The U.K. offers comprehensive, modern rail, air, and sea transportation. Inland travel is quick and efficient by public and private transportation systems. British Rail passenger services are concentrated on the high-speed, intercity lines, and commuter service around large cities, especially London and the southeast. Motorail services carry both passengers and cars.

Subway service in London is fast and frequent but closes at midnight and is subject to delay, with even a little snow. The present system is comprehensive, but stretched to near its capacity. It offers easy transfer to British Rail and buses.

All major urban and suburban areas have bus service. Intracity buses are painted red; long-distance lines are green. Bus route maps are furnished free by government-operated bus lines. Carrier-owned buses

serve major air and sea terminals. Minibuses service some suburban areas.

Taxis cruise the streets of all major cities in large numbers. They are easy to find, except in rush hour or in the rain. Taxis are metered and charge a flat rate per mile; surcharges are paid for evening, weekend, and local holiday travel and for extra passengers. Many cab companies have telephone pickup services. Intracity trips average 5–9 pounds (tip is optional). Taxis may be found in taxi ranks (stands) in front of large hotels, or may be flagged down on the street when the yellow rooftop light is on.

In London, black London cabs pick up passengers on the streets, from taxi ranks, or can be called by phone. They are licensed, and, as each driver must pass an extensive test on London streets and important locations, they are very reliable. London cabs are metered. Unlicensed “minicabs” are also available in London, but they must be booked and are not allowed to “cruise” for fares on the streets. They are unmetered and passengers should agree to a charge before departure. Minicabs are usually less expensive than black cabs.

Belfast: Belfast offers travel by bus, train, and taxi. Public transportation is not too busy during rush hour, and the system operates regularly. Intracity transportation provides adequate, inexpensive service. The Ulsterbus service covers all Northern Ireland outside Belfast, and their express coaches also serve the Irish Republic.

Edinburgh: Scotland has an excellent network of roads and motorways for driving between the cities or out into the countryside. In some remote areas of the Highlands only single-lane roads exist. They can be extremely hazardous and virtually impassable during the winter months. Caution is necessary in driving through areas where grazing sheep may attempt to cross the road. Most people find a car desirable for sight-seeing, shopping, and

business. But in the city centers, due to heavy traffic and parking problems, it is often desirable to use public transportation.

Both high-grade and low-grade petrol (gas) can be purchased at numerous filling stations. Unleaded petrol is becoming more readily available throughout Scotland in the larger cities and towns. Many gas stations can be closed on Sundays.

Regional

London is a hub of international travel, with air and sea routes to nearly all corners of the globe. Britain is served by ferry and hovercraft which link it to the Continent’s road and rail system. The Channel Tunnel (Chunnel) officially opened in May 1994 and began full transportation service of passengers, cars, and commercial lorries via high-speed rail to France during 1995.

Edinburgh: Edinburgh has frequent airline, rail, and bus services to other parts of Scotland and the U.K. Regular airline shuttle service from Edinburgh’s Turnhouse Airport to Heathrow and Gatwick Airports in London allows the traveler to make connecting flights to nearly any part of the world. Daily flights are scheduled from Turnhouse direct to Dublin and the Continent. Bus service to major British cities is frequent, reasonably fast, and inexpensive. Trains provide fast, more comfortable service, and include convenient night-sleeper service between Edinburgh and London.

Hovercraft and other car and passenger ferries operate regularly to and from the European Continent.

Belfast: Belfast has good bus and train service to most parts of Northern Ireland and the Irish Republic. There is convenient ferry service to Stranraer in Scotland as well as ferries to the Isle of Man and to Liverpool. Belfast has two airports. The Belfast International Airport (Aldergrove—18 miles from the center of Belfast) has numerous daily London-Belfast flights, and regular service to other British and interna-

tional destinations. The Belfast Harbor Airport (4 miles from city center) has services to London, other airports in Great Britain, and some flights to other cities in Europe.

Communications

Telephone and Telegraph

A direct-dial telephone system serves London and most of the U.K. The U.S. and Western Europe can be reached by direct dialing. Charges for home telephones and domestic and international calls are significantly more expensive than in the U.S.

Internal and international telegraph service is available and efficient.

Belfast local- and long-distance telephone service is good. Telegraph is available through several commercial companies. Edinburgh telephone and telegraph services are excellent. Telephone service is direct dial. It links Edinburgh to all cities in the U.K., most of Western Europe, and to the U.S.

Radio and TV

Television is broadcast through the state-owned British Broadcasting Corporation (BBC)—channels 1 and 2—and the commercially financed Independent Television Network (ITN)—channels 3 and 4. A fifth channel is in the discussion stages. Both BBC and ITN operate nationwide, with regional variations. All four channels operate in the UHF range.

Network programming is standard throughout the country in both content and timing. Considerable program flexibility is provided to allow for locally produced shows and news reports between network programs.

Cable and/or satellite TV are also available in many parts of London. There are many stations to choose from; they are on the air 24 hours daily and include 3 movie channels, 3 sports channels, CNN, SKY, and

several family- and children-oriented channels.

Radio programming on AM, FM, and SW bands is excellent. BBC radio provides listeners with five national channels, including a new, 24-hour news channel. Broadcasts present all types of music, news, commentary, adult education programs, and works of artistic and intellectual interest. Independent commercial stations provide general entertainment and news. Broadcasts from Europe can also be received clearly. Reception of the Armed Forces Network broadcasts on radio and TV is possible.

Newspapers, Magazines, and Technical Journals

The British press caters to a wide variety of interests and political views. Ten morning papers—*The Times*, *Financial Times*, *Guardian*, *Daily Mirror*, *Daily Mail*, *Daily Express*, *Sun*, *Daily Star*, *Daily Telegraph*, and *Independent*—are national. The total average daily circulation exceeds 2 million. Eight national Sunday papers—*Sunday Times*, *Mail on Sunday*, *News of the World*, *The Observer*, *The Sunday People*, *Sunday Express*, *Sunday Mirror*, and *The Sunday Telegraph*—have a total average weekly circulation of more than 3 million copies.

The news media is served by three large British news agencies—Reuters, the Press Association, and the Exchange Telegraph Company. UPI and AP have affiliates in London, as do most major U.S. newspapers. Many suburban daily papers contain news of local interest.

Britain has more than 4,500 periodicals and several prominent journals of opinion. Literary and political journals and those specializing in international and commonwealth affairs are published monthly or quarterly.

Publication of trade, technical, business, scientific, and professional journals has become a major aspect of the British publishing industry. These journals cover hundreds of

subjects, many in great depth. In addition to circulating in Britain, these publications enjoy international distribution. They are an important medium for selling British goods overseas.

Periodicals published in England circulate throughout the U.K. Scotland has three monthly illustrated periodicals (*Scottish Field*, *Scotland's Magazine*, *Scot's Magazine*), a weekly paper devoted to farming interests (*Scottish Farmer*), several literary journals (the most famous is probably *Blackwood's*), and many popular magazines. In Northern Ireland, weekly, monthly, and quarterly publications cover farming, the linen industry, building, motor-ing, politics, and social work.

European editions of *Time*, *Newsweek*, and the *International Herald Tribune* are readily available at newsstands and book-shops. A large number of bookshops in London carry American magazines such as *Fortune*, *Forbes*, *Saturday Review*, *Harper's Bazaar*, and the *New Yorker*.

Britain is served by a complete network of public libraries. About half the libraries lend a variety of phonograph records, and a growing number are adding loan collections of artworks, either original or reproduction. Nearly all libraries have children's departments and most also act as centers for film showings, adult education classes, lectures, exhibitions, drama groups, recitals, and children's story hours. They are a very useful resource for information on the neighborhood they serve.

Books of all types are available in bookshops and department stores.

Health and Medicine

Medical Facilities

The U.K. has excellent medical facilities in all major cities. London, Belfast, and Edinburgh have medical training centers offering the full range of services. All U.K. residents

are entitled to medical care under the National Health Service (NHS). Medical practitioners are allowed to maintain private (fee-for-service) practices in addition to NHS practices, and many do so. A relationship may be established with a local physician as a private patient in much the same manner as in the U.S. Many British physicians accept payment under U.S. health insurance plans.

Belfast offers a high standard of medical care, including an emergency "cardiac ambulance" staffed by coronary specialists. Specialists are available at the Royal Victoria Hospital, which is the major teaching facility of Queen's University Medical School, the City Hospital, the Ulster Clinic (mainly private care), and smaller hospitals scattered across Northern Ireland.

Edinburgh has long been famous for its medical schools, and the quality of local facilities is uniformly excellent.

Community Health

Living conditions in the U.K. are generally excellent; no major health hazards exist. Community sanitation standards are high and community environmental services are superior. Colds and other upper respiratory infections are common, but no more so than in comparable climates in the U.S.

NOTES FOR TRAVELERS

Passage, Customs & Duties

A passport is required. Tourists are not obliged to obtain a visa for stays of up to six months in the United Kingdom or to enter Gibraltar. Those wishing to remain longer than one month in Gibraltar should regularize their stay with Gibraltar immigration authorities.

Further information on entry requirements may be obtained from the British Embassy at 3100 Massachusetts Avenue, NW, Washington,

DC 20008; tel.: (202) 588-7800. Inquiries may also be directed to British Consulates in Atlanta, Boston, Chicago, Houston, Los Angeles, New York, and San Francisco. The web site of the British Embassy in the United States is <http://www.britainusa.com/consular/embassy/embassy.asp>.

British customs authorities may strictly enforce regulations regarding the import or export of certain items, including material deemed likely to incite racial hatred, firearms and personal defense items such as mace or knives. It is advisable to contact the British Embassy in Washington or one of the United Kingdom's consulates in the U.S. for specific information regarding customs requirements.

Air travelers to and from the United Kingdom should be aware that penalties against alcohol-related and other in-flight crimes ("air rage") are stiff and are being enforced with prison sentences.

Americans living in or visiting the United Kingdom may register at the Consular Section of the U.S. Embassy in London, or at the U.S. Consulates General in Edinburgh or Belfast and obtain updated information on travel and security within the United Kingdom.

The U.S. Embassy is located at 24 Grosvenor Square, London W1A 1AE; Telephone: in country 0207-499-9000, from the U.S. 011-44-207-499-9000 (24 hours); Consular Section fax: in country 0207-495-5012; from the U.S. 011-44-207-495-5012. The embassy web site is <http://www.usembassy.org.uk>.

The U.S. Consulate General in Edinburgh, Scotland, is located at 3 Regent Terrace, Edinburgh EH7 5BW; Telephone: in country 0131-556-8315, from the U.S. 011-44-131-556-8315. After hours: in country 0131-260-6495, from the U.S. 011-44-131-260-6495. Fax: in country 0131-557-6023; from the U.S. 011-44-131-557-6023. The web site is

<http://www.usembassy.org.uk/scotland>.

The U.S. Consulate General in Belfast, Northern Ireland, is located at 14 Queen Street, Belfast BT1 6EQ; Telephone: in country 01232-328-239; from the U.S. 011-44-1232-328-239. After hours: in country 01232-241-279, from the U.S. 011-44-1232-661-629. Fax: in country 01232-248-482, from the U.S. 011-44-1232-248-482.

There is no U.S. consular representation in Gibraltar. Citizen services questions should be directed to the U.S. Embassy in London. Passport questions can be directed to the U.S. Embassy in Madrid, located at Serrano 75/Madrid, Spain; telephone (34)(91) 587-2200, and fax (34)(91) 587-2303.

Pets

There is a concerted effort on the part of the U.K. Government to prevent the entry of rabies into the U.K. All dogs, cats, and other mammals entering Britain must undergo 6 calendar months' quarantine in government-approved kennels. No exceptions are made to this rule. If you desire to import a pet, write 6-10 weeks before departure to:

Ministry of Agriculture,
Fisheries and Food
Hook Rise South
Tolworth
Surrey KT6 7HF

Application forms will be sent by return mail.

Currency, Banking and Weights and Measures

The pound is divided into 100 pence (pennies). All transactions are made by using coins in denominations of 1, 2, 5, 10, 20, 50 pence, and one pound, and bills in denominations of 5, 10, 20, and 50 pounds.

The British pound is on a floating rate of exchange against the U.S. dollar. It currently falls in the range of £.684=\$1.00 (May 2002).

The British use the avoirdupois weight system. Most items are mea-

sured in ounces and pounds. Human weight, however, is expressed in stones (1 stone= 14 lbs.). Many food items are imported from other EU countries, so most grocery stores mark items in both the metric and the avoirdupois systems. The imperial gallon is one-fifth larger than the American gallon. Road distance and speed are measured in miles, not in kilometers.

No monetary controls are imposed for importation or exportation of British or foreign currencies.

Travelers checks are widely accepted throughout Great Britain. Credit cards are widely used in Great Britain and are readily available from several sources. Most large stores and restaurants accept major credit cards.

U.S. ATM bank cards connected to major systems, such as Plus or Cirrus, are accepted by U.K. bank cash machines for pounds at a favorable exchange rate.

PREFACE

Cities of the World represents a compilation of government reports and original research on the social, cultural, political, and industrial aspects of the nations and cities of the world. Most of the country profiles included here are based on official personnel briefings issued as *Post Reports* by the U.S. Department of State. The *Post Reports* are designed to acquaint embassy personnel with life in the host country. Consequently, the reports concentrate on cities in which the U.S. government has embassies or consulates. To increase coverage of other important cities, the editors have added information on a large number of cities—31 of which are new to this edition—not reported on by the Department of State.

Since the fifth edition of *Cities of the World*, the Department of State has issued 62 new or revised *Post Reports*, all of which have been incorporated into this sixth edition. Selected data in *Post Reports* not revised by the Department of State since the last edition of *Cities of the World* have been updated by the editors with revised statistics acquired through independent research. In addition, articles have been written on thirty-three countries for which no *Post Report* exists.

Readers familiar with the fourth edition of this publication will notice that with the fifth edition the page size was enlarged to accommodate more information. This sixth edition includes new photographs selected by the Gale editors. The photographs depict scenes found in a city and countryside and, in many cases, reveal the cultural flavor of the area as well. As in the prior edition, many chapters feature a map of that country's capital or major city, with a superimposed locator map indicating the nation's geographic location in relation to its regional neighbors.

Volumes in This Series

This series includes four volumes:

- Volume 1: Africa;
- Volume 2: The Western Hemisphere (exclusive of the United States);
- Volume 3: Europe and the Mediterranean Middle East;
- Volume 4: Asia, the Pacific, and the Asiatic Middle East.

In all, this set provides coverage of over 2,000 cities in 193 countries.

Format and Arrangement of Entries

Cities of the World is arranged alphabetically by country name. Its chapters are divided into two basic sections, Major Cities and Country Profile, each of these with several subdivisions. A Major City listing might comprise information on Education, Recreation, and Entertainment. Other Cities, smaller cities and towns which are designated as other than major, are discussed in brief paragraphs at the end of the Major City section. Country Profile sections are subdivided into: Geography and Climate; Population; Government; Arts, Science, Education; Commerce and Industry; Transportation; Communications; Health; Clothing and Services; Local Holidays; Recommended Reading; and Notes for Travelers. Thus, *Cities of the World* presents not only basic information, but also comprehensive data on local customs, political conditions, community services, and educational and commercial facilities.

Contents and Index

The Contents and Index in each volume provide easy access to these reports. Listed under each country in the Contents are the cities that appear in its Major Cities section, as well as listings for the Other Cities and Country Profile sections. A Cumulative Index, combining the four individual volumes is found at the end of each volume. The Index is arranged alphabetically by city name, including listings for both major and minor cities that are mentioned in each volume; as well as by country name with names of cities indented below.

Acknowledgments

The editors would like to thank the U.S. Department of State for providing copies of *Post Reports* to aid in the compilation of these volumes. The editors would also like to thank Adam A. Gall and Marlon C. Tussel for their editorial assistance.

Suggestions Welcome

The editors invite comments and suggestions concerning *Cities of the World*. Please write to: Editors, *Cities of the World*, The Gale Group, Inc., 27500 Drake Road, Farmington Hills, MI 48331-3535; fax (248) 699-8074; or call toll-free (800) 877-4253.

the Asiatic Middle East**

Kabul, Afghanistan

AFGHANISTAN

Islamic Republic of Afghanistan

Major City:

Kabul

Other Cities:

Bāghlān, Ghazni, Herāt, Jalālābād, Kandahār, Mazār-i-Sharīf

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report for Afghanistan. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

AFGHANISTAN, the landlocked country whose borders are touched by Turkmenistan, Tajikistan, Uzbekistan, China, Pakistan, and Iran, often has been called the crossroads of central Asia. It once formed part of the empires of Persia and of Alexander the Great. Throughout the centuries, it has been a base for forays into India, and has bowed to a succession of princes and petty chieftains struggling for control of its strategic trade and invasion routes.

Modern Afghanistan did not evolve until 1747, when principalities and fragmented provinces were consolidated into one kingdom by Ahmad Shah Durrani. All of the country's

successive rulers, until a Marxist coup in 1978, were from Durrani's tribe. Soviet military assistance to the new government eventually led to large-scale invasion of Afghanistan's capital city, but the regime failed to validate either Soviet conquest or authority in other parts of the nation. Soviet military occupation ended in February 1989 and Afghanistan endured a bloody civil war between the Afghan government and various factions of the fundamentalist Muslim guerrillas between 1992 and 1996. During the civil war, over 50,000 people lost their lives during the mujahidin infightings on Kabul's streets.

In 1995 and 1996, students from religious schools in the border regions of Afghanistan and Pakistan--the Taliban--spread throughout the country, proclaiming hostility to the West and establishing a reordering of society based upon a strict interpretation of Shari'a, or Islamic law.

After the September 11 attacks on the United States, carried out by members of Osama bin Laden's al-Qaeda forces who were sheltered by the Taliban, the U.S.-U.K.-led coalition launched a military offensive on Kabul and major Afghan cities, toppling the Taliban regime. Afghan society and infrastructure,

already decimated after two decades of war, must be rebuilt.

MAJOR CITY

Kabul

Kabul, the capital of Afghanistan, is situated on a high, barren plateau some 5,800 feet above sea level, and surrounded by rugged, treeless mountains. Commanding the main approach to the historic Khyber Pass between Afghanistan and what is now Pakistan, the city lies in the eastern section of the country, 140 miles from the Pakistan border. The Kabul River which winds through the city is, except for an interval in early spring, little more than a partially dry, but always polluted, stream.

The climate of the city is varied. During winter, temperatures sometimes fall below 0°F and, in January and February, snowfalls can be heavy. In summer, daytime temperatures often soar to 100°F, but fall rapidly after sunset.

Kabul is in a low-rainfall area, and almost all precipitation occurs between November and May. The remaining months are virtually dry. Strong afternoon winds, accompa-

Aerial view of Kabul, Afghanistan

nied by dust storms, occur frequently in summer. Severe earthquakes are rare, but tremors are common. In March 2002, however, an earthquake in the northern Baghlan province (about 100 miles north of Kabul), killed thousands and was felt as far east as Pakistan.

Kabul's history can be traced to the seventh century, although its importance was long obscured by the ancient cities of Ghazni and Herāt. It came to prominence early in the 16th century as the capital of the Mogul kingdom. The tomb of Babur the Great, founder of the Mogul empire in India (1482–1530), is in Kabul, in a beautiful garden near Noon Gun Hill.

There are old city walls in Kabul, the mausoleum of Timor Shah, the son of Ahmad Shah Durrani who moved the capital of Afghanistan from Kandahar to Kabul, and the Arg or palace built to operate the Bala Hissar citadel, or seat of the rulers of Afghanistan.

Great Britain's desire to control the routes to India precipitated the first of the Anglo-Afghan Wars, and it was at Kabul that British forces were ambushed and nearly annihilated. The city was occupied again in 1879 during the Second Anglo-Afghan War, a struggle that

established Afghanistan's borders with British India and Russia. After 1940, Kabul grew as an industrial center.

Afghanistan's capital city is the site of Kabul University (founded in 1932), which was closed in 1992 due to war. The Taliban reopened it in 1995, but women were banned. The medical school was the only institution to make an exception to the ban on women: only female doctors could treat female patients. With the defeat of the Taliban, 4,000 students have taken entrance exams for a new semester, and 500 of them are women. There have been donations of books from abroad.

There are several other schools in the city, including Kabul Polytechnic Institute, which has been in operation since 1951. The Institute of Arabic and Religious Studies has headquarters here, and maintains satellite centers in other cities throughout the country. The Afghanistan Academy of Sciences (1979) also is located in Kabul, as are several research institutes and a museum. As of June 2002, it is unknown to what extent these institutions are operational.

As a result of war with the Soviet Union, civil war, the destruction wrought by the Taliban, and the

2001-2002 bombing campaign, the infrastructure of Kabul largely has been destroyed, including roads, the telephone system, electricity, and water sanitation. However, international relief organizations are engaged in reconstruction efforts.

The people of Kabul have begun to sift through the rubble of destroyed buildings, selecting usable bricks and building materials for the construction of new schools and other facilities. It is estimated that as many as 60 percent of Kabul's buildings are damaged or destroyed. Gravel from them is being used to patch roads.

Signs of a rejuvenated Kabul were beginning to emerge in 2002. Stylish haircuts are now available for around \$3.50, men are wearing hats instead of turbans, and men are shaving, forbidden under the Taliban. New restaurants have opened, and there are stalls selling such varied items as fruit, snacks, balloons, and laptop computers.

Rents are high, and items on the black market are very expensive--scotch whiskey sells for around \$100 a bottle, British soccer jerseys sell for \$50 each, and pornography is both available and expensive.

However, the increase in market activity has also brought theft, assaults, and murder, which are now more prevalent than under the Taliban.

Recreation and Entertainment

Buzkashi (like rugby on horseback), is the national sport. In *buzkashi*, riders struggle for possession of a goat, calf, or sheep carcass, and scores are counted when one of the teams is able to fling the animal's body into a designated circle on the field. At the end of March 2002, the first movie made in Afghanistan since the Taliban came to power was shown in Mazari-i-Sharif: *Chapan-daz* is an Afghan production, shot, edited, and released in the country, featuring the sport of *buzkashi*. Indian movies are also popular.

Other pastimes that have returned in 2002 are dog fighting, camel fighting, motorcycle stunts, and karaoke. Soccer began to be played in Kabul's sports stadium in December 2001, a venue that had previously been used for executions.

Such western novelties and food items as bubble-gum, soda, cookies, and juices have been arriving from Iran, Uzbekistan, China, Russia, Egypt, Turkey, and India.

OTHER CITIES

BĀGHLĀN is located in northern Afghanistan, about 125 miles north of the capital. The city, capital of Bāghlān Province, was a producer of cotton and beet sugar. The population for Bāghlān was estimated at 117,700 in 2002.

In December 2001, the Northern Alliance forced Sayed Jaffar, a local warlord, from power in Baghlan province.

In March 2002, an earthquake measuring 6.0 on the Richter scale struck Baghlan, killing at least 1,800 and injuring thousands. Baghlan's rich agricultural region was also the victim of a plague of locusts in the spring of 2002.

Located 92 miles southwest of Kabul, **GHAZNI** is the capital of the province with the same name. It was a center for trading wool, fruit, and corn, and was famous for its embroidered sheepskin coats. The city's most famous ruler was Mahmud of Ghazni who conquered regions in the area and made Ghazni the capital of a kingdom extending from the Tigris to the Ganges rivers. The kingdom was overthrown in 1173 by Mohammed of Ghor. Two impressive ancient minarets jut into the sky in Ghazni. The population was estimated at 39,000 in 2002.

In March 2002, Taliban and al-Qaeda rebels remained in Ghazni province. Dueling factions of Tajiks, Hazaras and Pashtuns are refusing to surrender their weapons.

In May 2002, a radio station went into operation in Ghazni, broadcasting from 6 to 8 pm at night. Two women have been hired to read the news and announcements, and listeners leave messages at the station requesting songs to be played. However, as of June 2002, there were no telephones and no electricity in the city.

A commercial center, best known for carpets, **HERĀT** is the capital of Herāt Province. The city is situated in the western part of Afghanistan, over 450 miles west of Kabul. It is known for magnificent huge earthworks and defense walls. There are also tombs, palaces, and mosques here. Herāt was once on the trade route from India to Persia, Mesopotamia, and Europe. It was severely damaged by the Mongols in 1221 and 1383; rebuilt, it prospered as an independent Afghan kingdom. Its population was estimated at 166,600 in 2002.

Thirty percent of the population left Herat during the 2001-2002 military campaign. Since it began to subside, one local warlord who seized a great deal of power in Herat is Ismail Khan, who courted hard-line conservatives in Iran. Iran is reconstructing the road from Herat to its border, while the United States is cleaning out the area's canals. Khan has appointed mullahs and archconservatives to high positions, and has opened an office for the promotion of virtue and the prevention of vice. His army numbers 50,000 to 60,000.

JALĀLĀBĀD (also spelled Jelalabad) is the capital of Nangarhār Province in eastern Afghanistan. It is situated 70 miles east of Kabul, on the route from Kabul via the Khyber Pass to Peshawar, Pakistan. The city, with a population that was estimated at 158,800 in 2002, was a trade center with sugar processing facilities and handicraft shops. There were large gardens and tree-lined avenues, as it served as a winter capital. Two festivals that were held were the Mushaira or Poet's festival devoted to Jalalabad's

orange blossoms, and Waisak, a religious festival.

Jalalabad has been in existence as a city since the second century BC, and Akbar, regarded as the greatest Mughal ruler of India, started the town in its modern form in the 1560s. It came under Afghan rule in 1834, and was later occupied by the British in the Anglo-Afghan wars.

Eleven km south of the city is Hada, a sacred spot of the Buddhist world, where pilgrims have come to worship at its many temples. These were maintained by monks and priests in large monasteries. It is said that the Buddha visited Hada.

Jalalabad is also a military center, with an airfield. The University of Nangarhar was opened here in 1963.

As of January 2002, the road from Kabul to Jalalabad was unsafe, as there have been robberies, car-jacking, thefts, and murders.

The capital of Kandahār province, **KANDAHĀR** is situated 300 miles southwest of Kabul, halfway between Kabul and Herat. It is the second largest city in the country with a population that was estimated at 339,200 in 2002. Kandahār was the site of the successful Afghan uprising against Persia between 1706 and 1708, and was the first capital of modern Afghanistan, founded by Ahmad Shah Durani in 1747. The most sacred shrine in Afghanistan is the Kaherqa Sharif shrine in Kandahar, which contains the cloak of the prophet Mohammad. Also, the Chel Zina monument is noted for its 40 stairs leading to a chamber carved into rock, which was built by Babur, the founder of the Moghul empire. Other shrines in the city include Haratji Baba, Baba Wali, and the bazar Charsuq, which is composed of four arcades.

Kandahar was the site of fierce fighting in 2001, and the Taliban only surrendered the city in December. It is estimated that 80 percent

of the population of southern Kandahar left in 2001.

Music, which had been banned under the rule of the Taliban, returned to Kandahar after the military campaign, as singers returned from exile in Pakistan. In the marketplace, cassette tapes are played at high volume, which are sold alongside radios, televisions, and video players. Pet birds, which were also banned under the Taliban, are now sold in the marketplace. During the rule of the Taliban, there were seven schools in Kandahar that enrolled 5,000 boys. As of March 2002, 137 co-ed schools have opened in the Kandahar district, and more than 30,000 children are enrolled, one-fourth of them girls.

Because Kandahar is almost entirely Pashtun, it does not suffer from the ethnic fighting in northern Afghanistan that has emerged in 2002.

Kandahar International Airport was established as the American base in the war. It is surrounded by mine fields and and barbed wire. Taliban and al-Qaeda suspects are kept there in a high-security area. There are 3,500 military personnel based at the airport.

Located in northern Afghanistan, **MAZĀR-I-SHARĪF** is the capital of Balth Province, 190 miles northwest of Kabul. The population here was estimated at 239,800 in 2002. The city was named for the shrine of the cousin and son-in-law of the prophet Mohammad, Hazarate Ali, who was assassinated in 661 and buried near Baghdad. Legend has it that his followers feared that his body would be desecrated, so they put his remains on the back of a white camel which wandered until it fell and died. The body was buried on this spot, and knowledge of its existence remained unknown until 1136, when Seljuk Sultan Sanjar ordered a shrine to be built upon the spot. Genghis Khan destroyed the building, and the grave remained unmarked until 1481. None of the 15th-century decoration remains, but efforts have been made to

restore the building's beauty. Mazar-i-Sharif means "The Noble Grave."

In March 2002, Mazar-i-Sharif was one of the sites of New Year celebrations at the beginning of spring (Nowroz), the most elaborately celebrated festival in Afghanistan. The city was a major trading center famous for Turkman carpets, high-quality cotton, and lambskins.

Since the Taliban fled the city, the airport has opened, and its runway has been repaired. Girls are attending classes. Medical equipment has been flown in for a new hospital run by Jordanian soldiers, which has been treating thousands of patients. A new police force of 600 members was drawn up.

However, a wave of revenge attacks by ethnic Hazara and Uzbek soldiers was taking place in early 2002, targeting Pashtuns. The attacks included robbery, rape, and murder. The Taliban, who were dominated by Pashtuns, persecuted Hazara civilians and their Shi'a religion. As of April 2002, there were 104 illegal checkpoints in Mazar-i-Sharif, manned by soldiers who were supposed to be replaced by civilian police. The two dominant warlords in Mazar-i-Sharif who are struggling for control of the city are General Abduraashid Dostum, an Uzbek commander, and Attah Mohammad, a Tajik veteran of the Northern Alliance.

COUNTRY PROFILE

Geography and Climate

Afghanistan, a landlocked country of about 260,000 square miles in area (about the size of Texas), is bounded on the north by Turkmenistan, Uzbekistan, and Tajikistan of the Commonwealth of Independent States (C.I.S.); on the east and south by Pakistan; on the west by Iran; and on the extreme northeast by

China. Its topography consists of irrigated land, small but fertile river valleys, deep gorges, deserts, high plateaus, and snow-covered mountains. The eastern portion of the country is divided by the towering mountain ranges of the Hindu Kush and Pamirs, with peaks rising above 24,000 feet.

The principal rivers drain to the southwest into the Helmand and Arghandab valleys and then into a desolate, marshy area, called Seistan, on the Afghan-Iranian border. Other rivers, including the Kabul, flow southeast into the Indus River. The Amu Darya (or Oxus of ancient times) forms a large part of the northern boundary with the C.I.S.

Afghanistan's climate comprises a cold, snowy winter and hot, dry summer. Extreme temperature changes occur from night to day, season to season, and place to place. During summer in Kabul (altitude 5,800 feet), the temperature may be 50°F at sunrise, but reach 100°F by noon. In the Jalālābād plains (90 miles from the capital and at an elevation of 1,800 feet) and in southwestern parts of the country, summer temperatures can reach 115°F.

The chief characteristic of Afghanistan's climate is a blue, cloudless sky, with over 300 days of sunshine yearly. Even during winter, skies usually remain clear between snowfalls. Since rainfall is scarce from May to November, this period can be extremely dry and dusty.

Population

The 2002 population was estimated at 24,405,000. Many Afghans have fled the country because of the continuing strife—Afghan refugee population in Pakistan is approximately 3.7 million and, in Iran and the west, an additional 1.6 million. There have been many spontaneous returnees, but the U.N. High Commissioner for Refugees began assisting refugees to repatriate in February 2002. As of April, more than 350,000 had returned to

their homes. There are still approximately 400,000 internally displaced persons within the country. Also, many Afghans are still fleeing the country due to a lack of relief aid, banditry, and insecurity in remote areas.

Afghanistan's varied culture reflects its strategic location astride the historic trade and invasion routes that lead from the Middle East into central Asia and the Indian subcontinent. The largest ethnic group is the Pashtun (Pathan), comprising about half of the total population. Other sizable groups are the Tajik, Uzbek, Turkoman, and Hazara.

Dari (Afghan Persian) and Pushtu are the principal languages, but Turkic dialects are used extensively in the north. English is the most widely spoken foreign language; many educated Afghans speak Russian, German, or French as well.

Islam is the official religion and Muslims comprise 99 percent of the population of which 84 percent are Sunni Muslims and 15 percent are Shi'a Muslims. The Hazara, Kizilbash, and mountain Tajiks generally belong to the minority Shi'a sect. The Taliban attempted to destroy the presence of other religions in society; eight foreign aid workers were placed on trial for the crime of trying to convert Muslims to Christianity, a capital offense.

Since the fall of the Taliban, conditions for women have improved. Some have stopped wearing the head-to-toe cornflower-blue *burka*, however, many still shroud themselves in it, especially in rural areas. Some women are now wearing the *hejab*, or ankle-length black coat and chiffon veil, in deference to Islamic tradition and modesty. Under the Taliban, men and women were not permitted to mingle, and women could not venture outside of the home without being accompanied by a male relative. Women were prevented from obtaining education and from practicing most professions. In 2001-2002, that

© Charles and Josette Lenars/Corbis. Reproduced by permission.

Mosque in Mazar-i-Sharif, Afghanistan

situation was in the process of being reversed.

Being devout Muslims, most Afghans do not drink alcoholic beverages or eat pork.

History

Afghanistan has had a turbulent, interesting history and has withstood countless invasions. In 328 B.C., Alexander the Great entered what is today Afghanistan—but was then a part of the Persian Empire—and captured several cities, including Herát, Kandahár, Kabul, and Balkh. The 300-year rule of his Greek successors was followed by that of Turkic Kushanis and various Buddhist groups. A lively Greco-Buddhist culture flourished around Bámián. In the year 652, Afghanistan fell to conquering Arabs, who brought with them Islam.

Arab hegemony gave way to renewed Persian predominance which continued until 998, when Mahmud of Ghazni, a Turkic ruler, assumed control. Ghazni became the capital. After Mahmud's death, Afghanistan was controlled by various princes until the invasion of the great Mongol leader, Genghis Khan, in the early 13th century. This

resulted in the destruction of Herát, Ghazni, Balkh, and other Afghan cities. Marco Polo passed through Afghanistan later in that century.

About 1400, the area came under the control of Tamerlane, the Mongol emperor. During the late 15th and early 16th centuries, Afghanistan was ruled by Babur the Great, founder of the Mogul dynasty in India; Babul's grave is in Kabul.

Afghanistan, as an independent kingdom, was founded by Ahmad Shah Durrani, a Pushtun prince, who was crowned in 1747. From that date until the coup in 1978, the country was governed by his direct or collateral descendants.

The history of Afghanistan was influenced by several European countries during the 19th century. To counter Russian dominance in both Persia and central Asia, Great Britain fought the First Anglo-Afghan War (1838–42), occupying much of Afghanistan in the process. In the face of Afghan resistance, the British were forced to withdraw in 1842, suffering a massacre. The Second Anglo-Afghan War (1878–80) brought Abdur Rahman Khan to the throne as emir. He created a central government in Afghanistan and introduced many modern elements

Street in Kandahar, Afghanistan

AP/Wide World Photos, Inc. Reproduced by permission.

into the country; the borders with Pakistan (then British India) and Russia were established during the emir's reign.

Several 20th-century Afghan leaders, such as King Amanullah (who ruled from 1919 to 1929), supported modernization programs. The Noor Mohammad Taraki and successive regimes announced numerous reforms which called for sweeping changes, but which were rejected by traditional Afghan society.

Government

On April 27, 1978, the government of former President Mohammad Daoud was overthrown in a quick, violent, and bloody coup. Daoud and many of his family members were killed in the fighting or murdered in its aftermath. A Democratic Republic of Afghanistan (D.R.A.) was proclaimed by the new leftist-oriented leadership under Noor Mohammad Taraki. He, in turn, was overthrown

and murdered by his rival within the fledgling Peoples' Democratic Party (PDPA), Hafizullah Amin. The Soviets installed a regime when it became clear that they could no longer control Amin, and when the countrywide opposition to the brutal Taraki/Amin regimes threatened to overwhelm the government in power. In December 1979, the U.S.S.R. introduced more than 80,000 troops, unseating Amin, who died in unclear circumstances. The Soviets found themselves in a long, ongoing civil war between the Afghan government and fundamentalist Muslim guerrillas or mujahidin. In 1988, a United Nations mediated agreement provided for the withdrawal of Soviet troops, the establishment of a neutral state, and the repatriation of refugees. The U.S. and the Soviets pledged to serve as guarantors of the agreement but the Afghan rebels rejected it. After the Soviets left the country, the rebels and the government began a civil war and the rebels elected a government in exile. In

1990, the U.N. announced the existence of "zones of tranquility" in order to begin the voluntary repatriation of refugees, however, the rebel government opposed this plan as giving tacit approval of the Kabul government.

President Mohammad Najibullah Ahmadzai, who took office in 1987, faced several attempted coups. The survival of what was a Soviet-supported government surprised many people. Relations with the West had improved and the population seemed weary of the more than a decade of civil war that left two million dead and much of the country in ruins.

In April 1992, the rebels captured Kabul and ousted Najibullah, along with his communist government. A coalition of Islamic rebels assumed power and installed guerrilla leader Sibghatullah Mojaddidi as president on an interim basis for two months. In June, Islamic religious and ethnic leaders chose Burhanud-

din Rabbani as interim president for several months. Rabbani was re-elected in December 1992 to an 18-month term. Rabbani's election was met with violence by rebel Islamic factions.

Once the rebels took charge and established the new Islamic Republic of Afghanistan, the sale and consumption of alcohol was banned and women were ordered to wear head scarves. Most of the fundamentalist rebels also believed women should not hold government office.

In 1995-96, students from religious schools in the western region of Afghanistan, the Taliban, asserted their control over Afghan society, imposing adherence to a severe reading of Islamic law. They destroyed vestiges of other forms of worship, including two 1500-year-old Buddhist statues that were blown up in Bamiyan.

Until 2001, the Taliban sought diplomatic recognition and better relations with the West. To do so, they destroyed the country's opium crop, which cut the production of heroin worldwide in half. The United States demanded the surrender of Osama bin Laden, whom it wanted for the attacks on American embassies in Kenya and Tanzania in 1998, if it was to grant diplomatic status to the Taliban. The Taliban refused. The United States was able to negotiate harsh U.N. sanctions against the Taliban in December 2000, and from that time on, the Taliban further isolated themselves from the rest of the world by being increasingly hostile to the West.

Resistance fighters in Afghanistan, otherwise known as the Northern Alliance, were forced into a north-east section of the country. Two weeks prior to the September 11 attacks on the United States, the Northern Alliance's military leader, Ahmad Shah Masoud, was assassinated.

After the attacks on the World Trade Center and the Pentagon, the U.S.-U.K.-led coalition waged a full-scale air war against the Taliban,

later followed up by the presence and fighting of special forces on the ground.

Mullah Muhammad Omar, the reclusive leader of the Taliban, and Osama bin Laden, have not been found as of June 2002.

In November 2001, delegates from four Afghan factions met in Bonn, Germany, to sign an agreement on a transitional government. A power-sharing interim cabinet led by Pashtun tribal commander Hamid Karzai was set up (which included two women), and Karzai took office on December 22.

King Muhammad Zahir Shah, who was king from 1933 until 1973, has claimed that he does not wish to restore the monarchy. However, he returned to Afghanistan from exile in Italy to preside over a *Loya Jirga*, or traditional gathering of tribal elders and other leaders, to be held in June 2002. Every village in Afghanistan will be consulted to put forth one or more representatives to go to regional gatherings, which will then select the 1,500 people to attend the *Loya Jirga*. The transitional government established by the *Loya Jirga* will be entrusted with the job of creating a constitution and setting the schedule for free and fair elections to be held within two years.

As the military campaign of 2001-2002 subsided, looting, rape, and ethnic killings have taken place, especially in Pashtun villages in northern Afghanistan, driving thousands of civilians from their homes.

Tribal warlords or *jihadi* have asserted their authority in the cities and villages of Afghanistan, establishing quasi-fiefdoms, killing many civilians and engaging in other crimes. Attempts to reassert regulation of virtues and vices have returned in some locales. One reason given for the few numbers of casualties resulting from the intense bombing of the Tora Bora mountains in December 2001, was that the U.S.-U.K.-led coalition's local "allies" at the time—the war-

lords—may have alerted al-Qaeda and former Taliban fighters in the region, giving them time to flee their caves. One warlord, taking pay from the coalition, called in U.S. fighter pilots to attack rival tribal leaders, under the guise of the convoy being that of al-Qaeda. There is widespread fear that regional fighting could become the mark of the post-Taliban era. The major cities of Jalalabad, Kandahar, Herat, and Mazar-i-Sharif are all bases for rival warlords and their militias.

Landmines and other unexploded ordnance (UXO), left over from the civil war of the 1990s, are more of a danger after the bombing campaign. There are approximately 50-100 victims of landmines and unexploded ordnance every week.

Arts, Science, Education

Many of Afghanistan's artistic activities are concentrated in handicrafts. The National Museum in Kabul is rich in Greek and Buddhist history. Archaeological research teams from France, Italy, Germany, the former Soviet Union, Japan, and the United States have made a number of new discoveries, but are no longer active.

In 1999, the estimated literacy rate was 31.5% of the total population--47.2% for males, and 15% for females.

Prior to the rule of the Taliban, officially compulsory education began at seven years of age, continued for eight years and was free at state-run schools. Secondary education was available at age 15 and lasted four years. Under the Taliban, girls over the age of 8 were forbidden from attending school. The type of schooling given to boys under the Taliban was based on a strict reading of Islam.

The country's main institutions of higher learning are Kabul University and the Polytechnic College, also located in the capital; the latter was built jointly with Afghan and

Soviet funds. There are universities in the provinces of Nangarhar, Balkh, and Herat.

Commerce and Industry

Afghanistan is primarily an agricultural country, with about 80 percent of the population engaged in this sector of the economy. Only about 15 to 20 percent of the total land is economically useful. Some of the country's principal cash crops were wheat, rice, barley, cotton, sugar beets, sugarcane, oil seeds, and a wide variety of vegetables. Raisins, nuts, and many kinds of fruits also were produced. During the 1990s, Afghanistan's poppy production accounted for the world's largest production of opium. A program to prevent the resurgence of opium production is being financed by the United States and other Western countries.

Mineral resources consist of natural gas, coal, copper, talc, barite, sulfur, lead, zinc, iron, and salt, as well as some precious and semi-precious stones, notably marble and lapis lazuli. None of these extensive resources has been fully developed except natural gas. Other leading export commodities have been dried fruits and nuts, cotton, carpets and rugs, fresh fruits, and *karakul* (Persian lamb) skins. Most of Afghanistan's exports were previously sent to C.I.S., India, Germany, United Kingdom, and Belgium/Luxembourg. Imported are food, petroleum, fertilizers, basic manufactured goods, and vehicles. C.I.S. and Eastern Europe provided most of the imports.

After the Soviet military invasion, all western countries cut off development aid. Almost all aid was then provided by the Soviets and the Moscow-based Council for Mutual Economic Assistance. Even after the withdrawal of Soviet troops in 1989, the West did not resume foreign aid. The United Nations-sponsored "Operation Salaam" was established to provide for relief,

rehabilitation, and resettlement of Afghan refugees.

Oxfam International, which was well-established in the country prior to the 2001-2002 military campaign, has been active since then in the economic rebuilding of Afghanistan. It has urged the World Bank and the Asian Development Bank to cancel their \$33 million debt to the country. Afghanistan also owes \$8.8 million to the International Monetary Fund. The United States and the world's other wealthiest nations are beginning a \$4.5 billion aid program to rebuild Afghanistan.

The International Committee for the Red Cross, the Afghan Red Crescent Society, and various U.N. agencies are actively involved in rebuilding Afghanistan, beginning with securing emergency relief, food, potable water and sanitation, health care, and education. In addition, funds have been appropriated for orthopedic centers in Afghanistan, as there are thousands of amputees and other disabled persons, many of whom have been the victims of landmines.

Transportation

Ariana Afghan Airlines is the national carrier. Commercial flights have not yet resumed to Afghanistan. Afghanistan has no railroads. The country also has no navigable rivers.

Ninety-five percent of Afghanistan's 30,000 miles of highways have either been destroyed or badly damaged by years of warfare and neglect. Land mines are buried on the sides of many roads. The roads are hard to police: in November, four journalists were shot and killed on the road from Sarobi to Kabul. Bandits have control over traffic on the roads. The largest piece of the \$4.5 billion in international aid that has been pledged to Afghanistan over the next two years, \$1.2 billion, has been dedicated to rebuilding highways.

One of the world's highest tunnels is found in Afghanistan, at Salang,

which links the north to the south of the country. It is a 11,000-foot-high and 1.6-mile pass through the Hindu Kush mountains, built by the Soviets in 1964. It was reopened in January 2002, after not having been open since 1997.

Communications

International communications are difficult. Local telephone networks are not operating reliably. International organizations and other entities rely on satellite telephone communications even to make local calls. There is no commercial satellite telephone service available locally. Those who wish to make domestic or international calls need to bring their own satellite telephone. Injured or distressed foreigners might face long delays before being able to communicate their needs to colleagues or family outside Afghanistan. Internet is not available through local service providers.

In January 2002, the first independent newspaper in post-Taliban Afghanistan issued its first edition. The Kabul Weekly featured articles in English, French, Dari, and Pashtun.

Health

Medical facilities are few and far between throughout Afghanistan. European and American medicines are generally unavailable, and there is a shortage of basic medical supplies. Basic medicines manufactured in Iran, Pakistan and India are available. Travelers will not be able to find Western-trained medical personnel in most parts of the country. An emergency hospital in Kabul with some Italian staff can provide limited services. There are also some international aid groups temporarily providing basic medical assistance in various cities and villages. For any medical treatment, payment is required in advance. No commercial medical evacuation capability from within Afghanistan exists.

Information on vaccinations and other health precautions may be obtained from the Centers for Disease Control and Prevention's hotline for international travelers at 1-877-FYI-TRIP (1-877-394-8747); fax 1-888-CDC-FAXX (1-888-232-3299), or via CDC's Internet site at <http://www.cdc.gov>

Clothing and Services

An adequate wardrobe for hot, dry summers and cold, dry winters (as well as for brief spring and fall rainy seasons) should be brought to cover the duration of a stay here.

Winter-weight apparel is needed for December through February. Snowfalls are frequent; boots are a necessity for snow and mud conditions, and warm clothing is called for, especially wool sweaters. Excellent imported woolen materials are sold here, but the quality of tailoring varies widely.

For women, washable summer clothing is useful. Long cotton skirts, or those made from other washable fabrics, are popular in Kabul. Long wool skirts and sweaters are popular winter evening wear. Boots and warm outerwear are needed in the cold months. Coats of *karakul* and *poshteen* (suede lined in either sheared lamb or fur) can be purchased in Kabul. A good supply of shoes for all occasions should be brought into the country.

NOTES FOR TRAVELERS

Special Note: The U.S. Department of State strongly warns against all travel to Afghanistan. The security threat to all American citizens in Afghanistan remains high.

A passport is required. The Interim Authority of Afghanistan requires American citizens to obtain a visa for entry into the country. The government has not been able to re-

open all of the country's former diplomatic missions. In the interim, the government is allowing the issuance of a single entry visa to persons entering on sanctioned international relief flights at Kabul International Airport. Commercial flights have not yet resumed to Afghanistan. Information on entry requirements can be obtained from the Embassy of Afghanistan located at 2000 L Street, NW, Washington, DC 20036, telephone 202-416-1620, fax 202-416-1630.

Afghan customs authorities may enforce strict regulations concerning temporary importation into or export from Afghanistan of items such as firearms, alcoholic beverages, religious materials, antiques, medications, and printed materials. It is advisable to contact the Embassy of Afghanistan in Washington, D.C. or one of Afghanistan's other diplomatic missions for specific information regarding customs requirements.

U.S. citizens are encouraged to carry a copy of their U.S. passports with them at all times, so that, if questioned by local officials, proof of identity and U.S. citizenship are readily available. Consular assistance for American citizens in Afghanistan is extremely limited. U.S. Embassy officials in Kabul likely will not be able to obtain official information or assistance from Afghan authorities for Americans who face difficulties in Afghanistan nor will American officials be able to travel to provide personal assistance to Americans who face problems outside of the capital.

Although the Embassy is located at Bebe Mahro (Airport) Road, Kabul, it can provide no passport or visa services. Emergency consular services to U.S. citizens who travel or remain in Afghanistan are severely limited. The U.S. Embassy in Islamabad, Pakistan, will provide most consular services to American citizens. Americans who travel to or reside in Afghanistan are encouraged to register at the Consular Section of the U.S. Embassy in Islamabad, Pakistan, or the U.S. Consulate in Peshawar, Pakistan,

and obtain updated information on travel and security within Afghanistan. These missions can be contacted as follows:

U.S. Embassy Islamabad, Diplomatic Enclave, Ramna 5, Islamabad, telephone (92-51) 2080-0000, Consular Section telephone (92-51) 2080-2700, fax (92-51) 282-2632;

U.S. Consulate Peshawar, 11 Hospital Road, Cantonment, Peshawar, telephone (92-91) 279-801 through 803, fax (92-91) 276-712.

Islam is the official religion of this country, and most Afghans are of the Sunni Muslim sect. Under the Taliban, Christian missionary work was considered a capital offense. As of December 2001, there were a total of two Jews in Afghanistan, Ishak Levin, and Zebulon Simentov, who have been in a feud with one another for years. They both share the only surviving synagogue in Kabul. In the late 19th century, as many as 40,000 Jews lived in Afghanistan, many of whom had fled from Persia, now Iran. By the middle of the 20th century, about 5,000 remained, but most emigrated after the creation of Israel in 1948. The Soviet invasion of 1979 drove out almost all the rest.

The time in Afghanistan is Greenwich Mean Time (GMT) plus four.

Afghanistan's monetary unit is the *afghani*, comprised of 100 *puls*. Because of the poor infrastructure in Afghanistan, access to banking facilities is extremely limited and unreliable. Afghanistan's economy operates on a "cash-only" basis for most transactions. Credit card transactions are not operable. International bank transfers are not available. No ATM machines exist.

The metric system is officially in force, but traditional methods of weights and measures also are used. The *pau* (15 ounces) is the unit of measure for most foods; a *seer* is 15.7 pounds, a *kharwar* 80 *seers*, or about 1,254 pounds; and a *jerib* is .482 acres.

The U.S. Embassy was closed in January 1989, and reopened in Jan-

uary 2002. The Embassy is located at Bebe Mahro (Airport) Road, Kabul.

LOCAL HOLIDAYS

March 8	Women's Day
March 21	Nau-roz (New Year's)
April 27	Revolution Day
.	*Ramadan
May 1	Workers' Day
.	*Id ul Fitr (end of Ramadan)
August 19	Independence Day
.	*Id ul Adha (Feast of Sacrifice)

ARMENIA

Republic of Armenia

Major City:

Yerevan

Other Cities:

Arzni, Ashtarak, Echmiadzin, Kumayri

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 1999 for Armenia. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Armenia is one of the great cradles of human civilization. The archeologists tell us that wine was invented in its sheltered valleys, and, perhaps, even the wheel. According to Armenia's librarians, more than a decade before the Emperor Constantine turned Rome into a Christian Empire, Armenia's King Trdat declared his kingdom Christian, making Armenia into the world's very first Christian state.

Certainly, Armenia is home to one of the world's oldest and most durable continuous cultures. Its 3,000 years of history tell a powerful tale of conquest, foreign domination and resurgence. And throughout it all,

the country's remarkable people have sustained a clear sense of national, ethnic, and religious identity.

A member of the Soviet Union from 1921-1991, a newly independent Armenia is working hard to fulfill the promise of democracy and a market economy. The 1999 Parliamentary elections, for example, showed real improvement over the previous election. But, despite progress, the transition from the Soviet system has been painful. In addition to the natural hardships faced by all command economies undergoing reform, Armenia faces blockades and sanctions resulting from a complex conflict with Azerbaijan over the Nagorno-Karabakh Region.

Following independence, Armenia was virtually without electric power for 2 years. Its well-developed economy-one of the richest in the Soviet Union-was simply crushed. Recovery has been slow.

Now, however, the worst is over. The dram, the national currency, is currently enjoying relative stability. Oil and gas supplies are flowing steadily. Moreover, with U.S. help, the power sector has been reorganized to dramatically improve efficiency. As a result, the lights

have been on in Yerevan for the past two years.

With traditional resilience, the country is slowly climbing out of the abyss, even though high tensions with Azerbaijan keep Armenia's borders with that country and with Turkey closed. Although the traditional economic base has been shattered, small businesses are opening all over the capital, and, to a lesser extent, in the provinces. Consumer goods are available in local markets, kiosks and stores. The metro is running; car traffic is rolling all day long. If normal life still lies in the future, some hope, at least, has returned to the present. Much, however, is contingent on creating a durable political resolution to the volatile Nagorno-Karabakh situation.

Given this dramatic backdrop, Yerevan remains an intensely busy post. The Armenians, among the best-educated people in the entire CIS, are competent and energetic. Personnel assigned to this post can expect many exciting responsibilities at work. Moreover, given the very real nature of the challenges here, there is a genuine sense of making a difference.

MAJOR CITY

Yerevan

Yerevan, the capital of Armenia, is in the west-central part of the country in the Ararat Valley, a plateau 1,000 meters (3,000 feet) above sea level. This fertile plain is ringed by an impressive range of mountains, which are capped with snow for most of the year. With the exception of the relatively flat center city, Yerevan is a town of steep hills and winding cobblestone byways. The tree-lined downtown streets retain some old-fashioned charm, as do sections of the surrounding hillsides. These are clustered with stone villas and small houses in various states of repair. There are many bars and restaurants in the safely walked center. And, in the summer especially, outdoor cafes and fountains abound. Much of the greater metropolis, however, is characterized by Soviet-style high-rise architecture, which lacks any aesthetic appeal. But Armenia's often spectacular countryside is never more than a 30-minute drive from any part of town. It should be noted that all official Embassy housing is currently in the relatively pleasant city center.

The ancient city is the cultural as well as the administrative center of the nation. There are universities, a fine, functional Opera House and many pleasant museums. With about a million people it is home to roughly a third of the country's entire population.

On clear days (and there are many) the mountains ringing Yerevan create a dramatic backdrop. Mount Ararat of Noah's Ark fame, a 16,000-foot peak crowned with eternal snow, commands the southwest horizon across the Turkish border. To the north looms Mount Aragats, Armenia's highest mountain, a rugged snow-capped peak of 13,000 feet.

Utilities

Electricity is 220v-50hz. There are frequent, sometimes extremely powerful, spikes. Bring surge protectors and uninterruptible power supplies (UPSs) for computers and any other expensive or delicate electrical equipment. European-style round-prong sockets are used in all housing. Bring adapter plugs for appliances with auto power-switching properties. Non-power-switching electrical appliances with 110v-60hz input require a transformer. Some appliances like electric clocks cannot be adapted in this way, others, like turntables may require special parts from the manufacturer for full adaptation.

Outlets are not usually grounded, so extra care should always be exercised around appliances. Hand-held equipment-hair dryers, shavers-requires extra caution.

Food

For most of the year there is a good supply of inexpensive raw fruits and vegetables at the open-air markets. In summer there is an abundance of delicious local apricots, cherries, and other fruits. The dead of winter sees a dramatic reduction of selection and an increase in price for fresh produce. Still, by Western standards, prices are not high. Winter crops like cabbages, beets, potatoes, onions, carrots are readily available all the time at cheap prices. And salad greens, fresh herbs and even tomatoes can almost always be had for a price. Oranges, bananas and apples can also be obtained year round. The best places for fruits and vegetables (price and selection) are the GUM fresh market on Tigran Mets Avenue and the Central Market on Mashtots Ave. Small markets and vendors abound in the city.

Fresh pork, lamb, beef, chicken and a limited variety of freshwater fish are available year round. Eggs are available, too. Low and reduced fat UHT shelf milk and full-fat powdered milk can be purchased as well, although supplies of low-fat are sporadic. Pasteurized fresh milk is available, but the quality is low.

Dried fruits like raisins, apricots, dates and figs, as well as many kinds of salami and cured meat, can be found in abundance. A few varieties of whole-bean coffee are available. The Cafe de Paris on Abovian Street (near Tumanian Street) has fresh-roasted beans. And there is plenty of instant coffee in shops and kiosks. Also available are pasta, flour, rice, beans, lentils, a limited variety of European and Australian cheeses, local sour cream, walnuts, hazelnuts, mushrooms, yogurt, and butter. A variety of Western soft drinks, candy, cigarettes, ice-cream bars and a few brands of imported and local beer are available.

There are a few supermarkets in Yerevan, but the inventory is sometimes disappointing and quirky and they are far from Western standard. A shopping trip might include a run through all of them to find something you need. Frozen food is available at these stores, but the selection is extremely limited and there are no frozen vegetables.

The following stores are popular these days: Partez, Europe, Cash and Carry, Yeritsian and Sons, Bravo, Urartu, and the Hayastan Super Market at the Druzbah Metro stop. For meat "The Rooster" butcher on Pushkin Street is popular. The state-run GUM market is a good place to shop, but is a little intimidating at first. One will find there most of the goods carried in the supermarkets, and at much better prices.

Other than some cereal products, baby foods are not generally available. Cake mixes are not available. Pop Tarts and other breakfast bars are not available. Pet food is available, but limited as to type and very expensive. Kitty litter is not available. Beer is available but limited in variety. Wine is available, but limited in variety. Nestle breakfast cereals are available, but are limited in choice and are now selling for \$6 a box. Low-fat versions of food are not available. Peanut butter, pancake syrup, and chocolate syrup are not available.

View of Yerevan, Armenia

Clothing

The supply of ready made clothes available here is limited and often not to American taste. There are some ultra-expensive designer boutiques, however. And medium quality hand tailoring is available.

The sun can be quite strong, especially in the mountains, so hats, sun block, and good sunglasses are needed. Bring some effective winter gear. It does not stay cold, but temperatures can get very low. Long underwear will be needed some days. Keep in mind that many local buildings are poorly heated.

Washable fabrics should be chosen where possible. Although drycleaning services are available here, they are pricey and not as versatile as those in the U.S.

Sturdy walking shoes are a must; walking is a good way to get around in Yerevan.

Supplies and Services

It is strongly suggested that you bring a supply of laundry detergent and fabric softener with you. But what you bring by way of supplies is mainly a matter of preference, not absolute necessity. Most household goods are available here, from cleaning supplies to paper goods. But... they seldom bear a familiar brand name and often the quality is odd or very low. Russian-made toilet paper and Barf Detergent (an Iranian brand name) are good cases in point. Prices can also be quite high for some things, such as laundry detergent. Here you might see some familiar brands, such as Tide, but make sure it is for a machine. Hand detergent is common.

The following services are available and adequate: haircutting, shoe repair, taxi, tailoring, dressmaking, upholstery and draperies, auto repair, locksmith, picture framing, etc. In short, most average needs can be met.

Domestic Help

Domestic help is available and runs about \$100 per month for day help (\$1 per hour). Houses do not have special facilities for live-in maids.

Religious Activities

Most churches in Yerevan are Armenian Apostolic, but there are some services for other denominations. A partial list of contacts follows.

Anglican: (Episcopalian) Monthly service in English. Contact: Philip Storventer, St. Zhoravants Church. Tel: 40-79-85, Office: 52-71-27

Catholic: The Mekhitarist Center, daily services (mornings) with Sunday Mass at 10:00 am. (Catholic Armenian rite Mass is held primarily in Armenian with readings usually in English.) Address: 7 Alikhanian St. (opposite the Chinese Embassy) Contacts: Father Serafino (speaks English, French, Italian, Armenian), Father Elia (speaks Armenian, Italian) Tel: 56-

18-88, 58-98-37 E-mail: mca@acc.am

Church of the Latter-Day Saints: Services 10 am or 12 noon at 43 Pushkin St. Five different congregations and a youth group. Contact: Margie Anderson. Tel: 27-0349 or Elder Hadley Tel: 34-43-97 or Elder Reading Tel: 58-33-23.

Seventh Day Adventist: No English Service. There is an Armenian congregation of 300 and a young adult group. Contact: ADRA office. Tel: 39-27-09.

Interdenominational Bible Study and Fellowship: (In English) Sunday mornings from 9:30 to 10:30 am. at the Drummond home, Address: 39A Aigestan St. (Near Peace Corps Office) Contact: Peter or Jekke Drummond. Tel: 57-44-27.

Synagogue: Address: Nar-Dos St. 23, Yerevan. Contact: Rabbi Gersh-Meir Bourstem (Chief Rabbi of Armenia) Tel: 57-19-68 Fax: 374 3 90-69-14. e-mail: avnyer@mbox.amlink.net

Education

There is only one school in Armenia suited to the needs of the international community, and it is very well regarded. The QSI International School of Yerevan is an independent coeducational day school that offers an educational program from pre-school through grade eight for students of all nationalities. In addition, the school has the capability of coordinating correspondence education for the higher grades through a well-respected program operated out of the University of Nebraska. The school was founded in 1995 by Quality Schools International (QSI), which has 17 schools operating worldwide, many of them in the CIS. The school year comprises three trimesters. These extend from the first week in September to the second week in December; from the first week in January to the third week in March; and, lastly, from the first week in April to the second week in June.

The school is governed by the QSI Board of Directors. The board's composition is set forth in the bylaws of QSI. Additionally, an advisory board, composed of from six to ten members, assists the school in its operation. All members of the advisory board reside in Armenia. They are appointed by the president of QSI in concert with the director of the QSI International School of Yerevan.

The school offers an outcome-based educational program with a curriculum similar to that of U.S.-based public and private schools. Instruction, leading to individual mastery, takes advantage of small class sizes and the diverse educational backgrounds of the students. Instruction is in English.

The school also coordinates extra-curricular activities such as ballet, karate woodcarving, jewelry making, sculpting, puppet making, etc. Swimming instruction at a pool operated by the International Federation of the Red Cross (IFRCC) is available.

There were four full-time faculty members in the 1997-98 school year, two of whom were U.S. citizens.

The school is located in the 650 square meter second floor of the CARITAS Switzerland building on Ashtarak Highway. The building will also house the school's administrative offices and the director's quarters. The facilities will be adequate for the projected enrollment for the next 3 years, and there is sufficient play and exercise space for the students, both indoors and out. The school has its own athletic field and weekly access to the IFRCC gym and pool. There are currently no facilities for handicapped or special needs students. Bus service will be provided.

In the 1998-99 school year, the school's income was derived from regular day school tuition. Annual tuition rates were as follows: Pre-school (3-4-year-olds) \$5,300; Kindergarten, \$8,300; grades one through eight, \$10,800. The school

also charges an annual capital fund fee of \$1,600 per year or a capital fund deposit of \$4,000 for all 5 year and older students. Accreditation: Full accreditation is expected by 1999. Currently, the school's financial system and curriculum have both received accreditation. The school has been accepted into candidacy for full accreditation by two bodies: The Middle States Association of Colleges and Schools and the Commission on International and Trans-Regional Accreditation. The Self Study and School Improvement Plan have been completed and the Accreditation Team visited the school in February 1999. The school holds a Provisional Certificate from the Department of Defense.

Contact: QSI International School of Yerevan, c/o American Embassy, Yerevan, Department of State, Washington, D.C. 20521-7020

E-mail: gsiy@arminco.com World Wide Web URL: <http://www.arminco.com/gsiy> International telephone and fax: 371-407656

Local mobile phone: 8-21-407656

Sports

A few sport activities are also available in Yerevan. The Armenian soccer team plays at the Hrazdan stadium in season. There are tennis courts and amateur tournaments. For a fee, the gymnasium, sauna and indoor pool operated by the International Federation of the Red Cross are accessible year round. (The IFRCC facility is about 20 minutes from the Embassy.) And the Defense Attaches Office operates a small, but well-appointed gym and sauna in the Chancery. And there is a growing number of private health clubs in the city. Aerobic exercise classes are available.

Fishing is an attractive prospect in Armenia, a country with more than 100 mountain lakes, and countless clear fast rivers. Also, Lake Sevan is only about 50 miles from Yerevan. It is one of the world's largest mountain lakes, is a popular summer tourist spot, and the home of vast

numbers of fish-including brown trout. Fishing slower moving streams for carp is also popular.

The Tsakhadzor Ski Resort is a popular destination in both summer and winter. The chair lift operates year round and the overnight accommodation at the House of Writers is decent, albeit far from luxurious. There is skiing in the winter (cross country and downhill) and hiking and picnicking in the spring, summer and fall. The resort is about an hour's drive from Yerevan. Snowshoeing is also possible in many mountain areas for much of the year.

There are pristine camp recreation areas all over Armenia. Some notable ones are found on the slopes of Mt. Aragats, as well as in Hankavan, Dilijan and to the south near Yeghegnadzor.

And for those who like to jog around in strange places, that venerable running society the Hash House Harriers has an active chapter in Yerevan. The group, which is open to all, organizes camp outs from time to time.

Sightseeing

Yerevan is an excellent base for exploring Armenia's many ancient churches, monasteries, and natural wonders. Some of the oldest Christian monuments in the world can be found in Armenia. The architecture is fascinating and the settings dramatic; the mountainous Armenian landscape is unforgettable. Many people like to hike, climb and camp. The countryside is safe for overnight camping.

The Cathedral at Etchmiadzin, built in 301 A.D., is the spiritual center of the Armenian Apostolic Church. Located about 30 minutes from Yerevan by car, Etchmiadzin Cathedral can be visited for Sunday services. Tours on other days require special arrangement. The church, its grounds, and museum contain a fine collection of ancient religious artifacts.

There is much to see in Armenia. Take a trip to Mt. Aragats to see the soaring walls of the once impregnable fortress of Amberd. Or visit the Roman mosaics at the pagan temple of Garni. And do not miss the huge chambers hewn out of solid rock at the cave monastery of Gegard; or any of the scores of other churches, monasteries and ruins that hide in the country's rough, wild landscape.

Entertainment

The city of Yerevan itself has a surprising amount to offer. There is opera, ballet, and a world-class symphony. The symphony performs twice a week much of the year and tickets are very inexpensive.

The Armenian Song Theater is also splendid, as is the Chamber Ensemble. The National Art museum on Republic Square is a must see, as is the Matenadaran Manuscript Library, which houses illuminated tomes from ancient times in Armenian, Greek and Latin.

A visit to the open-air art market held near the opera house every weekend is a must, as are periodic trips to the Vermsage, the large crafts market located in the park near Republic Square.

Victory Park, overlooking the city, is a favorite place for runners and joggers, especially during the warm weather. And there is a small amusement midway in the park complete with a working Ferris wheel and other rides. There are also rowboats to rent on the park pond, which is ringed by several small cafes.

The American University of Armenia has several English-speaking clubs to which members of the American community are welcome. Several persons currently get personalized instruction from world-class musicians. The South Caucasus Study Group organizes many interesting talks and excursions. Topics range from history and archeology to natural history and biology.

Recently, a number of restaurants have opened in the city. Local interpretations of Russian, Chinese, Continental, Italian, Indian, Persian, Turkish and American (burgers and pizza) can be found. There are also, of course, many quality establishments serving Armenian cuisine. And there are scores of kabob houses, some of which have a good reputation for wholesomeness. In addition, outdoor cafe society is a vital part of the city life. During the long warm season (April to November) scores of pleasant establishments serving inexpensive coffee and pastries can be found tucked into the green patches around the city.

And, if such is your taste, small casinos abound in Yerevan. No one can vouch for their honesty or safety, however. Lastly, a few adequate bars and pubs popular with the expatriate crowd can be found. A high-tech disco has recently opened at the Armenia Hotel-now being managed by Marriott.

And there is an indoor-outdoor jazz bar and restaurant (Poplavok) by a lake in the center of the city. The music is excellent.

OTHER CITIES

ARZNI, 13 miles north of Yerevan, is noted for its mineral spring and baths, which are set in a park of pine and chestnut trees. The sanatorium was built in 1925. Regular bus service operates between Arzni and Yerevan.

ASHTARAK is on the southern slope of Mount Aragats, about 12 miles northwest of Yerevan. The surrounding area has been inhabited from prehistoric times and the villages of the area have many archaeological sites of interest.

ECHMIADZIN is a pleasant 12-mile drive from Yerevan. Mount Ararat, now in Turkey, can be seen on a clear day. It was on the peak of Mount Ararat that Noah is said to have landed after the Flood, and the

mountain remains an important part of Armenian legend.

KUMAYRI, formerly Leninakan, was completely destroyed in the 1988 Armenian earthquake. It was founded by Armenian refugee artisans from Turkey in 1837. The city of 123,000 was noted for its textile industry and theater life. Kumayri is currently being rebuilt, with completion expected soon.

COUNTRY PROFILE

Geography and Climate

Armenia is located in southwestern Asia, just east of Turkey. It covers a total land area of 29,800 square kilometers, which is slightly larger than the state of Maryland. Armenia is a landlocked country bordered by Azerbaijan, the Azerbaijan-Naxçıvan Enclave, Georgia, Iran and Turkey.

The climate is highland continental. It is dry, with an average of 550mm (21.6 inches) in annual rainfall. In the Ararat Valley, where Yerevan is located, there is far less rain, with an average range of from 200mm to 250mm (7.9 to 10 inches).

Seasonal extremes are pronounced in the Ararat Valley. Temperatures can approach the record summer high of 42°C (107.67) or plunge toward the record winter low of -30°C (-227). Mean temperatures are more temperate, however. July readings give an average high range of from 25°C (77°F) to 30°C (86°F). The January low range averages from -5°C (23°F) to -7°C (19°F). Autumns are long and golden; Armenia enjoys around 2700 hours of sunshine each year. Drought, however, is a perennial problem.

The country rests on a high mountainous plateau cut by fast flowing rivers. The over-grazed hills boast little true forest, but many of the steeper slopes are dressed with

scrub and second growth. Good soil is found in the Arax River Basin. And sheltered valleys across the country host fruit orchards and vineyards. The scenery along the highways is often dramatic, with high mountains shadowing green pastures ribboned with clear, cold streams.

Twenty percent of Armenia's land is given over to pasture and 17% to agriculture. Three thousand and fifty square kilometers is under irrigation.

At 4,095 meters, Mount Aragats is the highest point in the country.

The interesting geology consists mostly of young igneous and volcanic rocks including obsidian. Armenia is honeycombed with geologic faults and remains seismically active. The effects of a severe earthquake centered in Spitak in 1988 are still being felt socially and economically, particularly near the epicenter.

(See Health and Medicine for a discussion of the precautions recommended for the hot dry climate and the possibility of earthquake.)

Population

Armenia's population is officially 3.7 million, based on the 1989 census, but is probably substantially less, around 3 million, due to large scale emigration in the difficult years between 1988 and 1995. One-third of the population lives in Yerevan. Armenia retains significant Yezidi Kurdish and Russian minorities, and smaller numbers of Greeks, Ukrainians, and others. Some 300,000 ethnic Azeris fled Armenia in 1988-90, mostly from rural areas, and an approximately equal number of Armenians took refuge in Armenia from Baku and other Azeri cities.

Conditions in Armenia were so difficult from 1991 to 1993 that there was a vast emigration to the U.S., Europe, Russia and other Newly Independent States. True figures are not available, but the current

population probably stands between two-and-a-half and three million.

Armenians have their own highly distinctive alphabet and language. Ninety-six percent of the people in the country speak it, while a solid majority of the population know Russian as well. Armenia was totally literate; 99% of the population could read and write Armenian and or Russian in Soviet times. Current literacy figures are not available, but the economic crisis has dramatically affected education.

Most adults in Yerevan can communicate in Russian. Russian is still taught in school, although quality has declined sharply. English is increasing in popularity, but is spoken rarely outside of educated circles. Cyrillic script can still be seen on many older street and building signs. Ninety-four percent of the population claims membership in the Armenian Apostolic Church.

Caucasian hospitality is legendary and stems from an ancient tradition. Social gatherings center around sumptuous presentations of course after course of elaborately prepared, well-seasoned (but not spicy-hot) food. The host or hostess will often put morsels on a guest's plate whenever it is empty or fill his or her glass when it gets low. After a helping or two it is acceptable to refuse politely or, more simply, just leave a little uneaten food. A cleared plate or an empty glass will get filled.

On the whole, Armenia is a safe country, close-knit and with little violent crime.

Foreigners can travel freely throughout the country and be confident of a friendly welcome. Note that Armenians are intensely curious about foreigners, particularly in rural areas. This curiosity will generally manifest itself in open-handed hospitality and ready assistance to the traveler, but can sometimes become intrusive, requiring considerable diplomatic skill to extricate oneself. Stone-throwing by local urchins or vandalism of cars is

rare, but can be a problem, particularly when the foreigner is distinctively non-Armenian. Best defense is a friendly greeting in Armenian to the adults on entry to a new village.

Attitudes toward women are still shaped by Middle Eastern links and a pattern of male domination. Though violence against foreign women is rare, women traveling or dining without male escort should dress conservatively and avoid eye contact or other behavior that might attract unwanted attention.

Government

Armenia- "Hayastan" in Armenian- is a republic. On 5 July 1995, the current constitution was adopted through a national referendum.

With the adoption of the constitution ten provinces plus the capital were designated. They are as follows: Aragatsotn, Ararat, Armavir, Gegharkunik, Lori, Kotayk, Shirak, Syunik, Tavush, and Vayots Dzor, plus the capital city of Yerevan.

The head of state is the President, in whom much power is vested.

The head of government is the Prime Minister, who is appointed and dismissed by the President. The President also appoints and dismisses the members of the Government, but at the proposal of the Prime Minister.

The unicameral legislative branch is known as the National Assembly, which now has 131 members. Under an election law passed in 1999 two methods are used to choose what is now a professional full-time Assembly; first, a proportional party-based system, and, second, a simple head-to-head majority mandate. Currently, 56 deputies are elected under the proportional party-focused system and 75 are elected under the majoritarian candidate-focused system.

After the presidential election of 1998 a new set of political parties began to coalesce out of the ashes of

the previous administration. The largest plurality was for a time the "Yerkrapah" faction, a nationalistic association of Nagorno Karabakh veterans. But it has since been integrated into the Republican Party, which is headed by Defense Minister Vasgen Sarkissian. Moreover, just before the May 30, 1999, election the Republicans allied themselves with the People's Party. The People's Party is headed by Karen Demirchian, former First Secretary of the Armenian Communist Party. This powerful election alliance, the Unity Bloc-which includes Yerkrapah, the Republicans and the People's Party-won a decisive majority of National Assembly seats in the May 30, 1999, election.

The opposition is formed by several parties; notably, the Communists, the Dashnaks (a century-old nationalist party with strong ties to the Armenian Diaspora) and the National Democratic Union.

The country's legal apparatus is founded on a system of civil law. Currently, the National Assembly is very busy passing legislation in virtually every field. The system of new legislation being born is considered one generally favorable to free market business development and is in line with accepted democratic principles.

The judicial branch is headed by the Constitutional Court, which is composed of nine judges. These are appointed by the president. The term of office is for life, but a judge may be dismissed by the president. The president also appoints and dismisses the chief prosecutor.

Under international guidance the judiciary underwent a thorough legally mandated reform and retraining process. And it is now working with a completely rewritten set of legal codes that see it acting with increasing independence.

Moreover, in the past year, there have been important structural changes to the judiciary. What is more, constitutional amendments to even further increase judicial inde-

pendence are being given consideration. But new laws on the judicial system, the role of judges, advocate service and the enforcement of court judgements have already been passed. Judges have been appointed to the newly created trial courts (Courts of First Instance) and the Court of Appeals. However, it will take a lot of political will to continue to make further reforms encouraging judicial independence.

Many international organizations are represented in Armenia. The United Nations is very active, as is the EU and some national governments. In addition, there are scores of non-governmental organizations. These serve a variety of needs, ranging from humanitarian aid to democratic as well as economic development.

An important national issue is the situation in Nagorno-Karabakh, a predominantly Armenian region within Azerbaijan, which declared independence in 1988. After a war lasting six years, a fragile ceasefire has held since 1994. Achieving regional stability by finding a durable settlement is a high-priority mission goal. In addition, this unresolved confrontation is an exacerbating factor in the country's severe economic crisis due to the embargo imposed by Azerbaijan and Turkey. (See Commerce and Industry for more details.)

Lastly, no discussion of public institutions would be complete without mentioning the vast Armenian diaspora, both in the U.S. and Europe. It has become a bridge to the outside world for many Armenians, particularly with the advent of the Internet, and influences the direction of the country with resources and ideas. In addition, the Diaspora has been very active in humanitarian efforts in Armenia.

Arts, Science, and Education

Education

Yerevan is the country's intellectual as well as its administrative center.

Yerevan State University, the State Medical Institute and the State Engineering University are located in the capital. The latter maintains fairly strong programs in math, engineering and architecture.

The American University of Armenia has graduate programs in Business and Law, among others. The institution owes its existence to the combined efforts of the Government of Armenia, The Armenian General Benevolent Union, USAID, and the Boalt Hall School of Law at the University of California at Berkeley. Many of the country's most successful young entrepreneurs are graduates of this institution.

The extension programs and the library at AUA form a new focal point for English-language intellectual life in the city. English-language instruction plays a large part in the AUA curriculum and many members of the American community here, including spouses of U.S. Mission employees, teach English at the university.

Arts

As might be expected from so literate a society, Yerevan is a city of culture. The Matenadaran Library contains a priceless collection of ancient manuscripts, chiefly Armenian, but also Persian, Arab, Latin, and Greek.

The city's National Art Gallery has more than 16,000 works that date back to the middle ages. It houses paintings by many European masters. The Modern Art Museum, The Children's Picture Gallery, and the Saryan Museum are only a few of the other noteworthy collections of fine art on display in Yerevan. Moreover, many private galleries are now opening. They feature rotating exhibitions and sales.

Armenia was a crossroads of the ancient and medieval world. The country is home to hundreds if not thousands of fascinating archeological sites. Medieval, Iron Age, Bronze Age and even Stone Age sites are all within a few hours drive from the city. It can be compared to Greece or

Italy in terms of the numbers and quality of its historic sites. There is much to be learned and seen.

The world-class Armenian Philharmonic Orchestra performs at the city Opera House. In addition, there are several chamber ensembles and the Serenade Orchestra is also known for its high standards. In season, grand opera is performed. Fine music can also be heard at the State Music Conservatory and at the Chamber Music Orchestra Hall.

In addition, there are many drama theaters in Yerevan hosting plays in Russian as well as Armenian.

Yerevan's Vernisage (arts and crafts market)-held each weekend in the park just off Republic Square-is home to hundreds of vendors selling a variety of crafts, many of superb workmanship. From inlaid wooden backgammon sets, to the hand-knotted wool carpets that are signature to central Asia, the selection is astonishing. Obsidian, which is found locally, is crafted into an amazing assortment of jewelry and ornamental objects. And there is also an excellent selection of fine jewelry; Armenian gold smithy enjoys a long tradition. Soviet relics and souvenirs of recent Russian manufacture-nesting dolls, watches, enamel boxes, etc.-also may be found at the Vernisage. There is another popular weekend art market in the park across from the Opera House that focuses mainly on paintings.

Carpet emporiums abound in the city.

Science

In Soviet times Armenia boasted very high numbers of specialists and scientists in proportion to its population. There were many important academic institutes located here. Much of the basic research has stopped, however, due to the country's impoverished condition. For this reason many of the country's scientists have left or found more practical ways to make ends meet.

This breakdown has had an interesting consequence. Many of the English-speaking Foreign Service nationals employed at the U.S. Mission in Yerevan are drawn from this distinguished pool of intellectuals. They serve conscientiously in positions far beneath their level of training. These highly educated, self-starting Armenian partners add a great deal to the strength of the U.S. Embassy here. Yerevan has perhaps the best workforce in the entire NIS.

Commerce and Industry

Armenia's once thriving industrial economy largely collapsed with the demise of the Soviet Union. Only now is it slowly starting to recover. Once the small landlocked country was no longer an integral part of the economic structure of the Soviet central system, it lost its sources of supply as well as its markets. Historically, Armenia provided machine-building tools, textiles, and much of the Soviet military's high-tech equipment-lasers, navigation systems, etc. Energy and raw materials were supplied from other republics in a centralized system. Today, few industries from that time operate. And those that continue to run do so at greatly reduced capacity.

On top of this, the conflict with Azerbaijan over Nagorno-Karabakh has resulted in a closed border with Turkey (a natural trading partner). And Azerbaijan, which was once a main supplier of energy, is now a bitter enemy. Moreover, the expense of the occupation in Azerbaijan drains the Armenian treasury.

Over the last 5 years (1995-99) things have improved relative to the darkest days of early independence. At that time, from 1992 to 1994, Yerevan was virtually without electric power. The people survived mainly through an intensive program of international aid. The critical situation with electricity has changed owing to many of the following factors: improvements in

power management, such as metering and transmission, have been made; gas supplies are coming in through Georgia; and the Metsamor Nuclear Power Plant is up and running. However, the above-mentioned chronic factors hindering Armenia's development-Nagorno-Karabakh, lack of markets and sources of supply-are still very much applicable.

Armenia's problems notwithstanding, many of its macro-economic indicators are strong. Inflation was brought down to comparatively tolerable levels during 1996 (5.9%). And it stood at 20% for 1997. In 1998 there was actually a negative inflation rate (-1.3%) (deflation). And, so far for 1999, the annualized rate of inflation stands at 11%.

The dram has enjoyed relative stability in this environment. Currently, it stands at 545 dram to the U.S. dollar. Moreover, the dram weathered the Russian financial crisis of 1998 quite well. One can expect it to remain basically stable with, perhaps, a weakening trend against the dollar. Official GDP grew at 7% in 1998.

These days, Armenia's biggest source of foreign exchange is from its trade in precious stones. There is a thriving jewelry industry, which includes the manufacture of finished jewels as well as the polishing of rough diamonds bought from South Africa. Some textiles are still produced as well, particularly leather goods. There is also a trade in high-value agricultural produce-apricots and grapes. And it must be mentioned that the country is justifiably famous for its brandy production. Some electronics manufacturing continues. And a few projects involving software development have been launched as well-one of Armenia's assets is its highly trained and educated labor pool.

Natural resources include deposits of gold, copper, molybdenum, zinc and alumina.

Also, Armenia's richness of history may be viewed as a sustainable

resource. Tourism has real potential, including archeological and ecological tourism. Armenia is traditionally considered to be the first Christian state; its conversion pre-dates that of the Roman Empire. As a result there are important monasteries and churches that date to the earliest centuries of the first millennium AD. But Armenia was also part of the cradle of civilization and important Bronze and Iron Age sites are also found here. These archeological sites, although undeveloped from a tourism perspective, are second to none in importance. Moreover, their mountain settings are often dramatic and beautiful.

Although agriculture plays an important role in the economy, Armenia still imports much of its food. Most of the raw material for its industry-hides, cotton, rough diamonds-is also imported. Consumer goods are brought in from the U.S., the United Arab Emirates, the other Newly Independent States, Russia, Eastern and Western Europe, Iran and-by way of Georgia and Iran-from Turkey.

Armenia still engages in some old, Soviet-style barter, but this is being slowly phased out.

To the extent that practical considerations allow, the government is planning and executing an aggressive restructuring of most major sectors of the economy. Transportation in the areas of roads, air and rail, is being moved forward. The energy sector has been given the highest priority. And the water system is being addressed as well.

With some exceptions, privatization is also well under way. Over 80% of small businesses are private, and over 60% of medium and large enterprises are private. The phone system has been privatized and the country's premier accommodation, the Armenia Hotel, has recently been privatized as well. It is being managed under contract by U.S.-based Marriott. In 1998 the government overcame strong opposition to privatize the world-famous brandy enterprise. And ninety percent of

the country's land, including virtually all of the farmland, is in private hands.

An expanding service sector is emerging in the capital, fueled in part by the substantial amount of aid pouring into the country. The many new shops and restaurants benefit everyone posted here.

In the main, the government appears to have a good understanding of what is needed for economic development. There is a liberal trade regime. Foreigners can own any kind of property or business except land. Investment is encouraged. World Bank and IMF advice is taken seriously.

Transportation

Automobiles

A car is very desirable, but is not an absolute necessity in Yerevan. Four-wheel drive is needed if you want complete year-round mobility, but a sturdy standard car will do for Yerevan and many other destinations.

Buying a new car locally is an option. You can buy a new Lada Niva (a tough little Russian-made 4x4) for from \$5,000 to \$6,000. Small sedans, like Lada Zhiguli's, run a little less; big sedans, like Volgas, run a little more. There are many places to buy new Russian-made cars. It is also possible to import a car from Dubai or Russia duty free. Also, Mitsubishi Motors has established a well-run dealership in Yerevan that features both sport utility vehicles and sedans.

Used car prices are extremely variable. Buyers will undoubtedly need the help of a local person to shop Yerevan's weekend auto market where new and used models are sold. The good news is that getting a local car repaired is easier and cheaper. The bad news is that with a Russian-made car the chances that repairs will be needed are greatly increased. It should also be noted that these cars are well below U.S. safety standards.

There are no restrictions on what kind of car you can bring in. There are legal pitfalls if you buy locally, but they are easily avoided. If you buy a car here make sure to check that the registration (the technical passport) matches the vehicle in both the engine number and the body number. Also, get a dated bill of sale that names the price and the parties concerned. This may be hand written. Once the title is transferred into your name by the local authorities—a complex process that involves paying a three percent transfer tax on the value of the vehicle.

Note: Car theft is not a great problem in Yerevan, but stereo theft is known. Removable faceplates and other stereo security systems are advised.

Although engine oil can be obtained here, it is of variable quality, and name brands are sometimes counterfeited and substandard product substituted.

There is no unleaded fuel at all in Armenia so POVs should be modified to accept leaded fuel. This mainly entails removing the catalytic converter if you want to prevent this expensive part from being poisoned by the lead. A permission letter from EPA is required if this is done in the U.S.

Gasoline is available throughout the country, mainly from tanker trucks parked along the road or gas kiosks. Yerevan and larger towns boast an ever-growing number of clean, modern and even luxurious gas stations. On the roadside the quality of fuel is variable and occasionally poor enough to cause problems. Gas stations, however, seem to deliver reasonable quality. Gasoline currently costs about \$1.50 per gallon. Gas prices are marked per 20 liters. Currently, gas sells for about 3500 dram (seven dollars) per 20 liters.

Roads

The streets of Yerevan are very beaten up in places, but are mostly in adequate repair. National high-

ways vary in quality. Main routes are usually passable for moderate cruising speeds with occasional bad spots, but secondary routes are sometimes quite degraded. Drivers must remain alert for potholes, however, on all roads. As in most of the developing world, the road culture is aggressive and undisciplined. In winter, snow is cleared on main routes, but secondary roads are ignored. Constant jay-walking and poor lighting at night adds to the danger in cities and villages. Yerevan's roads are a place for skilled, confident drivers.

Local

Public surface transportation in Yerevan is crowded and the equipment is old. There are trams, buses, trolley buses and even a funicular. Taxis are available and not overly expensive. Two dollars is the average fare for a ride within the central downtown area. The taxis are not metered and passengers must negotiate, so expect to pay a stiff premium if you can't negotiate in Armenian or Russian. Tips are appreciated, but are not expected.

There are *Marshrutnoi* (minibus) taxis as well. They run specified routes at varied rates ranging from 50 to 200 drams (10 to 40 cents). As mentioned earlier, there is a central metro line in Yerevan. The price of a token is 40 drams (8 cents). This is also the cost of a bus or tram ride.

There are inter-city buses and minivans and also very few trains. The trains are unreliable and are not used by U.S. Mission employees. Most of those posted here move about by private car, on foot, or, on occasion, by charter bus.

Regional

Most internal long-distance travel is accomplished by car, minivan, or bus. The trains are very bad both internally and to nearby neighbors. For example, the train to Tbilisi, Georgia takes 14-18 hours, runs an erratic schedule, is uncomfortable and is targeted by thieves. (The same ride by car takes from 5 to 6 hours.)

Bad relations with Turkey over Nagorno-Karabakh have closed that nearby land border. And, because of the Nagorno-Karabakh conflict, travel to Azerbaijan is impossible from Armenia. Moreover, official Americans cannot travel to Nagorno-Karabakh itself without special permission; the road to N-K, however, is open and considered good. The highway to Tbilisi is also open. The Armenian leg is good, but the Georgian side tends to be beaten up and slow going. It is a 6-hour drive maximum. Surface routes through to southern Armenia and Iran are open most of the year. However, official Americans cannot cross the border into Iran.

The regional roads are passable for most of the year, but in the dead of winter some routes close from time to time due to snows in high mountain passes.

Currently, there are no regular commercial in-country flights operating. However, for special purposes it is possible to charter a helicopter from Armenian Airlines.

Travel to nearby and neighboring countries is generally accomplished by air. The UN World Food Program operates an eight-seat commuter plane between Yerevan, Tbilisi, and Baku on which members of the official community can purchase seats when available. In addition, there are regularly scheduled flights on Armenian Air, the national carrier, to many regional cities, including Ashgabat, Dubai, Tbilisi, Istanbul, Sofia, Tehran, Beirut, Aleppo, and Tashkent. It also flies to several cities in Europe (Paris, London, Athens, Frankfurt, Zurich and Amsterdam) as well as to several in Russia (Moscow, Kiev and Samara). The schedule is variable; most flights are weekly, while others, such as those headed for Tbilisi, leave at least three days a week.

There are flights to Moscow every day on either Aeroflot or Armenian Air. This would be a convenient route both into and out of Yerevan, as Moscow is a good-sized hub, but the arbitrary actions of immigration

officials in Russia have caused problems for some travelers, even those in transit. Theoretically, holders of multiple-entry Armenian visas are allowed three days of transit time in Moscow without a Russian visa, but this appears to be poorly understood by officials there. Moreover, price gouging by Russian taxi drivers has made road travel between Moscow's airports exorbitant. Such cross-city travel is often a requirement in order to change planes. Very cheap, if very uncomfortable, transit travel by bus is an option, however. That notwithstanding, routing through Moscow is strongly discouraged.

Currently, five carriers operate out of Yerevan: Aeroflot, Armenian Air, British Air, Swiss Air and Vnukovo, a Russian carrier.

Communications

Telephone

The quality of the telephone lines is sometimes very bad. Service can be interrupted and it may take several tries to complete a call.

For modem users the data transmission speed on some of these city lines is sometimes very low. Improvements are underway, however, following the privatization of the phone company. Some city lines have been made digital allowing for decent voice and acceptable data communication. Cellular telephone service is also now available in Yerevan.

Internet

Armenia's information policy is open and Yerevan does have several Internet providers. Currently, America Online has a local dial-up number that functions fairly well, even on some city lines. AOL members who wish to keep their accounts should check for the latest Yerevan access number(s) before departing for post. Note that there is currently a \$6 /hour network access surcharge for Armenia's AOL users. There are also local ISPs with rates that are competitive to AOLs. One of the better known is Arminco. Also, the Yerevan Physics Institute

provides dial-up accounts. The service on the local ISP's is, like AOL, mostly adequate for home E-mail. World Wide Web surfing is also possible at the fairly low but manageable speed of about 1.0 (one) KPS- this includes AOL. Interestingly, some Internet cafes have appeared in the city lately.

Enhanced speed, giving faster access to the World Wide Web, is possible with leased lines or a radio modem. These services can run into hundreds of dollars a month. Also, there is fairly high-speed Internet access at the Hotel Armenia I Business Center. The rates are relatively steep, however. And the Armenia I charges roughly a dollar for every E-mail sent. Predictably, the Internet scene is changing all the time.

Radio and TV

There are several FM radio stations in Yerevan that play a variety of music-including Western-during the day. For English-language TV the best local option appears to be AA TV This is a line-of-site microwave "cable" system (not all residences have line of site). Installation is \$100 (this includes a \$50 refundable deposit on the antenna). The most popular option for expatriates is the \$20 per month 24-channel deal, which includes many English-language channels such as Discovery, The Movie Channel, TNT and Cartoon Network, MTV Europe, BBC, VH1, CNBC and National Geographic, and a few others. Note that not all 24 channels are in English.

There is local Russian and Armenian programming over VHF broadcast bands. In addition there are many broadcast satellites whose footprints cover Yerevan. Most of the programming is in languages other than English, but, with the proper dish and tuner, CNN International is available, as are NBC Europe, Euro News (with a digital tuner/decoder) BBC World Service and more.

Some Americans have paid to have satellite dishes and tuners installed in their residences. The cost is

\$300\$1,500. Employees often sell this equipment to incoming personnel. All the equipment required to receive satellite transmissions is available in Yerevan, and there is a reliable local contractor who can install it. Costs, however, must be born by the employee, both for hardware and installation.

Newspapers, Magazines, Books, and Technical Journals

There is only one local weekly paper publication that provides Armenian news in English: Noyan Tapan. However, there are more electronic options. The SNARK news service provides a daily paid E-mail subscription as do Armenpress and Azg.

The PAO Information Resource Center is a first class facility that maintains a healthy collection of current periodicals for on-site review (50 subscriptions). There are 1,000 books in the library as well as an up-to-date reference collection in hard copy and on CD. Many data bases are available. In the IRC a leased-line Internet connection may be used free of charge on a reservation basis for research and news gathering.

In addition, some Western periodicals in English may be reviewed at nearby English-language American University of Armenia Library.

Health

Hospitals

Malatia Medical Center, a general hospital with an intensive care unit and internal medicine department that meets minimum Western standards for cleanliness and, to some extent, technology. In sum, most average medical problems can be handled locally. If time allows, complex or unusual problems require medical evacuation to London for treatment.

Some dental clinics with acceptable standards have recently been identified. These clinics can provide routine cleaning, do simple procedures

as well as give emergency response. For complex dental work evacuation is still an option.

An English-speaking ophthalmologist has also been identified and is available for referrals. No suitable specialist in obstetrics has yet been identified.

Community Health

The city water supply is poorly treated, and tap water must be briskly boiled for 5 minutes before drinking.

A species of scorpion, which presents no serious health risk, is the source of much discussion. The truth is that for people without an allergic reaction the bite of this animal does not present a danger of death or serious injury. However, the bites of these creatures are often very painful and can cause prolonged swelling at the site of the bite as well as some systemic effects, such as nausea. These creatures have been found in some houses, particularly those in lower areas subject to moisture, but are really an outdoor pest. Store boots and shoes properly if you go camping and shake them out. Warn children not to turn over rocks. And, if you garden yourself, be careful.

A more serious outdoor danger arises from snakes. There are four species of poisonous snake in Armenia: the desert rattlesnake, the Asian rattlesnake, *vipera lebetina*, and *vipera dorevsky* (English common names unknown). Fifty-percent of all bites occur in children 12 years old or younger during the summer months of July and August. Camping is a popular recreation in the Foreign Service community here. Wear high boots and heavy long pants for treks and keep a sharp eye out. Children should be discouraged from playing in thick grass in high summer-even in some less developed parts of the city. Most large hospitals have antivenin.

Alcoholic beverages from state stores are considered safe, but throughout the CIS adulteration of bootleg alcohol (often sold in kiosks)

with poisonous wood alcohol is known. Armenia is famous for its brandies: buy them, and all alcohol, from reputable sources and check the state seal carefully.

Preventive Measures

There is a very serious microbial condition known as Brucellosis that can be contracted from some hoofed animals. One vector is unpasteurized milk from goats or cows. There have been outbreaks of this disease in Yerevan. Homemade Armenian cheese from village producers is the culprit. This rustic salty cheese should be purchased from quality stores and state-run markets, not from street vendors. It should be inspected for state seals. Cheese made in state factories is generally considered safe, as is imported cheese. Be cautious about unfamiliar cheeses at parties or eateries, particularly in the country. Yogurt and sour cream from state factories is considered safe. Again, be careful of village produce.

Giardia, a water-born intestinal bug, has from time to time been detected in city water. To be absolutely safe tap water should be boiled for 5 minutes before consumption. Local sparkling mineral waters like Bjni and Jermuk are considered safe, as are the bottled non-sparkling waters.

Malaria has been reported in some rural areas, especially along the Azerbaijan border. If traveling to the countryside check with the Health Unit for an update on the situation. Prevalence is low, but travelers to these areas should use insect repellent, cover up, and, if possible, avoid outside activity at dawn and dusk.

New arrivals should be aware that strenuous exercise at Yerevan's near mile-high elevation can take one by surprise, particularly if one leaves the relatively low-lying city center for the mountainous suburbs.

Armenia is notoriously dry. Humidifiers are supplied by GSO upon request. Order one for sleeping quarters. Also, stay well

hydrated in winter by drinking plenty of water or juice to help avoid upper respiratory complaints. These are common in Armenia.

Hats and sun block are a necessity for any prolonged activity outside in the summer.

Immunizations

Required immunizations for Yerevan include Typhoid, Diphtheria, Tetanus, Hepatitis A and Hepatitis B. People who expect to be out in the country, or whose activities could put them in the way of a dog bite, might want to consider a preventive rabies series, although the disease is not reported.

Medicines

Familiar brands of Western style over-the-counter and prescription pharmaceuticals are not generally available in Yerevan, although some European products are to be found here. Substitutions are possible, but you have to know what you are looking for. Aspirin, acetaminophen, and ibuprofen are available. Bring a full supply of prescription medicines, favorite over-the-counter medications, and health supplies such as corn plasters or Ace Bandages. Arrange with a U.S.-based pharmacy to mail in continuing prescriptions.

Other Measures

Armenia is in an earthquake zone. Without being overly dramatic and with the full understanding that the possibility of an earthquake at any given place and time is statistically remote-it would nonetheless be prudent to review some materials on how to prepare for and how to behave during a seismic event. The Federal Emergency Management Agency has prepared an excellent fact sheet on the subject. Find it at the following World Wide Web address: <http://www.fema.gov/library/quakef.htm>

Basic precautions are to check for hazards in the home, identify safe places in each room and have disaster supplies on hand.

NOTES FOR TRAVELLERS

Five carriers currently serve Yerevan: Armenian Air, Aeroflot, British Air, Swiss Air and Vnukovo. (Vnukovo is not used for official travel). Since Aeroflot and Vnukovo flights come through Moscow-and there have been problems there-Armenian Air, British Air and Swiss Air are the only carriers generally used to get from Europe. American carriers are used, however, to get to those European cities where the flights to Armenia originate.

There are flights to Yerevan from Amsterdam, Athens, Frankfurt, Istanbul, London, Paris and Zurich. These are not daily flights. On average, each city gets served two times per week. Armenian Air changes schedules with little notice. Currently, Northwest/KLM and Austrian Airlines are negotiating to provide service to Yerevan. The agreements are still pending, however. Scheduling flights to Yerevan via Moscow is discouraged due to a variety of transit problems.

Customs, Duties, and Passage

Passport and visa required. For further information on entry requirements contact the Armenian Embassy at 2225 R St. NW, Washington, D.C. 20008 tel. (202) 319-1976; the Armenian Consulate General in Los Angeles at 50 N. La Cienega Blvd., Suite 210, Beverly Hills, CA 90211, tel. (310) 657-6102 or visit the Armenian Embassy's website at <http://www.armeniaemb.org>.

Be aware that certain items are proscribed for export and should not be purchased and removed from Armenia without the permission of the

Ministry of Culture along with payment of a 100% duty. This includes old carpets, old manuscripts, and antiques. (Anything older than 50 years is subject to this levy and/or may be banned from export altogether.)

Pets

You may import pets to Armenia. No quarantine is imposed. Currently, a valid rabies certificate and a health certificate are required. Pets should be given a full range of inoculations before arrival. Be sure to check with all the airlines you use about requirements in transit. Be advised that pets must accompany passengers in the cabin on some Armenian Air flights. The cargo holds on the Russian jets it flies from some cities are not properly heated or pressurized for pets. Pets obtained here should be inoculated by one of the local veterinarians. Bring any specific medications for your pet.

Currency, Banking, Weights & Measures

The dram is the official currency. It is internally convertible. Currently, one U.S. dollar equals 545 dram. This rate is fairly stable, but the trend has been to weaken slowly against the dollar.

Armenia is a cash-based economy. Banks are not generally used. There is one international bank, HSBC, which operates a few VISA ATMs around town. (One is in the Armenia Hotel.) The HSBC Bank is located next to the Armenia Hotel on Buzand Street. If you are bringing U.S. cash to Armenia, make sure it is in good condition. Torn or marked bills might be refused, as might bills older than 1989.

American Express Travelers Checks are accepted at the largest of the hotels, but there are added fees.

There are many money exchanges throughout Yerevan. They operate 7 days a week. By law all transactions must be in Armenian drams.

The metric system of weights and measures is used here. Fabric is bought by the meter, potatoes by the kilo, gasoline by the 20-liter container, and distances are measured in kilometers.

Americans who are living in or visiting Armenia are encouraged to register at the Consular Section of the U.S. Embassy in Armenia and obtain updated information on travel and security within Armenia. The U.S. Embassy in Yerevan is located at 18 General Bagramian Street, telephone 011 (3741) 151-551 and fax 011 (3741) 151-550. The consular section is open from 9:00 AM until 5:30 PM, with time reserved for American citizen services from 2:00 PM until 5:30 PM Monday through Friday

Canberra, Australia

AUSTRALIA

Commonwealth of Australia

Major Cities:

Canberra, Brisbane, Melbourne, Perth, Sydney, Adelaide, Hobart

Other Cities and Areas:

Alice Springs, Darwin, Fremantle, Geelong, Gold Coast, Newcastle, Tasmania, Wollongong

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated July 1996. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

AUSTRALIA, the land "Down Under," is an island continent about the size of the United States mainland. Geologically, it is one of the oldest continents; in civilization, the most recent. Its 19.2 million people (2000 est.) enjoy a high standard of living in a country which is still in the process of developing its great natural resources.

Australia holds considerable interest and appeal for Americans: its culture, similar to that of the United States; its unique geology, flora, and fauna; its distinctive literature and history; and the striking contrast between the highly civilized foreground of the coastal cities and the outback of the bush. Its climate var-

ies from tropical to temperate, and the contrasts in its landscape are from rolling plain to alpine height.

Australia and the U.S. share common goals and similar approaches to most major foreign policy questions. Their frequent exchanges of views on world affairs in general, and the Asian-Pacific area in particular, are characterized by a high degree of mutual confidence and understanding.

MAJOR CITIES

Canberra

The national capital, Canberra (an aboriginal word meaning "meeting place"), is in the Australian Capital Territory (ACT) in the southern tablelands of New South Wales. It is 1,900 feet above sea level with much of the surrounding mountainous terrain above 3,000 feet. Built to be the seat of the Federal government, Canberra is one of the most carefully planned and rapidly growing cities in Australia. It is often called the "garden city" because of its millions of trees and shrubs. The city is striving to become the nation's political, administrative, commercial, educational, and scientific hub. It is also a growing tourist center. Its

lake, national buildings, parks, and wide avenues attract over 500,000 visitors a year. In the heart of the city is man-made Lake Burley Griffin. Always an integral part of the city's master plan, the lake (11 km long with a 41 km shore line) was completed in 1964. Planned community shopping centers are in each suburb. Modern new buildings attest to the fast growth of the capital.

Wheat and dairy products are produced in the ACT; the surrounding tree-studded upland country is used for the most part for sheep grazing. Development is strictly controlled, and Canberra is affectionately called the "bush capital." To the south are the Snowy Mountains hydroelectric development and Mount Kosciusko (about 7,810 feet), the highest point in Australia. The highlands are timbered mainly with native eucalyptus and radiata pine planted by the Forestry Commission. The Molonglo River flows through Canberra, but much of the city's water supply comes from the Cotter River dam about 12 miles away.

Canberra's climate is sunny year round with only short periods of rain or overcast skies. Summers are warm, with temperatures occasionally above 37°C (98°F), evenings are usually cool. Winters are cold, with

early mornings often below freezing but warming up during the day. It almost never snows. January is the hottest month; July the coldest.

Food

There is an excellent range of food products at local markets and stores. Beef, lamb, pork, veal, chicken, fish and shellfish are of good quality and available year round, as are a wide range of fresh fruits, vegetables and dairy products. All types of baby formulas and most canned goods, including baby foods, are available. Some Stateside favorites are unavailable.

There are American-style supermarkets in major shopping areas for one-stop shopping, and in addition smaller grocery/convenience stores are found in each suburb.

There are also butcher shops, news-agents, and markets for fresh fruit and vegetables in many suburbs. No post exchanges, commissaries, or group-purchasing arrangements exist in Australia.

Clothing

Most clothing needs can be met in Australia, but the range of sizes and choice of styles are not as great as in the USA. Good quality clothing is available but more expensive than in the United States. Department and discount stores stock reasonably priced clothing. Availability of sizes and reduced selection are more a consideration than is price. It is difficult to find shoes in narrow widths, or in extra wide or large sizes.

Men: Dress in Australia is similar to that in Washington, D.C. Many American men wear medium-weight suits of wool or woolen-synthetic mixtures year round. Heavier suits are worn in winter with comfort, particularly in Canberra. Sport coats are also worn. Lighter weight suits are comfortable in summer. Bring a light-to-medium-weight top-coat and/or raincoat.

Casual attire is very much the same as in the United States. Track suits are popular. A warm jacket is

needed for winter, but there is little need for a heavy parka except for skiing. Hats are needed for sun protection.

Women: Clothing styles are current, and influenced by U.S. and European designs, as well as some excellent Australian designers. Good quality women's clothing is available but more expensive than in the USA, and the selection and size range are more limited. Tall sizes in women's clothes are not widely available but some shops carry petite sizes. Clothing needs are very similar to the USA—casual for the most part, but more formal for office and official events.

Warm clothing is needed for colder months in Canberra. Clothes that can be layered are very useful. Most houses are chilly in winter so bring warm clothes for indoor wear. Many wear wool sweaters; some, thermal underwear. A light to medium-weight coat is sufficient. Australians wear hats of all kinds to protect against the sun in all seasons. A wide range of women's sunhats is available.

Dressmakers are difficult to find as well as expensive. Good quality lingerie is available. Hosiery is available but quality and sizes are different. A wide variety of fabrics are available but fabrics, sewing materials and patterns are also more expensive.

Children: Bring clothing for all seasons, although heavy winter clothing is not necessary unless skiing trips are planned. Snow is a rarity in Canberra, though winter nights are often below freezing.

Most public schools through grade 10 have a school uniform, which children are encouraged to wear. Therefore, a large wardrobe is often not necessary. Sneakers are popular in Australia and are often worn to school. For attendance at private schools, black or brown oxford-type lace-up shoes are required; they may be purchased locally. Almost all private schools require students to wear the school uniform, which for

older students often includes blazer (or suit) and tie in winter. After school clothing is much the same as is worn in the U.S. Jeans are popular but the name brands are expensive, so bring a supply.

Clothing for infants and preschool children is available, and at reasonable prices in the larger stores. Some U.S. brands are stocked but are expensive.

Supplies and Services

Some American-brand cosmetics, including Revlon, Elizabeth Arden, Lancome, Clinique, and Helena Rubenstein, are sold locally but are expensive. Paper products are available (albeit expensive), and the range is much greater than a few years ago. Table and bed linens are available in a limited range, sizes are slightly different, and high quality items are more expensive. Personal items for men, such as shaving supplies, etc., are sold locally; this includes several makes of electric razors. (If you bring an electric razor from the U.S., make sure it will run satisfactorily on the local current.)

Bring all needed baby furniture if practicable. Items such as bassinets, playpens, cribs, carriages, and high chairs are available but more expensive than in the U.S., as are large outdoor and indoor toys and play items.

Laundry and dry cleaning services are good. Dry cleaning services vary from 1 day to 1 week; 60-minute dry cleaners are also available. Coin-operated laundromats are available, and a few of these include coin-operated dry cleaning equipment.

Hair salon services are good, but hair dye colors are not the same even though they include name brands. Bring your own or have someone send from the U.S.

Religious Activities

Most faiths are represented in Canberra.

Education

Australian schools are a blend of British and American systems. The school year is the reverse of that in the U.S. It usually starts at the beginning of February and closes for a 6–8 week summer vacation in early to mid-December. There are short breaks of approximately 2 weeks at the end of each term in March/April, June/July and September/October.

Grade placement for children transferring from the Northern Hemisphere can sometimes be a problem. Each family and school assess each student individually, with placement related to the age of the student, and academic level. Some will advance half a grade, others will stay on in the same grade as in the USA. It is important to hand-carry up-to-date school records.

Australian schools through the secondary level fall into two broad categories: government-funded and operated public schools and private schools.

Public Schools: Schools are located in most suburbs of the city. In Canberra, children attend Preschool at age four, Primary School for Kindergarten through Year 6, and transfer to High School for Years 7 through 10. Students in Years 11 and 12 attend secondary colleges. Education is compulsory through age 15, but most students continue through Year 12. One secondary college in Canberra offers the international baccalaureate program for those students who are academically talented.

All five year olds and children turning five on or before April 30 in any year, enroll in Kindergarten at the beginning of that school year in early February. Public schools request a small parent contribution to cover the cost of special resources, sporting equipment and library books. Many primary schools in the ACT offer before and after school care.

Uniforms are not compulsory in public schools but most primary

schools have a uniform and actively encourage students to wear it. High schools have a dress color code. All public schools are coeducational and nonselective.

Private Schools: Most private schools are church-sponsored by either the Catholic or the Anglican Church of Australia, although membership in the sponsoring church is not a requirement for admission. It can be difficult to enroll children in private schools, as waiting lists may be long. Some private-school fees are expensive; however the educational allowance is adequate to cover most costs. Some of the private schools provide educational facilities from kindergarten through grade 12, others follow a structure similar to that of the public schools.

Testing: In some states, teachers rely heavily on examinations to grade students. In the ACT, Year 10 and Year 12 Certificates depend on a system of continuing assessment of student progress, including performance, tests, and written work. In addition, Year 12 students who study a certain quota of accredited courses and pass the Australian Scaling Test (AST) receive a Tertiary Entrance Statement which is recognized for entrance to tertiary institutions.

The U.S. College Board achievement tests can be taken in Australia. In Canberra, the Scholastic Aptitude Test (SAT) and Achievement Tests are usually given twice a year.

Preschool: Preschool facilities, both privately run and government-sponsored, are available in most areas for four-year olds. The public preschools are generally located near the primary schools but operate separately with some parental help. There are Montessori, Steiner, French-Australian and Chinese-Australian preschools. In some areas there is a waiting list for preschool admission, especially in private schools. Play-groups are plentiful for children under 4 years.

Special Education: Canberra has several schools for children with

special educational needs from preschool through high school. Alternatively, students may be enrolled in small units attached to regular schools, or they may be mainstreamed. All public schools have some provision for needs of children with special skills and abilities as well as for children with learning or behavioral difficulties.

Higher education opportunities. There are two universities in Canberra—the Australian National University (ANU), an internationally recognized institution with a strong research orientation and large graduate program, and the University of Canberra (UC), with a full range of professional degree programs, including teacher and nursing degrees. Entry to both is competitive, but overseas students are accepted subject to satisfactory academic qualifications and availability of places. At present, both universities require U.S. educated students to have a U.S. High School diploma and a minimum of 1050 to 1100 in SAT scores, with much higher scores for entry to some degree courses. No “subsidized” fees exist for overseas students as for Australian students. Books, room and board are extra. Books, including school textbooks, are expensive.

Further educational opportunities are available through the Canberra Institute of Technology, which is a large multi-campus provider of a wide range of tertiary education and training courses. The CIT is part of the Australian TAFE (Tertiary and Further Education) system which is government-funded and provides vocational education and training programs to persons in the workforce, those who left school and members of the community. CIT offers more than 300 courses from certificate to diploma, through nine teaching schools. Fees vary by course. CIT opened a new hotel-management school in 1995, run in conjunction with Cornell University of New York. Planned to be a world-class provider, fees are substantially higher than regular CIT course programs.

Skyline of Brisbane, Australia

© Eye Ubiquitous/Corbis. Reproduced by permission.

Non-degree or diploma-level instruction is available in many subjects—through the Technical and Further Education Program at CIT, the Centre for Continuing Education at the ANU and many local secondary colleges. Costs are reasonable. Sports, computer training, arts, crafts, business courses, languages and homemaking skills are among the many subjects covered. Both evening and day instruction is available.

Recreation and Social Life

Once considered the “bush capital,” Canberra is now a thriving, cosmopolitan city without the traffic, pollution and major crime problems of many larger cities. It has been well planned, has excellent recreational amenities, and is becoming a significant stop for international tourists. There are frequent festivals, fairs, and exhibitions, the Royal Canberra show, a thriving symphony orchestra and philharmonic society, and frequent touring companies. The

Floriade festival in September/October is becoming recognized internationally.

Sports

Canberra is a very sports-minded city. Cricket, football, tennis, golf, swimming, and bowls are all popular. Also available are ice and field hockey, basketball, ballooning, rifle shooting, softball, horse riding, volleyball, cycling, fishing, ice skating, skiing, croquet, polo, squash, baseball, bushwalking (hiking), rowing, sailing, and soccer. Five versions of football are played—rugby league, Australian rules, rugby union, soccer and gridiron (American) football. The Canberra Raiders Rugby League team has a place in local culture similar to the Washington Redskins, and won the National Competition in 1994.

Dress for the various sports is similar to that in the U.S. and quality sports equipment is available but at higher-than-U.S. prices. Children’s

bicycles and sports items are available.

There are several public golf courses available as well as clubs that offer membership privileges.

Tennis, mostly hard court, is popular. Limited numbers of public courts are available but small clubs are inexpensive to join. Squash courts are also available.

The Australian Institute of Sport (A.I.S.) in Bruce is a world-class training facility with residential programs for athletes of many sports. Indoor and outdoor stadiums are located there and their swimming and other facilities are available for some public use.

Lake Burley Griffin in the center of the city is the focus of many water activities. There are several sailing clubs with races held each Saturday and Sunday during summer. The rowing clubs participate in regular rowing regattas, and dragon boat races have become a popular annual event for amateur teams. A tourist boat regularly provides cruises around the lake—some with meals. Powerboats are not permitted on the lake.

Some streams are stocked with rainbow and brown trout. Lake Burley Griffin is stocked annually with both species, which may be taken only with a line and rod. Good ocean fishing is available on the south coast of New South Wales, about 100 miles from Canberra. A fishing license is not necessary in the Territory or in New South Wales but both size restrictions and bag limits apply.

Swimmers have a choice of a number of pools in the city (indoor and outdoor) and a number of natural pools on rivers outside the city. Most offer swim lessons for children. Canberra is a 2-hour drive from the ocean and good, if chilly, surf beaches.

Most school children join one or more of the many sports clubs operating for children, which practice

once or twice weekly, and compete on weekends. In addition the YMCA and YWCA cater to children 8 years of age and older. Activities include basketball, volleyball, squash, judo, trampoline, gymnastics, yoga, etc. Also active are various church groups, scouts, girl guides, and the Canberra Police and Citizen's Youth Clubs.

Touring and Outdoor Activities

The Canberra area has a wide range of options for every member of the family. In the city, the major sites include the new and old Parliament Houses, the High Court, Questacon (the Science and Technology Centre), the National Gallery of Australia, the War Memorial and Tomb of the Unknown Soldier, the Royal Australian Mint, the Australian National Library, and Regatta Point—a display center to explain Canberra's planned development. Also close by are a Dinosaur Museum, the National Aquarium and Australian Wildlife Sanctuary, the National Museum, Cockington Green (a miniature English village) and a number of other tourist attractions.

For those who like the outdoor life, there is Namadgi National Park plus many nature reserves and recreation areas for bush-walking, bird-watching, camping and barbecues. The Tidbinbilla game reserve, the NASA tracking station and a dry alpine slide are each about 45-minutes drive from Canberra. Many picnic spots with facilities at lake-side areas are available, as well as picnic grounds in the city, often equipped with free electric grills or firewood. There are also about 10 wineries to visit near the city. The only real problem with outdoor activities is the large number of flies in summer months, which can be bothersome.

There are many seaside resorts on the coast, 100-200 miles from Canberra, which are accessible by paved road. The beaches are beautiful and the drive, scenic. Accommodations are heavily booked during summer holidays.

Good skiing at about five resorts, as well as on cross-country trails, is available about 100-130 miles from Canberra in the Snowy Mountains. The ski season tends to be short. Equipment can be hired in Canberra, Cooma or at the ski resorts. The Snowy Mountains, location of the large Snowy Mountain hydroelectric development, is also an attractive area for summer recreation with camping, picnic and fishing areas, water sports, a llama farm, riding (both day or longer trail-rides) and other activities.

Entertainment

Except for opera, for which it is necessary to go to Sydney or Melbourne, it is possible to enjoy a wide range of cultural activities in Canberra very easily and relatively inexpensively. The Canberra Theatre Center, which has a theater seating 1,200 and a smaller playhouse, sponsors a full range of live theater with both local and touring companies and performers. The Canberra Repertory Group is one of several groups producing high-quality plays. The Canberra Symphony Orchestra and Musica Viva arrange a number of subscription concerts annually. Active music clubs and a number of other societies offer a wide variety of cultural and intellectual programs. The Canberra School of Music presents a number of concerts and recitals of near-professional caliber in Llewellyn Hall. Movie theaters show American, British, Australian, and continental films. Movie theater tickets are more expensive than the U.S.

Canberra has a casino, and a few nightclubs together with several discos and restaurants with live entertainment/dancing. There are more than 300 restaurants providing a wide range of ethnic cuisines. In addition, most Canberrans belong to social or sporting clubs which provide inexpensive restaurants for members as well as recreational facilities and slot/poker machine gambling.

Social Activities

Most social and official occasions enable Americans to mix freely with

Australians. Americans residing in Canberra include US Government employees and their families, research fellows at ANU, American spouses of Australian officials, and business representatives. Spouses of the Embassy's American personnel meet regularly and the Australian American Association has a range of events. Canberra's social life varies with the wishes of the individual. Active, outgoing individuals find little effort is required to be accepted by Australians or American coworkers. Living in Canberra is similar to living and working in any modern, Western city.

Brisbane

Brisbane, with a population of about 1.6 million (1999 est.), is the capital of Queensland. It is 13 miles from the coast and 80 miles north of the New South Wales border. Situated on the Brisbane River, it is virtually at sea level and the city area covers 471 square miles.

Brisbane is surrounded by hills and nestled near beautiful Moreton Bay. The landscape rises from the river banks through hilly suburbs and on to the 3,000 foot peaks of mountain ranges less than 30 miles away. Ten miles of meandering river, parks and gardens and a unique blend of historical buildings and sophisticated architecture combine to create the charm that is Brisbane.

Brisbane was first settled in 1823 and has been the capital of Queensland since the foundation of the State in 1859. In the last ten years the city has developed rapidly and is now an attractive, modern urban center of over one million people. The city's population remains predominantly of British origin. However, the non-Anglo Saxon group has grown considerably since World War II as a result of the Australian immigration program. It includes Dutch, Italians, Greeks, Germans, East Europeans, Chinese and Vietnamese. Approximately 9,000 Americans also live in Queensland, most of those in the south east corner of the State in and around Brisbane. A large number of these are

ex-servicemen who married Australians during World War II.

During the last decade, the face of Brisbane has changed markedly. There is the new Queen Street Shopping Mall, the new Queensland Cultural Centre Complex, State Library and Museum and a host of new international hotels.

Brisbane's other main advantage is as a gateway to Australia's popular tourist playgrounds in the sun, on the beach (not more than 2 hours drive to the north or south), in the tropical rainforest hinterland and agricultural farms. Brisbane is 483km (300 miles) south of the Tropic of Capricorn and 22 km (13 miles) up the Brisbane River from the Pacific Coast at Moreton Bay.

A number of U.S. business firms are locating in Queensland bringing engineers, technicians and supervisory personnel. The number of

American tourists coming to the State continues to increase with the introduction of discount airfares on the Pacific routes and the attraction of the Great Barrier Reef, the beaches and the Australian outback. Queensland has three international airports at Brisbane, Townsville and Cairns.

Queensland boasts a subtropical climate and is one of Australia's sunniest capitals enjoying an average of 7.5 hours of sunshine a day.

Summer: September-May—Average temperature ranges from 66°F to 86°F.

Winter: June-August—Average temperature ranges from 42°F to 66°F.

Queensland has summer rainfall and dry winters. Many of the older homes are well designed to be cool in summer and do not need air-con-

ditioning. As there is also usually no central heating, these houses can be quite chilly during the short winter.

Clothing

As Queensland winters are short and fairly mild, dress appropriate for a Washington, D.C., spring/summer/fall will be appropriate year round for Queensland.

Supplies and Services

City Shopping: The main shopping streets in the city are the grid formed by Elizabeth, Queen and Ann Streets crossed by Edward, Albert and George Streets. The Queen Street Mall is located between Edward and George Streets and is the city heart for commerce, busy shoppers and workers. It features an information booth, outdoor restaurants, shaded seating and plenty of places to rest. Several large department stores in the city area offer most goods found in US department stores.

Suburban Shopping: Spacious drive-in suburban shopping complexes offer convenient air-conditioned shopping, including large supermarkets, clothing, electrical, and hardware stores, coffeeshops and delicatessens.

General Shopping Hours: In the city—8.15 am to 5 pm except on Fridays 8.15 am to 9 pm; Saturdays 8.15 am to 4 pm; on Sundays many (but not all) shops in the downtown area are open 9 am to 4 pm. In the suburbs—8.15 am to 5 pm except on Thursdays 8.15 am to 9 pm and Saturdays 8.15 am to 4 pm. Most larger stores are now open until 9 pm on weekdays.

Some small suburban "corner" stores have flexible hours and open from 7 am to 7 pm and often later. There are day and night chemists (drugstores) in the city and in most suburban districts.

Transport

The transport system in Brisbane is reasonably efficient with regular bus, train and ferry services. Taxis are also readily available for hire.

Education

State schools are considered very good at the elementary levels; some state high schools are also considered good. Students who have come from US schools with high academic standards may be advised to move ahead one grade in Queensland schools.

Churches play an important part in education in Brisbane and run most of the private schools.

School uniforms are generally worn at all junior schools, however they are not compulsory. The high schools normally require students to wear a uniform.

School holidays are of approximately 2 weeks duration with 6 weeks in December to January. Because of the school calendar, many families arriving from the northern hemisphere find a December/January transfer convenient.

Entertainment

Brisbane’s Queensland Cultural Centre is situated on the south bank of the Brisbane River and was completed in 1988. The complex houses the Queensland Art Gallery, the Queensland Museum, the State Library of Queensland and the Performing Arts Complex. The latter has a Concert Hall and Lyric Theatre each with seating for 2,000 people. The Brisbane Entertainment Centre, which opened in 1986, has seating for 13,000.

Because of the presence of both the Queensland Cultural Centre and the Brisbane Entertainment Centre, touring groups of international repute increasingly include Brisbane on their Australian schedules, including ballet, opera, chamber groups, larger ensembles and popular music groups. The Queensland Symphony Orchestra gives regular concerts and has internationally known guest stars. Live theatre is very popular in Brisbane and the Queensland Theatre Company performs first class productions regularly.

Many larger concerts and shows are held at the Brisbane Entertainment Centre at Boondall, some 30 minutes drive from the center of the city, which can seat approximately 13,000 people.

Restaurants: Brisbane restaurants are many and varied, ranging from large international class to small ethnic cuisine restaurants. Queensland’s seafood and tropical fruits are a major feature in many restaurants.

Tipping: Tipping is not compulsory in Queensland, nor is it a widespread practice. It is usual, however, to tip hotel porters, restaurant service and taxi drivers if they have helped with luggage.

Radio/Television: For home entertainment, national and commercial radio networks offer a variety of programs. Five all-color TV stations, including one noncommercial channel, broadcast a mixture of US, BBC and Australian programs. The fifth channel offers a wide range of multi-cultural programs. The TV system is PAL and is not compatible with the U.S. system.

Library: The State Library of Queensland consists of a reasonably well-stocked central library housed in the Queensland Cultural Centre, with several suburban branches. The Brisbane City Council also offers a well-stocked library to Brisbane residents, with branches in many suburbs.

Sports

Brisbane’s mild climate is extremely favorable for all forms of sporting pastimes and special events.

Australia’s favorite sports—cricket, Rugby Union, Rugby League and Australian Rules football—are all readily available in Brisbane.

In the city, tennis, golf, squash, cricket, badminton, bowling, lawn bowls, rugby, soccer, baseball, swimming, and flying are available. Deep sea and surf fishing are popular throughout the State, and the Great

Barrier Reef provides spectacular snorkeling and scuba diving. Water skiing and small boating are popular on the Brisbane River and inland lakes. Sailing and rowing competitions and regattas are held on the river and big boat enthusiasts may cruise the beaches of nearby Moreton Bay or the Pacific Ocean.

