had a merchant fleet of 5 ships totaling 31,021 GRT. All the islands are served by Tuvalu's one inter-island ferry. Funafuti has one lone airport, a grass strip that cannot be used for jet aircraft.

## 12 HISTORY

The islands were probably settled between the 14th and 17th centuries by Polynesians drifting west with prevailing winds from Samoa and other large islands. The first European to discover Tuvalu is thought to have been the Spanish navigator Álvaro de Mendaña de Neyra, who sighted Nui in 1568 and Niulakita in 1595. Further European contact was not made until the end of the 18th century. Between 1850 and 1875, the islands were raided by ships forcibly recruiting plantation workers for South America, Fiji, Hawaii, Tahiti, and Queensland. To help suppress such abuses, the Office of British High Commissioner for the Western Pacific was created in 1877.

In 1892, after ascertaining the inhabitants' wishes, the United Kingdom proclaimed the Ellice Islands (as Tuvalu was then known), together with the Gilberts, as a British protectorate. After further consultation, the protectorate became the Gilbert and Ellice Islands Colony in 1916. After the Gilberts were occupied by the Japanese in 1942, US forces occupied the Ellice

group in 1943 and drove the Japanese out of the Gilberts. After the war, the ethnic differences between the Micronesians of the Gilberts and the Polynesians of the Ellice Islands led the Ellice Islanders to demand separation. In 1973, a British commissioner appointed to examine the situation recommended administrative separation of the two island groups. The British government agreed, provided that the Ellice Islanders declared their wishes by referendum. The vote, held during August–September 1974 with UN observers in attendance, produced an overwhelming majority of 3,799–293 for separation. Accordingly, on 1 October 1975, the Ellice Islands were established as the separate British colony of Tuvalu, and a ministerial system was instituted. Pursuant to a constitutional conference held at London in February 1978, Tuvalu became an independent member of the Commonwealth of Nations on 1 October 1979. Sir Fiatau Penitala Teo became Tuvalu's first governor-general, and Toaripi Lauti, chief minister at the time of independence, took office as Tuvalu's first prime minister. Following new elections in September 1981, Lauti was succeeded in office by Tomasi Puapua, who was reelected in September 1985. In March 1986, Tupua Leupena replaced Sir Fiatau Penitala Teo as governor-general. In a poll held that same year, Tuvaluans rejected the idea that Tuvalu should become a republic. As a result of the 1989 general election the parliament elected Bikenibeu Paeniu as prime minister in September 1989. In the same election, Naama Latasi became the first woman to serve in Tuvalu's parliament.

In the 1993 legislative elections Paeniu and Puapua, the man who he replaced as prime minister, each received six votes from the newly elected twelve-member parliament. A second round of votes were held in December that year, from which Puapua withdrew, and Kamuta Latasi was elected prime minister.

In 1994 Prime Minister Latasi spearheaded a movement to remove the British Union Jack from the country's flag as a symbolic gesture of independence. In 1995, after conservative French President Jacques Chirac announced his country's intention to conduct above-ground nuclear tests in the South Pacific, Tuvalu emerged as a regional leader in the highly vocal opposition.

In April 1997 the Union Jack was restored as part of Tuvalu's national flag by a vote of seven to five in the Parliament. Newly reelected Prime Minister Bikenibeu Paeniu restored the former flag design, which Latasi had changed without consideration of the views of Tuvalu's citizens. Tuvalu, Nauru, and Kiribati aligned with the Cook Islands and Niue to put pressure on Australian production of "greenhouse gases." These low-lying island nations are particularly vulnerable to future global warming. Already flooding in stormy weather, they pressed for a worldwide cut of 20% of 1990 emission levels by 2005. Australia rejected the proposal, citing 90,000 jobs would be lost if Australia was forced to reduce emissions. None of Tuvalu's islands rise more than 16 feet (5 m) above sea level, and their future existence may be imperiled.

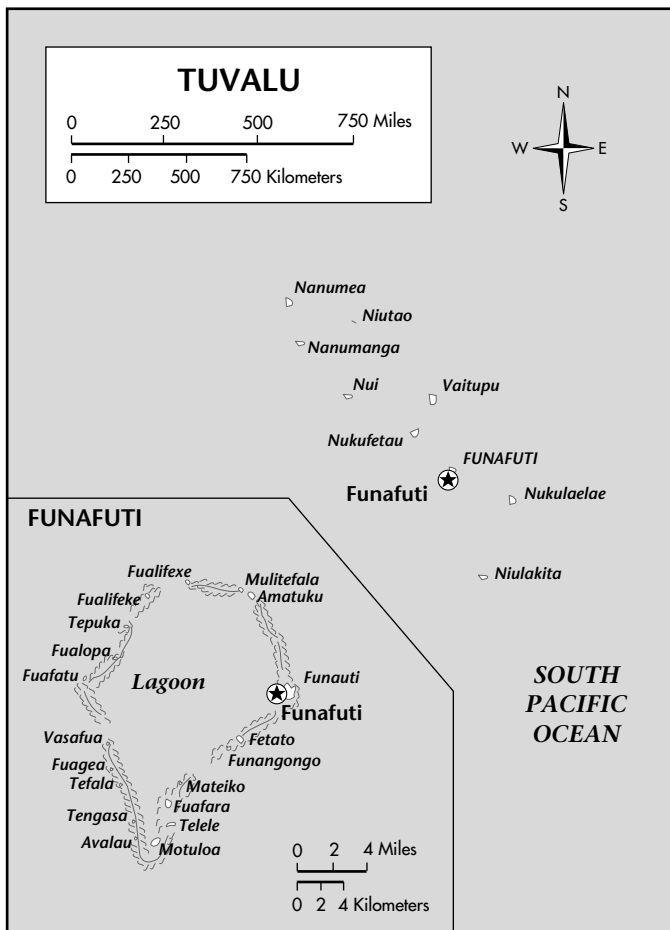

In 1998 Tuvalu began selling Internet addresses in its TV domain, i.e., all Tuvaluan Internet addresses end with the letters "tv."

By April 1999 there was growing dissatisfaction with Prime Minister Paeniu's leadership. Paeniu was forced to give up his office after a no confidence vote of parliament. On 27 April 1999 Ionatana Ionatana, former Minister of Education, was elected as prime minister by the twelve-member parliament.

In August 1999 Tuvalu sought economic aid as it suffered through a severe drought. Australia, New Zealand, Japan and Britain promised assistance to ease the water shortage with desalination plants. Japan agreed to provide the plants; New Zealand would pay to transport them. Australia would provide technical assistance toward formulating water policies.

Reportedly, Tuvalu licensed its dot-TV domain for \$50 million over ten years to an Internet incubator. In February 2000 Prime

LOCATION: 5° to 11° S; 176° to 180° E. TOTAL COASTLINE: 24 kilometers (15 miles).  
TERRITORIAL SEA LIMIT: 12 miles.

Minister Ionatana received the first installment of the licensing deal, \$20 million, and invested it in trust funds. In the continuing dispute with Britain over Tuvaluan separation with the Gilberts (Kiribati), Ionatana suggested that Tuvalu become a republic.

On 9 December 2000, Ionatana collapsed from cardiac arrest and died. Tuvalu had 4 prime ministers from 2000 to 2002. Faimalaga Luka, who was elected prime minister in February 2001, was replaced by Koloa Talake in December 2001 after a vote of no confidence. Saufatu Sopoanga became prime minister in August 2002 after general elections were held on 25 July. The elections and appointment of Sopoanga were expected to herald a period of stability in Tuvalu after Ionatana's death.

### 13 GOVERNMENT

Tuvalu is an independent constitutional monarchy. The head of state is the British monarch, whose representative on the islands is the governor-general, a Tuvaluan who has the power to convene and dissolve parliament (Sir Tomasi Puapua since June 1998). There is a unicameral legislature, the House of Assembly, with 15 members elected to four-year terms by universal adult suffrage. Seven islands elect two members each and one island elects one member. The cabinet is headed by the prime minister and has up to five ministers (all House members).

### 14 POLITICAL PARTIES

There are no political parties, and political life and elections are dominated by personalities. Small island constituencies with a

few hundred kin-related electors judge the leaders by their service to the community.

### 15 LOCAL GOVERNMENT

Local administration by elected island councils was established following the creation of the protectorate in 1892. Local governments were established on the eight inhabited islands by a 1966 ordinance that provided the framework for a policy aimed at financing local services at the island level. Funafuti's town council and the other seven island councils each consist of six elected members, including a president. Under the Falekapule Act of 1997, increasing power devolved from the central government to the island councils.

### 16 JUDICIAL SYSTEM

District magistrates were established with the protectorate in 1892, and a simple code of law based on mission legislation and traditional councils has been observed by native courts. Eight island courts were constituted in 1965 to deal with land disputes, among other local matters. In 1975 a High Court of Justice was set up to hear appeals from district courts. Appeals from the High Court may go to the Court of Appeals in Fiji and ultimately to the UK Privy Council in London.

The right to a fair public trial is respected in practice. Services of the public defender are available to all Tuvaluans free of charge. Defendants have the right to confront witnesses, present evidence, and to appeal. The judiciary is independent and free of governmental interference.

### 17 ARMED FORCES

Tuvalu has no armed forces except for the local police, which includes a maritime surveillance unit. For defense the islands rely on Australian-trained volunteers from Fiji and Papua New Guinea.

### 18 INTERNATIONAL COOPERATION

Tuvalu became a member of the Commonwealth of Nations on 1 September 2000, and the 189th member of the UN on 5 September 2000. Tuvalu cooperates with the South Pacific Forum, which it hosted in 1982. The country participates in the Asian Development Bank, belongs to the ITU, UNCTAD, UNESCO, UPU, WHO, and has associate or special status at the IFRCS and Intelsat. It is a member of ESCAP, an applicant to the WTO, and a signatory of the Law of the Sea. In 1979, Tuvalu signed a treaty of friendship with the United States, which in 1983 formally dropped its prior claim to four of the nine islands. Tuvalu opposes French nuclear testing in the South Pacific and signed the 1985 Rarotonga Agreement declaring the region a nuclear-weapons-free zone.

### 19 ECONOMY

Prime Minister Toaripi Lauti noted at the time of independence (1979) that all Tuvalu has is sun and a portion of the Pacific. Economic life is simple, but there is no extreme poverty. Subsistence is based on intensive use of limited resources, namely coconuts and fish; copra is the only cash crop. The islands are too small and too remote for development of a tourist industry. In 2002, there were fewer than 1000 visitors, most attached to international aid delegations. Its vulnerability to external shocks includes the real possibility that the nine low-lying coral islands that constitute the country could disappear beneath a rising ocean level as one of the effects of global warming. Already, thousands in this rather densely populated country have been displaced by ocean swamping parts of the land.

In the meantime, the economy has been kept afloat by two more fortunate developments: the success of the Tuvalu Trust Fund (TTF) and proceeds from the sale of Tuvalu's internet address, ".tv." The Trust Fund was set up in 1987 with A\$27

million derived from contributions from Tuvalu, Australia (the largest donor at A\$8 million), New Zealand, and the United Kingdom, with smaller grants from Japan and South Korea. Helped by occasional lump sum contributions from Australia, and modest withdrawals by Tuvalu, the TTF had grown to A\$37 million by 1999 and an expected A\$76.7 million by September 2002. The government derives about one-fourth of its revenues from returns on Trust Fund investments. More unique are the profits the government has been able to derive from its internet domain name. In 1990, the government leased the right to the suffix .tv to Idealab, a California company, for A\$90 million over 12 years, retaining a 20% share in the .tv Corporation. Some of the funds generated have been put in other investments and some have been used for infrastructure projects like airport development, electrification, and the construction of roads, office buildings and hospitals. The corporation .tv became a major shareholder in Air Fiji, which has exclusive flying rights to Tuvalu. In January 2002 .tv Corp. became a wholly owned subsidiary of VeriSign Corp., which bought it for \$45 million in an agreement by which Tuvalu maintains control of the management of its domain name. Returns from .tv Corp. have been highly variable—A\$14.5 million in 2002, but only A\$1.6 million in 2001; an expected installment of A\$10 million in 2002, but much less in 2003—presenting challenges for prudent budgeting.

The United Nations ranks Tuvalu among the least-developed countries.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2000 Tuvalu's gross domestic product (GDP) was estimated at \$12.2 million. The per capita GDP was estimated at \$1,100. The annual growth rate of GDP was estimated at 3%. Inflation averaged 3.73% from 1997–2001, but for 2001 was 5%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange.

## 21 LABOR

The estimated workforce numbered 7,000 in 2001. The economy relies primarily on subsistence ventures including fishing, and gathering coconuts. Many laborers work abroad and send wages home. In Funafuti, the government-controlled philately bureau is the largest single employer, with a staff of several dozen workers. The nation's only trade union, the Tuvalu Seamen's Union, has about 600 members who work abroad on foreign merchant vessels. The nearly 1,000 public employees in Tuvalu were not unionized as of 2002, but do belong to associations. The law protects the right to strike, but no strike has ever occurred.

The minimum working age is 14 (15 for industrial employment). Generally children do not work outside of the traditional economy. The minimum age for shipboard employment is 18. As of 2002, the biweekly minimum wage was \$75.66. The law sets the workday at eight hours. Basic health and safety standards, such as clean drinking water, are mandated by law but irregularly enforced.

## 22 AGRICULTURE

Although agriculture is the principal occupation, it contributes only 26% to the GDP. Agriculture is limited because of poor soil quality (sand and rock fragments), uncertain rains, and primitive catchment. Coconuts form the basis of both subsistence and cash cropping; the coconut yield in 1999 was about 2000 tons. Other food crops are *pulaka* (taro), pandanus fruit, bananas, and papayas.

## 23 ANIMAL HUSBANDRY

The Agricultural Division, based on Vaitupu, has attempted to improve the quality and quantity of livestock to lessen the islands' dependency on imports. Pigs and fowl, which were imported in the 19th century, have been supplanted by goats and rabbits. In 2001, there were some 13,200 pigs on the islands. Honey is also produced.

## 24 FISHING

Sea fishing, especially for tuna and turtle, is excellent. Although fishing is mainly a subsistence occupation, fish is sold in the capital, and *bêche-de-mer* is exported. The fish catch in 2000 was 400 tons, down from 1,460 tons in 1993. Japanese aid in 1982 provided a commercial fishing vessel for the islands. The Republic of Korea and Taiwan are both licensed to fish within the territorial waters of Tuvalu. In October 1986, Tuvalu, along with several other Pacific island nations, signed an agreement with the United States giving US tuna boats the right to fish its offshore waters. The sale of fishing licenses annually contributes about a \$80,000 to the government's revenues.

## 25 FORESTRY

There is little useful timber on the islands.

## 26 MINING

There was no commercial mining.

## 27 ENERGY AND POWER

International aid by UNDP and the European Development Fund is helping to develop electrical power. Funafuti has a limited amount of electricity to operate its meteorological and broadcasting stations and for use by the hospital and hotel; very few private households have electrical service. Installed electrical capacity totaled 2,600 kW in 1990. Both production and consumption of electricity amounted to 3 million kWh, or 330 kWh per capita, in 1995. The Tuvalu Solar Electric Cooperative Society, formed in 1984, provides a limited supply of photovoltaic electricity.

## 28 INDUSTRY

There is no industry apart from handicrafts, baking, and small-scale construction; the islands lack the population, capital, and resources to make commercial enterprises cost effective. In 1995, the latest year for which data is available, manufacturing accounted for 3% of GDP and construction about 14%. With the utilities sector, industry accounted for 19% of GDP. In recent years, construction has particularly benefited from the windfalls of money the government has through the .tv Corporation and related ventures.

## 29 SCIENCE AND TECHNOLOGY

There is no advanced science and technology except for that imported under foreign aid programs.

## 30 DOMESTIC TRADE

The local economy is based primarily on agriculture, which employs a majority of the resident population. Most residents of smaller villages and islands can grow or create their own necessary goods. Barter remains an important part of this subsistence economy. In larger communities, cooperative societies dominate commercial life, controlling almost all retail outlets, the marketing of local handicrafts, and the supply of fish to the capital. Offices are open from 7:30 AM to 4:15 PM, Monday to Thursday, and from 7:30 AM until 12:45 PM on Friday.

### 3<sup>1</sup> FOREIGN TRADE

Copra, the main cash crop, took many years to recover from the 1972 hurricane and has been affected by fluctuating market prices (although there is a subsidy to producers). Other exports include handicrafts and postage stamps. Most food, fuel, and manufactured goods are imported. Merchandise exports were valued at A\$276,000 in 1997, while imports amounted to A\$6.1 million that year. Tuvalu's principal trade partners are Fiji, Australia, New Zealand, and the United Kingdom.

### 3<sup>2</sup> BALANCE OF PAYMENTS

The US Central Intelligence Agency (CIA) reports that in 1998 the purchasing power parity of Tuvalu's exports was \$0.276 million while imports totaled \$7.2 million resulting in a trade deficit of \$6.924 million.

### 3<sup>3</sup> BANKING AND SECURITIES

The Bank of Tuvalu was founded in Funafuti in 1980 and has branches on all the islands. The bank is jointly owned by the Tuvalu government (75%) and by Barclays Bank, which was responsible for its operation until mid-1985.

In 1995, the government bought Westpac's 40% shareholding in the National Bank of Tuvalu and now owns the bank outright. Westpac has managed the bank since it was established in 1980 and is expected to provide an advisory support service.

### 3<sup>4</sup> INSURANCE

Insurance plays a minimal role in Tuvaluan life.

### 3<sup>5</sup> PUBLIC FINANCE

The US Central Intelligence Agency (CIA) estimates that in 1989 Tuvalu's central government took in revenues of approximately \$4.3 million and had expenditures of \$4.3 million. Government jobs are the only steady and salaried jobs in the country. Government revenues comes from sales of stamps and coins, fishing licenses, income from the Tuvalu Trust Fund, and the lease of its highly fortuitous .tv Internet domain suffix.

### 3<sup>6</sup> TAXATION

Revenue is obtained principally by means of indirect taxation: stamp sales, the copra export tax, fishing licenses., telephone line leasing, earnings from the Tuvalu Trust Fund, and profits from .tv Corporation, the enterprise set up in 1990 through a leasing arrangement with Idealab, a California corporation, to market the country's internet address, .tv.

The personal income tax rate on chargeable income is 30%. The company income tax rate on chargeable income is also 30%, down from 40%. The income of both nonresidents and foreign resident companies is taxed at a flat rate of 40%. There are a variety of sales taxes applied to a variety of goods and services. Island councils also levy a head tax and a land tax based on territorial extent and soil fertility.

### 3<sup>7</sup> CUSTOMS AND DUTIES

Since a single-line tariff was implemented on 1 January 1975, trade preferences are no longer granted to imports from Commonwealth countries. Tariffs, applying mostly to private imports, are levied as a source of revenue. Most duties are ad valorem, with specific duties on alcoholic beverages, tobacco, certain chemicals, petroleum, cinematographic film, and some other goods.

### 3<sup>8</sup> FOREIGN INVESTMENT

The cash economy is not sufficiently developed to attract substantial foreign investment. In 1981, the government established the Business Development Advisory Board to promote local and foreign investment in the Tuvalu economy; in 1993, the

board became the Development Bank of Tuvalu, the country's only commercial bank. UNCTAD reports that the annual flow of foreign direct investment (FDI) to Tuvalu for 1997 and 1998 was no more than \$100,000, zero for 1999, \$100,000 in 2000, and zero again in 2001. More important are the government's returns on its outward investments through the Tuvalu Trust Fund (TTF) and the .tv Corporation, returns on which are used to meet government expenses and invest in infrastructural development, lessening dependence on external aid. Profits from the .tv Corporation, for instance, were used to pay the country's UN dues, build a school and improve roads. The TTF is the leading source of revenue, regularly supplying about one-fourth of the government's budget, and is reported to have increased from its original A\$27 million capitalization in 1987 to over A\$75 million in 2002.

### 3<sup>9</sup> ECONOMIC DEVELOPMENT

Development aid, which rose rapidly during the 1960s, peaked at independence in 1979, when the United Kingdom undertook to provide £6 million. The Tuvalu Trust Fund (TTF) was established in 1987 with A\$27 million. The Fund receives contributions from Australia, New Zealand, the UK, Japan, Korea, and Tuvalu itself. The net income is paid to the Tuvalu government annually. As of September 2002, the Fund amounted to A\$76.7 million. In 1990, the government discovered a very profitable, if variable, source of income in leasing its internet domain address, .tv, to a California company, Idealab, and then retaining a 20% share in .tv Corporation that was established to market the suffix. Besides direct lease payments and dividends from its operations, the country stands to gain profits from other enterprises in which the corporation invests. The corporation, .tv, owns a major share, for instance, of Air Fiji which has exclusive rights on flights to Tuvalu. Unlike the prudently managed TTF, however, income from .tv Corp. is highly variable, presenting potential problems for rational budgeting. In 2001, revenue from the lease arrangement was A\$1.6 million while it had been A\$14.5 million in 2000, and a \$10 million installment is expected in 2002. Due mainly to income received by from Tuvalu fishermen working for non-Tuvalu operations, the country GNP's is considerably higher than its GDP. Fishing licenses are a major source of government revenue, amounting to A\$6.1 million in 2001.

In 2002, the government announced the Island Development Program (IDP) designed to reduce the disparity between household income on the main island, Funafuti, and the outer islands, and thereby slow the migration to the capital city. The program centers around the creation of a trust fund, the Falekanpule Trust Fund (FTF), modeled on the successful TTF. The FTF was capitalized at \$8.2 million contributed by the government and donor countries (principally New Zealand and Australia). Four types of policies are to be followed to achieve IDP goals: 1) decentralization of administration; 2) improvement of public service delivery; 3) promotion of small business development, and 4) a sustained augmentation of money available for the IDP through the prudent management of the FTF. In the first distribution of earnings from the FTF, the island councils were each given \$318,000 for development projects, and \$104,000 was allocated to a buffer account.

All development efforts in Tuvalu are overshadowed by the real possibility that an increase in global warming that ends up raising normal sea level could mean the disappearance altogether of the nine low-lying coral islands that constitutes the country. The government has consequently pushed hard on two fronts: urging industrialized countries to ratify and adhere to the Kyoto Protocol on limiting greenhouse gasses, and, in other countries, particularly, Australia, to have a plan for accepting displaced Tuvaluese.

## 40 SOCIAL DEVELOPMENT

Tuvaluans cling strongly to their traditional way of life. Villages are organized on a communal rather than a clan basis and have a customary system of social welfare. Young men's clubs and women's committees are standard features of social life, concerning themselves with sailing, fishing, crafts, and child welfare.

Women generally play a subordinate role within the family and society at large. Working women are primarily concentrated in the education and health sectors. Violence against women and domestic abuse are not widespread problems.

Human rights are well respected in Tuvalu. Serious crime is virtually nonexistent, and most prisoners are held for one night for offenses such as public drunkenness.

## 41 HEALTH

There are no serious tropical diseases on the islands except for a dwindling number of leprosy and dysentery cases. In 1990, there were 1.8 hospital beds per 1,000 people. In 1999 there were 0.3 physicians, 3 nurses, 0.9 midwives, and 0.1 dentist per 1,000 people. A large portion of Tuvalu's population had access to safe water (100%) and sanitation (85%) in 1993.

The infant mortality rate was estimated at 22 per 1,000 live births in 2002. In the same year, the fertility rate was an estimated 3.1 per 1,000 people. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 21.4 and 7.5 per 1,000 people. In 1995, the immunization rates for a child under one were as follows: diphtheria, pertussis, and tetanus, 82%; polio, 92%; measles, 94%; and tuberculosis, 88%. About 49% of children under one had been immunized for hepatitis B in 1995. The average life expectancy was estimated at 67 years.

Malaria was one of the most reported diseases in 1993, with 10,377 cases that year.

## 42 HOUSING

Most islanders live in small villages and provide their own housing from local materials. After the 1972 hurricane, Funafuti was rebuilt with imported permanent materials, but there is still a critical housing shortage on Funafuti and Vaitupu. Government-built housing is largely limited to that provided for civil servants.

## 43 EDUCATION

All children receive free primary education from the age of seven. Education is compulsory for seven years. The Tuvaluan school system has seven years of primary and six years of secondary education. Secondary education is provided at Motufoua, a former church school on Vaitupu now jointly administered by the government. In 1994, 1,906 students were enrolled in 11 primary schools. In 1990, secondary schools had 345 students with 31 teachers. Tuvalu Marine School was opened in 1979 with Australian aid. In the same year, the University of the South Pacific (Fiji) established an extension center at Funafuti.

## 44 LIBRARIES AND MUSEUMS

The first book published in Tuvalu was the Bible, in 1977. Apart from school facilities, the only library is the Parliamentary Library in Funafuti (600 volumes), which also houses the Archives.

## 45 MEDIA

In 1997, there were about 1,000 mainline telephones in use throughout the country. The government-owned Tuvalu Broadcasting Service, on Funafuti, transmits daily in Tuvaluan and also broadcasts news in English. In 2001, the only radio station in the country was owned by the government. There was also one government television station broadcasting about three hours per week. In 1997 there were 373 radio receivers in use per 1,000 population. Internet access is available through the management of the Office of the Prime Minister and the Department of Telecommunications.

There is no commercial press, but *Tuvalu Echoes* (2002 circulation, 250) is published biweekly by the government. Other local publications are produced by the churches or the government. The government is reported to respect freedom of speech and of the press.

## 46 ORGANIZATIONS

Apart from cooperative societies and local traditional bodies connected with island councils, there are few organizations. Organized youth groups include the Boy's Brigade, the Tuvalu Youth Fellowship and Pathfinder, and Girl Guide and Boy Scout troops. The Tuvalu Amateur Sports Association and the Pacific Red Cross are also notable. The National Council of Women of Tuvalu serves as an umbrella organization for women's cooperatives.

## 47 TOURISM, TRAVEL, AND RECREATION

Tuvalu's remoteness has discouraged tourism; the few visitors are on commercial or official business. In 1998, 1,077 tourists visited Tuvalu. That year there were 59 rooms in hotels and other facilities and tourism receipts totaled \$200,000.

The US State Department estimated in 1999 that the daily cost of staying in Tuvalu was \$97.

## 48 FAMOUS TUVALUANS

Tuvalu's first prime minister was Toaripi Lauti (b. Papua New Guinea, 1928).

## 49 DEPENDENCIES

Tuvalu has no territories or colonies.

# UNITED ARAB EMIRATES

United Arab Emirates

*Al-Imarat al-‘Arabiyah al-Muttahidah*

**CAPITAL:** Abu Dhabi (Abu Zaby)

**FLAG:** The flag consists of a red vertical stripe at the hoist and three equal horizontal stripes of green, white, and black.

**ANTHEM:** The National Anthem is an instrumental piece without words.

**MONETARY UNIT:** The United Arab Emirates dirham (UD), introduced as the currency in May 1973, is divided into 100 fils. There are coins of 1, 5, 10, 25, and 50 fils and 1 and 5 dirham and notes of 5, 10, 50, 100, 200, 500, and 1,000 dirhams. UD1 = \$0.27337 (or \$1 = UD3.658) as of January 2003.

**WEIGHTS AND MEASURES:** The metric system and imperial and local measures are used.

**HOLIDAYS:** New Year’s Day, 1 January; Accession of the Ruler of Abu Dhabi (Abu Dhabi only), 6 August; National Day, 2 December; Christmas, 25 December. Muslim religious holidays include Lailat al-Miraj, ‘Id al-Fitr, ‘Id al-‘Adha’, Hijra New Year, and Milad an-Nabi.

**TIME:** 4 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Comprising a total area of approximately 82,880 sq km (32,00 sq mi), including some 6,000 sq km (2,300 sq mi) of islands, the United Arab Emirates (UAE), in the eastern Arabian Peninsula, consists of seven states: Abu Dhabi, or Abu Zaby; Dubai, or Dubayy; Sharjah; Ra’s al-Khaimah, or Ra’s al-Khaymah; Fujairah, or Al-Fujayrah; Umm al-Qaiwain, or Umm al-Qaywayn; and ‘Ajman. Comparatively, the area occupied by United Arab Emirates is slightly smaller than the state of Maine. Extending 544 km (338 mi) NE–SW and 361 km (224 mi) SE–NW, the United Arab Emirates is bordered on the N by the Persian (or Arabian) Gulf, on the E by Oman, on the S and W by Sa’udi Arabia, and on the NW by Qatar, with a total boundary length of 2,185 km (1,358 mi), including a coastline of 1,318 km (819 mi).

In the late 1970s, Sa’udi Arabia and Qatar reportedly reached a boundary agreement according to which a narrow corridor of land was ceded by Abu Dhabi, thus allowing Sa’udi Arabia access to the Gulf near the Khawr Duwayhin and eradicating the former Qatar-UAE frontier. However, through 2002, no documents attesting to the accord had been submitted to the UN. The remainder of the boundary with Sa’udi Arabia is not yet fully demarcated. A 1999 border treaty with Oman was expected to go into effect in late 2002.

The UAE’s capital city, Abu Dhabi, is located on the Persian Gulf.

## <sup>2</sup>TOPOGRAPHY

The United Arab Emirates consists mainly of sandy desert. It is bounded on the west by an immense sebkha, or salt flat, extending southward for nearly 112 km (70 mi). The eastern boundary runs northward over gravel plains and high dunes until it almost reaches the Hajar Mountains in the Ra’s Musandam near Al ‘Ayn. The flat coastal strip that makes up most of the United Arab Emirates has an extensive area of sebkha subject to flooding. Some sand spits and mud flats tend to enlarge, and others enclose lagoons. A sandy desert with limestone outcroppings lies behind the coastal plain in a triangle between

the gravel plain and the mountains of the east and the sands of Sa’udi Arabia to the south. Far to the south, the oases of Al-Liwa’ are aligned in an arc along the edge of dunes, which rise above 90 m (300 ft).

The main gravel plain extends inland and southward from the coast of Ra’s al-Khaimah to Al ‘Ayn and beyond. Behind Ra’s al-Khaimah and separating Fujairah from the Persian Gulf is an area of mountains that rise over 900 m (3,000 ft) in height, with isolated cultivation. Finally, alluvial flats on the Gulf of Oman fill the bays between rocky spurs. South of Khor Fakkan (Sharjah), a continuous, well-watered fertile littoral strip known as the Batinah Coast runs between the mountains and the sea and continues into Oman. There are, in addition, many islands, most of which are owned by Abu Dhabi. These include Das, the site of oil operations, and Abu Musa, exploited for oil and red oxide.

## <sup>3</sup>CLIMATE

The months between May and October are extremely hot, with shade temperatures of between 38° and 49°C (100 to 120°F) and high humidity near the coast. Winter temperatures can fall as low as 2°C (36°F) but average between 17° and 20°C (63 to 68°F). Normal annual rainfall is from 5 to 10 cm (2 to 4 in), with considerably more in the mountains; most rainfall occurs between November and February.

## <sup>4</sup>FLORA AND FAUNA

Apart from cultivated plants, there are two categories of plant life in the United Arab Emirates: the restricted salt-loving vegetation of the marshes and swamps, including the dwarf mangrove, and the desert plant community, which includes a wide range of flora that is most abundant after the fall of rain.

Animal and reptile life is similar to that of Bahrain, with the addition of the fox, wolf, jackal, wildcat, and lynx. Hedgehogs have been seen. More than 250 species of small birds have been reported in the United Arab Emirates, along with many of the larger birds—kites, buzzards, eagles, falcons, owls, and harriers. Sea birds include a variety of gulls, terns, ospreys, waders, and

flamingos. Popular game birds include the houbara (ruffed bustard), as well as species of ducks and geese.

## 5 ENVIRONMENT

The clearing of natural vegetation, livestock overgrazing on rangelands, and extensive deforestation (in ancient times) have led to desertification. Overpumping of groundwater has brought a rise in soil salinity levels, and effluents from the oil industry have contributed to air pollution. In 1992, the United Arab Emirates ranked among 50 countries with the world's highest levels of industrial carbon dioxide emissions, which totaled 70.6 million metric tons, a per capita level of 42.28 metric tons. In 1996, the total rose to 81.8 million metric tons.

The nation has 0.2 cubic kilometers of renewable water resources, with 67% used for farming activity and 10% used for industrial purposes. The nation's cities produce an average of 0.5 million tons of solid waste per year.

As of 2001, the nation had two land areas protected by environmental legislation. The Al 'Ayn zoological gardens contain some 280 species of wildlife, including the gazelle, which had been on the verge of extinction in the region. In 2001, three of the country's mammal species were endangered. Four bird species were threatened with extinction. Endangered species in the United Arab Emirates are the peregrine falcon, South Arabian leopard, hawksbill turtle, gray wolf, Arabian oryx, Arabian tahr, green sea turtle, and desert monitor.

## 6 POPULATION

The population of United Arab Emirates in 2003 was estimated by the United Nations at 2,995,000, which placed it as number 131 in population among the 193 nations of the world. In that year approximately 1% of the population was over 65 years of age, with another 26% of the population under 15 years of age. There were 186 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 1.94%, with the projected population for the year 2015 at 3,588,000. The population density in 2002 was 42 per sq km (108 per sq mi).

It was estimated by the Population Reference Bureau that 86% of the population lived in urban areas in 2001. The capital city, Abu Dhabi, had a population of 904,000 in that year. Estimated populations of the other individual emirates were Dubai, 501,000; Sharjah, 314,000; Ra's al-Khaimah, 130,000; 'Ajman, 76,000; Fujairah, 63,000; and Umm al-Qaiwain, 27,000. The population of each emirate is concentrated largely in its capital. The towns of Abu Dhabi and Dubai are the most important urban centers; Abu Dhabi grew rapidly into a metropolitan area by attracting large numbers of internal and external migrants to its booming oil industry. According to the United Nations, the urban population growth rate for 2000–2005 was 2.0%.

## 7 MIGRATION

About 80% of the UAE's population originates from outside its borders. In the early 1980s, the government took steps to reduce the immigration rate by limiting the number of visas issued to foreign workers.

In 2000, there were some 1,922,000 migrants living in the United Arab Emirates. This includes the small number of refugees. The net migration rate for that year was 8.1 migrants per 1,000 population, a considerable drop from 15.0 migrants per 1,000 in 1990. The government views the immigration level as too high, but the emigration level as satisfactory.

## 8 ETHNIC GROUPS

South Asians accounted for 50% of the total population at last estimate. Emiris constituted 19%, while other Arabs and Iranians made up 23%. Other expatriates, including Westerners and East Asians, totaled 8%. Jordanians, Palestinians, Egyptians, Iraqis,

and Bahrainis are employed throughout the bureaucracy, including the educational system.

## 9 LANGUAGES

Arabic is the official and universal language. Hindi and Urdu are minority languages. English is widely used in business. Farsi is spoken in Dubai.

## 10 RELIGIONS

Islam is the official religion of all seven emirates. As such, virtually all UAE nationals and many immigrants are Muslims. Most (85%) are Sunnis, and the remaining 15% are Shi'as. The government does not recognize all non-Muslim religions. In emirates that officially recognize and grant legal identity to non-Muslim groups, only a limited number of Christian groups are granted this recognition. While recognizing the difference between Roman Catholic, Eastern Orthodox, and Protestant Christianity, the authorities make no legal distinction between Christian groups, particularly Protestants. Non-Muslims, constituting approximately 4% of the population, are principally Christians and Hindus, but also include Buddhists, Parsis, Baha'is, and Sikhs.

## 11 TRANSPORTATION

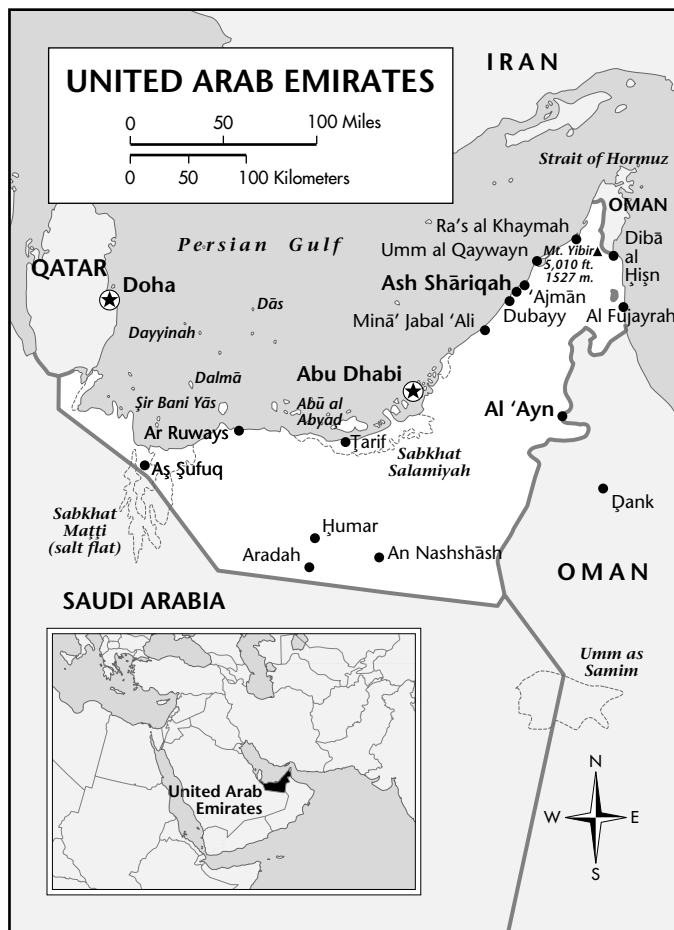

With most of the population concentrated in coastal towns and the Al 'Ayn oasis, road links between these centers have been given priority. There is now a paved coastal road linking Abu Dhabi, Dubai, Sharjah, 'Ajman, Umm al-Qaiwain, and Ra's al-Khaimah. Roads linking the interior to the main towns have been constructed; of particular importance is the transpeninsular road from Fujairah through the Hajar Mountains. A six-lane, 209-km (130-mi) highway has been built between Abu Dhabi and Al-'Ayn, and two bridges connect Abu Dhabi island with the mainland. Another highway links the UAE coastal network with the Trans-Arabian Highway at As-Silah on the Qatar border. In 2002, there were 4,835 km (3,004 mi) of paved highways. Of registered vehicles in 2000, there were 745,315 passenger cars and 453,097 commercial vehicles. There are no railways or waterways in the United Arab Emirates.

The United Arab Emirates is well provided with port facilities. Dubai's Port Rashid, with its deep-water berths and warehouses, is one of the largest artificial harbors in the Middle East. Other ports are the Jabal 'Ali complex, also in Dubai, completed in 1980; Abu Dhabi's Port Zayid; Sharjah's Port Khalid; and the deepwater port at Ra's al-Khaimah. Sharjah constructed a new port at Khor Fakkan in the early 1980s; the Fujairah port became fully operational in 1983. Jabal 'Ali in Dubai is the largest man-made port in the world. In 2002, the merchant fleet consisted of 56 ships with a capacity totaling 833,401 GRT.

In 2001, there were 438 airports, of which 19 had paved runways. A new international airport in Abu Dhabi, on the mainland across from the island, opened in 1982. The other international airports in the United Arab Emirates are in Dubai, Sharjah, and Ra's al-Khaimah. In July 1991, a "cargo village" opened at Dubai Airport, designed to handle 250,000 tons of cargo per year by 1997. The village operations can transfer cargo received at the port into air containers ready for airlift in three hours, and have the facilities to handle frozen and hazardous goods. In 2001, 7,675,800 passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

Although the Trucial Coast has for centuries been situated on one of the main trade routes between Asia and Europe, very little is known about the early history of the states that now make up the United Arab Emirates. The northern states of the United Arab Emirates, and in particular Ra's al-Khaimah, first came into historic prominence during the period of Portuguese occupation

LOCATION: 51°3' to 56°23' E; 22°30' to 26°17' N. BOUNDARY LENGTHS: Persian Gulf coastline, 1,318 kilometers (817 miles); Oman, 410 kilometers (256 miles); Sa'udi Arabia, 457 kilometers (285 miles). TERRITORIAL SEA LIMIT: 3 miles, except Ash Shariqah (12 miles).

in the 16th and early 17th centuries, when Portugal used the territories as a base to fight a rear guard action against Persia. At that time and down to the mid-18th century, neighboring Oman played an integral role in the history of the maritime states.

Abu Dhabi island was settled by its present ruling family, Al-Nahyan, toward the end of the 18th century, and Dubai was founded by an offshoot of the same family in 1833. The late 18th and 19th centuries brought the division of the area between the Nahyan and the Qawasim, who ruled Ra's al-Khaimah and neighboring territories and whose clashes with British and Indian shipping led to British naval expeditions against what came to be known as the Pirate Coast. Treaties concluded in 1820 and 1835 established a formal relationship between the states of the southern Gulf and Britain that was to last until 1971. In 1853, the sheikhs agreed to a "perpetual maritime truce" to be enforced by the British navy. Under a treaty signed in 1892, the United Kingdom promised to protect the Trucial Coast from all aggression by sea and to lend its good offices in case of land attack. In 1955, the United Kingdom effectively intervened on the side of Abu Dhabi in the latter's dispute with Sa'udi Arabia over the Buraymi oasis, control of which is now shared by Abu Dhabi and Oman.

When, in 1968, the United Kingdom announced its intention to withdraw its forces from the area, a decision to establish a federation of Arab emirates—embracing the seven Trucial States, Bahrain, and Qatar—was agreed on in principle. However, it proved impossible to reconcile the differences among all the

members six Trucial States (excluding Ra's al-Khaimah) agreed on the establishment of the United Arab Emirates, which was officially proclaimed a sovereign, independent nation on 2 December 1971, with Ra's al-Khaimah joining in early 1972.

Externally, the move to independence in 1971 placed the United Arab Emirates in difficult straits with its two powerful neighbors, Sa'udi Arabia and Iran. Sa'udi Arabia asserted a territorial claim on a group of oases in the south of the United Arab Emirates, and Iran laid claim to its offshore islands. In 1974, a border agreement on the Liwa' oases was signed with Sa'udi Arabia, but apparently has not been fully recognized by the rulers of either country. The dispute with Iran over the Abu Musa and Tumb Islands became tense when Iranian forces unilaterally asserted control over the UAE section of Abu Musa in 1992. In 1996, Iran rejected a proposal by the Gulf Cooperation Council (GCC) to put the dispute over the islands to the International Court of Justice (ICJ) for arbitration. In 2003, Iran still occupied the islands. In the dispute, the United Arab Emirates has received support from the GCC, UN, and the United States.

The United Arab Emirates became a founding member in 1981 of the Gulf Cooperation Council (GCC), a political and economic alliance directed, at least implicitly, against Iran. During the Iran-Iraq war, the United Arab Emirates gave aid to Iraq but also maintained diplomatic relations with Iran and sought to mediate the conflict.

In the Gulf War, forces from the United Arab Emirates participated with allied troops and the government gave some \$4.5 billion to the coalition war effort. Subsequently, the United Arab Emirates has increasingly looked to the GCC, the United States, and friendly Arab states for its security protection. The UAE's generosity with foreign aid to Arab states (over \$15 billion through 1991) made it a significant player in the affairs of the region. In the years immediately after the war, the United Arab Emirates accepted the stationing of US troops on its soil.

During the Yugoslav civil war, the United Arab Emirates airlifted wounded Bosnian Muslim women and their families to Abu Dhabi, where they were given free medical treatment and housing, and financial support for one year. The country has also given heavily to Red Crescent relief organizations in Bosnia. Unlike its neighbors and partners in the GCC, Oman and Qatar, the United Arab Emirates did not establish liaison offices in Israel—although it relaxed the Arab-wide boycott of Israel in the hope that lasting peace between the Palestinians and Israel would be forthcoming as a result of the Oslo Accords.

In 1991, the Bank of Commerce and Credit International (BCCI), which was based in the United Arab Emirates and largely owned by the ruling family of Abu Dhabi, collapsed, causing repercussions all around the world. Accused of fraudulent dealings, the bank was officially liquidated in 1996, and the UAE cabinet resigned the following year. A sharp decline in oil prices in 1998 strongly affected the economy of the United Arab Emirates, which recorded a drop of almost 6% in its GDP. At the end of 1999, the United Arab Emirates celebrated the 25th anniversary of its founding, and the 30th anniversary of rule its president, Sheikh Zayid Bin Sultan Al Nuhayyan.

Following the 11 September 2001 terrorist attacks on the United States, the United States called upon the nations of the world to implement counterterrorism measures. In November, the United Arab Emirates ordered financial institutions in the country to freeze the assets of 62 organizations and individuals suspected by the United States of supporting terrorist movements.

During 2002 and into 2003, the United Arab Emirates, along with the other countries of the Persian Gulf, were confronted with the situation of a potential US-led war with Iraq. On 8 November 2002, the UN Security Council unanimously passed Resolution 1441, calling on Iraq to immediately disarm itself of weapons of mass destruction (WMD) and WMD weapons

capabilities, to allow the immediate return of IAEA and UN weapons inspectors, and to comply with all previous UN resolutions regarding the country since the end of the Gulf War in 1991. If Iraq was found to be in “material breach” of the resolution, “serious consequences” were to result. The United States and the United Kingdom began amassing troops in the region, and by the end of February 2003, the number of troops in the Persian Gulf was approximately 200,000. As of 1 February, there were 500 US military personnel and 7 aircraft based at Al Dhafra, and a detachment of Canadian Aurora maritime patrol aircraft in the United Arab Emirates. At an Arab League summit held at Sharm el-Sheik, Egypt, on 1 March, sharp divisions between Arab leaders on the Iraq situation emerged, particularly between Libya and Sa’udi Arabia. However, the leaders issued a declaration expressing “complete rejection of any aggression on Iraq,” and called for continuing UN weapons inspections. It also called upon Iraq to disarm itself of WMD and the missiles needed to deliver them. At the summit, some leaders argued war was inevitable and that the countries of the region should prepare for its aftermath; some argued that war could be avoided if Iraq were to comply with weapons inspections; and a third group argued that the summit should issue an unequivocal anti-war declaration. At the summit, Sheikh Zayid Bin Sultan Al Nahayyan called upon Iraqi president Saddam Hussein to relinquish power and leave Iraq in exchange for immunity from prosecution. Iraq would be placed under the tutelage of the UN and the Arab League until a new government could be formed. Bahrain and Kuwait supported the UAE proposal.

### 13 GOVERNMENT

According to the provisional constitution of the United Arab Emirates, promulgated on 2 December 1971, the executive branch of the UAE government consists of the Federal Supreme Council, headed by the president, and the Council of Ministers. The Federal Supreme Council, composed of the hereditary rulers of the seven emirates, has responsibility for formulation and supervision of all UAE policies, ratification of federal laws, and oversight of the union’s budget. Sheikh Zayid bin Sultan al-Nahayyan, emir of Abu Dhabi, was elected president upon independence and has continuously been reelected to five-year terms ever since. The president is assisted by the Council of Ministers, or cabinet, headed by the prime minister. Sheikh Maktum bin Rashid al-Maktoum, ruler of Dubai, has served as vice-president and prime minister since 1990, succeeding his father upon the latter’s death. The member states are represented in the cabinet in numbers relative to their size and importance.