Camping or hiking (bushwalking) can be enjoyed in the rainforests or on the Darling Downs about 2 hours from Brisbane. There are camping sites with full facilities in all the National Parks in Queensland.

Waterfowl shooting in the Brisbane Valley is popular with hunters. Brisbane has an artificial ice skating rink, but skiing and other winter sports are not available.

Surfers Paradise on the Gold Coast is only one and a half hours drive south from the city and offers miles of golden beaches, good surfing, water slides, fun attractions, shopping and restaurants.

One hour to the north, the Sunshine Coast offers quieter relaxation on equally beautiful beaches.

Horse racing is well catered for in Brisbane and there are regular trotting and greyhound racing meetings.

Most sporting equipment is available in Brisbane. Depending upon quality preferred, it may be expensive. Bring an initial supply with you. No particular taboos or special requirements exist for sports attire except that whites are required for lawn bowls and cricket.

As Brisbane was host to the Commonwealth Games in 1982, special sporting facilities were built such as the covered Chandler Swimming & Sports Centre and the QE II Sports Stadium.

Social Activities

Business and sporting clubs and organizations such as the American Chamber of Commerce, State Chamber of Commerce and Indus-

try, Rotary, Lions and the Australian-American Association offer excellent points of contact.

Melbourne

Melbourne is the capital city of the State of Victoria at the southeastern corner of the Australian continent and has a population of approximately 3.4 million (1999 est). The city sprawls on gently rolling terrain on the shores of Port Phillip Bay about 50 miles from the ocean. It is bisected by the Yarra River.

Melbourne's latitude of about 38 degrees south corresponds to that of Washington, D.C., and San Francisco; but the climate is more changeable, with warm days and cool nights. Although temperatures rarely drop below freezing, cold evenings and morning frosts do occur in the winter months. The usual summer pattern is a week of gradually rising temperatures culminating in a few hot days suddenly broken by the "cool change", which drops the temperature sharply and starts the cycle all over again. At any time of year the climate is highly changeable with rain, sunshine, heat, and cold sometimes all occurring in the same day. Because of the mild but variable climate, Victoria, South Australia, and Tasmania are well suited for a wide range of flowers and trees that bloom all year round. South Australia and Victoria are noted for their good wines. All three states are rich farming and livestock-producing areas. Victoria, and especially Melbourne and its nearby districts, is a major industrial area. There are several other important industrial areas in South Australia.

Melbourne is a major port city and rail hub, as well as a major center of industry, business, and finance. Its parks are magnificent, its streets are ample, and it is an easy city to get acquainted with and in which to move around. Because of its size and given the high number of cars per capita in Australia, traffic is a growing problem.

The center of the city, however, has numerous car parks and the local

transportation system of trains, trams, and buses is extensive. Taxicabs are clean, reliable, and easy to obtain.

The city has an impressive skyline. A recent construction boom resulted in a large increase in modern office and apartment buildings in the 15 to 50-floor category.

Australia's post World War II program of immigration has brought to Melbourne many "new Australians" from western and southern European countries. These have injected a continental influence that is noticeable in many ways in delicatessens, restaurants, shops, sports, music and cultural programs, as well as in the frequency with which foreign languages are heard.

Since the late 1960's there also has been a substantial influx of Chinese, Vietnamese, Cambodians, Lao and Indonesians which has broadened the city's ethnic and cultural base even further.

Nearly 75 percent of the approximately 20,000 Americans in the consular district are located in the Melbourne metropolitan area, with the rest scattered throughout the district.

Food

In Melbourne there are many supermarkets comparable to U.S. stores, such as Safeway. Imported items from the U.S. and Europe are available, but at higher prices than in the U.S. In addition, because of the large foreign population in Melbourne, there is an immense variety of delicatessens, butchers, and green-grocers specializing in Italian, Greek, Eastern European and Asian produce. Also some neighborhoods have country-style markets which are open several days a week. The largest, the Victoria market, sells everything from fresh fruits and vegetables to live chickens and sides of beef and lamb. Local seafood is excellent and varied, including good fish, oysters and crustaceans. The large saltwater crayfish, known as "rock-lobster" in

the U.S. is very expensive but worth it.

Many supermarkets such as Safeway are open until midnight, but there are several Coles supermarkets operating 24 hours a day. Smaller supermarkets may close around 7 pm. Almost all stores close at 5 pm on Saturdays. City Center shops are open Sunday 10 am-5 pm. "Milkbars" usually exist in the small neighborhood areas. Not only milk, but also other dairy products and "emergency" food items are available at these small stores all weekend. Some grocery stores and butchers will take telephone orders and deliver either free or for a very small charge. For large shopping orders, there is a "half case" outlet next to the parking lot at Prahran Market just off Chapel Street and Malvern Road (see Melway). Similar stores exist in various suburbs; these are listed in the Melbourne telephone directory.

Education

The school year in the state of Victoria runs from late January or early February through early December. The year is divided into four terms with two to three week intervals between terms. The first term ends about Easter, and the other breaks are usually in late June and early October.

In Melbourne most American children attend private nondenominational or church-related schools which are generally considered to be academically superior to the public schools (known in Australia as "state schools"). There is a great variety of these schools, but most American students have attended only a few of these. Sometimes pre-admission examinations are required, but most schools reserve a number of places for the children of temporary consular or business residents, who are admitted without any special formalities. Admission, which depends on the child's scholastic record and existing vacancies in various grades, is most easily obtainable at the beginning of the school year in late January or February.

Students at most private schools wear school uniforms. A substantial initial outlay of approximately 300 U.S. dollars is usually needed to equip a child with the school basics, including regulation shoes, blazers, ties, socks, and gym equipment.

Differences between the American and Australian educational systems are most pronounced at the secondary level, particularly in the last two years of high school. Subjects are roughly comparable up until year ten, although there is probably a smaller choice of subjects in Australian schools.

At least two high schools and a small number of private schools in Melbourne have introduced the international baccalaureate, an internationally recognized high school diploma equivalent to most European secondary school leaving certificates. The international baccalaureate usually requires students to pursue a rigorous course of study in a number of academic areas. Many American universities grant advanced standing to students who obtain the international baccalaureate.

Recently the state of Victoria introduced a new high school diploma which requires students to follow a special course of study in both years 11 and 12. It is known as the Victorian Certificate of Education (VCE) and is being introduced over a period of years beginning in 1990. A controversial issue with many secondary and university educators in Australia, the VCE was introduced to allow more flexibility in subject matter for students in the last two years of high school. In addition to the regular course of study, it requires students to undertake a number of independent study projects, which are graded within the high school; but there is also a major external examination which students take upon completion of year 12 to obtain the VCE.

It should be emphasized that the VCE is intended to comprise a two-year study unit in years 11 and 12. Therefore, students planning to

attend high school in Melbourne in either of these two years would be well advised to obtain specific information from the schools of their choice regarding their special circumstances.

A good grade in the VCE and good high school grades would normally enable a student to gain admission to most American universities.

Clothing

Clothing prices in Australia are high by U.S. standards.

No matter when one arrives in Melbourne there is always the question of what weight clothes to put on—and by the time a decision is reached, the weather has changed completely! Generally speaking, the sweater, light coat or jacket which can be removed is a successful formula, whether it is winter, spring or autumn. Even in the summer either a long-sleeved cotton or a sleeveless dress with light sweater or short-sleeved jacket will be useful.

In the winter months (June-August), skiing is possible about 160 miles from Melbourne, so some “winter” clothing would be appropriate to wear for weekends on the slopes or just looking.

Melbourne has been known to experience all four seasons in one day. There is quite a lot of wind most of the year. In summer, Melbourne has a typical Mediterranean climate, except that the summer is as changeable as the rest of the year, so that hot weather alternates after four or five days with a cool change, and then back again. The following is a rough estimate of temperatures (in degrees Fahrenheit):

- Winter—June 21st through September 21. Daytime averages 57 degrees, nights in low 40's, rarely down to 32 degrees (if so, only for an hour or so); considerable rain and wind, no snow.

- Spring—September 22nd through December 21. Weather very changeable with some beautiful days about 75 to 80 degrees then

a spell of colder weather again; daytime average 67 degrees; can be windy.

- Summer—December 22 through March 21. A few hot days around 100 degrees with sudden changes to moderate weather. Nights generally cooler. Daytime average 77 degrees; breezes.

- Autumn—March 22 to June 21. Best weather; not much wind; average daytime 65 to 70 degrees. Nights around 60 degrees.

(These dates are obviously the reverse of seasons in the Northern Hemisphere which seems to be more easily understandable and logical to North Americans; the Australians tend to use the beginnings of the respective months, rather than the 21st in referring to their seasons.)

Sports

Australians are outdoor sports enthusiasts and Australia is noted for fielding “world class” sports teams. In Melbourne, golf and tennis are the most popular participant sports and are played year round. Sailing, swimming, fishing, surfing, and skin-diving are also popular. Good ski slopes abound in the mountains about 160 miles east of Melbourne. Australian-rules football is a spectacle which attracts huge crowds in the winter season, as does cricket in the summer. Soccer is increasing in popularity with the influx of “new Australians” from European countries. There is a growing national professional basketball association (similar to the American NBA) and amateur basketball and baseball are played at schools or various club organizations. Melbourne has both private and public golf courses and the best of these, such as the Royal Melbourne Golf Club, are among the world's finest.

Sports equipment of all kinds is available locally, including many well-known brands from England, Germany, Japan, and the U.S. The broad range of different types of equipment makes it difficult to com-

pare local and U.S. prices, but most sporting goods, including golf carts and tennis gear, are much cheaper in the U.S.

Tennis clubs are numerous and excellent; both grass and composition courts are available. Some tennis clubs admit children. There are several yacht clubs on Port Phillip Bay.

Deep sea, lake and river fishing are possible in this vast consular district. Small boats may be chartered in Melbourne or the suburbs for any type of fishing. Trout fishing is especially good in Tasmania. Hunting (or "shooting" as it is called in Australia) of ducks, birds, and some animals is possible in many areas. Target shooting can be arranged through one of the various rifle clubs.

Australian regulations no longer allow the importation of firearms of any sort.

Touring and Outdoor Activities

There are many one or two-day trips to be made near Melbourne. Plans, maps and general tourist information for short or long tours may be obtained from the Royal Automobile Club of Victoria (RACV), which provides road and other services for its members similar to those provided by the American Automobile Association, and from Victour.

We also recommend Blair's Guide to Victoria.

Roads outside the major cities are generally two-lane and are well maintained and provided with services such as wayside stops and gas stations.

Among the outstanding attractions in Melbourne are the attractively landscaped Royal Botanical Gardens. Because of the climate here, all tropical, sub-tropical and temperate zone trees, plants and flowers can be grown. Most are informatively labelled. The National Gallery, part of Melbourne's new Arts Center, has a

choice Far Eastern collection, as well as splendid representation from other parts of the world. There is an excellent group of Australian Impressionist paintings. The several National Trust Houses in and around Melbourne are well worth a visit. The National Museum has an excellent scientific collection.

In addition to a well-stocked zoo in Melbourne where one can find a good section of Australian fauna, as well as new and imaginative areas being built for animals from all over the world, there is an excellent wildlife sanctuary at Healesville about 40 miles northeast of Melbourne in the foothills of the Great Dividing Range. There one can see the shy lyre bird, emus, wombats, and opossums, walk among tame kangaroos and wallabies, see koala at close range, and watch the duck-billed platypus in a specially-constructed tank.

Taking the back road to Healesville one can get a splendid overall panorama of Melbourne from Kangaroo Ground War Memorial Tower, just 10 miles north of the City. (For kangaroo viewing go on to Sir Colin Mackenzie Sanctuary at Healesville referred to above.)

Phillip Island, about 85 miles southeast of Melbourne, is a popular summer resort where seals, fairy penguins, koalas and other wildlife can be seen in their natural habitat. Many people make at least one overnight trip to watch the fairy penguins march in from the sea at dusk.

The Dandenong Ranges, about 20 miles east of Melbourne are attractive to explore on short day trips. Gippsland, an area of wooded hills and rolling dairy country beginning just southeast of Melbourne, is relatively little-known as a tourist attraction, but drives through this nearby area provide many opportunities to see flora and fauna of Victoria in its natural state.

Further to the southeast, about 150 miles, is Wilson's Promontory, the southern extremity of the Australia-

lian mainland. It comprises 116,000 acres of National Park which makes an ideal spot for walkers and swimmers. Flats and lodges of varying bed capacities are also available for hire at Tidal River within the Promontory. Arrangements for the rental of these accommodations are made through Tourism Victoria. There are also several small towns nearby where one can find adequate motel accommodations.

Facilities for campers with tent or trailer are good in all populated areas of Australia. Most campsites have toilet and shower blocks with hot water and laundry facilities. Trailers can be rented on the spot as well. Skin divers will find ample opportunity to pursue their hobby. To recapture the flavor of the gold rush era, day trips are possible to Ballarat and Bendigo, two old Victorian mining towns an hour's drive west and northwest of Melbourne, respectively.

The beaches inside Port Phillip Bay run over 50 miles from Melbourne down the Mornington Peninsula; the nearest ocean surf beaches are just outside the Bay about 1 1/2 hours' drive. The drive along the Peninsula, inside or out, is quite lovely with varied views. Sharks do appear along some of these beaches, but are less of a problem here than elsewhere in Australia. Many of the more popular public beaches have "shark watch" personnel as well as lifeguards on duty.

An interesting day or weekend trip by car by to Lake Eildon, about 90 miles northeast of Melbourne. This is Victoria's biggest man-made lake which was built to irrigate a vast area of northern Victoria, reaching as far as the Murray River. Set in the Upper Goulburn River Valley, Lake Eildon has an area of 50 square miles and picturesque 320-mile shoreline. It is ideal for water sports. Houseboats can be rented for a weekend or longer for great family vacations. In this area there is also a chance to see native wildlife.

Auto trips to the Australian Alps to see the Snowy Mountain hydroelec-

tric power project take about six hours and good overnight accommodation is available.

The Great Ocean Road along the southern coast of Victoria to the west is a delightful way to get to South Australia. Special scenic attractions are the "Twelve Apostles" and Loch Ard Gorge, stark rock formations set in the midst of surging tides. Inland from the cliffs and beaches are the rain forests of the Otway Range with their tall, stringy-bark eucalyptus trees and tree ferns. Over the South Australian state border are volcanic lakes, limestone caves with recent exciting finds of extinct marsupial lions and giant kangaroos. The inland marshes are full of black swans, egrets and ducks. Further to the north, Adelaide, the capital of South Australia, is a beautiful city set in an amphitheater of wooded hills. The new music and art center is the focus for the Adelaide Festival which attracts talent from all over the world.

Returning from Adelaide, or a special trip on its own, a stop in the Grampians, low ranges of rocky mountains in Western Victoria, is especially worthwhile during springtime when there is a vast array of wildflowers carpeting the area.

Entertainment

Melbourne has many theaters whose productions include many musicals and plays from Broadway and London, sometimes with imported casts or stars, but more often with excellent local talent. There are also several repertory companies which present regular seasons runs up to five or six weeks for each play. The Victorian Arts Centre has lavish facilities for concerts, theater, opera and dance on a par with the Kennedy and Lincoln Centers.

Melbourne has an excellent symphony orchestra with a regular season. There are also several music societies which regularly present good opera, ballet and symphony concerts. The Melbourne Arts Festi-

val, modeled after Italy's Spoleto Festival, takes place in September. In addition, many times during the year there are visiting orchestras, chamber music groups and soloists. A series of outdoor "Music for the People" concerts is given by the Melbourne Symphony Orchestra in the summer months at the Sidney Myer Music Bowl. Top jazz, rock and roll, and country and western bands from the U.S. and Europe perform regularly.

Several film societies present old and new films on a monthly basis. Some have special film festivals of a week or so duration. Also, special programs featuring returns of old favorites are very popular. This is, of course, in addition to the usual run of contemporary films presented on a public basis throughout all of Greater Melbourne. There is a Melbourne Film Festival in May with films from all over the world.

In Melbourne there are five TV stations; many AM and several FM radio stations. Classical music and news programs are available throughout the day and evening as well as the usual "top ten" tunes.

The Melbourne Cup horse race in November is considered to be Australia's outstanding race meeting of the year and is a major holiday and social event. The Davis Cup playoffs or finals often are held in Melbourne in December. The Australian Tennis Open is held in January. The Royal Agricultural Show is held in September. The annual Moomba carnival, celebrated each year in March, is sponsored by the City of Melbourne, with many varied exhibitions during a week-long program. Memorial events include observance of the battle of the Coral Sea in May and ANZAC Day in April.

Social Activities

Social activities vary according to responsibilities, desires and opportunities within a personal or family pattern.

The Australian-American Association (AAA)—Its aim is to promote close ties between Australians and

Americans. Coral Sea Week (now known as Australia-America Week) has been celebrated together for many years, either at balls, dinners, luncheons or all-day picnics. Other occasions follow a similar pattern.

The American Club of Victoria—Its principal purpose is to mark the main American holidays. It organizes for its members a Memorial Day Service at a church followed by a reception at the Consul General's residence. For Americans and their Australian guests, the Club arranges a Thanksgiving Dinner at a local hotel.

The American Women's Auxiliary to the Royal Children's Hospital—Its main objective is the raising of funds to support a ward, and to help pay for materials and equipment, in the Hospital. Members may also do volunteer work in the hospital canteen or with the children themselves. The Club also serves as a welcoming group for Americans coming into the community, particularly American businessmen's wives.

The Auxiliary is open primarily to women of the Consulate General. The main social activities of this group are monthly luncheons with speakers, a rummage sale once a year and a Fourth of July Ball (usually held on the 5th).

There are men's clubs in and around Melbourne; some offer honorary memberships. There are the usual service clubs for men as well.

Some Americans have joined the American Branch of the Australian Red Cross and some participate in the activities of the English Speaking Union. Melbourne also has Rotary, Lions, Toastmaster, Kiwanis, and Apex Clubs.

Perth

Perth, with a population of about 1,364,000 (1999 est.), is the capital of Western Australia, the largest of the Australian States.

View of Perth from King's Park.

Susan Rock. Reproduced by permission.

Perth entered into a stage of modern development during the economic expansion of the 1960s and early 1970s. Prior to then, Perth was one of the most isolated cities in the world, separated even from Australia's Federal capital by more than 2,100 miles. Road, rail, ship, and air services now provide a constant and quick interstate and international link. Modern communications and technology provide the instantaneous information demanded by a modern community.

Foreign capital, much of it from Japan, China, South East Asia, and the U.S., is spurring this economic growth and Perth has become a commercial and industrial complex in its own right. Perth's function as an administrative center for the vast hinterland remains all-important.

Perth is an attractive, modern city in the midst of residential expan-

sion. Large areas of natural bush have been bulldozed to meet the demands of growth, and freeways connect the towering office blocks of the central business district and the suburbs. Flanked by thousands of new homes, roads and highways radiate out from the city center. Attractive residential areas front the Swan River and the Indian Ocean.

White, sandy beaches are accessible from most parts of Perth.

All the consumer goods and the modern comforts of life are available in Perth, but they are expensive. Many goods are manufactured in the eastern States and reflect the high cross-country transport costs.

U.S. firms are well represented through branch offices, subsidiary companies and agencies. Their interest is primarily in the oil and

gas, and alumina mining areas. Approximately 7,000 Americans live in Western Australia.

Perth has one of the best climates in Australia. It is the sunniest of the State capitals, receiving an average of 8 hours sunshine a day. It has the wettest winters and the driest summers, with an average rainfall of 33 inches. Temperatures average about 73°F in summer and about 55°F in winter. In summer a number of days of above 100°F temperatures are to be expected, but low humidity and evening sea breezes make most summer nights comfortable. With winter rainfall and a lack of central heating, winter can feel chilly.

Food

Perth supermarkets are similar to their U.S. counterparts and are stocked with most varieties of food-stuffs required by the American consumer. Meats, fresh fruits, and

vegetables are plentiful and reasonably priced. Paper products and cleaning supplies are expensive.

Clothing

Perth is a relaxed city and clothing is similar to that of southern California. Sundresses, slacks, jeans, T-shirts, and shorts are all in evidence as are smart luncheon dresses, tailored suits, and, sometimes, hats. For work most men still wear coat and tie, even in hot weather. Evening attire is similarly varied, ranging from long gowns to short cocktail dresses.

Perth has a budding fashion industry. Clothing of all types, including many international brands, are available in Perth stores; however, the cost is greater and the selection smaller than in the U.S. The same is true for underwear and children's clothing.

Supplies and Services

Several large department stores in the downtown business district offer most goods found in U.S. department stores. Also, spacious suburban centers offer convenient shopping in air-conditioned malls. These shopping centers and downtown stores close at 5 pm on weeknights and Saturday, except Thursdays, on which there is "late-night shopping" until 9 pm. The downtown mall and larger suburban centers are open on Sundays. Convenience stores stay open longer but charge higher prices.

Stores are well stocked. With the growth of the State's population, more goods are being produced in western Australia instead of being shipped from eastern Australia or overseas. Consumer prices in Perth are higher than for the eastern U.S. and higher than the U.S. average.

Religious Activities

Religion in Perth is predominantly Christian. Of the population, 26 percent are Anglican, 25 percent Roman Catholic, and 5 percent Uniting. All churches hold regular services and Sunday school and offer religious instruction to their members. Judaism is the chief non-

Christian religion; the Jewish community is active. Recent immigration from Indochina, the Middle East, and the U.S. has broadened religious philosophies, there are now several Moslem mosques as well as churches of Seventh-day Adventists and the Latter-Day Saints.

Education

Educational opportunities, both formal and informal, are available to suit practically all interests. Four major universities provide tertiary and post graduate degrees. Technical, vocational and recreational learning centers abound as Perth services both the burgeoning population of Western Australia as well as several countries of Southeast Asia.

Perth churches play an important part in education and operate the major private schools.

Sports

Sporting facilities are excellent for tennis, golf, sailing, and all water sports. Horse racing, trotting, and dog racing are popular year round. Car racing, Australian rules football, and cricket are also popular spectator sports. Many sporting associations and public facilities are available for golf, tennis, lawn bowling, surfing, boating, and sailing. Membership is obtainable and inexpensive. Fishing, water skiing, biking, hiking, ten pin bowling, and rollerblading are also popular. Indoor rinks also make it possible to pursue ice skating and ice hockey. Baseball, softball, basketball, and soccer are also very popular.

Touring and Outdoor Activities

Good highways can speed the motorist to most areas of the State. The West Australian outback has some magnificent and rugged scenery. With the onset of spring, the wildflowers bloom in abundance, blanketing the State in blossoms.

Entertainment

Entertainment facilities in Perth are much like those one would

encounter in a U.S. city of similar size. The library system consists of a well-stocked central library with numerous suburban branches. The State library also provides an information service.

Perth's principal museum, the Western Australian Museum, is devoted mainly to natural history, but it also has an interesting collection from pioneering days. It runs a children's center during the school holiday. The Western Australian Art Gallery has an interesting collection by many Australian artists. The city also has several private galleries. The port city of Fremantle has an excellent maritime museum.

Perth's concert hall and entertainment center attract artists of international renown. Excellent theaters on the University grounds as well as the refurbished His Majesty's Theater offer all forms of entertainment from classical to popular.

The city has five color TV stations, nine AM radio stations, and five FM stations. Numerous movie theaters show movies throughout the city and suburbs.

The Festival of Perth, held annually in February, attracts artists, plays, and exhibits from all over the world.

Social Activities

Western Australians are known for their friendliness. Sporting clubs and organizations such as Rotary and Lions offer excellent points of contact. The Australian-American Association and the American Women's Club provide opportunities for social involvement. Large organized social affairs are more formal than in the U.S. and long dresses or formal cocktail attire is worn.

The backyard barbecue is an institution in Perth because of the great weather and many invitations can be expected.

Sydney

In many ways Sydney is like San Francisco, with old homes perched

alongside modern apartment buildings on hills overlooking picturesque bays and coves. It has an international seaport with a scenic harbor, dominated by a famous bridge, and the world-famous opera house. In other ways, the city resembles Los Angeles, with its pleasant climate and informal outdoor life. The mean temperature in Sydney ranges from 56°F in winter to 74°F in summer.

Sydney is the capital of the State of New South Wales. It is also Australia's largest city (about 4 million people, 1999 est.), and is situated on the magnificent harbor of Port Jackson. It was the first European settlement in Australia, settled in 1788 as a penal colony. Sydney was named for Thomas Townsend, the first Viscount Sydney, Secretary of the Home Department, responsible for colonial affairs when New South Wales was founded.

The city grew rapidly with the arrival of free settlers; establishment of wool and wheat industries in New South Wales; gold rushes; building of road and rail networks focusing on Sydney Harbor; and the development of commerce, industry, and banking. The growth was largely unplanned, and the winding narrow streets and jumbled buildings add to Sydney's charm while aggravating traffic problems.

The city is built on an undulating low land south and west of Port Jackson and some steeply scarped sandstone plateaus north of the harbor and along the coast. The higher areas are 487–682 feet above sea level. The harbor has many bays, inlets, and coves with about 180 miles of shoreline. Most of the shoreline has been developed, but some areas have been set aside for parks, recreation areas, and reserves. Harbor Bridge, a single span steel arch known as the "coat hanger," and an underwater tunnel connect the north and south shores.

Food

As in Canberra, most foods are readily available. Supermarkets, as well as specialty shops, are found in

the city and suburbs. Some "American" food staples, such as Crisco, Bisquick, corn meal, and Mexican specialties, can occasionally be found in more expensive "international food" sections of stores.

Clothing

Sydney has a milder climate than its sister cities to the south. However, personnel often travel to the other areas of Australia. We suggest bringing some clothing suitable for tropical climates to the north and for the southern winters. For Sydney, clothing suitable for San Francisco is appropriate most of the year, though summers tend to be hotter and muggier.

Education

All public or government schools in Sydney are controlled by the New South Wales Department of Education. Non-government schools are usually church-sponsored, but they must follow courses and conform to the examinations of the State government system. Uniforms are usually required.

The school year begins in February and is divided into four terms; a break of approximately 2 weeks occurs between each term (April, July, September), with the long vacation (summer holidays) occurring in December/January. Both public and private schools follow this yearly pattern with only minor variations.

Grade placement is usually determined by the student's age, previous experience, and overall academic ability.

Free passes for use on public transport on buses and trains are provided for all children traveling more than 1 mile if they are attending the nearest appropriate school. This service is also provided to children attending private schools with no restriction on distance but with restrictions as to the outer limits on the transport system.

Sports

Sydney's outdoor sports facilities are equalled by few cities of its size

in the world. Beaches on the ocean north and south of the harbor entrance offer swimming, surfing, and beach sports from October through March. The harbors and rivers in the area are favorites for sailing and water skiing. The shark menace has been widely publicized, but no one has been attacked in the harbor for over 10 years, and beaches and offshore waters are patrolled.

Sydney is a sailor's paradise. The harbor is filled with small boats every weekend. Sailboats and power boats can be purchased locally, but prices are higher than in the U.S. prices.

Skiing is growing in popularity, though the season is limited to June-August and sometimes September. Ski resorts are 6 hours or more from Sydney by car. You can rent equipment.

The city is full of magnificent golf courses, both public and private, and tennis courts are numerous. Squash is a popular local pastime and squash courts are available at many clubs and at several large commercial facilities. The leading spectator sports are cricket and rugby football. Baseball also has been popular for many years, particularly in the western suburbs of the city, and a regular amateur league has teams throughout Australia. Basketball is growing rapidly in popularity. Indoor rinks also make it possible to pursue ice skating and ice hockey.

Hiking (bush walking) is popular, as is amateur prospecting in some of the old gold or opal fields in the interior of the State.

Saltwater fishing is good, and several streams and lakes offer freshwater fishing. Hunting most animals and birds is controlled, and hunters are often confronted by animal rights activists.

Touring and Outdoor Activities:

A number of pleasant picnic spots exist both within and near the city.

One of the favorites is the Royal National Park, about 30 miles south. Sydney has an excellent park system. Most suburbs have park and playground areas for children that are owned and controlled by local councils. You can reach the Sydney Zoological Gardens at the Taronga Park by car, bus, or ferry. The zoo, in a beautiful setting overlooking the harbor, is world famous for its collection of Australian fauna. A world-class aquarium is located at Darling Harbor, and another one in the North Shore suburb of Manly.

The Royal Botanic Gardens, Art Gallery of New South Wales, and the Australian Museum offer interesting and educational exhibits and are close to the city center. The magnificent Blue Mountains are less than a 2-hour drive to the west, and beaches on the south coast are popular vacation or weekend trips.

Entertainment

Sydney has many movie theaters, including large downtown and neighborhood first-run cinemas. Most films are English or American, but foreign-language films are also shown. Most films are seen here soon after release.

The legitimate theater retains its hold on the affection of Sydney-siders, and at least five or six stage productions are usually going on simultaneously. Productions include reviews and musicals, as well as drama and experimental plays. Some small, independent theaters in the suburbs have had successful productions and have become locally well known.

Australian ballet and opera companies have regular seasons in Sydney. Sydney's world-famous Opera House at Bennelong Point was opened by Queen Elizabeth on October 20, 1973. It contains concert halls, restaurants, and theaters, as well as the opera theater, and is the focal point for cultural entertainment in Sydney. Both the ballet and opera maintain international standards and have successfully tour abroad. Public support is wide-

spread and bookings should be made in advance. The Sydney Symphony Orchestra has a 6-month season and often has foreign guest soloists or conductors. World-class touring orchestras, chamber music groups, and soloists appear frequently.

Outdoor fairs include the Royal Easter Show and the Autumn Sheep Show. Other important events are the City of Sydney Festival in January, ANZAC Day Parade and commemoration ceremony in April, and the Australian-American Friendship Week in May. No unusual guidelines, etiquette requirements, or photographic restrictions apply to these activities.

Social Activities

Social contacts of Americans range from informal home visits to more formal meetings and an occasional full-dress ball. Except for small gatherings, however, few functions consist exclusively of Americans. Several Australian-American organizations are active in Sydney. The most prominent organization for promoting bilateral relations is the Australian-American Association (AAA), which sponsors an annual Friendship Week Ball, 4th of July activities and other social functions during the year.

The American Society and its affiliate, the American Women's Club, also have large and active memberships and welcome new arrivals to their ranks. The Society holds an Independence Day Celebration, an annual picnic, and other social events keyed to traditional American holidays, or to benefit worthy causes.

An American Legion chapter is active in Sydney. Another successful local organization is the American Club, a downtown eating club, a majority of whose members are now Australians.

The social club is a prominent feature of Sydney life. Clubs cover every form of activity from golf and tennis to lawn bowls, ethnic societies, and rugby league clubs. Since

slot machines are legal on club premises in New South Wales, many of the larger clubs have used this income to subsidize club activities and have low membership fees and lavish facilities—including indoor swimming pools, nightclubs, moderately priced meals, and such auxiliary activities as sports tournaments and charter group travel arrangements. Until recently, club life was predominantly a male phenomenon. But now women are admitted to full or associate membership in most institutions.

Sydney is a cosmopolitan city, and contacts with third-country nationals are frequent in the course of normal official or social activities.

Adelaide

Adelaide, founded in 1837, is the capital and principal city of South Australia. It was named for the consort of Britain's King William IV, and was the first city in Australia to be incorporated (1840). Now a thriving municipality of over 1 million inhabitants, it is a business and commercial center which supports a large export trade (Port Adelaide is only seven miles from the city), and which boasts a relatively new complex for the performing arts, the Adelaide Festival Centre. The Centre hosts Australia's premier performing arts festival. Adelaide is also the site of the annual Australian Formula One Grand Prix.

The city lies on the River Torrens, in an amphitheater of wooded hills. Its numerous parks and gardens provide the setting for an interesting mixture of colonial architecture and large, modern buildings. The University of Adelaide, more than a century old, is located here, as is Flinders University of South Australia, which was founded in 1966. Adelaide is noted for its many churches, including St. Peter's Anglican Cathedral. The South Australian Museum contains the world's largest collection of aboriginal artifacts.

One of the major tourist attractions in Adelaide is the huge Central

Sydney Opera House.

Susan Rock. Reproduced by permission.

Market, the largest produce market in the Southern Hemisphere. Shopping centers, where aboriginal arts and crafts may be purchased, and good hotels and restaurants have helped to increase business and tourism in the city. The South Australia Government Tourist Bureau conducts tours of the city and its environs and also of the Barossa Valley wine-producing district, where a vintage festival is held in odd-numbered years.

Warm-weather sports are particularly popular in Adelaide's climate. There are many cricket fields and tennis courts (Davis Cup matches are held here). Among the other popular sports are lawn bowls, golf, racing, water sports and, in the winter, football.

From Melbourne, the Great Ocean Road along the southern coast of Victoria to the west is a delightful way to get to South Australia, and on to Adelaide. Inland from the

cliffs and beaches are the rain forests of the Otway Range with their tall, stringy-bark eucalyptus trees and tree ferns. Over the South Australian border are volcanic lakes and limestone caves, with recent finds of extinct marsupial lions and giant kangaroos. The inland marshes are full of black swans, egrets, and ducks. The trip is fascinating, and lures many tourists to this part of the Australian continent.

Hobart (Tasmania)

Hobart is the capital of historic Tasmania, Australia's southernmost state. Named for Lord Hobart, a British colonial secretary, the city was known as Hobart Town for nearly 40 years after its incorporation in 1842. For a brief period, it also was called Hobarton. What is now the capital city originated as a penal colony on the site of one of the present suburbs, Risdon, but the settlement soon was moved across

the Derwent River. In 1812, it became the seat of state government.

The island state of Tasmania located about 150 miles to the south of Melbourne across the Bass Strait, is an outdoor adventurers dreamland. There are over 2000 km of walking tracks on the island and 18 national parks, with mountains, rivers and lakes that are never too far from the fabulous beaches on the coastline. The patient, observant hiker may get to see some of the abundant wildlife on Tasmania including wombats and wallabies, pademelons and platypus, kangaroos and quoll, and of course, the Tasmanian Devil. Fishing is plentiful and ocean life includes a large number of seals, dolphins and whales.

Dozens of guided and self-guided walking tours lead through Victorian-era streets and seaside towns to tell the stories and legends of the

earliest European settlers, most of whom were British convicts and the families of British security officials. Several prison buildings are now museums with artifacts, exhibits and presentations to share the history and experience of these people. Before the arrival of the British, however, Tasmanian Aborigines lived in isolation on the island for nearly 10,000 years. Their unique experience is shared at the Tiagarra Centre on Devonport's Bluff.

For a more refined experience, Tasmania has dozens of shopping markets that offer a variety of goods from antiques to arts and crafts. Excellent wines, cheeses, and chocolates, as well as local specialties such as leatherwood honey, are tempting treats. And in the evening, you can take in a concert at the Tasmanian Symphony Orchestra's Federation Concert Hall.

The population of Tasmania is about 470,000 (2000 est.) Tasmania can be reached by plane or ferry from Melbourne.

Hobart is the home of the University of Tasmania and of the State Library, which houses an excellent museum and fine art galleries. There are many designated historic sites in the city, as well as botanical gardens of note.

Fishing, swimming, golf, lawn bowls, and squash are among the numerous sports available in this temperate climate. Spectator sports feature especially the annual Sydney-Hobart Yacht Race, originating in Sydney the day after Christmas. There is ample opportunity for entertainment in Hobart, which has a legal gambling casino, plus concerts, movies, legitimate theater, and a wealth of hotels and restaurants.

The metropolitan population of Hobart is over 194,000 (1999 est.).

OTHER CITIES

From its rough and tumble beginnings as a small desert town, **ALICE SPRINGS** has grown just enough to include all the modern facilities a traveler could want while keeping true to the rustic Outback heritage of the town. Alice Springs is located right in the center of Australia on the banks of the Todd River, which is usually dry. The second largest town in the Northern Territory, it is called the capital of the Outback with a population of over 27,000. It became most popular as a tourist site after the release of the 1956 film romance, *A Town Like Alice*.

Originally named Stuart, the town was founded in 1871 as construction began there for the overland telegraph station built to relay messages between Darwin and Adelaide. The waterhole located just east of the telegraph station buildings was named Alice Springs in honor of the wife of Sir Charles Todd, the Postmaster General of South Australia. The locals began to use the name for their town and officially renamed the place Alice Springs in 1933. The Alice Springs Telegraph Station and the waterhole are still popular sites to visit.

For those looking for a moderate outback adventure, Alice Springs offers a variety of opportunities to explore. Hikers will enjoy the Ayers Rock, a two-mile red monolith, and the nearby Olgas, a huge group of domes of lavender conglomerate rock. Overnight or weekly dude ranch trips out of Alice Springs are similar to those in the Western U.S. Camels are widely available for excursions or you may choose to tour the area from a hot air balloon. Visitors can stay at one of two major Caravan Parks, which offer accommodations that range from simple camp sites to deluxe villas with fully modern facilities.

The Alice Springs Desert Park is a combination national park, zoo, research center and aboriginal cultural center. The park offers 1.6 km

of trails through three typical desert habitats as well as a wide range of interactive exhibits and presentations designed to share an appreciation for the land and people of the Australian outback. The National Pioneer Women's Hall of Fame, featuring the accomplishments of women who made pioneering discoveries in all fields, is also located in Alice Springs.

If you're in Alice Springs in September, you won't want to miss the world famous Henley-on-Todd Regatta. The event attracts many local and international participants who have found ingenious ways to race their homemade boats on a river without any water.

Trips to Alice Springs should be in the winter months, since the dry center of Australia can be very hot in the summer.

Situated on the north coast near the Timor Sea, **DARWIN** is the capital of the Northern Territories. With roughly 88,000 residents (1999 est.), it has one of Australia's finest harbors and is one of the country's most modern cities. Darwin is the service center for the sparsely inhabited hinterland; the economy also relies on government business. This is a vital transportation and communications hub, served by an international airport. The area was founded in 1839 by a surveyor on the HMS Beagle, scientist Charles Darwin's (1809–1882) research ship. The expanding air service industry accounted for much of the area's growth in the 1930s. The Allied armies in Northern Australia were headquartered here during World War II, when Darwin was heavily damaged in bombing raids. A 1974 cyclone decimated the city, but it was rebuilt with government aid.

FREMANTLE, a suburb of Perth, is located on the Indian Ocean at the mouth of the Swan River in southwestern Australia. Founded in 1829, Fremantle is the terminus of the Trans-Australian railroad as well as the seaport for Perth. The city is a fishing and passenger port

and the chief commercial port in the area. Fruit, flower, wheat, and wool are exported, and steel, oil, and phosphates are imported. East Fremantle and North Fremantle are suburbs of the city which has a current population of more than 25,000. Fremantle gained worldwide recognition as the site of the 1987 America's Cup yachting race.

GEELONG, Victoria's second largest city, has an estimated population of over 156,000 (1999 est.). It is an important port, located on Corio Bay, 50 miles southwest of Melbourne. A large percentage of the nation's wool crop is marketed here; shipping and manufacturing are also major employers. Many schools and laboratories, as well as a large library, have made Geelong a center of education. The city set aside 40 percent of its area for parks, and lies in the middle of a coastal resort area. Geelong's name is taken from the Aboriginal *jillong*, meaning "the place of the native companion," a reference to a long-legged bird.

GOLD COAST, 50 miles south of Brisbane, is a resort complex that straddles the Queensland/New South Wales border. Building restrictions here were lifted in 1952, causing a massive construction boom. Beach resorts abound in Gold Coast, where the population of approximately 391,000 (1999 est.) expands dramatically at holidays. Tourist attractions include a fauna reserve and a bird sanctuary.

NEWCASTLE (formerly called King's Town) lies on the Tasman Sea, 100 miles northeast of Sydney. Iron and steel industries, mining, and textile manufactures are the main economic activities here. Newcastle was founded in the early 19th century as a penal settlement and became a city in 1885. The city has port facilities and a channel. The War Memorial Cultural Centre was established in the 1950s. Newcastle's current population is nearly 479,000 (1999 est.) and is Australia's sixth largest city.

The seaport of **WOLLONGONG** is 40 miles south of Sydney. With over

263,000 residents (1999 est.), this is the nucleus of the Illawarra dairy region. Bulli coal deposits have lured many heavy industries to the city, and the artificial harbor of Port Kembla is the home of a fishing fleet. Wollongong has road and rail connections to Sydney. The University of Wollongong and a technical college are located here.

COUNTRY PROFILE

Geography and Climate

Australia is a large, comparatively dry, and sparsely inhabited continent, almost as large as the 48 contiguous U.S. states. Australia, the only continent that consists of a single nation, is also the only inhabited continent which is isolated from all others (total coastline exceeds 22,000 miles). Average elevation is about 985 feet, which makes it the flattest continent on earth. This is among the prime reasons for sparse annual rainfall—16.5 inches, which is less than two-thirds the world average (26 inches). Further, the rain falls mainly on coastal regions: Forty percent of the surface gets less than 10 inches per year, and annual evaporation exceeds annual rainfall on about three-quarters of the land. Overall runoff is less than half that of the Mississippi basin; Australia has no navigable rivers of any commercial significance.

In general, the country is warmer than the U.S. (the northern one-third is in the tropics, the rest in the temperate zone). Temperature extremes are much less pronounced. Sydney's average daytime temperature is 59 degrees Fahrenheit in the coldest month (July), and 81 degrees in the warmest month (January).

Population

Most of Australia's 19.2 million people live in the south and southeast coastal areas (temperate zone). The

states of New South Wales and Victoria contain about 60 percent of the population. Australians are mainly city dwellers: about 63% percent reside in the eight capital cities, with about 38% in Sydney or Melbourne.

About 80% of Australians are of British or Irish descent. After World War II, Australia began to encourage immigration from other European countries also, and these immigrants and their descendants make up most of the balance. Approximately 23 percent of Australians were born overseas (9 percent in the UK, Ireland, or New Zealand), and about 20 percent to homes where English is not the dominant language. Immigration from Asia has increased in the last twenty years, especially from Vietnam, Cambodia, and China. Fifty percent of current immigrants come from Asia, and Asian-Australians are projected to account for 10 percent of the total population within a generation. In 1992, the population's annual rate of growth was estimated to be 1.37 percent; a little less than half of that stemmed from immigration. The government promotes pluralism, ethnic tolerance, and social diversity, describing this policy as multiculturalism.

Aboriginals and Torres Strait Islanders total about 260,000 (approximately 1.5 percent of the population). Most of them live in northern coastal regions and the interior, but there are also significant aboriginal communities in metropolitan Brisbane, Sydney, and other Australian cities.

Government

Australia is divided into six states and two territories: Queensland, New South Wales, Victoria, Tasmania, South Australia, Western Australia, the Northern Territory, and the Australian Capital Territory (Canberra). All eight regional jurisdictions are represented in both houses of Parliament. Australia also governs external territories such as Norfolk Island in the Pacific (about 1000 miles northeast of Sydney), as

well as the Cocos (Keeling) and Christmas Islands in the Indian Ocean (about 1600 miles northwest of Perth).

In fiscal terms, Australian state and territorial governments mainly depend on grants from the federal government, for they do not tax personal incomes or corporate profits. Nevertheless, the states and territories have broader administrative authority than states of the U.S., for they manage various functions that Americans usually associate with local government (e.g., police, schools, and hospitals). In Australia, local governments provide relatively minor services (e.g., water supply, recreation facilities).

Canberra, the capital, is about 180 miles southwest of Sydney. During nation-building ferment of the 1890s, it became clear that partisans of Sydney and Melbourne could not reach agreement on either city as the permanent capital. The site of Canberra, the compromise, was selected after the six states federated in 1901. Chicago architect Walter Burley Griffin designed the basic plans, and construction started in 1913.

The Commonwealth (federal) government and the six state governments operate under written constitutions which mainly draw on the British (Westminster) tradition of a Cabinet government that is responsible to a majority in Parliament's lower chamber, the House of Representatives. The federal constitution, however, also contains some elements that resemble American practice (e.g., a Senate in which each state has equal representation).

The head of state is Queen Elizabeth II, the reigning British monarch, but she exercises her functions through personal representatives living in Australia (i.e., the Governor-General of Australia and the Governors of the six states). All seven are Australian citizens and are appointed at the recommendation of the respective head of government (i.e., the Prime Minister or

the Premier of a state). Most of their duties are ceremonial, and they mainly act on the advice of Cabinet ministers. Democratically elected representatives thus exercise effective rule, and in recent years there has been considerable debate about proposals to abolish the monarchy and establish a republic.

Voting is compulsory, and seats in the 147-member federal House of Representatives are allotted to the states and territories according to population. Members of the House are elected to three-year terms from specific "divisions" (districts) by means of a preferential voting system, but the Prime Minister may recommend new national elections before the three years have elapsed. (The Governor-General traditionally follows such advice.)

The Prime Minister and other Cabinet ministers are all serving members of Parliament. By tradition, most are members of the House of Representatives, which is the focus of intense debates and a highly structured competition that pits the government against the opposition. Party discipline is strict; almost all controversial proposals are debated and enacted along party lines. It is rare for a member to cross the floor (i.e., vote against party views), and anyone who does so risks expulsion from the party or rejection for "preselection" in the next electoral cycle. (Australia does not have primary elections. A candidate for the House of Representatives is nominated during a meeting of the party's local members.)

Each of the six states elects 12 federal Senators who serve for six years, but their terms overlap—so that half these seats are at issue every three years. In addition, each of the two territories elects two Senators who serve three-year terms. The upper house thus has 76 members in all.

Drafters of the constitution intended that the Senate mainly serve to represent the states and protect their rights. But because of strict party discipline and complex

electoral methods—at-large voting involving proportional "quotas" and sequential tallies that take account of second and subsequent preferences marked on the ballot—Senators mainly represent the interests and policies of political parties, with relatively minor variations that attest to regional concerns. Senators may serve as ministers, and in recent years about one-third of the overall number have come from the upper house.

The Senate cannot originate or amend tax or expenditure bills, but has the constitutional authority to reject them or propose changes. In all other respects, the two houses have equal standing. Under complex conditions specified in the federal constitution—in essence, extended deadlock between the House and Senate—both houses may be dissolved simultaneously, so that ensuing national elections would involve all seats in Parliament. This is unusual and has occurred only six times.

All major parties support the U.S.-Australia alliance and stress the importance of close relations between Australia and the United States. This long-standing and stable pattern is essentially unaffected by the outcome of national elections.

The governing Australian Labor Party (ALP), which maintains close ties to the trade union movement, has held office since 1983. During that period, the government has carried out major restructuring of the economy (e.g., floating the Australian dollar, cutting tariffs by substantial amounts, reducing and simplifying regulations that affect business). Liberalizing trade and enhancing economic integration with Asia-Pacific countries are major tenets of the ALP.

The opposition Liberal-National Coalition agrees with the ALP on the need to liberalize trade and enhance economic ties, and it likewise favors a free-market approach to economic growth. The Coalition, however, stresses individual rights, personal autonomy, and managerial

initiative, while favoring a more rapid shift toward enterprise contracts that would replace detailed federal and state regulations on pay levels and fringe benefits. Its junior partner, the National Party (formerly called the Country Party), is closely associated with conservative social values and the interests of farmers.

Two minor parties—the Australian Democrats and the Western Australia “Greens”—are represented only in the Senate but have political and media effects which are disproportionate to their numbers. The Democrats tend to be somewhat to the left of Labor, stressing good government, public-sector services, and social equality. The Western Australia “Greens” take a special interest in environmental matters and often express concern about the effect of large social institutions (e.g., government bodies, corporations, and trade unions) on individuals and local communities.

The High Court of Australia equates to the U.S. Supreme Court. It has the power of constitutional review, as well as general appellate jurisdiction over other federal courts and the courts of the various states. The federal court system is less extensive than in the U.S., for Parliament has invested state courts with substantial authority to enforce federal statutes.

Arts, Science, and Education

Education is compulsory through age 15. Reflecting the government’s drive to expand educational access, the number of Australians finishing high school has risen from 34 percent in 1983 to over 70 percent today. Approximately 66 percent of students attend government schools; the rest attend private schools. The number of students completing the Australian equivalent of a college education (i.e., at a university, teachers’ college, college of advanced education or technical school) is, growing annually. The Australian government supports

two significant organizations that encourage Australian and American scholarship and academic exchanges: the Australian Fulbright Commission and the Australian Centre for American Studies.

In science, Australia holds a significant place in radio astronomy, geology and marine sciences. Its observatories constitute the principal center of radio astronomy research in the Southern Hemisphere. It is also an important base for monitoring U.S. space flights and satellites with two critical NASA Space Tracking Stations. With the Great Barrier Reef on the country’s northeast coast, Kakadu National Park in the far north, and the unusual array of flora and fauna, Australia is considered by many naturalists and environmentalists to be a giant ecological laboratory. Australia’s proximity to Antarctica has also fostered considerable scientific research in the area of the South Pole.

Private and community events organizers, as well as the Australian Broadcasting Corporation (ABC), annually bring to Australia internationally-acclaimed performing artists who tour Australia’s principal cities. The major cities have symphony orchestras and lively professional theaters with productions ranging from the classics to the avant garde. National and foreign opera, ballet and theater companies perform in sites outside their headquarter cities on a regular touring basis. Some Australian companies such as the Australian National Ballet have received international acclaim.

Australia’s art scene is dynamic. Government-supported galleries in Canberra and the state capitals have important collections of Australian and overseas artists. Commercial galleries in the larger cities display top-quality work as well. Traditional and contemporary aboriginal art is popular with local and foreign collectors. Adelaide, Perth, Sydney, Melbourne and Canberra host annual or biennial arts festivals. They include all of the arts

and attract world-famous writers, musicians, singers, actors and dancers. Activities in the arts and politics are well-covered by newspapers and magazines. Australia’s publishing scene is lively. Novels, travel books and more “academic” publications by local authors are plentiful. Bookshops are usually well stocked, yet books, even paperbacks, are substantially more expensive than in the U.S. because of Australian arrangements with British publishers.

Commerce and Industry

Australia’s free enterprise economy combines a strong private sector with a relatively larger sector of state-owned or licensed businesses than is the case in the U.S. Railroads, utilities and many services are owned by state and federal governments. The push towards micro-economic reform and increased competition, however, has seen a gradual shift towards privatization of many of these services. For example, while the major telecommunications operator, Telecom, is government owned, recent deregulation of the market has seen two other operators take a significant market share. Deregulation of the airlines in 1990 has resulted in a major industry reshuffle. Ansett and Qantas (which took over former domestic-only carrier Australian Airlines in 1993) now compete directly both domestically and internationally, resulting in less expensive fares and greater services than previously. Nevertheless, airline prices still remain considerably higher than in the U.S. The privatization of QANTAS is now being completed through share offering. Other utilities and services (such as the natural gas infrastructure and the major airports) are subjects of the government’s extensive privatization plans.

Base wages are determined by a federal Industrial Relations Commission and, increasingly, by enterprise (collective) bargaining at the workplace level. After peaking at 12 per-

cent during 1990-91 recession unemployment is currently declining (6.4% percent in 2000).

A decreasing number of agricultural products are subject to marketing controls or stabilization arrangements. Australian agriculture is highly mechanized and efficient. It is based mainly on winter grains and extensive livestock ranching, with a limited acreage of row crops. The main agricultural products are wool, wheat, and meat, although sugar, dairy products, cotton and fruit, are also important. Livestock, which includes roughly 117 million sheep, holds greater relative importance in Australia than in the U.S.

In 2000, cattle prices increased by about 22% and were projected to continue to increase by about 6% for 2001 and 2002. In the same year, wool prices increased by about 21% high. Export income from wool accounts for about 6% of total export earnings (1994 data; in 1953 the figure was 50 percent). About one-third of world supply of wool is produced in Australia.

Distance, sparse population, and lack of navigable rivers make overland and air transportation vital. Australia has an extensive road and rail infrastructure network, relative to the population, with major arterial routes between each state capital (regional roads are of variable quality). Air transport, including air freight, has expanded into a leading industry: Australia leads the world in freight-ton miles per capita and is second only to the U.S. in passenger miles per capita.

Australia depends largely on ocean transport for bulk export, with an array of modern, deep water ports to handle its important minerals export trade. Significant reforms of labor practices over the past years have resulted in quicker ship turnaround times and more efficient stevedoring methods, but most industry groups argue that further reforms are necessary. International shipping is provided largely by foreign-owned lines, which contributes to Australia's high balance

Hobart Harbor and wharf.

Susan Rock. Reproduced by permission.

of payments net services deficit. Sea ports are well integrated with land transportation infrastructure.

Australia ranks among the world's leading trading nations, even though it has a relatively small population of only 19.2 million people. Primary products comprise about 60 percent of total merchandise exports. Of that, minerals and fuels account for 28 percent, and agricultural goods (both processed and unprocessed), around 30 percent. But the real growth sector is in elaborately transformed manufactures, which formerly made up an almost negligible percentage of Australia's merchandise exports.

While Australia is still considered a large importer of transformed goods and an exporter of primary commodities, its contribution to the global manufactures market is becoming significant.

Expansion of the minerals industry has been rapid over the past decade, despite uncertain minerals prices. Australia is the world's largest exporter of coal and continues to be a major player in the liquefied natural gas and iron ore markets—Japan is Australia's largest coal and iron ore market, for use in Japanese steel mills. Production of most other

metals, including gold, the titanium minerals and alumina, is major—in some cases world-leading.

Shifts in Australia's overseas trade pattern have occurred since World War II. The U.K. now is much less important to Australia as a trading partner than formerly. Asian countries are now the prominent markets for Australian products and accept 60 percent of merchandise exports. Japan is Australia's number one export market, taking 25 percent of merchandise exports in 1994 (mainly coal, iron ore, meat and gold). The U.S. is Australia's primary import source, with merchandise imports totalling almost \$11 billion in 1994 (22 percent of total import value—this compares to 12 percent in 1955). Australian exports to the U.S. were worth \$3.4 billion in 1994. The U.S. is the only major trading nation to consistently hold a bilateral trade surplus with Australia.

Australia exports a wide range of goods to the U.S. Major categories include beef, aircraft and associated equipment, computers and parts, and crude petroleum and oils. Major imports from the U.S. are computers, aircraft and equipment, measuring and checking equipment and telecommunications equipment.

The latter category represents a growing business opportunity for U.S. exporters, as Australia is currently experiencing a boom in mobile telecommunications, along with the start-up of pay-TV services.

Historically, Australia relied on high tariffs to protect domestic industry. In addition, special restrictions have applied to dairy and some other agricultural products, as well as to textiles, clothing, footwear and automobiles. The current Labor government has set about reducing tariffs and non-tariff barriers to increase Australia's integration into the global trading arena. Australia has petitioned the U.S. to liberalize its restrictions on the entry of Australian meat, steel and sugar. The Australian government and rural organizations continue to voice their displeasure over the U.S. Export Enhancement Program (EEP) and the Dairy Export Incentive Program (DEIP).

The Australian government has established foreign investment guidelines that encourage inward investment. Restrictions on foreign investment remain in mining, urban real estate, the media and civil aviation. In the natural resource sector, the government requires foreign investors to give Australian companies the opportunity to participate in major projects, normally requiring that at least 50 percent Australian equity and 50 percent of board-voting strength be held by Australian interests. In other areas, nonresidents, foreign-controlled businesses, and Australian companies in which foreign interests have a substantial shareholding, must notify the government before acquiring a substantial interest in an Australian company.

Around 30 percent of direct foreign investment stock in Australia comes from the U.S. U.S. investment is particularly prominent in autos, petroleum and minerals development, agricultural machines, construction and earthmoving equipment, chemicals, food processing, and oil refining. Australia is the

fourth most important country for direct investment from the U.S., after Canada, the U.K., and Germany.

Australia's economy definitely looks promising. Throughout the decade of the 1990s, the country boasted an annual economic growth rate of about 4% per year, the second-fastest rate in the developed world (behind Ireland). Which has placed the economy at the best it's been in over thirty years.

The July 2000 introduction of the Goods and Services Tax (GST) seemed to cause a decrease in the construction industry, but over the course of a year, the service sectors reported strong growth (e.g. communications, 8 percent; property/business services 9 percent, finance services 5 percent) as did mining (10 percent), metal products (7 percent) and non-metallic mineral products (24 percent). The 10% GST is levied on most goods and services (with the exception of basic foods, education, health, and some other sectors). Several other sales taxes were abolished with the acceptance of the GST. The overall effect of these changes seems to have been to raise the inflation rate from its average 2.5% to 6% at the end of 2000. However, the rate is expected to return to normal by the end of 2001.

Transportation

Local

Bus service in Canberra is good, though limited in evenings and on weekends and holidays. Other major cities have a good system of commuter trains, buses, streetcars, and harbor ferries. Public transportation is efficient though crowded during rush hours.

Taxi

Taxi service in all major cities is good. Tipping is not expected unless the driver helps with baggage. Rent-a-car services are available in all cities. Rates are higher than those in the US. Railway porters have a set charge for each piece of luggage

handled, varying slightly from city to city.

Regional

Australia's size makes air travel the most convenient method of in-country travel. Several international airlines operate regularly in and out of Australia. There is an extensive but expensive domestic air network with an impressive safety record.

Numerous foreign shippers call at various ports. All State capitals are on the coast and most overseas liners can berth within 1 mile of the business district.

Rail service is good between major cities but other rail routes are erratic. Bus service is available between most cities and is less expensive than either air or rail.

Road conditions in Australia vary greatly. Few four-lane highways exist, and these are mainly for short stretches on the approaches to the larger cities. Most highways typically are two-lane asphalt or crushed stone; some have a third lane for passing on hills and other dangerous points. Country and secondary roads often are unsurfaced and become impassable after heavy rains.

Communications

Telephone

Telephone service within Australia and worldwide is excellent. An Australia-to-U.S. call is easy to place. Direct dialing and itemized billing are available but must be requested when ordering telephone service as they are not automatically installed. Fax facilities are excellent.

It is not advisable to have cordless/cellular phones in personal effects as they may be confiscated by Australian Customs. Phones coming into Australia must be registered with Telecom before entering Australia. Permits are very expensive.

Radio and TV

AM and FM radio stations reach the entire country. Shortwave broadcasts, including VOA, can be picked up but reception is unreliable. TV programs are similar to those in the U.S. with many American programs and films shown. All TV channels broadcast in color using the PAL system which means that U.S. made TVs cannot be used without modification. TV modification from NTSC (U.S.) to PAL is expensive, not always satisfactory, and will render the set unusable in the U.S. until it is converted back to NTSC.

Newspapers, Magazines, and Technical Journals

Australia's metropolitan press consist of two daily papers in Sydney and two in Melbourne; one each in Adelaide, Brisbane, Canberra, Hobart and Perth; and two national daily newspapers. Each state capital has at least one Sunday paper. Many daily papers are published in provincial areas. Triweeklies, biweeklies and weeklies are published in other cities and towns throughout the country. Australia has a flourishing periodical press. U.S. newspapers are not available locally; however, *USA Today*, the *Wall Street Journal*, and the *International Herald Tribune* are available at a limited number of news agents.

Newsstands carry *Time Australia*, the Asia-Pacific edition of *Time*, as well as *Who* magazine (People). *Newsweek* and *Fortune* have been incorporated as part of the *Bulletin* magazine. Numerous bookstores in each capital city carry such American magazines as *Fortune*, *Saturday Review*, *Scientific American*, *Harper's Bazaar*, the *New Yorker*, the *New Leader* and European magazines such as *Paris Match*, *Realities*, *Punch*, the *Observer*, the *New Statesman* and *Encounter*. Airmail delivery or locally printed editions of the more popular magazines listed above means that issues are up to date. Subscriptions normally would be necessary for only the specialized publications.

Health and Medicine

Medical Facilities

Also readily available are well-qualified doctors, surgeons, and specialists as well as good hospitals and laboratory facilities. It is not necessary to go outside Australia for medical care except in rare instances which require a trip to a specialist in the US.

Canberra has one general hospital, one Catholic hospital, and one private hospital which cater to all sections of the community. They are well equipped and provide the usual pathology and X-ray services and outpatient care. The city has many general practitioners and a variety of specialists. Good dentists, several opticians and ophthalmologists are available. Dental fees vary with the type of work required. Laboratory fees are expensive.

State capitals generally have several large and well-equipped hospitals. Many excellent doctors, surgeons, and specialists of all kinds practice in these cities. Competent oculists and opticians are readily available although eyeglasses, lenses and contact lenses are more expensive than in the U.S. All residential areas have a large number of general practitioners competent to handle all general ills not requiring a specialist. Gynecologists and pediatricians are excellent. Hospital accommodations are sometimes limited and, except for emergency care, should be reserved as far in advance as possible. Dentists use modern methods and equipment. Good orthodontic, periodontic and endodontic care are available. Pharmaceutical services are provided by chemist shops (drugstores) in all suburban and city shopping areas. Chemist shops are well stocked with prescription and patent medicines, and some provide 24 hour service and free delivery.

Community Health

No unusual health problems or hazards exist. Sewage and garbage disposal services are similar to those in

the U.S.; incinerators are used in most large apartment buildings. Water supply is ample for household use and normally enough for watering lawns. Water is soft and safe (drawn from a mountain reservoir in the mountains near Canberra) and is chlorinated and fluoridated. Safe pasteurized and homogenized milk is available.

Flies are pests throughout Australia in warm weather. In midsummer, the native bush fly is a constant annoyance outdoors, but it disappears in cold weather. People with gardens find snails and slugs a great nuisance. Zipper type garment bags are useful to protect fine and seldom-worn clothing from moths and silverfish.

Preventive Measures

No serious endemic diseases exist and no special health precautions are necessary. Sabin polio vaccine is available; take the series either before or after arrival, especially children under 2 years, as well as a measles, mumps, and rubella shots. The usual children's diseases (measles, mumps, chickenpox) occasionally reach epidemic proportions. Mild outbreaks of influenza, gastroenteritis, and other seasonal diseases are common. Sinusitis, colds, and other minor respiratory illnesses, as well as asthma and allergies, are common. Children should be immunized against diphtheria, whooping cough, tetanus, polio, measles, mumps, rubella and Haemophilus influenza B. Adults should keep tetanus and booster shots current. Yellow fever immunizations are currently required for personnel who have previously resided in tropical Africa or Brazil. No unusual health hazards exist. No known cases of rabies have occurred in Australia in recent years.

NOTES FOR TRAVELERS

Australia is served by a number of airlines including United which

flies daily nonstop from the U.S. West Coast. Travelers must use the airline that holds the appropriate city-pair contract fare. Flying time for the roughly 7,000-mile nonstop trip from the west coast is about 14 hours.

U.S. citizens may travel to Australia on a valid U.S. passport with an Australian visa or, if eligible, on a valid U.S. passport and an Electronic Travel Authority (ETA), which replaces a visa and allows a stay of up to three months. The ETA is free of charge and is available from airlines and many travel agents. American citizens who overstay their ETA or visa, even for short periods, may be subject to detention and removal. More information about the ETA and entry requirements may be obtained from the Embassy of Australia at 1601 Massachusetts Avenue, N.W., Washington, D.C. 20036, telephone (202) 797-3000, via the Australian Embassy home page on the Internet at <http://www.austemb.org/>, or from the Australian Consulate General in Los Angeles, tel (310) 229-4840.

Information on vaccinations and other health precautions may be obtained from the Centers for Disease Control and Prevention's hotline for international travelers at 1-877-FYI-TRIP (1-877-394-8747); fax 1-888-CDC-FAXX (1-888-232-3299), or via CDC's Internet site at <http://www.cdc.gov>.

Australian customs authorities enforce very strict regulations concerning the temporary importation from all countries of items such as agricultural and wood products, as well as very strict quarantine standards for other products, animals and pets. It is advisable to contact the Embassy of Australia in Washington or one of Australia's consulates in the United States for specific information regarding customs requirements, or see <http://www.aqis.gov.au>.

Americans living in or visiting Australia are encouraged to register at the nearest U.S. consulate and obtain updated information on

travel and security within Australia.

The U.S. Embassy in Canberra is located at Moonah Place, Yarralumla, A.C.T. 2600, telephone (61)(2) 6214-5600, fax (61)(2) 6273-3191, home page <http://usembassy-australia.state.gov>.

NOTE: Registration, passports, and other routine citizen services for Canberra and the rest of the Australian Capital Territory (A.C.T.) are provided by the U.S. Consulate in Sydney (please see contact information below). The Embassy may be contacted for emergency services (i.e. the arrest, death or serious injury of American citizens) within the ACT or Queanbeyan.

The U.S. Consulate General in Sydney serves New South Wales, Queensland, and the Australian Capital Territory and is located on Level 59, MLC Centre, 19-29 Martin Place, Sydney NSW 2000, telephone (61)(2) 9373-9200, fax (61)(2) 9373-9184, home page <http://usembassy-australia.state.gov/sydney/>.

The U.S. Consulate General in Melbourne serves Victoria, Tasmania, South Australia, and the Northern Territory and is located at 553 St. Kilda Road, P.O. Box 6722, Melbourne Vic 3004, telephone (61)(3) 9526-5900, fax (61)(3) 9525-0769, home page <http://usembassy-australia.state.gov/melbourne/>.

The U.S. Consulate General in Perth serves Western Australia and is located on Level 13, 16 St. Georges Terrace, Perth WA 6000, telephone (61)(8) 9202-1224, fax (61)(8) 9231-9444, home page <http://usembassy-australia.state.gov/perth/>.

You can import dogs and cats to Australia from the U.K. (including the Channel Island, Northern Ireland, and the Isle of Man), the Irish Republic, Hawaii, Fiji, Papua New Guinea, Norfolk Island, and New Zealand without major difficulty. In all cases, animals must have been solely in the country of export for 6 months before export (or since

birth) and during that period must not have been in an port quarantine kennel. They must be accompanied by prescribed documents, including health certificates.

Animals from other areas can also be imported; however, the owner must comply with a lengthy and costly quarantine period.

Charges are made for inspection of animals on arrival in Australia and for accommodation in kennels at quarantine stations. These charges are reviewed periodically. All quarantine regulations are rigidly enforced.

Exporting of Wild Birds: Persons wishing to import their pet birds to the U.S. should be aware of the Wild Bird Conservations Act which limits imports of exotic bird species to ensure their populations are not harmed by trade, and the U.S. Department of Agriculture quarantine requirements.

Individuals who reside outside the U.S. continuously for at least one year may import a maximum of two pet birds (not on endangered species list), per year.

Arrangements for 30 day quarantine of pet birds into the U.S. may be made through the Agriculture Section.

Australian and American dollars may be freely exchanged. However, under the Australian banking (foreign exchange) regulations, a person departing from Australia is allowed to take only A\$250 in notes, A\$5 in coins and the equivalent of A\$250 in foreign currency notes. Any excess can be arranged through banking facilities by letters of credit, travelers checks, or drafts. The rate of exchange fluctuates slightly from day to day.

These accounts are freely convertible into U.S. dollar drafts or travelers checks. Bank credit cards are available and useful, particularly when traveling within the country. Employees who obtain bank savings accounts or other investments may

be subject to Australian income taxes on the income earned from such deposits. Contact the Financial Management Office or Administrative Office for more information.

No restrictions exist on bringing dollar currency or travelers checks into Australia. U.S. currency and checks drawn on American banks are freely negotiable.

Australia uses the metric system.

Disaster Preparedness

Australia is located in an area of low seismic activity. Although the probability of a major earthquake occurring during an individual trip is remote, earthquakes can and do occur. General information about natural disaster preparedness is available via the Internet at <http://travel.state.gov/crisismg.html>, and from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov>

AZERBAIJAN

Republic of Azerbaijan

Major City:

Baku

Other Cities:

Gyandzha, Mingechaur, Nakhichevan, Shemakha, Sumgait

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated August 1994. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The Republic of **AZERBAIJAN** declared its independence from the former Soviet Union on August 30, 1991. Formerly known as the Azerbaijan Soviet Socialist Republic, its independence was recognized by the United States on December 25, 1991. The country administers the Nakhichetan Autonomous Republic, which has an Azerbaijan ethnic majority but is separated from the rest of Azerbaijan by Armenia. It also administers the Nagorno-Karabakh region, which is predominately Christian Armenian but is within Azerbaijan's borders. Ongoing civil strife between Armenia and Azer-

baijan over control of Nagorno-Karabakh has, at times, turned violent.

MAJOR CITY

Baku

Baku (also spelled Baky), with over 1.7 million residents (1997 est.), is the capital of Azerbaijan. Located on the western shore of the Caspian Sea, Baku is the country's largest city, chief port, and main industrial center. Oil, first discovered in the eighth century, is the basis of Baku's economy. The oil field here was the world's largest in the early 1900s and, until the 1940s, was the Soviet Union's largest. Although Baku's oil field has been all but exhausted, drilling continues in the surrounding areas, as well as offshore. Pipelines connect these areas with Baku's oil refinery and processing plants. Other industries include shipbuilding, the manufacture of oil industry equipment, and electrical machinery.

Baku traces its history back to at least 885 A.D., but it is probable, based on archaeological evidence, that the area was inhabited several

hundred years before Christ. Peter the Great conquered it in 1723, but 12 years later it was returned to Persia. In 1806, Russia managed to gain control and, in 1920, Baku became the capital of the Azerbaijan Soviet Socialist Republic.

Recreation and Entertainment

The Caucasus region, with its mountainous terrain, offers many winter sports. Fishing and swimming are popular, although some areas along the Caspian Sea have suffered considerable environmental damage from the exploration of offshore oil and gas reserves. Sihov Beach is popular with Baku residents. A trip to scenic Lake Gyogyol, in the mountains of southwest Azerbaijan, is well worth the time. This resort area is located at 4,500 feet above sea level.

Visits to the nearby wine growing regions and to Lenkoran, a subtropical city with experimental gardens, are possible from Baku. About 44 miles from Baku is the Kobustan Museum-Reserve where caves used by man 10,000 years ago can be visited. Cave drawings can be seen.

Baku, built on a hillside overlooking the Bay of Baku, has an attractive waterfront park. Restaurants, tea

houses, sports facilities, and an open-air theater are found there. A ride on the funicular (cable railway) to the highest location in the city, Kirov Monument, gives the visitor a view of the entire city and bay.

The picturesque old town, or castle district, forms the core of Baku. The district features the fortress of Icheri-Shekher with its narrow streets and old buildings. Icheri-Shekher's walls still survive, as does the 12th century tower of Kyz-Kalasy (Maiden's Tower). Also in this area is the museum Shirván-Sháh's, a former palace, part of which was built in the 11th century. The oldest religious site, the Synyk-Kala Minaret and Mosque, also dates from the 11th century.

Baku is Azerbaijan's major cultural and educational center. The city has several museums; the Azerbaijan State Art Museum, with 7,000 exhibits; the Academy of Sciences' Museum of the History of Azerbaijan, which contains 120,000 displays on the history of the Azerbaijani people; and the State Museum of Azerbaijan, which specializes in Azerbaijani literature. The Museum of Azerbaijani Carpets and Applied Folk Art has exhibits featuring carpets, embroidery, ceramics, jewelry, and other related art.

Music has played an important role in Azerbaijani life. Opera and ballet performances are popular and are staged throughout the year by the Mizra Akhundov Opera and Ballet Theatre, the Muslim Magomayev Philharmonic, the Samed Vurgun Russian Drama Theatre, and the State Puppet Theatre.

Transportation

Roads are extremely poor in Baku. Driving hazards such as open manholes, debris, and potholes are common. Drivers pay little heed to traffic regulations, signals, lanes, or other drivers. Drivers often travel at extremely high rates of speed and accidents are frequent. Driving within Baku should be considered

extremely hazardous. Outside of the city, where roads are present, conditions are similar. They are often in poor repair, unlit, and lack lane-marking, traffic signs, and warnings. Many rural roads are unpaved and rarely traveled.

OTHER CITIES

GYANDZHA, formerly known as Kirovabad and Yelizavetpol, is located along the Gyandzha River in western Azerbaijan. The city has a population of 294,000 (1997 est.) and is the country's second largest city. Gyandzha was established in the fifth or sixth century, but was destroyed by an earthquake in 1139 and rebuilt four miles east of the original settlement. Surrounded by a fertile farming area, the city has several industries that are agriculture-related. Other industries include the manufacture of machinery and instruments. Agricultural and teacher-training institutes are located here.

MINGECHAUR, located in the central part of the country, has 97,000 residents (1997 est.). The Mingechaur Reservoir, built in 1953 on the Kura River, provides hydroelectric power and water for irrigation. The city's major industry is a large cotton textile mill.

NAKHICHEVAN, with a population of 60,000, is the capital of the Nakhichevan Autonomous Republic. According to Armenian lore, the city was founded by Noah. Various archaeologists have dated the city back to 1500 B.C. Nakhichevan was once a noted trade and handicrafts center, but now is known for its wine, dairy products, furniture, and leather.

The town of **SHEMAKHA** is about 80 miles west of Baku in the foothills of the Caucasus. It served as a major trading center and the capital of the Shivran shahs before they moved to Baku. Earthquakes have destroyed many historic sites in

Shemakha, but visitors can still see the Seven Domes Royal Mausoleum (Yeddi Gumbez), which served as a burial place for royalty, and the Djuma Mosque, which was built some time in the 10th century. The ruins of the Guistan fortress, from about the 11th or 12th century can be seen as well. Shemakha was once a major stop on the Silk Road and is still well-known for its carpet industry. Demonstrations of traditional weaving techniques are now presented to visitors at the modern carpet-weaving factory.

SUMGAI is 22 miles northwest of Baku. An industrial center specializing in chemicals and metals, the city has numerous factories. Its industries produce aluminum, synthetic rubber, fertilizers, detergents, petrochemicals, and steel-related products. Sumgait's population is 273,000 (1997 est.).

COUNTRY PROFILE

Geography and Climate

Located in eastern Transcaucasia, the Republic of Azerbaijan is slightly larger than Maine and contains 33,744 square miles. Its borders include Russia and Georgia on the north, Iran on the south, Armenia on the west, and the Caspian Sea on the east.

The Caucasus Mountains form a natural northern border. Almost half of the country consists of lowlands, some of which are below sea level. The two main rivers are the Kura, which flows from the northwest to the Caspian Sea, and its tributary, Araks, which flows along Azerbaijan's border with Iran. Much of the farmland (70 percent) is irrigated.

Central and eastern Azerbaijan has a dry, subtropical climate with mild winters and long, hot summers. The

average summer temperature in Baku is 81°F; January temperatures average 34°F. The southeastern section of the country has a humid subtropical climate. Cold winters and hot, dry summers are characteristic of the Nakhichevan Autonomous Republic. Heavy snowfalls, making travel impossible for three or four months of the year, are common in the more mountainous areas during winter.

Population

Azerbaijan's population is estimated at 7.7 million (2000 est). The majority of people (90%) are Azerbaijanis of predominately Turkish descent. Russians and Armenians make up 4.5% of the population; almost all live in central Azerbaijan or near Baku.

Approximately 93% of the people are Muslim, mostly of the Shiite sect (70 percent); the remainder are Sunni. The Muslim Board of Transcaucasia, which has spiritual jurisdiction over all Islamic sects in Armenia, Georgia, and Azerbaijan, is located in Baku. The rest of the population is Christian—divided almost equally between Russian Orthodox and Armenian Orthodox.

Azerbaijani is the official language of the country and is spoken by 82 percent of the people.

Government

Azerbaijani sovereignty was declared in September 1989 and the Supreme Soviet (parliament) announced the country's independence from the Soviet Union on August 30, 1991. The Communist Party disbanded the next month. In a referendum held in December 1991, over 99 percent of the voters favored independence. On March 2, 1992, Azerbaijan was admitted to the United Nations and on April 30, the country officially adopted the name Republic of Azerbaijan.

Marketplace in Baku, Azerbaijan

© Caroline Penn/Corbis. Reproduced by permission.

The executive branch of the government consists of the president and a 21-member Council of Ministers. The 360-seat Supreme Soviet (parliament) is the highest legislative body. In October 1991, the Supreme Soviet established another legislative body, the National Council. The 50-member (20 percent are also members of the Supreme Soviet) National Council meets in continuous sessions.

The judicial system is headed by a Supreme Court. Civil law is the basis of the legal system.

The flag of the Republic of Azerbaijan consists of three equal horizontal bands of (top to bottom) blue, red, and green. Centered in the red

band is a white crescent and an eight-pointed star.

Arts, Science, Education

Azerbaijan has a long history as an educational center. The educational system is extensive and illiteracy has been practically unknown. In 2001, the government adopted the use of the Roman alphabet, to replace the Cyrillic script that had been imposed by Stalin in 1939. The new alphabet affects all aspects of life, from official government documents to newspapers, magazines and billboards. The change was seen as an opportunity to move forward from a Soviet past and

strengthen ties with the Western world. Many citizens are already familiar with the Roman alphabet, since it is taught in primary schools, and as a country focused on education, it seems likely that the change will not cause too much trouble.

Education is free in Azerbaijan. In 1997, there were over 4,400 primary schools with about 719,000 students enrolled and over 35,500 teachers. There were also 819,600 students enrolled in secondary schools with about 85,000 teachers. The Azerbaijan Polytechnic Institute and the State University in Baku support at least 27,000 students. Other institutions of higher learning include the Medical University, Technological University, the Economic Institute, and the Oil and Chemistry Academy.

Commerce and Industry

Although Azerbaijan is not as industrialized as its Transcaucasia neighbors, Armenia and Georgia, its overall economy is the best of all the former Soviet republics. The future outlook, however, is clouded by the continuing civil unrest in Nagorno-Karabakh and the government's failure to enact needed economic reforms. Azerbaijan suffers high unemployment and a low standard of living. Foreign investment would offer a needed boost to the economy but Azerbaijan's current problems make such investment unlikely in the near future.

The economy is heavily dependent on industry and mining. Oil, gas, petroleum products, oil field equipment, steel, iron ore, and cement are the chief heavy industries. Major oil fields are located in the Apsheron Peninsula, where Baku and Sumgait are located, and around the cities of Siyar, Neftechala, and Ali-Bayramli. Pipelines connect the oil fields with Baku, where the refineries and processing plants are located. Large oil reserves have been discovered off-

shore, in the Caspian Sea, but are mostly unexploited. Azerbaijan's main exports are oil, gas, chemicals, and oil field equipment, mostly to the other ex-Soviet Union republics.

The chief crop is cotton, which is used in textile production. Other major crops include grain, rice, and grapes.

The Chamber of Commerce and Industry of the Republic of Azerbaijan is located at 370601 Baku, ul. Kommunisticheskaya 31/33.

Transportation

Azerbaijani Airlines services several in-country cities, Russia, Georgia, Istanbul, and Turkey. Turk Hava Yolari is the only Western airline with flights into and out of Azerbaijan.

Travelers on airlines among the countries of the Caucasus may experience prolonged delays and sudden cancellations of flights. In addition to routine delays, flights are often overcrowded with passengers without seats standing in the aisle, along with excess unsecured cabin luggage. Even basic safety features such as seat belts are sometimes missing. Air travel to Azerbaijan on international carriers via the United Kingdom, the Netherlands, Germany, and Turkey is generally more reliable.

Train travel in the Caucasus region is not secure. Public transportation in general is overcrowded and poorly maintained. The U.S. Embassy strongly discourages use of the Baku Metro.

Bus travel is not recommended either because they are rundown, overcrowded, and are often driven in an unsafe manner.

A reliable subway system operates in Baku, but it is often overcrowded.

Taxis are inexpensive, easy to flag down, and relatively efficient.

Communications

Local telephone service is poor by Western standards. Service is in the process of being updated.

Baku has several radio stations which broadcast in Azerbaijani, Russian, Arabic, Persian, and Turkish. Shortwave radio is a good means of staying in touch with world news.

There are four TV stations in Baku. One station broadcasts in Azeri, two are relayed from Russia, and one from Turkey.

There are over 300 newspapers printed in the country. Several English-language newspapers and journals are available in the major hotels, many days late and very expensive.

Health and Medicine

Medical care, considered very good before the breakup of the Soviet Union, does not meet Western standards. Health care and social services are free to all citizens by the government. But the state-run hospital system is limited and there is a lack of basic supplies and modern equipment. Emergency treatment for travellers may be free, but you will need to pay for medicines and other supplies.

There are a few drug stores in Baku with basic medicines, but it is best to bring an ample supply of any prescription or over-the-counter medications you may need.

Community Health

Eastern Azerbaijan has been called one of the most ecologically devastated regions in the world. The area around Baku and Sumgait suffers from serious pollution due to oil, gas, and chemical industries. Extensive environmental damage has resulted from the exploitation of offshore oil and gas reserves in the Caspian Sea.

Sanitation services are regular, but garbage is dumped into inadequate storage facilities. Water is not potable and must be boiled prior to drinking. Plumbing and water delivery services are substandard. Food storage practices are poor; great care must be taken during purchase and preparation of all fresh foods.

There is an increasingly high rate of vaccine-preventable diseases such as polio, measles, mumps, diphtheria, whooping cough, hepatitis, and gastroenteric diseases. Inoculations should be current before arriving in the region.

LOCAL HOLIDAYS

Jan. 1	New Year's Day
Jan. 20	Day of the Martyrs (Day of Sorrow)
May 9	Celebration of War Veterans Day
June 15	Day of National Salvation
Aug. 28	Republic Day
Oct. 9	Army & Navy Day
Oct. 18	National Independence Day
Dec. 31	Day of Azeri Solidarity
.	Kurban Mayram / Id al-Adha (Feast of the Sacrifice)*
.	Novruz Bayram*
.	Ramadan Bayram (End of Ramadan)*

*variable, based on Islamic calendar

NOTES FOR TRAVELERS

Passage, Customs & Duties

As a result of conflict in the Nagorno-Karabakh area of Azerbaijan, twenty per cent of Azerbaijani territory (in the southwest along the borders with Iran and Armenia) is occupied by insurgent forces. A cease-fire has been in effect since 1994, although reports of armed clashes along the cease-fire line and along the border with Armenia continue. Anti-personnel mines are a danger in areas close to the front lines. It is not possible to enter the self-proclaimed "Republic of Nagorno-Karabakh" from Azerbaijan. Travelers contemplating entering Nagorno-Karabakh are advised that because of the existing state of hostilities, consular services are not predictably available to Americans in Nagorno-Karabakh. Travelers, therefore, are cautioned to avoid travel to Nagorno-Karabakh and the surrounding occupied areas.

A passport and visa are required to enter Azerbaijan. Travelers with valid Georgian visas are permitted to enter Azerbaijan for a stay up to five days. Thereafter, they must include a letter of invitation from an individual or organization in Azerbaijan when applying for a visa. For additional information on visa requirements, travelers can contact the Embassy of Azerbaijan, 927-15th Street, N.W., Suite 700, Washington, D.C. 20005; telephone (202) 842-0001.

Americans are encouraged to register at the Consular Section of the U.S. Embassy and obtain updated information on travel and security within Azerbaijan. The U.S. Embassy in Baku is located at Prospect Azadlig 83. The telephone numbers are (9) (9412) 98-03-35, (9) (9412) 98-03-36, or (9) (9412) 98-03-37.

Currency

Azerbaijan is mostly a cash economy country. Traveler's checks and credit cards are accepted only in some hotels and a few restaurants and supermarkets. The local currency is the *manat*. U.S. dollars are required in most hotels and preferred in many restaurants

Manama, Bahrain

BAHRAIN

State of Bahrain

Major City:
Manama

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 2000 for Bahrain. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Site of some of the oldest civilizations in the world (thought by some to be the site of the Garden of Eden), Bahrain is packed with archaeological digs, historical museums, dhow-building yards, and back-street souqs.

As modern as central Manama may be, the basic rhythms of life in the island's many villages remain remarkably traditional. By the same token, where there is tradition in the Gulf there is Islamic conservatism: Women cover themselves from head to foot.

Traditional craftwork continues in Bahrain: Dhows (fishing boats) are built on the outskirts of Manama;

cloth is woven at Bani Jamrah; and pottery is thrown at A'ali. A few goldsmiths still operate in the souq. One of the mainstays of Bahraini culture is the drinking of traditional Arabian coffee. You cannot go far without finding a coffee pot in a shop or a souq. Traditional Arabian street food like shawarma (lamb or chicken carved from a huge rotating spit and served in pita bread) and desserts such as baklava are also ubiquitous. While a bit thin on Arabic food, Bahrain has a bonanza of Indian, Pakistani, Thai, and other Asian specialties.

Bahrain's main island has almost certainly been inhabited since prehistoric times. The archipelago first emerged into world history in the 3rd millennium BC as the seat of the Dilmun trading empire. Dilmun, a Bronze Age culture that lasted about 2000 years, benefited from the islands' strategic position along the trade routes linking Mesopotamia with the Indus Valley.

Eventually Dilmun declined and was absorbed by the Assyrian and Babylonian empires. The Greeks arrived around 300 BC, and Bahrain remained a Hellenistic culture for some 600 years.

After experimenting with Christianity, Zoroastrianism, and Manicheism, in the seventh century

many of the islands' inhabitants converted to Islam.

In the 1830s, Bahrain signed the first of many treaties with Britain, who offered Bahrain naval protection from Ottoman Turkey in exchange for unfettered access to the Gulf. Oil was discovered in 1932, and large-scale oil-drilling soon followed. Oil money brought improved education and health care to Bahrain. It also brought the British closer: The main British naval base in the region was moved to Bahrain in 1935.

In the 1950s, the waves of Arab nationalism that swept through the region led to increasing anti-British sentiment. Bahrain proclaimed its independence on August 14, 1971.

As the price of oil went through the stratosphere during the 1970s and 1980s, the country grew by leaps and bounds. Despite the Gulf-wide economic downturn of the late 1980s, Bahrain remained calm and prosperous.

Bahrain's reputation as a relatively liberal and modern Arabian Gulf State has made it a favorite with travelers in the region and an excellent introduction to the Gulf. While their neighbors staked everything on oil, Bahrainis diversified their economy and created some of the

region's best education and health systems. Years of British influence have made English widely spoken. Development has been swift, but it hasn't swallowed up everything.

MAJOR CITY

Manama

Manama is a cosmopolitan city of about 144,000. Central Manama is undergoing extensive urban development, featuring new banks, hotels, offices, and six-lane, divided highways on land reclaimed from the sea during the past 15 years. The growth has resulted in moderately increased traffic congestion and the distinct beginnings of urban sprawl. Yet the city is livable, and many consider it the preferred location in the Gulf. The discomfort of the outdoor summer weather and the real, as well as psychological, isolation of living on a small island community cause frustration for some.

Utilities

Electricity is 220v-240v, 50 hertz. Because voltage fluctuates, delicate electrical equipment such as stereos should have voltage regulators. These are available locally, but at high prices.

Food

Clean, modern, U.S.-style supermarkets are numerous. Excellent prawns and fish, superb dates, good eggs, fresh chickens, and fresh dairy products, including pasteurized milk, are grown or produced on the island. Depending on the season, fresh fruits and vegetables are also available. The latter is supplemented by an abundance of imported fresh fruit and vegetables. Beef, mutton, lamb, veal, pork, poultry, cheeses, other dairy products, cereals, and canned or dry goods are all imported, primarily from the U.S., New Zealand, Australia, and Europe, and are readily available in the island's supermarkets and shops. Prices, however, are often high. Smart shoppers spend time in

Business district of Manama, Bahrain

the cheaper, covered central market in downtown Manama.

Clothing

Fabrics and sewing supplies are plentiful and moderately priced. Tailors are good at copying patterns and models, but most do not create or design clothing. Local stores offer expensive ready-made clothing of varying quality and limited selection from Europe and the U.S.

Bahrain has no official clothing taboos. As guests of a society that traditionally is very strict among its own members, especially the women, visitors are expected to dress modestly. Shorts, short dresses, and bare shoulders are inappropriate outside the home. Skirts and dresses for women and long pants for men are recommended for general wear. Sneakers for tennis and other sports are locally available but at high prices.

Men: Take cool, lightweight suits for summer wear and many cotton shirts. Sweaters and a moderate supply of light winter clothes are necessary. Winter nights can be as chilly as 45°F. Since winter is also the rainy season and some streets are unpaved, boots and galoshes are useful to negotiate the many puddles that linger after heavy rains.

Women: Shoe shopping presents a problem, especially for women. Only the latest European styles are available at local boutiques. Because of the heat and humidity, natural clothing fibers (especially cotton) are best during summer. Double-knits and synthetic materials are very uncomfortable during the hot season.

Children: Children's shoes and clothing are available but are usually expensive. Shoes are of poor quality, and children's galoshes are hard to find.

Supplies and Services

Almost everything is available in Bahrain, but is invariably more expensive. Laundry soaps and bleaches, though fairly expensive, are readily available locally. Small appliances, linens, utensils, tools, cosmetics, soaps, and perfumes are available but are also expensive. Specific brand names may not be available, but suitable substitutes abound. Color film is expensive. It may be processed locally or in the U.S. Dog, cat, and bird foods are available locally. Kitty litter, dog collars, leashes, and toys are usually available, but are expensive, and the selection is limited.

A large variety of personal and professional services are available in Bahrain, from picture framing to motor vehicle rust-proofing, legal and tax counseling, to insect extermination. However, costs exceed those of comparable services in the U.S.

Shoe repair shops provide reasonably priced and satisfactory work. Dry-cleaners are adequate for materials not requiring special treatment. Men's suits are cleaned and pressed for \$5. For women's silk clothing, however, reliable dry-cleaning may be \$7 for a dress.

Beauty shops are found throughout Manama. Their work is good and at prices comparable to those in the U.S. Barbershops are also common and fairly inexpensive.

Repairs for automobiles, radios, and electrical appliances are usually satisfactory. Long delays sometimes occur due to a prevailing lack of spare parts.

Finished carpentry products are inferior to and more expensive than U.S. products. Residential furniture is expensive.

Domestic Help

Most middle-class Bahraini families and Westerners in Bahrain employ domestic servants. Going rates (as of 1999) for domestic servants are as follows: Full-time cooking and cleaning \$160-\$350/month Part-time cooking and cleaning \$2.65-\$3/hour. Part-time gardener \$70-\$100/month Babysitter (American teenagers) \$2.50-\$3/hour.

Religious Activities

Bahrain allows freedom of worship. Although most Bahrainis are Muslims, several Christian churches serve the foreign community. Both Protestant and Catholic services are held every Friday and Sunday on the navy base (NSA). Protestant Sunday school is available for kindergarten through adult levels at the National Evangelical Church in Manama. Sacred Heart (Roman Catholic), St. Christopher's (Anglican), and the Church of the Latter-

day Saints, as well as Syrian Orthodox churches, have active congregations. Most churches hold services on Friday to correspond to the local Sabbath, but Sunday services are also held. Many churches have nurseries to care for children during services, and services are conducted in a variety of languages. Bahrain's Jewish community is too small to sustain a synagogue.

Education

The Bahrain School is an international school of about 1,000 pupils representing 50 nationalities for students in kindergarten through 12th grade. The school is operated by the Department of Defense Dependents Schools, Europe (DODDSEUR). In addition to a standard American curriculum, it offers the International Baccalaureate (IB) program that is recognized in more than 40 countries for university entrance. American colleges will generally give one year's advance placement for IB diploma holders. The Secondary School meets the accreditation standards of the North Central Association of Colleges and Secondary Schools (NCA). Under DODDS regulations, children of U.S. military personnel are accorded priority in admission, while other students, including children of U.S. civilian agency personnel, are accepted on a space-available basis. The Bahrain International School Association (BISA) is the local governing body, but management authority is held by DODDS.

The school year runs from early September through late June. The school week conforms to the Muslim week, Saturday through Wednesday, with a Thursday to Friday weekend. The school day is from 8 a.m. to 3 p.m. for all grades.

Group registration is held before the beginning of the new school year. Thereafter, parents may register their children in the school's administrative office upon arrival in Bahrain. Children must be accompanied by a parent or sponsor at registration and must present all records from prior schools, passport

number, and immunization records. Placement tests are also required upon registration.

The Habara School and the Nadeen School offer a pre-nursery and beginning primary school syllabus to a predominantly British and American enrollment aged 2-7 years, at a cost of about \$500-\$600 a term (i.e., \$1,500-\$1,950 per school year). Half-day summer play school is available for kindergarten and primary-school-age children. NSA also operates a year-round day care center for children.

Other schools, including St. Christopher's (British) and one with a French curriculum, are also available.

Special Educational Opportunities

The University of Bahrain offers bachelor's degrees in business, science, education, engineering, art, and health sciences. The language of instruction is Arabic.

The University of Maryland is a U.S. institution that offers undergraduate courses through the Bahrain School and on a part-time basis for adults wishing to begin or continue work toward an associate's or bachelor's degree. Additionally, seminar classes are scheduled at various times. These classes are one semester hour of credit that requires 16 hours of classroom instruction.

The Bahrain Government and some private schools offer Arabic-language, secretarial, business management, and computer classes. Several schools offer hands-on computer courses.

The Bahrain Arts Society offers classes in drawing, painting, and poetry. The Music Institute provides instruction in a variety of musical instruments to adults and children at reasonable cost. As funds permit, the Embassy also maintains an Arabic-language program. Classes are also available through the Bahrain Ministry of Education or various schools and individuals. Ballet, ice

skating, karate, aerobics, and yoga classes are available. Most of the five-star hotels also have thriving health clubs for men and women.

Recreation and Social Life

Summer is difficult for children and parents because the intense heat and humidity preclude outdoor activities. Bring games, handicrafts, hobby supplies, and beach toys. An outdoor grill and equipment for light camping are useful in winter.

Power boating and sailing are popular with many Westerners in Bahrain. There are four sailing clubs on the island. Used pleasure boats and sailboats are sold, but at high prices when available. Groups rent Arab dhows for a day of water sightseeing, swimming, fishing, and picnicking. Only saltwater fishing is done; take your own gear, as it is expensive there. Scuba diving is popular, and the sea floor around Bahrain is interesting in parts; but the water is often murky. Rental costs are prohibitive. U.S.-certified scuba diving classes are available, and two clubs offer courses at reasonable tuition.

The BAPCO (Bahrain Petroleum Company) Club at Awali permits some foreigners in the business and diplomatic communities to hold memberships (about \$300 yearly) to use its beach, bowling, dining, and swimming facilities. All the major hotels in Bahrain (Meridien, Hilton, Sheraton, and Holiday Inn) offer memberships in their swimming pool, health club, and tennis facilities, but the cost is high. Several private clubs (AlBandar and the Marina) offer membership to foreigners and have attractive, well-located facilities. There is a small indoor ice-skating rink open to the public. Horseback riding and riding lessons are available.

Attending the weekly horse races at the racetrack about 5 miles south of Manama is a pleasant way to spend a winter afternoon. Races are run using an excellent stock of Arabian horses and are free to all who wish to attend. Betting and alcoholic beverages are prohibited at the racing grounds.

A new sporting era has dawned in Bahrain. The Riffa Golf Club has created an 18-hole course on more than 150 acres. What was once a desert is now a green oasis of sporting excellence.

Local travel agents offer a range of tours, usually 3-7 days, to places in the Middle East, India, the Far East, or Europe. These package trips are popular among Westerners. In addition, excellent half day tours in Bahrain are available through private tour companies. Camping is possible in the central part of the island during the winter and spring. Private groups frequently arrange dhow trips into the Gulf during the non-winter months.

Many interesting archeological and historical sites are in Bahrain. This is the largest ancient necropolis in the world with more than 100,000 grave mounds, ancient forts, temples, and city sites going back to the Dilmun era, circa 2500 BC. The Bahrain National Museum has an excellent display of both ancient Bahrain and the more recent Arab traditions. Two restored houses can be toured and traditional craftsmen still work in some villages. At Jasra is a handicraft center where visitors can watch traditional Arab artisans plying their craft. Finished pieces can be purchased at the gift shop.

Several air-conditioned movie theaters show recent films in English, French, Italian, Arabic, and Hindi at modest admission prices. Several video rental outlets carry the latest U.S. and European films and most Westerners own video equipment.

Many good but expensive restaurants feature international cuisine and music groups. The major hotels schedule well-known entertainers for brief engagements in the fall, spring, and winter. Some medium-priced restaurants specialize in tasty Chinese, Thai, Turkish, Arabic, and Indian foods. American fast food is available at high prices from Kentucky Fried Chicken, Hardee's, Burger King, BaskinRobbins, Dairy Queen, McDonald's, Chili's, Pizza Hut, Dominoes Pizza, Fuddrucker's,

Hole-in-One Donuts, and Subway for deli-style sandwiches. Much entertaining is done at home.

Bahrain has a well-developed tradition of club life directed mainly at the sporting community. The BAPCO Club, Dilmun Club, Yacht Club, and British Club have extensive recreational facilities. High fees at the Marina Club make membership unattractive; however, pier and mooring facilities are available at various other locations on the island.

The American Women's Association is a focal point for American community activities, and the American Association arranges monthly luncheon meetings, an annual picnic, and other social events.

Bahrain abounds with attractive special interest clubs: the Historical and Archeological Society, Natural History Society, drama groups, the Garden Club, bridge groups, tennis league, and cross country and motor groups, plus some possibilities for Americans to enjoy rugby, soccer, and cricket.

COUNTRY PROFILE

Geography and Climate

The State of Bahrain is an archipelago of 33 small, low-lying islands in the Persian Gulf, halfway down the east coast of Saudi Arabia and about 15 miles from the Saudi mainland. Total land area is about 300 square miles.

Five of the six principal islands are linked by a causeway system. Bahrain Island, where the capital city of Manama is located, is the largest. It is about 30 miles long and 10-12 miles wide. A four-lane causeway links Manama with the island and town of Muharraq, site of the newly expanded international airport. Bridges also connect Sitra, Nabih Saleh, and Um al-Nassan Islands to

Bahrain Island, which is linked to the mainland of Saudi Arabia by a causeway to Dhahran and Al-Khobar.

Bahrain, with a desert climate, is one of the world's hottest areas. Its hottest and most humid weather is from June through September. Most buildings and all Embassy staff housing are air-conditioned. The weather is pleasant from November through May, but the combination of poor soil drainage and few storm sewers can result in its infrequent rainfall leaving muddy city streets and puddles.

A narrow strip of land along the northern and northwestern coasts of Bahrain Island is cultivated with date palms, alfalfa, and vegetables. A desert, punctuated by a north-south plateau, extends south of the cultivated area. Surrounding this plateau is a rolling basin surrounded by overhanging bluffs sloping

into the sea. The ground is hard and infertile with a gravel surface until the spring when a pale, soft green covering appears on the desert following the winter rains. It provides a welcome contrast to the summer's aridity.

Population

Bahrainis are Muslims. With an estimated 666,000 people, of whom 38% are non-Bahrainis, the population is divided between the Shi'a community and the ruling Sunnis. The Shi'a community is principally split between ethnic Arabs and Iranians. Indians, Pakistanis and other Asians comprise the majority of resident foreigners. Bahrain has a large Western community, which includes about 6,000 British and approximately 3,000 Americans. The majority of the indigenous population is under 25 years old.

Bahrainis are cosmopolitan people noted for their hospitality, moderation, and tolerance. Although many still wear traditional Arab dress, others have adopted Western attire. Modern Bahraini culture is the lat-

est in a succession of civilizations dating back thousands of years. The island of Bahrain was called Dilmun in the Babylonian and Sumerian eras, Tylos in the Seleucid era, then Awal, and finally Bahrain.

Government

The extended Al-Khalifa family has ruled the State of Bahrain since the late 18th century. It dominates Bahrain's society and Government. The constitution confirms the Amir as hereditary ruler, with the assistance of a Prime Minister and an appointed Cabinet.

Britain conducted Bahrain's foreign relations and ensured its defense through a treaty relationship from the mid-19th century until 1971, when Bahrain declared its independence. The mercantile and adaptive spirit of the Bahraini people enabled Bahrain to establish public schools, an effective and efficient modern bureaucracy, a Western legal system, and a sophisticated economy at an earlier stage than its Arabian Gulf neighbors. Bahrainis continue to welcome foreign contributions to the economic and social life of the country.

Since independence, Bahrain has joined the U.N., the Arab League, the Organization of the Islamic Conference, and the Gulf Cooperation Council. The Gulf Cooperation Council was formed in 1981 to coordinate developmental, educational, commercial, and security affairs among its six Arab Gulf State members.

Arts, Science, and Education

The first public school in Bahrain opened in 1919, and its literacy level remains high by regional standards. Bahrain was the first country in the area to introduce co-education in public schools. Many Bahrainis are well educated and well traveled. Many have studied at the American University of Beirut or in England, Egypt, or in the U.S. English is widely spoken, especially

in the business community. Knowledge of Arabic is not essential, but the ability to communicate in Arabic opens many doors in Bahrain and increases social access for Westerners.

Bahrain has a national university and a college of health sciences. The regional Arabian Gulf University is also located in Bahrain. Its medical school opened in the fall of 1984. The campus is a modern architectural marvel, with separate facilities for men and women.

Bahrain features a number of talented artists whose works are displayed and sold at frequent exhibitions.

The role of Bahraini women is changing. Their position in society is expanding and developing. Many opportunities in both education and business that had never before been open to Arabian Peninsular women have become available. Some women still wear the "abaya," a traditional black cloth covering the whole body, outside their homes. Other Bahraini women dress in the latest European fashions, drive cars, and occupy positions of responsibility, including mid-level Government posts.

Commerce and Industry

Bahrainis have an ancient tradition of trade, travel, and receptivity to cultural influences from abroad. They are cosmopolitan and accept many Western customs.

Much of Bahrain's current prosperity can be traced to the discovery of oil in 1932, the first find on the Arab side of the Gulf. Bahrain does not have a large oil reserve and, therefore, has sought to diversify its industrial base. Banking, communications, oil-related services, general commerce, and industries, including aluminum smelting and downstream product production, have broadened the base of economic activity in the country.

Approximately 90 American firms capitalize on the geographic, service, and environmental advantages of having regional offices in Bahrain.

Despite modernization, traditional enterprises have not disappeared. Handmade Arab dhows ply the seas as they have for more than 1,000 years. From the sea come a variety of fish, including delicious shrimp. Expensive natural pearls, once the economic mainstay of the island, are still found in limited commercial quantities. Bahrainis take great pride in their quality and color. A limited number of craftsmen continue to make traditional baskets, cloth, and pottery. Also available in local markets are a variety of imported handicrafts from Middle Eastern and South Asian countries.

Transportation

Automobiles

All family members who are at least 18 years old and intend to drive in Bahrain should take along a valid U.S. driver's license. Local authorities permit U.S. license holders to drive for one month until a permanent Bahraini license is obtained.

Bahrain's climate and roads shorten a car's life span. Many people find a used car adequate in this small country. Ford, Chrysler, and General Motors products are available in Bahrain. European and Japanese autos are still cheaper than U.S. models. The local market for used cars is active.

Although it is difficult to drive large cars in many parts of Manama, they are very common. A mechanically simple car is preferable since maintenance/repair can be expensive, and spare parts are often in short supply. Local third-party insurance is required and is available for less than \$100 for most cars. Full coverage costs about 5% of the value of the car.

Gasoline prices are comparably lower than U.S. prices. Unleaded gasoline is available.

Rental cars are available locally, from about \$397 to \$550 a month, depending on condition and the comfort options requested.

Local

A network of roads connects Manama with other villages on Bahrain Island and to the three neighboring islands. Most major roads in the northern third of Bahrain are four-lane and well maintained. In the older parts of Manama and Muharraq, many streets are narrow and twisting or in poor condition. Congested areas of pedestrians, hawkers, and cars make driving difficult and dangerous, particularly in the market ("souq") area. Roundabouts (traffic circles) are found at most intersections. However, even with Bahrain's 140,000 registered vehicles congesting the streets, the drive to work from most residential areas takes no more than 15-20 minutes. Taxis are readily available, but most are not metered and fares are subject to intense negotiation.

Buses operate regularly, but are often crowded and sometimes require lengthy waiting periods in extreme heat. They are not air-conditioned and are not considered a suitable alternative to taxis by most Westerners.

Regional

Bahrain International Airport's ultramodern new terminal is one of the busiest in the Gulf. Approximately 22 carriers serve Bahrain with connections to other Middle Eastern destinations, Europe, Africa, and the Far East. There are no direct flights between Bahrain and North or South America. Bahrain also has a modern and busy port. It offers direct and frequent cargo shipping connections to the U.S., Europe, and the Far East. The four-lane causeway linking Bahrain with Saudi Arabia is open to vehicle traffic, affording access to most parts of the mainland. Only males are permitted to drive in Saudi Arabia.

Communications

Telephone and Telegraph

Bahrain has one of the most efficient telephone networks in the Middle East. A radio and telecommunications station links the Gulf, via INTELSAT, to the rest of the world with good connections. A call to the U.S. usually takes only a few seconds to place and costs about \$1.29 a minute. Reduced rates (\$1.04 a minute) are in effect between 7 p.m. and 7 a.m. daily, and all day Friday. INET services are available, in addition to AT&T and MCI "Dial America."

Mail

Bahraini international mail is also a quick and safe method of corresponding with the U.S.

Radio and TV

Several TV stations can be received clearly in Bahrain. Channel availability is strictly dependent on each housing compound, and the selection varies widely. The Bahraini Government-owned station has both Arabic- and English-language services. The latter airs from 5 to 11 p.m. and includes a 30-minute English-language newscast, as well as American series, movies, cartoons, and British and Indian programs. BBC World Service Television from Hong Kong is broadcast over open TV channels. CNN is available on a pay-for-service channel, as are a large number of other stations broadcasting American films and TV shows. Another English-language station is transmitted by ARAMCO from neighboring Dhahran, Saudi Arabia. This station presents mostly rerun American programs, but also offers several recently taped sports events on Thursday and Friday afternoons. Programming is provided only during the late afternoon and evening and is entirely English. With a suitable antenna, you can pick up four other stations, including Qatar, Dubai, and Kuwait. The English-language newspapers carry tentative schedules for some stations.

All local TV stations use the European scan (PAL/SECAM 625 lines). American NTSC TV's are not compatible and will not work. In addition to regular programs, an active video rental market offers many current movies.

ARAMCO also maintains an excellent AM/FM radio service. ARAMCO presents popular, classical, country-western, and rock music on two wavelengths. Radio Bahrain has an AM/FM stereo service with strong signals broadcasting modern and classical music, topical programs, and English newscasts on two channels. English programming from Qatar and Dubai is also received. The latest news is broadcast on shortwave and medium wave by VOA's Middle East and African services during the morning and evening, by the World Service of the BBC, and by Armed Forces Radio and Television Services (AFRTS). A dependable shortwave receiver is desirable due to atmospheric conditions around Bahrain, which frequently cause poor reception, especially of VOA. Equipment must be adjustable to the local 220V, 50-cycle power. An all-channel TV antenna that also serves for FM stereo might be the best buy, and it is available locally.

Newspapers, Magazines, and Technical Journals

The Gulf Daily News and Bahrain Tribune are two daily English-language papers that are published in Bahrain and directed toward the English-speaking community. The English-language Gulf News is available daily from the U.A.E. The International Herald Tribune usually arrives a day after publication and costs about \$2 per issue.

International newsmagazines such as Time, Newsweek, and The Economist are available uncensored locally at several bookstores. Women's magazines, mostly British, and hobby and sports magazines are found on many newsstands. These are expensive, so it is preferable to subscribe to magazines. Bookstores have a limited selection of

titles and are more expensive than in the U.S.

Health and Medicine

Medical Facilities

The oldest hospital in Bahrain is the American Mission Hospital, run by the Mission of the Reformed Church in America, and the newest is the International Hospital. Emergency services are also available at the Bahrain Defence Force Hospital in Riffa, and Awali Hospital. Routine dental care is available at local Bahraini medical facilities, but it is advisable to have a thorough checkup and treatment of serious problems before leaving the U.S.

Community Health

The Government of Bahrain provides free public health care to all Bahrainis and foreigners through six hospitals and a network of clinics throughout the island. Most health care provided at the facilities is professional, competent, and modern. However, doctors and staff cannot always handle large numbers of people.

The most common insects are mosquitoes, cockroaches, flies, ants, and meal mites. Flies are troublesome during the spring, late summer, and early fall. Insecticides are available in local stores. Rats and mice are also found, particularly near uncollected and decaying garbage heaps throughout the city. Cleanliness and precautions such as storing food in airtight containers are advisable. Brownish-green lizards (geckos) are useful, silent friends who populate the upper reaches of house walls. Common in many parts of the world, they bother no one except the squeamish and feed on insects that find their way into houses despite screening and the use of insecticides.

Fleas, sand ticks, and wood ticks are prevalent in Bahrain and are a problem for pets. There is no heartworm in Bahrain. Veterinarians are available and competent, but expensive.

An extensive drainage system is currently under construction in Bahrain. Some houses still have septic tanks that can occasionally overflow.

When enjoying beach activities or indulging in water sports, wear either plastic or canvas shoes and avoid stepping on sharp pieces of shell, buried pieces of metal or glass, sea urchins, stonefish, and cone shells that can sting painfully and sometimes dangerously. Sea snakes, jellyfish, stingrays, and sharks are found in Bahrain waters but rarely pose a threat close to shore. Minor ear infections are sometimes contracted through swimming in polluted water and should receive prompt medical attention. Seek advice on the location of clean and safe swimming areas. Irritation to ears and eyes may also be caused by the draft from fans and air conditioners or the dust and sand carried in strong winds.

Preventive Measures

Health precautions include preventing sunstroke and heatstroke, which are real risks during the summer and fall. Outdoor activities must be carefully planned and exertion kept to a minimum during the daytime in that period.

In the summer, good health is best maintained by drinking a lot of liquid, getting plenty of sleep, and taking extra salt on food, or, if preferred, salt tablets, with a physician's guidance. The high summer humidity can be troublesome to those with asthmatic or bronchial ailments.

Summer colds are often brought on by sudden changes of temperature due to extensive air-conditioning in buildings and cars. Avoid direct drafts from air conditioners.

Some medications are not available in Bahrain. Take an initial supply from the U.S. that can be refilled through mail.

NOTES FOR TRAVELERS

Customs, Duties & Passage

Passports and visas are required. Two-week visas may be obtained for a fee upon arrival at the airport. Prior to travel, visitors may obtain from Bahraini embassies overseas five-year multiple entry visas valid for stays as long as one month. Visitors who fail to depart the country at the end of their authorized stay are fined. An exit tax is charged all travelers upon departure. Residents of Bahrain who intend to return must obtain a re-entry permit before departing. For further information on entry requirements, travelers can contact the Embassy of the State of Bahrain, 3502 International Drive, N.W., Washington, D.C. 20008, telephone (202) 342-0741; or the Bahrain Permanent Mission to the U.N., 2 United Nations Plaza, East 44th St., New York, N.Y. 10017, telephone (212) 223-6200. Information also may be obtained from the Embassy's Internet home page at <http://www.bahrainembassy.org>.

The following items are strictly prohibited: firearms and ammunition or other weaponry, including decorative knives; cultured, bleached, or tinted pearls and undrilled pearls produced outside the Arabian Gulf, pornography or seditious literature; and habit-forming or hallucinatory drugs. Videocassettes will be inspected and viewed on arrival and should not be shipped in hand or checked baggage.

Travelers should note that the local definition of pornography is considerably stricter than in the Western world.

Magazines such as Playboy are likely to be confiscated at the airport. Adults may import two bottles of alcohol, and the duty-free shop at Bahrain's International Airport is open to arriving as well as departing passengers.

Americans living in or visiting Bahrain are encouraged to register at the Consular Section of the U.S. Embassy in Manama and obtain updated information on travel and security within Bahrain. The U.S. Embassy is located at Bldg. 979, Road no. 3119, Zinj District (next to Al Ahli Sports Club). (The mailing address is P.O. Box 26431, Manama, Bahrain.) The telephone number is 973-273-300. The Consular Section fax number is 973-256-242. The Embassy maintains an English language hotline providing information on current travel conditions in Bahrain at telephone 973-255-048. The Embassy's website, which includes consular information, is <http://www.usembassy.com.bh>. The workweek in Bahrain is Saturday through Wednesday.

Pets

The Bahrain Minister of Commerce and Agriculture issued a Ministerial decree in 1984 that banned the importation of dogs, cats, and monkeys into Bahrain from countries where rabies is found.

Bahrain is rabies free and certain rules have to be met when importing a pet. Within one month of your departure date, obtain a veterinary health certificate that identifies the pet, states the origin and name of the exporter; verifies that the animals/birds were examined prior to shipment, confirms that the animal is free from all contagious diseases (as well as ecto-parasites), and is fit for travel. The following vaccination certificates must accompany the animal when it arrives in Bahrain:

Cats: Rabies, Feline Enteritis
Dogs: Rabies, Distemper, PARVOV

If an animal is not permitted entry into Bahrain, it is the responsibility of the owner to pay for its return.

Firearms and Ammunition

Firearms and ammunition are not to be imported into Bahrain under any circumstances.

Currency, Banking, and Weights and Measures

Citibank is the only American bank currently established in Bahrain that provides full commercial banking services (individual Bahraini dinar, U.S. dollar checking and savings accounts, fund transfers). Citibank and several other banks, as well as commercial money changers, accept U.S. Treasury dollar checks or travelers checks and will disburse either U.S. dollars or Bahrain dinars at the established rate, often with a surcharge. However, banks usually do not cash personal checks.

The exchange rate is: US\$1.00 = Bahrain Dinar (BD).377 (or 377 fils); BD1=US\$2.65. The Dinar is pegged to the US\$; it will not fluctuate.

Bahrain officially adopted the metric system of weights and measures in December 1977.

Taxes, Exchange, and Sale of Property

Bahrain does not have personal or sales tax. An active resale market in Bahrain is open to those seeking to sell personal property, including automobiles. Bahrain has a free exchange of currency. Money changers will quickly convert dollars or travelers checks to virtually any currency desired.

Dhaka, Bangladesh

BANGLADESH

People's Republic of Bangladesh

Major Cities:

Dhaka, Chittagong

Other Cities:

Barisal, Comilla, Dinājpur, Faridpur, Jessore, Khulna, Mymensingh, Narayanganj, Pabna, Rajshahi, Rangpur, Sirājganj, Sylhet

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated August 1997. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

BANGLADESH, on the Bay of Bengal between India and Burma, is the most densely populated, yet one of the least developed and poorest countries in the world. Its needs are many, and its resources few. Marked by famine, floods, an astronomical birthrate, and a tenuous economy, it is struggling to improve the welfare of its citizens.

Physically, Bangladesh is semi-aquatic. The land, basically flat, is broken by the delta system of the Ganges and Brahmaputra rivers, and thousands of lesser waterways, tributaries, and streams course through the country. Tea plantations and bamboo jungles add diversity to the landscape.

MAJOR CITIES

Dhaka

Dhaka, the capital, has developed over centuries as a city of culture, commerce, and government in the Bengal region. Buddhist and Hindu domination ended in the 13th century and was followed by 500 years of Muslim economic and cultural influence. In the 17th century, under Moghul rule, Dhaka occupied the role of capital city and was an important trade and commercial center. During the European domination of the 19th and 20th centuries, particularly during the British raj, Dhaka served as a district headquarters, although Calcutta was the chief seaport and industrial center of Bengal. It was not until independence in 1971 that Dhaka again achieved capital status. From a population of less than 2 million in 1971, it has grown to approximately 7 million today.

Divided into districts, Dhaka lies in the south along the banks of the Buringanga River. The once splendid buildings and residences have deteriorated into shops and small dwellings. The majority of Dhaka residents live in this area. Most of the modern public institutions and commercial development are con-

centrated in Dhaka center. However, due to increasing congestion some businesses are spreading to more newly developed areas. On a narrow strip of high ground north of the city, the upper-class areas of Banani, Gulshan, and Baridhara Model Towns have developed.

Food

Locally, you may purchase meat, fish, shrimp, eggs, fresh vegetables, and fruit. For the coolest 6 months of the year, a wide variety of vegetables are available, although the size and quality are not up to U.S. standards. Individuals should soak all vegetables in chlorine for 30 minutes. All meat must be frozen 7 to 14 days or cooked very well to avoid diseases. Several types of leaf lettuce, green beans, cauliflower, broccoli, green pepper, celery, and tomatoes are only in the market during the coolest part of the year. During the hottest 6 months, vegetables are limited to potatoes, onions, eggplant, cucumbers, carrots, cabbage, and a variety of local greens and squashes.

Several varieties of tropical fruits are available locally in season, including mangoes, pineapples, bananas, papayas, lychees, and guavas. Oranges, apples, and grapes are imported from India or Pakistan. Packaged food items can be

found on the local market but at considerably higher prices.

Home gardens can provide a variety of foods to your diet. For those who don't have a yard in which to plant a garden, large flowerpots on the roof can be used to plant vegetable seeds. Tomatoes, carrots, beets, snow peas, cabbage, broccoli, lettuce (leafy varieties), and herbs can be grown. Much attention needs to be given to a vegetable garden in order to keep the insects and crows from consuming the fruits of your labor.

Clothing

An umbrella is good protection against the rain or sun. Bring a large supply of summer clothing and shoes for all occasions. Loose-fitting cotton clothes are more comfortable than synthetics for the high humidity that prevails throughout much of the year. Clothes wear out due to frequent washing and required changes.

Because black rust permeates everything and mildew is prevalent 9 months of the year, clothing and leather items must be given special attention. Plastic garment bags are not recommended. Use old sheets, etc., to cover stored clothes and to act as dust covers on open clothing racks. Local tailors can make basic men's, women's, and children's clothing. Success is most often achieved when a garment copy is supplied. Bring a good supply of fine cotton fabrics and sewing notions and have clothes made locally. Tailors cannot use paper patterns, but include them if you sew yourself. Local fabric and notion selections are limited in quality, color, and selection.

Wool clothing and sweaters can be worn a few weeks during the cool season and for traveling to neighboring India and Nepal. Clothing customs vary with the season; lightweight suits are worn by men more often during the cooler months.

Men: Local safari suits or sport shirts and slacks are worn to work most of the year. Ties are appropriate in most offices. During the cool

season, lightweight suits are often worn. Sweatsuits are handy for the cooler months.

All-cotton shirts and slacks are most comfortable for 9 months of the year. Blends, however, are tolerable for work in the air-conditioned office and for cooler weather. Bring an adequate supply of shoes for work and sports, including sandals and thongs for poolside use. Sweaters and other lightweight wool clothing are used during the cool months and for travel. Include a good supply of cotton underwear, socks, and proper athletic wear for a variety of sports.

Women: Bring lightweight, comfortable clothing for home or office wear. Mid-calf-length dresses or sleeved blouses with skirts are most common; pants with long blouses are also appropriate. Bring washable fabrics; dry-cleaning is available but not reliable.

Modest attire with covered back and shoulders and mid-calf skirts is appropriate for occasions that include Bangladeshis. A lightweight shawl or jacket to cover shoulders is often sufficient to use with more typically U.S. summer styles; jackets are handy for air-conditioned rooms as well. Sundresses and shorts can be worn at home, at the home of an American friend, or at the American Recreation Club. Two-piece swimwear is acceptable at private clubs. It is important, however, to be covered when you are traveling between home and your destination.

Many discover the practical comfort of the "shalwar kamiz," a traditional costume with cool, loose-fitting pants and a long tunic or blouse. It may be purchased locally in cotton or silk or tailored for you in a fabric of your choice.

Children: Good-quality, ready-made clothing for children is not available. Clothing for boys is particularly hard to find. Bring a good supply and keep in mind how quickly children grow. Bring a large supply of tennis shoes and sandals.

Consider the warm weather and include sundresses, shorts, T-shirts, cotton underwear, a large supply of socks, and several bathing suits. Sweatpants, jeans, and sweaters are necessary for winter and travel. Dressy clothes are seldom needed. A typical school outfit includes shorts, T-shirts, and tennis socks for both boys and girls.

Besides umbrellas, you might want to bring a lightweight rain slicker, galoshes, or gumshoes. However, the heat during the rainy season may render such items impractical. The galoshes might be more practical for children who might play outside after a storm. Bring nonskid shoes and slippers, as the floors in most houses are a noncarpeted tile. Costumes for Halloween and school plays are useful items, but costumes can easily be made by the local tailors.

Bring all clothing for infants. Rubber pants with diapers encourage skin rashes; try improved products available in the U.S. Bring diapers and good-quality pins and rubber padding. Some cotton clothing, but not the best quality, can be found locally.

Supplies and Services

Bangladesh has strict import laws. Many items may be found on the local market but at very high prices.

Dhaka has several beauty parlors. Bring your own hair-coloring products; henna is available here and has been popular among the Americans. Dry-cleaning services are inexpensive but not very reliable. Picture framing is also reasonable; however, proper matting material is not available. Film processing is adequate and reasonably priced. Local tailors can sew basic styles or copy an existing garment successfully and inexpensively; local fabric selection and notion supplies are limited. Basic vehicle repairs are done locally, though parts are sometimes difficult to find.

Religious Activities

The Constitution of Bangladesh grants all religions the freedom to

Three-wheel taxis in Dhaka.

Cory Langley. Reproduced by permission.

preach, practice, and propagate their faith. Catholic and Protestant congregations have been established for generations in Dhaka.

Most Roman Catholics from the American community attend English-language Masses held on Saturday at St. Mary's Cathedral in Ramna or on Sunday at Banani Seminary in Banani. Many priests are U.S. citizens (Holy Cross Fathers). First communion and religious education classes are also held.

An interdenominational Protestant church holds English-language services every Friday morning in Gulshan. This interdenominational congregation sponsors an active group for all youth from grades 6 through 12. The Anglican church, St. Thomas' New Centre, has English-language services twice weekly. Seventh-day Adventists,

Latter-day Saints, Mennonites, Bahai, and Assemblies of God are also represented in Dhaka.

Education

The American International School Dhaka (AIS/D) is a coeducational day school for students of all nationalities from preschool (4 years old) through grade 12.

The school is divided into three sections, elementary school, middle school, and high school, with a student population of approximately 500. AIS/D is administered by an American superintendent and two principals and governed by a 10-member school board comprising parents of students enrolled in the school. Three positions on the board are direct-hire U.S. Embassy employees, two are other Americans, and four are other nationalities. AIS/D is accredited by the Middle States Association of Col-

leges and Schools and the European Council of International Schools.

The school occupies a 4-acre campus in Baridhara, a suburb of Dhaka. The modern, air-conditioned building consists of a library; 47 classrooms, including 2 art, 2 music, 5 science, and 3 computer rooms; a gymnasium; a multipurpose room; and an auditorium. School grounds encompass a softball/soccer field, volleyball and basketball courts, a 25-meter swimming pool, and a playground area.

A library of 25,000 volumes is available for students and their families. The facility is available on a fee basis to expatriate employees of any organization that sponsors children attending the school. All instructional and art materials are furnished by the school. AIS/D operates its own fleet of 15 modern buses for transporting students to

and from school. Transportation is also provided for all after-school activities.

The curriculum is based on the American model. Numerous specialty teachers are employed: art, music, physical education, computers, English as a Second Language, resource specialist, French, Spanish, and south Asian studies. The school's scholastic standards are high, and graduates attend many fine universities worldwide. AIS/D can accommodate some students with minor learning difficulties, but it does not have a special education program. Parents of children with special needs must contact the school before accepting a posting in Dhaka.

A strong extracurricular program is maintained for students of all ages. Each quarter, after-school activities are offered for a small fee. On average, 30 different activities are scheduled each quarter. The school participates in the South Asia Inter School Association (SAISA) and sponsors athletic teams including swimming, track and field, basketball, volleyball, and soccer. In addition, the school's PTA sponsors a weekend soccer program and scouting opportunities. PTA activities depend on parent volunteers.

Students travel in and out of the country to participate in SAISA events and educational field trips. A summer session is available but is recreational in nature. The academic year begins in mid-August and ends in early June.

Parents wishing to enroll their children should write: Superintendent, American Embassy (AIS/D), Dhaka, Bangladesh, Department of State, Washington, DC 20521-6120. There is an application fee and a yearly capital fee. Tuition rates for 1995-96 were as follows: Preschool, \$2,700; Kindergarten-Grade 3, \$6,850; Grades 4-5, \$7,250; Grade 6, \$8,550; Grade 7, \$8,450; Grade 8, \$8,800; Grade 9, \$9,000; Grade 10, \$9,400; Grade 11, \$9,000; Grade 12, \$9,500.

Alternative schooling is very limited in Dhaka. Several other preschools are available.

High school students may choose to attend a boarding school in the U.S. or one of two schools in India. The schools in India are missionary founded and of high quality. Woodstock begins and ends in June with a 3-month break from December 1 to March 1. Kodaikanal follows a more typical American calendar. For additional information, write directly to the schools:

Woodstock School
Mussoorie, U.P.
India

Kodaikanal School

Fax: (91) 4542-41109

Special Educational Opportunities

The Heed Institute in Dhaka offers lessons in Bangla scheduled for half-day sessions. French may be taken at the French School and Alliance Française. Trenton State College periodically offers graduate courses for the faculty of AIS/D in which members of the community may also enroll. AIS/D recently began a few short courses for adults at the school. Such courses include computer and swimming classes.

Sports

The American Recreation Club is an extremely attractive compound covering about half a city block and located in Gulshan Model City. It includes two lighted, hard-surface tennis courts; one air-conditioned squash court; swimming and wading pools; volleyball and badminton areas; a basketball court; two playgrounds; and (in 1996) a weight/aerobics room. Inexpensive squash and tennis lessons are available, but we suggest you bring all of your own equipment and sportswear, as local availability of such goods is sporadic.

Club amenities also consist of a restaurant and bar, a large multipurpose room, a cabana by the pool, a

video rental facility (U.S. specifications), and a fine catering service. Special activities are featured monthly, sports tournaments are held frequently, and the weekly Thursday highlight of Pizza Night is a popular event. The club is open for breakfast on weekends and holidays. Monthly dues apply.

The Kurmitola Golf Club is located on the Dhaka Cantonment near Gulshan. In addition to an 18-hole golf course, the facility has a swimming pool and a restaurant/bar open daily. Membership fees are high and fluctuate from year to year. There is restricted access to the golf club for nonmembers. Members must pay an additional monthly fee. Lessons are available, usually from a caddie since the club has no pro on staff. No rental clubs exist. Bring all equipment including clubs, balls, and pull-cart if desired.

The Sheraton and Sonargaon hotels also provide recreational opportunities. Memberships are available for the health club, tennis, and swimming facilities. Fees are moderately high.

Numerous opportunities for adult team sports are available. Currently, active teams exist for slow-pitch softball, volleyball, basketball, rugby, tennis, and soccer. Hashers race throughout the year. Aerobics classes are also available. Activities vary depending upon expatriate interest.

Bicycles may be used in residential areas, but traffic is congested, and it is quite dangerous for children learning to ride.

Boating and fishing are limited, but it is possible to either buy or rent a country boat. Large boats can be hired at Sadarghat in Old Dhaka or Narayanganj, approximately 10 miles from Dhaka. Groups often go on boating parties.

Cox's Bazar, which is south of Chittagong, is the only usable ocean beach in Bangladesh. Swimming in local rivers and ponds is not safe.

There are several clubs operated by other foreign embassies and international groups. Most of the clubs have tennis courts, squash courts, and swimming pools. Several of these clubs have open nights when members of other clubs are welcome to attend. Each of the clubs sponsors various social events throughout the year for the expatriate community.

Touring and Outdoor Activities

Interesting buildings and sights in Dhaka include the High Court, Dhaka Museum, Lalbagh Fort, Armenian Church, and Nawab's Palace. The Star Mosque, known for its lovely blue star external ornamentation, and the Baital-Mukarram, built in the style of the Kaaba at Mecca, are two of the most notable of the several hundred mosques throughout the city.

The zoo and botanical gardens provide interesting diversions from the crowded city streets. The narrow, winding streets of the Chowkbazaar section of Old Dhaka have picturesque bazaars and shops. The main riverfront of the city, Sadarghat, lies on the bank of the Buriganga River; a visit to the ferry terminal is a good starting point to see Old Dhaka.

Many people limit their travel outside and around Dhaka due to traffic congestion and lack of public services. During monsoon season, bridges are often washed out, which restricts land travel, making people rely on the airline and train companies, which are not always reliable.

Approximately 10 miles from Dhaka is Narayanganj, the center of the jute trade in Bangladesh and a thriving river port. A number of Moghul and Buddhist ruins are within 25 miles of the city. A river trip to Khulna is an enjoyable 3-day outing from Dhaka. The beautiful scenery and the active life of the Bangladeshis along the river's edge can be viewed from the calmness of the boat's deck.

Cox's Bazar, 94 miles south of Chittagong, has a 75-mile, unpopulated

beach along the Bay of Bengal. The Bangladeshi Government encourages the development of Cox's Bazar as a tourist resort; three modern, modest hotels are there. Round-trip flights from Dhaka are available at relatively reasonable rates.

Sylhet, with 78,000 acres and 132 tea estates, offers a pleasant and relaxing change from city life. Rangamati, in the Chittagong Hill Tracts, is a tribal area recently opened to expatriates. It is a nice place to visit, where you can take quiet walks and visit some of the tribal villages. A visit to the Sunderbans is pleasant if you like roughing it. The Sunderbans claims to be the largest mangrove forest in the world. It might be your one chance to see the famous Bengal tiger (but don't count on it!).

Round-trip flights from Dhaka leave daily for Calcutta. There is currently a direct flight to New Delhi on British Airways four times a week.

Daily flights to Bangkok leave Dhaka. Bangkok is a busy city and a nice diversion from Dhaka. Flights to Katmandu leave Dhaka five times a week, offering cooler weather in Nepal and an opportunity to trek in the Himalayas. On Thursdays and the second and fourth Wednesday of each month, there are direct flights to Rangoon.

Entertainment

There are no acceptable recreational facilities for picnicking, hiking, or hunting within easy reach of Dhaka. There are no theaters that offer movies in English. Recreation is limited in variety and consists largely of self-generated dinners or receptions. Everyone makes use of the limited facilities and activities available—primarily the American Recreation Club, school, and private residences. Reception rooms in the two hotels can be rented at a high cost.

Western cultural presentations are limited. USIS and other diplomatic agencies, including the British Council, Alliance Française, and

German Cultural Center, occasionally sponsor plays, lectures, films, and musical programs. Plays are presented throughout the year by the Dhaka Stage theater group and AIS/D. The Dhaka Chorus and AIS/D present concerts during the year.

A number of restaurants serve Asian dishes. Italian and Indian restaurants are also available. The Sonargaon and Sheraton hotels have several restaurants that offer a greater variety of entrees.

The National Museum, Shilpakala Academy, and Osmani Hall host exhibitions and cultural performances. You may enjoy folk music, dance festivals, plays, poetry readings, art exhibitions, and recitals.

Other sponsoring groups include the Art Council of Bangladesh, the Bulbul Academy of Fine Arts, the College of Music, the College of Arts and Crafts, Nazrul Academy, and foreign cultural missions (USIS and the British Council, German Cultural Institute, and Alliance Française). The Dhaka Museum includes collections of 10th- and 12th-century Hindu and Buddhist sculpture, folk arts and crafts of tribal groups, painting, ancient coins, and Moghul arms and jewelry.

Social Activities

Organizations within the American community include the ARA and the Dhaka American Women's Club (DAWC). Currently, a complete Boy Scouting program is available, as are Brownies for girls. Several organized play groups for small children are active.

All women are invited to join the DAWC. In addition to charitable work and community service, the DAWC organizes excursions and activities. A monthly newsletter, the *Bangladasher*, is also published by the club.

A number of expatriates, who can best be met through the cultural, special interest, and sports activities, live in Dhaka. The U.N. Women's Association (UNWA) offers

Cory Langley. Reproduced by permission.

Street scene in Chittagong.

an associate membership to women who are not spouses of U.N. employees. There is an active Dhaka International Garden Club. The Dhaka Stage theater group welcomes volunteers for its productions. Dhaka has several international service clubs. Individual and team sports competitions provide a good opportunity to meet the large expatriate community. The Dhaka Chorus sings each week and gives two concerts a year. Duplicate bridge and mah-jongg groups meet weekly.

Chittagong

Chittagong is located 12 miles from the mouth of the Karnaphuli River in southeast Bangladesh, near the Bay of Bengal and about 125 miles south of Dhaka. It is situated in one of the regions of heaviest annual rainfall in the world. Bangladesh's chief port, with modern facilities for oceangoing vessels, Chittagong is also an important rail terminus and

administrative center. Exported items include jute, tea, skins, and hides, while cotton and other fabrics, machinery, and construction materials are items imported.

During the 1960s, oil installations were set up offshore. Chittagong has an oil refinery and blending plants, as well as other industries that include cotton and jute processing mills, tea and match factories, engineering and chemical works, iron and steel mills, and fruit canning, leather processing, and shipbuilding facilities. Power for the local industries is supplied by the Karnaphuli hydroelectric project.

The city has a current population of nearly 2 million (1991 est.), and has landmarks that include Hindu temples, Buddhist ruins, and several examples of Mogul art. There are a university, founded in 1966, and several arts and professional colleges.

Historically, Chittagong was known to the civilized world in the early centuries (A.D.). The port was used by Arakan, Arab, Persian, Mogul, and Portuguese mariners; the latter called the city Porto Grande. Chittagong was originally part of an ancient Hindu kingdom and was conquered by a Buddhist king of Arakan in the ninth century. It became part of the Mogul empire in the 13th century, was retaken by the Arakans in the 16th century, and was recaptured by the Moguls a century later. The British East India Company took control in 1760. Chittagong's port facilities were damaged during the Indo-Pakistani War in 1971.

OTHER CITIES

BARISAL is an important river port in southern Bangladesh on the Ganges River delta, 90 miles south

of Dhaka. With a population of approximately 188,000 (1991 est.), Barisal is a transshipment point for jute and rice, as well as a market for fish and betel nuts. Jute, oilseed, flour, and rice mills are also located here. The city has three colleges affiliated with the University of Dhaka. A phenomenon named the “Barisal guns” occurs in the city; these are unexplained sounds that resemble thunder or cannons, and are believed to have a seismic origin.

COMILLA, 50 miles southeast of Dhaka, lies on an affluent of the Meghna River. Situated on the main railroad and highway linking Dhaka and Chittagong, Comilla is an administrative center and collection point for hides and skins. The city also has a cottage industry in cane and bamboo basketry. The site of three colleges affiliated with the University of Dhaka, Comilla has a population exceeding 155,000 (1991 est.) and is one of the most densely populated areas of Bangladesh.

DINĀJPUR is the headquarters of the eponymous district, located about 190 miles northwest of Dhaka. Employment here is provided by mills, farms, and a power station. Dinājpur’s northeastern section contains the old city, with the former house of the maharajah. The University of Rājshāhi is associated with two government colleges here. An estimated 138,000 people live in Dinājpur (1991 est.).

FARIDPUR, named for the Muslim holy man Farid Shar and the site of his shrine, is in southern Bangladesh, about 50 miles west of the capital. With a population of about 50,000, Faridpur is an administrative center, railway terminus, and market town for rice and jute. Two colleges affiliated with the University of Dhaka are located here.

JESSORE lies on the Bhairab River, 90 miles southwest of Dhaka. An administrative headquarters, the city has approximately 154,000 residents (1991 est.). Landmarks here include shrines of Muslim saints and the Rajbāri of Chanchra.

Supposedly, Jessore’s name is taken from *yaśohara*, or “glory depriving”; Gauer was the pre-eminent city at the time, until Jessore surpassed it in importance. A library, a stadium, and four government colleges are located here.

KHULNA, whose population is 1 million (1991 est.), is located near the Ganges delta about 125 miles southwest of Dhaka and 77 miles northeast of Calcutta, India. The city is one of Bangladesh’s chief ports and the trade and processing center for the products of the Sundarbans—a swampy, forested region. Rice, jute, and other agricultural products are processed here, and there is also some shipbuilding and textile manufacturing in Khulna. Timber and forest products are exported.

MYMENSINGH (also spelled Maimansingh) is in north-central Bangladesh, on an old channel of the Brahmaputra River. Rice, jute, sugarcane, oilseeds, tobacco, mustard, and pulse (edible seeds of leguminous plants) are traded in Mymensingh. The city was once known for the manufacture of glass bangles, and now its industries include jute pressing and electrical supply factories. Mohan College, affiliated with the University of Dhaka, is located here. There is also an agricultural university, a veterinary training institute, and the Institute of Radiation Genetics and Plant Breeding. Formerly called Nasirabad, the city today has a population close to 202,000 (1991 est.).

NARAYANGANJ (also spelled Narayungunj) is the river port for Dhaka and one of Bangladesh’s busiest trade centers. Located at the confluence of the Bakhya and Chaleshwari Rivers, the city’s population is estimated at 296,000 (1991 est.) Dhaka and Narayanganj together comprise Bangladesh’s principal industrial region. Narayanganj is also a collection center for hides and skins, and a receiving point for imports from and exports to Calcutta, India. Industries in the city range from jute presses, cotton and textile mills, and ship repair

facilities, to leather, glass, footwear, and undergarment manufacturers. The famous shrine of the Muslim holy man Kadam Rasal is located nearby.

PABNA is in western Bangladesh on the Ichamati River, about 75 miles northwest of the capital. Known for its handmade products and hosiery, Pabna is the site of the Hindu temple of Jor Banga. With a current population of close to 112,000 (1991 est.), Pabna has a college affiliated with Rajshahi University.

RAJSHAHI is in west-central Bangladesh on the Ganges River, about 130 miles southwest of Dhaka and 40 miles west of the Indian border. Formerly called Rampur Boalia, the city is the administrative center for a region that produces nearly all of the country’s silk. Industries in Rajshahi include oil pressing plants, match factories, and sawmills. The Varendra Research Museum, a silk institute, and a university (founded in 1953) with several affiliated colleges, are also located here. Rajshahi has a population of over 430,000.

RANGPUR, in northwest Bangladesh on the Little Ghaghet River, is 175 miles north of Dhaka. Situated in a tobacco growing district, Rangpur manufactures cigarettes and cigars and is noted for its cotton carpets. With an estimated population of 549,000 (1991 est.), Rangpur has a college that is affiliated with Rajshahi University.

SIRĀJGANJ, located about 68 miles northwest of the capital in the north-central region, is a principal jute center. The first jute mills in the Bengal were opened here. Sirājganj became a city in 1869; it has three colleges and a population of about 108,000 (1991 est.).

SYLHET, situated just south of the Indian border and 125 miles northeast of Dhaka, is the administrative center for a region that cultivates rice and tea and has extensive limestone quarrying. Industries within the city include tea factories and a

well-known cane facility. Sylhet is a center of Islamic culture and is the site of several tombs of Muslim holy men. Three colleges affiliated with the University of Dhaka are located in Sylhet. The city's population is close to 117,000 (1991 est.).

COUNTRY PROFILE

Geography and Climate

Bordered on three sides by India and sharing a border with Myanmar (Burma), Bangladesh is located in south Asia on the northern edge of the Bay of Bengal. Approximately 120 million people inhabit an area the size of Wisconsin.

Bangladesh consists primarily of low-lying plains that never rise more than 35 feet above sea level. The delta region of 55,598 square miles is formed by the Ganges and Brahmaputra Rivers and smaller tributary rivers. Changes in topography occur only in the northeastern hilly tea-growing regions of Sylhet and the southeastern forest regions of the Chittagong Hill Tracts. The capital, Dhaka, is less than 25 feet above sea level.

Bangladesh has three main seasons. The mild (70°F) season, from mid-October to the end of February, is characterized by clear sunny skies and cool (50°F) evenings. This is when cyclones are least likely, making travel in the Chittagong Hill Tracts and Cox's Bazar ideal.

The hot season, from March until the end of May, has little rain. The early part is pleasant (75°F), but as the monsoon approaches, hot (95°F) temperatures and high humidity make life extremely difficult.

The monsoon season is June to mid-October. At the beginning of the monsoon, the continuous rains cool the atmosphere. Temperatures are milder (85 to 90°F), but it is the

oppressive humidity that makes the climate uncomfortable.

Tropical cyclones that emerge from the Bay of Bengal with high winds and tidal waves hit Bangladesh an average of 16 times a decade. Travelers must be prepared for flooding and cyclones, particularly in the coastal areas, throughout the monsoon season. Unpredictable weather patterns during the monsoon season greatly affect living conditions and agricultural crops throughout the country.

Population

The population of Bangladesh is estimated at 131.3 million (1991 est.) with an annual growth rate of 2%. Bangladesh is the most densely populated agricultural country in the world. The areas around the capital city, Dhaka, and around Comilla are the most densely settled. The Sunderbans, an area of coastal tropical jungle in the southwest, and the Chittagong Hill Tracts on the southeastern border with Myanmar and India are the least densely populated areas. Population growth is a concern of the Bangladeshi Government.

About 35% of the population is under 15 years of age. The literacy rate is 63% for males and 49% for females. Life expectancy is 60 years, and unemployment and poverty are considerable. Over 35% of the population lives at or below subsistence level; the average per capita income is approximately US\$1,570 (2000 est.).

Urbanization is proceeding rapidly, and it is estimated that only 30 percent of the population entering the labor force in the future will be absorbed into agriculture, although many will likely find other kinds of work in rural areas. Unemployment and underemployment will remain substantial problems.

Bangladesh, like all modern countries, has a mixture of people of varied origins. The great majority of the Bangladeshis are of mixed Aryan-Dravidian stock; however,

many families can also track their ancestors back to the Middle East and central Asia. These Bengalis inhabit most of the broad plains of Bangladesh. The original tribal people, with less than 1 percent of the population, migrated hundreds of years ago from Burma, Thailand, Assam, and other areas in Southeast Asia. They possess oriental features and live mainly in the Chittagong Hill Tracts and along the northern borders of the Dinajpur, Mymensingh, and Sylhet Districts. Bangladeshis are mostly Muslim; Hindus comprise a 16 percent minority. The other religions in Bangladesh, Buddhists, Christians, Baha'is, and animists, number only 1 percent. Islam was declared the state religion in 1988 and affects all aspects of life in Bangladesh.

Although English is spoken in some urban areas and among the educated, Bangla (also referred to as Bengali) is the official language. English is no longer used for instruction in public primary or secondary schools; it is used sporadically in judicial proceedings, businesses and universities. Technical writing is in English.

The statutes of Bangladesh conform to Islamic laws, but the system of law in the courts derives from English common law. In rural areas, where most of the people live, interpretations of conservative Islam and local customs predominate. Freedom of religion is guaranteed; however, minorities do not have the same access to upward mobility as Muslims.

The people of Bangladesh are friendly. Crowds are everywhere. The vast numbers of people sometimes overwhelm a newcomer. The tradition of secluding women creates a largely male population to be seen on the streets and in the marketplace in older sections of Dhaka and the villages. With the expanding garment industry, however, more women are working and in public view.

Public Institutions

The region encompassing Bangladesh, the delta of two major river systems, has been a center of commerce and culture since the beginning of recorded history. Bangladesh attained its independence in 1971.

British rule over modern Bangladesh ended in August 1947, when India and Pakistan became independent nations. The serious political, linguistic, historical, cultural, and economic differences dividing East and West Pakistan were temporarily masked by enthusiasm for independence from the British. Although East Pakistan (Bangladesh) had a larger population and was the chief foreign exchange earner, government power was centered in West Pakistan. As Islamic brotherhood as a rallying cry lost its appeal, Bangladeshi identity in East Pakistan began to take precedence over Muslim identity.

In March 1971, the leader of the East Pakistan Awami League, which stood for Bengali nationalism, was arrested for political activities and unwillingness to compromise on the issue of provincial autonomy. Other Awami League leaders fled to India and established a government in exile. Civil war began. Millions crossed the Indian border, and hundreds of thousands were displaced in Bangladesh. Approximately 35,000 were killed in 9 months. A beleaguered Pakistani Army fought the Mukti Bahini (Liberation Army).

The refugee pressure in India in the fall of 1971 produced new tensions. Indian sympathies were with East Pakistan. In November, India intervened on the side of the Bangladeshis. On December 16, 1971, Pakistani forces surrendered, and the new nation of Bangladesh was born. The U.S. extended diplomatic recognition on April 4, 1972, and the People's Republic of Bangladesh became a member of the U.N. in September 1974.

The People's Republic of Bangladesh is governed under the provision of a written Constitution. The Constitution created a strong executive Prime Minister, an independent judiciary, and a unicameral legislature on a modified Westminster model. The Constitution adopted as state policy the Awami League's four basic principles of nationalism, secularism, socialism, and democracy.

There are 30 to 40 active political parties in Bangladesh. Only four parties have more than 10 members elected to the current parliament.

Arts, Science, and Education

Bangladeshis take great pride in their rich and subtle language, Bangla, and in its long tradition of literature, poetry, and music. Assertion of their national identity and language became a prime rallying point during the Bangladeshis' struggle for independence from West Pakistan and remains a dominant theme in all sectors of life and culture.

Bangladeshi artistic expression is best expressed in its handicrafts: inlaid woodwork, brass, and pottery. Bangladeshi folk embroidery, "nakshi kantha," depicts realistic and stylized scenes or designs and may be found intricately stitched and greatly detailed or in rustic and simple form. Representational art shows a distinct traditional Moghul influence. Modern painters can also be found.

Music and song are greatly appreciated in Bangladesh in both folk and classical forms. The songs of the "bauls," the traditional wandering folk minstrels, are especially popular. The bauls sing simple and lively songs that tell tales and describe mystic inspiration, playing rudimentary stringed instruments and drums, with the singer dancing and interacting with his audience. Also popular are songs of revered Bengali poets. Moghul traditional court music forms the basis for modern

classical counterparts, using instruments such as the sitar, a stringed instrument, with percussion accompaniment of the tabla. Classical dance is similar to the stylized forms of Northern India. Bangladeshi pop music consists of songs from Bangla and Hindi films and is ubiquitous throughout Bangladesh, as it is throughout the subcontinent.

The educational system in Bangladesh includes 5 years of primary education, 5 years of secondary education, and 2 years of college (U.S. senior high equivalent), which results in an intermediate arts degree. The final 2 years of higher education for a bachelor of arts or science degree are equivalent to a U.S. associate of arts degree. Formal education in Bangladesh ends at this level, although some students may pursue a graduate-level master's degree (equivalent to a U.S. bachelor's degree). The quality of public education is low due to lack of facilities and supplies. Attendance for school-age students is 70% in primary education and 18% in secondary education. In 1996, only about 3% of the GDP was allocated to education.

Commerce and Industry

Bangladesh's economy is primarily based on agriculture. Despite devastating floods in 1998, successive record harvests have led to a slight rebound in the economy. Agriculture accounted for 26% of GDP in 2000 and is the primary occupation of about 70.0% of the population.

Major industries include jute and leather goods and cotton textiles. Others are sugar, iron and steel mills, fertilizer plants, and a small number of food-processing plants. Natural gas deposits are being exploited, but Bangladesh does not have many other natural resources. A growing garment industry is located throughout Bangladesh for assembling garments for export.

Aid from the U.S. and other donors is about 60 percent of the domestic

development budget. In addition to the U.S., major donors are the World Bank/International Bank for Reconstruction and Development (IBRD), the Asian Development Bank (ADB), Japan, Canada, Australia, Saudi Arabia, and Western Europe. Most of Bangladesh's exports—raw jute and jute goods, leather, frozen seafood, and tea—go to the U.S., Italy, the U.K., Germany, and Japan. Bangladesh imports most of its food grains, machinery, petroleum, vegetable oils, and fertilizer from Japan, the U.S., Singapore, Hong Kong, and China. Over 80 nongovernmental voluntary aid agencies (NGO's), in addition to official agencies, operate in Bangladesh.

The USAID program in Bangladesh is one of the U.S. Government's largest. It focuses on reducing poverty by reducing the rate of population growth, increasing agricultural productivity, and building democratic institutions. The Bangladeshi Government places a high priority on these development goals.

Transportation

Bicycle rickshaws, baby-taxis (small three-wheeled motorized vehicles), and buses provide public transportation. A private vehicle for personal use around Dhaka is useful. Driving is on the left, but both right-hand- and left-hand-drive vehicles may be used. Only leaded gas and diesel fuel are available in Bangladesh. Compact or intermediate-sized cars are best suited for the congested road conditions. Many city streets are narrow, rough, and crowded with buses, trucks, rickshaws, pushcarts, animals, and pedestrians. Air-conditioning is strongly recommended.

A few car rental agencies are available; prices are high but include both insurance and driver.

Communications

Telephone and Telegraph

Phone services are inadequate. Though efforts are slowly underway

to upgrade the telephone system, including expanding domestic and international capacity and installing digital exchanges, the government-run service currently has only about 580,000 lines to serve 130 million people.

Four private companies now are operating cellular service. Several Internet service providers now exist in Dhaka.

Radio and TV

Bangladesh currently has one local TV station broadcasting in Dhaka and to relay stations around the country. TV is government controlled, and telecasts are 7 hours daily with extended hours on Fridays. Programs include a 10 pm English newscast. A few popular U.S. and British serials and movies may be seen following the late-night news. In the morning, the BBC (7 am to 8 am) and CNN (8 am to 11 am) are broadcast.

Bangladesh TV uses the PAL TV system (625-line color). A PAL or multi-system TV and video recorder are necessary to view local TV or rental tapes from local private video shops. An American TV (NTSC system) will work with a VCR but will not receive local programs.

Radio is the primary communications medium in Bangladesh. Radio Bangladesh broadcasts a wide schedule of AM programs and also programs in FM through the TV system. Occasionally you are able to pick up signals of Western music on the FM station, including BBC transmissions. A high-quality short-wave radio is needed to receive broadcasts of Voice of America, Radio Australia, and the Armed Forces Radio and Television Network.

Health and Medicine

Preventive Measures

Before arrival in Bangladesh, individuals should ensure that all of their immunizations are current. In addition to the standard childhood

immunizations, the following immunizations are strongly recommended: hepatitis A, hepatitis B, meningitis, rabies, and typhoid fever. Immunizations are available at post, but postponing the immunizations until arrival will delay for several months the onset of disease immunity.

Malaria prophylaxis is no longer recommended within Dhaka but is required for travel outside the city. Either mefloquine or the chloroquine/Paludrine combination is recommended.

Dhaka's water supply is contaminated. All water used for drinking, brushing teeth, and washing fruits and vegetables must be boiled for 1 minute. Servants should be instructed carefully and supervised frequently in the boiling procedure.

The water in local restaurants is often not boiled. Drink only bottled water without ice cubes. Restaurants allow you to bring your own drinks.

It is possible to shop for meats, fish, and fresh fruits and vegetables locally. Fruits and vegetables must be carefully soaked in Clorox. Cook meat from local markets thoroughly and determine the freshness of fish before eating.

Occasional gastrointestinal upsets are unavoidable. With normal precautions, serious amebiasis, bacillary dysentery, and intestinal parasites can be kept at minimal levels. Respiratory and superficial skin infections are common. Even the smallest of wounds should be carefully cleaned.

By taking necessary precautions, most people in Dhaka remain healthy. Most problems are not exotic tropical diseases; rather, they are the same pattern of colds, allergies due to unhealthy and polluted local conditions, and childhood illnesses encountered at home.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Routes via London or Amsterdam are on an American carrier. Through London, British Airways flies to Dhaka 4 days a week, Biman Bangladesh Airlines flies 5 days a week and Emirates flies to Dhaka 4 days a week. If you route through Amsterdam via New York or Boston, there are flights to Dhaka arriving on Monday and Thursday on KLM.

Northwest or United Airlines may be flown from the west coast via the Pacific to Hong Kong, Bangkok, or Singapore. Daily connections to Dhaka are available from these cities via Dragon, Thai, Singapore, or Biman Airlines.

A passport and onward/return ticket are required. A visa is not required for a tourist stay of up to 15 days. Visas (landing permits) are available for a fee upon arrival by air. Further information on entry requirements can be obtained from the Embassy of the People's Republic of Bangladesh, 3510 International Drive, N.W., Washington,

D.C. 20008, telephone 202-244-0183, fax 202-244-5366, web site <http://www.bangladeshembassy.com> or from the Bangladesh consulates in New York, 211 E. 43rd Street, Suite 502, New York, NY 10017, telephone 212-599-6767, or the Bangladesh Consulate in Los Angeles, 10850 Wilshire Boulevard, Suite 1250, Los Angeles, CA 90024, telephone 310-441-9399, web site <http://www.bangladeshconsulatela.com>.

Americans living in or visiting Bangladesh are encouraged to register at the Consular Section of the U.S. Embassy in Dhaka and obtain updated information on travel and security within Bangladesh. The U.S. Embassy is located at Diplomatic Enclave, Madani Avenue, Baridhara, Dhaka, telephone (880-2) 882-4700 through 22, fax number (880-2) 882-4449. For emergency services during business hours, call (880-2) 882-3805. For emergency services after hours, call (880-2) 882-4700 and ask for the Duty Officer. The Embassy's Internet home page is <http://www.usembassy-dhaka.org/state/embassy.htm>. Their workweek is Sunday - Thursday.

Pets

Bangladesh has no quarantine requirements for pets. Have your pet fully inoculated (rabies, distemper, etc.) and bring vaccination certificates and certificate of good health properly executed by a veterinarian. If pets accompany the traveler as excess baggage, no customs formalities are required. No established kennels are available. Veterinarians are available, although their competence varies. Bring a leash and all other pet supplies, including a good quantity of medicated flea shampoo and deworming medicine.

Currency, Banking and Weights and Measures

Bangladesh currency is in denominations of takas and paishas (one-hundredth of a taka). The exchange rate fluctuates frequently but not by a great amount. The current exchange rate is approximately

US\$1 = Taka 57 (July 2001). Currency notes are 1, 2, 5, 10, 20, 50, 100, and 500 takas.

The metric system is used in Bangladesh. Occasionally the old system of weights and measures of seers, mounds, tolas, and bighas is used. The old system is rarely seen in Dhaka.

BHUTAN

Kingdom of Bhutan

Major Cities:

Thimphu, Paro

Other Cities:

Punakha, Tongsa

INTRODUCTION

BHUTAN is a land of great beauty and mystery. Situated in the Himalaya Mountains, this tiny kingdom was largely isolated from the rest of the world for centuries. However, the late 20th century marked an end to Bhutan's isolation. The absorption of Tibet, Bhutan's major trading partner, by China in 1959 and India's annexation of Bhutan's neighbor, the Kingdom of Sikkim, in 1975, prompted the Bhutanese to realize that they could no longer remain isolated while surrounded by two powerful neighbors. Under the guidance of its leader, King Jigme Singye Wangchuck, Bhutan joined the United Nations in 1971. Three years later, the country was opened to foreign tourists for the first time.

Today, Bhutan remains largely unknown to most Westerners. It is a land of unspoiled alpine valleys and beautiful mountain peaks dotted with *dzongs* (fortresses). Centuries of isolation allowed Bhutan to develop a rich religious, cultural, and artistic heritage. As more of Bhutan becomes accessible, new locations and new experiences are opening to visitors.

MAJOR CITIES

Thimphu

Thimphu, located in west-central Bhutan, is the nation's capital. Once a sleepy rural community, Thimphu is now the country's center of government, religion, and commerce. Nestled in a fertile agricultural valley, Thimphu is a trading center for the rice, corn, and wheat grown in the area. Industrial activity in and around Thimphu is extremely sparse. Most industrial production is centered on lumbering. A large sawmill is located in Thimphu. In 1966, a large hydroelectric plant was built in Thimphu. This plant produces power to the surrounding region. The city has no major airport, but is served by a small airstrip. The population of Thimphu is about 30,000 (1993 est.).

Recreation

Recreation in and around Thimphu is centered on government-sponsored walking tours. Because many of Bhutan's monasteries, sacred mountain peaks, and *dzongs* are off-limits to foreigners, the number of accessible sites in Thimphu and other areas is extremely limited. However, beautiful attractions are available in Thimphu. One example is a *chorten* (shrine) in honor of one

of Bhutan's earlier rulers, Jigme Dorji Wangchuck. The shrine, which has several floors, is adorned with paintings depicting various Buddhist deities. It was constructed in 1974 and offers a beautiful view of Thimphu.

Thimphu's most beautiful building is Tashichhodzong (Fortress of the Glorious Religion). Constructed in 1641 and renovated in the late 1950s, Tashichhodzong is an example of Bhutan's unique architectural style. Traditionally, Bhutanese structures are built without the use of architectural plans or nails. Tashichhodzong contains 100 rooms, including a throne room for the king, and is filled with beautiful paintings and sculptures. The structure is also the home of Bhutan's largest monastery. In the summer, when monks reside at Tashichhodzong, foreigners are not allowed to enter.

Entertainment

Entertainment opportunities popular in the West, such as nightclubs and theaters, are non-existent in Bhutan. As a result, most entertainment in Bhutan revolves around shopping for Bhutanese handicrafts and souvenirs. Two stores in Thimphu, the Dorji Gyeltshen Shop and Senghay Budha, offer beautiful scarves and shawls. These stores also sell long robes of wool or silk.

Aerial view of Thimphu, Bhutan

These robes, known as *kho* (for men) and *kira* (for women), are the native dress of Bhutan. A government-owned Handicrafts Emporium sells a wide variety of Bhutanese jewelry, handicrafts, sculpture, table linen, and *thang-kas* (religious scrolls).

For those interested in stamp collecting, the government's Philatelic Office sells Bhutan stamps. Bhutanese stamps are considered exquisite by many collectors and are highly popular souvenirs.

Bhutan's National Library, located in Thimphu, operates a bookstore which sells a few English-language publications. Brass replicas of Buddhist statues are also sold here.

Paro

Bhutan's second largest city, Paro, is located 40 miles (64 kilometers) west of Thimphu. The city, constructed in the 1970s, is relatively new and exhibits beautiful white-washed buildings adorned with Buddhist symbols. As in Thimphu, all buildings are constructed without the use of nails or architectural plans. Bhutan's only major airport is located here and the city has some beautiful temples. Throughout the city, lamas can be seen in solemn prayer. The presence of the lamas makes Paro a very peaceful, tran-

quil city. Paro has approximately 10,000 residents.

Recreation

Several walking tours are available for those who wish to view the temples, *dzongs*, and monasteries in Paro and the surrounding area. Paro is the home of the Paro Dzong. This fortress is the official residence for several monks and serves as a Buddhist headquarters for Paro and the surrounding region. The building, constructed in the 1600s, was nearly destroyed by fire in 1907. The structure sustained heavy damage and many priceless statues, artifacts, and religious scrolls (*thang-kas*) were lost. Only one *thang-ka* was saved and can be viewed by the public during special festivals. The Drukgyel (Victorious Druk) Dzong located in a valley near Paro, offers a beautiful view of Mt. Chomolhari. Much of this *dzong* was destroyed by fire in 1954. Another popular attraction has been the Taktsang (Tiger's Nest) Monastery, nestled on a cliff 2,952 feet above Paro. This monastery, however, was destroyed by fire in 1998.

One of Paro's principal attractions is the National Museum. This five-story building offers beautiful and informative displays of Bhutanese costumes, masks, jewelry, weapons,

stamps, books, and textiles. Of particular interest are statues carved from butter, priceless religious scrolls, and an enormous carving of the Tree of Life. This carving, which pays homage to Buddhism's four sects, is located on the top floor of the museum.

OTHER CITIES

The town of **PUNAKHA**, located in west-central Bhutan, was established in 1577 and served as the capital of Bhutan. Punakha's primary attraction is the Punakha Dzong, a fortress located at the confluence of the Pho Chu and Mo Chu Rivers. This fortress serves as a winter retreat for monks living in central Bhutan. Punakha Dzong has been severely damaged by fires and earthquakes over the centuries. In recent years, the fortress has been threatened by high water levels on the Po Chu and Mo Chu Rivers. The town's population has been estimated at 1,100 residents.

TONGSA, a town situated in central Bhutan, is the ancestral home of Bhutan's royal family. The town is noted for the large Tongsa Dzong, which used to guard the only east-west route through Bhutan. Today, Tongsa Dzong is occupied by several government offices and is a home for a large group of Buddhist monks. Tongsa has approximately 5,000 residents.

COUNTRY PROFILE

Geography and Climate

The Kingdom of Bhutan is a small country nestled in the Himalaya Mountains. It occupies an area of 18,147 square miles, approximately the size of Vermont and New Hampshire combined. Bhutan is landlocked, surrounded on the north by China and on all other sides by India. The northern part of the

country is extremely mountainous, containing some of the most rugged terrain in the world. The central part of Bhutan has fertile valleys and arable land. Southern and eastern Bhutan contain densely forested foothills.

Each region of Bhutan exhibits a different climate. The mountainous northern regions are extremely cold with perpetual snowfall. Central Bhutan's climate is more temperate, with warm summers, cold winters, and moderate rainfall. Warm, humid temperatures and heavy rainfall characterize the climate in southern and eastern regions of the country.

Population

The population of Bhutan is estimated at 2,049,000 (2001 est.) and can be divided into three ethnic groups. The most numerous group are the Sharchops. They are often considered the earliest inhabitants of Bhutan and predominantly settle in eastern regions of the country. Western regions of Bhutan are inhabited by Ngalops, an ethnic group of Tibetan origin. The Sharchops and Ngalops comprise about 50 percent of Bhutan's population. Thirty-five percent of the population are Nepalese who emigrated to Bhutan in the late 19th and early 20th centuries. They are farmers and live in southern areas of the country. Over 85,000 Nepalese were expelled to Nepal in the early 1990s, and live in refugee camps monitored by the United Nations. The remaining 15 percent of Bhutan's population are small minorities of indigenous or migrant groups.

The official language of Bhutan is Dzongkha, although Nepali is predominant in southern regions of the country. English is widely used in schools, colleges and by government officials.

Buddhism is the state religion and is practiced in nearly two-thirds of the country. Southern Bhutan is predominantly Hindu. The Bhutanese government promotes religious freedom and celebrates all

major Buddhist and Hindu religious festivals.

The life expectancy in Bhutan in 2001 was approximately 53 years for males, 52 years for females. Bhutan's literacy rate is 42%.

History

Very little is known of Bhutan's early history. It is believed to have been inhabited as early as 2000 B.C. Bhutan's recorded history began in the eighth century A.D. with the introduction of Tantric Buddhism. From the 12th to the 17th century, Tibet ruled Bhutan. Under the tutelage of Tibetan lama, Ngawang Namgyal, Bhutan developed an intricate and comprehensive system of laws that served as a check against the ambitions of various ecclesiastical and civil administrators. This system worked effectively until Namgyal's death. Without the presence of a strong leader, Bhutan dissolved into a 200-year period of political chaos as numerous regional governors and local administrators vied for power. By 1907, the management of Bhutan's civil affairs were controlled by Sir Ugyen Wangchuck, who became Bhutan's first hereditary king. In an attempt to stabilize the political situation, King Ugyen invited the British to establish a presence in Bhutan. Bhutan and Great Britain signed a friendship treaty in 1910. The British government agreed not to interfere in the internal affairs of Bhutan, but reserved the right to guide Bhutan's relations with other countries. After the British relinquished their control of the Indian subcontinent, Bhutan signed a treaty with the new Indian government in 1949. The provisions of the treaty were nearly identical to those made with Britain 40 years earlier. The main difference was that India agreed to pay yearly compensation to Bhutan for portions of its territory annexed by the British in India in 1864. The treaty between these two nations is still in effect.

Government

Since 1907, Bhutan has been ruled by a monarchy. Each Bhutanese monarch has brought political stability to the country and implemented numerous reforms. In 1926, the son of Bhutan's first monarch, Jigme Wangchuck, created Bhutan's first public school and repaired monasteries that had been damaged after fires, earthquakes, and centuries of wear and tear. Jigme Wangchuck was succeeded in 1952 by his son, Jigme Dorji Wangchuck. Jigme Dorji implemented many positive changes during his reign. He supported the creation of Bhutan's postal system, built modern roads, launched long-range economic planning, welcomed trained medical personnel into Bhutan, and dissolved the kingdom's ancient serfdom system. In 1953, King Jigme Dorji instituted a constitutional monarchy and created a National Assembly. The National Assembly, or *tshogdu*, has 151 members and meets twice a year. All Bhutanese citizens 25 years or older are eligible for election to the Assembly. Once elected, each representative serves a three-year term. The king established the Royal Advisory Council in 1965, which is responsible for advising the king on governmental matters and regulating the policies of the National Assembly. In 1968, a Council of Ministers was formed and given the authority to implement government policy. The Bhutanese government does not allow the formation of political parties.

Upon his death in 1972, King Jigme Dorji was succeeded by his son Jigme Singye Wangchuck. For the most part, the present monarch has continued the governmental changes implemented by his father. King Jigme Singye's most notable contributions to Bhutan are the development of the country's telephone system, the construction of numerous factories and hospitals, and the building of over 100 schools. In September 1990, government forces ruthlessly crushed pro-democracy rallies in southern regions of Bhutan.

The flag of Bhutan is divided diagonally with yellow on the left over orange on the right. A white dragon is located in the center.

Arts, Science, Education

There is no compulsory educational system in Bhutan and only half of the children attend school. The educational system consists of seven years of primary schooling followed by four years of secondary school. In 1993, there were 235 primary schools with 1,859 teachers and 56,773 students. For those who complete a secondary education (junior high and high school), the majority of Bhutanese university students receive higher education in India.

Commerce and Industry

Bhutan is an agrarian society, with over 90 percent of the population engaged in farming and animal husbandry. The main crops are corn, rice, millet, wheat, oranges, apples and potatoes. Bhutan is also the world's largest producer of cardamom.

The industrial capacity of Bhutan is small. Chemical, cement, and food processing factories have been developed. Homemade handicrafts also comprise part of Bhutan's industrial sector.

Bhutan has a wealth of untapped natural resources. These include forests, rivers with excellent hydroelectric potential, and rich deposits of limestone, marble, graphite, copper, lead and coal.

Over 90 percent of Bhutan's trade is with India, although timber, cardamom and liquor are exported to Singapore, the Middle East and Western Europe. Principal exports are agricultural products, timber, cement and coal. Textiles, cereals and consumer goods are Bhutan's primary imports.

Bhutan's estimated per capita gross national product (GDP) was \$420 million in 1995. The paper currency, the *Ngultrum*, was introduced in the early 1970s. Coinage is known as *Chetrum*. Indian currency is also legal tender in Bhutan.

Transportation

In 1996, there were more than 805 miles (1,296 kilometers) of roads, 260 miles (418 kilometers) of which were paved. Fairly good roads connect Bhutan with India. The Bhutan Government Transport Service and about 30 private operators provide bus service. Within most of the country, however, travel is by foot or pack animal.

The national airline is Druk Airlines (Royal Bhutan Airlines). It is based at an international airport near Paro and provides service to Calcutta, Dhaka, Katmandu, New Delhi, and Bangkok.

Communications

Telephones are available in Thimphu and Paro. International calls can be made from hotels in the city. However, it often takes over an hour for connections to be completed. In remote locations, wireless telephones are the only reliable communication device.

Bhutan has excellent postal and teleprinter services. An international microwave link connects Bhutan's capital, Thimphu, to Calcutta and Delhi. International telegraph and telex communication is available.

There were approximately 28,000 radio receivers (1994 est.) in Bhutan. Although Bhutan does not have its own television station, broadcasts are transmitted from India and Bangladesh. In 1989, however, the Bhutan government ordered the destruction of all television antennas and satellite receiving dishes, claiming that it wanted to protect Bhutan's national culture.

There are 39 radio stations for internal government communications. However, the Bhutan Broadcasting Service offers shortwave programming in Dzongkha, Shar-chopkha, Lhotsam and English.

Health and Medicine

Medical facilities in Bhutan are limited. Some medicine is in short supply. Serious medical problems requiring hospitalization and/or medical evacuation to the United States can cost thousands of dollars or more. Doctors and hospitals often expect immediate cash payment for health services.

Cholera, typhoid fever and malaria are health concerns throughout the country.

Diligent water purification and food preparation methods must be exercised when visiting Bhutan. Immunizations for tetanus, typhoid, polio and hepatitis are recommended.

NOTES FOR TRAVELERS

Tourists are admitted only in groups by pre-arrangement with the Tourism Authority of Bhutan, P.O. Box 126, Thimphu, Bhutan, tel. (975-2) 23251, 23252; fax (975-2) 23695. Entry is available only via India, Bangladesh, Nepal, and Thailand. The border with China is closed.

Visitors to Bhutan are required to book through a registered tour operator in Bhutan. This can be done directly or through a travel agent abroad. The minimum daily tariff is regulated and fixed by the Royal Government. The rate includes all accommodations, all meals, transportation, services of licensed guides and porters, and cultural programs where and when available.

A passport and visa are required for entry into and exit from Bhutan. All visitors, including those on official U.S. Government business, must obtain visas prior to entering the country. There are no provisions for visas upon arrival.

For additional entry/exit information, please contact the Bhutan Mission to the United Nations (Consulate General), 2 UN Plaza, 27th floor, New York, NY 10017, tel. (212)826-1919, fax (212)826-2998, or via the Internet at <http://www.embassy.org/embassies/bt.html>.

There is no U.S. Embassy or Consulate in Bhutan. Although no formal diplomatic relations exist between the United States and Bhutan, informal contact is maintained through the U.S. Embassy in New Delhi. Updated information on travel and security in Bhutan may be obtained at any U.S. consulate or embassy in India or Bangladesh. Americans living in or visiting Bhutan are encouraged to register at the U.S. Embassy in New Delhi. They may also obtain assistance from the U.S. consulates in India or, to a more limited degree, from the U.S. Embassies in Dhaka, Bangladesh or Kathmandu, Nepal.

The U.S. Embassy in New Delhi is located at Shanti Path, Chanakyapuri 110021, tel. (91)(11)419-8000, fax:(91)(11)419-0017. The Embassy's Internet home page address is <http://usembassy.state.gov/posts/in1/wwwh-main.html>

The U.S. Consulate General in Mumbai (Bombay) is located at Lincoln House, 78 Bhulabhai Desai Road, 400026, tel. (91)(22) 363-3611/ Internet home page address is <http://usembassy.state.gov/mumbai/>

The U.S. Consulate General in Calcutta is at 5/1 Ho Chi Minh Sarani, 700071, tel. (91)(033)282-3611 through 282-3615. The Internet home page address is <http://usembassy.state.gov/posts/in4/wwwh-main.html>

The U.S. Consulate General in Chennai (Madras) is at Mount Road, 600006, tel. (91)(44) 827-3040. Internet home page address is <http://usembassy.state.gov/chennai/>

The U.S. Embassy in Dhaka is located at Diplomatic Enclave, Madani Ave, Baridhara, Dhaka 1212, tel. (880) (2) 882-4700-22, fax (880)(2) 882-3744.

The U.S. Embassy in Kathmandu is located at Pani Pokhari, Kathmandu, tel. (977)(1)411179, 410531, fax(977)(1)419963. The Internet home page address is <http://www.south-asia.com/USA/>.

BRUNEI

Brunei Darussalam

Major City:

Bandar Seri Begawan

Other Cities:

Jerudong, Kuala Belait, Seria

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated April 1992. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The oil- and gas-rich state of **BRUNEI**, on the northern coast of the island of Borneo, is one of Asia's oldest kingdoms. Early Chinese records refer to it variously as "Polo," or "Puni." The present sultanate dates to 1514, and the conversion to Islam; during this era, Brunei was the center of a vast empire which stretched far north to the Philippines. By the end of the 19th century, however, most of its power had been lost in the colonial expansion of South-East Asia.

Brunei Darussalam, the country's official name (Abode of Peace), was a protectorate of the United Kingdom from 1888 to 1984, when it gained full autonomy. For a quarter of a

century before independence, it had been a self-governing constitutional monarchy, with the British assuming responsibility for foreign affairs and defense.

MAJOR CITY

Bandar Seri Begawan

The capital and main center of population, approximately 75,000, (and site of the only international airport) is Bandar Seri Begawan at the northeastern corner of the main part of the State. Downtown area consists of shops, banks, government offices, and hotels. Several places of interest are situated along the bank of the Brunei River.

Food

Subject to seasonal variations and occasional shortages, a wide variety of foods is available in Brunei. Fresh fish, fruits, and vegetables are available locally. Canned and frozen vegetables from the U.S., Europe, and Australia are sold at supermarkets. Frozen meat and poultry are imported from Denmark, Australia, New Zealand, or the U.S.

Fruit is limited to definite seasons. Apples, peaches, pears, oranges, grapes, and plums are imported seasonally from Australia, New Zealand, and the U.S. Buy local fruits such as bananas, papayas, pineapples, and grapefruit at outdoor markets and supermarkets.

Sterilized milk and powdered milk are available in Brunei. Fresh milk is available but expensive.

Any local foods, as well as various Western foods, can be catered.

Soft drinks, such as Coca-Cola, Pepsi, 7-Up, Sprite, Orange, etc., are available and are inexpensive. Sales of alcoholic beverages are currently prohibited.

Clothing

An extensive summer wardrobe is the only type of clothing necessary for Brunei. Order ladies clothing via mail facilities, but ready-made clothing is available in Brunei. Sizes are limited and fit may be difficult. Ordering usually takes several weeks. Sports attire varies.

Men: Lightweight summer suits are appropriate for office wear; slacks and sport shirts for casual wear. Acceptable dry-cleaners exist. Tails and morning dress are not worn in Brunei. English and U.S. men's shoes, underwear, shirts,

Susan Rock. Reproduced by permission.

Omar Ali Saifuddin Mosque in Bandar Seri Begawan

neckties, socks, and ready-made suits are available but are expensive, and the selection of sizes, styles, and quality varies.

Women: Conservative dress is the rule. Bring cotton summer dresses, slacks, skirts, blouses, and pantsuits for all occasions. Shorts are not worn publicly but can be worn at poolside or at beaches. Skirts and blouses, dresses, and pantsuits are worn to the office. Stores selling women's clothing offer various ready-made dresses, skirts, and ensembles at medium-to-high prices, but sizes, selection, fit, and quality are limited.

Lingerie and stockings are available at reasonable prices, but selection is

limited. Formal hats and gloves are seldom worn. European shoes of limited sizes are available at varying prices.

Children: Clothing and shoes for children and babies are available at reasonable prices. A wide variety of fabric is available at reasonable cost. Local dressmakers and tailors have been used with varying degrees of success, but good tailors are expensive.

Supplies and Services

Toilet articles and cosmetics are available but are much more expensive than in the U.S.

Most common brands of American and British cigarettes, some Ameri-

can brands of cigars and pipe tobacco and smoking accessories are available at prices comparable to, or lower than, U.S. prices.

There are local bookstores but prices are 50 to 100 percent higher than those in the U.S., and the selection is not good.

Several beauty shops in Brunei are available and moderately priced.

Religious Activities

Both Roman Catholic and Anglican Church services are conducted in the downtown area of the city at their respective facilities.

Education

Brunei has no American schools. The International School has an essentially British curriculum and provides an adequate education from kindergarten through grade 6.

The school operates from 7:30 am to 12:30 pm. But if your child is having difficulty in a subject, bring some additional study materials to assist you in working with your child, as the British system here does not encourage parental involvement as an American school would. Other schools open to expatriate children are Mission schools and the Chinese school, which is also adequate through the elementary grades. A good boarding school is available in Singapore.

Space at all schools is limited. There is a long waiting list.

Sports

Tennis, swimming, badminton, table tennis, billiards, soccer, golf, basketball, sailing, windsurfing, bowling, and squash are available in Brunei. There are two golf courses—one at Pantai Mentiri near Bandar Seri Begawan and the other in Seria, which manages the Brunei Shell Recreation Club. Obtain permission to play at both courses in advance. A member of the club must accompany guests. Memberships are available at Pantai Menter.

Touring and Outdoor Activities

Omar Ali Saifuddien Mosque, a symbol of Brunei's adherence to Islam, is one of the most magnificent in Asia. It is an edifice of classical Islamic architecture consisting of gold mosaic, marble, and stained glass. Its minaret, which has a lift inside and distinctive gold dome, rises to 166 feet and 160 feet.

Linked to the mosque and built in the middle of the lagoon is an elegant concrete boat that resembles a 16th-century royal barge.

The mosque has been the country's most important feature since its completion in 1958.

The official residence of the Sultan of Brunei is the Istana Nurul Iman in Bandar Seri Begawan, which was completed in 1982, and believed to be the largest royal palace in this part of the world.

The Sultan of Brunei, as Prime Minister, has offices located in the Istana, which has become a symbol of national pride. In keeping with ancient Brunei, trading the Ruler's Istana is the seat of Government, and the Council of Cabinet Ministers meets under the presidency of His Majesty.

The Sultan Hassanal Bolkiah Aquarium, housed in the Churchill Memorial Building, has various species of tropical fish found in Brunei waters.

The Lapau (Royal Ceremonial Hall) and the Dewan Majlis (Parliament House) form a sprawling complex featuring a blend of traditional Malay and Western architecture.

The Lapau, which contains the Patarana (Throne), where numerous solemn ceremonies are held, is beautifully decorated in exquisite gold motifs. In the Lapau on August 1, 1968, the Sultan was crowned the 29th Sultan of Brunei.

The famed and centuries-old Kampong Air (water village) is composed of several villages housing 38,000

persons. It is an extensive collection of houses on stilts in the Brunei River. The Government provides a wide range of facilities that include schools, clinics, a Post Office, and electricity and water supplies. A boat cruise along the Brunei River is a pleasurable experience and a must for all tourists. Single women should always be accompanied.

The Arts and Handicraft Center is situated on the bank of the Brunei River, facing Kampong Air, and, thus commands a panoramic view. It offers a wide selection of locally made silverware, brasserie, and bronzeware crafted and inspired by the rich Malay cultural heritage. The silver, brass, and bronze are hammered and crafted by hand into a variety of articles, such as jugs, trays, gongs, boxes, napkin rings, spoons, threads, bracelets, etc. There are also an assortment of beautifully woven baskets and mats of bamboo and pandan. Brunei, during the 15th century, was a dominant power in the region under its ruler Sultan Bolkiah, the 5th Sultan of Brunei, whose mausoleum rests on the bank of the Brunei River at Kota Batu, near the Brunei Museum.

The Brunei Museum is of unique eastern architecture and is situated on the picturesque bank of the Brunei River. It is about 4 miles from the town center and has a large collection of exhibits, including brassware, bronzeware, Chinese porcelain and ceramics, historical records, and artifacts of the cultural heritage of this country.

The beaches at Brunei are fine golden sands with scenic picnic spots. However, rusted debris and broken glass pose serious threats to badly littered areas where the waters are calmer. The beaches facing the South China Sea are substantially cleaner, but bites from sandflies and stings from jellyfish are often a nuisance.

Although the above activities are interesting and diverting for a few weeks, they provide no relief from

Brunei's climate, both atmospheric and cultural.

Entertainment

Brunei, as an entertainment center, is undistinguished. Occasionally, the music society and other diplomatic missions sponsor concerts, but legitimate theater, opera, and ballet do not exist in Brunei. The one local movie theater is not a place for family diversion. There are no night-clubs. Art exhibits are held occasionally at the Brunei Museum and foreign missions.

Dining out is one of the most popular forms of recreation and entertainment in Brunei. Restaurants are plentiful but expensive. An international hotel, the Sheraton, has dining rooms, a bar currently not used to serving alcoholic beverages, and a coffee shop. Other establishments regularly offer specials on food from foreign countries.

Videotaped movies are available in Brunei for the VHS system. Quality of recordings is poor. TV and radio services are broadcast in English, Malay, and Chinese on the Brunei channel. Two Malaysian TV channels can also be received.

Social Activities

Many foreigners belong to one or more of the various sports and recreation clubs available in Brunei, such as the yacht club or tennis club. Social life is restricted to home entertainment among members of the diplomatic and business communities.

OTHER CITIES

A short drive to the northeast of the capital, **JERUDONG** is known as "the playground of the Sultan." The biggest attraction is the new amusement park which opened in 1994 to celebrate the Sultan's birthday. The park covers 104 hectares with a wide variety of thrill rides and amusements from roller coasters to a calmer carousel. A children's park includes playgrounds, mazes and swings. A large auditorium offers

Cory Langley. Reproduced by permission.

Night view of Omar Ali Saifuddin Mosque in Bandar.

musical entertainment, which has included two concerts in 1996 given by Michael Jackson. The Musical Fountain in the park offers a 20-minute high-tech laser, music and light show every night. Behind the park is Jerudong Beach, which offers a lovely site for swimming. Admission to the park and all rides is free.

Jerudong Park, a grand polo stadium complex with a beautiful equestrian center, a golf course and facilities for trapshooting and croquet, is where the Sultan goes for recreation. However, since entry to the park is by invitation only, you may only get a chance to see it through special tours.

There are several fine hotels in this area and tour packages are offered through various agencies.

KUALA BELAIT is a river port situated west of Seria, near the South China Sea. The city is a district capital surrounded by oil fields. There is a government vocational school here, and a coastal road runs eastward toward Bandar Seri Begawan. Kuala Belait's population is approximately 25,000.

SERIA is a major oil center of some 24,000 residents, located on the South China seacoast about 40 miles southwest of Bandar Seri Begawan. This is also the headquarters of Brunei's only oil and gas cor-

poration, Brunei Shell Petroleum. The oil produced in the region has supplied most of the funds used in the country's growth.

COUNTRY PROFILE

Geography and Climate

Brunei occupies 3,459 miles on the northern coast of the island of Borneo and is 350 statute miles north of the Equator at 5° N, 115° E. It comprises two separate areas: the capital area and a thinly populated enclave to the east, consisting mostly of jungle. Separating the two is a salient of the Malaysian State of Sarawak, which on the landward side surrounds both parts of Brunei. The north shore is on the South China Sea.

From the 14th to the 16th century, Brunei was the center of a powerful empire covering most of the northern part of the island of Borneo and extending north through the Philippines to Manila.

By the 19th century, much of Brunei's empire had been whittled away by piracy, wars, and the spread of European nations into the Far East. By the end of the 19th century, Brunei was a British protectorate, and, in 1906, the British Resident system was introduced. The discovery of major oil fields in the western end of the State in the 1920s brought economic stability to Brunei and created a new style of life for the population.

Constitutionally, Brunei was regulated by an agreement with Britain that was concluded in 1959 and was amended in 1971. By this agreement, the State was internally self-governing, with Britain looking after only foreign affairs and having a consultative role in external defense. In 1984, Brunei resumed full sovereign status and assumed responsibility for its own defense and foreign affairs. The country has

joined the U.N., the Association of South East Asian Nation (ASEAN), and the Organization of the Islamic Conference.

Brunei is a small oil and gas-producing state. The oil and gas fields are centered in the towns of Seria and Kuala Belait, 67 miles southwest of the capital. Other large towns are Tutong, which is midway between Bandar Seri Begawan and Kuala Belait, and Bangar in the Temburong District.

The country is mainly primary and secondary tropical rain forest with only a narrow coastal strip from Kuala Belait to Bandar Seri Begawan cultivated. The rain forest produces as much as 146 inches of rain to the interior but only about 108 inches a year is recorded on the coast. The climate is equatorial with uniform temperatures and high humidity.

Brunei has no personal income tax, and the people enjoy, among other things, free education and medical care.

Population

Of a total population of approximately 331,000, 64 percent are Malays, 20 percent are Chinese, and 16 percent are non-Malay indigenous people, mainly Ibans and Dusuns, as well as several other minor tribal groupings. Europeans make up a small percentage of the population.

Malay is the official language, but English is spoken almost everywhere in the State. The Chinese community speaks Hokkien; other languages and dialects include Hakka, Cantonese, Mandarin, and Hindi.

Public Institutions

Brunei is a traditional Islamic monarchy, with supreme political power vested in the Sultan. He is assisted and advised by the four councils: the Privy Council, the Religious Council, the Council of Cabinet Ministers

and the Council of Succession. All members are appointed by the Sultan. The Sultan presides over the cabinet as Prime Minister and also holds the positions of Minister of Defense and Minister of Finance.

Brunei's legal system is based on English common law, with an independent judiciary, a body of written common law judgments and statutes, and legislation enacted by the Sultan.

Arts, Science, and Education

Brunei has 177 primary schools and 29 secondary schools (including non-Government schools). Children begin school at age 5, and education is available for 10 years (6 years for primary and 4 years for lower secondary). However, no programs or facilities exist for disabled children or for handicapped children.

Brunei's education system has been extended since 1985 by the foundation of the nation's own university—the University of Brunei Darussalam. Currently, the University has four faculties—Education, Science, Arts, and Social Science and Management.

The small population and the need to build up generalist skills rapidly is reflected upon the University's decision to concentrate initially on only these few selected disciplines. The development of degree courses such as Law, Medicine, Dentistry, Engineering, and Accounting were not deemed economically justifiable, since they are readily available overseas. The University's academic staff is mainly non-Bruneian.

Other institutions at tertiary level include an agricultural training center and various technical institutes. These are designed to meet skill shortages.

Many schools for expatriate children are located in Brunei, including the International School, where instruction is in English, and missionary schools. Currently, school-

ing is available from kindergarten through grade 6. The International School is considering opening a grade 7 class, but this is still in the planning stage.

Commerce and Industry

Oil and natural gas, the economic backbone of the country, represent 9% of the total exports of Brunei and 56% of its gross domestic product. Some 31% of Brunei's petroleum and 6 million tons of liquefied natural gas are exported to Japan annually.

Apart from oil and gas, forestry is playing an increasing role in the country's economy. The Government is also placing greater emphasis on agricultural development to enable the country to reduce its dependence on the importation of foodstuffs.

Transportation

Local

Most Bruneians own cars and as a result, public transport and taxis are not in great demand, although buses operate between the major centers. Chauffeur driven or rental cars are available for hire through major hotels or the airport.

Taxis are not metered and fares, though negotiable, are expensive. The fare from the airport to Bandar Seri Begawan varies from about US\$12 to US\$29, depending on taxi availability and the driver's whim.

Water taxis are the most common form of transport in Kampong Air, Brunei's renowned water village. Regular water taxis and boat services ply the routes between Bandar Seri Begawan, Bangar, Limbang (in Sarawak), Labuan, and some towns in the Malaysian State of Sabah. But single women should be accompanied when using these services.

Regional

Air transportation is commonly used for destinations outside Brunei. Several international airlines

and the national airline, Royal Brunei Airlines, serves Brunei.

Communications

Telephone and Telegraph

Local telephone calls are free (except by public phone booth). Long-distance telephone, FAX, and telegraph service to the U.S. is good but expensive. Use of public phones requires the pre-purchase of a calling card, because the phones are not coin operated.

Radio and TV

The government-owned Radio Television Brunei (RTB) broadcasts daily on AM and FM from 6:30 am to 10 pm, with programs in English, Malay, and Chinese. Programs are varied and international news is reported twice a day—at 12:15 pm and 9:15 pm.

One local TV channel and two Malaysian channels are received. Brunei programs, which have included some award winning documentaries, comprise about 40 percent of programming. Other ASEAN countries, Australia, the U.K., and the U.S. import the remaining 60 percent. CNN headline news is broadcast 6 days a week, from 7 to 7:30 pm via Malaysian TV. Ownership of satellite dishes is strictly regulated.

The TV system is PAL as opposed to the NTSC system used in the U.S.

Newspapers, Magazines, and Technical Journals

Western publications are available. Occasionally, censored copies of *Time* and *Newsweek* are available at local vendors. The ASEAN edition of *Reader's Digest* is also available. Other U.S. magazines appear on the newsstands about a month late and at a price two or three times their U.S. price. Many outdated magazines are available at newsstands. One English-language newspaper, the *Borneo Bulletin*, is published weekly in Brunei. International newspapers available daily include the *Straits Times* (Singapore), the *New Straits Times* (Malaysia), the

Asian Wall Street Journal, and the *International Herald Tribune*.

A limited selection of American and British books on various subjects is available in selected bookshops at 50 to 100 percent above publisher prices. The library downtown has a collection of books in English.

Health and Medicine

Medical Facilities

Health services are free for Brunei citizens with a nominal charge for permanent residents and expatriates. Health care is a three-tier system, with health clinics providing primary care, health centers providing secondary care, and district hospitals providing tertiary and specialized care.

The most important medical facility in Brunei is the 550-bed central referral hospital in Bandar Seri Begawan known as Raja Isteri Pengiran Anak Saleha Hospital (RIPAS Hospital). This hospital, built at US\$95 million, provides diagnostic and therapeutic facilities for the entire country.

Most doctors and dentists in the country are non-Western expatriates. For specialized care, patients are sent abroad.

Routine dentistry is available. Opticians and optometrists are available, and there are many doctors in private practice.

Bring an extra set of glasses or contact lenses, if needed, from the U.S. If you or a family member are taking long-term medications or allergy injections, bring a supply and arrange beforehand for regular refills.

Community Health

Respiratory infections, colds, coughs, sore throats, etc., lead the list of common complaints. Middle-ear and external-ear infections, sinusitis, and bronchitis are not uncommon.

Sanitation of human waste has improved over the years. However, other waste carried by contaminated water often runs in the open storm drainage system, resulting in chronic unpleasant odors. Some town and residential areas are marred by indiscriminate dumping of waste and garbage. The Municipal Department provides garbage collection services for about US\$9 a month to most residential areas. Although scheduled regularly, this service is often intermittent.

Preventive Measures

Clean fruits and vegetables well before eating. Cook meat thoroughly. Insect control is rudimentary. Malaria suppressants are not necessary in Brunei.

NOTES FOR TRAVELERS

Passage, Customs and Duties

Most travel to Brunei is by air. Several airlines provide direct, nonstop flights to Brunei on most weekdays from Singapore, Kuala Lumpur, Thailand, the Philippines, and Hong Kong. Some of the more popu-

lar international airlines serving Brunei are Singapore, Thai, Malaysian, and Philippines Airlines. The most direct route from the U.S. to Brunei is via the west coast, with connections made at any Asian cities serving Brunei.

U.S. passport-holders may take advantage of Brunei's participation in the Visa Waiver Pilot Program (VWPP), which allows visitors to Brunei for business or pleasure to obtain visas upon arrival for up to 90 days at no charge. The existing airport tax upon arrival/departure is Brunei dollars 12. For further information about entry requirements, travelers may consult the consular section of the Embassy of Brunei, 3520 International Court, N.W., Washington, D.C. 20008; Tel: (202) 342-0159 (<http://www.embassy.org/embassies/bn.html>).

Brunei customs authorities enforce strict regulations concerning the temporary import or export of items such as firearms, religious materials and alcohol. For non-Muslims, very limited amounts of alcohol for personal consumption are permitted (i.e., 12 bottles of beer and two bottles of wine/spirits). It is advisable to contact the Embassy of Brunei in Washington for specific information regarding customs requirements.

Brunei has a mandatory death penalty for many narcotics offenses. Under the current law, possession of heroin and morphine derivatives of more than 15 grams, and cannabis of more than 20 grams, carries the death penalty. Possession of lesser amounts carries a minimum twenty-year jail term and caning.

Americans living in or visiting Brunei are encouraged to register in person or via telephone or fax at the consular section of the U.S. Embassy in Bandar Seri Begawan and obtain updated information on travel and security within the country. The U.S. Embassy is located on the 3rd floor, Teck Guan Plaza, Jalan Sultan, in the capital city of Bandar Seri Begawan. The U.S.

mailing address is American Embassy, PSC 470 (BSB), FPO AP, 96507. The telephone number is (673)(2)229-670, fax number (673)(2)225-293 and e-mail address amembbsb@brunet.bn. The after hours number for emergency calls is (673)(8) 730-691.

Pets

Travelers coming to Brunei with pets must request entry for the pet by writing to:

Veterinary Officer
 Veterinary Clinic
 Ministry of Agriculture
 Bandar Seri Begawan
 Brunei Darussalam

Include in the letter, all particulars about the pet and a health certificate. The clinic requires at least 2 weeks' notice before the pet's arrival.

Quarantine is not required for pets arriving from England, New Zealand, Australia, Singapore, and other parts of Borneo. If arriving from other parts of the world, the pet is quarantined for about 2 weeks. No fee is imposed for incoming pets, but an outgoing fee of US\$1 is charged for each pet. Pets must arrive in Brunei as cargo.

Currency, Banking and Weights and Measures

The monetary unit of Brunei is the ringgit (dollar), which is issued in notes of 1, 5, 10, 50, 100, 500, 1,000, and 10,000. The coins are in the denominations of 5, 10, 20, and 50 cents. Currently, US\$1 is equivalent to about B\$1.70. The exchange rate fluctuates daily.

The Brunei dollar is at par with the Singapore dollar, and the currencies are interchangeable in both countries.

Brunei uses the metric system of weights and measures. Gasoline is sold by the liter; temperatures are cited in degrees Celsius; and distances are measured in kilometers.

U.S. citizens living in or visiting Brunei may register in person or via

telephone with the U.S. Embassy in Bandar Seri Begawan and obtain updated information on travel and security within the country. The U.S. Embassy is located in Teck Guan Plaza, Third Floor, Jalan Sultan, in Bandar Seri Begawan. The mailing address is American Embassy PSC 470 (BSB), FPO AP, 96534; the telephone number is (673)(2) 229-670; the fax number is (673) (2) 225-293.

RECOMMENDED READING

These titles are provided as a general indication of the material published on this country. The Department of State does not endorse unofficial publications.

Beccari, Odoardo. *Wanderings in the Great Forests of Borneo*. London, 1904. The best natural history of Borneo.

bin Mohamad, Mahatir. *The Malay Dilemma*. The famous book-length essay by the author who is now the Prime Minister of Malaysia.

Brooke, Sylvia and H.H. *Queen of the Headhunters*. London, 1936. An eccentric but quite interesting account by the wife of one of the White Rajahs.

Brown, D.E. *Brunei: The Structure and History of a Bornean Malay Sultanate*. Brunei Museum, 1970.

Chalfont, Lord Alun. *By God's Will*. A flattering portrait of the Sultan of Brunei penned by Lord Chalfont, one of the few authors to have gained the royal confidence.

CAMBODIA

Major City:

Phnom Penh

Other Cities:

Angkor, Battambang, Kampong Cham, Kampong Chhnang, Kampong Saom, Kampot, Koh Kong, Kratie, Pursat, Siem Reap

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated October 1994. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

CAMBODIA is a shattered nation that is struggling to find peace and stability. For nearly 25 years, Cambodia has been torn apart by civil war, genocide, and an invasion from neighboring Vietnam. Cambodia's troubles began in 1969 when American planes bombed North Vietnamese bases in eastern Cambodia during the Vietnam War. In 1975, the Khmer Rouge, a radical Communist group, overthrew Cambodia's pro-Western regime. Immediately after its victory, the Khmer Rouge evacuated all cities and towns. Virtually the entire population was sent into the countryside to clear jungle and till the land. Approximately two million Cambodians died from executions, disease,

or starvation at the hands of the Khmer Rouge. Vietnam invaded Cambodia in 1978 and drove the Khmer Rouge from power in 1979. The Khmer Rouge and three non-Communist groups formed a military coalition to force Vietnamese troops from Cambodia. The Vietnamese fought against the Khmer Rouge and its coalition allies until September 1989, when it announced that it had withdrawn all of its forces from Cambodia. Following the withdrawal of the Vietnamese, the coalition disintegrated and a bloody civil war erupted between the Khmer Rouge and the three non-Communist groups. Several international attempts to end the fighting were unsuccessful until October 1991, when a United Nations peace plan was signed in Paris by the Khmer Rouge and the three non-Communist groups.

In March 1992, the United Nations sent its first contingent of peacekeeping troops to Cambodia. The mission of the United Nations troops during 1992 was to disarm all warring factions, repatriate 375,000 Cambodian refugees living in camps in Thailand, and prepare the country for democratic elections. However, the Khmer Rouge refused to disarm and launched attacks against civilian targets and United Nations troops. Opponents of the Khmer Rouge have also refused to

give up their weapons. By early 1993, several thousand refugees had returned to Cambodia but many others have stayed in Thailand out of fear that the civil war may resume. At press time, the Khmer Rouge continued to ignore the peace agreement it signed in October 1991. Also, attacks by Khmer Rouge guerrillas on United Nations peacekeepers increased in number and ferocity. Several U.N. soldiers had been killed or taken prisoner since their arrival in Cambodia in early 1992. The United Nations had nearly 19,000 soldiers in Cambodia in February 1993.

MAJOR CITY

Phnom Penh

Phnom Penh, the capital of Cambodia since the mid-15th century and the country's largest city, has a population of approximately 1 million. The city lies at the confluence of the Mekong River, the Bassac River, and the Tonle Sap, and consists of four urban districts and three suburban districts. Phnom Penh is a sprawling city, with a mix of wide, tree-lined boulevards and narrow dirt roads, large French-colonial houses, apartment buildings, and small wooden thatch-roofed dwell-

ings. The city is laid out in a rough grid system, with odd numbered streets running basically north/south and even numbered streets running east/west. However, streets are not always numbered sequentially, and a map is frequently helpful in locating streets and addresses. The *Phnom Penh Post*, a local English-language newspaper published semimonthly, prints a useful city map in each issue. The streets have been renamed and renumbered several times in recent years, and to avoid confusion, people frequently use both the old and the new street names and numbers when giving directions or listing addresses. Most of the posted street numbers reflect an old numbering system.

Ninety percent of Cambodia's population live in rural communities, but in recent years, an increasing number of residents have relocated to the capital city, most to try and make a better living and some to attend school or receive technical training. Like all of Cambodia, Phnom Penh is a city struggling to overcome the ravages and neglect of civil war and the city's basic infrastructure is in various states of disarray and disrepair. Phnom Penh is hot and humid year round, with a rainy monsoon season from June to October, cooler at the turn of the year and hot from February to May. September and October are the months of heaviest precipitation.

Food

Food shortages are not a problem in Phnom Penh, and a variety of locally grown fresh fruits and vegetables are always available. There are four markets that stock supplies of imported meat, both fresh (imported from Australia and New Zealand) and frozen (imported from the U.S.). Available types of meat vary but usually consist of various cuts of beef, pork, and chicken. Prices for imported meat are higher than in the U.S. Locally produced meat is available but is not recommended as there are no standards for quality control or hygienic handling or processing. Locally produced milk should be avoided, but

imported fresh pasteurized milk is sometimes available at two markets, and four markets stock UTH milk, dried milk, and canned condensed milk. Imported western-type foods are available at several markets, but selection and availability vary. Imported processed baby food is available at two markets.

Clothing

Cambodian culture and custom dictate modesty in dress, particularly for women. Very short skirts and shorts should be avoided, although sleeveless tops are acceptable for women (shoulders should be covered when visiting temples and wats). Many Cambodians wear western-style clothing, particularly in Phnom Penh, but traditional skirts and sarongs are also common. Clothing appropriate for a tropical climate is worn year round, and most occasions call for casual attire.

Local markets stock a wide supply of inexpensive secondhand western clothing, including an abundance of children's clothing. Clothing can also be made locally at very low cost (the material—cotton, silk, polyester—is more expensive than the labor), and local tailors are adept at copying favorite articles of clothing. Good quality shoes are difficult to find. Leather shoes and sandals, for adults and children, can be custom made locally at relatively inexpensive prices.

During the raining season, rubber boots, a long, lightweight raincoat, and a rainhat are desirable. Umbrellas are also a necessity during the rainy season.

Men: At work, men are most comfortable in short-sleeved dress shirts and cotton pants. Long-sleeved dress shirts and neckties are appropriate for more formal occasions. Cotton material is available locally and dress shirts can be made inexpensively. Personnel should bring tropical-weight suits for formal occasions, although for most situations shirt and tie is adequate. Formal entertaining is rare in Cambodia.

Women: Women are most comfortable at work wearing at or below the knee lightweight skirts and dresses, or appropriate slacks. Shorter styles are acceptable for Westerners but are not customary in Cambodian culture. Tight, scanty, or otherwise revealing clothing should be avoided. In Cambodia's tropical climate, natural fiber clothing, especially cotton, is usually the most comfortable. Sandals or other casual shoes are appropriate for work; for more formal occasions, pumps or dress sandals are appropriate. At more formal functions, women should wear skirts or dresses rather than dress pants. Women should not wear black or white to Cambodian weddings (these colors are worn at funerals).

Supplies and Services

Necessary toiletries, cleaning and household supplies can be purchased locally, although selection and brand names are limited. Most available products are imported from Thailand, and some European and a few American brands are available.

Local tailors are adequate and inexpensive. Fine quality is sometimes limited by sewing machines that are very basic and frequently manually powered. Some minor shoe repairs can be done locally, and leather shoes and sandals can be custom made at inexpensive prices. Good quality repair services can be hard to find. Poor quality, dry-cleaning services are available at two hotels. Beauty- and barbershops are widely available locally, at very low prices by American standards, although services are generally limited to haircuts. There is also a more expensive French salon located at the Cambodiana Hotel.

Religious Activities

Religious facilities in Phnom Penh include two Muslim services (conducted in Arabic), a weekly Catholic mass, and several Protestant services. The Anglican Church of Christ Our Peace and the Assemblies of God both hold English-language services. Buddhist services, conducted in Khmer, are also

View of Phnom Penh, Cambodia

© Nik Wheeler/Corbis. Reproduced by permission..

readily available. There are no Jewish or Eastern Orthodox services currently available in Phnom Penh (although there is an Eastern Orthodox chapel located at Norodom and 352 streets).

Education

There are two suitable primary/secondary schools located in Phnom Penh. The International School of Phnom Penh, founded in 1989, is an independent coeducational school that offers an educational program from preschool through grade 10 for students of all nationalities. The school year comprises four terms extending from August through June. The curriculum is an internationally based program focusing on the academic needs of students from more than 30 countries. All instruction is conducted in English. The school is housed in four separate buildings on three interconnected

compounds and includes 12 classrooms, a library, an outdoor eating area, and a theater. A basketball and volleyball court and an elementary playground comprise the outdoor facilities. The school is governed by a 7-member board, elected annually by the Parents' Association, which is automatically conferred on the parents or guardians of children enrolled in the school. About 98% of the schools income is derived from school tuition and fees.

The Ecole Francaise, operated as part of the French school system under the direction of the French Foreign Ministry, offers an educational program from kindergarten through age 15 (approximately equivalent to U.S. grade 10). The academic program emphasizes basic skill development, and American personnel who have young children

in attendance feel that at the primary level the school is comparable to schools in the U.S. school system. All instruction is conducted in French. The Ecole Francaise does not have lunch facilities and students go home for 2 hours in the middle of the day. Tuition fees are about \$2,000 per year.

Sports

Because of Cambodia's hot and humid weather, sports enthusiasts should take proper precautions to avoid heat stroke, sunburn, and dehydration. Tennis, swimming, boating, volleyball, soccer, and running are among the locally available sports. The International Youth Club has several hard packed tennis courts that can be reserved in advance. They also have an Olympic-sized swimming pool and a weight room equipped with a variety of free weights, weight

machines, and stationary bicycles. There are plans to build a squash court in the next year.

There are several types of individual and family memberships (in various price ranges) available at the International Youth Club; non-members and guests are required to pay a small entrance fee. There is also a smaller swimming pool at the Cambodiana Hotel (entrance fee for non-hotel guests), and the Hotel is in the process of building a small fitness center.

The National Olympic Stadium has two soccer fields, several volley ball and basketball courts, and a 400-meter dirt running track. Facilities are rudimentary, but are free and open to the public. To avoid traffic, dust, smog, and curious stares, most runners prefer to run at the Olympic Stadium rather than through the streets of Phnom Penh. The Hash House Harriers, an expatriate running club, meet weekly for group runs and socializing.

Boating and fishing can be done on the Mekong and Bassac Rivers. Small, rudimentary fishing and motor boats can be rented at reasonable cost by the hour or the day (usually a driver is included in the rental cost). Local boats are not equipped with life preservers or other safety equipment. Some basic fishing tackle can be purchased locally, but anglers will be better off if they bring gear with them. For gardeners, Cambodia's lush tropical climate encourages rapid growth of a wide range of fruits, vegetables, and tropical flowers.

Spectator sports include volleyball and soccer tournaments, and Thai kick-boxing matches. Occasionally, boat and swimming races are held on the Mekong and Bassac Rivers, usually in conjunction with a local holiday or festival. Cyclo races have recently become an annual event.

Touring and Outdoor Activities

Travel by air is possible to some locations in Cambodia, and in many cases is required due to unsafe or

impassable road conditions. Cambodia has eight usable airports, with daily flights to Siem Reap and the temples at Angkor Wat, and several weekly flights to Battambang (Cambodia's second largest city, located to the northwest of Phnom Penh), Stung Treng, Ratanakiri, and several other destinations. A newly available "high speed" boat service offers daily trips up the Mekong River to Kompong Cham and Kratie. Package boat tours are also available to Mekong Island, situated in the Mekong River near Phnom Penh. Visitors can see a variety of local handicraft demonstrations, visit a small zoo, and have lunch on local cuisine.

The white sand beaches at Sihanoukville, located on Cambodia's coast on the Gulf of Thailand, are approximately a 3-1/2 hour drive from Phnom Penh. Koh Kong Island, located just off of Cambodia's western coast in the Gulf of Thailand, is being developed as a tourist destination. Flights are available from Phnom Penh, and the Island can also be reached by boat from Sihanoukville.

Day trip destinations from Phnom Penh include Udong, Cambodia's capital from 1619 to 1866, located 24 miles north of Phnom Penh; Tonle Bati and Ta Prohm and Yeay Peau Temples, located 20 miles south of Phnom Penh; temples at Phnom Chisor, located 33 miles south of Phnom Penh and 13 miles south of Tonle Bati; and Koki Beach, which is not really a beach at all but a popular Khmer destination—especially on Sundays—located on the Mekong River, 7 miles east of Phnom Penh.

Entertainment

Formal and organized entertainment in Phnom Penh is limited. The French Cultural Center shows movies in French and sponsors a monthly schedule of lectures. Several times a year they bring classical musicians or theater performances to Phnom Penh. The Phnom Penh Players, an amateur acting group, put on two plays a year. Cambodian dance perfor-

mances are held occasionally. Performances, ceremonies, and races are also held in conjunction with most Cambodian national festivals. There are a number of nightclubs in Phnom Penh that offer dancing (most clubs play a combination of Cambodian, Thai, and western rock music).

Social Activities

The international community in Phnom Penh is small, and it is easy to meet and get to know people of all nationalities. Although opportunities for formal socializing and entertainment are minimal, opportunities for meeting host country nationals and nationals of other friendly countries include the International Youth Club, the Hash House Harriers, socializing at local restaurants and bars, and the Women's Forum (an international group that meets monthly for brunch and socializing).

Special Information

Undetonated land mines are a hazard that travelers outside of Phnom Penh should beware of. Bombs and mines were laid throughout Cambodia during the 1970s, and many of these still remain. As skirmishes between the Khmer Rouge and the Royal Government Army continue, new mines continue to be laid everyday, even in areas previously cleared and deemed safe. At the end of 1993, it was estimated that there remain 6–9 million mines yet to be cleared. Countrywide, there are nearly 100 casualties per day from mine blasts, and mine accidents rank among malaria and tuberculosis as Cambodia's greatest public health hazards. As a result of mine accidents, Cambodia has a higher percentage of amputees than any other country in the world.

OTHER CITIES

Located about 200 miles north of Phnom Penh, **ANGKOR** offers some of the countries most beautiful archeological sites. The Angkor was once the capital of the Great Khmer Empire, which reigned from the 9th

View of Angkor Wat, Cambodia

© Dave G. Houser/Corbis. Reproduced by permission.

to 15th centuries AD. The ruins of 100 or more temples and buildings are hidden beneath a stunning rain-forest canopy. Sandstone carvings on the sides of the temples tell their stories. Local tour guides can help you interpret them. One of the most magnificent sites is Angkor Wat, the temple complex built between 879-1191AD to honor the Hindu god Vishnu. The complex covers 500 acres and boasts a number of soaring towers, beautiful courtyards and galleries, and a large moat meant to symbolize the ocean surrounding the world. The Wat contains one of the largest bas relief sculptures in the world, which depicts scenes from Hindu legends.

Nearby is Phnom Bakheng Hill, the first “temple mountain” at Angkor. The temple there originally had 109 towers supporting a seven level structure, meant to symbolize the seven heavens of Hinduism. According to Hindu mythology, this temple mountain represents Mount Meru, the center of the universe.

Visitors may need to stay in Siem Reap, a town located only a few miles away from Angkor. Package tours, ranging from 2 to 5 days in duration, can be arranged through several travel agents in Phnom Penh. Prices include all ground and air transportation, hotel and meals, admission fees at all temples, and an English-speaking guide. Trips can also be arranged individually. Round-trip airfare to Siem Reap is approximately \$100 (daily flights are now available from Phnom Penh), and there are government-set fees to visit the temples.

BATTAMBANG is located in western Cambodia along the banks of the Sangker River. It is approximately 160 miles (258 kilometers) northwest of Phnom Penh. The city is situated in the heart of large rice growing region and has developed into a major marketing center. Before 1975, Battambang was the site of productive textile and cigarette manufacturing industries. These industries were heavily dam-

aged by the Khmer Rouge. Two ancient Khmer temples, Prasat Sneng and Prasat Banon, are located near Battambang. These temples date back to the 11th and 12th centuries, respectively. Within the city, the Pothiveal Museum contained many beautiful examples of Khmer art. The present condition of Prasat Sneng, Prasat Banon, and the Pothiveal Museum is unknown. With a population of approximately 195,000 in 2002, Battambang is Cambodia’s second largest city.

One of central Cambodia’s largest cities is **KAMPONG CHAM**. It is located roughly 45 miles (75 kilometers) northeast of Phnom Penh. Kampong Cham is situated near a heavily forested region of Cambodia where several varieties of trees, particularly rubber trees, are found. Several large rubber plantations have been constructed near the city. Kampong Cham’s location on the Mekong River has led to the development of a productive fishing industry. The soil around Kampong

Cham is extremely fertile and supports the growth of corn, cassava, beans, tobacco, sugarcane, cotton, rice, and potatoes. An 11th century Buddhist shrine, Wat Nokor, is located on the outskirts of the city. Kampong Cham has a population of over 35,000. Current population figures are unavailable.

KAMPONG CHHNANG, with a population of approximately 56,000, is situated on the Tonlé Sap River and is the home of a large fishing industry. The city is central Cambodia's transportation hub and is linked by rail, road, and river ferry with Phnom Penh. The residents of Kampong Chhnang and the surrounding region are noted for the creation of beautiful Cambodian pottery.

KAMPONG SAOM is Cambodia's major port city. The city was constructed in 1960 with French assistance. By 1966, Kampong Saom had developed into a modern city with parks, schools, and hospitals. The city was heavily damaged during years of civil war and all port facilities were closed by the Khmer Rouge. All port facilities were reopened in late 1979. In 1984, Kampong Saom's port handled 2.5 tons of cargo per day.

The coastal city of **KAMPOT** is located in southern Cambodia near the border with Vietnam. Kampot is located in a rich agricultural region and is a trading center for the rice, bananas, coconuts, and pepper grown near the city. Kampot is also noted for the population of durian, a tropical fruit whose seeds are roasted and eaten like chestnuts. The city is connected by road and rail with Phnom Penh. Road conditions near Kampot are extremely poor. Kampot was heavily damaged by the Khmer Rouge and many areas of the city need to be rebuilt. Kampot has a population of approximately 19,000.

The name **KOH KONG** refers to the province, the town, and the island located in southwest Cambodia near the border of Thailand. The main attractions of the island are

the white sand coves and lush tropical forests. Though the island has not been fully developed for tourist stays, day trips can be made for those interested in swimming, diving, or backpacking around the island. The village boarder town on the mainland offers several hotels, restaurants, and even a few night clubs for an active nightlife.

KRATIE (also spelled Kracheh) is northeastern Cambodia's largest city. The city is situated along the Mekong River in the heart of a fertile agricultural region. Rice, vegetables, bananas, potatoes, sugarcane, corn, and cotton are grown near the city. The area around Kratie is heavily forested and is an excellent source of hardwoods such as teak, mahogany, and rosewood. Vestiges of Cambodia's proud history, such as the monastery of Phnom Sambok and the ancient city of Sambor, are located on the outskirts of Kratie. The city has a population of nearly 20,000. Current population figures are unavailable.

The city of **PURSAT** (also spelled Pouthisat) is located on the Pursat River in western Cambodia. The region around Pursat is one of Cambodia's largest rice-growing regions. Corn, potatoes, bananas, cotton, and vegetables are grown near Pursat. Other economic activity in the city revolves around distilling and trading in horns and hides. Pursat has an estimated population of 42,000 in 2002.

SIEM REAP is one of northwestern Cambodia's largest cities. The city is Cambodia's largest producer of pharmaceuticals. Located north of Siem Reap are the remains of Angkor Wat, an ancient temple city complex constructed in the 12th century. The largest religious edifice in the world, Angkor Wat is considered the greatest architectural work in Southeast Asia. Siem Reap has a population of approximately 142,000 in 2002.

COUNTRY PROFILE

Geography and Climate

The Kingdom of Cambodia covers an area 181,040 sq. km. (69,900 sq. mi.), approximately the size of Missouri. It is bordered on the northwest by Thailand, on the north by Laos, and on the east and southeast by Vietnam. Cambodia has a short coastline on the Gulf of Thailand.

The country terrain is largely flat, low-lying plains that are drained by the Tonle Sap (Lake) and the Mekong and Bassac Rivers. The Mekong River flows 189 miles through Cambodia; in places it is up to 3 miles wide. The rich sediment deposited during the rainy season when the Mekong River swells and floods each year adds to the very fertile growing conditions that exist throughout the Upper Mekong Delta. The Tonle Sap, located in western central Cambodia, connects with the Mekong River at Phnom Penh via a 60 miles long channel.

During the dry season when the water level of the Mekong is low, water flows southeast out of the Tonle Sap into the Mekong River. However, during the wet season when the level of the Mekong rises, an extraordinary phenomena takes place. The swollen Mekong River actually causes the flow of the Tonle Sap to reverse, forcing water to drain back into the Tonle Sap and over time causing the Lake to more than double in size. As a result of this unique occurrence, the Tonle Sap is one of the richest sources of freshwater fish in the world. The central lowlands are characterized by seemingly endless, flat rice paddies, fields of reeds and tall grass, and fields of cultivated crops such as corn, tobacco, sesame, and tapioca. Sprinkled throughout are tall sugar palm trees and occasional wooded areas. Rice is grown in 90 percent of the cultivated land. However, only two-thirds of the land cultivated before 1970 is cultivated

today, largely as a result of dangerous land mines and a lack of equipment and irrigation.

There are heavily forested areas located away from the Lake and Rivers and mountainous areas in the southwest (the Cardamom Mountains), the south (the Elephant Mountains), and the north (the Dangrek Mountains). Most of the country lies at an elevation of less than 100 meters above sea level. The highest elevation, Phnom Aoral (60 miles northwest of Phnom Penh) is 1,813 meters. The mountainous areas are largely forested, with virgin rain forests in the southwest, evergreen and mangrove forests along the coastal strip, and towering broadleaf evergreen forests in the north. Much of the north and northeast is covered by a thick jungle of vines, bamboo, palm trees, and assorted other ground plants. The southwest provinces support large (although old) rubber plantations.

Phnom Penh, the capital of Cambodia since the mid-15th century and the country's largest city, has a population of approximately 1 million. The city lies at the confluence of the Mekong River, the Bassac River, and the river flowing from the Tonle Sap and consists of four urban districts and three suburban districts. Phnom Penh is a sprawling city, with a mix of wide, tree-lined boulevards and narrow dirt roads, large French-colonial houses, apartment buildings, and small thatch-roofed wooden dwellings. Many residents have relocated to the capital from rural provinces, most to make a better living and some to attend school or to learn English. Phnom Penh is a city struggling to overcome the ravages and neglect of civil war, and most of the city's basic infrastructure is in disarray.

Upon leaving Phnom Penh, the scenery immediately becomes very rural. Cambodia's second largest city, Battambang (population approximately 200,000), is located 175 miles to the northwest. Approximately 3 hours (by road) to the southwest of Phnom Penh is the

port of Sihanoukville on the Gulf of Thailand, with white-sand beaches. In the far northeast, Ratanakiri province is the home of Cambodia's ethnic minorities.

The climate in Cambodia is consistent throughout the country—hot and humid. There are two distinct seasons: a cooler dry season that last from November to May, and a hotter rainy season lasting from June to October. The country has an average annual rainfall of between 50 and 75 inches with the southwestern mountains, the area with the highest rainfall, receiving nearly 200 inches per year. October–December are the coolest months of the year, when temperatures can fall to the mid to upper 60°F (25–27°C). April is the hottest month, when temperatures regularly exceed 100°F (40°C). The average relative humidity is 81 percent. Although the heat and humidity, particularly during April and May, can be uncomfortable and fatiguing, all U.S. Embassy housing and offices are equipped with air-conditioning. During the rainy season, periodic flooding is a problem, as are increased mosquitoes, silverfish, and vermin infestation. High levels of humidity and moisture encourage damage caused by mildew and rust.

Population

The population of Cambodia is approximately 12 million, with an annual growth rate of 2.25% (2001 est.). Cambodia is the most homogeneous of the Southeast Asian nations, with ethnic-Khmers comprising nearly 90% of the population. There are small percentages of ethnic-Chinese and ethnic-Vietnamese, and a small Cham Muslim population that was nearly wiped out by the Khmer Rouge during the 1970s. Cambodia's ethno-linguist minorities (hill tribes), numbering fewer than 100,000, reside in the country's mountainous regions and are concentrated primarily in the northeast. As sporadic fighting continues between the Khmer Rouge and Royal Government forces, a fluctuating population of Cambodi-

ans seek refuge in Thailand. Years of violent and bloody civil war have taken their toll on the population and are reflected in the demographics of the country. Nearly 65 percent of the population are women, and 40% (4 million) is under age 15.

Cambodia's population is mostly rural with approximately 80 percent employed in agriculture or fishing. Nearly 90 percent of the population resides in the central lowlands. The average population density in Cambodia is 61 people per square kilometer.

The official language of Cambodia is Khmer, and it is spoken throughout the country. Unlike Thai and Vietnamese, Khmer is a nontonal language with many disyllabic words. The Khmer language descends from Sanskrit and borrows a number of words from Pali. It is not directly related to either Thai or Vietnamese. For over a century during the period of French colonization, educated Cambodians also learned French. Today, however, the second language of choice is fast becoming English. Young people crowd English-language classes and practice their language skills with foreigners at every chance they get.

Buddhism is the state religion in Cambodia, and the vast majority of Cambodian people are Buddhist. Cambodians practice Theravada Buddhism, an earlier form of the religion that originated in India. Every male Buddhist is expected to become a monk for at least a short period of his life. Under the Khmer Rouge, the practice of Buddhism (and all religion) was forbidden. Monks were executed, and nearly all of the country's 3,000 wats (Buddhist temples) were severely damaged or destroyed. In recent years, despite a critical lack of resources, great emphasis has been placed on restoring and rebuilding the wats.

Cambodia's small Muslim community was nearly annihilated by the Khmer Rouge. There are several mosques in Phnom Penh, however, and in a number of villages to the

north and east along the Mekong River.

Public Institutions

The Kingdom of Cambodia is struggling to overcome decades of civil war, isolation, and massive destruction by the Khmer Rouge of its population, infrastructure, and national identity and culture. Historically, however, the Khmer nation has been both powerful and influential throughout the region. From the 9th to the 14th century, the Khmer Empire successfully ruled much of the area that is today Thailand, Laos, and Vietnam. During the 14th and 15th centuries the power of the Khmer Empire waned, and a succession of Kings alternately fought with neighboring Vietnam and Thailand. In 1863, Cambodia signed a treaty of protectorate with France, and over the course of the next century became established as a French colony. Cambodia, under the leadership of King Norodom Sihanouk, declared independence from France in 1953. Shortly thereafter King Sihanouk abdicated the throne to his elderly father in order to be elected prime minister and then Chief of State. Sihanouk severed diplomatic relations with the U.S. in 1965. In 1970, when Sihanouk was temporarily out of the country, his cousin, General Lon Nol staged a coup d'état, and replaced Sihanouk as chief of state. Sihanouk established a government-in-exile operated out of Beijing, and became a figurehead leader of the group known as the Khmer Rouge. Meanwhile under Lon Nol, extreme levels of government greed and corruption led to violent fighting and the deaths of several hundred thousand Cambodians between 1970 and 1975.

On April 17–18, 1975, the Khmer Rouge invaded Phnom Penh and systematically and methodically emptied the city of all residents. Over the next 4 years, the Khmer Rouge attempted to implement a totally agrarian-based self-sufficient society, forcibly relocating Cambodia's citizens to rural work camps to work in the fields and per-

form manual labor. Under the genocidal leadership of the Khmer Rouge, nearly 1 million Cambodian people were tortured and executed and almost an entire generation of educated and professionally trained citizens was methodically annihilated. Widespread starvation, disease and despair contributed to the massive numbers of deaths that occurred during the 1975–79 reign of the Khmer Rouge regime. During this period, the country's basic infrastructure—systems of transportation, communication, education, health, economics, and government—was destroyed.

In January 1979, Vietnam invaded Cambodia and forced the Khmer Rouge westward to the Thai border, and installed a new communist government headed by Hun Sen and Heng Samrin, two former Khmer Rouge leaders. For more than a decade Vietnam presided over the chaotic situation in Cambodia, plagued by continued guerrilla warfare with the Khmer Rouge, widespread famine, international isolation, and political, social, and economic instability.

Amidst international pressure and a declining economic situation at home, Vietnam ceased its occupation of Cambodia in 1990, and a year later the 1991 Paris Peace Agreements promised to end 13 years of Cambodian civil war and establish the country as a democracy. The Cambodian peace agreement called for the deployment of the largest and most costly peacekeeping force in the history of the U.N. The U.N. Transitional Authority in Cambodia (UNTAC) was created and charged with custodial administration of the country until a democratically elected constituent assembly could form a new government and ratify a national constitution. In May 1993, Cambodia held its first free and open elections (in which the Khmer Rouge refused to participate), with 95 percent of eligible voters registered to vote, and of those 90 percent casting a ballot.

The National Assembly, the leading legislative body, is made up of 120

elected members representing three major political parties. The Royalist FUNCINPEC party (the French acronym for Cambodian National Front for an Independent, Neutral, Peaceful and Cooperative Cambodia) and the Cambodian People's Party (CPP) share a majority of power in the National Assembly (with the two co-prime ministers, H.R.H. Norodom Ranariddh and Hun Sen representing those two political parties), and the Buddhist Liberal Democratic Party (BLDP) has a smaller presence.

The main goals of the new government are national reconciliation to rebuild the country and to restore peace and stability where chaos has existed. A major obstacle confronting Cambodia is a severe lack of resources. Over the past two decades the country's infrastructure was nearly completely destroyed, and Cambodia is now faced with reestablishing basic levels of transportation, communication, food and water supplies, and government services. Poverty is a serious problem, and living standards and social indicators in Cambodia place it among the poorest countries in the world. Cambodia's new leaders have been working hard to reestablish ties with the international community and formulate a policy for foreign relations. A big part of this has been seeking desperately needed international aid and assistance. To date, Japan, France, Australia and the U.S. have been the major contributors. A key to the new government's success will be its ability to strengthen Cambodia's economy and improve living standards throughout the country.

The Kingdom of Cambodia is divided into 21 provinces that are broken down into districts, communes, and villages. Seats in the National Assembly are allocated proportionally by province.

Arts, Science, and Education

Cambodia, a country with a rich history of traditional architecture,

Man on a bicycle on a Cambodian street

Cory Langley. Reproduced by permission.

music, dance, and handicrafts, suffered near cultural devastation under the Khmer Rouge regime. Pagodas and temples, museums, libraries, and theaters were routinely ransacked and destroyed. Between 1975 and 1979, the rich history and culture that had accu-

mulated over thousands of years in the form of buildings, sculptures, paintings, and manuscripts was ruthlessly wiped out.

Today, the country is struggling to restore, rebuild, and resurrect its cultural institutions. Historically,

Cambodia is perhaps best known for its unique and impressive architecture that climaxed during the Angkorian period (the 9th to the 14th century). At that time, Khmer art and architecture were widely influential throughout Southeast Asia. The most magnificent exam-

ple of Khmer architecture can be seen at the world famous temples of Angkor, including Angkor Wat, the Bayon, and Angkor Thom. Although attacked and ransacked by the Khmer Rouge, these spectacular temples remain one of the architectural splendors of the world. With international assistance, a variety of conservation efforts are underway to protect and preserve these national monuments.

The National Museum of Khmer Art and Archaeology, located in Phnom Penh, has some of the finest examples of Khmer art and sculpture. Pagodas around the country are in various states of refurbishment and repair, and the Royal Palace and its surrounding compound including the Silver Pagoda—with its floor covered with 5,000 silver tiles—has undergone an impressive renovation and has sections that are open to the public for tours.

Cambodia's classic dance, with its graceful and controlled movements and colorful silk costumes, is performed to the accompaniment of traditional string and percussion instruments and vocalist. Under the Khmer Rouge, 90 percent of Cambodia's classical dancers were killed, and it is only recently that the government reestablished a national dancing troupe. Theater in Cambodia recently received a severe setback when the Bassac Theater, a historic site in Phnom Penh and Cambodia's national theater, caught fire and was destroyed. The country currently has no funds to replace or to rebuild the theater and is hoping for international assistance to help restore this culturally significant site.

Like most institutions in Cambodia, the educational system suffered greatly under the Khmer Rouge. By 1979, the educational system ceased to exist. In addition, the country was left with a severe lack of trained teachers, most of whom were executed during the Khmer Rouge regime. School buildings, books, supplies, and printing facilities were all destroyed. However, a major effort in the 1980s to reestab-

lish a national school system resulted in the opening of nearly 4,700 primary schools and 440 secondary schools throughout the country. There are now over 2 million primary school students and 190,000 secondary school students, as well as a small university and technical school population in Phnom Penh. However, quality of education remains low. Primary school graduates risk lapsing into illiteracy, and secondary school graduates lack the required level of knowledge, particularly in the fields of mathematics, science, and foreign languages, to gain college admission.

One of the major problems facing the educational system in Cambodia is a continued shortage of competent and qualified teachers. For example, approximately one-third of all primary schoolteachers themselves have only a primary school education. In addition, teaching salaries are so low that new teachers are discouraged from entering the field (the World Bank recently calculated that average teacher salaries cover only half the cost of a typical household's monthly rice consumption). Educational resources of all types are lacking; only 4 percent of the projected 1994 national budget was allocated for education. Adult literacy in Cambodia is believed to be around 35 percent, a slight decline from where it was 25 years ago.

Commerce and Industry

Cambodia's economy, even before the widespread destruction and devastation brought on by the Khmer Rouge, was one of the least developed in Southeast Asia. Although with assistance from the international community, the economy has improved, Cambodia remains a poor, underdeveloped country, and its economy continues to suffer from decades of civil war and internal corruption. The average per capita income is approximately US\$1,300 (2000 est.). Future economic development and

growth will depend heavily on international aid and assistance and foreign investment.

Agriculture, including rice farming, livestock, forestry, and cultivation of other crops, is a primary part of the economy, involving 75% percent of the labor force. Agriculture accounted for about 37% of GDP in 1999. Excellent rice harvests in 1999 contributed to Cambodia's better-than-expected economic growth. With its large amount of arable land, ample rainfall, and close proximity to the major ASEAN markets of Thailand and Vietnam, agriculture will continue to have strong growth potential for the economy.

Industry and manufacturing remain low. Mining activities (for clay, dolomite, gold, limestone, pagodite, phosphate, quartz, sapphire, ruby, silica sand, and other precious stones) are also low. Although Cambodia's natural resources include a variety of gemstones, the largest gemstone mines are currently not under government control, and their output remains largely unreported.

Since 1993, Cambodia has received major assistance from the IMF, World Bank, ADB, UNDP and other bilateral and multilateral donors that is earmarked for economic reform. Cambodia has already made considerable progress by improving control of the forestry industry, which had been plagued with management corruption and illegal logging operations. Timber and firewood are the main forest products (Cambodia does not have a large quantity of teak or other valuable hardwoods).

Cambodia is a member of ASEAN and the Asian Free Trade Area. Cambodia has begun the process of accession to the World Trade Organization.

Transportation

Local

In Phnom Penh and throughout Cambodia, vehicles drive on the

right-hand side of the road as they do in the U.S. However, in most locally available automobiles the driver's seat is on the right side of the vehicle. Traffic conditions in Phnom Penh can be confusing and dangerous, primarily because traffic regulations are rarely enforced. Few Khmer drivers have had any type of formal driving instruction and most do not have a license. The streets are shared by large cargo trucks, cars, a plethora of motos, bicycles, cyclos, a few ox-pulled carts, and pedestrians. The absence of stop signs at even major intersections adds to the confusion and danger of driving in Phnom Penh. Additionally, some informal but significant "rules of the road" may prove initially confusing to American drivers. For example, in Cambodia, the meaning of another car flashing its headlights is "you are in my driving path and I am not yielding my right of way to you."

Traffic conditions at night can be particularly challenging. Street lights in Phnom Penh frequently do not work, and in any case are only present on a few major roads. The roads are dark, and many cars, motos, cyclos, and bicycles travel at night without any lights. During the rainy season when roads frequently become flooded, drivers should beware of potentially slippery conditions and hidden potholes.

"Moto taxis"—small motorcycles that accept passengers to sit behind the driver—are widely available and are used regularly. Cyclos—large tricycles with a passenger seat in front and a peddler or driver behind—are also a widely used form of transportation. Both of these forms of transportation are inexpensive (usually costing between 20¢ and \$1; prices are negotiable) and are readily available. Cars with drivers can be hired by the hour or by the day; rates are reasonable.

Regional

Transportation facilities available within Cambodia are limited. There are five National Highways linking Phnom Penh to other provinces. The conditions of these roads, the only

main roads in the country, vary considerably and in some cases they are not passable even with a four-wheel-drive vehicle. In 1990, it was estimated that only about 20 percent of the roads in Cambodia were covered with asphalt and were in passable condition. Missing or damaged bridges also creates travel difficulties as ferry services are frequently not available. To date, the government has not allocated significant budget resources for repairing the country's roads, and little attempt has been made to find private funding for road construction and repair. The highway system is being rebuilt in stages with the help of foreign assistance projects and loans, as they become available.

The Khmer Rouge continue to mine bridges, including those recently restored and rebuilt. Incidents of banditry, robbery, and kidnapping by Khmer Rouge and government soldiers has made road travel to many destinations additionally dangerous and unreliable. Private taxi service can be arranged to some destinations outside of Phnom Penh, subject to the same dangers as previously described.

Travel by air is possible to some locations, and in many cases is required due to impassable roads, damaged bridges, and unsafe travel conditions. Cambodia has 8 usable airports with daily flights to Siem Reap (and the temples at Angkor Wat), and several weekly flights to Battambang (Cambodia's second largest city, located 175 miles to the northwest of Phnom Penh), Stung Treng, and a few other destinations. Flights to the northeast of Cambodia fly only once per week, and there is no road access to this part of the country. Organized trips to visit the temples of Angkor Wat (accompanied by an English-speaking guide) are available through local travel agencies; trips ranging from 2 to 5 days can be arranged, although prices are expensive. There are daily flights from Phnom Penh to Bangkok (a one hour flight), where connections to other international carriers can be made. Daily or

weekly flights to other international destinations, including Singapore, Ho Chi Minh City, Hong Kong, and Kuala Lumpur, are also available directly from Phnom Penh.

Cambodia has two rail lines, both originating in Phnom Penh, and a total of 367 miles of government owned single, one-meter-gauge track. Guerrilla activities continue to disrupt service, and the railroad is not safe for travel by American by Americans for either official or personal travel.

Likewise, Cambodia has 169 miles of navigable inland waterways for boats drawing up to 1.8 meters of water. Although several cities are theoretically reachable from Phnom Penh by boat, due to high incidents of banditry and generally unsafe conditions of equipment and lack of life preservers and safety devices, transportation by boat is generally not recommended.

Communications

Telephone and Telegraph

In Phnom Penh and throughout Cambodia, local telephone service consists of individual mobile telephones carried by the small (but growing) percentage of individuals who can afford them. There are only a few businesses and almost no homes with installed telephone lines, and they are difficult to get. Motorola telephones cover an area 18 miles around Phnom Penh where the antenna is installed. Samart telephones service a wider area of the country including Siem Reap, Sihanoukville, and Kompong Cham.

Phnom Penh does have a limited local telephone system, but overseas calls are frequently easier to make than local ones. There are a small but growing number of pay phones located in Phnom Penh, and local emergency telephone numbers have recently been established.

Because many businesses and most individuals do not have telephones, communication frequently requires

a hand-delivered message or personal visit.

Radio and TV

Post receives shortwave radio broadcasts in English from the BBC, VOA, and Radio Australia. Radio France International, a French station, can be received on FM radio. Local TV programs (news programs, sitcoms, dramas, movies) are broadcast in Khmer, the official language of Cambodia. Occasionally, programs in French, Thai, or English are shown. The French channel CFI is retransmitted over Phnom Penh by the French cultural center. A small regular TV antenna is sufficient to receive it. A Thai company also operates a TV channel out of Bangkok. Cable TV (including Star TV that transmits BBC 24 hours per day, and CNN) can be viewed in several local restaurants and hotels.

Newspapers, Magazines, and Technical Journals

Reasonably current news magazines are available, including international editions of *Time* magazine, *Newsweek*, and *The Economist*. English-language books are difficult to find in-country, but there are several well-stocked English-language bookstores in Bangkok.

Health and Medicine

Medical Facilities

Although there are several well-trained Cambodian medical specialists in Phnom Penh, local hospitals are poorly equipped and inadequately staffed. Locally available medications and sterilization techniques are for the most part inadequate.

Community Health

A rudimentary and unsophisticated public health system exists in Cambodia, with hospitals established in most provinces and districts. In Phnom Penh there are nine hospitals (including both public and private facilities). However, throughout the country health services remain inadequate. The Min-

istry of Health recently began trying to rebuild a national health system, but resources are scarce and there remains a critical lack of trained doctors and nurses. In 1993, there were only 986 trained physicians in all of Cambodia, and due to very low civil service salaries there is little incentive for medical professionals to enter the public health sector.

Despite existing difficulties, the health sector has made significant progress in the past 2 years, and this trend of improvement is expected to continue. International aid and assistance has accelerated, largely in the form of direct assistance to individual facilities at the local level, and the availability of medications and supplies has increased throughout the country. Priorities facing the Ministry of Health include reestablishing functioning primary health services through a district-based health system approach, strengthening national programs aimed at the principal communicable diseases afflicting the country (including tuberculosis, malaria, immunizable childhood diseases, AIDS, diarrheal diseases, malnutrition, acute respiratory infections, and adequate birth space), and improving the capacity of the health system to perform functions and to manage resources efficiently (the public health system has become very decentralized in its management, which accounts for widely varying levels of service and unevenly distributed assistance throughout the country).

Sewage and garbage disposal facilities are generally inadequate but improving. Currently, the city of Phnom Penh has only 15 serviceable garbage trucks, and rubbish collection is notoriously bad due to a lack of government funds. Recently however, the Phnom Penh Municipality signed a tentative contract with a French company to improve the garbage collection and disposal in the city. To pay for the new services, the city has proposed new taxes for households and businesses.

Preventive Measures

Sickness is a significant problem, but with proper attention to methods of prevention and general sanitation, and by keeping immunizations current, many common diseases can be avoided. Malaria suppressants should be taken regularly when traveling up-country, but are not required within the confines of Phnom Penh where the risk of malaria is minimal. Recommended inoculations include typhoid fever, cholera, Japanese encephalitis, Hepatitis A and B, measles, mumps, rubella, and a post-childhood polio re-booster. All pets should be inoculated against rabies. To reduce the risk of mosquito-borne diseases, it is advised that insect repellent be used at night, and protective clothing be worn during the dusk to dawn hours.

Tap water in Cambodia is not potable, and for drinking purposes most people use readily available and reasonably priced bottled water. Tap water can be used if it is boiled first for 10 minutes and then filtered. Iodine is also effective in purifying water. Tap water can be used for washing and bathing. Fresh fruits and vegetables are abundant all year round, but they must be thoroughly cleaned and soaked in an iodine or chlorine solution and then rinsed with purified water before consumption. Where possible, fruits and vegetables should be peeled. All meat and seafood must be well cooked before eating. Locally produced milk should be avoided, but UTH whole milk, dried milk, canned condensed milk, and occasionally imported fresh milk is available.

The climate in Cambodia is hot and humid year round, and care must be taken to avoid prolonged sun exposure, sunstroke, heatstroke, and dehydration. Regular use of sunscreen is recommended, and individuals will appreciate having UV protective sunglasses, and a hat or sun visor. Dehydration can be a problem, particularly among children, but it can easily be prevented

by consuming proper amounts of water throughout the day.

NOTES FOR TRAVELERS

Passage, Customs & Duties

The normal flight pattern from Washington, D.C. to Phnom Penh leaves from Dulles International Airport and flies to the U.S. west coast, and from there flies to Bangkok with one stop over (usually in Taipei, Taiwan). It is necessary to change planes in Bangkok to fly to Phnom Penh; no U.S. carriers currently fly to Cambodia.

A passport and visa are required. Tourists and business travelers may purchase a Cambodian visa, valid for one month, at the airports in Phnom Penh and Siem Reap. Both require a passport-sized photograph.

There is a \$20 local entry fee (payable in U.S. dollars), and an \$8 departure tax for all international flights. There is no restriction on the amount of currency that can be imported into the country, but amounts in excess of \$10,000 must be declared. Current information about entry/visa and other requirements may be obtained from the Royal Embassy of Cambodia, 4500 16th Street, NW, Washington, DC 20022, telephone number 202-726-7742, fax 202-726-8381. Overseas inquiries may be made at the nearest embassy or consulate of Cambodia.

All U.S. citizens in Cambodia are encouraged to register with the U.S. Embassy in Phnom Penh where they may obtain updated information on travel and security within Cambodia. The U.S. Embassy is located at no. 16, Street 228 (between streets 51 and 63), Phnom Penh, Cambodia. The telephone number is (855-23) 216-436 or 218-931; fax (855-23)-216-437. A recording of security information is available twenty-four hours a day at telephone (855-23) 216-805.

Pets

Pets are permitted entrance into Cambodia. All pets should have standard vaccinations and certificates Contact the airlines for shipping information. There is an established veterinarian in Phnom Penh.

Currency, Banking and Weights and Measures

The official currency of Cambodia is the riel; there are approximately 2500 riel to the dollar (June 1994). Paper riel notes are issued in 100, 200, and 500 denominations. There are no coins in use. The U.S. dollar serves as a widely used unofficial currency and is accepted virtually everywhere in the country. Many times prices are given in U.S. dollars instead of riels. All monetary transactions in Cambodia are conducted in cash; credit cards are accepted only at the Cambodiana Hotel and at some airlines. U.S. travelers checks can be exchanged at local banks (for a fee), but they are not accepted by local merchants or businesses as a form of currency.

Cambodia uses the metric system for all weights and measures.

INTRODUCTION

CHINA has the longest continuous historical and cultural tradition of any country on earth. The civilization which took shape in the Yellow River Valley of North China in the second millennium B.C. eventually came to dominate all of East Asia, including Japan, Korea, and Vietnam. The products of that civilization bear the unmistakable stamp of the vast nation which today is the home of nearly one-fourth of the world's population.

The process of change in a society structured by more than 3,000 years of civilization has not been an easy one, and China in the 20th century has been exhausted by political, eco-

nomie, and intellectual chaos. The Chinese Communist Party assumed control of the mainland in 1949, after almost a generation of war and social upheaval and, on October 1 of that year, formally proclaimed establishment of the People's Republic of China.

In the intervening years, and during the period of the Great Proletarian Cultural Revolution, diplomatic relations between the United States and the People's Republic of China (P.R.C.) were interrupted. In the late 1960s, steps were taken toward relaxing tension between the two countries, and on March 1, 1979, the United States and the P.R.C. exchanged ambassadors and established embassies in Beijing and in Washington, DC.

MAJOR CITIES

Beijing

Beijing is on the northern edge of the North China Plain. To the west and north are hills, rising to 11,000 feet, 60 miles to the west, while flat, fertile farmlands stretch to the south and east. In 2000, Beijing's population was approximately 12,033,000.

Beijing's modern architecture is undistinguished, but pockets of splendid old buildings—notably the Forbidden City of the Ming and Qing Dynasties—still preserve the charm of premodern Beijing. In the past 25 years, many new multistory buildings have been built along the broad east-west access, which passes through Tiananmen Square. In all sections of Beijing, new high-rise office buildings, hotels, shopping complexes, and apartment houses are either under construction or recently completed. The city is constantly changing, although certain sections are still largely characterized by narrow streets fronted by gray walls, beyond which gray roofs with slightly upturned gables mark courtyards and residences, intersected with blocks of brick apartments for workers. The city has three ring roads (some sections are raised highways) that allow for easier access around the city and to the outskirts. The six-lane airport expressway has recently been completed. While a fourth ring road is under construction, it is not expected to alleviate worsening overall traffic congestion, caused by a proliferation of taxicabs and privately owned vehicles on city streets.

Food

With the increasing availability of Western products and their Chinese

counterparts, it is now possible to find locally most of the components of a typical American diet. The drawbacks to the local scene are mainly price and lack of convenience: imported goods are still quite expensive, and food shopping outside the major hotel supermarkets is very time consuming. A summary of what is and isn't available is listed below.

All kinds of meat are available, both fresh and frozen, including beef, pork, and lamb. There are various delicatessens around town, as well as a German butcher who offers Western cuts. Frozen chickens (both whole and cutup), turkey, and duck are available at the Friendship stores and other outlets. Fresh and frozen seafood comes in many varieties, including such delicacies as scallops, squid, and some imported fish such as rainbow trout and salmon; prawns are available locally, but the quality varies. Also widely available are various cold cuts and sausages (some imported, some made locally) such as hot dogs, ham, and bacon as well as liver pate and caviar. Imported cheeses (at very high prices), deli meats, and fresh baked goods are also available widely at several hotel delicatessens and bakeries.

Dairy products are readily available. Fresh pasteurized, homogenized milk is sold almost everywhere for about 12 Yuan per liter. UHT (long-life) milk (low-fat and skim as well as full-fat) is widely available as well, imported mainly from Australia. A Swedish-Chinese joint venture company produces a heavy cream similar to *creme fraiche*, yogurt (plain and limited selections of flavors), cottage cheese, and sour cream. With the exception of yogurt, however, these items are expensive. Butter, margarine, and cheddar-style cheese are all available, in both locally made and imported varieties. An Italian cheese store that recently opened offers locally made fresh ricotta, mozzarella, and soft Italian cheeses, and lately, fresh pasta.

Fresh produce is abundant, and the availability of a wide variety of

fruits and vegetables has increased dramatically over the past few years. Local produce markets dot the city, with some around the diplomatic compounds catering to Westerners and their tastes.

Produce available year-round includes cabbage, potatoes, onions, cucumbers, beets, carrots, garlic, bean sprouts, broccoli, cauliflower, celery, corn, eggplant, lettuce, green peppers, spinach, and string beans. The popularity of "hothouse farming" has made available such diverse items as fresh white and cremini mushrooms, Italian parsley, okra, zucchini, Japanese eggplant, and beautifully ripe tomatoes. Boutique fruit stands offer the likes of mangoes, lemons, imported apples, cherries, and Asian pears in addition to bananas, watermelon, peaches, lychees, strawberries, persimmons, pineapples, plums, mandarin oranges—all of which are available at different times of the year.

Frozen vegetables are available at several stores, although at considerably higher prices than in the U.S. Canned tomatoes, peas, asparagus, mushrooms, and carrots, as well as a variety of canned fruits are available; their quality may vary, but their prices are consistently high. If you cook a lot of Italian food, bring your own tomato paste as no acceptable substitute is available, and imported cans are expensive. A variety of juices are regularly available either fresh, canned, or in cartons: orange, grapefruit, pineapple, tomato juices, guava, grape, and various juice blends. All are expensive compared to prices in the U.S.

Some other items available in Beijing stores are grains (several varieties of rice, cornmeal, oatmeal, macaroni, spaghetti, millet), spices (bay leaves, cinnamon, coriander, noniodized salt, pepper, curry powder, chili powder, sesame seeds and paste, anise), chicken and duck eggs, nonegg noodles, sandwich bread, walnuts and pine nuts, granulated sugar, cooking oils, cookies, jams, honey, ice cream, rice vinegar, catsup, beer, wine (both imported

and Chinese), soda water, mineral water, imported spirits, and many Western brands of candy and gum.

Clothing

In July and August, the weather turns hot and humid similar to that of Washington, D.C., and rain showers are frequent. Autumn is the best time of the year, with warm, pleasant clear days and little wind. December through March is cold, extremely dry and windy, with occasional snow. Beijing spring is mostly dry, with frequent strong winds that stir up heavy dust storms. Prepare your wardrobe with these extremes in mind. In winter most buildings are overheated, but restaurants frequently have little or no heat.

The Chinese, both men and women, wear long winter underwear and trousers with a padded tunic in winter. A light open-necked shirt is the usual dress in the summer. Foreigners' clothing is informal and reflects prevailing fashions in Europe or the U.S. Daytime requires sturdy, practical, and washable items. Bring your deck shoes, tennis shoes, or hiking boots for climbing the Great Wall (it's steep).

Warm clothing, including boots, is needed during winter. Synthetic fabrics are a problem because they collect excessive electricity in the dry winter months. Static spray is a great help in controlling static electricity in clothing, and some consider it essential. Local department stores carry limited selections of men's underwear, sports and dress shirts, polo shirts, socks, and sweaters and down jackets for men, women, and children. A number of Western designers contract with Chinese firms to produce high-style items. Some of the items, often seconds, appear in the free markets at prices that are bargains compared to their U.S. equivalents.

For older children, Chinese clothing is adequate but has a distinctly Chinese look. Clothing for school should include sweatsuits for physical education class and sneakers. Dresses and trousers are available locally, though the styling may not be West-

Great Wall of China near Beijing

ern. Shoes of cloth and rubber are inexpensive and come in all sizes, but quality is poor.

Supplies and Services

Local toiletries and cosmetics differ widely from what Americans are used to, and Western products, available at selected shops, are limited in selection and quantity and priced exorbitantly. Bath oils and lotions, moisturizers, and creams are popular because skin becomes exceedingly dry and itchy in the dry winter climate. Dandruff shampoos and hair conditioners are also useful.

There are a few hotel laundry and dry-cleaning facilities. Service time varies, and cleaning is marginally satisfactory. Shrinkage of woolen suits is not unknown, and clothing has been lost or damaged. Simple tailoring and dressmaking can be done locally. Tailors can copy clothes from pictures, and with a fitting session or two, they do adequate work. Good silk, wool, linen, blended suit

fabric, and brocades (inexpensive by U.S. standards) are available, but cotton, men's shirt, and wash-and-wear fabrics can be hard to find. Many people have been pleased with the clothes they have had made here.

There are men's barbers and women's beauty/barber salons in the hotels and the International Club, and if you speak Chinese, you can go to the generally improving local salons. Prices range from inexpensive to expensive. The Chinese have their own supplies, but some women may prefer to use their own hair spray, conditioners, coloring, shampoo, and equipment such as rollers.

Religious Activities

Catholic Mass is offered in English every Saturday night at the Canadian Embassy and every Sunday at the Philippine Embassy. A Catholic Mass is also offered Sunday morning at two Chinese cathedrals in Beijing; the churches are indepen-

dent of Rome, and the service is in Latin.

Nondenominational Protestant services in Chinese are held Sundays at two local Protestant churches and in English at the Sino-Japanese Center.

The Church of Jesus Christ of Latter-day Saints holds meetings in the homes of members.

Informal Jewish services are held for the major holidays, as are Passover Seders. These services are coordinated by longtime residents of Beijing. Weekly services are not available.

Information on religious services is available from American Citizen Services, American Embassy.

Education

With the rapid growth of the foreign community, Beijing has experienced a deficit of educational opportunities for children.

Rickshaw on a street in Beijing, China

Courtesy of Thomas Musthaler

Three new schools, all with programs limited so far to elementary and middle school grades, have also opened recently in Beijing: the Western Academy of Beijing (WAB), the New School for Collaborative Learning (NSCL), and the Beijing Singapore International School (BISS). The WAB and BISS both attract mostly children whose native tongue is not English, with extensive English as a Second Language (ESL) programs. The WAB's curriculum, developed by the European Council of International Schools (ECIS), is more British in its orientation as well.

It must be stressed that none of the schools in Beijing are equipped to handle children with anything but mild learning disabilities. If your child has special educational needs, be sure to have these assessed before you make the decision to come to Beijing.

International School of Beijing: Jiang Tai Road, Dongzhimenwai, Beijing 100004, People's Republic of China Tel: 86-10-6437-7119 Fax: 86-10-437-6989

The International School of Beijing, jointly sponsored by the governments of Australia, Canada, New Zealand, the U.K., and the U.S., was

established in 1980 as the successor to the American Educational Association and the former Australian, Canadian, and British schools. ISB is an independent, coeducational day school offering a program ranging from pre-kindergarten through grade 12 for government dependents and other citizens of the founding nations. As space is available, qualified children of citizens of other countries are also admitted. The school year extends from mid-August to mid-June.