After extending the 1971 interim constitution at five-year intervals for 25 years, the Supreme Council and the Federal National Council approved a measure removing the term “interim” in 1996, making the document a permanent constitution. The Federal National Council, consisting of 40 delegates from the member emirates, appointed by their respective rulers for two-year terms, can question cabinet ministers and make recommendations to the Supreme Council, but it has no legislative powers. The constitution stipulates the distribution of the 40 seats as follows: Abu Dhabi and Dubai, 8 each; Sharjah and Ra’s al-Khaimah, 6 each; and ‘Ajman, Umm al-Qaiwain, and Fujairah, 4 each. The Supreme National Council meets only occasionally.

Most of the emirates are governed according to tribal traditions, including open meetings in which citizens express themselves directly to their rulers.

### 14 POLITICAL PARTIES

No political parties exist in the UAE. Arab nationalist feeling has developed, however, and there is growing sentiment, particularly among urban youth, in favor of political liberalization and accelerated economic development. Several small clandestine

groups with ties to radical Arab organizations or militant Islamic groups are believed to be active and are watched closely by the federation’s security services.

### 15 LOCAL GOVERNMENT

The major institutions of local government are the municipalities of Abu Dhabi town, Al-‘Ayn, Dubai, Sharjah, Ra’s al-Khaimah, Fujairah, ‘Ajman, and Umm al-Qaiwain and a handful of traditional councils known as majalis and amiri diwans.

### 16 JUDICIAL SYSTEM

Abu Dhabi, Dubai, and Sharjah have developed relatively sophisticated judicial systems based, as in other Gulf states, on a combination of Shari’ah laws and contemporary legal codes. The 1971 constitution established a Federal Supreme Court and an indeterminate number of courts of first instance. The Supreme Court consists of a president and a maximum of five judges, all of whom are appointed by presidential decree upon approval of the Federal Supreme Council. The Supreme Court president and member judges are deemed independent of the executive and legislative branches; once appointed, they cannot be removed. As of 1978 the lower courts were incorporated into a unified federal judiciary consisting of four tribunals.

Shari’ah courts in each emirate are subject to review in the Federal Supreme Court. There is no separate national security court system. Military tribunals try only military personnel and apply a system based on Western military judicial procedure.

Court systems in the Emirates of Dubai and Ra’s-al-Khaimah function independently of the federal system. Each system has multiple levels of appeal and verdicts in capital cases are appealable to the president.

There are no jury trials. Under the Criminal Procedural Code, the accused has a right to counsel in capital cases and in those involving a possible penalty of life imprisonment. Due process rights are uniform under both the civil court and the Shari’ah court procedure.

### 17 ARMED FORCES

The armed forces of the UAE were placed under a unified command in 1976, and the forces of Abu Dhabi, Dubai, Ra’s al-Khaimah, and Sharjah were merged. In 2002, the combined forces totaled 41,500 personnel. The army had 35,000 soldiers including the Royal Guard. Equipment included 45 main battle tanks and 76 *Scorpion* light tanks. The navy was comprised of 2,500 personnel operating 16 patrol and coastal combatants. The air force had 4,000 personnel, 101 combat aircraft, and 49 armed helicopters.

Many military personnel are expatriates from Oman, Jordan, and other countries. The UAE provides support to the peacekeeping mission in Yugoslavia. The US air force maintains a military presence in the UAE. Defense spending in 2000 was about \$1.6 billion or 3.1% of GDP.

### 18 INTERNATIONAL COOPERATION

On 9 December 1971, shortly after achieving independence, the UAE became a member of the UN, and it now belongs to ESCWA and all the nonregional specialized agencies. The country is a member of G-77, GCC, the Islamic Conference, the Arab League, and OPEC. The UAE is a member of the WTO and signatory to the Law of the Sea.

### 19 ECONOMY

The economy of the UAE centers primarily on oil and oil-based industries, but the share of this contribution to the GDP fell from 70% in 1980 to an estimated 22% in 1998. This was principally the result of falling oil prices, but also reflected the growth in other sectors of the economy, such as manufacturing, finance and insurance, real estate, and government services. In 2002, the oil

industry's share was at 24%, but manufacturing had reached 15.1% of GDP from only 3.8% in 1980. The oil industry accounts for about 30% of exports and provides 70% to 80% of government revenues. In Abu Dhabi, by far the wealthiest of the seven emirates, oil revenues are supplemented by income from a huge investment fund. Dubai joined the ranks of the oil producers only in 1971, and entrepôt trade continues to play a major role in its economy. In 2000, Abu Dhabi completed a capacity expansion program has increased the UAE's crude oil production capacity to 2.6 million barrels per day (million barrels per day). Third quarter production in 2002 was 1.99 million barrels per day, somewhat over the official OPEC quota of 1.89 million barrels per day. Although 'Ajman has a small shipbuilding and ship repair yard and a recently established cement company, and Umm al-Qaiwain has a fish hatchery, a cement plant, and some small handicraft operations, these poorer emirates depend on federal aid—in effect, on revenue sharing by Abu Dhabi and Dubai. Oil production in Sharjah began in July 1974, and manufacturing and tourism there have been expanded. The number of factories in Sharjah rose from 74 in 1974 to 931 in 2000, increasing 13.4% from 1998. Ra's al-Khaimah has six large cement plants (three built since 1998), a pharmaceutical factory, a lime kiln, and the gulf's first explosives plant. Fujairah remains predominantly agricultural, but the emirate's government has also been developing an industrialization program, with emphasis on establishing mining-based industries. In 2002 it had 33 factories, a third producing nonmetallic metal products.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 the United Arab Emirates' gross domestic product (GDP) was estimated at \$51 billion. The per capita GDP was estimated at \$21,100. The annual growth rate of GDP was estimated at 5.6%. The average inflation rate in 2000 was 4.5%. The annual rate of GDP growth between 1988 and 1998 was about 4.2%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. Petroleum extraction accounts for approximately 34.2% of GDP; manufacturing, 11%; wholesale and retail trade, 10%; government services, 9.6%; business, 8%, and construction, 7.4%. Foreign aid receipts amounted to about \$1 per capita.

## 21 LABOR

In 2002, the workforce was estimated at 1.6 million. However, around 74% of the total labor force is made up of foreign nationals, with foreigners accounting for 98% of the private labor force. In 2001, the service sector provided jobs for 78% of the workforce, with industry amounting to 15%, and agriculture 7%.

The UAE leans heavily on skilled labor, technology, and management abilities provided by foreigners. Non-UAE Arabs are employed at all economic levels, including the government bureaucracy and civil service. Manual labor is largely performed by Pakistanis and Iranians, while many Indians are to be found in clerical positions. Most domestic servants are women from Sri Lanka or the Philippines. There is a high proportion of Europeans at management levels. Until recently, the large influx of immigrants was insufficient to cope with labor needs. A 1984 decree guarantees UAE nationals priority in hiring, in order to reduce dependence on expatriates.

Unionization is prohibited by law. Collective bargaining provisions do not exist, and strikes are strictly prohibited in the public sector. Rather, all labor contracts are reviewed by the Ministry of Labor to ensure that the pay will satisfy the employee's basic needs and secure a means of living.

There is no minimum wage. A standard workweek of eight hours per day, six days per week and minimum occupational health and safety requirements are not effectively enforced. Foreign workers are especially vulnerable to abuse. Widespread and credible reports indicate that foreign workers have had their passports confiscated, pay withheld, and are forced to work excessively long days far beyond the statutory maximum. Women working as domestic servants have also reported being sexually and physically abused. Foreign workers have little redress for their grievances. UAE administrative bodies virtually never rule against a UAE employer, and UAE employers can prevent a foreign worker from switching to another employer.

## 22 AGRICULTURE

Only about 81,000 hectares (200,000 acres) of land are cultivated. About 24% of cultivated land is used to grow vegetables, 30% fruit, 10% feed crops, and 36% for other uses. The most productive region is Ra's al-Khaimah, which receives underground water supplies from the nearby mountains of Oman and which enjoys the most plentiful rainfall. The main crops are tomatoes, melons, and dates.

The Digdaga Agricultural Trials Station in Ra's al-Khaimah is central to all agricultural research and training efforts in the UAE. Abu Dhabi has two large wheat farms at Al 'Ayn, and experimental farms at Rawaya and Mazaid (near Al 'Ayn) are designed to encourage local Bedouins to take up settled farming. The Abu Dhabi Arid Land Research Center on Sadiyat Island produces vegetables through special irrigation and hydroponic techniques. In 1999, UAE agriculture produced 1,055,000 tons of vegetables and melons, and 358,000 tons of fruit. Produce includes citrus, mangos, tomatoes, celery, potatoes, cucumbers, lettuce, melons, peppers, and fodder crops.

The Ministry of Agriculture and Fisheries reported a 48% increase in vegetable production between 1992 and 1995. Dates, traditionally grown on oases by nomads, are becoming less important because of vegetable and fruit production. In 1999, the UAE produced 295,000 tons of dates. The UAE currently satisfies about 60% of its domestic fruit and vegetable demand; bans on imports of certain vegetables and government incentives and subsidies are used to encourage domestic production. Roses and chrysanthemums are grown for export to Europe.

## 23 ANIMAL HUSBANDRY

Livestock production has risen sharply in recent years. In 2001, the UAE had 1,300,000 goats, 550,000 sheep, 220,000 camels, and 97,000 head of cattle. Dairy farming is centered in Ras al-Khaimah, with other dairy farms in Al Ain, Umm Al Quwain, Sharjah, and Dubai. The UAE produces about 90% of its dairy needs. Local poultry and egg production satisfy 27% and 40% of domestic demand, respectively. Five major producers account for 75% of the domestic chicken production. The poultry farm at Fujairah has the capacity to supply over 15% of domestic demand for broilers and eggs. Ras al-Khaimah and Al Ain are other centers of poultry production. Production of poultry meat reached 37,000 tons in 2001, with imports of poultry meat (mainly from France, Denmark, the United States, and Brazil). The UAE also re-exports poultry meat, mostly to Oman, former Soviet republics, and Iran.

## 24 FISHING

Fishing is an important source of domestic food and fodder. Per capita annual consumption of fish and shellfish in the UAE is more than any other country in the Middle East. UAE coastal waters abound in fish and shellfish, and the country borders two high-potential fishing regions, the Persian Gulf and the Gulf of Oman. Many varieties of fish are caught, including rock cod, tuna, mackerel, sardines, anchovies, jack, marlin, red mullet, bream, and snapper. Over 70% of the catch typically is dried and

processed into animal feed and fertilizer. The fish catch in 2000 was 105,456 tons, which supplied about 50% of local demand. Modern fishing techniques have been introduced with government assistance, and two new ports permitting the use of larger fishing boats were opened in 1981. The government also provides facilities for ship maintenance pro bono, as well as interest-free loans for the purchase of fishing boats and equipment. More than 3,000 fishing vessels annually operate in UAE waters. Umm Al Quwain is the site of a new 1,300 sq m marine farm which will research fish breeding. A fishmeal plant is in operation in Ra's al-Khaimah.

## 25 FORESTRY

Natural woodland is scarce, apart from palm groves along the northern and eastern coasts. Forested areas covered 321,000 hectares (793,000 acres), or about 3.8% of the total land area in 2000. The Forestry Department planted 80 million trees during 1980–95, at a cost of over \$3 billion. Imports of forest products totaled \$344.8 million in 1997.

## 26 MINING

Apart from oil and natural gas, the minerals sector included fertilizer production and production of construction materials, marble, and stone quarried from the Hajar Mountains. Copper and chromium have been found in Fujairah and Ra's al-Khaimah. In 2000, 60,000 tons of chromite ore were produced; 348,400 tons of ammonia (nitrogen content); and 243,400 tons of urea (nitrogen content). Lime, gypsum, hydraulic cement, and, presumably, common clays, diabase, gravel, limestone, sand, and shale were also produced.

## 27 ENERGY AND POWER

The UAE's crude oil production was 2.27 million barrels per day in the third quarter of 2002 (up from 1,260,000 barrels per day in 1985). Total reserves of crude oil were estimated at the beginning of 2002 at 97.8 billion barrels, or about 10% of the world's total. Production is confined to Abu Dhabi, Dubai, Sharjah, and Ra's al-Khaimah, which together had an estimated maximum daily capacity of 2.6 million barrels in 2002, giving the UAE the second-largest production capacity among Organization of the Petroleum Exporting Countries (OPEC) members (surpassed only Saudi Arabia). Abu Dhabi accounts for 94% of the total reserves, or about 92.2 billion barrels. Abu Dhabi's oil output comes almost exclusively from the onshore drilling activities of the Abu Dhabi Co. for Onshore Oil Operations (ADCO) and the offshore activities of Abu Dhabi Marine Operating Co. (ADMA-OPCO). Abu Dhabi has a 60% participation in the operations of both companies, which are managed by the government-owned Abu Dhabi National Oil Co. (ADNOC). The remaining 40% of ADCO's ownership is divided mainly among UK, US, and Dutch interests; the balance of ADMA-OPCO is owned by UK, French, and Japanese firms.

Offshore oil exploration by foreign companies has produced major new finds in recent years. Discovery of the offshore Butainah field in 1979 added about 1 billion barrels of oil to the UAE's proved reserves. That year, a US company, Amerada Hess, began producing crude oil at a rate of 15,000 barrels a day from the Arzanah offshore field. The Japan Oil Development Co. (JODCO), in partnership with ADNOC, began production at the offshore Umm ad-Dalkh field near Abu Dhabi in 1982. The two companies also agreed to develop three other small offshore areas, and both joined a French firm, CFP, to produce a projected 50,000 barrels of oil per day from the Upper Zakum field. The offshore Saleh field was found in 1983. As of 2002 ADNOC was planning to sell a 28% stake in the Upper Kakum field to foreign interests.

In 1981, Abu Dhabi and Dubai began to transfer up to half of their annual revenues from oil operations to the federation. The

UAE's oil export receipts were \$11 billion in 1999, down from \$12.3 billion in 1985, and from \$19.4 billion in 1980. Oil exports in 1995 accounted for 46% of total export revenue. In 2002, 60% of oil exports went to Japan.

The UAE has two major refineries in Abu Dhabi, both operated by ADNOC, as well as two smaller facilities. In addition, there is a new \$300 million condensate refinery in Dubai that began operations in 1999. Refining capacity was 514,750 barrels a day at the beginning of 2002. The UAE's proven natural gas reserves totaled about 6 trillion cu m; net production amounted to 39.9 billion cu m in 2000. The second phase of the \$1 billion Habshan onshore natural gas project was completed in early 2001.

All electricity is thermally generated from oil or natural gas. Electric power production was 36.3 billion kWh in 2000. Consumption of electricity in 2000 was 36 billion kWh. Total installed capacity in 2001 was 5.6 million kW. The first phase of the Taweelah A-2 cogeneration facility, the UAE's first independent water and power project, began operations in 2000.

## 28 INDUSTRY

The process of industrialization gathered momentum after the formation of the federation in 1971. By 2002, manufacturing was second only to the oil sector in contributions to economic output. To diversify the economy, in the early 1990s the UAE introduced new industries, including aluminum, cement, pharmaceuticals, fabricated metals, processed foods, fertilizer, and explosives. Manufacturing as a percentage of GDP rose from 3.8% in 1980 to 7.7% in 1990 to 8.7% in 1995 to 15.1% in 2002.

The Ar-Ruwais industrial complex in Abu Dhabi includes an oil refinery with a processing capacity of 120,000 barrels per day; a fertilizer factory, with a production capacity of 1,000 tons of ammonia and 1,500 tons of urea per day; and a gas liquefaction installation. In June 2002 agreement was reached on a contract to expand the refinery capacity Ruwais refinery to 500,000 barrels per day to be completed by 2005. The UAE has five other smaller refineries: In Abu Dhabi, a 88,500 barrels per day capacity facility run, like the Ruwais refinery, by the Abu Dhabi National Oil Company (ADNOC); in Fujairah, a 90,000 barrels per day refinery run by Metro Oil; in Dubai, the 120,000 barrels per day Jebel Ali condensate refinery run by the Emirate National Oil Company (ENOC), first opened in 1999; near Jebel Ali, a 40,000 barrels per day second-hand gasoline unit run by ISO Octane, opened May, 2000; and in Sharjah, another second-hand unit with 71,250 barrels per day capacity opened in 2001 and run by the Sharjah Oil Refining Company (SORC). The UAE's crude oil refining capacity as of January 2001 was 514,750 barrels per day.

Near Umm An-Nar, a large plant belonging to National Chlorine Industries produces salt, chlorine, caustic soda, and hydrochloric acid. In Dubai the industrial port complex at Jebel 'Ali is the largest manmade port in the world and includes the largest dry dock in the world with capacity of one million tons. The Jebel Ali Free Zone (JAFZ) is the UAE's most developed free trade zone, including close to 200 factories, prominent among them being a major power plant with water desalination units, a steel fabrication plant, and an aluminum smelter, built in 1979, producing 290,030 tons of aluminum products per year. Plans have been announced to expand the Dubai Aluminum Company's capacity to 372,600 tons per year. Dubai's older industrial zone of Rashidiya is the site of some 40% of the emirate's processing industries. The other emirates have developed industries that produce construction-related materials such as cement, asphalt, and concrete blocks.

According to the statistics of UAE's Ministry of Finance and Industry (MOFI), there were 2,153 registered industrial establishments in 2000 (up from 1,261 in 1995) employing 176,260 people. Forty percent of the units—854—were in Dubai, which also accounted for 46.7% of industrial investment (\$3.6

billion of \$7.76 billion). Abu Dhabi accounted for 25% of investment (\$2 billion) but only 10% of industrial units (235). Sharjah and Ras Al-Kaimah had industrial investment of \$790 million and \$763 million, respectively, each about 10% of the total. Outside of the oil sector, chemicals commanded the largest portion of investment (14.5%), with food and beverages second (11.2%). Metal production accounted for 3.6% of industrial investment and garments 0.8%.

### 29 SCIENCE AND TECHNOLOGY

Advanced technology in the United Arab Emirates has been imported mostly by foreign oil companies and is limited largely to heavy industry; nearly all of its technological specialists are foreigners. In the 1980s, the United Arab Emirates took major steps to decrease its reliance on foreign scientists and technicians. The Ministry of Agriculture and Fisheries has a research center in Ra's al-Khaimah. United Arab Emirates University, founded in 1976 at Al Ain, has faculties of sciences, engineering, agricultural sciences, medicine and health sciences. Ajman University College of Science and Technology was founded in 1988, Etisalat College of Engineering at Sharjah in 1989, and the The Higher Colleges of Technology at Abu Dhabi in 1988. In 1987-97, science and engineering students accounted for 24% of college and university enrollments.

### 30 DOMESTIC TRADE

Dubai remains the most important center of trade and commerce, both for the nation and the region. Many food importers also serve as wholesalers, distributors, and retailers. There are about four or five large companies controlling most of the food retail sector. Franchising has become very popular in a variety of retail sectors including, restaurants, clothing, hardware supplies, beauty products, health care products, toys, sporting goods, etc.

Business hours tend to vary, although general hours of 8 AM to 1 PM and 4 to 7 PM are observed; most offices are closed Thursday afternoon, and Friday is the weekly holiday. Banks are open from 8 AM to noon, Saturday-Thursday.

### 31 FOREIGN TRADE

UAE's commodity exports were crude oil (45%), natural gas, re-exports, dried fish, and dates as of 2000. Imports include machinery, vehicles, electrical equipment, aircraft, cosmetics, tobacco, steel, furniture, plastics, chemicals, and food products.

Principal trading partners in 1998 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
Japan	7,583	3,150	4,433
Korea	1,930	1,647	283
India	1,638	1,789	-151
Singapore	957	1,127	-170
United Kingdom	842	2,845	-2,003
United States	644	2,607	-1,963
Germany	187	2,102	-1,915
China (inc. Hong Kong)	147	1,417	-1,270
France	107	1,352	-1,245
Italy	101	1,772	-1,671

### 32 BALANCE OF PAYMENTS

Oil and natural gas exports have allowed the UAE to sustain a trade surplus for many years, but changes in oil prices cause the surplus to fluctuate widely from year to year. In the early 2000s traders in the UAE were beginning to seek out new markets in locales such as Russia, the Central Asian states, and East and South Africa. The government does not provide statistics for workers' remittances, investment income, oil and gas export revenues, foreign direct investment transactions, and capital

transactions, which seriously compromises the compilation of balance of payments statistics.

The US Central Intelligence Agency (CIA) reports that in 2000 the purchasing power parity of the United Arab Emirates' exports was \$47.6 billion while imports totaled \$28.6 billion resulting in a trade surplus of \$19 billion.

### 33 BANKING AND SECURITIES

The UAE Currency Board came into existence with its issuance of the UAE dirham in May 1973. In 1975-76, statutes came into force providing for the board's gradual transformation into a central bank, including powers to impose minimum liquidity ratios and other credit regulations. The board was replaced in 1980 by the UAE Central Bank, with enhanced authority to regulate the banking system. Capitalized at \$81.7 million, the bank was granted additional capital of \$2 billion from the government in 1982, which was to increase by 20% per year until a total deposit of \$4 billion had been reached.

The oil boom of the 1980s brought with it the proliferation of commercial banks, making the UAE one of the most overbanked countries in the world. By 1987, strains were beginning to show and two banks collapsed. Bad loans were prevalent and some borrowers used the Islamic prohibition on *riba* (interest) as an excuse not to repay debts.

UAE banks were hit hard by the invasion of Kuwait in 1990, when partial withdrawals amounted to an estimated UD7 billion (\$1.9 billion), or 7% of total deposits. In 1991, the Bank of Commerce and Credit International (BCCI), based in the United Arab Emirates and owned in large part by the ruling family of Abu Dhabi, was accused of fraudulent dealings, and closed, damaging the credibility of the UAE banking system. However, because of improvements in the banking system, in 1999 the government cleared the way for establishment of an offshore banking center to be based in the free zone on Saadiyat Island, to enable UAE to compete with Bahrain. Also in 1999, the merger of two banks—National Bank of Dubai and Emirates Bank International—was announced. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$10.7 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$42.6 billion.

As of 2000, the United Arab Emirates was planning a stock exchange as part of the financial center on Saadiyat Island in Abu Dhabi.

### 34 INSURANCE

Because of tightening federal regulations, the number of insurance companies declined from 126 in 1980 to 56 in 1987. The Federal Insurance Companies and Agents Law of 1984 requires all insurance companies established in the UAE to be public joint-stock companies, with equity wholly owned by UAE nationals. Companies already established in the country can obtain a concession from the local equity provision. Minimum capital must be UD10 million. In 2001, \$149 million worth of life insurance premiums was written in the United Arab Emirates. In 1999, there were 19 National Insurance companies practicing in UAE, and 28 foreign insurance companies.

### 35 PUBLIC FINANCE

A federal budget is prepared according to the UAE's development policy, while each emirate is responsible for municipal budgets and local projects. Conservative public expenditure policies have become more necessary as oil revenues have declined since 1983. Deficit spending is common. Abu Dhabi's oil income accounts for the bulk of federal revenues; under the constitution, each emirate contributes 50% of its net oil income to the federal budget.

The US Central Intelligence Agency (CIA) estimates that in 2000 the United Arab Emirates's central government took in revenues of approximately \$20 billion and had expenditures of \$22 billion. Overall, the government registered a deficit of approximately \$2 billion. External debt totaled \$12.6 billion.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

<b>REVENUE AND GRANTS</b>	<b>100.0%</b>	<b>20,000</b>
Tax revenue	17.7%	3,532
Non-tax revenue	16.2%	3,235
Capital revenue	0.1%	17
Grants	66.1%	13,216
<b>EXPENDITURES</b>	<b>100.0%</b>	<b>22,000</b>
General public services	3.2%	711
Defense	30.1%	6,613
Public order and safety	13.8%	3,032
Education	17.3%	3,812
Health	7.2%	1,589
Social security	3.2%	704
Housing and community amenities	1.6%	361
Recreation, cultural, and religious affairs	1.4%	318
Economic affairs and services	4.5%	999
Other expenditures	17.6%	3,861

### 36 TAXATION

Each emirate has its own decrees on corporate taxation. Corporate taxes are paid only by oil companies (at rates that vary among emirates) and branches of foreign banks (at 20%). Municipal taxes are 5% on residential and 10% on commercial rents. A 5% tax is imposed on hotel services and entertainment. There is no personal income tax.

### 37 CUSTOMS AND DUTIES

Dubai, the major area for foreign trade, is a free trade zone and free port with no restrictions on imports or exports. The individual emirate governments exert no control over imports, except for licensing. Customs duties are levied ad valorem; the rates differ among the emirates but are generally nominal (4% for most goods), except for a duty of 50% on alcoholic beverages (importation of which requires special permission). The duty on tobacco was 90% of the CIF (cost, insurance, and freight) value. Duty-free imports include machinery, construction materials, foodstuffs, medicine, and printed matter. Food imports require a health certificate and meats require a certificate from a slaughterhouse that has been approved under Islamic law. Import licenses are required for all firms desiring to engage in importation. The United Arab Emirates is a member of the Gulf Cooperation Council (GCC) along with Bahrain, Kuwait, Oman, Qatar, and Saudi Arabia. The GCC has been in discussions for a common external tariff (CET) for some years.

### 38 FOREIGN INVESTMENT

All the emirates are eager to attract foreign investment. One obstacle to foreign investment may be the federal requirement that investments must be on a joint venture basis with the local partner owning at least 51% of the venture. The exception is investment in the free trade zones where 100% foreign ownership is allowed. In 2002, there were 11 free trade zones in the UAE in various stages of development. Most provide 100% import and export tax exemption, 100% exemption from commercial levies, 100% repatriation of capital and profits, multiyear leases and other services, including assistance with recruiting labor. The largest and most successful is the Jebel Ali industrial free zone

(JAFZ) in Dubai incorporating close to 2,000 companies from over 100 countries. The JAFZ has attracted more than \$3 billion of foreign investment. In 2002, three new zones were announced: The Dubai International Financial Centre; the Dubai Metals and Commodities Centre; and the Mohammed bin Rashid Technology Zone. In 2000, Dubai Internet City, the world's first e-commerce free zone, was opened, and in 2001, the Dubai Media City began was launched. Other free zones are located in the Dubai International Airport, and in Sharjah, Ajman, Umm Al Quwain, and Fujairah. Principal foreign investors are the United Kingdom, the United States, France, India, Japan, and Germany. Though reliable statistics are not available for the UAE, some reports suggest that US investment in 1999 was about \$500 million. Multinational companies operating in the Jebel Ali industrial zone include the following Samsung (ROK); Pioneer (Japan); General Motors, IBM, Mobil, and Toys "R" Us (US); and Ericsson (Sweden).

In 1996, UAE created the Abu Dhabi Free Zone Authority to regulate the development of Saadiyat Island, where there will be few restrictions on foreign companies. Companies opening offices there will be exempt from taxes, will be allowed to repatriate all profits and capital, to import labor; in addition, there will be no requirements to establish UAE partners. In 1999, the Emirates Global Capital Corporation was granted a 50-year contract to develop the 26 sq km (10 sq mi) zone, where a stock, commodities, and futures exchange was planned. However, in 2002 this project was on hold.

### 39 ECONOMIC DEVELOPMENT

The discovery of oil opened the way for the UAE into the industrial age. The federation, formed in 1971, used its vast oil wealth during the 1970s to transform the national economy through expansion of roads, ports, airports, communications facilities, electric power plants, and water desalination facilities, as well as construction of huge oil-processing complexes. With the completion of major infrastructural projects by the early 1980s, the focus of development shifted to diversifying the economy by establishing capital-intensive industries based on oil and gas resources.

The country's major industrial projects are the Jabal 'Ali industrial zone in Dubai and the refinery complex at Ar-Ruwais in Abu Dhabi. Jabal 'Ali includes the Dubai Aluminum Co. smelter, a natural gas liquefaction plant, a cable factory, and a desalination plant that is one of the world's largest, with an output of about 25 million gallons of water daily. In mid-1995, 822 companies were operating in the Jabal 'Ali Free Zone. by 2002, this number had risen to about 2000, representing investments from over 100 countries. The United Arab Emirates now hosts 11 free trade zones including the innovative Dubai Internet City, launched in 2000, the world's first e-commerce free trade zone. and Dubai Multi-Media City, established in 2001. In 2002 three new specialized free zones were founded: the Dubai International Financial Centre, the Dubai Metals and Commodities Centre, and the Mohammed bin Rashid Technology Park.

In 1997 the Industrial Loan Fund was set up to provide finance through the Gulf Industrial Corporation (GIC) established in 1979 in Abu Dhabi. The GIC now owns a large number of industries which produce a wide variety products, including cement blocks, fodder, flour, PVC pipes, mineral waters, and aluminum.

In relation to GNP, the UAE is one of the world's major aid donors; the principal vehicle for bilateral aid has been the Abu Dhabi Fund for Arab Economic Development. The UAE makes regular annual payments to Syria, Jordan, Lebanon, and the PLO. Responding to Iraq's invasion of Kuwait in 1990, the UAE made significant financial contributions to assist the frontline states and to share the cost of the foreign military forces.

## 40 SOCIAL DEVELOPMENT

There is no social security law in the UAE, but many welfare benefits are available to citizens, among them free hospital treatment and medical care and subsidies for education. Relief for any domestic catastrophe is provided from a disaster fund. If the father of a family is unable to work because of illness, disability, or old age, he receives help under the National Assistance Law; should he die or divorce his wife, the woman's future is secured. UAE nationals receive many government services, including health care, water, and electricity, free of charge.

Female employment is growing in government service and in occupations such as education and health. According to government statistics, women accounted for nearly 20% of the workforce. Women account for 65% of intermediate and secondary school teachers, 54% of health care workers, and nearly 40% of all government employees. They are also accepted for military service. Women account for over 75% of the student body at the UAE University.

Women continue to suffer from official discrimination. Females may not leave the country without the permission of a male relative. Custody is given to mothers following divorce only in cases of children under seven. A married woman can work outside the home only with her husband's permission. Men may have more than one wife, but not more than four, and the practice is widespread. Women who remarry may have to give up custody of children from a previous marriage.

Many domestic servants are foreigners who are sometimes subjected to mistreatment or abuse, and poor pay. If they leave their employers without fulfilling the terms of their contract, they may be barred from taken further employment.

The government restricts democratic freedoms and also limits freedoms of speech, assembly, association, press, and the right to a speedy trial.

## 41 HEALTH

Health facilities have been expanded rapidly since independence. Modern hospitals have been built in Abu Dhabi, Dubai, and other towns. In 1991, there were 1,526 doctors and 2,800 nurses. In 1991–1993, 95% of the population had access to health care services. In 1995, 95% of the population had access to safe water and 98% had adequate sanitation in 1994–1995. As of 1999, there were an estimated 1.8 physicians and 2.6 hospital beds per 1,000 people. In the same year total health care expenditure was estimated at 8.4 % of GDP.

Average life expectancy in 2000 was 75 years and the infant mortality rate was 7 per 1,000 live births. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 18.3 and 3.9 per 1,000 people. Children up to one year old were immunized in 1994 against tuberculosis, 98%; diphtheria, pertussis, and tetanus, 90%; polio, 90%; and measles, 90%. As of 1999 the rates for DPT and measles were, respectively, 94% and 95%.

Typhoid fever and tuberculosis are rare; malaria remains a problem. Malaria incidence was 3,735 reported cases in 1993. The goiter prevalence was 40.4 per 100 school children in 1996. The HIV prevalence rate in 1997 was 0.2 per 100 adults. The next year, there were only eight cases of AIDS reported.

## 42 HOUSING

The federal government is attempting to make modern low-cost homes available to poorer families, supplying them with amenities such as piped water, sewerage systems, and electricity. The Ministry of Housing constructed about 4,000 houses for free distribution to poor families between 1978 and 1981. In 1993, government spending for housing was at about 30% of the total budget. In 1995, the Abu Dhabi Department of Social Service and Commercial Buildings (est. 1976) began construction of 504

residential buildings and had 417 other projects in the planning stages. The department has built over 40,000 housing units since 1976. In 1980, 33% of all housing units were flats, 30% were traditional Arabic dwellings, 9% were low-cost housing, 8% were shacks, and the remainder were sheds, caravans, single rooms, tents, and other facilities. About 85% had water closets and 26% had electricity, piped-in water, and access to a sewage system.

## 43 EDUCATION

The educational system of the United Arab Emirates has burgeoned since 1971. Education in the six northern emirates, formerly financed and administered by Kuwait, has been managed by the UAE Ministry of Education since 1972. Education is compulsory for six years at the primary level, from age six, and is free to all UAE citizens, as are school uniforms, books, equipment, and transportation. Arabic is a compulsory subject, and segregation of classes by sex is required. The system remains concentrated at the primary level. At the secondary level, children go through six years of education in two stages. In 1997, there were 259,509 pupils and 16,148 teachers at the primary level. Student-to-teacher ratio stood at 16 to 1. In the same year, secondary schools had 180,764 pupils and approximately 11,000 teachers. As of 1999, 78 % of primary-school-age children were enrolled in school, while 68% of those eligible attended secondary school. United Arab Emirates University is at Al 'Ayn. In 1997, all higher-level institutions had 16,213 students. Approximately 16.7% of the central government budget was allocated to education in the latter part of the 1990s. As of 1999, public expenditure on education was estimated at 1.9% of GDP. For the year 2000, adult illiteracy rates were estimated at 23.5% (males, 24.8%; females, 20.5%).

## 44 LIBRARIES AND MUSEUMS

The National Library has four branches and holds 370,000 volumes. The Higher Colleges of Technology (175,000 volumes), and the United Arab Emirates University (300,000 volumes) are in Abu Dhabi. The Al 'Ayn Museum (1971) is an archeological institution. There are local museums in Dubai, Fujairab, and Sharjah, which is also home to archaeological, historical, Islamic, and science museums.

## 45 MEDIA

The communications system has been dramatically improved and expanded in recent years. Telecommunications operations in the emirates are all handled by ETISALAT. The Jabal 'Ali earth satellite station in Dubai maintains telephone and telegraph traffic, telex data transmission, and color television broadcasting; computer-controlled automatic telex systems have been installed in both Dubai and Abu Dhabi. In 1998, the UAE had 915,223 main telephone lines and 1 million cellular phones in use. A color television network connects Abu Dhabi with Dubai and Sharjah. UAE Radio has broadcasting stations in four emirates; the first commercial station was opened in Abu Dhabi in 1980. As of 1999 there were 8 AM and 3 FM radio stations and 15 television stations. In 2000 the UAE had 318 radios and 292 television sets for every 1,000 people.

The Provisional Constitution provides for free expression; however, the government restricts expression in practice. All published materials must be licensed by the Ministry of Education, which governs content and allowable subjects. The media practice self-censorship on the subjects of government policy, the ruling families, national security, religion, and international relations. Arabic-language dailies published in the UAE in 2002 include: *Al-Khalij* (2002 circulation, 85,000), *Al-Ittihad (Unity)*, 58,000), *Al-Fajr (The Dawn)*, 50,000), *Al-Wahdah* (30,000), and *Al-Bayan* (32,650). There were three English-language dailies: the *Gulf News* (91,530) and *Khaleej Times*

(72,000), published in Dubai, and the *Emirates News* (21,150), published in Abu Dhabi.

#### 46 ORGANIZATIONS

There are chambers of commerce in the larger states. The Federation of United Arab Emirates Chambers of Commerce and Industry is located in Abu Dhabi. Various social and sporting clubs provide outlets for philanthropic work and recreation. National youth organizations include the National Union of Students of the Emirates and the Emirates Scout Association. The Red Crescent Society is active.

#### 47 TOURISM, TRAVEL, AND RECREATION

Except for Gulf nationals and citizens of the UK, most visitors must secure a visa in advance. Tourism is encouraged by all the emirates, whose varied scenery includes mountains, beaches, deserts and oases. Activities include visits to Bedouin markets, museums, zoos, and aquariums. Many large world-class hotels have opened in recent years. The emirates attract tourists from Western Europe during the winter, when the main attractions are the beaches and sunny climate. Tourists numbered 3,906,545 in 2000, with receipts totaling \$1 billion

The cost of staying in Dubai, according to 1999 UN estimates, was \$194 per day; estimated daily expenses for travel in Abu Dhabi was approximately \$197.

#### 48 FAMOUS EMIRIANS

Sheikh Zayed bin Sultan an-Nahyan (b.1918) has been ruler of Abu Dhabi since 1966 and president of the UAE since 1971.

#### 49 DEPENDENCIES

The UAE has no territories or colonies.

# UNITED STATES PACIFIC DEPENDENCIES

## AMERICAN SAMOA

American Samoa, an unincorporated and unorganized insular US territory in the South Pacific Ocean, comprises that portion of the Samoan archipelago lying E of longitude 171° W. (The rest of the Samoan islands comprise the independent state of Western Samoa.) While the Samoan group as a whole has an area of 3,121 sq km (1,205 sq mi), American Samoa consists of only seven small islands (between 14° and 15° S and 168° and 171° W) with a total area (land and water) of 197 sq km (76 sq mi). Five of the islands are volcanic, with rugged peaks rising sharply, and two are coral atolls.

The climate is hot and rainy; normal temperatures range from 24°C (75°F) in August to 32°C (90°F) during December–February; mean annual rainfall is 330 cm (130 in), the rainy season lasting from December through March. Hurricanes are common. The native flora includes flourishing tree ferns, coconut, hardwoods, and rubber trees. There are few wild animals.

As of mid-2002, the estimated population was 68,688, an increase over the 1986 population estimate of 37,500. However, the total population has remained relatively constant for many years because of the substantial number of Samoans who migrate to the United States. The inhabitants, who are concentrated on the island of Tutuila, are almost pure Polynesian. English is the official language, but Samoan is also widely spoken. Most Samoans are Christians.

The capital of the territory, Pago Pago, on Tutuila, has one of the finest natural harbors in the South Pacific and is a duty-free port. Passenger liners call there on South Pacific tours, and passenger and cargo ships arrive regularly from Japan, New Zealand, Australia, and the US west coast. There are regular air and sea services between American Samoa and Western Samoa, and scheduled flights between Pago Pago and Honolulu.

American Samoa was settled by Melanesian migrants in the 1st millennium BC. The Samoan islands were visited in 1768 by the French explorer Louis-Antoine de Bougainville, who named them the Îles des Navigateurs as a tribute to the skill of their native boatmen. In 1889, the United States, the United Kingdom, and Germany agreed to share control of the islands. The United Kingdom later withdrew its claim, and under the 1899 Treaty of Berlin, the United States was internationally acknowledged to have rights extending over all the islands of the Samoan group lying east of 171° W, while Germany was acknowledged to have similar rights to the islands west of that meridian. The islands of American Samoa were officially ceded to the United States by the various ruling chiefs in 1900 and 1904, and on 20 February 1929 the US Congress formally accepted sovereignty over the entire group. From 1900 to 1951, the territory was administered by the US Department of the Navy, and thereafter by the Department of the Interior. The basic law is the Constitution of 1966.

The executive branch of the government is headed by a governor who, along with the lieutenant governor, is elected by popular vote; before 1977, the two posts were appointed by the US government. Village, county, and district councils have full authority to regulate local affairs.

The legislature (Fono) is composed of the House of Representatives and the Senate. The 15 counties elect 18 matai (chiefs) to four-year terms in the senate, while the 20 house members are elected for two-year terms by popular vote within the counties. (There is one appointed member from Swains Island.) The secretary for Samoan affairs, who heads the Department of Local Government, is appointed by the governor. Under his administration are three district governors, the county chiefs, village mayors, and police officials. The judiciary, an independent branch of the government, functions through the high court and five district courts. Samoans living in the islands as of 17 April 1900 or born there since that date are nationals of the United States. The territory sends one delegate to the US House of Representatives.

The economy is primarily agricultural. Small plantations occupy about one-third of the land area; 90% of the land is communally owned. The principal crops are bananas, breadfruit, taro, papayas, pineapples, sweet potatoes, tapioca, coffee, cocoa, and yams. Hogs and poultry are the principal livestock raised; dairy cattle are few. The principal cash crop is copra. A third of the total labor force is employed by the federal and territorial government. The largest employers in the private sector, with more than 15% of the labor force, are two modern tuna canneries supplied with fish caught by Japanese, US, and Taiwanese fishing fleets. Between 80% and 90% of foreign trade is conducted with the United States.

Samoans are entitled to free medical treatment, including hospital care. Besides district dispensaries, the government maintains a central hospital, a tuberculosis unit, and a leprosarium. US-trained staff physicians work with Samoan medical practitioners and nurses. The LBJ Tropical Medical Center opened in 1986.

Education is a joint undertaking between the territorial government and the villages. School attendance is compulsory for all children from 6 through 18. The villages furnish the elementary-school buildings and living quarters for the teachers; the territorial government pays teachers' salaries and provides buildings and supplies for all but primary schools. Since 1964, educational television has served as a basic teaching tool in the school system. About 97% of the population is literate. In 1997, total enrollment in American Samoa's 29 public elementary and secondary schools was over 19,000. American Samoa Community College enrolled 1,178 in the fall of 2001.

Radiotelegraph circuits connect the territory with Hawaii, Fiji, and Western Samoa. Every village in American Samoa has telephone service.

## GUAM

The largest and most populous of the Mariana Islands in the Western Pacific, Guam (13° 28' N and 144° 44' E) has an area, including land and water, of 540 sq km (208 sq mi) and is about 48 km (30 mi) long and from 6 to 12 km (4–7 mi) wide. The island is of volcanic origin; in the south, the terrain is mountainous, while the northern part is a plateau with shallow

fertile soil. The central part of the island (where the capital, Agaña, is located) is undulating country.

Guam lies in the typhoon belt of the Western Pacific and is occasionally subject to widespread storm damage. In May 1976, a typhoon with winds of 306 km/hr (190 mph) struck Guam, causing an estimated \$300 million in damage and leaving 80% of the island's buildings in ruins. Guam has a tropical climate with little seasonal variation. Average temperature is 26°C (79°F); rainfall is substantial, reaching an annual average of more than 200 cm (80 in). Endangered species include the giant Micronesian kingfisher and Marianas crow.

The mid-2002 population, excluding transient US military and civilian personnel and their families, was estimated at 160,796, an increase over the 1986 estimate of 117,500. The increase was attributed largely to the higher birthrate and low mortality rate. The present-day Chamorro, who comprise about 37% of the permanent resident population, descend from the intermingling of the few surviving original Chamorro with the Spanish, Filipino, and Mexican settlers, plus later arrivals from the United States, United Kingdom, Korea, China, and Japan. Filipinos (26%) are the largest ethnic minority. English is the official language, although Chamorro is taught in the primary schools. The predominant religion is Roman Catholicism.

The earliest known settlers on Guam were the original Chamorro, who migrated from the Malay Peninsula to the Pacific around 1500 bc. When Ferdinand Magellan landed on Guam in 1521, it is believed that as many as 100,000 Chamorro lived on the island; by 1741, their numbers had been reduced to 5,000—most of the population either had fled the island or been killed through disease or war with the Spanish. A Spanish fort was established in 1565, and from 1696 until 1898, Guam was under Spanish rule.

Under the Treaty of Paris that ended the Spanish-American War in 1898, the island was ceded to the United States and placed under the jurisdiction of the Department of the Navy. During World War II, Guam was occupied by Japanese forces; the United States recaptured the island in 1944 after 54 days of fighting. In 1950, the island's administration was transferred from the Navy to the US Department of the Interior. Under the 1950 Organic Act of Guam, passed by the US Congress, the island was established as an unincorporated territory of the United States; Guamanians were granted US citizenship, and internal self-government was introduced.

The governor and lieutenant governor have been elected directly since 1970. A 15-member unicameral legislature elected for two years by adult suffrage is empowered to legislate on all local matters, including taxation and appropriations. The US Congress reserves the right to annul any law passed by the Guam legislature, but must do so within a year of the date it receives the text of any such law.

Judicial authority is vested in the district court of Guam, and appeals may be taken to the regular US courts of appeal and ultimately to the US Supreme Court. An island superior court and other specialized courts have jurisdiction over certain cases arising under the laws of Guam. The judge of the district court is appointed by the US president; the judges of the other courts are appointed by the governor. Guam's laws were codified in 1953.

Guam is one of the most important US military bases in the Pacific, and the island's economy has been profoundly affected by the large sums of money spent by the US defense establishment. During the late 1960s and early 1970s, when the United States took the role of a major combatant in the Viet-Nam conflict, Guam served as a base for long-range US bombers on sorties over Indochina. In 2001, there were 3,398 active-duty US military personnel stationed on the island.

Prior to World War II, agriculture and animal husbandry were the primary activities. By 1947, most adults were wage earners employed by the US armed forces, although many continued to

cultivate small plots to supplement their earnings. Since World War II, agriculture has generally contributed less than 1% of the GNP, partly because a considerable amount of arable land is taken up by military installations. Fruits and vegetables are grown and pigs and poultry are raised for local consumption, but most food is imported. Current fish catches are insufficient to meet local demand.

Tourism has become a major industry and sparked a boom in the construction industry in the mid-1980s. The number of visitors grew rapidly from 6,600 in 1967 to around one million per year in the early 2000s, 90% of whom come from Japan. The stagnation in the Japanese economy since the early 1990s slowed the growth of Guam's tourism sector.

The Guam Rehabilitation Act of 1963 has funded the territory's capital improvement program. Further allocations in 1969 and 1977 provided over \$120 million for additional capital improvements and development of the island's power installations. More than \$200 million of federal funds were authorized for typhoon relief in 1977–78. Total expenditures by the government of Guam were \$431 million in 2000; revenues were \$420 million.

Guam's foreign trade usually shows large deficits. The bulk of Guam's trade is with the United States, Micronesia, and Japan.

US income tax laws are applicable in Guam; all internal revenue taxes derived by the United States from Guam are paid into the territory's treasury. US customs duties, however, are not levied. Guam is a duty-free port. In its trade with the US mainland, Guam is required to use US shipping.

Typical tropical diseases are practically unknown today in Guam. Tuberculosis, long the principal killer, was brought under control by the mid-1950s. The Guam Memorial Hospital has a capacity of 192 beds. Village dispensaries serve both as public health units and first-aid stations. In addition, there are a number of physicians in private practice. Specialists from the US Naval Hospital in Guam, assisting on a part-time basis, have made possible a complete program of curative medicine.