Organization: The school is governed by an 11-member Board of Directors, 6 of whom are appointed by the sponsoring embassies, and 5 of whom are elected by the International School Association of Beijing. All parents of children who are registered for attendance in the school and members of the Board of Directors are automatically members of the Association.

Curriculum: The curriculum is based on, but not limited to, American models. Language arts and mathematics are emphasized. Social studies, science, computer studies, Chinese, French, art, music, drama, physical education, and health education are also taught. The International Baccalaureate (IB) program is also offered to

students in grades 11 and 12, along with several advanced placement courses. All grades meet in regular classes, from self-contained elementary (pre-kindergarten through grade 5) through middle school (grades 6 to 8) to high school (grades 9 to 12). All students study about China within the regular subjects and through special field experiences. There are limited programs for ESL, resource, and English enrichment.

Accreditation: The ISB is accredited by the Western Association of Schools and Colleges.

Faculty: There are about 80 full-time and 16 part-time professional staff members, many of whom are American.

Enrollment: Enrollment is about 1,000 students (50% Pre-K through grade 5, 25% grades 6 to 8, 25% grades 9 to 12).

Facilities: The school operates in 2 modern and 10 new buildings with 48 classrooms, 4 science labs, 5 music rooms, 2.5 art rooms, 3 computer labs, a learning Media Center, and a multipurpose room with stage, 14 language rooms, 8 resource and ESL classrooms, 2 gymnasiums, shower rooms, and 2 food-serving kitchens. It is located partly on the compound of the Lido Hotel Company Ltd., and partly on land leased from the Chinese Government. With the addition of 10 new buildings to the campus during the summer of 1994 to add needed enrollment capacity, the outdoor/play/sports places were cut back somewhat.

A new school facility for 1,500 students on a new 40-acre site is in the construction stages. Until the site is complete, students in grades K through 2 will attend a new "satellite" campus a short distance away from the Lido campus, accommodate the growing student.

Finances: About 95 percent of the school's income is derived from regular day school tuition. Annual tuition rates for 1996-1997 were as

follows: Pre-K: \$7,500; K-grade 5: \$11,870; grades 6 to 8: \$12,710; grades 9 to 12: \$14,030; capital fee: kindergarten—\$1,500, grades 1 to 12—\$3,000. A mandatory building fee of \$15,000 per student (refundable under certain terms and conditions upon withdrawal) was introduced for the 1996-97 school year to raise funds for the new campus. (All fees are quoted in U.S. dollars.)

The New School of Collaborative Learning: Shangdi West Road, Haidian District, Beijing 100085 PRC

The New School of Collaborative Learning is a cross-cultural international school sponsored by the Alliance for International Collaboration and Development (AICD), an American nonprofit educational corporation. Established in 1994, it offers, in English and Chinese, a program ranging from preprimary through 9th grade. An alternative school in the heart of Beijing's intellectual district, NSCL emphasizes immersion in Chinese and American cultures and languages and self-motivated learning through individualized education. The school sees its location in China as a positive benefit and seeks to have its students take full advantage of the unique opportunities afforded by this location. Administrators are actively involved in Chinese educational reform, with NSCL serving as a model school for the Haidian Reform Initiative.

Organization: The school year extends from the beginning of September through mid-June. The school is governed by a Board of Trustees composed of both American and Chinese educators, private sponsors, and parents. The administration has a Head of School, a Director of Education, a Director of Administration, and a Director of Outreach Programs.

Curriculum: The curriculum has been designed with the ongoing assistance of educators from Sidwell Friends School of Washington, D.C., and the bilingual program follows

that of the Chinese American School of San Francisco. The best of both American and Chinese teaching is brought to the instruction of mathematics, science, social studies, and language arts. Western and Asian art, music, physical education, computer training, and a program of community service complete the curriculum. Wherever possible and appropriate, an active learning/integrated learning approach is used.

Accreditation: The NCSL is applying for accreditation from the Western Association of Schools and Colleges.

Faculty: There are team teachers at every level.

Enrollment: During its first year, the school enrolled 25 students on three levels: primary, elementary, and middle school. The school in its second year enrolled approximately 60 pupils.

Facilities: The school operates in a new educational facility on 30,000 square meters, which includes the site for a track and a Chinese garden. It will share facilities with a Chinese elementary school until enrollment expands to fill the entire building. The school's 12 classrooms include a library and an assembly room. The track is soon to be completed. A science and library building and gymnasium are to be built in the next 3 years.

Finance: In the 1994-95 school year, about 95 percent of the school's income came from regular day school tuition. Annual tuition rates for 1995-96 are Pre-K: \$7,000; Primary I: \$8,000; Primary II: grades 3 and 4: \$10,000; grades 5 to 9: \$11,000.

Preschool Options: There are a variety of preschool options in Beijing, with two Montessori schools, several private preschool programs, and the American Community Preschool (ACP).

Adult Educational Opportunities

A number of interested students in Beijing have arranged to study the Chinese language or Chinese traditional art and music at Chinese institutions and universities. Occasionally American universities offer U.S.-led extension courses in Beijing. These latter opportunities vary with the composition of the American community at post at a given moment.

Sports

China presents limited participant sports and recreational opportunities.

Cycling, hiking, tennis, golf, and ice skating are enjoyed by some. Several private tennis clubs, in addition to the various embassy courts, have both indoor and outdoor (lighted) tennis courts with varying hourly fees. The International Club holds tournaments each year for members of the foreign community. Though local tennis equipment is generally adequate, tennis enthusiasts should bring a supply of balls.

Biking is a very popular mode of transportation in Beijing. Individuals find cycling a convenient way to exercise and sight-see at the same time. Chinese bicycles are heavy and have no gears, but are sturdily made and comfortable, and some people use them to commute to work. Recent to the marketplace are an increasing variety of made-for-export mountain bicycles and accessories, available at about 50 percent of the cost in the U.S. Since Beijing is flat, gears are not really necessary, but bicycles with gears have their advantages, especially for bike trips outside the city or on windy days. Imported bikes are subject to theft, so a good locking system is recommended.

Sports facilities include several golf courses in Beijing, and the cost is relatively affordable. There are roughly 6 weeks of ice skating in Beijing every year, with outdoor, unimproved rinks at the Summer Palace and Beihai Park.

Spectator sports in Beijing include basketball, volleyball, ping-pong, badminton, soccer, gymnastics, and hockey, but tickets are very hard to get.

Health clubs are now available in many of the better hotels, including such facilities as indoor swimming pools, tennis and squash courts, a range of aerobics equipment and weight machines, and sauna, steambath, and locker facilities. Membership fees vary, as does the equipment or facilities in each club, but there is generally something for everyone, from the hardcore to the occasional club goer, in terms of facility and budget.

Touring and Outdoor Activities

Sight-seeing in and around Beijing and the rest of the PRC is a favorite activity.

Private groups also offer sight-seeing, but arrangements are often difficult. For a variety of reasons—the language barrier, frequent delays, logistical difficulties—travel in China is a real adventure, more fun to accomplish in groups than on one's own. Fortunately, there are many fascinating sights in the PRC, which make the challenge of travel worth the effort, but travel is rarely relaxing or restful, and transportation and lodging costs are rising rapidly as well.

Entertainment

There are lots of interesting activities going on all over Beijing—symphonies, operas, acrobatics, theater groups, and sporting events. However, hearing about events in time to get tickets is often difficult. Events are often not publicized ahead of time, or ticket distribution is unknown.

There is a Chinese film series (with English subtitles) with weekly showings at a nearby hotel and a foreign film program at a downtown hotel, although the foreign films are not all that current.

Hong Kong

Hong Kong is Cantonese for “fragrant harbor,” a name inspired either by the incense factories that once dotted Hong Kong Island or by the profusion of scented pink Bauhinias, the national flower.

The island is a dazzling melee of human life and enterprise. Its animated nature seems all the more perplexing when you add in the mix of nationalities, languages, customs, and fashions. People came to this city for many reasons—to find a better life or to find freedom from restrictive governments—and enough have stayed to turn a once-quiet trading village into one of the world's busiest international business centers.

From the harbor the city's latest architectural wonders stand against a green-mountain backdrop, while on the other side of the island beaches and quieter villages slow the pace considerably. Hong Kong has the best shopping in the world. Although the thought of crowded streets and mind-boggling choices can be daunting, no place makes big spending easier than this center of international commerce.

It was in the late 1970s that Hong Kong began to focus on the issue of its future. The colony's officials and business people realized they could no longer put off the question of what would happen to the New Territories, which makes up more than 90 percent of Hong Kong's land area. The New Territories were leased to Britain by China in 1898, for 99 years. That lease was set to expire on July 1, 1997.

After months of negotiations, both sides agreed in 1984 to Beijing's proposal for a Joint Declaration making Hong Kong a Special Administrative Region, with its own distinct laws, freedoms, and way of life. On July 1, 1997, Hong Kong reverted to Chinese sovereignty amid intense interest from the international community.

So far, the transition has been smooth. Hong Kong has grown steadily more prosperous. While an estimated 387,000 citizens had emigrated over the past few years, many have been coming home as their confidence returns.

Landscape

The landscape is one of contrast, marked by a mix of old and new types of architectural design. It is quite apparent from the old churches and government buildings that are a few stories high to the high-rise skyscraper office and apartment buildings that cover the landscape from the harbor's edge and climb dramatically to the Peak.

The developed areas consist of high-density, high-rise office buildings and apartments. Hong Kong has experienced a very ambitious building program during the past decade, and more is planned for the future. Incorporated into this scheme are plans to ensure that park areas remain part of the landscape. This setting complements the steep green hills that surround the city and provide a pleasantly spectacular visual background.

Utilities

Electrical current is 220v, 50 cycle, AC. Power is dependable with little voltage fluctuation. Transformers are required for 110v appliances. Employees may purchase additional transformers locally. Synchronous 60-cycle appliances, such as electric clocks, record players, and tape recorders, will not function properly on 50 cycles without modification. American and Continental European plugs will not fit into the three-prong U.K. standard sockets used in Hong Kong,* but adapter plugs are available. Hong Kong has a wide variety of 220v appliances available at prices comparable to those in the U.S. Color TVs, video players, stereo components, and electric clocks with built-in converters for either 50 or 60 cycles and voltage adjusters from 120v to 220v are also readily available.

Food

Food markets and supermarkets in Hong Kong provide a wide variety of fresh, processed, canned, and frozen foods catering to both the Western and Asian diet. It is possible to find almost everything here that one buys in the U.S. However, certain items will carry a premium price tag, and what is on the shelf today may not be there tomorrow. Food shopping in Hong Kong is perhaps best and most economically accomplished in the European fashion rather than American, i.e. going to different shops and markets for different foods. However, the larger outlets of the two major supermarket chains (Wellcome and Park N' Shop) are stocked to European tastes and carry standard products. American products are beginning to be seen on the shelves with more regularity. Credit cards are accepted at Wellcome and Park N' Shop. Most meats in the supermarket are imported from the U.S., Australia, and New Zealand. Phone/fax orders and delivery are available. Local markets sell fresh fruits, vegetables, meats, poultry, fish, and seafood at prices somewhat less than in supermarkets. Seasonal fruits and vegetables are imported from both the northern and south-

ern hemispheres and are available most of the year in Hong Kong. Specialty shops are popular in Hong Kong, providing an ever increasing selection of imported gourmet food and beverage items from around the world. Condiments and spices for Asian cooking are available in supermarkets and gourmet shops, as well as from vendors in the local markets. Coffees and teas from all over the world are sold here. Bakeries produce a variety of pastries, breads, and rolls. There are good quality butcher shops in addition to supermarket meat counters. Local dairies provide pasteurized milk and dairy products including yogurt, sour cream, and cottage cheese. Butter and cheeses are imported. Even health food stores have found a niche in this cosmopolitan city.

Clothing

General: With its increasing prosperity, Hong Kong has become very fashion conscious in recent years. In central Hong Kong and the shopping arcades of Kowloon, more and more fashion boutiques, including the finest of European import houses, cater to the affluent tastes of this economically flourishing territory. The sophistication of conser-

vative big-city business attire predominates, and Hong Kong "dresses up" not only for the office but also for teas, lunches, and dinners. On the other hand, designer label "casual wear" is also very common all over Hong Kong; and jeans and sneakers identify the tourist and resident alike, whether sight-seeing or bargain shopping.

A varied wardrobe, similar to what you would wear in Washington, is appropriate for Hong Kong. Definite seasons call for summer lightweight garments most of the year with mediumweight or lightweight wool for the Hong Kong winter. The winter although short, December through March, can be cold with temperatures averaging 15°C (59°F).

Three other general comments:

1) during the humid months, cotton is highly preferable to synthetic fabric for clothing as well as undergarments; 2) getting around Hong Kong requires considerable walking, uphill as well as down, therefore special attention should be given to comfortable footwear for all activities; and 3) if you wear an unusual or especially large size, you may have difficulty with some items such as shoes or underwear.

Men: Men need lightweight suits from April through November and lightweight wool suits for the cooler months.

American and British summer and winter suit materials are stocked locally, and getting a suit made to order is still one of the best deals in Hong Kong. Prices will vary depending on your tailor and the quality of material being used. Custom-made shirts are also quite popular and also vary in price according to design and material. Shoes can also be custom made to suit your taste. Most of the popular brands of shoes used for leisure activities are available at reasonable prices. You can also find many outlets that stock popular sweaters and ties. Hats are seldom worn for formal occasions, but you will see all the familiar logo

Street scene in Hong Kong.

David Johnson. Reproduced by permission.

caps and styles as you walk around Kowloon and Hong Kong.

Women: Women should bring a supply of summer cottons and other lightweight dresses. Women who plan to work in Hong Kong should bring suits and other professionally appropriate outfits such as one would wear in Washington. Although dry cleaning services are readily available, the costs are similar to the U.S., so many prefer to use wash and wear apparel.

Materials such as cotton and varieties of silks and woollens are stocked for tailor-made dresses, suits, and coats. Some fabrics are inexpensive, but tailoring of women's clothing is not and the finished product often leaves much to be desired.

An increasing number of shops carry imported American and European ready-to-wear sweaters, dresses, suits and coats but prices are higher than in the U.S. unless found at bargain factory outlets or markets. Locally manufactured clothing is also available but is very limited in sizes above U.S. size 12. Evening wear, both informal and formal, is more difficult to find and is more expensive in Hong Kong than in the U.S.

Lingerie, including British and U.S. brands, is available; however, it is

more expensive than in the U.S. Cotton undergarments, which are preferred due to heat and humidity, are not easily found. The supply of U.S. or British hosiery items is very limited and very expensive; tall or queen-sized hosiery is virtually unavailable.

Lightweight coats or lined raincoats are often worn during the cooler months; unlined raincoats are desirable for the warmer, rainy season. If you have a fur jacket or stole, you will probably have an opportunity to wear it in the winter.

Some ready-made American and European shoes are available but expensive and usually come in wider widths. Narrow shoes and sizes above 7-1/2 are difficult to find. Once here, you may enjoy having shoes made by Hong Kong shoemakers whom many consider to be good. Because of the need for comfortable walking shoes and the level of fashion seen in the main shopping/business district, "smart-casual" (a British term) shoes are recommended.

Sports clothes, including bathing suits, are sold here but generally in small sizes and with price tags higher than in the U.S. Locally made, inexpensive knits are also available in the street markets. Women do not generally wear shorts

on the streets in Hong Kong, but slacks and pantsuits are often worn. White is still the only color acceptable on most tennis courts.

Children: Children dress just as in the U.S. Parents can enjoy the fact that heavy winter wear is not needed and blue jeans are standard streetwear. Hong Kong street markets are full of clothing for toddlers and young children. Many children's shops have attractive clothes but prices are high.

With the exception of sports shoes, children's shoes cost more than in the U.S. and the choice is limited. It is hard to find shoes of correct size, proper fit, and desired styles. Orthopedic shoes are not readily available.

Supplies and Services

As with food and clothing, almost anything you want is available in Hong Kong; however, unless it is made locally, it may be hard to find, and, it will most probably be more expensive than in the U.S. American, British, French, and German toiletries, cosmetics, and hygiene products are available in Hong Kong, but are expensive. You may wish to bring an ample supply of cosmetics. French perfumes, however, can be purchased at a reasonable price as compared to prices in the U.S. Pharmacies in Hong Kong are good; however, bring any needed prescriptions with you. Most household products are available in several brands.

Hong Kong is renowned for its toys, but you have to be careful that what you purchase complies with U.S. safety standards. Toys "R" Us has two outlets in Hong Kong and Kowloon and carries approved brands that comply with U.S. standards, although the prices are higher than you will find in the U.S. In shopping for toys locally, you must remember that there is a great difference in quality between export quality and local quality. Both kinds are available on the local market.

There are many excellent bookstores in Hong Kong but be pre-

pared for prices considerably higher than in the U.S. Most people mail order their reading material. It should be noted, however, that paperback editions of best sellers are often out in Hong Kong long before paperback. International magazines and newspapers are readily available.

Men's and women's hairdressers are located throughout Hong Kong and have generally high standards at reasonable to expensive prices. Many use the facilities located in major hotels located near the at which appointments can be made. Hong Kong has reliable dry cleaners, many using American methods and materials. The price is similar to that charged in the U.S. and several pick up and deliver. Good laundries are also available. Shoe repair services operate on the street, in stairways, or in alleys. The service is fair and reasonably priced. Car maintenance and repairs are moderately priced for locally-sold models. Parts and service for American cars are more difficult to obtain.

Domestic Help

Domestic help is available in Hong Kong but has become quite costly. Full-time Chinese cooks are almost a thing of the past and very expensive. Any live-in Chinese help is a rarity and extremely costly. Although part-time help is available, it is also expensive and difficult to arrange. Most families looking for domestic help choose to hire Filipina domestics who live in and are reasonably priced. By law, minimum wage for overseas domestic helpers (Filipinas, Thais, etc.) for 1998 was set at HK \$3,860 per month. Additionally, the employer is required to provide either all food or a food allowance (usually about HK \$400/Mo.), housing, uniforms, medical insurance, and one round trip to the home country every 2 years for home leave. By law, these domestics have eleven local holidays, 1 week of annual leave after 1 full year of successful performance, and home leave (2 weeks) every 2 years. All domestic helpers should have a medical examination including chest x-ray, blood serological,

and stool examination. All costs are borne by the employer.

Religious Activities

Religious services are held in English by the following denominations: Assemblies of God, Bahai Faith, Baptist, Christian Missionary Alliance, Christian Science, Church of Christ, Church of England (Episcopal-Anglican), Iglesia de Cristo, Jewish (Orthodox and Reform congregations), Latter-day Saints, Lutheran, Methodist, Presbyterian/ Congregational, Quakers, Roman Catholic, Seventh-day Adventist, United Pentecostal, and others. Various Buddhist sects also have English speaking congregations in Hong Kong.

Education

Hong Kong International School. The vast majority of American school-age children attend the Hong Kong International School (HKIS). It is recognized as one of the leading international schools and provides a U.S.-style education and U.S. curriculum. HKIS is sponsored by and operated under the auspices of the Lutheran Church-Missouri Synod (USA). It is registered with the Office of Education of the Hong Kong Government and is associated with other American overseas schools in the Far East. Its accredited status by the Western Association of Schools and Colleges of the U.S. reflects its conformity with American educational standards. Half the staff is composed of trained teachers recruited in the U.S. through the Lutheran school system and appointed for a minimum of 3 years. The remainder of the staff, also professionally trained and experienced, consists of members of the American and European community in Hong Kong plus a few Chinese instructors.

HKIS serves a religiously diverse community. Although religious instruction is mandatory, course offerings may be selected that encompass Christian or Bible subjects as well as a variety of non-Christian topics such as existentialism and oriental religions. Chapel is voluntary for students in grades 7-

12. For kindergarten through grade 6 there are weekly chapel services and 20-minute religious instruction classes.

Of its approximately 2,000 students, slightly more than half are U.S. citizens, while fewer than 100 are dependents of U. S. Government employees. Instruction is in English with emphasis on academic or college preparatory courses. Some advanced placement courses are offered. More than 90% of graduates enroll in American colleges and universities. In the recent years, HKIS has made great strides to include programs for special needs children. However, there is currently no school in Hong Kong, including HKIS, which is staffed or equipped to handle students with severe learning, physical, or emotional disabilities. Parents with special educational needs for their children should consult directly with the school to see how those needs can best be met.

The elementary school (K-5) in Repulse Bay is an air-conditioned "open space" facility consisting of six clusters of over 4,000 sq.ft. each. There is also a gymnasium, library, and swimming pool. Educational approaches range from self-contained classrooms to independent learning and team-teaching situations. The middle school (grades 6-8) and high school (grades 9-12) are located together at Tai Tam, several miles from Repulse Bay. The multi-million dollar facility features an open air campus similar to schools found in many parts of the U.S. with classrooms, separate science laboratories, computer lab, music rooms, a cafeteria, gymnasium, swimming pool, audio visual center, bookstore, library, and guidance offices.

Sixth grade through High School students participate annually in an "Interim Program" which consists of a week of cultural explorations in Hong Kong or overseas. These programs are a prerequisite for graduation. The school offers approximately 37 interim trips each year with about 20 students enrolled in each. The cost of these

View of Shanghai, China

Courtesy of Cliff Brackett

trips must be borne by the parents. For example, the least expensive trip is US\$350 (for 6th grade), and the most expensive is a High School trip for US\$1,600. Parents/children are allowed to indicate their preferences but sometimes are not placed in their top choice.

A full program of American-type extracurricular activities is offered, including a broad selection of clubs, drama, choral and band groups, publications, scouts, and sports: badminton, baseball, basketball, bowling, cross-country, field hockey, gymnastics, rugby, soccer, squash, swimming, tennis, track and field, volleyball, and water polo. Inter-scholastic competition includes meets with other schools in Hong Kong as well as the International School Bangkok (ISB) and the Taipei American School (TAS). HKIS also hosts an invitational basketball tournament each December that attracts schools from other Asian cities. Some emphasis is placed on inter-cultural programs. Mandarin is taught in elementary school and is offered as an elective in middle school and high school. French and Spanish are offered in grades 6-12.

The school year normally runs from the third or fourth week in August until mid-June.

Since the school is normally at capacity enrollment, it is vital that application forms be requested and forwarded well in advance. Application forms can be requested, in writing, from the Admissions Office, Hong Kong International School, 6 South Bay Close, Repulse Bay, Hong Kong. It is particularly important that parents discuss well in advance any instances in which a student has poor academic records or special needs.

English Schools Foundation (ESF) (British Curriculum). This is an alternative to HKIS. Before an application can be submitted, the student must be a resident of Hong Kong. Admittance and decision as to grade level placement are based on age, the results of an entrance examination in English and mathematics, an interview and availability of space. A medical examination is also required. The city is zoned and children attend the ESF schools according to where they live. ESF schools previously used by Consulate General families and located in Mid-Levels where many employees are housed include Glenealy Junior School and Kennedy Road Junior School for children 5-10 and Island School for children 11-17.

Other specialized school options include the Chinese International

School and Singapore International School, both providing bicultural English-Mandarin programs; the French International School which has both French and English streams; the German-Swiss School which has both German and English streams; the International Christian School which is based on Taiwan's American-based Morrison Academy; and the American International School, a Catholic Church sponsored school in Kowloon. Kellett School, the only private British Primary school in Hong Kong, is another alternative considered by American families. Good preschools are available on Hong Kong Island but are quite costly.

Special Educational Opportunities

Adult education courses conducted in English are available at both Hong Kong University and the Chinese University of Hong Kong. The courses cover literature, history, journalism, philosophy, architecture, pottery making and many other subjects. Entrance as a full-time student either to the University of Hong Kong or to the Chinese University is very difficult. The entrance examinations are based on a British educational background, and the universities generally only admit students who are permanent residents of Hong Kong, except as non-credit auditors. Elsewhere, there are excellent opportunities to study many phases of Chinese culture, especially Cantonese. Instruction in modern dance, ballet, voice, instrumental music, Western and Asian painting, and sports are available. The YWCA English

Speaking Members Department, Island School, Towngas, Electric Co., and the American Women's Association also offer a good variety of adult education courses. Language classes are taught at the Alliance Francaise, Goethe Institute, and the Italian Cultural Society. The YMCA and YWCA offer adult language courses in Cantonese and Mandarin.

Recreation and Social Life

Recreation and social activities are plentiful in Hong Kong but one needs to be willing to seek out opportunities, especially for sports, since public venues are extremely crowded and private facilities (clubs) are beyond the financial means of most Consulate General personnel. In addition, waiting lists for membership in most clubs exceed the average tour in Hong Kong. On the other hand, facilities for entertainment and cultural activities are quite extensive and affordable.

Sports

Most sports facilities such as golf, tennis, squash, riding and swimming pools are available through private clubs only. The Consulate General has a tennis court located on the grounds of the Consul General's compound on Barker Road and a swimming pool located at the Shouson Hill compound which are available to employees and families.

The recent opening of two public golf courses in Hong Kong has made it affordable for non-club members to hit the links. Also, the Macau Golf and Country Club (one hour away by hydrofoil) features a challenging and fun course; and within a two hour bus or boat ride from Hong Kong, there are six courses in China that offer affordable golfing packages.

Sailing and yachting are popular and possible year round. Joining a sailboarding, kayak or rowing club often provides the opportunity for sport without the expense of a recreational club. There are some very nice beaches in the territory. Beaches on Hong Kong Island, espe-

cially on the South Side of the island, tend to be quite crowded. There is also a concern about pollution, and beach-goers need to pay attention to environmental reports in the media on pollution ratings. The more remote beaches in the New Territories and on Outlying Islands are more appealing; these beaches are reached by ferries, private "junks," and/or on foot.

If you are a runner or tri-athlete, there are numerous associations to join as well as several Hash House Harriers groups that meet weekly. There are many events sponsored by such groups throughout the year for competitors. One of the more popular means of recreation and exercise for both Chinese and expatriates is walking and hiking. The opportunities are endless and the territory has a multitude of very well-marked and maintained paths and trails that meet the needs of the leisurely stroller, the family on an outing, the casual hiker, and the ardent mountain trekker.

Tenpin bowling has been popular among Consulate General personnel.

Some Americans participate in the activities of the Hong Kong Softball Association which includes men's and women's softball teams. Because of the summer heat the softball teams are active only from September through April, and games are played at night. Some Americans entered teams in the Dragon Boat Festival held annually in June and for the 100 km Trail-walker event held in November. Popular spectator sports include soccer, cricket, rugby, softball, tennis, basketball, and horse racing (October-May).

Touring and Outdoor Activities

The Outlying Islands of Cheung Chau, Ping Chau, Lamina, and Lantau, which are accessible by ferry, offer hiking and browsing opportunities for day trips. Overnight "vacation rentals" are also available at reasonable prices. Macau is an interesting place to spend a day or

weekend. This 400-year-old Portuguese colony (until December 1999), 40 miles west of Hong Kong, is a place of old and gentle Mediterranean charm on the one hand, and a city on the move on the other; bright lights, large construction sites and new high rises are rapidly changing its skyline. It is the oldest European settlement in Asia. Travel by high-speed ferry takes just about an hour. Cuisine, a mixture of Portuguese, English, and Chinese styles, is tasty and interesting. Antique shopping is another good excuse to make the trip to Macau. Hong Kong is a crossroads to most destinations in Asia. Vacations in Southeast Asia, Japan, and the Philippines are popular. Many use Hong Kong as a door to tourist travel in China. Travel agents are plentiful and are eager to assist you with package deals and self-determined itineraries.

Hong Kong itself has many interesting sights for tourists and photographers. Tourist agencies offer excellent tours. Among the more interesting excursions are the water tours of the island, tours of Kowloon, the New Territories, Hong Kong Island, the fishing village of junks and sampans at Aberdeen, and the ride to the top of the Peak by funicular cable car (Peak Tram). There are also heritage tours and opportunities to visit local housing areas and schools. Ocean Park is one of Hong Kong's most popular recreational attractions. Facilities include the world's largest aquarium, an ocean theater, a zoo, flower and water gardens, and oriental and Western restaurants. Middle Kingdom, a cultural village, portrays customs, costumes, architecture and entertainment from 13 dynasties of China. A visit to Ocean Park makes a pleasurable and interesting outing for the entire family. Water World, which is located adjacent to Ocean Park, has water slides and pools galore. A visit to Water World is a great way to escape the heat of summer.

Entertainment

Eating is the most popular form of entertainment in Hong Kong. About

Junks in Hong Kong harbor

Courtesy of Ellen Bowden

1.5 million people eat in restaurants daily, the highest per capita rate in the world. The range of restaurants runs from world class to street vendors. All types of Western restaurants are available, and the choice of Asian cuisines is practically endless.

A variety of performing arts programs are presented throughout the year, including symphony concerts, recitals, ballet and dance performances, drama, and Western opera. The Hong Kong Cultural Center, the Academy for the Performing Arts, the Hong Kong Arts Center and City Hall are the centers of Hong Kong's cultural life. The Hong Kong Cultural Center includes a 2,085-seat concert hall, a 1,724-seat grand theater, and a flexible 300- to 500-seat studio theater for experimental drama. It is the home of the Hong Kong Philharmonic Orchestra. The Cultural Center complex also houses the Hong Kong Museum of Art, with its collections of Chinese arts and antiquities, ethnographic materials and archaeological finds, and the Hong Kong Space Museum. The Hong Kong Academy for the Performing Arts (APA) is a professional degree granting institution providing training, education, and research in the performing arts and related fields. Students from the APA

Schools of Dance and Drama give public performances throughout the year in the APA's theater. The Hong Kong Arts Center features a multi-purpose theater, a recital hall for music performances and films, and art galleries. It is a multidisciplinary center, featuring contemporary work in the performing, visual, and cinematic arts. The Center also offers classes in painting, ceramics, and other art forms for children and adults. The Hong Kong Philharmonic Orchestra is the nucleus of Hong Kong's musical life. It has an 11-month season from April through February and season subscriptions are available. Guest artists of world renown appear regularly with the orchestra.

Other performing arts groups that perform at Hong Kong's cultural venues include the Hong Kong Repertory Theater, the Hong Kong Chinese Orchestra, the Hong Kong Dance Company, City Contemporary Dance Company, the Hong Kong Ballet, and the Chung Ying Theater Company. The American Community Theater (ACT) is Hong Kong's most active amateur theatrical group and produces several plays a year. It has an international membership and stages American theatrical productions, including musicals. The most active and best known choral groups are the Bach

Choir, the Hong Kong Singers, and the St. Cecilia Singers. These non-professional groups present one or two cantatas, operettas, or musicals a year. Free lunch time concerts and recitals are held each Wednesday in St. John's Cathedral (Episcopal), which is located one-half block from the Consulate General. The program includes both sacred and secular music.

Social Activities

All travelers have the opportunity for a very active social life as they enjoy the wonderful restaurants of Hong Kong, theaters, school activities, wine tastings, food fairs, night spots.

The American Women's Association (AWA) has about 1,600 regular and associate members; by charter the membership is at least 51% American regular members with international members as associates. The Association has a number of popular monthly activities and several special membership luncheons/meetings/programs during the year. It supports many community projects and offers a wide variety of both social and charitable activities. Joining AWA is a good way to meet Americans outside the Consulate General and also to get to know women of other nationalities. The English Speaking Members' Department of the YWCA located near the Consulate General offers their members a vast number of day and evening activities including lectures on Asian Affairs, seminars on family issues, bridge, tennis, exercise, cooking and language classes, computer and other skill development sessions, and a variety of arts and crafts offerings. Their "At Home in Hong Kong" program is highly recommended for newcomers to the territory. The Rotary Clubs, American Chamber of Commerce, Lions Clubs, Toastmaster and Toastmistress Clubs, the American University Club, League of Women Voters, Hong Kong, (an integral part of the League of Women Voters of the U.S.), and many other groups where individuals can meet local residents and expatriates are available. The Brownies, Cub Scouts,

Girl Guides, and Little League baseball are active in Hong Kong. A public children's library is in City Hall. HKIS sponsors summer sports and skills programs. Various churches also have youth activities. The Welfare Handicrafts, Mother's Choice, the Red Cross, YMCA, and many other welfare agencies—some branches of U.S. organizations—offer a variety of opportunities for both men and women for volunteer service. Both civic and professional associations are numerous.

Geography and Climate

Hong Kong, a Special Administrative Region (SAR) of China, covers an area of 404 square miles, about six times the size of Washington, DC. Hong Kong is a bustling, vibrant, very Chinese, and very international city. This colorful mix of East and West, old and new, is alive with an overwhelmingly entrepreneurial spirit. To the 6.8 million residents, the city represents the dream of prosperity and the opportunity for personal betterment. One has to admire the incomparable tenacity of the Hong Kong people—their strength of purpose and devotion to work and family are striking. The SAR consists of Hong Kong Island, the Kowloon Peninsula, the New Territories, and various surrounding islands.

Hong Kong was a British colony from 1841 until June 30, 1997. On that date, which coincided with the expiration of the 99-year British lease on the New Territories, it became a Special Administrative Region of the People's Republic of China. Under a unique “one country, two systems” formula agreed to by Britain and China in the Joint Declaration of 1984, Beijing has granted Hong Kong people the right to govern Hong Kong with a high degree of autonomy in all areas except defense and foreign affairs. In practice, this means that life in Hong Kong after the transition to Chinese sovereignty has changed very little.

From the small fishing villages of 150 years ago, Hong Kong has grown into one of the most impor-

tant trading, industrial, and financial centers in Asia. Official representatives of most major countries reside in the territory, along with a host of international bankers, lawyers, and business people who participate in Hong Kong's booming trade and industry. Hong Kong Island, the site of most of the territory's governmental, commercial, and financial activities, is about 32 square miles in area. The island's population and business centers are located across the harbor from Kowloon and extend from Pok Fu Lam to North Point, encompassing the Central, Mid-Levels, Wan Chai, and Causeway Bay areas of Hong Kong. The Consulate General office and official housing for American staff are located on the island. The seaward, or south side of Hong Kong Island, is made up of a rugged shoreline with high cliffs and sheltered bays. The interior is rough terrain with steep hills and small valleys. The highest area, known as the Peak, is 555 meters (1,830 ft.) above sea level and has a breathtaking view of the scenic harbor and Kowloon on one side and the offshore islands and South China Sea on the other. The Kowloon Peninsula is directly across the harbor from Hong Kong Island. It is separated from the New Territories by groups of hills, the highest of which rises to more than 3,000 feet. The Kowloon area, with its major subdivisions of Mong Kok and Tsim Sha Tsui, is the leading industrial area of Hong Kong, as well as a major residential area and tourist center with many hotels and shops. The major railway station, Hunt Hom, serving Guangzhou, is also located in this densely populated area. The New Territories comprises an area of 355 square miles between Kowloon and the Chinese border and also includes some 235 small offshore islands. This area accounts for most of the territory's agricultural activity and a growing portion of its industrial and residential sectors. The topography is mostly steep hills and marshes, but many places are used for small farms. The only major agriculture on the offshore islands is on Lantau Island, the largest. The

remaining islands are small, and, if inhabited, are primarily fishing bases. The rustic character of the New Territories has been transformed in recent years with the construction of major satellite towns such as Sha Tin and Tuen Mun, where large numbers of Hong Kong residents live.

Hong Kong's climate is governed by the monsoons. Although the territory lies within the Tropics, it enjoys a variety of weather because of these seasonal winds. The winter monsoon blows from the north or northeast from September to mid-March, and the summer wind blows from the south or southwest from mid-March to September. During the summer monsoon, the weather is hot and humid; during the winter monsoon it is cool. Average temperatures range from 58°F in February (with lows in the 40s) to 82°F in July (with highs in the 90s). The mean relative humidity ranges from a low of 67% in November to 84% in May; many days the humidity approaches 100%, accompanied by heavy clouds. Late fall is the most pleasant time of year, generally with dry and sunny weather and high temperatures of 70° to 75°F. The average annual rainfall is 95 inches.

Population

Hong Kong's population at the end of 1998 was approximately 6.8 million, with the overwhelming majority being ethnic Chinese. Most were born in Hong Kong, with others coming from China or other countries in Asia. The rest of the expatriate community includes mainly government officials and business people representing many nationalities. About 50,000 U.S. citizens (including 11,500 dual nationals) are resident in Hong Kong, representing a major foreign presence in the territory. The other major expatriate groups are from Canada, the Philippines, Thailand, and the United Kingdom. The official languages of Hong Kong are Chinese and English. Cantonese is the most common Chinese dialect spoken, and English is widely used in government and business. Most people

follow traditional Chinese beliefs. The two main religions are Buddhism and Taoism. About 600,000 or 10% of the population are Christian. Hong Kong has about 50,000 followers of Islam, most of whom are Hong Kong Chinese. The Hindu community, which has been part of the territory since its earliest days, has increased to 12,000. Hong Kong's Jewish community numbers about 1,000.

Public Institutions

Hong Kong has retained almost the entire administrative structure put in place by the British. The Hong Kong Government is staffed by an effective civil service numbering more than 184,000 people.

Some 30 executive bureaus organized along functional lines constitute this administrative framework. The executive-led government is headed by the Chief Executive (who replaced the British Governor); he was selected by the Hong Kong people in late 1996 and serves for a five-year term. He is advised by the Executive Council, prominent local residents whom he appoints. The 60-member Legislative Council, whose powers are limited, consists of a mixture of directly and indirectly elected members. Beneath these bodies, the Urban Council is responsible for various local matters like recreation and sanitation for Hong Kong Island and Kowloon, while the Regional Council performs the same function for the New Territories. At the lowest level, 19 District Boards cover the entire territory, serving as grassroots advisory bodies for monitoring public opinion regarding government policies.

Environment

Due to its small size and location in the Pearl River Delta, Hong Kong's environment is strongly influenced by the rest of China. A closely-packed city, Hong Kong suffers from smog on a regular basis. Air quality is continuously monitored by the government, and a report on the air quality is announced daily. The range is usually 60 to 80 or "moderate" which means fair. An index of

over 100 (which occurred in the summer of 1997) is unhealthy. Air pollution from diesel vehicle emissions remains a priority concern. In November 1997, the Hong Kong government launched a trial of liquefied petroleum gas vehicles to address this problem, but it is unlikely that there will be a major shift away from diesel vehicles in the next 3-5 years. Quality of inshore water, particularly around the beaches, is also deteriorating. This will not improve until the major government infrastructure program to treat all raw sewage and waste before discharge into the ocean is completed around 2004.

Fresh water, mostly piped from China, is treated at several water treatment plants located in Hong Kong before being used. The quality of water meets current World Health Organization requirements. However, some people choose to use distilled water or use filters to remove sediment from water sources at home.

Arts, Science, and Education

Hong Kong has a rich cultural life that embraces the arts and traditions of both East and West. A variety of performing arts is presented, including symphony concerts, recitals, ballet and dance performances, drama, Western opera, and Chinese traditional stage arts. There are two professional orchestras, three full-time dance companies, a handful of professional drama groups, and scores of amateur orchestras, choirs, dance groups and drama clubs, plus overseas artists and groups who visit the territory throughout the year. Long-established performing companies like the Hong Kong Philharmonic Orchestra, the Hong Kong Chinese Orchestra, the Hong Kong Repertory Theater, and Hong Kong Ballet offer annual subscriptions for their performances. The primary venues for arts events are the Hong Kong Cultural Center, with a 2,085-seat concert hall and a 1,724-seat grand theater, the Hong Kong Academy for the Performing Arts, the Hong Kong Arts Center, City Hall, and the three major town halls in ShaTin, Tsuen Wan and Tuen Mun.

The annual Hong Kong Arts Festival in February/March brings a wide array of well-known local and overseas groups and is the highlight of the cultural year. The Festival of Asian Arts is a biennial event featuring performing arts from Asian and Oceanic cultures. The International Arts Carnival in the summer aims to introduce children and young people to the performing arts. The annual Hong Kong International Film Festival is one of the world's major noncompetitive film festivals. The Fringe Festival in January/ February is an open platform for the arts. Hong Kong has several museums and small galleries. The Hong Kong Museum of Art houses a collection of Chinese bronzes, ceramics, and paintings and stages major international loan exhibitions of Chinese and Western art. Its branch museum, the Flagstaff House Museum of Tea Ware, is devoted exclusively to Chinese tea ware. Both the Chinese University of Hong Kong and the University of Hong Kong have museums exhibiting Chinese art and cultural artifacts. The Tsui Museum of Art displays a privately-owned collection of Chinese fine art. Galleries at the Hong Kong Arts Center emphasize contemporary and Western arts. Small commercial galleries sell works by Chinese and overseas artists.

The Hong Kong Museum of History focuses on local and Chinese history. The Hong Kong Space Museum has visitor participatory exhibits and a planetarium to introduce visitors to astronomy and space science. Exhibits at the Hong Kong Science Museum cover basic science principles, mathematics, earth science, life science, the applications of technology, and high-tech areas such as computers and robotics.

Education is highly valued by the Government and people of Hong Kong; no other element takes a larger share of the government budget. Full-time education is compulsory between the ages of 6 and 15. Instruction is mainly in Chinese in primary school and in Chinese and English in secondary school.

Ten degree-granting institutions are supported by the Hong Kong government's University Grants Committee. They all follow the British three-year system. The University of Hong Kong, founded in 1911, uses English as the language of instruction. The Chinese University of Hong Kong, a federated university composed of four colleges, uses both English and Chinese in teaching. Both universities offer academic as well as professional courses and include graduate and extension programs. The Hong Kong University of Science and Technology, opened in 1991, offers first and advanced degrees primarily in science, engineering and business management. The Hong Kong Polytechnic University and the City University of Hong Kong offer degree and diploma courses combined with work and vocational training programs. The Hong Kong Baptist University and Lingnan College Hong Kong offer degree programs, primarily in social sciences, business, and liberal arts. The Hong Kong Institute of Education was formed in 1994 by merging four colleges of education. It provides pre-service teacher education for primary and secondary school teachers. It enrolled its first degree program students in 1998. The Hong Kong Academy for Performing Arts offers comprehensive multidisciplinary professional training for performing and related technical and media arts, leading to diploma and first degree. The Open Learning Institute of Hong Kong provides the adult population with opportunities for further education in non-degree and degree programs.

Commerce and Industry

Hong Kong is a leading international manufacturing, trading, and financial center, as well as a strategically located regional entrepôt, especially for products originating from or destined for the People's Republic of China. Hong Kong maintains a free and open trading regime, and the government pursues a policy of minimum interference in the economy. These factors, together with Hong Kong's skilled and industrious work force and a

legal framework that encourages business initiative, have contributed to the territory's success and have helped transform it into the world's 8th largest trading economy. An important Asian financial center, Hong Kong plays a leading role in regional banking, shipping, and communications. The local currency, the Hong Kong dollar, is freely convertible and fluctuates in a narrow band around 7.8 to the U.S. dollar. There is complete freedom of capital movement. At the end of 1998, 172 fully licensed banks operated in the SAR (14 are subsidiaries of U.S. Banks). U.S. firms are the third most numerous in the insurance industry with 22 wholly owned. Taxes are low. The current salary and corporate tax rates are 15% and 16%, respectively. There are no taxes on royalties, interest, or capital gains. Hong Kong imposes no import tariffs. Excise taxes are levied for revenue purposes on tobacco, cosmetics, alcoholic beverages, ethyl alcohol, methyl alcohol, and some petroleum products. Reflecting the growing importance of services in the economy, Hong Kong's visible trade is increasingly in deficit (\$17.7 billion in 1996 and \$20.5 billion for 1997).

With few natural resources, the territory must depend on imports. Principal imports consist of food, textile yarn and fabrics, iron and steel, plastic molding materials, consumer products, paper, and machinery. Principal exports consist of textiles and apparel, watches and clocks, electronic components, and other light industrial products. The value of domestic exports alone was equal to 14.6% of Hong

Kong's gross domestic product (GDP) in 1998 (a declining percentage as labor intensive production moves across the border into China). Tourism constitutes a major industry for the economy with 10.4 million visitors passing through the territory in 1997 and 9.6 million in 1998.

The U.S. is the territory's second largest trading partner (after the PRC), with 14.4% of total trade. In

1998, the U.S. was the second largest market for domestic exports with a 29.1% share. The U.S. supplied 7.5% of imports and was the number two destination for re-exports with 22.4%. Principal imports from the U.S. are electrical machinery; computer and office machines; telecommunications, sound recording and reproducing equipment; plastic, meat, vegetables, and fruit. Principal domestic exports to the U.S. are textiles, apparel, electrical machinery, photographic equipment, watches and clocks, computer and office machines, textiles, yarn and fabric. Currently, about 1,100 U.S. firms operate here and U.S. direct investment was estimated at \$20 billion in 1998. The American business community is well represented by the American Chamber of Commerce in Hong Kong.

Transportation

Driving in Hong Kong is on the left (right-hand-drive). Automobile insurance is expensive; however, substantial discounts can be obtained based on the length of accident-free or "no-claim" driving documented by presenting a letter from your previous insurance companies).

Parking throughout the territory, especially in the downtown areas, is extremely limited and costly (approx. US\$3/HR). Parking fees often exceed the cost of travel by taxi. The Consulate General will assist you in registering your car and in obtaining a valid Hong Kong driving license. Driving tests are not required for those presenting a valid license from the U.S. or from other countries whose licenses are recognized by the Hong Kong Government.

Public transport (buses, taxis, subways, ferries, and trams) is readily available and reasonably priced. Carpools, shared taxis, or public transport are the most commonly used modes of transport between home and work.

Local. The MTR (Mass Transit Railway) subway system connects Hong

Kong Island with Kowloon and nearby portions of the New Territories. Since opening in February 1980, it has become a highly efficient, reasonably priced mode of transportation. The Island Line, which connects much of the harbor side of Hong Kong Island to the existing system, opened in 1985. Streetcars (trams) operate only in urban areas of Hong Kong Island. Bus service, including minibuses, covers almost the entire island, Kowloon, and the New Territories. Buses and streetcars are quite crowded during peak hours. Taxi service is relatively inexpensive and generally available at all hours. Radio-dispatched taxis are available.

The Peak Tram is a very popular tourist attraction, providing a breathtaking view of Hong Kong and Kowloon as you climb to its terminus on the Peak. At the Peak, the view is spectacular and there are many shops and restaurants. The Peak is also served by bus, mini bus and taxi for easy transport back to the City or other locations on Hong Kong Island.

An extensive network of roads exists throughout the territory; however, most are narrow and many are steep and winding because of the terrain. Traffic, which moves on the left, is heavy, but well regulated. There are three cross-harbor tunnels connecting Kowloon and Hong Kong Island. For those with a more romantic bent, the Star Ferry operates a very efficient and inexpensive passenger service between Central on the Hong Kong side and Ocean Terminal in Kowloon. Ferries also operate from numerous points on Hong Kong Island and the Kowloon Peninsula to many of the outlying islands.

Regional. In July 1998 Hong Kong's venerable Kai Tak Airport was replaced by a new airport at Chek Lap Kok just north of Lantau Island. An impressive road, bridge, and tunnel link connects the airport to Hong Kong Island. In addition, a high speed rail link speeds passengers to the Central business district

in Hong Kong. Departing passengers can obtain boarding passes and check their baggage at the new terminus in Central. Air service in and out of Hong Kong is excellent. About 50 airlines operate over 700 scheduled flights per week to Hong Kong. The U.S. carriers currently offering non-stop flights to Hong Kong are United and Northwest.

Hong Kong Harbor, one of Asia's busiest, handles more than 8,000 incoming ships a year, principally cargo ships but also a large number of cruise ships as well as U.S. Navy ships on port call. Trains run between Kowloon and Guangzhou (Canton), China. Hydrofoil and air transportation between Hong Kong and Guangzhou are also available, with connections there to other cities in China. Helicopter, hydrofoil and ferry transport between Hong Kong and Macau operate frequently throughout the day and evening.

Communications

Telephone, Fax, and Internet. Excellent local and international telephone and computer services are available throughout Hong Kong. Hong Kong was one of the first Asian cities to install fiber optics (replacing copper) throughout its telephone and communications infrastructure. Other services, such as Internet, mobile phones, call waiting, call forwarding, and pagers, are available from Hong Kong Telecom and other local vendors. Many employees have found it convenient to utilize a U.S. calling card. Internet service costs vary depending upon which of the over 100 Internet Service Providers (ISPs) available in Hong Kong an employee decides to use. CompuServe and America On Line are also available in Hong Kong.

Mail. International mail service is reliable, and transit time to the west coast is 3-5 days.

Radio and TV. Hong Kong has 13 radio channels: seven operated by government-affiliated Radio Television Hong Kong. Cantonese, English, and Mandarin programming includes classical and popular

music, BBC World Service, local news, and public affairs. Transistor radios and short-wave receivers are available in abundance at reasonable prices in Hong Kong.

Hong Kong uses the PAL 625 system for television broadcasts; a multi-system television set, readily available in Hong Kong, is the most convenient option. American NTSC sets are not compatible. Two local television stations each provide one Cantonese and one English channel. Most English-language programs are U.S. or U.K.-produced and present a variety of entertainment, including various U.S. news programs tailored for the Far East. Satellite and cable TV are available in many areas with such offerings as CNN, BBC, and HBO. The Consulate General commissary has a tape (NTSC format) rental program, and there are numerous video rental stores throughout Hong Kong that rent both video cassettes and laser disks. The most popular local cassette format is VHS-PAL System.

Newspapers, Magazines, and Technical Journals. Hong Kong has vibrant media. It has one of the highest newspaper readerships in Asia, and is the world's largest center for Chinese-language publications. American, British, and other European periodicals are readily available in Hong Kong. American magazines and technical journals are expensive but are available. Both Time and Newsweek have Far Eastern editions on the newsstands weekly. There are two local English-language morning dailies, the South China Morning Post and the Hong Kong Standard. In addition, the Asian Wall Street Journal, the International Herald Tribune, and USA Today are available. There are numerous bookstores carrying a good selection of paperbacks and magazines, but prices are higher than in the United States.

Health and Medicine

Medical Facilities. The quality of medical care in Hong Kong is high. Hong Kong is the medical evacuation center for posts in China and

Manila. Medications, from the UK and U.S., are readily available. The cost for medical (especially dental) care is high in comparison to U.S. prices. Dentists and physicians on the Consulate General's referral list speak English and are trained in the U.K., Australia, or the U.S. Nursing care is good. Although the majority of pregnant women elect to stay in Hong Kong for delivery, the Health Unit supports the M/MED world-wide policy which recommends that pregnant women return to the U.S. for delivery.

Community Health. Although the territory has more than doubled the reservoir capacity in the past few years, water shortages still occur when rainfall is below normal. Water sources are reported to be potable, adequately chlorinated and fluoridated. Water from taps can, at times, be discolored due to pipes in buildings. Filters can be purchased locally to improve the quality of the water. In September 1997, Hong Kong reported 290 patients with AIDS (acquired immunodeficiency syndrome) and 2000 HIV positive patients. The blood supply in Hong Kong is screened for the HIV virus and other communicable diseases by the Red Cross. Individuals requiring blood or blood products are advised to contact the Health Unit. Tuberculosis remains one of Hong Kong's major community health problems. However, an active anti-TB program has succeeded in reducing the morbidity and mortality rate.

Preventive Measures. Individuals are encouraged to have immunizations updated before traveling to Hong Kong. The yellow fever vaccine can be received (inconveniently) at a local clinic. Japanese B encephalitis vaccine is available only in Hong Kong. Children 6 years old and under are encouraged to have annual blood lead levels screenings for the prevention of lead poisoning. Do NOT put them in air freight. The following immunizations will be reviewed and updated as needed: typhoid, diphtheria, tetanus, polio, measles, mumps, rubella, HIB, Hepatitis A and Hepatitis B.

Keep your immunization records with your passport. Individuals requiring daily medications are encouraged to bring an adequate initial supply. Don't pack your medications in your sea freight or checked luggage.

Notes for Travelers

Passage, Customs & Duties. Hong Kong is served by many of the world's major airlines including leading U.S. carriers. United and Northwest offer several flights a day including nonstop service from the west coast of the U.S. and Minneapolis-St. Paul and, seasonally, to Chicago. Continental Airlines provides services via Guam. Traveling via the Pacific can take a rest stop en route in several cities in the continental U.S., as well as Honolulu, Tokyo, or Guam.

Passports and evidence of onward/return transportation by sea/air are required. A visa is not required for tourist visits by U.S. citizens of up to 90 days. An extension of stay may be granted upon application to the Hong Kong SAR Immigration Department. U.S. citizens must have passports with at least four months' validity for entry into Hong Kong. A departure tax of \$80 HK (approximately \$10.30 US), must be paid at the airport, unless this has been included in the traveler's airfare. Visas are required to work or study in Hong Kong. With approval from the Hong Kong Civil Aviation Department, airlines began collecting an insurance surcharge from passengers in November 2001. The insurance surcharge ranges from \$30 HK (\$3.80 US) to \$40 HK (\$5.10 US) depending on the airlines. Effective November 5, 2001, travel agents in Hong Kong which are members of the Travel Industry Council of Hong Kong (TIC) are allowed to charge a service fee of \$5.00 HK (approximately \$0.64 US) per sector for each air ticket issued. Public transportation from Hong Kong's International Airport at Chek Lap Kok to Central Hong Kong (about 25 miles) is readily available, as are taxis. Travelers should exchange sufficient money for transportation at the airport

exchange facility located immediately outside the baggage claim area. For the most current information concerning entry and exit requirements, travelers can consult the Hong Kong SAR Immigration Department, Immigration Tower, 7 Gloucester Road, Wanchai, Hong Kong (tel. (852) 2829-3001, fax (852) 2824-1133, Internet Home Page: <http://www.info.gov.hk/immtd/>), or the Embassy of the People's Republic of China, 2300 Connecticut Avenue, N.W., Washington D.C. 20008, tel. (202) 328-2500. Internet home page: <http://www.china-embassy.org>, or the Chinese consulates general in Chicago, Houston, Los Angeles, New York City, or San Francisco. Overseas, inquiries may be made at the nearest Chinese embassy or consulate.

A Hong Kong driver's license may be issued without a test to individuals who hold a valid U.S. driver's license, provided they have resided in the United States for not less than six months. American visitors who do not plan to stay in Hong Kong for more than twelve months can drive in Hong Kong on their valid U.S. driver's license.

Americans living in or visiting Hong Kong are encouraged to register at the U.S. Consulate General and to obtain updated information on travel and security conditions within the Hong Kong SAR. Americans can register on-line at <http://www.usconsulate.org.hk>, in person at the Consulate General or by fax or mail. The U.S. Consulate General is located at 26 Garden Road, Central, Hong Kong. The mailing address is PSC 461, Box 5, FPO AP 96521-0006, tel. (852) 2523-9011, fax (852) 2845-4845; Internet: <http://www.usconsulate.org.hk>.

Pets. Dogs and cats imported from any country other than the UK, Ireland, Australia, or New Zealand must remain in quarantine for 1-4 months, depending on country of origin. One month is the standard quarantine period for pets imported from the U.S. if they are accompanied by appropriate certificates attesting that they come from

rabies-free areas and that their inoculations are current. Pets that have been in the United State for 6 months or longer are sometimes granted immediate entry if certain, very specific veterinary and documentary requirements are met. Quarantine regulations are rigidly enforced. Boarding fees for animals for the quarantine period are expensive and are calculated according to the weight of the animal.

The Hong Kong Government requires that all animals arrive under an airway bill via air-freight, not as accompanied baggage. Airlines will require you to present a special import permit before accepting your pet as Hong Kong-bound cargo. You should apply for this special import permit in advance.

This application must include the appropriate fee in Hong Kong dollars by check or local bank draft to the Hong Kong Government and be sent to: Senior Veterinary Officer, Agriculture and Fisheries Department Room 819, 8/F 393 Canton Road Kowloon, Hong Kong. Tel No.: (852) 2733-2142, Fax No.: (852) 2311-3731 24 Hour Interactive Inquiry: (852) 2733-2452.

The current fee schedule and an up-to-date form can be found at the Hong Kong Government web site: <http://www.info.gov.hk>.

The Hong Kong Government requires that all dogs brought into the territory receive a microchip identification device immediately upon entry. A tiny, encapsulated microchip is injected under the skin between the neck and the shoulders using a single-use needle. This device, which can be read by a scanner held close to the dog, is linked to ownership and vaccination records stored in government computers.

Animals under quarantine can only be housed in government kennels or the private Pok Fu Lam Kennel. It is extremely difficult to secure space at the government kennels. Reservations for the private kennel should be made well in advance.

Pok Fu Lam Kennels 698 Victoria Road Hong Kong, Tel. No.: (852) 2551-6661.

Local veterinarians and international moving firms can also provide excellent airport-to-kennel service.

Firearms and Ammunition. Possession of personally owned weapons is prohibited under the laws of Hong Kong. This restriction applies to the possession or importation of any firearms, sporting weapons (including spear guns, harpoons, etc.) or ammunition.

Currency, Banking, and Weights and Measures. The local currency is the Hong Kong dollar, which is pegged to the U.S. dollar and is freely convertible to other currencies. The value in relation to the U.S. dollar fluctuates slightly according to market conditions (usually around 7.8). Any currency may be brought into the territory.

For longer stays you may want to open a local checking account as most local shops and stores accept personal checks. A local account is also useful since many clubs, grocery stores, and service stations require payment by automatic monthly withdrawal from a local bank account. Automated teller machines on the Plus and Cirrus networks abound and accept most debit cards and credit cards. Major credit cards are accepted by most stores and restaurants.

Hong Kong is a major financial center and can provide most services that are typically found in the U.S. Checking accounts, savings accounts, travelers checks, and foreign exchange facilities are readily available. Minimum balances are common, and you should be aware of this before opening a new account. The time to clear checks drawn on banks in the U.S. is about four days.

Hong Kong has converted to the metric system, but pounds, inches and gallons still compete with grams, meters and liters. Local markets continue to use the catty, which

is roughly 1-1/4 pounds. Temperature is recorded in Celsius.

Guangzhou

Guangzhou (formerly Canton), the capital of Guangdong Province, is the gateway to southern China. Over 2,000 years old, Guangzhou is now the center of one of the world's fastest growing economic regions: the booming Pearl River Delta.

Lying just south of the Tropic of Cancer, Guangzhou is 1,150 miles south of Beijing and 80 miles northwest of Hong Kong. With a subtropical monsoon climate, the long summers are hot and humid. August is the hottest month, with an average temperature of 82°F. January, with an average of 55°F, is the coolest. Average annual rainfall is 77 inches; April and May are the rainiest months.

Metropolitan Guangzhou encompasses an area of over 4,500 square miles, with a population of over 3 million plus at least 1 million migrant workers. The city proper has an area of 21 square miles and an official population estimated over 3.8 million. In recent years, Guangzhou's industrial, commercial, and residential areas have greatly expanded, particularly to the south and east of the old city core. The surrounding Pearl River Delta is a fertile agricultural region supporting two rice crops yearly. Other agricultural mainstays are jute, sugarcane, oil-producing plants, pigs, chickens, ducks, and fish.

Goods from Guangzhou are marketed in nearly all countries. Light industrial manufacturing, including textiles, shoes, toys, furniture, and exportable consumer products, accounts for most of these exports. Principal heavy industries include shipbuilding, sugar refining equipment, and tool and motorcycle manufacturing.

Bustling food markets and busy restaurants are a big part of the Guangzhou street scene. Cantonese cuisine is renowned and local res-

Susan Rock. Reproduced by permission.

Tiananmen Square and gate in Beijing

taurants are packed daily with patrons. Local markets thrive and stores are stocked with both Chinese and foreign products. Brightly decorated storefronts and brisk trading in noisy markets contribute to the lively atmosphere. Buildings trimmed in lights and neon signs and billboards illuminate the city at night.

Food

A fair range of fresh fruits, vegetables, and meats is available most of the year, and these can usually be found at the famous Qing Ping market. There you can also stock up on Chinese herbal medicines, have a dog, cat, or some exotic animal slaughtered fresh for supper, and feast on a meal of snake, turtle, or scorpion.

Staple products and canned goods can be purchased from the duty-free Daily Living food store or at Park 'N Shop, a Hong Kong-based supermarket chain with several branches

in Guangzhou, including one about a mile from Shamian Island. Some small shops near the Consulate are beginning to stock Western staples. Selection is often limited, and many employees make regular shopping trips to Hong Kong. Fresh milk (USDA standard), ice cream, breads, and a very limited selection of cheeses and cold cuts are available (at high prices) from the White Swan delicatessen next door to the Consulate.

Liquor and wine can be ordered from Hong Kong or purchased at Daily Living. China brews some good beers; those and some U.S. brands are readily available.

Environmental pollution and public sanitation are serious problems in Guangzhou. Fruits and vegetables must be thoroughly washed. All drinking water outside major hotels should be considered suspect. Unpeeled fruits and vegetables that are not to be cooked should be

soaked in a bleach solution, then rinsed before eating. Although the variety of vegetables available is limited, the produce is organically grown without the use of night soil, so it does not have to be soaked in a sterilizing solution.

Clothing

Because the climate of Guangzhou is hot and humid most of the year, lighter weight natural fiber garments and shoes are needed. Cottons, silks, and lightweight suits are best. During the cooler, rainier months, a light topcoat, raincoat, or sweater is essential. However, for a few weeks of the year the weather turns quite cold, and heavier sweaters and a winter coat are necessary.

Buying shoes and clothing on the local market is possible if you are petite. Sizes are generally too small for larger-than-average foreigners. Fabric is available and some tailoring and dressmaking can be done locally.

Some adequate children's clothes can be found on the local market.

Supplies and Services

Laundry and dry-cleaning facilities are available major hotels, as are barber and beauty shops. Service is good and prices are reasonable. Haircuts at local area barbershops are inexpensive, but the quality of service is not always up to Western standards. Hygiene is also a consideration. The White Swan's salon offers facials and other beauty treatments.

Simple shoe repair can be done locally; more difficult repairs are easily handled in Hong Kong.

Religious Activities

The Guangzhou International Christian Fellowship holds ecumenical religious service at the American School for the expatriate community. The Guangzhou Chinese Catholic Cathedral and the Shamian Island Catholic Church hold Masses in Latin, Mandarin, and Cantonese. Protestant services in Cantonese are held at Christ Church, across the street from the Consulate, and at Dongshan Church and Zion Church. Huaisheng Mosque holds services at noon on Fridays.

Education

The American School of Guangzhou (ASG) is located in the Tianhe district. ASG is fully accredited in grades K to 12. In 1995-96, the school had approximately 200 students from more than 20 countries. The teaching staff is recruited from the U.S., supplemented by several locally hired, accredited American teachers. The school offers an American curriculum, with classes in art, music, Chinese culture, and physical education. All instruction is in English, with an ESL program for nonnative English speakers. ASG's principal is Dr. Nancy Stephan.

ASG address:

American School of Guangzhou
PSC 461 Box 100
FPO AP 96521-0002
Tel: 86-20-758-0001
Fax: 86-20-758-0002

Two church-supported schools are operating in Guangzhou.

Guangzhou has several preschools accepting children from 2 to 5 years old. Half-day (morning) English-language preschools are located at the China Hotel, Garden Hotel, and Ramada Pearl Hotel. Fees of a few hundred dollars a month apply. Other international preschools plan to open in the future.

A Chinese-language, local government-sponsored preschool and kindergarten for children 3 to 5 years old operates half-day or full-day programs on Shamian Island. Care is very good. The school provides meals, or parents may provide their own. Most children without Chinese-language ability are able to adapt easily and interact with the Cantonese-speaking children. The language of instruction is Mandarin, though teachers often lapse into Cantonese. Full-day and half-day fees apply.

Sports and Outdoor Activities

Ping-pong, badminton, tennis, and tai chi are popular local sports. There are several health clubs near the Consulate and in the major hotels, some of which include swimming pools and squash and tennis courts. The city has several large, modern bowling facilities, as well as good quality indoor roller skating and ice skating rinks operating year round. Basketball and soccer games have been organized at local universities. Horseback riding is available.

Every other Saturday, joggers and walkers may join the local Hash House Harriers at various suburban locations. Guangzhou has several large parks, though they tend to be crowded on weekends. Nearby Baiyun Mountain Park has hiking trails. Guangzhou's sports complex, located near the American School, has hosted events for the Asian games, professional tennis matches, the 1995 world weightlifting championships, and the 1992 women's soccer World Cup. An 18-hole golf course is located in the northern

part of the city. Shenzhen boasts a championship golf course; other golf clubs are planned.

Shamian Island is a reasonable location for jogging and is also home to an excellent tennis facility with nine indoor and outdoor lighted, hard-surface courts.

Touring

Traveling in China can be difficult (especially if you do not have some Chinese-language ability) but also rewarding. Popular trips from Guangzhou include Guilin, Macau, Hainan Island, and Kunming. A weekend of shopping and dining in Hong Kong can be expensive, but getting there is convenient via plane, overnight boat, high-speed catamaran, bus, or train. The train ride is about 2 hours one way; the bus takes about 3-1/2 hours. One can also drive as far as Shenzhen, leave the car in a parking lot, and use Hong Kong's public transportation the rest of the way. Bicycles can be rented for touring the city, and mountain bikes can be purchased at local factory outlets for outings to area villages and rice farms.

There are direct flights from Guangzhou to dozens of Chinese cities and many international destinations, including Australia, Indonesia, Japan, Malaysia, the Philippines, Singapore, Thailand, and Vietnam.

Entertainment

Theaters in Guangzhou occasionally show ballets, symphonies, and plays by touring musical or theatrical groups. Occasional concerts feature Chinese or foreign pop performers. Local movie theaters show dubbed films and some English-language. Private lessons in Cantonese and Mandarin language, music, traditional painting, and calligraphy for adults and children are easy to arrange.

Shopping and browsing are a favorite pastime in Guangzhou. The famous (some would say infamous) Qing Ping market, which sells many live and exotic animals for consumption, is just north of Shamian Island. The antique market, one of

China's best, is also within walking distance of the Consulate. Beijing Road has dozens of upscale clothing and jewelry stores. The semiannual Canton Trade Fair provides an opportunity to examine and purchase products, including baskets and silk carpets, from all over China.

Social Activities

The growing international business community informally organizes fund-raisers and parties. The American School is a social gathering point, especially for those with children. The Guangzhou Women's International Club is one of the most active groups in the expatriate community, organizing a wide variety of events for its members and guests. The American Chamber of Commerce branch in Guangzhou holds monthly breakfast meetings, and occasional lunches and dinners, at the major hotels. Nightclubs and karaoke clubs have become popular night spots, creating new opportunities for Chinese and foreigners to socialize.

Eating Out

Guangzhou is famous for its cuisine, and eating out is a favorite pastime for local and foreign residents. Restaurants serving Cantonese cuisine abound, though many do not have menus in English. For those in search of a change, try one of the Sichuan or Beijing-style restaurants. There is a growing number of other Asian restaurants, including Japanese, Korean, Malaysian, and Thai. Western cuisine is unavailable except at the major hotels. Of course, Guangzhou has not been excluded from the invasion of Western fast-food establishments: Pizza Hut, McDonald's, and Kentucky Fried Chicken.

Special Information

Before coming to Guangzhou, individuals should take care of all potential medical problems, including dental and eye care. Trips to Hong Kong for medical attention are costly.

In cases of accident or sudden illness, local medical facilities have

been used, but they are not recommended for routine care and are considered to be a last resort option. Hospital outpatient clinics are busy and there are few private doctors. One local dental clinic comes close to meeting U.S. standards.

Shanghai

Although Shanghai is a young city by Chinese standards, with 13 million residents, it vies for the title of the most populous city in the world. The Shanghai metropolitan area (including the suburban counties) is China's most important industrial, commercial, and financial center, accounting for 5 percent of the Gross National Product. The Shanghai-ese, as the city's residents are known, speak their own distinctive dialect and are recognized as being among the country's most able businessmen. Today, Shanghai is a hub for several Chinese industries, including iron and steel, shipbuilding, textiles and garments, electronics, clocks, bicycles, automobiles, aircraft, pharmaceuticals, computers, publishing, and cinema. Shanghai is China's largest port and most important foreign trade center. Shanghai itself accounts for 8 percent of all Chinese exports but handles nearly two-thirds of China's total exports through its ports. Once the world's third-largest port, Shanghai remains China's principal shipping center. Shanghai is the most cosmopolitan of Chinese cities and its shops, restaurants, and night life reflect this. Shanghai-style food (seafood) is distinctive and elegantly presented. There are numerous night clubs, discos, and karaoke bars, but cultural entertainment for the expatriate family (movies, music, theater, etc.) is very limited.

Shanghai is acknowledged as the busiest and most exciting shopping center in China. From antiques to pottery, clothing to cotton goods, rugs, furniture, and jewelry, shoppers will find something for every taste in Shanghai's 24,000 stores, supplemented by shopping streets and free markets.

Food

Thanks to the construction of new joint-venture shopping complexes, shopping for food in Shanghai is now almost as convenient as shopping in a supermarket in the U.S., although the cost is considerably higher and the selection more limited. Shanghai has numerous open-air markets where fresh fruits and vegetables, meat, fowl, and fish and seafood are available. Most fresh produce is available year-round. The prices in these markets, where most Chinese shop, are much lower than in the upscale supermarkets. Locally produced and imported soft drinks (Coke, Sprite, Fanta), soda water, tonic water, and beer are available. In addition, a limited selection of local and imported liquor and wines is available at a duty-free shop at reasonable prices. However, at commercial outlets, whereas soft drink and beer prices are comparable or cheaper than those in the U.S., prices for liquor are somewhat higher.

Clothing

Shanghai has four seasons, with weather slightly warmer than that of Washington, D.C. Except for joint-venture enterprises and places frequented by tourists, few other buildings in Shanghai are heated or air-conditioned. China exports numerous items of clothing, including wool sweaters and down clothing, which are available locally at reasonable prices. Prices of cashmere sweaters have increased substantially in the past few years, but are still below those in the U.S. Children's clothing is plentiful and inexpensive. In planning your Shanghai wardrobe, remember that the summers are hot and humid, while the winters can be cold and damp, with temperatures sometimes dropping below freezing. Most items of clothing can be purchased locally, although not always in the larger sizes. This is especially true for shoes, so be sure to bring an adequate supply.

Supplies and Services

Personal care and household cleaning and paper supplies can be purchased locally. Local equivalents are

available but inferior in quality, while imported ones are considerably higher in price. Locally produced American brands are mid-range in price and quality.

Religious Activities

Shanghai has Catholic and Protestant churches, Buddhist/Daoist temples, and Islamic mosques. The Catholic Patriotic Church is independent of Rome. Catholic services are conducted in Chinese, except for a small Sunday morning service for expatriates that is conducted in English. Protestant services are conducted in Chinese, although simultaneous interpretation/earphones are provided at the Sunday service of the International Community Church. Judaism is not one of the five religions recognized by the Chinese Government and no synagogues exist.

Education

Utilizing a twin-campus design, the Shanghai American School offers a comprehensive educational program on both the east and west sides of Shanghai. Each campus includes pre-kindergarten through 12th grade on 25 to 30 acres, with approximately 30,000 square meters of building space. The west campus, completed the fall of 1996, is located in Zhu Di Township, about 3 km north and west of the Hong Qiao Airport. The east campus, completed the fall of 1997, is located in Pudong at the Shanghai Links residential community, approximately 18 km east of the Bund. The Shanghai American School can be reached at 86-21-6221-1445 (telephone) or 0-86-21-6221-1269 (fax).

Sports

Sports facilities are limited to a members-only golf club and several municipal tennis court complexes. Several hotels (as well as joint-venture housing complexes) offer health club memberships, most of which include indoor/outdoor pools, tennis/racquetball courts, weight/fitness rooms, and bowling alleys. There are occasional pickup softball, volleyball, and basketball games with members of the university and business communities.

Touring and Related Activities

Since Shanghai is an industrial and commercial center, sight-seeing in the city is relatively limited. The city has several picturesque temples and gardens, the oldest (Ming Dynasty) being in the recently renovated Old City Temple area, which has also been reconstructed in the Ming style. The countryside around Shanghai is flat and lends itself to hiking and long bicycle rides, although current traffic congestion and poor road conditions make this a bit of a trial. Short trips to the historic and scenic cities of Suzhou, Hangzhou, and Nanjing offer additional sight-seeing opportunities at relatively limited expense. Note, however, that travel outside of Shanghai is regulated. Travel by public transportation outside a 24-mile radius of Shanghai requires 48-hour notification to the Shanghai Foreign Affairs Office.

Social Activities

An active Expatriate Association sponsors monthly luncheons, sight-seeing, cultural activities, and social events such as the annual Christmas Ball. There is also a large and growing American Chamber of Commerce and a professional women's organization, both of which have monthly lectures and get-togethers centering on business-related activities. However, organized family-oriented social and recreational activities are very limited and most expatriates entertain at home.

Special Information

Like many large cities in developing countries, Shanghai has a problem with water and air pollution. The water has a high concentration of minerals and metals. Bottled distilled water is available for purchase locally. Those who suffer from hay fever and sinus- or bronchial-related allergies will find these conditions aggravated by the high level of suspended particulates (dust and coal dust) and carbon monoxide in the air.

Shenyang

Shenyang is the political, military, and economic capital of northeast China, the region once known as Manchuria. The northeast, composed of the provinces of Liaoning, Jilin, and Heilongjiang, is home to over 100 million people.

A frontier land settled in the late 1800s, the northeast has for the past century been a strategic battleground and center of intrigue between Russia, Japan, Korea, and the forces of Chinese nationalism.

The two pillars of Manchuria's economy are heavy industry and agriculture. The region is home to some of China's largest state enterprises, including the massive Anshan Steel Works, the First Auto Works, and the Jilin Petrochemical Corporation. Efforts to reform ailing state enterprises remain a problematic but critical part of the nation's overall drive to achieve economic development with social stability. Jilin is China's largest exporter of corn and tobacco. Heilongjiang is known as "the king of soybeans," and Liaoning's apples, peaches, and pears are exported throughout Asia. In addition, ginseng from southern Jilin's Changbai mountain range has fortified Chinese traditional medicines for years.

The northeast is an extremely diverse part of China. Geographically, the region stretches from the magnificent natural harbor at Dalian, through the heavily populated Manchurian plain, east along the spectacularly rugged Sino-Korean border, and north to the wetlands and forests that characterize the Sino-Russian border.

The region is ethnically diverse as well, a unique blend of Han Chinese, Manchu, Mongolian, and Korean culture. In fact, the southern quarter of Jilin Province contains the Yanbian Korean Autonomous Prefecture, known as "China's Korean Corner" and home to nearly 1 million ethnic Korean Chinese.

The city of Shenyang itself is a heavily polluted, industrial metropolis of about 5 million people in the midst of unprecedented economic growth. It is home to several of the region's largest state enterprises, but also contains several prominent universities and cultural attractions. For example, Shenyang is home to a smaller version of Beijing's Forbidden City, used by the Manchus before they captured the imperial capital in the 17th century and established their own dynastic rule. The founder of the Qing (as they called themselves) line is also buried in Shenyang.

The region's climate is mainly influenced by the continental landmass of central Asia. Shenyang's winter is a little longer than Beijing's and compares to that of Chicago without the Windy City's raw winter winds and is much drier. Traveling south to the ice-free port of Dalian on the southern tip of the Liaodong peninsula, the extremes of weather become less pronounced.

Food

Pork, chicken, duck, mutton, some seafood (frozen fish and shrimp), and beef are normally available, but quality varies and only chicken is available in American-style cuts.

A variety of vegetables and fresh fruits, including excellent strawberries and peaches, are available in the market in season. Recently, at least three to four fresh vegetables and two to three fresh fruits have been available throughout the year.

Some imported foodstuffs are available, but many locally available substitutes are acceptable. Some imported beers, wines, and liquors are available at prices comparable to those in the U.S. Local beer is available.

Clothing

Shenyang has a short, warm summer sandwiched between an extended spring and fall. The winter is long and cold, comparable to the northern Midwest in the U.S. Most buildings are heated but not to U.S. standard.

Supplies and Services

Toiletries, cosmetics, and household cleaning products are available locally but differ widely from similar American products. Shenyang's winters reduce the usual problems with cockroaches and insects found in developing countries, but moth infestation is a big problem.

Shenyang does not have the large international hotels found in China's major tourist centers. As a result, the usual services found in such establishments are generally unavailable. Barbers and beauticians at the few hotels provide a utilitarian if not high-fashion service. Local dry-cleaning services are of variable quality.

Winter outer garments and sweaters can sometimes be purchased locally. A wide range in size, style, and color of other garments is nonexistent.

Religious Activities

One nondenominational Protestant church in Shenyang conducts services in Chinese. Mass at the Chinese Catholic Church is in Latin. No synagogue exists, but Shenyang does have one mosque and several Buddhist and Daoist temples. Protestant services for foreigners are conducted at China Medical University and at Riverside Gardens.

Touring and Outdoor Activities

Shenyang has some interesting parks and monuments. Nanhu and Lu Xun Parks provide good jogging paths during the less crowded times of day. Consulate General families have enjoyed picnicking at Dongling, the imperial tomb of the first Qing emperor, during the warmer months.

Entertainment

Three local TV stations broadcast in Chinese every evening, in color. One English-speaking channel, Star Plus, offers a variety of old movies and TV series. There are also up-to-date sportscasts on Star Sports. Liaoning Radio has recently begun offering a nightly English news pro-

gram, and VOA, BBC, Radio Australia, and others can be picked up by shortwave radio.

Special Information

The facilities at local clinics are modest by U.S. standards. Individuals with serious medical problems should be evacuated to Hong Kong.

Chengdu

Chengdu is the capital of China's most populous province, Sichuan, and the traditional center of government and transportation in southwest China. The Chengdu consular district is made up of the provinces of Sichuan, Yunnan, and Guizhou, as well as the Xizang Autonomous Region, more commonly known as Tibet.

As Chengdu serves as the air transport hub of southwest China, air service is provided to all major Chinese cities. Centrally located, Chengdu is between a 2- and 2 1/2-hour flight to Beijing, Shanghai, Guangzhou, and Lhasa. There is also a twice weekly flight to Hong Kong, which is Chengdu's sole international connection at this time. Chengdu also has rail service to all major destinations.

Chengdu has a moderate climate with fairly mild winters, early springs, rainy summers, and warm autumns. Though not uncomfortable in terms of temperature, there is a near-perpetual overcast. This condition is attributable to Chengdu's location in the Sichuan basin, one of the world's most productive agricultural plains. Pollution, caused primarily by the burning of coal in winter, is also an irritant.

Chengdu has been a governmental and cultural center since at least 400 B.C., undergoing numerous name changes over the years. During the Han Dynasty (206 B.C.–A.D. 220) it was known as the "City of Brocade," becoming so prosperous that it gained the nickname "Storehouse of Heaven." Under the Five Dynasties, the local warlord planted

so much hibiscus on the city walls (since destroyed) that it was known as the "City of Hibiscus."

Present-day Chengdu has a population of 8.7 million, of whom about 3 million live in the city center. There has been a great deal of new and unimaginative high-rise construction over the past few years as is the case with most of China's major cities. Nonetheless, the city maintains a great deal of charm with several nice city parks and areas where old-style buildings have remained. These older smaller buildings have been central to the renaissance of small private businesses. In Chengdu's alleys, one can amble for hours, on foot or bicycle, going from small shop to small shop.

Chengdu's role as a regional center of government, transportation, and culture, as well as of electronic and other industries, has brought increasing numbers of foreigners. The tourist trade continues to increase, and one now frequently encounters American and other tourists, as well as expatriates employed as English teachers.

Food

Chengdu is acknowledged as the center of authentic Sichuan cuisine. Several good Sichuan restaurants and countless "xiaochi" or traditional snack restaurants exist. The major hotels have Western restaurants. Chengdu has two fast-food restaurants.

There are a number of Chinese-produced canned and dry goods on the market. Some Western products, such as instant coffee, artificial creamer, and powdered whole milk, are widely available, and one can usually find American peanut butter and Australian dried pastas. Other than yogurt, fresh dairy products are not found. UHT milk is available but expensive (15 to 20 yuan per liter). Pork, beef, shrimp, and chicken are available, but quality and presentation vary.

On the positive side, there is an impressive array of fruits and vege-

tables available year round. There is a proper joint-venture bakery that sells French bread, wheat bread, croissants, cakes, and pies. Some foreign liquors are available, but the wine selection is almost exclusively Chinese. Hotel shops and major department stores also stock a small variety of Western goods at higher than U.S. prices.

Clothing

Clothing and shoes of unreliable quality are available at both small stores and large department stores. Although winter temperatures are not extreme, it is nonetheless a damp and penetrating cold. Long underwear may be needed in the winter months.

Supplies and Services

Procter and Gamble hair care items and detergents are widely available, but not their toothpaste and other toiletries.

Barber and beauty facilities are available in hotels and elsewhere. These are adequate but not quite up to Western standards. Simple and inexpensive shoe repair is available. Personnel have used local tailors/dressmakers with varying results. The major hotels do dry-cleaning.

Religious Activities

Chengdu has two Protestant churches and one Chinese Catholic cathedral. All services are conducted in Chinese. Mass is said in Latin. There are two mosques. There is no synagogue nor are there any informal organized Jewish services.

Education

There are no Western schools in Chengdu.

Touring and Outdoor Activities

Most people ride bicycles both for practical and recreational purposes. Within Chengdu, a bicycle is actually more convenient than a car. Chinese-made bicycles can be purchased locally at reasonable prices. Basic one-speed bikes, tricycles, multispeed bikes, and export-stan-

dard mountain bikes are all available.

There are some close-by sights, such as the Du Fu Thatched Cottage, that make for a nice cycling outing. Sights of interest within a several hours' drive are Emei Shan, Le Shan, Dujiangyan Irrigation Works, and the Wolong Panda Reserve.

Entertainment

Occasionally there are visiting Western song or dance troupes brought in under the auspices of cultural exchange programs. There is almost no locally available English-language reading material.

Special Information

Calling cards with your name in English on one side and your Chinese name on the other are a must in both business and social circumstances. They can be obtained in Chengdu within a few days. The quality of those done in Beijing or Hong Kong is much better, but harder to arrange.

Nanjing

Nanjing (Nanking), the provincial capital of Jiangsu (Kiangsu) Province in eastern China, is a city of ancient culture that has several times, during 10 dynasties, been the capital of the country. Its history spans 2,400 years. The Treaty of Nanking, signed here in 1842, was the pact that opened China to foreign trade.

Industry has developed considerably since 1950, and Nanjing is now a production center for iron, steel, chemicals, machine building, optical instruments, textiles, and foodstuffs. The city is one of China's intellectual centers, having 18 universities and several other institutions of higher learning. Nanjing's population is over 2.4 million.

The Nanjing Bridge over the Chang Jiang (Yangtze) River is one of China's most spectacular spans. It is a double-deck bridge handling

both rail and motor vehicles, making Nanjing a major transportation center for north-south traffic.

Scenic and historic spots abound throughout Nanjing. On the Purple Mountains east of the city is the Zijin Shab Observatory of the China Academy of Sciences, with its extensive collection of ancient astronomical instruments. Also here are the Sun Yat-sen Mausoleum and Ming Xiaio Tombs, both national historical monuments, and the Linggu Si (Soul Valley Temple). The Lantern Festival in the central marketplace and the zoo near the city gates are popular attractions. Lovely lakes and luxuriant greenery add to the charm of this famous tourist city.

Chongqing

Chongqing (Chungking), built on a rock promontory at the confluence of the Yangtze and Chia-ling Rivers, was once the headquarters of the Chinese National Armies and the political capital of the nation. In 1937, shortly before the capture of Nanking in the Second Sino-Japanese War, national administrative offices were moved here, where they remained until 1945. The city was also an American air base during World War II (1944-1945).

Chongqing is a misty, mountain city, encircled by rivers on three sides. Natives call it "fog city" because there are about 200 foggy days a year. It was opened in 1890 as a treaty port, and is the trade center for much of western China. It has textile mills, chemical plants, steel and cement factories, and several other smaller industries. Chongqing's population is 2.83 million.

Two of the city's interesting natural features are its north and south hot springs parks, Beiwenquan and Nanwenquan. The zoo, with its exhibits of rare animals and birds, and the beautifully landscaped Goose Peak Park are popular tourist spots. The Research Institute of Traditional Chinese Painting,

where the area's top artists work and reside, is also located here.

Harbin

Harbin (Ha-erh-pin) is one of the great trade marts and communication centers of the Far East. Located on the Sung-hua, or Sungari, River, almost at the exact midpoint of Manchuria, it is the capital of Heilungkiang (Black Dragon) Province, and has an estimated population of 2.9 million. Food processing, tractor and ball bearing manufacture, and wire and cable factories are its main industries.

Harbin was only a village until 1896, when the Russians contracted to build the Chinese Eastern Railway branch of the Trans-Siberian Railroad. Wide avenues and European-style architecture are evidence of the strong Russian influence on the town in the years between the start of rail construction and the surrender of the Russian concession in 1924. A major influx of White Russian refugees after 1917 gave Harbin the largest European population in the Far East, but most of those who had fled the revolution left after the Chinese Communists rose to power.

The town was captured in 1932 by Japanese forces invading Manchuria, and fell again, in August 1945, to the Soviets. The Chinese Communists eventually took possession, and developed Harbin into a major industrial city.

Wuhan

Wuhan is a consolidation of three Han cities in Hubei (Hupei) Province of east central China. Wuchang, Hankou, and Hanyang came under one administration in 1950 and these cities, as a unit, now flourish as a commercial and industrial center and the transportation hub of central China. The city lies on the spot where the Han and Yangtze rivers meet, and is home to 5.2 million people.

It was in the place that is now Wuhan that the revolution against imperialist China took form in 1911.

Many industrial enterprises and commercial ventures have helped to build Wuhan into one of China's most important cities. Tea, silk, cotton, rice, oils, soap, timber, and steel are among the diverse products that are transferred through the bustling city port. Also, tourists are attracted to Wuhan to view the temples, the scenic landscape, and the ancient musical terrace called Guqintai.

OTHER CITIES

ANSHAN is an industrial center of about 1,450,000 residents, situated 350 miles northeast of Beijing. The site of some of China's main iron and steel facilities, the city also relies on cement and chemical production. Iron smelting here dates to 100 B.C. and progressed until Manchu emperors shut down the operations. The Japanese, who occupied the vicinity early in the 20th century, resumed production. The steel works were founded here in 1918. Anshan was the scene of intense fighting in the Chinese civil war (1946-1949), with both sides taking control of the district 11 times. The city was rebuilt following the war and is now twice as large in area as it was sixty years ago. Two parks are noteworthy in Anshan. Tang-gangzi Park, a few miles south of the city limits, has two historic homes—one that belonged to a Manchu warlord, and another to the last Qing emperor. The park's hot springs and sanitarium attract visitors from many parts of the country. The other park, Eryijiu Park, boasts three huge lakes and several walkways.

CHENG-CHOU (formerly spelled Zhengzhou and Chengchow), located about 40 miles southwest of Beijing in the east-central region, is the capital of Honan Province. This is a crucial railroad junction for both north-south and east-west

lines. Cheng-chou has been inhabited since about 1500 B.C., and flourished as the terminus of the New Pien Canal from the seventh through the 10th centuries. The railway has been important to the city from the arrival of the Peking-Han-k'ou line 80 years ago. A tower in the center of town commemorates a 1923 workers' strike that began in Cheng-chou and extended along the rail line. The Communists changed the area from a strictly commercial and administrative center to an industrial hub when they took over in 1949. Today there are textile and flour mills, tobacco factories, locomotive repair plants, and a thermal generating station. Nearby countryside is irrigated by a pumping station erected in 1972. A major improvement project saw the planting of thousands of trees to cut down on the sand that was blown through the city by strong gusts. Cheng-chou's population is an estimated 2.1 million.

CHENGDU (also spelled Ch'eng-tu) is one of China's ancient cities. It dates back to the Han Dynasty (206 B.C.-A.D. 220), and in early times was an imperial capital. Chengdu is the administrative seat of China's most populous province, Szechwan (Sichuan), where the beautiful Shu embroidery is produced. Noted for its famous cuisine, and for its annual flower fair, the city is also the transportation and cultural center of southwest China. Chengdu was the site of an American air base in 1944-1945, during the Second World War. The city is located on the irrigation system of the Min River and is the center of a fertile region. It is the site of a university and technical college, and has a population of approximately 5.3 million. No western schools exist in Chengdu; preschoolers attend local Chinese kindergartens. Older children use Calvert correspondence courses. Martial arts and painting classes are available for children.

FUZHOU (also spelled Foochow), the capital of Fujien Province in southeast China, is a seaport on the

Minjiang River midway between Hong Kong and Shanghai. This city of 1.4 million residents is known for its handicraft industries which produce horn combs, umbrellas, and lacquers. It became famous also for the export of black (Bohea) tea, named for the Chinese hills where it is grown. Fuzhou dates back to 202 B.C., in the Han Dynasty. The early city walls remain, and in the adjacent hills are many beautiful examples of architecture, among them the spectacular White and Black Pagodas. Fuzhou was one of the first ports opened to trade in 1842 by the Treaty of Nanking.

GUILIN (also spelled Kweilin), a city of spectacular scenic beauty, lies on the Lijiang River in Guangxi Zhuang Autonomous province. The Chinese call it a "city of culture" because of the great numbers of celebrated artists and intellectuals who congregated here during the Japanese aggression. It is an ancient community, founded during the Qin Dynasty of the third century B.C. Silk is a major export of Guilin. During World War II, an American air base was established here, first in 1944 and, after a devastating attack by the Japanese, again in 1945. Today, Guilin is a city of more than 400,000. It has light industry as well as all of the by-products of urban life—dust, noise, and traffic congestion.

GUIYANG (formerly spelled Kueiyang) lies on the Nan-ming Ho River, 200 miles south of Chongqing. With a population nearing 2,500,000, it is a provincial capital and industrial center. Industries here include iron, coal, and bauxite production, as well as the manufacture of mining equipment and automobile tires. Guiyang experienced great economic progress during the Sino-Japanese War (1937-1945), when highway, railroad, and communications construction began. The city has a teacher-training college, medical school, and university.

HANGZHOU (also spelled Hangchou and Hangchow) is located on the north bank of the lower reaches

of Qiantang River. One of China's scenic spots and a major tourist center, it is said to have been called "the world's most beautiful and splendid city" by Marco Polo. Hangzhou is particularly famous for Xi Hu (West Lake), a mirrorlike body of water encircled by hills, and surrounded by terraces with flowers, trees, and pavilions. In addition to being the capital of Zhejiang Province, it is one of China's major silk-producing centers. Hangzhou silk is internationally famous. Light industry has also developed considerably in recent years. The city has 1.78 million residents.

LÜDA (also spelled Lüta, formerly called Dalian) is a leading port in the northeast, located on the south coast of Liao-tung Peninsula, about 300 miles from Beijing. The Russians first developed the region in 1898, calling it Dalny, but lost the city to the Japanese after the Russo-Japanese War of 1904. Shipbuilding and other industries were introduced by the Japanese and have been growing since. The industrial base of Lüda is varied, including oil refining, paper and fertilizer production plants, and steel factories. Tourism here has a great economic impact. This is one of China's foremost summer resorts, known for its beaches and many hotels. The city has an engineering college. Lüda's population is an estimated 1,630,000.

SUZHOU (also spelled Soochow) is China's historic garden city and one of the oldest towns in the Chang Jiang River basin. It is a center for tourism, and many of its historic parks have been restored and reopened to the public. The Great Pagoda was built here in the year 1131. Suzhou is also famous for its silks and embroidery, a centuries-old tradition. Since 1950, the city has expanded its textiles and chemical industries, but its most famous products remain handicrafts. Sash has a current population of over 1.2 million.

TIANJIN (also spelled Tientsin) is a river port about 75 miles south-

east of Beijing, and a major commercial and industrial city. It also is an educational center of long standing, and the site of the more recently inaugurated (1960) Hupei University. For centuries Tianjin was a military post, having become a garrison town in the second year of the Ming Dynasty. It was occupied for a few years by the British and French in the middle of the 19th century, and was seized during the Boxer Rebellion in 1900. The city then came under direct control of the central government, and is one of only three Chinese cities which are thus administered. Tianjin has a metropolitan population of over 9 million.

XI'AN (also spelled Hsi'an and Sian), one of the most historically interesting of all of China's cities, is situated in the center of the Guanzhong Plain in east-central China. It is a significant origin of Chinese civilization and, as early as the third century B.C., was a focal point for international exchange between China and other countries. It was the starting point of the famous "Silk Road," the overland trade route to the West. Xi'an served as the capital of 10 dynasties over a period of 1,000 years. Many notable tombs and other ancient relics are preserved here and at Pei-lin, south of the city. In Xi'an's more recent history, it is also remembered as the scene of the communist kidnapping of Generalissimo Chiang Kai-shek in 1936. The population of Xi'an is approximately 3.1 million.

YANGSHUO, a southern suburb of Guilin, is a market center and county seat on the Li River. It is known for its mountain scenery; tourists come to this small town regularly on the noted Li River boat tours. Four mountain peaks assure a dramatic setting for photographers: Dragon Head Hill, Crab Hill, House Hill, and Green Lotus Peak. Shopping and hotel accommodations are limited but the government tourist office here has been called the country's most helpful. There are boat and bus connections to Guilin; bicycles can be rented in Yangshuo.

The industrial city of **ZIBO** (also called Chang-tien) is located in a rich coal field, 175 miles south of Tianjin in the eastern region. As it is known today, Zibo was formed in 1949, when the counties of Tzuch'eng and Poshan merged. Historically, the city can be traced to the second century B.C.; the extensive mid-20th-century development started with completion of an important railway passing just north of town. Textile manufacturing and food processing are growing in significance. Zibo has an estimated population of 2,775,000.

REGIONS

Since 1999, **MACAU** has been officially designated as a Special Administrative Region (SAR) of China, an agreement which allows the region a high degree of autonomy in just about every aspect of government except in foreign affairs and defense. The region is made up of two islands and a peninsula reaching off the Guangdong mainland into the South China Sea. The population is about 440,000 (2000 est.) Since it is a separate government entity, you will need a separate passport to enter and you should make certain that your China passport allows multiple entries for your return trip. The extra effort could be well worth it, since there is much to see and do in Macau.

One of the most famous historic sites is the Ruínas de São Paulo, the ruins of St. Paul's Cathedral, originally built in 1602 and rebuilt after major destruction from an 1835 typhoon. A museum in the former nave of the cathedral reportedly holds the tomb of the Cathedral's builder, Jesuit Father Alessandro Valignano, and an arm bone of St. Francis Xavier. On the hill overlooking the cathedral there are ruins of the fort that once protected the settlement of the cathedral, as well as a second museum and a metrological observatory.

There are seven major temple complexes in Macau. The oldest, A-Ma, is dedicated to the seafarers' goddess and dates from the early 16th century. The Kun Iam Tong complex is dedicated to the Goddess of Mercy. It was founded in the 13th century, but some of the present structure was built around 1627. It is the largest and wealthiest of the temples and contains several special halls dedicated to the Three Precious Buddhas, the Buddha of Longevity and Kun Iam herself.

Macau has several modern attractions as well. One of newest is the Macau Tower, a 338m tower which houses an entertainment and convention center. Located on the coast of the Nam Van Lakes, the tower is the 10th largest in the world. There are a total of ten casinos in Macau, mostly located in the Lisboa tourist complex. The Macau Cultural Center, opened in 1999, consists of two auditoriums for seminars, lectures and other cultural events and a second building housing three museum areas with exhibits on Macau culture, history and arts. There are ten other museums throughout Macau.

For nature lovers, Macau offers a variety of hiking trails and walking tours throughout the area. There are also 15 showcase gardens, the oldest one being the St. Francisco Garde, which was started in 1580 by the Castilian friars of the Franciscan order which founded a convent at the area.

Getting around is fairly easy, since there are buses throughout the region as well as plenty of taxis. If you'd like, you can try one of the three wheeled pedicabs along the waterfront.

Known as the "rooftop of the world," **TIBET** has long been considered a place of great beauty and mystery. Some of the mystery developed as China periodically restricted or prohibited travel to the area. There are an estimated 2.6 million people in Tibet (2000 est.). Since 1965, Tibet has been designated as an Autonomous Region linked to China, and though travel is still somewhat com-

plicated, the scenery and culture are worth the trouble.

Lhasa, the “city of the gods,” is the capital of Tibet and sits at an altitude of about 12,000 ft. The Potala, home to several past Dalai Lamas, is a main attraction. Built in the 7th century, this UNESCO World Heritage site now houses a unique museum which includes underground labyrinths and dungeons, large decorative statues of Buddha, and chapels decorated with human skulls and thigh bones. The tombs of past Dalai Lamas are also located in Lhasa, as is the Jokhang Temple.

Tibetan monasteries are located in Gyantse and Sakya. The one in Sakya contains a collection of religious relics that may be viewed by visitors with some restrictions by the monks.

Naturally, one of the most popular sites in Tibet is Mt. Everest. At 29,035 ft, it is the world's highest peak. In Tibet, the name of the mountain is Qoomolangma, which means “mother goddess of the universe.” Its European name was given to honor Sir George Everest, the British surveyor-general of India who first accurately recorded the height and location of the mountain in 1865. Before then, it was known to the Western world as Peak 15. The Qoomolangma Nature Preserve surrounds the Tibetan base of the mountain and offers a variety of programs to protect and preserve the local environment and culture. A hike to the Everest Base Camp, the most famous starting point for trekkers, will take more than a few days of strenuous climbing. Or, you can find a tour with a 4-wheel-drive vehicle that takes you there for a visit.

It is possible to make travel arrangements to Tibet from outside of China. Once in China, travelers wishing to visit Tibet must join a group, which can be arranged by almost any Chinese travel agency. The travel agency will arrange for the necessary permits and collect any fees. The Chinese government requires foreigners (including U.S.

citizens) wishing to visit Tibet to apply in advance for approval from the tourist administration of the Tibetan Autonomous Region. More information is available from the Chinese Embassy or one of the Chinese consulates in the United States, or, while in China, from the U.S. Embassy or nearest U.S. consulate general. (Please see the above section on Entry Requirements.) Recently, some Americans with long-term Chinese visas have experienced difficulty obtaining permits to visit Tibet

COUNTRY PROFILE

Geography and Climate

Occupying an area of about 3.7 million square miles, the People's Republic of China (PRC) is the third-largest country in the world, after Canada and Russia. It shares borders with North Korea, Russia, Mongolia, Afghanistan, Pakistan, India, Nepal, Bhutan, Burma, Laos, and Vietnam. Hong Kong and Macau are situated on China's southern coast. Two-thirds of China's area is mountainous or semidesert; only about one-tenth is cultivated. Ninety percent of its people live on one-sixth of the land, primarily in the fertile plains and deltas of the east. The country lies almost entirely in the Temperate Zone. Only the southernmost portions of the Provinces of Yunnan and Guangdong, and the Shuang Autonomous Region of Guangxi, lie within the tropics. A monsoon climate is a major influence in the south, but the north and west have a typical continental climate, except that winters are extremely dry and summers quite rainy.

During summer, warm, moist, maritime airmasses bring heavy rains to eastern China, and hot, humid, summer weather is typical. Winter offers a sharp contrast when cold, dry Siberian air-masses dominate and often penetrate to the southern

provinces. Little precipitation falls during the colder months; clear days with low humidity and low temperatures are the norm. During late winter and early spring, strong north winds sweep across northern China, and hazy days, caused by dust storms, are common.

Population

A little more than 21% of all the world's people live in China. The Chinese Government estimates that the Chinese population has reached 1.26 billion. Population density varies strikingly, the greatest contrast being between the country's eastern and western halves. The high mountains, plateaus, and arid basins of the Tibetan Highlands and the Xinjiang-Mongolia Region comprise slightly more than half of China's area but contain only about 5% of the total population. In the eastern half of China, population density generally ranges upward from 130 people per square mile. Major heavily populated areas—those in excess of 520 people per square mile—coincide with level-to-rolling alluvial plains on which intensive agriculture is centered.

Most Chinese inhabitants are of Mongoloid descent, and ethnic distinctions are largely linguistic and religious rather than racial. The Han people comprise about 92% of the population; the remaining 8%—about 50 groups—are termed “minority nationalities” by Beijing. Although non-Han peoples are relatively few in number, they are politically significant. Most inhabit strategic frontier territory, and some in the southwest, Tibet, Xinjiang, and Inner Mongolia have religious or ethnic ties with groups in adjoining nations. However, the preponderance of non-Han groups in many parts of western China is lessening, because Han Chinese have entered these regions in increasing numbers since 1950.

Although unified by tradition, written language, and many cultural traits, Han Chinese speak a score of mutually unintelligible tongues.

Most Han Chinese use the northern dialect, commonly called Mandarin, or one of its variants; a national vernacular based on the Beijing variant of this dialect (“putonghua”) is in general use.

Religion plays a more significant role in daily life in southern China than it does in the north, but many mosques, temples, Daoist shrines, and churches have been reopened since the Cultural Revolution, and a great deal of restoration work is being done on ancient Buddhist temples. Ideology guides artistic expression and social behavior less than it used to, but despite artistic experiments with modern themes and techniques, China remains an austere and authoritarian state.

The dress of the average Chinese is increasingly colorful and stylish, particularly in urban areas. Chinese cuisine can be among the best and most varied in the world. The number of good restaurants is growing, and Western food is available in Beijing, Guangzhou, and Shanghai, where private restaurants have sprung up to compete with those in the major hotels.

Public Institutions

The 48-million-member Communist Party of China (CCP) dominates or influences virtually all sectors of national society. Party policy guidance is implemented through utilizing the party structure present in all important government, economic, and cultural institutions. Nearly 70 percent of government employees are party members, and the percentage is even higher in the more senior ranks. Party control is the tightest in government offices and in urban settings; it is considerably looser in the rural and national minority areas where 80 percent of the Chinese people live and work.

The party is headed by a Politburo, which currently has 21 members. The Politburo itself is headed by a seven-member Standing Committee. The General Secretary, a member of the Politburo Standing Committee, heads the Secretariat,

which is responsible to the Politburo and helps handle the day-to-day work of the party center and its relations with regional and local party committees. The Politburo, aided by the Secretariat, also oversees the work of the Organization, International Liaison, Propaganda, and United Work Front Departments.

The Politburo is chosen by the Party Central Committee, which is elected every 5 years at a Party Congress. The Central Committee meets twice a year in formal plenary session and at other times holds informal work conferences on important topics. In addition to the Central Committee, the Party Congress also elects a Central Discipline Inspection Commission and a Central Advisory Commission. Provincial and local party groups are patterned on the central model.

A Party Central Military Commission, consisting of about a dozen top-level members, oversees the People’s Liberation Army (PLA). The direct subordination of the PLA to the party underlines the special status and political importance of the PLA.

The party also uses such mass organizations as the Young Communist League, the Women’s Federation, and the labor unions as conduits for policy directives. Disrupted by the Cultural Revolution, these organizations have been rebuilt and revitalized.

The National People’s Congress (NPC) is formally the state’s highest organ of power. A new NPC is elected every 5 years and meets in plenary session for about 2 weeks once a year to review and adopt major new policy directions, laws, the budget, and major personnel changes. The NPC Standing Committee and the deputies who participate in the NPC’s specialized committees meet every 2 months for 10-day sessions to review and approve the lion’s share (90%) of Chinese legislation. The State Council, an executive body corresponding to a cabinet, is nominally

subordinate to the NPC, but in reality is the key player in the government structure and is charged with policy implementation. Members of the State Council include the premier, vice-premiers, state councilors, ministers, and heads of various commissions and special agencies. A court and a procuratorial system are also subordinate to the NPC.

The Chinese Constitution promulgated in 1982 guarantees freedom of speech, press, and assembly, but the government interprets the Communist Party’s “leading role” as circumscribing those rights. Outright opposition to the government is not tolerated. Self-censorship is common. Nevertheless, criticism of official corruption and even ad hoc, small-scale protests against petty grievances have been allowed to take place. Foreign books and periodicals—and Chinese translations of those materials—are available in libraries and bookstores. Commercial Internet service has also been available since mid-1995, but the government has pledged to monitor and censor content.

Arts, Science, and Education

The Chinese Government’s modernization-drive and its policy of “kaifang” (opening to the outside world) have combined to create a period of tremendous cultural ferment. Not since the early years of this century has China tried to assimilate such a rapid influx of foreign ideas. At the same time, conservative members of the old guard and bureaucrats—those wary of the onset of modernity, who cling to the past—still occupy key positions of power, thus creating a continuing tension between the new and the old, between the urge to rejoin the international community and the wish to protect China from its dangerous influences.

The impetus to modernize China culturally and economically stems, in part, from the desire to see China regain the position of influence it once held in Asia. The civilization

and culture that developed in the Yellow River Valley of North China in the second millennium B.C. eventually came to dominate virtually all of East Asia, including Japan and Korea. Since 1949, however, many aspects of traditional Chinese culture have disappeared from the land of their origin or have been severely altered by the socialist transformation of China.

Prior to the violent suppression of the Democracy Movement in June 1989, China's international cultural exchanges had been flourishing. The PRC has signed formal cultural agreements with many nations, including the U.S. Private sector exchanges, such as those carried out by People to People, Sister City and Sister State programs, and U.S. universities, are too numerous to count. Hundreds of performing and visual artists; scholars of politics, economics, law, and literature; and interested citizens representing a full spectrum of professions came to China from the U.S. every month. Thousands of Chinese, too, traveled to the U.S. under government and private auspices to enhance their expertise and make contacts in the international cultural community. Since the Tiananmen incident Western cultural influence has been viewed skeptically by Chinese officials, and they have been very selective in their support for international exchange.

The cultural life of China takes place under the watchful eye of a variety of organizations, including the Propaganda Department of the Chinese Communist Party Central Committee, the Ministry of Culture, the All-China Federation of Literary and Art Circles, and the local offices of these national organizations. During the past 10 years, China has restored many cultural institutions damaged by the Cultural Revolution and rehabilitated many artists and writers. However, the government's once-substantial support for the arts has been sharply reduced in the last few years because of budget constraints and a policy of decentralization. Many cultural organizations, art

schools, and performing arts groups have been told to become self-supporting. The full effect of the new policies is not yet apparent as cultural institutions must now grapple with financial and artistic problems they have not faced since before 1949.

Under the policy of opening to the outside world, international cultural exchanges are flourishing. Many countries, including the U.S., have signed formal cultural agreements with China, but it is the private sector that has shown the most rapid growth. Privately arranged cultural exchange activities are now too numerous to count. Through them, numerous foreign performers and teachers of art, music, dance, and drama visit China; art exhibits are exchanged; and many Chinese artists go abroad. This has had a profound impact on Chinese arts, but this Western influence is not without controversy. The interest of Chinese artists in Western literature and art is upsetting to those with traditional ideas. Some avant-garde or politically sensitive works continue to be banned and their authors silenced.

The Chinese cultural scene also includes a large number of art and history museums throughout the country. The museums include many important and exceptionally beautiful pieces. Particularly noteworthy are the museums in Liaoning, Xian, and Shanghai, along with the Beijing Historical Museum and the Palace Museum, which houses art treasures of the Qing Dynasty.

The Chinese film industry is at the forefront of Chinese creative arts. Mawkish socialist dramas have given way to serious films examining and questioning the political and ideological basis of Chinese society. A prominent group of young directors, known as the "5th Generation," has won international awards for its work.

For those who like to purchase artwork and handicrafts, China offers a wide variety. Antique ceramics, scrolls, carvings and hardwood fur-

niture are available, but prices are high, and objects predating the 19th century cannot be taken out of the country. Export of antiques is subject to close scrutiny by the Cultural Relics Department, which must approve any item before packers are permitted to pack it. Modern copies are widely sold, though the quality varies. Contemporary Chinese painting—both traditional watercolors and oils—is receiving increasing international recognition. The handicraft industry has flourished under the economic reforms and offers many regional specialties: Guizhou batik, Suzhou embroidery, carved chops, paper cuts, porcelain figurines, cloisonné, cinnabar, carved lacquer, wicker work, basketware, and others.

In an effort to overcome the ravages of the Cultural Revolution, China has made a large and continuing investment in science. Most scientific efforts are devoted to immediate developmental needs: defense, industrial technology, agriculture, and public health, but important advances are being made in basic science research. From 1949 to 1960, PRC science was heavily dependent on support from the Soviet Union, where many Chinese scientists and technicians were trained. In 1978, China decided to adopt Western technology and expertise for its modernization effort and sent thousands of scientists and teachers to Japan and the West (to the U.S. in particular) for training in science and technology specialties. Despite the ideological break with the U.S.S.R., science in China continues to be organized largely along Soviet lines, with research concentrated at the various institutes of the Chinese Academy of Sciences. Chinese scientists now participate actively at international conferences, and thousands of Chinese scientific periodicals are published. The largest U.S. bilateral science and technology exchange program, by far, is with China, and the largest Chinese program is with the U.S.

Compulsory education is mandated in China for the first 10 years of

Bicycle parking lot in China

Susan Rock. Reproduced by permission.

schooling, although many students drop out of every grade, particularly in rural areas. The literacy in China is about 82%. The current emphasis in Chinese educational policy is on improving secondary, technical, and vocational education and on extending educational opportunities to remote areas and undereducated populations. China is investing in teacher training to address a shortage of qualified secondary school educators. An educational television network and a TV university are broadcast throughout the country.

To develop a highly educated elite with the technological and managerial skills necessary for modernization, China has sent thousands of students abroad—two-thirds of them to the U.S. Chinese-Foreign/Foreign-Chinese publishers have embarked on a massive book translation program. The study of English is booming in China, and interest in the U.S. is intense. The

Voice of America has 150 million listeners in China.

Commerce and Industry

China's economy has grown at an average annual rate of about 9 percent since 1978. In that year, about 270 million Chinese lived in conditions of absolute poverty, while official PRC figures stated that the number had dropped to 70 million people by the end of 1994. Although growth has accelerated into double digits in recent years, the Chinese economy is marked by significant regional disparities. Heavy state-owned industries are concentrated in the northeast and Shanghai. Once poor agricultural regions in southern China, particularly Guangdong and Fujian Provinces, have emerged as dynamic light industry and trade bases. While rural areas near the coast and

urban centers have in many cases joined in the country's rapid industrial growth, interior and western provinces lack the infrastructure to support rapid growth. The low tax base of the central government has constrained needed investment in the interior for roads, railways, electric power, and other infrastructure.

Agriculture remains key to China's economy, with roughly 80% of the population living in rural areas. China is the world's leading producer of many food crops, including rice, wheat, and sweet potatoes, and is also a major producer of many other crops such as soybeans and peanuts. Major cash crops include cotton, tobacco, and oil seeds. Reform policies encouraging peasants to diversify into vegetable farming, poultry and fish breeding, and animal husbandry have boosted the variety and quality of the Chinese diet.

The need to provide food for over a billion people, as well as industrial crops like cotton for rapidly expanding industries, is an unrelenting challenge. China has already achieved relatively high per-acre yields, but only about 10 percent of China's land is arable and is frequently ravaged by droughts and floods. After a series of record harvests in the early 1980s briefly propelled China into the ranks of net food exporters, grain production dipped slightly. Rising domestic demand has forced China to again increase grain imports from the U.S., Canada, and Australia. Beijing hopes to boost grain production through increased investment, wider dissemination of scientific techniques, and some added incentives to peasants, but limited government financial resources will constrain these options.

China's modernization drive has benefited from a rich natural resource base. China's coal reserves are virtually inexhaustible, but transportation bottlenecks and air pollution are major drawbacks to China's dependency on this fuel. China is the world's sixth-largest oil producer, but production at some of the largest oil fields has peaked and is beginning to decline. Offshore drilling by Western oil companies has so far produced mixed results. China probably has large untapped oil reserves in the far west, but developing these fields and transporting the oil to markets will require large investments.

China's other mineral resources include iron, tin, tungsten, and many rare earths. China produces a full range of industrial products, from light industrial consumer goods to satellite launch systems. Chinese products lag behind Western standards in quality and design, however, and there is considerable demand for imported consumer durables as well as high-technology products. The policy of "reform and opening" has promoted the growth of joint ventures, which produce a variety of products for both the domestic market and export.

While growth has been both rapid and impressive, it has also outstripped supplies of energy and raw materials. Efficiency has suffered from bottlenecks in transportation and telecommunications. Energy and transport bottlenecks in particular will persist through the 1990s, with electricity supplies likely to be an important concern for many enterprises.

Foreign trade has grown rapidly since China opened to the outside world. At the end of the last decade, textiles overtook oil and coal as the main foreign exchange earner. In 1995, exports of mechanical and electrical products exceeded textile exports for the first time. Other leading exports include footwear, toys, travel goods, plastic articles, and steel products. China imports grain, timber, essential raw materials, high-technology goods, petroleum, aircraft, and machinery.

While reforms have brought about tremendous growth and societal changes, concerns about social stability have inhibited the implementation of potentially painful reforms needed to sustain China's rapid economic growth. China will face enormous social and economic challenges during the remaining years of this century.

Transportation

Local

A well-developed rail system exists in the densely populated eastern half of the country. Passenger service, including sleeping car accommodations, is available between all major cities. Domestic air service is extensive, and routes are now serviced almost entirely by jets, many of them American made. On less important routes, one finds a mixture of Russian-built turboprops and Chinese or Russian propeller planes. Transportation costs are high.

Taxi stands with English-speaking dispatchers are widely available in Beijing, and taxis of all shapes and sizes congregate in areas fre-

quented by Westerners in the hopes of getting a fare or can be hailed on the street.

In Beijing, most taxis are metered and charge about \$1.45 at flag-down and \$0.36 per kilometer. The fares are set, and passengers need not worry about being overcharged unless they enter a taxi without a meter in it. Receipts may be requested for payment. Taxi drivers normally do not expect tips, since tipping technically is illegal in China.

Regional

China follows a right-hand drive pattern, but a number of unique practices can make driving confusing for foreigners. Main roads are wide and in good repair, but the numerous pedestrians and bicycles make driving hazardous and often stressful. It snows in Beijing and Shenyang, but the streets are quickly cleared.

Nonstop international air service links Beijing with Japan and many cities in Europe, Southeast Asia, and Australia. Northwest has recently begun nonstop service to Detroit.

Communications

Telephone and Telegraph

Many improvements in telephone service have been made in recent years. The Chinese telephone system is quickly becoming a system meeting U.S. standards. An example of this is the addition of IDD lines. However, the new arrival may experience some frustration when dealing with the Chinese system. The monthly rate for basic service is comparable to that in the U.S.

International calls may be made to most parts of the world and English-speaking operators are on duty 24 hours daily. Connections to the U.S. and other countries are good, and the cost is comparable to that in the U.S. Both AT&T and Sprint offer access to the U.S. telephone system via a direct-dial num-

View of Nanjing from Yangtze River Bridge

© Wolfgang Kaehler. Reproduced by permission.

ber that can be accessed from apartment telephones and many public telephones in Beijing.

Domestic and international telex and telegraphic service is quick and reliable but can be expensive.

Computer Telecommunications

Beijing is undergoing a telecommunications revolution. In June 1995, commercial vendors began offering full Internet access at 9,600 baud data rates. Service providers are user unfriendly, but with perseverance, it is possible to establish an electronic mail link through the Internet. Lines, however, are unreliable, and frequent interruptions are common. Despite these problems, given the current rate of development, it is likely that Internet connections from other parts of China will soon be available as well.

Radio and Television

In addition to Chinese-language programming, local AM and FM radio stations now have daily news and feature programs in English, and regularly broadcast Western classical and pop music. A short-wave radio will provide you with the opportunity to listen to VOA, BBC, Radio Australia, and other English-language broadcasts.

Two to five TV channels can be received in most cities, with virtually all programs in color. While most programs are in Chinese, the national network, CCTV, and municipal stations in Beijing, Shanghai, and Guangzhou broadcast English-language news programs six evenings a week. Popular American television programs are occasionally broadcast in Chinese.

Newspapers, Magazines, and Technical Journals

Since 1981, the Chinese authorities have been publishing the English-language *China Daily*, which appears 6 days a week. This newspaper contains local and international news, business reports, a sports page with scores from around the world, and several local features.

The *International Herald Tribune*, the *Asian Wall Street Journal*, *Time*, *Newsweek*, and some other American and European periodicals can be purchased in some hotels and bookstores in many major cities.

Health and Medicine

Medical Facilities

While there are no expatriate hospitals, there are two expatriate

clinics. The International Medical Center is a joint venture with a tie to the International SOS Assistance. There are several expatriate physicians at this clinic, which is open 24 hours. The Asia Emergency Assistance evacuation company also has a clinic near the Ta Yuan diplomatic compound. Like everything imported into China, the care at these clinics is expensive. They have had problems importing vaccines and medicines, and only time will tell if these problems will be solved.

The dental facilities in Beijing are adequate for minor procedures such as routine fillings. There are two small expatriate dental clinics in Beijing, but their capabilities are limited. Individuals should have their routine dental work done before coming to Beijing. While there are several U.S.-trained orthodontists in Beijing, there are some concerns about infection control, and customer satisfaction has been mixed at best.

Most hospitals in China will not accept medical insurance from the United States. Travelers will be asked to post a deposit prior to admission to cover the expected cost of treatment. Many hospitals in major cities may accept credit cards for payment. Even in the VIP/Foreigner wards of major hospitals, however, American patients have frequently encountered difficulty due to cultural and regulatory differences. Physicians and hospitals have sometimes refused to supply American patients with complete copies of their Chinese hospital medical records, including laboratory test results, scans, and x-rays. All Americans traveling to China are strongly encouraged to buy foreign medical care and medical evacuation insurance prior to arrival. Travelers who want a list of modern medical facilities in China can e-mail the United States Embassy's American Citizen Services unit at AmCitBeijing@state.gov and request a list by return e-mail.

Ambulances do not carry sophisticated medical equipment, and

ambulance personnel generally have little or no medical training. Therefore, injured or seriously ill Americans may be required to take taxis or other immediately available vehicles to the nearest major hospital rather than waiting for ambulances to arrive. In rural areas, only rudimentary medical facilities are generally available. Medical personnel in rural areas are often poorly trained, have little medical equipment or availability to medications. Rural clinics are often reluctant to accept responsibility for treating foreigners, even in emergency situations.

Preventive Measures

Everyone should be current in their basic immunizations. In addition, the following are recommended for China: hepatitis B, Japanese B encephalitis (if staying more than 30 days), hepatitis A or gamma globulin, rabies for posts other than Beijing, and typhoid vaccines.

Overall, China is a healthier place than most countries in South Asia or Africa. Cholera, typhoid fever, and dysentery are not common, and most childhood diseases like measles and diphtheria are rare. Malaria prophylaxis is not needed except in Hainan Island and in areas near the Vietnam border.

Hepatitis is a major problem in China (types A, B, and E). Japanese encephalitis is still a threat during mosquito season. Since vaccines for these diseases require several series to provide full protection, please start them as soon as possible. Air pollution is bad in China and especially so in Beijing and Shenyang. Anyone with a chronic respiratory problem like asthma should not come to China. In the winter, severe dryness aggravates mucous membranes, and colds are common. Travelers should consult their doctor prior to travel and consider the impact seasonal smog and heavy particulate pollution may have on them. Humidifiers are essential for winters in Beijing and Shenyang. Because of the high population density of people, pigs, and water-fowl, China is a breeding ground for

influenza. Annual influenza vaccination is recommended, especially for those with chronic illnesses. Upper respiratory infection is the most common disease seen at the Medical Unit.

Most roads and towns in Tibet, Qinghai, parts of Xinjiang, and western Sichuan are situated at altitudes over 10,000 feet. Travelers should seek medical advice in advance of travel, allow time for acclimatization to the high altitude, and remain alert to signs of altitude sickness. HIV has become a significant concern in China. Travelers should always ask doctors and dentists to use sterilized equipment and be prepared to pay for new syringe needles in hospitals or clinics.

Water must be boiled for drinking, and it is full of sediments and minerals. A water distiller is highly recommended for Beijing and Chengdu. Night soil is still used for vegetables, and all vegetables should be soaked in a chlorine solution. The fluoride level in China is low, and a supplement is necessary for young children.

Please bring plenty of over-the-counter medicines like acetaminophen (Tylenol), cold medicines, and skin lotions or creams. These items are available locally but are more expensive. An extra pair of eyeglasses or contact lenses is recommended. The dusty atmosphere is especially hard on contact lenses.

Families with small children are advised to bring a cold mist vaporizer, which is helpful in dealing with the winter respiratory illnesses of the young. A heating pad may also be useful.

NOTES FOR TRAVELERS

Passage, Customs & Duties

A valid passport and visa are required to enter China. Americans arriving without valid passports and the appropriate Chinese visa

Susan Rock. Reproduced by permission.

Temple of Eight Immortals in Xi'an

are not permitted to enter and will be subject to a fine and immediate deportation at the traveler's expense. Travelers should not rely on Chinese host organizations claiming to be able to arrange a visa upon arrival.

Visas are required to transit China. Persons transiting China on the way to and from Mongolia or North Korea or who plan to re-enter from the Hong Kong or Macau Special Administrative Regions should be sure to obtain visas allowing multiple entries. Permits are required to visit Tibet as well as many remote areas not normally open to foreigners.

For information about entry requirements and restricted areas, travelers may consult the Embassy of the People's Republic of China (PRC) at 2300 Connecticut Avenue N.W., Washington, D.C. 20008, or telephone (1-202) 328-2500, 2501 or 2502. For a list of services and fre-

quently asked visa questions and answers, travelers can view the Chinese Embassy's web sites at <http://www.china-embassy.org>, or visa@china-embassy.org. There are Chinese Consulates General in Chicago, Houston, Los Angeles, New York, and San Francisco. Americans traveling in Asia have been able to obtain visas to enter China from the Chinese visa office in Hong Kong and the Embassy of the People's Republic of China in Seoul, South Korea.

Americans who overstay or otherwise violate the terms of their Chinese visas will be subject to fines and departure delays and may be subject to detention. Travelers should note that international flights departing China are routinely overbooked, making reconfirmation of departure reservations and early airport check-in essential. Passengers must pay a RMB 100 airport user fee (approximately \$12 US) when departing China on inter-

national flights and RMB 60 airport fee (approximately US \$7.20) for all domestic flights.

Chinese customs authorities enforce strict regulations concerning temporary importation into or export from China of items such as antiquities, banned publications or vehicles not conforming to Chinese standards. Information concerning regulations and procedures governing items that may be brought into China is available through the Chinese Embassy and Consulates in the United States. Students may bring into China only a limited number of items that are considered necessary for study and daily life. Some U.S. citizens residing in China have been required to pay customs duty on certain high-value items when departing China because procedures were not followed when the items were originally brought into China.

Americans in China who are not staying at hotels, including Ameri-

cans who are staying with friends or relatives, must register with local police. Americans who are questioned by police should immediately notify the U.S. Embassy or the nearest consulate. Foreigners detained for questioning may not be allowed to contact their national authorities until the questioning is concluded. Foreigners detained pending trial have often waited over a year for their trial to begin. Americans are rarely granted bail. Criminal punishments, especially prison terms, are more severe than in the United States. Persons violating the law, even unknowingly, may be expelled, arrested or imprisoned. Criminal penalties for possession, use, or trafficking of illegal drugs are strict, and convicted offenders can expect severe jail sentences and fines. Non-American foreigners have been executed for drug offenses. Several Americans currently incarcerated in China have been implicated in financial fraud schemes involving falsified banking or business documents, tax evasion schemes and assisting alien smuggling, including selling passports.

In the past, protesters detained for engaging in pro-Falun Gong activities have been deported quickly from China. Several of these protesters alleged they were physically abused during their detention. In addition, they alleged that personal property including clothing, cameras and computers had not always been returned to them upon their deportation. Chinese authorities report while they have deported these foreigners quickly after public demonstrations in favor of the Falun Gong, future adherents who intentionally arrive in China to protest against Chinese policy may receive longer terms of detention and possibly face prison sentences.

Chinese authorities have seized documents, literature, and letters that they deem to be pornographic, political in nature, or intended for religious proselytism. Persons seeking to enter China with religious materials in a quantity deemed to be greater than that needed for personal use may be detained and

fined. Chinese customs authorities may seize books, films, records, tapes, and compact disks to determine if they violate Chinese prohibitions. Individuals believed to be engaged in religious proselytism or in conduct Chinese officials consider immoral or inappropriate have been detained and expelled.

PRC authorities occasionally confiscate passports and levy exit bans against persons involved in commercial or other disputes. The U.S. Embassy or Consulate General will make inquiries with local authorities to ensure that the U.S. citizen's rights under the U.S. - China Bilateral Consular Convention are honored. The individual usually is not taken into custody, but is sometimes confined to a hotel or other facility until the dispute is resolved. The U.S. Embassy or Consulate General will issue another passport to any U.S. citizen who applies for one under these circumstances; however, even with a new U.S. passport, Chinese authorities will often block departure by refusing to provide a visa for exit purposes.

U.S. citizens other than tourists at major hotels are encouraged to register at the U.S. Embassy or at one of the U.S. Consulates General in China. They may also obtain updated information on travel and security within the country at the Embassy or Consulates General. It is possible to register from the United States via the Internet through the U.S. Embassy's home page at <http://www.usembassy-china.org.cn>.

Beijing: The U.S. Embassy in China is located at 2 Xiu Shui Dong Jie, Beijing 100600, telephone: (86-10) 6532-3431, 6532-3831, and after-hours: (86-10) 6532-1910; fax (86-10) 6532-4153. The U.S. Embassy web site address is <http://www.usembassy-china.org.cn> and the e-mail address is AmCit-Beijing@state.gov. The Embassy consular district includes the following provinces/regions of China: Beijing, Tianjin, Shandong, Shanxi, Inner Mongolia, Ningxia, Shaanxi,

Qinghai, Xinjiang, Hebei, Henan, Hubei, Hunan, and Jiangxi.

Chengdu: The U.S. Consulate General in Chengdu is located at Number 4, Lingshiguan Road, Section 4, Renmin Nanlu, Chengdu 610041, telephone: (86-28) 558-3992, 555-3119; fax (86-28) 558-3520; after-hours (86-0) 13708001422. This consular district includes the following provinces/regions of China: Guizhou, Sichuan Xizang (Tibet), and Yunnan, as well as the municipality of Chongqing.

Guangzhou: The U.S. Consulate General in Guangzhou is located at Number 1 South Shamian Street, Shamian Island 200S1, Guangzhou 510133; telephone: (86-20) 8121-8418; after-hours: (86-139-0229-3169; fax: (86-20) 8121-8428. This consular district includes the following provinces/regions of China: Guangdong, Guangxi, Hainan, and Fujian.

Shanghai: The U.S. Consulate General in Shanghai is located at 1469 Huaihai Zhonglu, Shanghai 200031 telephone: (86-21) 6433-6880, after-hours: (86-21) 6433-3936; fax: (86-21) 6433-4122, 6471-1148. This consular district includes the following provinces/regions of China: Shanghai, Anhui, Jiangsu, and Zhejiang.

Shenyang: The U.S. Consulate General in Shenyang is located at No. 52, 14th Wei Road, Heping District, Shenyang 110003, telephone: (86-24) 2322-1198, 2322-0368; after-hours: (86-0) 13704019790; fax (86-24) 2322-2374. This consular district includes the following provinces/regions of China: Liaoning, Heilongjiang, and Jilin.

Currency, Banking and Weights and Measures

Chinese currency (yuan) may not be brought into or taken out of China. Travelers checks, Hong Kong dollars, and U.S. currency may be exchanged at international airports, hotels, and government shops operating exclusively for foreigners.

Most exchange points require an official exchange certificate to

reconvert RMB to U.S. dollars. Be sure to save all receipts, therefore, when you change money upon arrival.

China's weights and measures are based on the metric system. However, a common unit of weight is the "jin," which is equivalent to one-half kilo.

Pets

Beijing: Starting May 1, 1995, the Beijing Municipal Government has implemented new regulations strictly controlling the registration of dogs in urban areas (limitations on size and breeds).

There are no similar restrictions against cats; however, there is a 1,000 RMB fee (\$118) payable at customs, and a general rule holding that only one pet per employee may be imported. Cats also need proof of a rabies shot (within the last year) and a certificate of good health dated no more than 30 days before arrival. While Chinese regulations call for a 1-month quarantine for cats in Chinese-designated facilities, health officials at the airport so far are allowing owners to "quarantine" the cat at home, but admonish owners to keep the cat indoors at all times and inform owners that during the month health officials have the right to come to the apartment to "inspect" the cat. No cat owner so far has reported such inspection visits.

The China Travel Service will not send unaccompanied pets from Hong Kong. You must make arrangements to ship your pet on a direct air route to Beijing.

Guangzhou: Official Chinese policy varies by locality. Most hotels will not accept dogs or cats.

Shanghai: Dogs cannot be let out on the streets of Shanghai and are limited to the grounds of your house or apartment complex. Dogs and cats must have valid rabies and health certificates accompanying them and will be inspected on arrival by local health officials. Authorities currently do not impose a quarantine. After arrival, dogs

must be registered with the Public Security Bureau, which will then issue individual identification cards. Cats are legal and do not have to be registered but are governed by the same regulations outlined for dogs. No facilities are available in Shanghai for boarding your pets. Pets should be shipped to Shanghai as check-in baggage.

Shenyang: Dogs and cats are available in the marketplace.

Chengdu: Pets are prohibited in Chengdu. There are no local kennels or veterinarians.

Disaster Preparedness

Some areas of China frequented by Americans, notably Yunnan Province, are prone to earthquakes. Coastal areas of Hainan, Guangdong, Fujian, and Zhejiang provinces are subject to typhoons during the summer rainy season. General information about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov>. Travelers should check weather conditions for cities and areas in China prior to departure. Winter weather and summer typhoons often cause the closure of airports in some parts of the country.

Suva, Fiji

FIJI

Republic of Fiji

Major City:

Suva

Other Cities:

Lautoka, Levuka, Nadi

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 2001 for Fiji. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Fiji is a tropical archipelago with all the advantages and disadvantages associated with island geography. The country offers beautiful scenery, friendly people, interesting work and excellent opportunities for outdoor recreation. It also features a full complement of tropical conditions, including heat, humidity, rain, mildew, tropical diseases (but not malaria), significant political issues and a shortage of urban amenities to which Americans are accustomed.

Fiji is the crossroads of the Pacific, a center for transportation, trade and regional organizations. The Embassy has responsibilities in three other independent countries-

Tonga, Tuvalu and Nauru-and three French overseas territories. Officers with regional responsibilities can expect substantial official travel.

Racial tensions between the indigenous Fijian and Indo-Fijian communities exist and have been exacerbated by two military coups in 1987 and an attempt& coup and unconstitutional change of government in 2000. Although these problems have led to isolated incidents of violence, Suva, for the most part, and the rest of the country continue to retain a friendly atmosphere. A good standard of public courtesy prevails in spite of the communal differences. Those willing to make the effort will be able to make friends in all of Fiji's assorted racial communities.

For the person who appreciates its attractions, Suva can be a pheasant assignment. Adherents of scuba diving, snorkeling, boating, golf and tennis will find their leisure hours well occupied when it isn't raining. Suva's shops are well stocked, so shortages of basic goods are seldom a problem. But Suva is not Sydney; nor is it a holiday destination as you might imagine. It is small and urban, and functions primarily as a commercial and government center. Visitors whose preferences run to theater, television, shopping, concerts or other forms of city-life

entertainment may find Suva somewhat dull.

MAJOR CITY

Suva

The capital, Suva, is the chief port and only sizable city in Fiji (population approximately 166,000, metropolitan area approx. 300,000). It boasts a natural harbor and lies on a peninsula on the southeastern coast of the main island of Viti Levu ("Great Fiji"). Suva's business center is adjacent to the wharf and harbor frontage; a light industrial park is on the north along the shore; and a complex of government buildings and government housing extends south. On the surrounding low hills are scattered residential areas, including the better sections of Tamavua, Domain and Muanikau. Another popular residential area, Lami, lies along the coast to the west. Across the harbor from the city rises an amphitheater of rugged mountains. Suva's airport is 26 kilometers (15.6 miles) to the east on the Rewa River, just past the small, outlying town of Nausori.

Newer residential housing consists of concrete, ranch-style or two-story houses with surrounding gardens.

Some older houses have verandas, often identified with tropical colonial outposts. Most houses have corrugated tin roofs.

Throughout the city, lush tropical growth is supplemented by municipal and private plantings of hibiscus, poinsettias, orchids, gardenias and varieties of tropical trees such as bananas, papayas, coconuts, palms, mangoes and breadfruit. Islands in Suva Harbor provide small swimming beaches, but the nearest sand beach frontage is 56 kilometers (35 miles) away at Pacific Harbour.

The city's shops are generally small and owned mostly by Indo-Fijians. Most greengrocers are Chinese. The Suva Central Market is the largest public market in the South Pacific and offers a large quantity and variety of fruits and vegetables in season. Suva has a number of large department-type stores and associated supermarkets, including the American company, Cost-U-Less, a warehouse-type store that opened in Nadi and Suva in 1998. A small number of business people, a few missionaries, some teachers and a few Americans married to Fijians comprise the small American community. The Europeans of Suva are divided among a small group of old families dating from Fiji's earliest colonial days and a more transient population of expatriates (Australians, British, and New Zealanders) in the civil service, business, and education.

Utilities

Water quality is generally good but may decline with excessive rain, breaks in the water main or disruption in treatment schedules. Electricity is relatively reliable, though current can fluctuate, and outages do occur. Current is 220v-240v 50Hz, AC. Electrical outlets are three-pronged, and adapters are available locally. Transformers are available locally but are expensive. Bring small appliances that will run on 50 Hz current.

Food

Frozen, fresh, and canned foods from Australia and New Zealand are available in a reasonable variety and regular supply. The American store Cost-U-Less provides a limited selection of American products. Food supplies are not as varied or of the quality found in the U.S. The cost of living, including food prices, is higher than in Washington, D.C.

Seasonal tropical fresh vegetables and fruits are plentiful and excellent.

Temperate-zone fruits such as apples, pears and oranges, and vegetables such as broccoli, celery, beets and leeks are imported and usually available, though expensive.

Baby food is available, but of poor quality. Bring a blender or food grinder to provide for your baby's needs. Australian, but not U.S., formulas are available. Sterilized and pasteurized milk is available, as is powdered milk. Butter and cream are also available. Locally produced sour cream, cottage cheese, and yogurt are available. Eggs are plentiful. American coffee is readily available, either ground or instant, but expensive. Australian coffee in instant form is readily available and is comparable in price to U.S. coffee.

Most beef and all pork sold in Fiji are locally produced and are acceptable. Imported beef, lamb and veal are also available, but are expensive. Fresh fish, sweet-water crabs, clams and smoked fish are sold in the central market and specialized stores. Local frozen poultry is available and reasonably priced. Frozen turkeys and fresh and frozen local fish are available.

Many people buy the locally produced beer, which is excellent. Locally bottled (under franchise arrangements) soft drinks and mixers are good. Australian- and U.S.-produced diet beverages are available in limited quantity and are expensive.

The traditional Fijian diet, different from what most Americans are used to, consists mainly of starchy root crops, green leafy vegetables, seafood and coconut products. Fresh ingredients for Chinese and Indian dishes are available.

Clothing

Clothing in Fiji is more expensive and generally of poorer quality than clothing bought in the U.S. Plan to bring most of what you will need. Dress is casual. At work women wear lightweight dresses or blouses and skirts. Men wear long trousers and short or long-sleeved shirts.

Women dress smartly, but casually, and seldom wear pants. At more formal functions, men wear a shirt and tie while women wear simple evening or cocktail dresses. Hats are rarely worn and are never required, since neither Fijian nor Indian women wear hats as part of their dress. (Traditionally, Fijians regard the head as sacred and refrain from touching the head of another person or putting anything on their own.)

Dressmakers are inexpensive by U.S. standards and have a good selection of fabrics, but the quality of the work is variable.

The climate necessitates frequent changes of clothing. Therefore, the most suitable type of clothing for both men and women is that which is cool, e.g., cotton, and easily washable. Drycleaning facilities and adequate laundry facilities are available, but quality varies. Cardigan sweaters are useful in the evening during cooler months, or when attending air-conditioned movie theaters and restaurants.

Infants' clothing is available, but is of limited variety. A dressmaker can sew satisfactory children's clothing, which can be supplemented by clothes ordered from the US. Schoolchildren wear uniforms made locally.

Bring an adequate supply of shoes for your tour. Shoes available locally

are of poor quality and often do not fit well.

This is especially true of sport shoes. In deciding on quantity, bear in mind that with frequent rainy days, shoes will wear out more rapidly than they would in a drier climate. Fair-quality children's sandals are available locally; the International School uniform specifies black sandals.

Also bring non-tropical clothing for travel to New Zealand, Australia or back to the U.S.

Supplies and Services

The larger local stores stock adequate supplies and varieties of toiletries and cosmetics, but prices are higher than in the US. and American products are usually not available. Bring a supply of your favorite toothpaste, shampoo and cosmetics, as they may not be available locally.

Most household items are sold locally at much higher prices than in the U.S. Dishes, glassware, cookware, and plastic and paper products are expensive and of poor quality by U.S. standards. If you have children, bring a supply of toys, including some gifts, since those available locally are expensive and of limited supply and variety. Many people use mail-order catalogs to purchase such items. Gift wrap paper and cards are also in short supply and very expensive.

Baby bottles, disposable diapers and other infant supplies are stocked, but cost much more than American equivalents. American-made bottles and nipples are not sold in Fiji.

A large range of Japanese and some European electronic and photographic equipment is available locally. American TVs and VCRs, which are formatted in the NTSC system, will not receive local TV broadcasts or play local videotapes, which are formatted in the PAL system. Some people overcome this problem by purchasing multi-system TVs and VCRs, but they are expensive. Video cassettes (in the

PAL system) can be rented at local shops. However, such tapes are often of very poor quality, which may damage or reduce the life span of your VCR. Generally, VHS tapes are more widely used than Beta. Many 240v household appliances, ranging from mixers and food processors to washing machines and microwave ovens, are available in Suva but are more expensive than those available in the U.S.

In addition to garbage collection, the Suva City Council provides grass-mowing services, garden debris removal and drain cleaning services along the roads. Dry-cleaning and shoe repair services are available. Routine electrical, plumbing and mechanical repairs are adequate. With auto repairs, some patience is required. Barbers and beauticians are inexpensive and adequate.

Domestic Help

Well-trained domestics are hard to find. Cooks are difficult to find, but most servants can prepare breakfast and lunch if they are sufficiently trained. Most live-in maids prefer to cook their own meals and will often ask to install a small stove in their quarters.

Most servants are paid about F\$60-\$90 per week (current rate of exchange is about F\$2.10 = US\$1.00), plus quarters. They work a 5, 5-1/2, or 6-day week, with 2-4 hours off in the middle of the day. Domestics need at least some training to ensure that they understand what you want them to do. Most local maids are happy to take care of children, but training is required in this area as well.

Religious Activities

English-language services are held in many Suva churches, including Anglican (Episcopal), Wesleyan, Seventh Day Adventist, Presbyterian, Methodist, Latter-Day Saints, Pentecostal, Roman Catholic and the Assembly of God. Most churches have charitable organizations affiliated with them. Hinduism, Islam, and other world religions are also represented in Fiji. Suva has a

small Jewish community. However, no synagogue exists.

Education

Suva has several preschools or kindergartens that take children from age 3 for 3 to 5 days a week, 4-6 hours per day. Fees are reasonable and the preschool training appears to be adequate.

Most Americans attend the International School of Suva (ISS), which encompasses both elementary and secondary levels. Preschool classes opened in 1996-97. The school offers the International Baccalaureate Program. ISS is accredited by ECIS, the European Council of International Schools. It is not accredited by any American association.

Other Suva schools that might be considered minimally adequate at the elementary level include Yatsen School (run by the Chinese community), the Catholic Stella Maris and Marist Brothers Schools, the government-operated Suva Grammar School (grade 4 through high school), and the Holy Trinity Anglican Primary School.

Schools in Fiji other than the ISS are very crowded. All schools maintain strict teacher-pupil ratios and cannot guarantee placement.

Schools in Fiji, like those in many other southern hemisphere countries, begin their school year at the end of January and end in November. ISS divides terms into quarters. For others, the school year is divided into three terms. Summer vacation occurs from the end of November through the end of January.

Special Educational Opportunities

The University of the South Pacific (USP) began offering undergraduate degree courses in 1969. In the mid-1970s, it established master's and doctoral programs. These programs are available to the 11 member countries and have recently become available to overseas graduate students, including Fulbright grantees from the U.S. From an aca-

Local produce market in Suva

Susan Rock. Reproduced by permission.

demographic point of view, families with college-age children would be wise to have them study outside Fiji, since USP's methods and standards of instructions differ significantly from those of U.S. colleges and USP degrees are not easily recognized in the U.S.

The University's Extension Service offers a variety of academic, cultural and practical courses for those working full time, as well as students who cannot enroll for residential or part-time studies. Adults may participate in day or evening classes in Pacific cultures and languages. The USP Extension Service, with French and Japanese Government sponsorship, offers language-training programs. The Fiji Institute of Technology (FIT) offers some evening courses.

Sports

The people of Fiji are keen sportsmen and women, and there are many sporting activities available. However, sporting goods, clothes and shoes are expensive and sometimes unavailable. Bring them with you or plan to purchase them from the States through mail-order catalogs.

Boating and water sports enthusiasts will find Suva's waters and boat-

ing facilities quite good, weather permitting. The lack of beaches in the Suva area makes ownership of a small boat attractive. Small sailboats and motorboats made locally are available at prices higher than those in the U.S. The local purchase of an imported boat is expensive because of high customs duties. Motors, fishing tackle, and snorkeling, scuba, and water skiing equipment are available in limited range and at high prices. Motorboats and snorkeling gear can be rented. Deep-sea fishing is available, but expensive. Fresh water fishing is possible along the interior rivers, but you will need a guide.

Scuba diving is popular in Fiji with two active dive clubs organizing day and weekend trips. Commercial dive operators offer trips near Suva, at several island resorts and on live-aboard and charter dive vessels. U.S.-recognized instruction is offered in Suva and at some resorts. Fiji's coral reefs are among the world's most beautiful. Dive sites range from shallow coral gardens suitable for beginners to challenging open water diving that will satisfy the most experienced hard-core fanatic. The omnipresent sharks are well-fed and generally non-aggressive; most divers quickly get used to their presence. A limited

selection of equipment is stocked locally, but prices are higher than U.S. levels. It is best to bring all equipment, including at least two tanks per diver. Underwater photographers should bring all their own gear. Diving safety standards in Fiji are reasonable, but the generally low standard of medical care and transport renders any accident more serious than in the U.S. or the Caribbean. There is only one decompression chamber in the country, located in the city of Suva.

Golf is a popular sport in both the expatriate and local communities. Suva has an 18-hole golf course at the Fiji Golf Club, which is only 10 minutes from the Embassy. The course condition is poor, especially due to frequent rain, but playable and very convenient. Membership is relatively inexpensive; as of September 2000 it was US \$150 per year. A Robert Trent-Jones designed championship course (that is also frequently wet) is available at Pacific Harbour, about 30 miles west of Suva. Annual fees there are US \$140 per couple and US \$93 per individual member. The best course in Fiji of international standard is located at the Sheraton Denarau Resort near Nadi, about 3 hours by car from Suva. Membership there is more expensive, at about US \$925 per year, which allows a maximum of 60 games annually. Carts are not available at the Suva course. Golf equipment is sold locally, but selection is limited and expensive so bring your own. Membership is not required to play at any of Fiji's courses. Green fees are reasonable by American standards, as are caddy fees.

Other popular sports are squash, tennis and lawn bowling. Tennis is very accessible and popular. Both lawn and synthetic courts are available. Local selection of tennis and squash equipment is limited, so bring your own. Two health/exercise clubs are available: Polaris and the Rabuka Gym. Suva has an Olympic sized pool, though water quality can be a problem. An organized swimming club for children meets at the pool and swimming lessons for both

children and adults are offered periodically.

Spectator sports include soccer, cricket, rugby, volleyball and basketball.

No hunting is done in Fiji.

Touring and Outdoor Activities

Suva's small Fiji Museum, located in Thurston Gardens (the local botanical garden) has good Fiji and South Pacific ethnographic collections. Orchid Island, west of Suva, and the Fiji Cultural Center at Pacific Harbour also offer interesting glimpses of traditional Fijian village life, handicraft making and traditional ceremonies. Fijians make decorative woodbark cloth with geometric designs called "Masi" (Tapa). They also are accomplished at wood carving and mat weaving.

Fiji has a very well developed tourism sector. Information on services and facilities is readily available. Cruises to the outer island of the Fiji group can be arranged at reasonable cost on small inter-island vessels that service the country. These trips can take from several days to one or several weeks, with stops at many small copra loading points. Long weekend or holiday trips to the beaches and hotels on the southwest coast of Viti Levu can provide a pleasant break from Suva's more urban atmosphere. Hiking is possible along a nature trail, with waterfalls at Colo-i-Suva just 7 kilometers from the city, though crime has been a problem at times. "Blue Lagoon" cruises to the Yasawa Islands northwest of Viti Levu, a stay at the off island resorts in the Yasawas, or a weekend at Toberua Island near Suva can give comfortable exposure to the traditional idyllic South Pacific island image. Rivers Fiji offers river rafting and kayaking as well as sea kayaking. There are a number of ecotourism opportunities.

Entertainment

For many, the great drawback to living in Suva, aside from the frequent

rain and the isolation of island life, is the relative lack of cultural, social, intellectual or simply diverting activities for a person who is not sports-minded. The Fiji Arts Council sponsors performances by touring artists, usually under the auspices of other governments, but they are very infrequent. The drama group of the Fiji Arts Club puts on several productions each year utilizing local dramatic talent. Other sections of the club offer arts and crafts, photography, music and dance. The fine arts group organizes shows of members' work.

The American Women's Association holds monthly luncheons for its members, frequent social events for couples and holiday parties for children. In addition the International Women's Association has a monthly morning tea with a speaker; the Corona Society does many good works; and the Rucksack Club sponsors several trips each month to explore Fiji's interior, coastline and islands.

One six-screen, very modern multiplex cinema theater and three other movie theaters in Suva show European, American, and Hindi films. Movies often reach Suva within a couple of weeks of release in the U.S., especially if they are action flicks. Movie prices are low (about US \$2.25).

Dining in Suva is improving, but is limited by its population. There are several good Chinese restaurants, an excellent Indian restaurant and a very good Japanese restaurant. There are also several restaurants offering good Continental cuisine. Several establishments offer good seafood and a number of small pizza restaurants and snack bars exist. The pizza is very mediocre. Those who travel to Tahiti or New Caledonia can enjoy good French cuisine.

Rock and reggae music are popular in Suva, with a number of good local bands. Two of the town's several discos are upscale enough to be widely patronized by government officials and expatriates. Hotels occasionally

hold "island night" dances with live bands. Urban Fijians have carried their traditional love of music and dancing into the city with them, making the nightclub scene surprisingly lively.

Fijian rituals are often colorful. The best known is the fire-walking ceremony of the islanders of Beqa (pronounced Bengga). The "Meke" (traditional dancing and singing) is performed occasionally at Suva hotels and regularly at the larger coastal resorts. Indians also perform ritual fire walking, but this is more religious in nature.

Photography is a popular hobby in Suva and several well-stocked photography stores exist. Film is expensive to purchase and develop here. Black-and-white film and color prints can be processed in Suva at costs much higher than the US. Bird-watching is also a popular hobby in Fiji because of the many varieties of birds that flourish in the islands.

The larger towns in Fiji celebrate various festivals. Suva hosts the week-long Hibiscus Festival in August, which includes parades and native dances. Similar events on a smaller scale are held in Lautoka, Nadi, and Sigatoka.

Using a camera at Fijian events is permitted but requires some care. Fijians can become upset if amateur photographers disrupt the dignity of their traditional ceremonies. Standing up, even in front of your seat, is particularly frowned upon. You may take as many pictures as you wish from a seated position.

Social Activities

Since the American community is small, few social activities are planned exclusively for Americans. The American Women's Association sponsors some activities and a fair amount of non-representational entertaining is done by individuals.

Clubs play an important part in the social life of many local residents. A few clubs are for men only, with an occasional day when women are

permitted. Others are essentially private drinking clubs. Except for a few hotel cocktail lounges and some squalid public bars, the bars of the various clubs are the center of much of the local social life, especially for men. Most of the sporting clubs (open to women) have a yearly formal or semi-formal dance and occasional "island night" dances. Hobby-oriented clubs, such as the shell collectors club, hiking clubs, diving clubs, etc., offer opportunities for social contacts.

The Fiji Women's Club offers a wide selection of social and volunteer activities and international contacts for women.

OTHER CITIES

LAUTOKA, the second largest city in Fiji with a population of about 36,000 (1996 est.), lies on the dry, west coast of Viti Levu. It is a major center of the country's sugar industry. The Colonial Sugar Refining Company has a huge mill here that ships raw sugar to New Zealand. Residents are Indian shopkeepers, workers, and artisans. Lautoka is a base for interisland cruises. A number of water sports-oriented beach resorts are located nearby. Local administration is conducted by a town board.

LEVUKA is located on Ovalau Island just east of Suva. It is a seaport and an historic town that was once the capital of Fiji. The population is approximately 1,400.

NADI (also spelled Nandi) is a village on the west coast of Fiji's main island, Viti Levu. It lies at the mouth of Nandi River and has an international airport. Nadi is a duty-free port. About 9,000 people live in Nadi (1996 est.).

COUNTRY PROFILE

Geography and Climate

Tourist literature on Fiji refers to "300 islands in the sun." Of the 320 islands and islets that make up the Fiji group, only about 150 are permanently inhabited. The total land area of the country, 18,272 square kilometers (7,055 square miles), is about the size of the State of Hawaii. The largest island, Viti Levu, 10,386 square kilometers (4,101 square miles), is about the size of the Big Island of Hawaii. Viti Levu has a mountainous interior penetrated by few roads. Most agricultural land and all towns are near the sea or along the river valleys. The highest point, Mt. Victoria, rises 1,323 meters (4,341 feet). Twenty-eight other peaks exceed 914 meters (3,000 feet). Vegetation on the windward side of the islands is luxuriously tropical, while grasslands prevail on the leeward sides.

The climate is warm and humid. Suva, on the eastern "wet" side of Viti Levu, averages 120 inches of rain annually. The western and northern sides of the island are drier and sunnier. Temperatures in Suva range from the high 60s in the winter, to the mid 90s in the summer.

Most of Fiji's sugarcane, the nation's primary crop, is grown on the western side. Nadi (pronounced Nandi), site of the international airport, lies on the western side, benefiting from the better weather and visibility. Many of Fiji's tourist resorts, some ranking among the best in the world, are in the West.

The wet summer season lasts from December through March. The cooler, drier winter season falls between May and October. Although temperature changes are noticeable, the average number of days of rainfall in Suva varies little from month to month. Humidity during summer is usually high, often

reaching 90% and above. Fiji is in the hurricane zone. The last hurricane to hit Suva directly was Cyclone Kina, in January 1991. In March 1997, Cyclone Gavin swept through northern Vanua Levu and the northwestern part of Viti Levu, devastating several outer island-groups. Southeast trade winds blow steadily from March to October, with variable winds during the Southern Hemisphere summer. Mildew and corrosion present constant problems. The use of air conditioning, dehumidifiers and "hot closets" reduce the danger of mildew damage to clothes, video tapes and other possessions.

Non-malarial mosquitoes are numerous, particularly in the summer. An epidemic of mosquito-borne dengue fever, which reoccurs every few years, occurred in early 1998. Poisonous insects, snakes and sea life are not common, though scratches and cuts, particularly those suffered while swimming or diving, need to be treated promptly as they can easily become infected.

Fiji lies near a major fault line and has suffered major earthquakes. Although the last severe quake was in 1953, small tremors are occasionally felt. In November 1998, quakes registering as high as 4.3 occurred on the island of Kadavu, southeast of Viti Levu.

Population

Fiji's population was estimated at 776,000 at the end of 1997. According to official figures, ethnic Fijians now outnumber Indo-Fijians. The Fijians are descended from Melanesian voyagers who arrived in the islands hundreds or thousands of years ago. Most of the Indo-Fijian population is descended from indentured laborers who arrived in the late 19th century to work on sugar cane plantations and stayed on when their indentures expired.

Emigration among the Indian population, already an established trend, accelerated after the 1987 military coups. Many emigrants were professionals and managers, resulting in

serious consequences for human resources and the economy. As many as half of Fiji's doctors and lawyers emigrated in the 18 months following the first coup. According to the last census, official population estimates for December 31, 1997 are as follows: Fijian 51%, Indian 42.5%, Others 6.5%.

The "others" category includes part Europeans (the local term for persons of mixed Fijian and European ancestry), Rotumans (Rotuma is an outlying island whose population is Polynesian), other Pacific islanders, Chinese and Europeans (whites).

Fiji straddles an ethnic line between Melanesia to the west and Polynesia to the east. As a result, Polynesian influence is prevalent in Lau, the eastern islands of the Fiji group. Fiji's diversity is also reflected in its many religions. The indigenous Fijian population is mainly Methodist, with strong minorities of other Protestant groups and Roman Catholics. Fijians, like most Pacific islanders, are devoted to their religion and maintain a strict Sabbath. Many Chinese are Roman Catholic. The majority of Indo-Fijians are Hindu; the remainder are Muslims, Sikhs, or Christians.

English, Fijian and Hindi are the three languages of the islands, with English being the official language of the government and the media. The older Chinese speak Cantonese as well as English. Despite the use of English in the country's schools, it is estimated that outside of the major urban areas, only 20% of Fiji's population can speak English fluently.

Fiji's several ethnic communities have maintained their unique cultural patterns, giving the country an attractive, multi-cultural atmosphere. Although various ethnic groups support separate churches, many schools are integrated.

Public Institutions

A decade after two military coups in 1987, Fiji made significant progress

toward the restoration of democracy with the approval of an amended Constitution in 1997, which encouraged multi-ethnic government while protecting traditional indigenous Fijian cultural and land interests. Under the amended Constitution, which included a strengthened bill of rights, the Prime Minister and the President could be of any race. For the first time, in addition to communally allocated seats, open seats were created that were not allocated to any racial community in the Lower House.

Democratic elections were held in May 1999, the first under Fiji's revised, more democratic Constitution, resulting in a change in government. The Labor Party-led coalition headed by Mahendra Chaudhry, was elected with a large parliamentary majority. Chaudhry was Fiji's first Indo-Fijian Prime Minister.

However, in May 2000, an armed group of militant ethnic Fijian nationalists, joined by a few military officers, seized the Prime Minister and his Cabinet in the Parliamentary complex and held them hostage for 56 days. Following continued political turmoil, the army usurped governmental authority, forced the resignation of President Ratu Mara, abrogated the 1997 constitution and installed an Interim Prime Minister and Cabinet. A commission to formulate a new constitution has been established by the Great Council of Chiefs and elections are promised by August, 2001. Fiji is likely to remain an undemocratic state for at least two or three years.

Fiji has a wide variety of nongovernmental, fraternal, and charitable organizations such as Rotary, Lions, Jaycees, YMCA/ YWCA, Red Cross, Girit Council, Muslim League and women's groups. Some such organizations are communally based; others are multiracial.

Arts, Science and Education

As a small, primarily agricultural country, far removed from any metropolitan center, Fiji has limited self-generating cultural activities or major scholarly centers. The Fiji Arts Council, with government support, sponsors a number of local arts and crafts clubs. The Fiji Arts Club presents five or six quality productions each year. Dancing, singing and various Fijian and Indian religious and secular celebrations and ceremonies are a colorful and authentic continuation of a long tradition.

The University of the South Pacific (USP), established in 1967 in Suva, contributes to the intellectual life of the regional community. Founded as a regional university for the English-speaking areas of the South Pacific, USP concentrates on educating professionals and teachers. Institutes of Marine Science, Natural Resources, and Research; Education and Extension in Agriculture; Social Sciences Administration; and Pacific Studies are expanding USP's scope of research and teaching. USP's School of Agriculture is located in Samoa, and the School of Law is in Vanuatu.

The small, but excellent, Fiji Museum has a good collection of traditional Fijian artifacts, as well as displays from throughout the Pacific. Art and other exhibitions by local or visiting artists provide some cultural diversions.

Commerce and Industry

Fiji is primarily an agricultural country, dependent on sugar and, to a lesser degree, other agricultural commodities for export income. In recent years, tourism has been the fastest growing foreign-exchange earner in Fiji and may well become the most important industry in future years. Gold is mined in the interior of Viti Levu, although production varies with market price. Timber, particularly Caribbean

pine, is an important export due to a major forestation project begun by the government in 1972. Major stands of mahogany, planted 30 or more years ago, are maturing and ready for harvest. Some light industry, including marine repair facilities, a brewery, flour mills, several rice mills, a cooperative dairy plant capable of producing both fresh and ultra-high temperature (UHT) milk, a steel-rolling mill, and a household paint factory have been established. Sugar and tourism constitute the mainstays of the economy, accounting for more than half of the nation's foreign exchange earnings.

Fiji imports from Australia, New Zealand, Japan, the U.S. the UK, and Southeast Asia. It is a member of the International Sugar Organization and exports sugar to the European Community under the Cotonou Convention.

Land in Fiji is either Crown land (owned by the government, 10%), freehold land (7%), or native land (83%). As in most of the Pacific, native land is held in common by extended family groups. Some land was alienated from these groups before Fiji became a British possession in 1874 and it is now freehold. Once Fiji became a colony, native land was protected and no further significant land sales were allowed. The native land is controlled by the Native Lands Trust Board, which administers the land for the family groups. Substantial areas of native land, however, are mountainous with only forestry as a potential commercial activity. Immigrant groups (mainly Indians) have had difficulty buying land and, as a result, have become tenant farmers or have entered commercial fields. Most agricultural land is currently leased for a period of 30 years, after which it reverts to the traditional land-owning group unless negotiations succeed in establishing new lease arrangements. Much of Fiji's land remains under-utilized. As leases expire, Fiji faces a dilemma. Ethnic Fijian landowners are increasingly eager to farm their own land or are demanding high lease rates. Consequently, many Indo-

Fijian farmers face the prospect of becoming displaced.

Fiji's largest commercial firms are, for the most part, owned by expatriates or naturalized European-Fijians. Business methods are predominantly Australian, New Zealand and British.

The undemocratic change of government in May 2000 had a devastating effect on the economy. GDP declined by over 10 percent. Tourism declined nearly 40 percent, resulting in the loss of thousands of jobs. The garment industry has faltered in the face of sanctions by Australia and New Zealand, costing many more jobs. In all, it is estimated that 7,000 jobs were lost in the four months following the May crisis. The 2000 sugar harvest was not immediately affected. However, the EU is reassessing its preferential sugar pricing for Fiji in light of the loss of democracy. Fiji also may lose preferential markets for its textiles. Such changes in preferential pricing would have devastating impacts on the sugar and garment industries. A serious contraction of the economy is expected in 2000 and beyond.

Transportation

Automobiles

You will want a personal vehicle. Travel on the main island of Viti Levu is mostly by road and moves on the left. The maximum speed limit is 80 kph (50 mph).

Fiji operates on the metric system and traffic moves on the left. Before shipping an American car by sea freight, consider the advantage of buying a right-hand drive car in Fiji. Vehicles manufactured in Japan and Australia are available. All imported cars must be inspected (called a warrant of fitness in Fiji) if it was previously registered in a foreign country. Do not attempt to convert a left-hand drive vehicle to right-hand drive in Fiji.

Adults (ages 18 and over) must have a Fiji driver's license. A valid US

license or a license issued by any other foreign country may be used for 6 months only. Third-party insurance is mandatory, but inexpensive. Bring "no-claim" letters for a discount, which will bring the cost down.

Resale of locally purchased cars is unrestricted. Applicable customs duty must be paid by the seller.

Given that unleaded gas is now readily available in Fiji, there is no longer any need to remove the catalytic converter from vehicles imported from the U.S.

Local

Suva has sufficient paved streets for the number of cars in the city. A generally good paved road circles most of the main island of Viti Levu. From Suva to Lautoka, following the southern and western coasts, the coastal road is called the Queens Road. Many of Fiji's tourist hotels are located along this stretch. From Lautoka to Suva, following the northern and eastern coasts, the road is called the King's Road and includes a 30-mile stretch of rough gravel road along the northeast coast. It takes about 50 minutes to drive to the Pacific Harbour Beach and Golf Resort to the west of Suva, and about 3 hours to drive from Suva to Nadi and the international airport.

Avoid driving out of the main cities and towns at night. Stray livestock occasionally wander in the road and have caused fatal accidents in the past.

Public transportation by bus is frequent and inexpensive, but the bus fleet is aging. Taxis are plentiful, equipped with meters and inexpensive. Most, however, are in poor condition and it is common for taxi drivers to speed and otherwise drive in an unsafe manner. Motorcycles and bicycles are rare in Suva. Frequent rain and hilly terrain make them impractical.

Regional

Air Pacific, Fiji's international flag carrier, and other regional airlines

have international flights that connect Fiji with Los Angeles, Honolulu, Australia, New Zealand, Tonga, American Samoa, Samoa, Tuvalu, Kiribati (formerly the Gilbert Islands), New Caledonia, Tahiti, Vanuatu (formerly the New Hebrides), and Japan.

International airlines serving Fiji from the U.S. are Air Pacific (in a code share with American Airlines from Los Angeles) and Air New Zealand (in a code-share with United Airlines from Honolulu). U.S. government travelers must travel on one of these code-share flights. Currently, no American flag carrier serves Fiji directly.

Air Pacific, Fiji Air and Sun Air operate routes within Fiji. They provide several daily flights between Suva and the international airport at Nadi, and also service the islands of Vanua Levu and Taveuni. Air Fiji and Sunflower fly to smaller airports in the Fiji group and Tuvalu, and Turtle Airways connects various resort areas by small amphibious aircraft. There is a helicopter service.

Communications

Telephone and Telegraph

Local telephone service is good. Fiji is served domestically by Telecom Fiji Ltd, while international communications are provided by Fintel, Ltd. Telephone connections with Australia, Canada, the U.S., Europe, and most of the rest of the world are excellent, but do experience occasional "fade out" and disconnection. Regional communications to the neighboring and smaller islands is somewhat less reliable and can vary in quality depending on the time of day and prevailing climatic conditions. E-mail and Internet communications are available through Telecom Fiji Internet Services, but are expensive, slow and subject to disconnection. Telephone Calling Cards are available as well as mobile (Vodafone) telephone services and voice mail. International and domestic telegram services,

including Western Union, are available 24 hours and are reliable. Though Fiji's communication services are good and generally keep up with emerging technologies, prices are high by US. standards.

Mail

International airmail takes up to two weeks to and from the U.S. Packages sent by international surface mail are transported via sea and can take up to 3 months to arrive. No censorship exists and packages pass through customs without delay. However, there have been complaints, though rare, about packages being stolen from the Fiji mail system.

Correspondents in the U.S. however, should be cautioned to put sufficient postage on letters and to clearly mark them "AIRMAIL" to ensure they are handled as airmail and not as surface mail.

Radio and TV

Fiji has one commercial TV station, which offers one free channel and two cable channels: Sky Entertainment and Sky Sports.

Two radio stations operate in the country. The government-owned Island Network Corporation broadcasts nationwide in three languages: Hindi, Fijian and English. Established in 1954, it is run by the Fiji Broadcasting Commission and broadcasts 24 hours a day, 7 days a week. It directly rebroadcasts foreign news from BBC and the Australian Broadcasting Corporation (ABC). It also uses prerecorded and packaged music and current affairs programs to supplement local productions. FM 96 is commercially run and has a 24-hour, all-music format geared to younger listeners. It also broadcasts in three languages, and has brief news programs. It derives its world news output from the BBC, ABC, and VOA. FM 96 has transmitters in Suva and Lautoka.

Japanese short wave radios are available locally. Reception from Australia and New Zealand is good, but the same cannot be said for VOA or BBC.

Newspapers, Magazines and Technical Journals

Currently, the country has three daily English-language newspapers, The Fiji Times, The Fiji Sun and the Post. Locally published monthly magazines include Pacific and The Review. Hindi and Fijian language newspapers are published weekly by the Fiji Times. Up-to-the-minute news on Fiji can be found on the Internet at www.fijilive.com, a website run by The Review magazine.

Overseas papers are not readily available. Australian and New Zealand papers usually arrive several days late. The New Zealand editions of Time and Newsweek are sold locally at newsstands or by subscription. Some American magazines are available locally (House and Garden, Vogue, etc.), but arrive late and are expensive.

The Suva City Library has a small, dated selection of fiction and nonfiction.

The University of the South Pacific has a good library and limited bookstore. A small and expensive selection of paperbacks is available at bookstores in town.

Health and Medicine

Medical Facilities

Most medicines are available at the many drugstores around town. Local doctors are competent to care for common ailments.

Most routine laboratory tests are performed by their staff or are sent to the main laboratory at the national hospital (Colonial War Memorial (CWM) Hospital) in Suva. Some tests, previously sent overseas, can now be tested at the two new private pathology laboratories in Suva. The Health Care Pacific Hospital (a new private hospital) houses one of the two private pathology labs. The Plaza Imaging facility provides private ultrasound and basic X-ray services in Suva. Special X-rays, ultrasound, CAT

scans and echocardiogram services are available at CWM in Suva.

A 60-bed private hospital (Health Care Pacific), associated with Colonial Insurance Company, opened in mid January 2001. It offers outpatient and inpatient services, operating theater services and a modern state-of-the-art pathology laboratory staffed by local and overseas specialists.

Due to the political crisis in Fiji that began in May 2000, professional people such as doctors, nurses, accountants, dentists and medical technicians are leaving the country. According to the president of the Fiji Medical Association, it is estimated that by January 2001 there will be a manpower loss of up to 30% not only among private practitioners, but also local and expatriate doctors currently staffing the main government hospital in Suva.

A cut in salaries in 2000 due to the political crisis has prompted even more nurses to resign and emigrate. As a result there is a move to hire ward assistants (nurses aides) to look after the basic nursing care of patients in the hospitals. In addition, many of the most qualified local nurses have been recruited from the Ministry of Health to staff the new private hospital (Health Care Pacific). This nursing shortage is likely to greatly affect the quality of care for patients in the government hospitals and community health centers in the country.

The Suva Colonial War Memorial Hospital is not recommended for treatment except in an emergency for the stabilization of a patient either in the coronary or intensive care units prior to an evacuation. The original hospital buildings are old and have only slowly been renovated and painted. The newer extension houses the Accident and Emergency Units, all specialty clinics, operating theatres, acute care wards, critical care units, the main laboratory, the pharmacy and lecture theatres for the medical students. The hospital does not meet sanitation standards of American

facilities. It is understaffed and the local training of medical and nursing personnel is not comparable to that found in the U.S. Nonetheless, the hospital is the best facility to cope with immediate treatment of serious medical emergencies until medical evacuation can be arranged. Most cases of serious illness or pregnancy are evacuated to Honolulu.

A new Children's Hospital (a new addition to CWM), which opened in April 2000, is a very clean and spacious facility and includes a neonatal unit, outpatient and inpatient services for children, a pharmacy and neonatal training facilities.

There are several American doctors currently working on contracts for the Fiji School of Medicine in Suva. They specialize in pediatrics, general surgery and research.

Dental care and orthodontic services are available in Fiji. There is only one qualified orthodontist in Fiji who is based in Lautoka on the western side of the island, 220 km. from Suva. He is good and inexpensive. Although several private dentists can provide routine care and are comparatively inexpensive, sanitation may not be up to U.S. standards.

Replacement eyeglasses are available in Fiji, and there are a few qualified ophthalmologists who offer limited eye diagnostic services. However, it is recommended that eye problems be taken care of before arriving in Fiji. Contact lens users should bring a supply of solutions with them, as supply and selection are limited.

If you require regular prescription medicine, make arrangements for refills to be sent to you from an American pharmacy.

Pharmaceuticals in Fiji are imported mainly from Australia and New Zealand, with a few imported from the U.S., Canada and India. Intravenous fluids are imported from Baxter Company in Australia. Insulin is imported from Lilly Com-

pany. Most antibiotics are imported from Alpha Med in Australia. Vaccines are imported from New Zealand and Australia. Fiji has no capacity to test the quality of these imported drugs, other than screening drugs for expiration dates and any unusual characteristics such as color or shape. Questionable drugs are sent overseas for testing. American over-the-counter medicines are generally not available. Bring a supply of anything you regularly use, or arrange for it to be sent to you.

Community Health

Sanitation in Suva is good by developing world standards. The general health of the population is also good. Filariasis and dengue fever exist in the islands. Infectious hepatitis is common but infectious disease rates are generally low. Leptospirosis has been the cause of several deaths in Fiji lately and preventive measures have been taken to educate the public on how to prevent contracting this disease. Tap water in Suva is usually potable, but not always. Boiling drinking water is recommended, especially during periods of heavy rainfall. The post provides water distillers at all residences. Most restaurants are safe. Homes in several residential areas use septic tanks rather than the sewer system. Garbage disposal is adequate. Vermin and insect pests, which thrive in this hot, wet climate, are always a problem that requires vigilance.

Lizards, lawn toads and mosquitoes are numerous but harmless, except in the case of the mosquitoes during dengue fever outbreaks. Bring a supply of insect repellent for use outdoors. Take care in choosing an appropriate repellent for children. Malaria does not exist in Fiji or in the island countries to the east of Fiji. Typhoid outbreaks can occur, but are quickly contained and rarely seen in Suva. Sexually transmitted diseases are on the rise, as are the number of HIV positive cases, especially among young people.

Preventive Measures

Only the usual State Department immunization requirements are

necessary. Gamma globulin shots are recommended before you come. Yellow fever and typhoid vaccines are available in Fiji for preventive measures if needed for regional travel. There is no malaria or yellow fever in Fiji.

NOTES FOR TRAVELERS

Customs, Passage & Duties

Proof of sufficient funds, an onward/return ticket, and a passport valid for at least three months beyond the date of departure from Fiji are required for entry to Fiji. A visa is not required for tourist stays up to six months. Yachts wishing to call at the Lau group of islands need special permission granted at the first port of entry into Fiji. Fiji collects a departure tax, payable in local currency. For more information about entry/exit requirements, travelers may contact the Embassy of the Republic of Fiji, 2233 Wisconsin Avenue, N.W., No. 240, Washington, D.C., 20007; telephone (202) 337-8320, or the Fiji Mission to the United Nations in New York. This is particularly important for travelers planning to enter Fiji by sailing vessel.

U.S. citizens are encouraged to carry a copy of their U.S. passports with them at all times, so that, if questioned by local officials, proof of identity and U.S. citizenship are readily available. According to Fijian law, a criminal detainee may be held for a maximum of 48 hours before charges are brought. INTERPOL normally advises the U.S. Embassy of the detention or arrest within 24 hours of the incident. Nevertheless, U.S. citizens who are detained are encouraged to request that a consular officer at the U.S. Embassy in Suva be notified

U.S. citizens are encouraged to register at the U.S. Embassy in Suva. The Embassy will also be able to provide updated information on travel and security in Fiji. The U.S. Embassy in Fiji is located at 31 Lof-

tus Street in the capital city of Suva. The telephone number is (679) 314-466, and the fax number is (679) 302-267.

Pets

It is relatively easy to import pets from Australia, New Zealand or England. For pets originating from other countries, the procedures can be extremely cumbersome and expensive, e.g. long-term quarantine in England and Australia, or 6 months of quarantine in Hawaii, to be followed by 3-month quarantine in Fiji. However, a recent arrival's positive dealing with the Quarantine Department indicated that there has been a change in policy, resulting in less restrictive procedures. Depending on the type of pets, quarantine restrictions differ. Generally, however, importation requirements of dogs and cats originating from the mainland U.S. are: Directly from mainland U.S with 3 months of quarantine in Fiji. Via Hawaii with one month of quarantine in Hawaii, followed by 1 month of quarantine in Fiji.

Nonetheless, the process remains protracted and complicated.

The following breeds of dogs are prohibited from importation into Fiji: Dogo argentino, film brasileiro, Japanese tosa, pit bull terriers (including American pit bull terriers), rottweilers, staffordshire terriers or crosses of any of the above.

Firearms and Ammunition

The importation of firearms is prohibited. No exceptions are made.

Currency, Banking, and Weights and Measures

The official unit of currency in Fiji is the Fiji dollar. One U.S. dollar in September 2000 equaled Fiji dollar 2.10. The rate is determined daily and fluctuates slightly. Fiji currency is divided into cents, with 1, 2, 5, 10, 20, 50 cent and 1 dollar coins; and 2, 5, 10, 20 and 50 dollar notes.

Many commercial banks in Suva maintain exchange facilities. Personal Fiji dollar checks may be

cashed at any of these banks and will be accepted at most Fiji hotels and shops. U.S. dollar traveler's checks and greenbacks may be used to purchase Fiji dollars at any of the exchange facilities.

Fiji uses the metric system of weights and measures. Gasoline is bought by the liter, and the temperature is measured in Celsius.

Taxes, Exchange, and Sale of Property

All purchases in Fiji are subject to a 10% value added tax (VAT) placed on all goods and services.

GEORGIA

Republic of Georgia

Major City:

Tbilisi

Other Cities:

Batumi, Kutaisi, Rustavi, Sukhumi

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 1999 for Georgia. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Georgia is an ancient land, rich in history. It is the site of Colchis where, legend has it, Jason found the Golden Fleece. A Christian country since the fourth century, Georgia has been a crossroads and, at times, a battlefield for Assyrians, Arabs, Mongols, Persians, Turks, Russians, and others.

A new Georgia has emerged from the collapsed Soviet Empire. In today's Georgia, Western engineers are building oil pipelines where the Silk Road once ran. Fully occupied with nation building, Georgians are anxious to draw on the American experience to build a viable democracy and free market economy.

Tbilisi lies along the Kura River across a series of steep hills; its winding, tree shaded streets are at the heart of a charm that made Tbilisi one of the most livable cities in the former Soviet Union. Although it is just the size of West Virginia, Georgia enjoys some of the most spectacular natural beauty in the world. Mountain, desert, vineyards, sub-tropical groves and the fabled Black Sea Coast are within a few hours of each other. A visit to Georgia is a ticket into the very eye of history.

MAJOR CITY

Tbilisi

In 458 AD, the capital of Georgia was moved from the small, nearby town of Mtskheta to its present location, Tbilisi. The founder of Tbilisi, King Vakhtang Gorgasali, named the city Tbilisi (from the Georgian word "tbili," meaning warm) after discovering hot sulfur springs. Many hot sulfur baths are still in use today.

Tbilisi has a population of approximately 1,400,000 and is spread out over 135 square miles. Adding to Tbilisi's natural beauty is the Mtk-

vari River (also called the Kura in Russian) which flows through the city center. Tbilisi is neither European nor Asian but an exotic mixture of both, as illustrated by the architecture, houses of worship, open-air markets, sulfur baths, and different nationalities living together in common courtyards.

Utilities

The electrical current in Tbilisi is 220 volt/50 Hz.

Personal computer users should bring a high quality surge suppressor and an uninterruptible power supply (UPS).

Food

While many fresh fruits and vegetables, meats, dairy products, and spices are seasonally available, supply, selection, and quality also vary seasonally. Generally, pork, beef, veal, lamb, imported whole chicken and leg quarters, and fish (freshness is not guaranteed) are available in the local open markets. The art of carving is not practiced by local meat vendors: meat is cut off the carcass and not trimmed to Western standards. Cutting utensils, storage bags, and a meat grinder are essential in preparing meat for cooking or freezing. Likewise, those interested in freezing or

canning fruits or vegetables should bring all supplies required.

Yogurt, sour cream, eggs (bring egg cartons), butter, and local cheeses are available but textures and tastes vary. The joint venture stores have imported dairy products but the supply is unreliable.

A variety of fresh and dried spices is available year-round. Raisins, apricots, figs, and dried beans are also available but must be cleaned well before use.

Clothing

At present only a few small private shops offer a limited supply of Western-style clothing. It is advisable to bring all clothing and shoes to post as well as a supply of mail order catalogs. The climate in Tbilisi is similar to that in Boston or Washington; thus, clothing for a full range of seasons is needed.

Washable, lightweight cotton fabrics are appropriate for the late spring and summer months. Winter clothing is required for the cold months of November through March.

Locally available shoes are mostly imported from Turkey and Italy. Many Western-style shoes can be found but at unusually high prices. Sizes are generally erratic. To have clothing made locally, personnel should bring all fabric and sewing notions.

Supplies and Services

Although Tbilisi has several new supermarkets, items can be quite expensive and inventory is erratic. Bring a good supply of toiletries, cosmetics, hair care products, sanitary supplies, tobacco, home medicines, common household needs, household repair items, candles, cleaning equipment and products, laundry detergents, napkins, and postage stamps. In addition to all clothing and baby supplies, bring children's art supplies, books, and toys. A durable stroller is a must because the roads and sidewalks are extremely bumpy. Disposable dia-

pers, available only in small sizes, are obtainable but at somewhat higher prices than in the U.S. Other items to consider are clothes hangers, European plug converters, photographic supplies, flashlights (large and pocket-sized), batteries, computer supplies, battery operated lights, stationery supplies, pet supplies, and hobby supplies.

Tailoring, dress making, shoe repair, dry cleaning, beauty shops, and barber shops are available locally. It is advisable to take all beauty supplies to the barber or hairdresser because most of the shops do not exercise Western hygiene standards. The joint venture dry-cleaners do a fine job and shoe repair service is good. Tailoring and dress making are also done with care, and prices are reasonable.

Domestic Help

Reasonably priced domestic help, English-speaking nannies, and drivers are available. Few Georgians have had any exposure to Western cleaning techniques and products and thus require training.

Religious Activities

Places of worship for various faiths conduct services in Hebrew, Russian, Georgian, and Armenian. Additionally, the Salvation Army offers English-language Protestant worship services for the international community. Also, some Americans have opened their homes to sponsor church services, Sunday school, and Bible study.

Education

Quality Schools International (QSI), a non-profit institution which opened in September of 1995. QSI offers high quality education in English for elementary students from ages four through thirteen. Several Embassy families currently have children attending this school. The school's curriculum includes English (reading, grammar, composition, keyboarding, and spelling), mathematics, cultural studies (history, geography, economics, etc.), sci-

ence, computer literacy, art, music, physical education, and Russian or Georgian language. In the 1997-98 school year, the school had an enrollment of approximately thirty-one students. QSI also offers extension courses for older children through the University of Nebraska.

School-age children and adults may take private or group lessons in tennis, art, dance, music, horseback riding, gymnastics, and ice skating. One should, however, have some background in Russian or Georgian or make arrangements for an English-speaking instructor.

Sports

Small groups do get together with the international and local community to play softball, volleyball, or tennis, to run or hike, to practice aerobics or gymnastics, and to ice skate or fish at Tbilisi Sea, Bazaleti, or JINVALI Lakes. Staff interested in any of these activities should bring proper equipment and attire. For spectators, the most commonly held international competitions in Georgia are wrestling, chess, and soccer.

Touring and Outdoor Activities

The city of Tbilisi possesses many interesting historic sites. The Old City has preserved its intricate maze of its narrow meandering streets and lanes. Steep cobblestone streets often end in stairs leading up the mountain; courtyards are encircled by wooden balconies; domes of ancient churches and bath-houses catch the eye. Nearby is the 13th century Metekhi Church and the monument to Vakhtang Gorgasali, the founder of Tbilisi. Dominating Old Tbilisi are the ruins of the Narikala Fortress and the gleaming statue of Mother Georgia.

One of the greatest benefits of living in Tbilisi is the proximity to the Caucasus Mountains. Opportunities to ski in winter and hike in summer are found only two hours away by car in Gudauri, which

© Jon Spaul/Corbis. Reproduced by permission.

Aerial view of Tbilisi, Georgia

offers a four-star hotel. The seaside of Batumi on the Black Sea is a drive of 6-7 hours.

Hotel accommodations are generally still of the Soviet style. Camping is possible throughout the country, even near the capital city.

Entertainment

Excellent operas, ballets, recitals, concerts, dramatic plays, pantomime, and marionette

theater are popular forms of entertainment during various seasons. Tickets are generally inexpensive. Quality movie theaters do not exist, but the Embassy shows movies on select Friday nights. Restaurants now in operation offer Italian, German, Chinese, Mexican and Georgian food. The Western standard, five-star Sheraton Metechi Palace Hotel offers a cafe, restaurant, piano bar, and discotheque. Nightclub entertainment is limited but small, informal, gatherings at home with friends from the active international and local communities occur often.

The International Women's Association offers numerous activities and opportunities for women from many nations to get acquainted. The Club meets once a month at the

Sakartvelo Restaurant and offers many social and volunteer activities. .

OTHER CITIES

The city of **BATUMI** is in the extreme southwestern corner of Georgia. Batumi's location on the Black Sea coast has led to its development as a major Georgian seaport and shipyard. The city is home to a major oil refinery, which receives oil via a pipeline from Baku, Azerbaijan. Several industries are located in Batumi. These industries produce furniture, machinery, and zinc-plating. Batumi is situated in a rich agricultural region where citrus fruits and tea are grown. Many popular resorts are located on the outskirts of the city. Batumi's major tourist attraction is the Batumi Botanical Gardens, which feature a wide array of flora and fauna. Batumi has an estimated population of 137,000.

KUTAISI is situated on the Rioni River in western Georgia. It is one of Georgia's largest industrial cities. Industries in Kutaisi manufacture furniture, textiles, clothing, processed foods, mining machinery, trucks, and consumer goods. Nota-

ble tourist attractions near Kutaisi include the remains of a first-century A.D. Bagrat church and fortress and the Sataplia Nature Reserve, which offers informative displays of dinosaur fossils and tours of several limestone caverns. With an estimated population of 240,000 in 1997, it is Georgia's second largest city.

The city of **RUSTAVI** is situated on the Kura River approximately 16 miles (26 km) southeast of Tbilisi. Rustavi is primarily an industrial center and is the home of large steel and iron works. Synthetic fibers and fertilizers are produced by a major chemical factory in the city. In 1995, Rustavi had an estimated population of 160,000.

SUKHUMI is a major resort city. Tourists from Georgia and other former Soviet republics flock to Sukhumi for its warm weather and sandy beaches. Several small industries are located in the city. These industries are involved in wine-making and canning the fruit grown near Sukhumi. The city has a population of approximately 122,000.

COUNTRY PROFILE

Geography and Climate

The Republic of Georgia is situated on the eastern bank of the Black Sea and bordered by the Caucasus Mountains to the north. Its neighbor to the east is Azerbaijan, and to the south are Turkey and Armenia. Georgia is at a crossroads of European and Asian commerce, culture, and religion.

Georgia is 69,900 sq. km., slightly larger than West Virginia. Starting in the east, Georgia's landscape is largely semi-desert. In the western portion lie the permanently snow-covered peaks and glaciers of the Caucasian Mountains, with summits as high as 5,000 meters. The

subtropical climate near the Black Sea coast nourishes citrus fruits. Numerous rivers, including the Kura and the Rioni, wind through Georgia's mountains and valleys. Many of these rivers are used for hydroelectric power generation.

Protected by the Black Sea and Caucasus Mountains, Georgia's climate is relatively mild. Seasonal temperatures range from winter daytime highs of 32°F - 35°F to summer daytime highs of 86°F - 93°F. Summers have relatively low humidity. Spring daytime highs average in the high 60°F to the mid 70°F.

Population

Georgia's population, according to the 1989 Soviet census, is 5.5 million, of which some two-thirds are ethnic Georgians. Over 80 other nationalities reside in Georgia, including Armenians, Russians, Azerbaijanis, Ossetians, Greeks, Abkhazians, Ukrainians, Jews and Kurds.

Within Georgia are two autonomous republics, Abkhazia and Adjara. During the Soviet period, the region settled by Ossetians was also granted autonomous status.

Georgian is a proto-Caucasian language of the Iberian-Caucasian family and is spoken throughout the country. Most urban Georgians speak Russian; it is somewhat less common in the country-side.

Christianity was spread throughout Georgia in the 4th century. Today, the majority of Georgians identify themselves as Georgian Orthodox, an autocephalous church (i.e. one with its own patriarch) similar to Greek and Russian orthodox churches. The unusual Georgian Orthodox cross, with its downward-bowed crosspiece, is ascribed to Saint Nino of Cappadocia, who introduced Christianity to Georgia. According to legend, upon entering Georgia she took two vine branches and, with strands of her own hair,

bound them together in the form of a cross.

Islam is practiced among sectors of the population of Tbilisi, in villages near the Azeri and north Caucasus borders, and in the autonomous republic of Adjara in the southwest. The Jewish population in Georgia dates back twenty-five centuries. Roman Catholicism is practiced by some Georgians, mostly in the west. Reflecting Georgia's religious diversity, one small area in Old Town Tbilisi has five different places of worship: a Georgian Orthodox Church, a Roman Catholic Church, a mosque, a synagogue, and an Armenian Orthodox Church. Hospitality is one of the most notable characteristics of the Georgian people. Georgians receive guests as a "gift from God." The hospitality is particularly well represented by the "Georgian Table." The table is stacked with many traditional dishes, such as Georgian flat bread; "khachapuri" (a cheese pie); lamb, pork or beef shishkebab; roast pig; chicken or turkey in a walnut sauce; and accompanying "tkemali," a spicy plum sauce. The traditional drink of Georgia is wine; grapes are grown throughout the country, especially in the region of Kakheti. "Churchkhela" is a special dessert made with walnuts or hazelnuts dipped into a paste made from boiled grape skins. A unique feature of the Georgian table is the "tamada," or toastmaster. Chosen by the male members of the table, the tamada offers a series of traditional toasts for the guests during the meal.

The family unit is important for Georgians. Many nuclear families live together with parents or grandchildren, often because of the housing shortage. Tradition has passed down a strong sense of obligation for family members to look after one another.

Public Institutions

Georgia became one of the fifteen republics of the Soviet Union in

1921. The Communist Party dominated the Georgian Soviet Socialist Republic for over seventy years.

As the Soviet Union began to disintegrate, Georgia became one of the first republics to declare its independence. The first post-Soviet government, headed by Zviad Gamsakhurdia, was strongly nationalistic. Although democratically elected, Gamsakhurdia did not observe democratic norms. Following a coup, the Gamsakhurdia government was replaced in March 1992 by a State Council headed by former Soviet Foreign Minister Eduard Shevardnadze. After an initial period of political turmoil, Georgia held elections for Parliament in October 1992. Mr. Shevardnadze was elected Head of Parliament and Head of State.

Georgia adopted a new constitution in August 1995. The constitution provides for three branches of government: the Executive (President), Legislative (Parliament), and Judicial (Supreme Court). In November of that year, Presidential and parliamentary elections were held. International monitors described them as "generally free and fair." Eduard Shevardnadze was elected to a 5 year term. The unicameral Parliament has four political parties: the Citizens' Union of Georgia which holds 110 seats and is the governing party; the Adjara-based Revival Union Party; the National Democratic Party; and the People's National Democratic Party.

Arts, Science, and Education

Georgians are proud of their centuries-long cultural and academic traditions, many of which continue to the present day. Georgians are particularly talented musicians. The Georgian folk song continues an age-old polyphonic style, and even singers who have never met each other can create complex harmo-

nies. A traditional dinner always includes Georgian folk songs.

In three handsome state theaters in Tbilisi, one can see opera, symphony concerts, ballet, and drama. Tbilisi's most famous theater company, the Rustaveli Theater, has performed throughout Europe and took its performance of *King Lear* to the 1996 Edinburgh Festival. There are also several other theaters, including a marionette and children's theater, where all performances are in Georgian.

Tbilisi is home to several of Georgia's finest history museums and art galleries.

The Fine Arts Museum contains remarkable examples of ancient textiles and jewelry, and the Ethnographic Museum is an unusual open air exhibit depicting life at various times in all the regions of Georgia. In Tbilisi and throughout the country, travelers encounter marvelous examples of Georgian ecclesiastical and secular architecture.

Georgia's educational system is currently faced with both pressures to reform to meet contemporary needs and with extremely difficult financial problems. Georgian students attend school from age six and continue through graduation from high school. Georgians are highly educated and place great value on education. Literacy rates approach 100%, with almost all Georgians bilingual in Georgian and Russian and many speaking a third and fourth language. English is increasingly widely spoken in Tbilisi, and Georgians are usually eager to practice English with Americans.

Commerce and Industry

The Georgian economy is primarily agricultural. Immediately after independence in 1991, the Georgian economy contracted dramatically, due in large part to the sudden requirement to obtain energy supplies at world prices. By 1994, eco-

nomics output stood at about one-third of its level in 1990 and hyperinflation raged. In late 1994, with the assistance of the IMF, the Government of Georgia introduced an economic reform program aimed at curtailing inflation and creating conditions for economic growth. This economic recovery continued in 1996. However, much of the country's Soviet-era industry is either closed or operating below capacity. The country needs substantial productive investment to modernize its industry and infrastructure.

Successful economic reform relies heavily on technical assistance and funding provided by the international community, including the United States. The character of assistance programs to Georgia has shifted from humanitarian food and medicines to longer-term support for economic restructuring, especially in the critical energy sector.

Georgia's international trade is increasing, albeit from a very low base. The current account deficit is financed by significant lending. Georgia is preparing its application to join the World Trade Organization and has chosen a relatively open trading regime. The government also welcomes foreign investment. A variety of mid-size joint ventures have sprung up that include U.S. and German partners, and Tbilisi receives frequent visits from investors interested in Georgia's business potential. Georgia's principal trading partners are Turkey, Russia, and Western Europe.

Small enterprises have now been almost completely privatized, as has housing. Georgia is engaging in the difficult task of privatizing large, residual state holdings and hopes to find foreign investors interested in some of these enterprises. Considering the distance the economy has come since introducing economic reforms in 1994, Georgia's economic

Transportation

Automobiles

Travelers should consider the following factors when selecting a vehicle for local use: the fuel quality is inconsistent, parts for non-Russian vehicles are largely unavailable, and vehicle servicing is well below Western standards. A few dealerships, such as Mitsubishi, operate in Tbilisi but do not stock spare or replacement parts. Roads inside and outside the capital are not well maintained. Some staff prefer four-wheel drive vehicles that allow more ground clearance. Russian-made and used German vehicles are available locally. Prices are competitive but quality is inconsistent. Cars and drivers can be privately rented for outings. Some long term visitors hire a personal car and driver at rates significantly lower than the cost of owning and operating a personal vehicle.

Local

In Tbilisi, an inexpensive underground metro system connects outlying districts to the city. However, power outages can strand metro riders between stops, hundreds of feet underground. Overcrowded buses and trolley buses serve the inner city, and taxis can be hailed throughout the city. The best mode of transportation is often by foot because Tbilisi is relatively small.

Regional

Two train stations provide service to other regions of the country and to the countries of the former Soviet Union. The trains do not meet Western standards, and schedules are not dependable.

Tbilisi opened a new airport in 1996. Commuter airplanes fly on an unpredictable schedule between Tbilisi and four of Georgia's main cities. International flights ferry passengers to cities outside of Georgia. The airlines serving Georgia which reflect Western standards are Turkish Air, British Airways, Austrian Air and Swissair. Aeroflot provides regular flights between Tbilisi

and other cities within the former Soviet Union.

Communications

Telephone

Most people in the city have private telephones. Service sometimes is problematic but costs are reasonable. Domestic telegraph, fax, and wireless services are available with reasonable prices. Cellular telephone service is also available in Tbilisi. Most public telephones in the city are not in working order.

Mail

Georgian international mail service is very slow. Federal Express and DHL are available in Tbilisi but can be very expensive.

Radio & TV

Cable television is available in Tbilisi for a reasonable monthly fee. English-speaking programming includes CNN, Cartoon Network, TNT, ESPN, SKYNEWS, and NBC SUPER CHANNEL. Spanish, Italian, French, German, and Russian programs are also available on cable. Georgia uses the PAL format for all television broadcasts.

Health and Medicine

Medical Facilities

Medical facilities in Tbilisi are government operated and include specialized hospitals, medical institutes, and outpatient polyclinics. One of the largest hospitals, Republican Hospital, serves not only Tbilisi but also outlying areas of the country. None of the facilities practices Western standards. There is a shortage of medicines, but the situation is improving slowly with supplies coming in from Turkey and Germany.

Under the Soviet system, everyone was immunized. At present, however, a shortage of vaccines has caused epidemics of diphtheria, measles and mumps. Also due to the lack of vaccines for animals, rabies

has been on the increase. Last year there were over 25 human cases of rabies in Georgia.

Several private medical emergency/referral services are available which provide twenty-four hour ambulance service and direct referral to specialists.

In the past year, a private medical clinic, OMS, has opened. It is staffed by a western trained doctor and medic.

Community Health

The most common health problems encountered with Embassy personnel are the usual health problems found in the United States, mainly those causing upper respiratory distress. Those with allergies have increased problems during the spring when the trees are flowering.

The most common intestinal problems are giardia and food poisoning. Post provides water filters which attach to the water source in the kitchen and supply potable water. Many people also purchase Brita filters to filter out the large amount of sediment in the water. Care should be

taken in eating raw fruits and vegetables. As in most overseas posts, it is recommended that fruits and vegetables not peeled or cooked be washed and then soaked in a chlorine solution. Purchasing meat and dairy products in the open market can be risky in the summer due to lack of refrigeration. Meat should always be well cooked.

Preventive Measures

Update immunizations before coming and bring at least a three to six month supply of prescription and frequently used over-the-counter drugs. Limited emergency dental care is available but it is very important to get a dental checkup and complete all dental work before leaving the U.S.

Prescription glasses are not available locally so it is helpful to bring an extra pair or make arrangements

to have glasses sent if necessary. Bring a copy of your prescription with you.

LOCAL HOLIDAYS

NOTES FOR TRAVELERS

Passage, Customs & Duties

A passport and visa are required. U.S. citizens may receive a visa upon arrival at Tbilisi Airport, the Port of Poti, and the Red Bridge ("Tsiteli Khidi") crossing on Georgia's border with Azerbaijan. Americans intending to enter Georgia at other points-of-entry must obtain a visa beforehand at a Georgian embassy or consulate abroad. Armenian and Azerbaijani visas are no longer valid for transit through Georgia. Travelers to Georgia must fill out a customs declaration upon arrival that is to be presented to customs officials when departing the country. (Please see also the section on Georgian Customs regulations.) For further information, please contact the Embassy of Georgia at 1615 New Hampshire Avenue, N.W., Suite 300, Washington, D.C. 20009, tel. (202) 387-2390, fax:

(202) 393-4537; Internet: <http://www.georgiaemb.org>.

Travelers to Georgia must fill out a customs declaration upon arrival that is to be presented to customs officials when departing the country. Travelers are advised to declare all items of value on the customs form. Failure to declare currency and items of value can result in fines or other penalties. If your customs form is lost or stolen, please report the loss to the police to obtain a certificate to show to customs officials when you depart the country.

Traveler's should be aware that Georgia's customs authorities may enforce strict regulations concerning the temporary importation into or export from Georgia of items such as alcohol, tobacco, jewelry, religious materials, art or artifacts, antiquities, and business equipment. Only personal medicines with a doctor's statement can be imported without the permission of the Georgian Department of Healthcare.

U.S. citizens living in or visiting Georgia are strongly encouraged to register at the Consular Section of the U.S. Embassy in Tbilisi, where they may obtain updated information on travel and security within Georgia. The U.S. Embassy in Tbilisi is located at 25 Atoneli Street, tel. (995)(32)98-99-67 or (995)(32)98-99-68, fax: (995)(32)93-37-59. The Embassy web site address is located at: <http://www.georgia.net.ge/usembassy>

Complex visa requirements in Russia make it more desirable to fly to Tbilisi from Western Europe, usu-

ally from London, Zurich, Frankfurt, Vienna, or Istanbul.

Air travel connections to Tbilisi are difficult to arrange outside of Georgia. A number of charter flights serve Tbilisi each week, but it is difficult to get information on these flights outside of Georgia.

Pets

In compliance with the World Health Organization (WHO), Georgian authorities require that pets entering or departing Georgia must have a health certificate stating the pet is in good health, is free from infectious disease, and has had a rabies inoculation not less than 10 days and not more than 30 days before departure. The certificate must be validated by the appropriate medical authority in the country where travel begins.

U.S. airlines require that animals must be in a kennel and transported in the reserved animal area in the hold. Note that the few veterinarians in Tbilisi have a shortage of supplies and vaccines. Boarding kennels are unavailable. All pet vaccinations should be up-to-date. Pet owners should bring all pet supplies that may be required.

Firearms & Ammunition

U.S. citizens may not import firearms into Georgia; however, hunting weapons may be brought into the country for a two-week period based on valid Georgian hunting licenses. Membership in the Georgian Society for Hunting is also required.

Currency, Banking, and Weights and Measures

The Lari is Georgia's official currency. Only Lari-based transactions are legal. Georgia has several reliable banking facilities which can transfer currency into and out of Georgia.

The Sheraton Metechi Palace Hotel is the only business venture that accepts travelers checks and major credit cards for dining and lodging. The Guest House "Betsy" also accepts credit cards.

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated January 1997. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

INDIA challenges and fascinates any newcomer. India is a land of contrasts—4,000 year old Indus Valley seals in the National Museum, Indian teens browsing among the latest Western fashions to the beat of rock music at Benetton's, elephants draped in red and gold plodding up music-filled driveways of five-star hotels amid lights and gyrating wedding guests, bazaars filled with ultra-soft pashmina shawls and silk saris edged in gold, cows dozing on the center divider of busy urban avenues, white-water rafting on the chilly Ganga (Ganges River), bookstores with Anglo-Indian literature and American novels, delicious makhani dal (red

bean dish) and masala dosa (South Indian crispy potato-filled pancake), graceful maharaja palaces offering tourist specials, bird sanctuaries with wintering flamingos and cranes from Siberia, more than a dozen recognized regional languages with English widely spoken from north to south, and one of the wonders of the world—the Taj Mahal in Agra.

India requires patience and flexibility. First-time travelers overseas—as well as veterans—can expect a certain amount of culture shock. The English language is used in ways which may perplex native speakers. Local customs concerning timeliness and sanitation are relaxed. Indians may give the answer they think a questioning foreigner wants to hear, rather than the truth. Gentle persistence on issues of importance to you yields dividends.

Schooling, support, and social activities are good and plentiful. “*Achcha*” (fine) or “*T.K.*” (o.k.), accompanied by a head bobble, is the most common reply to a question. So, “*Na-must-ay*” (hello) and “Welcome to India!”

MAJOR CITIES

New Delhi

New Delhi is located in north-central India beside the old city of Delhi on the Yamuna River. The capital of modern-day India traces its roots to King George V's triumphant tour of India in 1911. While encamped on the outskirts of Delhi, the King announced that the capital of British India would be shifted from Calcutta to a new city to be built beside the ancient city of Delhi.

Older residential areas feature broad, tree-lined streets and large bungalows with spacious yards. Houses in newer residential areas are more modern, but yard space is often at a premium and streets are congested. The commercial heart of New Delhi is Connaught Place, where state emporia sell local crafts. Jan Path, famous as the capital's souvenir center, has everything from cheap curios to exquisite pieces of art. Luxurious five-star hotels have good restaurants and shopping malls. An occasional cow meanders down avenues, reminding visitors that this is India.

The old city of Delhi is a vivid contrast to the spacious, orderliness of

Tomb of Mughal Emperor Humayun in New Delhi

New Delhi. Jama Masjid and the majestic Red Fort lie amid narrow, crooked streets teeming with humanity, vehicles, produce, and animals. Chandni Chowk in the heart of Delhi is jammed with shoppers, vendors, conveyances, temples, mosques, and small shops selling everything from spices to expensive jewelry. Qutab Minar, a 13th-century minaret over 240 feet high, stands amid ruins outside the city limits. New Delhi is filled with massive forts, palaces, and grand tombs built over the centuries by Delhi's various rulers.

Food

Every neighborhood in New Delhi has at least one market that sells fresh fruit, vegetables, cut flowers, and dry goods, oils, eggs, some canned or bottled items, milk, soft drinks, lotion, shampoo. There are also chemists (pharmacy), bakery, and sometimes a meat shop with chicken and/or mutton. The most

popular markets among foreigners are Modern Bazaar, Khan Market, and INA Market.

Fresh fruits and vegetables are seasonal and the selection may not be as large as in U.S. supermarkets. The winter season is best for price and variety—many stock up by freezing or canning. Potatoes, onions, tomatoes, carrots, limes, lemons, cucumbers, eggplant, at least one variety of squash, coriander, bananas, orange or tangerine, apples (sometimes stored from last season), and coconuts are always available. Frozen peas are available year round. Seasonal varieties include peas, broccoli, cauliflower, cabbage, red and white radishes, kohlrabi, green peas, spinach, lettuce, string beans, parsley, varieties of squash, sweet potatoes, turnips, breadfruit, avocados, melons, many varieties of mangoes, limes, pomegranates, tangerines, oranges, grapes, papaya, grape-

fruit, pineapple and occasionally small peaches, short thin celery, and apricots. Dried fruits, cashews, walnuts, almonds, and pine nuts are usually available in the market.

Mutton, goat, pork, and chicken are available in several cuts. Buffalo undercut can be used as beef in recipes. Fresh sea fish and shellfish are available, but should be eaten only in the cooler months. Baby food in the local market is limited to powdered milk in tins and an occasional box of cereal mixed with dried fruit.

Clothing

In general, the adult Indian dresses more conservatively than Americans. Indians wear Western dress more and more as the years go by—especially the men. Men wear shirts and slacks, suits, bush or safari suits (the short or long-sleeved shirt is worn outside the same-color pants), or a kurta-pajama (long

tunic over draw-string pants). At home, a man might wear an under-shirt with lungi (3 yards of material tucked in at the waist).

The accepted national dress for women is the sari, which can be worn in a number of ways. Usually it is a combination of 6 meters of often elaborately bordered silk, cotton, or polyesters wrapped over a drawstring full-length petticoat and a form-fitting choli blouse which leaves the midriff exposed. The sari is worn for formal occasions, accompanied by quality jewelry of gold, silver, and precious stones. The other outfit Indian women wear frequently is the salwar kameez, a two-piece suit made up of decorative knee length tunic over drawstring pants, sometimes worn with a scarf (“dupatta”).

Although Indian women are not hesitant to show their mid-section—some even have open backs—they usually feel self-conscious in pants and a tucked-in blouse. Most would not wear shorts even in the privacy of their own homes. (See Special Information for more information on Indian sensitivities on dress.)

New Delhi’s climate alternates between extremely hot summers, humid monsoons, and surprisingly chilly winters. Lightweight, loose yet covering cotton clothing is suitable for eight months of the year. Sweaters, jackets, wool skirts, wool suits, sweat suits, hats, scarves, and even gloves will be welcome during the winter. Excursions to the north or to hill stations require warm clothing including heavy sweaters and coats. American-style underwear and sports socks are not available locally. Light raincoats or Windbreakers may come in handy. Umbrellas are needed in the monsoon season.

Washable fabrics are the most convenient for maintenance, but dry-cleaning services are also available. Cotton, silk, and wool are the most comfortable fabrics to wear. Quality woolen and knit fabrics are generally not available. India’s distinctive

cottons and silks, however, are among the bonuses of life here.

Local footwear consists mainly of sandals (“chappals”), which have straps over the instep and big toe. Ready made shoes often lack quality, comfort, and durability—and they can be expensive. Cobblers repair shoes at little cost. Shoes wear out more quickly in this climate. Bring several pair of comfortable walking shoes, good work shoes, and sport shoes for recreation and exercise.

Men: Lightweight suits are practical for most of the year, but warmer suits (wool) are needed in December and January. High-quality local silk ties are beautiful and inexpensive. Men occasionally wear locally tailored bush or safari suits for summer or winter wear. Local tailor-made shirts and suits vary greatly in quality and fit, and can be more expensive than ready made. Most Americans prefer to bring tennis shorts, knit shirts, golf clothes, and swim trunks. Shorts for at-home wear can be tailored locally, but may cost more than U.S. ready made shorts. Men’s sandals, available in many styles, are comfortable during the summer heat.

Women: Casual dresses, suits, and pants suits are suitable for most daytime occasions. Cotton dresses and cotton underwear are coolest in the hot weather. Women may want to bring pantyhose as comparable pantyhose are difficult to find on the local market, but it is acceptable to go without hose, particularly during the warm weather. Shorts and strapless tops are not worn on the public streets.

Children: At the American Embassy School in New Delhi students dress casually. Jeans, slacks, shorts, T-shirts, shirts, light jackets, tennis shoes, sweat suits, and sweaters are worn by both girls and boys. Teenage girls also wear the salwar kameez and dresses on occasion.

Sweaters and warm jackets are worn daily in December and Janu-

ary. Warm clothing will be needed for the middle school and high school sport conventions which take place in Pakistan, for school or family outings to the hill stations or up north, and for the winter months. Light colors are cooler in hot weather, but dark colored clothes are practical for active children—the red soil is difficult to wash out.

Sandals, worn by both girls and boys during summer, are widely available locally. Socks and tennis shoes tend to wear out quickly.

Teens can buy the latest fashions in jeans, sweaters, shirts, and cotton skirts from sidewalk vendors or in classy shops.

Supplies and Services

Local dry cleaning is available with varying results. Shoe repair is good, inexpensive, and available in the marketplace.

Tailoring services vary in quality and price. Copying existing clothing achieves the best results, but tailors will work from pictures, too.

A beauty shop and a barbershop are located on the enclave compound. Some of the hotels have complete health club facilities, including massage and sauna. For excellent private massages, specialists will come to the home on a regular basis. Prices are inexpensive for these services.

Religious Activities

A Jewish synagogue conducts services in Hebrew at the Judah-Hyam Hall.

Christianity in India dates back nearly 2000 years. Most Christian churches have services conducted in regional languages, as well as in English.

Catholic churches conducting Mass in New Delhi include the Carmel Convent School, the Holy See Embassy, St. Dominic’s, Sacred Heart Cathedral, and the Holy Family Hospital.

Protestant churches include the Bible Bhawan Bethany Assembly, the St. James Church of North India, Centenary United Methodist Church, Cathedral Church of the Redemption, New Delhi Christian Fellowship at the Taj Mahal Hotel, the Church of Jesus Christ of Latter-Day Saints, the Free Church, the Delhi Bible Fellowship at Triveni Auditorium, and the Green Park Free Church.

Moslems worship in Arabic in mosques ("Masjid") all over Delhi.

Sikh temples ("gurdwara") ring with readings in Punjabi.

International prayers are read in English and Hindi from the holy books of all religions meetings in the Baha'i House of Worship.

Hindu and Jain temples ("mandirs") abound; the language is Hindi.

Education

The American Embassy School (AES) is a private nonprofit, coeducational day school, conveniently located on a 12-acre site just behind in New Delhi. Instruction by American, Indian, and third-country national teachers follows the American educational system from pre-school through high school. AES is on a par with the best schools in the U.S. The school is divided into three sections: Elementary (ECEC-5), Middle School (6-8), and High School (9-12). The school year runs from early August through May. Students with U.S. citizenship may be admitted any time during this period.

About 35 percent of the 1000 students are American, the balance are 47 different nationalities. About 98 percent of AES graduates attend universities in the U.S. and in other countries. The school is a designated testing center for the College Entrance Examination Board, American College Testing Program, Secondary School Admission Test, and Graduate Management Admission Test and Graduate Record Examination. The school is accredited by the Middle States Associa-

tion of Secondary Schools and Colleges. Selected Advanced Placement courses are offered. Courses are also offered that satisfy the requirements of the International Baccalaureate diploma. Many extracurricular activities are offered including softball, soccer, swimming, hockey, basketball, baseball, tennis, camping, photography, dramatics, cheerleading and student publications. School-sponsored trips to places of interest outside Delhi are available to students in grades 6 to 12. AES provides daily school bus transportation to most neighborhoods in New Delhi, and a late bus is available for those engaging in after school activities.

Apply for admission to AES as early as possible. Write to the school at the following address:

Director
American Embassy School
Chandragupta Marg
Chanakyapuri
New Delhi - 110 021
India

Include a record of academic achievement (official transcript of high school credits or official elementary school report card) and health record. In some cases, interviews with school officials, appropriate testing, and physical examinations may be required. A child who is 3 years old on or before September 1 is eligible for admission to the Early Childhood Education Center (ECEC). However, AES does not ensure space in this program. To enter a child in this program, parents should write to the school as soon as their assignment is firm. A child who is 5 years old on or before September 1 is eligible for admission to kindergarten; a child who is 6 years old on or before September 1 is eligible for the first grade. For information regarding a child with a specific learning disability, contact the school prior to coming to post. AES offers remedial education classes, but only for the mildly learning disabled. They do not offer services for severely handicapped children. There are some ramps throughout the grounds, but

the school is not equipped to handle children who require special accommodations due to physical handicaps.

New Delhi has a range of pre-schools, both Montessori and traditional, which attract both Indian and foreign diplomats' children. They offer quality education at lower cost than the ECEC of AES. Some American children attend these schools, which provide contact with children in other communities.

Parent groups associated with the school include Home and School Association (HSA) and Parent Teacher Student Administrators (PTSA, pronounced "pizza"). All parents of children at AES automatically belong to HSA. All participants in the high school program are also eligible for PTSA family memberships for a small fee.

USIS has a large library at the American Center which is open to Americans and Indians alike. The USIS collection concentrates on all aspects of the U.S.

AWA operates a growing library near the Co-op, which is open 16 hours a week and has a good collection in fiction and nonfiction.

AES runs an elementary library and a high school library. Parents may also use the library.

Special Educational Opportunities

The Delhi School of Music offers private instruction in a full range of instruments of Western music, e.g. piano, violin, cello, and guitar.

Private instruction in Indian music, both instrumental and vocal, and in Indian dance are readily available at moderate cost. Piano teachers are also available. Those interested in art and handicrafts can take courses in painting, ceramics, batik, tie-dye, and fabric design.

The National Museum occasionally gives courses on the history of Indian art.

Susan Rock. Reproduced by permission.

Taj Mahal in Agra

Sports

Among the sports activities to be enjoyed in and around Delhi are golf, tennis, bowling, badminton, horseback riding, polo, swimming, fishing, and softball. Spectator sports include horse racing, polo, cricket, soccer, field hockey, and school sports.

The Delhi Gymkhana Club and the Chelmsford Club offer swimming, tennis, squash, and billiards. The Delhi Golf Club has a good 18-hole course and a small 9-hole course, complete with peacocks in the trees. Many golf clubs in Delhi offer pay and play—the Delhi Golf Club is the best (although hard to get into), but a new course in Noida across the Yamuna River is popular.

For horseback riding, the Delhi Riding Club gives instruction from beginning to advanced levels, and the Presidents Estate Polo Club offers both riding and polo playing.

Both single-glider rides and gliding instruction are available at the Delhi Gliding Club. Several major hotels offer memberships to their swimming and health clubs.

Within the community, one can also find the Delhi Football League (soccer) and Hash House Harriers (joggers). A vast wooded park area near the U.S. Embassy offers several running/jogging paths ranging in distance from 2.5 to 5 miles. Groups within the community get together for basketball, soccer, and volleyball.

Touring and Outdoor Activities

Sightseeing opportunities range from those in immediate neighborhoods to extensive tours of other parts of India and neighboring countries. Costs may be higher than expected, especially when traveling with a family, and the quality of accommodations varies. Delhi has many historical monuments, reli-

gious buildings, and shrines open to visitors.

Excellent sight-seeing guides which are updated every year or two, include *India, a Travel Survival Kit*, *Fodor's India, Nepal and Sri Lanka*, and the *AWA Glimpses of India*.

Ancient and historic sites are everywhere. Once the home of viceroys and now the official residence of the President of India, Rashtrapati Bhawan overlooks a 2-mile long mall down Rajpath to India Gate.

There are many sites that one can visit: Qutab Minar and the nearby mosque constructed from demolished Hindu and Jain temples; the Mughal Gardens of Rashtrapati Bhawan, Parliament House and the Secretariat; the Red Fort with Shah Jahan's court, the Pearl Mosque, and the evening Sound and Light Show on its history; Raj Ghat, Mahatma Gandhi's cremation memorial grounds; Chandni Chawk

and the spice and silver bazaars; Hauz Khas village and Moslem ruins; Feroz Shah Kotla grounds with an Ashoka pillar on the Jamuna River bank; Humayun's tomb and gardens; Lodi Gardens with tombs and pathways; the huge 14th-century fortress city of Tughlakh; Suraj Kund, a pre-Islamic site; Purana Qila; the 1857 Mutiny Memorial on Delhi's Northern Ridge; the Jantar Mantar observatory; the Viceroy's Church; Safdarjang's Tomb; and Jama Masjid in old Delhi.

When visiting religious sites, remember to dress accordingly. Visitors may be asked to cover their heads, remove shoes, and/or wait until devotions are completed.

During the hot season, it is good to combine the out-of-doors touring with a trip to one of the many museums—National Museum, Crafts Museum and Village Complex, Mahatma Gandhi Museum, Nehru Memorial Museum and Library, National Museum of Natural History, Indira Gandhi Memorial Museum, and National Gallery of Modern Art. State museums are closed on Mondays.

Children particularly enjoy the Delhi Zoo with Indian birds and animals, Apu Ghar Amusement Park, and Shankar's International Doll Museum. The Rail Transport Museum offers the opportunity to circle Delhi on a train in a couple of hours. During cool months, the city's parks and gardens are filled with all-seasonal flowers and offer pleasant picnic spots.

For out-of-town trips, transportation is available by car, train, tour bus, or plane. AWA Out-of-Town Tours frequently offers special trips throughout India and to neighboring Nepal and Thailand. Other popular trips are to Pakistan and Sri Lanka.

The first trip out, however, should be to see the Taj Mahal at Agra. Travel by train early in the morning—visit the Taj, the Agra Fort, and Fatipur Sikri—then return at

© Wolfgang Kaehler. Reproduced by permission.

Men drinking tea in New Delhi

night by train. Near Agra is the Bharatpur bird sanctuary.

Rajasthan has a number of palaces and fortresses cities on the tour map—the pink city of Jaipur is 180 miles away or 5 hours by car; and a trip to Udaipur's Lake Palace, Jodhpur, and Jaisalmer would make a week-long trip by car or train. The major pilgrimage site on the Ganges River, Varanasi (Banaras), is 450 miles from Delhi and is accessible by car, plane, or train.

White-water rafting on the Ganges River, north of Rishikesh, has become a popular 3–5 day family outing or school trip.

Two areas for skiing are Auli, Uttar Pradesh and Solang in Himachal Pradesh's Kulu Valley. With an incredibly beautiful panorama of India's major Himalayan peaks, Auli offers the basics. Accommodation is very cheap. Skis, poles, boots, and goggles cost \$4 to rent, and are in poor repair. No ski lift is available, and it takes 2 long days to get there. Solang has a ski lift—for those taking a course or who obtain permission from the Manali Mountaineering Institute, who owns the lift. Rental equipment is cheap. Accommodations include a nearby lodge, run by Himachal Pradesh

tourism, and guest houses in Manali. Kulu Valley also offers heliskiing. For \$1,000 for 4 days, a European-flown and maintained helicopter will lift skiers from a luxury hotel parking lot to 18,000-foot mountains where one can ski down deep powder slopes for hours without seeing a tree or another skier.

Visitors to Corbett National Park, 183 miles from Delhi, can see tigers, leopards, hyenas, deer, peafowl, and elephants. Hill stations offering relief from the summer heat are Mussoorie, 170 miles away, and Simla, 225 miles. There are many excellent game reserves and bird sanctuaries. Bring binoculars and a good camera. Fishing spots within driving distance of Delhi are available.

Photography is prohibited at airports, dams, bridges, and military installations. Still cameras, not video cameras, may be used to photograph certain historical monuments, but the rules may be changing. At the entrance to historical or tourist sites, a posted sign or guide will explain the current policy. In some cases, a fee is charged to carry in a camera. Obtain the consent of any local individuals to be photographed. If someone asks to be photographed in their ethnic outfit

or with their elephant or cobra, be prepared to pay a tip—this is their livelihood.

Entertainment

New Delhi has many auditoriums, concert halls, stadiums, and luxury hotels with grand ballrooms. Indian and Western music, drama, dance, exhibitions and lectures are plentiful, especially in the cooler season. Traditional Indian festivals are celebrated in Delhi, as well as all over the country. These festivals offer exceptional photo opportunities.

The All India Fine Arts and Crafts Society holds regular lecture meetings and exhibitions of contemporary Indian art. Many restaurants feature Indian musicians. In addition to Indian music, local hotels and auditoriums occasionally feature performances by foreign jazz groups, ballets, and Shakespearean plays. Cultural centers of various embassies regularly offer special programs. The Delhi Music Society sponsors an international concert season. The Delhi Diary, a small weekly magazine, carries a current listing of events in New Delhi.

Tickets are available for these annual events: Republic Day parade, Beating Retreat, Ram Lila (drama), Suraj Kund Mela (fair), and the melas staged by the AWA, the Canadians, and the Australians.

Amateur performers have wonderful opportunities here. The Delhi Symphony Orchestra performs regularly and is always looking for musicians. The Delhi Community Players, an international group of theatre lovers, presents one or two dramas or musicals each season. AES an active program of dramatic and musical presentations by students. The AES High School Chorus and the Delhi Christian Chorus always welcome new members.

Films are regularly shown at the British High Commission, the Max Mueller Bhavan (Goethe Institute), the Alliance Francaise, and the India International Centre. A few Indian theaters show English-language foreign films.

For those who enjoy dinner and dancing, most large hotels in New Delhi feature Western-style dance bands and discotheques.

Social Activities

Americans in New Delhi can lead an active social life. In addition to the Indian and international events, Americans generate many activities themselves. Most of these activities also attract Indian and international participation.

AWA offers opportunities for Americans to share activities in the American community and to explore and enjoy living in India.

Scouting in New Delhi has an active program for boys (age 7–18) and for girls (kindergarten through grade 6)—camping, white water rafting, hiking, exploring, crafts, drama, and community service projects. Scouts should bring their current records and equipment. Uniforms, packs, and sleeping bags may be ordered or locally tailored. Adult leaders, merit badge counselors, and helpers are always needed.

In addition to after school activities organized by AES (soccer, volleyball, swimming, basketball, and track), PTSA sponsors Saturday night Open Gym for high schoolers and a foreign film festival during Language Week.

The best opportunity to meet Indians is at receptions and dinner parties. India is a warm, open society. Indians invite Americans to their homes and readily accept American invitations. Older children of Indians and Americans are often included in invitations.

Sports clubs, churches, business associations, international organizations, and American groups offer occasions for meeting people outside the American community. The Rotary and Lions Clubs have local chapters.

Americans may apply for associate membership in the Canadian High Commission Recreation Association and for a 2-year courtesy card from

the Australian High Commission Social Club.

Delhi Network is an informal organization which invites women, especially foreigners new to Delhi, to a monthly coffee morning where information on life in Delhi is shared.

The Indo-American Chamber of Commerce welcomes Americans and Indians to their varied and interesting programs.

The Women International Club (WIC) and the Delhi Commonwealth Women Association (DCWA) have 50 percent Indian membership. WIC has a very active social and cultural program for members. The DCWA turns its energies to the funding and running of the DCWA Clinic and small school for the poor.

The Outreach Committee of the AWA operates a recycling program and has a listing of Indian organizations welcoming volunteer help.

Special Information

Indians dress modestly. To respect Indian sensitivities when in public, Western women should wear skirts below the knees or longer or relatively loose dark slacks, avoiding sleeveless blouses, tight pants, and shorts. Young women and teenage girls, especially those dressed in tight or short Western dress, may attract pinches and other undesirable attention. Western men should avoid going shirtless; trousers are preferable to shorts. These suggestions are especially important when visiting rural areas or tradition-bound urban areas.

Short-term visitors, especially those planning trips outside the major cities, should keep the weather in mind when arranging their travel.

Calcutta

By Indian standards, Calcutta is a new city. It was established by Job Charnock in 1690 as the trading center in Bengal for the East India Company. The site of the city was

occupied at that time by three villages, one of which had been developed by Portuguese traders as early as 1530. Development of the city has been shared not only by the English and the Indians, but also by Greeks, Portuguese, Dutch, French, Swedes, Jews, Armenians, and Persians—all of whom have contributed to its history.

Calcutta, once a trading center for the East India Company and the capital of British India from 1772 to 1912, is today India's second largest city with 13 million people. Capital of the state of West Bengal, Calcutta is situated in eastern India on the Hooghly River about 80 miles north of the Bay of Bengal. The city is built on marshland and experiences periodic flooding.

About half of Calcutta's inhabitants are Bengali Hindus and a significant percentage are Anglo-Indians, Moslems, and other communities (Sikhs, Parsees and Christians). The largest single element is from the U.K. and now numbers only 266 residents. The American community is estimated to be about 217. Principal languages of the city are Bengali, Hindi and English.

Overpopulation and associated problems—poverty, poor sanitation, and lack of housing—are evident everywhere. Despite facing problems of high unemployment, overcrowding and poor infrastructure, Calcutta, as a city, shows remarkable resilience. The friendliness of Indians of all classes provides many contacts and experiences that together can make a tour in Calcutta pleasant and memorable.

Food

In-season fruits and vegetables are plentiful. Bananas, oranges, and limes are always available. In winter, cauliflower, broccoli, red cabbage and squash are specialties. All fruits and vegetables must be washed and treated with a disinfectant solution.

Excellent and inexpensive beef and mutton is plentiful in the market.

Pork and poultry (poor by U.S. standards) are also available. Better cuts of these meats are usually purchased at higher prices from specialty shops or vendors who deliver.

Fresh fish is reasonably priced in season. Shrimp, crabs, and lobster are available seasonally at slightly high prices. Rice, eggs, sodas, and baked goods are available locally.

Locally available powdered milk is expensive.

Clothing

Men: During the warmest part of the year, short-sleeved shirts or locally made bush shirts are worn.

Wash-and-wear or other lightweight suits in cotton or blends are appropriate. Mohair, wool, or blend medium-weight suits are good for the cool season. Local dry cleaners are adequate, but the quality of service is irregular. Vacations in the hill stations call for a coat, raincoat, jacket, and/or sweater.

Calcutta has many country and sports clubs. Those interested in tennis, swimming, golf and riding should bring appropriate attire.

Women: Washable, inexpensive, and easy-care cotton dresses are worn for most daytime occasions during the 9 warm months of the year. During this time, evening wear is casual. During the cool months, cottons, lightweight wools, wool, synthetic fabrics, and silks are worn. A lightweight coat, sweaters, and knitwear are good for vacations in the hills.

Local tailors can make clothing from patterns or pictures with the local cottons, cotton-blends, and silks.

Bring lightweight, sturdy summer footwear. Flat, low-heeled shoes are necessary for the rough terrain. Relatively inexpensive sandals are available in small sizes only, others can be made to order, but quality is inconsistent. Cobblers can copy shoes that you own or work from pictures.

Children: Bring at least an initial clothing supply for children, especially underwear, swimsuit, tennis shoes, and school shoes. Bring a small supply of winter clothing for cool winter days or visits to hill stations. Children who attend boarding school in hill stations will need a full supply of winter clothing and warm blankets.

Local baby supplies are not up to U.S. standards; bring cotton or disposable diapers and rubber pants. Outerwear can be made locally with local fabrics.

Religious Activities

Calcutta's largest religious groups are the Hindus, Muslims, Buddhists.

The Jewish Synagogue is located near the Calcutta Cathedral.

Calcutta has several Anglican churches in addition to the Cathedral of St. Paul. Presbyterian services are held in St. Andrew's Church of Scotland. The largest of the Roman Catholic churches is St. Thomas' on Middleton Row. Other denominations represented are Methodist, Baptist, Seventh-Day Adventist, Christian Scientist, Assembly of God, and Quaker. Many church services are in English.

Education

Schooling in Calcutta above the lower elementary grades is poor by U.S. standards. Many American students to the Calcutta International School (CIS), which accepts students from nursery school through Grade 12. CIS follows the British curriculum but satisfies most American requirements. Grades 10–12 are geared to the British A-level equivalent, requiring American students to do additional coursework before entering most U.S. colleges and universities.

The Mongrace Montessori School, is excellent for preschoolers (age 3 and over).

The school calendar varies among the schools, but most continue throughout the year, with a 1-

Hand-pulled rickshaw in Calcutta

Cory Langley. Reproduced by permission.

month-long break in December to January and a 6-week break during the summer months of May and June.

Sports

Many sports are available—golf, tennis, swimming, horseback riding, rowing, squash, soccer, cricket, polo, horse racing, and field hockey. Squash is played on European-sized courts with imported English squash balls (softer than American balls). A swimming pool is at several private clubs.

Medium-quality tennis and squash rackets are available. Squash balls are difficult to obtain. Local tennis balls are of poor quality. Golfers may use either English- or American-sized golf balls.

Most Americans pay to join a private club for the social life and sports facilities. The Tollygunge Club, about 30 minutes from central Calcutta, has a swimming pool, golf, tennis, horseback riding, monthly movies, and a snack area.

The Saturday Club has tennis courts, a swimming pool, library, restaurant, and lawn. The Calcutta Swimming Club has a large outdoor swimming pool, dining room, and bar. Both clubs accept single women as members.

The Bengal Club offers its older, conservative membership a quiet atmosphere for business luncheons and dinner parties. The Calcutta Club is most prestigious among Bengalis. The South Club and International Club are popular with tennis players. The Rowing Club uses a small lake in south Calcutta, and the Royal Calcutta Golf Club is the oldest Golf Club outside the U.K.

Touring and Outdoor Activities

A drive on the Grand Trunk Road along the Hooghly River reveals glimpses of bygone splendor in Calcutta. Boat rides are available at Diamond Harbor and Kakdwip, a 2-hour drive from Calcutta.

The ocean resorts of Puri and palpur lie about 300 miles southwest on the Bay of Bengal and may be reached by overnight train. Hotel accommodations are moderate to poor. Visitors may swim and surf. Also on the Bay of Bengal and only 4 hours from Calcutta by road is Digha, which has limited accommodations.

The temples and caves of Bhubaneswar, Puri, Konarak, and other historic towns are 275 miles southwest of Calcutta in Orissa. The largest collection of Siberian tigers in the world is in the wildlife preserve

there. Kathmandu, the capital of Nepal, is about 700 miles northwest of Calcutta and is about 1 hour by air. The hill station town of Darjeeling is a hour's flight or an overnight train ride from Calcutta.

Permits are required to visit Sikkim, Mizoram, Manipur, Nagaland, Arunachal Pradesh, and the scenic Andaman Islands, a 2-hour flight from Calcutta. Good snorkeling, scuba diving, moderately priced hotels, and tours are available. Some rental snorkeling and scuba gear is available. The peak holiday season is November through April.

Entertainment

Calcutta has good hotel restaurants with international cuisine and live dance bands. Americans also dine at several good Indian and Chinese restaurants.

Several movie theaters regularly feature European and American films, but facilities are poor.

Calcutta is known as the creative capital of India. Bengalis are lively, talkative, and outgoing people. During the cool season, Calcutta comes alive with Indian poetry, music, drama, painting, sculpture, and dance programs. The Calcutta School of Music presents occasional chamber music concerts. Visiting vocal, instrumental, and dance artists perform several times a year.

The Birla Planetarium has daily lectures and demonstrations, except on Mondays. The Zoological Gardens with its white tigers, and the Agri-Horticultural Society are located in Alipur. There are also the Botanical Gardens in Alipur.

Social Activities

Many clubs are available for membership. The Lions and Rotary Clubs welcome men of all nationalities. Many organizations welcome the participation of foreign women in their educational and charitable activities, including local orphanages and Mother Teresa's institutions.

Chennai (Madras)

Chennai (known as Madras until 1997), the capital of Tamil Nadu, lies on the shore of the Bay of Bengal, about 900 miles north of the Equator. With a population of 6.4 million, Chennai is the fourth largest city in India and the major industrial, business, and cultural center of South India. Founded by the British in the early 17th century as their first trading and military post in South Asia, Chennai has continued to grow with very little planning. Modern concrete buildings are often flanked by small shops, thatched huts, and vacant lots. Major streets bustle with bicycles, scooters, handcarts, oxcarts, buses, and long-distance trucks. The general pace of life is slower than in Bombay or Calcutta. Chennai, however, experiences poor sanitation and overcrowding. About 80 percent of the people in South India are still engaged in agriculture, but engineering and consumer industries are beginning to attract more activity.

Chennai is one of India's more pleasant major cities and is spread out over 50 kilometers.

The population is mostly Hindu, with large Muslim and Christian minorities. The traditional jibba, veshti and lungi are worn by many men; professional and businessmen wear Western dress. South Indian women typically wear saris, although the north Indian tunic sets are gaining popularity. South India is famous for Carnatic music and classical dance in the Bharatanatyam, Kathakali, and Kuchipudi styles.

English is spoken by about 5 percent of the people in South India. Tamil is the primary language in Chennai.

Food

Many fruits and vegetables are available—corn, eggplant, beans, carrots, potatoes, cabbage, squash, avocados, mushrooms, artichokes, yams, manes, bananas, peaches, pears, apples, grapes, oranges

(sweet limes), guavas, limes, tangerines, and pineapples. Cashews, peanuts, walnuts, and coconuts are also available.

Beef, chicken, mutton, lamb, pork and, occasionally, veal are available. The cost of all meats, except lamb and chicken, is less than in the U.S. Turkey is also available, but the quality is poor.

Fresh seafood (fish, lobster, crab, shrimp) is available and reasonably priced. Eggs are plentiful and their quality is good. UHT Long-Life milk or powdered milk is used by many foreigners for both drinking and cooking. Good quality cream is available locally. Fresh milk, cream, and powdered milk are available locally, but the supply is undependable. Fresh milk should always be boiled. Baby food and formula are also available locally, but the quality is questionable.

Clothing

American men usually wear short-sleeved dress shirts or bush shirts and slacks in the office, although a sports coat or suit may be necessary for an important appointment or official function. American women's office dress is similar to that worn in U.S. offices during the summer.

Materials for women's summer clothing are excellent, inexpensive and easily available in Chennai, although elastic, thread and zippers are not of the highest quality. Several changes of dress may be necessary daily. Frequent laundering, tropical sunlight, and perspiration combine to shorten the life of clothing. Since there is little seasonal change, cottons are worn year around. Indian dress (two-piece pajama outfits and saris) is popular for casual as well as formal wear. Chennai is a center for a great variety of export-quality handloom silks and cotton textiles. Many women bring a good supply of summer dresses from the U.S. and add locally-made garments to their wardrobes. Also, there are excellent local tailors who can copy almost anything, though these tailors have

trouble with designing or copying from pictures.

Bring several swimsuits and other sport clothes, including shoes for tennis and jogging and riding. Shoes with Western styling and quality are difficult to find, though both inexpensive dress and casual sandals are available locally. A good supply of undergarments is also recommended as local versions are not designed or sized to American tastes. Keep in mind that cotton is the most comfortable for the Chennai climate.

Supplies and Services

Most medicines and drugs are available, although the brand names differ and quality control is inadequate. Travelers are advised to bring their own supply. Most medicines cost less than those in the U.S. Vitamins are available, though not in combination supplements. Chennai water supply does not have fluoride added. Vitamins with fluoride added are recommended for children.

Hairdressers and barbers are adequate and inexpensive. Dry cleaning facilities exist but are of low quality.

Education

The American International School in Chennai (AIM) opened in August of 1995. Designed to enhance the educational and social experiences of expatriate children in Chennai (formerly Madras), AIM is independently operated under the auspices of the U.S. Consulate, Chennai, with the permission of the Indian Ministry of External Affairs. It is governed by a Board of Directors drawn from the parents of the children attending AIM.

AIM follows an American international curriculum taught by expatriate and Indian teachers.

Some elementary-age children have attended KFI - The School. Established with the intention of exploring the educational implications of the teaching of philosopher J. Krishnamurti, KFI - The School is run by

the Krishnamurti Foundation and accepts students from nursery school age through U.S. 10th grade. Its student body is 90 percent Indian; its curriculum is religious based. Parents find this alternative very agreeable, but admissions are difficult to obtain particularly for foreign children. Applications are taken once a year in April for June. Class size is limited to 25 per grade level.

By American standards, other schooling options in Chennai are inadequate. Other schooling options are available in the city however enrollment is restricted and entrance standards are very rigid. Facilities lack resources, with outdated textbooks, class rooms and buildings badly in need of repair. Although the curriculum is in English, many of the students have only marginal English speaking skills.

A preschool has recently opened in conjunction with the American International School. Other American preschoolers attend local Montessori schools. Maria Montessori visited Chennai many times during her professional career and left her marks in the city. Traditional Montessori methods are very popular in many local pre schools.

Special Educational Opportunities

Private instruction is available in classical south Indian dancing, instrumental music, philosophy, and yoga. Several famous yoga instructors reside in Chennai.

In Chennai, colleges are affiliated with the University of Chennai. Few admissions are granted to foreigners.

The Government College of Arts and Crafts offers instruction in painting, sculpture, and handicrafts. Interested persons may arrange private lessons from staff members.

Sports

Americans occasionally join the Madras Club, the Cosmopolitan

Club, or the Madras Gymkhana Club. All have swimming pools and tennis courts where whites are customarily worn. The Cosmopolitan Club and Madras Gymkhana have marginal golf courses.

Bring sports equipment, such as golf clubs, tennis rackets, and balls. Good equipment for volleyball, hockey, badminton, and soccer is available locally.

Laws in the southern states make the sport of hunting almost impossible. Do not import weapons into India.

Touring and Outdoor Activities

The ancient rock carvings at Mamallapuram (also called Mahabalipuram) and the temple cities of Kanchipuram are worth a visit. Facilities for sight-seeing are improving yearly. Adequate overnight accommodations exist in hotels, clubs, guesthouses of business concerns, or government-run tourist bungalows.

The beach in Chennai is not considered usable for health reasons. Many Americans use a resort area 35 kilometers south of the city for swimming and sunbathing. You can rent a beach house for weekends and holidays. However, be aware of the powerful undertow, and avoid leaving the beach line. Individuals who plan to use the beach should bring a sufficient supply of sunscreen.

Entertainment

On weekends a group of expats might organize pick up, softball and volleyball games. The Chennai Hash House Harriers organize biweekly runs around the city for individuals and families.

The Government Arts Gallery has a small collection of contemporary art; exhibits by individual artists are displayed periodically. The Government Museum exhibits a world-famous collection of early and medieval temple sculpture and an outstanding collection of bronze art.

There are a number of good restaurants in Chennai—in private clubs, deluxe hotels, and a few Chinese and Indian restaurants.

Social Activities

Several informal groups meet regularly for bridge, mahjong, snooker, Scottish Dancing etc. There are two women's groups which are popular with the expatriate community. The Overseas Women's Club (OWC) is open to foreign passport holders and concentrates on fund-raising to support local charities but also provides some support and orientation to newcomers. The OWC has recently published a book called "At home in Madras, a Handbook" which is an excellent resource for persons setting up residence in Chennai (formerly Madras). The International Women's Association (IWA) is an Indian/International organization which provides a social network. Activities and programs are centered around cross cultural exchanges, friendship and goodwill between India and the expatriate community in Chennai. Monthly programs include topics on philosophy/religion, health/ecology, current events, tours/travel, cooking swapshop, book discussions and arts/handicrafts.

Social life is centered in the home for Indians and Westerners alike. Consumption and importation of alcohol is tightly controlled. Certain clubs, restaurants, and hotel permit rooms may serve Indian liquor and wines.

South Indians are hospitable, easy-going, and pleasant. Entertaining at home consists of dinner parties and buffet suppers, occasional cocktail parties, and large receptions. Many Indians do not serve alcohol.

Third-country nationals in Chennai are largely members of the consular corps and business community from the U.K., Japan, Germany, Russia, Malaysia, Singapore, and Sri Lanka. About 20 honorary consuls reside in Chennai. The Consulate General of France is located in Pondicherry, a former French territory.

Gateway of India, arch in Bombay, India

© Charles E. Rotkin/Corbis. Reproduced by permission.

Special Information

British Airlines and Lufthansa have direct flights from Europe to Chennai. For long flights, a midpoint layover is recommended. Other major international airlines fly into India through Bombay and New Delhi. Transiting Bombay is not recommended.

Mumbai

Government of Maharashtra changed the name of the city of Bombay to Mumbai in December, 1995.

With a population of more than 16 million, greater Mumbai now outranks Calcutta as the largest urban area in India. Mumbai is India's most western city, and yet the most representative of India's diverse populations.

Mumbai occupies two islands on the west coast of India in Maharashtra state. The eastern side looks out over a great natural harbor, unri-

valed elsewhere on the subcontinent, that provides 75 square miles of sheltered, deep water.

At the southern end of the city lies the sweeping, 3-mile curve of Back Bay, fringed by a boulevard whose lights—brightly gleaming at night—are known locally as the Queen's Necklace.

The downtown business area is flanked to the north by a belt of thriving markets or bazaars that sell everything from essential foodstuffs to luxury items. Beyond the bazaars, Mumbai is a hodgepodge of densely crowded tenements, slum areas, factories, cotton mills, railway lines, and crowded streets.

Mumbai provides about one-third of India's income tax revenue and two-fifths of the country's total revenue from air and seaborne trade. It has the country's busiest stock exchange and the largest concentration of industries. More U.S. banks and manufacturing companies are

located in Mumbai than in any other city in India. By far India's busiest port, Mumbai handles twice the tonnage of Calcutta and Cochin. The Indian film industry, whose capital is Mumbai, produces more movies than any other place in the world.

Nearly 70 percent of Mumbai residents are Hindu. Muslims account for another 15 percent. The remainder is composed of Christians (mainly Catholics), Buddhists, Jains, Jews, Parsees and Sikhs—often influential minorities, though few in number. Most of the estimated 5,000 Americans in the Mumbai consular district are of Indian ancestry.

Americans have few language problems in Mumbai. English is widely used in government and business circles. Service personnel often have a poor understanding of English, speaking instead Marathi or Gujarati. Most domestic employees

speak some English and Goan or Konkani.

Food

Most basic food items are available locally. Beef has become increasingly scarce since the ascension to Maharashtra state power of a Hindu nationalist party, the BJP, in 1994. Mutton, pork, ham, and chicken are readily available. A broad variety of fresh seafood is available in the dry seasons, including many kinds of fish, prawns, lobster, and crab. A good variety of vegetables is found in plentiful supply year round—tomatoes, green peppers, potatoes, cabbage, cucumbers, beets, beans, onions, carrots, cauliflower, spinach, and okra. Lettuce and celery are available. Many wonderful fruits are available at different times of the year—papaya, mangoes, pineapples, oranges, tangerines, grapes, peaches, pears, plums, apples, and strawberries. Prices of fruits and vegetables can be as much as 80 percent less than the would cost in the U.S.

Many canned and dry goods can be found on the local market. White flour, whole-wheat flour, sugar (very coarse), confectioners sugar, tea, coffee (ground or beans), juices, jellies, gelatins, crackers, potato chips, excellent nuts, dried beans and lentils, and locally bottled soft drinks such as Pepsi, Coca-Cola, 7-Up, orange soda, club soda, and tonic water are all available. Local dairy products such as fresh milk, cream, yogurt, ice cream, and cheese are available. However, the fresh milk and cream are generally not considered safe unless they are boiled before use. It is safer to use long-life milk, which is available locally. Specialty items such as pate, cheese, and olive oil can be found, as can many American products (Tang and Hershey’s Chocolate Syrup), but the prices are high.

Clothing

Because of the heat and humidity in Mumbai, lightweight, washable clothing is a must. There are very few air-conditioned buildings. Even in the coolest months, polyester blends are uncomfortably warm.

Clothing, including underwear, made of 100 percent cotton is best. Bring clothing for cooler climates for travel to the mountain and desert areas of India and for planned or unexpected trips to Europe, the U.S., or other parts of the globe in winter.

Sports attire is informal in Mumbai, but whites are generally used on tennis courts.

Men: Cotton dress shirts and sports shirts are available in Mumbai, but the quality is not quite the same as in the U.S. Bring a supply of ties, socks, cotton underwear, and shoes. Good sandals and slippers are sold locally, but dress shoes are not satisfactory. Bring athletic shoes, bathing suits, and clothing for sports activities (tennis, volleyball, squash). Some better quality men’s clothing can be purchased in Benetton. Good quality athletic shoes are not available locally. Casual waterproof shoes are helpful to have to wear during the monsoon.

Women: For other times, inexpensive, lightweight cotton dresses, blouses, skirts, shorts, and slacks are available locally. On Fashion Street, an open fair-market dealing in seconds, dresses and skirts are sold for \$2-\$3. Better quality clothing can be found at shops like Benetton.

Ready-made Indian suits (salwar kameez) and saris in beautiful design may be worn for casual and formal occasions. Silk saris can be tailored into dresses and suits. Accessories such as belts, scarves, and costume jewelry are inexpensive. Shoes and sandals are available, but the quality is not as good as in the U.S. Leather purses in a multitude of colors and styles are sold at reasonable prices.

Children: Children’s clothing should be lightweight and washable. Bring a supply of cotton underwear, bathing suits (and other swimming necessities), and shoes. Cotton T-shirts and shorts are available, but bring a supply. Also, bring rubber boots and umbrellas. Infant

supplies are sold locally, but are not up to Western standards.

Supplies and Services

Shopping in Mumbai is interesting. The city has many handicraft shops that specialize in crafts from many parts of India, especially Kashmir and Gujarat—gemstones, embroidery, leather goods, antiques, carved screens, brass, gold items, and carpets.

Gasoline is about \$3.60 a gallon for 93 octane. Eighty-seven octane, as well as unleaded gasoline is also available. Gasoline quality is good but not as good as in the U.S.

Beauty salons and barbershops are adequate and inexpensive.

Dry cleaners exist, but quality is questionable. If you must have something cleaned, make arrangements through one of the five-star hotels.

Tailors and dressmakers are inexpensive. They can easily copy already existing items (rather than sewing from pictures or patterns). Tailors are not as speedy as in Hong Kong or Bangkok, nor is the finished product as skillfully made, but one can usually find a tailor who does adequate work. Good-quality fabrics are available here, but notions (thread, buttons, fasteners, etc.) are below American standards.

Religious Activities

Mumbai has Hindu temples, Moslem mosques, Christian churches, and Jewish synagogues. Among Christian denominations represented are Roman Catholic, Methodist, Church of Christ, and Episcopalian (Church of England). Services are conducted in English, Hindi, Gujarati, and Marathi.

Education

The American School of Mumbai (ASB) offers classes from pre-kindergarten through grade 12. ASB is an American-sponsored school and receives grants from the Department of State. It is the only one of the many English-medium schools to use the American system. The

school year runs from mid-August to late May.

The school staff numbers about 30, including a principal, full-time teachers, special staff, and several aides. The student body is composed of about 200 students, 30% American and the remainder other foreign residents of Mumbai. The elementary school is located across the street from the consulate; the middle and high schools are approximately one block from the consulate. The school is currently in the process of purchasing property, and will soon start building a new school. The new school is expected to be ready for occupancy and classes in the fall of 1999.

ASB's high school program is operated as an independent course of study with the University of Nebraska correspondence program. ASB modifies the University of Nebraska program by scheduling the students into as normal a school program as possible.

Most parents send their children to ASB at least through grade 8.

Other English-medium schools in Mumbai operate under the British system. Mumbai International School, Cathedral School, and John Cannon are well known. The schools are competitive and children are under great pressure to perform well. Admission is difficult, particularly in the lower grades. Few American-type extracurricular activities are available. The school year begins in early June and ends in early April.

Sunflower School and Casa Bambino are two nursery schools located in the residential areas near the U.S. Consulate General. Both accept children sooner than ASB does. Though classes are crowded, in recent years American children have been attending Casa Bambino.

Special Educational Opportunities

Teachers of Hindi are available. Classes are available locally in pottery, Indian cooking, weaving, art,

computers, fabric painting, and many other subjects are also available. Coaches are available for tennis and golf.

Sports

Basketball teams play weekly, and tennis is popular. Most sports activities in Mumbai are centered around various private clubs.

Breach Candy Swimming Bath Trust, has two saltwater pools, a lap pool that is partially covered, and an outdoor pool in the shape of pre-partition India. Applicants must have a European sponsor to join. Fees for two years for a family of two total about \$925. The children's park and playground may be used at Breach Candy free of charge. Visitors may use the pool area for \$3.00 per person.

The Willingdon Sports Club is Mumbai's most prestigious private club. Foreign businessmen and diplomats must have a sponsor, but are admitted under special provisions. Fees for two years total about \$6,300 in 1996. The only club with a golf course in Mumbai, it also has tennis, badminton, and squash courts, a swimming pool, a library, several restaurants, and gardens often used for large parties.

Mumbai Gymkhana is located in the downtown area near USIS and offers tennis, swimming, badminton, and squash. The total cost for belonging to this club for two years, irrespective of family size, is about \$9,125 in 1996. Married women cannot be members, but can use the facilities as their husbands' dependents. This club is very popular with Mumbai's young professional crowd.

The Royal Mumbai Yacht Club, located near the Taj Mahal Hotel and the Gateway of India, has sailboats for members to use during the October-May sailing season. Members of Washington, D.C.'s Army Navy Club are allowed to use the club and the sailboats at no cost. The Colaba Sailing Club also has sailboats and is less expensive.

Amateur Riders' Club is adjacent to the race course and has riding facilities. It is especially nice for young people who wish to take riding lessons.

Rotary Clubs, Lions Clubs, and Masonic Lodges are active in Mumbai.

Touring and Outdoor Activities

There are fascinating sights in and around Mumbai. Newcomers can begin by taking one of the several half-day or full-day city tours arranged by the Government of India Tourist Office. A tour of Victorian architecture of the city and a boat ride from the Gateway of India to Elephanta Caves is worthwhile. There are also many Hindu, Jain, and Moslem shrines to see.

Other daytime outings include trips to the Buddhist temple caves on a jungle-covered hillside at Kanheri, the Portuguese fort city of Bassein, and the Kanala bird sanctuary with a fort perched atop a jungle-covered hill.

The three hill stations of Lonavala, Matheran, and Mahabaleshwar make pleasant weekend excursions. Lonavala has the Karla and Bija Buddhist temple caves and two interesting old hill forts. Matheran has pleasant views, walks, and bridle trails. Mahabaleshwar is the coolest of all, with attractive views and walks.

Goa, about a 45-minute flight from Mumbai (about \$100.00 round-trip), has clean beaches, luxury resort hotels, and historic Portuguese towns. Reservations usually must be made well in advance. Aurangabad, 30 minutes from Mumbai by plane, has the temple caves of Ajunta and Ellora and an old fort at Dalalabad. And a trip to the Taj Mahal at Agra is a must for anyone stationed in India.

Entertainment

Mumbai is a cosmopolitan city and dining out in the many Chinese, French, Italian, and Indian restaurants is a popular activity. Hotels

often have discotheques and dance bands in their restaurants. Many new nightclubs have opened throughout Mumbai.

Mumbai is a center for Indian and western classical music. Well-known Indian and international artists perform in Mumbai's concert halls.

Art and archeology exhibits can be found at the Jehangir Art Gallery and the Prince of Wales Museum. The Museum Society sponsors slide lectures by international and Indian scholars. The Mumbai Natural History Society organizes weekend bird-watching trips and publishes magazines, bird guides, and books on flowering trees. English-language plays by professionals and vintage American and English films can be seen. American action-style films are frequently shown in local theaters.

The USIS and British Council libraries, Alliance Francaise, and Max Mueller museum are open to everyone. Inexpensive paperback books published in India, U.S., and U.K. are available in the several nearby, moderately well-stocked book stores.

Social Activities

A small, active American Women's Club holds monthly meetings.

An active social life with international contacts is possible in Mumbai. Indians are hospitable people and friendships develop rapidly. Americans are welcome to join the American Alumni Association and the Indo-American Society. Both offer opportunities for contact with Indians interested in the U.S. Indus International is a popular women's organization that features study groups and trips to interesting parts of India. Many business people join the Indo-American Chamber of Commerce.

The Hash House Harriers, an international running group, sponsors a run the last Sunday of each month, an occasional weekend trip to Goa

or a hill station, and the Hash Bash (party) every fall.