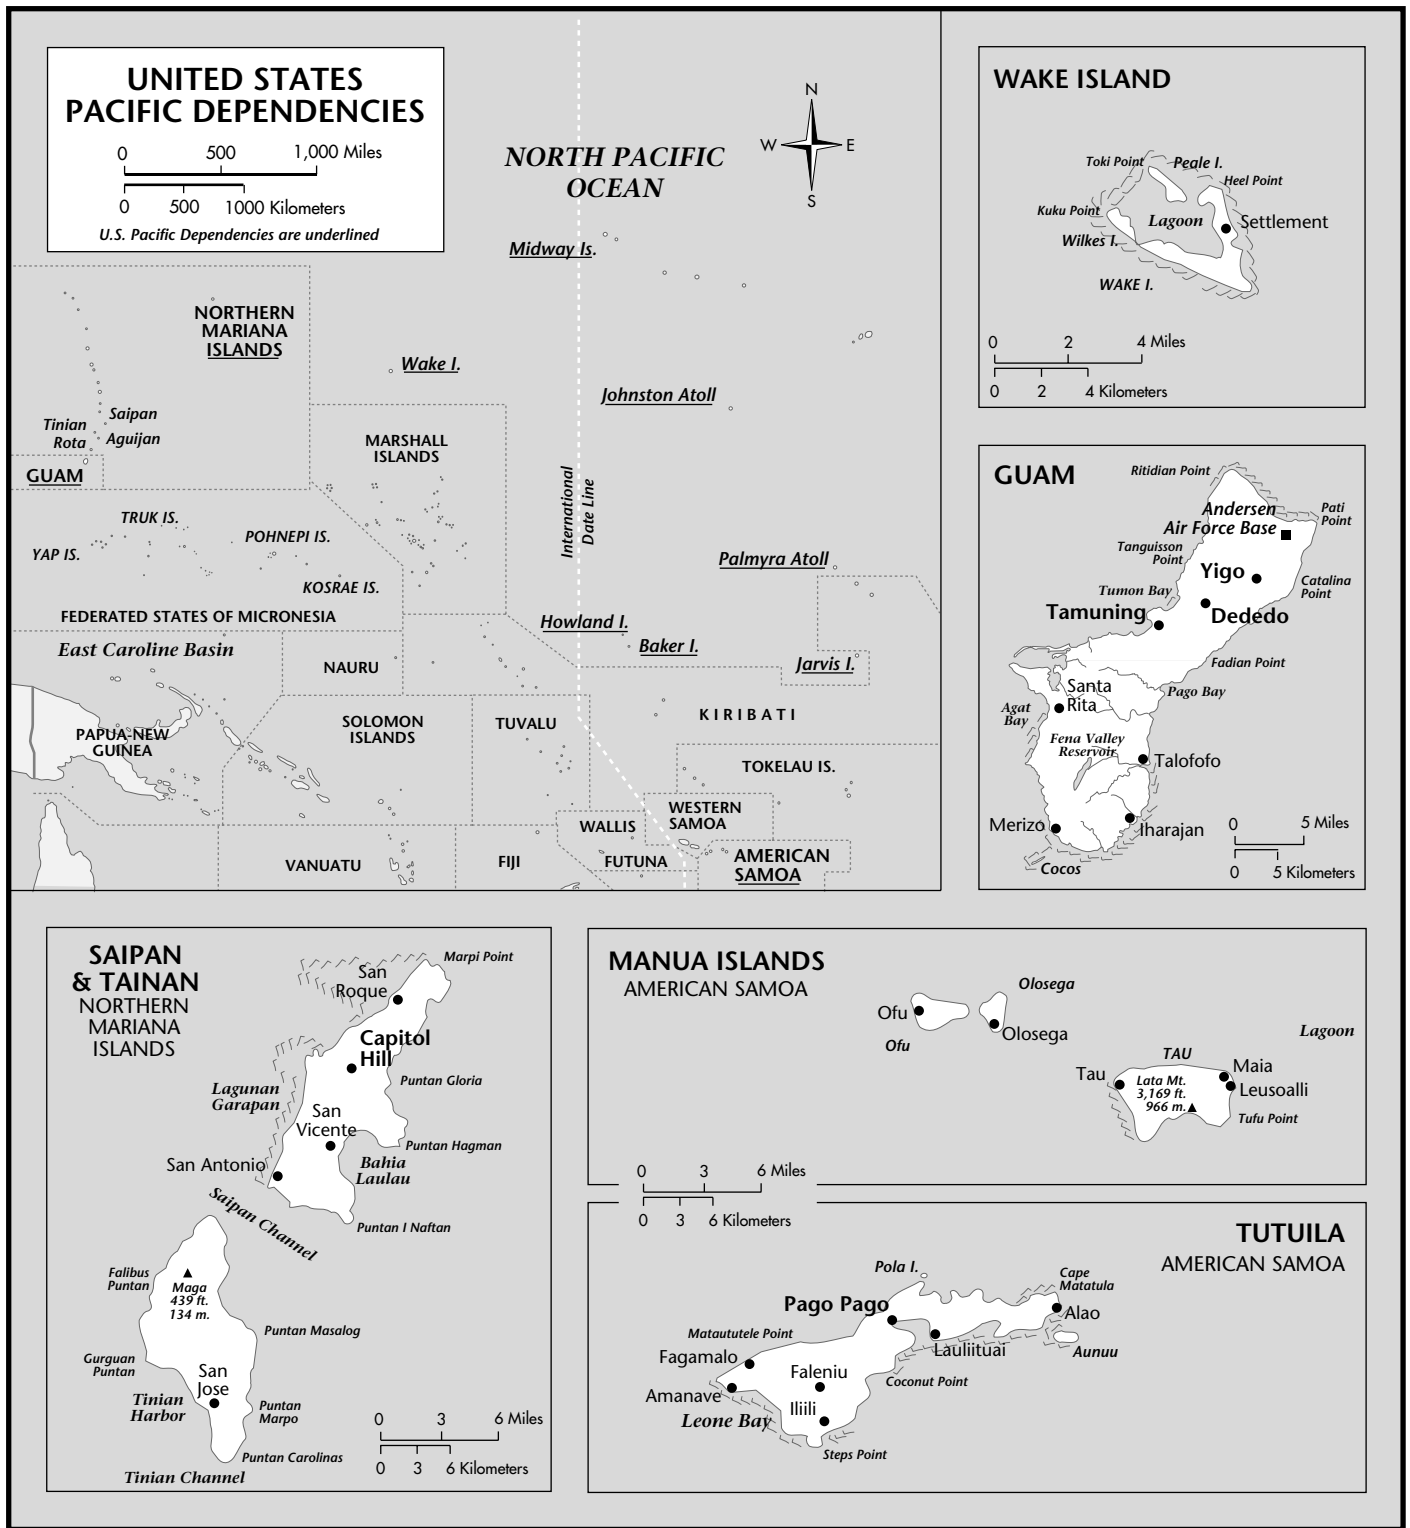

School attendance is compulsory from the age of 6 through 16. In 1998/99, 31,860 pupils were enrolled in public elementary and secondary schools. The University of Guam enrolled 3,748 students in 1998/99, and Guam Community College enrolled 4,404 students in the fall of 1998.

## HOWLAND, BAKER, AND JARVIS ISLANDS

Howland Island (0° 48' N and 176° 38' W), Baker Island (0° 14' N and 176° 28' W), and Jarvis Island (0° 23' S and 160° 1' W) are three small coral islands, each about 2.6 sq km (1 sq mi) in area, belonging to the Line Islands group of the Central Pacific Ocean. All are administered directly from Washington as US unincorporated territories. Public entry is by special permit and generally restricted to scientists and educators. Howland was discovered in 1842 by US sailors, claimed by the United States in 1857, and formally proclaimed a US territory in 1935–36. It was worked for guano by US and British companies until about 1890.

Baker, 64 km (40 mi) S of Howland, and Jarvis, 1,770 km (1,100 mi) E of Howland, also were claimed by the United States in 1857, and their guano deposits were similarly worked by US and British enterprises. The United Kingdom annexed Jarvis in 1889. In 1935, the United States sent colonists from Hawaii to all three islands, which were placed under the US Department of the Interior in 1936 and are administered as part of the National Wildlife Refuge system. Baker was captured by the Japanese in 1942 and recaptured by the United States in 1944. The three islands lack fresh water and have no permanent inhabitants. They are visited annually by the US Coast Guard. A lighthouse on Howland Island is named in honor of the US aviatrix Amelia Earhart, who vanished en route to the island on a round-the-world flight in 1937.

**JOHNSTON ATOLL**

Johnston Atoll, located in the North Pacific 1,151 km (715 mi) sw of Honolulu, consists of two islands, Johnston (16° 44' N and 169° 31' W) and Sand (16° 45' N and 169° 30' W), with a total land and water area of about 2.6 sq km (1 sq mi). The islands are enclosed by a semicircular reef. It was discovered by English sailors in 1807 and claimed by the United States in 1858. For many years, it was worked for guano and was a bird reservation.

Commissioned as a naval station in 1941, it remains an unincorporated US territory under the control of the US Department of the Air Force. In recent years, it has been used primarily for the testing of nuclear weapons.

As of January 2003, there were about 800 people living on the atoll; the population, usually standing at 1,100 government personnel and contractors, decreased significantly after the September 2001 departure of the US Army Chemical Activity

Pacific (USACAP). The atoll is equipped with an excellent satellite and radio telecommunications system.

## MIDWAY

The Midway Islands (28° 12'–17' N and 177° 19'–26' W) consist of an atoll and two small islets, Eastern Island (177° 20' W) and Sand Island (177° 22'–24' W), 2,100 km (1,300 mi) WNW of Honolulu. Total land and water area is 5 sq km (2 sq mi). As of 2002, 40 people made up the staff of the US Fish and Wildlife service on the atoll.

Discovered and claimed by the United States in 1859 and formally annexed in 1867, Midway became a submarine cable station early in the 20th century and an airlines station in 1935. Made a US naval base in 1941, Midway was attacked by the Japanese in December 1941 and January 1942. In one of the great battles of World War II, a Japanese naval attack on 3–6 June 1942 was repelled by US warplanes. Midway is a US unincorporated territory; there is a closed naval station, and the islands are important nesting places for seabirds. In 1993, administrative control of Midway was transferred from the US Department of the Navy to the US Department of the Interior's Fish and Wildlife Service.

## NORTHERN MARIANAS

The Northern Marianas, a US commonwealth in the Western Pacific Ocean, is comprised of the Mariana Islands excluding Guam (a separate political entity). Located between 12° and 21° N and 144° and 146° E, it consists of 16 volcanic islands with a total land area of about 475 sq km (183.5 sq mi). Only six of the islands are inhabited, and most of the people live on the three largest islands—Rota, 85 sq km (33 sq mi); Saipan, 122 sq km (47 sq mi); and Tinian, 101 sq km (39 sq mi).

The climate is tropical, with relatively little seasonal change; temperatures average 21–29° C (70–85° F), and relative humidity is generally high. Rainfall averages 216 cm (85 in) per year. The southern islands, which include Rota, Saipan, and Tinian, are generally lower and covered with moderately heavy tropical vegetation. The northern islands are more rugged, reaching a high point of 959 m (3,146 ft) on Agrihan, and are generally barren due to erosion and insufficient rainfall. Pagan and Agrihan have active volcanos, and typhoons are common from August to November. Insects are numerous and ocean birds and fauna are abundant. The Marianas mallard is a local endangered species.

The Northern Marianas had an estimated population of 77,311 in mid-2002. Three-fourths of the population is descended from the original Micronesian inhabitants, known as Chamorros. There are also many descendants of migrants from the Caroline Islands and smaller numbers of Filipino and Korean laborers and settlers from the US mainland. English is the official language and Chamorro and Carolinian are taught in school. However, only 14% of the population speaks English in the home. About 90% of the people are Roman Catholic.

It is believed that the Marianas were settled by migrants from the Philippines and Indonesia. Excavations on Saipan have yielded evidence of settlement around 1500 BC. The first European to reach the Marianas, in 1521, was Ferdinand Magellan. The islands were ruled by Spain until the Spanish defeat by the United States in the Spanish-American War (1898). Guam was then ceded to the United States and the rest of the Marianas were sold to Germany. When World War I broke out, Japan took over the Northern Marianas and other German-held islands in the Western Pacific. These islands (the Northern Marianas, Carolines, and Marshalls) were placed under Japanese administration as a League of Nations mandate on 17 December 1920. Upon its withdrawal from the League in 1935, Japan began to fortify the islands, and in World War II they served as important military bases. Several of the islands were the scene of heavy fighting during the war. In the battle for control of Saipan

in June 1944, some 23,000 Japanese and 3,500 US troops lost their lives in one day's fighting. As each island was occupied by US troops, it became subject to US authority in accordance with the international law of belligerent occupation. The US planes that dropped atomic bombs on Hiroshima and Nagasaki, bringing an end to the war, took off from Tinian.

On 18 July 1947, the Northern Mariana, Caroline, and Marshall islands formally became a UN trust territory under US administration. This Trust Territory of the Pacific Islands was administered by the US Department of the Navy until 1 July 1951, when administration was transferred to the Department of the Interior. From 1953 to 1962, the Northern Marianas, with the exception of Rota, were administered by the Department of the Navy.

The people of the Northern Marianas voted to become a US commonwealth by a majority of 78.8% in a plebiscite held on 17 June 1975. A covenant approved by the US Congress in March 1976 provided for the separation of the Northern Marianas from the Caroline and Marshall island groups, and for the Marianas' transition to a commonwealth status similar to that of Puerto Rico. The islands became internally self-governing in January 1978. On 3 November 1986, US president Ronald Reagan proclaimed the Northern Marianas a self-governing commonwealth; its people became US citizens. The termination of the trusteeship was approved by the UN Trusteeship Council in May 1986 and received the required approval from the UN Security Council. On 3 November 1986, the Constitution of the Commonwealth of the Northern Marianas Islands came into force.

A governor and a lieutenant governor are popularly elected for four-year terms. The legislature consists of 9 senators elected for four-year terms and 18 representatives elected for two-year terms. A district court handles matters involving federal law and a commonwealth court has jurisdiction over local matters.

The traditional economic activities were subsistence agriculture, livestock raising, and fishing, but much agricultural land was destroyed or damaged during World War II and agriculture has never resumed its prewar importance. Today, government employment and tourism are the mainstays of the economy. Tourism employs about 50% of the work force. The construction industry is also expanding, and there is some small-scale industry, chiefly handicrafts and food processing.

The Northern Marianas is heavily dependent on federal funds. The United States also pays to lease property on Saipan, Tinian, and Farallon de Medinilla islands for defense purposes. The principal exports are garments, milk, and meat; imports include foods, petroleum, construction materials, and vehicles. US currency is the official medium of exchange.

Health care is primarily the responsibility of the commonwealth government and has improved substantially since 1978. Tuberculosis, once the major health problem, has been controlled. There is a hospital on Saipan and health centers on Tinian and Rota. The largest hospital in the commonwealth is a 74 bed, 110,000 square foot facility.

Education is free and compulsory for children between the ages of 8 and 14, and literacy is high. Northern Marianas College had an enrollment of 982 in fall 2001. There are 2 AM, 1 FM, and 1 television stations.

## PALMYRA ATOLL

Palmyra, an atoll in the Central Pacific Ocean, containing some 50 islets with a total area of some 10 sq km (4 sq mi), is situated about 1,600 km (1,000 mi) SSW of Honolulu at 5° 52' N and 162° 5' W. It was discovered in 1802 by the USS *Palmyra* and formally annexed by the United States in 1912, and was under the jurisdiction of the city of Honolulu until 1959, when Hawaii became the 50th state of the United States. It is now the

responsibility of the US Department of the Interior. The atoll is privately owned by the Fullard-Leo family of Hawaii.

Kingman Reef, NW of Palmyra Atoll at  $6^{\circ}25' \text{ N}$  and  $162^{\circ}23' \text{ N}$ , was discovered by the United States in 1874, annexed by the United States in 1922, and became a naval reservation in 1934. Now abandoned, it is under the control of the US Department of the Navy. The reef only has an elevation of 1 m (3 ft) and is awash most of the time, making it hazardous for ships.

## WAKE ISLAND

Wake Island, actually a coral atoll and three islets (Wake, Peale, and Wilkes) about 8 km (5 mi) long by 3.6 km (2.25 mi) wide, lies in the North Pacific 3,380 km (2,100 mi) W of Honolulu at  $19^{\circ}17' \text{ N}$  and  $166^{\circ}35' \text{ E}$ . The total land and water area is about

8 sq km (3 sq mi). Discovered by the British in 1796, Wake was long uninhabited.

In 1898, a US expeditionary force en route to Manila landed on the island. The United States formally claimed Wake in 1899. It was made a US naval reservation in 1934, and became a civil aviation station in 1935. Captured by the Japanese on 23 December 1941, Wake was subsequently the target of several US air raids. It was surrendered by the Japanese in September 1945 and has thereafter remained a US unincorporated territory under the jurisdiction, since 1972, of the Department of the Air Force.

As of October 2001, only around 200 contractor personnel inhabited Wake Island. The island was no longer being used for missile launches by the US Army's Space and Strategic Defense Command. It is a stopover and fueling station for civilian and military aircraft flying between Honolulu, Guam, and Japan.

# UZBEKISTAN

Republic of Uzbekistan  
*Uzbekiston Respublikasi*

**CAPITAL:** Tashkent (Toshkent)

**FLAG:** Horizontal bands of blue (top), white, and green separated by narrow red bands; white crescent moon and twelve stars on the blue band.

**ANTHEM:** The national anthem begins “Serquyosh hur o‘lkam,” (“My country, sunny and free.”).

**MONETARY UNIT:** The som (SOM) is the official currency, introduced when Uzbekistan left the ruble zone in November 1993. SOM1 = \$0.00103 (or \$1 = SOM966.43) as of May 2003.

**WEIGHTS AND MEASURES:** The metric system is used.

**HOLIDAYS:** Independence Day, 1 September.

**TIME:** 5 PM = noon GMT.

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Uzbekistan is located in central Asia bordering the Aral Sea, between Kazakhstan and Turkmenistan. Comparatively, it is slightly larger than the state of California, with a total area of 447,400 sq km (172,742 sq mi). Uzbekistan shares boundaries with Kazakhstan on the N, Kyrgyzstan and Tajikistan on the E, Afghanistan on the S, and Turkmenistan on the SW. Uzbekistan's boundary length totals 6,221 km (3,866 mi). Its capital city, Tashkent, is located in the eastern part of the country.

## <sup>2</sup>TOPOGRAPHY

Uzbekistan consists of mostly flat to rolling sandy desert with dunes. The Fergana Valley lies in the east surrounded by mountainous Tajikistan and Kyrgyzstan. The Aral Sea lies in the northwest. There is semiarid grassland in the east. About 11% of Uzbekistan's land is arable, most of which is under irrigation.

## <sup>3</sup>CLIMATE

The climate is mid-latitude climatic desert. Temperatures range from 26° to 32°C (79° to 90°F) in the summer, with much higher figures in the desert. Average winter temperatures are between -6° and 2°C (21° to 36°F). There is very little rainfall in the country. The best watered areas only receive about 30 cm (12 in) annually.

## <sup>4</sup>FLORA AND FAUNA

Ecological damage has left much of the country devoid of animal life. The country, a member of the former Soviet Union, was part of Nikita Krushchev's 1954 “Virgin-Lands” plan. Khrushchev wanted Soviet farmers to grow cotton and grain on the steppes of Uzbekistan. At one point the country grew 70% of the Soviet Union's cotton. Unfortunately the farmers had to irrigate the crops to obtain meaningful results. Now the Amu Darya and Syr Darya rivers run dry in certain places. Half of the Aral Sea is now a dry lake bed and the land is poisoned from the overuse of fertilizer.

## <sup>5</sup>ENVIRONMENT

Uzbekistan's main environmental problems are soil salinity, land pollution, and water pollution. In 1992, Uzbekistan had the world's 27th highest level of carbon dioxide emissions, which totaled 123.5 million metric tons, a per capita level of 5.75 metric tons. In 1996, the total dropped to 94.9 million metric tons. Chemicals used in farming, such as DDT, contribute to the pollution of the soil. Desertification is a continuing concern.

The nation's forestlands are also threatened and continue to dwindle. Between 1990-1995, deforestation occurred at an annual average rate of 2.65%.

The country's water supply also suffers from toxic chemical pollutants from industrial activity as well as fertilizers and pesticides. Uzbekistan has 16.3 cu km of renewable water resources, with 94% used for farming and 2% used for industrial purposes. The Aral Sea has been drying up and, as a result, pesticides and natural salts in its water have become increasingly concentrated. The nation's cities produce an average of 45.8 million tons of solid waste per year.

As of 2001, only 1.8% of Uzbekistan's total land area is protected. In 2001, 7 mammal species and 11 bird species were threatened with extinction. Threatened or rare species include the markhor, Central Asia cobra, Aral salmon, slender-billed curlew, and Asiatic wild dog. The Jeseter hladky has become extinct.

## <sup>6</sup>POPULATION

The population of Uzbekistan in 2003 was estimated by the United Nations at 26,093,000, which placed it as number 39 in population among the 193 nations of the world. In that year approximately 4% of the population was over 65 years of age, with another 38% of the population under 15 years of age. There were 99 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000-2005 is 1.51%, with the projected population for the year 2015 at 30,718,000. The population density in 2002 was 57 per sq km (147 per sq mi). The population is most dense in the Fergana Valley.

It was estimated by the Population Reference Bureau that 37% of the population lived in urban areas in 2001. The capital city, Tashkent, had a population of 2,140,000 in that year. Samarkand had a population of about 370,000. According to the United Nations, the urban population growth rate for 2000–2005 was 1.6%.

## 7 MIGRATION

Emigration to other former USSR republics exceeded immigration by 328,200 during 1979–90. In 1991, an estimated 400,000 Russians departed from Uzbekistan. As of 1996, 250,000 Crimean Tatars had left Central Asia for the Ukraine; most these Tatars were from Uzbekistan. In 1999, there were an estimated 30,000 Tajik refugees and 8,000 Afghan refugees living in Uzbekistan; however, only 1,135 refugees and asylum seekers were registered with UNHCR. Up until 1999, refugees and asylum seekers were assigned no special status and were considered ordinary foreigners. However, in 1999 the government completed a draft of the Migration Law, which passed the Cabinet of Ministers. In 2000 the net migration rate was -0.7 migrants per 1,000 population. In that year there were 1,367,000 migrants living in Uzbekistan, including the remaining refugees. The government views the emigration level as too high, but the immigration level as satisfactory.

## 8 ETHNIC GROUPS

In 1996, 80% of the population was Uzbek. Russians constituted 5.5%; Tajiks made up 5%; Kazakhs accounted for 3%; Karakalpakhs for 2.5%; Tatars 1.5%; and others 2.5%.

## 9 LANGUAGES

Uzbek, the state language, was the most widely spoken non-Slavic tongue in the USSR. It is a Turkic language with six vowels—virtually identical to those of Tajik, which has surely influenced it—rather than the original eight or nine. In 1993, it was decided that the language would be written in the Roman alphabet rather than in the Cyrillic alphabet. In 1999, Uzbek was spoken by 74.3% of the population in Uzbekistan; Russian was spoken by 14.2%; Tajik by 4.4%; and other various languages by 7.1%.

## 10 RELIGIONS

Freedom of religion is guaranteed under the constitution of 1992, adopted after independence, and there is a specific provision prohibiting the establishment of any state religion. Ethnic Uzbeks are primarily adherents of the Hanafi sect of Sunni Islam, but the Wahhabi sect has flourished as well in recent years. Muslims account for about 88% of the population; Eastern Orthodox Christians for 9%; and others for 3%. In 2002 Uzbekistan had a significant Jewish population of some 30,000 Ashkenazi and Bukharan Jews, primarily in the cities of Tashkent, Bukhara, and Samarkand. Almost 70,000 Jews have emigrated to Israel or the US since independence. Other minority religions include small communities of Korean Christians, Baptists, Roman Catholics, Lutherans, Seventh-Day Adventists, Evangelical and Pentecostal Christians, Buddhists, Baha'is, and Hare Krishnas.

## 11 TRANSPORTATION

Uzbekistan has some 3,656 km (2,272 mi) of railroad track in common carrier service (not including industrial lines); separate lines serve eastern and western regions. In 2002, there were also 81,600 km (50,706 mi) of highways, of which 71,237 km (44,227 mi) are hard-surfaced. As a doubly landlocked nation, there is no direct connection to the open sea; the closest route to the sea is to the south through Termiz on the Afghanistan border. Conflict in Afghanistan blocks this route. The Zeravshan River is the largest inland waterway. Uzbekistan had 267 airports in 2001, 10 with paved runways. In 2001, a total of 2,256,400

passengers were carried on scheduled domestic and international airline flights.

## 12 HISTORY

Some parts of present-day Uzbekistan have been inhabited since the Paleolithic era. The first states in the region were Khwarazm, Bactria, Sogdiana, and the Parthian Empire, in the first millennium BC. The territory was consolidated under the Achaemenids in the 6th century BC, until it was conquered by Alexander the Great, 329–327 BC. The Greeks were displaced by the Tochari in the 3rd century BC. From the 1st century BC to the 4th century AD Uzbekistan was part of the Kushana Kingdom. This in turn was replaced by the Ephthalite state.

In the 6th century the area was part of the West Turkic Kaganate, a loose confederation of largely nomadic tribes. By the 8th century the region was conquered by the Arabs, who introduced Islam. The Umayyid dynasty was displaced by the Abbasids in 747–750. In the 9th century the Samanids took control of most of Central Asia, including Uzbekistan. Turkic tribes again began to push into the area from the east in the 10th century, eventually forming the Karakhanid state. A lesser part of that state, Khwarazm, grew more powerful in the 12th century and came to dominate most of Central Asia.

Genghiz Khan's Mongols invaded in 1219, conquering all of Central Asia by 1221. In 1224 Genghiz Khan's son Chagatai was made ruler of this area. As Chingisid influence waned, Timur (Tamerlane, 1336–1405) established an empire in Samarkand. Upon his death it split into Khorasan, ruled by his son Shah Rukh, and Mawerannahr, ruled by his grandson, Ulgh Beg. Although Timur is now claimed as the father of the modern Uzbeks, more likely candidates are the Sheibanid, nomadic Uzbeks who fought to take the area in the early 16th century. They settled among the other populations and became farmers, making Bukhara their capital.

In the 16th century Khwarazm, Balkh, and Khiva separated from Bukhara, becoming separate principalities. Bukhara was conquered by Persia in 1740, but sovereignty was retaken soon after by the Mangyt dynasty, which ruled until 1920. In the early 19th century the Kokand Khanate grew powerful in the eastern part of present-day Uzbekistan.

Russia had begun trading with Bukhara, Khiva, and Kokand in the 18th century. Concern about British expansion in India and Afghanistan led eventually to Russian conquest, which began in the 1860s and ended in the 1880s, when Uzbekistan became part of Turkestan guberniia, with Bukhara and Khiva administered as separate emirates under Russian protection.

In 1916 Tsar Nicholas II issued a call for Central Asian males to be drafted into labor battalions. This sparked resistance throughout the region, including in Uzbekistan, which was violently repressed. During the conflict from 1917–1920, Uzbekistan was the site of competing attempts to create governments; the Bolsheviks announced a short-lived Turkestan Autonomous Republic, while a Muslim Congress also attempted an Autonomous Government of Turkestan. Red Army forces intervened savagely, but armed resistance continued as late as 1924, in the so-called Basmachi Rebellion.

The Uzbek Soviet Socialist Republic was created in 1925. In 1929, Tajikistan, which had been an administrative sub-unit, was elevated to full republic status, changing the boundaries. They were changed once again in 1936.

Under the leadership of long-time leader S. Rashidov, Uzbekistan was politically conservative during the 1970s and early 1980s. The republic was targeted for anti-corruption purges in the mid-1980s, when considerable fraud in the cotton industry was discovered. The leader as of 2003, Islam Karimov, was appointed by Moscow in 1989.

In March 1990, Karimov was elected to the newly created post of president by the Uzbek Supreme Soviet. Uzbekistan declared

LOCATION: 41°0' N; 64°0' E. BOUNDARY LENGTHS: Afghanistan, 137 kilometers (85 miles); Kazakhstan, 2,203 kilometers (1,369 miles); Kyrgyzstan, 1,099 kilometers (683 miles); Tajikistan, 1,161 kilometers (722 miles); Turkmenistan, 1,621 kilometers (1,007 miles).

independence on 1 September 1991, in the aftermath of the abortive Moscow coup of 19–21 August. Karimov's presidency was reaffirmed in an election in December 1991. Since then, however, Karimov has been increasingly hostile to even the most basic tenets of democracy. True opposition parties were banned in 1992 and political reformers have been jailed or have fled the country. Parliamentary elections to the 250-seat Majlis were held on 24 December 1994 and 15 January 1995, with 231 seats going to Karimov's People's Democratic Party—the former Uzbek Communist Party. Following the elections, President Karimov held a referendum that extended his presidency until 2000.

Despite his anti-democratic leanings, Karimov received little criticism from the West or from Russia (which, in fact, supplies him with ample military backing) since he had been seen as a buffer against the fundamentalist Muslim political and revolutionary movements in Central Asia—notably those in Afghanistan and in neighboring Tajikistan. In fact, Uzbekistan had supplied arms to the secular factions in both countries' civil wars.

The Islamic Movement of Uzbekistan (IMU), a radical Islamic organization seeking to establish an Islamic state in Central Asia, has long been operational in Uzbekistan. In February 1999, five

car bombs in Tashkent were attributed to the IMU by Karimov, who accused the group of attempting to assassinate him and destabilize the country. The IMU broadcast a declaration of jihad from a radio station in Iran, and demanded the resignation of the Uzbek leadership. That year, IMU fighters operating from mountain hideouts launched a several-year series of engagements with government forces. Militants also took foreigners hostage in 1999 and 2000, including four US citizens who were mountain climbing in August 2000, and four Japanese geologists and eight Kyrgyzstani soldiers in August 1999. IMU military leader Juma Namangani apparently was killed during a US-led air strike in Afghanistan in November 2001. In addition to the IMU, the Hizb-ut-Tahrir ("Freedom Party"), another radical Islamic organization, operates in the country, although, unlike the IMU, it does not use violent tactics to pursue its goals. Following the 11 September 2001 terrorist attacks on the United States, and its subsequent military campaign in Afghanistan to oust the Taliban regime and al-Qaeda forces, all radical Islamic groups in the Central Asian nations were linked by most governments to terrorism.

Uzbekistan offered its airbases to the US-led coalition for its campaign in Afghanistan beginning in October 2001. In

response, the United States provided the country with \$60 million for 2002, in addition to a one-time contribution of \$100 million.

On 27 January 2002, Karimov held another referendum to prolong his presidential term from 5 to 7 years, effectively keeping himself in power until 2007. The US Department of State refused to send election observers, arguing there had to be a “free and fair” presidential election before a referendum was valid.

### 13 GOVERNMENT

The state constitution adopted on 8 December 1992 mandates a civil democratic society. The executive branch consists of the president and his appointed prime minister and Cabinet of Ministers. During the Soviet years, the legislative branch consisted of a unicameral Supreme Soviet of 150 seats. The judicial branch is appointed by the president, subject to legislative confirmation, for 5- and 10-year terms. The Supreme Assembly replaced the Soviet-era legislature and has 250 members with members serving five-year terms. On 27 January 2002, a referendum was held that will make the Assembly bicameral in the 2004 elections. The last elections were held 5 and 19 December 1999. Not all of the seats in the Supreme Assembly election were contested, and all parties in the Assembly support President Islam Karimov. In 1992, President Karimov banned opposition parties. The president is the head of state and has responsibility for the functioning of the other branches of government as well as for making sure the constitution is observed. He essentially rules by decree. Karimov held referendums extending his presidency in 1995 and 2002, taking 92% of the vote in 2002. The president is currently elected for a seven-year term.

### 14 POLITICAL PARTIES

In the Soviet period, the only legal political party was the Communist Party. As Soviet control began to disintegrate in 1989–90, a number of mass-based “informal organizations” appeared which grew to be the equivalents of parties, although not all were legally registered. The largest, claiming as many as 100,000 members, was *Birlik* (Unity), founded by Abdurakhim Pulatov in 1989. *Erk* (Freedom) was founded in 1990 by Muhammad Solih, who split away from *Birlik*; in 1991, Solih was a candidate for president, drawing approximately 12% of the vote. Another group, never legally registered, was the Islamic Renaissance Party.

After independence President Islam Karimov began to establish strong authoritarian control. Political opposition was forbidden. Opposition leaders have been beaten, jailed, and exiled. There were five registered parties as of 2003, but their platforms are essentially identical, and all parties with seats in parliament support the president. The People’s Democratic Party (NDP) is the renamed Communist Party. Also registered were the Fatherland Progress Party (VTP); the Adolat (Justice) Social Democratic Party; the Democratic National Rebirth Party; and the Self-Sacrificers Party (the Fatherland Progress Party recently merged with Self-Sacrificers Party).

A political pressure group, the *Erk* (Freedom) Democratic Party, was reformed as a pro-Karimov party after repudiating its founder, Muhammad Solih, who was forced into political exile. Another pressure group, the *Birlik* (Unity) Movement was officially banned in mid-1993, but continued to exist.

### 15 LOCAL GOVERNMENT

The republic is divided into 12 oblasts, or provinces. There is also the autonomous Republic of Karakalpakstan, which has the right of legal secession, though is unlikely to exercise it. Administration is performed by locally elected councils, overseen by presidential appointees.

An April 1999 decree by Karimov granted *mahallas*, the smallest communal or neighborhood units in Uzbekistan, a

greater level of autonomy than they previously had. The *mahallas* are traditional institutions charged by law with regulating communal life, and carrying out many state functions, such as community policing, political surveillance, and distributing social welfare payments. This increase in decentralization for the *mahallas* has been welcomed by non-governmental organizations (NGOs) attempting to provide assistance to the *mahallas* and to strengthen the participation of communities in political, economic, and social matters.

### 16 JUDICIAL SYSTEM

The Soviet judiciary system, featuring trials by panels of three judges, still prevails. There are three levels of courts: district courts (people’s courts) at the lowest level, regional courts, and the Supreme Court. District court decisions may be appealed through the higher levels. Under the constitution, the president appoints judges for five-year terms. There are also town, city, Tashkent city courts and arbitration courts appointed for five-year terms.

The judicial system also consists of a constitutional court, higher economic court, and economic court of the republic. The constitutional court judges the constitutionality of laws and acts passed by the Supreme Assembly, the decrees issued by the president, government enactments and ordinances of local authorities. It is also responsible for interpreting the constitution.

The Supreme Court’s rulings are final and binding. It is the highest judicial body of civil, criminal, and administrative law.

Defendants have the right to an attorney and most trials are open to the public. In political cases, the judiciary may experience pressure from the government.

### 17 ARMED FORCES

Total armed forces numbered approximately 50,000–55,000 in 2002. The army numbered 40,000 armed with over 300 main battle tanks. The air force numbered between 10,000 and 15,000 and operated 135 combat aircraft and 452 attack helicopters. In addition, there were about 18,000–20,000 internal security forces and a national guard of 1,000 organized into a single brigade. Government troops faced opposition from an estimated 2,000-member Islamic Movement of Uzbekistan. The defense budget for 1997 was \$200 million or 1.4% of GDP.

### 18 INTERNATIONAL COOPERATION

Uzbekistan was admitted to the UN on 2 March 1992. It is also a member of the Asian Development Bank, ESCAP, OSCE, EBRD, FAO, IAEA, IMF, UNCTAD, UNESCO, WHO, and the World Bank. It has observer status with the WTO. The country has signed the Nuclear Non-proliferation Treaty and is a member of the CIS. It has close ties with the United States, Austria, South Korea, Malaysia, Indonesia, and Turkey. The United States established formal ties with Uzbekistan in February 1992.

In June 2001, leaders of China, Russia, Kazakhstan, Kyrgyzstan, Tajikistan and Uzbekistan met in China to launch the Shanghai Cooperation Organisation (SCO) and sign an agreement to fight ethnic and religious militancy while promoting trade.

### 19 ECONOMY

Although characterized by one of the lowest per capita incomes in the Central Asian and other post-Soviet republics, Uzbekistan’s rich reserves of gold, oil, natural gas, coal, silver, and copper provide a promising endowment for future development. As a major source of cotton for the textile industry in the former USSR and the world’s third largest cotton producer, Uzbekistan has a predominantly agricultural economy. Agriculture and agro-processing accounted for about half of GNP in 1996. In addition, much of the industrial production is linked to agriculture, including cotton harvesting equipment, textiles, and chemical

fertilizers and pesticides. Only 12% of Uzbekistan's total cotton production and 60% of its silk cocoons were processed locally in the early 1990s, reflecting the country's principal role as supplier of raw material goods for downstream manufacturing elsewhere in the former USSR.

Uzbekistan has a centrally planned economic structure in which most production and employment remains in the state sector, and all health, education, social security, and welfare services are provided by the government. Measures taken toward establishing a greater market orientation within the economy have been more cautious than in many other post-Soviet countries. A differentiated process of price control liberalization was applied to the wholesale and retail sectors in 1991 in an attempt to avoid socially destabilizing surges in consumer prices. Nevertheless, inflation ran 790% in retail prices and 2,700% in wholesale prices in 1992; by the end of the year, real wage earnings had declined by 56%. The disruption of trading arrangements with former Soviet republics and the cessation of transfers from the Union's central government is evident in the erosion of other major economic indicators since 1990. In addition to a seriously deteriorating fiscal balance, estimated GDP shrank by 17% between 1991 and 1994. Following a breakdown in agreements over the conditions of a new ruble zone with Russia and other CIS countries, Uzbekistan adopted its own currency, the som, in late 1993.

When it became apparent that the slow pace of economic reform was not working, the government increased efforts to move from a command-driven to a market-oriented economy. Reforms included tighter monetary policies, cooperation with international financial institutions, increased privatization of state owned enterprises, and an improved environment for foreign investors. In response, the economy slowed its decline to 1% in 1996 and the inflation rate dropped to 35%, down from 1,300% in 1994. Additional reforms announced in 1996 aimed at increasing the private sector's share of GDP to 60%.

In 1999, the state continued to dominate the economy. GDP grew by 2.5% in 1997, and 4.4% in 1998, despite the Russian and Asian financial crises. Inflation was at 71% in 1997, but fell to 29% in 1998. In 1999 growth was 4.1% and in 2000 4%, while inflation persisted at annual rates of 29% and 26% respectively. Continued inflation and a growing debt burden combined with the global economic slowdown in 2001 to reduce real growth to 3%.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Uzbekistan's gross domestic product (GDP) was estimated at \$62 billion. The per capita GDP was estimated at \$2,500. The annual growth rate of GDP was estimated at 3%. The average inflation rate in 2001 was 23%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 33% of GDP, industry 24%, and services 43%. Foreign aid receipts amounted to about \$6 per capita and accounted for approximately 1% of the gross national income (GNI).

Approximately 34% of household consumption was spent on food, 13% on fuel, 4% on health care, and 7% on education. The richest 10% of the population accounted for approximately 32.8% of household consumption and the poorest 10% approximately 1.2%. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings.

## 21 LABOR

The labor force was estimated at 11.9 million in 1998. As of 1995, agriculture and forestry engaged 44% of the labor force, services, 36%, and industry 20%. In 1999, unemployment stood at 10%, with another 20% of the workforce underemployed.

The labor code adopted in 1992 recognizes the right for all workers to voluntarily create and join unions, which may in turn associate with international affiliations. Unions also were granted independence from government administrative and economic bodies (except where provided by law), and were encouraged to develop their own charters, structure, and executive bodies. However, as of 2002, the union structure remained the same as under Soviet rule. There were no independent unions.

The standard workweek is 41 hours, and minimum wages are set by the Ministry of Finance. As of 2002, the minimum wage was about \$3.00 per month. Some factories have reduced work hours to avoid layoffs, and overtime pay is rarely given. The minimum working age is 16, although 15-year-olds may work a shorter workday. The Labor Ministry has an inspection service to enforce compliance with this requirement. The Labor Ministry also inconsistently enforces occupational health and safety regulations, many industrial plants continue to be hazardous, and most workers lack protective clothing and equipment.

## 22 AGRICULTURE

Uzbekistan was the former Soviet Union's largest producer of fruits and vegetables. About 15% of the total area is crop land. In 2001, about 33% of GDP and 42% of exports came from agriculture.

During the Soviet era, cotton was grown on almost half of all sown land. Cotton is grown in the crescent beginning in the Fergana Valley and extending south along the Tien Shan Mountains to Samarkand and Bokhara, and then west along the Amu Darya River. All cotton is flood irrigated. Plantings are generally in April, with the harvest coming in late August or early September. Fields are usually planted with alfalfa or corn every four or five years, but many fields are planted without rotation, leading to declining yields. Since independence, Uzbekistan has embarked on a policy to diversify agriculture; annual cotton lint production was 1.1 million tons in 1999. Almost 40% of the gross value of agricultural production is derived from cotton; Uzbekistan was the world's fifth-largest producer of cotton lint in 2001/02 (after China, the United States, India, and Pakistan), accounting for 5% of world supply, but cotton production declined severely in 1999, and worldwide prices dropped as well, causing serious strain in this important segment of the Uzbek economy.

Rice, wheat, barley, and corn are important grain crops. Rice is produced on 48 specialized state farms, and about 85% of the rice crop comes from the southwestern part of Karakalpakistan and the Khorezm region. In 1999, over 4.3 million tons of cereals were produced. Sesame, tobacco, onions, flax, and various fruits are also grown.

## 23 ANIMAL HUSBANDRY

Sheep are the main livestock product, with Karakyl sheep (noted for their black wool) raised in the Bukhara region. The livestock population in 2001 included 8.1 million sheep, 5.3 million head of cattle, 830,000 goats, 89,000 pigs, 165,000 donkeys, 150,000 horses, 28,000 camels, and about 14 million chickens. Meat production that year totaled 512,000 tons, of which 77% was beef, 17% was mutton, 3% was pork, and 3% was poultry. Wool (greasy) production in 2001 was estimated at 15,900 tons. Mulberry trees have been grown for silkworm breeding since the 4th century; some 1,200 tons of silk were produced in 2001.

## 24 FISHING

Fishing occurs mainly in the Fergana Valley. The Aral Sea in the north (the world's fourth-largest lake) is too saline and becoming more so, especially since its water surface area has decreased by 33% since 1960. The total catch in 2000 was 3,837 tons, primarily carp.

## 25 FORESTRY

Forests make up 4.8% of the total land area, mostly in the Fergana Valley and Zeravshan regions. Commercial forestry is not a significant part of the economy. Uzbekistan imported \$37.2 million in forestry products during 2000.

## 26 MINING

The mineral sector remained one of the chief contributors to the country's economic development. Along with natural gas and uranium, in which Uzbekistan was a world leader, and crude oil, in which it was self-sufficient, the country was significant to world mineral markets as a gold producer—it has, at times, been a world leader. Gold was the second-leading export commodity in 1998, providing 9.6% of export earnings; mineral fertilizers and ferrous metals ranked fourth and fifth, respectively, among export commodities. Production of fertilizers was an important part of the domestic chemical industry, as fertilizers were used for the production of cotton. Uzbekistan's fourth-, fifth-, and sixth-leading industries in 2002 were, respectively, metallurgy, natural gas, and chemicals manufacture.

Uzbekistan produced 62,276 kg of gold in 2000, and 80,000 in 1998. Uzbekistan also mined copper (91,800 tons in 2000), molybdenum, silver, and tungsten. Copper, molybdenum, and lead-zinc were mined at the Almalyk mining and metallurgical complex, Uzbekistan's major nonferrous-metals-producing enterprise, northeast of Tashkent; the complex had the capacity to mine and process 25 million tons per year of ore. No bismuth, cadmium, lead, palladium, tin, or zinc was mined in 1997–2000; it appeared that mining operations have been curtailed sharply or have ceased. Control of one of the main lead-mining deposits, Altyń-Topkan, in the Kurama mountain range, was transferred to Tajikistan in 1999. Uzbekistan also produced cement, kaolin clays (5.3 million tons in 2000, with a total capacity to produce 8 million tons per year), feldspar, graphite, iodine, mineral fertilizer, nitrogen, phosphate rock, and sulfur. No fluorspar was produced in 1999 and 2000; total production capacity was 150,000 tons per year. Uzbekistan also manufactured copper, gold, lead, molybdenum, silver, steel, tungsten, and zinc metals.

Uzbekistan's explored resources of gold were 5,300 tons; the main reserves, amounting to 3,200 tons, were in the central Kyzylkum region, containing the Muruntau deposit (2,230 tons), the largest gold deposit in Eurasia and among the largest in the world; Muruntau's milling operation, near Zarafshan, processed more than 22 million tons per year of ore. Zeravshan—a 50–50 joint venture of an Uzbek government conglomerate and Newmont Corp., of the US, the leading foreign investor in Uzbekistan's gold industry—produced 15.4 tons in 2000—from gold-bearing tailings from the Muruntau operation—down from 16.7 in 1999. The drop was a result of lower gold content in the material received by the plant.

## 27 ENERGY AND POWER

Uzbekistan is one of the ten largest producers of natural gas in the world. In 2000, production totaled 56.3 billion cu m (1.99 trillion cu ft); proven reserves, in 12 major deposits, amounted to as much as 1.9 trillion cu m (67 trillion cu ft) at the start of 2002, located mainly in the western Qizilkum Desert.

At the beginning of 2002 Uzbekistan's proven oil reserves were estimated at 594 million barrels. Oil production in 1999 amounted to 213,000 barrels per day, mostly from the wells in

the Fergana Valley. Since 1991, Uzbekistan has more than doubled its oil production to become essentially self-sufficient in petroleum and, since 1996, a net exporter of petroleum as well. Hydroelectric stations on the Syr Darya, Chirchik, and Naryn rivers depend largely on Kyrgyzstan and Tajikistan for their power. In 2001, total installed electrical capacity was 11,711,000 kW. Production in 2000 came to 44,300 million kWh, of which 87% was from fossil fuels and 13% from hydropower. Consumption of electricity in 2000 was 41.9 billion kWh. Brown coal deposits at the head of the Angren Valley, southeast of Tashkent, are used for local electricity generation. About 3.2 million tons of coal were produced in 2000.

## 28 INDUSTRY

Growth of Uzbekistan's industrial production averaged 3.2% in the 1980s, although on a per capita basis, the republic's industrial output remained less than half that of the USSR average by the end of the decade. Most industry is based on the processing of local agricultural products. Soft goods (mainly cotton, wool, and silk fiber) and processed foods (including cottonseed oil, meat, dried fruit, wines, and tobacco) accounted for about 39% and 13% of industrial production respectively in 1990; their manufacture was concentrated in Tashkent and the Fergana Valley.

Uzbeklegprom, the state association for the production of light industry goods, produces about 90% of Uzbekistan's textiles. Production figures fell from 700 million sq m in 1993 to 650 million sq m in 1995, when total textile production was valued at \$510 million. In the late 1990s, Uzbeklegprom sought to boost capacity with the assistance of several joint venture partners. Investment projects such as the \$194 million investment Korean Kabul Textiles and those by Turkish firms "Astop" and "Tekfen" have begun to modernize cotton processing, although most textiles mills continue to use outdated machinery with technology from the 1970. The investment cost of updating the entire industry was estimated at between \$500 million and \$1 billion.

Food processing is Uzbekistan's second-largest industry, based on the country abundant production of fruits and vegetables. The sector is also in need of investment to modernize its processing and packaging equipment.

Uzbekistan's machinery industry is the primary producer of machines and heavy equipment in Central Asia. Uzavtosanoat is the cornerstone of the country's automotive industry, and has developed joint ventures with Daimler-Benz (Germany) and Daewoo (ROK). The UzDaewoo-Avto plant in Andizhan began production in 1996 and produces 200,000 units annually. Two kinds of cars, the Nexia and the Tico, and a microbus called the Damas are the main models produced.