OTHER CITIES

AGRA is situated on the right bank of the Yamuna River, 125 miles southeast of New Delhi. An important commercial center and rail junction, this city of over 1.2 million is known for its glass products, shoes, carpets, and handicrafts. The present city was established by Akbar, who built a stone fort here in 1564; it was a Mogul capital until 1658. The city frequently changed rulers during the decline of the Mogul empire until it was annexed by the British in 1803. It served as capital of the North-West Provinces from 1835–62. Agra has many magnificent forts and castles and is home of Agra University, but its main attraction is the Taj Mahal. When the fifth Mogul emperor, Shah Jahan, learned of the death of his wife, Queen Mumtaz, he ordered the Taj Mahal to be built in her memory. Often called a monument of love, its polished white marble walls are decorated with millions of inlaid precious and semi-precious stones. Construction began in 1632 and took 22 years and over 20,000 workers to complete.

AHMADABAD (or Ahmedabad) is one of India's most beautiful cities, and is known best as the site of the beginning of Mahatma Gandhi's efforts in the country's independence movement. It was here that Gandhi was arrested in 1933. Ahmadabad, with a population of more than 4.2 million, is an important rail terminal, as well as an industrial center known for its cotton mills. It is located on the Sabarmati River, nearly 300 miles north of Bombay. Ahmadabad is the capital and cultural center of Gujarat State. It has many magnificent tombs and mosques, and is sacred to the Jains, who have over a hundred temples here. Ahmadabad is also the home of Gujarat University, founded in 1950.

BANGALORE is 180 miles west of Chennai. It is the home of a university, of the National Aeronautical Research Institute, and of the University of Agricultural Sciences. It once had a large British civil and military post. Bangalore is the capital city of Karnataka State, and has a population of approximately 5.6 million. Founded in 1537, Bangalore today is one of South India's major transportation hubs and industrial centers. There are aircraft and electronics industries and textile mills; coffee is traded. Known as a retirement city, Bangalore has wide streets and numerous parks. Kolar Gold Fields, with a population of 144,400, is 35 miles east of Bangalore. It is known for its gold mines.

The city of **BARODA** lies on the Viswamitn River between Bombay to the south and Ahmadabad to the north. Situated in a fertile area, Baroda is a major marketing hub for millet, cotton, and tobacco. Hand-loomed cloth interwoven with silver is made here. It is also a prominent rail center. Formerly the capital of the princely state of Baroda, the city became part of the Indian Union in 1947; merged with Bombay State in 1948; and became part of the new state of Gujarat in 1960. Historic landmarks include a palace dating back to 1721. Medieval Indian sculptures and paintings may be seen at the Museum and Picture Gallery. There is a medical college and an university, founded in 1949 here. A well-planned city with wide avenues and beautiful parks and buildings, Baroda's population is over 750,000.

The city of **BHOPAL** is situated in central India in an agricultural region surrounded by rolling hills and dense forests. Founded in 1728, this industrial city of about 1.4 million people is 466 miles south of New Delhi. Items produced in Bhopal include electrical goods, jewelry, and cotton cloth. Bhopal is best known, however, for the tragedy that occurred in December 1984. The deadly gas, methyl isocyanate, escaped from the Union Carbide pesticide plant on the outskirts of the city. It passed over the towns of

Jaiprakash and Chhola and drifted toward Bhopal. It was the worst industrial disaster ever, killing more than 2,500 people.

The capital of Orissa State, **BHUBANESWAR** is situated 140 miles southwest of Calcutta, in eastern India. The city boasts numerous shrines, built between the sixth and 12th centuries, that are examples of the finest of Hindu architecture in the country. At one time, there were 700 temples in Bhubaneswar; today, 500 still stand. The Great Temple, built to the sun god in the seventh century, is decorated with detailed carvings. Today, the city is a developing administrative center, with a population of over 225,000. Utkal University, founded in 1943, and Orissa University of Agriculture and Technology, founded in 1962, are located in Bhubaneswar.

Situated on the Noyil River at an altitude of 1,400 feet, **COIMBATORE** is the third largest city in Madras State in southwestern India. In 1866, Coimbatore was made a municipality and the headquarters of its district. It is a major commercial and industrial hub based on the hydroelectric complex on the Pykora River. Coimbatore is the largest cotton-milling center south of Bombay. A majority of its residents are Hindu and speak Tamil. The renowned Hindu-Dravidian-style Temple of Perur is located here. The Nilgiri Hills, known for their tea and coffee, are nearby. A railway connects the city with Madurai and Tuticorin, and air service links it with Cochin, Bangalore, and Chennai. The population in Coimbatore exceeds 1.4 million.

HYDERABAD, a city of 5.4 million inhabitants, is located in Andhra Pradesh State. Once part of the Mogul Empire, the area is known as Nizam's Dominions, after the sovereigns who ruled the region for many centuries. Hyderabad lies on the Musi River, about 300 miles north-northwest of Chennai, and is a city of paper factories, pottery works, sugar refineries, and carpet and textile mills. The University of Hyderabad was founded in 1918. Some of

its ancient structures include Char Minar, built in 1591, and the Old Bridge, built in 1593. Warangal is 90 miles northeast of Hyderabad. The 12th-century capital of Telugu Kingdom, Warangal is known for its carpets, silk, and textiles, and has a population of 336,000.

INDORE is located in northwestern India, about 320 miles northeast of Bombay. The city, on the Bombay-Agra Road, is the center of the Malwa Region, which offers a pleasant climate, fertile land, and consistent rainfall. Indore has cotton mills and several other light industries; cotton, peanuts, millet, wheat, and barley are grown in the region. Indore's educational facilities include a medical college, a technical institute, and a plant experimentation station; Daly College, once exclusively for royal princes, now offers open enrollment. Two palaces and the old British Residency still stand here. The city has a population of approximately 1.6 million.

JAIPUR, the capital of Rajasthan, is situated in northwest India, about 150 miles southwest of New Delhi. Founded in 1727, the city was the capital of the former Indian state of Jaipur. It is a commercial center, known for its ivory and enamel work, and for glassware and marble carvings. The name is sometimes seen spelled Jeypore. Among the city's many tourist attractions is a fabulous maharajah's palace, which occupies one-seventh of the municipal area. Currently, Jaipur has over 2 million residents, and is known as the pink city, from the color of its houses. The city of Ajmer is 85 miles to the southwest of Jaipur. Founded in 145, Ajmer today is a trade center with cotton mills and nearby marble quarries. This city of almost one million has a Jain temple, the tomb of a Muslim saint, and a palace among its historic sites.

KANPUR (Cawnpore) is a rail junction, and the most important industrial center of the Uttar Pradesh State in northern India. Situated on the right bank of the Ganges River,

about 250 miles southeast of New Delhi, Kanpur is known for the massacre of British soldiers and European families during the 1857 Sepoy Mutiny. It now is a city with a population of 2.6 million. A technological institute is located in Kanpur. The city of Allahabad is located farther south on the Ganges River at the junction of the Yamuna. A holy city long sacred to Hindu pilgrims, Allahabad today is an administrative, transportation, and legal center that trades in sugar and cotton. Historic sites in this city of 1.5 million include Jama Masjid (Great Mosque). There is also a university, founded in 1887.

The commercial and cultural center of the middle Ganges Valley, **LUCKNOW** is the capital of Uttar Pradesh State. It lies 48 miles northeast of Kanpur and 270 miles southeast of New Delhi, on the Gumti River. Lucknow is a major wholesaling center, handling food products. There are also financial and banking opportunities here. Lucknow once served as the capital of the princes of Oudh. A number of interesting mosques, palaces, and other buildings are reminders of their reign. The most fascinating is the white marble Great Imambara, built in the late 1700s. The city is known for its zoological gardens, parks, and National Botanical Gardens. The city is the site of Lucknow University, several government research centers, and a variety of colleges. The majority of Lucknow's approximately 2.2 million inhabitants are Hindus; there is also a small Muslim community.

Situated near the Vaigai River, **MADURAI** (formerly called Madura) is in southern India, about 280 miles southwest of Chennai. In the middle of a cotton-growing region, the city's industries concentrate on cotton spinning and textile weaving. An old city, Madurai was the headquarters of the Pandya Dynasty from about the third century B.C. until the A.D. 10th century. Madurai was controlled by Great Britain from 1801 to 1947. Of the outstanding shrines, temples, and palaces located here, the Great

Temple is one of the largest Hindu temple complexes. It is visited daily by thousands of pilgrims; parts of the complex are open to non-Hindus as well. The population here is estimated at 1,187,000.

NAGAPUR, a transportation hub and industrial center, is located on the Nag River in central India, about 425 miles northeast of Bombay. Founded in the 18th century, Nagapur passed to the Marathas after 1743 and to the British in 1853. Today, it is a city of more than 2 million whose industries include flour milling, fruit canning, printing, and dyeing. Nagapur also manufactures pottery, glass, brassware, textiles, and iron and leather goods. Amravati is a city of 261,400 situated 85 miles southwest of Nagapur on a branch of the Purna River. An important cotton center, Amravati is the site of the Great Stupa, dating to the second century A.D. Andhra Dynasty.

PUNE (also called Poona) is situated on the Bima River, 75 miles east-southeast of Bombay. It is a rail and road junction, as well as a city of beautiful public gardens and numerous palaces and temples. There are extensive military headquarters here and in its suburbs. Pune has 3.7 million residents.

SURAT, with a population exceeding 2 million, is 150 miles north of Bombay, near the mouth of the Tapti River. During the 18th century, this ancient city was the largest in the country. It was the site of serious conflict between Portuguese, Dutch, and British traders while it was the principal European trading port. Surat is no longer a prominent port, but it is a major commercial city for trading, cotton and silk milling, handloom weaving, and a variety of crafts.

Situated on the Ganges River, **VARANASI** (formerly called Benares and Banaras) is 375 miles northwest of Calcutta in northeastern India. To Hindus, this city is the most sacred place on earth. They believe dying here guarantees a Hindu release from endless

rebirths; and by worshipping at the river, a Hindu acquires special merits during the present life. Over one million pilgrims visit Varanasi's 1,500 temples every year. Most of the temples have been built in the past 200 years due to the earlier destruction of the ancient complexes. Noted shrines include the Great Mosque of Aurangzeb, the most prominent structure situated on the highest ground; the Golden Temple, dedicated to Biseswar (Shiva); and the Durga Temple, favored by tourists for its swarms of monkeys. Industries in Varanasi include the manufacture of brocade, silk, and brassware. The city has a population of approximately 1.2 million.

COUNTRY PROFILE

Geography and Climate

India—"Bharat" to most Indians—is the seventh largest country in the world, with an area approximately one-third the size of the U.S. India is bordered by China, Pakistan, Nepal, Bhutan, Bangladesh, Myanmar (Burma) and Sri Lanka. To the west, south, and east, India is surrounded by the sea—respectively, the Arabian Sea, the Indian Ocean, and the Bay of Bengal. The Lakshadweep Islands off the southwest coast and the Andaman and Nicobar Islands, 750 miles off the southeast coast in the Bay of Bengal, belong to India.

India stretches more than 2,000 miles from Jammu and Kashmir in the north to the southern tip of Tamil Nadu. It is 1,800 miles from Gujarat in the west to Arunachal Pradesh in the east. The topography is dominated in the far north by the majestic Himalayas, which include the world's highest peaks. From the Himalayan foothills to the Vindhya Range in central India spreads the vast, fertile, heavily populated Gangetic Plain. The sacred Ganges (Ganga) and the

Yamuna rivers dissect the Plain. South of the Vindhya Range lies the Deccan Plateau. The Western and Eastern Ghats lie along the southern coastlines.

The climate in India ranges from Arctic-like conditions in the high Himalayas, to blast furnace heat in many parts of the country during the summer, and heavy monsoon downpours during the rainy season. At other times, the weather can be mild and delightfully pleasant. New Delhi is at an altitude of 700 feet above sea level in north central India. The weather in the capital is most pleasant during the temperate months of October–November and February–March, periods characterized by cool nights and warm days. While the winter months of December and January are usually fairly temperate too, the temperature can become surprisingly cold at night. From April through mid-July daytime temperatures often top 100°F. The nights cool off somewhat, but are still hot. From mid-July to September, the occasional monsoon rains create high humidity and high temperatures.

Throughout the year severe air pollution is a problem in New Delhi. During the monsoon season, mosquitos breed in standing water, spreading malaria, Japanese B encephalitis, and dengue fever. Mold, dust, and bacterial infections are common. Cockroaches, termites, moths, and flies are common pests.

Mumbai (formerly known as Bombay), India's financial capital, is a port on the Arabian Sea in the western state of Maharashtra. On a map, Mumbai appears as a peninsula (actually two islands) off the west coast of India. A great natural harbor provides 75 square miles of sheltered deep water.

Mumbai has a tropical climate with three distinct seasons. The heat and high humidity of April, May, and October make life quite uncomfortable. The monsoon season, June to September, brings a welcome relief although the humidity remains high. An average of 77 inches of rain

falls during the monsoon. Late November through February is cooler, although the days are still hot and sunny.

Calcutta, the capital of the state of West Bengal, is situated on the Hooghly River about 80 miles north of the Bay of Bengal. Because the city is built on near sea-level marshland, Calcutta and its suburbs suffer from poor drainage and periodic flooding, especially during the monsoon, June to October. From November through February, temperatures are pleasant, however the city suffers from considerable air pollution during these months. The heat begins in March, and occasional “nor’westers” bring welcome cool winds and rain from the Himalayas through May. Then the overcast sky of the monsoon brings relief from the glare of the sun, even though the temperature remains high.

Chennai, the capital of Tamil Nadu, lies on the shore of the Bay of Bengal, about 900 miles north of the Equator. Until 1997, the city was known as Madras. Chennai has a medium-sized artificial harbor and a wide sandy beach that extends for several hundred miles along the coast. The surrounding countryside is a largely flat, coastal plain devoted to rice cultivation. It is green and fertile during part of the year but dry and dusty during the rainless spring and early summer months.

The climate is tropical throughout the year. December and January are relatively cool months. The weather heats up drastically from March through June. Unfortunately, as the temperature rises, so does the humidity. Chennai is unique among the consular cities—it experiences a late monsoon from August through November. Pre-monsoon rains bring slight relief in July, and the temperatures decrease slowly until the cooler season returns in November. During the hottest months, sea breezes occasionally lessen the discomfort.

Chennai averages 48 inches of rain annually, although droughts occur

when the monsoon fails. Most rain falls from October through December, but frequent showers can occur from May to September. Occasionally, cyclones strike the coast. Mildew damage occurs throughout the year. All U.S. Government houses have air conditioners in every room to help combat this fungus, as well as for comfort.

Population

India is the world’s second most populous country with an approximate population of 1,017,650,000. If current population growth trends continue, India’s population will likely surpass China’s in the next 20 to 30 years. The U.S. Embassy and Consulates are located in the following cities (with rough population estimates from 2000): Delhi (including New Delhi), 12.4 million; greater Mumbai, 18 million; greater Calcutta, 12.9 million; and Chennai, 6.6 million.

India is a predominantly rural country; more than three-fourths of the people live in villages. Nevertheless, India’s cities are huge and continue to expand with the annual migration of hundreds of thousands of rural residents. The strain on the cities to provide basic services to these burgeoning populations is outstripping their resources. The result is predictable—the quality and reliability of the water, power, transportation, and communications infrastructure have deteriorated in many urban centers.

India is a cultural, linguistic, ethnic, and religious mosaic unequalled in the world. The nation’s 25 states and several union territories are largely established on ethnic and linguistic lines. Hindi has been designated as the national language; it is in widespread use throughout the north and is increasingly understood in other parts of the nation, especially in large urban centers. English also continues as a language link between educated people from different parts of the country. Shopping and getting around in any of the urban areas can be easily done in English. Communication in

rural areas can also be pursued in English, but some understanding of Hindi or the local language is a definite advantage.

Although largely a Hindu nation (nearly 80% of the population), India has a huge Muslim population (approximately 12%)—the world’s second largest, after Indonesia. Sikhs, Christians, Buddhists, Jains and others make up the balance. Religion in India often provides identity and defines a way of life. Marriage, clothing, diet, employment, and location of housing can be dictated by religious considerations. Most women and some men dress in their traditional clothing, though modern fashions tend to blur ethnic lines in cities.

Most Indians have dietary restrictions; many are vegetarian, and some avoid eggs and dairy products. Many fast on a particular day of the week. Among those who do eat meat, Hindus do not eat beef and Muslims avoid pork. In cities, Indians generally eat late, often as late as 10 or 11 p.m.

Caste identification remains strong today, even among some non-Hindus. Having evolved over thousands of years, castes or family clans now number in the hundreds and are roughly divided by the Government of India into the *Forward Castes* (priestly, princely, and business), *Backward Castes* (agrarian and tradesmen), and *Scheduled Castes and Tribes* (formerly untouchables). Despite long-standing government affirmative action programs, most members of the Scheduled Castes and Tribes remain at the bottom of India’s social and economic ladder. Socially, an Indian is expected to marry within his own caste.

Dating and public display of affection between males and females are rarely seen. Arranged marriages are the norm, though there are exceptions, especially among the urban middle class. The traditional joint family is common, and a bride typically moves into her in-laws’ home. Traditionally, an Indian family is not considered complete until

there is a male heir to care for his parents in their old age and to light their funeral pyres.

Public Institutions

India is a democratic republic made up of 25 states and 7 union territories. Its 1950 constitution is mainly derived from the British parliamentary system. The constitutional head of State is the President, although his duties are mainly ceremonial. He resides in *Rashtrapati Bhavan* in New Delhi, formerly the residence of the British Viceroy. Executive power is held by the Prime Minister and his appointed Council of Ministers (the Cabinet) from the majority party or a coalition in Parliament.

Legislative power is vested in the bicameral Parliament, which is made up of the *Rajya Sabha* with, up to 250 appointed and indirectly elected members, and the *Lok Sabha*, with up to 550 directly elected members.

The judicial system is headed by a Supreme Court appointed by the President.

The political structure of the state governments is similar. The Governor, who is appointed by the President, is ceremonial head of the government, while the Chief Minister and his cabinet, who come from the majority party or coalition in the State Assembly (Legislature), exercise executive authority.

National political parties include the Congress (I) Party, Bharatiya Janata Party (BJP), Janata Dal, Communist Party of India (CPI), and Communist Party of India-Marxist (CPM). In addition, there are several important regionally-based political parties, including *Telugu Desam*, *All India Anna Dravida Munetra Kazhagam*, *Dravida Munetra Kazhagam*, *Akali Dal*, and *Samajwadi Janta Dal*.

Many philanthropic organizations exist in India. The Rotary and Lions Clubs, the Red Cross, the YWCA and YMCA, the Boy Scouts and Girl

Guides—to name a few. The National Cadet Corps selects young men and women from all over the country to train at a military camp in New Delhi each year.

Arts, Science, and Education

The cultural heritage of India is one of the richest and most ancient in the world. India absorbed immigrants and invaders with their varied cultures. Although as a nation, India is less than 50 years old (1947); it has an ancient civilization spanning more than 4,000 years.

Indian architecture and sculpture have served primarily religious functions, mainly in temple carvings and tombs (Hinduism, Jainism, Buddhism, Christianity, and Islam). The pinnacle of Moslem Mughal architecture was reached in the 17th century when Shah Jahan built the Taj Mahal at Agra as a tomb for his favorite wife.

Beginning with the sacred Vedas, Sanskrit literature developed over 2,500 years and is now alive in the epics *Mahabharata* and *Ramayana*, originally handed down orally. Indian philosophy, which analyzes the soul, *karma* (action or duty) and salvation, is divided into many schools of thought (e.g., Schools of *Yoga*).

Indian music comprises a wide variety of instrumental and vocal traditions, among which are classical, religious, popular, theatrical and modern. The internationally famous Ravi Shankar still performs on his sitar, accompanied by tabla drummers.

The classical traditions of Indian dance are at least 2,000 years old and have evolved into dance dramas which dramatize Hindu religious stories through stylized gestures which are highly symbolic and emotionally suggestive.

Education is primarily the responsibility of the state governments. Although free in most states for

children between the ages of 6 and 14, education is not compulsory. Secondary schools offer instruction in Hindi, English and the appropriate regional language. Higher education is provided in colleges, universities and technical institutes. Social education programs promote adult literacy. In the nearly 50 years since independence, India has built a university education system which is second in size only to that of the U.S., with 200 universities and more than 6,300 colleges.

Commerce and Industry

With a population growth rate of over 2.1 percent per year and a real gross national product (GNP) growth rate since the early 1950s averaging below 4 percent, India has made modest progress in improving the standard of living for most of its population. Per capita income is U.S.\$2,200.

Agriculture accounts for 27% of India's GDP, involving 62% of the work force. The services sector, which includes trade, hotels, banking, transport and communications, now accounts for 52% of GDP and is the largest and the fastest growing sector of the economy.

India has traditionally found it difficult to export sufficient goods to offset import needs. India's leading exports include textiles and garments, leather products, gems and cut diamonds and, in recent years, manufactured goods. Principal imports include petroleum, capital goods, iron and steel, chemicals, fertilizers and edible oils. With over \$5.2 billion in two-way trade, the U.S. is India's largest trading partner followed by Russia, the European Community, and Japan. The U.S. is the largest foreign investor and the largest source of joint ventures in India.

Jute and cotton textiles remain the most important industrial sectors, but steel, heavy industry, and chemicals have gained in importance. India now manufactures a variety of

finished products, including consumer durables such as TVs, washers, stereos, electronics equipment, computer software, and automobiles for domestic use and export. Mineral resources (coal, iron ore, bauxite, manganese) are substantial but have been only partially tapped. Despite industrial development, chronic problems of unemployment and underemployment remain.

Transportation

Fuel

Diesel fuel and 93 octane petrol (gasoline) are readily available throughout the country. Diesel costs one-third as much as petrol. Lead free petrol is available on the open market in New Delhi and other large metropolitan cities. It is not readily available throughout India.

Rental Cars

When one rents an automobile for travel in India, it usually includes a driver. Air-conditioning costs more. Using rental services through a hotel more than doubles the cost, but this insures an English-speaking driver. One can also rent a car without a driver through Budget and Hertz.

New Delhi

New Delhi is probably the easiest Indian city in which to drive with its wide boulevards and flower-filled traffic circles.

Mumbai

Public transportation is available. Taxis are inexpensive (about 50 cent one-way between home and work) and readily available during daytime hours though often not late in the night. However, they are small and uncomfortable. Local buses and trains are extremely crowded and unclean.

Calcutta

The road conditions are poor. During the monsoons, streets flood and can stay flooded for 2 or 3 days.

Local transportation includes the subway, buses, taxis, three-wheelers, and rickshaws. Buses are over-

crowded and service is irregular. Metered taxis are available at all major hotels and shopping areas. The rates are low; however, most taxi drivers prefer to negotiate a flat rate. Tipping is optional. The city subway provides service that is comfortable, safe, and uninterrupted by traffic congestion.

Rental vehicles are available, but it is very difficult to get an English-speaking driver.

Local

Public transportation in Indian cities includes trains, buses, taxis, auto rickshaws (three-wheeled scooters), and cycle rickshaws. Horse-drawn Tongas are still seen in some cities and towns. Taxis and auto rickshaws, usually yellow and black, are not air-conditioned, but are inexpensive. Meters are often not set at the current rate, but drivers will produce a current rate card if asked to substantiate the higher rate. Taxis charge higher rates late at night.

VIP automobiles are given more leeway on the roads than are emergency vehicles. They usually come equipped with flashing lights, sirens, and are often accompanied by hand and gun-waving security vehicles. (There are also VVIPs and VVVIPs.) Ambulances may have a small flashing light, but not a siren. Police vehicles (jeeps, motor scooters, buses) are marked POLICE in English or Hindi. Fire engines have sirens.

Public transportation between cities is done by bus, train, or plane. India has an extensive rail system. State corporations run the bus companies which network throughout the country. Luxury tour buses can be rented.

Regional

India's highway system extends to most parts of the country. During the monsoon, roadways can become flooded due to sudden downpours. Traffic is diverted, potholes and sinkholes appear, and power and telephone service goes out. If one plans to do a lot of traveling in India

by personally owned vehicle, a 4-wheel drive utility vehicle with right-hand drive would be very useful.

Cars are driven on the left and most vehicles are right-hand drive. Operating a left-hand drive vehicle outside city limits can be dangerous. The driver will need someone in the passenger seat to tell when to pass or when another vehicle or animal is coming head-on in the left lane.

Driving is a challenge when sharing the road with the vehicles of varied speeds and sizes—trucks, buses, auto rickshaws, Indian-made Marutis, bullock carts, bicycles, handcarts, bicycle rickshaws, motor cycles, wandering livestock, taxis, pedestrians, and the occasional elephant or camel. Accidents are frequent and can be very serious, especially to unprotected passengers and pedestrians. Emergency medical services for road accident victims are usually poor or nonexistent.

The road conditions throughout the country differ from state to state. India has installed a new system of traffic signs, listing destinations and distances in English, Hindi, and local language on one sign. Bypasses are being installed around major cities. Petrol pumps are readily available throughout the country with 93 octane petrol and diesel fuel.

No matter how challenging the new ways of the road may seem, Indian drivers are tolerant of unusual behavior on the roadways. The key to driving in India is patience and flexibility.

Regional Air

India has separate domestic and international terminals at the major airports. To enter the airport, one must have a current airplane ticket or an official airport pass. Check-in procedures take 1-2 hours for domestic flights, and 2-3 hours for international flights. Most international flights arrive and depart in the middle of the night. Arriving passengers can expect to spend 15

minutes to 2 hours to get their baggage.

United Airlines currently offers daily round-the-world service from New Delhi, with flights in both directions to and from London and Hong Kong. Delta flies into Mumbai from Frankfurt seven times a week.

Direct flight connections link various Indian cities with Nepal, Bangladesh, Sri Lanka, and Pakistan. Indian Airlines, Vayudoot Airlines, and new private air carriers offer service throughout India. Domestic travel by air is expensive. A round trip from Delhi to Goa, a distance of 500 miles, costs \$360.

No American carriers operate in and out of Calcutta. The city is served by a few foreign carriers, and their services are limited. Over-nighting in Bangkok or Singapore is unavoidable. Calcutta is connected with major Indian cities by Indian Airlines.

The international airport departure tax is Rs. 300 a person; and to neighboring countries the tax is Rs. 150.

Regional Railroads

India has one of the largest railway systems in the world. Although train stations can be a challenge, train travel is very enjoyable and probably the best way to see the country. Reservations should be made well in advance. And trains are no longer the bargain they once were. Indian rail offers 1st and 2nd class, sleepers, chair car, compartments, vegetarian and non-vegetarian meals, and air conditioning. Passengers carry their own toilet paper and drinking water.

Rail and air travel in India require a lot of planning, patience, and flexibility. Occasionally a train, plane or bus will be delayed or pre-poned (an Indian-English word meaning earlier than scheduled).

Communications

Telephone and Telegraph

Local and international telephone service is available in India. Service is often disrupted, especially during monsoons and a heavy workload can delay repairs and installations. In general, the phone system functions adequately but requires patience, persistence, and low expectations.

Telephone numbers in India currently may be 6-digit or 7-digit numbers. Most homes have only one extension, usually placed by the front door or in the kitchen.

USA-Direct is now available in India for collect and credit card calls. Many Embassy employees have an AT&T credit card for international use. However, having the long-distance phone call originate in the U.S. incurs the least expense. Commercial telegraph, public FAX, and international telex services are available in India, but are, often unreliable.

Radio and TV

Electronic media in India is controlled by the Government of India. All India Radio (AIR) broadcasts mainly in various Indian languages, with occasional Western music and news programs in English. A good shortwave radio is necessary to receive Voice of America (VOA) and British Broadcasting Corporation (BBC).

Doordarshan, the local government-run TV, telecasts in color on the PAL system. One or two channels can be seen in major cities. Limited daily news is supplemented by a world news roundup on Friday nights. Classical Indian music, melodramatic Hindi movies/serials, political debates, and educational instruction are interspersed with cricket matches, edited coverage of Parliament, and old English-language movies.

CNN came to India in 1991 during the Gulf War. In 1992 the satellite broadcast Star Network (BBC news, sports, MTV, movies and entertainment in English and other Asian

languages) was introduced. The availability vary considerably from neighborhood to neighborhood.

Newspapers, Magazines, and Technical Journals

India has wonderful bookstores and a lot to read in English. Besides the local language newspapers, many nationally circulated English language dailies are sold in the major cities. *The Times of India*, *The Indian Express*, *The Hindustan Times* and *The Hindu* are only the tip of the iceberg. *The International Herald Tribune*, the *Asian Wall Street Journal* and *USA Today*, all printed in Singapore, are available 1 day after publication. A few other foreign newspapers are available. Asian editions of *Time* and *Newsweek*, as well as the *Far Eastern Economic Review*, are available within a few days of publication. *India Today*, *Business India*, *Delhi Diary* (tourism), *Femina*, and many other magazines are of high quality and address a variety of subjects.

A variety of fiction and nonfiction books are sold in local bookstores, especially mysteries, science fiction, current best-sellers, and books on India by American, British, and Indian authors. Locally published paperbacks are inexpensive; imported ones are the same cost as in the U.S. or England. Hardbacks may be more expensive than expected. The American Women's Association in New Delhi has an excellent lending library located on the housing compound adjacent to the U.S. Embassy.

Health and Medicine

Medical Facilities (New Delhi)

Many name-brand prescription medications manufactured by U.S. and other multinational pharmaceutical companies are available locally, often at a cost far less than in the U.S.

(Mumbai)

Local dental care is satisfactory, and orthodontic treatment is available.

(Calcutta)

Prescription glasses are available locally. Local dentists offer good, general services at reasonable prices, but have specialized dental work done in the U.S. if possible.

Calcutta's humidity and pollution have a drying effect on hair and contribute to a variety of skin rashes.

Services in India

Qualified English-speaking specialists, many trained in the U.S. and Europe, are available in India for consultation and patient care.

Routine prenatal care is available, but all pregnant women are strongly encouraged to return to the U.S. to deliver. Basic dental services are available in India and are less expensive than in the U.S. Dental services in Calcutta are somewhat limited. Root canals, crown and bridgework, and orthodontic care in New Delhi are of high quality and inexpensive. High-quality, low-cost optical services are available throughout India.

Community Health

In most of India, public sanitation falls far below Western standards. Open sewers abound. Insect control programs have been under-funded. Tap water is considered unsafe throughout India and adequacy of water fluoridation varies with locality and other factors. Fresh produce is considered contaminated. Regulation of food handling and preparation in restaurants is nonexistent. Intestinal parasites, bacillary dysentery, malaria, hepatitis, dengue fever, meningitis, Japanese B encephalitis, tuberculosis, typhoid fever, and rabies are important health concerns. Automobile accidents can be catastrophic due to inadequacies in the medical care delivery system. AIDS is a growing public health problem. Air pollution is an acute problem in many urban areas.

Preventive Measures

Adjusting to a new living and work situation, a new school system, and a tropical environment creates

stresses as well as rewards. Culture shock can cause insomnia, headaches, irritability, and a variety of other symptoms. A program of proper rest, exercise and nutrition can be very helpful in managing these conditions and in making your overseas tour an enjoyable one.

Respiratory illnesses and allergies are common due to dust and heavy pollution. Conditions here aggravate respiratory ailments and allergies. Adults or children prone to these illnesses may want to consult with a physician before considering this assignment.

Caution must be exercised concerning food and water. Commercially bottled beverages, including beer, soft drinks, and mineral water can be considered safe. Otherwise, water must be made safe for drinking by boiling or chemicals. Commercially bottled mineral water is available at restaurants and in the local market.

Meat (chicken, beef, and pork) should be well cooked. Fish should be cooked, not eaten raw. All fruits and vegetables that are eaten raw must be thoroughly cleaned and soaked for 15 minutes in disinfectant solution.

Malaria is endemic in India, and chloroquine-resistant malaria is found in New Delhi and other urban centers. Detailed recommendations for malaria prevention are available 24 hours daily by calling the CDC Malaria hotline at (404) 332-4555.

Tuberculosis is still a common problem in India. Children and adults should have a TB skin test annually.

AIDS is a health risk in India. Use of condoms and avoidance of high-risk behaviors are encouraged. Specific information may be obtained by calling (800) 342-AIDS.

Up-to-date immunizations are a must. Routine childhood immunizations should be up to date, including Diphtheria, Pertussis and Tetanus (DPT); Measles, Mumps and Rubella (MMR); Polio (either OPV

or IPV), and Hemophilus b Conjugate Vaccine (HbCV). In addition, the following immunizations are recommended:

- Hepatitis A Vaccine is recommended for those traveling to India.
- Oral typhoid vaccine is recommended.
- Hepatitis B Vaccine is recommended for travelers who expect to stay longer than 60 days, or who may be at a high risk.
- Rabies vaccine is recommended in India for those who spend a lot of time outdoors, joggers, bicyclists, and frequent travelers to rural areas.
- Japanese B Encephalitis (JBE) vaccine is recommended.
- Dengue fever, a viral disease transmitted by mosquitoes, is present throughout India. No specific treatment and no vaccines are available.
- Those arriving in India from Africa should have a valid yellow fever vaccination. The WHO-approved facility at Indira Gandhi International Airport in New Delhi can give this vaccination to those who need it.

Last, but perhaps the most important, while driving or riding in an automobile in India, buckle the seat belt.

NOTES FOR TRAVELERS

All American citizens require a passport and visa for entry into and exit from India for any purpose. All visitors, including those on official U.S. government business, must obtain visas at an Indian embassy or consulate abroad prior to entering the country. There are no provisions for visas upon arrival. Those arriving in India without a visa bearing the correct validity dates

and number of entries are subject to immediate deportation on the return flight. The U.S. Embassy and consulates in India are unable to assist when U.S. citizens arrive without visas. For further information on entry requirements, please contact the Embassy of India at 2536 Massachusetts Avenue N.W., Washington, D.C. 20008, telephone (202) 939-9849 or 939-9806 or the Indian consulates in Chicago, New York, San Francisco, or Houston. The Internet address of the Embassy of India is <http://www.indianembassy.org/>. Outside the United States, inquiries should be made at the nearest Indian embassy or consulate.

Permission from the Indian Government (from Indian diplomatic missions abroad or in some cases from the Ministry of Home Affairs) is required to visit the states of Mizoram, Manipur, Nagaland, Arunachal Pradesh, Sikkim, parts of Kulu district and Spiti district of Himachal Pradesh, border areas of Jammu and Kashmir, some areas of Uttar Pradesh, the area west of National Highway No. 15 running from Ganganagar to Sanchar in Rajasthan, the Andaman and Nicobar Islands, and the Union Territory of the Laccadive Islands.

Indian customs authorities enforce strict regulations concerning temporary importation into or export from India of items such as firearms, antiquities, electronic equipment, currency, ivory, gold objects, and other prohibited materials. It is advisable to contact the Embassy of India in Washington, D.C. or one of India's consulates in the United States for specific information regarding customs requirements.

Americans living in or visiting India are encouraged to register at the U.S. Embassy in New Delhi or at one of the U.S. consulates in India. They may also obtain updated information on travel and security in India and request a copy of the booklet, "Guidelines for American travelers in India."

-- The U.S. Embassy in New Delhi is located at Shantipath, Chanakyapuri 110021; telephone (91) (11) 419-8000; fax (91) (11) 419-0017. The Embassy's Internet home page address is <http://usembassy.state.gov/delhi.html>.

-- The U.S. Consulate General in Mumbai (Bombay) is located at Lincoln House, 78 Bhulabhai Desai Road, 400026, telephone (91) (22) 363-3611; fax (91)(22)363-0350. Internet home page address is <http://usembassy.state.gov/posts/in3/wwwhmain.html>.

-- The U.S. Consulate General in Calcutta (now often called Kolkata) is at 5/1 Ho Chi Minh Sarani, 700071; telephone (91) (033) 282-3611 through 282-3615; fax(91)(033)(282-2335). The Internet home page address is <http://usembassy.state.gov/posts/in4/wwwhmain.html>.

-- The U.S. Consulate General in Chennai (Madras) is at Mount Road, 600006, telephone (91) (044)811-2000; fax (91)(044)811-2020. The Internet home page address is <http://usembassy.state.gov/chennai/>.

Pets

No quarantine of pets exists in India. Whether accompanying the owner or being shipped unaccompanied, the following documents must be available at the time of arrival:

- A current health certificate with the pet's name, breed and sex, stating that the animal is in good health, fully vaccinated, and free from contagious diseases (including for a dog: Aujosky's disease, distemper, rabies, leishmaniasis, and leptospirosis; for a cat: rabies and distemper).

- A rabies vaccination certificate which must be either: (a) a nerve tissue vaccine taken more than 30 days but not more than 12 months before arrival of the pet in India, or, (b) a chicken-embryo vaccine taken more than 30 days but not more than 36 months before the arrival of the pet in India.

- A distemper vaccination certificate.

- A parrot should have a certificate stating negative results from a compliment fixation test for Psittacosis within 30 days prior to arrival.

Hotels in India do not allow pets. Occasionally, a hotel will grant an exception to those with a small pet. Some kenneling facilities are available in India, but at present are inadequate for the health and care of the animal.

Bring an adequate supply of flea collars, heartworm pills, and any required medication.

Dog licenses are required and can be obtained from the local municipality for a nominal fee. Dogs can be registered with the Kennel Club of India through its northern India branch.

Secretary
Northern India Kennel Club
H-9, Green Park Extension
New Delhi
Telephone: 667-692

Veterinarian services in India are marginal. One or two excellent veterinarians practice in New Delhi, but in general they tend to administer multiple medicines without adequate examination.

When deciding whether to ship a pet to India, consider the heat, humidity, and availability of living space. Pets here seem to develop a variety of skin rashes. Shipping an animal into India during the peak summer months can be hard on it.

Currency

The official currency is the rupee which is divided into 100 paise. Rupee notes come in the following denominations: 10, 50, 100, and 500. Coins come in the following denominations: 10, 25 and 50 paise, and 1, 2, and 5 rupee.

The rate of exchange is Rs. 48.98=US\$1 (May 2002). The exchange rate is free floating, changing daily.

All currency and travelers checks in excess of \$10,000 carried into India must be declared at Customs upon arrival. An unlimited amount of other currencies, drafts, travelers checks, or letters of credit may be brought in. Foreigners must usually pay hotel bills and domestic air fares in hard currency.

India uses the metric system of weights and measures. Mileage markers are in kilometers, and frequently in miles also. Smaller distances are gauged in meters. Weights are in kilograms (kilos) and grams. Liters are used to measure liquid amounts. One inch equals 2.54 centimeters or 25.4 millimeters.

INDONESIA

Republic of Indonesia

Major Cities:

Jakarta, Surabaya, Medan

Other Cities:

Ambon, Bandung, Kupang, Palembang, Semarang, Surakarta, Ujung Pandang, Yogyakarta

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 2001 for Indonesia. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Man has woven a rich brocade of cultures among the far-flung islands of the world's largest archipelago. Most of Indonesia's inhabitants trace their descent from Malay seafarers who left the Asian mainland long before the time of Christ. Chinese pearl fishermen and Indian holy men brought their influences—Hinduism survives on Bali, a storied setting of temples and rice paddies where an endless pageantry of festivals and dances placates attentive spirits. Arab mariners introduced Islam. The Dutch monopolized the rich spice trade of the Moluccas and with them brought Christianity.

Indonesia's 3,000 islands stretch almost 5,000 km (3,100 miles) into the Pacific Ocean. Richly endowed with natural resources and hosting a phenomenal array of distinct cultures, for centuries they have been a magnet to Chinese and Indian traders, European colonizers, wayward adventurers, and intrepid travelers.

It is generally believed that the earliest inhabitants of the Indonesian archipelago originated in India or Burma. In 1890, fossils of Java Man (*homo erectus*), some 500,000 years old, were found in east Java.

Later migrants ("Malays") came from southern China and Indochina, and they began populating the archipelago around 3000 BC.

By the 15th century, a strong Moslem empire had developed with its center at Melaka (Malacca) on the Malay Peninsula. Its influence was shortlived, and it fell to the Portuguese in 1511. The Dutch East India Company, based in Jakarta, took control of Java by the mid-18th century. The Dutch took control in the early 19th century, and by the early 20th century, the entire archipelago was under their control.

Burgeoning nationalism and the Japanese occupation in World War II weakened Dutch resolve. Indone-

sia declared independence in 1945, which the Dutch recognized in 1949.

Today, Indonesia is a vibrant, multi-ethnic nation comprised of more than 300 ethnic groups in the midst of an enormous democratic transformation after years of authoritarian government.

MAJOR CITIES

Jakarta

Jakarta—the capital, chief port, and commercial center of Indonesia—and its suburbs cover some 350 square miles. Over 11 million people live within this area. As seat of the central government, Jakarta is the center of political life, with the Presidential Palace, national government offices, Parliament, and the Supreme Court all located in the city center.

The main ethnic groups in Jakarta are Sundanese, who predominate in the surrounding province of West Java, and Javanese. However, the city is a melange of all main groups from throughout the archipelago, including a substantial Chinese population and tens of thousands of expatriates.

In the 16th century, Jakarta, called Sunda Kelapa, was the chief port for the Sundanese (West Javanese) kingdom of Pajajaran. Later, the Sultan of Bantam changed the name to Jayakarta, "Glorious Fortress" in the Sundanese language. At the end of the 16th century, Dutch and Portuguese traders struggled for a foothold on Java. Since it was difficult for foreigners to pronounce Jayakarta, the name was changed to Jakarta. Eventually, the Dutch won possession of Java and established a fortified trading post at Jakarta, which they renamed Batavia. For three-and-a-half centuries after the Dutch arrival, Batavia was the focal point of a rich, sprawling commercial empire called the Netherlands East Indies. In older sections, Dutch-style gabled houses with diamond-paned windows and swinging shutters are still found. The canals, narrow downtown streets, and old drawbridges will remind you of the city's Dutch heritage and early settlers.

Eventually, more modern sections of the city were built some 8 miles inland. Indonesia became a sovereign State on December 27, 1949; the next day Batavia was renamed Jakarta. The city has grown rapidly in population from about 600,000 in 1940 to over 11 million. Physically, Jakarta has changed much in the last decade. A modern center with hotels, restaurants, and tall office buildings now has grown up amidst the crowded "kampungs" often with banana groves and rice paddies reminiscent of rural Java. Infrastructure, roads, electric power, and water supply are vastly improved, and new housing and apartments have gone up. With Jakarta's expanding boundaries, most Americans and other foreigners live in newer suburbs, such as Kebayoran, 5 miles from downtown. Air pollution and traffic congestion are increasing problems.

Like most Asian commercial cities, Jakarta has a large population of Chinese origin, many of whom have Indonesian citizenship. They constitute the country's largest non-Indo-

nesian ethnic group. Many have lived in Indonesia for generations and no longer speak Chinese, but most maintain Chinese traditions and family ties. Most Chinese in Jakarta operate businesses. Their district, Kota (or Glodok), has a distinctly Chinese flavor.

Over 25,000 foreigners live in the Jakarta area. Over 60 nations now maintain diplomatic or consular missions. The U.S., Russia, Germany, The Netherlands, Japan, and Australia operate the largest. Over 6,000 Americans reside in Jakarta—members of U.S. Government agencies, the U.N. and private, nongovernmental agencies, business representatives, and missionaries. Jakarta is the main stop for an increasing number of U.S. business visitors and many American, European, and Australian tourists visit Jakarta each year, usually on their way to tourist areas such as Bali or Yogyakarta.

Jakarta's average temperature ranges from 72°F to 87°F. It seldom varies more than a few degrees all year. The average humidity, 82 percent, rises to 83 percent or 84 percent during the wet season. It rains about 125 days a year for an average of 70 inches. Although heavy rains occur during the wet season (November through March), they do not compare to the heavy, monsoon downpours that characterize the rainy season in other tropical countries. Although monotonous and enervating, the heat will not oppress you as do the summers in Tokyo and Washington, D.C.

Western-style clothes predominate in Jakarta, but many still wear Indonesian attire. English is understood by many higher level Indonesian officials, business representatives, and professionals, particularly the younger generation. However, some knowledge of Bahasa Indonesia, the national language, is needed by foreigners for everyday communication. The older, Dutch-educated Indonesians can speak Dutch, especially those who grew up under The Netherlands colonial rule.

Food

Most food can be purchased in Jakarta. There is a good variety of fresh fruits and vegetables (locally-produced and imported), beef, pork, chicken and fish available in local markets and grocery stores. An increasing amount of western convenience foods and snack items are available in local stores, albeit at prices higher than in the U.S. Imported brands of toiletries are expensive but available here. Otherwise, with a little initiative, you will be able to find everything you need in Jakarta.

Clothing

General: Men, women, and children wear cotton and other lightweight clothing year round. Due to frequent, hard washing, clothing does not last as long as in the U.S. Launderers generally do satisfactory ironing and pressing. Adequate drycleaning costs considerably less than in a major U.S. city. Shoes wear out sooner than in U.S. due to the dampness and rough terrain. Locally made men's and women's shoes are adequate to good, but large sizes are sometimes difficult to find. There is a very wide range of price and quality available locally. Imported shoes for both men and women are available at many shops and department stores, but larger sizes are rare even in imported shoes. Several places in Jakarta sell moderately priced made-to-order shoes. Athletic shoes are more readily available in larger sizes, especially at outlets for the many name brands that are manufactured locally. For children and young teens, sandals, cloth shoes, and tennis shoes are available.

Imported fabrics are available locally but are expensive. Indonesian batik, with its distinctive patterns, is popular for dresses and sportswear. Prices for batik vary widely depending on the quality and intricacy of design. Take advantage of inexpensive tailoring to have clothing made. Tailors and seamstresses do not work from patterns, but can copy based on a picture or a sample item. Bring some warm

clothing for travel to Tokyo, Hong Kong, or the U.S. in winter months.

Men: Many men wear batik shirts (long and short sleeves) for social affairs. Indonesians consider long-sleeved batik shirts formal attire. Batik shirts can be purchased ready-made or tailor made. American sport shirts are usually worn only for casual affairs and at private parties. Bring an adequate supply of shoes. Only a few exclusive, expensive shops sell Western styles and sizes. Some have found sandals, desirable for informal wear. Bring your own golf shoes or buy them in Tokyo, Hong Kong, or Singapore for better quality and more reasonable prices. For evenings in the mountains, men will need a light jacket or sweater. Bring sports clothes, including tennis or golf shorts and swimming trunks.

Women: Office wear for women is similar to that in Washington, D.C., during summer. Since offices, cars, and most indoor places are completely air-conditioned, most lightweight summer fabrics, including knits, are suitable. Some women wear nylon hose. Casual dresses or long pants are suitable for nearly all daytime occasions. Evening wear is usually casual. Special occasions are dressy or formal. Both long and short casual dresses are appropriate for informal events.

A wide variety of fabrics, both local and imported, is available locally. Women who wear smaller sizes will not have trouble finding attractive and affordable clothing locally, but larger sizes are rare. Bring some shorts and sleeveless shirts. Shorts are worn primarily for golf and tennis. Also bring swimsuits, tennis and golf clothes, and sports clothing.

You can often use a wool sweater and slacks during the cool mountain evenings. Ready-made maternity clothes are not available. Most women bring an ample supply of underwear. Women rarely wear hats and gloves; they are not required at churches or for calling. Bring plenty of shoes and sandals. Some prefer closed (canvas-type)

shoes for shopping and sightseeing during the rainy season. Bring your regular size if you know your feet don't swell in hot weather.

Children: At JIS, all children in grades 7 thru 9 must wear uniforms (available for purchase at the school) and tennis shoes for physical education classes. Most children wear shorts at home and at the pool. Local shops sell children's shoes, but a proper fit may be difficult to obtain. Western-style clothes are popular with young people in Jakarta. Jeans and denims are sold everywhere.

Supplies and Services

Most basic toiletries are available locally, but if you rely on a particular U.S. brand, you should pack a supply. Bring special medicines or vitamins and reorder them by mail.

Drycleaning is generally deemed adequate. Shoe repair facilities are fair. Prices are less than in the U.S. A few beauty shops are recommended; some are small and simple, others are more luxurious. They offer the usual services at low, reasonable prices. Color rinses, perm; and dyes are available but expensive. You provide your own perm and dye supplies. Major hotels and shopping areas have barbershops. The usual services are reasonable.

Generally, radio, TV, and household appliance repairs do not meet U.S. standards. However, several shops perform adequate repair services; parts are usually imported and expensive. Good quality batik floor cushions and draperies can be custom made at reasonable prices. Picture framing is inexpensive and quality and selection varies.

Jakarta has many dressmakers, but prices and competence vary greatly. Some will visit your home for fittings. Establish a dressmaker's competence before providing an expensive piece of fabric. Tailors are available and, again, their competence and prices vary greatly. They make shirts, shorts, and suits.

Domestic Help

As in most of Asia, household help is not a luxury, but a necessity—not to provide a life of ease, but to help a family live a normal life and maintain a good level of security. You must take extra precautions when preparing food and must thoroughly scrub and peel vegetables before cooking, or soak them in disinfectant and rewash them in bottled water if you eat them raw. Marketing can be time consuming, although the preponderance of Western-style supermarkets makes shopping easier, albeit at a higher price. In many households, the cook shops for food in local markets at a considerable savings to the family. Domestic staff cannot shop in the commissary.

Aside from being practical, household help is customary in this part of the world. Even Indonesians of moderate circumstances have them.

The number of household help needed and their salaries differ according to individual households, with varying emphasis on their responsibility and ability. Below are examples of staff responsibilities. Salaries are paid in Rupiah and are considered quite affordable by western standards.

Cook: Plans the meals with you; informs you of what is on the market and does shopping; keeps a kitchen account book, which you should check; cleans the kitchen; and does the dishes.

Maid/Houseboy: Serves at table, mixes drinks, and cleans living and dining rooms; may also prepare meals on the cook's day off or if she or he is the only servant in a small household.

Nanny: Takes care of children, cleans their room, mends their clothing, and sees that it comes back from the launderer in good condition. May help with general housework if the family is small.

Driver: Acts as chauffeur, purchases gas and oil, and keeps your car in good operating condition.

Gardener: Tends the lawn, shrubs, flowers, etc. Most common is a combination gardener/watchman who watches the house during the day while he tends the yard.

Night Watchman: Guards your house.

Many families employ one or more “all in one” helpers who combine the functions of cook, maid/houseboy, and nanny. Domestic staff in Indonesia depend on their employers. The employer customarily provides uniforms and/or clothing, a Lebaran or Christmas bonus (1 month's salary if the employee has worked at least a year, prorated for shorter periods), and some employers provide uniforms and/or clothing as well as some basic food stuffs and some medical expenses. Additionally, employers must provide a bed (including the mattress), sheets, pillows, and towels for each employee that lives in. A bed, mattress, and pillow (at minimum) purchased locally costs between \$25 and \$35. Sheets and towels are very expensive on the local market.

All household staff should have a preemployment physical examination and annual stool tests and chest x-rays. As of February 2000, the range in cost for full physicals was \$8-\$20; x-rays were \$15. Domestic employees who are dismissed by you for any reason other than wrongdoing should be given severance pay at the rate of 1 month's salary for each full year worked and a prorated portion of a month's salary for employment periods of less than full years. If the employee resigns, you are not obliged to give severance pay but may want to give “service pay,” something like a thank-you bonus. Prevailing practice in business is to give one-half a month's salary after 5 years of employment. But should you choose to give “service pay,” the amount is at your discretion. Some staff require constant supervision, especially on cleanliness, market prices, storage and use of food supplies, and personal effects.

Religious Activities

In Jakarta, churches of several denominations hold regular services in English: Roman Catholic, Anglican, Baptist, interdenominational Protestant, Lutheran, and the Church of Jesus Christ of Latter-day Saints. There are also two active Christian youth groups: Friday Night Live for teens and pre-teens and International Christian Youth for high school students. There is an informal Jewish network that plans observations of high holidays and holds some social events.

Education

American children from kindergarten (prep-1) through grade 12 living in Jakarta generally attend Jakarta International School (JIS). Enrollment for the 2000-2001 school year was 2,526. Currently more than half of the 227-member teaching staff is American. The high school is fully accredited by the Association of Western Schools and Colleges and the European Council of International Schools. All instruction is in English.

JIS has three campuses, two of which are elementary schools, in two locations. For elementary level students, campus assignment is based primarily on area of residence.

Pattimura is located in Kebayoran Baru and houses prep-1 through grade 5. Completely reconstructed in 1986, Pattimura now consists of 23 classrooms, a library with more than 20,000 volumes, a computer lab, a theater, a gymnasium and special rooms for art, music, ESOL and reading. All indoor facilities are air-conditioned.

Pondok Indah Elementary (PIE) is located in Cilandak, behind but not connected to the Middle and High School campus. PIE houses prep-1 through grade 5. Located on 9 acres, it includes 47 classrooms, a library with more than 30,000 volumes, two computer labs, a science lab, gymnasium, theater, cafeteria, covered play area, swimming pool and expansive fields for outdoor recre-

ation. All buildings are air-conditioned.

Cilandak houses the Middle (grades 6-8) and High School (grades 9-12), in addition to the administrative offices. The 23-acre campus includes 115 classrooms, two libraries totaling more than 37,000 volumes, nine computer labs, two theaters, two gymnasiums, tennis courts, sports fields, a swimming pool and cafeteria.

The JIS elementary curriculum gives students a solid foundation in basic skills. The school offers up-to-date programs in math and science, using discovery and inquiry methods, and places a strong emphasis on language arts. Students have specialist teachers for music, art, computers, library and physical education. In grades 3, 4, and 5, students also have specialist teachers for Indonesian language and culture.

The Middle School curriculum includes a balanced emphasis on basic skill development and content. A variety of teaching methods is employed. The school's program of studies and daily schedule provide a gradual transition from the largely self-contained school structure of the elementary school to the departmental organization found in the high school. Students receive instruction in English/language arts, mathematics, history/social studies, science, and physical education. There is also a variety of exploratory and elective options in the areas of visual and performing arts, computer education, practical arts and modern languages. Each 7-8th grade student also must complete required courses in computer applications, Indonesian language and health.

The High School curriculum offers a modified American curriculum as well as the International Baccalaureate (IB), fulfilling admission requirements for American universities as well as those of other countries. Normally, six subjects are taken each year, including a sequential progression of courses in

English, mathematics, science and social studies. The following foreign languages are offered: French, Spanish, German, Dutch, Japanese, Korean and Indonesian. One semester of Indonesian language and geography is required for JIS High School graduation. Electives include music, drama, fine arts, practical arts, business, computer studies, physical education, year-book, and journalism. Advanced courses are offered in selected areas in order to prepare students for Advanced Placement (AP) exams and the IB diploma.

To supplement the academic program, JIS provides a variety of extracurricular activities designed to encourage physical well-being, intellectual interchange and participation in social activities. Boys and girls can participate in a varied after school sports program. There are also special interest clubs such as photography, chess, handicrafts, etc. Community leagues in soccer, basketball, baseball and competitive swimming are available.

At the high school level, JIS participates in the Interscholastic Association of Southeast Asia Schools (IASAS), a regional organization that offers competition in sports, as well as cultural events. Club activities are available at all levels, as well as Boy and Girl Scout Programs.

The school year begins in mid-August and ends early in June. There is a three-week vacation between semesters and a one-week break during second semester. The school observes Indonesian holidays. School hours are:

Prekindergarten(Prep Junior):
7:30 a.m.–noon
Kindergarten (Prep Senior):
7:30 a.m.–noon
(1st semester) 7:30 a.m.-1:45 p.m.
(2nd semester) Grades 1–5: 7:30 a.m.–1:45 p.m. Grades 6–12: 7:30 a.m.–2:40 p.m.

A catering service sells sandwiches and hot lunches on campus. Ice

cream, bottled drinks, and various snacks are also available at the student stores on campus.

School uniforms are worn only for physical education; however, clothing should be clean, neat and comfortable. Shoes must be worn at all times for health reasons.

JIS does not have the facilities to deal with children who have serious learning, emotional or physical disabilities. Parents of prospective students are advised that the school is able to serve only those mildly learning disabled students who are able to function in the regular program with minimal support. If a child is receiving special services, such as LD instruction, remedial teaching, speech/language therapy or seeing any educational specialist outside the regular classroom, parents are advised to contact the school and discuss the child's situation before making a decision to come to Jakarta.

There are several other schools in Jakarta, including schools following the British, French, and Australian educational curricula, as well as a Montessori school. The Australian International School (AIS) is a smaller, relatively new school in southern Jakarta that offers special

needs programs. Children with special needs are mainstreamed, with full-time Indonesian classroom assistants assigned as necessary. A special needs coordinator works with the children individually several times per week. Speech therapy is sometimes available, though not guaranteed. School facilities are basic, but class sizes tend to be small. The school offers classes from preschool through grade 12, operating on the Australian school calendar which means that the school year goes from January-December. For more information, contact the school at AIS@bitnet.id, or phone 6221-780-5152.

Students wishing to enroll in prep I (kindergarten) at JIS must reach their 5th birthdays prior to October 31 of the current school year.

Preschools: There are several good English-language preschools at post. Many families of young children take advantage of part- or full-time preschools, including Bambino, Tutor Time, Discovery Center and Jakarta Montessori School. JIS has a preschool program for 3- and 4-year-olds; however, most Embassy families find the JIS program to be too expensive.

Special Educational Opportunities

Indonesian language training is available through a number of local resources, including the Lembaga Indonesia-Amerika (Yayasan LIA) and ICAC. The Indonesian Heritage Society offers various opportunities to study Indonesian culture in depth through its study groups, lecture series, and museum volunteer program. Although several Indonesian colleges and universities exist, all instruction is in Indonesian.

Sports

Jakarta hosts a variety of recreational and sports facilities, from fitness clubs to golf driving ranges to tennis courts to riding stables.

AERA provides a variety of activities to enhance the morale of American families. Facilities include dining areas, a Western-style bar with large-screen TV, a pool table, video games, NTSC video rental, a satellite dish, tennis courts, swimming pool, a fitness center, and multipurpose rooms used for fitness and children's classes and available for special-purpose rental.

The club conducts a summer camp for elementary school-aged children, organizes activities for adults and children, and hosts programs for American holidays and other special occasions. It also provides catering services for members. Membership fees include a reason-

able initiation fee and monthly dues. Charges for food, video rentals, etc., are payable on a monthly basis.

There are several other clubs that expatriates join, including the Jakarta American Club (not affiliated with the Embassy or the AERA Club) and the Mercantile Athletic Club. Several large hotels make their facilities available on a daily or membership basis. In addition, the Mission housing pool includes some apartment complexes and housing complexes that have swimming pools, tennis courts, and other amenities.

Golf. Golf enthusiasts can choose from 18- and 9-hole golf courses and driving ranges. Some are open to casual players, but others require memberships. Membership and green fees are moderate. Courses are generally well maintained and are open from sunrise to sunset. Most have pro shops, snack or meal service, locker room facilities, and instruction. Golf equipment is available locally but is more expensive than in the U.S.

Tennis: Most clubs have tennis courts, including the AERA Club, the Hilton, the Senayan Sports Complex, and JIS. Several housing compounds also have tennis facilities. Although tennis equipment and balls are available locally, prices are generally higher than in the U.S.

Swimming: In Jakarta, most clubs, hotels, and apartment or townhouse complexes have swimming pools. Many hotels charge daily fees for use of the pool. Ancol and Pondok Indah offer public swimming and water park facilities. These tend to be crowded on weekends and public holidays. Saltwater bathing is available at beach resorts and nearby islands. Beach lovers should note, however, that the closest beach is some 3-1/2 hours by car from Jakarta. Pelabuhan Ratu (Samudra Beach) on the Indian Ocean, south of Jakarta, is about 4 1/2 hours by car, and Anyer, Carita, and Sombola, on the Sunda Straits west of

Jakarta, are about 3-1/2 hours by car. Pulau Seribu or Thousand Islands is a system of small islands in the sea north of Jakarta. There are several basic but pleasant resorts that offer scuba, snorkeling, swimming, and various sports.

Touring and Outdoor Activities

Snorkeling and scuba diving: Snorkeling and scuba diving are available both near and far from Jakarta. Several islands of the Thousand Islands area have popular sites for viewing coral, highly colored tropical fish, and other sea life. Some are reachable by boat in several hours. Pulau Putri and other islands have beaches and full tourist facilities, including cottages for rent. Scuba courses are available, and informal groups organize trips to the islands. For travel further afield, several other islands and resorts offer both activities, including Sulawesi, Sumatra, Lombok, Bali, Kalimantan, Maluku and Papua. Most dive shops / tour operators rent tanks and weights. Most also sell equipment, but it is expensive compared to U.S. prices. It is advisable to bring your own regulator and BCD.

Horseback Riding: Several high-quality English-style equestrian facilities offer regular lessons for all levels, including jumping and polo; costs of lessons are cheaper than the equivalent in the U.S. Horses can be leased long term, which is the best arrangement if you plan to ride more than a couple of times a week.

Photography: Picturesque villages, colorful native dress, street scenes, mountains, and beaches provide a variety of photo opportunities. Film and slides, mostly Japanese and U.S. brands, are available locally at reasonable prices. Local processing of color film is good and reasonably priced.

Sightseeing In and around Jakarta: There are several museums, including the National Museum, which houses a large collection of Indonesian antiques, cultural displays, and one of the

world's finest Asian porcelain collections; the Museum of the Armed Forces; Museum Wayang, which houses a collection of puppets representing various regions and eras in Indonesia; Museum-Tekstil, containing a collection of Indonesian textiles; the Adam Malik Museum, containing some of the late statesman's collection; the Ceramic Museum; and the Jakarta Historical Museum.

Taman Mini, located about 13 miles southeast of Jakarta, has several theme museums, exhibits of traditional houses of the 27 regions in the country, amusement rides, an orchid garden, and various other attractions. Taman Impian Jaya Ancol is located in the north of Jakarta and has a water park, an amusement park, an art and handicraft market, and Seaworld. Many consider visiting the various market areas as a sightseeing trip in itself. Jakarta also has a zoo and planetarium. Newcomers often enjoy city tours arranged by major hotels and travel agencies. The Indonesian Heritage Society has an Explorers Club that organizes regular tours to a wide variety of local landmarks and historic areas. It is an interesting way to see the city and meet new friends.

To learn about Indonesian culture, take trips outside the city. The Puncak Hills and the nearby town of Bogor offer a pleasant climate and scenery change. In Bogor, the famous Botanical Gardens feature a 275-acre park with a zoological museum, scientific library, and laboratory. The orchid collection is a special attraction. Puncak Pass, on the road to Bandung, is 5,000 feet high. Jakarta residents often rent cottages in the Puncak on weekends. A Safari Park, where you can drive through and view wild animals, is located here. There is also a children's zoo on the premises.

Bandung, a 4-hour drive from Jakarta or a pleasant train ride, offers good hotel accommodations and pleasant mountain views. Several modern artists live and work in Bandung; one of Indonesia's art

schools is here. About 15 miles north of Bandung is the Tangkuban Prahua Volcano.

Yogyakarta and Solo are interesting cities on Java. Yogyakarta is of historical and cultural interest—here are some of Indonesia's best-preserved Hindu and Buddhist monuments and temples, among them the famous Borobudur Temple. At the magnificent Prambanan Temple, between Yogyakarta and Solo, a Javanese dance-drama is performed twice a month at full moon during the dry season. Both Solo and Yogyakarta are Javanese cultural centers and offer a variety of events and shopping opportunities. Good hotels are available.

The Island of Bali is one of the most popular vacation spots for tourists. It has beautiful beaches and striking volcanic scenery. Accommodations range from four-star hotels to simple guest houses and bungalows. Balinese culture is particularly interesting. As Islam swept through Indonesia, many Hindus fled to Bali, where Hindu and Indonesian culture and customs mix in an interesting fashion. The island abounds in cultural activities and performances and shopping opportunities. Bali is about 1 hour and 20 minutes by air from Jakarta.

Although rioting in January of 2000 caused some damage to the tourist industry, the Island of Lombok continues to be popular. Considered similar to Bali of 30 years ago, this still-unspoiled island has lovely beaches and is famous for its weaving and pottery. There are flights from Jakarta, via either Bali or Yogyakarta.

The Island of Sumatra offers Lake Toba, a beautiful volcanic lake in the north; Padang, central Sumatra's largest city and center of the Minangkabau people (a matriarchal society); Palembang, site of a refinery and large oil installations; and an elephant training center near Lampung in southern Sumatra. Visiting many of these places requires a car, but travelers must be wary of poor road condi-

tions and hazardous local driving. Some travel agents and hotels offer packages that include tours onsite with a rented vehicle and driver.

Entertainment

Jakarta offers a large variety of restaurants ranging from international-standard restaurants, generally housed in major hotels, to moderately priced, family-style restaurants, to most popular American fast-food restaurants. A 10% government tax and 11% service charge is included in the bill at nicer restaurants.

The city offers a variety of nightlife, including clubs both in major hotels and as independent establishments. There are several discotheques that offer both live and recorded music.

Expatriates frequent several Jakarta cinemas; they are air-conditioned, clean, and wide screened. American films are shown in their original English language version with Indonesian subtitles. Admission is usually about \$2.50. American movies shown here tend to be several months old and are subject to government censorship.

Americans occasionally attend Indonesian dances, music performances, and puppet shows. Local artists frequently hold exhibits throughout the city. Several amateur theater groups present English language plays and musicals. There are classical music evenings and an occasional ballet. Stage plays are rare, but the number of rock concerts is increasing.

Taman Ismail Marzuki (TIM), the Jakarta Cultural Center, has an enclosed theater, an open-air theater, a cinema, exhibition rooms for art shows, and a planetarium.

There are no real public libraries here, and although popular English-language books are available in several bookstores, prices can be double what they are in the U.S. The British Council, ICAC, and AWA operate small lending libraries, and parents of JIS students can use the high school library. The AERA Club

operates small, informal used book exchanges. Many families order books from Internet bookstore sites.

Social Activities

Most social life centers around private homes and includes cocktail parties, buffets, dinners, and card parties. Heavy traffic patterns frequently determine the timing and frequency of such entertaining.

AWA organizes social and charitable activities for women and their families. Monthly meetings are held with guest speakers or other activities. Twice a year, AWA sponsors major craft bazaars, which are very popular. It publishes *Introducing Indonesia*, an excellent guide to expatriate living in Indonesia, as well as the *Jakarta Shoppers Guide* and other useful books. It also maintains a center that houses a thrift shop, a used book section, a lending library, and a servants registry. The organization also organizes group tours within and outside of Indonesia.

The American Chamber of Commerce in Indonesia, commonly known as AMCHAM, is an association of businesspeople abroad and is concerned with U.S. trade, investment, and community services. AMCHAM holds monthly luncheons with guest speakers and sponsors some social activities.

With a large international community, social activities include Indonesians, Americans, and other expatriates of many nationalities. A great deal of entertaining occurs among international representatives and Indonesians. The Women's International Club (WIC) has members from many nationalities. It was organized in 1950 to promote friendship and understanding among different nationalities. It sponsors social activities and classes and is active in social welfare programs. It sponsors an annual Christmas Bazaar that is very popular with both expatriates and Indonesians.

ICAC is a nonprofit organization that provides workshops, activities, professional counseling services, a

lending library, a small craft shop, and a newcomers resource center. It conducts orientation programs quarterly and smaller luncheons and discussion groups to help newcomers meet each other and begin their adjustment to Jakarta.

The International Allied Medical Association (IAMA) is an informal group of English-speaking health professionals interested in keeping up with current developments in the medical field. Monthly meetings with guest speakers are held.

The Indonesian Heritage Society is an organization of volunteers interested in learning about the history, art, and culture of Indonesia. Volunteers assist in the museums of Jakarta and sponsor a public lecture series and smaller study groups.

A multinational community chorus, the PPIA choir, presents concerts twice a year and is open to all. In addition to these groups, there are many other organizations based on specific interests and needs, such as Rotary and Lions Clubs.

Surabaya

Surabaya, with a population of about 2.7 million, is Indonesia's second largest city and provincial capital of East Java. Surabaya is on the northeastern coast of Java opposite the nearby Island of Madura. The city itself is thickly settled along the Brantas River Estuary. The area around the city to the west and south is marshy, coastal plain. In recent years, the abundant rice cultivation in the south has given way to steady development of industrial sites. The southern plain gradually rises to a range of volcanic mountains, the nearest of note is about 31 miles south of the city.

Surabaya's climate is very hot and humid with an average humidity of 75 percent, rainfall of 60 inches, and an average temperature of 81°F. The rainy season begins in November and ends around April. The rest of the year, particularly June through October is drier. The periods when

the monsoons change direction (usually March–April and November–December) are characterized by harsh rains and often result in some flooding in East Java and in greater Surabaya. The months of July and August are the most comfortable of the year.

At the turn of the century, Surabaya was the leading port of the Dutch Indies. The city exported rubber, tobacco, teak, kapok, sugar, and fibers. Despite the impact of World Wars, the 1930s depression, the 1945–49 resolution, and subsequent periods of civil turbulence, Surabaya remains a major agricultural-industrial center and is Indonesia's second largest port. Since 1968 Surabaya has progressed rapidly. It is the commercial hub for the second largest market in the country, and the province of East Java has one of the best development records in Indonesia.

The city's present population is almost entirely indigenous Indonesian (primarily Javanese and Madurese), with a small but visible ethnic Chinese minority, an ethnic Indian community of perhaps a thousand, and a few hundred other foreigners, including Japanese, Koreans, Europeans, and Americans. About 180 Americans live in the greater Surabaya area, primarily engaged in business. The Indonesian-American friendship association (PPIA) sponsors English language courses, college counseling, and cultural programs. The number of American tourists visiting Surabaya is rising, but most tourists visit Bali and Yogyakarta.

Food

An increasing number of Western-style supermarkets ease the grocery shopping experience in Surabaya. And though you can generally get everything on your list (from olive oil to Swiss Miss instant cocoa), you may have to visit two or more stores and/or wait a matter of weeks for that hard to find item to turn up again on the shelves. A wide variety of local seafood, chicken, beef (often tough and dry), pork (including bacon) and mutton are available. In

addition, sausages, lamb and a better quality beef are imported from neighboring New Zealand and Australia but are more expensive. Most dairy products are also imported: cheddar, mozzarella, Edam, Gouda, Parmesan, Camembert, Brie, and feta cheeses are available.

Entertainment

Surabaya offers a wide variety of restaurants, including Western, Indonesian, and other Asian (Chinese, Japanese, Korean, etc.) cuisine. Surabaya also has several nightclubs and discos. Film is available locally. Local printing and developing service is inexpensive and satisfactory. Surabaya has several air-conditioned theater complexes that show subtitled American films, including first-run movies. The video system in this country is PAL, and the format in Surabaya is primarily VCD, followed by DVD. VHS choices are extremely limited. Surabaya has a small museum and a large zoo with Komodo dragons, a nocturnal animal exhibit, outstanding bird and ape collections, and an excellent aquarium of tropical fish. The Taman Remaja Amusement Park, open daily, has several rides and games for small children.

Social Activities

Social life in Surabaya is centered around the home and generally informal. Dinner parties at home and at hotel restaurants are the most common forms of entertainment. Several local firms provide catering services for private parties. Two international organizations, the Expatriate Women's Association of Surabaya (EWAS) and the Women's International Club (WIC), meet regularly.

Medan

Medan was formerly the capital of the Island of Sumatra, Indonesia's second largest island. It is now capital of only North Sumatra Province, which borders the Straits of Malacca. In 1910, this relatively new city moved to its present location, a few miles inland from the

city of Belawan-Deli. The Medan municipality still includes the port of Belawan, where rubber, palm oil, coffee, and tea are exported, and consumer and industrial goods are imported. It is Indonesia's largest port in value of exports.

The city is set on a lush green plain, surrounded by rice paddies and palm trees. The Bukit Barisan mountain range, which runs the length of Sumatra, can be seen to the south. Only 82 feet above sea level, just north of the equator, Medan has a climate which is generally hot and humid. The heaviest rains fall from September through December most years. The Medan community has grown from 77,000 in 1940 to some 1.8 million (2000 est.). These figures include about 250,000 Chinese, 15,000 Indians, 200 Europeans, and 60 Americans. The Western community recently has been decreasing in size due to Indonesianization of expatriate positions in the petroleum industry and a relocation of some of the remaining workers outside Medan. Medan today is the largest banking and commercial community in Indonesia, next to Jakarta.

Medan is a sprawling city of *kampungs*, (native Indonesian villages), with a crowded Chinese sector and an Indian (Tamil) district. Some areas with elegant old government office buildings, parks, and peaked tile-roofed houses reflect the early Dutch colonial heritage. A few tall buildings and new houses with modern curved roofs are springing up. Traffic is chaotic, with swarms of fume-spewing motorized *becaks* (pedicabs), motorcycles, bicycles, cars, buses, trucks, and jaywalking pedestrians. A one-way street system has helped traffic, but it makes the city a puzzle for the newcomer.

Education

The Medan International School has classes from pre-kindergarten through eighth grade. Founded in 1969, this coeducational school has instruction in English, and the school uses American textbooks. Information about Medan International may be obtained by writing

them at P.O. Box 191, Medan, Sumatra, Indonesia.

Secondary-age students must be educated away from the city. Most American children attend the Medan International School through the eighth grade, then transfer to Jakarta International School or the Singapore American School, although both schools offer grades one through 12. Neither school offers boarding facilities, and arrangements must be made with a private family or a private hotel. The address of the Singapore American School is 60 King's Road, Singapore 1026, Republic of Singapore. Jakarta International School's address is J1. Terogong Raya 33, Jakarta 12430, Indonesia.

Recreation

In the mountains, about 105 miles southwest of Medan, is lovely Lake Toba. It is 55 miles long and 18 miles wide, and is dominated by the Island of Samosir. The elevation at the water's edge is almost 3,000 feet, and mountain peaks rise along the shore. Sight-seeing tours to Samosir Island and the Batak villages can be made by boat. There are several hotels in the tiny town of Prapat that offer reasonable food and lodging.

About one-and-a-half hours southwest of Medan, through tropical forests and up a series of hairpin curves, is the highland area of Brastagi. At an altitude of 5,000 feet, the weather is even cooler than at Lake Toba. Live volcanos afford striking scenery. Golf, horseback riding, and hiking are possible.

Roads are slowly improving in northern Sumatra, but travel to more remote areas usually requires a four-wheel-drive vehicle.

Tennis, swimming, softball, cricket, squash, golf, badminton, bowling, and horseback riding are possible in Medan, but some facilities are not up to U.S. standards.

Several health clubs and fitness centers of varying size and equipment are available. The Medan

Club has three tennis courts and a squash court for use by members. The Deli Golf Club, about 40 minutes from downtown, has an 18-hole course.

The playing field areas in Medan have little playground equipment, and are used primarily for soccer by the Indonesians. On occasion, expatriate community members organize a Sunday softball game on one of these fields. There are no picnic areas or beaches in the city's vicinity. The nearest beach is at Pantai Cermin, some 31 miles away, but it is shallow, muddy, and made even less attractive by poisonous sea snakes. Sailing is not common; good skin diving areas are far from Medan.

Entertainment

Entertainment is limited in the Medan area. The city's movie theaters rarely offer English-language films but few Americans patronize them. Chinese, Kung Fu movies and Indian films are standard local fare.

Color broadcasts are shown on local television; most programming comes from Jakarta. Programs are generally limited to news, sports, Indonesian cultural shows, some children's cartoons, or dated English films. The broadcast system is PAL. There are no English-language radio programs, so it is necessary to have a shortwave radio in order to keep up with U.S. and world news.

The United States Information Service (USIS)-sponsored library has English-language books, primarily classics, references, or textbooks, and shows weekly U.S. news summaries on videotape. The British Council has a library with 6,000 books for leisure reading, as well. All local newspapers are in Indonesian, although the English-language *Singapore Straits Times* and the *Jakarta Times* or the *Jakarta Post* can be home-delivered. Asian editions of *Time* and *Newsweek* are available in local book shops.

Medan has a new cultural center complex, but presentations are infrequent.

Chinese restaurants are the most popular of the few dining establishments in Medan. One of the international class hotels, the Tiara, offers reasonably good European food, but Indonesian and Indian restaurants do not serve good-quality meats. Prices vary from moderate to expensive for non-Indonesian food.

Several nightclubs are open, but Americans and Europeans rarely patronize them.

OTHER CITIES

AMBON, with a population of 313,000, is the capital of Maluku Province on the Banda Sea in eastern Indonesia. This important seaport was founded by the Portuguese in 1574. Early in the 17th century, the Dutch and English settled in the area, and fought over it for 200 years. The "massacre of Amboina" took place in 1623 and involved the killing of many English settlers by the Dutch. Japanese forces held the city during World War II from 1942 until 1945. A few examples of Dutch colonial architecture remain today. Fort Victoria, still an active military post, and the former Dutch governor's home, both stand in the heart of Ambon. The Museum Siwalima is in the eastern suburb of Karang Panjang. It houses a number of artifacts, including Chinese ceramics, objects of magic, and skulls.

BANDUNG, is a city of 2.4 million, and the fourth largest municipality in the country. Located at a rail junction 75 miles southeast of Jakarta, it is a bustling city, with many factories, hospitals, government departments, and schools. A well-known textile center, Bandung is the center of Indonesia's quinine industry, using the cinchona grown in the nearby plantations. Founded in 1810, it is the center of Sudanese cultural life. Bandung was the site of a World War II Japanese prison camp. Surrounded by mountains

and volcanoes, Bandung is a tourist resort known for its cool and healthy climate. Bandung is also an educational and cultural center. A textile institute, a technological institute, a state university, two private universities, and a nuclear research center are located here. The city was the site of the Bandung Conference in 1955, a meeting between 29 Asian and African nations to promote cultural and economic cooperation. Bandung Alliance School, featuring a U.S. curriculum for grades one through six, and Bandung International School, featuring a combined curriculum for pre-kindergarten through grade eight, are located here.

KUPANG is the capital of East Nusa Tenggara Province. It is situated on Kupang Bay at the tip of Timor Island. It was settled by the Dutch early in the 17th century. Kupang has a population over 400,000.

PALEMBANG, situated about 300 miles northwest of Jakarta in South Sumatra, is Indonesia's richest city. Large oil refineries and a petrochemical complex employ many of the provincial capital's 1.4 million residents (2000 est.). Other industries are shipbuilding and iron and rubber production. Long a trade center, Palembang lies on the Musi River, which links it to principal Asian ports. The area was the capital of a Hindu Kingdom in the seventh century; the Dutch and British came a thousand years later. Landmarks here include the Great Mosque, built in 1740; the provincial parliament building; and the Rumah Bari Museum. Statuary, sculptures, weapons, and crafts are on display in the museum. A university was founded in Palembang in 1960.

SEMARANG, the capital of Central Java Province, is a seaport city and one of the major commercial centers in Indonesia. It is located on the north coast, 225 miles east of Jakarta. The manufacture of textiles and machinery and shipbuilding and fishing are the economic mainstays here; exports include

The Great Mosque in Sumatra

sugar, coffee, and rubber. It came under Dutch control as early as 1748, and was occupied by the Japanese during World War II from February 1942 until September 1945. Many steamship companies maintain offices in this city of approximately 787,000 residents (2000 est.). Depongoro University, founded in 1957, is located here, along with Semarang International School, which features a U.S. curriculum for nursery school through sixth grade. The student body numbers forty-one. Semarang International is located at Jl. Raung 16, Candi, Semarang, 50232, Jateng, Indonesia.

SURAKARTA (also known as Solo) is located in central Java Province

50 miles southeast of Semarang, and is connected to Jakarta and Surabaya by rail. This city of approximately 516,500 residents (1995 est.) is the trade center for the surrounding region that produces sugar, tobacco, and rice. Surakarta is particularly known for its handicrafts, which include gold work and batik cloth; it also manufactures textiles, furniture, machinery, metal products, leather work, and cigarettes. In addition, Surakarta is a cultural center recognized for its gamelan music and for its shadow plays called wayang. Landmarks in the city include a Dutch fort, built in 1799 to resemble a Dutch town; and the walled palace of the sultan that is almost a city in itself. There is a private university in Surakarta, as

well as an extension facility of the Islamic University of Indonesia that has a library and a museum.

UJUNG PANDANG (formerly called Makassar) is the business center of Sulawesi, situated 900 miles east of Jakarta on the Makassar Straits. Improvements in the city's harbor have expanded the export trade which includes gums, resins, coffee, and rattan. In the center of town is the grave of the national hero, Prince Diponegoro of Yogyakarta (1785–1855). He was a Javanese leader in the war against the Dutch in the late 1820s. The dungeon where the Dutch held him for 27 years is still standing; Indonesians make pilgrimages to both sites. Ujung Pandang was a principal port for the Goa Kingdom when the Portuguese arrived in the 16th century, followed by the Dutch. The fall of the kingdom in 1667 came with the conquest of the old *benteng*, or fort, which was rebuilt as Amsterdam Castle. This now is considered an excellent example of 17th-century Dutch fortress construction. The Ujung Pandang Provincial Museum has several displays in the fort, including costumes, coins, and musical instruments. The city's population is an estimated 1.1 million (2000 est.).

YOGYAKARTA (also spelled Jogjakarta) is located in central Java Province, 175 miles southwest of Surabaya. Situated at the foot of Mount Merapi, Yogyakarta was founded in 1749 and was once the capital of a sultanate. It was also the site of a revolt against the Dutch in the early 19th century, and played an important role in the Indonesian independence movement from 1946 to 1950. Today, Yogyakarta is Java's cultural center known for drama and dance festivals, as well as for its handicraft industry. The city is an important tourist center and has beautifully preserved Hindu temples and monuments. The Borobudur Temple (26 miles to the northwest) is one of the finest Buddhist monuments in central Java, dating from about the ninth century. The shrine was left to crumble in the jungle rot and peri-

odic earthquakes of the area for over a thousand years until it was rediscovered in the 19th century and restored under a \$23 million U.N.-sponsored beautification project. The walled palace of the sultan of Yogyakarta served as Indonesia's provisional capital in 1949–1950, and now houses Gadjah Mada University. Islamic University of Indonesia and several colleges are also located here. Yogyakarta's population is over 500,000.

COUNTRY PROFILE

Geography And Climate

The Republic of Indonesia encompasses the world's longest archipelago. From the tiny island of Sabang in the northwest to Papua (formerly Irian Jaya or West Irian) in the east, over 17,000 islands, stretch some 3,400 miles along the Equator. The total land area covers about 736,000 square miles. The main islands, in terms of population and importance, are Java, Sumatra, Bali, Kalimantan (Borneo), Sulawesi (Celebes), Papua, and the Maluku. The landscape is highly varied with mountain peaks and volcanoes, some rising to over 15,000 feet. In central Papua, snow covers some peaks all year.

The tropical climate varies with location, season, and altitude. Jakarta lies in the lowlands. The climate is monotonous and enervating with heavy rainfalls, low winds, high temperatures, and high humidity. Spanning the Equator, Indonesia experiences no real seasons. However, a wet season begins in November and lasts until March, followed by a dry season from April to October. Days and nights each last 12 hours.

The tropical climate and rich soil support abundant flora and fauna. Mangrove swamps and marshes flourish along the coast; tropical rain forests cover most of the ter-

rain up to 3,000 feet; and abundant subtropical vegetation, such as oak, pine, and hardwoods, thrives at higher altitudes. The abundant forest cover and favorable climate have stimulated a diverse animal life.

Many endangered and unique animals, such as single-horn rhinoceroses, orangutans, saltwater crocodiles, Komodo "dragons," Sumatran tigers, giant monitor lizards, and anoa, the pygmy buffalo of Celebes, still find a home in Indonesia. Many species of snakes, insects, and birds abound.

Population

Indonesia's 219 million people (2000 estimate), make it the fifth most populous—as well as the most populous Moslem-country in the world. Some 63% live on overcrowded Java and the adjacent islands of Madura and Bali. Some 65% are under age 25; about 85% live in rural areas. Indonesia has over 300 ethnic groups. Roughly 45% of the population are Javanese. Other large ethnic groups include the Sundanese (West Java), Madurese, Balinese, Bataks (North Sumatra), Minangkabau (West Sumatra), coastal Malays, Dayaks (Kalimantan), Ambonese (Maluku), Makasarese-Buginese (Sulawesi), and Chinese.

Indonesian (Bahasa Indonesia), a form of Malay, is the official language. Many Indonesian leaders speak English. Some 87% of the population are Moslem. Islam originally came to Indonesia via Persia and India. It is less austere than the Middle Eastern variety and in some areas encompasses Hindu and pre-Islamic Indonesian customs and beliefs.

European and American Christian missionaries have been influential in certain parts of Indonesia, especially in northern Sulawesi, the Moluccas or "Spice Islands," North Sumatra, the lesser Sundas (Flores, Timor, Sumba), and Papua. Currently both Catholic and Protestant minorities exist. Many ethnic Chinese are Catholic. The island of Bali is predominantly Hindu. The

annual population growth rate is 1.6%. To reduce the growth rate, the government sponsors family planning. About 50% of eligible couples on crowded Java and Bali have enrolled.

Public Institutions

Indonesia is a unitary republic, divided administratively into 32 provinces. (The former province of East Timor gained independence following a referendum in August 1999.) The provinces are further subdivided into regencies, subdistricts, and municipalities. Since the collapse of Soeharto's authoritarian "new order" regime in May 1998, the country has embarked on the road to democratization and decentralization. Under the transitional presidency of B.J. Habibie, freedom of expression was restored and political laws were rewritten paving the way for the June 1999 parliamentary elections, the first free and fair elections held in more than 40 years. Out of the 48 parties that contested the election, the largest 6 vote winners were the Indonesian Democratic Party of Struggle (PDI-P) with 34%, GOLKAR with 22%, the National Awakening Party (PKB) with 13%, the Unity and Development Party (PPP) with 11%, the National Mandate Party (PAN) with 7%, and the Crescent and Star Party (PBB) with 2% of the vote. Several smaller parties won seats in the current Parliament (DPR), but, under law, will be required to merge in order to contest the next election in 2004.

In October 1999, the People's Consultative Assembly (MPR), the constitutionally highest governmental body, elected Abdurrahman Wahid (a.k.a. "Gus Dur") to a 5-year term as the country's fourth president. "Professionalizing" the military, which played important political, economic, and social roles under past governments, is a current goal, and so are justice sector reform and a fight against corruption. Both the MPR and DPR have become very active, with the MPR addressing constitutional reform and the DPR exerting considerable

influence on government policy and the budget.

The government is implementing new laws on regional autonomy aimed at devolving political and economic control to the regions. Success in this effort is seen as crucial in addressing grievances that have helped spawn separatist movements in some provinces including Aceh and Papua (formerly Irian Jaya). Most internationally known commercial, social, and philanthropic organizations such as the Chamber of Commerce, Red Cross, Rotary, Lions Club, and Scouts are represented.

Arts, Science, and Education

The arts in Indonesia reflect the perception and creativity of a people surrounded by great natural beauty and a rich cultural heritage. Art, like religion, is woven into patterns of daily life. It is an integral accompaniment to celebrations and religious rites, as well as a principal source of leisure time enjoyment. Various Indonesian art forms are based on folklore but others were developed in the courts of former kingdoms or, as in Bali, are part of religious tradition.

The famous dance dramas of Java and Bali derive from Hindu mythology and often feature fragments from the Ramayana and Mahabharata Hindu epics. These highly stylized dances with elaborate costumes are accompanied by full "gamelan" orchestras comprising instruments similar to the xylophone as well as drums, gongs, and occasionally, stringed instruments and flutes.

One of the most fascinating types of Indonesian performing arts is the "wayang," art puppet performance, accompanied by gamelan. Two main types of wayang exist: The "wayang kulit" features flat leather shadow puppets, and the "wayang golek" uses wooden hand puppets. In both forms, the puppets are used to narrate a story usually based on one of

the Hindu epics, but they frequently offer veiled comments on contemporary political figures and events.

Transportation

Automobiles

Personal cars for work, shopping, social occasions, and trips to the mountains or seashore add a great deal of convenience and independence to life here. Please consider the following before deciding to ship or purchase vehicle locally.

Only sedans and station wagon-type vehicles may be imported, but the government has allowed the import of some smaller SUV's, like the RAV 4, and occasionally small engine Jeeps or other SUV type vehicles and minivans on a case-by-case basis. Buses, vans, sports cars, and luxury vehicles (4,000cc engine capacity and those above the highest priced Indonesian vehicle) are generally not allowed for import.

The most commonly imported and locally available automobiles are Toyotas and other Japanese models, and to a lesser extent European and Australian models; few American models are imported due to high prices (the Indonesian Government considers most luxury vehicles), limited parts, and lack of repair facilities. Automobile resale values vary and are less favorable for large U.S. models. Smaller cars are easier to handle, as streets and highways are narrow and traffic is heavily congested.

As of February 2000, a locally assembled Toyota Corolla SE with automatic transmission and air-conditioning costs \$18,918.

Importing a car into Indonesia requires two separate permits and approvals from the Government of Indonesia: (1) Preliminary approval (PPI) before your car is shipped/ordered/or purchased; (2) Customs approval (PP-8) when the car arrives.

Auto insurance is available locally. You might also consider U.S. insur-

ance coverage available through various companies before deciding. By law, you must have third-party coverage in an amount equal to Rp 1,000,000. Full comprehensive coverage is recommended. Collision insurance is strongly recommended, as most Indonesians are financially unable to pay for damages.

Driving in Indonesia, traffic moves on the left. Right-hand drive is recommended but not required. A left-hand-drive car is less hazardous in Jakarta than on the busy, narrow two-lane (or one and one-half lane) roads leading from Jakarta to mountain and beach resorts. Driving in Indonesia requires care and vigilance to avoid accidents. Many long term visitors hire a full-time or part-time driver.

Travelers can drive in Indonesia using either an Indonesian drivers license, obtainable on presentation of a valid U.S., foreign, or international license, or an international drivers license validated by the Government of Indonesia. Keep in mind this license must be renewed annually. If you do not have a valid license, you must take written and driving tests for a fee.

The state-owned Pertamina Company sells gasoline and diesel fuel through its outlets throughout the country. Unleaded fuel (called Super TT) is Rps 1,400 a liter. Higher octane leaded is Rps 1,300; lower octane leaded is Rps 1,000; and diesel fuel costs Rps 600 a liter. A few stations sell unleaded gasoline. However, unleaded fuel is now available in some major cities and on the toll road to Bogor and Puncak.

Adequate asphalt roads connect major cities in central and east Java. A standard shift is preferable, and air-conditioning is necessary. Heavy-duty springs and shock absorbers, undercoating, and rust-proofing are recommended. If your car has tubeless tires, bring at least one spare with a tube for emergencies.

Local

By Western standards, public transportation in Jakarta is overburdened and inadequate. Buses in particular are not maintained properly and are considered so unsafe, Embassy personnel rarely use them. Several taxicab companies operate fleets from the major hotels in Jakarta, in the suburb of Kebayoran (which houses many Embassy employees), and have reliable reservation services. Use metered taxis to avoid haggling over fares and overcharging. "Bajajs" (motor-driven, three-wheeled vehicles) also operate and can be used for short distances. However, Bajaj and taxi drivers speak little English and often know only the names of major streets.

Surabaya. "Becaks" (pedicabs) are the most commonly used means of local public transportation for short trips. Various types of three- and four-wheeled vehicles supplement the city bus system, but Consulate General personnel rarely use any of these motorized public vehicles. Metered taxi service is available.

Regional

The rainy season often causes the generally poor roads to become impassable. Otherwise, trucks, buses, animal carts, becaks, and pedestrians congest the roads. Depending on the season and local road conditions, you can possibly drive from Jakarta to the eastern tip of Java (about 800 miles) in 2 or 3 days. From there your car can be ferried across to Bali. The Indonesian State railway system serves major cities in Java. Accommodations, standards, and service vary from air-conditioned comfort to steerage. Limited rail and road networks on Sumatra make traveling difficult.

Garuda Indonesian Airways, Bouraq, Merpati, and several other local airlines provide air service to major cities and outlying islands in Indonesia, including Denpasar on the island of Bali. Garuda also flies to major Asian, European, and Australian cities. Numerous daily flights to and from Singapore, 1

hour and 20 minutes from Jakarta, exist. The international airport is some 20 miles from downtown Jakarta. Several daily flights from Medan serve Jakarta and Singapore. One flight a day goes to Penang, Malaysia. Several weekly flights within Sumatra service Padang, Banda Aceh, and Pekanbaru. An almost hourly shuttle service connects Jakarta and Surabaya.

Communications

Telephone and Telegraph

A 24-hour satellite-telephone service connects Indonesia with the U.S. Reception on international calls is usually good, but local phone service is only fair. Cables and central exchange equipment are often saturated and sometimes inadequately maintained. In-country direct dialing is available throughout Indonesia.

If you have a telephone charge card from a U.S. company, use it during your stay for cheaper rates on calls to the U.S. Many long-distance companies provide reduced rates upon request for calls made with their calling cards.

Radio and TV

Commercial television was allowed by the government to begin operations in 1989, after many years of government television only. Indonesian broadcast television is in the PAL (European) format. Programming varies greatly, from locally produced dramas and game shows to U.S. sitcoms and dramatic series with Indonesian subtitles. There is daily English news on Televisi Republik Indonesia (TVRI), the government network. The local cable and satellite television services offer CNN, BBC, CNBC, Star News, and Australian news programs to subscribers, as well as HBO, Cinemax, ESPN, Discovery, National Geographic, C-Span, Worldnet, and Star TV, and other educational and entertainment channels. Subscribers can receive up to 50 channels, in various Asian and European languages as well as

English. Rates are comparable to those in the U.S. Jakarta has abundant TV, radio, and stereo equipment sales and repair services, although prices on new equipment can be high.

Vendors sell or rent DVDs, VCDs, laser disks, and PAL videotapes. Locally sold or rented videotapes are censored. Local power is 220v, 50-cycle, AC but fluctuates widely. A voltage regulator, available locally, is recommended to protect audio and video equipment. U.S.-standard NTSC videotapes are rented by the AERA Club, so U.S.-standard televisions and VCRs are useful to view these videos.

Radio keeps most of the population informed and entertained. In addition to hundreds of small commercial stations throughout the country, Radio Republik Indonesia (RRI), the government radio network, broadcasts nationwide via relay stations. RRI Jakarta broadcasts news and commentary in English for about an hour in the early mornings and evenings. Dozens of AM and FM stations broadcast in Jakarta, including several with English programming and Western popular music. Most are stereo. Since all newscasts come from RRI and all stations relay it, the top of the hour begins with the same voices on all radio stations at once. Some personnel might also want to have a shortwave radio receiver for VOA, BBC, and Radio Australia. Shortwave reception is generally good.

Newspapers, Magazines, and Technical Journals

The British Council, the Women's International Club, and the Indonesia-America Friendship Society (PPIA) operate lending libraries with minimal membership requirements and collections of approximately 20,000 books. The library facilities of the Jakarta International School (JIS) are available to students and their parents. Anyone in the international community may use the library's facilities on the school premises, but only families with students attending JIS

may borrow books. Each elementary school library contains more than 20,000 books, and the high school library has almost 40,000.

English-language sources of news in Jakarta are readily available. Three English-language dailies are published in Jakarta. The most widely read is the Jakarta Post, followed by the Indonesian Observer and the Indonesia Times. The International Herald Tribune, the Asian Wall Street Journal, and USA Today are sold in many major hotels. The Tribune is available for home delivery. A wide variety of international magazines in English are available commercially.

Many hotels and bookstores have a selection of English-language books at prices some 50% higher than those in the U.S. The American Women's Association (AWA), the International Community Activity Center (ICAC), AERA, and the commissary all operate small bookshelves recycling used books. Bring basic reference works, particularly for children, and leisure reading material.

Surabaya. The Jakarta English-language newspapers and many international newspapers and magazines are also available commercially. PPIA offers free memberships for a small English-language lending library.

Internet. A wide variety of home connections to the internet, including through high-speed digital lines, TV cable, and dialup services, are available at reasonable monthly prices. Cable modems are available for rent at less than \$10/month. Additionally, there are large numbers of internet cafes throughout all major urban centers where customers can connect for nominal fees.

Health and Medicine

Medical Facilities

If you take chronic medication, bring your own. This includes birth control pills, vitamins, blood pres-

sure medication, and thyroid or estrogen hormones. Local pharmacies carry a range of products of variable quality, availability, and cost. Some chronic medications may be bought here, but make that decision after you arrive. Establish a supply source before coming.

Local medical facilities are used selectively for specialty consultation and emergency hospitalization. Elective surgery is not recommended in Jakarta. Patients with problems that cannot be handled in Jakarta are evacuated to Singapore. The hospital used (whether local or regional) depends on the condition and urgency of the problem.

Indonesian facilities to handle high-risk obstetrics and neonatal care are very limited.

Dental care, such as cleaning, repairs of dental cavities, and root canal and bridge work, can be performed in Jakarta. Complicated dental problems can be referred to specialists in Singapore. There are orthodontists who work in Jakarta, though the quality of their work is quite inconsistent.

Jakarta has optometrists and selected ophthalmologists of reasonable quality. Lens work is satisfactory, but bring an extra pair of glasses with you.

Local physicians are used selectively, with variable satisfaction. No American or European doctors currently practice in the city. Hospitals are generally of a significantly lower standard than in Jakarta. Surabaya is not equipped to support significant ongoing medical problems, and persons posted in Surabaya must be aware of this. Concerns and plans regarding dental and optometry care and chronic medications should be considered and resolved prior to arrival. Local pharmacies carry a range of products of variable quality, availability, and cost.

Community Health

Community sanitation and public health programs are inadequate

throughout Indonesia and subject to frequent breakdowns. Water and air pollution and traffic congestion have rapidly increased

with the growth of major cities. Almost all maladies of the developing world are found here. Residents are subject to water- and food-borne illnesses such as typhoid, hepatitis, cholera, worms, amebiasis, and bacterial dysentery. Mosquito-borne dengue fever exists throughout Indonesia. Malaria is endemic in metropolitan Jakarta, Medan, the Puncak, Surabaya, and southern Bali and in a few other locations. Respiratory difficulties are common and are exacerbated by the high pollution levels. Asthma problems are generally worse during a tour here, as are any other respiratory or skin allergies.

Preventive Measures

Recommended immunizations for children include all of the standard pediatric immunizations of diphtheria, pertussis, tetanus, polio, measles, mumps, rubella, and hemophilus B, plus hepatitis B, hepatitis A, typhoid, and preexposure rabies for toddlers. Adults should be current on all recommended immunizations. Malaria prophylaxis is recommended for travel to endemic areas outside major cities. Additionally, use of screens, clothes that cover the body, and insect repellent for children and adults is important to decrease exposure not only to mosquitoes carrying malaria but also to those carrying dengue fever, a disease that is present in both urban and rural areas.

Because of evidence of hydrocarbon and other chemical contamination in Jakarta. All water used for consumption should be bottled. Bottled water is also supplied in Surabaya. Factory-bottled soft drinks and juices are generally safe. Milk sold in sealed containers is generally safe. Standard recommendations for preparing fresh fruits, vegetables, and meats apply here. Washing, soaking, and peeling and/or thoroughly cooking are mandatory to minimize insecticide residue and

bacterial and parasitic contamination. A wide variety of foods are available in local markets and supermarkets, and it is possible to eat a well-balanced diet.

Car accidents are the primary causes of severe injury to foreigners living in Indonesia. Defensive driving and use of seatbelts are encouraged, and use of motorcycles is strongly discouraged. The U.S. maintains a list of available blood donors, but Rh negative blood may be difficult to obtain in an area with very few Westerners. Therefore, it is important to know your blood type and recognize that this may be a problem.

**Galungan & Kuningan are Hindu Balinese Holidays. Balinese use Caka Year, which is 210 days per year, not 365. Therefore, these holidays are celebrated twice in one Gregorian year.

NOTES FOR TRAVELERS

Passage, Customs & Duties

The usually traveled route to Indonesia from the U.S. is by air via

the Pacific. This route in particular is advantageous to families traveling with children or pets since it eliminates the forced stop overnight in Singapore. Since the trip from the U.S. to Jakarta is so long and tiresome, you may wish to make a rest stop along the way.

A passport valid for six months beyond the intended date of departure from Indonesia is required. A visa is not required for tourist stays up to two months. As of November 2000 the Government of Indonesia has been discussing implementing visa requirements for foreign travelers. Travelers should reconfirm entry requirements before traveling. For additional information about entry requirements for Indonesia, travelers may contact the Embassy of the Republic of Indonesia, 2020 Massachusetts Avenue, N.W., Washington, D.C. 20036, telephone (202) 775-5200, fax (202) 775-5365.

U.S. citizens are encouraged to carry a copy of their U.S. passports with them at all times, so that, if questioned by local officials, proof of identity and U.S. citizenship are readily available. When U.S. citizens are arrested or detained, formal notification of the arrest is normally provided to the U.S. Embassy in Jakarta in writing, a process that can take several weeks. If detained, U.S. citizens are encouraged to attempt to telephone the nearest U.S. consular office.

Americans living in or visiting Indonesia are encouraged to register at the U.S. Embassy or Consulate where they may obtain updated information on travel and security within the country.

The U.S. Embassy is located in Jakarta at Medan Merdeka Selatan 5; telephone:(62)(21)3435-9000; fax (62)(21)3435-9922. The Embassy's web site is located at <http://www.usembassyjakarta.org>. The consular section can be reached by e-mail at jakconsul@state.gov.

The U.S. Consulate General is in Surabaya at Jalan Raya Dr.,

Sutomo 33; telephone: (62)(31) 567-2287/8; fax (62)(31)567-4492; e-mail consularsuraba@state.gov.

There is a Consular Agency in Bali at Jalan Hayam Wuruk 188, Denpasar, Bali; telephone: (62)(361)233-605; fax (62)(31) 222-426; e-mail amcobali@indo.net.id.

Pets

Except for a prohibition against importing birds, pets are admissible into Indonesia. All animals must have a certificate of health issued by a veterinarian. Owners must produce evidence that within 6 months to 30 days before arrival the pets were inoculated against rabies. No quarantine is required. There are two ways to bring pets to Jakarta. The first method is as accompanied baggage (excess baggage) since the pet travels with you on the same flights. Your pet can be immediately cleared through Customs if all documentation is in hand and is valid. The airline determines the excess baggage costs and these are a personal, non-reimbursable expense.

The second and often most expensive method of shipping a pet is as airfreight.

In the freight system, the pet is transported unaccompanied by the owner. Animals are loaded into pressurized holds along with other cargo. Fees for this type of shipment vary according to your country of origin, the number of pets, and the airline handling the transport. You can find airfreight forwarders through your local yellow pages, the worldwide web or through your veterinarian. Some airlines limit pet transport to only certain portions of the year due to high temperatures. Upon arrival in Jakarta it will take about 3 hours to clear your pet through Indonesian Customs.

Do not route your pet (alone or accompanied) via Australia, where it will be confiscated and destroyed. Persons bringing pets through Hong Kong or Singapore must have prior authorization from those governments to do so. This authoriza-

tion is required regardless of the carrying airline and must be obtained directly from the governments of those countries. Instructions for applying for this authorization can be obtained at any British (for Hong Kong) or Singaporean embassy. The desired transit time must be stated on the authorization. If pets arrive without the authorization (even if only in transit), they will be quarantined at your expense or destroyed.

Firearms and Ammunition

Personal weapons in Indonesia present a problem due to the difficulty of obtaining import licenses and certificates of registration.

Currency, Banking, and Weights and Measures

The monetary unit is the rupiah. The rate of exchange changes constantly (as of February 2001, Rp 9,440 = US\$1). The international metric system of weights and measures is used in Indonesia. Gasoline and other liquids are sold by the liter (1.0567 liquid quarts); cloth, by the meter (39 inches); and food and other weighted items, by the kilogram (2.2 pounds). Distance is measured by the kilometer (0.625 miles); speed, in kilometers per hour (40 kph =25 mph).

Taxes, Exchange, and Sale of Property Restrictions

Direct consumer taxes and service charges, such as those imposed on hotel and restaurant bills, gasoline purchases, and airport departure, are paid.

SPECIAL CIRCUMSTANCES: U.S. citizens involved in commercial or property matters should be aware that the business environment is complex. In many cases, trade complaints are difficult to resolve.

DISASTER PREPAREDNESS: Indonesia is located in an area of high seismic activity. Although the probability of a major earthquake occurring during an individual trip is remote, earthquakes can and will continue to happen. General infor-

mation about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov/>.

IRAN

Islamic Republic of Iran

Major Cities:

Tehrān, Esfahān, Shirāz

Other Cities:

Ābādān, Bakhtaran, Bandar Abbas, Hamadān, Kerman, Mashhad, Qom, Tabriz, Yazd, Zāhedān

INTRODUCTION

The Middle Eastern nation of **IRAN** is located at a strategic crossroads between the Western and Eastern worlds. Since the 1979 Islamic Revolution, Iran has isolated itself from most of the world in an attempt to protect itself from non-Muslim values and influences. The country's support of international terrorism and its desire to export the Islamic Revolution to its more moderate Middle Eastern neighbors has made Iran an international outcast. Since the death of Ayatollah Ruhollah Khomeini, the leader of Iran's Islamic Revolution, in 1989, Iran has made tentative attempts to establish new ties with the West. Years of isolation and a devastating war with Iraq during the 1980s decimated Iran's economy. The moderate, pragmatic government of Ali Hashemic Rafsanjani recognized the need for Western technology and financial assistance to rebuild the economy, but it had to move cautiously in order not to offend Iran's powerful Islamic clergy. In 1997, a moderate candidate, Mohammed Khatami, was elected president. Since Iran's constitution limits the president's powers, the election did not change Iran's foreign policy.

MAJOR CITIES

Tehrān

Tehrān, the capital of Iran, is located at the foot of the Elburz Mountains (Reshteh-ye Alborz). The city, whose origins date back to the fourth century A.D., has served as Iran's capital since 1788 and has developed over the years into a modern transportation, cultural, and industrial center. Tehrān is linked by road with other major Iranian cities and is accessible by air to cities in Asia, Europe, and the Persian Gulf region. The city is home to many of Iran's major educational institutions, including the University of Tehrān, the Arya Mehr University of Technology, and the National University of Iran. Tehrān is a primary industrial center. Industries in Tehrān produce a wide variety of products, including automobiles, cement, textiles, pharmaceuticals, sugar, electrical equipment, and pottery. Rapid industrialization during the late 20th century has led to a dramatic increase in air pollution. Tehrān enjoys a favorable climate, with cool winters and warm summers. In 1995, Tehrān had an estimated population of 6.8 million.

Recreation and Entertainment

Western-style entertainment, such as movies or nightclubs, are virtually nonexistent in Tehrān. However, the city has many museums and mosques that are of interest to visitors. The Ethnological Museum offers visitors an informative look at Iranian life during the 19th and early 20th century. The museum contains excellent displays featuring articles used by average Iranian villagers, including jewelry and amulets, household dishes, and tools. The Ethnological Museum also offers a display of a 19th century Iranian village, with mannequins adorned in native dress.

For those interested in history, Tehrān's Archeological Museum contains art, sculpture, and artifacts from every century and dynasty in Iranian history. Among the exquisite articles in the museum are porcelain vases and bowls, armaments, bone tools, bronze and brass jewelry and perfume-burners, and beautiful rugs.

One of Tehrān's most interesting mosques is the Sepahsalar Mosque. This mosque has eight minarets which offer excellent views of Tehrān. The interior of Sepahsalar Mosque is adorned with beautiful tile work and contains a large

library filled with many ancient manuscripts.

Tehrān has over 19 parks, gardens, and squares which offer visitors a welcome respite from the hectic pace of the city. Tehrān's parks and gardens are often filled with Iranians playing badminton and soccer, or picnicking with family members.

Although some hotels and restaurants were closed or destroyed during the Islamic Revolution, several remain which serve Western cuisine. Many Iranian dishes are also quite good and are reasonably priced. The main staple of Iranian dishes is rice, although vegetables, yogurt, meat, cheese, and bread are also used.

The streets of Tehrān have many shops which offer many items of interest to tourists. Persian carpets, which are among the finest in the world, are popular souvenirs.

Esfahān

The city of Esfahān (also spelled Isfahan) is located in west central Iran approximately 210 miles (340 kilometers) south of Tehrān. From the 16th to 18th century, Esfahān served as the capital of Iran. Today Esfahān is one of Iran's largest and most important cities. The city has developed into a major industrial center for textiles, rugs, and tiles. Most heavy industry in Esfahān is centered around petroleum refining and steel making. During the spring and summer, the city receives cool breezes from the north which help to moderate temperatures. Esfahān had a population of 2.6 million in 2000.

Recreation and Entertainment

Esfahān is one of Iran's most beautiful cities and offers many sight-seeing opportunities. The city has many mosques, mausoleums, and minarets that are open to visitors.

Esfahān's largest mosque is the Friday Mosque (Masjid-i-Jami). Begun in the 11th century, construction of

Street in Shiraz, Iran.

AP/Wide World Photos, Inc. Reproduced by permission.

the Friday Mosque continued for several centuries. Because the mosque was constructed over several centuries, it offers visitors a glimpse of architectural styles from various centuries of Persian culture. The Friday Mosque is considered one of Iran's most beautiful structures. Located about 500 yards from the Friday Mosque is the Ali Mosque (Masjid-i-Ali). The Ali Mosque has a facade that is covered with exquisite decorations. A notable feature of the Ali Mosque is a group of arches topped with a cupola. The cupola is inscribed with a poem honoring one of Iran's Shahs as well as 13 verses from the Koran. The Shaikh-Lutfallah Mosque, with its intricately patterned dome and gorgeous mosaics, is another beautiful example of Persian architecture.

The city has several mausoleums which are of interest to visitors. The Mausoleum of Darb-i-Imam has a large cupola covered with beautiful mosaics. The mausoleum is easily recognizable by a stone lion with a human face which resides in a courtyard in front of the mausoleum. The Mausoleum of Baba Qasem was completed in 1340 as the final resting place of a theologian from the Sunni Sect of Islam. In 1928, Baba Qasem's body was removed from the tomb because he

was considered a heretic by Iran's Shi'ite majority. The mausoleum is a beautiful structure and is adorned with white mosaic tiles on a blue background. The Mausoleum of Baba Rokn-ed-din is another popular site for sightseers. This mausoleum was constructed in 1629 and presented as a gift to the citizens of Esfahān by Shah Abbas. The Mausoleum of Babau Rokn-ed-din is noteworthy because of its unusual pentagonal shape.

Esfahān's beautiful minarets (prayer towers) are also worth a visit. The Sareban Minaret is one of the most attractive minarets in Esfahān. It is 144 feet high and divided into three sections, with each section beautifully decorated with inscriptions, brickwork, or stalactites. North of the Sareban Minaret is the Minaret of the 40 Daughters. This minaret is a brick structure adorned with intricate geometric patterns. The Minaret of the 40 Daughters is somewhat smaller than the Sareban Minaret.

In addition to sight-seeing, Esfahān offers wonderful shopping opportunities. The city's bazaar allows visitors to watch carpet weavers, silversmiths, and coppersmiths practicing their crafts. The silver, brass, and copper jewelry, hand-

printed cloth, pottery, and Persian rugs sold at the bazaar make excellent souvenirs.

Many visitors also enjoy strolling through the city's spacious central square, with its lovely trees and manicured gardens.

Shirāz

Shirāz, located in south central Iran, is an industrial and commercial center. Several manufacturing industries are located in Shirāz. These industries produce textiles, fertilizers, sugar, and cement. The city is famous for its wine and Persian rugs. Shirāz is considered Iran's literary capital and is the birthplace of Sa'di and Hafez, two of the country's greatest poets. The city has a favorable climate, with mild winters and pleasant temperatures from March to October. In 2000, Shirāz had a population of approximately 1,113,000.

Recreation and Entertainment

Like many other Iranian cities, Shirāz is quite old. As a result, there are many historic mosques and mausoleums that are worth a visit. One of the oldest mosques in Shirāz is the Old Friday Mosque (Masjid-e-Jame). This mosque was begun in 894 A.D. but was added onto throughout the centuries. Beautiful mosaics adorn the structure. One of the unique aspects of the Old Friday Mosque is the miniature temple which graces the mosque's courtyard. This temple, known as the *Khoda Khanen* (The Lord's House), was constructed in the 14th century and contains a copy of the Koran. No other mosque in Iran has a temple of this kind. Another mosque, the New Friday Mosque, is the largest in Iran with an area of 215,000 square feet. Constructed in the 13th century, it is easily recognizable by its gilded cupola.

The mausoleums of the Persian poets Hafez and Sa'di are located in Shirāz and are open to visitors. The Hafez Mausoleum is situated in a

lovely garden filled with orange trees and cypresses. The tomb of Hafez is covered with rosettes and verses from his poems. Another collection of Hafez's poems is inscribed on an alabaster tablet located near the tomb. The Sa'di Mausoleum, with its turquoise dome and high portico, is a beautiful structure. An artificial pond near the tomb offers a spot for peaceful contemplation. Another mausoleum, the Mausoleum of Shah Cheragh, is a pilgrimage center for Shi'ites. Therefore, it is not open to non-Muslim visitors. The mausoleum has many beautiful mirrors and has a distinctive pear-shaped dome.

Shirāz has many bazaars which offer wonderful shopping opportunities. Souvenir hunters can purchase authentic Persian carpets, tablecloths, gold and silver jewelry, glass and ceramic wear, and wood carvings.

OTHER CITIES

ĀBĀDĀN is situated in extreme southwestern Iran near the border with Iraq. Founded in the eighth century, Ābādān's location near the Persian Gulf led to its development as a trading center. The discovery of oil near Ābādān in the early 20th century brought new wealth to the city. Oil refineries, pipelines, and port facilities were quickly constructed. Ābādān was attacked by Iraq in 1980 during the early stages of the Iran-Iraq War. The city was bombed repeatedly throughout the conflict. Most of the city, particularly its oil refineries and port facilities were destroyed. Some of the facilities have been repaired and oil refining has resumed, although at vastly reduced levels. Current population figures are unavailable.

The city of **BAKHTARAN**, located in western Iran, is nestled in the midst of a fertile agricultural region. Formerly known as Kerman-shah, the city has served as a trading center for the barley, corn, wheat, oilseeds, rice, and vegetables grown nearby. Bakhtaran is home to

several industries, which produce sugar, textiles, carpets, tools, and electrical equipment. Bakhtaran has a population over 540,000.

BANDAR ABBAS is located on the Strait of Hormuz at the entrance of the Persian Gulf. The city is an important port for Iranian exports such as petroleum and agricultural products. The climate in Bandar Abbas is extremely hot and humid during the summer, but cooler in winter. The city has an estimated population over 210,000.

Situated at the foot of Mount Alvand in west-central Iran, **HAMADĀN** is an important trading center for fruits and grains grown near the city. The city is famous for its production of Persian rugs and leather goods. Hamadān is an ancient city and some vestiges of its historical past remain, including the mausoleum of Esther and Mordecai and a stone lion constructed during the reign of Alexander the Great. Avicenna, an Arab philosopher, was born and buried in Hamadān. The city has an estimated population over 272,000.

KERMĀN is located on a sandy plain in southeastern Iran. Founded in the second century, the city is an industrial center noted for the production and distribution of beautiful carpets. Other industries in Kermān produce textiles and cement. The city has several mosques that are of interest to visitors. Kermān's climate is generally cool and it is not unusual for the city to experience sandstorms during the spring and autumn. Current population figures are unavailable.

The city of **MASHHAD** (also spelled Meshed) is the site of two important Muslim shrines, the Shrine of Imam Ali ar Rida and the Shrine of Caliph Harun ar Rashid, which are visited by nearly four million pilgrims annually. Mashhad is situated on an ancient trading route between Iran and the silk markets of China. Today, the city is northeastern Iran's largest export center for carpets and agricultural products. The city has attractive parks, court-

yards, avenues, mosques, and libraries which are of interest to visitors. In 2000, Mashhad had a population of approximately 2,378,000.

Located only 92 miles (147 kilometers) south of Tehrān is the holy city of **QOM**. Qom, with its numerous shrines and tombs of Islamic saints, is the destination of many Shi'ite pilgrimages. The most notable shrine in Qom is the Shrine of Fatimah, which was erected in honor of the sister of an Islamic leader. The city is home to the largest theological college in Iran. Qom has also developed into an industrial center for the production of textiles, cement, pottery, brick, and petrochemicals. A large oil refinery is also located near the city. Qom is situated in a rich agricultural region and is a distribution center for the cotton, wheat, fruits, barley, and vegetables grown near the city. The city is linked by road and railway with Tehrān and other Iranian cities. Qom has a population of approximately 650,000.

TABRIZ is located in extreme northwestern Iran near the country's border with Russia. With a population of approximately 1,624,000 (2000 est.), Tabriz is Iran's fourth largest city. The city has a well-developed industrial sector. Industries in Tabriz produce a wide variety of products, including agricultural machinery, textiles, carpets, motorcycles, dried fruits and nuts, soap, and leather goods. Rail, air, and bus transportation connects Tabriz with Tehrān. Tabriz is a modern city with beautiful tree-lined avenues and lush public gardens. The city has several mosques, most notably the blue-tiled Blue Mosque. Tabriz is prone to severe earthquakes and has received damaging shocks over the centuries. In February 1997 a devastating earthquake rocked northwest Iran, killing over 500 and leaving more than 35,000 homeless.

The city of **YAZD** is located in Iran's arid central region. Yazd, founded in the fifth century A.D., is an ancient city and has many mosques and mausoleums that are of interest to

visitors. One mosque in particular, the Friday Mosque (Masjed-e Jom'eh), has the tallest minarets of any mosque in Iran. Many of Yazd's mosques are beautifully decorated with intricate designs and inscriptions. The city is located in the heart of a fertile agricultural area which produces fruit, barley, wheat, almonds, and cotton. Yazd is most noted for its silk weaving and carpet manufacturing. The area surrounding Yazd is rich in minerals, which has led to the development of a substantial mining industry. Yazd is a transportation hub and is connected by road and rail with Tehrān and other major Iranian cities. Yazd has a population of over 223,000.

ZĀHEDĀN, a city of approximately 220,000 residents, is situated in southeastern Iran. The city serves as a point of departure for trips to many of the smaller towns in the region. Industrial capacity in Zāhedān is rudimentary, at best. Factories in the city produce mostly bricks, ceramics, processed food, or local handicrafts. Current population figures are unavailable.

COUNTRY PROFILE

Geography and Climate

The Islamic Republic of Iran is located in the highlands of southwestern Asia. It comprises an area of approximately 636,293 square miles, slightly larger than Alaska. Iran is bordered on the north by Armenia, Azerbaijan, Turkmenistan, and the Caspian Sea, on the east by Afghanistan and Pakistan, on the west by Iraq and Turkey, and on the south by the Persian Gulf and the Gulf of Oman. The topography of Iran consists mainly of desert and mountains. The central, eastern, and southern parts of the country contain great salt flats (*kavir*) and desert. These areas are virtually uninhabitable. Most of Iran's population lives in the northern and northwestern areas of Iran. Two

mountain chains dominate the landscape. The Zagros Mountains originate in northwestern Iran, extend southward to the Persian Gulf coast, and skirt eastward along the Gulf of Oman. The second range, the Elburz Range, extends along the southern coast of the Caspian Sea.

Most of Iran exhibits a desert climate, although areas along the Caspian seacoast are more temperate. Summers are usually long, hot and dry. High humidity is prevalent along the Caspian Sea and Persian Gulf coasts. Spring and fall are usually of short duration. Winter, especially in mountainous northern regions, is harsh with extremely cold temperatures.

Iran suffers from chronic water shortages. Eastern and southern portions of Iran receive negligible precipitation. Northern and western parts of the country receive annual rainfall of only eight to ten inches.

Population

As of 2000, Iran had an estimated population of 65,870,000. A number of ethnic groups are represented in Iran. The majority of Iranians are Persians (51 percent). Approximately 25 percent are Azerbaijani. Small minorities of Arabs and Kurds also reside in Iran. Iran's official language is Farsi, spoken by 58 percent of the population. About 26 percent speak Turkic languages, especially people in northwestern and northeastern parts of the country. Kurdish and Luri are spoken in western parts of Iran and Baluchi in the southeast. Arabic, English and French are also spoken.

Approximately 89 percent of the population are Shi'ite Muslims. Another 10 percent belong to the Sunni Muslim sect of Islam. Small non-Muslim minorities exist in Iran. These include Zoroastrians, Jews, Christians, and Baha'is.

Life expectancy at birth 68 years for males and 71 years for females (2001 est.).

History

Iran, known as Persia until 1935, has a history that dates back to the pre-Christian era. In 549 B.C., Cyrus the Great united Persians and Medes into one Persian empire. Under Cyrus, the Persians created a wealthy and powerful empire. They conquered Babylonia in 538 B.C. and established a dominant position in the Middle East. However, in 333 B.C., the Persian Empire was attacked and conquered by Alexander the Great. The Persians regained their independence under the Sassanians in 226 A.D.

For several centuries, Persia was invaded and occupied by numerous foreign powers. In the seventh century A.D., the Arabs conquered Persia, bringing with them their Muslim faith. Turks and Mongols overran and occupied Persia at various intervals between the 11th and 16th centuries. In 1502, a group known as the Safavids established control of Persia. Under the leadership of Shah Abbas, Persia enjoyed an era of unparalleled peace and prosperity. In 1795, the Safavids were succeeded by the Qajars. The Qajars ruled Persia until 1925.

The early 20th century in Persia was marked by a series of uprisings against the Qajar Dynasty. In 1906, Shah Muzaffer-ud-Din granted the first constitution in Persian history. This constitution gave people a voice in the political process for the first time. This concession, and others, were not enough to calm the anger of the people. In 1925, the Qajar's were overthrown during a coup attempt. A young Persian army officer, Reza Khan, seized power. He named himself king and took the title Reza Shah Pahlavi. During his reign, Reza Shah sought to modernize the country and develop its oil industry. During World War II, Nazi Germany had established a strong commercial presence in Iran. The United States and Great Britain demanded that the Germans be expelled from Iranian soil. When these demands were not met, they invaded Iran in 1941. Reza Shah was forced to abdi-

cate the throne in favor of his son, Mohammad Reza Pahlavi. In 1942, Iran, Great Britain and the U.S.S.R. signed a treaty in which the British and Soviets agreed to respect Iran's territorial integrity and defend the country against foreign aggression. In return, the Iranians agreed to allow Great Britain and the U.S.S.R. to deploy troops in the country. At the end of World War II, the Soviets reneged on the agreement and refused to withdraw its troops. However, after intense American pressure, the Soviets pulled their troops out of Iran in 1946. This marked the beginning of a close relationship between the Pahlavi Dynasty and the United States.

In 1951, the Shah was ousted from power and a new government formed. It was led by Dr. Mohammad Mossadigh, a longtime opponent of the Shah. Mossadigh sought to end all foreign influence in Iranian domestic affairs. The United States and Western European nations strongly urged that Shah Reza Pahlavi be returned to power. In 1953, Mossadigh was overthrown and arrested by the Shah's army. Reza Pahlavi was returned to the throne. In 1961, the Shah launched an ambitious program to modernize Iran. He instituted land reforms and encouraged massive amounts of foreign investment. These reforms, coupled with money from Iran's vast oil reserves, began a period of unprecedented period of modernization and growth.

Despite the prosperity, a growing undercurrent of political turmoil emerged. Many groups within Iran resented the Shah's authoritarian rule, which was enforced by his brutal secret police force. In particular, Reza Pahlavi angered Iran's powerful religious leaders. They charged that the Shah's modernization program was a rejection of Islamic values and traditions. Reza Pahlavi responded to the criticism with even harsher political repression. One of the Shah's most vocal critics, Ayatollah Ruhollah Khomeini, was arrested by secret police agents and imprisoned. In 1964, Khomeini was

forced to leave Iran and eventually settled in France.

In 1978 domestic violence, led by religious clerics, exploded throughout Iran. Iran's cities were the scene of violent demonstrations and riots against the Shah's programs and Western influence in Iran's internal affairs. Bloody battles were waged between Iranian civilians and troops loyal to the Shah. In an attempt to end the violence, Pahlavi declared martial law in 12 major cities. This decision only made the Iranian people angrier. By early 1979, it became clear that Reza Pahlavi's days in power were numbered. On January 16, 1979, the Shah left Iran for exile in Egypt. Before his departure, Reza Pahlavi created an interim government led by prime minister Shahpour Bakhtiar.