The aerospace industry centers around the Chkalov Tashkent Aircraft Production Co., a government-controlled enterprise that is one of the largest and most significant aircraft assembly plants in Central Asia. Equipment used on the *Salyut* and *Mir* space stations were some of the products of the program, which also includes explorations of the Moon, Mars and Venus. Of more practical use have been developments in satellite imaging and communications.

Metal processing industries are clustered in the Olmaliq-Oharangan (Almalyk-Akhangaran) complex, southeast of Tashkent. Metal alloys, wire, rods and sheet and gas-based nitrogen are manufactured in Chirchik, close to the Kazakhstan border in the northeast. Chemical fertilizers used mainly in cotton production are also produced in the Chirchik.

Uzbekistan has three oil refineries, at Fergana, Alty-Arik, and Bukhara. The 50,000-barrels-per-day-capacity facility at Bukhara was built after the breakup of the Soviet Union at a cost in excess of \$400 million, and is expected to be expanded to a capacity of 100,000 barrels per day, with the ability to handle both crude oil and gas condensate. In 2001, however, the refineries were

operating well below capacity because of the decline in the Uzbekistan's oil production.

### 29 SCIENCE AND TECHNOLOGY

The Uzbek Academy of Sciences, headquartered in Tashkent, has departments of physical-mathematical sciences; mechanics; control processes; informatics; chemical-technological and earth sciences; and biological sciences. Uzbekistan has 45 research institutes conducting research in agriculture and veterinary sciences, technology, natural sciences, and medicine. Twenty-three colleges and universities offer scientific and technical training. In 1987–97, 1,763 scientists and engineers and 314 technicians per 1 million population were engaged in research and development.

### 30 DOMESTIC TRADE

Although dominated by state-owned stores and distribution channels under the Soviet economy, retailing has seen a marked shift toward private business. Since 1992, thousands of small businesses have been privatized or leased to worker collectives, with the most progress in retail trade, consumer services, public catering, and local industry. However, the shift from state-control to a free market economy continues to move at a very slow pace. Urban markets provide an important outlet for the sale of vegetables and other foodstuffs. Government restrictions on trade and foreign investment have hindered the economy. Black market trade is still available.

### 31 FOREIGN TRADE

While supplying the former USSR with light industry goods (mainly cotton fiber), basic equipment related to agriculture and agricultural processing, and some oil, Uzbekistan has been highly dependent on the other former Soviet republics for critically needed grain, food, machinery, and other industrial inputs.

In 1998, exports included cotton, gold, natural gas, fertilizers, ferrous metals, textiles, food products, and automobiles. Imports included grain, machinery and parts, consumer durables, and foods.

Principal trading partners in 1998 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
Russia	472	529	-57
Tajikistan	181	339	-158
Turkmenistan	155	7	148
Italy	148	74	74
Korea	129	422	-293
Germany	117	304	-187
France	88	152	-64
Kazakhstan	60	164	-104
United States	31	162	-131
Ukraine	27	153	-126

### 32 BALANCE OF PAYMENTS

Uzbekistan was extremely reliant on cotton exports as a means of trade throughout its association with the former USSR, but earnings fluctuated widely from year to year depending on the performance of the agricultural sector. Exports of natural gas and petroleum generated much needed hard currency reserves within the next several years. Uzbekistan received substantial financial support from the World Bank, IMF, and other multilateral lending institutions. Proceeds were used to finance the cotton industry and oil and gas development, to provide a social safety net, to maintain the water supply, and to further privatization efforts.

The country lost almost half of its foreign exchange reserves in 1996, after the government imposed strict currency controls. As of the early 2000s, Uzbekistan was able to maintain reserve levels

at or close to \$1.2 billion, in large measure by restricting imports. Exports dropped as well, and as a result of this decline in trade, Uzbekistan managed to achieve a modest balance of payments surplus of \$359 million in 1999. The country's external debt stood at \$5.1 billion in 2001. Many creditors reassessed their lending to Uzbekistan due to this high debt burden, and foreign investment declined.

The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Uzbekistan's exports was \$2.8 billion while imports totaled \$2.5 billion resulting in a trade surplus of \$300 million.

### 33 BANKING AND SECURITIES

After 1993, the banking system was headed by the now-defunct National Bank of Uzbekistan, the former local branch of the Soviet Gosbank. The NBU attempted to increase its supervision over Uzbekistan's banks, the most important of which are state-owned. In 2002, the Central Bank of Uzbekistan (CBU) was in charge of the country's two-tier banking system, and had the responsibility of issuing soms, the country's currency unit, and regulating the commercial banks by setting reserve requirements and the discount rate. The other important state bank was the Uzbek National Bank of Foreign Economic Activities (NBU), which dealt exclusively with the foreign exchange rate.

There were increasing hints from the government that the banking sector is in trouble. The first indicator of a banking crisis came with the sudden and unpublicized sacking in January 1997 of Ahmat Ibotov, the head of Promstroi Bank, the second-largest bank in Uzbekistan after the NBU. Then, on 26 February 1997, President Karimov launched a scathing attack on the country's banks, accusing them of being corrupt and bureaucratic. The president also blamed the banks for maintaining excessively high interest rates. The CBU has also recently criticized the banks for poor credit risk evaluation and poor procedures over the issuing of bank guarantees. Commercial banks in the country include the Uzbek Commercial Bank and the Uzbek Joint-Stock Innovation Bank. The country does not have a security market, but the trading of commodities is widely practiced in the country.

In 1996, the authorities closed three banks, all supposedly for breaching lending limits set by the CBU. One of the main problems in the banking sector is over-concentration. The three largest banks, all of which are state-owned, control 86% of commercial banks' assets. The main culprit is the NBU, which accounts for 45% of assets.

### 34 INSURANCE

Among the insurance companies doing business in Uzbekistan in 1997 were: GOSSTRAKH State Insurance Company of the Republic of Uzbekistan; JV, UMID Joint-Stock Insurance Co.; MADAD Joint-Stock Insurance Agency; and Uzbekinvest National Insurance Co. of the Republic of Uzbekistan, which is government-owned.

### 35 PUBLIC FINANCE

Uzbekistan's spiraling inflation as a member of the ruble zone necessitated the introduction of a transition currency after it left the ruble zone in November 1993. In 1994, the government undertook economic reforms, but privatization efforts have fallen short of expectations. Subsidies for basic consumer goods (except some food staples and energy products) and subsidized credit to industrial enterprises were substantially reduced during 1994 and 1995. In response, the budget deficit fell from a high of 16% of GDP in 1993 to 3.3% in 1995, but had escalated to nearly 7% by 1997. The external debt, \$1.5 billion at the end of 1994, more than doubled to \$3.3 billion by 1997. An enterprise profit tax, a value-added tax, and an excise tax on cotton supply the bulk of government revenues.

The government is officially committed to a gradual transition to a free-market economy, but is cautious in the actions it takes toward that goal. The restrictive trade regime has crippled the economy and currency convertibility is essentially unheard of.

The US Central Intelligence Agency (CIA) estimates that in 1999 Uzbekistan's central government took in revenues of approximately \$4 billion and had expenditures of \$4.1 billion. Overall, the government registered a deficit of approximately \$100 million. External debt totaled \$5.1 billion.

### 36 TAXATION

Corporate rates range from 10–60%, with a standard rate of 18%. Also levied is a 25% value-added tax. In a law adopted in late 2001, the maximum rate on personal income taxes was reduced from 50% to 33%. The official minimum monthly wage rate in Uzbekistan is 3,430 soms, which is worth about \$2 in the black market. People who earn less than 15,720 soms (about \$9) a month pay 13%. On the increment between 15,720 soms and 31,140 soms (\$18) per month the rate is 23%, and on income above 31,140, the new maximum rate is 33%. At the same time the government introduced a 20-som tax on each liter of gas.

### 37 CUSTOMS AND DUTIES

Uzbekistan is a member of the Economic Cooperation Organization, together with Afghanistan, Azerbaijan, Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, Iran, Pakistan, and Turkey. Uzbekistan has also formed an economic union with Kazakhstan and Kyrgyzstan. Imports are subject to customs duties at rates ranging from 1% to 4%. However, excise taxes have been much higher, as much as 90% for imported liquor.

### 38 FOREIGN INVESTMENT

While Uzbekistan's store of valuable natural resources is likely to provide a strong basis for covering the costs of long-term economic development, significant amounts of external funding will be needed to support its short-term development plans over the next decade. To stimulate foreign direct investment, legislation adopted in mid-1991 provides tax incentives and guarantees against expropriation, though falling short of securing the right to repatriate profits and third-party dispute arbitration. By the end of 1992, 450 joint ventures were registered in the country but only 135 were actually operating. The largest of these is with the US-based Newmont Mining Corp. Negotiations over further Western participation in the exploitation of a major oil field discovered in the Fergana Valley in early 1992 are currently underway. Fourteen bilateral agreements with China were signed in 1992.

In 1994, British-American Tobacco, one of the world's largest cigarette manufacturers, announced a \$200 million deal to acquire 51% of state-owned Uztobacco. That same year, a Coca-Cola joint venture began operations in Uzbekistan. In August 1996, South Korea's Daewoo Group announced the planned investment of \$2.5 billion in Uzbekistan to build telecommunications networks. Daewoo has invested \$658 million to produce cars in Uzbekistan. In 2000 Uzbekistan and Israel announced plans to cooperate on the development of solar power technology.

In 1997, the International Monetary Fund, disappointed with Uzbekistan's rapid monetary growth, suspended the \$180 million loan program. Many small- and medium-size Western businesses have begun freezing their investments or pulling out. Investors have complained that once the required bribes are paid and an investment is guaranteed, officials begin delaying, lengthening, and altering procedures so much that making a profit is often impossible. Despite the fact that the Uzbekistan economy appeared to be among the strongest in the late 1990s, government intervention in business deals were discouraging

foreign companies from investing in the country. Prior to 1998, the government counted foreign credits as investments, greatly inflating investment statistics. The country's lack of currency convertibility, despite many promising opportunities, reduced foreign investment to a low level. The Uzbek government reports FDI of \$298 million in 1998 and \$188 million in 1999, the latest years for which statistics are available.

### 39 ECONOMIC DEVELOPMENT

Under centralized Soviet economic planning, Uzbekistan's economic growth was fueled by expanded agricultural production, as extensive stretches of land were brought under irrigation particularly for cultivation of cotton. While highly critical of the former Soviet's government emphasis on promoting cotton monoculture in the republic, the country's new government has found that the country's economic fortunes are closely tied to cotton production, which has fallen steadily since the Soviet era.

Since independence the government has aimed at facilitating a greater market orientation in the economy, though the steps taken toward this goal have been smaller and slower-paced than in other parts of the former USSR. A series of basic laws and new policies have been adopted regarding property ownership, land, privatization, foreign investment, price controls, trade, taxes, and banking. In 1995 the government announced a mass privatization program with the objective of increasing the private sector's share of GDP from 40% to 60%. Although nearly 60,000 small businesses (96% of the total) and 14,000 farms (accounting for 11% of arable land) had been privatized by 1997, only 20% of Uzbekistan's medium and large-sized enterprises were in private hands. The new policy would transform 3,000 state enterprises into corporate entities with 51% controlling interest sold to the public and 30% to private investment funds.

For the immediate future, developing the country's oil and natural gas fields, bolstering cotton exports through productivity enhancement, and sustaining gold exports are likely to be key strategies for procuring some of the necessary financing to support economic development. In 1992, Uzbekistan signed an agreement with Russia transferring its share of the former Soviet Union's debt to the latter in exchange for relinquishing all claims on Soviet assets. One area of serious concern for the government is the increasing threat to public health and economic productivity posed by the environmental damage resulting from past development strategies. Addressing growing water shortages, severe river and lake pollution caused the heavy use of chemical inputs in agriculture, the desiccation of the Aral Sea due to massive irrigation, and high levels of both air and water pollution in the country's industrial centers are among the country's most pressing environmental management problems.

In January 2002 the government and the Central Bank embarked on an IMF staff monitored program (SMP) primarily designed to convince the IMF to approve a financial program by the fourth quarter of 2002. The SMP was aimed at accelerating the transition to a market economy and achieving macroeconomic stability. The main policies pursued were reducing the role of the state through progressive lifting of restrictions on private activity, as well as accelerated privatization state enterprises, plus tight monetary and fiscal policies to bring down inflation and reduce debt. As of April 2003, the government had not convinced the IMF to reinstate Uzbekistan as eligible for financial assistance. A review was scheduled for May 2003.

### 40 SOCIAL DEVELOPMENT

The social security system includes old age, disability and survivor's pensions, in addition to sickness, maternity, work injury, and unemployment benefits. Pensions are provided at age 60 for men and age 55 for women. The program is financed by a

32.5% contribution from employers and a 1% contribution by employees. Women are entitled to 126 days of maternity benefits plus three years unpaid maternity leave. Unemployment benefits are paid for entirely by employers. Benefits are paid for a maximum of 26 weeks. First-time job seekers are entitled to 50% of minimum wage for 13 weeks, 75% if they have dependents.

Although nominally equal under the law, women hold few high-level positions. Traditional customs decree that women generally marry young, bear many children and confine their activities to the home. This is particularly evident in rural areas. There is a reported increase in the incidence of suicide by self-immolation by women. The number of women enrolling in higher education is on the decline. Violence against women and spousal abuse continues to be a common problem with little or no governmental intervention.

Human rights violations are prevalent. Security forces arbitrarily arrest and detain individuals, torture and beat prisoners, and confine them to unsafe prisons and labor camps. Freedom of speech and press are tightly restricted. Religious groups are closely monitored. The activities of human rights organizations are restricted, and human rights activists are frequently harassed.

#### 41 HEALTH

The system of health care in Uzbekistan is comprehensive and services are provided mainly free of charge. Yet the overall efficacy of the Uzbek system was still relatively low as of 2000. The public often used hospitals for primary care. In 1991, one quarter of the population was hospitalized annually; this figure declined to 12.9% by 1998. Health care reform objectives as of 2000 included improved quality of services overall and specifically in the areas of maternal and child health; promotion of privatization; and cost containment. Primary health care in rural areas is still provided by health posts staffed by physicians' assistants and midwives. In 2000, 85% of the population had access to safe drinking water and 100% had adequate sanitation. As of 1999, there were an estimated 3.1 physicians and 8.3 hospital beds per 1,000 people. As of 1999 total health care expenditure was estimated at 4.1% of GDP.

The infant mortality rate was 22 per 1,000 live births in 2000. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 26.1 and 8 per 1,000 people. The average life expectancy was 70 years in 2000. In 1994, 93% of children up to one year old were immunized against tuberculosis; 65% against diphtheria, pertussis, and tetanus; 79% against polio; and 71% against measles. As of 1999, the rates for DPT and measles were, respectively, 99% and 96%.

Leading causes of death per 100,000 people in 1990 were communicable diseases and maternal/perinatal causes, 137; noncommunicable diseases, 601; and injuries, 65. There were 97 reported cases of tuberculosis per 100,000 people in 1999. The heart disease rates were well above the countries classified as "medium human development" by the World Health Organization. The likelihood of dying after age 65 of heart disease was 508 for males and 538 for females per 1,000 adults in 1990-93. At least 65,898 deaths were cardiovascular disease-related in 1993.

#### 42 HOUSING

In 1989, 31.9% of all privately owned urban housing had running water, 11.3% had sewer lines, 21.1% had central heating, and 1.5% had hot water. In 1990, Uzbekistan had 12.1 sq m of housing space per capita and, as of 1 January 1991, 204,000 households (or 11.5%) were on waiting lists for urban housing. In 1996, it was estimated that about 90% of all households owned their own apartments or houses.

### 43 EDUCATION

The estimated adult illiteracy rate in 1995 was 0.3% (males, 0.2%; females, 0.4%). For centuries, Uzbekistan was a noted Muslim educational center. Muslim schools in the cities of Bukhara, Samarkand, Tashkent, and Khiva attracted students from other Muslim countries. In 1920, after the Soviet Union took control of the region, schools and mosques were closed down, and a secular state-funded educational system was established. The educational system is now being modified. In recent years, there has been an increased emphasis on Uzbek literature, culture, and history. Over 75% of the students are taught in the Uzbek language. In 1995, primary schools enrolled 1,905,693 students and employed 92,400 teachers. Student-to-teacher ratio stood at 21 to 1. In the same year, secondary schools had 3,318,900 students and 340,200 teachers.

There are three universities in Uzbekistan: Tashkent State University; Nukus State University; and Samarkand Alisher Navoi State University. There are several other institutions offering specialized training. In 1992, all higher-level institutions had 24,787 teaching staff and enrolled 638,200 students. As of 1995, public expenditure on education was 7.4% of GDP.

### 44 LIBRARIES AND MUSEUMS

The Alisher Navoi State Public Library of Uzbekistan in Tashkent holds 4.9 million volumes and is the largest library in the country. Also in the capital are Republic Library for Science and Technology (two million volumes), the library of the Uzbek Academy of Sciences (1.5 million), the Pedagogical Institute (808,000), Tashkent State University (2.46 million), and the Polytechnic Institute (808,000). Samarkand State University's library holds 1.6 million volumes, and the Pedagogical Institute Ulugbek in Fergana holds 295,000 volumes.

The State Art Museum, the Historical Museum, and the State Literary Museum are in Tashkent. The Museum of Culture and Art History is in Samarkand. There are local museums in Andizhan, Buchara, Karsi, Namangan, and other cities.

### 45 MEDIA

Telephone links to other former Soviet Republics are provided by land link or microwave and to other countries through Moscow. In 1999, there were 1.98 million main telephone lines. In 1998, there were 26,000 cellular phones in use. Radio Tashkent, established in 1947, broadcasts in Uzbek, English, Urdu, Hindi, Farsi, Arabic, and Uighur. There is also a television station in Tashkent, and satellite earth stations receive Orbita and INTELSAT. As of 1998, there were 20 AM and 7 FM radio broadcast stations and 4 television stations. In 2000, there were 456 radios and 276 television sets in use for every 1,000 people. The same year, there were 7,500 Internet subscribers served by 42 service providers.

Though there are privately-owned newspapers, the government owns all of the publishing house and must grant approval for all publications printed. The most widely read dailies include *Khalk Suzi* (2002 circulation 52,000), *Pravda Vostoka* (35,000), and *Sovet Uzbekistoni*. The weekly *Narodnoye Slovo* has a circulation of 21,000.

Though the constitution provides for freedom of expression, the government is said to restrict those rights severely, controlling all information flow. A 1991 law prohibits offending the president.

### 46 ORGANIZATIONS

The Uzbekistan Chamber of Commerce and Industry promotes the country's exports in world markets. An umbrella organization, the Federation of Trade Unions of Uzbekistan, coordinates the activities of the country's trade unions. The Academy of Sciences was established in 1943.

The Society for Human Rights is an important political association. Several social action groups formed in the 1990s, many, such as Real Action (1994), the ECO Initiative Group (1999) and Ecopolis Cultural and Ecological Movement (1995), are focused on environmental and developmental issues. The Red Crescent Society is also active.

National youth organizations include the Ulugbek Foundation for the Support of Talented Youth, the Youth of the Union of the Republic of Uzbekistan, and Soglom Ovlun Uchun, an organization focusing on health and development for children and youth. Women's organizations include the Center for Women Leaders (in Tashkent) and the Women's Committee of Uzbekistan.

#### 47 TOURISM, TRAVEL, AND RECREATION

Uzbekistan tourist attractions include the Islamic cities of Samarkand, Bukhara, Khiva, and Kokand. Muslims from Pakistan, Iran, and the Middle East have been drawn to these sites with their palaces, mosques, madrasses (religious colleges), and pre-Islamic remains.

In an effort to increase tourism in recent years, several hotels have been built in the Uzbekistan, and historical monuments were reconstructed. In 1998, foreign visitors totaled about 272,000.

According to 2002 US State Department estimates, the cost of staying in Tashkent was about \$283 per day.

#### 48 FAMOUS UZBEKISTANIS

Islam A. Karimov and Leonid Kuchma have been president and prime minister of Uzbekistan since October 1992, respectively. A famous 20th century writer is Abdullah Quaisi, who wrote the historical novels *Days Gone By* and the *Scorpion from the Pulpit*, published in the 1920s. Quaisi was killed in the 1930s during

Stalin's purges. Ilyas Malayev (b.1936) is a popular poet and musician.

#### 49 DEPENDENCIES

Uzbekistan has no territories or colonies.

# VANUATU

Republic of Vanuatu  
[French] *République de Vanuatu*  
[Bislama] *Ripablik blong Vanuatu*

**CAPITAL:** Port-Vila

**FLAG:** Red and green sections are divided horizontally by a gold stripe running within a black border and widening at the hoist into a black triangle on which is a pig's tusk enclosing two crossed yellow mele leaves.

**ANTHEM:** *Yumi, Yumi, Yumi (We, We, We).*

**MONETARY UNIT:** As of 1 January 1981, the vatu (VT) replaced at par value the New Hebridean franc as the national currency. There are coins of 100 vatu and notes of 100, 500, 1,000, and 5,000 vatu. VT1 = \$0.0078 (or \$1 = VT126.97) as of May 2003.

**WEIGHTS AND MEASURES:** The metric standard is used.

**HOLIDAYS:** New Year's Day, 1 January; May Day, 1 May; Independence Day, 30 July; Assumption, 15 August; Constitution Day, 5 October; National Unity Day, 29 November; Christmas Day, 25 December; Family Day, 26 December. Movable religious holidays include Good Friday, Easter Monday, and Ascension.

**TIME:** 11 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Vanuatu, formerly the Anglo-French condominium of the New Hebrides, is an irregular Y-shaped chain of some 80 islands, with a total land area of about 12,200 sq km (4,710 sq mi) and a total coastline of 2,528 km (1,571 mi). Comparatively, the area occupied by Vanuatu is slightly larger than the state of Connecticut. Of the 70 inhabited islands, the largest is Espiritu Santo; the island of Efate is the administrative center. The island chain is about 800 km (500 mi) long and lies about 1,000 km (600 mi) W of Fiji and 400 km (250 mi) NE of New Caledonia. Vanuatu and France both claim Matthew and Hunter islands, which lie between Vanuatu and New Caledonia; one of the islands has been occupied by French forces.

Vanuatu's capital city, Port-Vila, is located on the island of Efate.

## <sup>2</sup>TOPOGRAPHY

The islands are of coral and volcanic origin; there are active volcanoes on several islands, including Ambrym, Lopevi, and Tanna. Most of the islands are forested and mountainous, with narrow coastal strips. The highest peak, Tabwemasana, on Espiritu Santo, rises 1,878 m (6,161 ft) above sea level. The islands are generally well watered.

## <sup>3</sup>CLIMATE

The tropical oceanic climate is moderated by southeastern trade winds, which blow between the months of May and October. Winds are variable during the remainder of the year, and cyclones may occur. Average midday temperatures in Port-Vila range from 25°C (77°F) in winter to 29°C (84°F) in summer. Humidity averages about 74%, and rainfall on Efate is about 230 cm (90 in) a year.

## <sup>4</sup>FLORA AND FAUNA

Despite its tropical forests, Vanuatu has a limited number of plant and animal species. There are no indigenous large mammals, poisonous snakes, or spiders. The 19 species of native reptiles

include the flowerpot snake, found only on Efate. There are 11 species of bat (3 unique to Vanuatu) and 61 species of land and water birds. While the small Polynesian rat is thought to be indigenous, the large species arrived with Europeans, as did domesticated hogs, dogs, and cattle. (The wild pig and fowl appear to be indigenous.)

The region is rich in sea life, with more than 4,000 species of marine mollusks. Coneshell and stonefish carry poison fatal to humans. The giant East African snail arrived only in the 1970s but already has spread from the Port-Vila region to Luganville.

## <sup>5</sup>ENVIRONMENT

Vanuatu's population growth has caused concern for the environment in several areas. Water pollution in urban areas is a problem due to inadequate sanitation systems. A majority of the country's population does not have access to a reliable supply of safe drinking water. The nation's logging industry threatens the forests and contributes to the problem of soil erosion. Forests currently cover 75% of the land area. The reefs on Vanuatu's coasts, which are the home of the country's marine life, are threatened by inappropriate fishing methods and siltation. In 1987, the government formed the National Advisory Committee on the Environment (NACE) to address the nation's developing environmental concerns. The estuarine crocodile, hawksbill turtle, Fiji banded iguana, and insular flying fox are threatened species.

## <sup>6</sup>POPULATION

The population of Vanuatu in 2003 was estimated by the United Nations at 212,000, which placed it as number 172 in population among the 193 nations of the world. In that year approximately 3% of the population was over 65 years of age, with another 42% of the population under 15 years of age. There were 105 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 2.43%, with the projected population for the year 2015 at 275,000. The population density in 2002 was 17 per sq km (45 per sq mi). The population is unevenly distributed, with the vast

majority of Vanuatuans living in some 2,000 small villages. The most populous islands are Efate, Espiritu Santo, and Malekula.

It was estimated by the Population Reference Bureau that 20% of the population lived in urban areas in 2001. The capital city, Port-Vila, on Efate had a population of 26,000 in that year. Luganville on Espiritu Santo, the only other large town, had a population of 6,983. According to the United Nations, the urban population growth rate for 2000–2005 was 4.0%.

## 7 MIGRATION

Vanuatu's earliest known settlers probably migrated from the northwestern Pacific about 3,000 years ago. They were followed a thousand years later by migrants from the Solomon Islands. Tradition describes a series of subsequent incursions. In the 19th century, thousands of New Hebrides islanders were recruited as indentured laborers for plantation work in Australia, Fiji, New Caledonia, and Samoa. This migration gradually died down after the establishment of the Anglo-French Condominium, although voluntary emigration to New Caledonia continued until independence. In recent years, adverse economic conditions have encouraged emigration to Fiji, New Zealand, and the US. The net migration rate in 2000 was -0.9 migrants per 1,000 population. Worker remittances that year amounted to \$19 million, or 8.2% of GDP. The government views the migration levels as satisfactory.

## 8 ETHNIC GROUPS

Approximately 98% of the total population are of Melanesian origin. French constitute about 4% of the population. The remaining 2% is made up of Vietnamese, Chinese, and other Pacific Islanders.

## 9 LANGUAGES

More than 100 languages and dialects are spoken in Vanuatu. Melanesian, the principal language, is related to Fijian and New Caledonian speech. Pidgin English, known as Bislama or Bichelama, is recognized by the constitution as the lingua franca, although English and French are also official languages. The national anthem is in Bislama, which is also used in parliamentary debate, with the proceedings reported in English and French as well. Children often speak as many as four languages and every aspect of public life—including education, law, and the media—is complicated by language problems.

## 10 RELIGIONS

A majority of the population is considered to be Christian; other Vanuatuans follow indigenous traditional religions. The Anglican, Presbyterian, and Roman Catholic churches began missionary work in the New Hebrides during the 19th century. More recently, the Seventh-Day Adventists and other nontraditional Protestant groups have been active in mission work. Most mission schools have been handed over to the government, but the missions have continued to make important contributions to education and health. Since 1940, the John Frum cargo cult (a rejection of the white Christian's beliefs but not his goods) has flourished, mainly on Tanna and provides a remarkable example of religious development in a situation of cultural challenge and transition. Membership, however, is only about 5% of the population.

In 1995 the government passed a Religious Registration Act in response to concerns expressed by some established churches about the activities of new missionary groups, such as the Holiness Fellowship, Jehovah's Witnesses, and the Church of the Latter-Day Saints. It was repealed in 1997.

At last estimates, 48% of the population were Presbyterian; 15% were Catholic; 12% were Anglican; 7.6% followed indigenous beliefs; 6.2% were Seventh-Day Adventist; 3.8% were

members of the Church of Christ; and 15.7% were designated as other. Muslims are also active within the country.

## 11 TRANSPORTATION

During World War II, Vanuatu became an important Allied base, and many roads and airstrips were built by the US forces. In 2002, there were 1,070 km (665 mi) of roads, of which 256 km (159 mi) were paved.

There were 31 small usable airfields serving all the main islands in 2001, of which 3 had paved runways. The chief airports are Bauerfield, on Efate, and Pekoa, on Espiritu Santo; both have been upgraded to handle jet aircraft. Air Vanuatu, the national airline operated by Ansett Airlines of Australia, maintains regular service to Australia; an internal airline, Air Melanesiae, links 22 airfields on various islands. Other external service is provided by Air Pacific, UTA, Polynesian Airlines, Solair, and Air Nauru. Port-Vila and Luganville are the chief seaports. In 2001, 97,500 passengers were carried on scheduled domestic and international flights. Small ships provide frequent interisland service. Vanuatu maintains a policy of open registry for merchant ships, allowing foreign shipowners to avoid the higher costs and regulations of registration under their own flags. As of 2002, there were 54 ships in the Vanuatuan merchant fleet, with a total capacity of 1,092,838 GRT.

## 12 HISTORY

Although the Portuguese navigator Pedro Fernandes de Queir established a short-lived settlement on Espiritu Santo in 1606, little more is known about the history of the New Hebrides until French and British explorers arrived in the late 18th century. Captain James Cook discovered, named, and charted most of the southern islands in 1774. The next century brought British and French missionaries, planters, and traders, and for many years the islanders suffered from the depredations of the recruiting ships and from other lawless acts by Europeans in the region.

By the Anglo-French Convention of 1887, a joint naval commission was established, with a resident commissioner to protect the lives and interests of the islanders. In 1906 following a London conference, the Anglo-French Condominium was established, largely to settle land claims and to end difficulties caused by lack of clear local jurisdiction. Indigenous political activity developed after World War II, with increasing native concern over land alienation and European dominance.

In 1975 a representative assembly replaced the nominated advisory council under which the New Hebrides had been governed; twenty-nine assembly members were elected by universal suffrage, nine members represented economic interests, and four members represented the traditional chiefs. In 1977 the National Party (Vanuaaku Pati), which held twenty-one of forty-two assembly seats, demanded independence and staged a boycott of the legislature; in response, at a conference in Paris, self-government was agreed on for 1978, to be followed by a 1980 referendum on independence. After considerable difficulty, a constitutional conference in 1979 finally agreed on an independence constitution. In the November 1979 elections for a newly constituted, fully elective assembly, the National Party, led by Father Walter Lini, obtained twenty-six of the thirty-nine seats.

In May 1980 however, a dissident francophone group, based on Espiritu Santo, attempted to break away and declared an independent government of Vemarana, under Jimmy Stevens and the Nagriamal Party. Attempts made during June to resolve the differences between the new central government and the rebels failed, and UK and French troops were sent to Luganville on 24 July. No shots were fired, but the soldiers remained until Vanuatu's formal declaration of independence on 30 July 1980. They were then replaced at the new government's request by

forces from Papua New Guinea, who were assisted by the local police in putting down the rebellion.

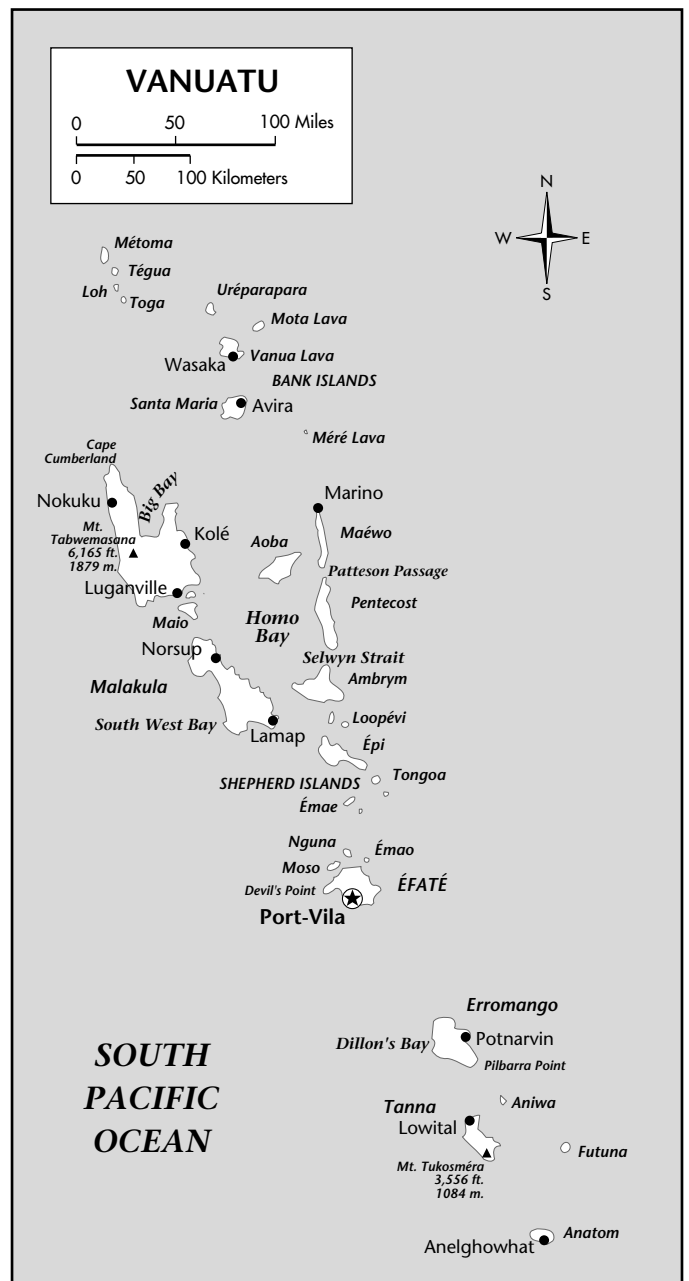

Since independence, Vanuatu (Our Land Forever) has followed a nonaligned foreign policy. As of late 1987, it was the only South Pacific nation to have joined the nonaligned movement, and in January 1987 it signed a controversial fishing agreement with the USSR. In May 1987 Vanuatu announced a ban on all military ships and aircraft in a dispute over a proposed Libyan diplomatic mission. The dispute ended with the expulsion of two Libyan diplomats. Relations with the French government remained strained throughout much of the Lini government's rule, though they improved at the end of 1989 with the signing of the Matignon Accord relating to New Caledonia.

In December 1988 President George Ati Sokomanu attempted to dismiss the Lini government by ordering the dissolution of the country's parliament. Sokomanu appointed Barak Sope as prime minister. Lini refused to surrender office and reconvened parliament. Sope and several supporters were arrested and charged with inciting mutiny. Sope was sentenced to six years' imprisonment.

Fr. Lini lost a parliamentary vote of confidence in September 1991 and he was replaced by Donald Kalpokas. In December 1991 the francophone Union of Moderate Parties (UMP), led by Maxime Carlot Korman, won the largest bloc of seats and formed a coalition government with the National United Party (NUP), led by Lini. Strains between the coalition members led to Lini joining the opposition in August 1993, but Carlot Korman's government survived the defection.

Parliamentary elections were again held in 1995, with the UMP winning slightly more seats than the Vanuatu Party (VP), led by Donald Kalpokas. Rialuth Serge Vohor was prime minister from November 1995 until a no-confidence vote in parliament forced his resignation on 7 February 1996. Maxime Carlot Korman was elected prime minister, forming a coalition, and parliament appointed Kalpokas deputy prime minister. The coalition was considered to be weak, however. On 30 September 1996 Korman was ousted by a no-confidence motion. Vohor was reelected as prime minister. The Vohor government repealed the Ombudsman's Act, but President Jean Marie Leye refused to declare this piece of legislation as law. Leye, in the face of dissent and political crises, took action to dissolve parliament. The ruling coalition refused to step down, questioning the constitutional right of Leye to do this. The Court of Appeal ruled in January 1998 that Leye's actions were legal, thus opening the way for a new general election. In the election held 6 March 1998 the VP of Kalpokas improved its earlier performance, but could not claim a majority. Kalpokas rejoined forces with Fr. Lini and the NUP and coalesced with minority party legislators to gain a clear majority. Kalpokas was elected prime minister. Willie Jimmy was named deputy prime minister on 19 October 1998. Kalpokas resigned to avoid a no-confidence vote in late 1999, and Barak Sope of Melanesian Progressive Party (MPP) became prime minister. In 1999, the government introduced a Comprehensive Reform Program, to combat corruption and abuse of power by government officials. It included a revamping of state administration, an increase in private sector development, a reduction in the public service sector, and the enactment of a leadership code of conduct.

At the South Pacific Forum in June 1999 Vanuatu supported a proposed Pacific Free Trade Area (FTA) that would initially include fourteen countries in the region. The South Pacific Forum set up the Pacific Kava Council to work at protecting the regional rights to kava and its uses. The kava plant's reputed relaxation properties had attracted the attention of producers of herbal medicines. The establishment of kava plantations in Central America threatened the Pacific Islands' production. Vanuatu joined with other small island developing states (SIDS) through the United Nations SIDSnet, an Internet project linking over forty

LOCATION: 13° to 21°S; 166° to 171° E. TOTAL COASTLINE: 2,528 kilometers (1,571 miles). TERRITORIAL SEA LIMIT: 12 miles.

island nations worldwide to address issues like the economic hurdles of isolation and small markets. The United Nations Environment Program (UNEP) issued a report assessing the ecological and population threats faced by SIDS, Vanuatu included. The UN's Intergovernmental Panel on Climate Change announced its predictions on the consequences of global warming. Vanuatu was mentioned as already affected by inundation of low-lying areas and coastal regions by rising oceans.

In April 2001, Barak Sope was ousted as prime minister in a vote of no confidence, and Edward Natapei became prime minister. The new government undertook investigations into Sope's business dealings, and in November, Sope was charged with two counts of forgery. He was sentenced to three years'

imprisonment but was subsequently pardoned by President Fr. John Bani. Natapei was reelected prime minister in May 2002, after parliamentary elections held on 30 April, in which his Vanua'aku Party took 15 seats and the Union of Moderate Parties took 14 seats.

### 13 GOVERNMENT

Under the independence constitution adopted in 1979 and effective in 1980, Vanuatu is an independent republic within the Commonwealth of Nations. The head of state is the president (Fr. John Bani since March 1999); the head of government is the prime minister (Edward Natapei since April 2001). The unicameral legislature consists of fifty-two members (thirty-nine before 1987, and fifty before 1998) elected by universal adult suffrage to four-year terms. The cabinet is responsible to parliament, and the president is chosen by an electoral college for a five-year term. The electoral system includes a degree of proportional representation. A Council of Chiefs chosen by their peers in the chiefs' district councils advises the government on the protection of Vanuatuan languages and culture.

### 14 POLITICAL PARTIES

The country saw six political parties be represented in parliament at the 30 April 2002 elections: the Union of Moderate Parties (UMP, Serge Vohor); the National United Party (NUP, led by Father Walter Lini until his death in February 1999; thereafter by Dinh Van Than); the Vanua'aku Party (VP, Edward Natapei); Melanesian Progressive Party (MPP, Barak Sope); the Vanuatu Republic Party (Maxime Carlot Korman), and the Green Party. Also represented in Vanuatu are the Jon Frum Movement (Song Keaspai); the Friend Melanesian Party (FMP, Albert Ravutia); and the Tan Union (TU, Vincent Boulekone).

### 15 LOCAL GOVERNMENT

Vanuatu is divided into six provinces (Malampa, Penama, Sanma, Shefa, Tafea, Torba). There are municipal councils in Port-Vila and Luganville, and community councils elsewhere. Espiritu Santo and Tanna have special regional councils.

### 16 JUDICIAL SYSTEM

Despite the great difficulty in unifying laws based on the very different English and French traditions, Vanuatu has sought to establish a single system based on British criminal procedure and the French penal code. The constitution establishes a Supreme Court, with a chief justice and three other judges, as well as an appeals court. Village and island courts have jurisdiction over customary and other matters.

The judiciary is independent of the executive and free from military influence. The constitution guarantees a range of procedural due process protections including the presumption of innocence, fair public trial, habeas corpus, and the prohibition against double jeopardy.

### 17 ARMED FORCES

The nation maintains close links with Papua New Guinea, where Vanuatuan cadets train for a mobile defense force under the auspices of the Australian Ministry of Defense, which also helps to train skilled manpower for national development tasks.

### 18 INTERNATIONAL COOPERATION

A member of the Commonwealth of Nations, Vanuatu joined the UN on 15 September 1981 and participates in ESCAP, FAO, IBRD, ICAO, IDA, IFC, IMF, UNCTAD, UNESCO, UPU, and WHO. It also belongs to the Asian Development Bank (which opened a regional office in Port-Vila in 1984), the French Community, G-77, and various regional Pacific bodies, and has applied for membership in the WTO. Vanuatu has taken an active role in Pacific affairs, campaigning for a nuclear-free zone and

advocating independence for New Caledonia. Vanuatu has established diplomatic relations with a number of OECD countries, as well as China, Cuba, Vietnam, and Libya.

### 19 ECONOMY

Vanuatu has a mixed traditional and modern economy. Agriculture supports about 65% of the population, but the service industry is playing an increasingly important role in the economy. Tourism has been developed since the 1980s and, together with financial services, has become an important foreign exchange earner. GDP grew by less than 3% a year in the 1990s. For the three years 2000 to 2002, GDP growth averaged 3% and inflation averaged 3%. During this period the islands had to deal with the extensive damage from two severe earthquakes, each followed by sizeable tsunamis: in November, 1999 on the northern island of Pentecote, and in January 2002, centered on the capital and surrounding areas. The absence of personal and corporate income taxes have made Vanuatu an offshore financial center, and the government also earns fees from a "flag of convenience" shipping registry.

### 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2000 Vanuatu's gross domestic product (GDP) was estimated at \$257 million. The per capita GDP was estimated at \$1,300. The annual growth rate of GDP was estimated at 2.7%. The average inflation rate in 2000 was 2.5%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 26% of GDP, industry 12%, and services 62%.

According to the United Nations, in 2000 remittances from citizens working abroad totaled \$10.9 million or about \$95 per capita and accounted for approximately 8.2% of GDP. Worker remittances in 2001 totaled \$15.8 million. Foreign aid receipts amounted to about \$157 per capita and accounted for approximately 15% of the gross national income (GNI). Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings.

### 21 LABOR

About 80% of the population is engaged in peasant labor either for subsistence or producing cash crops such as copra. As of 2002, there were approximately 25,000 persons participating in the formal economy as wage earners. The wage-labor force is concentrated in Port-Vila and Luganville.

For persons engaged in government enterprises, port work, construction, and certain other jobs, the terms of employment and wages are set by legislation. The nation's first trade unions were formed in 1984. In 2002 there were seven trade unions; the largest two were the Oil and Gas Workers' Union and the Vanuatu Airline Workers' Union. Union membership has fallen from 4,000 in 1994 to less than 1,000 in 2002.

The law prohibits children under 12 from working. Children between 12 and 18 may work under restricted hours and conditions. The Labor Department effectively enforces these laws. In 2002, the minimum wage was \$143 per month for all workers. This does not provide an adequate living and most families subsidize this amount with subsistence farming. The law mandates a 44-hour maximum workweek. The Employment Act provides health and safety standards but these are not effectively enforced.

## 22 AGRICULTURE

About 10% of the land is cultivated. While most crops, including yams, taro, manioc, sweet potato, and breadfruit, are raised for local consumption, cash crops like copra, cocoa, and coffee have been increasingly important. Production of copra totaled 43,000 tons in 1999. Copra production was adversely affected by cyclones in 1985 and 1987.

In 1983, Vanuatu's first agricultural census was taken, with British assistance. A land alienation act passed in 1982 limits land ownership to indigenous owners and their descendants, but expatriates can lease land for up to 75 years.

## 23 ANIMAL HUSBANDRY

Hogs and fowl form part of the village economy. Vanuatu is ideal for cattle, and large numbers are raised on plantations; in 2001 there were an estimated 151,000 head of cattle, up from around 124,000 in 1990. The growing meat-packing industry produces frozen, chilled, and tinned beef; production of beef totaled about 4,000 tons (dressed carcass weight) in 2001. The beef industry is centered on the island of Espiritu Santo, where the country's main abattoir is located. Beef is exported primarily to Japan, with a lesser amount going to New Caledonia.

## 24 FISHING

Although the South Pacific Fishing Co., a joint Vanuatuan government and Japanese venture, has facilities at Luganville that freeze and export both tuna and bonito to Japan and the United States, the full fishery potential has not been realized. Fishing is currently focused on domestic consumption; exporting fish requires a government permit. Vanuatu's catch was 73,490 tons in 2000; exports totaled \$270,000 that year.

## 25 FORESTRY

About 37% of the total land area is forest or bushland. Total roundwood production in 2000 was 131,000 cu m (388,300 cu ft), with 69% burned as fuel. Sawnwood production totaled 18,000 cu m (635,400 cu ft) that year, and exports of forest products were valued at \$2.7 million. The government approved the establishment of a large commercial forestry plantation on Espiritu Santo in 1987.

## 26 MINING

Vanuatu had few known minerals, although gold deposits have recently been discovered. A small manganese mine on Efate ceased exports in 1980.

## 27 ENERGY AND POWER

Temporary generators established throughout the islands by the United States during World War II (1939–45) have mostly deteriorated. Total installed capacity was about 11,000 kW in 2001, all of it conventional thermal. Electricity production in 2000 totaled 39 million kWh, all of it from fossil fuels. Consumption of electricity in 2000 was 36.3 million kWh.

## 28 INDUSTRY

The industrial sector is small: in 1990 it contributed about 12.3% to GDP; in 1996, 13% and in 2001, 11.5%. The leading industries are fish and food freezing, wood processing, and meat canning. The small manufacturing sector, accounting for 5.5% of GDP in 1990 and 5% in 2001, is geared to toward domestic consumption. Indigenous crafts include basketry, canoe building, and pottery. In 1990, National Breweries, a joint venture with Sweden, began producing Tusker beer and Pripps Lager.

## 29 SCIENCE AND TECHNOLOGY

There is no advanced technology apart from overseas aid programs.

## 30 DOMESTIC TRADE

A large part of the population still relies on barter. In Port-Vila, European businesses dominate commercial life; there are hotels, supermarkets, fashion shops, and patisseries, as well as recently established Australian steak houses and small Chinese restaurants. Some Vanuatians have entered the cash economy in urban areas. There is a very small light industry section that supplies the local markets. The nation's numerous cooperative societies handle most of the distribution of goods on the islands. A value-added tax applies to most goods and services.

Normal business hours in the capital are 7:30 to 11:30 AM and 1:30 to 4:30 PM, Monday–Friday. Banks in Vanuatu are open on weekdays from 8 to 11:30 AM and 1:30 to 3 PM.

## 31 FOREIGN TRADE

In 2000, exports totaled \$23.2 million and imports amounted to \$86.7 million. Service receipts have helped offset the traditionally adverse trade balances. A commodities marketing board exports copra and cocoa, and cooperatives play a major role in foreign trade.

Most of Vanuatu's export commodities are foodstuffs, including oil seeds, (34%), vegetables (15%), wood (13%), meat (12%), cocoa (4.7%), and fish (1.3%).

In 2000, Vanuatu's imports were distributed among the following categories:

Consumer goods	16.4%
Food	20.2%
Fuels	14.1%
Industrial supplies	18.2%
Machinery	15.7%
Transportation	13.1%
Other	2.3%

Principal trading partners in 2000 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
Bangladesh	5.0	n.a.	n.a.
Japan	2.8	4.4	-1.6

## 32 BALANCE OF PAYMENTS

Continuing trade deficits have been offset by aid from the United Kingdom and France, but this assistance is being steadily reduced.