Ayatollah Khomeini returned triumphantly from France on January 31, 1979. He declared that Bakhtiar's government was invalid and named his own provisional government. On February 11, 1979, the Shah's best troops, the Imperial Guard, were defeated. Many officials and secret police agents from the Shah's government were hunted down, imprisoned or executed.

The Islamic Republic of Iran was proclaimed on April 1, 1979. The government was dominated by religious clerics and all domestic policies were based on strict Islamic principles and traditions. The foreign policy of the Islamic Republic was extremely anti-American and dedicated to spreading the Islamic Revolution to the rest of the Middle East. On November 4, 1979 Iranian militants seized the American embassy and took hostages. The militants demanded the return of the Shah from exile and intended to put him on trial. However, on July 27, 1980, the Shah died in Egypt after undergoing treatment for cancer. Despite American and international pressure, the hostages remained captive. After a series of frustrating and fruitless negotiations, President Carter authorized a military attempt to rescue the hostages. The mission was a complete

Cory Langley. Reproduced by permission.

Mosque and other buildings in Tehrān

failure and resulted in the deaths of several U.S. servicemen. After months of intense negotiations, an agreement was reached. The hostages were freed on January 21, 1981.

On September 22, 1980, Iraq invaded Iran in a dispute over the Shatt-al-Arab waterway. For nine years, the two countries fought a long and savage war. Both sides suffered heavy casualties and severe damage to their oil producing facilities. In August 1988, Iran and Iraq agreed to a UN-sponsored ceasefire. Peace talks began shortly after. In 1990, a peace agreement was signed, Iraqi troops were withdrawn from Iranian soil, and prisoners of war exchanged.

In 1989, Ayatollah Khomeini offered a one million dollar reward for the killing of Salman Rushdie. Rushdie wrote a book, *The Satanic Verses*, that Khomeini and others deemed blasphemous to Islam. Rushdie was forced to go into hiding. Although Khomeini died on June 4, 1989, the threats against Rushdie's life continue.

Relations between the United States and Iran remain extremely tense. The United States has accused Iran's government of con-

tinued state sponsorship of terrorism. Since Khomeini's death, Iran is slowly emerging from years of self-imposed isolation and seeking new contacts with the rest of the world.

In 1997, a moderate candidate, Mohammed Khatami, was elected president. In April 1998, the mayor of Tehrān, Gholamhossein Karabashi (a political ally of President Khatami), was denounced by political conservatives and arrested on corruption charges. Protesters demonstrated against the arrest, which revealed the growing division between the moderates who won elections in 1997 and the conservatives who have controlled the country since 1979.

Government

Religious clerics wield unrivaled political power in Iran. The government of the Islamic Republic is headed by a Spiritual Leader of the Islamic Revolution. This position is held by a cleric who is highly regarded by the Iranian people. Ayatollah Khomeini served in this capacity until his death in 1989. He was succeeded by Ayatollah Ali Hoseini-Khamenei.

The Spiritual Leader selects six clerics to serve as a Council of

Guardians. These men serve as commanders of the armed forces, appoint judges, and determine the competency of presidential candidates.

Iran's Islamic constitution provides for the appointment of a president and prime minister. The president is elected to a four-year term and controls the executive branch of government. The president, in turn, nominates a candidate for prime minister. The prime minister is responsible for coordinating government decisions. The candidate for prime minister is subject to approval by the National Assembly. The National Assembly, or Majlis, is composed of 270 members elected to a four-year term. All legislation approved by the Assembly can be vetoed by the Council of Guardians. Elections for the Majlis were last held in April 1996. The results of the election indicated that moderate candidates favoring better relations with the West won a majority of the seats. The election results were viewed as a setback for Iran's hard-line Islamic militants.

All judicial matters are the province of the Supreme Court and a four-member High Council of the Judiciary. These men are entrusted with the enforcement of all laws and for establishing judicial and legal policies.

In 1982, an Assembly of Experts was created. This body consists of 83 members who are elected to eight-year terms. The Assembly of Experts is responsible for choosing the Spiritual Leader and interpreting the constitution. All candidates for election to the Assembly of Experts are subject to approval by the Council of Guardians.

The flag of the Islamic Republic of Iran consists of three equal horizontal bands of green (top), white, and red; the national emblem (a stylized representation of the word "Allah") in red is centered in the white band. "Allah Akbar" (God is Great) in white Arabic script is repeated 11 times along the bottom of the green

band and 11 times along the top edge of the red band.

Arts, Science, Education

Since 1943, primary education is mandatory for all children for five years. The great majority of primary and secondary schools are run by the state. Tuition and textbooks for elementary students are provided at government expense for the first four years. Small fees are charged at state-run secondary schools.

Iran has about 44 universities with 15 located in the capital, Tehrān. Many of Iran's universities were sites of violent unrest during the Islamic Revolution. Many universities were closed in 1980, but have been gradually re-opened since 1983. A new university, The Free Islamic University, was opened in April 1983. In recent years, college education in Iran has stressed vocational and agricultural programs.

In 1997 about 9.2 million primary school students and nearly 8.8 million secondary level students.

In 1994, an estimated 72 percent (male 78%, female 64%) of Iranians, age 15 and over, could read and write.

Commerce and Industry

Under the Pahlavi dynasty, Iran experienced tremendous industrial and economic growth. Much of this growth was disrupted by the 1979 Revolution. Also, massive corruption, mismanagement, and ideological rigidities have created product shortages and high inflation. Iran's main industry is oil production. However, the large oil refineries at Ābādān and Bandar Khomeini and the main tanker terminal at Kharg Island were destroyed or severely damaged during the 1980–88 war with Iraq. These facilities are slowly being repaired. In addition to oil, Iranian industries produce petro-

chemicals, textiles, vegetable oil and other food products, carpets, cement and other building materials, and fertilizer.

Iran has abundant agricultural resources. Her principal crops are wheat, rice, barley, nuts, cotton, sugar beets, and fruits. Wool is also an important product.

Petroleum accounts for 90 percent of Iran's exports. Other exports include carpets, fruits, nuts, and hides. Iran's primary imports are foodstuffs, military supplies, machinery, metal works, pharmaceuticals, and technical services. Japan, Germany, France, Italy, Turkey, Britain, Spain, and the Netherlands are Iran's primary trading partners.

The unit of currency is the *rial*.

Transportation

In 1995, Iran had approximately 87,000 miles (140,100 kilometers) of roadway. An estimated 26,500 miles (42,700 kilometers) were paved highways. Approximately 1.56 million cars and 589,000 commercial vehicles were in use in 1995. Conditions of secondary roads vary from good to poor.

Iran had an estimated 4,500 miles (7,300 kilometers) of railroads in 1996. The main line links Tehrān to the Caspian Sea and Persian Gulf.

There are several flights between Iran and Asia, the Middle East and Europe.

Public transport is frequent, reliable and relatively safe. Bus services offer competitive, inexpensive rates. Trains are efficient and inexpensive as well.

The Shatt-al-Arab was one of Iran's principal waterways. However, it was heavily damaged in the 1980s during the Iran-Iraq War. The Shatt-al-Arab contains two of Iran's principal ports, Ābādān and Khorramshahr. Both ports were virtually destroyed during the fighting. Iran's other ports are located along the

Gulf of Oman and Persian Gulf coasts. These include Bandar Abbas, Bandar Beheshti, Bandar Bushehr, and Bandar Khomeyni.

Iran's main international airport, Mehrabad Airport, is located just west of Tehrān. Shirāz International Airport is located only nine miles (15 kilometers) from Tehrān. A new airport opened near the city of Isfahan in July 1984 and began receiving international flights in March 1986.

The national airline is Iran Air (Airline of the Islamic Republic of Iran). International flights are available to the Persian Gulf area, Tokyo, London, Paris, Athens, Beijing, Kuala Lumpur, Karachi, Rome, Vienna, Lagos, Bombay, Istanbul, Frankfurt and Geneva.

Communications

There were an estimated 14.3 million radios and 3.9 million televisions in use in 1995. Iran's main radio station is the Voice of the Islamic Republic of Iran. Regional broadcasts can be heard in Farsi, Arabic, Assyrian, Dari, Kurdish, Bandari, Baluchi, Turkish and Urdu. Foreign broadcasts are available on shortwave frequencies in English, French, Spanish, German, Russian, Farsi, Armenian, Urdu, Kurdish, Arabic and Turkish.

Television broadcasts are aired on the Vision of the Islamic Republic of Iran. Programs are produced in Tehrān and transmitted to 28 stations across the country.

Iran's press is tightly controlled by the government. Strong criticism of the government, senior religious clerics, or public morality is forbidden. Many of the newspapers and periodicals published during the Shah's rule have been banned.

NOTES FOR TRAVELERS

A passport and visa are required. The Iranian Interests Section of the Embassy of Pakistan is located at 2209 Wisconsin Ave. N.W., Washington, DC. 20007; tel 202-965-4990, 91, 92, 93, 94, 99, fax 202-965-1073, 202-965-4990 (Automated Fax-On-Demand after office hours). Their Internet web site is <http://www.daftar.org> (click on "English"). U.S. passports are valid for travel to Iran. However, the authorities have often confiscated the U.S. passports of U.S.-Iranian dual nationals upon arrival. U.S.-Iranian dual nationals have been denied permission to depart Iran documented as U.S. citizens. To prevent the confiscation of U.S. passports, the Department of State suggests that dual nationals leave their U.S. passports at the nearest U.S. embassy or consulate overseas for safekeeping before entering Iran, and use their Iranian passports to enter the country. To facilitate their travel if their U.S. passports are confiscated, dual nationals may, prior to entering Iran, obtain in their Iranian passports the necessary visas for the country which they will transit on their return to the United States, where they may apply for a new U.S. passport.

Alternately, dual nationals whose U.S. passports are confiscated may obtain a "Confirmation of Nationality" from the U.S. Interests Section of the Embassy of Switzerland, which is the U.S. protecting power. This statement, addressed to the relevant foreign embassies in Tehran, enables the travelers to apply for third-country visas in Tehran. Dual nationals finding themselves in this situation should note in advance that the Swiss Embassy would issue this statement only after the traveler's U.S. nationality is confirmed and after some processing delay. Dual nationals must enter and leave the United States on U.S. passports.

Iranian authorities may permit travelers to bring in or to take certain goods out of Iran. However, U.S. travelers should refer to the section of this Consular Information Sheet regarding U.S. Government economic sanctions and the importation and exportation of restricted items in order to avoid any violation of the Iranian transactions regulations.

All luggage is searched upon traveling into and departing from Iran. Tourists can bring in and take out the following non-commercial goods, if they are recorded on the tourist's goods slip upon arrival at customs: personal jewelry, one camera, an amateur video camera, one pair of binoculars, a portable tape recorder, a personal portable computer, first aid box, and a camping tent with its equipment. Iranian authorities allow the departing passenger to take an unlimited amount of Iranian goods and foreign goods up to \$160 (US), and their personal non-commercial equipment. Air passengers may also take one carpet up to 6 square meters from Iran. The U.S. government only allows the importation of up to \$100 worth of Iranian-origin goods, except there are no sanction restrictions on the quantity of Iranian-origin carpets and foodstuff. Iranian authorities prohibit the export of antique carpets and carpets portraying women not wearing the proper Islamic covering, antiques, original works of art, calligraphic pieces, miniature paintings, different kinds of coins, and precious stones. They likewise prohibit the export and import of alcoholic beverages, weapons, ammunitions, swords and sheaths, military devices, drugs and illegal goods. It is advisable to contact the Iranian Interests Section in Washington, DC for specific information regarding customs requirements.

On May 6, 1995, President Clinton signed Executive Order 12959, 60 Federal Register 24757 (May 9, 1995), which generally prohibits exporting goods or services to Iran, re-exporting certain goods to Iran, making new investments in Iran and dealing in property owned or

controlled by the government of Iran. Except for carpets and foodstuffs, the importation of Iranian-origin goods or services into the United States has been prohibited since October 19, 1987. The Office of Foreign Assets Control, Department of Treasury, provides guidance to the public on the interpretation of the above. For additional information, please consult the Licensing Division, Office of Foreign Assets Control (OFAC), U.S. Department of Treasury, tel. 202-622-2480 or check the OFAC home page on the Internet at <http://www.treas.gov/ofac> or via OFAC's info-by fax at 202-622-0077. For information regarding banking compliance, please contact OFAC's Compliance Programs Division at tel. 202-622-2490.

There is no U.S. embassy or consulate in Iran. The Embassy of Switzerland serves as the protecting power of U.S. interests in Iran. The U.S. Interests Section at the Swiss Embassy is located at Africa Avenue, West Farzan Street, no. 59, Tehran. The local telephone numbers are 878-2964 and 879-2364, fax 877-3265. The workweek is Sunday through Thursday. Public service hours are 8:00 a.m. - 11:00 a.m. The Interests Section does not issue U.S. visas or accept visa applications. The limited consular services provided to U.S. citizens in Tehran, Iran include:

- (a) registering U.S. citizens;
- (b) answering inquiries concerning the welfare and whereabouts of U.S. citizens in Iran;
- (c) rendering assistance in times of distress or physical danger;
- (d) providing U.S. citizens with passport and Social Security card applications and other citizenship forms for approval at the U.S. Embassy in Bern, Switzerland;
- (e) performing notarial services on the basis of accommodation; and
- (f) taking provisional custody of the personal effects of deceased U.S. citizens.

Currency

In addition to the U.S. Government economic sanctions on trade and investment restrictions, travelers should be aware that most hotels and restaurants do not accept credit cards. Cash-dollars (not traveler checks) are accepted as payment. In general, hotel bills must be paid with cash-dollars. ATM machines are not available. Foreign currency must be declared at customs upon entry into the country, and the amount is entered in the passport. This amount can then be changed at the bank.

LOCAL HOLIDAYS

- Feb. 11. Victory Day
- Mar. 20 Oil Nationalization Day
- Mar. 21-24. No Ruz (First Day of Spring & New Year)
- Apr. 1. Islamic Republic Day

Baghdād, Iraq

IRAQ

Republic of Iraq

Major Cities:

Baghdād, Al Baṣrah, Al Mawṣil

Other Cities:

An Najaf, Arbil, Kirkūk, Ar Ramādi, Nimrud, Nineveh

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report for Iraq. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

IRAQ is the cradle of civilization, the country of the *Thousand and One Nights*, and the land of the two great rivers of history, the Tigris and the Euphrates. Known to the ancient Greeks as Mesopotamia ("in the midst of the rivers"), Iraq was enlarged after World War I to include the northern mountainous district of Kurdistan.

Modern Mesopotamia is still a fascinating juxtaposition of the old and the new. While signs of progress are visible everywhere, so are the manifestations of past glories. Excavated sites of vanished empires—Sumerian, Akkadian, Babylonian, Assyrian, Chaldean, Persian, Greek, Parthian, Ottoman, and Islamic—

remind every visitor of the incredible heritage of which modern Iraq is a part.

Editor's Note: Most of the city and country profile information contained in this entry reflects the conditions in Iraq prior to the outbreak of hostilities from the 1990 Iraqi invasion of Kuwait, the subsequent withdrawal of Iraqi troops as a result of the multi-national military attack that ended on February 27, 1991, and the continued economic sanctions imposed by the United Nations.

MAJOR CITIES

Baghdād

The history of Baghdād begins in the eighth century. It was founded by Caliph Mansur, and was known as the City of Peace. During the time of Charlemagne, it flourished under the Abbassid Caliph Harun al-Rashid, after whom its present-day main street was named. The old walled city, with a diameter of 3,000 yards, was completely destroyed, first by the Mongols, later by Hulagu Khan in 1258, and again by Tamerlane in 1400. Baghdād became a frontier outpost of the Ottoman Empire from 1638 to

1917, finally emerging as the capital of the Kingdom of Iraq in 1921. The city was the scene of the 1958 coup that overthrew the monarchy and established the Iraqi republic.

Baghdād of the 19th century can best be observed in the *souks* or bazaars, which have changed little in the last 100 years, except for the goods they offer the shopper. Among the things that can be found are silver and gold jewelry, copper and brass trays and coffee pots, Persian carpets, Kuwaiti chests, and hordes of people.

Baghdād is a sprawling city of about 4.9 million people (2000 est.). It bustles with vehicular traffic like all other capitals of oil-producing states. Yet, residential areas are still quiet with some remnants of mud villages interspersed with modern villas. The villas themselves are surrounded by high walls within which grow pleasant gardens with fruit trees, grass, and flowers.

Baghdād is rich in archaeological remains, and several museums are located in the city. There are three universities in Baghdād; the largest is the University of Baghdād, founded in 1958. Baghdād International Airport is 12 miles from the city.

Clothing

Only two types of clothing are required in Baghdād: an extensive summer wardrobe and warm winter clothing for the chilly November to March season. Bring garment bags to protect clothing from dust and insects.

Sports attire varies. White is required for tennis at the local clubs. Bathing suits deteriorate rapidly, so several should be brought to Iraq.

Raincoats and boots or rubbers are needed for the whole family, especially children, during the very muddy, wet winter months. Boots can be bought locally.

In general, most imported clothing items are restricted in availability and selection, and are expensive; locally made clothing is of poor quality.

Men need cool, lightweight suits, and many shirts. Suits and ties are worn throughout the year in the office. In summer, it is often necessary to change shirts during the day. Sports shirts and slacks are worn during the leisure hours; shorts should be worn only at home.

Women require a wardrobe of lightweight suits; cool, washable dresses; slacks; shirts; and blouses. Inexpensive cottons are advisable due to frequent laundering. There is no taboo against wearing reasonably low-cut dresses. Dry cleaning is satisfactory. Stockings usually are not worn during summer. In winter, wool suits, dresses, slacks, sweaters, and warm bathrobes are essential. Coats, stoles, and warm wraps are required for winter evenings; light wraps are necessary for spring and fall.

Women's shoes are available locally but quality is poor and they are expensive. Low-heeled sandals,

flats, and sneakers are used for ordinary day wear, depending on the season, with emphasis on sturdiness.

Children's clothing should be washable. Warm clothing is needed for winter in unheated rooms with cold tile floors. In summer, most children wear cotton clothing. Because much time is spent at swimming pools, several bathing suits are needed for each child. Children's tennis shoes, sandals, and flip-flops are available at a reasonable price.

Supplies and Services

Toilet articles, cosmetics, over-the-counter medications, household items and other related items are scarce or unavailable.

The better tailors and dressmakers in Baghdād can usually follow a pattern with desired results, but they are not designers and are very expensive.

Simple shoe repairs are possible, but repair work on women's shoes is unsatisfactory. Dry cleaning is available and is of acceptable quality. Several beauty shops in Baghdad have experienced stylists at reasonable prices. Barbershops are less satisfactory, but are adequate.

Education

Baghdad International School offers an international education in English to children of foreign diplomats and expatriates from pre-kindergarten through grade 12. Founded in 1969, the coeducational, day, proprietary school is governed by an independent board of directors that includes both appointed and elected members.

The school is chartered by the United Nations Economic and Social Commission for Western Asia under an agreement with the government of Iraq. It is not accredited and there are no facilities for special education, learning disabilities, or gifted. If the child receives supplementary work at home, the school curriculum is considered adequate for the early elementary grades. A variety of extracurricular activities centering around sports and dance may be chosen. Enrollment currently totals over 50 representing many different countries. The school year runs from September to early June.

Baghdad International School is located six miles west of the city on an 11-acre campus. The air-conditioned school has a media center, auditorium, cafeteria, science laboratories, athletic fields, and a 16,000-volume library. The school's mailing address is P.O. Box 571, Baghdad, Iraq.

Other schools in Baghdad provide education in other languages.

Recreation

The flat desert terrain of Baghdad and vicinity is aesthetically unappealing, but some relief is afforded by drives to nearby places of interest. Many foreigners combine picnicking with archaeological exploration on weekends and holi-

days. Extensive travel within Iraq is limited by the desert, the summer heat, the lack of good roads (except between major cities), and, above all, travel restrictions.

A new road has been under construction from the Kuwaiti border to Baghdad and then west to Jordan. Driving time from Baghdad to Al Basrah is about six hours; to Al Mawşil about four hours. Truck traffic on the existing roads is often heavy. All diplomatic personnel must obtain government permission for most travel outside Baghdad. Difficulties encountered in travel contribute to the isolation of Baghdad.

Picnic excursions outside Baghdad in cool weather may include visits to the ruins of Babylon (45 miles, long-time capital of the Babylonian Empire), Ctesiphon (18 miles, vaulted banqueting hall of the Sasanian Kings), and Samarra (87 miles, short-lived ninth-century capital of the Abbassid Caliphate). Visits to the Shia holy places of An Najaf and Kerbala are an easy one-day excursion. The upper Euphrates River, with its unique water wheels, is worth a weekend trip.

The sites of Hatra, Nineveh, Nimrud, and Khorsabad are also of archaeological and historical interest. When travel to northern Iraq is permitted, visits to Christian and Yazidi villages there are also rewarding, as are visits to the mountains of the Kurdish areas.

The northern resort areas of Iraq have been rebuilt and expanded. The higher elevations and colorful local culture in the Kurdish region combine to make this area one of prime tourist interest. Security restrictions may prevent foreigners from visiting this area.

The cities of Amman (Jordan), Istanbul (Turkey), and Kuwait City (Kuwait) offer a welcome change, but air travel is expensive and auto travel is time-consuming. However, good roads do exist to these points, and the journeys, if time allows, are rewarding.

The bazaars of Baghdad should be explored and visits to the city's monuments and museums are rewarding.

Tennis, softball, cricket, bowling, swimming, and squash are available in and around Baghdad. Several of the city's luxury hotels offer memberships entitling one to use their athletic facilities which usually include swimming, tennis, squash bowling, weight rooms, and sauna. Hunting is forbidden and guns may not be imported. Boating, water-skiing, and windsurfing are possible at several Iraqi lakes but these destinations require travel permission.

Many foreigners belong to the Alwiyah Club. Members of the foreign community informally organize activities which include running, drama, music appreciation and bridge. Social life is restricted to home entertainment among members of the diplomatic and business communities. Home entertainment equipment such as stereos, record collections, and videotape equipment can be brought to Iraq. Videotaped movies are available in Kuwait for both the VHS and BETA systems.

Baghdad, as an entertainment center, is undistinguished. Opera, ballet, and the legitimate theater do not exist, but some English-language films are shown in the local cinemas. Nightclubs, although in operation, do not have a wide selection of entertainment. Some local restaurants are frequented by foreigners in Baghdad. The Iraqi Symphony Orchestra gives a few concerts during the winter season.

Iraq's national tourist agency, the General Establishment for Travel and Tourism Services, is located at Al-Kodwa Square, Khalid bin Al-Waleed Street, Baghdad.

Al Basrah

Iraq's only port is Al Basrah (also spelled Basra, Bassora, Bussora, and Busra, and known in the *Arabian Nights* as Bassorah), located in

the southeastern section of the country on the Shatt-al-Arab waterway, 300 miles south of Baghdād. Al Baṣrah has become a prosperous city due to its location near the oil fields and 75 miles from the Arabian Gulf; it was the site of a great deal of Gulf War fighting. Petroleum products, grains, dates, and wool are exported from Al Baṣrah. Many oil refineries have been constructed in the city since 1948.

Founded by the Caliph Umar I in 636, Al Baṣrah was a cultural center under Harun ar-Rashid, but declined with the decay of the Abbassid caliphate. For many years, the Persians and the Turks fought for possession of Al Baṣrah. The construction of a rail line linking Al Baṣrah and Baghdād and the building of a modern harbor restored the city's importance after World War I. Occupied by the British in World War II, it was an important transshipment point for supplies to Turkey and the former U.S.S.R.

A branch of the University of Baghdād is located in Al Baṣrah. The population of Al Baṣrah is over 700,000.

Al Mawṣil

Al Mawṣil, with a population of about 1,034,000 (2000 est.), is located on the Tigris River in northern Iraq, opposite the ruins of Nineveh, and 225 miles north of Baghdād. The largest city in northern Iraq and the country's third largest city, Al Mawṣil is important for its trade in agricultural goods and exploitation of oil. Most of the city's inhabitants are Arabs, although the surrounding area is mostly populated by Kurds.

Historically, Al Mawṣil was the chief city in northern Mesopotamia for 500 years before being devastated by the Mongols. During its occupation by the Persians in 1508, and by the Turks from 1534 to 1918, the city remained extremely poor. Under British occupation from 1918 to 1932, Al Mawṣil again became the chief city of the region. Turkey disputed its possession by Iraq in

1923–1925, but it was confirmed by the League of Nations in 1926. The city's oil wells were seized during the Arab revolt of April 1941, but were soon retaken by the British.

A trading center for grain, hides, wool, livestock, and fruit, Al Mawṣil produces cement, sugar, nylon, and bitumen. The city has numerous mosques, shrines, and churches; its university was founded in 1967. Nearby are the ancient ruins of Nineveh and the partially excavated cities of Tepe Gawra, Calah, and Dur Sharrukin.

OTHER CITIES

The holy city of **AN NAJAF** is located in south-central Iraq on a lake near the Euphrates River, about 100 miles south of Baghdād. With a population over 130,000, An Najaf is the site of the tomb of Ali, the son-in-law of Muhammad the Prophet. An object of pilgrimage by the Shi'ite Muslims, the tomb is a starting point for the pilgrimage to Mecca. The city is also called Mashad Ali in honor of Ali.

ARBIL (also spelled Irbil) is a commercial and administrative center in northern Iraq, between the Great and Little Zab Rivers, about 200 miles north of Baghdād in a rich agricultural region. The ancient Sumerian city of Urbillum, or Arbela, formerly occupied this site; it eventually became one of the great Assyrian towns. As the capital of its province, Arbil today is a major grain producer. The railroad that ends in Arbil connects the city with Kirkūk and Baghdād. Arbil is currently built on an artificial mound on top of an old Turkish fort. The population was estimated at 2,368,000 in 2000.

Iraq's oil industry is centered in the city of **KIRKŪK**, located in the northeast part of the country about 150 miles north of Baghdād. The city, with a population of approximately 535,000, is connected by pipelines to ports on the Mediterranean Sea. Kirkūk is also the market

for the region's produce, including cereals, olives, cotton, and fruits. The city is also home to a small textile industry. The surrounding agricultural region also raises sheep. Present-day Kirkūk is situated on a mound that contains the remains of a settlement that dates back to 3000 B.C. Most of the residents of Kirkūk are Kurds. Kirkūk is the terminus of a railroad from Baghdād.

AR RAMĀDI (also called Rumadiya; in Arabic, Ramadi) lies on the right bank of Euphrates River, 60 miles west of Baghdād. It is the starting point of a highway that crosses the desert to Mediterranean towns. Ar Ramādi was the scene of battle during World War I in which the British, under the rule of Maude, defeated the Turks. The population was estimated well over 80,000.

The ruins of the ancient city of **NIMRUD** lie about 37 km southeast of the city of Mosul, south of Nineveh. In the time of the Assyrian empire it was known as Kalhu, or Calah, as it is mentioned in Genesis of the Old Testament. It served as the capital of Assyria under Assurbanipal II in 879BC and was destroyed by the Medes of Northern Persia at about 612BC. Archeological excavations have uncovered many of the walls and several artifacts from the king's palace, called the Northwest Palace. A site museum is now located there. On the southeastern side of the city lie the remains of the royal arsenal, Fort Shalmanesar.

The ancient city site of **NINEVEH** is located on the Tigris River, just opposite of Mosul. Today, however, the name refers to the larger administrative district for the area, which has a population of about 1.6 million (1991 est.). The ancient city served as the capital of the Assyrian Empire from about 704-681BC and was somewhat known as the hub of the civilized ancient world. It was taken over by the Medes of Northern Persia at about 612BC. As capital, the city of Nineveh was the site for the magnificent palaces of Sennacherib and Assurbanipal. Recent

archeological excavations have uncovered a great deal of the ancient city, including a section of wall about 7.5 miles long and sculptures from the palaces. The original city's protection wall contained 15 gates, each named for an Assyrian god. At least two of these gates, Shamash and Nergal, have been reconstructed. One of the most incredible finds was the Assurbanipal library, which includes over 20,000 cuneiform tablets. The Iraq Department of Antiquities has roofed the sites and has established the Sennacherib Palace Site Museum for visitors.

COUNTRY PROFILE

Geography and Climate

The Republic of Iraq is situated on the Asian Continent, northeast of the Arabian Peninsula. It lies between 38° and 29°30' north latitude, and 38° 30' and 51°30' east longitude, from its northwestern tip to its southeastern extremity. Iraq is bounded on the north by Turkey, on the east by Iran, on the south by Kuwait and the Arabian Gulf, on the southwest by Saudi Arabia and Jordan, and on the northwest by Syria.

Iraq's 171,554 square miles are divided into four major geographical areas. The main one, having almost 75 percent of the population, is the alluvial plain or delta lowlands. Stretching from north of Baghdād, the capital, past Al Baṣrah to the Gulf, this area is watered by the Tigris and Euphrates Rivers which rise in the Armenian Mountains of eastern Turkey. The rivers approach to within 40 miles of each other near Baghdād, diverge before joining to form the Shatt al-Arab north of Al Baṣrah, and then flow together with the Karun into the Gulf. An estimated 25 billion cubic feet of silt a year is carried downstream by these rivers to add to the delta.

As well as being the legendary locale of the Garden of Eden, the region contains the ruins of Ur, Babylon, and countless other ancient cities. The plain is quite flat—average altitude is 75 feet—and encompasses about 7,500 square miles of marshland to the north of Al Baṣrah. In spite of the fertility of the area irrigated by the rivers, over three-fourths of it is arid desert.

The second area is the western plateau, an extension of the Arabian Peninsula, which marks the region to the west and south of the Euphrates, extending into Jordan and Syria. Comprising more than half of Iraq's total area, it is home to only one percent of the population. The land here is not sandy; it is primarily dust and gravel. Sand dunes exist, but they are not dominant. The average altitude is about 400 feet. Irrigation is limited to sparsely scattered wells. The most heavily populated part of the area is in a depression in the plateau west of the Euphrates between Hit and Najaf, running in a southerly direction from Ar Ramādi to Kerbala. The depression is divided into two basins, Habbaniya in the north and Abu Dibbis in the south.

The third geographical area is the Jazīra, or island, formed by the upper reaches of the Tigris and Euphrates and their tributaries. Both undulating plains and flat country are found in the region, as well as a basalt chain—50 miles long and 4,800 feet high—west of Al Mawṣil.

The fourth area consists of the mountains to the east of the Tigris in the north of Iraq, which rise from 700 feet near the river bank to nearly 12,000 feet on the Iraq-Turkey-Iran border. This is an extension of the Alpine system which runs southeast through the Balkans, the Taurus Mountains of southern Turkey, northern Iraq and Iran, and into Afghanistan, finally ending in the Himalayas. East of Kirkūk and Arbil, the land is very rocky until the Plains of Sulaimaniya are reached.

Baghdād is located almost in the geographical center of Iraq. Just north of the city, the alluvial plain begins, extending southward through the marshlands to the Gulf. Climatically, the Baghdād area is comparable to the extreme southwestern United States and northern Mexico, with hot, dry summers, cold (but rarely freezing) winters, and pleasant spring and fall seasons. Maximum daytime temperatures in summer (May through September) occasionally reach as high as 130°F, but are generally between 115° and 120°F. The low humidity (5–25%) and 20°F drop in temperature at night result in more comfortable weather than that found in tropical humid regions.

Population

About 75 to 80 percent of the approximately 23.2 million Iraqis are of Arab stock. The largest ethnic minority are the Kurds, who comprise 15 to 20 percent of the population. Although the Kurds are mostly Muslims, they differ from their Arab neighbors in language, dress, and customs. Other distinctive ethnic communities include Assyrians, Turkmans, Chaldeans, and Armenians.

About 97 percent of the population is Muslim; Iraq is the only Arab country in which most Muslims are members of the Shi'ite sect. There are also small communities of Christians, Jews, Mandaean, and Yazidis.

Arabic is most commonly spoken and is the country's official language; English is the most commonly used Western language.

Government

Iraq's role in the Middle East has undergone several significant changes since World War II. The July Revolution of 1958 ended Hashemite rule in Iraq, the country's participation in the Baghdād pact (now called CENTO), and its traditional ties with the West.

Foreign policy, which followed a neutralist line under Qasim from 1958 to 1963, was identified with the cause of Arab unity after the Ba'ath (Renaissance) Party came to permanent power in 1968. Iraq entered into a treaty of friendship with the Soviet Union in 1972, and the Ba'ath and Communist parties formed a Nominal coalition with a Kurdish party. In 1979, the Communist Party was removed from the coalition.

Iraq is governed by the Revolutionary Command Council (RCC), consisting of nine of civilian and military members and chaired by the President. The RCC enacts legislation, which is then ratified by the National Assembly. The RCC's President (chief of state and supreme commander of the armed forces) is elected by a two-thirds majority of the RCC. The current president is Saddam Hussein, who took office in July 1979. A 29-member Council of Ministers (Cabinet), appointed by the RCC, has administrative and some legislative responsibilities. A 250-member National Assembly was elected on June 20, 1980, in the first elections since the end of the monarchy; the last election was held in March 1996 (only candidates loyal to Saddam Hussein were allowed to run). No real opposition party exists. A new constitution was drafted in 1990 but not adopted. Iraq is divided into 18 provinces, each headed by a governor with extensive administrative powers.

Iraq's judicial system is based on the French model, which was introduced during Ottoman rule. It does not serve as an independent branch of government as in the United States. There are three different courts: civil, religious, and special. The Court of Cassation is the last court for appeals. National security cases are handled by the special courts. Iraq is essentially a one-party state and the press is limited to a few newspapers published by and expressing the views of the government.

After years of precarious relations with Iran over control of the Shatt-al-Arab Waterway that divides the two countries, war erupted in September 1980 when Iraqi planes bombed Iranian airfields and Iran retaliated. Ground fighting began and Iraqi troops crossed the border but were driven back in May 1982. In 1984, both countries attacked tankers in the Persian Gulf, including an Iraqi attack of the *U.S.S. Stark* which killed 37 U.S. Navy personnel. Warfare ended in August 1988 when a United Nations cease-fire resolution was accepted. In August 1990, Iraq attacked and invaded neighboring Kuwait; declared it a province and precipitated an international crisis. The United Nations called for economic sanctions in Iraq. When Iraq did not withdraw its troops from Kuwait by the U.N. deadline of January 16, 1991, a multi-national force (including the United States) launched an attack on Iraq. In February after cease-fire attempts were rejected by both sides as unacceptable, the multi-national coalition began a ground offensive with the aim of liberating Kuwait. Iraqi troops offered little resistance and were quickly defeated. On March 3, Iraq accepted defeat and agreed to ceasefire terms.

After the war, internal revolts against Saddam Hussein's government by the Shi'ites in southern Iraq and Kurds in the northern provinces were suppressed by Iraqi armed forces. One to two million Kurds fearing for their safety fled across the border into Iran and Turkey. To help solve this refugee crisis, other countries stepped in to establish "safe havens" for Kurdish population within Iraq and many Kurds returned.

After the war, the United Nations imposed economic sanctions on Iraq and mandated the dismantling of certain Iraqi weapons and missile programs. In 1996, the United Nations brokered a deal with Iraq that would allow it to sell a limited quantity of oil to pay for critical civilian needs. In late 1997, Saddam Hussein expelled ten Americans

who were working as weapons inspectors for the United Nations, thus obstructing the disarmament process. The United States sent 30,000 troops to the Persian Gulf to prompt Iraq into submitting to the United Nations' resolutions. Tensions mounted and a military confrontation seemed imminent. In February 1998, United Nations Secretary General Kofi Annan went to Iraq and persuaded the Iraqi government to cooperate.

The flag of Iraq is made up of red, white, and black horizontal bands. In the central white band are three green stars arranged horizontally. The words *Allah Akhbar* ("God is Great") in green Arabic script were added between the stars during the Persian Gulf War in 1991.

Arts, Science, Education

Iraq's cultural life is centered in Baghdād, arguably the second most important Arab capital after Cairo. Once confined to a small group of the more Westernized and well-to-do Iraqis, cultural participation by ordinary citizens and official patronage has increased. The most vigorous activity is in fine arts. The Iraq Museum of Modern Art has organized an extensive permanent collection of the work of Iraqi artists. In Western classical music, the government-subsidized Iraq National Symphony and its chamber ensemble offer about eight different programs during the winter months. A number of special presentations are sponsored by foreign embassies and cultural institutions. Occasional Arabic language dramatic productions are given at the National Theater and at the Mansour Theater.

In keeping with Iraq's ambitious national development program, the government before the Gulf War awarded thousands of scholarships to many U.S. and other foreign universities, with heavy emphasis on engineering and the sciences. Iraqis are proud of their rich scientific heritage from Islamic and pre-Islamic

Street in downtown Baghdad, Iraq

AP/Wide World Photos, Inc. Reproduced by permission.

times, and the government wanted to increase modern manifestations of this heritage. Six years of primary school is compulsory and there are plans to extend it to nine years. Secondary education is available for six years. Public education is free; private schools were abolished in 1970s. Adult literacy is currently estimated to be 58% (1995 est.).

Archaeology attracts the interest of many members of the foreign community. A number of archaeological digs are in progress, and the Iraq Department of Antiquities has undertaken major restorations of some principal sites. Iraq's superlative collections of Mesopotamian antiquities are on display at the excellent Iraq Museum.

Commerce and Industry

The long war with Iran (1980–1988) resulted in considerable debt and

post-war reconstruction funds were needed to repair industrial and oil installations, as well as, damage to the physical infrastructure around the southern city of Al Başrah. Economics, especially the shortage of hard currency, was the driving force behind Saddam Hussein's invasion of Kuwait. However, the war over Kuwait resulted in severe economic damage to Iraq—considerably more than the years of war. The loss of trade, investment, economic assistance, and the many foreign workers who left the country because of the war resulted in economic problems that have persisted for many years.

Iraq has a state-controlled economy with a small private sector. The economy is heavily dependent on oil and refined products; 95% of export earnings come from this source. Iraq has the second largest oil reserves in the world and was the second largest Organization of Petroleum Exporting Countries

(OPEC) producer after Saudi Arabia. Since 1972, the government has gradually nationalized all the oil fields in the country, in keeping with the policy that the country's resources, particularly oil, should not be under foreign control. Since 1999, Iraq was authorized to export unlimited quantities of oil to finance humanitarian needs including food, medicine, and infrastructure repair parts. Oil exports fluctuate as the regime alternately starts and stops exports, but, in general, oil exports have now reached three-quarters of their pre-Gulf War levels. Per capita output and living standards remain well below pre-Gulf War levels.

Manufacturing and agriculture play much smaller roles in the economy despite their great potential. All heavy industry is government-owned and includes iron, steel, cement, pharmaceuticals, and fertilizers. There is a trend to allow private ownership of light industrial concerns such as food processing

and textiles. Iraq has a large, skilled work force. Much fertile, irrigated land is available for agricultural purposes and 30% of the work force is involved in agriculture. Iraq is one of the world's largest producer of dates; barley and wheat are the other major agricultural products.

Iraq's gross domestic product (GDP) is approximately \$57 billion, or \$2,500 per capita (2000 est.). The United Nations trade embargo established in August 1990 and the war has blocked or disrupted Iraq's trade with other nations.

The address of the Baghdad Chamber of Commerce is Mustansir Street, Baghdad, Iraq.

Transportation

During the Gulf War, many roads, railways, bridges, and ports were destroyed or damaged. Immediately after the war the only surface link to other countries was through Amman, Jordan. The Iraqi government has given the repair of roads and bridges a high priority. Baghdad is served by a limited number of international airlines as well as Iraqi Airways, the national carrier.

Iraq has intercountry rail transportation. Rail lines connect Baghdad with major cities such as Al Baṣrah, Arbil, and to Al Mawṣil, where Istanbul (Turkey) and Europe can be reached via Aleppo (Syria). The Oriental Express travels to and from Baghdad via Turkey and Syria.

Local transportation includes taxis and buses. Americans seldom use either. Taxis, operated by both companies and private individuals, are usually available, but are difficult to find after 8 p.m. Taxis may be hired for trips out of Baghdad. Many taxis are American-made and many are not equipped with meters. Fares must be negotiated, but is easily managed once the recognized standard rates are known. Even for taxis with meters, fares should be agreed on in advance. Tipping is not expected. Some established foreign-

ers without cars make contact with a taxi company in their vicinity and use it exclusively, paying their bills by the month. This can become quite expensive for more than a short-term arrangement.

The bus system operates on most of the main streets; however, most buses are in poor condition.

A car is essential in Baghdad, especially for a foreigner living in an outlying residential district. Markets for food and household goods are far apart, and distances between home, office, and friends can be great. Certain car colors are prohibited (black, olive, beige, tan), as are all cars with diesel engines.

An international or U.S. driver's license will expedite issuance of an Iraqi license. International driver's licenses must specifically list Iraq in order to be valid here. Third-party insurance is compulsory. Major roads have international traffic signs; driving is on the right-hand side of the road.

Communications

Iraq has a dial telephone system. Long-distance service, although poor, is normally available within the country and to nearby capitals. Satellite connections to overseas countries are usually satisfactory, although delays can be encountered in placing a call. At times, as a war-related economic move, Iraq has discontinued long distance, direct-dial service. Long distance calls must then be placed through operators and usually only placed for phone numbers on an approved list.

International airmail letters to or from the U.S. usually take eight to 12 days, although if selected for review by the censors, letters can be delayed as much as three weeks. Air Mail is more reliable than surface mail. Telex is available at the major hotels and telegrams may be sent from the telegram office in Baghdad.

Radio reception is fair. Domestic service is available in Arabic, Kurdish, and several minority languages, while external service is available in many languages. It is possible to tune in to Voice of America (VOA), British Broadcasting Corporation (BBC), Monte Carlo (Monaco), and other shortwave programs. A good shortwave set capable of worldwide reception is worthwhile. There are 16 medium-wave and 30 short-wave transmitters in the country. Baghdad has two TV stations, both government-operated. With the exception of a few English-language serials and films, its limited programs are in Arabic only (usually about eight/nine hours a day).

The state-sponsored *Baghdad Observer* is the only English-language paper readily available. Few Western publications are available. Occasional copies of *Time* and *Newsweek*, censored, are seen at local vendors. A subscription to European versions of these magazines, although expensive, is much more dependable. The *International Herald Tribune*, printed in Paris, can also be subscribed to via international mail. The delay on these publications is about five days.

Only a limited supply of books and technical journals is available. The British Council library, however, has a wide selection of fiction and nonfiction, and the International Children's Center (ICC) has a library, although not extensive, of children's books. The U.S. Interests Section maintains an informal lending library.

Health and Medicine

Baghdad has several small private hospitals where Westerners may be hospitalized in emergencies. These hospitals, however, do not offer the comprehensive medical, surgical, or diagnostic care of a large American medical center; most foreigners use medical facilities abroad.

Many well-trained and qualified doctors in nearly all the medical and surgical specialties practice in Baghdad. However, these doctors are severely overworked and are limited by the lack of development of hospitals, money in a war situation, laboratories, and well-trained nursing staffs.

Although adequate routine dental care is available, complex dental problems are usually hard to solve locally. Children requiring orthodontia should have the process initiated prior to arrival. Satisfactory follow-up care for orthodontia can be obtained in Baghdad.

No adequate diagnostic facilities exist for allergies. Those with severe or disturbing allergies should have diagnostic sensitivity procedures performed prior to arrival. Iraq's climate could severely aggravate allergies. If therapeutic allergy serum for desensitization is necessary, an adequate supply should be kept on hand.

If you require special or unusual medicines, bring your own supply. Medications are scarce and hard to find; U.S. brands are unavailable.

Sanitation is below U.S. standards; there are indiscriminate dumpings of waste and garbage. One city garbage collection per week services residential areas.

Baghdad's central water system provides adequate potable water, which is filtered in the home for drinking. The water is obtained from the Tigris River. The city water in Al Mawşil, Al Başrah, and Kirkük is also safe to drink. It is unsafe, however, to drink untreated water in the villages.

Periodic fumigation with DDT or equivalent spray helps eliminate insect pests. The Baghdad city and health authorities have several large trucks which irregularly spray major portions of the city to reduce the number of flies and mosquitoes.

The foreign community is commonly subject to gastro-intestinal upsets. Respiratory infections and colds also are common, and often severe. They are frequently of prolonged duration and may progress to bronchitis, pneumonia, or pleurisy. These complications should be promptly and adequately treated. Children are subject to the usual childhood diseases, but generally do well in Baghdad. Hepatitis and sand fly fever are local hazards.

Skin and eye infections prevalent among the local population must be guarded against by proper habits of personal hygiene. Parasitic diseases such as hydatid cyst, amoebic and bacillary dysentery, and worms are prevalent. Bilharzia may be prevented by avoiding bathing, washing, or wading in irrigation ditches and slow-moving streams. Malaria and Baghdad boil (Cutaneous Leishmaniasis) are relatively uncommon now.

The dust-laden air may severely aggravate sinus and other respiratory tract complaints, and may cause acute irritative conjunctivitis. Baghdad also experiences smog, due mainly to brick factories and oil refineries built close to the city.

The long, hot summer can be debilitating. Since the dryness evaporates perspiration rapidly, fluid loss can be extensive. Salt tablets are helpful to those who perspire profusely. Insect bites, heat rash, and temperature extremes may be discomforting to some. Insect repellents are advised.

Like other desert areas, Iraq is an entomologist's paradise. Many varieties of insects are found year round. Sand flies are a particular nuisance during the late summer and early fall, and houseflies are plentiful throughout the year. Precautions must be taken against cockroaches, ants, and termites. The insect population of homes is kept to a minimum by small, harmless lizards which keep mainly to the upper walls and seldom bother humans. In the Middle East, they

are regarded as bringing good fortune to the home.

U.S. health authorities recommend immunization against cholera (except for infants under six months), typhoid, tetanus, polio, and gamma globulin. The usual pediatric immunizations also should be updated.

NOTES FOR TRAVELERS

Passage, Customs and Duties

No American air carriers serve Baghdad, other airlines, including Iraqi Air, Air France, Lufthansa, and Swissair offer frequent direct flights from several European capitals. Iraqi Air prohibits hand baggage (including brief cases) on most flights.

Passports and visas are required. On February 8, 1991, U.S. passports ceased to be valid for travel to, in or through Iraq and may not be used for that purpose unless a special validation has been obtained. Please see paragraphs on Passport Validation and U.S. Government Economic Sanctions. For visa infor-

mation, please contact the Iraqi Interests Section of the Algerian Embassy, 1801 P Street, NW, Washington, DC 20036, telephone 202-483-7500, fax 202-462-5066.

Without the requisite validation, use of a U.S. passport for travel to, in or through Iraq may constitute a violation of 18 U.S.C. 1544, and may be punishable by a fine and/or imprisonment. An exemption to the above restriction is granted to Americans residing in Iraq as of February 8, 1991 who continue to reside there and to American professional reporters or journalists on assignment there.

Iraq has strict customs regulations. Upon arrival, a traveler must declare any foreign currency, audio-visual equipment, satellite and cell telephones, personal computers and especially modems. There may be difficulty in obtaining a permit to take these items out when leaving Iraq. The Iraqi authorities may request the surrender of such equipment for depositing at the border (there might be difficulties in reclaiming it when leaving Iraq). Videotapes may be confiscated. Carrying firearms and pornography is forbidden. Any news publications may be regarded as hostile propaganda and confiscated. Charges of disseminating propaganda detrimental to Iraq might follow. So-called "friendly" requests for foreign periodicals and newspapers should be flatly refused. Usually cars are very thoroughly checked. Offering gifts to inspectors may result in charges of bribery, which could lead to serious consequences. Generally, export of gold, foreign currency, valuable equipment, antiquities and expensive carpets is forbidden.

All foreigners (except diplomats) are requested to take an AIDs or HIV test at the border. Sanitary conditions at the Ministry of Health border stations are questionable. You may wish to bring your own needle or try to postpone the check until your arrival in Baghdad. You may wish to have the test done ahead and carry a valid certificate.

The U.S. does not have diplomatic relations with Iraq, and there is no U.S. Embassy in Iraq. The Embassy of Poland represents U.S. interests in Iraq; however, its ability to assist American citizens is limited.

Pets

A veterinarian's certified statement of good health and a rabies inoculation is necessary for all pets brought into Iraq. Import licenses are obtained after entry. Pets are most easily brought into the country when they accompany the owner. Adequate veterinary care is available locally but animal medicines are in short supply. Commercially prepared pet food is not available and other pet supplies are very scarce.

St. George's Anglican Church in Baghdad holds services in English, and is open to all members of Protestant denominations. There is no resident minister, and activities are limited to the weekly services. There are several Catholic churches, and English-language masses are offered at St. Raphael's. English-language services are also offered at a Seventh-Day Adventist Church.

Currency, Banking and Weights and Measures

The monetary unit of Iraq is the *dinar* (ID), which is divided into 1,000 *fiils*. All private foreign exchange transactions are government-controlled through the Central Bank of Iraq. Travelers checks and foreign currency are not limited, provided they are declared upon entry. Rafidian Bank, Iraq's sole commercial bank, is the only one authorized to accept foreign currency or travelers checks.

Comprehensive U.N. sanctions on Iraq, imposed following Iraq's 1990 invasion of Kuwait, prohibit all economic and financial transactions with the Government of Iraq, persons or entities in Iraq unless specifically authorized by the U.N. Since 1998, foreigners traveling in Iraq may legally exchange foreign currency in money exchange kiosks

or bureaus (run privately or state banks). Payments for hotel, renting a taxi, etc. must be paid in foreign currency. No ATM machines exist.

The metric system of weights and measures is used in Iraq. The use of any other system is legally prohibited.

The time in Iraq is Greenwich Mean Time (GMT) plus three hours.

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 2001 for Japan. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

For a country that lived in self-imposed isolation until 150 years ago, Japan has not hesitated to make up for lost time.

It is a place of ancient gods and customs but is also the cutting edge of cool modernity. High-speed trains whisk you from one end of the country to another with frightening punctuality. You can catch sight of a farmer tending his paddy field, then turn the corner and find yourself next to a neon-festooned electronic games parlor in the suburb of a sprawling metropolis.

Few other countries have, in the space of mere generations, experienced so much or made such an

impact. Industrialized at lightning speed, Japan shed its feudal trappings to become the most powerful country in Asia in a matter of decades. After defeat in World War II, it transformed itself to a wonder economy, the envy of the globe.

In the cities you will first be struck by the mass of people. In this mountainous country, the vast majority of the 126 million population live on the crowded coastal plains of the main island of Honshu. The three other main islands, running north to south, are Hokkaido, Shikoku, and Kyushu, and all are linked to Honshu by bridges and tunnels that are part of one of Japan's modern wonders—its efficient transport network of trains and highways.

Outside the cities, there is a vast range of options from the wide open spaces and deep volcanic lakes of Hokkaido, blanketed by snow every winter, to the balmy subtropical islands of Okinawa. You will seldom have to travel far to catch sight of a lofty castle, ancient temple or shrine, or locals celebrating at a colorful street festival. The Japanese are inveterate travelers within their own country and there is hardly a town or village, no matter how small or plain, that does not boast some unique attraction.

Rampant development and sometimes appalling pollution is difficult to square with a country also renowned for cleanliness and appreciation of nature. Part of the problem is that natural cataclysms, such as earthquakes and typhoons, regularly hit Japan, so few people expect things to last for long.

And yet, time and again, Japan redeems itself with unexpectedly beautiful landscapes, charmingly courteous people, and its tangible sense of history and cherished traditions. Most intriguing of all is the opaqueness at the heart of this mysterious hidden culture that stems from a blurring of traditional boundaries between East and West. Japan is neither wholly one nor the other.

MAJOR CITIES

Tokyo

Tokyo, the capital of Japan and one of the world's largest cities in terms of area, is at the head of Tokyo Bay on the Kanto Plain, the largest level area in the country. The city proper covers 221 square miles and has a population of 8.5 million. The 796-square-mile metropolitan area occupies sea-level stretches along

the bay and rivers, as well as hilly areas farther inland which include suburban cities and towns, and several small villages; total population of this area is now more than 14 million.

Tokyo developed originally around a feudal castle built during the 16th century. Toward the end of that century, a great feudal lord named Tokugawa Ieyasu ruled this castle and the surrounding area. In 1603, after a series of civil wars, he established himself as *shogun*, or military dictator, of all Japan, and administered his rule from Edo, which later was called Tokyo. Under succeeding rulers of the Tokugawa dynasty, the city grew in importance and became the leading commercial center of the area.

Tokyo has been, for all practical purposes, the capital of Japan since 1603, although the imperial court in the ancient capital of Kyōto maintained nominal authority until 1868. The court moved to Tokyo, and a Western-style government was established in the late 1860s.

Besides being the seat of government, Tokyo is the industrial, commercial, financial, communications, and educational center of Japan. It has over 7,900 factories or plants with 30 or more employees, 102 four-year colleges and universities, and 28 daily newspapers. It is Japan's most international city, with more than 122,500 foreign residents, of whom over 14,000 are Americans. Most foreign companies doing business in Japan have their headquarters here.

Tokyo is a vital metropolis of striking contrasts—of confusion and calm. Business and residential properties are side by side, giving the city a patchwork-quilt impression. It has lovely parks and shrines, broad thoroughfares, modern office buildings and hotels, expressways, and department stores similar to those in other large international cities. Beyond all this, however, lies another world of narrow streets, markets, theaters, restaurants, and Japanese-style

houses that make Tokyo a unique city.

Utilities

Electricity in Tokyo is single phase 100 or 200 volts, 50 cycles (HZ) electric current. Most U.S.-manufactured appliances will operate satisfactorily as long as they will tolerate 50 cycle electric current. Electric timing devices and clocks that are designed for standard U. S. 60-cycle electric current may not operate properly on 50-cycle electricity. Most appliances manufactured for Tokyo use require 100 volt, 50 cycle electric current.

Food

Most food items available in the U.S. can be obtained on the local market at higher prices.

The New Sanno Hotel also has a small shoppette. Throughout the city one can conveniently locate greengrocers, convenience-type stores, and large modern supermarkets.

Clothing

General: Bring a four-season wardrobe for all family members. Winter clothing is advised for the cold and damp winter months. Summer in Tokyo can be very hot and humid. Raincoats and umbrellas are essential.

Local department and specialty stores carry a variety of Western-style clothes and imported items from the design centers of the world for both men and women but are generally available in sizes unique to the Japanese physique and are very expensive. Excellent quality silks, woolens, and various synthetics are available.

Shoes for men, women and children are available locally but it is difficult, and sometimes impossible, to find the proper size. Shoe sizes are shorter and wider than in the U.S.

If you need special sizes or particular brands in clothing and shoes in order to be properly fitted, bring them with you. Office dress as well as sports and casual attire follow

Washington or U.S. standards. Social functions are not extremely dressy. Simple good taste is the best criterion.

Men: The accepted attire for dinner parties, unless otherwise stated, is a business suit.

Women: An afternoon dress, a simple long dress, or long skirt and top are suitable for the frequent cocktail parties, receptions, and buffet dinners. Formal attire is a floor-length dress. Bring at least one full skirt (either long or short) that would be appropriate for dining in Japanese restaurants or homes where guests sit on tatami mats on the floor.

Children: A variety of children's clothing is available; sizes are not a big problem but prices are high.

Supplies and Services

The following items are available at higher prices: toiletries for men and women, cosmetics, feminine personal supplies, tobacco items, home medicines and drugs; common household items, including minor repair materials; and entertainment supplies such as candles, napkins.

All basic services—laundry, drycleaning, barber and beauty shops, shoe, and automobile repair—are available.

Domestic Help

The number and type of domestics varies with the obligations and living pattern of the employee. The hourly rate for part-time domestics is approximately Y1,000. Salaries for full-time domestics vary but generally you can expect to pay \$1,000-\$1,500 per month.

Domestics are covered by Japanese national health insurance but are not covered by unemployment insurance. Many employers assume partial obligation for doctors' bills and for the placement of a domestic in another position when they leave Japan. Those who sponsor non-Japanese domestics are responsible for assuring their departure from

Asakusa/Sensoji Temple Gate in Tokyo

Susan Rock. Reproduced by permission.

Japan if not placed with a qualified sponsor.

Part-time maids are available as babysitters when those services are needed. Teenagers charge from Y500 per hour depending on age and experience while part-time maids charge Y1,000 per hour.

Religious Activities

English-language services are available in the Tokyo and Yokohama areas for members of most denominations. Religions represented include Roman Catholic, Baptist, Seventh-day Adventist, Episcopal, Mormon, Christian Scientist, Lutheran, Interdenominational, Jewish, and Interdenominational Charismatic. The churches offer a variety of fellowship for all age groups and combined programs to provide services for the benefit of the foreign community in the area.

Education

Tokyo has a wide selection of excellent schools that provide education

comparable to that available in the best schools in the U.S. and elsewhere. The school styles range from open classroom to more structured approaches; sports, music, drama, and other outside activities are provided in varying degrees. Graduates from the schools in the area have no difficulty being accepted by the best U.S. colleges and universities. To accommodate the requirements of children with special needs, parents should be certain to communicate directly with the schools regarding individual educational needs and programs available. The school year is from September to June. It is essential to communicate with the schools as early as possible since competition for spaces is keen. Most schools begin accepting applications for the upcoming school year in November of the current year. Most of the private schools maintain waiting lists. Upon acceptance, many schools require an early commitment on the part of the family and may require a non-refundable deposit. The schools in the Tokyo

area most frequently used are listed below. Each is accredited by the Western Association of Schools and Colleges.

A physical examination is required by most of the schools.

The American School in Japan (ASIJ) (1-1, Nomizu 1-comme, Chofushi, Tokyo 182-0031, tel: 0422-34-5300, fax: 0422-34-5308; web address: www.asij.ac.jp; e-mail: enroll@asij.ac.jp) is an independent elementary and secondary school accredited by the Western Association of Schools and Colleges. It is an overseas member of the National Association of Independent Schools of the United States and is affiliated with the International Schools Service. Of the 1,400 students, 67% are American, 15% are Japanese and the rest third-country nationals. The curriculum is similar to that of the best U.S. college preparatory schools. In addition, Japanese language and area studies are offered in all grades. The facilities include

an indoor swimming pool, two gymnasiums, theater, laboratories, libraries, and cafeteria. The emphasis is on individualized instruction through the modular schedule in the secondary schools and through employment of team teaching as a means of greater flexibility in the elementary school. The number of graduates who enter colleges is about 98%.

The school is at Chofu in Tokyo's western suburbs. The school provides bus service from all areas of Tokyo including a stop at the apartment compound, with commuting time running slightly under an hour each way. Train service to within 10 minutes walking distance from the school is also available.

American School in Japan Nursery-Kindergarten (3-5 age group) (15-5, Aobadai 2-chome, Meguro-ku, Tokyo 153-0042; e-mail: nk@asij.ac.jp). In addition to the kindergarten on the Chofu campus, ASIJ operates a nursery kindergarten Meguro that is about 20 minutes from the housing compound. It accommodates 115 students of several nationalities. The normal school day includes teacher-directed work and activities (music, library, films), rest periods, snack, and outdoor play.

International School of Sacred Heart (3-1, Hiroo 4-chome, Shibuya-ku, Tokyo 150-0012; fax: (3) 3400-3496; tel: (3) 3400-3951; web address: www.iac.co.jp/~issh3/; e-mail: issh@gol.com) is an elementary and secondary institution with a student body of about 588 students directed by the Catholic Sisters of the Society of the Sacred Heart. Accredited by the Western Association of Schools and Colleges, it is a school for girls; however, boys are accepted for kindergarten. Around 50 different nationalities are represented in the student body and about 40-50 graduates are admitted to U.S. and Japanese colleges and universities each year. The school plant includes laboratories, gymnasium, and library; sports facilities also are provided. The

Courtesy of Motoko Huthwaite

Buddhist cemetery adjacent to high rise buildings in Tokyo

school is on the Sacred Heart University campus in central Tokyo.

Nishimachi International School (14-7, Moto Azabu 2-chome, Minato-ku, Tokyo 106-0046; tel: (3) 3451-5520; fax: (3) 3456-0197; web address: www.nishimachi.ac.jp; e-mail: info@-nishimahi.ac.jp) offers instruction from kindergarten through grade 9. It is accredited by the Western Association of Schools and Colleges. Enrollment is about 400 with an international student body. The curriculum allows easy progression into the international high schools in the Tokyo area. Centrally located in Tokyo, the school has a gym (but no field), a large library, plus a strong Japanese language and active cultural activities programs. It generally requires early application for admission since there is usually a waiting list, particularly in the lower grades.

Seisen International School for Girls (12-15, Yoga 1-chome, Setagaya-ku, Tokyo 158-0097; fax: (3) 3701-1033; tel: (3) 3704-2661; web address: www.scisen.com; e-mail: sisnfo@jap.com) is a girls' elementary and secondary school accredited by the Western Association of Secondary Schools and Colleges and operated by the Catholic order, the Handmaids of the Sacred Heart of

Jesus. Boys are accepted for kindergarten. Enrollment is around 645, representing 60 nationalities. The emphasis in the secondary school is college preparatory with an extracurricular program of arts, drama, journalism, music, and sports. Some 94% of graduates enter college. The school is in Tokyo, convenient to public buses, subways, and trains.

St. Mary's International School (6-19, Seta 1-chome, Setagaya-ku, Tokyo 158-8668; fax: (3) 3707-1950; tel: (3) 3709-3411; web address: www.smistokyo.com; e-mail: jutra@twics.com) is sponsored by the Catholic order, Brothers of Christian Instruction. It is an elementary and secondary boy's school accredited by the Western Association of Schools and Colleges with an enrollment of 900, representing some 70 nationalities. The school has a preschool (5 years), but there is a waiting list. The secondary school curriculum is college preparatory, and participation in sports and extracurricular activities including music, arts, drama, and journalism is emphasized. The international Baccalaureate program is offered in the high school. The facilities include a gymnasium, indoor pool, laboratories, library, and cafeteria. Almost all graduates enter American colleges. Bus ser-

vice is provided by the school. In addition, train, subway, and public bus service to the school is excellent.

Tokyo International Learning Community (6-3-50 Osawa, Mitaka-shi, Tokyo 181-0015, Tel: 0422-31-9611; fax: 0422-31-9648; web address: www.tilc.org; e-mail: tilc@gol.com) Established in 1987, Tokyo International Learning Community was set up by concerned parents and professionals in Tokyo's English-speaking community to support the education of students with special needs.

Its staff now consists of four full-time teachers and over 10 other staff members, including an occupational therapist, a physical therapist, a speech pathologist, and a psychologist. Based in a seven-room school building in Mitaka, Tokyo International Learning Community has an Early Childhood program for children from newborn to 5 years old with developmental disabilities or difficulties, and their families, as well as an Upper School Program for elementary, middle- and high-school students.

There is a support group for parents of children with special needs. A program for students enrolled in other international schools who are diagnosed as having a learning disability is also available. Services are offered in central Tokyo as well as the Mitaka campus.

Special Educational Opportunities

Exceptional opportunities exist in Tokyo for higher education and for training in Japanese arts and crafts. Each institution has its own admission requirements; courses can be followed as part of a degree program or for enrichment.

Sophia University, a Jesuit institution, has an international division that offers accredited courses in English and comparative cultures, leading to bachelor's and master's degrees. Both part-time and full-time study is possible, and all courses are in late afternoon or evening.

Temple University Japan, established in the early 1980s, is a branch of Temple University of Philadelphia, Pennsylvania. In the fall of 1987, the school moved into a new building in Shinjuku, which include such facilities as classrooms, a library, a language laboratory, and an auditorium. Temple offers bachelors degrees in the liberal arts and masters degrees in teaching English as a second language and business administration. Classes take place days and evenings.

International Christian University is about 20 miles from the center of Tokyo. It is an interdenominational school offering courses in English in all of its divisions-humanities, social sciences, natural sciences, and languages. The Bachelor of Arts degree requires competency in Japanese, which can be acquired at the university by taking an intensive program. Night courses are not offered.

The University of Maryland, in cooperation with the Armed Forces, offers night courses at the undergraduate and some graduate levels. Although these courses are offered primarily to military personnel, Embassy staff members also are eligible. Courses currently are given at Camp Zama and Yokota Air Force Base. The commuting distance is from 1 to 1-1/2 hours from Tokyo by train.

Many opportunities exist for participation in adult classes in painting, sumie painting, ikebana (flower arrangement), woodcarving, doll making, pottery, and other Japanese crafts. Lessons in Japanese and Chinese cooking, music, and dancing can also be taken.

Sports

The Japanese are sports lovers and participate in virtually every sport popular in the West in addition to their own. The foreigner is welcomed, either as an active participant or as a spectator, and sports are effective avenues for establishing social and informal contacts with the Japanese people.

The most popular spectator sport of Western origin in Japan is baseball; the Tokyo pro teams play to sellout crowds nearly every day in season, and the annual Japan World Series championship team often gives visiting American teams stiff competition. Ranking in spectator popularity is the traditional Japanese wrestling or sumo. Fans include foreigners and Japanese alike, and tickets to the major tournaments held throughout the year are hard to find. Local television broadcasts both baseball and sumo events. Other popular spectator sports include soccer, rugby, gymnastics, swimming and diving competitions, and the Japanese martial arts exhibitions and matches. In addition to judo and karate, the arts include kendo (fencing with bamboo swords), Aikido (self-defense emphasizing physical conditioning and mind over matter), and Japanese longbow archery. You can study any of the martial arts in Tokyo under the most famous instructors. Judo instructions are available to Mission employees on the compound.

Golf is very popular in Japan. The courses are excellent and playable year round. Public courses are relatively few, and membership in the private Japanese clubs is prohibitively expensive. The military has three 18-hole golf courses at Tama, Zama, and Atsugi, all from 1 to 1-1/2 hours' drive from downtown Tokyo. Membership is open to all Mission employees and their families, and dues are reasonable. Non-members can play by paying a nominal greens fee.

Golfers bringing a letter certifying their handicap at a previous golf club will be considered by the handicap committee for an "in-Japan" handicap.

The city has few public tennis and badminton courts. Private clubs have long waiting lists and are expensive.

Many Japanese recreational centers and clubs feature table tennis.

The major hotels have swimming pools and clubs; memberships are available but costs are relatively high. In the complex of the Olympic sports facilities are two Olympic-sized pools and a high diving area open to the public. The New Sanno Hotel has an outdoor pool.

Beaches and water in the Tokyo area are polluted. However, nice but crowded beaches are located along the coast south of Tokyo near Kamakura on the Miura Peninsula, on the picturesque Izu Peninsula about 80 miles from Tokyo, and the eastern coast of the Chiba Peninsula about 60 miles from Tokyo. These areas abound in picturesque fishing villages and dramatic scenery.

The Tokyo YMCA has a basketball court, swimming pool, and facilities for volleyball and gymnastics. Also, Tokyo's Olympic Gymnasium facilities for these sports are open on a limited basis to the public. Bowling is popular in Japan, and Tokyo has many centers.

Several indoor ice skating rinks in the city are open year round and outdoor skating is popular on lakes and rinks outside Tokyo during winter.

The mountain resort areas of Nikko and Hakone have facilities for sailing and water-skiing. Commercial marinas, like Enoshima on Sagami Bay, rent sailboats. Skiing is excellent in Japan. Many ski areas are to the north and northwest of Tokyo (3-6 hours by train), with areas for beginners and experts. Accommodations range from luxurious lodges to skier dormitories. Equipment can be rented, but large ski boots are difficult to find.

Mountain climbing is also popular; you can join several hiking clubs. Good hiking over mountain trails is within 2 hours by train from Tokyo.

Touring and Outdoor Activities

Japan's rugged and beautiful terrain offers a great deal to outdoor enthusiasts. Most scenic areas,

including nearby Nikko and Mt. Fuji, have been incorporated into an extensive national park system. Hiking trails and good camping facilities abound. Hundreds of low-priced hostels exist, many in isolated places. The hostels are open to people of all ages, single or married.

Much of Japan is easily accessible from Tokyo on Japan's excellent rail transportation system. The historic Kyoto-Nara area, with its hundreds of shrines and their typical Japanese gardens, can be reached by Shinkansen (super express trains) in about 3 hours. Shinkansen to Kyushu, southern Japan, takes about 7 hours. Northern Japan is a day's journey by train. Domestic airlines will take you to most major cities in Honshu, Shikoku, Hokkaido, and Kyushu or Okinawa within a few hours. Travel by air, rail and car tends to be expensive.

Within hours by car or rail from Tokyo are the many hot-spring mountain resorts of the Hakone Range near Mt. Fuji, beautiful Nikko National Park with its famous shrines of the Tokugawa Shoguns; and northwest of Tokyo, Nagano Prefecture, popular winter sports center. These resort areas offer excellent recreational facilities and fine Western and Japanese-style hotels.

Shimoda, at the tip of the Izu Peninsula (about 3 hours from Tokyo by express train), is of historic interest as the site of the first American Consulate in Japan, opened by Townsend Harris in 1856.

Nearby Tokyo is Kamakura, which is also of great historical interest with its many 12th- and 13th-century shrines and temples and the famed Great Buddha. Added incentives to travel are the many colorful festivals that take place throughout Japan, especially during the summer. Timing a trip to coincide with a festival or witnessing some of the many festivals held in Tokyo can add greatly to your experience.

In all the major cities and many of the others are Western-style hotels

with facilities ranging from acceptable to adequate. A stay in a Japanese-style inn or Ryokan can be most interesting. Ryokans are usually more expensive than firstclass Western-style hotels, but the attentive service given guests is almost unequaled anywhere in the world. The guest must be prepared, however, to sleep on tatami mats and eat Japanese food.

Entertainment

Tokyo is one of the entertainment capitals of the world. It offers an infinite variety of nightlife from the most deluxe and expensive clubs and spectacular music hall revues to jazz coffeehouses and working-class restaurants. Restaurants are everywhere. Hardly a street in the city does not have at least one Japanese restaurant specializing in tempura (shrimp, fish, and various vegetables deep fried in oil), sushi (raw fish or shrimp in a small rice mold wrapped in a special kind of seaweed), and sukiyaki, perhaps the best known Japanese food among foreigners. Many nice restaurants feature international cuisine or regional specialties (Chinese, French, American, Russian, Italian, Korean, or Spanish). Tokyo also has a variety of fast-food chains, both Japanese and such American favorites as McDonald's, Wendy's, Burger King, Shakey's, Kentucky Fried Chicken, and Pizza Hut. Recent casual restaurant additions include Outback Steakhouse and TGI Friday's. Prices in the restaurants range from moderate to extremely expensive. One of the best ways to sample the restaurants in Tokyo is at lunchtime when a meal costs half as much when served in the evening.

Tokyo is the center of the Kabuki and Noh theaters. Two major theaters in Tokyo present Kabuki, and usually at least two productions are playing at any one time. Several productions of Noh and the classical Japanese comedy, Kyogen, are shown every week. The famous Bunraku Puppet Theater of Osaka visits Tokyo regularly.

Tokyo has nine symphony orchestras that perform year round, several ballet and opera companies, and many chamber groups and individual artists. With these choices, and with the constant stream of visiting foreign orchestras, ballet and opera companies, and individual artists, it has become one of the world's music centers. However, ticket prices are expensive.

Tokyo Weekender and Tokyo Classified, periodic publications especially for foreign residents or tourists in the city, present useful information on what is happening in music and the theater in Tokyo and describes various events going on throughout Japan.

Tokyo is also the center of Japan's contemporary art life. Several museums have fine collections of Japanese and Western arts, and innumerable small galleries present showings of Japanese and foreign artists. The major department stores often sponsor art exhibitions. The Tokyo Museum of Modern Art each year has several large foreign exhibitions of international significance.

The Western Theater in Tokyo attracts much interest and activity. Most foreign plays are translated and presented in Japanese. The Tokyo International Players, an international English-language amateur group, produces several plays and readings during their October-May season. American and other foreign movies, shown with Japanese subtitles, are quite popular in Tokyo. They are, however, expensive. The English-language press carries detailed schedules. American movies are shown on Sunday afternoons and evenings at the New Sanno Hotel.

Photography is a popular hobby for both still and video enthusiasts. The Japanese are avid picture takers, and most foreigners follow suit. Excellent Japanese cameras and accessories are sold at the exchanges at reasonable prices. American film is sold locally and at

the exchanges, although Japanese film is also of high quality.

Social Activities

The Tokyo American Club is a large, long-established club to which many in the business community belong. It has a restaurant and swimming pool. Fees are prohibitive.

The New Sanno Hotel, open to US Government civilian employees, has three restaurants and a snack bar, a cocktail lounge, a swimming pool, and offers dancing, night-club shows, special events, and movies.

Social life is comparable to the social life enjoyed in most large U.S. cities. Acquaintances and friends are developed through contacts in the office, at clubs, churches, and through friends.

Although opportunities are numerous for making Japanese friends in Tokyo, it does require a positive effort in most cases. This is partly explained by the size of the city, the language barrier, and differences in cultural background and personality between Westerners and Japanese. Although the Japanese are not surprised when Westerners remain aloof in the foreign colony, they are delighted when a foreigner makes an effort to learn about their way of life, e.g., by studying their various art forms, by traveling Japanese-style, etc. One good way to make daily contact with the Japanese more meaningful is to learn some of the language and customs. In addition, a great number of organizations and activities bring people together for both business and pleasure, such as the American Chamber of Commerce, the Japan-America Society, the Royal Asiatic Society, the International House, international friendship clubs, and the Japanese alumni associations of many American colleges and universities. Many organizations directed either toward community welfare or cultural exchange provide excellent opportunities to meet both Japanese women and women of other nationalities, i.e., the College Women's Association of Japan,

the Japan-American Women's Club, the International Ladies Benevolent Society, the International Social Service, and the Tokyo - Washington Women's Club. The latter club meets several times a year and offers monthly or biweekly meetings of various small interest groups such as golf, bridge, chorus, ink painting, flower arranging, and doll making.

Classes in Japanese arts and crafts are also readily available throughout the city and serve both to broaden your circle of friends and your knowledge of the culture of Japan. These classes are not offered solely for foreigners, since the formal study of various aspects of Japanese culture has traditionally been popular for Japanese as well.

An excellent way to make Japanese friends is to offer classes in English conversation. These classes are not difficult to arrange. Another way to make Japanese friends is to participate in the American Orientation Program sponsored by the Fulbright Commission for Japanese scholarship students going to the U.S. to study.

Yokohama

Yokohama is Japan's second largest city, with a population of 3.3 million, and is part of the Kanto metropolitan area centered near Tokyo. Yokohama was one of the first Japanese ports to open to Western trade, and today is one of the world's busiest shipping ports, with a cosmopolitan flavor and a large international population. Despite being a large, industrial city, Yokohama retains a pleasant atmosphere and is relatively close to a number of sightseeing and recreation areas, such as the ancient capital of Kamakura, the hot spring resorts at Hakone, and Mount Fuji.

Yokohama's climate is essentially the same as Tokyo's, with hot, humid summers and mild winters.

The United States Foreign Service Institute has a field school in Yokohama, established to provide lan-

Susan Rock. Reproduced by permission

City street in Kyoto

guage and area-studies training. The center is in a converted residence (the former American Consulate) on the Bluff, a ridge overlooking the harbor and the city, about a five-minute walk from Harbor View Park and the Foreign Cemetery.

The school's neighborhood, called Yamate. It features several parks and historic sites related to the opening of the port to foreign trade and the early foreign community in Yokohama. This neighborhood hosts a commercial center with a wide variety of stores, restaurants and entertainment.

Japanese Language and Area Training Center

FSI Yokohama is an overseas field school of the State Department's Foreign Service Institute, offering intensive, full-time language instruction to U.S. Government

civilian and military officials, their spouses, and in some cases diplomats from third countries.

FSI Yokohama's excellent teaching staff is small but highly experienced. The faculty has created many texts and reference materials in-house, and continues to innovate in both teaching methods and course content. In recent years, the school has adopted a number of computer-based interactive teaching materials. Instructors can help students in finding opportunities to use Japanese outside the classroom as well, through local sport or hobby groups, travel and language exchanges. The school has a library of language texts and reference works, books in English about Japan, Japanese literature in the original and in translation, and videotapes in Japanese.

Taking advantage of its location in country, the school arranges frequent field trips to places of interest to students for their ultimate assignments in Japan. These may include government offices, political party conventions, newspapers and TV stations, Japan Self-Defense Force facilities, factories or museums. The class may take overnight field trips out of town to experience some of the variety of Japanese society, particularly the more traditional culture found in rural areas. Many students also do a week-long practicum, working on a volunteer basis in a Japanese business or institution to gain experience in practical use of the language and in social interaction. A series of guest lectures, in both English and Japanese, offers further insights into Japan's politics, economy and society.

Other, optional events, such as attending a sumo match or traditional Japanese theater, are open to students' families as well.

Food

Local grocery stores, however, are more convenient and have a better selection of fresh foods such as produce, meat, fish, and baked goods. Local stores also carry premium imported items such as cheeses and wines, but at high prices.

The Honmoku area offers a number of Japanese- and Western-style restaurants, including several family restaurants. Farther afield, you can find restaurants serving just about any kind of cuisine in and around downtown Yokohama.

Clothing

Japanese clothing prices vary from near U.S. prices to much higher, depending on the item and outlet, and larger sizes may be hard to find.

Supplies and Services

Most things are usually found nearby, although it sometimes takes more of a search than in the U. S., and prices may be higher. Yokohama has a growing number of large U.S. specialty retailers (e.g., Toys R Us, Sports Authority) within a 30-minute drive from student housing, although the selection of goods differs somewhat from the same stores in the US.

Services such as drycleaning, hair styling, and photo developing available.

Phone service is good but expensive. Pre-paid phone cards, however, offer calls to the U.S. for as little as 15¢ per minute. Home e-mail and Internet service is available at a cost, and quality is comparable to that in the U.S. In Japan, however, even local calls are metered, so extended Internet use will result in a high phone bill. Cell phones are available locally at reasonable rates.

Religious Activities

In addition to numerous Buddhist temples and Shinto shrines, the

neighborhoods are home to several Catholic and Protestant churches. Most of the churches serve international congregations and offer services in English.

Education

Children in kindergarten through sixth grade usually attend the R. E. Byrd DODDS Elementary School at the Negishi Housing Area (PSC 472 Box 12, FPO AP 96348-0005). It is a small school, less than 200 students total, in a modern facility on a quiet residential street.

Middle and high school students usually attend St. Maur International School (83 Yamate-cho, Naka-ku, Yokohama 231-8654 Japan, www.stmaur.ac.jp) or Yokohama International School (258 Yamate-cho, Naka-ku, Yokohama 2310862 Japan, www.yis.ac.jp). Both are coeducational day schools, and both are about a 30-minute walk from the student housing area. St. Maur is operated by the Sisters of the Infant Jesus, a Catholic order, and is accredited by the Western Association of Schools and Colleges. YIS is an independent nonsectarian school, and is accredited by the New England Association of Colleges and Schools.

Both the international schools include kindergarten and elementary grades as well. There are several pre-kindergarten options, but most are fairly expensive. The Byrd School offers one year of pre-kindergarten, but class size is limited and space might not be available for children of non-DOD families. The two international schools offer pre-school classes, and some families have sent children to local Japanese pre-schools.

The Yokohama area offers a wealth of opportunities for instruction in both traditional Japanese and Western arts, crafts, music, drama, and sports. Many of these classes can be found within walking distance of student housing. Extension programs of U.S. universities are offered on the larger military bases, but long commutes make participa-

tion difficult for those living in Yokohama.

Recreation and Social Life

The Yamate neighborhood offers good routes for walking, jogging, or bicycling. Neighborhood playgrounds are within a block or two of all student housing. A municipal sports center has a weight room, basketball and volleyball courts, and classes for martial arts and other sports, usually for a small per-visit fee. A public park has an outdoor pool open in summer with a reasonable entry fee.

A commercial sports club offers year-round swimming as well as a weight room, aerobics classes and other facilities. Rates are around ¥6,000 to ¥10,000 per month, depending on the hours and days of use. The Yokohama Country and Athletic Club offers more extensive indoor and outdoor sports facilities, but membership fees are high.

The Negishi housing area has a library which has a large selection of English-language books for children and adults. Yokohama boasts a wide variety of museums, concert halls, theaters, and cinemas. Cinemas are much more expensive than in the U.S., but video rentals are close to American prices. American movies are often available in English with Japanese subtitles.

Yokohama in general and the area around FSI in particular have a large international population, and local Japanese residents tend to be very open to foreigners. Most students and family members, even those who speak little or no Japanese, have few problems making friends.

Ōsaka & Kōbe

One of the world's greatest commercial cities, Osaka sits at the center of the Kansai region, Japan's traditional heartland and its second largest economic center. It is Japan's third largest city with a population of nearly 3 million. From the 3rd century A.D., Osaka (then called

© Michael S. Yamashita/Corbis. Reproduced by permission.

Waterfront of Kobe, Japan

Naniwa), with its bay and magnificent river system, has been the hub of inland traffic for the Kansai region and the center of Japanese trade. Over the past 3 decades, Osaka has lost its position as Japan's premier commercial and industrial city to Tokyo. But Osaka and the Kansai region still rank as one of the most important economic regions in the world, and its economic output exceeds that of most European countries and equals that of Canada. Osaka is home to many of Japan's most famous companies, including Matsushita (Panasonic), Sharp, Sanyo, Suntory and Minolta. The approximately 85,000 manufacturing enterprises in Osaka prefecture alone employ nearly 1 million people and produce over \$220 billion worth of good annually.

Thirty minutes to the west of Osaka is the cosmopolitan port city of **Kobe**, noted for its foreign influence. Another major city Hiroshima, site of the first atomic bombing and the headquarters of the Japanese

car maker, Mazda, now one-third owned by Ford Motor Company.

Kōbe lies on a narrow strip of land along the famous Inland Sea. It faces an excellent harbor on the south and is bordered by the steep, pine-clad Rokko Mountains on the north. The altitude ranges from sea level to some 600 feet within Kōbe proper, and rises abruptly to 3,000 feet in the mountains behind the city. In the bay is Port Island, the world's largest man-made island.

An industrial city and one of the busiest ports in the world, Kōbe is a cosmopolitan city noted for its foreign influence. In recent years, coastal reclamation has enlarged the industrial and port areas. Manufacturing centers around shipbuilding, steel, textiles, and electronics.

One of the first seaports to be opened to foreign settlement more than a century ago (1868), Kōbe remains a highly cosmopolitan city.

The population of 1.4 million includes an international community of Koreans, Chinese, Indians, French, British, Germans, and Americans. Over 1,000 Americans live in Kōbe, many of whom commute to work in Ōsaka.

Western-style hotels, modern trade shows on Port Island, restaurants serving international cuisine, and colorful festivals add to the city's unique atmosphere. Parks and gardens accentuate the natural beauty of Kōbe, particularly during azalea time in May and the blooming of the chrysanthemums in late autumn. Some of the Western-style houses built more than a century ago in Kitano, the old foreign district, are open for walking tours.

Between Kōbe and Ōsaka is Takarazuka. It is the site of a popular hot-spring resort and family amusement park.

Utilities

No shortages of or problems with electricity, gas, or water occur in Japan, absent an event like the Kobe Earthquake in January 1995. Telephone service is excellent, and direct dialing is available for international calls. Electricity in the Osaka area is 100 volts/60 cycles.

Typical Japanese outlets accommodate a plug with two, equally-sized flat prongs.

Food

The local market is filled with fresh fruit, vegetables, eggs, breads, meats, fish, and dairy products, and its use requires no more sanitary caution than one would apply in the U.S. All of these items are expensive. Many stores in Kobe also carry foreign-brand foodstuffs, albeit at higher prices than in the U.S. or the country of origin. A local buyer's club also permits the purchase of international foods.

Osaka is known as a "kuidaore" (food-loving) city. Both Western-style and Japanese restaurants are abundant.

These range from affordable shops and sushi bars to exclusive, members-only establishments.

There is the opportunity to experience a broad range of the dining spectrum.

Clothing

Fashion tastes in Japan increasingly are influenced by American trends, but Japanese-particularly in this area-tend to be fashion-conscious in a conservative way. Americans who dress similarly will be well received. Clothing and shoes purchased locally are expensive, and size also presents a problem.

Supplies and Services

Almost everything is available in Japan, but prices range from high to exorbitant. If you favor certain brands or need special medicines or a regular supply of some item (e.g., contact lens cleaner, toiletries, or hot cooking sauce), it may be better

and cheaper to ship them from the U.S.

Laundry and drycleaning services are excellent, as are barber and beauty shops. Women's hair coloring may not match colors available in the U.S., so bringing samples may help. Repair facilities for American-made appliances and automobiles are often inadequate; repairs for Japanese products are adequate and easily available but expensive.

Domestic Help

Domestic help is hard to find, and wages are high. Day help can be obtained from an agency, but at nearly \$300 per day. Live-in cook/servants charge about \$1,800 a month, plus a month's bonus twice a year. Employees must also provide plane fare to the home country once per year.

Religious Activities

English-language services for followers of the Catholic, Protestant, and Jewish faiths are held in Kobe. Catholic and Anglican/Episcopal Churches, with Japanese-language services, are 10 minutes away in Nishinomiya.

Education

English-speaking students have a choice of four schools in the Osaka and Kobe areas.

Canadian Academy, a coeducational facility founded in 1913, teaches kindergarten through high school and also offers boarding facilities for boys and girls grades 7-12. The curriculum is based on the typical college preparatory system in the U.S. The school has an extensive array of extracurricular activities. The language of instruction in all subjects is English. Address: Koyo-cho Naka 4chome, Higashinada-ku, Kobe, 658-0032, Telephone +81 (78) 857-0100, Fax +81 (78) 857-3250.

Osaka International School, founded in 1992, also offers a wide curricula and a number of extracurricular activities with a college preparatory emphasis. A school bus for all ages can be taken from near the housing compound. Address: 4-16,

Onohara Nishi 4-chome, Mino-shi, Osaka 562-0032, Telephone +81 (727) 27-5050, Fax +81 (727) 27-5055.

Marist Brothers International School, for boys and girls from kindergarten through grade 12, was founded in 1951 and is located in western Kobe. The curriculum is based on the U.S. college preparatory system. The language of instruction in all subjects is English. Children can go from Nishinomiya (east of Kobe) to Marist by public transportation: Address: 2-1, Chimori-cho 1-chome, Suma-ku, Kobe 654-0072, Telephone +81 (78) 732-6266, Fax +81 (78) 7326268.

St. Michael's International School, a primary school for boys and girls, is an Episcopal school for children of all nationalities and faiths. It is built on the site of the old English Mission School in the center of Kobe. A school bus stop is available about 2 kilometers away from the compound. Address: 17-2 Nakayamate dori 3-chome, Chuoku, Kobe 650-0004, Telephone +81 (78) 2318885, Fax +81 (78) 231-8899.

A number of Japanese nursery schools accept foreign children. In Kyoto, the Kyoto International School, for boys and girls in grades 1 through 8, serves a diverse foreign community of a number of nationalities. Most of the parents are teachers, research scholars, artists, or missionaries. Address: 317 Kitatawara-cho, Naka-dachiuri Sagaru, Yoshiyamachi-dori, Kamigyoku, Kyoto 602-8247, Telephone +81 (75) 451-1022, Fax +81 (75) 451-1023.

Special Educational Opportunities

Many Americans here enjoy classes and tutoring in traditional Japanese art forms such as flower arranging, cooking, dancing, pottery making, music, brush painting, and calligraphy, as well as in Japanese sports such as judo, kendo, karate, and aikido. Prices for lessons, however, are typically high.

Sports

Sports facilities are available, but are more crowded and expensive than in the U.S.

A number of pools, tennis courts, and health clubs in the area are open on either a membership or a pay-as-you-go basis. Typical costs are a one-time membership fee of about \$100, and about \$100 a month thereafter.

Public golf courses and driving ranges are crowded and rather expensive. Private golf clubs are numerous but beyond the financial reach of most U.S. visitors. However, occasionally invitations are sent to play in golf tournaments organized by the Japan-America societies and other American-affiliated groups.

Excellent beaches are a few hours' drive or a ferry ride away from Kobe. The Osaka-Kobe area has numerous bowling alleys and roller and ice skating rinks. Winter skiing areas are located a 2-hour train ride or 3-hour car ride away. The Rokko Mountain National Park in Kobe has extensive hiking trails, and a smaller mountain hiking area is a 10-minute walk from the Nishinomiya compound.

Zoos, aquariums, amusement parks, and museums of all types are available for family outings.

Touring and Outdoor Activities

Local festivals are held in the consular district throughout the year. Public and private museums regularly feature special exhibits. Department stores also sponsor fairs showcasing food items and crafts from different Japanese prefectures. Kyoto is an international cultural treasure and a popular touring destination. Shops in Kyoto and elsewhere are well-stocked with wood block prints, china, porcelain, scrolls, screens, etc. Its centuries-old festivals and innumerable temples and shrines bring visitors back again and again.

Nearby Nara was founded in A.D. 710 and contains some of the oldest

and most famous art treasures in Japan, including the Great Buddha of the Todaiji Temple, housed in the world's largest wooden building. Hundreds of tame deer freely roam Nara Park and are very popular with children.

To the west of Kobe is Himeji, site of the most spectacular castle in Japan. It has been the site of many Japanese samurai movies, including the American TV program, "Shogun." To the west and south lies the Inland Sea, whose quiet shores and scenic islands are within easy reach of the compound by bridge and ferry.

Two of Japan's most famous scenic spots are in the consular district: Amanohashidate on the Japan Sea and Miyajima Shrine near Hiroshima. Also in Hiroshima is the Peace Park and Museum. See also Tokyo, Touring and Outdoor Activities.

Entertainment

Movie houses throughout Osaka and Kobe show first-run American and foreign films, while at prices two to three times higher than in the U.S. Auditoriums in Kobe and Osaka offer concerts by world-famous classical and popular artists as well as symphony orchestras, ballet, and opera. Osaka is also the home of Bunraku, the famous traditional Japanese puppet theater, and Kabuki and Noh performances are also presented. The spring tournament of sumo, the historical sport popular among foreigners and Japanese alike, is held annually in Osaka. A unique all-girl troupe in Takarazuka, a 30-minute train ride from the compound, performs Western-style musicals on a constantly changing bill.

Social Activities

Most Americans entertain in their homes. Kobe and Osaka have many nightclubs and restaurants suitable for entertainment in a variety of price ranges. The Kansai Chapter of the American Chamber of Commerce in Japan (ACCJ) maintains an office in Osaka and meets periodically for luncheons and dinners in Osaka and Kobe. The George Wash-

ington Society, a gathering of American residents in the Kansai, celebrates George Washington's birthday with a formal ball and the Fourth of July with a picnic.

Japanese enjoy Western entertainment and accept invitations to American homes. Both formal and informal contacts between Americans and Japanese are extensive. The Japan-America Societies in Osaka, Kobe, Kyoto, and Hiroshima sponsor a variety of lectures, luncheons, and parties that offer an excellent opportunity to establish friendships. The Japan-America Women of the Kansai (JAWK) meets bimonthly and organizes a number of programs to increase friendship and understanding between women of the two countries as well as to raise money for charitable organizations. Rotary International, Lions International, and the Jaycees have chapters in almost every city and like to meet with official Americans. Japanese-American sister city affiliation committees promote a number of exchanges. The Kobe Women's Club meets weekly from September to May for art programs, excursions, bridge, and other activities. Twenty-three official and 45 honorary consulates general and consulates are in the Osaka-Kobe area, as are foreign business representatives of all nationalities.

Kyōto

Kyōto is about an hour's drive from Osaka over an excellent highway, and is one of the world's most famous and beautiful cities. It was the capital of Japan from 794 (when it was called Hei-an-kyo) until 1868 and, although it was superseded as the administrative seat of government for brief periods during those years, it remained the ceremonial capital. And since Kyōto was spared the bombs of World War II, it is the city richest in historical remains and cultural assets in Japan.

Modeled after the ancient Chinese capital Ch'an An, and surrounded on three sides by forested mountains, Kyōto has long inspired scholars and artists. Its centu-

ries-old festivals and innumerable temples and shrines bring visitors back again and again. Nijo Castle, the residence of the first Tokugawa *shogun*; Kinkaku-ji, the Temple of the Golden Pavilion; the Shinto shrine with its lovely cherry-blossom gardens; and Gosho, the ancient imperial palace, are but a few of Kyōto's treasures. Japan's history is still very much alive in Kyōto today, but the charm of the cultural heritage is only one aspect of the city.

The visitor is aware of the old and new, which initially seem to contradict one another, but soon he realizes that ancient shrines and temples and quiet gardens and traditional handicrafts blend with the modern life of Kyōto in beautiful harmony. All of these contribute to the unique atmosphere of the city.

Many English books are available at local stores as a help to guide visitors through this fascinating city. Since Kyōto has been thriving primarily on the tourist industry, other industries are less important, except for electronics and silk-weaving.

Kyōto's population is 1.5 million.

Education

Kyōto International School, for boys and girls in pre-kindergarten through grade eight, serves a diverse foreign community of at least eight nationalities. Most of the parents are teachers, research scholars, artists, or missionaries. An American/British curriculum is followed.

Recreation

Sports facilities are available but very crowded and expensive.

Public golf courses in the Ōsaka-Kōbe district are crowded and expensive, and private clubs are even more costly. Tennis, health clubs, and swimming are available, as are playing fields for soccer, rugby, and field hockey. Social clubs have been organized by members of the foreign community, but membership fees are quite high.

Excellent, but crowded, beaches are only a few hours away. Boating and water-skiing enthusiasts find many opportunities to enjoy their sports. The area has numerous bowling alleys and roller and ice skating rinks. In the winter, skiing areas are two hours away by train. Also, there are limitless hiking trails in the Rokko Mountain National Park.

Zoos, an aquarium, amusement parks, and many different types of museums are found in this area.

In the district is Nara, center of the nation's spiritual heritage and the ancient capital of the earliest known Japanese dynasty. Founded in the year 710, it contains some of the oldest and most famous art treasures in the country, including the Great Buddha of the Todaiji Temple, housed in the world's largest wooden building. The massive five-story pagoda of Kofuku-ji and some beautiful Buddhist shrines and statues can also be visited. Hundreds of tame deer freely roam Nara Park.

Two of Japan's most famous scenic spots are also in this area: Amanohashidate on the Japan Sea and Miyajima near Hiroshima.

Souvenir and curio hunting is a popular diversion, and shops in these three cities are well stocked with woodblock prints, china, porcelain, scrolls, screens, and the like.

Many movie houses show first-run American and foreign films. Fine auditoriums offer concerts and recitals by world-famous artists; the Ōsaka music festivals are held three weeks annually in a splendid 3,000-seat auditorium. Ōsaka is also the home of *Bunraku*, the traditional Japanese puppet theater. Legitimate stage productions in English are few, but a unique all-girl troupe in Takarazuka performs Western-style musicals on a constantly changing bill. Theatergoers enjoy *Kabuki* and *Noh* plays as well as other forms of traditional Japanese theater. A *sumo* (Japanese wrestling) tournament is held every spring.

Since nightclubs are quite expensive, most Americans in the area entertain in their homes. The Japanese happily accept such invitations.

Rotary, Lions International, and the Jaycees have chapters in almost every city in Japan, and are active in the Ōsaka-Kōbe area. Also represented are Japan-America societies, the Japan-America Women of the Kansai, the YMCA and YWCA, the Kōbe Women's Club, and the Japan League of Women Voters.

Nagoya

Nagoya City is the capital of Aichi Prefecture and center of commerce, industry, and culture in central Japan (the Chubu Region). The city has over 2 million people, ranking fourth in population among Japan's cities. It is located between Tokyo and Osaka and sits astride Japan's major east-west highway and railway systems.

Nagoya and the surrounding region make up an industrial powerhouse. Economic activity in this region is such that even if separated from the rest of Japan, it would still have one of the world's largest economies. This is the center of Japan's automobile and auto parts industries. The country's largest carmaker, Toyota Motor Corporation, has its headquarters and virtually all of its Japan operations in Aichi and other car and truck manufacturers are either headquartered or have plant facilities in the region. Mitsubishi Heavy Industries and Kawasaki Heavy Industries, along with other aerospace companies, are located in or near Nagoya.

Other industries, ranging from machine tools to fine ceramics, are located here and form part of the Chubu Region's vast economic base. Some of this manufacturing output is exported out of the Port of Nagoya, the busiest in export volume of all of the country's ports. Nagoya Bay is large enough to accommodate some of the world's largest ships; every year, about 38,000 ships enter the bay to dock at

Nagoya's port. In 1999, foreign trade volume in and out of all of the regional air and maritime ports was almost \$142 billion.

Nagoya and its residents have long been associated with commerce and merchandising. Located along the historical transportation routes between eastern and western Japan (e.g., between Edo, or Tokyo, and Osaka), the town prospered from its trade with both regions. Among the important early regional industries were textiles, steel-making, and ceramics, traditional economic activities whose imprint is still evident today. The first of Japan's Tokugawa shoguns, Tokugawa Ieyasu (who was from the area of Nagoya), recognized the town's strategic importance in the early 17th century and built an imposing castle in its center. Ruled over first by one of his sons and then by other Tokugawa successors, Nagoya grew both in economic and political importance during the long, and virtually warfare-free, Tokugawa era. Over time, the city and the surrounding area became the commercial and industrial hub that it remains today. The castle built by the shogun, leveled along with the rest of the city during World War II, was rebuilt and remains the premier landmark in and symbol of the city.

Regional civic and business leaders are pushing ahead with several large scale 21st century projects in and around Nagoya. Already in place is a giant new commercial development, JR Central Towers, which opened in downtown Nagoya over the city's main train terminal in March 2000. The year 2005 looms large both as the deadline for completion of the new Central Japan International Airport and as the year the region will host the 2005 World Exposition. The airport is a \$7.2 billion project to be built on landfill in Ise Bay about 35 kilometers south of Nagoya. Plans for the World Exposition (EXPO 2005) have been scaled back from the original conception but the project is still an enormous undertaking with a projected investment of about \$1.4 bil-

lion by the Japanese government, local governments, and the private sector. The estimated number of visitors to the March through September EXPO is upwards of 18 million. The EXPO, which will have an environment based theme, will be held on existing parkland near a forested area adjacent to Nagoya. There are also several huge highway and railway construction projects planned for the region. The most heavily trafficked highways between Nagoya and Tokyo (the "Tomei") and between Nagoya and Osaka (the "Meishin") both have new partner routes planned for construction early in this century. In addition, Nagoya-based Central Japan Railways is going ahead with development of the "Linear Chuo Shinkansen," a futuristic "maglev" (magnetic levitation) train that could run at speeds as high as 500 kilometers per hour, connecting Tokyo and Nagoya in 40 minutes.

Utilities

Electricity in Nagoya is 100v, 60 cycles, so many U.S.-made electric appliances can be used without adjustment. However, televisions, radios, VCRs, and clocks intended for use in the U.S. will not work well in this area because of frequency and/or timing problems. A VCR, for instance, might work for playback only but not record well because the timing would be askew. Electric sockets are compatible with regular two-prong, U.S. plugs, but three-prong sockets with grounding are rare.

Food and Clothing

Shopping for groceries and other goods in Japan follows a simple rule of thumb: you can get most anything you want if you are willing to pay for it.

Nagoya, like all large Japanese cities, has world-class department stores, specialty food shops selling an ample selection of imported goods, wine and liquor stores, and fashionable boutiques. Those are all predictably expensive. But Nagoya also offers less costly shops that may be in less convenient locations or provide a somewhat lower stan-

dard of packaging or presentation but still offer high-quality goods. Also, large, lower-cost, high-volume retailers, American stores among them, are increasingly in evidence in the Nagoya area and these firms are adding to the variety of goods sold and increasing price competition.

Recreation & Entertainment

Nagoya provides an especially strong encounter with the Japanese and their way of life. Contacts in and around Nagoya are less likely to speak English, so Japanese language skills are going to be tested every day. Local and regional news, whether on television or radio or in the regional newspaper, is going to be in Japanese, further testing language skills.

Among the best features of life in Nagoya are the city's own cultural attractions, its location in the midst of some of Japan's greatest historic sites, and its natural setting with both seacoast and mountains nearby. Few of the ancient temples and shrines that once dotted the city exist any longer but those that do, such as Atsuta Shrine, are well worth a visit.

Tokugawa Ieyasu, who had such an important role in the city's history and his descendants are featured in the Tokugawa Museum, a splendid collection of weapons, armor, artworks, and other artifacts from that era in Japanese history. Tokugawa's castle, restored in the 1950s, is a great structure that visitors can enter and explore inside. The Nagoya Boston Museum has an impressive collection of treasures from ancient Egypt, Greece, and Rome along with more modern works of art on display; the works are on long-term loan from the Boston Museum.

The new Aichi Performing Arts Center is a huge complex with a concert hall, theaters, and museum space. The city also has numerous parks, among which is Higashiyama Koen, with a beautiful Japanese garden as well as a great zoo.

Fountain in Nagasaki's Peace Park

Susan Rock. Reproduced by permission.

Using Nagoya as a base, some of Japan's greatest historic sites are within easy reach. Kyoto, for instance, is about an hour and a half away by car and 45 minutes away by train, a fairly easy day trip. Ise Shrine in Mie Prefecture, among the best-known and most beautiful of Japan's shrines, can also be reached in less than 2 hours. Takayama in Gifu Prefecture, where an ancient part of city remains intact and where traditional Japanese craft-making is still preserved, is probably too far for a day trip but can easily be visited in a weekend. There are also old post towns set in the mountains that are around Nagoya to the north and west. The mountains are an attraction themselves; some of Japan's tallest peaks are not far from Nagoya, making hiking and skiing easy to do for those posted here. If you want to ski, bring your boots, clothes, and other equipment; there

are plenty of ski slopes in the nearby mountains.

Nagoya has a well-deserved reputation for being very hot and humid in the summer. Winters are cool to cold, but are milder with each passing year. These days it snows only rarely, perhaps one snowfall in Nagoya itself each winter.

Education

Nagoya's only English-speaking school is the Nagoya International School (NIS), which offers a U.S.-based education program. The school has over 300 students in kindergarten through grade 12 college preparatory curriculum. The post educational allowance covers tuition and some other educational expenses. NIS is accredited by the Western Association of Schools and Colleges. A large proportion

of the faculty has advanced degrees. Facilities dating back from the later 60s and early 70s are well-maintained. A new gymnasium and arts center was dedicated in 1999. The school's location is about 30 minutes from the eastern part of the city where the principal officer lives and about 45 minutes from the more central area where the two other American officers have their homes. Both areas are served by buses operated by the school. The principal officer serves as a member of the Board of Trustees.

Special Information

Nagoya has a number of quality hospitals with English-speaking personnel. There are a number of U.S.-trained doctors and dentists who are well-acquainted with the Consulate and its staff and are very helpful. There are also English speaking druggists.

Hiroshima

Hiroshima is in the center of the National Park Inland Sea of Seto and is the largest city of West Honshū. As the target of the first atomic bomb on August 6, 1945, Hiroshima is known throughout the world. Ninety percent of the city was destroyed that day, and the estimated loss of life is as high as 200,000.

Hiroshima was rebuilt in the post-war years. Peace Memorial Park, with the Cenotaph, Atomic Dome, and Peace Memorial Museum, draws thousands of visitors annually; the park was created in a section of the city which had been gutted by the atomic explosion. Itsukushima Shrine on Miyajima Island, one of the three most scenic views in Japan, is 14 miles west of Hiroshima.

Prominent among local enterprises are the automotive industry, represented by Toyo Kogyo K.K., Japan's third largest car manufacturer; and the shipbuilding companies of Mitsubishi Heavy Industry, Ltd., and Hitachi Engineering Co., Ltd.

The current population of Hiroshima is over one million.

Education

Hiroshima International School, located in a suburban/rural area, offers coeducational classes for kindergarten through grade eight. The school was organized in 1962 by business people, missionaries, and families attached to the Hiroshima Radiation Effects Research Foundation (U.S.-sponsored).

International's curriculum is based on U.S. and British educational systems; all students receive instruction in Japanese, and other languages are also taught (including English as a foreign language).

Fukuoka

Fukuoka City, capital of Fukuoka Prefecture, is the cultural, economic, and educational center of Kyushu Island with a population of

1.3 million people. The city is the heart of the region's \$410 billion economy, which is larger than that of Australia and almost equal that of South Korea. The Island encompasses 10% of Japan's GNP and the region represents Japan's fourth economic center behind the Tokyo, Osaka, and Nagoya region. In addition, the region boasts an economic growth rate above the national average and increasing integration into the regional Asian economy. Already known as Japan's "Silicon Island" because of the semiconductor industry that accounts for over 30% of Japan's total chip output, Kyushu is also developing into a major car-manufacturing center. It will soon produce 10% of Japan's car output, based on roboticized state-of-the-art auto technology.

Fukuoka City also is the heart of the Island's dynamic hi-tech research and development, which is noted as a leading world center for research in advanced computer chips, nuclear fusion, and robotics. With its long tradition of openness to the outside world and receptivity to foreign ideas and products, Fukuoka City has developed into Japan's test market for fashion design and new products.

Culturally and politically, Fukuoka has led Kyushu's advancement in promoting some of the nation's most active sister-city programs and Japan-America Society activities. Fukuoka City's universities are highly active in expanding student and cultural exchanges, particularly with Asia. In addition, Fukuoka City's leading officials are exploring ways in which the City, region, and people may play a more constructive role in the development of the Asian-Pacific Region.

In this context, the Kyushu region is known as the "Gateway to Asia," maintaining close economic, cultural, and political ties with Japan's Asian neighbors. Fukuoka City has established the Asian Cultural Awards to honor contributions to the understanding of Asian culture and thought by both Western and Asian scholars. It has also initiated

an Asian-Pacific Mayors summit to encourage networking by local leaders in order to work cooperatively in developing solutions to common problems. The City has also established regular meetings with counterparts in Korea to promote understanding and cooperation. Reflecting Fukuoka City's increasing prominence in Asia, Asia Week, a weekly magazine published in Hong Kong named Fukuoka City the "Most Livable City in Asia" for the second time in 1999. Fukuoka also hosted the G-8 Finance ministers meeting in July 8, 2000, prior to the Kyushu-Okinawa Summit of G-8 meeting in Okinawa on July 21-23. The city hopes to become an important international economic, cultural, and political center in the future.

Few regions in Japan can match Kyushu's historic consciousness, and fewer yet have the deep sense of self identity and pride seen in the people of Kyushu. According to tradition, it is here that the Sun Goddess Amaterasu descended from heaven to establish the nation of Japan, and it is here where Japan's first emperor was born. Kyushu led Japan out of feudalism in 1868, and its local heroes have played major roles in shaping modern Japan.

The consular district-which contains over 15 million people comprises the seven prefectures of Kyushu Island and Yamaguchi Prefecture on the main island of Honshu. Other major cities in the district include Kitakyushu, Nagasaki, Kumamoto, Oita, and Kagoshima.

Two key US. military facilities, Sasebo Naval Base and the Marine Corps Air Station at Iwakuni, are located in the consular district. The foreign missions are also established in Fukuoka and the Kyushu region.

Utilities and Equipment

Electricity in Fukuoka is 100v, 60 cycles; AC (different from Tokyo's 50 cycles), so most U.S.-made electric appliances can generally be used without difficulty. Overseas calling

services are available, and are considerably cheaper than the Japanese long-distance carrier.

There are a number of FM radio stations in Fukuoka. These stations broadcast at a different frequency than those in the U.S., however, so a radio capable of receiving the Japanese FM band is required. Similarly, regional television channels broadcast at a different frequency.

Newer televisions allow automatic programming of channels. English on the sub-channel, including news programs. Cable TV is available at commercial rates at post. Video rental stores (VHS) are common in Fukuoka, but selection varies.

Food

American-type foods are available locally, and health and food product safety standards are comparable to those in the U.S. Fresh meat, seafood, fruits, and vegetables, as well as staples, packaged foods, and coffee are sold in Japanese markets, although at higher prices than in the U.S. Beef prices are exceptionally high by American standards.

Baby food is available but difficult to find on the local economy. Good quality milk, butter, and margarine are available locally. A selection of cheeses from Europe, the U.S. and New Zealand are sold at Japanese outlets at higher than U.S. prices. Fruits and vegetables are more expensive than those in the U.S.; however, they are also fresher.

Clothing

As with other major cities in Japan, current American and European fashions are available at the larger department stores but at higher prices (for name labels, two to three times the U.S. price is the norm). Also, finding U.S. sizes is often a problem. Military exchanges offer some relief, but stocks are limited and trips to the bases are expensive and time consuming. Mail-order catalogs are a commonly used source of clothing.

Fukuoka's winters are usually mild (it usually snows one or two days

per year) although the proximity to the Korean Peninsula occasionally results in a sudden cold snap. Summers in Fukuoka are similar to those in Washington, hot and humid. Bring a four-season wardrobe. As with the rest of Japan, residents of Fukuoka dress conservatively.

Supplies and Services

Toiletries, cosmetics, tobacco products, commonly used home medical supplies, and virtually all household supplies can be found in Japanese shops but at high prices. Cribs, playpens, strollers, diapers, and other products for babies are available but, again, are expensive locally.

Local shoe repair, dry cleaning, laundry, barbers and beauty shops are more expensive than in the US. Dealers representing the major U.S. automobile manufacturers have offices in Fukuoka. Nevertheless, parts for American and other foreign autos are expensive and harder to find. In terms of servicing and size, most employees choose to purchase a used Japanese car, which can be purchased at post.

Domestic Help

Cost of a full-time servant, including food and transportation, is about Y175,000 per month. Part-time domestic help costs Y10,000 daily, including transportation. It is also customary to pay semi-annual bonuses (June and December), that usually amount to a month's pay each time.

Religious Activities

Roman Catholic, Latter-day Saints, and Protestant churches (including Methodist, Baptist, Presbyterian, and Episcopal) in the city hold services in Japanese to which Americans are welcome. English-language Protestant and Roman Catholic services are also available. Fukuoka does not have a Jewish congregation.

Education

Founded in 1972, the Fukuoka International School (FIS) is a pri-

vate, coeducational day and boarding school that offers an educational program from pre-kindergarten through grade 12 for English-speaking students of all nationalities. The school year comprises two semesters extending approximately from September 1 to June 18.

A Board of Directors and Board of Trustees govern the school. The school is a member of the Japan Council of Overseas Schools and the East Asia Regional Council of Overseas Schools. A basic college preparatory U.S. curriculum is updated regularly to keep it current with trends in the U.S. as well as in other international schools in Japan. The curriculum includes English as a Second Language (ESL) program, Japanese-language classes, and computer classes. FIS is accredited by the Western Association of Schools and Colleges. The 2000-2001 school year consists of 1 headmaster, 18 full-time and 9 part-time staff members, including 11 American citizens, 8 host-country nationals, and 5 third-country nationals. Enrollment at the beginning of the 2000-2001 school year was 173 students. Korean, American, and Japanese are the largest nationalities represented at the international school, but British, Australian, Canadian and other nationals also are part of a very culturally diverse student community.

A new two-story physical plant with a gymnasium was constructed in 1990/91. A dormitory was built in the 1994/95 school year. The current facility consists of 11 classrooms, a science lab, a music room, a language laboratory, physics, science and computer rooms, an art room, an office, principal's room, a kitchen, a student lounge, and a 5,100 volume library. The dormitory provides rooms for 24 live-in students.

In the 2000-2001 school year, nearly all of the school's income was derived from regular day school tuition and registration fees. Annual tuition rates were as follows: pre-kindergarten: \$8,341; kindergarten-grade 6: \$9,082; grades 7-

8: \$9,916; and grades 9-12: \$10,658. There is a one-time registration fee of \$1,853 and annual facility fee, \$463. Unless special arrangements are made with the school's treasurer, tuition is payable at the beginning of each semester. (All fees are quoted in U.S. dollars-107/¥1.) Local business and government support for the Fukuoka International School is strong.

Fukuoka International School 18-50, Momochi 3-comme, Sawara-ku, Fukuoka, Japan 814-0006 Tel: 81-92-841-7601. Fax: 81-92-841-7602

Sports

For the avid jogger/runner there is Ohori Park, modeled after China's famed West Lake in Hangzhou. Ohori Park has a specially paved two-kilometer jogging path along with bicycle and walking paths along the scenic lake. Rowboats are available for rental on the lake from spring to autumn. There are numerous road races and marathons held year around in Fukuoka and Kyushu. The October Fukuoka City Marathon attracts a large number of participants of all ages from the region.

Bowling is popular in Fukuoka along with ice and in-line skating. Swimming is also a popular pastime, with numerous facilities around the city. Swimming lessons for children and adults are offered year around at reasonable prices at facilities. There is also a man-made beach facing Hakata Harbor. Hikers enjoy the trails at the Citizen's Forest.

A full range of sports activities is offered in Fukuoka, particularly in the martial arts. The "budokan," or sports center, offers kendo, judo, laido, karate, and other types of Asian martial arts courses.

Touring and Outdoor Activities

Kyushu is noted as Japan's leading center for porcelain and ceramic production. Imari and Arita, in nearby Saga Prefecture, are home to Japan's most famous porcelain makers Imaemon and Kakiemon.

There are numerous pottery areas and antique shops in and around Fukuoka City. The region also is noted for its historic and scenic spots. Fukuoka City has numerous excavation sites such as Korokan, an ancient site underscoring Fukuoka's historic importance as a major trading center for the region. Nagasaki City is a well-known tourist destination, noted for its historic setting and tragic wartime experience. Kyushu is also famous for its "onsen," or hot spring. Yufuin and Beppu in neighboring Oita Prefecture, as well as Kumamoto and Kagoshima, are popular destinations. Hiking is another popular activity in the region.

The Fukuoka Dome, Japan's largest retractable sports stadium, hosts international concerts, sports programs, and trade promotional events. The Daiei Hawks professional baseball team plays at the Dome. Fukuoka City is the center for the arts as well as shopping, Nagasaki hosts the Huis Ten Bosch Dutch theme park, Miyazaki has the world's largest indoor swimming complex, and Kitakyushu has the Space - World Amusement Park. All locations are accessible by train or car.

Entertainment

Fukuoka City hosts the spectacular annual Dontaku (May) and Yamakasa (July) festivals, which attract national attention. "Yatai" or outdoor food vendors, are also popular, serving a variety of local cuisine, including "Hakata ramen" noodles.

Current American films in English with Japanese subtitles attract large audiences. In April 1996, AMC opened a 13-theater complex in the new Canal City Hakata mall complex in downtown Fukuoka. Fukuoka is now a major stopping area for internationally known performers, since the opening of several large entertainment facilities. Jazz, country and western, western, and Japanese classical music concerts are popular in Fukuoka. Kumamoto hosts a major Country and Western music concert each October, "Coun-

try Gold," which attracts famous performers from the U.S. and Japan. In Fukuoka, there are also restaurants such as the Blue Note which feature live jazz and popular music. The November Sumo wrestling tournament also adds to Fukuoka's visibility and appeal.

Fukuoka has a wide range of excellent Japanese and Western restaurants. Although more expensive than those restaurants in the U.S., the quality is high.

Social Activities

Opportunities for meeting Japanese from all walks of life are virtually unlimited. Fukuoka's residents are noted in Japan as being friendly and hospitable to guests. Although growing, the foreign community is small, and a minimal knowledge of Japanese is essential.

Sapporo

Sapporo is a modern city of 1.8 million people and the capital of Hokkaido, the northernmost major island of Japan. The city is the governmental and commercial center of Hokkaido, which is the size of Austria and has a population a bit larger than that of Finland or Denmark (5.7 million).

Sapporo is renowned for its winter events and sports facilities. The city has hosted the Winter Olympics (1972), many other world-class skiing events, and holds the world's largest Snow Festival each year in February.

Within easy driving of the city are breathtaking volcanic lakes and gorges, white water rivers, mountains dressed with cedar, pine, birch, and aspen, and spectacular views of both the Pacific Ocean and the Sea of Japan.

Sapporo is located in a snow belt and has a "subarctic" climate. But, despite over 20 feet of snow each year, winter temperatures are moderate, seldom dropping below 20° at night and staying just below freezing during the day. Spring is short

but pleasant and summer is delightful, with temperatures in the 70s-15 to 20 degrees cooler than in Tokyo or Osaka.

The special attachment the people of Hokkaido have for Americans is unique. In the early 1870s when the Japanese Government began a crash program to develop Hokkaido, Japanese officials called on President Grant for advice. Grant responded by recommending his own Secretary of Agriculture, Horace Capron, as a candidate to organize a group of American and foreign experts to assist in the opening Hokkaido. After accepting the Japanese offer, Capron left his post in the U.S. and worked for the Government of Japan for 5 years as a senior advisor in charge of developing Hokkaido. The American educators, engineers, and agricultural experts who joined Capron are remembered fondly in Hokkaido even today; and are honored with statues and museums in and around Sapporo.

Utilities

The electric current in Sapporo is 100v, 50-cycle, AC. Except for appliances with synchronous motors, such as electric clocks, phonographs, and tape recorders, standard American electrical appliances run well. Cable and satellite television are available for a reasonable monthly fee.

Food

You can get most foods, including delicious Hokkaido crab and other seafood delicacies, on the open market. Department stores, supermarkets, and specialty food shops sell a variety of foodstuffs; however, most food prices in the local markets are considerably higher than they are in Washington, D.C.

Clothing

Bring an adequate supply of clothing. Though department stores carry a variety of clothing and shoes, sizes are limited, and prices are very high. Local tailors and dressmakers are good but extremely expensive. Fashion for men is fairly

conservative, i.e., dark suits for business.

In the long winters here, lined, knee-high snow boots, warm gloves, caps and warm winter clothing, including snow suits for children, are necessities. If you plan to ski, snowboard, or skate, bringing the necessary equipment from the U.S. could cut costs by more than 50%.

Supplies and Services

Sapporo has nearly every kind of specialty shop and repair facility. Barbers and beauticians are adequate. Drycleaning is available though somewhat more expensive than in the U.S. Local auto mechanics are competent, but parts for foreign-made cars must be specially ordered and are expensive.

Domestic Help

Live-in domestic help is almost impossible to find and very expensive. Hourly maid services are available. A cook and a maid staff the consul general's home.

Religious Activities

Sapporo has Catholic and Protestant churches and Baha'i and Islamic communities. Some services and activities are conducted in English. There is no synagogue, but a small group of Jewish residents gather to celebrate Passover and other observances.

Education

The Hokkaido International School is the only English-language school in Sapporo and offers courses from kindergarten through grade 12, with a student population of about 170 children. Though small, the school has improved considerably since moving into an impressive new building built with the aid of the Hokkaido Government in 1995. HIS is accredited by the Western Association of Schools and Colleges. Recent graduates have been accepted by such universities as Cornell and the University of Virginia.

Sports

Hokkaido is a sports fan's paradise. In the winter one can ski, ice skate, and cross-country ski; in the summer one can play golf (very expensive compared to the U.S.) and tennis, hike, camp, boat, and swim (both in summer and in winter at indoor public pools near the Consulate General and at various resorts). Hunting for bear, deer, pheasant, duck, and rabbit is available. However, obtaining a hunting license is a difficult and complicated procedure.

Touring and Outdoor Activities

Jozankei, a hot-spring resort, lies on the banks of a swiftly flowing stream in a beautiful valley, 17 miles southwest of Sapporo. Jozankei has many large hotels, some with Western-style accommodations. Noboribetsu hot springs is about 80 miles southeast of Sapporo. Its outstanding feature is a valley filled with sulfur pools known as the Valley of Hell.

The Ainu Village at Shiraoi, about 1 hour south of Noboribetsu, is one of the few places in Hokkaido where you can see an exhibition of Ainu customs and culture.

Lake Toya and Lake Shikotsu were formed by ancient volcanic eruptions. Both offer pleasant mountain scenery and opportunities for hiking and boating. They are 2-3 hours' drive from Sapporo. For a long weekend or holiday, Akan National Park in the eastern part of the island offers the famous lakes of Akan, Kutcharo, and Mashu as well as pleasant drives through beautiful mountain and forest scenery. Sounkyo Gorge, about a 5-hour drive from Sapporo, is also famous for its scenery.

Entertainment

Sapporo is a modern city with excellent restaurants, first-class hotels serving international cuisine, modern theaters featuring American movies in English with Japanese subtitles, a zoo, a municipal symphony orchestra, a modern art

museum, and well-stocked department stores.

Social Activities

Hokkaido has a small but growing American business community. There is an American missionary community and the number of American English teachers in Hokkaido is increasing. Aside from these groups, social activities among Americans are limited.

Social and recreational opportunities here for a foreigner not willing to plunge into the Japanese culture and language are much more limited than in cosmopolitan cities with larger foreign communities.

Only a limited number of Sapporo citizens can carry on a conversation in English, but many people are eager to befriend foreigners. A basic speaking knowledge of Japanese is essential in broadening friendships.

Nagasaki

Nagasaki, capital of the eponymous and westernmost prefecture of the Japanese archipelago, faces China across the China Sea. One of Japan's most prosperous commercial cities, it also is the site of early Christianity in the country. The Jesuit, St. Francis Xavier, arrived in Nagasaki in 1549 bearing Christianity.

Nagasaki was insignificant until 1571, when Portuguese traders first arrived, and thereafter became a port of call not only for Portuguese ships, but for Spanish and Dutch as well. The city was the only port of contact kept open to the outside world between the mid-17th and mid-19th centuries, the long interval when Japan enforced its isolationist policy.

Chinese temples and Western structures are among the many historical sites in Nagasaki. On Dejima (Deshima), an artificial island, is a scale model of the quarters where representatives of the Dutch East India Company once lived. In the

central city is the authentically reconstructed Urugami Cathedral, built by a French missionary with help from Japanese Christians—it was totally destroyed in the second atomic bombing of August 9, 1945, which leveled one-third of the city and killed an estimated 40,000 people; nearly as many more were critically injured. Peace Park and the Statue of Peace, at the core site of the bombing, are memorials to that devastation.

Nagasaki today is a center of shipbuilding, fishing, and coal mining industries, as well as the heart of a large agricultural area. It has grown considerably as a tourist attraction, and boasts Japan's first seaborne airport, built in 1975. The city was used as a setting for the novel by John Luther Long which later became the Puccini opera, *Madame Butterfly*.

The current population of Nagasaki is approximately 442,000.

OTHER CITIES

CHIBA, the seat of Chiba Prefecture, is situated on the eastern shore of Tokyo Bay. Once a poor fishing village, it is now a prosperous commercial city of 887,000 residents. Large-scale industry and the opening of major railway lines have contributed heavily toward the development of the city, which is now the 13th largest in Japan. Chiba dates to 1126; it evolved around a castle built by a local warlord but, when the castle burned two centuries later, the clan collapsed and the community was all but deserted. It was only after the Meiji Restoration of the mid-19th century that Chiba again began to achieve significance.

The city of **GIFU** is located 19 miles north of Nagoya in central Honshū. It lies on the edge of the Nobi Plain at the foot of the Japan Alps. Situated in a region that once had 516 earthquakes in one year, not many of this ancient city's old buildings survived the 1891 earthquake. The

fertile farmland on the Nobi Plain enables residents to grow rice and vegetables. Gifu is noted for its paper products which include fans, umbrellas, and lanterns. It also manufactures cutlery and textiles. Tourists in Gifu enjoy boating on the Nagara River in the evening to see the cormorant (aquatic birds) fishing. The use of tame cormorants to catch fish is an old technique called *ukai*. The population of Gifu is 407,000.

HAMAMATSU, with a current population of 582,000, is situated in southern Honshū, about 56 miles southeast of Nagoya and 145 miles southwest of Tokyo. Historically an old castle town, Hamamatsu today is an industrial city whose chief products include musical instruments, motorcycles, compact automobiles, tea, and textiles. Allied forces bombed the city in May and June 1945.

HIMEJI is located on Honshū Island, 50 miles west of Ōsaka. It is a commercial city whose old craft industries produce leather, toys, and dolls. Since World War II, Himeji has acquired new integrated iron and steel works, a large petrochemical complex, and heavy engineering plants. The city, whose population exceeds 453,000 is one of the many towns built by Japan's feudal lords. Japan's most spectacular castle is located here; it commands a view of the city from a hill. Completed in the early 17th century, it is called "Egret Castle" because of its resemblance to the white bird and has been the site of many Japanese samurai movies.