The US Central Intelligence Agency (CIA) reports that in 2000 the purchasing power parity of Vanuatu's exports was \$22.8 million while imports totaled \$87.5 million resulting in a trade deficit of \$64.7 million.

The International Monetary Fund (IMF) reports that in 2001 Vanuatu had exports of goods totaling \$20 million and imports totaling \$78 million. The services credit totaled \$119 million and debit \$73 million. The following table summarizes Vanuatu's balance of payments as reported by the IMF for 2001 in millions of US dollars.

<b>Current Account</b>	-15

### 33 BANKING AND SECURITIES

Vanuatu's banking system includes a Central Bank, local retail banks, and a Development Bank that provides loans for agricultural projects, housing, and industrial development. The country's Financial Centre, a tax haven created by the British in 1971, is the third-largest source of government revenue. Favorable regulatory and tax structures have stimulated foreign interest in Vanuatu as an international financial center; more than 600 offshore companies and banks were registered in Port-Vila in 1985. Local banks require no minimum deposits for vatu accounts and a minimum of US\$5,000, or the equivalent in major specified currencies, for foreign currency holdings. Vanuatu has no double taxation agreements with other countries, ensuring maximum confidentiality for international financial transactions. In late 1999, a number of foreign bank-including Deutsche Bank, Banker's Trust, and the Bank of New York-banned trading in US with Vanuatu because of suspected illegal activity being carried on through the Vanuatu financial center. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$55.3 million. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$245.6 million. The money market rate, the rate at which financial institutions lend to one another in the short term, was 5.5%. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 6.5%.

There is no stock exchange.

### 34 INSURANCE

Insurance coverage is available through agents of overseas companies, mainly British and French.

### 35 PUBLIC FINANCE

The US Central Intelligence Agency (CIA) estimates that in 2000 Vanuatu's central government took in revenues of approximately \$94.4 million and had expenditures of \$99.8 million including capital expenditures of \$30.4 million. Overall, the government registered a deficit of approximately \$5.4 million. External debt totaled \$64.6 million.

The following table shows an itemized breakdown of government revenues. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

<b>REVENUE AND GRANTS</b>	<b>100.0%</b>	<b>94</b>
Tax revenue	81.9%	77
Non-tax revenue	10.6%	10
Grants	7.4%	7

### 36 TAXATION

Vanuatu has no income, corporation, or sales tax. Government revenues are derived from indirect taxes, which include stamp taxes, an excise tax on locally produced alcoholic beverages, a 10% hotel tax, and a rent tax. In 2000 the OECD listed Vanuatu as one of 38 uncooperative tax haven. In 2002, it was one of seven that remained on the list. In May 2003, however, Vanuatu was removed from the blacklist, having promised an OECD representative to make the required reforms.

### 37 CUSTOMS AND DUTIES

Vanuatu imposes tariffs on both an ad valorem and specific basis. Tariff rates average 15–20%; however, rates for luxury goods could reach 200%. Printed matter is exempt. A 5% service tax is also charged on all imported goods. Export duties are levied on the country's primary products.

### 38 FOREIGN INVESTMENT

The government encourages all forms of foreign investment, especially if there is joint local participation. There are no major foreign ownership restrictions, and duty exemptions are available on application to the Ministry of Finance. In late 1999 Vanuatu's Department of Trade announced that, to be considered, all foreign investment proposals must be accompanied by US\$38,000. This action was taken because of the high number of project proposals approved that have not been implemented. According to statistics published by UNCTAD, foreign direct investment (FDI) in Vanuatu was US\$30.2 million in 1997, but dropped to US\$20.4 million in 1998, and averaged US\$20.275 for the three years following (1999 to 2001).

### 39 ECONOMIC DEVELOPMENT

The British independence settlement provided grants of £23.4 million to Vanuatu, including £6.4 million in budgetary aid (with additional grants provided annually), £4 million for technical aid, and £13 million for development projects aimed at promoting national economic self-sufficiency. Projects under the five-year development plan for 1982–86 included harbor development, agricultural training, and road improvements. Aid for other infrastructural development is provided by Australia, New Zealand, the UN, and the EU. Government development projects emphasize local participation and preservation of Vanuatu's cultural heritage. In 1995, Vanuatu received US\$45.8 million in aid from international sources. In 2000, Vanuatu was listed on the OECD's list of "uncooperative" tax havens. In 2002, it was one of only seven jurisdictions still on the list of not having taken corrective action. In May 2003, however, Vanuatu was the first of the seven to be removed from the blacklist having agreed, after discussions with OECD representatives, to institute the necessary reforms. Vanuatu remains one of the top ten "flags of convenience" registries.

### 40 SOCIAL DEVELOPMENT

The majority of the people cling to traditional village life. The extended family system ensures that no islanders starve, while church missions and the social development section of the Education Ministry concentrate on rural development and youth activities. The government incorporates family planning into its overall maternal and child health program. A provident fund system provides lump-sum benefits for old age, disability, and death. Workers contributed 3% of earnings and employers contribute 3% of payroll. Pensions are provided at the age of 55.

Women are still largely confined to traditional cultural roles, and most marriages include a "bride-price" that encourages men to consider their wives as possessions. Women generally do not own land. Village chiefs usually act to reinforce the subordinate roles of women and are thus viewed as a primary obstacle to

female advancement. There are no female leaders in Vanuatu's civic, business, or religious institutions. A disproportionate number of women lost their jobs due to cutbacks in government employment. Violence against women, especially domestic abuse, is common.

Human rights are generally well respected in Vanuatu.

#### 41 HEALTH

Malaria is the most serious of the country's diseases, which also include leprosy, tuberculosis, filariasis, and venereal diseases. Malaria was reported in 10,377 cases in 1993, a decrease from 28,558 in 1990. In 1990, there were an estimated 200 cases of tuberculosis per 100,000 people reported. Safe water was available to 72% of Vanuatu's population during 1989-90.

Medical care is provided by 94 hospitals, health centers, and clinics administered by the Ministry of Health, assisted by the World Health Organization and a number of voluntary agencies. Local training schemes in basic community nursing are provided by Port-Vila hospitals and local clinics train health and sanitation orderlies. The country had 15 physicians in 1991. In 1997 there were 0.1 physicians and 2.6 nurses per 1,000 people.

There were 500 deaths of children under five years old in 1990-95. Only 12% of married women were using contraception in 1989-90. In 2002, the infant mortality rate was estimated at 59.6 per 1,000 live births. In the same year the estimated birth rate (24.8 per 1,000 people) far exceeded the general mortality rate (8.3 per 1,000 people). The fertility rate in that year was 3.1 children per woman. Average life expectancy was an estimated 61.3 years. The immunization rates for children under one were as follows in 1994: diphtheria, pertussis, and tetanus, 74%; polio, 74%; measles, 53%; and tuberculosis, 86%.

#### 42 HOUSING

In urban areas only the emerging middle class can afford government-built housing. Other migrants to the towns buy plots of land and build cheap shacks of corrugated iron and waste materials, principally near Port-Vila and Luganville. The vast majority of villagers still build their own homes from local materials. The majority of dwellings are traditional Melanesian houses with earth or coral floors, no glass windows, and palm, bamboo, or cane walls and roofing. The most widely used exterior construction material was bush. In February 1987, a cyclone damaged 95% of the buildings in Port-Vila. In 1998, 87% of the population had access to safe drinking water.

#### 43 EDUCATION

The overall literacy rate is low (64% of the population), but literacy is relatively widespread among persons under 35 years of age. Primary education is available for almost all children except in a few remote tribal areas. Education is provided in either English or French. In 1992, there were 272 primary schools with 852 teachers and 26,267 students. Student-to-teacher ratio stood at 31 to 1. General secondary schools had 220 teachers and 4,269 students in the same year. There were also 124 students in teacher training schools and 444 in vocational schools. The pupil-teacher ratio at the primary level was 24 to 1 in 1999. In the same year, 96% of primary-school-age children were enrolled in school, while 23% of those eligible attended secondary school.

Full secondary education is provided by the anglophone Malapoa College and the French Lycée at Port-Vila; limited secondary education is also available in five English post-primary schools and three French mission schools. For post-secondary education, especially medical and technical training, selected students go principally to Fiji, Australia, and New Zealand.

Government expenditure on education in 1995 amounted to 20% of the central government budget. As of 1999, public expenditure on education was estimated at 8.7% of GDP.

#### 44 LIBRARIES AND MUSEUMS

There is practically no secular reading matter in the country's many vernaculars. A cultural center at Port-Vila has a well-stocked library of both French and English books and periodicals and houses fine collections of Melanesian art and artifacts, as well as a valuable stamp collection. The secondary schools also have libraries, and there is a small library in the parliament building. Efate has a small museum displaying South Pacific artifacts and current works of art. The Vanuatu Cultural Center and National Museum and a private fine arts museum are located in Port-Vila.

#### 45 MEDIA

The weekly government newspaper, *The Vanuatu Weekly*, appears in English, French, and Bislama. In 2002, it had a circulation of 1,700. Vanuatu is linked by telegraph and telex to Hong Kong; Paris; Noumea, New Caledonia; and Sydney, Australia. An earth satellite tracking station came into service in 1979. There were 5,500 mainline telephones in 1998 and 310 additional cellular phones in 2000. Radio Vanuatu (founded 1966) broadcasts daily in English, French, and Bislama. As of 2002, there were four radio stations and one television station. In 1997 there were 254 radios and 10 television sets per 1,000 population. In 2000, there were 3,000 Internet subscribers served by one service provider.

The constitution provides for free speech and a free press; however, in practice these provisions are not always honored, threatening opposition groups and media representatives with revocations of licenses and permits.

#### 46 ORGANIZATIONS

There are a great number of European organizations, but the cooperative movement has had the greatest local impact. Cooperative units have organized a training center in Port-Vila for such skills as accounting, management, law, and marketing. Cooperatives receive British aid and government support but remain firmly independent. There is an active Vanuatu Credit Union League offering educational opportunities as well as financial services to members. National youth organizations include the Vanuatu National Youth Council and the Vanuatu National Union of Students. The Vanuatu Association of Women Graduates promotes higher education opportunities for women.

#### 47 TOURISM, TRAVEL, AND RECREATION

The most popular recreations in Vanuatu include marine sightseeing, deep-sea fishing, sailing, and beachcombing for shells. The number of tourist arrivals reached 57,591 in 2000, with over 36,000 from Australia alone. Tourist receipts totaled \$58 million the same year. There were 1,060 rooms in hotels and other establishments. According to 1999 UN estimates, the cost of staying in Port-Vila was approximately \$172 per day. The daily cost of staying in Santos was \$95 and Tanna Island was \$69.

#### 48 FAMOUS VANUATUANS

Father Walter Hayde Lini (1943-99), ordained as an Anglican priest in 1970, served as prime minister in Vanuatu from 1980 to 1991.

#### 49 DEPENDENCIES

Vanuatu has no territories or colonies.

# VIETNAM

Socialist Republic of Vietnam  
*Cong Hoa Chu Nghia Viet Nam*

**CAPITAL:** Hanoi

**FLAG:** The flag is red with a five-pointed gold star in the center.

**ANTHEM:** *Tien Quan Ca (Forward, Soldiers!).*

**MONETARY UNIT:** The dong (D) is a paper currency of 10 hao and 100 xu. There are coins of 1, 2, and 5 xu, and notes of 5 xu, 1, 2, and 5 hao, and 1, 2, 5, and 10 dong. D1 = \$0.00007 (or \$1 653= D 15,303) as of May 2003.

**WEIGHTS AND MEASURES:** The metric system is the legal standard, but some traditional measures are still used.

**HOLIDAYS:** Liberation of Saigon, 30 April; May Day, 1 May; Independence Day, 2 September. Movable holidays include the Vietnamese New Year (Tet).

**TIME:** 7 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Situated on the eastern coast of mainland Southeast Asia, the Socialist Republic of Vietnam (SRV) has an area of 329,560 sq km (127,244 sq mi), extending 1,650 km (1,025 mi) N–S and 600 km (373 mi) E–W. Comparatively, the area occupied by Vietnam is slightly larger than the state of New Mexico. At its narrowest, Vietnam is only 50 km (31 mi) across. The nation is bordered on the N by China, on the E by the Gulf of Tonkin, on the E and S by the South China Sea, on the SW by the Gulf of Thailand, and on the W by Cambodia and Laos, with a total land boundary of 4,639 km (2,883 mi) and a coastline of 3,444 km (2,140 mi). Before unification, which was proclaimed on 3 July 1976, Vietnam was divided in two by the 17th parallel. To the south was the Republic of Vietnam (RVN), also known as South Vietnam; to the north, the Democratic Republic of Vietnam (DRV), also known as North Vietnam.

Vietnam, China, the Philippines, Brunei, Taiwan, and Malaysia claim all or part of the Spratly Islands and Paracel Islands, located in the South China Sea roughly 600 km (350 mi) east of Ho Chi Minh City and 400 km (250 mi) east of Da Nang, respectively. The Paracel Islands are known in Vietnamese as the Hoang Sa archipelago, and the Spratlys as the Truong Sa. Both archipelagoes are reportedly surrounded by rich undersea oil reserves, and are productive fishing grounds. China has occupied the Paracel Islands since 1974, when Chinese troops drove a South Vietnamese garrison from the western islands. Vietnam occupies six of the Spratlys, and has unsuccessfully engaged in negotiations with Malaysia and the Philippines over the remainder. Periodic clashes between Chinese and Vietnamese naval forces have taken place in the vicinity of both island groups.

Vietnam's capital city, Hanoi, is located in the northern part of the country.

## <sup>2</sup>TOPOGRAPHY

Vietnam has been described as a carrying pole with a rice basket hanging from each end. The description is a fitting one, for a single mountain chain, the Annam Cordillera (in Vietnamese,

Truong Son), extends along Vietnam's western border from north to south, connecting two "rice baskets," which are formed by the densely populated Red River Delta of the Tonkin region in the north and the rich Mekong River Delta in the south. Over two-thirds of the entire population of the country lives in the two low-lying delta regions, both of which are composed of rich alluvial soils brought down from the mountainous regions of southern China and mainland Southeast Asia. The remainder of the population lives along the narrow central coast, in the hilly regions of the Central Highlands north of Ho Chi Minh City (formerly Saigon), or in the mountains north and west of the Red River Delta. The highest mountain peak is Fan Si Pan (3,143 m/10,312 ft), near the northern border.

## <sup>3</sup>CLIMATE

Vietnam is entirely located in the tropical belt lying between the equator and the Tropic of Cancer. While there are slight variations in temperature, depending on the season and the altitude, the primary seasonal changes are marked by variations in rainfall.

In the north, the rainy season extends from mid-April to mid-October; the city of Hanoi has a mean annual rainfall of 172 cm (68 in), and in the mountains, annual rainfall sometimes exceeds 406 cm (160 in). Daily temperatures fluctuate considerably in the Red River Delta region, particularly in the dry season, when the thermometer may drop as low as 5°C (41°F) in the region of Hanoi. During the rainy season, the average temperature in Hanoi is about 30°C (86°F).

The south is more tropical; temperatures in Ho Chi Minh City vary only between 18° and 33°C (64–91°F) throughout the year. Temperatures in the Central Highlands are somewhat cooler, ranging from a mean of about 17°C (63°F) in winter to 20°C (68°F) in summer. The rainy season extends from early May to November, with annual rainfall averaging about 200 cm (79 in) in lowland regions. The typhoon season lasts from July through November, with the most severe storms occurring along the central coast. Typhoons in this region frequently lead to serious crop damage and loss of life.

#### **4 FLORA AND FAUNA**

The mountainous regions of Tonkin, as well as the Annam Cordillera, are characterized by tropical rain forest broken by large areas of monsoon forest. In the higher altitudes of the far northwest there are pine forests. Shifting cultivation has resulted in many sections of secondary forest. Tropical grasses are widespread, and there are mangrove forests fringing parts of the Red River Delta and in the Ca Mau peninsula, which juts into the Gulf of Thailand. Tropical evergreen forests predominate in the south, with extensive savanna in the southwest.

Deer and wild oxen are found in the more mountainous areas. There are many species of tropical birds and insects.

#### **5 ENVIRONMENT**

During the Vietnam war, massive bombing raids and defoliation campaigns caused severe destruction of the natural foliage, especially in the Central Highlands in the south. In addition, dioxin, a toxic residue of the herbicide known as Agent Orange, had leached into water supplies. Over 50% of the nation's forests have been eliminated. UN sources estimate that Vietnam loses 160,000 to 200,000 hectares of forest land annually. The nation has 366 cu km of renewable water resources with 86% used for farming activity and 10% used for industrial purposes. As of 2000, only 72% of the rural population had access to safe drinking water. Salinization and alkalinization are a threat to the quality of the soil, as are excessive use of pesticides and fertilizers.

Environmental damage has also been caused by the slash-and-burn agriculture practiced by nomadic tribal peoples in the Central Highlands and in the mountainous regions in the north. The government is engaged in a program to introduce modern farming practices to these populations.

In 2001, 38 of Vietnam's mammal species and 47 bird species were endangered. About 297 types of plants are also endangered. Endangered species include the tiger, elephant, Sumatran rhinoceros, Thailand brow-antlered deer, kouprey, river terrapin, Siamese crocodile (probably extinct), estuarine crocodile, Javan rhinoceros, and the pileated, crowned, and caped gibbons. The Vietnam warty pig has become extinct.

#### **6 POPULATION**

The population of Vietnam in 2003 was estimated by the United Nations at 81,377,000, which placed it as number 13 in population among the 193 nations of the world. In that year approximately 6% of the population was over 65 years of age, with another 31% of the population under 15 years of age. There were 99 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for 2000–2005 is 1.35%, with the projected population for the year 2015 at 94,742,000. The low growth rate is due to extensive family planning programs aimed to curb overpopulation. The population density in 2002 was 240 per sq km (622 per sq mi).

It was estimated by the Population Reference Bureau that 20% of the population lived in urban areas in 2001. The capital city, Hanoi, had a population of 1,074,000 in that year. Ho Chi Minh City is the largest urban area with a population of 3,678,000. According to the United Nations, the urban population growth rate for 2000–2005 was 2.2%.

#### **7 MIGRATION**

The 1954 partition of Vietnam resulted in the exodus of over 820,000 refugees, the majority of them Catholics, from the northern part of the country. Most eventually settled with government assistance in the Central Highlands or on the outskirts of the capital city of Saigon (now Ho Chi Minh City). During the same period, about 80,000 Viet-Minh troops and their dependents moved from the south to the north.

The Vietnam war caused severe disruption of living patterns in both the north and the south. In the north, intensive US bombing of major industrial cities led to a dispersal of the population from urban areas, while a government-sponsored program resulted in the resettlement of nearly 1 million Vietnamese from crowded areas in the Delta to less densely populated regions in upland areas of the country. In the south, migration was primarily from the countryside to the cities, as millions of peasants fled their villages to escape the effects of the war or to seek employment in the affluent cities of Saigon and Da Nang. At the end of the war in 1975, nearly one-half of the population lived in urban areas, many in refugee camps on the edges of the major cities.

After seizing control of the south in 1975, the Hanoi regime announced a new program that called for the resettlement of over 10 million Vietnamese into uncrowded areas of the country by the end of the century. Many were to be moved from refugee camps in the south to new economic zones established in the Central Highlands or along the Cambodian border. Although the zones were unpopular because of poor living conditions, between the end of the war and 1981, nearly 1.5 million Vietnamese were resettled into new areas. The overall aim was to disperse the entire population into several hundred "agro-industrial districts" that would provide the basis for development of an advanced Socialist economy. Since 1981 another 2.1 million have been resettled.

In addition to this migration within the country, since the war there has been a substantial outflow of Vietnamese fleeing to other countries. About 150,000 were evacuated from the south in the final weeks of the war, many of them eventually settling in the United States. There were 593,213 people of Vietnamese ancestry in the US in 1990. In 1978, a new exodus began after the government nationalized all private trade and manufacturing in the country. During 1978–87, an estimated 1 million Vietnamese fled by sea to other countries in Southeast Asia, or overland to China. Many later resettled in Australia, France, the United States, and other countries. From 1979 to 1984, 59,730 persons emigrated legally through the US Orderly Departure Program; this program was suspended by the Vietnamese government in 1986 but later resumed, with 57,000 emigrating to the United States in 1993 alone. In 1984, the US started a program that offered asylum to Vietnamese political prisoners and all Asian-American children. This program was restarted in September 1987. Between 1975 and 1984, about 554,000 persons, known as the "boat people," emigrated illegally. In 1992, Vietnam signed agreements with the United Kingdom providing for the forcible repatriation of almost all the 55,700 "boat people" remaining in Hong Kong. The major refugee community was in China, which was harboring 285,500 Vietnamese of Chinese ancestry at the end of 1992.

As of 1997, 3,000 Vietnamese remained in Hong Kong. By 1999, some 110,000 non-refugee boat people had returned to Vietnam. In 2000, the net migration rate was -0.5 migrants per 1,000 population. The government views the emigration level as too low, but the immigration level as satisfactory.

#### **8 ETHNIC GROUPS**

About 85–90% of the population of the SRV is composed of ethnic Vietnamese. The racial origins of the Vietnamese are obscure, although many scholars believe they represent a mixture of Australoid peoples who lived in mainland Southeast Asia during the Stone Age with Mongoloid peoples who migrated into the area from southern China.

In addition to the ethnic Vietnamese, there are 53 other ethnic groups living in the SRV. Many, like the Tay, the Thai, the Nung, the Rhadé, and the Jarai, are nomadic tribal peoples living in the mountainous areas of the Central Highlands and along the Sino-Vietnamese border. The overseas Chinese (Hoa) are descendants of peoples who migrated into the area in recent centuries. The

Cham and the Khmer are remnants of past civilizations that controlled the southern parts of the country.

Until recently, the largest ethnic minority in the country was the overseas Chinese, numbering more than 2 million. Many have fled the country for economic or political reasons in recent years, however; Chinese constituted 3% of the population in 1999. Other sizable minority groups are the Muong, the Tay, Meo, Khmer, Man, and Cham.

## 9 LANGUAGES

The official language of the SRV is Vietnamese (Quoc ngu). A tonal language, it bears similarities to Khmer, Thai, and Chinese, and at least one-third of the vocabulary is derived from Chinese. Formerly, Vietnamese was written in Chinese characters, but under French rule a Romanized alphabet originally developed by Roman Catholic missionaries in the 17th century was adopted as the standard written form of the language. Most of the minority groups have their own spoken languages, and some have their own writing systems, but all children in the SRV today receive instruction in the national language. Other languages include Chinese, English, French, Khmer, and the tribal languages of Mon-Khmer and Malayo-Polynesian.

## 10 RELIGIONS

In 2002, the dominant religious belief was Buddhism. Many believers practice a mixture of Mahayana Buddhism, Taoism, and Confucianism, sometimes called Vietnam's "Triple Religion." It was under Chinese rule that these three major religions and philosophical systems entered the country. Three-fourths of the population are at least nominally Buddhist. Like many Asian peoples, the Vietnamese also practiced spirit worship, a form of religious belief that was particularly prevalent among the tribal peoples.

Christianity was first brought to Vietnam in the 17th century by Roman Catholic missionaries sponsored by the French, the Spanish, the Portuguese, or the papacy. Eventually, however, propagation of the Christian faith was forbidden by the imperial court, and Catholicism could only be practiced in secret. French priests were especially active in provoking the French decision to conquer Vietnam in the 19th century.

Under French rule, Christianity prospered, and when Vietnam restored its independence in 1954, there were more than 2 million Catholics in the country, a population that increased to between 6 and 7 million in 1998.

Two millenarian religious sects, the Cao Dai and the Hoa Hao, also became popular among peasants and townspeople in the Mekong Delta. In 1998, the Cao Dai sect claimed 1.1 million adherents, and the Hoa Hao claimed 1.3 million.

Minority religions include various denominations of Protestantism, Hinduism, and Islam.

Since reunification in 1975, religious activities have been restricted, although freedom of religion is formally guaranteed in the 1980 constitution. The government granted permission in 1983 for church organizations to carry on activities that correspond to official policies, but it has cracked down on dissident elements that resist state control. In April 1999 the government issued a new decree on religion that prescribes the rights and responsibilities of religious believers. It states for the first time that no religious organization can reclaim lands or properties taken over by the State following the end of the 1954 war against French rule and the 1975 Communist victory in the south. The decree also states that persons formerly detained or imprisoned must obtain special permission from the authorities before resuming religious activities.

## 11 TRANSPORTATION

The war wreaked massive damage on Vietnam's transportation network, especially its railways, roads, and bridges. Further

LOCATION: 102°10' to 109°30' E; 8°30' to 23°22' N. BOUNDARY LENGTHS: China, 1,281 kilometers (796 miles); Cambodia, 982 kilometers (610 miles); Laos, 1,555 kilometers (966 miles). COASTLINE: 3,444 kilometers (2,140 miles). TERRITORIAL SEA LIMIT: 12 miles.

damage occurred during the Chinese invasion in 1979, after which direct rail and air connections with China were severed. The nation's truck fleet is ancient and seriously lacking in spare parts. Most goods move by small barges or sampans along the countless waterways. The length of inland navigable waterways totals about 17,702 km (11,000 mi), of which 29% is navigable year-round by vessels with less than a 1.8 m draft. Major ports such as Haiphong in the north and Da Nang in the south, are

frequently clogged with goods because many of the stevedores—often overseas Chinese—have fled abroad. In 2002, Vietnam had a merchant fleet of 153 ships totaling 527,920 GRT.

Recognizing its importance to economic growth, the government is making a major effort to improve the transportation network. The railroads are to be expanded. There were 3,142 km (1,952 mi) of operable track in 2002. There were 34 airports, 17 with permanent-surface runways in 2001. The nation's air fleet remains primitive, as the national airline (Hang Khong Vietnam) uses Soviet passenger liners built in the 1950s. In 2001, 3,410,300 passengers were carried on scheduled domestic and international flights. There were 93,300 km (57,977 mi) of roads in the country in 2001, but only 23,418 km (14,552 mi) were paved. There were an estimated 93,600 cars and several million motorcycles in 2000. The main route from Hanoi to Ho Chi Minh City badly needs improvement. In 1997, the government authorized the construction of a new north-south highway, the largest infrastructural project ever undertaken in Vietnam. The construction will take at least fifteen years, utilizing ten days of mandatory labor from almost every citizen between the ages of 18 and 45.

## 12 HISTORY

During the first millennium BC, the Lac peoples, the ancestors of the modern-day Vietnamese, formed a Bronze Age civilization in the vicinity of the Red River Delta in northern Vietnam. The Lac were primarily rice farmers, although those living in mountain valleys occasionally practiced the slash-and-burn agriculture now prevalent among nomadic tribes in the Central Highlands and the mountainous regions in the north. In the 3rd century BC, the Vietnamese kingdom of Van Lang was conquered by a Chinese military adventurer who incorporated the Red River Delta area into his own kingdom in southern China. A century later, Vietnam was integrated into the expanding Chinese empire. During 1,000 years of Chinese rule, Vietnamese society changed significantly as it was introduced to Chinese political and social institutions; Chinese architecture, art, and literature; and the Chinese written language. In AD 939, during a period of anarchy in China, Vietnamese rebels restored national independence.

During the next several hundred years, the Vietnamese Empire, then known as Dai Viet (Great Viet), gradually developed its own institutions and expanded steadily to the south. Under two great dynasties, the Ly (1009–1225) and the Tran (1225–1400), the Vietnamese fended off periodic attempts by China to resubjugate Vietnam, while gradually expanding southward at the expense of their southern neighbor, Champa. In the early 15th century, Chinese rule was briefly restored, but a national uprising led by Le Loi led to the expulsion of the Chinese and the formation of an independent Le Dynasty (1428–1788). Under the Le, expansion to the south continued, and the entire Mekong River Delta came under Vietnamese rule during the 17th century. But expansion brought problems, as a weakened Le court slipped into civil war between two princely families, the Trinh in the north and the Nguyen in the south.

The division of Vietnam into two separate political entities came at a time when European adventurers were beginning to expand their commercial and missionary activities into East and Southeast Asia. In 1771, a major peasant revolt led by the Tay Son brothers destroyed the Nguyen and the Trinh and briefly united the entire country under Emperor Nguyen Hue, ablest of the Tay Son. But a prince of the defeated Nguyen house enlisted the aid of a French Roman Catholic bishop and raised a military force that conquered the Tay Son and reunited the country under a new Nguyen Dynasty (1802–1945). When the founding emperor, Gia Long, died in 1820, his son Minh Mang refused to continue the commercial and missionary privileges granted by his predecessor to the French. In 1858, French forces attacked near Saigon and forced the defeated Vietnamese Empire to cede

territory in the area to the French, which became the colony of Cochinchina. In 1884, France completed its conquest of the country, establishing a protectorate over central and northern Vietnam (now renamed Annam and Tonkin). In 1895, the three sections of Vietnam were included with the protectorates of Laos and Cambodia into a French-ruled Indochinese Union.

In March 1946, the French and the DRV signed a preliminary agreement (the Ho-Sainteny Agreement) recognizing Vietnam as a "free state" in the new French Union. The agreement also called for a plebiscite in Cochinchina to permit the local population in that colony to determine their own future. During the summer of 1946, French and Vietnamese negotiators attempted without success to complete an agreement on the future of Vietnam. In September, Ho Chi Minh signed a *modus vivendi* calling for renewed talks early in 1947, but military clashes between Vietnamese and French troops in the DRV led to the outbreak of war in December 1946. The Franco-Viet-Minh war lasted nearly eight years, ending in July 1954 after a successful siege of the French garrison at Dien Bien Phu by Viet-Minh forces. According to the Geneva agreement signed on 21 July, Vietnam was temporarily partitioned along the 17th parallel, pending general elections to bring about national reunification. North of the parallel, the DRV began to build a Socialist society, while in the south, an anti-Communist government under the Roman Catholic politician Ngo Dinh Diem attempted with US aid to build a viable and independent state. In the summer of 1955, Prime Minister Diem refused to hold consultations with the DRV on elections called for by the Geneva accords. On 26 October, Diem proclaimed the Republic of Vietnam (RVN), with its capital at Saigon. In a referendum held three days earlier, Diem had defeated ex-Emperor Bao Dai, and in 1956, Diem became president of the RVN under a new constitution written with US support. With the Geneva accords thus abrogated, Vietnamese guerrillas, supported by the DRV, initiated low-level political and military activities to destabilize the Saigon regime. Their efforts were assisted by Diem's own shortcomings, as he brutally suppressed all political opposition and failed to take effective measures to bring to an end the unequal division of landholding in South Vietnam. The first Vietnamese attempts to resist French rule were ineffectual. Western-style nationalist movements began to form after World War I, and an Indochinese Communist Party, under the leadership of the veteran revolutionary Ho Chi Minh, was formed in 1930. After the collapse of France in World War II, Japan forced the French administration to accept a Japanese military occupation of Indochina. During the joint French-Japanese rule, Communist forces under the umbrella of the Viet-Minh Front began to organize for a national uprising at the end of the war. In March 1945, the Japanese, nearing defeat, disarmed the French and seized full administrative control over French Indochina. At the same time, the Japanese set up a puppet government, with Bao Dai, the figurehead emperor of Vietnam, as nominal ruler. Shortly after Japan surrendered to Allied forces in August 1945, Viet-Minh forces, led by the Indochinese Communist Party, launched the nationwide August Revolution to restore Vietnamese independence. On 2 September, President Ho Chi Minh declared the formation of an independent Democratic Republic of Vietnam (DRV) in Hanoi. Under the Potsdam agreements, Nationalist Chinese troops occupied all of Indochina north of the 16th parallel, while British troops occupied the remainder of the old Indochinese Union. Chinese commanders permitted the Viet-Minh to remain in political control of the north, but the British assisted the French to restore their authority in the south.

In December 1960, revolutionary forces in the south formed a National Liberation Front (NLF) to coordinate political activities against the Diem regime. Guerrilla activities by the People's Liberation Armed Forces (known in the United States as the Viet-Cong) were stepped up, and Hanoi began to infiltrate trained

cadres from the north to provide leadership to the revolutionary movement. Despite increasing economic and military assistance from the United States, the Diem regime continued to decline, and in November 1963, Diem was overthrown by a military coup waged with the complicity of US president John F. Kennedy's administration, which had watched in dismay as Diem had alienated Buddhist elements by his open favoritism to fellow Roman Catholics. A Military Revolutionary Council, led by the popular southern general Duong Van (Big) Minh, was formed in Saigon. General Minh promised to continue efforts to defeat the insurgency movement in the south but was unable to reverse the growing political anarchy in Saigon. Early in 1964, he was replaced by another military junta. During the next 15 months, a number of governments succeeded each other, while the influence of the NLF, assisted by growing numbers of regular troops that were infiltrating from the north, steadily increased in the countryside. By early 1965, US intelligence was warning that without US intervention, South Vietnam could collapse within six months.

Beginning in February 1965, US president Lyndon Johnson took two major steps to reverse the situation in South Vietnam. American combat troops were introduced in growing numbers into the south, while a campaign of heavy bombing raids was launched on military and industrial targets in the north. In Saigon, the political situation stabilized with the seizure of power by a group of army officers led by Nguyen Van Thieu and Nguyen Cao Ky. Encouraged by the United States, the new military regime drafted a constitution, and in elections held in September 1967, Gen. Thieu was elected president of the country. By 1967, US troop strength in South Vietnam had reached over 500,000, while US air strikes over DRV territory were averaging about 100 sorties a day. The Hanoi regime attempted to match the US escalation by increasing infiltration of North Vietnamese military units into the south, but under the sheer weight of US firepower, the revolution began to lose momentum, and morale was ebbing.

On 30 January 1968, in an effort to reverse the military decline on the battlefield and encourage the growing popular discontent with the war in the United States, Hanoi launched the Tet Offensive, a massive effort to seize towns and villages throughout the south. The attempt to seize Saigon or force the collapse of the Saigon regime failed to achieve its objective, but the secondary aim of undermining support for the war in the United States succeeded. President Johnson canceled plans to increase the US military commitment and agreed to pursue a political settlement. To bring about negotiations with Hanoi, a complete bombing halt was ordered on 1 November, just before the US presidential election that brought Richard M. Nixon to office as the new Republican president. President Nixon announced a policy of "Vietnamization," according to which US forces would be gradually withdrawn and the bulk of the fighting in the south would be taken over by RVN forces. On 30 April 1970, in order to destroy enemy sanctuaries beyond the South Vietnamese border, US and South Vietnamese forces invaded neutral Cambodia. The invasion backfired, however, stimulating the rise of revolutionary activities by the Hanoi-supported Cambodian Communist movement and arousing protests in the United States that the war was being expanded. The withdrawal of US military forces continued, and in March 1972, the DRV attempted to test the capability of the South Vietnamese forces by launching a direct offensive across the 17th parallel. The "Easter Offensive" succeeded in capturing the provincial capital of Quang Tri, but further gains were prevented by the resumption of US bombing raids.

By this time, both sides were willing to compromise to bring the war to an end; on 26 October 1972, the DRV announced that the secret talks between US secretary of state Henry Kissinger and its representative, Le Duc Tho, had produced a tentative

agreement. Hanoi agreed to recognize the political authority of President Nguyen Van Thieu in Saigon, while the United States agreed to complete the withdrawal of US forces without demanding the removal of existing North Vietnamese troops in the south. The negotiations briefly ran aground in late autumn, leading President Nixon to order an intensive bombing assault on the DRV, but the talks resumed in early January, and the Paris Agreement was formally signed on 27 January 1973.

The Paris Agreement and the withdrawal of US forces by no means signaled the end of the conflict. Clashes between revolutionary forces and South Vietnamese units continued in the south, while provisions for a political settlement quickly collapsed. In January 1975, North Vietnamese forces in the south launched a major military offensive in the Central Highlands. When South Vietnamese resistance in the area disintegrated, further attacks were launched farther to the north, and by late March the entire northern half of the country was in North Vietnamese hands. President Thieu resigned on 21 April, but his successor, General Duong Van Minh, was unable to achieve a negotiated settlement. The capital of the RVN, Saigon, was occupied by North Vietnamese troops on 30 April. Thus ended a war in which some 2,000,000 Vietnamese and more than 56,000 Americans were killed and an estimated 4,000,000 people were injured. In the DRV, US bombing was estimated to have destroyed 70% of the industrial plants; in the RVN, more than 4 million were homeless. During the 1950–74 period, total US economic and military aid to Vietnam was \$23.9 billion (including \$16.1 billion in direct military aid), representing the largest bilateral assistance program in modern history. Chinese aid to the DRV (according to intelligence estimates) probably averaged over \$200 million a year. No complete figures are available on the extent of Soviet assistance to the DRV, but some scholars estimate it at about \$1 billion annually.

During the next 15 months, the DRV moved to complete national reunification of north and south. Nationwide elections for a new National Assembly were held on 25 April 1976. On 24 June, the first Assembly of the unified country met and proclaimed the establishment on 2 July of the Socialist Republic of Vietnam (SRV), with its capital remaining at Hanoi. In December, the Communist Party, known as the Vietnamese Workers' Party since 1951, was renamed the Vietnamese Communist Party. The NLF was dissolved into a nationwide Fatherland Front for the entire country. The nation's Communist leadership, with Le Duan the general secretary of the Communist Party and Pham Van Dong the prime minister, remained unchanged, while loyal members of the revolutionary movement in the south were given positions of prominence at the national level. Ton Duc Thang, figurehead president of the DRV after the death of Ho Chi Minh in 1969, remained in that position until his death in 1980.

Economic reconstruction and the building of a fully Socialist society proved more difficult than reunification. Nationalization of industry and collectivization of agriculture had been achieved in the north in the late 1950s, but the south proved more resistant to official efforts to end private enterprise after 1975. When the regime attempted to destroy the remnants of capitalism and private farming in the south in 1978, thousands fled, and the economy entered a period of severe crisis. Its problems were magnified by the outbreak of war with China. In December 1978, Vietnamese forces had invaded neighboring Kampuchea (known as Cambodia until 1976 and again from 1989) to overthrow the anti-Vietnamese government of the revolutionary Pol Pot. A pro-Vietnamese government was installed in early January 1979. China, which had been supporting Pol Pot to retain its own influence in Southeast Asia, mounted a punitive invasion of North Vietnam in February 1979. After a short but bitter battle that caused severe casualties on both sides, the Chinese forces withdrew across the border. China, however, continued to

support guerrilla operations led by Pol Pot against the government in Kampuchea.

During the 1980s, the SRV attempted to recover from its economic crisis. Party leaders worked out a compromise permitting the survival of a small private sector while maintaining a program of gradual Socialist transformation. With the death of Le Duan in June 1986, a new leadership emerged under General Secretary Nguyen Van Linh at the Sixth National Party Congress. This leadership promised a new “openness” in political affairs and a policy of economic renovation (*doi moi*) to improve the livelihood of the population. A strong conservative coalition of party leaders seriously reduced Linh’s effectiveness as they stressed the dangers of political liberalization and slowed the pace of economic reform. In March 1988 Prime Minister Pham Hung died, and Linh’s choice of a conservative replacement, Do Muoi, was a clear concession to these groups.

Economic recovery continued to be difficult due to a serious lack of investment capital, resources, and technical skills. The SRV’s internal problems were compounded by the continuing dispute with China. To protect itself from Chinese intimidation, Hanoi had formed a military alliance with the USSR and was deeply dependent upon Soviet economic assistance. The continuing civil war in Kampuchea also represented a steady drain on the SRV’s slender resources and prevented foreign economic assistance, particularly from the United States. In December 1988 the constitution was amended to remove derogatory references to the United States, China, France and Japan, as an attempt to improve international relations. In August 1991 Do Muoi resigned as prime minister. His successor Vo Van Kiet favored free-market reforms. A new constitution was adopted by the National Assembly in April 1992. A general election took place in July 1992 and, for the first time, independent candidates were allowed to present themselves, but neither of the two deemed qualified were elected. On 23 September 1992, the National Assembly elected Lu Duc Anh as president and reelected Vo Van Kiet as prime minister.

In January 1989 the first direct talks between Vietnam and China since 1979 resulted in Vietnam’s agreement to withdraw its troops from Cambodia by the end of September 1989 and China’s agreement to end aid to the Khmer Rouge guerrillas once the Vietnamese withdrawal was achieved. Later, Vietnam insisted that the withdrawal was contingent on the end of all foreign military aid to factions opposing Cambodian Prime Minister Hun Sen. Hanoi hoped to use the September 1989 withdrawal of its troops from Cambodia as leverage for improved relations with the Association of Southeast Asian Nations (ASEAN), Japan, and the West. On 23 October 1991 a Cambodian peace agreement was signed, paving the way for Vietnam’s eventual entry into ASEAN, which occurred in 1995.

During the 1990s, Vietnam stepped up its efforts to attract foreign capital from the West and regularize relations with the world financial system. At the same time, the country struggled with its intention not to descend too deeply into Western style consumerism, as demonstrated in 1996, when the government, while continuing to court foreign investment, banned consumer-goods advertising in foreign languages. That move angered Western investors and free-market Vietnamese, but marked the beginning of a countrywide attempt to purge society of overt Western decadence. Analysts attributed the drive to the aging hard-line leadership who looked at the *doi moi* reforms with intense skepticism.

After joining ASEAN in 1995, Vietnam began reframing its trade laws and began instituting legal reforms aimed at codifying its sometimes capricious statutory system. During 1995, a significant year in Vietnam’s opening up to the world, the Communist Party held two meetings to discuss the establishment of a law-based civil society to replace the decades-old system of rule by fiat. In this spirit, the National Assembly passed a series

of laws aligning the country with international standards on copyright protection—needed for World Trade Organization (WTO) membership—and other areas. An extensive document, called the Civil Code, was passed containing 834 articles ostensibly granting the Vietnamese people greater civil liberties. Other measures were decidedly investor-unfriendly, such as Prime Minister Kiet’s decree that no more land would be turned over from rice production to industrial use. Subsequently, Vietnam’s foreign investment rate slid from a peak of \$8.6 billion in 1996, to just \$1.4 billion in 1999.

In June 1996, the Communist Party held its eighth congress, its first full congress since 1991. Much was expected from the congress in light of the country’s ambiguous and, at times, conflicting moves toward openness and reform over the 12 years of *doi moi*. The congress returned to power the aging leadership, granting additional five-year terms to General Secretary Do Muoi, President Le Duc Anh, and Prime Minister Vo Van Kiet. The Party issued decrees in favor of continued economic reform and international investment, but balked at the kind of market liberalization most internationalist investors perceive as necessary to the creation of a viable economy.

After the long war between the Communists and the United States, 30 April 2000 marked Vietnam’s reunification. Celebrations of the occasion, with military parades and a carnival atmosphere, were followed by the 6 May funeral of former prime minister Pham Van Dong. One of the original troika leading Vietnam during the struggle against France and the United States, Dong (born in 1906) had been an influential, unswerving Communist conservative. It remains to be seen whether the inevitable winnowing of Vietnam’s “gerontocracy” will result in significant liberalization.

Severe, violent unrest in the countryside during 1997 led to punishment of rural officials for corruption, and increased awareness of agricultural concerns. As much as 80% of Vietnam’s population lives in farming communities. Expressions of rural discontent continued to emerge, even in the form of peasant anticorruption protests in the streets of Ho Chi Minh City. The Party hierarchy was somewhat reshuffled during 1997’s central committee meetings. Tran Duc Luong was selected as the new president (the third most powerful rank in the troika including general secretary and prime minister.) Phan Van Khai became prime minister. The ultimate hard-liner, Do Muoi, was succeeded as the Party’s general secretary by Gen. Le Kha Phieu. Muoi remained a highly influential advisor to Phieu, and some observers feel that Muoi’s constant pressure to hold the hard line kept Phieu from coming into his own as a possibly more progressive leader.

As aftereffects of the Asian economic crisis stunted the growth of Vietnam’s economy, the country remained poor at the beginning of the 21st century. In spite of strides in rice production, literacy and education, unemployment outpaces economic growth. Rural infrastructure languishes, and the urban gap between a rich elite and struggling masses is enormous. Socialist rhetoric and retrenchment failed to heal the divide, which also exists between North and South. Some effort has been made to recognize Party officials from the South, such as early 2000s appointment of Truong Tan Sang, who had been Ho Chi Minh City’s Party head, to lead the Party’s economic commission. The reformists within the Party have never been completely marginalized, only outmaneuvered by the old-time Marxists. Retired General Tran Do’s open criticism of corruption and other failures of the system resulted in his expulsion from the Party in January 1999. General Tran Do endured other forms of harassment, but it was not as severe as that meted out to other dissidents, due to his revered war veteran, communist faithful, status. He died on 9 August 2002.

Issues of importance relevant to Vietnam’s reintegration into the international system have included the status of Vietnamese

refugees; border and troop withdrawal disputes with Cambodia, Thailand, and the People's Republic of China; conflicts over the Spratly and Paracel island groups in the South China Sea; conflicts with the United States over the recovery of the remains of US soldiers missing-in-action (MIA); and Vietnamese cooperation in a diplomatic settlement in Cambodia. In October 1991 Vietnam agreed to accept the forced repatriation of Vietnamese refugees—known as boat people—who were designated economic migrants, not seekers of political asylum. The boat people were in camps around Asia from 1975–1994. The “comprehensive plan of action” adopted by the UN High Commission for Refugees in 1989 reduced the number of boat people fleeing Vietnam. In 1994, the Commission decided that all those still living in camps were to be repatriated.

The Soviet economic assistance on which Vietnam had depended, withered away with the collapse of the USSR, although technical help from Russia remains important. With the loss of major Soviet aid, Vietnam's relations with the West began to warm considerably. In June 1992, Vietnam announced that all South Vietnamese officials had been released from reeducation camps, a US-mandated prerequisite for lifting its embargo against Vietnam. As a result, on 3 February 1994 President Bill Clinton lifted the US trade embargo against Vietnam. At the time Clinton lifted the embargo, there were still 2,238 US servicemen listed as missing. Vietnam agreed to cooperate with their recovery to the “fullest possible extent.” Vietnam and the United States established full diplomatic relations in 1995. Trade between the United States and Vietnam has still been stymied by wrangling over agreements, including a stalemate in trade normalization talks in May 2000; however, in December 2001, Vietnam and the United States normalized trade relations. Vietnam does not want to be perceived by China as overly friendly with the United States, and the Party elite is very reluctant to embark on the economic overhaul that the United States demands. This resistance to change mandated from outside has kept Vietnam from World Bank, International Monetary Fund, and World Trade Organization benefits, but has earned it some admiration among those who oppose those institutions' dominance. Vietnam's international economic relations often appear confused or confusing to observers, as the Party attempts to balance a certain level of openness with the strong will to preserve a socialist system that has become a rarity in the global economy.

Print and broadcast media remain firmly state-dominated. In January 2002, the Communist Party ordered the seizure and destruction of unauthorized books written by leading dissidents. Relations with Canada soured when Vietnam executed a Vietnamese-Canadian woman on heroin charges in April 2000. The US government (particularly members of Congress) remains critical of Vietnam's human rights policies, including arbitrary arrest and detention of citizens. In contradiction to assertions of commitment to the cause of human rights, authorities continue to severely limit freedom of speech, press, assembly and association, workers' rights, and rights of citizens to change their government. In 1995, for instance, nine Vietnamese were sentenced to 4–15 years in prison for attempting to convene a conference on democracy and human rights. Six members of a banned Buddhist group were sentenced to up to five years in prison for “sabotaging religious solidarity,” and two longtime Communist Party members were sentenced to 12–15 months in jail for calling for political pluralism. Members of Vietnam's ethnic minorities such as the indigenous hill peoples have had difficulty protecting their land from logging and other encroachments. To celebrate the reunification anniversary in 2000, a large-scale amnesty of prisoners was held, which may have included political dissidents.

A May 2000 report, “Vietnam: Silencing of Dissent” by Human Rights Watch, detailed ways in which those expressing views counter to the Party line are subjected to “harassment and intimidation,” although it noted that Vietnam has fewer actual

political prisoners than in the past. The arrival of Internet access in Vietnam began to provide a means for free expression, although so far Internet content is government-monitored. In August 2001, the government passed a decree that imposed stricter regulations on Internet cafes and imposed fines for illegal Internet usage, while opening up provision of Internet services to privately owned businesses, including foreign companies. The government controlled the operation of the sole Internet access provider. In August 2002, the government proposed severe penalties for Internet cafe owners who allow customers to visit anti-government or pornographic websites. There were approximately 4,000 Internet cafes in 2002.

The controversy between the People's Republic of China and the SRV over the control of the Spratly and Paracel archipelagos in the South China Sea dates to the early part of the 20th century. After the Vietnam War, when oil supplies became an issue, the dispute intensified, leading to numerous armed clashes between China and Vietnam. Vietnam, China, the Philippines, Brunei, Taiwan, and Malaysia claim all or part of the Spratly and Paracel archipelagos. These competing claims have broad geopolitical implications regarding oil reserves, fishing rights, rights of passage for ships, prevention of nuclear dumping, and security in the region. In 1995, China occupied Mischief Reef, on an island in the area claimed by the Philippines and later that year China signed an agreement with a US oil exploration firm to drill for oil in waters claimed by Vietnam. As a member of ASEAN, Vietnam took its complaint to that body. In March 1997, a meeting of the ASEAN ambassadors was convened in Hanoi and the regional bloc emerged united in opposition to China's move against what they officially recognized as Vietnam's legal territory, marking the first time the ASEAN nations stood up in defiance of Beijing. The disputes over the islands remain unresolved as of early 2003.

At the ninth Party congress held in April 2001, reform-minded National Assembly chairman Nong Duc Manh was chosen as General Secretary to replace the unpopular Le Kha Phieu, who was increasingly seen as an obstacle to Vietnam's modernization. Manh is believed to be the illegitimate son of Ho Chi Minh. There is evidence of some division within the Party, as some more conservative members are concerned about the perceived negative effects of economic growth, such as corruption and drug trafficking, whereas a more reformist bloc is interested in separating the government from the Party and in creating a greater role for the private sector. In 2002, the Party revised its rules to allow members to engage in private business. At the meeting of the National Assembly in July 2002, Prime Minister Phan Van Khai and General Secretary Nong Duc Manh, among others, identified corruption as one of the government's main challenges. By September, more than 100 government officials had been arrested, more than 50 police officers had been suspended from duty, and two members of the Central Committee were expelled from the Party for dealings with Nam Cam, a crime figure involved in drug, prostitution, and protection rackets.

In National Assembly elections held on 19 May 2002, approximately 700 candidates competed for 498 seats, some of whom were independents. However, a government body, the Fatherland Front, was responsible for screening candidates. No opposition parties contested the vote. In July 2002, President Tran Duc Luong was reappointed for a second term by the National Assembly, which also reappointed Prime Minister Phan Van Khai for a second five-year term.

### 13 GOVERNMENT

The Communist Party-controlled government of Vietnam has ruled under four state constitutions. The first was promulgated in 1946, the second in 1960, the third in 1980, and the fourth in 1992.

The 1946 constitution of the Democratic Republic of Vietnam (DRV), adopted shortly before the war with the French, was never fully implemented because of wartime conditions. On 1 January 1960, a new constitution was promulgated, instituting a largely presidential system to capitalize on Ho Chi Minh's considerable prestige. In the Republic of Vietnam (RVN), formerly South Vietnam, two constitutions were promulgated. The first, by the regime of Ngo Dinh Diem was introduced in 1956. The second was put forth when Nguyen Van Thieu was elected president in 1967. Like the DRV constitution, it created a modified presidential system, with a cabinet responsible to the legislative branch. Following the fall of the RVN in 1975, the north moved quickly toward national reunification. A nationwide National Assembly was elected in April 1976, and the Socialist Republic of Vietnam was proclaimed in early July. In December 1980, the SRV adopted a new constitution for the entire country. The new charter, more doctrinaire than its predecessors, described Vietnam as a "proletarian dictatorship" led by the Communist Party, and called for an early transition to full Socialist ownership. The highest state authority was the National Assembly. Members were elected for five-year terms by universal adult suffrage at age 18. The Assembly appointed the Council of Ministers (a cabinet of 33 ministers), the chairman of which ranked as premier. The Council of State (12 members in 1987) served as the collective presidency of Vietnam, elected by the National Assembly from among its own members and accountable to it.

In 1992 a new constitution was adopted by the National Assembly. Like the 1980 constitution it affirmed the central role of the Communist Party, stipulating that the party must be subject to the law. In support of a free-market economy, constitutional protection of foreign investment was guaranteed. However, land remained the property of the state, with individuals or enterprises entitled to the right to long-term leases that can be inherited or sold. The newly created position of president replaced the Council of State; the president has the right to appoint a prime minister subject to the approval of the National Assembly. The National Assembly, with a maximum of 400 members, retained legislative power. Members are elected to five-year terms by universal adult suffrage. As of 2002, there were 498 members of the National Assembly.

## 14 POLITICAL PARTIES

The government of the SRV is a de facto one-party state ruled by the Vietnamese Communist Party (VCP). The Vietnamese Communist Party is the political successor to the Indochinese Communist Party, created in 1930 and formally dissolved in 1945. From 1945 until 1951, the party operated in clandestine fashion, until it emerged once more as the Vietnamese Workers' Party at the Second National Congress in 1951. The party assumed its current name in 1976, shortly after the unification of the country into the Socialist Republic of Vietnam.

The Communist Party is administered through an assembly of national delegates. National party conventions elect a Central Committee to guide party affairs between sessions of the national convention. The Central Committee in turn elects the Politburo, the highest policy making body, and a secretariat to direct day-to-day party operations.

The Fatherland Front is the linear successor of the Viet-Minh Front, formed in 1941 to provide the Communist Party with a broad organization to unify all elements in Vietnam against the French colonial regime. The Fatherland Front was formed in North Vietnam in 1955 as a device to mobilize the population to support the regime's goals. A similar organization, the National Liberation Front (NLF), was established in South Vietnam in 1960 by Nguyen Huu Tho to provide a political force in favor of national reunification. After the fall of the RVN in 1975, the NLF was merged into the Fatherland Front.

Under the RVN government, development of a political party system in the Western sense never passed the rudimentary stage. President Thieu, who headed the People's Alliance for Social Revolution, tried to consolidate anti-Communist political organizations in the RVN through a multiparty National Social Democratic Front, but formal political organizations were weak and plagued with religious and regional sectarianism. Wartime conditions and the lack of a national tradition of political pluralism were additional factors preventing the rise of a multiparty system. All such parties were abolished after the fall of Saigon in 1975.

In the SRV, elections for national and local office are controlled by the Communist Party and the state. In the July 1992 general elections 601 candidates contested 395 National Assembly seats. For the first time independent candidates—not Communist Party members or endorsed by organizations affiliated with the Party—were permitted to contest seats, although they did require Party approval in order to present themselves. Two candidates qualified, but neither was elected. In 1996, the Communist Party held its eighth congress, at which it was widely expected a new generation of leaders would be inaugurated; but, again the aging hard-line leaders were given another five-year term in office as the country struggled with the consequences of 12 years of economic reform and increased international openness. In 1998's national elections, the first three "self-nominated" candidates (not proposed by the Party or the Fatherland Front) managed to gain seats in the 450-member National Assembly. Women held 26% of seats in the National Assembly as of May 2000, but have not yet risen to the top echelons of the Party. At the ninth party congress held in April 2001, National Assembly chairman Nong Duc Manh was chosen as general secretary, which was seen as a step toward reform. In the 19 May 2002 elections for the 498-member National Assembly, some independents competed for seats, although the Fatherland Front was responsible for approving them. No opposition parties contested the vote. The Communist Party took 90% of the vote (447 seats); the other 10% (51 seats) was won by candidates who are not Party members but were approved by the Party.

## 15 LOCAL GOVERNMENT

Vietnam is divided into 58 provinces (*tinb*), and three municipalities (*thu do*)—Hanoi, Haiphong, and Ho Chi Minh City—all administered by the national government. Districts, towns, and villages are governed by locally elected people's councils. Council candidates are screened by the party. Council members' responsibilities include upholding the constitution and laws and overseeing local armed forces units. The councils in turn elect and oversee executive organs, called people's committees, to provide day-to-day administration. The entire system functions in a unitary fashion, with local organs of authority directly accountable to those at higher levels.

## 16 JUDICIAL SYSTEM

The judicial system of the SRV parallels that of the former DRV. The highest court in Vietnam is the Supreme People's Court, whose members are appointed for five-year terms by the National Assembly on the recommendation of the president. In addition, there are local people's courts at each administrative level; military courts; and "special courts" established by the National Assembly in certain cases. Law enforcement is handled by the People's Organs of Control; the president, or procurator-general, of this body is appointed by the National Assembly.

Although the constitution provides for the independence of judges and jurors, there is close control of the entire governmental system by the Vietnamese Communist Party (VCP) and a judicial selection process which favors appointment of jurists supportive of the VCP. Prison sentences are frequently

imposed through administrative procedures without the protections of procedural due process or judicial review.

Trials are generally open to the public. Defendants have the right to be present at the trial, to have an attorney, and to cross-examine witnesses. The legal system is based on communist legal theory and French civil law. Rising crime, including violent robbery and extortion, in the cities, plus endemic corruption and smuggling, provide challenges for under-funded law enforcement agencies and the criminal justice system.

## 17 ARMED FORCES

Since reunification in 1975, Vietnam has emerged as one of the world's leading military powers. As of 2002, the People's Army of Vietnam was estimated at 484,000. Of that figure, the regular army had about 412,000 personnel, the air force 30,000, and the navy 42,000. Reserves numbered between 3–4 million. Armaments included about 1,200 main battle tanks, 629 light tanks, two submarines, six frigates, 189 combat aircraft, and 26 armed helicopters. There is a border defense corps of 40,000 personnel. Also, local forces may number between 4–5 million in a rural unit people's militia. Military expenditures were \$650 million in 1998 or 2.5% of GDP.

## 18 INTERNATIONAL COOPERATION

The SRV was admitted to UN membership on 20 September 1977. The nation belongs to ESCAP and all the nonregional specialized agencies. Vietnam is also a member of the Asian Development Bank and G-77, has observer status at the WTO, and is a signatory to the Law of the Sea.

By 2003, the SRV had diplomatic relations with more than 170 countries. The United States lifted its trade embargo with Vietnam in February 1994, and on 11 July 1995, President Bill Clinton normalized diplomatic relations with the country. The first US embassy opened in Hanoi on 6 August 1995.

## 19 ECONOMY

Wet-rice agriculture is the most important segment of the Vietnamese economy, and approximately 63% of the population was engaged in agriculture in 2002, down from 66% in 1997, producing 25% of the GDP. While agriculture has continued growth, transforming Vietnam from a net importer 15 years ago into the second-largest exporter of rice, industry has grown even faster. The most diversified area in Southeast Asia in terms of mineral resources, Vietnam is well endowed with coal, tin, tungsten, gold, iron, manganese, chromium, and antimony. Foods, garments, shoes, machines, cement, chemical fertilizer, glass, tires, oil, coal, steel, and paper are the main industrial products. Most of the nation's mineral resources are located in the north, while the south is a major producer of rice and tropical agricultural products, such as rubber, coffee, and tea. The war took its heaviest economic toll on Vietnam's infrastructure, which even in the best of times was far from adequate to afford access to and mobilization of the country's agricultural and industrial resources. Further setbacks came in the late 1970s. In 1976, the regime announced a five-year plan, calling for rapid industrialization and Socialist transformation by the end of the decade. According to official sources, in 1978 floods destroyed 3 million tons of rice, submerged over 1 million hectares (2.5 million acres) of cultivated land, and killed 20% of all cattle in the affected areas along the central coast. The termination of all Chinese aid in the same year, followed by the Chinese attack on the north in February–March 1979, dealt the economy further blows. Vietnam's economy had already been weakened by the military effort in Kampuchea (known as Cambodia until 1976 and again after 1989) and by the suspension of food aid from the EC, the United Kingdom, Australia, and New Zealand because of objections to Vietnam's refugee policies. Reportedly, the country came close to general famine in 1979.

In 1979, faced with serious shortages of food and consumer goods, Vietnamese leaders approved a new program granting incentives for increased productivity and delaying the construction of farm collectives in the southern provinces. During the 1981–85 five-year plan, emphasis was placed on agriculture and the production of consumer goods. Economic performance improved in the early 1980s, with the growth rate estimated at about 10% annually. Price inflation, however, became a major problem, averaging 700% in 1986–87.

Policy changes were introduced incrementally with economic liberalization preceding consideration of political liberalization. On 3 February 1994 US president Clinton lifted the trade embargo against Vietnam that had been in place for 33 years. The reforms helped Vietnam's economy to grow at a rate of 9% a year during most of the 1990s and by almost 10% in 1996. Growth in the industrial sector was especially strong at over 12% annually between 1988 and 1997. In Hanoi, the increased presence of a foreign community spurred the availability of western-style restaurants and bars, hotel and airport renovation and upgrading, accessible public telephones, and advertising of consumer goods. However, with the onset of the Asian financial crisis, triggered in June 1997 by the return of Hong Kong to Chinese Rule, growth, which was 8.2% for the year in 1997, dropped to 3.5% in 1998 and 4.5% in 1999. Growth increased to 6.7% in 2000, and to 6.8% in 2001. Projected growth for 2002 is 7%.

Unemployment grew during the 1990s to an estimated 25% in 1995. Several factors contributed to Vietnam's growing unemployment: natural increases in the population; monetary and other adjustments for hyperinflation, which intensified the unemployment problem by limiting growth in some sectors of the economy; the return of demobilized troops from Cambodia; repatriation of refugees; workers laid off from state enterprises; and returning guest workers. However, with capital investment, this labor force could be turned into a resource for growth in labor-intensive manufacturing, considering the low wage base in Vietnam, the high skills levels, and high motivation. Unemployment in urban centers was reported as 6.44% in 2000 and 6.28% in 2001. In the Red River delta, unemployment was 7.34% in 2000 and 7.07% in 2001. Rural underemployment was estimated at 26.1% for 2000 and 25.7% for 2001. Inflation, which jumped from 3.1% (period average) in 1997 to 7.9% in 1998, moderated to 4.1% in 1999, and has been at negligible levels since: -1.7% in 2000 and 0.8% in 2001. The Party leadership is concerned about persistent unemployment and underemployment, the widening gap between rich and poor, and increases in bankruptcy, prostitution, and corruption.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Vietnam's gross domestic product (GDP) was estimated at \$168.1 billion. The per capita GDP was estimated at \$2,100. The annual growth rate of GDP was estimated at 4.7%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 25% of GDP, industry 35%, and services 40%. Foreign aid receipts amounted to about \$18 per capita and accounted for approximately 4% of the gross national income (GNI).

The World Bank reports that in 2001 per capita household consumption (in constant 1995 US dollars) was \$256. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the same period private consumption grew at an annual rate of 3%. Approximately 49% of household consumption was spent on food, 15% on fuel, 4% on health care, and 18% on education.

The richest 10% of the population accounted for approximately 29.9% of household consumption and the poorest 10% approximately 3.6%. It was estimated that in 1998 about 37% of the population had incomes below the poverty line.

## 21 LABOR

The labor force was estimated at 38 million persons in 1998. In 2002, agriculture (including forestry and fishing) employed 63% of the labor force, with industry, construction and services providing work for the remainder. Unemployment in 1995 was estimated at 25%.

As of 2002, Vietnamese workers were not free to form or join independent unions. The government-controlled Trade Union Federation of Vietnam (VGCL) is the sole labor organization, and all workers automatically become members of the union of their workplace. In 2001, the VGCL had four million members throughout the country, including 95% of all public sector employees, 90% of workers in state-owned enterprises, and 70% of private sector workers. Strikes are prohibited at enterprises that serve the public or are important to the national economy or defense, and the Prime Minister decides what enterprises come under that definition. Most strikes occur against foreign enterprises.

The minimum age for full-time employment is 18, with special provisions for those between 15 and 18 years of age. However, many children work in violation of this law, especially in the informal economy. The Labor Law requires the government to set a minimum wage, which was \$30 per month for foreign-investment joint ventures in 2002. Outside of these enterprises the minimum was set at \$12 per month. Working hours are set by law at eight hours per day with a mandatory 24-hour rest period per week. Working conditions are slowly improving.

## 22 AGRICULTURE

Nearly 63% of the labor force of the SRV derives its livelihood from agriculture; arable land in 1998 was 7,202,000 hectares (17,796,000 acres), of which 1,534,000 hectares (3,790,000 acres) were in permanent crops.

Only about 15% of the land in the north is arable, and 14% of it is already under intensive cultivation. Agriculture in the north is concentrated in the lowland areas of the Red River Delta and along the central coast to the south. The Mekong Delta, among the great rice-producing regions of the world, is the dominant agricultural region of the south. Excess grain from the area is shipped to the northern parts of the country. Annual food-grain production averaged 20 million tons in the early 1990s, reaching 33.2 million tons in 1999.

Rice, the main staple of the Vietnamese diet, occupies 94% of arable land. In the north, two and in some cases three crops a year are made possible through an extensive system of irrigation, utilizing upward of 4,000 km (2,500 mi) of dikes. Single-cropping remains the rule in the south, where heavy rains fall for six months of the year and virtually no rain at all during the other six months. The southern region's extensive network of canals is used mainly for transport and drainage, although some irrigational use was attempted under the RVN government. Rice production between 1975 and 1980 was adversely affected by bad weather and the regime's attempt to promote collectivization, but it began to rebound during the early 1980s. In 1980, 11.7 million tons of paddy rice were produced; output rose to 16.2 million tons in 1985 and to 19.2 million tons in 1990. Production totaled 31.4 million tons in 1999.

Other crops include corn, sorghum, cassava, sweet potatoes, beans, fruits, and vegetables. In 1999, estimated production (in thousands of tons) was sugarcane, 17,840; corn, 1,752; groundnuts in shell, 386; and soybeans, 148. Rubber, formerly a major crop and a leading source of foreign exchange, was grown mostly on large plantations organized under the French colonial

regime. As a result of the Vietnam war, practically all of the large plantations in the "redlands" area in the south were shut down, and damage to the trees was severe. In 1975, the SRV announced that rubber workers had resumed the extraction of latex from hundreds of thousands of rubber trees on plantations north and northwest of Ho Chi Minh City, most of which had lain fallow for years. Rubber production was given high priority by the Hanoi regime and increased from 40,000 tons in 1975 to an estimated 215,000 tons in 1999. Other industrial and export crops produced in Vietnam include coffee, tea, tobacco, pepper, and jute. In 1999, 487,000 tons of coffee, 62,000 tons of tea, 9,000 tons of jute, 35,000 tons of tobacco, and 70,000 tons of cashews were harvested.

Agriculture in the north has reached an advanced stage of collectivization. A land-reform program completed in 1956 distributed 810,000 hectares (2,002,000 acres) to 2,104,000 peasant families. The share of the Socialist sector in agricultural land increased from 1% in 1955 to 95% in 1975. By 1977, the north had 15,200 agricultural cooperatives and 105 state farms.

In the south, rapid collectivization began in 1978, when the regime announced a program to place the majority of southern farmers in low-level cooperative organizations by the end of the 1976-80 five-year plan. Popular resistance was extensive, however, and by 1981, less than 10% of the rural population was enrolled in full-scale collectives and a roughly equal number in low-level, semi-Socialist production solidarity teams and production collectives.

In an effort to make collectivization more palatable, the regime announced a "household contract" system, permitting members of cooperatives to lease collective land in return for an agreed proportion of total output. This system apparently encouraged many peasants to join cooperative organizations, and the regime announced in mid-1986 that collectivization at the low level had been "basically completed" in the south, with 86.4% of the rural population enrolled in some form of collective organization.

## 23 ANIMAL HUSBANDRY

The most important aspect of animal husbandry in the SRV remains the raising of draft animals, mainly water buffalo. Lack of feed, shelter, and technical guidance and an inability to control disease combine with the legacy of war damage to hinder the growth of this sector. Increasing the livestock is now a major priority of the Hanoi regime. The sizes of herds in 2001 (with 1975 figures in parentheses) was as follows: hogs, 21,740,000 (8,800,700); buffalo, 2,807,000 (2,193,000); and cattle 3,900,000 (1,485,000). Vietnam also had an estimated 561,000 goats, 121,000 horses, 153 million chickens, and 57 million ducks in 2001. Meat production totaled 2,004,000 tons in 2001, with pork accounting for 70%; poultry, 19%; buffalo and other meat, 11%.

## 24 FISHING

Fresh and dried fish and fish sauce (known as nuoc mam) are major ingredients of the Vietnamese diet, and fishing is an important occupation. Shrimp, lobster, and more than 50 commercial species of fish are found in Vietnamese waters. Ha Long Bay, the major fishing area of the north, is particularly rich in shrimp and crayfish. Fish also abound in Vietnam's rivers and canals.

The fishing industry was severely depleted after the Vietnam war, when many fishermen (often overseas Chinese) fled the country. The government has increased marine production into a major export industry. In 2000, ocean production was estimated at 1,441,590 tons, and inland production was estimated at 161,000 tons. Exports of fish products were valued at \$1,480 million in 2000. Vietnamese aquaculture primarily produces cyprinids and prawns.

## 25 FORESTRY

In 2000, forests covered 30% of the total land area of Vietnam. Important forestry products include bamboo, resins, lacquer, quinine, turpentine, and pitch. Depletion of forests, however, has been serious, not only through US defoliation campaigns in the south during the war, but also because of the slash-and-burn techniques used by nomadic tribal groups in mountainous areas.

According to Western scientists who have visited the SRV in recent years, the damaged areas are recovering faster than anticipated, although reforestation has been slow and some regions are faced with sterility and erosion. Official policy currently emphasizes the replacement of natural forests with export crops such as cinnamon, aniseed, rubber, coffee, and bamboo. Roundwood production was estimated at 31,242,000 cu m (1.1 billion million cu ft) in 2000, with 85% used as fuel wood.

## 26 MINING

Vietnam had a wide variety of important mineral resources, but the mining sector was relatively small and undeveloped. The principal reserves, located mainly in the north, were antimony, bauxite, carbonate rocks, chrome, clays, anthracite coal, copper, natural gas, gemstones, gold, graphite, iron ore, lead, manganese, mica, nickel, crude petroleum, phosphate rock (apatite), pyrophyllite, rare earths, silica sand, tin, titanium, tungsten, zinc, and zirconium. Coal dominated the mining sector, and, along with carbonate rocks, crude petroleum, and phosphate rocks, was produced in large quantity. Iron reserves were estimated at 520 million tons, and apatite reserves, 1.7 billion tons. Bauxite mines in the Central Highlands Province (Lam Dong) were capable of producing 1.7 million tons per year of ore. Mining was Vietnam's fourth-leading industry in 2002; mining and quarrying contributed 6.6% to GDP, 91.2% of which came from oil, gas, and coal. Also among leading industries were the production of cement, chemical fertilizer, oil, coal, and steel; crude oil was its top export commodity. Vietnam's movement toward a free market has resulted in increased international trade.

Production outputs in 2001 included chromium ore (gross weight), 60,000 tons, up from 51,000 in 1997; ilmenite, 145,000 tons, up from 109,000 in 2000 and 50,000 in 1997 (90% was exported, mostly to Japan, and resources totaled 15 million tons of ore); zinc, 36,000 tons, up from 18,000 in 1999; tin, 3,500 tons, down from 4,800 in 1997; gold, 2,000 kg, up from 1,000 in 1997; lime, 1.03 million tons; and silica sand, 62 million tons, up from 20 million tons in 1997. Vietnam also produced barite, bauxite, bentonite, hydraulic cement, chromium, kaolin clay, refractory clay, construction aggregates, copper, fluor spar, gemstones, granite, graphite, ilmenite, iron ore, lead, lime, marble, nitrogen, phosphate rock, pyrite, pyrophyllite, rare earths, salt, silica sand, sulfur, building stone, and zirconium. Most chromite, ilmenite, and zirconium, and some granite, kaolin, salt, and silica sand, was exported. No tungsten was produced in 1998–2001. Asian Mineral Resources started two diamond drilling programs at nickel deposits. The mining industry comprised state-owned companies, several state-and-foreign mining and mineral-processing company joint ventures, many small-scale local government-owned mining companies, local government-private mining company joint ventures, and local private miners.

## 27 ENERGY AND POWER

Lack of energy is one of Vietnam's major obstacles to economic development. While coal output is substantial, most of it has been reserved for export. Until the late 1970s, the nation had no proved oil reserves, and hydroelectric power, while showing considerable potential, was poorly developed. Since the end of the war, the government has implemented a number of major projects

to provide Vietnam with sufficient energy resources. Several hydroelectric power stations are currently under construction, and some are already in operation. In 2000, net electricity generation was 25.7 billion kWh, of which 40.7% came from fossil fuels and 59.3% from hydropower. In the same year, consumption of electricity totaled 24 billion kWh. Total installed capacity at the beginning of 2001 was 4.9 million kW.

In February 1975, during the time when the country was still divided into two separate nations (North Vietnam and South Vietnam) the Mobil Oil Company, a US firm, struck oil off the southern coast, producing an initial outflow of 2,400 barrels per day. By mid-April, however, US oil firms—which had invested some \$100 million in oil exploration in South Vietnam—had left the country. In the mid-1970s, offshore oil was also discovered by Soviet geologists working the Gulf of Tonkin. In the late 1970s, Western firms abandoned their explorations because of unpromising results, but the USSR continued its efforts and by late 1984 had begun to achieve promising results. In September 1992, Vietnam demanded that China immediately withdraw all oil exploration ships from disputed waters in the Gulf of Tonkin. In April 1994, Mobil Corporation signed a production-sharing contract to explore for oil off the southern coast of Vietnam, becoming the first American company to drill in Vietnamese waters since 1975.

As of 2000, about 30 foreign companies had been awarded contracts to operate in the waters off the southeastern coast. Vietnam estimated that it would need about \$5 billion in foreign investment in its oil sector during 1996–2000 in order to fully develop its petroleum resources. Proven oil reserves as of 1 January 2002 totaled 600 million barrels; production in 2000 amounted to 288,000 barrels per day. In 1999, exports of petroleum accounted for about \$2 billion, or 22% of total exports. Natural gas is believed to exist throughout much of northern Vietnam; proved reserves in 2001 were 193 billion cu m (6.8 trillion cu ft). Production was 999.3 million cu m (35.2 billion cu ft) in 1999.

Control over the Spratly Islands remains a contentious issue between Vietnam, China, Taiwan, the Philippines, Brunei, and Malaysia. The reefs, many of which are partially submerged, lie atop an oil field containing an estimated 1–7 billion barrels of oil.

## 28 INDUSTRY

Most heavy and medium industry is concentrated in the north, including the state-owned coal, tin, chrome, and other mining enterprises; an engineering works at Hanoi; power stations; and modern tobacco, tea, and canning factories. The industrial sector in the south is characterized by light industry and consumer goods industry, including pharmaceuticals, textiles, and food processing, although there are some large utilities and cement works. Much of the industrial sector in the north was badly damaged by US bombing raids during the war. In the south, the private sector was permitted to continue in operation after 1975, but all industry and commerce above the family level was nationalized in March 1978. The results were disastrous, and the regime now permits the existence of a small private sector, mainly in the area of consumer goods and other light industry. The results have been generally favorable; industrial production in the 1980s increased at an average annual rate of 9.5%. During the 1990s, industrial production grew by about 12% per year. Industry accounted for 38% of GDP in 2001, up from 28% in 1995. Industrial gross output increased by 14.2% in 2001. The private sector grew 20.3% and the public sector grew 15.3%, with the foreign-invested sector expanding slightly below average at 12.1%. The foreign-invested sector constitutes about 35% of industrial production. Leading industrial sectors are food processing, garments, shoes, machine building, mining, cement, chemical fertilizers, glass, tires, oil, coal, steel, and paper.

Food processing and packaging accounts for 40% of total export turnover. The average annual growth rate has been about 11%.

Export turnover in the textiles and garment industry was \$2.1 billion in 2001 and expected to reach \$2.5 billion in 2002. VINATEX (Vietnam National Textiles and Garment Corporation), the largest Vietnamese corporation in the sector, plans to invest \$900 million in the period 2001 to 2005, made up of \$700 million in the textiles sector and \$200 million in material and accessories sectors, for equipment upgrades.

The leather and footwear sector earned about \$1.55 billion in 2001 and an estimated \$1.9 billion in 2002. Vietnam is the eighth-largest exporter of leather and footwear.

Vietnam's rubber sector has been growing at about 15% a year with an output of 300,000 tons of dried latex. Plans are to invest about \$100 million in the period 2001 to 2010 in building/expanding 11 latex plants. Construction has been one of the driving forces of economy, growing at 15% a year. The construction sector consists of about 3,500 companies, including 270 foreign invested enterprises worth more than \$3.5.

Vietnam has a large-scale wood processing industry with a nation-wide network of 760 state-managed wood processing units. There are also over 200 local enterprises, 53 joint ventures and close to 1200 small scale production units. In 2001 the market for metal-working machinery and equipment was \$45 million of which 90% was imported.

The state-dominated industrial sector, which accounts for about 45% of the country's GDP, is still marked by inefficiency and low productivity and has retarded the growth of the private sector. This is due to the low level of development, characterized by obsolete plants and machinery, shortages of capital, raw materials, energy and transport, and a command-style economic system. Vietnam's assets include low wages, good skill levels, and a motivated work force.

The government owns an estimated 6,000 state-owned enterprises (SOEs): the majority of non-agricultural enterprises. Most of these SOEs reflect the inefficiencies of parastatals, including debt, obsolete equipment and practices, and poor labor. In 1997, the government organized 2,000 SOEs into 88 conglomerates, accounting for 80% of the state sector and further monopolizing the industrial sector. Foreign investment, while welcome, is hard pressed to find opportunities outside of the Vietnam government's reach. In February 2003, the first auction of a state-owned enterprise (SOE) took place, which resulted in the sale of the Hai Phong Agricultural Mechanical Engineering Company for \$300,000 to a private Vietnamese company. The auction was financed by the Australian government.

## 2<sup>9</sup> SCIENCE AND TECHNOLOGY

Science and technology have been one of the key weak spots in the Vietnamese economy and were targeted for significant growth during the second five-year plan (1976–80). Vietnam's leading learned societies are the Union of Scientific and Technical Associations (founded in 1983) and the General Association of Medicine (founded in 1955), both in Hanoi. The State Commission for Science and Technology supervises research at the universities and institutes attached to the Ministry of Higher Education; the Institute of Science organizes research at other institutions. All research institutes are attached to government ministries.

Courses in basic and applied sciences are offered at Cantho University (founded in 1966), the Hanoi University of Technology (founded in 1956), the University of Hanoi (re-founded 1956), the University of Ho Chi Minh City (founded in 1977), Ho Chi Minh City Pedagogical University of Technology (founded in 1962), and various colleges. In 1996, the Hue

College of Sciences (formerly the University of Hue) had 10 departments and a large library.

In 1985, total expenditures on research and development amounted to 498 million dong; 20,000 scientists and engineers were engaged in research and development.

## 3<sup>0</sup> DOMESTIC TRADE

Since 1979, the government has permitted the existence of a private commercial sector, mainly in southern cities as Ho Chi Minh City and Da Nang. Most private businesses are small shops and restaurants. In 1991, private enterprise and company laws were adopted by the National Assembly. It is estimated that private businesses account for 70% of domestic trade. Consumer items, durable, and non-durable goods, are available in greater abundance.

Wholesalers in Vietnam consist of state-owned trading companies and private local wholesalers. Warehouses often have minimal facilities and equipment. The retail sector in Vietnam is undergoing rapid transformation, as new sales outlets and merchandising techniques have emerged. In the major urban areas, several Western-style mini-markets and privately-owned convenience stores have opened. Showrooms and service centers for electronics, appliances, and industrial goods offer wholesale and retail sales. In September 1996, the Saigon Superbowl opened in Ho Chi Minh City as Vietnam's first entertainment and retail center. Outside of the largest cities, retail outlets consist of family-operated market stalls or small street-front shops. There is still a strong "gray market" of smuggled goods. A value-added tax applies to most goods and services. Advertising appears in many forms. The government has restricted the use of foreign imagery in outdoor advertising by placing limitations on foreign language, landscapes, and models.

Business hours for government offices are usually Monday through Saturday between 8 AM and 5 PM, with a midday break sometime between 12:00 AM and 1:00 PM. Commercial offices are open from 8 AM to 5 PM; banks are open until 3 or 4 PM weekdays and until 11:30 AM on Saturdays. Shops and restaurants are open into the evenings and on Sundays.

## 3<sup>1</sup> FOREIGN TRADE

Beginning in 1980, emphasis was placed on the development of potential export commodities such as cash crops, marine products, and handicrafts, while imports were severely limited. To promote trade expansion with Japan, Singapore, and Hong Kong, several export-import firms were set up in Ho Chi Minh City under loose official supervision. The results were favorable but the experiment aroused distrust among communist party leaders, and the freewheeling enterprises were integrated into a single firm strictly supervised by the government.

The economic reforms of the late-1980s, including currency devaluation, adoption of a flexible exchange rate system, and lifting restrictions on foreign trade, contributed to the rapid growth in exports in the early 1990s. The US lifting of economic sanctions in 1994 pushed the volume of foreign trade even further upwards. Investments in Vietnam are contributing to the development and expansion of tourism. Vietnam joined the ASEAN Free Trade Area (AFTA) in 1995, committing itself to tariff reductions among member nations. Foreign trade in Vietnam, though, is still mostly restricted to a couple of state-owned agencies. However, in 1999, the economy recorded its smallest trade deficit in recent memory as exports climbed 23% while imports increased only 2.1%.

Import commodities include petroleum and steel products, motor vehicles and tractors, tires, foodstuffs, raw cotton, textiles, sugar, and grain. The most important export commodities for Vietnam are crude petroleum (21%), footwear (14%), and apparel (12%). Other exports include rice (10.2%), shellfish

(8.2%), and coffee (5.9%). Principal trading partners in 1999 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
Japan	1,786	1,618	168
China (inc. Hong Kong)	982	1,178	-196
Singapore	876	1,879	-1,003
Australia	815	216	599
Germany	654	269	385
United States	504	323	181
Indonesia	420	287	133
France	355	309	46
Korea	320	1,486	-1,166
Thailand	313	562	-249

### 32 BALANCE OF PAYMENTS

Foreign investment is constricted by red tape and infrastructural problems. A traditional merchandise trade deficit was partially offset by an inflow of foreign money. This inflow, however, made the Vietnamese currency overvalued (some argue by as much as 20–30%) and was seen to be hurting exports by driving up the cost of goods. The 1998 financial crisis reflected the culmination of this overvaluation, which was remedied by 1999 with low import levels, and smaller investment figures. The current account deficit for 2003/04 was expected to widen, due to stronger domestic demand and increased imports of important production inputs. Vietnam is the world's second-largest rice exporter after Thailand. In recent years, Vietnam has received an increase in foreign loans, aid, and direct investment. Vietnam's foreign debt stood at \$13.2 billion in 2000.

The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Vietnam's exports was \$15.1 billion while imports totaled \$15.3 billion resulting in a trade deficit of \$200 million.

The International Monetary Fund (IMF) reports that in 2000 Vietnam had exports of goods totaling \$14.5 billion and imports totaling \$14.1 billion. The services credit totaled \$2.7 billion and debit \$3.25 billion. The following table summarizes Vietnam's balance of payments as reported by the IMF for 2000 in millions of US dollars.

<b>Current Account</b>	<b>960</b>

### 33 BANKING AND SECURITIES

The State Bank of Vietnam, created in 1951, was the central bank of issue for the DRV, with numerous branches throughout the territory and an extensive agricultural and industrial loan service; in 1976, it became the central bank of the SRV. Foreign exchange is regulated by the Foreign Trade Bank. The Bank for Agricultural Development provides loans to the agricultural and fishing sectors.

Financial chaos became a constant threat during the final years of the RVN. The National Bank of Vietnam (NBV), established in 1954, was the sole authority for issuing notes, controlling credit,

and supervising the formation of new banks and changes in banking establishments.

In early May 1975, shortly after the fall of Saigon, the new revolutionary regime announced the temporary closure of all banks in the south, although the RVN piaster continued to circulate as the only legal tender. Two months later, the National Bank of Vietnam was reopened under new management. Stringent regulations were announced to control inflation and limit currency accumulation. All private Vietnamese and foreign banks were closed in 1976. By then, the Hanoi regime had ordered a complete withdrawal from circulation of the RVN currency and its replacement by the dong, in use in the north.

Since the banking reorganization of July 1988, but particularly since 1992, Vietnam has moved to a diversified system in which state-owned joint-stock, joint-venture, and foreign banks provide services to a broader customer base. The first foreign representative bank office arrived in 1989. In 1992, foreign banks were granted permission to open full commercial branches. The government set up the Bank for the Poor in 1995, and gave it the task of lending to "the poor living in underprivileged areas." As of December 1998, in addition to four state-owned commercial banks, there were numerous joint-stock banks, foreign bank branches, joint-venture banks and foreign banks with representative offices. Foreign banks only recognize three of the joint-stock banks as viable partners, however.

The state banks still dominate the system, state enterprises are still the main borrowers, and their lending is still predominantly short-term because of the skewed interest rate structure. These banks are the Bank of Foreign Trade (Vietcombank), the Vietnam Industrial and Commercial Bank (Incombank), the Vietnam Bank for Agriculture and Rural Development (BARD), and the Vietnam Bank for Investment and Development (BIDV).

Two banking decrees, issued in October 1990 and governing respectively commercial banks, credit cooperatives and other financial institutions, and the State Bank, aimed to regulate the financial system more strictly. Credit cooperatives had to be licensed by the State Bank rather than by local People's Committees. The first decree also gave the state commercial banks greater autonomy, and permitted them to compete with each other and to seek capital from sources other than the state. The second decree introduced new instruments through which the State Bank could control the banking sector, including open-market operations and varying reserve requirements and discount rates.

Despite these changes, the banking system is in poor health. Public confidence in the system remains low. Only 4% of all potential holders of accounts have actually opened one. There were only 10,000 bank accounts in the entire country of 80 million people in 2002. As of 2002, the Vietnam banking system had gained little international confidence, although international audit standards are beginning to be implemented. Loan fraud investigations and low loan liquidity have brought bank finances under scrutiny. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$7.6 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$17.1 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 4.8%.

In July of 2000, the Vietnam Stock Exchange opened its doors for the first time.

### 34 INSURANCE

Before May 1975, life and property insurance coverage was available in the RVN from three small Vietnamese insurance companies and through local representatives of about 70 French, UK, and US insurance firms. By the end of 1975, all private insurance facilities had ceased to operate, and the Vietnam

Insurance Co., established in the DRV in 1965, had become the nation's lone insurance firm. In 1981, the main types of insurance offered were motor vehicle, personal accident, hull and cargo, offshore exploration, aviation, and third-party risk. In Vietnam, third-party automobile insurance and employers' liability are compulsory.

In 1997, other insurance companies operating in Vietnam were Hochiminh Insurance Co., Nha Rong Joint-Stock Insurance Co., Petrolimex Joint-Stock Insurance Co., Petrovietnam Insurance Co. (PVIC), Vietnam National Reinsurance Co., and the Yasuda Fire and Marine Insurance Co. As of 2002, foreign insurers were allowed in Vietnam, thus opening up the market.

### 35 PUBLIC FINANCE

The main sources of monetary revenue are income taxes, the sale of SOE's, and customs taxes. Annual deficits are financed by foreign aid. Monetary policy reforms enacted since 1988 helped end the hyperinflationary spiral of the 1980s. Aid from the former Soviet Union, formerly Vietnam's most prominent donor, was greatly reduced after the dissolution of the USSR in 1991. Foreign investment peaked in 1995 after the US declared an end to economic sanctions, but quickly receded thereafter. Implementation of a VAT in 2000 was expected to increase revenue.

The US Central Intelligence Agency (CIA) estimates that in 1999 Vietnam's central government took in revenues of approximately \$5.3 billion and had expenditures of \$5.6 billion including capital expenditures of \$1.8 billion. Overall, the government registered a deficit of approximately \$300 million. External debt totaled \$13.2 billion.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

REVENUE AND GRANTS	100.0%	5,300
Tax revenue	79.0%	4,185
Non-tax revenue	15.1%	800
Capital revenue	0.8%	43
Grants	5.1%	273
EXPENDITURES	100.0%	5,600
General public services	7.0%	391
Education	13.7%	766
Health	3.6%	200
Social security	10.5%	585
Economic affairs and services	7.0%	392
Other expenditures	54.7%	3,065
Interest payments	3.6%	201

### 36 TAXATION

Individual income is subject to a progressive tax ranging from 0% to 50%. For corporations with not foreign-owned capital, the top rate is 32%. For companies with foreign-owned capital the top rate is 25%. Indirect taxes include a turnover tax ranging up to 30% of gross receipts; a special sales tax on tobacco products, spirits, beer, and other items ranging from 15–100%; royalty taxes from 1–20% in most cases, and customs duties. A value-added tax (VAT) was introduced in 2000 with a rate of 10%.

### 37 CUSTOMS AND DUTIES

All imports must be authorized by one of the state trading corporations. Customs duty is generally charged on imports and exports, with many exemptions and duty reductions available (including imports related to an aid program and goods to be used for security, national defense, scientific and educational training, or research purposes). Tariff rates are divided into three

categories according to the import source country's trade relationship with Vietnam: ordinary rates apply to goods imported from countries that have not exchanged normal trade relations (NTR) agreements with Vietnam; preferential rates apply to goods from countries that have exchanged NTRs with Vietnam; and special preferential rates apply to goods from countries that have made special trade arrangements with Vietnam. Ordinary tariff rates are about 50% higher than preferential rates. Special preferential rates vary by country. There are also special consumption taxes (mostly on luxury goods) of up to 100%, a value-added tax (VAT) of 0–20%, and import quotas.

In 1994, the United States lifted its trade embargo on Vietnam and in 1995 the two countries established formal relations. Vietnam is a member of ASEAN and its free trade area (AFTA).

### 38 FOREIGN INVESTMENT

France was the dominant foreign investor in Indochina before World War II. Resident Chinese, however, played a major role in rice milling, retailing, and other activities (and continued to do so in the south through the early 1970s). Following the 1954 partition agreement, the French economic position in the DRV was completely liquidated, and the participation of private foreign investors in the DRV economy was prohibited. The RVN government encouraged the introduction of private capital. In March 1957, a presidential declaration provided guarantees against nationalization and expropriation without due compensation, temporary exemption from various taxes, and remittance of profits within existing regulations. Despite these efforts, because of wartime conditions, relatively little new private foreign investment was attracted to the country, apart from a few ventures by US and Japanese interests. In 1977, the SRV issued a new investment code in an effort to attract private foreign capital to help develop the country. However, because of stringent regulations and a climate of government suspicion of private enterprise, the 1977 code attracted little enthusiasm among potential investors. Only the USSR and France made sizable investments, although in recent years Japan has laid the foundation for future investment by bank loans. Beginning in 1984, the regime began to encourage the formation of joint ventures and announced that preparations were under way for a new foreign investment code.

In 1987 the National Assembly passed a liberalized investment law seeking to improve the overall investment climate and emphasize the development of export industries and services. The Vietnamese investment laws were much more liberal than those of other countries in Southeast Asia. The code permitted wholly owned foreign enterprises in Vietnam, levied low taxes on profits, allowed full repatriation of profits after taxes, and guaranteed foreign enterprises against government appropriation. The law also encouraged oil exploration. Factors hindering performance of foreign investors are bureaucracy, lack of management expertise, smuggling and corruption, and an underlying distrust and uncertainty on the part of officialdom.

In early 1994 the government announced three proposals intended to improve the investment environment and increase foreign trade: expedited decisions on small investment projects; the elimination of the requirement for import-export licenses for many commodities; and reduced list of industries that would be off limits to foreign investors. Foreign investments were allowed in insurance companies and brokerages, and reinsurance between companies. Under amendments to the Foreign Investment Law in 1996 more authority over investment licensing was given to local governments.

Total foreign direct investment (FDI) approvals from 1988 to June 2002 amounted to \$38.58 billion, but the total disbursed was a little over \$20 billion, about 52% of approved FDI. Since the 1994 reduction of restrictions, however, actual inflows of FDI

have averaged about 70% of the approvals. After the Asian financial crisis, the level of inflow decreased by about \$900 million a year. From 1994 to 1997, inflow average, and from 1998 to 2000, the annual average inflow was \$1.7 billion. The main cause of the decline is reduced investments from other Southeast Asian countries. As of 2003, it is estimated that FDI projects produce 13% of the country's GDP, including 36% of industrial production. As of 1999, Singapore was the largest foreign investor with \$5.9 billion of total investments approved by the Vietnam government between 1988 and 1999 (only \$2 billion actualized). Other major investors included Taiwan, Hong Kong, Japan, South Korea, France, the British Virgin Islands, Russia, the United States, and the United Kingdom. The Vietnamese government controls both upstream and downstream oil and gas industries, but since 1998 foreign investment has been permitted. In October 2001, the consortium that included Conoco, the Korean National Oil Company (KNOC), SK Corporation of South Korea, and Geopetrol of France made a major find of oil in the Cuu Long Basin. In November 2002, the Japan Vietnam Petroleum Company (JVPC) made its first sizeable discoveries. JVPC is the operator in the joint venture, and holds a 46.5% share.

### 39 ECONOMIC DEVELOPMENT

With the defeat of the RVN forces in April 1975, Vietnam faced the task of restoring its infrastructure, damaged by the war, while working toward the goal of a technologically advanced society. Long-range planning centered on the second five-year plan (1976–80), which called for major emphasis on heavy industry and rapid agricultural growth. Due to factors including unfavorable weather, decreased foreign aid, and high military expenditures—combined with managerial inefficiency—the plan was a disaster. Industrial production grew by only 0.6% and agriculture by 1.9%. The third five-year plan (1981–85) was more modest in its objectives. Emphasis was placed on agricultural development and the promotion of consumer goods, with industrial development in the background. Socialist transformation remained a high priority, although a less rapid rate of change was expected than during the previous five years. Although the goals of the new plan were more realistic than those set for its predecessor, its success was limited. Growth figures in industry (9.5%) and agriculture (4.9%) improved significantly over the previous five years. Production remained spotty in key areas, however, and problems of mismanagement—primarily by the state sector—proliferated.

The fourth five-year plan (1986–90) continued the previous plan's emphasis on agricultural growth and expansion of exports and light industry. Efforts to promote Socialist transformation were to continue, but at a gradual pace and "by appropriate forms." Development aid continued to come primarily from the former USSR and other CMEA countries. In 1978, the SRV became fully integrated into the CMEA planning and development structure, and its five-year plans were coordinated with those of its CMEA partners. Planned Soviet outlays for the 1986–90 period totaled some \$11–13 billion. This aid and trade waned with the decline of the USSR, with the full cutoff occurring in 1991. The SRV's new economic emphasis, *doi moi* (renovation) was instituted by Nguyen Van Linh following the sixth national party congress (1986). His plan included policy and structural reforms for a market-based economic system: price decontrol (liberalized prices), currency devaluation, private sector expansion through decollectivization of agriculture (food production), legal recognition of private business, new foreign investment laws, autonomy of state enterprises, business accounting methods, devolution of government decision-making in industry to enterprise level, and limiting government participation to macroeconomic issues. Implementation of these policies was achieved with varied success.

Inflation policy and agricultural reform resulted in immediate increases in rice production. Vietnam changed from a net importer of rice to the third major rice exporter after Thailand and the United States.

Agriculture remains the most important economic sector, accounting for about one third of GDP and about 63% of the labor force. There were 12,000 government-owned companies employing 30% of Vietnam's labor force that held 75% of the country's assets, and monopolized 86% of bank credit in 1992. The privatization program met with resistance from conservative politicians, the companies, and from foreign investors. Conservatives feared that privatization undermined the economic basis of socialism, and foreign investors were wary of poor investments with meager legal underpinnings. Opposition from managers who would lose a "free hand," and employees whose jobs might be replaced by new equipment also arose. In 1994 the director and deputy director of the textile company that was the flagship for this privatization program were dismissed for alleged corruption.

US president Bill Clinton's lifting of the 30-year-old trade embargo in 1994 opened the way for waiting American companies to do business in Vietnam. International assistance during the mid-1990s was from the World Bank for education and agricultural reforms, the Japan Overseas Economic Cooperation Fund for infrastructure programs, the United Kingdom for soft loans, technical training and refugee resettlement, and from the Asian Development Bank. A continuation of reforms promoting foreign investment and minimizing the state's role in the economy moved slowly in the late 1990s due to political corruption and inefficiencies.

The Asian financial crisis negatively affected investor confidence in the region, severely reducing Vietnam's main focus of economic development as of late. A complete overhaul of the financial regulatory system is still necessary in order to stimulate the economy. Vietnam's increasing integration in regional and international economic organization should impel more competitive production methods. Until 2006, as part of its commitment in joining the Asian Free Trade Area (AFTA), it will have to reduce tariff by 55 to 46%. At the end of 2001, Vietnam concluded a bilateral trade agreement with the United States, and it has now started toward the goal of accession to the World Trade Organization by 2004.

### 40 SOCIAL DEVELOPMENT

A social security plan provides old age, disability and survivorship benefits, as well as worker's injury and medical insurance. Coverage is compulsory for public employees and employees of companies with more than 10 workers. Pensions are funded by 5% of employee wages, 15% of employer payroll, and government contributions. Maternity benefits are payable at 100% of wages for 120 days.

Women have full legal rights under law, but are subject to various forms of social discrimination. Few women are found in senior management or high level government positions, but business and the public sector nevertheless employ many women, and they are an important part of the economy. Women also generally receive lower wages than their male counterparts. Domestic violence against women is common.

The human rights record is poor, and there are continuing reports of arbitrary detention and the mistreatment of detainees during interrogation. However, restrictions on free speech and religion have been lessened slightly in recent years, as have restrictions on travel. Human rights organizations are not permitted to operate in Vietnam.

### 41 HEALTH

Wars in Vietnam since 1946 have undermined much of the progress made by the DRV, RVN, and SRV in the health field.

Damage to urban hospitals in the north was especially severe. A 1976 World Health Organization report indicated the dimensions of that destruction: 24 research institutes and specialized hospitals, 28 provincial hospitals, 94 district hospitals, and 533 community health centers; all destroyed mainly as the result of US bombing. Three decades of intermittent war has also had a devastating effect on health conditions in the south.

At the war's end in 1975, many endemic diseases were observed to be on the increase, in alarming contrast with trends among other affected countries in Southeast Asia. The World Health Organization (WHO) reported in 1976 that malaria had been both widespread and increasing in the south in 1975. During 1965–74, 5,000 cases of bubonic plague were occurring annually, with a mortality rate of 5%. Saigon was said to have had a tuberculosis rate two to three times that in neighboring countries, while leprosy (involving an estimated 80,000–160,000 cases) was increasing.

Since reunification in 1975, some progress in health care has been made, and the incidence of many contagious diseases has been reduced. However, the incidence of tuberculosis, which had been largely controlled (99 cases per 100,000 people reported in 1996), rose again to 189 cases per 100,000 people as of 1999. Commonly reported diseases in Vietnam were diarrheal disease (22,422 deaths in 1995); malaria (136,069 cases in 1993); and tuberculosis (35,813 in 1994). Venereal and paraveneal diseases were said to have afflicted 1 million persons in the south (about 5% of the total population) and, WHO claimed, 80% of RVN soldiers. Opiate addiction affected about 500,000 persons. As of 1999, the number of people living with HIV/AIDS was estimated at 100,000 and deaths from AIDS that year were estimated at 2,500. HIV prevalence was 0.24 per 100 adults. Tobacco consumption has increased from 1.0 kg (2.2 lbs) a year per adult in 1984–86 to 1.1 kg (2.4 lbs) in 1995.

During the early 1980s, foreign visitors routinely reported observing severe cases of malnutrition and shortages of medical equipment and supplies. While conditions have generally improved as agricultural production has increased, most Vietnamese continue to live at the minimum level of subsistence. In February of 1996, Vietnam was considering fortification of foods with iron and vitamin A. In 1995, the Vietnamese government issued the National Plan of Action for Nutrition (1995–2000), which aimed to eliminate food insecurity, reduce malnutrition, and reduce micronutrient deficiencies. About 39% of all children under 5 were classified as malnourished in 2000.

Vietnam reported life expectancy in 2000 to be 69 years and infant mortality to be 27 per 1,000 live births. Maternal mortality was 160 per 100,000 live births in 1998. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 20.9 and 6.1 per 1,000 people. Immunization rates for children up to one year old in 1997 were tuberculosis, 96%; diphtheria, pertussis, and tetanus, 95%; polio, 95%; and measles, 96%.

Family planning services were provided to 2,157,000 people in 1992. An estimated 75% of married women (ages 15 to 49) were using contraception in 2000. Abortion is available on request. Vietnam's fertility rate in 2000 was 2.2, down nearly 2% from the previous 5-year period.

In 1991, the country had 275,560 physicians, 58,912 nurses, and 14,813 midwives. In 1992, there was a nurse to doctor ratio of 4.9. About 97% of the population had access to health care services in 1993. In 2000, 56% of the population had access to safe drinking water and 73% had adequate sanitation. As of 1999, there were an estimated 0.5 physicians and 1.7 hospital beds per 1,000 people. As of 1999 total health care expenditure was estimated at 4.8% of GDP.

## 4<sup>2</sup>HOUSING

Housing is a serious problem in the SRV, particularly in urban areas of the north where war damage has caused overcrowding and lack of resources has hampered efforts to resolve the problem. By 1986, housing had become a critical problem in Hanoi, particularly in the central sections of the city, where per capita living space was reduced to four sq m. Large flats are gradually being erected in the suburbs to ease the problem. In the meantime, many families live in temporary quarters built directly on the sidewalk or attached to other buildings. Housing is less a problem in the countryside, where many farm families have begun to take advantage of a rising standard of living to build new houses of brick and stone. Similarly, in the south, housing is available to meet the requirements of the population because building construction had continued at a relatively high level during the war years. In 1989, the majority of housing units were semi-permanent (structures with brick walls and tile roofs lasting about 20 years).

## 4<sup>3</sup>EDUCATION

In the mid-1970s, literacy in the south was estimated at about 65%, while in the north a rate of 85% was claimed in 1975. By the year 2000, adult illiteracy rates for the reunified country were estimated at 6.7% (males, 4.3%; females, 9.0%). After 1975, the educational system in the south was restructured to conform to the Socialist guidelines that had been used in the DRV. The 12-year school cycle was reduced to 10 years, and the more than 20,000 teachers in the south were among those subjected to "reeducation." By 1976, some 1,400 tons of textbooks printed in the DRV had been shipped to the south, and the books used previously under the RVN were destroyed. In addition, more than 1,000 formerly private schools in the south were brought under state control. Today, education is free at all levels, and five years of primary education is compulsory. As of 1999, public expenditure on education was estimated at 2.8% of GDP.

In the mid-1980s, the educational system was rapidly expanding to cope with the nation's rising population. In 1998, primary schools had 324,431 teachers and 10,431,337 students, with a student-to-teacher ratio of 32 to one. In the same year, secondary schools had 226,491 teachers and 6,642,350 students. As of 1999, 96% of primary-school-age children were enrolled in school, while 61% of those eligible attended secondary school. There are 90 colleges and three universities in the SRV. The major university is in Hanoi. In 1997, universities and equivalent institutions had 23,522 teachers and enrolled 509,300 students.

## 4<sup>4</sup>LIBRARIES AND MUSEUMS

The École Française d'Extrême-Orient maintained an extensive research library in Hanoi, which was transferred intact to the DRV. Now the National Library, it has about one million volumes; the bulk of the present collection has been added since 1954 and includes a substantial number of Russian titles. The General Scientific Library in Ho Chi Minh City (formerly the National Library) maintains a collection of over 800,000 volumes. Many books in the south's library system were burned following the reunification, especially in the larger libraries at Ho Chi Minh City, Huế, and Da Nang. According to official sources, the number of libraries in the country has increased since 1975. Vietnam National University at Hanoi Library holds 1.4 million volumes.

The collections of the Musée Louis-Finot, an archaeological and cultural museum established by the French in Hanoi, were transferred intact to the DRV. These collections, now part of the Historical Museum, contain artifacts and related material from archaeological discoveries in Thanh Hoa and Yen Bay, including a 2,500-year-old burial boat and an excellent array of bronze implements. Hanoi's National Art Gallery includes a folk-art

collection and Vietnamese Bronze Age artifacts. Notable also is the Museum of the Revolution, grouping memorabilia of Vietnam's struggle for independence from the French since the early 1900s. The Army Museum, housed in the Hanoi Citadel, contains a collection of weapons and documents concerning the Indochina war. The Vietnamese Fine Arts Museum (1966) houses exhibits on the decorative and applied arts, and folk and modern art. The architecture of religious edifices and former Vietnamese imperial structures reflect the country's cultural heritage. The Ho Chi Minh City Museum, founded in 1977, has a section devoted to the revolution and another to ancient arts. The Ho Chi Minh Museum, also founded in 1977, studies his life and work.

#### 45 MEDIA

Vietnam's postal, telegraph, and telephone services are under the Ministry of Communications. The country made significant progress in upgrading its telecommunications system in the 1990s: all provincial switchboards have been digitized and fiberoptic and microwave transmission systems have been extended from the major cities to the provinces. However Vietnam still lags behind its Southeast Asian neighbors. There were an estimated 2.6 million mainline telephones as of 2000, with an additional 730,155 cellular phones in use.

Hanoi has a strong central broadcasting station, the Voice of Vietnam, boosted by local relay transmitters. Since 1975, almost the entire country has been blanketed by a wired loudspeaker system. Radio programs beamed abroad include broadcasts in Chinese, English, French, Japanese, Spanish, Thai, Bahasa Indonesia, Russian, Khmer, and Lao, and there are special broadcasts to mountain tribes. Television was introduced into the RVN in 1966, and an extensive service, reaching some 80% of the population, was in operation by the early 1970s. A pilot television station was inaugurated in the DRV in 1971. Many of the major cities now have television stations, all under the guidance of the Ministry of Information, which replaced the State Committee for Radio and Television in 1987. As of 1999, there were 65 AM and 7 FM radio stations. In 1998, there were seven television stations. In 2000, Vietnam had 106 radios and 185 television sets for every 1,000 people. In 2001, there were 160,000 Internet subscribers served by about five service providers.

Most newspapers in the south were shut down by the PRG in 1975, but some papers that had been sympathetic to the NLF/DRV cause were allowed to continue publication. All press is strictly controlled by the Ministry of Culture and Information. Principal Vietnamese dailies (with their estimated 2002 circulation) are shown in the following table:

	AFFILIATION	CIRCULATION
HANOI		
<i>Nhan Dan</i>	Communist Party	200,000
<i>Quan Doi Nhan Dan</i>	Army	60,000
<i>Hanoi Moi</i>	Communist Party	35,000
HO CHI MINH CITY		
<i>Saigon Giai Phong</i>	Communist Party	100,000

The English-language *Saigon Times* was established in 1995.

#### 46 ORGANIZATIONS

The principal mass organization is the Fatherland Front, which merged in January 1977 with the National Liberation Front and with the Vietnam Alliance of National, Democratic, and Peace Forces. The Fatherland Front draws up single slates of candidates in all elections and seeks to implement the political, economic, and social policies of the Communist Party. Other organizations that form part of the Fatherland Front are the Peasant Union, with some five million members; the Ho Chi Minh Communist Youth Union, with four million members; and the Vietnamese

Women's Union, with 11.4 million members. Industrial and commercial enterprises are represented by the Chamber of Commerce of the SRV in Hanoi.

Many of the various types of organizations found in Western countries had existed in the RVN since the 1950s. Among them were the Boy Scouts and Girl Scouts, cooperatives, sports organizations, and various cultural, professional, and youth associations. Most of these bodies, however, were disbanded after 1975. There are several charitable organizations, primarily those representing aid from other countries or other major international organizations, such as the Red Cross.

#### 47 TOURISM, TRAVEL, AND RECREATION

Vietnam possesses a number of historic and scenic areas of interest to tourists. In the north, the beauty of Ha Long Bay, with its countless grottoes and rock spits jutting vertically into the sea, is well known. Hanoi itself, with its historical monuments, its lakes and pagodas, and its extensive French colonial architecture, is extremely picturesque, but hotel facilities are both inadequate and expensive.

In 1986 and 1987, the government made plans to expand international and domestic airline service, double hotel capacity in the major cities, simplify the complicated visa restrictions, and grant shore leave passes to passengers on cruise ships stopping at Vietnamese ports. As a result of these measures, tourism grew rapidly. From 20,000 in 1986, visitor arrivals rose to 450,000 in 1992 and 1,715,637 in 1997. In 2000, 2,140,000 foreign visitors arrived in Vietnam. That year there were 66,700 hotel rooms with 120,800 bed-places and an occupancy rate of 50%. All visitors need visas and must register with the government within 48 hours of arrival.

According to 2001 US government estimates, the cost of staying in Ho Chi Minh City was \$154 per day. Travel costs in Hanoi were estimated at \$155 per day.

#### 48 FAMOUS VIETNAMESE

Important figures in Vietnamese history include the sisters Trung Trac and Trung Nhi, national heroines who led a revolt (AD 40–43) against China when that nation was imperial master of Tonkin and North Annam; Ngo Quyen, who regained Vietnamese independence from China in 938; Tran Hung Dao, who defeated the forces of Kublai Khan in 1288; Emperor Le Loi, national hero and brilliant administrator, in whose reign the Vietnamese legal code was promulgated in 1407; Emperor Gia Long (d.1820), who reunified Vietnam in the early 19th century; and Le Van Duyet (1763–1832), a military leader who helped the emperor to unify the country.

Phan Boi Chau (1875–1940) was Vietnam's first modern nationalist and, like China's Sun Yat-sen, is claimed by Vietnamese Communists and nationalists alike as their spiritual leader. Ho Chi Minh ("The Enlightener"), born Nguyen That Thanh (1890–1969), was a man of many other pseudonyms. Ho Chi Minh was a founding member of the French Communist Party in 1920 and founded the Vietnamese Communist Party in 1930. Often referred to as "Uncle Ho," he was president of the DRV from 1945 until his death. General Vo Nguyen Giap (1912–1975), a professor of history turned strategist, organized the first anti-French guerrilla groups in 1944, led the Viet-Minh in its eight-year struggle against France, and defeated the French at Dien Bien Phu; subsequently he served as minister of defense, commander in chief of the army, and vice-premier of the DRV. Truong Chinh ("Long March," 1906–1988), the DRV's foremost Communist thinker, was secretary-general of the Vietnamese Communist Party from 1940 until 1956, when he was purged from his post for having mismanaged the land reform; exonerated shortly thereafter, he was president of the Council of State (1981–87). Pham Von Dong (b.1906), a member of the nobility, joined the Vietnamese revolutionary movement at its inception and

became minister of foreign affairs in 1954, premier of the DRV in 1955, and premier of the SRV in 1976; he resigned in 1987. Le Duan (1907–86), first secretary of the Communist Party, presided over Vietnam's reunification and the formation of the SRV. Le Duc Tho (1911–1990), a member of the Communist Party Politburo but with no post in the government, was the DRV's chief negotiator in talks that led to the 1973 Paris Peace Agreement; for his role, Le shared with US Secretary of State Henry Kissinger the 1973 Nobel Peace Prize.

Prominent political figures in the formation of the RVN included Bao Dai (Nguyen Vinh Thuy; b.France, 1913–1997), who had served as nominal emperor of Annam under the Japanese and had attempted to form a unified national government after the war, and Ngo Dinh Diem (1901–63), who served as president of the RVN from its founding on 26 October 1955 until his overthrow and death in November 1963. Nguyen Cao Ky (b.1930), an RVN air force commander, took control of the government in the coup of June 1965. General Nguyen Van Thieu (b.1923) was elected president of the RVN in the elections of September 1967 (with Ky as his vice-presidential running mate), an office he retained until the RVN's defeat in 1975. Both Thieu and Ky left the country in 1975, Thieu taking up residence in Taiwan and Ky in the United States. The new leadership in the south, following the 1975 NLF victory, was headed by Pham Hung (1912–1988), chairman of the southern wing of the Communist Party since 1967; Huynh Thanh Phat (1913–1989), the PRG premier, who later became a member of the Council of State; and Nguyen Thi Binh (b.1927), the PRG's foreign affairs minister who had headed the NLF delegation at the Paris talks and who also became a Council of State Member. Pham Hung became premier of the SRV in 1987, and Vo Chi Cong (b.1913?) became president of the Council of State. Nguyen Van Linh (b.1913) became general secretary of the Communist Party in December 1986.

The 13th-century writer Nguyen Si Co is regarded as one of the first truly Vietnamese authors; he is best known for his collection titled *Chieu Quan Cong Ho*. Other leading literary figures are two 15th-century poets, Ho Huyen Qui and Nguyen Binh Khiem; the latter's collection, *Bach Van Thi Tap*, is a classic of Vietnamese literature. Nguyen Du (1765–1820) wrote a famous novel in verse, *Kim Van Kieu*. Hoang Ngoc Phach, who wrote the romantic novel *To Tam* (1925), is credited with the introduction of Western literary standards into Vietnamese literature.

#### 49 DEPENDENCIES

Vietnam has no territories or colonies.

# YEMEN

Republic of Yemen

*Al-Jumhuriyah al-Yamaniyah*

**CAPITAL:** Sana (San'a)

**FLAG:** The national flag is a tricolor of red, white, and black horizontal stripes.

**ANTHEM:** *Al-Watani (Peace to the Land)*.

**MONETARY UNIT:** The Yemeni riyal (YR) is a paper currency of 100 fils. There are coins of 1, 5, 10, 25, and 50 fils and notes of 1, 5, 10, 20, 50, and 100 riyals. YR1 = \$0.00546 (or \$1 = YR183.15) as of May 2003.

**WEIGHTS AND MEASURES:** The metric system is being introduced, but local measures remain in common use.

**HOLIDAYS:** Labor Day, 1 May; Day of National Unity, 22 May; National Day, 14 October; Independence Day, 30 November. Movable Muslim holidays include Laylat al-Miraj, 'Id al-Fitr, 'Id al-'Adha', Milad an-Nabi, and 1st of Muharram.

**TIME:** 3 PM = noon GMT.

---

## <sup>1</sup>LOCATION, SIZE, AND EXTENT

Yemen is located in the southern part of the Arabian Peninsula. It is slightly larger than twice the size of the state of Wyoming with a total area of 527,970 sq km (203,850 sq mi). Yemen shares boundaries with Sa'udi Arabia on the N, Oman on the E, Gulf of Aden on the S, and the Red Sea on the W, and has a total land boundary length of 1,746 km (1,085 mi) plus a coastline of 1,906 km (1,184 mi).

## <sup>2</sup>TOPOGRAPHY

The topography of Yemen features a narrow coastal plain backed by flat-topped hills and rugged mountains. Dissected upland desert plains in the center of the country slope into the desert interior of the Arabian Peninsula. The highest known point is the summit of Jabal Hadhur, rising 3,760 m (12,336 ft) above the Red Sea coast. The western part of the country contains fertile soil in its highland plateaus which rise from about 1,200 to 3,000 m (4,000 to 10,000 ft). Approximately 3% of Yemen's land is arable. A system of wadis drain mountain slopes into the desert and into the Gulf of Aden.

## <sup>3</sup>CLIMATE

Extreme humidity combines with high temperatures—as high as 54°C (129°F) in the shade—to produce a stiflingly hot climate. Winds blowing northwest in summer and southwest in winter bring little rain but cause severe sandstorms. During January and February, however, the temperature averages about 20°C (68°F). The climate of the highlands is generally considered the best in Arabia. Summers are temperate and winters are cool, with some frost. Temperatures vary from 22°C (72°F) in June, the hottest month, to 14°C (57°F) in January. Rainfall in the highlands ranges from 41 cm (16 in) at Sana to 81 cm (32 in) in the monsoon area of the extreme southwest. The average year-round temperature at Sana is 18°C (64°F).

## <sup>4</sup>FLORA AND FAUNA

Vegetation is sparse along the coast, but in the highlands and wadis, it is plentiful. Acacia, date palm, and many fruit trees are

common. Many varieties of grapes are cultivated. Custard apple, euphorbia, and spurge grow in abundance. Alpine roses, balsam, basil, wild elder, and Judas tree are among the flowers and herbs. Wild mammals include the baboon, gazelle, leopard, and mountain hare. Scorpions and millipedes are everywhere, but snakes are less common. Many varieties of birds are found, including the bustard, hawk, vulture, raven, parrot, hornbill, honeysucker, and weaver finch. More than 27,000 varieties of insects and over 600 specimens of flowering plants have been collected in Yemen.

## <sup>5</sup>ENVIRONMENT

Yemen's main environmental problems have long been scarcity of water, soil erosion, and desertification. Water pollution is a problem due to contaminants from the oil industry, untreated sewage, and salinization. The nation has 4.1 cubic kilometers of renewable water resources with 92% used for farming activity and 1% for industrial purposes.

Natural forests in mountainous areas have been destroyed by agricultural clearing and livestock overgrazing. The National Environmental Council, established in 1976, disseminates information on conservation. In response to the nation's environmental needs, the government of Yemen has created laws governing the use of the country's water supply. Law Number 42 (1991) protects water and marine life.

As of 2001, 5 mammal species and 13 bird species are listed as threatened. Endangered species include the northern bald ibis, the South Arabian leopard, slender-billed curlew, and two species of turtle (green sea and hawksbill). Queen of Sheba's gazelle and the Sa'udi Gazelle have become extinct in the wild.

## <sup>6</sup>POPULATION

The population of Yemen in 2003 was estimated by the United Nations at 20,010,000, which placed it as number 51 in population among the 193 nations of the world. In that year approximately 3% of the population was over 65 years of age, with another 48% of the population under 15 years of age. There were 103 males for every 100 females in the country in 2003. According to the UN, the annual population growth rate for

2000–2005 is 3.52%, with the projected population for the year 2015 at 30,677,000. The population density in 2002 was 35 per sq km (91 per sq mi). Most of the population is concentrated in the Tihama foothills and central highlands of Yemen. Most of southern Yemen is very sparsely populated.

It was estimated by the Population Reference Bureau that 25% of the population lived in urban areas in 2001. The capital city, Sanaa, had a population of 1,231,000 in that year. Other large cities include Taiz (2,206,000), Hodiedah (1,750,000), and Aden (562,000), the chief port and former capital of the PDRY. According to the United Nations, the urban population growth rate for 2000–2005 was 4.7%.

## 7 MIGRATION

There were 1,168,199 citizens of Yemen working abroad in 1986. Most were working in Sa'udi Arabia and other Gulf states. When Yemen took Iraq's side in the war that followed its 1990 annexation of Kuwait, Sa'udi Arabia effectively expelled an estimated 800,000–1,000,000 Yemeni workers by revoking their work privileges. These workers had been sending home some \$3 billion a year in remittances.

Many people from the Wadi Hadramawt in southern Yemen have worked abroad in East Africa, India, and Indonesia for centuries. Following independence and the establishment of a leftist regime in the PDRY, more than 300,000 people fled to the north, including about 80,000 Yemenis from the YAR, and virtually all minority groups left the country. Subsequent political upheavals resulted in further emigration.

In 1992 more than 60,000 Yemenis returned from the Horn of Africa, chiefly because of turmoil in Somalia. In 1998 and 1999, Yemen experienced a significant influx of Somali asylum seekers, who fled their country for economic reasons. They were accommodated in a refugee camp in Al Ghahain, near Aden, supervised by the UN High Commissioner for Refugees (UNHCR). As of 1999 the government had expressed its desire to move the camp to a new site about 140 km from Aden and was working with UNHCR to finalize a location. By the end of 1999, UNHCR had helped 874 Somali refugees repatriate to safe areas in their homeland. In 1999, there were approximately 57,000 Somali refugees, of whom 15,000 were being assisted by UNHCR. Other refugees were mainly from Eritrea, Ethiopia, and Middle Eastern countries.

The net migration rate in 2000 was 0.1 migrants per 1,000 population, a significant decline from 9.8 per 1,000 in 1990. Worker remittances in 2000 amounted to \$1,288,000,000, or 15.1% of GDP. The government viewed the immigration level as too high, but the emigration level as satisfactory.

## 8 ETHNIC GROUPS

Since independence, the population has been almost entirely Arab. However, there are Afro-Arab concentrations in western coastal locations, South Asians in southern regions, and small European communities in major metropolitan areas. Many ethnologists contend that the purest "Arab" stock is to be found in Yemen. Classified as Joktanic Semites, the Yemenis claim descent from Himyar, great-grandson of Joktan, who, according to the book of Genesis, was descended from Shem, the son of Noah. Yemenis were prominent in the early armies of Islam and thus helped to Arabize much of the Middle East. The Tihama has been subjected to occupation and infiltration by many conquerors, and its people show significant admixtures of other racial types, including Negroid peoples. A small minority of Akhdam perform menial tasks throughout the country. The history of the Yemenite Jews predates by centuries the Islamic Hijra (AD 622). How they came to settle in the region has not been determined.

## 9 LANGUAGES

Arabic, the national language, is spoken in a variety of dialects. In vocabulary and other features there is a considerable difference between the classical language used for writing and formal speaking and the spoken dialect used for ordinary discourse. Traces of the ancient South Arabian languages spoken prior to the coming of Muhammad appear in the dialects of the more remote districts of southern Yemen. Mahri, a rare and relatively unstudied language of unknown origins, is spoken in the east. English is widely understood in the former PDRY.

## 10 RELIGIONS

The Republic of Yemen is officially a Muslim country. Almost all of the inhabitants are Sunnis of the Shaf'i school, one of the four major schools of Islamic law. They reside chiefly in the coastal plains and the southwestern part of the country. Most of those remaining are Shi'as of the Zaydi sect, who live in the highlands. This sect, originating in the 9th century, takes its name from Zayd bin 'Ali (d.740), a descendant of Muhammad, and doctrinally is very close to Sunni Islam. In addition, there is a small minority of Isma'ilis, members of another Shi'a sect.

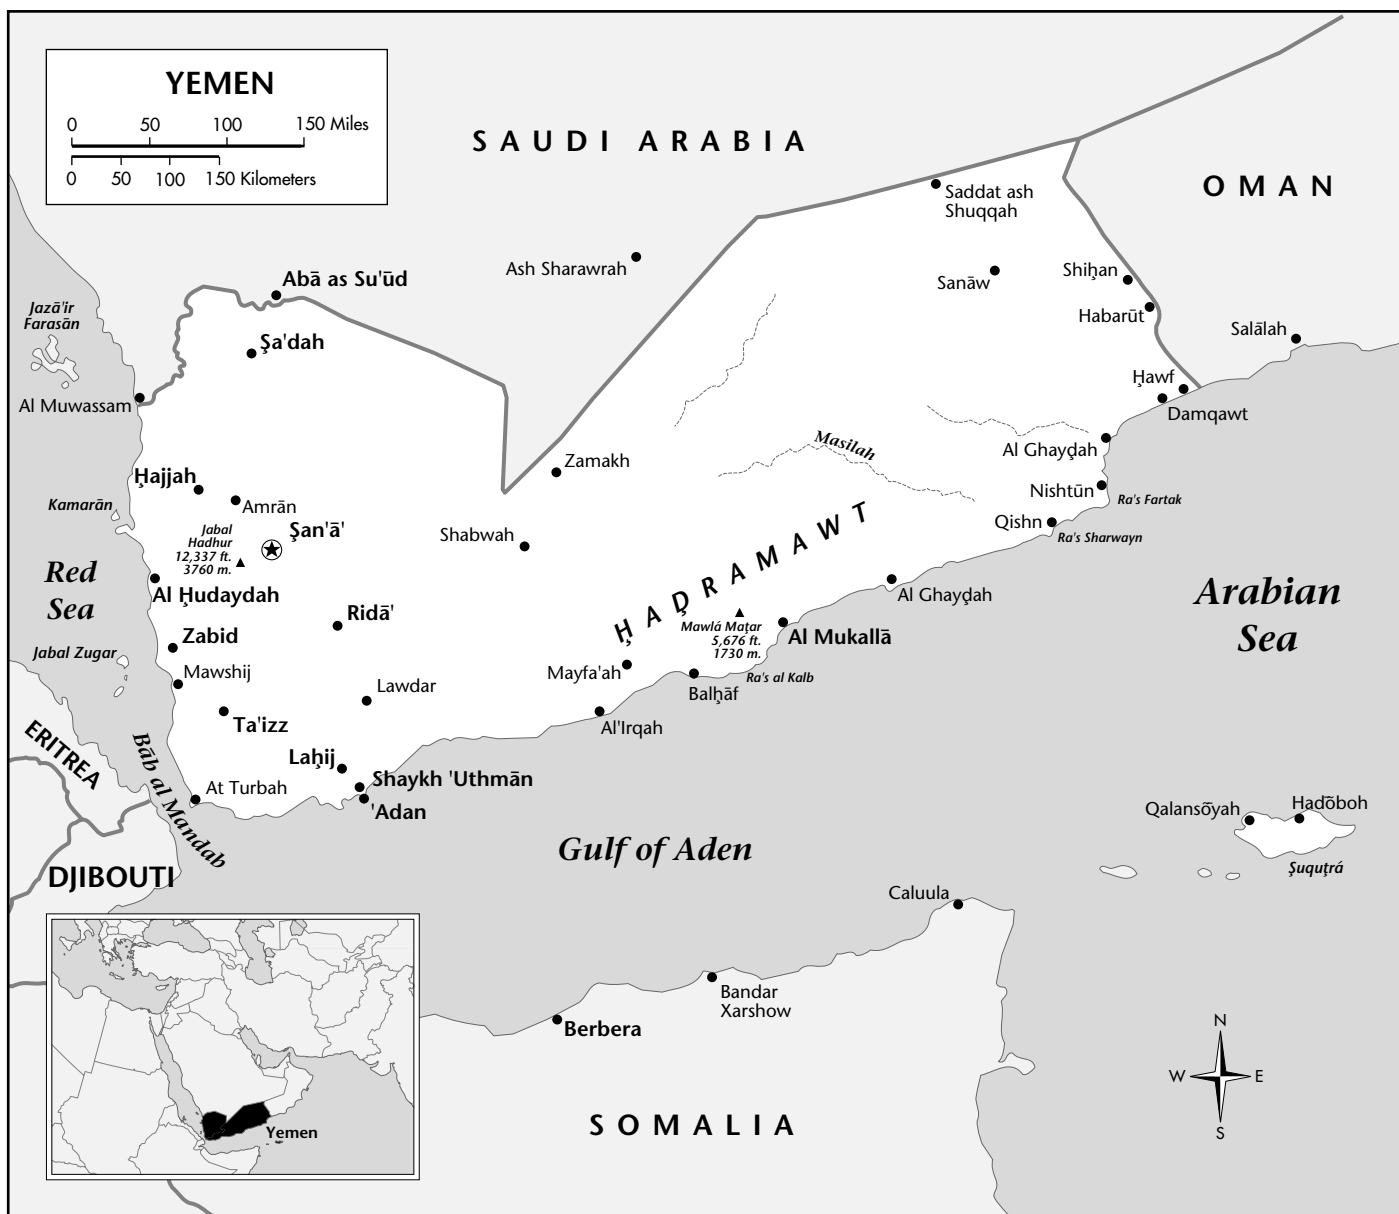

Nearly all of the country's once sizable Jewish population has emigrated. There are no legal restrictions on the few hundred who remain, although there are traditional restrictions on places of residence and choice of employment. About 500 Jews live in the villages between San'a and Saada in northern Yemen. There are also small Christian and Hindu communities. In remote areas there is still evidence of shamanism, animism, and other indigenous forms of religion.

## 11 TRANSPORTATION

Through the 1950s, Yemen's transportation system consisted of a few primitive mud tracks connecting the larger towns. Then, in 1961, technicians from China completed a 224-km (139-mi) road between San'a and Al-Hudaydah, the YAR's first asphalt highway. Seven years later, the US finished the 386-km (240-mi) highway linking Sana, Ta'izz, and Al-Mukha; the USSR completed a road from Ta'izz to Al-Hudaydah in 1969. Other paved roads extend from Sana to Ma'rib, from San'a to Sa'idah, from Ta'izz to At-Turba, from the San'a-Ta'izz highway to Al-Bayda, and from Ta'izz to Aden ('Adan). A direct link between San'a and Wadi Hadhramaut via Marib was completed in 1999. By 2002, Yemen had about 69,263 km (43,040 mi) of roadway, of which only 9,963 km (6,191 mi) were paved. Passenger cars numbered only 33,600 in 2000, and there were 83,600 commercial vehicles. There are no railways or waterways in Yemen.

Improvements to the main port of Al-Hudaydah have expanded berthing, storage, and handling facilities and increase cargo capacity to 1,750,000 tons annually. Other ports are Al-Mukha, Aden, and Salif, which have sheltered harbors and deepwater berths capable of taking 10,000-ton ships. In 1999 the Aden Container Terminal opened with further expansion plans underway. In 2002, Yemen had a merchant fleet of 4 ships, totaling 15,002 GRT.

Progress in air transportation has been rapid in recent years. In 2001 there were 49 airports, 16 with paved runways. The principal airfield, capable of handling modern jet aircraft, is Ar-Rahba International Airport, north of Sana. There are smaller international airports at Al-Hudaydah, Ta'izz, and Aden. Aden International Airport was renovated and Sana's renovation was scheduled for late 2001. Yemen Airways (Alyemda), the national airline, operates services between San'a, Ta'izz, Al-Hudaydah, and Al-Bayda and also schedules flights to Egypt, Ethiopia, Kuwait, Sa'udi Arabia, and the United Arab Emirates. The airline carried 841,400 passengers in 2001.

LOCATION 12°41' to 17°32' N; 42°32' to 53°5' E. BOUNDARY LENGTHS: Oman, 288 kilometers (179 miles); Sa'udi Arabia, 1,458 kilometers (907 miles); coastline, 1,906 kilometers (1,183 miles).

## 12 HISTORY

Classical geographers divided Arabia into three regions: Arabia Petraea ("rocky"), Arabia Deserta ("deserted"), and Arabia Felix ("fortunate"). The last, the southwestern corner, included the territory now occupied by Yemen. The region was the site of a series of rich kingdoms that dominated world trade. The wealthy kingdom of Sheba (or Saba), with its capital at Ma'rib, is the best known of the South Arabian kingdoms. The prosperity of this kingdom (10th to 2d centuries BC) was based on the spice and incense trade. Competition from new trade routes undermined Sabaeen prosperity and caused the kingdom to decline. From the 2d century BC to the 6th century AD, the Himyarite dynasty, of ethnic stock similar to that of the Sabaeans, ruled in Arabia Felix, and paganism gradually gave way to Christianity and Judaism.

The Himyarite hegemony was ended in 525 by invading Christian Ethiopians, whose rule lasted until 575, when they were

driven out by Persian invaders. Islam was accepted in the next century, and Yemen became the battleground of Muslim religious factions. The coastline (Tihama) was held by the Sunnis of the Shafi'i School, while the highlands were controlled by the Zaydis, a Shi'a sect.

In the 9th century, a Zaydi ruler, Yahya al-Hadi ila'l Haqq, founded a line of imams that survived until the second half of the 20th century. Nevertheless, Yemen's medieval history is a tangled chronicle of contesting local imams. The Fatimids of Egypt helped the Isma'ilis maintain dominance in the 11th century. Saladin (Salah ad-Din) annexed Yemen in 1173. The Rasulid dynasty (Kurdish and Turkish in origin) ruled Yemen, with Zabid as its capital, from about 1230 to the 15th century. In 1516, the Mamluks of Egypt annexed Yemen; but in the following year, the Mamluk governor surrendered to the Ottoman Turks, and Turkish armies subsequently overran the country. They were

challenged by the Zaydi imam Qasim the Great (r.1597–1620) and expelled from the interior around 1630. From then until the 19th century, the Ottomans retained control only of the coastal area, while the highlands generally were ruled by the Zaydi imams.

Early in the 19th century, Yemen was overrun by Wahhabis, but in 1818, Ibrahim Pasha, the son of Muhammad 'Ali of Egypt, drove them out of Yemen and reestablished Zaydi control. Egyptian troops occupied the main ports of Yemen until 1840, when they were withdrawn. The Zaydi imams recognized Ottoman suzerainty and paid a large annual subsidy to the Ottoman sultan. After 1840 the situation was anarchic, and law and order in any form was not reestablished until 1872, when the Ottomans again occupied Sana and consolidated their control. The northern mountains remained under the control of Zaydi imams from the Hamid ad-Din family. The Ottomans kept a large force in Yemen during World War I, but under the armistice terms evacuated it in 1918 and Yemen became independent.

In 1834 the British had occupied Aden as a coaling station on the route to India; the importance of the territory was substantially increased with the opening of the Suez Canal in 1869.

To protect its foothold in Aden the United Kingdom had signed a treaty of "protection and advice" with rulers of the tribes and states in the hinterland, leading to the adoption of the names Western Aden Protectorate (WAP) and Eastern Aden Protectorate (EAP). As long as northern Yemen remained at least nominally a part of the Ottoman Empire, relations on the frontier between the United Kingdom (in the WAP and EAP) and the Turks (in Yemen) were relatively peaceful.

During World War I the British supported the Idrisi tribe's attempt to establish itself in Yemen. In 1919 the United Kingdom occupied Al-Hudaydah, which came into Idrisi hands when the British withdrew in 1921. The Zaydis, now led by Imam Yahya ibn Muhammad Hamid ad-Din, who had become imam in 1891, waged an armed struggle against the Idrisis that ended when Imam Yahya seized Al-Hudaydah in 1925. The imam also sought to move into the states of the Western Aden Protectorate in an attempt to reestablish his suzerainty in these territories formerly held by the Yemenis. The Idrisis came under the protection of King Ibn Sa'ud, and in 1934, a war broke out between the Sa'udis and Yemenis. By the Treaty of Ta'if (May 1934), Yemen lost 'Asir to Sa'udi Arabia but won British and Sa'udi recognition of its independence. However, incursions by the imams against the UK protectorate in Aden continued until 1962.

In 1959 the United Kingdom formed the six WAP states into the Federation of Arab Emirates of the South, with others joining later. The inhabitants of Aden, who were more politically and economically advanced than those of the protectorates, opposed adherence to the federation. Nevertheless, Aden in 1963 was merged into the federation, which then became known as the Federation of South Arabia.

The dispute over the future form and direction of this new political entity, as well as over which other states would join it, resulted in several years of factional violence, as various political parties, labor organizations, and other groups struggled for political ascendancy. Finally, in 1967, the National Liberation Front (NLF) emerged as the strongest political group, and the United Kingdom agreed to negotiate with it concerning future independence. On 30 November 1967 all the states of the WAP and EAP were amalgamated, the last British soldiers withdrew, and the NLF declared the independence of the People's Republic of South Yemen. On 22 June 1969 the head of the NLF, Qahtan ash-Sha'bi, was deposed by a group of young leftists of the NLF. The new regime, headed by a five-man council, renamed the country the People's Democratic Republic of Yemen (PDRY), developed close ties with the USSR, and secured economic aid from it and China. A further political alignment occurred in

1971, when Salim Rubaya 'Ali became head of state and 'Abd al-Fattah Isma'il was named head of the party, in an uneasy rivalry. In 1978 Isma'il, the head of the Yemen Socialist Party (YSP), formerly the NLF, overthrew and executed President 'Ali and assumed the presidency. Isma'il resigned his position in 1980, ostensibly for reasons of health, and went into exile. 'Ali Nasir Muhammad al-Hasani, the prime minister, assumed the presidency.

Meanwhile, Yemen joined the League of Arab States in 1945, and in 1958, it formed a federation, the United Arab States, with the newly established United Arab Republic (UAR). In December 1961 however, the pro forma federal connection with Egypt was severed, and in September 1962 the government of Imam Muhammad al-Badr, only a few days old, was overthrown by revolutionary forces led by Brigadier (later Marshal) 'Abdallah as-Sallal. He proclaimed himself president and commander-in-chief of the army and declared the establishment of the Yemen Arab Republic. Badr escaped to the northern regions of the YAR, where he organized a counterrevolutionary force.

A civil war between the royalists (defenders of the imamate) and the republican government broke out, and appeals by both sides for support brought about the active intervention of other Arab states. Sa'udi Arabia supported the royalist cause, and the UAR came to the assistance of the republic, dispatching up to 70,000 troops to the YAR; fighting was particularly bitter during the winter of 1963-64. Eventually the conflict subsided, as the Sa'udis curtailed their aid to the royalists and the Egyptians to the republicans. Sallal was deposed in November 1967 and replaced by a Republican Council. Talks between republican leaders and Sa'udi Arabia in March 1970 at Jiddah concluded with an agreement that ended the civil war and left the republicans in control.

In June 1974 'Abd ar-Rahman al-Iryani (who had been president since 1967) resigned, thrusting the country into a state of political confusion. By the end of the year Lieutenant Colonel Ibrahim Muhammad al-Hamdi had emerged as president, heading a government with powers of centralized control that were progressively strengthened. Hamdi was assassinated by unknown assailants in October 1977. His successor, Colonel Ahmad ibn Hussein al-Ghashmi, who formed a civilian government and established the Constituent People's Assembly, met a similar fate in June 1978, in a bomb blast in which PDRY involvement was suspected. Lieutenant Colonel 'Ali 'Abdallah Saleh thereupon became president. In 1982, he inaugurated the General People's Congress as an instrument for popular political mobilization.

Since independence, the PDRY was embroiled in conflicts with all three of its neighbors. A separatist movement was supported in Oman; there were border skirmishes with Sa'udi forces in 1969 and 1973; and the PDRY fought a brief war with the YAR in February-March 1979. The war ended with a truce, mediated by the Arab League, and with an agreement in principle to seek unification of the two Yemens. On 13 January 1986 PDRY President Muhammad attempted to eliminate his rivals within the YSP. A number of officials were killed, including Isma'il, and Muhammad was forced into exile, along with thousands of his followers. A civil war ensued during the following two weeks, in which about 4,200 died and the supporters of Muhammad were defeated. Haydar Abn Bakr al-'Attas, the prime minister, took over as acting president; Dr. Yasin Sa'id Nu'man was appointed prime minister, and 'Ali Salim al-Bayd was chosen as the new head of the YSP. President al-'Attas was officially elected in November 1986.

In late 1981 a constitution for the two Yemens was drafted. However, implementation was hampered by the continuing insurgency against President Saleh by the leftist National Democratic Front (NDF), which was based in, and reportedly aided by, the PDRY. Saleh was able to defeat the NDF militarily

in 1982. Movement toward unification was maintained in repeated declarations and meetings through 1985, but no real progress was achieved. The January 1986 civil war in the PDRY set back relations between the two countries, particularly since 50,000 refugees fled the YAR, but both governments subsequently reaffirmed their commitment to unity.

In 1989 the leaders of the YAR and PDRY approved the 1981 draft constitution and their legislatures ratified it on 21 May 1990. The unified Republic of Yemen was proclaimed the following day. In the May 1990 election, 121 seats were won by the northern General People's Congress, sixty-two by Islaah (an Islamist and tribalist party), fifty-six by the southern Yemeni Socialist Party, forty-seven by independents, and fifteen by five other parties. On 22 May 1990 Ali Abdullah Saleh became the president of Yemen and Haidar Abu Bakr al-Attas the first prime minister, serving until 9 May 1994. A 30-month transition period was set for unifying the different political and economic systems. The army, police, and civil service were not integrated as planned, however. Meanwhile, the economy was hard hit by the consequences of Yemen's support for Iraq after the Kuwait invasion. It is estimated that Saudi Arabia expelled between 800,000 and 1 million Yemeni workers, thus depriving Yemen of some \$3 billion in foreign exchange. In addition, the Sa'udis and Gulf states ended \$2 billion in foreign aid. Unemployment in Yemen reached 30%.

Free and fair parliamentary elections were held in April 1992 with President Saleh's General People's Congress (GPC) barely missing a majority victory. A three-party coalition was formed but foundered in late 1993 when Vice President Ali al-Beidh of the Yemen Socialist Party boycotted meetings. Although the quarrel appeared to be patched up with an agreement in February 1994, fighting broke out in May of that year. In a few months, thousands of casualties had been suffered; tribes, clans, and militias were engaged in seeking their own selfish goals and the city of Aden was under siege. Some observers attributed the civil conflict to the recent discovery of massive oil reserves in the south and to Saudi Arabia's interest in weakening Yemen by promoting the breakup of the union. The future looked bleak, despite efforts of the UN and some Arab states to promote peace. Meanwhile, on 9 May 1994 Muhammed Said al Attar became acting prime minister until 6 October 1994 when Abdel Aziz Abdel Ghani took office.

Although bloody, the civil war was short-lived, with the north having subdued the rebellious south by July. Restoring civil order was difficult, especially in light of the dire economic straits faced by the country, which in 1995 had 70–90% inflation and a deficit of 17% of GDP. The IMF and World Bank stepped in after the war and instituted structural adjustment programs which brought inflation down below 10%, with further reduction to 6% expected in 1997 (for the non-oil sector).

In 1997 parliamentary elections were scheduled for May and it was expected that Saleh's GPC would retain its sizable majority. The international community expressed skepticism as to the fairness of the elections but, in the context of the Persian Gulf, they were expected to be reasonably fair. Notably, the YSP, representing the defeated south, announced that it would boycott the elections in protest of the GPC's collusion with Islaah, a tribal and Islamist party, to rig the elections. Saleh maintained the presidency and on 14 May 1997 Faraj Said Bin Ghanem became the new prime minister. On 29 April 1998 Bin Ghanem resigned and Abdel Karim al-Iriani became acting prime minister. In September 1999 President Ali Abdullah Saleh was reelected in Yemen's first direct presidential election. The YSP boycotted the election. Charges of fraud were made by the opposition with allegations of underage voting, multiple balloting, and unauthorized submission of ballots by absentee voters.

Yemen's history of kidnappings, over 100 Westerners the first six years of the 1990s, continued through 2000. In the past the

kidnappings were economically motivated, i.e., Yemeni tribesmen asking for money. However, the more recent ones appeared ideological—Muslims demanding the release of prisoners held by another Muslim group. Kidnappings damaged Yemen's economy by their impact on its tourist industry. Falling world oil prices also hit Yemen hard since oil accounts for over 80% of Yemen's exports. Yemen attempted to increase economic productivity with a campaign against qat (khat) chewing. Qat is a mild indigenous narcotic plant customarily chewed by some 75% of the Yemeni population. In August 1999 the government led by President Saleh, himself a qat user, launched a campaign to reduce qat usage by swearing off qat and encouraging others to follow his example. Anti-qat campaigns have been politically treacherous as former prime minister Mohsin al-Aini was ousted in 1972 after attempting to stamp out qat-chewing.

On 12 October 2000, two suicide bombers detonated a small boat containing explosives alongside the USS *Cole* as it was refueling in Aden harbor. Seventeen US sailors were killed and 39 others were wounded. In remarks broadcast on Qatar's al-Jazeera satellite channel in March 2001, al-Qaeda leader Osama bin Laden praised the attack. Bin Laden, whose father was of Yemeni origin, had been indicted by the United States for the 1998 bombings of the US embassies in Kenya and Tanzania that killed 224 people. In the aftermath of the 11 September 2001 terrorist attacks on the United States, attributed to al-Qaeda, the United States focused attention on governments in the world responsible for harboring and supporting terrorists. Since 1992, the United States has alleged that bin Laden and al-Qaeda targeted US military forces in Yemen, and that al-Qaeda has formed alliances with jihad groups in Yemen. In June 2001, Yemeni officials arrested 9 men believed to be affiliated with the Islamic Army of Aden, a fundamentalist group linked to bin Laden, for the 2000 attack on the *Cole*. The group was responsible for kidnapping 16 Western tourists in December 1998; four of the hostages were killed in a gun battle between the group and Yemeni government troops. The Islamic Army of Aden apparently advocates the imposition of Islamic law in Yemen, is against the United States or other Western states using Yemeni ports or bases, and supports the lifting of international sanctions against Iraq.

In November 2001, President Saleh met with President Bush, assuring him that Yemen was a partner in the war on terrorism. In December, Yemen detained some 80 foreign students and teachers from an Islamic fundamentalist institute in the Marib province, where Yemeni special forces were searching for al-Qaeda suspects. In February 2002, Yemen expelled more than 100 foreign Islamic scholars, including British and French nationals, in an effort to curb the spread of terrorism. Scores of prisoners being held by the United States as a result of its 2001–2002 campaign in Afghanistan are natives of Yemen. In March 2002, the United States was finishing plans to send hundreds of US Special Forces to Yemen, to “advise and assist” Yemeni forces combating armed groups affiliated with al-Qaeda. No combat role for the US forces was envisioned.

On 6 October 2002, the French oil tanker *Limburg* was the target of a terrorist attack in the Gulf of Aden, which killed one crewmember and released 90,000 barrels of oil. An explosives-laden boat hit the tanker, in an attack that was similar to the one on the USS *Cole*. On 3 November, a US CIA-controlled unmanned Predator surveillance plane fired a Hellfire missile into a car in northwest Yemen, killing 6 al-Qaeda operatives, including Qaed Salim Sunian al-Harethi, considered to be Osama bin Laden's chief operator in Yemen. Al-Harethi was also a suspect in the 2000 bombing of the *Cole*. President Saleh called on al-Qaeda members to renounce violence and turn themselves in to face trial in Yemen, as opposed to being turned over to the United States.

In December 2002, a North Korean freighter disguised as a Cambodian ship was intercepted in the Arabian Sea and seized at gun point by the US Navy and Spanish marines; the vessel was carrying a shipment bound for Yemen of 15 Scud missiles, warheads, and an agent used in Scud fuel. President Bush ordered the shipment released after concluding the Yemen-North Korean deal was concluded on a legal basis. Also in December, a Yemeni Muslim extremist killed three American doctors and wounded a pharmacist by opening fire in a Baptist hospital in the town of Jibla.

Domestically, on 20 February 2001, Yemen amended its constitution to extend the presidential term of office from 5 to 7 years, and to reorganize the bicameral parliament. The referendum was passed by 73% of the voting population. Also in February, municipal elections were held for the first time.

### 13 GOVERNMENT

The 1970 YAR constitution affirmed Islamic law as the basis of all legislation and established the unicameral Consultative Assembly as the supreme legislative body. The assembly was authorized to name the president and to appoint the ruling Executive Council. In the first national elections, held in 1971, voters selected 119 members of the Consultative Assembly; the president appointed the forty remaining members. This body was dissolved in 1974, and in 1978, the Constituent People's Assembly replaced it, with 99 members elected and 60 members appointed by the president for a 2-year term.

In the General People's Congress (GPC), created in 1982, 700 of the 1,000 members were elected, with the other 300 appointed by the government. Between meetings (held every two years), the GPC's affairs were to be handled by a seventy-five-member standing committee. The president, elected by the Constituent People's Assembly for a five-year term, served as secretary-general of the GPC and commander-in-chief of the armed forces and appointed the prime minister and a ministerial council.

The 1970 constitution of the PDRY was ratified by the general command of the United Political Organization-National Front, which later became the Yemen Socialist Party (YSP). The Supreme People's Council, which had 111 members elected by universal suffrage at age eighteen, enacted laws; elected a Presidium and its chairman, who served as head of state; and chose the prime minister and the Council of Ministers. The YSP apparatus and the organs of government were closely intertwined.

The 1990 unity constitution established a political system based on free, multiparty elections. During the transitional period a presidential council was created with five members, three from the North and two from the South, to oversee executive operations. The council appointed a prime minister who picked a thirty-eight-member cabinet. A 301-member parliament was also formed, with 159 members chosen from the North, 111 from the South, and thirty-one at large. Constitutional amendments in 1994 eliminated the presidential council, and provided that the president would be elected by popular vote from at least 2 candidates selected by the legislature. In 1999, Yemen held its first direct presidential elections.

Legislative elections were again held in 1993, with the GPC maintaining its majority (124 seats). Islaah won sixty-one seats and the YSP took fifty-five. Independent candidates won forty-seven and members of the country's dozens of other political/tribal parties took thirteen seats. Following the 1994 civil war, the GPC and Islaah formed a unity government. The next parliamentary elections were in April 1997. The GPC maintained its dominance taking 187 of 299 seats. The YSP, the only substantial opposition since the GPC and Islaah joined forces, boycotted the elections, which they said were being managed by the GPC leadership.

On 20 February 2001, new constitutional amendments extended the presidential term of office from 5 to 7 years, and extended the parliamentary term of office to 6 years. The president may now serve a maximum of two 7-year terms. A bicameral legislature was created, consisting of an upper house, the Consultative Council or Shura Council, with 111 seats appointed by the president; and a House of Representatives composed of 301 members elected by popular vote. The next presidential elections were slated for 2006, and legislative elections were scheduled for 27 April 2003. Suffrage is universal at 18.

### 14 POLITICAL PARTIES

The National Liberation Front, which emerged in 1967 as the strongest faction in the disputes before South Yemen's independence, became the United Political Organization-National Front in 1970 and changed its name to the Yemeni Socialist Party (YSP) in 1978, when two smaller leftist parties were merged with it. This Marxist-Leninist organization, the PDRY's lone political party, was the only group to offer candidates in the 1986 legislative elections and survived to represent southern interests in the unified Yemen.

In pre-unification north Yemen, political parties in the Western sense played no role. Tribal allegiances were more important political factors. After unity, the northern leader, General Saleh, formed the General People's Congress (GPC), which became the country's largest party. The second-largest bloc in the parliament is held by the Islaah Party (The Yemeni Congregation for Reform), a fusion of tribal and Islamic interests that opposed the unity constitution because it did not sufficiently adhere to Islamic principles. At least forty smaller parties have been active in the politics of unified Yemen, but the GPC, Islaah, and the YSP are the only ones of national significance. After the 1994 civil war, the GPC and Islaah formed a coalition government to establish civil order.

In the April 1997 legislative election the GPC won a landslide victory and no longer governed in coalition with Islaah. The YSP boycotted the April 1997 legislative election. In addition to these three main parties, as of 1997, the other parties active in the political arena that had fulfilled Yemen's legal procedures to practice political activities were the Peoples Nasserite Reformation Party, Liberation Front Party, Nasserite Democratic Party, League of the Sons of Yemen, Federation of Popular Forces, National Arab Socialist Baath Party, National Democratic Front, Al Haq Party, Yemen League Party, and the National Socialist Party. As of 2003, the active parties are GPC, Islaah, Yemeni Socialist Party (YSP), Nasserite Unionist Party, and the Arab Socialist Rebirth Party.

In September 1999 Yemen held the first direct presidential elections ever held on the Arabian peninsula. Longtime president Saleh captured 96.3% of the vote; Najeeb Qahtan al-Shaabi, his only opponent, won 3.7% of the vote. Led by the YSP, a coalition of opposition groups boycotted this election.

### 15 LOCAL GOVERNMENT

The YAR was divided into eleven governorates (*muhafazat*), each headed by a governor. Each governorate contained a varying number of sectors (*nawahi*). Traditional divisions still extant included the uzlah, a group of villages (*qura*) of people who belong to the same tribe, headed by a sheikh; and the mahall, a group of houses administratively subordinate to a village. The central government retained ultimate authority over local officials, although certain administrative sanctions were granted to traditional local rulers.

In an effort to de-emphasize older loyalties and associations, the PDRY government created a highly centralized state and divided the country into six governorates, all closely controlled by the central authorities. Each had an appointed governor, and

each was divided into districts, which were also administered by appointed officials.

The unified government established 17 governorates, subdivided into districts. In the countryside, especially in the north and east, tribal authority is often stronger than formal government institutions. There are currently 20 governorates, and 326 district municipalities. The government has taken steps to implement decentralization. Municipal elections were held for the first time in February 2001. Authority over local planning, development, and administration is consolidated in municipal councils. The February elections included 26,832 candidates for 6,614 district municipal council seats and over 2,500 candidates for 418 provincial council seats. Those elected are to serve a 2-year transitional term.

## 16 JUDICIAL SYSTEM

Under a 1991 decree the separate judicial systems of the former YAR and the former PDRY were unified at the Supreme Court level. A Supreme Judicial Council administers the judiciary, appointing and promoting judges and reviewing policies regarding the structure and functioning of the judicial system. There are courts of first instance, which hear civil, criminal, commercial, and family matters; decisions can be appealed to courts of appeal. The Supreme Court rules on the constitutionality of laws, hears cases brought against high government officials, and is the last court of appeal for all lower court decisions. The judiciary, especially at the lower levels, is susceptible to pressure and influence from the executive branch. All laws are codified from *Shari'ah*, and there are no jury trials. In addition to regular courts, a system of tribal adjudication exists for some noncriminal issues, although the tribal "judges" often hear criminal cases as well.

The former YAR judicial system consisted of *Shari'ah* law and courts for criminal and family law areas administered in each district by a hakim and commercial law and courts for business matters. In remote areas, tribal law was applied in tribal courts. The *Shari'ah* courts applied Islamic law and litigants could appeal the decision of a *hakim* to another *hakim*, and from him take a final appeal to the *Istinaf*, the highest court of appeal, in Sana. Both sets of courts were considered generally fair and impartial. Former YAR state security courts were abolished with unification.

The former PDRY court system was organized in three tiers: magistrate or divisional courts, provincial courts, and military courts. Magistrate courts handled most criminal, juvenile, family, housing, agrarian, and other minor civil matters. Provincial courts handled more serious criminal cases, inheritance cases, major civil claims, and appeals from magistrates' courts. *Shari'ah* courts applying Islamic law and tribal courts applying traditional law also existed alongside the modern court system.

## 17 ARMED FORCES

In 2002, the active armed forces of Yemen numbered 66,500 with some 40,000 reserves. The army of 60,000 was equipped with 790 main battle tanks and some 310 towed artillery pieces. The navy of 1,500 operated 11 patrol and coast combatants and nine other vessels. The air force, with 5,000 members, had 76 combat aircraft and eight attack helicopters. The paramilitary included a national security force of 50,000, and at least 20,000 tribal levies. A coast guard is slowly being established. Yemen spent \$482.5 million for defense in 2001, or 5.2% of GDP.

## 18 INTERNATIONAL COOPERATION

Yemen joined the Arab League in 1945 and was admitted to UN membership on 30 September 1947; the republican government became Yemen's UN representative in December 1962. Yemen participates in the ESCWA and all the nonregional specialized

UN agencies. The country is also a member of G-77, a signatory to the Law of the Sea, and an applicant to the WTO.

Yemen is on good terms with both conservative and radical Arab states. Several thousand PLO fighters from Beirut were accepted in 1982. Military aid and advisers have been accepted from both the United States and the former USSR.

## 19 ECONOMY

Traditionally an agricultural area, northern Yemen was self-sufficient in food and a net exporter of agricultural product until the Civil War in the 1960s and a prolonged drought in the early 1970s. In the late 1970s and early 1980s many farmers switched from labor intensive food crops to the more profitable cultivation of *qat*, a mild stimulant chewed by many Yemenis that has no significant export market. The economy of southern Yemen developed through foreign assistance (especially from the former USSR). The southern city of Aden, with its port and refinery, is the economic and commercial center of the country. The Yemeni economy depends on imports of wheat, flour, rice, and other foodstuffs. Trade deficits have been offset by remittances from Yemenis working abroad and by foreign aid.

Crude oil is now a significant sector of the economy, with exports accounting for over 80% of total exports. Following the unification of the country in 1990, responsibility for development of the oil sector fell to the state-owned general corporation for oil and mineral resources. Civil war in 1994 disturbed output. Oil output has been declining since 1995, and over 200 dry wells have been drilled, suggesting that the industry has passed its peak.

When Yemen aligned with Iraq during the Gulf War, Sa'udi Arabia and the Gulf states, Yemen's main aid donors and hosts to large numbers of Yemeni workers and their families, ended the Yemenis' privileged status. The economic impact of lost remittances was estimated at about \$1 billion per year. After the Gulf crisis, Yemen was confronted with high unemployment, lost remittances, halving of US military aid, a sharp cutback in USAID programs, other canceled foreign assistance, and the cost of food imports and social services for the returnees totaling about \$500 million.

Following the civil conflict in 1994, the government began a five-year program in 1995 that removed all controls on the exchange rate and cut the interest rate, as well as initialized trade policy reform, privatization, and the elimination of price controls. The reforms were favorably received by the World Bank and IMF, which agreed to provide aid.

A new liquefied natural gas drilling project promised exploitation of Yemen's 482 billion cu m (17 trillion cu ft) of gas reserves in subsequent years, although in 2002 US companies ExxonMobil and Hunt Oil withdrew from the project, leaving the French-based company, TotalFinaElf, as the lead investor.

Gross domestic product (GDP) grew at an average rate of 3.8% from 1988 to 1998. Low oil prices in 1999 held real GDP growth to 3.7% in 1999, and their recovery helped push real growth to GDP to 5.1% in 2000. A stabilization in oil prices combined with declines in the growth of agricultural output, electricity and manufactures, attributable more to the domestic lack of rain than to the global economic slowdown, reduced GDP growth to 3.3% in 2001. Consumer price inflation had fallen to 6% in 1996 and 8% in 1998, but the average from 1999 to 2001 was 11%. An increase to 15.8% inflation was estimated for 2002 reflecting high fuel, electricity, and food prices from both shortages and the lowering or elimination of subsidies. Yemen is one of the 25 poorest and economically least development countries in the world with about a third of the population living in poverty.

## 20 INCOME

The US Central Intelligence Agency (CIA) reports that in 2001 Yemen's gross domestic product (GDP) was estimated at \$14.8 billion. The per capita GDP was estimated at \$820. The annual growth rate of GDP was estimated at 4%. The CIA defines GDP as the value of all final goods and services produced within a nation in a given year and computed on the basis of purchasing power parity (PPP) rather than value as measured on the basis of the rate of exchange. It was estimated that agriculture accounted for 17% of GDP, industry 40%, and services 43%.

According to the United Nations, in 2000 remittances from citizens working abroad totaled \$1,288 million or about \$70 per capita and accounted for approximately 15.1% of GDP. Worker remittances in 2001 totaled \$1,542 million. Foreign aid receipts amounted to about \$24 per capita and accounted for approximately 5% of the gross national income (GNI).

The World Bank reports that in 2001 per capita household consumption (in constant 1995 US dollars) was \$219. Household consumption includes expenditures of individuals, households, and nongovernmental organizations on goods and services, excluding purchases of dwellings. It was estimated that for the same period private consumption grew at an annual rate of 13%. Approximately 25% of household consumption was spent on food, 26% on fuel, 3% on health care, and 5% on education. The richest 10% of the population accounted for approximately 25.9% of household consumption and the poorest 10% approximately 3.0%.

## 21 LABOR

In 1998, Yemen's workforce was estimated at five million. According to 1992 estimates, 64% of the labor force is employed in agriculture and herding, 25% in services, and 11% in commerce and industry. In 1995 the estimated unemployment rate stood at 30%.

United Yemen enacted a new labor code in 1995, (amended in 1997) which guaranteed the rights of unionization and collective bargaining. The government restricts this right by placing government officials in union positions of prominence. The Yemeni Confederation of Labor Unions, the country's only labor confederation, had 350,000 members in 14 unions in 2002. There exists a limited right to strike. All collective bargaining agreements must be reviewed by the minister of labor.

There is no nationally fixed minimum wage. Average wages do not provide a family with a decent standard of living. Although children under the age of 15 are prohibited from working, child labor is common, especially in rural regions. The labor code calls for a maximum eight-hour workday and a 48-hour workweek.

## 22 AGRICULTURE

Yemen, with its wide range of arable climatic zones, has the greatest potential for agricultural development of any nation on the Arabian Peninsula. Agriculture is an important part of the economy (accounting for 17% of GDP in 2001), despite the lack of arable land, scarcity of water, periodic droughts, and difficult terrain. Employment in the agricultural sector accounts for more than 64% of the workforce, but with only 3% of its land area arable, Yemen's potential for agricultural self-sufficiency is very remote. As of 2001, Yemen imported \$857.2 million in agricultural products.

Traditionally, Yemen was famous for its coffee, shipped from the port of Al-Mukha, from which the English word mocha derives. The main cash crop is qat, a mild stimulant chewed by many Yemenis on a daily basis, but not exported significantly because it is highly perishable. Industrial farming of fruits and vegetables, using modern irrigation techniques, provides a level of production to nearly satisfy domestic demand. As a high-cost producer, Yemen is not yet able to internationally compete in

marketing its produce, especially since such exports are often blocked at the borders.

Agriculture output in 1999 (in 1,000 tons) included sorghum, 321; tomatoes, 248; wheat, 144; grapes, 160; bananas, 88; seed cotton, 25; sesame seed, 18; coffee, 12; and cotton, 8.

## 23 ANIMAL HUSBANDRY

Animal husbandry is a key sector of the economy, and the export of hides and skins has long been an important source of foreign exchange. In 2001, the livestock population was estimated at 5,029,000 sheep, 4,453,000 goats, 1,400,000 head of cattle, 500,000 donkeys, and 198,000 camels.

Commercial production of poultry in Yemen began in the mid-1970s. Yemen produces about 95% of its annual consumption of eggs and is emerging as a significant producer of broilers (chicken meat). The brief civil conflict in 1994 hurt the industry by driving up the costs of imported feed and vaccines. About 78,000 tons of poultry were marketed by eight companies in 2001. About 32,000 tons of eggs were marketed in 2001.

## 24 FISHING

Fishermen work along the Arabian Sea, Gulf of Aden, and Red Sea coasts. The annual fish catch in 2000 was about 114,751 tons. Principal species of that catch included Indian and Spanish mackerel, cuttlefish, lobster, and scavengers. Fish-processing plants are located at Al-Hudaydah and Al-Mukalla. Exports of fish and fish products were valued at \$40.9 million in 2000. Pearl and coral diving have been practiced for centuries.

## 25 FORESTRY

Forest and woodland coverage is negligible. Forests once covered Yemen, but overgrazing by goats and the systematic cutting of timber for fuel and construction have almost completely eliminated the forest cover, especially in the south. Roundwood production totaled 302,000 cu m (10.7 million cu ft) in 2000, all of it used for fuel. Lumber imports amounted to \$44.9 million in 2000.

## 26 MINING

Until the discovery of petroleum—the preeminent segment of the Yemeni economy—the mineral industry had been limited to the production of cement, dimension stone, gypsum, and salt. In 2000, production of cement amounted to 1.4 million tons; dimension stone, 2.5 million cu m; marble, 86,000 sq m; gypsum, 100,000 tons; and salt, 150,000 tons. The government was focusing on creating conditions favorable to foreign investment, to develop the nation's mineral resources. The government had exclusive domain over the precious stone and hydrocarbon industries; mining legislation guaranteed the rights of private property for all other commodities. ZincOx Resources, of the United Kingdom, continued evaluating the Al-Jabail zinc deposit, which Anglo American Corp. had explored in the late 1990s.

## 27 ENERGY AND POWER

A number of companies have held oil concessions, but commercial deposits were not discovered until July 1984, when the US-based Hunt Oil Company struck oil in the eastern governorate (province) of Marib. As of 1999, Yemen had two aging refineries. The capacity of the Aden refinery had declined from 170,000 barrels per day before the 1994 civil war to 120,000 barrels per day as of 2002. The newer Marib plant has a capacity of 10,000 barrels daily. Oil production is split between Canadian Occidental (which had been operating in North Yemen since 1987) in the Masillah block, US Hunt Oil in the Marib field, and three other operators. In 2001, oil production amounted to 452,521 barrels per day. Proven oil reserves as of 1 January 2002 were 4 billion barrels. Exploration declined in

1994 due to civil war between the north and south but picked up again in 1997.

Most exploration occurs in the Marib and Masillah fields, with some activity also in the eastern Hadhramaut and Hehara regions. Most new oil discoveries in recent years have been in southern Yemen.

With natural gas reserves estimated in early 2002 at 478 billion cu m (17.2 trillion cu ft), Yemen has potential as a gas producer. Most of the known reserves are concentrated in the Marib-Jawf fields, operated by the Yemen Exploration and Production Company.

Total electricity production was 2.8 billion kWh in 2000, of which 100% was from fossil fuels. Total installed capacity in 2001 was 810,000 kW, entirely based on conventional thermal sources.

## 28 INDUSTRY

In northern Yemen industry traditionally has been based on food processing, but this subsector has suffered from poor productivity of agriculture and reliance on imported raw materials. Building materials, textiles, leather wear, jewelry, and glass making are other industries in the north. The largest industry in southern Yemen is petroleum refining. Southern manufactures include clothing, processed food, metal products, soap, and perfumes. Industrial production accounts for 40% of GDP (1998 est.)

Yemen's main refinery at Aden processed 60,000 barrels of petroleum per day in 1994 after sustaining damage in the civil war. Output reached 100,000 barrels per day by the start of 1995 with the repair of the main pumping station and two tapping units. That year, the refinery produced 26.5 million barrels of residual and distillate fuel oil, 10 million barrels of gasoline, and 3.5 million barrels of kerosene. In 2002, Yemen's total refinery capacity is 130,000 barrels per day, most from the 120,000-barrels-per-day-capacity Aden refinery operated by the Aden Refinery Company (ARC), and the rest from a 10,000-barrels-per-day refinery at Marib operated by Yemen Hunt Oil Company. In December 2002, the government signed an agreement with the Hadramawt Refinery Company, a Saudi venture, for the construction of a 50,000-barrels-per-day refinery at Al Mukalla costing \$450 million.

Yemen's considerable natural gas reserves—estimated at 480 billion cu m (16.9 trillion cu ft), have not been developed. A liquefied natural gas project was initiated in 1995 by TotalFinaElf and several other major multinational oil companies, which established the Yemen Liquefied Natural Gas Company (Yemen LNG). To date, however, the company has not been able to locate enough credit-worthy buyers of the output that it could sign up for the period of 20 years or more generally needed to justify the large capital outlays for liquefaction and port facilities, and LNG tankers. In June 2002, two US companies, ExxonMobil and Hunt Oil, announced they were leaving the consortium. Shortly after Yemen extended approval for an additional four years.

## 29 SCIENCE AND TECHNOLOGY

The University of Aden, founded in 1975 at Al-Mansoorah, has faculties of science, arts, and education; agriculture; engineering; and medicine. Sana University, founded in 1970, has faculties of science, medicine and health sciences, engineering, and agriculture.

## 30 DOMESTIC TRADE

At the center of most towns is a market place (*sug*), the lanes of which are lined with open-front booths where food and implements are displayed and sold. Some goods are bartered. Others sold for cash, usually after bargaining. The production of *qat*, a mild stimulant which many Yemenis chew, plays an important role in domestic trade. Relying on a highly sufficient internal distribution system, the production of *qat* would increase

per capita GDP an estimated 15–20% were it included in the national income statistics. Corruption among civil servants is a common element of domestic commerce—soldiers at checkpoints confiscate money or *qat*, and businesses are often obliged to pay off local officials.

Customary business hours are from 8 AM—1 PM and from 4 PM—7 PM, Saturday–Thursday. Banks are open from 8 AM—12 PM (11:30 AM on Thursdays).

## 31 FOREIGN TRADE

Petroleum accounts for about 91% of the country's exports. Oil export revenues were estimated at \$1.4 billion in 1998. Other exports in recent years have included coffee and dried and salted fish; imports included food and live animals, machinery and equipment, and manufactured goods.

In 1998 Yemen's imports were distributed among the following categories:

Consumer goods	10.8%
Food	29.4%
Fuels	6.4%
Industrial supplies	27.8%
Machinery	16.6%
Transportation	8.4%
Other	0.6%

Principal trading partners in 1999 (in millions of US dollars) were as follows:

COUNTRY	EXPORTS	IMPORTS	BALANCE
China (inc. Hong Kong)	731	62	669
Thailand	646	39	607
Korea	347	29	318
Singapore	207	71	136
India	179	55	124
Kuwait	53	120	-67
Saudi Arabia	45	246	-201
United Arab Emirates	18	256	-238
United States	16	125	-109
United Kingdom	5	87	-82

## 32 BALANCE OF PAYMENTS

Yemen's balance of payments was adversely affected in the early 1990s, as other nations sought to economically punish Yemen for its support of Iraq during the Persian Gulf War. In 1993, the current account deficit reached a peak of \$1,217 million, foreign exchange reserves sank to just \$144.6 million, and the trade deficit was \$920 million. Transfers, consisting largely of remittances from Yemenis working in other Gulf states fell by 42% between 1990 and 1993.

As of the early 2000s, Yemen's balance of payments position had substantially improved: its current account surplus stood at \$1.8 billion in 2000, up from a \$455 million deficit in 1998. Yemen's bilateral and multilateral debt situation has also improved in recent years, with debt to Russia reduced, debt rescheduling by the Paris Club, and financing from the World Bank and IMF. In 2001, Yemen's outstanding debts stood at approximately \$4.8 billion, or 80% of GDP.

The US Central Intelligence Agency (CIA) reports that in 2001 the purchasing power parity of Yemen's exports was \$3.9 billion while imports totaled \$3 billion resulting in a trade surplus of \$900 million.

The International Monetary Fund (IMF) reports that in 2000 Yemen had exports of goods totaling \$4.09 billion and imports totaling \$2.48 billion. The services credit totaled \$211 million and debit \$809 million. The following table summarizes Yemen's balance of payments as reported by the IMF for 2000 in millions of US dollars.

<b>Current Account</b>	1,862
Balance on goods	1,609
Balance on services	-599

### 33 BANKING AND SECURITIES

The republican government set up the Yemen Currency Board in 1964 with a capital of YR2 million; in 1971, the Currency Board was replaced by the Central Bank of Yemen (CBY). The state-owned Yemen Bank for Reconstruction and Development (YBRD), founded in 1962, finances development activities, and the International Bank of Yemen, organized in 1980, operates as a commercial bank. In the 1970s, the YBRD dominated the banking business, controlling some 70% of the loans outstanding in the YAR; during the same decade, a number of foreign commercial banks, including ones from Hong Kong, Iraq, Pakistan, the United States, and the United Kingdom, opened offices in Sana.

The economic recovery in 1995 and the partial liberalization of interest rates on bank deposits appear to have succeeded in encouraging the growth in savings as reflected in higher quasi-monetary holdings. In 2002, there were eleven commercial banks (9 private and 2 public) and two public sector specialized banks (Agriculture and Housing) operating under the jurisdiction of CBY. There were also three Islamic banks in operation. The International Monetary Fund reports that in 2001, currency and demand deposits—an aggregate commonly known as M1—were equal to \$1.7 billion. In that same year, M2—an aggregate equal to M1 plus savings deposits, small time deposits, and money market mutual funds—was \$3.4 billion. The discount rate, the interest rate at which the central bank lends to financial institutions in the short term, was 15.16%.

There are no securities exchanges in Yemen.

### 34 INSURANCE

There were at least ten insurance firms in the Yemen in 1999. Much of the Yemen's insurance business is transacted abroad. In 1999, there was 18.8 million dollars of premiums written in Yemen, giving the insurance industry a .30% share of the Gross Domestic Product.

### 35 PUBLIC FINANCE

The US Central Intelligence Agency (CIA) estimates that in 2001 Yemen's central government took in revenues of approximately \$3 billion and had expenditures of \$3.1 billion. Overall, the government registered a deficit of approximately \$100 million. External debt totaled \$4.7 billion. Since unification, Yemen has run a budget deficit equivalent to 10–20% of GDP, financed primarily by bank credit. Yemen's decision to back Iraq in the Gulf War caused it to lose some \$2 billion in development aid. The civil conflict in 1994 also exacerbated the need for external assistance and debt restructuring. The government estimated revenues would increase by 90% to YR301 billion in 1997, while expenditures would rise 72.5% to YR313 billion at that time. Increased oil revenues were expected to provide most of the increase in revenues.

The following table shows an itemized breakdown of government revenues and expenditures. The percentages were calculated from data reported by the International Monetary Fund. The dollar amounts (millions) are based on the CIA estimates provided above.

<b>REVENUE AND GRANTS</b>	<b>100.0%</b>	<b>3,000</b>
Tax revenue	38.6%	1,159
Non-tax revenue	59.4%	1,782
Capital revenue	0.5%	14
Grants	1.5%	45
<b>EXPENDITURES</b>	<b>100.0%</b>	<b>3,100</b>
General public services	22.0%	682
Defense	18.8%	582
Public order and safety	8.3%	258
Education	21.8%	676
Health	4.4%	136
Housing and community amenities	1.6%	51
Recreation, cultural, and religious affairs	2.8%	87
Economic affairs and services	11.5%	356
Interest payments	8.8%	273

### 36 TAXATION

Personal income taxes are levied on wage workers and the self-employed. Taxes on business profits are graduated. The top tax rate on personal and corporate income tax is 35%. Zakat (the religious charity tax) is state-enforced, but under the republican regime its estimation is a voluntary concern of each individual. Yemeni businessmen have been trying to abolish Zakat as an obligatory levy entirely, leaving it to the discretion of each individual to give to the needy. Taxes were increased substantially in the 1970s, with taxes on imports providing about 70% of total tax revenues. There are excise duties, road and vehicle taxes, port fees, a tax on rents, and telegraph fees. The state also derives income from the confiscated property of the imamate. The chronic budget deficits of the 1980s forced the government to place considerably more emphasis on the traditionally lax collection of taxes. In early 2002 a general sales tax (GST) was signed into law, but its implementation was delayed pending a review of the country's indirect tax system.

### 37 CUSTOMS AND DUTIES

Import duties are generally levied at rates varying from 5% on essential goods to 25% on luxury items; medical and agricultural items are duty-free, while tobacco is dutiable at 145%. Surcharges are added to these basic rates to cover defense expenditures, to finance schools and orphanages, and to assist the poor. Export duties are levied on a variety of products. Interestingly, in 1995 the government renounced the secondary and tertiary aspects of the Arab League's boycott of Israel, but will not renounce the primary aspect until the Arab League gives up the boycott completely by consensus of the member nations.

### 38 FOREIGN INVESTMENT

Foreign investment is encouraged by the Yemeni government as it is prospecting for more oil and hoping to develop its natural gas reserves. The Yemen General Investment Authority (GIA) was established in 1992, and worked with the World Bank's Foreign Investment Advisory Service, to revise Yemen's Investment Law 22 of 1991 (as amended) to refocus it on promotion rather than regulation of foreign investment. As of 2002 the Yemeni Parliament had not ratified the revisions. Investment law restructuring is part of the IMF-World Bank-sponsored economic reform program that has been being pursued in Yemen since 1995. The Yemeni Free Trade Zone Public Authority was established in 1991 to develop the Aden Free Trade Zone. The

port was developed as a joint venture between the Port of Singapore Authority (PSA) and the Bin Mahfouz Group of Saudi Arabia. In Phase II of the program, 30 hectares were made available for lease. Free zone incentives the right to have 100% foreign ownership, no personal income taxes for non-Yemenis, a 15-year corporate tax holiday, renewable for up to 10 years, and the right to 100% repatriation of capital and profit.

There are no reliable statistics on foreign investment in Yemen. US investment has mainly been in the oil and gas sector. The Houston-based Yemen Hunt Oil Company, which operates on the only other refinery in Yemen, has been operating since 1984. Its pipelines line have been repeatedly attacked. Security can not help but be a concern for Western investors given events like the kidnapping of 16 tourists in 1998 (with four killed in the rescue attempt; an bomb explosion at the Aden Refinery in 1998, the bombing of the USS *Cole* in Aden Harbor October 2001, with 17 dead, and a year later, the explosion and fire on the French-flagged tanker the *Limburg* in October 2002, with one killed and 90,000 barrels of oil spilled. More hopeful is the settlement of the its debt issues with Kuwait and Saudi Arabia which has thus made Yemen eligible for concessional loans from these neighboring states. In 1995, a consortium was established for the development of natural gas production. In addition to the government's 26% share, Total (France) had 36% equity; Hunt Oil (US), 14.6%; Exxon (US), 14.1%; and Yukong (ROK), 9.3%. On June 2002 Exxon (now ExxonMobil) and Hunt Oil withdrew from this enterprise, which has stalled for lack of an identifiable market through which the investors could recoup their investments.

### 39 ECONOMIC DEVELOPMENT

After unification in 1990, the new government assumed all debts incurred by former governments. Domestic political strains ultimately culminated in civil strife in 1994. As a result, the economy was further burdened with reconstruction costs.

The government launched a major reform program in 1995. The program included revenue mobilization through tax measures, depreciation of the customs valuation rate, the liberalization of cement prices, an increase of petroleum product prices by about 90%, and a 60% rise in electricity tariffs. The government's medium-term goal is to eliminate all subsidies by 1999–2001. Fiscal and monetary measures included the containment of primary non-development budget expenditures, partial reform of the exchange system (including currency depreciation), interest rate reform, and monetary management reforms. Furthermore, transportation and communication charges were deregulated, health and education fees were increased, and privatization programs were initiated. In 1996, 16 public enterprises were targeted for privatization. Laws prohibiting foreign investment in certain industrial sectors were abolished in 1996.

International aid has an ongoing role in the economy's development. In early 1996, the IMF agreed to provide a 15-month standby credit of \$191 million, and the World Bank authorized the loan of \$80 million to support the reform policies. The World Bank also decided to allocate government loans to Yemen worth \$365 million during 1996–99. The EU also pledged grants worth \$61.7 million in 1996/97, including \$30 million in project finance. Yemen benefited when Russia was admitted to the Paris Club (an organization of countries owed money from past official loans). Approximately 80% of Yemen's debts to Russia, mostly for arms purchases, was forgiven in the debt rescheduling. The remainder of Yemen's debt to Paris Club members was rescheduled under Naples terms (for the poorest countries, this allows for cancellation 50% to 66% of eligible sovereign debt), and in 2001, another Paris Club rescheduling provided an "exit treatment" that allowed Yemen to reach a sustainable level of indebtedness.

External debt was brought to a steady average of about 55% GDP for 2000 for the three years 2000. Yemen's fiscal imbalance has also improved in recent years, helped considerably by recovering oil prices in 2000. The fiscal deficit reached 6.4% of GDP in 1998, but then moderated to 0.2% of GDP in 1999, and, with increasing oil prices, soared to a surplus of 8.5% of GDP in 2000. In 2001 and 2002, the government continued to run surpluses of revenues and grants over expenditures, amounting to 2.8% of GDP in 2001 and 0.4% of GDP in 2002. Inflation, however, reached over 15% in 2002 due to increased prices for fuel, electricity and food.

In 2002 the parliament signed into law a general sales tax (GST), but implementation of this major tax reform designed to broaden and rationalize the tax base was delayed with IMF approval while more information about the effect of indirect taxation was collected. Yemen remains one of the poorest and least developed countries in the world. With a birth rate of around 3% a year, poverty has actually been expanding in recent years. About one-third of households are considered to be living in poverty. Water scarcity poses a severe challenge. The water crisis involves a depletion of groundwater, so that economic activity may become unsustainable in some areas. The fertility rate is 6.4, and illiteracy among women and girls is particularly high—72% of females and 44% of males are illiterate—a social deficiency with serious implications for economic development.

### 40 SOCIAL DEVELOPMENT

Families and tribes care for their sick, handicapped, unemployed, and widows and orphans. Those without family or tribal ties beg or have recourse to Islamic pious foundations (waqfs). The state operates orphanages and finances other welfare measures. A provident fund system provides old age, disability, survivor, and workers' compensation benefits. This program covers all employees, including Yemeni nationals working overseas. Workers contribute 6% of their wages, and employers pay 9% of payrolls. Old age benefits are paid as a one lump sum equivalent to 2.5% of earnings multiplied by the number of years worked. A health insurance program exists only for public employees. While the government has expanded its role in providing assistance, traditional means still predominate.

Women face considerable official and social discrimination. Polygamy is legal, and the practice of paying large dowries continues to be widespread. Women are required to obtain permission from a male member of the family in order to leave the house, and are rarely allowed to travel unaccompanied. Women have limited access to education. Conservative estimates place the illiteracy rate for women at 76%, compared with 40–50% for men. Women in southern Yemen typically have a higher level of educational attainment than those in the north. Child marriage is common, and some girls marry as early as 12 years old. Women are permitted to vote, but social customs discourage most women from becoming politically active. Violence against women and children is prevalent but considered a family issue and not reported to authorities.

Although reports of arbitrary arrest and detention continue, Yemen's human rights record has improved in some areas in recent years. In the same year, three security officers were convicted of human rights abuses. International and domestic human rights organizations operate in Yemen.

### 41 HEALTH

Malnutrition and the diseases associated with it are major health problems; 30% of children under five were malnourished in 1989–95. Malaria, typhus, tuberculosis, dysentery, whooping cough, measles, hepatitis, schistosomiasis, and typhoid fever are widespread, and sewage disposal of the most rudimentary type constitutes a general health hazard. In 2000, 69% of the population had access to safe drinking water and 45% had

adequate sanitation. Civil conflict in July 1994 created a shortage of water, food, and medical supplies in Aden, exacerbating health problems. Since the 1970s, many new hospitals and dispensaries have been established. Medical personnel that year included 2,640 doctors, 120 dentists, and 6,480 nurses. As of 1999, there were an estimated 0.2 physicians and 0.6 hospital beds per 1,000 people. As of 1999, total health care expenditure was estimated at 5.6% of GDP.

In 1997, immunization rates for children up to one year old were tuberculosis, 62%; diphtheria, pertussis, and tetanus, 57%; polio, 57%; and measles, 51%. Life expectancy in 2000 was estimated at 56 years; the infant mortality rate in 2000 was 76 per 1,000 live births. As of 2002, the crude birth rate and overall mortality rate were estimated at, respectively, 43 and 9.3 per 1,000 people.

There were only 22 AIDS cases in 1996. The HIV prevalence rate was 0.0 per 100 adults in 1997.

## 42 HOUSING

Housing is inadequate; about one-fourth of urban housing units are huts, tents, or other makeshift structures. In the hot coastal region, most dwellings, except those of the ruling classes, are straw huts. In the highlands, the poorer people live in huts of stone or baked brick. Wealthier Yemenis live in large houses whose style is unique to southwestern Arabia: the lower part is generally built of sandstone, basalt, or granite, while the upper part, which may rise from two to eight stories, is usually of baked brick with windows outlined in decorative designs. Often a loggia topped with brass and open on all sides rises from the roof.

## 43 EDUCATION

Early Yemeni education, with regard to medieval disciplines of law, religion, history and poetry, was sophisticated and, for a country of its type, remarkably widespread. Its people contributed nobly to medieval Islamic civilization. The Al-Azhar University of Cairo was well known for its education during the 10th and 11th centuries and it attracted students from nearby countries such as Ethiopia, Arabia, and Somalia. However, in the 19th and 20th centuries, there was slow progress in the field of education. Prior to the 1962 revolution, no proper educational system was in place. Civil war and internal political upheaval only worsened the situation.

In 1990, the literacy rate for the People's Democratic Republic of Yemen was 39.1% (males, 52.8%; females, 26.1%). The rate for the Yemen Arab Republic was 38.5% (males, 53.3%; females, 26.3%). In the unified Republic of Yemen, adult illiteracy rates for the year 2000 were estimated at 53.8% (males, 32.6%; females, 75.0%). As of 1999, public expenditure on education was estimated at 6.6% of GDP.

In 1997, primary schools enrolled 2,699,788 pupils and employed 90,478 teachers. Student-to-teacher ratio stood at 30 to 1. At the secondary level in the same year, there were a total of 354,288 students. As of 1999, an estimated 61% of primary-school-age children were enrolled in school, while 37% of those eligible attended secondary school.

There are two universities: Sana University (founded in 1970) and the University of Aden (established in 1975). Total university enrollment in 1997 reached 65,675. In addition, over 2,000 Yemenis are being educated at foreign universities.

## 44 LIBRARIES AND MUSEUMS

Both the National and Miswal libraries are located in Aden. Each has a collection of 30,000 volumes. The Miswal Library also maintains another 9,000 volumes as a traveling library to serve citizens. The Library of the Great Mosque of Sana maintains a collection of 10,000 manuscripts, but is not accessible to the public. The British Council maintains two libraries: at Aden (3,000 volumes) and at Sana (10,400 volumes).

The National Museum has branches in Aden and Sana. The Aden site focuses primarily on ancient, pre-Islamic civilizations. Aden is also home to the Crater Military Museum and the Crater Folk Museum. There are local museums in Taizz and Zafar.

## 45 MEDIA

Since unification, efforts have been underway to upgrade the country's telecommunications infrastructure. Two-way radio links Yemen directly with Cairo and Rome. Telephone and telegraph facilities are available in major cities, and a modern dial telephone system has been installed in Sana, Ta'izz, and Al-Hudaydah. There were about 291,359 mainline telephones in 1999. In 2000, there were an additional 32,042 cellular phones in use.

The government operates several radio stations and two television networks, one of them partly commercial. As of 1999, there were 4 AM and 1 FM station and 7 television broadcast stations. In 2000, Yemen had 65 radios and 283 television sets for every 1,000 people. In 2001, there were 14,000 Internet subscribers.

In 2002 there were three daily newspapers: *Al-Thawrah* (circulation 110,000), published in Sana; *Al-Jumburiyah* (100,000), in Ta'izz; and *Ar-Rabi Ashar Min Uktubar* (20,000), published in Aden. The English-language weekly, *Yemen Times*, has a circulation of 20,000.

The constitution restricts free expression. The relative freedom of the press established prior to the 1994 civil conflict has yet to be reestablished. The Ministry of Information owns or controls all media.

## 46 ORGANIZATIONS

The government has encouraged the formation of cooperatives, but private associations with political overtones are suspect. There are chambers of commerce in the major cities. The Federation of Yemen Chamber of Commerce and Industry is located in San'a.

National youth organizations include the Fattah Socialist Youth Union, the General Union of Yemeni Students, General Union of Yemeni Youth, Supreme Student Committee of the Yemen Arab Republic, and the Yemen Scout Association. The Yemeni Federation of Women's Organizations is based at San'a University. The Red Crescent Society is active in the country.

## 47 TOURISM, TRAVEL, AND RECREATION

Tourists can visit historic and religious sites (such as the Ghumdau Palace and the Great Mosque in Sana) and exotic markets, and enjoy scenic areas including the Red Sea coast. Passports and visas are required by foreign visitors. Vaccination against yellow fever and cholera is recommended.

In 2000, there were 72,836 tourist arrivals and receipts totaled \$76 million. There were 10,440 hotel rooms with 26,010 bed-places.

According to the 2002 United States government estimates, the cost of staying in Sanaa is approximately \$215 per day. Elsewhere in the country, travel costs are less expensive.

## 48 FAMOUS YEMENIS

Imam Yahya ibn Muhammad Hamid ad-Din (1869?–1948) ruled during the period when Yemen established its independence; he was assassinated during an uprising. 'Ali 'Abdallah Salih (b.1942) became president of the YAR in 1978, ending a period of upheaval in which his two immediate predecessors were assassinated. Field Marshal 'Abdallah as-Sallal (1920–94) was the first president of the YAR and held power from 1962 until a coup ousted him in 1967. 'Ali Nasir Muhammad al-Hasani (b.1940?) was prime minister of the PDYR in 1980 and president from 1980 to 1986. Haydar Abu Bakr al-'Attas (b.1939) was prime minister of the PDYR during 1985–86.

#### 49 DEPENDENCIES

Yemen has no territories or colonies.

# INDEX TO COUNTRIES AND TERRITORIES

This alphabetical list includes countries and dependencies (colonies, protectorates, and other territories) described in the encyclopedia. Countries and territories described in their own articles are followed by the continental volume (printed in *italics*) in which each appears. Country articles are arranged alphabetically in each volume. For example, Argentina, which appears in *Americas*, is listed this way: Argentina—*Americas*. Dependencies are listed here with the title of the volume in which they are treated, followed by the name of the article in which they are dealt with. In a few cases, an alternative name for the same place is given in parentheses at the end of the entry. The name of the volume *Asia and Oceania* is abbreviated in this list to *Asia*.

- Adélie Land—*Asia*: French Pacific Dependencies:  
French Southern and Antarctic Territories
- Afars and the Issas, Territory of the—*Africa*: Djibouti
- Afghanistan—*Asia*