KAGOSHIMA is a seaport city situated in a well-protected harbor on the southern coast of Kyūshū. Historically important as a castle town, Kagoshima was the site where the first Christian missionary, St. Francis Xavier, landed in 1549. The city was bombarded by British warships in 1863, destroyed by fire in 1877, damaged by a volcano eruption in 1914, and severely bombed by Allied forces during World War II from June through August 1945. Today, Kagoshima is an important port,

the site of a naval yard, and since 1961, the home of a major Japanese rocket base. The center for the manufacture of Satsuma porcelain ware, Kagoshima also produces silk and cotton clothing, wood products, and tinware. There are two universities in Kagoshima; the city has a current population of 552,000.

KANAZAWA is situated near the coast of west-central Honshū, about 80 miles north of Gifu. A historic city, Kanazawa became an industrial and cultural headquarters after 1580. Its power deteriorated with the decline of feudal political units in 1871 and the growth of modern industry on the opposite coast of Honshū. Kanazawa is best known for manufacturing Kutani porcelain and Kaga silk. Recently added products include textiles and textile machinery. The present city, with a population of about 428,000, was built around the Maeda Castle, which was destroyed in 1881 by fire. Kanazawa is home to the country's renowned landscape garden, Kenrokuen. The sacred Hakusan Mountain of five peaks can be seen and easily reached from here.

KAWASAKI, with a population of 1.2 million, is one of the nation's 10 largest cities. Lying on the west coast of Tokyo Bay, it is a major industrial center surrounded by an extensive farming area. The city was severely damaged during World War II. Kawasaki is the site of a renowned temple called Kawasaki Daishi, and of an exhibit garden of typical Japanese folk houses—both spots are widely visited by tourists.

KITA-KYŪSHŪ is another city with more than one million residents. It was formed in 1963 by the amalgamation of the five northern Kyūshū cities in Fukuoka Prefecture. It is the center of the prefecture's production, and is one of the cities which has grown dramatically with Japan's development as a major industrial nation. Among Kita-kyūshū's many and diverse industries are shipbuilding; coal shipping; iron, steel, glass, and chemical factories; fishing; and the production of specialized textiles. A

well-known technical institute is located here. International School Kita-kyūshū, coeducational day school, was founded in 1990. Serving students pre-kindergarten through grade eight, the enrollment is 13. A U.S. curriculum is followed; both English and Japanese are used for instruction. The address is Yahata Higashi-ku Takami 2-chome Shinnittetsu Shijo Kaikan, Kita-kyūshū.

KUMAGAYA, with a population over 150,000, lies on the Ara River, about 40 miles northwest of Tokyo in central Japan. Many of its residents work in Tokyo even though Kumagaya is a commercially vibrant city. While silk reeling was the traditional industry, heavy industries have been established here today.

An important 17th-century castle town, **KUMAMOTO** today is a market center for the surrounding agricultural region. It is situated on the west coast of Kyūshū on an extensive plain near the Shira River. The city was founded in the 16th century at the site where a magnificent castle was built, and became a stronghold during feudal times. Although it was partially destroyed in 1877, the remains of the castle are still visited by tourists. Pilgrims are attracted to Kumamoto's Buddhist temple as well as the city's several shrines. Industries in the city include food processing, textiles, and chemicals. Kumamoto has two universities and a current population of 662,000.

KURASHIKI, with 417,000 residents, is located 10 miles west of Okayama—so close that the two cities blend into one population center. Kurashiki was a rice-trading center in the Edo period (1603–1867), and many of the warehouses used then for storage line the streets of the modern city. Textile manufacturing is the main industry today. Among Kurashiki's cultural facilities are Ohara Museum, with a fine collection of Western art; a folk-craft museum, built from old rice warehouses, and containing exhibits of pottery, woodwork, Japanese

papers, and rush mats; and archaeological and historical museums.

MIYAZAKI, with a population of 287,000, is located on the Hyuga Sea in southeast Kyūshū, 150 miles southeast of Fukuoka. The Oyodo River traverses the city, and the nearby volcano, Sakurajima, occasionally spews its ash. Inhabited for nearly 8,000 years, the city has managed to retain some of the elements from its past. There is virtually no heavy industry in Miyazaki; the resultant clean air, along with secluded parks, tree-lined boulevards, and an accessible riverfront have made the city a popular tourist and resort center. Miyazaki is the site of the great Shinto shrine—Miyazaki-jingu—dedicated to Japan's first emperor, Jimmu; the shrine also houses an archaeological museum. Ageless Japanese traditions may be found throughout the city. At the Miyazaki Cultural Center, the fine arts of calligraphy, koto music, tea preparation, and flower arrangement are taught by masters. Several summer festivals are held each year in Miyazaki. The city accessible by all forms of transportation. A runway expansion at Miyazaki Airport is expected to handle some diversions from the Tokyo and Ōsaka airports. A university was founded here in 1949.

Situated in west-central Honshū, the major seaport of **NIIGATA** lies on the estuary of the Shinano River, about 30 miles north of Nagaoka. Divided into two sections by the river, the city has an industrial side and a residential side which features shopping areas and Niigata University. Niigata was established by the Nagaoka clan as an outpost in 1616. It became the capital of Niigata Prefecture in 1870. The city has a population of over 500,000.

Located on the island of Honshū, **NISHINOMIYA** has a population of approximately 413,500. It is situated between Kōbe and Amagasaki on Ōsaka Bay. The city is known for its manufacture of saki, an alcoholic beverage of fermented rice usually served hot. Kōbe Women's College is located here.

OKAYAMA is a seaport city of 627,000 and capital of Okayama Prefecture on western Honshū. It developed from a *jokamachi*, or castle town, founded in 1573, and is now a market hub in an area that is devoted to large-scale mechanized farming. One of Japan's most beautiful parks, Okayama Korakuen, lies nearby on an island in the Asahikawa River. The park, and a popular youth festival held at the Saidaiji Temple in the city each February, are major attractions in Okayama.

SAKAI is a satellite city on Ōsaka Bay in west-central Honshū. It developed mainly after World War II, and now stands 14th on the list of Japan's large cities, with a population exceeding 800,000. It is a center of industrial importance, producing machinery, automobile parts, and chemicals. In the 16th century, Sakai was a leading port, or *minatomachi*.

SENDAI, the *Mori-no-miyako*, or city of trees, is located in Mayagi Prefecture of northern Honshū, about 180 miles north of Tokyo. It is a center for branch offices of many government agencies and major corporations. The largest city in the Tohoku district, it has a population over 1 million, and is the site of Tohoku University; several technical schools also are located here. The Japanese National Railways and other rail lines converge in the city. Sendai is known for Sendaihira silk, and also for the production of beautiful Sendai cabinets and other wood products. The famous Tanabata festival is held here in early August. Close to the city is a hot-spring resort called Aiku Spa.

UTSUNOMIYA is the capital of Tochigi Prefecture, situated about 60 miles north of Tokyo. Previously, it was called Ikebenogo; once the road leading to northeastern Japan was opened, it was also known as Otabashi Station. About 1059 it was named Utsunomiya. A processing center for the grain and tobacco grown in the region, Utsunomiya also manufactures knit goods, wood products, and paper. The ruins of

Utsunomiya Castle may be seen on the south side of the city. Utsunomiya has a population of over 425,000 and is home to Utsunomiya University.

Located in Kanagawa Prefecture, on Honshū Island, at the southwest end of Tokyo Bay, **YOKOSUKA** is about 20 miles south of Yokohama and 40 miles south of the capital. In 1868 the city became an important naval base. Its only major industry is shipbuilding. Yokosuka developed into a city by 1907 and slowly expanded into the nearby towns and villages. Japan's first modern lighthouse is located at Cape Kannon, which is east of the naval base. There are a few small fishing villages along the nearby coast. The city has a population of more than 450,000.

COUNTRY PROFILE

Geography and Climate

Japan, a country of islands, extends along the eastern or Pacific coast of Asia. The main islands, running from north to south, are Hokkaido, Honshu or the mainland Shikoku, Kyushu, and Okinawa, which is about 380 miles southwest of Kyushu. About 3,000 smaller islands are included in the archipelago. In total land area, Japan is slightly smaller than California.

About 71% of the country is mountainous, with a chain running through each of the main islands. Japan's highest mountain is world famous Mt. Fuji (12,385 feet). Since so little flat area exists, many hills and mountainsides are cultivated all the way to the top. Situated as it is in a volcanic zone along the Pacific deeps, frequent low intensity earth tremors and occasional volcanic activity are felt throughout the islands. Hot springs are numerous; some have been developed as resorts.

Temperature extremes are fewer than in the U.S. since no part of the interior is more than 100 miles from the coast. At the same time, because the islands run almost directly north-south, the climate varies. Sapporo, on the northern island, has warm summers and long, cold winters with heavy snowfall. Tokyo, Nagoya, Kyoto, Osaka, and Kobe, on the southern part of the largest island of Honshu, experience relatively mild winters with little or no snowfall and hot, humid summers. Fukuoka, on the island of Kyushu, has a climate similar to that of Washington, D.C. with mild winters and short summers. Okinawa is subtropical.

Spring, with its profusion of cherry blossoms and other flowering trees and shrubs, and autumn, with its gold and flaming red trees and lovely fall flowers, are the most pleasant seasons. The hot, humid summers are difficult in the cities, but the sandy beaches along the coast and the many fine mountain resorts provide pleasant relief. The rather mild and dry winters are not as severe as the U.S. East Coast; it rarely snows or rains in the Tokyo area at this time of year. The climate causes no more of a problem with mildew, mold, moths, mosquitoes, or other pests than is experienced in Washington, D.C.

Population

Japan's population, currently some 125 million, has experienced a phenomenal growth rate during the past 100 years as a result of scientific, industrial, and sociological changes. High sanitary and health standards produce a life expectancy exceeding that of the U.S.

The Japanese are a Mongoloid people, closely related to the major groups of East Asia. However, some evidence of a mixture with Malayan and Caucasoid strains is present. The latter is still represented in pure form by a very small group of Ainu in Hokkaido, the remains of the Caucasoid people who inhabited Japan in prehistoric times, and who perhaps formed a portion of a cir-

cumpolar culture extending across Siberia to European Russia.

The Japanese usually are described as group-oriented rather than individually oriented. Geography is the main reason for this group orientation. Many people confined in a small land area poorly endowed with natural resources traditionally work together for the good of the whole.

In premodern Japan the extended family or clan system provided security for the component families. Industrialization and urbanization broke up this type of family system, but the paternalistic tradition has continued through government social welfare agencies and, to a greater degree, through large companies that provide more fringe benefits than their Western counterparts.

The Japanese are always conscious of their uniqueness as a people. They are proud of their country, its great natural beauty, distinct culture, and the important role it plays in the modern world. Because the Japanese are polite and cautious in approaching social situations, they often impress foreigners as being shy and reserved, but beneath this they are always interested and curious to learn about foreign ideas and attitudes.

Japan's communication with the rest of the world, from commerce to the arts, has been hampered by a language barrier. Japanese is a difficult language with a complicated writing system. Relatively few non-Japanese are completely bilingual. Although English has been for many years the international language of Japan, and the study of English is compulsory in Japanese junior and senior high schools, the Japanese have as difficult a time with English as non-Japanese speakers do with Japanese. The average person can speak only a few words, and business representatives and government officials are constantly trying to improve their command of the language. Instruction in English conversation is in

great demand, and it is a common experience for an American to be stopped on the street by someone who just wants to practice a few sentences of English.

Japan is an urban society with only about 7% of the labor force engaged in agriculture. Many farmers supplement their income with part-time jobs in nearby towns and cities. About 80 million of the urban population are heavily concentrated on the Pacific shore of Honshu and in northern Kyushu. Metropolitan Tokyo with approximately 14 million, Osaka 2.6, Nagoya 2.1, Kyoto 1.5, Sapporo 1.6, Kobe 1.4, and Kitakyushu, Kawasaki, and Fukuoka with 1.2 million each account for part of this population. Japan faces the same problems that confront urban industrialized societies throughout the world: overcrowded cities, congested highways, air pollution, and rising juvenile delinquency.

Shintoism and Buddhism are Japan's two principal religions. Buddhism first came to Japan in the 6th century and for the next 10 centuries exerted profound influence on its intellectual, artistic, social, and political life. Although still important, it is a relatively inactive religious form today. Monasteries and temples, large and small, dot the landscape but usually play only subdued background role in the life of the community. Most funerals are conducted by Buddhist priests, and burial grounds attached to temples are used by both faiths.

Shintoism is founded on myths and legends emanating from the early animistic worship of natural phenomena. Since it was unconcerned with problems of afterlife that dominated Buddhist thought, and since Buddhism easily accommodated itself to local faiths, the two religions comfortably coexisted, and Shinto shrines and Buddhist monasteries often became administratively linked. Today, many Japanese are adherents of both faiths. From the 16th to the 19th century Shintoism flourished, eventually seeking unity under a symbolic imperial

rule. Adopted by the leaders of the Meiji restoration, it received state support and was cultivated as a spur to patriotic and nationalistic feelings. Following World War II, state support was discontinued and the Emperor disavowed divinity. Today, Shintoism plays a more peripheral role in the life of the Japanese people. The numerous shrines are visited regularly by a few believers and, if they are historically famous or known for natural beauty, by many sightseers. Many marriages are held in the shrines, and children are brought after birth and on certain anniversary dates; special shrine days are celebrated for specific occasions, and numerous festivals are held throughout the year. Many homes have "god shelves" where offerings can be made to Shinto deities.

Confucianism arrived with the first great wave of Chinese influence into Japan between the 6th and 9th centuries. Overshadowed by Buddhism, it survived as an organized philosophy into the late 19th century and remains today as an important strain in Japanese thought and values.

Christianity, first introduced into Japan in 1549, was virtually stamped out a century later; it was reintroduced in the late 1800s and has spread slowly. Today, it has 1.4 million adherents, which includes a high percentage of important persons in education and public affairs.

Beyond these three traditional religions, many Japanese today are turning to a great variety of popular religious movements normally lumped together under the name "new religions." These religions draw on the concept of Shinto, Buddhism, and folk superstition and have developed in part to meet the social needs of elements of the population. The officially recognized new religions number in the hundreds and total membership is reportedly in the tens of millions.

Public Institutions

Japan's parliamentary government constitutional monarchy-operates within the framework of a constitution that took effect on May 3, 1947. Sovereignty is vested in the Japanese people by constitutional definition, and the Emperor is the symbol of the state, "deriving his position from the will of the people with whom resides sovereign power."

Japan has universal adult suffrage with secret ballot for all elective offices, national and local. The government has an executive responsible to the legislature and an independent judiciary.

The seven major political parties represented in the National Diet are the Liberal Democratic Party (LDP), the Democratic Party of Japan (DPJ), the Clean Government Party (Komeito), the Liberal Party (LP), the Japan Communist Party (JCP), the Social Democratic Party (SDP), and the Conservative Party (CP).

Arts, Science, and Education

Japan's educational system is based on 6 years of elementary and 3 years of middle or junior high school. Schooling is compulsory and free. More than 97% of children finishing middle school go on for 3 years of upper or senior high school. Japan has over 1,174 universities, colleges, and junior colleges and over 3 million college students, making it second only to the U.S. in the proportion of its college-age population that are students. Nevertheless, the most prestigious Japanese universities can accept only a fraction of the applicants. About half of the Japanese university students study in the Tokyo area. Before senior high school and college, students must take extremely rigorous competitive entrance examinations. The most difficult college entrance examinations are for national universities like Tokyo and Kyoto.

Despite the difficulty of the written language, Japan has one of the world's highest literacy rates. It is a country of readers, ranking second only to the U.S. in book publishing. Japan's unique culture includes centuries-old graphic and performing arts.

Modern theater forms and modern graphic arts are very popular, and Japanese artists and designers are among the world's best. Institutions like Tokyo's National Theater continue to preserve and encourage traditional art forms. Flower arranging (ikebana), one of the unique cultural heritages, originated in the 1300s with the advent of the tea ceremony; today Japan has 3,000-4,000 ikebana schools with millions of followers. The tea ceremony (chanoyu), perfected in the 16th century, fascinates both participants and spectators by its simplicity and elegance, designed to create peace of mind in both the performer and the partaker. Kabuki, one of the most colorful forms of traditional Japanese entertainment, a bustling, exaggerated drama accompanied by music and song, and Noh, a form of Japanese court dance characterized by use of masks, are performed regularly in cities throughout Japan. Martial arts which include judo, karate, kendo, aikido, and Japanese long-bow archery draw on Zen philosophy and traditionally have as their objective the achievement of self-discipline and inner peace. Martial arts performances can be seen regularly in the leading cities.

Commerce and Industry

Japan's industrialized free market economy is the world's second largest, after the U.S. Together the two countries comprise over 30% of global output. Japan's economy provides the Japanese people with a high standard of living: per capita GDP in 1999 was \$24,075.

With only one-sixth of its land arable, Japan produces roughly half of the food required for its population. Food self-sufficiency rates continue

to fall, however, with the Agriculture Ministry predicting a rate of 40% by 2005. Fish is a staple of the Japanese diet, and Japan maintains one of the world's largest fishing fleets. It currently ranks third among the top fishing countries, accounting for almost 6% of global fishery production. Demand for imported food has increased yearly as Japanese dietary preferences change toward meat, bread, and dairy products. Japan imported over \$47 billion in foodstuffs in 1997.

Japan's natural resources can supply only a fraction of the raw materials needed by industry. For example, Japan imports more than 80% of its primary energy supply. Foreign trade is therefore vital; reliable sources of raw materials and stable export markets are essential to continued economic prosperity. With close government-industry cooperation, a strong work ethic, and a mastery of high technology, Japan's industries have risen to become household names and world leaders in the production of autos, electronics, and machinery.

The U.S. is Japan's leading trade partner; Japan is our third largest foreign market, and the largest for U.S. agricultural products. Japan's exports to the U.S. are primarily motor vehicles, machinery, and electronic products. The bulk of U.S. exports to Japan are agricultural products, raw materials, and high-technology products, such as aircraft and computers.

Transportation

Automobiles

A personally owned vehicle is not absolutely essential in view of the excellent public transportation systems in Tokyo and throughout most of Japan.

All vehicles must be registered with the Ministry of Foreign Affairs. To obtain registration, you must provide proof of ownership (factory invoice or bill of sale) and a valid insurance policy. Third-party insurance is compulsory. Premiums for

third-party insurance differ by the age of owner and capacity of engine displacement and are currently ¥60,340 for age 26 with 1,500 cc-2,500 cc.

Many people purchase a used car for use while in Japan since these vehicles are in good supply and available at relatively reasonable prices. Traffic moves on the left and most cars are right-hand drive. Gasoline costs more than in the U.S.

Japanese streets and roads are generally congested with cars, trucks, buses, motorbikes, and bicycles. Japanese cars are small by American standards but are advantageous in the narrow streets and limited parking areas. Driving is complicated by the fact that many road signs are written in Japanese kanji, and most Tokyo streets are not numbered or marked at all. Maps are essential for getting around in the city. Rental cars are available, but the charges are exorbitant.

Apply for a Japanese driver's license issued by the Public Safety Commission. In order to have your U.S. driver's license converted to a Japanese driver's license, you must appear in person at the licensing office and submit official documents to prove that you had been in the US. for a minimum of three full months during the time your U.S. driver's license was effective.

The Japanese driving licensing office will check the issuance date and expiration date on your US. driver's license and also check the issuance date, embarkation/disembarkation stamp dates, date of entry permit on your passport and compare the two. They will accept your application if it reflects that you have been in the U.S. for 3 months anytime your US. driver's license was effective.

If your U.S. driver's license was renewed recently, and you were not physically present for 3 months in the US. before your initial arrival date to Japan, you will be required to submit an original document

issued by the Department of Motor Vehicles of the State where your license was issued that lists your previous driver's license records. The authorities will compare the DMV records with your passport entry/exit stamps and issuance date in an attempt to verify your physical presence in the U.S. for 3 months in total.

Necessary items to apply for a Japanese driver's license:

1. Japanese translation of your U.S. driver's license.
2. Diplomatic/official and tourist passport(s) or any official document that will certify that you have been in the U.S. for 3 months (e.g., expired passports, school records, letter from prior employer, copies of travel orders indicating a stateside tour.)
3. One photo (size must be 3 cm x 2.4 cm).

Yokohama: Most students, especially those bringing families to Yokohama, find it worthwhile to have a car for shopping trips and sightseeing on weekends. Others get by without a car, relying on travel by foot, bicycle, motorcycle, taxi, or the region's excellent public transportation network. Used cars are available fairly cheaply.

Roads are usually congested, and expressway tolls are high. Parking in downtown areas often costs around ¥500 per hour, although shopping centers usually discount parking for customers who spend over a certain amount. Bus lines offer frequent service to downtown Yokohama and to the nearest train stations. The rail network offers extensive and efficient, though not cheap, service from Yokohama throughout the Kanto area.

Sapporo: Reasonably priced used cars are available in Sapporo. Four-wheel drive is useful, particularly outside the city in winter. Since Japanese drive on the left, right-hand drive cars make passing and turning hazardous.

Okinawa: The limitations of public transportation make a car essential on Okinawa. A small car is appro-

priate for the many narrow and congested roads. Compared to elsewhere in Japan, cars here tend to be less costly to maintain, and probably easier to sell on departure. Cars deteriorate rapidly on Okinawa due to the humid climate and salt air, and regular steam cleaning and undercoating are advised. Spare parts for many foreign cars, including some of the more popular American models, are limited and expensive. Good used cars can be purchased from departing American personnel or from local used car dealers. Financing and insurance are available from American firms here. Insurance rates are considerably higher than in the U.S.

Public buses are a clean, safe and reliable, though expensive option. Taxis are numerous and less expensive than in Tokyo.

New cars are readily available but not recommended. Although Okinawa has a Ford dealer, repairs and spare parts for U.S.-made cars, including American-made Japanese models, are difficult to obtain. Reliable used Japanese cars can be purchased for about \$2,000-\$3,000, but may be expected to require substantial upkeep and repair expenditures during a 3-year tour. The high humidity, heavy with salt from the ocean, and blowing coral dust are hard on metal, and cars rust quickly.

Local

The public transportation systems of Japan's major cities are among the most modern in Asia and include excellent trains, extensive subway systems, and buses. All cities have an abundance of taxis. As in all heavily populated areas, transportation facilities are overtaxed, particularly during rush hours. Japan Railway (JR) electric trains link the major parts of Tokyo with outlying towns and cities, and the subway system crisscrossing Tokyo is the most inexpensive transportation in the city. Osaka has a JR loop line, and subway systems are also located in Yokohama, Nagoya, Osaka, Fukuoka, and Sapporo. Bus service links subway and

loop train lines in Tokyo and is the system of local transportation in cities and towns throughout Japan. Signs and directions in subway and railway stations in the major cities usually appear in English as well as Japanese, making subway and rail travel relatively simple for the non-Japanese-speaking traveler.

Cruising taxis are plentiful. Taxis are safe and clean, though not inexpensive. Most taxi drivers do not speak English, so have directions to your destination written in Japanese. Most hotels have these instructions at the front desk to assist their guests in returning to the hotel. Taxi doors are operated by the driver, opening and closing automatically. Taxis are metered; the charge in Tokyo is Y660 for the first 2 kilometers plus Y80 for each additional 274 meters. There are additional charges for slow movement in traffic and late-night service. Consumption tax is added to the total fare amount. It is not customary to tip taxi drivers.

Regional

Most of the country is served by the JR system. The Shinkansen (popularly known as the bullet train) is a familiar sight speeding across the Japanese countryside connecting Tokyo and many of the larger cities throughout Japan. These and other express and local trains combine to form a vast rail network that is heavily used. Sleeping, dining, and first-class (green) coaches are available on the main lines. Trains maintain strict schedules, and the personnel are polite and efficient. Porters or redcaps are available at all principal stations although they are extremely few in number. Their charges range from Y200 to Y300 per piece of baggage or more if the baggage is extremely heavy.

Most of the major international airlines and a number of steamship companies provide service to Japan. Domestic air travel is quite extensive. Several domestic airlines operate to all the major cities in Japan; airbus service has been instituted between Tokyo and several cities. The airport used for domestic travel

is Haneda, 23 kilometers from Tokyo. Rapid monorail or bus service is available from Haneda to downtown Tokyo locations, and taxis are plentiful. The taxi fare is around Y6,500.

The new Tokyo International Airport at Narita, about 77 kilometers from Tokyo, is used for all international flights (except those of China Airlines, the Republic of China national carrier that operates from Haneda). Surface transportation from Narita into the city is commonly via limousine bus directly to the Tokyo City Air Terminal (TCAT) or by taxi. Train service is also available, but its use is not recommended for the newcomer due to the complicated connections. Transit time by bus and taxi can be time consuming, at least 1-1/2 hours, often more, depending on traffic conditions on the heavily congested highways serving the airport from central Tokyo. The airport limousine bus fare is Y3,000, and taxi fare is approximately Y27,000, including toll charges.

Many express toll roads are excellent. Almost all roads are paved. The main roads are generally in good condition, the secondary roads are more inclined to be narrow and winding.

Communications

Telegraph and Telephone

To obtain the lowest possible rates, bring a telephone credit card from AT&T, MCI, or SPRINT. These carriers also provide International Long Distance service from any phone within Japan.

International telegrams can be sent from any Kokusai Denshin Denwa (KDD) office in any leading city, any local telegraph or telephone office, and most hotels.

Mail

Postal rates for ordinary letters addressed within Japan are Y80 and for ordinary postcards Y50. International postal rates to the U.S. for airmail letters are Y110 for

the first 25 grams; postcards Y70, aerogram Y90, and printed matter up to 20 grams Y80 plus Y40 for each additional 2 grams.

Radio & TV

The Far East Network (FEN) is an affiliate of the U.S. Armed Forces Radio Network. FEN broadcasts 24 hours daily in English with the latest news, music, and sports events (AM 810).

Japanese radio stations present a variety of classical and popular music on both AM and FM. Japanese FM radios operate on a lower frequency spectrum of 76 MHz to 90 MHz rather than the U.S. frequencies of 88 MHz to 108 MHz. It is impossible to convert a U.S. receiver for Japanese frequencies; so if you wish to receive most Japanese stations, you will need to buy a domestic receiver.

TV in Japan has reached the highest levels of technical sophistication. TV is broadcast in stereo, bilingual multiplex, high-definition, and direct broadcast satellite (DBS). Of the many channels available, two government non-commercial channels (NHK) broadcast high quality programs that include public service, sports, and music events. The program content of the commercial networks varies little from channel to channel with a large emphasis on entertainment, musicals, and quiz programs. They do broadcast in stereo.

Movies and U.S. TV series are often transmitted with a unique bilingual soundtrack. Several hours of bilingual programming, including live news broadcasts are transmitted daily.

Residents often have access to satellite TV companies, including "Direct TV" and "Perfect TV" as well as the Japanese broadcast stations.

Newspapers, Magazines, and Technical Journals

Five English-language daily newspapers are published in Tokyo—the Japan Times, the Daily Yomiuri, the Mainichi Daily News, the Asahi

Evening News, and the U.S. Army's Stars and Stripes. Nihon Keizai Shimbun, Japan's major financial daily, has a weekly English-language edition. Home delivery is available for all of these newspapers. The Asian Wall Street Journal, published in Hong Kong, is also available daily.

American magazines arrive from a few days to a month after publication. The most popular periodicals are available in Stars and Stripes bookstores, military exchanges, major hotels, or by subscription. Asian editions of Newsweek and Time are published in Tokyo and are promptly available by subscription or at major newsstands.

Large Japanese bookstores and bookstores in major hotels carry a wide selection of English-language books. Books also can be purchased at the Sanno Hotel.

Health & Medicine

Medical Facilities

Many English-speaking Japanese physicians, with U.S. post-graduate training, as well as Western doctors, maintain private practices in Tokyo. Local hospitals and clinics range from older facilities to very modern medical centers. Language continues to be a frustrating barrier in many facilities.

Completing the following "to do" list will make your transition to Japan easier:

* Do not pack prescription medications in your check-in luggage. Hand carry your prescription medications.

* Individuals enrolled in a preferred provider organization (PPO) or health maintenance organization (HMO) will find it difficult to use this coverage overseas. Individuals that are members of a PPO or HMO should consider changing insurance policies before arriving to Tokyo.

* Bring a hot-steam humidifier(s) for dry winter weather.

* Bring a dehumidifier(s) for the hot and humid summer weather.

* Bring flashlights and emergency firstaid kit(s) for your home and car.

* Enroll in a first aid and CPR course.

* Visit your dentist for cleaning and dental check-up before arriving to Tokyo. Dental care in Tokyo is expensive.

Okinawa: The Adventist Medical Center provides an alternative for dental and medical care at Camp Lester. It is a modern, well-run facility staffed by American or American-trained missionary physicians and dentists from the Seventh-day Adventist Church. Full payment in yen at the time of service is expected.

Osaka-Kobe: There are excellent medical resources in Osaka-Kobe. Physical exams can be done at Kobe Kaisei Hospital. Serious medical problems are referred to appropriate medical specialists.

Sapporo: Sapporo has two university hospitals for emergency and routine care.

Community Health

General health conditions in Japan are similar to those in the U.S. The city water supply, in all major cities, is potable. Sewage and garbage disposal facilities are adequate. The country has no special pest or vermin problems.

Air pollution has been a problem in Tokyo over the years, but an active anti-pollution program has reduced the problem significantly. Nevertheless, the summer heat and humidity will exacerbate respiratory ailments such as asthma.

In recent years, tuberculosis (TB) has been on a sharp increase in Japan. Employees and eligible family members are encouraged to have annual TB skin testing (PPD).

Preventive Measures

Endemic diseases are not prevalent and no particular preventive measures need be taken beyond updating routine immunizations. The water is not fluoridated.

No immunizations are required to enter Japan.

OKINAWA

Okinawa is the largest of the Ryukyu Islands, a chain that extends from Kyushu to Taiwan. Okinawa Prefecture (which includes the southern part of the archipelago) derives its name from the main island. Naha, the prefectural capital, is also located on the main island. The island of Okinawa is 70 miles long and on average 7 miles wide. It has over 1 million inhabitants, including about 50,000 U.S. military personnel and their families. Another 200,000 people live on the outlying islands. Naha is 800 miles southwest of Tokyo, 350 miles northeast of Taipei, and 750 miles north of Manila.

Although it is part of Japan, Okinawa has a distinct history and identity. It was once an independent kingdom, with a language and culture of its own, and paid tribute to the Chinese emperors. Even today, it differs from mainland Japan as climate, diet, customs, and other aspects of life shade into those of Southeast Asia. Okinawa officially became a part of Japan in the 1870s, and many of the Japanese emigrants to Hawaii and South America at the turn of the century actually came from Okinawa.

The island was the scene of the last major U.S.-Japanese battle of the Second World War, a battle in which about one-third of the Okinawan population was killed. From 1945 to 1972, Okinawa was under U.S. administration. The war and occupation left the Okinawan people with strong reservations about the use of military force. It is a source of friction that this small, crowded island is home to a large concentra-

tion of U.S. and-to a much lesser extent-Japan Self Defense Forces.

Climate

Okinawa's climate resembles that found along the South Carolina coast. Winters are comfortable but cool at night and at the shore. Spring and fall are delightful. Summers are long, hot, and humid. Okinawa often experiences typhoons or strong tropical storms in the fall and occasionally heavy weather in the spring. Accordingly, most buildings are low and built of concrete.

Whenever annual rainfall is less than the normal 80 inches, water rationing is necessary. As of late 2000, there had been no rationing since a 21-day period in the winter of 1994.

Okinawa has a full complement of semitropical insects and reptiles, including the habu, a very aggressive, poisonous species of snake. Although Okinawan field workers and small animals are occasional snakebite victims, no consular personnel have experienced problems with snakes in recent memory. Prudence, however, especially at night, is the watchword; 200 to 250 snakebites are reported annually. Ants, spiders, fleas, ticks, rodents, and other small pests have from time to time caused minor problems. Small lizards called geckos are a standard part of the exterior and interior landscapes.

History

Ryukyuan history has had its legendary heroes, fine artists and patrons of the arts, sages, diplomats, philosophers, the rise and fall of dynasties, and alternating periods of foreign domination and vigorous independence. Written records, beginning about A.D. 600, mention several unsuccessful attempts by China and Japan in the seventh century to require tribute and submission from this diminutive Oriental state.

The first significant date in Ryukyuan history is 1187, when Shunten, the son of a Japanese hero and an Okinawan princess, established himself as king of Okinawa. Out of respect for his legendary father, Shunten gave Japan titular jurisdiction over the islands, thus providing a basis for later Japanese claims to the Ryukyus. Under the dynasty of Eiso, who reigned from 1260 to 1299, the unified kingdom made rapid strides in cultural development, achieved economic order, and enjoyed internal peace. Tradition also ascribes to his reign the introduction of Buddhism into Okinawa.

During the first half of the 14th century, the kingdom collapsed and the island reverted to feudalism. In 1372, King Satto, usurper of the Shuri throne, reunified the kingdom, acknowledged the suzerainty of the Ming dynasty, and brought in Chinese traders and teachers. Under his rule, Ryukyus became enterprising, prosperous sea traders, voyaging as far as Korea and the Indies. During this period, the people also became students and imitators of Chinese art, philosophy, and craft.

Okinawa's "golden age" began in 1477 with the reign of King Sho-shin, whose successors carried on the grand tradition until 1609, when the good fortune came to an abrupt, disastrous end. Japan, having suffered defeat in Korea, invaded the defenseless island as punishment for Okinawa's refusal to aid the *shogun*. During the next few years, King Shonei was held hostage while the Japanese exploited the island and monopolized the trade with China. In 1611, Shonei was permitted to return to Okinawa, but only after acknowledging the suzerainty of the Lord of Satsuma and pledging that the Ryukyus would always remain a dependency of Japan.

The next two centuries marked a continuous struggle for economic survival. The Satsuma clan dominated Okinawa, controlling its foreign affairs, many aspects of its

internal administration, and its overseas trade, particularly trade with China. The people were left to make their living from the meager resources of the countryside. By chance, the sweet potato was introduced in 1606, and sugarcane in 1623. These became major crops and alleviated, to some degree, the Okinawans' struggle for survival in that era.

In 1853, Americans arrived in Naha harbor under the command of Commodore Matthew C. Perry, whose objective was to establish a base in the Ryukyus in order to open Japan to foreign trade and commerce. In 1854, Perry proposed that the U.S. assume territorial jurisdiction over Okinawa to prevent other nations from seizing it, and to provide a continuing base for American shipping in the event negotiations with Japan failed. His proposal was rejected by Washington. Perry successfully carried out his mission to Japan in March 1854, and his interest in the Ryukyus rapidly waned. However, before his departure for the U.S., he sought to preserve American interests in Naha against outside intrusion. He drafted a covenant of friendship between Okinawa and America, and the compact was signed on July 11, 1854.

Japan began to exert greater control over the Ryukyus and, in March 1879, the king abdicated. Tokyo proclaimed Okinawa a prefecture and appointed a governor and other officials to administer the islands.

Okinawa remained a prefecture of Japan, eventually with elected representatives in the Japanese national Diet, until shortly before the end of World War II in 1945. U.S. military forces invaded the island on April 1 of that year. In the Battle of Okinawa, which lasted almost three months, American casualties totalled 12,000 dead and 35,000 wounded. Japanese losses approached 100,000. A high percentage of the Okinawan civilian population lost their lives, and the Battle of Okinawa has remained a major determinant of Okinawan attitudes towards the presence of

either U.S. military forces or the Japanese Self-Defense Forces on Okinawa.

The U.S. administered the Ryukyus (except for the Amami Oshima Islands, which were returned to Japan in 1953) under the provisions of the Treaty of Peace with Japan until May 15, 1972; America then returned the administration of the islands to Japan in what is referred to as the Okinawa Reversion. The island reverted to its former status as a prefecture of Japan, and the U.S.-Japan Security Treaty and Status of Forces Agreement and Japanese national laws became applicable to Okinawa.

Public Institutions

As a Japanese prefecture, Okinawa elects a governor and legislative assembly every 4 years. Local branches of conservative and reformist political parties vie for power, with the electorate divided roughly between the two broad persuasions. Anti-base sentiments and desires for base reductions are widespread among the Okinawan people, but anti-Americanism is very rare. Individual Americans rarely encounter expressions of hostility.

Okinawa receives the largest part of its income from the Japanese central government as transfer payments; tourism contributes about 12%; and direct, military-related spending accounts for about 6% of prefectural income. The U.S. military presence is less important to Okinawa's prosperity than it once was, and some Okinawans argue that in fact it hinders the island's development prospects.

The conduct and stationing of U.S. military personnel on Okinawa are subject to the US. Japan Status of Forces Agreement (SOFA). All four services are represented. These forces assist in the defense of Japan according to the terms of the Mutual Security Treaty and have regional responsibilities that take them throughout the western

Pacific area on exercises and training missions.

U.S. Military

American life on Okinawa is heavily influenced by the presence of 50,000 U.S. military personnel and their families. The military bases offer a full range of American-style conveniences, shopping, education, and leisure activities. Some neighborhoods just outside the larger bases resemble similar communities in the U.S., with shops, restaurants, car lots, and bars catering to service members.

Although many Americans make an effort to experience Okinawan culture, most focus the vast majority of their activities on base and within the American community. This is partly attributable to the fact that, despite many years of association with Americans, relatively few Okinawans can converse easily in English. The decline of the dollar against the yen has also made it more expensive to venture off base for shopping or entertainment. At the same time, few Americans-most of them on short assignments-acquire a working competence in Japanese.

The U.S. Navy operates a hospital, and the Air Force a clinic, but the cost for civilians for nearly all forms of treatment is higher than at local hospitals. Off-base, only one hospital-Adventist Medical Center-has an English-speaking medical staff. For dental care, the only reasonable option is at an off-base clinic, such as Adventist's, because civilians are a low priority at military facilities and prices are far higher than off base.

Utilities

Electricity on Okinawa is 100 volt, 60 cycles, with American standard wiring. American appliances such as fans, microwaves, radios, lamps, TVs and VCRs usually operate without problem.

Although some TV programs on Japanese stations are bilingual, a U.S. bilingual set will not work. A special FM receiver can be pur-

chased locally for about \$100. Locally available rental videotapes are VHS. Telephone calls to the U.S. are relatively inexpensive, but internet service is somewhat costlier than in other countries since local calls are charged by the minute. During water shortages, water is rationed, and the tap water is not potable.

Food

Dairy products such as milk, cottage cheese, and sour cream are ultra-pasteurized for extended shelf life but still sometimes spoil prior to their expiration date. Japanese grocery stores offer a better selection of high-quality produce but at much higher prices. There is no need to import anything except perhaps ethnic or specialty cooking ingredients and spices. American and other wines and liquors are available.

Clothing

Bring clothing suitable for the Carolinas, including warm jackets. Clothes can be purchased at the exchange (akin to Walmart or Sears in selection, but with slightly higher prices), at local shops catering to foreigners (where prices are very high), or through catalog mail orders. Bring special sizes or brand names, or plan to shop by mail. Japanese adult clothing is expensive and comes only in small sizes. Dry-cleaning and laundry service is available on the military bases through Japanese concessions, so prices are the same as at off-base facilities.

Men: Normal US. leisure clothing is fine, bearing in mind that Japanese tend to dress conservatively.

Women: Cotton and other lightweight dresses and accessories are suitable for summer wear. Afternoon and evening wear is similar to that worn in the U.S., though depending on the occasion, more variety and less formality is seen. Scarves, jackets, and wraps are practical during the cool months. Lightweight wool suits and dresses are worn, as well as coats, jackets, and sweaters.

Children: Children dress as they would in the U.S. As with adults, shopping for children's clothing is best accomplished through local stores, and mail order. The supplies available on the island are adequate, but the range of choice in both style and price is often limited. Kids have the most luck in Japanese department stores, although prices are higher than in the U.S.

Religious Activities

Catholic, Protestant, Jewish, Orthodox, and Muslim services are offered on the military bases. Protestant services offered off-base in English include Episcopalian, Lutheran, Baptist, Evangelical, and other denominations. There are a number of Catholic churches off-base, but not all offer masses in English.

Education

Several English-language school choices are available for children. The Department of Defense operates two senior high schools, two middle schools, and several elementary schools, offering a standard kindergarten through grade 12 American public school curriculum, athletic program, and after school activities, as well as a range of special education facilities.

The Okinawa Christian School is U.S. accredited and Protestant affiliated, and offers a kindergarten through grade 12 curriculum with American teachers and texts. It functions as the de facto international school here for students who do not have access to DOD schools, but want an English-language education; nearly half of the students come from non-Christian homes. The school is located in Yomitan village, a fair distance from the Consulate General residential areas; busing is available.

New Life Academy, which is not U.S. accredited, offers a kindergarten through grade 6 academic curriculum with a Christian focus. It is located in Okinawa City near Kadena Air Base.

Several Montessori pre-schools and kindergartens for children age 2-6 have been used by recent employees. All of the military bases have day care facilities for younger children, but waiting lists are long and military dependents are given preference. Some off-base care facilities include teaching components.

Special Educational Opportunities

The following universities offer undergraduate and graduate degrees on Okinawa through military base education offices:

* Central Texas College: Associate of Applied Science (business management, child development, computer technology, legal assistant, other)

* University of Maryland: Associate of Arts (accounting, Japanese studies, management, other); Bachelor of Arts (Asian studies, business management, English, history, psychology, sociology, other); Master of Education (counseling and personnel services); teaching certification (secondary teaching)

* Michigan State University: Master of Science (community service)

* University of Oklahoma: Master of Arts (economics); Master of Human Relations; Master of Public Administration

* Troy State University: Master of Science (educational leadership, management).

Sports

Okinawa offers a variety of excellent facilities for anyone interested in taking up or playing a personal sport. Okinawan bullfighting (bloodless, between two bulls), Japanese professional baseball games during spring training, and marathon running are options. There is an active Hash House Harriers organization, with several runs/walks weekly.

The military bases offer a selection of youth activities: Cub/Boy Scouts, Brownie/Girl Scouts, soccer, peewee

basketball, Little League baseball or t-ball, touch football, dance, gymnastics, cheerleading, etc.

Touring and Outdoor Activities

Although many of the Okinawan beaches consist of ground coral mixed with sand, they are still one of the main attractions of a tour here. The better beaches on Okinawa charge an admission fee, but the military beaches are free. Wonderful islands just an hour away and accessible by ferry boats are great for snorkeling and diving. The northern half of Okinawa is sparsely populated and features a beautiful coastline of mountains and coral reefs. Unfortunately, all historical sites with the exception of ancient castle ruins were leveled in the 1945 battle. Shuri Castle, home of the most recent Okinawan monarch, has been rebuilt and is a major tourist attraction, as are other, older castle ruins. A large botanical garden and many well-maintained parks make Okinawa a family-friendly place.

Okinawa is a small, crowded island far from the mainland, so island fever can be a serious problem, especially given the prohibitively high cost of traveling off island. Northwest Airlines operates a ticketing office on Okinawa, but connections must be made in Tokyo or Osaka.

Entertainment

Japanese movie theaters show recent foreign films in the original language with Japanese subtitles, but admission is quite expensive. Video rental shops offer wide selections. A military TV station with standard U.S. programming, three Japanese TV commercial stations, and one Japanese public TV station, may be picked up off-site with roof antennas. The military also operates AM and FM radio stations. Numerous cable TV packages are available but more expensive than such services in the U.S.

Other eating establishments are found off-base at higher prices and include numerous steak houses,

Mexican, Korean, Chinese, Indian, Thai, Italian, French, Argentine, pizza, fast food, and Japanese restaurants. Prices are slightly lower than in Tokyo for comparable meals. Bars and discos abound,

though some refuse to cater to non-Japanese. American musical groups sometimes visit Okinawa, but these activities receive limited English-language publicity. Several large and impressive concert halls offer cultural events throughout the year.

Social Activities

The 50,000 military personnel and family members on Okinawa focus most of their activities on the bases. Contacts with most Americans, DOD personnel and others come from work, church, or through children's school activities. There is a small expatriate community and international women's clubs where English is spoken are active. Other international contacts are more difficult, though not impossible, without Japanese language ability.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Northwest and United Airlines offer several flights daily from the U.S. to Tokyo. American, Delta, and Continental Airlines also provide service. Flight time varies from 9 to 14 hours, depending on the route.

All international flights (except China Airlines, which operates between Japan and Taiwan out of Haneda) arrive and depart from the Tokyo International Airport at Narita. American airlines, Northwest and United are served at terminal 1. Continental Airlines and Delta Air Lines are served at Terminal 2. Clearance at Customs, Immigration, and Quarantine (CIQ) is fast and courteous.

Public transportation via airport limousine bus is recommended; it can be taken to a number of downtown hotels, including the Okura

and ANA. Train routing is complicated and taxi fares are prohibitive. Person using public transportation facilities into Tokyo are encouraged to limit accompanying baggage to two pieces plus one carry-on in view of limited baggage space available on the carriers.

Travelers arriving from the U.S. need no special immunizations. Those arriving directly from other areas of the world must make certain they have appropriate inoculations to enter Japan.

A valid passport and an onward/return ticket are required. A visa is not required for tourist/business stays up to 90 days. For information about the Japanese visa waiver for tourists, Japan's strict rules on work visas, special visas to take depositions, and other visa issues, travelers should consult the Consular Section of the Embassy of Japan at 2520 Massachusetts Ave. N.W., Washington, D.C. 20008, tel. (202) 238-6700, or the nearest Japanese consulate. In the United States, there are Japanese consulates in the following cities: Agana (Guam), Anchorage, Atlanta, Boston, Chicago, Denver, Detroit, Honolulu, Houston, Kansas City, Los Angeles, Miami, New Orleans, New York, Portland (Oregon), Saipan (Northern Marianas), San Francisco and Seattle. Additional information is available via the Internet on the Embassy of Japan home page at <http://www.embjapan.org/>.

U.S. citizens transiting Japan should ensure that their passports and visas are up to date before leaving the United States. Many Asian countries deny entry to travelers whose passports are valid for less than six months. It is not usually possible to obtain a new U.S. passport and foreign visa during a brief stopover while transiting Japan. Airlines in Japan will deny boarding to Americans who seek to transit Japan without the required travel documents for their final destinations in Asia.

It is illegal to bring into Japan some over-the-counter medicines com-

monly used in the United States, including inhalers and some allergy and sinus medications. Japanese customs officials have detained travelers carrying prohibited items, sometimes for several weeks. Some U.S. prescription medications cannot be imported into Japan, even when accompanied by a customs declaration and a copy of the prescription. Japanese physicians can often prescribe similar, but not identical, substitutes. Lists of Japanese physicians are available from the U.S. Embassy in Tokyo through its web site, from U.S. consulates in Japan, and from the Department of State, Bureau of Consular Affairs, Office of American Citizens Services. Persons traveling to Japan carrying prescription medication that must be taken daily should consult the Japanese Embassy in the United States before leaving the U.S. to confirm whether they will be allowed to bring the particular medication into Japan. Japanese customs officials do not make on-the-spot "humanitarian" exceptions for medicines that are prohibited entry into Japan.

U.S. citizens resident in or visiting Japan are encouraged to register at the Consular Section of the U.S. Embassy in Tokyo or one of the five U.S. Consulates in Japan, where they may also obtain updated information on travel and security within Japan. Registration forms are available via the home pages or by fax from the U.S. Embassy or one of the U.S. Consulates. Online registration is available for the areas served by the Embassy and our Consulate in Naha, Okinawa through the respective web sites. Travelers and residents can also sign up for an e-mail Community Security Update newsletter through the Embassy web site at <http://www.tokyoacs.com>. Alien registration formalities required under Japanese immigration law are separate from U.S. citizen registration, which is voluntary but allows U.S. consular officials to better assist American citizens in distress. Registration information is protected by the Privacy Act.

The U.S. Embassy in Tokyo is located at 1-10-5 Akasaka, Minato-ku, Tokyo 107-8420 Japan; telephone 81-3-3224-5000; fax 81-3-3224-5856. Recorded visa information for non-U.S. citizens is available at the following 24-hour toll phone number: 0990-526-160. The U.S. Embassy in Tokyo's web site is <http://www.tokyoacs.com>. Please see also the U.S. Commercial Service in Japan's web site at <http://www.csjapan.doc.gov>.

The U.S. Consulate General in Osaka-Kobe is located at 2-11-5 Nishitenma, Kita-ku, Osaka 530-8543; telephone 81-6-6315-5900; fax 81-6-6315-5914. Recorded information for U.S. citizens concerning U.S. passports, notarials and other American citizens services is available 24 hours at 81-6-6315-5900. Recorded visa information for non-U.S. citizens is available at the following 24-hour toll phone number: 0990-526-160. Its web site is <http://synapse.senri-i.or.jp/amcon/>.

The U.S. Consulate General in Naha is located at 2564 Nishihara, Urasoe, Okinawa 901-2101; telephone 81-98-876-4211; fax 81-98-876-4243. Its web site is <http://www.congennaha.org>.

The U.S. Consulate General in Sapporo is located at Kita 1-Jo Nishi 28-chome, Chuo-ku, Sapporo 064-0821; telephone 81-11-641-1115, fax 81-11-643-1283. Its web site is <http://usembassy.state.gov/sapporo/>.

The U.S. Consulate in Fukuoka is located at 2-5-26 Ohori, Chuo-ku, Fukuoka 810-0052; telephone 81-92-751-9331; fax 81-92-713-9222. Its web site is <http://usembassy.state.gov/fukuoka/>.

The U.S. Consulate in Nagoya is located at the Nishiki SIS Building, 6th Floor, 3-10-33 Nishiki, Naka-ku, Nagoya 460-0003; telephone 81-52-203-4011; fax 81-52-201-4612. The U.S. Consulate in Nagoya offers only limited emergency consular services for U.S. citizens. The U.S. Consulate General in Osaka-Kobe handles all routine matters. A consular officer from the U.S. Consulate

General in Osaka-Kobe visits the U.S. Consulate in Nagoya on the second Wednesday of every month. During those visits the consular officer provides consular services to U.S. citizens by appointment. To make an appointment for consular services in Nagoya, please contact the U.S. Consulate in Nagoya at the number listed above. The U.S. Consulate in Nagoya's web site is <http://usembassy.state.gov/nagoya>

Pets

All dogs and cats imported into Japan are subject to a minimum quarantine of 14 days to a maximum of 180 days at the Animal Quarantine Facility of the arrival airport (Shin-Chitose, Narita, Haneda, Kansai, Fukuoka, Kagoshima, Naha airports).

Upon arrival, you must present two types of documents to the Animal Quarantine Office at the airport: 1. Health Certificate issued or endorsed by the government agency, indicating that your pet is rabies- or leptospirosis-free. 2. Rabies Vaccination Certificate, including the date, type and validity of the vaccination. The vaccination must be administered over 30 days prior to entry into Japan and still be within the valid period. You will also need to fill in an import quarantine application form at the Animal Quarantine Office.

When your pet is not hand carried, the importers need to notify the Animal Quarantine Services in charge of the importing airport from 70 to 40 days prior to the arrival. Advance information about the pet should include the following: species of animal, total number, sex, age, weight and country of origin, estimated date of arrival, name and address of consignee and consignor, date and port of embarkation, flight information, and any remarks you would like to put for their information.

The owner of the dog/cat is not required to be present in order to apply for quarantine inspection. Such application may be made by proxy. The Quarantine Service

charges a detention fee for pets, which includes boarding, food and care while in quarantine, at a rate of around Y2,000-Y2,500 per day for a cat and Y3,000-Y3,500 for a dog, depending on the size. In relation to your pet import, other costs such as transportation fee to kennel custom clearances and import tax will be involved.

Importing pets from countries other than the U.S. may have different requirements. Please contact the Animal Quarantine Office at Narita at 81-476-32-6664 or <http://www.animal-quarantine-service.go.jp>.

Firearms and Ammunition

Local law prohibits the purchase and/or importation of personally owned firearms.

Currency, Banking, and Weights and Measures

The unit of currency in Japan is the yen. Bills are in denominations of Y10,000, Y1,000. Coins are Y500, Y100, Y50, Y10 and Y1. Japanese currency floats on international markets so exchange rates can vary dramatically. In calendar year 2000, the exchange rate has averaged about Y107 to the U.S. dollar.

The use of credit cards is not widespread, particularly outside major cities. While there are ATMs in Japan, most are not open 24 hours a day or do not accept a U.S.-based card.

Japan uses the metric system of weights and measures.

Disaster Preparedness

Japan is faced with the ever-present danger of deadly earthquakes and typhoons. Japan is one of the most seismically-active locations in the world; minor tremors are felt regularly throughout the islands. While responsibility for caring for disaster victims, including foreigners, rests with the Japanese authorities, one of the first things a traveler should do upon arriving in Japan is to learn about earthquake and disaster preparedness from hotel or local government officials. Additional details

on self-preparedness are available via the Internet on Embassy Tokyo's web site at <http://www.tokyoacs.com>

KAZAKSTAN

Republic of Kazakstan

Major City:

Almaty

Other Cities:

Astana, Chimkent, Karaganda, Pavlodar, Semipalatinsk

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated June 1996. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The Republic of **KAZAKSTAN** celebrated its tenth anniversary of independence in 2001. Kazakstan is the ninth largest country in the world, but has a relatively small population of 15 million. In 2000, the Government of Kazakstan completed its move to the new capital Astana. The U.S. Embassy is still located in Almaty, which remains the country's largest city, business center and transportation hub. Many Americans also travel to Atyrau and

Aktau, cities in the heart of Kazakstan's oil producing region on the Caspian Sea

As in several other former Soviet republics, ethnic conflict has erupted into violence. In Kazakstan, the conflict is between the Kazakhs and Russians. The Kazakhs represent 53% of the population; Russians 30%.

MAJOR CITY

Almaty

Almaty (Formerly Alma-Ata) was the capital of Kazakstan from 1929 to 2000. It is the largest city with over 1.3 million residents. Almaty (apple place) is located just north of the Trans-Alay Alatau Mountains, near the border with Kyrgyzstan. The city is situated at an altitude of 2,300–3,000 feet above sea level.

Modern Almaty was founded by the Russians in 1854 and was settled by a variety of ethnic groups, but mainly Russians and Ukrainians.

In the 1930s, the population increased dramatically after the construction of the Turkish-Siberian Railroad. Industrial development followed and the capital is now a major industrial center.

Education

The Almaty International School is a private, coeducational institution for children from preschool to grade eight. The University of Nebraska provides correspondence courses for grades nine through twelve. The school's curriculum is similar to U.S. schools.

Recreation and Entertainment

The mountainous area in which Almaty is located offers much of interest to the tourist. Chalets on the mountain slopes may be rented. Mountaineering, skiing, and winter sports are available. In the mountains, 12 miles from Almaty, is the Medeo Winter Sports Complex, where many skating records have been set.

Visits to other areas of Kazakstan should be made by air; the distances are great. Lake Balkhash is a 45-

Building in Almaty, Kazakhstan

minute flight from Almaty. Part freshwater, part seawater, the lake is 400 miles long. Near Karaganda is Baykonur, which was the site of a Soviet space center. Space flights, with cosmonauts aboard, were launched from here.

Almaty is a pretty city with well-thought out urban planning. Trees line the wide streets and there are many parks for the residents to enjoy. The city's natural beauty is enhanced by the nearby mountain range. Built in 1907, the former Russian Orthodox Cathedral is the only historical building of note. Made of wood, it is the second highest such building in the world.

Kazakhstan's academic and cultural life is centered in Almaty. Located here are 15 institutions of higher learning, including Kazakh State University, with 13,000 students, and many research organizations. Several museums have been established, including the Kasteyev Kazakh State Art Museum containing 20,000 exhibits and a library of 30,000 volumes, and the Central State Museum of Kazakhstan, with 90,000 exhibits. The State Public Library, founded in 1931, has almost 3.5 million volumes in its collection. The city also has a botanical garden.

Cultural performances are offered by the Abay Opera and Ballet Theatre, Avez Drama Theatre, Lermontov Russian Drama Theatre, and the Uighur and Korean Theatre of Music and Drama. Reflecting the ethnic diversity of Almaty, performances are given in several languages.

OTHER CITIES

With a population of 313,000 (1999 est.), **ASTANA** became the capital of Kazakhstan in 1997. Officially, the move of the government from Almaty to Astana was due to Almaty's susceptibility to earthquakes and its proximity to the Chinese border. However, the government also hopes that relocation of the capital will both boost the economy in the northern regions and ease ethnic divisions between the predominantly Russian north and the Kazakh south.

Though much work is yet to be done in building the city as a more prosperous capital, Astana is set to become the most important cultural and scientific center of Kazakhstan. The L.N. Gumilyov Eurasian University and Akmola State Medical Academy are located in Astana, as

is the Kazakh Scientific-Research Institute of Grain and Agricultural Products. In the past few years, several major hotels have been built and the city now offers a modern trade center; Zhastar, a sports and entertainment complex; Kinderdorf, a children's park; two drama theatres; and a branch of the Union of Writers and Artists of Kazakhstan. A memorial to the famous Russian poet A.S. Pushkin is also located in Astana and construction of a national museum and library is already underway.

The surrounding Central Region offers a variety of sight-seeing excursions. Lake Balkash, is one of the largest lakes in the world and is half saltwater, half freshwater. The Bayan-Aul National Park has rock drawings, stone sculptures, and hiking opportunities around clean, sparkling lakes.

CHIMKENT (also spelled Cimkent) is located in southern Kazakhstan by the Turkestan-Siberian Railroad line, approximately 75 miles north of Tashkent, Uzbekistan. Established in the 12th century, Chimkent is now a major industrial, cultural, and rail transportation center. The city has a population of 404,000.

Founded in 1856, **KARAGANDA** has a population of 596,000 and is Kazakhstan's second largest city. It is a sprawling city, containing more than 300 square miles. Large coal deposits, major iron and steel works, and a railway link have contributed to the city's growth and importance. Karaganda has five institutions of higher education, including a university established in 1972.

PAVLODAR, with a population of 349,000, is 180 miles northwest of Semipalatinsk. Located in a fertile farming region, since the mid-1960s it has developed into a major industrial center with several heavy industries and an oil refinery.

SEMIPALATINSK, located in the northeastern section of the country near the Russian Federation border,

has a population of 342,000. Founded in 1718, the gates of the old fort still exist. Semipalatinsk's growth has been due to its location at the junction of trade, caravan, and railway lines. The city is known for its food processing and meat packing industries. In the late 1980s, its factories produced one-third of Kazakstan's consumer goods. Residents of Semipalatinsk have been plagued with health problems that some attribute to nuclear fall out. In a forty year span, 1949–1989, 500 nuclear devices were detonated at the nuclear test site here.

COUNTRY PROFILE

Geography and Climate

Kazakstan is the second largest (after the Russian Federation) of the former Soviet republics. At 1,049,200 square miles, it represented 12 percent of the former U.S.S.R.'s total land area and is approximately four times the size of Texas. The country borders the Russian Federation to the north; China to the east; the Caspian Sea to the west; and Kyrgyzstan, Turkmenistan, and Uzbekistan to the south.

The country has a diversified landscape. Lowlands account for more than one-third of its territory, mountainous regions for one-fifth, and the rest consists of hilly plains and plateaus. There are also several sparsely inhabited desert regions. Khan-Tengri Peak on the Kazakstan-Kyrgyzstan border is the highest point.

The area around Almaty is subject to earthquakes and mud slides. Earthquakes in 1887 and 1911, along with a serious mud slide in 1921, resulted in much destruction. A dam, built in 1966, has reduced considerably the chances of another catastrophic mud slide.

Most of Kazakstan's climate is continental with hot summers and cold winters. However, the different elevations result in wide variations in temperature and precipitation. In Almaty, daytime temperatures in July average 81°F; in January the average is 23°F.

Population

The estimated population of Kazakstan is approximately 16,820,000 (2000). Kazakhs (a Turkish people with Mongol features) make up 46 percent of the population; Russians, who live mainly in the north, comprise 35 percent; and Germans, residing mostly in the northeast, three percent. More than 100 other ethnic groups live in the country.

Deaths of Kazakhs during the U.S.S.R.'s collectivization programs and purges plus the immigration of many ethnic groups has resulted, until recently, in the Kazakhs being a minority in their own country. Much of the German immigration resulted from forced deportation by Stalin as German troops invaded Russia in the early 1940s. Recently, many Germans living in Kazakstan have migrated to Germany.

Russians were sent to Kazakstan to work in the industrial sector and to suppress Kazakh nationalism. The large Russian population has led to ethnic conflict with the Kazakhs. There were riots in December 1986, in 1989 when Kazakh was declared the official language, and again in 1991 when Kazakhs became leery about Russian Federation designs on the mostly Russian inhabited area along the northern border. Independence and the resulting fall of Kazakstan's Russians as the more privileged class have led to an increase in ethnic tension.

Russian was the official language for many years, but in 1989 a law was passed declaring Kazakh the official language. Russian is still commonly used. Uighur, German, and Korean are spoken by small portions of the population.

Most Kazakhs are Sunni Muslims of the Hanafi school. Kazakstan has 60 mosques and 230 Islamic religious communities. An Islamic institute is located in Almaty. The major Christian denomination is Russian Orthodox, attended by the Slavic minorities. Protestant churches, mainly Baptist, are also found.

Government

Kazakstan's declared its sovereignty in October 1990, and its independence on December 16, 1991, one of the last two Soviet republics to do so. The Kazakh Soviet Socialist Republic then adopted the name Republic of Kazakstan, and United Nations membership followed on March 2, 1992. The Kazakh Communist Party disbanded seven months later.

Kazakstan is a constitutional republic with a strong presidency. The president is the head of state and the commander in chief of the armed forces. Nursultan Nazarbayev, an ethnic Kazakh and former leader of the Communist Party, was elected as president in 1990 and reelected in 1999. The prime minister chairs the Cabinet of Ministers and serves as Kazakstan's head of government. There are four deputy prime ministers, 14 ministers, and 11 chairmen of state agencies. Kasimzhomart Tokayev, the former Minister of Foreign Affairs, has been Prime Minister since 1999.

Kazakstan has a bicameral parliament, comprised of a Lower House (the Mazhilis) and upper house (the Senate). The 77-seat Mazhilis is popularly elected by single mandate districts, with 10 members elected by party-list vote. The Senate has 39 members. Two senators are selected by each of the elected assemblies (Maslikhats) of Kazakstan's 16 principal administrative divisions. The president appoints the remaining seven senators.

Political parties have traditionally played little role in local politics, where personal and family ties are

more important. Several new parties formed and were registered in 1999 following passage of a constitutional amendment that created 10 new seats in the Mazhilis attributed by party-list voting.

Arts, Science, Education

Education is free and compulsory between the ages of seven and 14. More than 60 percent of primary and secondary students are taught in Russian. However, since Kazakh was established as the official language in 1989, there have been attempts to increase the number of schools using it as the language of instruction. There are 55 institutions of higher education, including three universities—Karaganda State University, Kazakh State University, and the Technical University at Karaganda Metallurgical Combine.

Commerce and Industry

Kazakstan has vast quantities of a variety of natural resources. Almost one-fifth of the coal mined in the former Soviet Union was from here and the country has major oil reserves, much of it not yet exploited. A focus on oil production and increased prices in the world market provided a much needed boost to the economy in 2000. In that year, the GDP grew nearly 10%.

Foreign investments in oil and mineral exports have been significant for the industry with over \$12 billion in investments since 1993. The Tengiz oil field, developed by the TengizChevroil joint venture, established by the Government and Chevron in 1993 and subsequently expanded to include ExxonMobil and Lukarco, is the flagship foreign investment project in Kazakstan. Kazakstan's current oil production is not that vast, almost 800,000 barrels/day, but offshore oil discoveries in the North Caspian Sea look promising.

Kazakstan has become a major regional grain exporter, supplying markets in Russia, Iran, China and other Central Asian countries. Important agricultural crops are grain, meat, and cotton.

With unemployment at about 12.8% in 2000, the government is taking an active role in seeing that foreign firms give preference to Kazakstanis in their employment practices. The government has also tightened its policy on foreign labor, which has made it more difficult for foreign companies to obtain work permits for expatriate employees.

Transportation

Several airlines have frequent flights to and from Kazakstan.

Railroad service is also available within Kazakstan and neighboring major cities.

Roads are in poor repair, especially in rural areas. The road between Almaty and Bishkek, Kyrgyzstan is especially treacherous at night or during poor weather. Americans and other travelers have been killed in traffic accidents on that road, and travel at night is not recommended. Street lighting, especially on side streets, may be turned off at night. Drivers often ignore lane markings. Potholes are common, and they are often dangerously deep. Pedestrians frequently dart out in front of cars. Visitors should use special caution if driving at night. Defensive driving is a must because many local drivers do not follow traffic laws. Accidents involving severe injury and/or death are common. Traffic police have reportedly stopped cars to seek bribes on main city streets and at periodic checkpoints on major highways.

Travelers should be particularly careful when using public transportation and taxis. Buses tend to be very crowded and can be unsafe and unreliable. Due to the danger of theft or assault, travelers should be selective regarding which taxi they contract and always avoid entering

a cab that already contains persons other than the driver.

Communications

Telephone service is considered fair to good. Phone service to the other former Soviet republics is by land line or microwave; to other foreign countries, by the Moscow international gateway switch.

Kazakh Radio broadcasts in several languages: Kazakh, Russian, Uighur, German, and Korean. State TV broadcasts informational programs and films in both Kazakh and Russian languages, with filler shows about Kazakh music and dance. In the cities, independent television stations are popular. Their main fare is poorly-dubbed pirated American films and cartoons. They also focus on local news shows. Talk shows with interesting discussions but uninspiring production values are also popular. Televised classified advertising is also a favorite among the people.

Kazakstanis are avid newspaper readers, but the print media is in poor financial health. Most newspapers have drastically reduced their circulation due to the cost and difficulty in obtaining paper. The government supports freedom of the press. Investigative reporting and political commentaries are popular. English-language and German-language newspapers and magazines are available at newsstands in major hotels and the airports.

Health

Medical care has declined since independence and does not meet Western standards. There is a severe shortage of basic medical supplies, including disposable needles, anesthetics, and antibiotics. U.S. citizens in frail health are strongly advised not to visit Kazakstan.

Several regions of the country have high rates of infant deaths, birth defects, and illness. Most severely affected are the areas around the

Aral and Caspian Seas, which suffer from pesticide damage; the area around Semipalatinsk, which was a nuclear test site; and in industrialized cities, which have pollution from their factories.

NOTES FOR TRAVELERS

Passage, Customs and Duties

A valid passport and visa are required. The Kazakstan Embassy in Washington, D.C., issues visas (based on an invitation from an individual or organizational sponsor in Kazakstan). The U.S. Embassy in Almaty does not issue letters of invitation to citizens interested in private travel to Kazakstan. All travelers, even those simply transiting Kazakstan for less than 72 hours, must obtain a Kazakstan visa before entering the country. Travelers may also be asked to provide proof at the border of their onward travel arrangements. Travelers transiting through Kazakstan are reminded to check that their visas allow for sufficient number of entries to cover each transit trip and to check the length of validity of the visa. Crossing the land border to and from the neighboring Kyrgyz Republic can result in delays or demands from border officials to pay fines. For complete information concerning entry requirements, U.S. citizens should contact the Kazakstan Embassy at 1401 16th Street NW, Washington, D.C. 20036, telephone (202) 232-5488. The Kazakstan Embassy may also be reached by Email:kazak@intr.net, and at their home page: <http://www.kazakhstan-embassy-us.org>.

Several border areas with China and cities in close proximity to military installations require prior permission from the government to enter. In 2001, the government declared the following areas closed to foreigners: Gvardeyskiy village, Rossavel village, and Kulzhabashy railway station in Zhambyl Oblast; Bokeyorda and Zhangaly districts in Western Kazakstan Oblast; the

town of Priozersk and Gulshad village in Karaganda Oblast; and Baykonur, Karmakshy, and Kazakly districts in Kyzylorda Oblast. Americans traveling within Kazakstan have on occasion reported local officials who demand documentation authorizing travel within their area of jurisdiction, despite appropriate registration in Almaty or Astana. Americans should report any trouble with local authorities to the U.S. Embassy in Almaty.

There are local Kazakstani registration requirements. All travelers staying for more than three business days must register with the Office of Visas and Registration (OVIR). OVIR offices are located in Almaty, Astana and all other major cities. Visitors who do not register may have to pay fines upon departure. All visitors who plan to stay more than 30 days must also present to the OVIR office within 30 days of arrival a certificate indicating a negative HIV test conducted no more than one month before registration. Evidence of an HIV test performed abroad is acceptable. Testing may also be done at the Center for the Prevention and Control of AIDS (7 Talgarskaya Street, Almaty).

Tenge, Kazakstan's currency, can be exported in amounts up to \$10,000 without written certification on the origin of funds. For legal requirements on the export of tenge, travelers should consult with local Customs officials. In practice, travelers have been erroneously charged duty on tenge exports or asked to surrender tenge before departing the country. Kazakstani customs authorities may enforce strict regulations concerning export from Kazakstan of items such as antiquities. It is advisable to contact the Embassy of the Republic of Kazakstan in Washington for specific information at 1401 16th Street NW, Washington, D.C. 20036, telephone (202) 232-5488.

Americans living in or visiting Kazakstan are encouraged to register at the U.S. Embassy Consular Section in Almaty and obtain

updated information on travel and security within Kazakstan. Registration with the Embassy is different from Kazakstani OVIR registration. It can help the U.S. Embassy contact you in case of an emergency, and it can streamline replacement of a lost or stolen passport. The U.S. Embassy in Almaty is 11 hours ahead of U.S. Eastern Standard Time and is located at 99/97A Furmanova Street, tel. 7-3272-63-39-21, after-hour emergencies 7-3272-50-76-27, fax 7-3272-50-62-69, and e-mail: consularalmaty@state.gov.

Currency, Banking and Weights and Measures

Kazakstan remains largely a cash economy. Traveler's checks and credit cards are not widely accepted, except at large hotels and restaurants catering to international visitors. U.S. dollars can easily be exchanged for the local currency (tenge) at local and authorized currency exchanges, but all denominations of U.S. dollar bills must have been issued after 1990 and be in good condition (not worn or torn and without any writing or marks).

Disaster Preparedness

Kazakstan, especially the mountainous southeast region, is an earthquake-prone country. The U.S. Department of State has ranked the earthquake threat level within Almaty as a Level 4 (the highest level assigned). Building practices within Kazakstan do not generally meet U.S. seismic standards. In addition, local authorities do not have sufficient resources to respond to a large-scale disaster. American citizens traveling to Kazakstan are encouraged to register with the U.S. Embassy Consular Section to assist in contacting them in the event of an emergency. General information about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov>.

KIRIBATI

Republic of Kiribati

Major City:

Tarawa

Other Cities:

Abemama, Butaritari

INTRODUCTION

The main wave of Micronesian settlement to the islands now known as **KIRIBATI** came from the Samoa Islands sometime between the 11th and 14th centuries, but the Samoans were probably not the first settlers. European contact began in 1537, when Kirimati (Christmas Island) was sighted by the Spanish. Commercial activity by the English began in the early 19th century. By the 1850s and 1860s, trade ships were visiting the islands regularly. The British declared a protectorate over the Gilbert and Ellice island groups in 1892. During World War II, the Japanese occupied the Gilberts until 1943. In 1974, the Ellice island group split away and became the independent nation of Tuvalu. Self-government for the Gilberts was established on July 12, 1979, and the islands became the independent Republic of Kiribati.

MAJOR CITY

Tarawa

Tarawa, the capital of Kiribati, is actually a small atoll with government offices located on south

Tarawa at Betio, Bairiki, and Bikenibeu. Tarawa lies among the nation's western island group between the larger islands of Maiana and Marakei.

Tarawa has a population of about 28,000. Between the 1950s and the 1980s, Tarawa's population increased ten-fold. An estimated 40% of the country's entire population lives on Tarawa, and overcrowding of the island is a major concern. The government has begun a resettlement program to eventually relocate almost 5,000 people from the densely populated western atolls (especially Tarawa) to the sparsely populated or uninhabited Line Islands and Phoenix Islands. During 1988–93, some 4,700 people were resettled on the Teraina and Tabuaeran atolls in the eastern Line Islands.

Most of the country's roads are located on Tarawa. The Nippon Causeway, completed in 1987 with Japanese assistance, replaced ferry service between the town of Bairiki and Betio (an islet) on Tarawa. A series of similar causeways linking north and south Tarawa are under construction.

Betio is the main port for western Kiribati and is equipped to handle containers. The Pacific Forum Line

links Tarawa with other shipping routes. The airport at the town of Bonriki on Tarawa handles international flights.

An industrial center was established in 1990 at Betio with aid from Great Britain. Manufactured items include clothing, shoes, furniture, leather goods, and kamaimai (coconut liquor). The Foundation for the Peoples of the South Pacific, located at Bairiki, provides technical assistance for agriculture and nutrition programs.

Recreation and Entertainment

Tourism is underdeveloped because of a lack of regular transport. Tarawa has a visitors' bureau, and there is a hotel on Betio. However, the government has singled out Kirimati, in the eastern Line Islands, for tourist development. The government is encouraging ecotourism, game fishing, and the promotion of historic battle sites of World War II. The Japanese constructed a fortress on Betio, which was the site of a 1943 battle resulting in 4,000 Japanese, 1,000 American, and no Kiribati casualties. Soccer is a popular recreational sport, and traditional singing and dancing are practiced. The National Library and Archives in Tarawa has 50,000 volumes. Items are in storage at the National

Archives in anticipation of the formation of a national museum to be built in Tarawa.

OTHER CITIES

Robert Louis Stevenson was one of the most famous temporary residents in **ABEMAMA**. He came to the island in 1889 with his wife. As the story goes, she was so taken by the place that she took it upon herself to design a flag for the island, which featured the picture of a shark wearing a crown. Of course, the flag was never officially used. The atoll is one of the Gilbert islands with a population of about 3,200 (1990 est.). With the exception of two major resorts, it remains fairly undeveloped. As such it provides an opportunity to enjoy the natural beauty of the island and experience the original I-Kiribati culture. Nature lovers should try to catch a sight of the unusual tiny yellow "barking" frog that is believed to be helpful in controlling the mosquito population. Abemama is about 50 mi. southwest of Tarawa and can be reached by air or boat.

The lush, green island of **BUTARITARI** (formerly Makin Island) is worth a visit for the adventuresome who don't mind a little rain. Also located in the Gilbert Islands, Butaritari has a population of over 3,700 (1990 est.) and receives about 157" of rain a year. Several war relics, included downed aircraft can be seen around the island as what remains from a 1942 US Marine operation. The American film, "Gung Ho," basically retells the story of this operation, starring Ronald Regan. Visitors will want to find an opportunity to sample fried breadfruit while on the island, since this particularly variety does not exist anywhere else. A large, beautiful lagoon with coral reefs can be explored from the island.

COUNTRY PROFILE

Geography and Climate

The islands of Kiribati are situated around the intersection of the International Date Line and the Equator. Scattered over 2 million square miles are 33 islands with a total land area of 277 square miles. Kiribati has more sea area per person than any other country. There are three main island groups: the seventeen Gilbert Islands, the eight Line Islands, and the eight Phoenix Islands.

The islands are coral atolls built on submerged volcanic chain and seldom rise more than 13 feet above sea level. Kirimati (Christmas Island), in the Line Islands, is the largest atoll in the world, with an area of 481 square miles. The atoll was used as a nuclear test site by the British from 1957 to 1962, and by the US in 1962.

Kiribati has an equatorial climate, with high humidity during the November–April rainy season. Although the islands lie outside the traditional South Pacific tropical storm belt, there are occasional gales and even cyclones. Annual rainfall varies from 40 inches near the Equator to 120 inches in the extreme north and south. Daily temperatures range from 77°F to 90°F, with very little fluctuation during the year. The islands have prevailing easterly trade winds.

Population

Kiribati has a population of approximately 87,000, unevenly distributed among the islands. Some 40% of the population is concentrated on Tarawa, while some of the islands of the Phoenix and Line groups are uninhabited. Since the 1980s, the government has resettled people from Tarawa to Teraira and Tabuar-ean in the Line Islands because of overcrowding.

Nearly all of the country's population is Gilbertese or Micronesian. Polynesians (mainly from Tuvalu) account for less than 0.5%, and Europeans and people of mixed races, 0.6%.

Nearly all the population is Christian, the largest sects being the Kiribati Protestant Church and the Roman Catholic Church. Religious minorities include Seventh-Day Adventists, Church of God, Assemblies of God, Mormons, and Baha'is. Christianity is an integral part of social interaction.

The main languages spoken are Gilbertese (I-Kiribati) and English. The official language is English, but it is seldom used on the outer islands. I-Kiribati is an Austronesian language related to many other in the South Pacific.

Government

Kiribati became an independent democratic republic within the Commonwealth of Nations in 1979.

Kiribati has a unicameral chamber legislature called the Maneaba ni Maungatabu House of Assembly). There are 41 members: 39 are directly elected for four years; the Attorney-General is an ex-officio member; and there is one representative of the Banaban community (inhabitants of Ocean island). The president is head of both state and government, and is also directly elected. The president appoints a cabinet from the incumbent members of the Maneaba, with which he shares executive power.

In 1994, Teburoro Tito, head of the Maneaban Te Mauri Party, was elected president.

The judicial system consists of the High Court, a court of appeal, and magistrates' courts. All judicial appointments are made by the president.

Though political parties do exist, they are more similar to informal coalitions in behavior. They do not have official platforms or party

structures. Most candidates are considered as independents.

Kiribati's flag shows a blue and white heraldic representation of the Pacific waters, with a golden sun rising on a red background. There is a golden frigate bird in flight over the sun.

Arts, Science, Education

Education is compulsory between the ages of 6 and 15. For many residents, a primary-level education is all that is needed to succeed in a subsistence community. Secondary school students take the New Zealand School Certificate. Tarawa Technical Institute conducts courses in technical and vocational subjects. A nurses' training center operates at the hospital in Tarawa. The Marine Training Centre trains about 200 students each year for working on foreign merchant shipping lines. There is a state-operated college for primary school teachers, and a satellite center of Fiji's University of the South Pacific at Tarawa.

Commerce and Industry

The people of Kiribati depend on the sea for their livelihood. Individuals fish for their family's food, and commercial fishing is also important. A hatchery provides bait fish to domestic commercial fishing vessels. The government also sells fishing licenses to foreign fishing vessels, and the Royal New Zealand Air Force patrols the vast sea area to discourage poaching. The economy relies on foreign aid supplied by the United Kingdom, New Zealand, Japan, and Australia. Foreign aid typically accounts for 25–30% of the domestic economy. Money sent home by men working overseas on oceangoing vessels accounts for a significant portion of the cash economy. The economy was once reliant on phosphate exports from the island of Banaba until production ceased in 1979. Since then

Kiribati has relied on fishing, subsistence agriculture, and exports of copra (dried coconut meat). Coconuts are one of the few natural resources on the islands, due to poor soil quality and occasional droughts.

Tourism is one of the largest domestic activities. Between 3,000 and 4,000 visitors per year provide \$5–\$10 million in revenue. Attractions include World War II battle sites, game fishing, ecotourism, and the Millennium Islands, situated just inside the International Date Line and the first place on earth to celebrate every New Year. The government is also promoting Kirimati (Christmas Island) in the Line Islands as a tourist destination for game fishing and bird watching.

With a per capita GDP of about \$850 (2000 est.), Kiribati is one of the poorest nations in the world.

Transportation

Kiribati has about 400 miles of roads, mostly on Tarawa. The Nippon Causeway opened in the 1980s, connecting Betio and Bariki. Other causeways linking north and south Tarawa were built in the 1990s. There is no rail, river, or lake transport, but canoes travel across the lagoons frequently. Motorcycles are the most popular land vehicles.

Roads in Tarawa, while satisfactory in some areas, are generally in need of repair. After heavy rains, some road sections experience temporary flooding. Vehicle traffic proceeds at a relatively slow rate. Drinking and driving is a common practice, especially on the weekends. Kiribati was a former British protectorate, and cars drive on the left side of the road.

The main islands have airstrips that are served from Tarawa. Passenger ferries also go to many of the smaller islands.

Communications

Radio Kiribati, operated by the government, is the country's only radio station, transmitting in I-Kiribati and English and broadcasting a few imported Australian shows. Tarawa has an earth station to transmit and receive satellite communications. Kiribati is on the Peacesat network, which provides educational transmissions from Suva, Fiji.

There is no commercial press; all publications are government- or church-sponsored. The government publishes the weekly *Atoll Pioneer*; *Te Itoi ni Kiribati* is published by the Roman Catholic Church; and *Te Kaotan te Ota* is published monthly by the Protestant Church.

Health

The Central Hospital in Tarawa, with 160 beds, is the main health care facility. There are four medical districts, each with its own medical officer and staff. Each inhabited island has its own medical dispensary, and a medical radio network links all the islands.

Tuberculosis is the most serious health problem on the islands. Other problems include leprosy, filariasis, and dysentery. Vitamin A deficiency, causing night blindness and xerophthalmia, occurs often among children in Kiribati. There was a cholera outbreak in the 1970s.

As the role of cash in the economy has grown, the level of nutrition has declined. Malnutrition, obesity, diabetes, and cardiovascular problems have increased among urbanized islanders, because many have given up the traditional nutrient-rich diet for store-bought rice, canned food, and sweets. Inhabitants of the outer islands have largely avoided these nutritional problems.

All water should be regarded as a potential health risk. Visitors should therefore refrain from drinking any water that is not bottled, boiled or otherwise sterilized. Vegetables should be cooked and fruit should be peeled before eating.

NOTES FOR TRAVELERS

A valid passport and visa are required. Visa requirements include one application form, two photos and a fee. There is no Embassy of Kiribati in the United States. For information on entry requirements, please contact the Honorary Consulate of the Republic of Kiribati, Suite 503, 850 Richards Street, Honolulu, HI 96813, telephone (808) 529-7703; fax (808)521-8304. For visa or other information, travelers may consult the Consular Section of the nearest British embassy or consulate. The British Embassy in the United States is located at 3100 Massachusetts Ave., N.W., Washington, D.C., 20008. The telephone number is (202) 588-7800.

The Republic of Kiribati's customs authorities strictly prohibit the importation of firearms, ammunition, explosives and indecent publications. Strict quarantine laws govern the import of any part of plants, fruits, vegetables, soil, as well as animals and animal products. Visitors are not allowed to export human remains, artifacts

that are 30 or more years old, traditional fighting swords, traditional tools, dancing ornaments or suits of armor. For more information, please contact the British Embassy.

Americans living in or visiting Kiribati are encouraged to register at the Consular Section of the U.S. Embassy in Majuro, whose consular district includes the Republic of Kiribati. U.S. citizens may also obtain updated information on travel and security within Kiribati from the Embassy. Officers of the U.S. Embassy in Majuro, Republic of the Marshall Islands, are concurrently accredited to Kiribati and make periodic visits. The U.S. Embassy does not have a street address in Majuro. The Embassy is located on the ocean-side of the island's road, near the Church of the Latter-Day Saints and Gibson's Express, "Long Island." The U.S. Embassy's mailing address is P.O. Box 1379, Majuro, MH 96960-1379. The telephone number is (692) 247-4011. The fax number is (692) 247-4012.

Currency

In Kiribati, the Australian dollar is the legal currency. Travelers' checks and all major currencies are

accepted by banks and may also be exchanged for local currency at some local hotels. Visa and MasterCard are accepted at most hotels

KOREA, NORTH

Democratic People's Republic of Korea

Major Cities:

Pyongyang, Hamhung, Chongjin, Wonsan

Other Cities:

Haeju, Hyesan, Kanggye, Kimch'aek, Najin, Namp'o, Sinuiju

INTRODUCTION

The Democratic People's Republic of Korea, or **NORTH KOREA**, is one of the world's last hard-line Communist nations. Since its creation in 1948, North Korea has been extremely hostile toward Western nations, especially the United States, and has isolated itself from most of the world. The fall of Communism in Eastern Europe in 1989 and the collapse of the Soviet Union in 1991 has deprived North Korea of many important allies and trading markets.

Since the end of the Korean War in 1953, North Korea has pursued, both through violence and peaceful negotiations, reunification with neighboring South Korea. On September 17, 1991, North Korea was granted a seat in the United Nations along with South Korea and five other nations. The North Koreans had previously been barred from membership because of their opposition to a separate seat for South Korea. The two countries signed an historic nonaggression pact on December 13, 1991. The pact called for a relaxation of trade and travel restrictions and allowed the construction of telephone and postal services between North and South Korea. The accord has allowed the reunification of families

separated since the end of the Korean War. On December 31, 1991, North Korea and South Korea signed an agreement that banned the production of nuclear weapons by either country. The new openness between the two Koreas has renewed the hope that a political reunification of the Korean peninsula will eventually occur.

MAJOR CITIES

Pyongyang

The capital city of North Korea, Pyongyang, is located on the Taedong River and is roughly 30 miles (48 km) from the Yellow Sea. Although North Korea is very mountainous, Pyongyang is situated on a flat, open plain. Because it receives no protection from mountains or hills, Pyongyang is buffeted by bitterly cold winds during the winter. Temperatures during the winter are generally very cold, averaging 17°F (-8°C) in January. The temperature in Pyongyang is rather pleasant during the summer with highs around 70°F (21°C).

Pyongyang is an ancient city, its origin dating back to 1122 B.C. In that year, a Chinese-born scholar named Kija established a kingdom with

Pyongyang as its capital. The city quickly became a center for agriculture and textile manufacturing. Pyongyang was controlled by Kija and his successors for nearly one thousand years. In 108 B.C., Pyongyang was attacked and captured by Chinese armies. Under the Chinese, the city became an important trading center. By 427 A.D., Pyongyang became the capital of the Koguryo, a culturally advanced and warlike people. The Koguryo kingdom controlled Pyongyang until 668, when they were attacked and conquered by the Silla kingdom. The Sillas ruled in Pyongyang until 918, when the city was captured by the Koryo dynasty. The Koryos established Kaesong as their capital and made Pyongyang a secondary capital. The Mongols attacked the Koryos and seized control of Pyongyang in 1392. The city again changed hands in 1592 following an invasion by Japan. In 1627, Pyongyang was destroyed when the Manchus overran Korea and defeated the Japanese. Following the Manchu invasions, Korea was closed to all foreigners. When foreigners were allowed to return nearly 200 years later, Pyongyang became a major religious center for Christian missionaries. In 1895, the city was a battleground for the warring armies of China and Japan. Pyongyang was decimated. When Korea became a colony of Japan in

© Reuters NewMedia, Inc./Corbis. Reproduced by permission.

Gate of Triumph in Pyongyang, North Korea

1910, the Japanese rebuilt Pyongyang and established several industries in the city. During the Korean War (1950-1953), Pyongyang was totally destroyed for the third time in its history. Following the war, the city was rebuilt with the help of Chinese and Soviet financial aid.

Pyongyang is North Korea's largest city, with an estimated population of 2,484,000 in 2000. The North Korean government has touted Pyongyang as a workers' paradise and a model for socialist progress. The city has block after block of modern apartment buildings, tree-lined streets, handsome boulevards, theaters, parks, and a zoo. Most of North Korea's libraries and muse-

ums, two modern sports stadiums, and several opera houses and cultural centers are located in Pyongyang. The city has several lavish statues and monuments honoring North Korea's leader, Kim Il-sung. Among them are a 60-foot tall bronze statue that, when flood-lit at night, is visible for miles. From 1986-1988, the North Korean government spent between \$4 and \$7 billion on the construction of luxury hotels, sporting facilities, and athlete villages in Pyongyang in an unsuccessful bid to jointly host the 1988 Summer Olympics with Seoul, South Korea. This construction boom nearly bankrupted the country and many of the building projects were never completed.

Although Pyongyang has many of the trappings of a modern, vibrant city, it is often described by visitors as drab and lifeless. The streets of Pyongyang are often devoid of cars, bicycles, pets, and people. Those who are on the streets go about their business without smiling or making eye contact. Apartments are often very cramped, some with only one toilet for every two floors. The lives of Pyongyang residents are tightly regimented. Individual expression and creativity are discouraged.

Western entertainment, such as movies or dancing, is nonexistent in Pyongyang. Hotels, inns, restaurants, barbershops, beauty parlors, public baths, tailor shops, and laundries are owned and controlled by the State. Restaurants open at noon and generally do not remain open late in the evening. Only a simple meal is offered by restaurants. Diners may choose between a rice meal, rice mixed with another grain, or a noodle dish. Very few restaurants offer meat or eggs, as these are scarce and very expensive. In the few existing barbershops, each barber is expected to give about 20 haircuts each day. Beauty parlors and laundries are reserved for the wives of high government officials.

Pyongyang is one of North Korea's major industrial centers, its factories powered by coal from the nearby deposits along the Taedong River. The city's industrial base is comprised of iron and steel mills, sugar refineries, rubber factories, textile mills, and ceramics factories. Chemicals, processed food, and electrical equipment are also produced in Pyongyang.

Pyongyang serves as the major hub for North Korea's railway system. The city has a very modern, clean, and efficient subway system. Subway stations are adorned with beautiful chandeliers, marbled walls, and mosaic murals of Kim Il-sung. North Korea's international airport, Sunan Airport, is located approximately 10 miles (6 km) north of Pyongyang. Sunan Airport handles international flights to Moscow and

Beijing as well as domestic flights from Pyongyang to North Korea's other major cities.

Most of North Korea's major educational institutions are located in Pyongyang. The city's largest university, Kim Il-sung University, was founded in 1946 and is located on the outskirts of Pyongyang overlooking the Taedong River. Admission to Kim Il-sung University is widely regarded as one of the highest honors to be attained by a North Korean youth. The university's departments include mathematics and dynamics, physics, chemistry, biology, history, economics, philosophy, law, Korean language and literature, and foreign language and literature. Pyongyang is also the home of the Pyongyang Pedagogical University. This university is responsible for training teachers for technical schools and universities. Pyongyang Pedagogical University offers postgraduate courses, research facilities, and a library. The university library is North Korea's central repository for educational publications and materials. Copies of all publications and materials relating to the study of education and textbooks are kept here for educational research purposes. North Korea's principal medical school, Pyongyang Medical College, is also located in the capital.

Hamhung

The city of Hamhung is located northeast of Pyongyang in east-central North Korea. In 1960, Hamhung was merged with the port of Hungnam, a small village on the Sea of Japan coast. Together, Hamhung and Hungnam comprise North Korea's second largest urban area. The combined population of Hamhung and Hungnam was estimated at 670,000 in 2000.

Hamhung was established as an important government center during the Yi dynasty (1392-1910). Hungnam developed as a very small fishing village. In 1928, a major hydroelectric plant was built near Hamhung. This power plant sparked new industrial develop-

ment with the construction of a large fertilizer plant. Other industries soon followed, among them oil refineries, food processing plants, chemical industries, a textile plant, and machine plants. Hamhung became an important industrial center. The city was nearly leveled completely during the Korean War. However, most of the industries were rebuilt in the late 1950s and early 1960s. Today, Hamhung and Hungnam form the backbone of North Korea's chemical industry. The city is home to the Hamhung State Historical Museum. Hamhung has three major colleges, a medical college, the Chemical Industry College, and the Chemical Research Institute.

Chongjin

Chongjin, located on the northeastern coast, is North Korea's third largest city. In 1986, Chongjin had a population of approximately 530,000. The city is the major port and distribution center for eastern North Korea.

Chongjin originated as a small fishing village. However, during the years of Japanese colonial rule (1910-1945), the Japanese established oil, steel, and iron ore manufacturing industries in Chongjin. Railroads were built connecting Chongjin with iron mines along the Tumen River near the North Korean border with the People's Republic of China. The Japanese also constructed modern port facilities at Chongjin. The city soon became a major conduit for manufactured goods from Korea to the Japanese home islands. Following the end of Japanese rule in 1945, the North Koreans modernized and expanded Chongjin's steel industry, railroads, and port facilities. Currently, Chongjin is North Korea's primary steel producing center. The North Koreans have also established other industries in the city. These industries are involved in the production of chemicals, textiles, and machinery. Because of Chongjin's location as a port city, shipbuilding has also evolved as a major industry.

Wonsan

Located 80 miles (130 km) east of Pyongyang, Wonsan is one of North Korea's principal ports and the site of a major naval base. The city developed during the Yi dynasty as a trading center and port known as Wonsanjin. In 1914, the railroad connecting Wonsan with Seoul (now in South Korea) was constructed. On the east coast, the Wolla rail line, running from Wonsan to the extreme northeastern port of Najin, was constructed in 1928. In 1941, North Korea's major east-west railroad connecting Wonsan and Pyongyang was completed. These railroads, which have all been modernized, make Wonsan a major railway hub.

Fishing is one of Wonsan's major economic activities. The presence of a warm and cold current in the waters off Wonsan attracts a great number of species. Fish caught include pollack, octopus, anchovy, sardines, flatfish, sandfish, herring, and mackerel. The abundance of fish near Wonsan has led to the development of a thriving fish processing industry. The city is also the home of other major industries, including shipbuilding, brickyards, locomotive works, chemical plants, textile mills, and a large oil refinery. Many of these industries were destroyed during the Korean War, but have been rebuilt and modernized. Wonsan has over an estimated 350,000 residents.

OTHER CITIES

HAEJU is situated in southwestern North Korea on the coast of the Yellow Sea. The city is one of North Korea's most valuable ports, particularly because it is the only port that remains unobstructed by ice during the winter months. Because of Haeju's location on the Yellow Sea, fishing is an important economic pursuit. The city serves as an export center for agricultural products grown nearby. A copper refinery, cement manufacturing plant, and several chemical plants are

located in and around Haeju. The city's population in 1993 was approximately 229,172.

The city of **HYESAN** is located in extreme northern North Korea along the border with the People's Republic of China. It's population in 1993 was approximately 178,000. By virtue of its location near the Paektu Mountains, which offer abundant forests of larch, spruce, and pine, Hyesan manufactures lumber and paper products. The city's location on the Yalu River makes it an important transportation center. Winters are extremely cold in Hyesan, with temperatures plummeting as low as -44°F.

KANGGYE, a city on North Korea's northern frontier, is an important transportation center. The city is connected via railroad and roadway with Pyongyang. Kanggye is located in a region where graphite, zinc, copper, and coal are abundantly available. Consequently, mining and mining-related industries are an important part of Kanggye's industrial base. Other industries in Kanggye manufacture ceramics and process timber. According to latest estimates, Kanggye had approximately 223,000 residents.

The city of **KIMCH'AEK** is located in eastern North Korea on the shores of the Sea of Japan. Originally known as Songjin, the city's name was changed in 1952 in honor of a fallen North Korean war hero. Kimch'aek is an important seaport which exports lumber and agricultural products. Also, rich deposits of graphite, magnesite, zinc, and iron are located near Kimch'aek. Mining and mining-related industries are important components of the city's economy. Kimch'aek's location on the Sea of Japan has encouraged the development of fisheries and fish processing industries. Kimch'aek has a population over 281,000.

Located in extreme northeastern North Korea is the city of **NAJIN**. Najin is an important transportation center and port city. An important rail line links Najin with

Wonsan, Hamhung, and Chongjin. The city's coastal location has led to the development of a large shipbuilding industry. The waters off Najin offer an abundance of fish, particularly herring, codfish, and pollack. The latest population estimate for Najin is 34,000.

NAMP'O, located approximately 30 miles (50 km) southwest of Pyongyang, is one of North Korea's primary western ports. Situated at the mouth of the Taedong River, Namp'o is a center for both international and domestic trade. Imported goods arrive at Namp'o and are shipped down the Taedong River or by railway to markets in Pyongyang or other major cities. The city has a well-developed industrial base centered on gold and copper refining, shipbuilding, and glassmaking. In 1980, Namp'o had roughly 241,000 residents. Current population figures are unavailable.

The city of **SINUJU** is located in northwestern North Korea near the mouth of the Yalu River. The city is highly industrialized and is an important producer of chemicals, electrical equipment, textiles, and consumer goods. Hydroelectric power for these industries is supplied by the Sup'ung Dam. By virtue of its location across the border with the People's Republic of China, Sinuiju is a major trading center. Railways, roads, and air routes link Sinuiju with Pyongyang. In 1981, Sinuiju had roughly 200,000 people. Current population figures are unavailable.

COUNTRY PROFILE

Geography and Climate

North Korea occupies the northern half of a mountainous peninsula. The country's geographic area is approximately 46,540 square miles, slightly smaller than Mississippi. North Korea is bordered by the People's Republic of China and Russia

on the north, on the east by the Sea of Japan, on the west by the Yellow Sea, and on the south by South Korea. Hills and mountains cover almost the entire country, with narrow valleys and small plains in between. The major mountain ranges are located in the north-central and northeastern sections of North Korea and along the eastern coast. On the eastern coast, the hills drop sharply down to a narrow coastal plain, whereas on the west coast the slope is more gradual, forming broad, level plains. North Korea has no active volcanoes and does not experience severe earthquakes.

North Korea has several major rivers, most of which flow westward into the Yellow Sea. These rivers include the Yalu, Taedong, Chongch'on, Imjin, and the Yesong. The east coast has several swift-flowing rivers. Only two, the Tumen and the Songchon Rivers, are large. North Korea's rivers flow strongly during the summer, fed by seasonal rainfall and melting snow in the mountains, but the volume drops considerably during the dry winter months.

Population

Koreans are a racially and linguistically homogenous people. In 2000, North Korea's population was estimated at approximately 21,690,000. Although there are no indigenous minorities, a small community of approximately 50,000 Chinese reside in North Korea. Traditional Korean religions are Buddhism, Confucianism, Shamanism, and Chondokyo, a religion peculiar to Korea combining elements of Buddhism and Christianity. However, religious activity in North Korea is practically nonexistent. Several government-sponsored religious groups exist to provide the illusion of religious freedom. North Koreans are encouraged to embrace *juche*, a state ideology which espouses self-reliance and national identity, as a substitute for organized religion.

Life expectancy in North Korea is approximately 68 years for males and 74 years for females (2001 est.).

History

According to legend, the god-king Tangun founded the Korean nation in 2333 B.C., after which his descendants reigned over a peaceful kingdom for more than a millennium. By the first century A.D., the Korean Peninsula, known as Chosun ("morning calm"), was divided into the kingdoms of Silla, Koguryo, and Paekche. In A.D. 668, the Silla kingdom unified the peninsula. The Koryo dynasty succeeded the Silla kingdom in 918. The Yi dynasty, which supplanted Koryo in 1392, lasted until the Japanese annexed Korea in 1910.

Throughout most of its history, Korea has been invaded, influenced, and fought over by its larger neighbors. Korea was under Mongolian occupation from 1231 until the early 14th century and was devastated by a large number of Chinese rebel armies in 1359 and 1361; Hideyoshi launched major Japanese invasions in 1592 and 1597. To protect themselves from such frequent buffeting, the Yi kings finally adopted a closed-door policy, earning Korea the title of "Hermit Kingdom." Although the Yi dynasty paid nominal fealty to the Chinese throne, Korea was, in fact, independent until the late 19th century. At that time, Japanese, Chinese, and Russian competition in Northeast Asia led to armed conflict. Having defeated its two competitors, Japan established dominance in Korea. The Japanese colonial era was characterized by tight control by Tokyo and by ruthless efforts to replace the Korean language and culture with those of the colonial power. Japan formally annexed Korea in 1910.

Japan occupied the entire Korean peninsula until the end of World War II. After the surrender and withdrawal of Japanese forces in 1945, the Allies divided Korea into two occupation zones. Soviet troops occupied areas north of the 38th

parallel. Territory south of this line was controlled by American forces. The Soviet Union and the United States engaged in a series of conferences in an attempt to agree on a new government for the entire Korean peninsula. These efforts were fruitless. In September 1947, the United States submitted the question of Korea's future to the United Nations General Assembly. The General Assembly ruled that U.N.-supervised elections should be held in both occupation zones. Elections were carried out under U.N. observation in the south, and on August 15, 1948, the Republic of Korea (South Korea) was established. The Soviets refused to hold elections and decided to create a Communist state in the northern zone. The Democratic People's Republic of Korea (North Korea) was declared on September 9, 1948. The governing body for this new state was the Korean Workers' Party, under the leadership of Kim Il-sung.

On June 25, 1950, North Korean forces invaded South Korea. The United States and sixteen U.N. member nations sent troops to defend South Korea. North Korean forces were initially successful, driving the U.N. forces back and nearly conquering all of South Korea. However, after a surprise landing at Inchon, South Korea, U.N. forces gained the upper hand and drove North Korean troops back to the North Korea-China border. The Chinese sent thousands of troops across the border, forcing U.N. troops back down the Korean peninsula. A bloody conflict was waged for control of Korea. On July 27, 1953, an armistice was signed at Panmunjom by China, North Korea, South Korea, and the United States. No formal peace agreement officially ending the war has ever been signed between the two warring factions. Therefore, the border between North Korea and South Korea remains one of the most volatile regions in the world.

Government

North Korea is a Communist state dominated by the Korean Workers' Party. Kim Il-sung, ruled North Korea at its creation in 1948, wielding unrivaled power. Often referred to as the "Great Leader," Kim was president of North Korea and general secretary of the Korean Workers' Party. Following his death, his son, Kim Jong Il, inherited supreme power. Kim Jong Il was named General Secretary of the Korean Workers' Party in October 1997, and in September 1998, he was reconfirmed Kim Jong Il as Chairman of the National Defense Commission, a position which was then declared "highest office of state."

The North Korean constitution provides for the establishment of a Supreme People's Assembly. The Supreme People's Assembly is authorized to approve or amend laws and to formulate domestic and foreign policy. The Assembly is also charged with approving state economic programs and state budgets, establishing or changing administrative subdivisions, granting amnesties, and electing judges to the Supreme Court. Delegates are elected to a four-year term. Citizens seventeen years or older can vote and be elected to the Assembly. The Assembly elects a president and the Central People's Committee. The Central People's Committee directs the Administrative Council, which implements policies created by the Committee.

Despite this elaborate constitutional process, the Korean Workers' Party is the sole political authority in North Korea. It elects a Central Committee, who in turn elects a Politburo. The senior members of the Administrative Council are all members of the Central Committee and the majority are also members of the Politburo.

A three-tiered court system is composed of the Supreme Court at the top, provincial courts in the middle, and people's courts at the bottom. Judges are usually members of the Korean Workers' Party or are con-

trolled by the Party. They are trained in judicial procedures for three months before assuming office. Trials are usually open to the public. The accused is guaranteed the right to defend himself and to have counsel, but there are only Government defenders.

The courts of first instance are those established at city, county, and district levels. Presided over by judges elected for two-year terms, they can try civil as well as criminal cases. Assessors, who are vested with authority equal to that of judges, participate in the proceedings. Decisions are by majority vote of the one judge and two assessors. Provincial courts also hear appeals or complaints resulting from the decisions of the lower courts. In practice, however, appeals reaching the provincial courts are said to be infrequent.

The Supreme Court is empowered to supervise the operation of the lower courts in the enforcement of civil and criminal law. Its judges are elected by the Supreme People's Assembly for a term of three years. The court is expected to render judgments in accordance with the basic policies of the Government and the Party.

The flag of North Korea consists of horizontal stripes of blue, red and blue separated by narrow white bands. The red stripe contains a white circle within which is a red five-pointed star.

Arts, Science, Education

Education is a monopoly of the State, which uses it for well-defined political, economic, and nationalist purposes dictated by the Korean Workers' Party. Education is designed to indoctrinate the entire population in Communist ideology. Also, the educational system intends to imbue the population with pride in its own history and culture and to create a supply of skilled workers, technicians, and scientists to meet the regime's eco-

nomical goals. A strong emphasis on working while learning, or the integration of theory and practice, permeates the educational system, and all students are required to engage in productive labor along with their studies, both in their specialties and in other areas, for nominal pay. This is a means whereby the regime is reimbursed for educational costs.

The North Korean government stresses the elimination of Confucian methods of learning by rote and emphasizes instead full use of practical experiments in the laboratory, in the field, and in work experience. Excursion trips to military installations and old battlefields, industries, and other points of interest are among the techniques used. Speech and composition contests, debate meetings on scientific subjects, exhibitions of the arts, contests on new inventions and new designs, story-telling and poem recital meetings, music auditions, art contests, athletic meets, and motion picture appreciation gatherings are among the devices used by the schools to keep students interested and occupied in practical ways. Students are also assigned to such group projects as rabbit raising, fire prevention, and assisting the public health services.

The curriculum of North Korea's educational system includes a heavy emphasis on Communist ideology and combines Korean studies with Marxist-Leninist principles. Principal subjects include scientific subjects, such as mathematics, physics, chemistry, and biology; and social science subjects.

North Korea has an adult education system that is designed to provide ideological and technical training and to reduce illiteracy. Adult education classes are conducted at factories or through correspondence schools located at some colleges and senior technical schools.

Eleven years of education are required for North Korean children and are provided at government expense. Students receive one year of preschool, four years of primary

school beginning at age six, and six years of secondary school. In 1986, there were approximately 9,530 primary and senior middle schools. North Korea has an estimated 280 institutions of higher education and three universities.

All students are required to study English as a second language beginning at age fourteen. The literacy rate in North Korea is approximately 99%.

Commerce and Industry

The economic system of North Korea was inspired by the model used in the former Soviet Union. The means of production are socialized, and the allocation of natural resources are centrally determined by the State. The State owns and operates industry, banking, agriculture, mining operations, and domestic and foreign trade. State control of economic affairs is unusually tight even for a Communist country because of the small size and homogeneity of society and the strict rule of Kim Il-sung.

Agricultural productivity is centered around State-controlled (collectivized) farms. Despite the use of improved seed varieties, expansion of irrigation, and the heavy use of fertilizers, North Korea has not yet become self-sufficient in food production. Four consecutive years of poor harvests, coupled with distribution problems, have led to chronic food shortages.

The economy of North Korea is heavily industrialized. Industrial workers account for nearly 64% of the work force. Textiles, food processing, machine building, military products, mining, metallurgy, and petrochemicals are major industries. North Korea has abundant hydroelectric resources and is rich in minerals, especially uranium, zinc, coal, lead, iron ore, graphite, manganese, copper, and gold. Minerals and mineral ores are North Korea's primary exports. Since 1995, Japan and China have been

major trading partners, followed by South Korea and Germany.

North Korea has about \$520 million in exports, but relies on \$960 million in imported goods (1999 est.). In comparison, South Korea exports \$172.6 billion and imports, \$160.50 billion (2000 est.). The fall of Communism in Eastern Europe in 1989 and the collapse of the Soviet Union in 1991 has deprived North Korea of its main trading partners and increased the country's isolation in the world community. In 1991, dozens of factories were forced to close due to fuel shortages. This is seen as a further sign of North Korea's worsening economy.

On August 24, 1992, North Korea's last principle ally and trading partner, the People's Republic of China, established diplomatic and trade relations with South Korea. Both countries pledged to eliminate all economic and political barriers. North Korea has been forced to seek financial aid, trade links, and foreign investment from the West. On October 20, 1992, North Korea approved legislation that promotes foreign investment in the country. Foreign investors will be allowed to open joint business ventures with North Koreans and establish privately owned companies within government-created enterprise zones. The legislation is viewed as North Korea's first positive step toward a new openness with the rest of the world.

Transportation

Damage to the transportation facilities during the Korean War was particularly severe in North Korea. The country lost 70 percent of its locomotives, 90 percent of its locomotive sheds, 65 percent of its freight cars, and 90 percent of its passenger cars. The restoration of rail transportation received high government priority, since the greater part of imported goods enter the north by rail. The postwar rehabilitation program, in addition to restoring destroyed railroad tracks, called for the restoration of railroad bridges and the reconstruction of

tunnels. Normal traffic was restored to the country by the early 1970s. Today, North Korea has a well-developed railway system. Travel and the shipment of manufactured goods and raw materials is mostly done by rail. In 1989, North Korea had approximately 3,050 miles (4,915 km) of railroad track. International passenger rail service is available from Pyongyang to Beijing and Moscow.

Motor transportation plays a secondary role in the movement of freight and passengers. Very few North Koreans own cars. Also, seasonal factors make motor transportation impractical. Since most roads are unpaved, early snows in the winter and rainfall during the summer make roads impassable. Modern highways link Pyongyang to the cities of Namp'o, Wonsan, and Kaesong. As of 1989, North Korea had approximately 18,630 miles (30,000 km) of roadway.

International airline service to Beijing, Hong Kong, and Moscow are available. There are domestic flights from Pyongyang to the cities of Chongjin, Wonsan, and Hamhung.

Communications

Telephone communication with North Korea is virtually impossible. Direct or operator assistance calls cannot be made to North Korea from the United States.

The Korean Central Broadcasting Committee supervises radio programming. Radio Pyongyang broadcasts are transmitted over loudspeakers into factories and municipal centers. Programs include news, weather, music, drama, literary recitations, some light entertainment, analyses of international affairs, and glorification of Kim Il-sung and the Korean Workers' Party. Shortwave frequencies carry foreign broadcasts in Russian, Chinese, French, English, Japanese, Spanish, Arabic, and German.

North Korea had an estimated 291,000 televisions and 4.2 million radios in use in 1990. The main television station is located in Pyongyang, with stations at Munsudae and Kaesong. Foreign films, news, music, and dance and cultural programming is shown daily. Television service is available throughout most of North Korea.

Foreign language publications are available in Pyongyang. Those published in English include: *The Democratic People's Republic of Korea*, *Foreign Trade of the D.P.R.K.*, *Korea*, *Korea Today*, *Korean Women*, *Korean Youth and Students*, and *The Pyongyang Times*. The types of books published in North Korea include essays, short stories, plays, literary criticism, textbooks, children's books, poetry, and novels. A large proportion of all titles are devoted to a glorification of Kim Jong-il.

Health and Medicine

Persons with medical problems should be aware that, because of continuing economic hardship, the level of medical care falls far below U.S. standards, and medical care for Americans who become ill or injured in North Korea, including emergency medical evacuation, is generally not available. Hospitals in Pyongyang and other cities often lack heat, medicine, and even basic supplies, and suffer from frequent power outages. Hospitals do not have food for patients. Functioning telephones are not widely available, making it difficult to summon assistance in a medical emergency. Americans should not bring personal medications to North Korea without written authorization from the North Korean Embassy in a third country or the North Korean Mission to the United Nations in New York. Absent such permission, persons requiring regular medication should not travel to North Korea. Hospitals will expect immediate U.S. dollar cash payment for medical treatment.

NOTES FOR TRAVELERS

Passage, Customs & Duties

The United States does not maintain diplomatic or consular relations with North Korea. The U.S. Government therefore cannot provide normal consular protective services to U.S. citizens in North Korea. On September 20, 1995, a consular protecting power arrangement was implemented, allowing for consular protection by the Swedish Embassy of U.S. citizens traveling in North Korea. In this capacity, the Swedish Embassy in the capital city Pyongyang endeavors to provide basic consular protective services to U.S. citizens traveling or residing in North Korea who are ill, injured, arrested or who may die. Since 1998, four U.S. citizens have been detained by North Korean authorities. Consular access has not always been granted readily, and there have been allegations of mistreatment while in custody, as well as the requirement to pay large fines to obtain release. U.S. citizens should therefore evaluate carefully the implications for their security and safety when deciding whether to travel to North Korea.

U.S. passports are valid for travel to North Korea. North Korean visas are required for entry. The U.S. Government does not issue letters to private Americans seeking North Korean visas, even though in the past such letters have sometimes been requested by DPRK embassies. Prospective travelers to North Korea must obtain in advance a Chinese visa valid for at least two entries prior to their arrival in the region. A valid Chinese visa is essential for both entry into China en route to North Korea, as well as departure from North Korea by air or land to China at the conclusion of a visit or in an emergency. Travel across the Demilitarized Zone (DMZ) between North and South Korea is not permitted. U.S. citizens who arrive in North Korea without a valid U.S. passport and North Korean visa may be detained,

arrested, fined or denied entry. Payment for travel costs by Americans in North Korea must be made in U.S. dollars at inflated prices. Payment may be required as well for the costs of security personnel assigned to escort foreign visitors.

U.S. citizens traveling to North Korea should carry only valid U.S. passports bearing the proper North Korean visa. Under no condition should U.S. citizens bring with them to North Korea any document that identifies them as citizens or residents of either the Republic of Korea (South Korea) or the Democratic People's Republic of Korea (North Korea). There is currently no way to replace a lost or stolen U.S. passport in North Korea.

There is no North Korean embassy or consulate in the United States. U.S. citizens and residents planning travel to North Korea must obtain North Korean visas in third countries. For information about entry requirements and restricted areas, contact the North Korean Mission to the United Nations in New York. Address inquiries to the Permanent Representative of the Democratic People's Republic of Korea to the United Nations, 820 Second Avenue, New York, New York 10017, tel: (1-212) 972-3105; fax: (1-212) 972-3154, or contact the North Korean embassy in a country that maintains relations with North Korea.

U.S. citizens traveling to North Korea usually obtain their visas at the North Korean Embassy in Beijing, China, which will only issue visas after authorization has been received from the North Korean Foreign Ministry in Pyongyang, the capital city. Prior to traveling to the region, travelers may wish to confirm with the North Korean Embassy by telephone at (86-10) 65321186, 65321189, 65325018, 65324308, or 65321154 (fax: 65326056), that authorization to issue visas has been received from Pyongyang.

U.S. citizens are encouraged to carry photo-copies of their passport

data and photo pages with them at all times so that, if questioned by DPRK officials, proof of U.S. citizenship is readily available to DPRK authorities and Swedish protecting power officials.

All needed vaccines should be administered prior to traveling to North Korea. Vaccine recommendations and disease prevention information for traveling abroad are available from the Centers for Disease Control and Prevention's International Travelers' Hotline, which may be reached from the United States at 1-877- FYI-TRIP (1-877-394-8747), via its toll-free autofax number at 1-888-CDC-FAXX (1-888-232-3299), or via the CDC Internet site at: <http://www.cdc.gov/>. In addition, travelers should bring food with them to North Korea as the few restaurants available to foreigners are often closed for lack of supplies and in any case have limited menus that lack variety and nutritional adequacy.

DPRK authorities may seize documents, literature, audio and video tapes, compact discs, and letters that they deem to be pornographic, political, or intended for religious proselytizing. Persons seeking to enter North Korea with religious materials in a quantity deemed to be greater than that needed for personal use can be detained, fined and expelled. Information concerning laws governing items that may be brought into North Korea may be available from the North Korean Mission to the United Nations or from a North Korean embassy or consulate in a third country.

The Embassy of Sweden, which acts as U.S. Protecting Power, is located at: Munsu-Dong District, Pyongyang. The telephone and fax numbers, which are frequently out of order due to poor telecommunications in the DPRK, are: Tel: (850-2) 381-7908; Fax: (850-2) 381-7258. U.S. citizens contemplating living in or visiting North Korea are encouraged to register in person, by telephone or fax with the U.S. Embassy in Beijing, China, and to obtain updated information on travel and

security within North Korea. The Consular Section of the U.S. Embassy in Beijing is located at 2 Xiushui Dongjie, Beijing 100600; telephone: (86-10) 6532-3431; after hours: (86-10) 6532-1910; fax: (86-10) 6532-4153; e-mail AmCit-Beijing@state.gov. It is also possible to register from the United States via the Internet through the U.S. Embassy's home page at <http://www.usembassy-china.org.cn>.

Security

The activities and conversations of foreigners in North Korea are closely monitored by government security personnel. Hotel rooms, telephones and fax machines may be monitored, and personal possessions in hotel rooms may be searched. Photographing roads, bridges, airports, rail stations, or anything other than designated public tourist sites can be perceived as espionage and may result in confiscation of cameras and film or even detention. Foreign visitors to North Korea may be arrested, detained or expelled for activities that would not be considered crimes in the U.S., including involvement in unsanctioned religious and political activities or engaging in unauthorized travel or interaction with the local population. Since 1998, four U.S. citizens have been detained by North Korean authorities. Consular access has not always been granted readily, and there have been allegations of mistreatment while in custody, as well as the requirement to pay large fines to obtain release.

LOCAL HOLIDAYS

- Jan. 1 & 2 New Year's Day
- Feb. Sollal (Chinese New Year)*
- Feb/Mar. Taeborum (Lantern Festival)*
- Feb. 16 Kim Jong-il's Birthday
- Mar. 1 Anti-Japanese Uprising Day
- Mar. 8 International Women's Day
- Apr/May Buddha's Birthday*
- Apr. 15 Kim Il-sung's Birthday
- May 1 May Day
- June 1 Children's Day
- June 6 Young Pioneers of Korea Day
- June 25 Fatherland Liberation War Day
- July 27 Victory Day
- Aug. 15 Liberation Day
- Sept/Oct. Ch'ilsok (Harvest Moon Festival)*
- Sept. 9 Independence Day
- Oct. 10 Korean Workers's Party Day
- Nov. 3 Kwangju Student Uprising Day
- Nov. 7 October Revolution Day
- Dec. 27 Constitution Day

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 2001 for South Korea. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Welcome to "The Land of the Morning Calm," a country with a people obsessed with nature, and with mountains in particular. Wherever you travel, you will see them out in the open air, clad in the latest adventure fashions.

According to the Koreans, the first of their kin was born in 2333 B.C.E. Less aesthetically-minded scientists believe Korea was first inhabited around 30,000 B.C.E., when tribes from central and northern Asia migrated to the peninsula. Under constant pressure from China, these tribes banded together to found a kingdom in the 1st century C.E. By 700 C.E. the Silla Kingdom of Korea was at its cultural stride, proliferat-

ing the country with palaces, pagodas, and pleasure gardens. But in the early 13th century, the Mongols reached Korea and pursued a scorched-earth policy. When the Mongol Empire collapsed, the Choson Dynasty succeeded, and a Korean script was developed.

In 1592 Japan invaded the country and was followed by China. The Koreans were routed, and the Chinese Manchu Dynasty established itself. Turning its back on a hostile world, Korea closed its doors to outside influence until the early 20th century, when Japan annexed the peninsula. The Japanese occupied Korea until the end of World War II. After the war, the U.S. occupied the south of the peninsula; the U.S.S.R. occupied north. Elections to decide the fate of the country were held only in the south, and when the south declared its independence, the north invaded.

By the time the war ended, 2 million people had died, and the country had been officially divided. After a few years of semi-democracy in the south, martial law was declared in 1972. The next 15 years roller-coasted between democracy and repressive martial law, hitting a low in 1980, when 200 student protesters were killed in the Kwangju massacre. By the late 1980s, the country was at a flash point, student pro-

tests were convulsing the country and workers throughout Korea were walking off the job to join them. Among the demands were democratic elections, freedom of the press, and the release of political prisoners. The government did not budge until President Chun suddenly decided to grant everything the protesters asked for.

Korean society is based on the tenets of Confucianism, a system of ethics developed in China around 500 B.C.E. Confucianism emphasizes devotion and respect-for parents, family, friends, and those in positions of authority. Many Koreans attribute their country's remarkable success in recent decades to this attitude. In modern Korean society, Confucianism is most noticeable in relations between people. The Five Relationships prescribe behavior between ruler and subject, father and son, husband and wife, old and young, and between friends. If you fall outside any of these relationships, you do not effectively exist.

South Koreans have turned their hand to all art forms. Traditional music is similar to that of Japan and China, with an emphasis on strings. Traditional painting has strong Chinese and calligraphic elements, with the brush line being the most important feature. Most tradi-

tional sculpture is Buddhist, and includes statues and pagodas. Seoul is also a showpiece of modern and traditional architecture, including the city gates and the Choson-era Kyonbok Palace.

The Republic of Korea represents a fascinating blend of the past and present. The Korean people are proud of their long history and unique cultural traditions, and they remain committed to preserving their heritage into the next millennium.

Korea and its capital, Seoul, offer a wide range of both cultural and recreational opportunities. By providing a lifestyle that includes a combination of both the unique and familiar, Korea will prove to be a fascinating place to live, work or travel.

MAJOR CITIES

Seoul

Seoul has a population of more than 10 million people. It is located in the northwest part of the Republic, about 30 miles south of the DMZ, which separates North and South Korea.

The name derives from "Sorabol," the capital of the Shilla Kingdom. Seoul was established as the capital in 1392 by the first emperor of the Yi Dynasty. At that time, Seoul was surrounded entirely by the four hills that now simply form the boundaries of the downtown area. Today, the urbanized area extends well beyond those boundaries. The Han River flows through the southern part of the city and into the Yellow Sea.

As mentioned earlier, Seoul is the repository for Korea's history and culture. Part of the city's charm is the juxtaposition of traditional characteristics with modern life. For example, three of the major palaces in the city, Kyongbok, Changdok, and Toksu are all located in downtown Seoul within walking distance of the Embassy and the Compounds I & 11 residential areas. A walk in almost any city neighborhood will reveal not only concrete, high-rise apartments, but also small parks and traditional homes. Shops range from those high-dollar establishments catering to the expatriate community, to local "mom and pop" stores and streetside vendors peddling traditional snacks.

Seoul was a major casualty of the Korean war, with 80% of the city razed. Since that time, modern

buildings have sprung up everywhere, and factories and industrial areas have mushroomed throughout the city and beyond. Hosting the 1986 Asian Games and the 1988 Summer Olympic Games boosted Seoul's image as a major venue for international conferences (hotels, tourist services, etc.). Seoul now looks forward to cohosting the soccer World Cup in 2002.

Utilities

Apartments and houses are wired for 110/120 volts, 60 cycles. Electricity is reliable, so regulators are not required.

Food

Local markets provide an alternative to grocery shopping. Large supermarkets, usually located in the basement level of major department stores, have a wide selection of local produce and meats, as well as imported items—the latter being quite expensive. Residents also have a choice of patronizing the high-end delicatessens and foreigner's shops, which offer a wide array of items. Neighborhood vendors will be less expensive, but their standards of handling and cleanliness may not meet U.S. standards. Although there have been no reports of serious illness from eating locally purchased produce, it is always wise to carefully clean all fruits and vegetables, and to handle meats/poultry/fish with appropriate care and common sense.

Liquor is readily available in Korea. Korea's local beer (OB and Crown) is reasonably good. Imported wines are available at various delicatessens and shops throughout the city; expect to pay an extraordinarily high price.

Clothing

In addition to dressing for a relatively conservative environment, employees should come prepared for the four very distinct seasons that Korea offers: from hot, humid summers to cold, dry winters. Fortunately, Korea exports a wide array of clothing items. It is easy to supplement a wardrobe here. Many American/European

designer names can be located in the markets of Seoul (Itaewon, Namdae-mun, Tongdae-mun). These items are usually “seconds,” however, and you need to be on the look-out for glaring flaws. Larger sizes (be it with clothing or shoes) can be difficult to find, although there are plenty of tailors and shoemakers in Itaewon who can happily create whatever designs you have in mind. Items that are easy to find are: wool and acrylic sweaters, knit shirts, leather goods, sport shoes, raincoats, jackets, parkas.

Men: Dark suits are appropriate for summer and winter wear. Those with definite preferences or who are hard to fit should bring a good supply or arrange to receive mail-order catalogs to replenish their wardrobes as necessary. Many have suits and shirts made on the local economy; service and standards are usually high, and prices are exceptionally reasonable.

Women: Women in Seoul dress more conservatively than they do in the U.S. In deference to local customs, American women usually wear clothing that is not conspicuously bare-although attitudes toward fashion styles are changing, showing too much skin is still considered uncouth.

Modern styles and attractive clothing are readily available and reasonably priced. Availability, however, will depend on what local factories are producing at that time. Larger sizes can also pose a challenge. In response to that, there are good seamstresses available, and many employees have had clothes made. As always, mail-order catalogs are a big help.

Children: Various kinds of children's clothing are available at local markets and are reasonably priced. However, some parents find shopping for infants and pre-teens difficult. Shopping for teenagers will not pose any problems-stylish brand-name items made for export are readily available and at good prices.

Supplies and Services

There are numerous beauty shops and barbershops on the local economy as well. However, the latter establishments may not have a staff fluent in English; bring a friend to help out, at least initially.

Domestic Help

The days of inexpensive domestic help are long gone. Most domestic help are not Korean, but rather hail from the Philippines, Thailand, and Sri Lanka.

Religious Activities

Yongsan Military Base has services for the following faiths: Protestant, Roman Catholic, Episcopal, Jewish, and non-denominational. Roman Catholic Mass is also offered in Spanish. American and European missionaries, as well as military chaplains, can provide religious services and Sunday School services.

Seoul has several churches throughout the city, some of which provide English-language services. There is a Mosque near Itaewon market. Other faiths represented are: Seoul Union Church (interdenominational), the International Union Church of Seoul, and the Seoul Memorial Baptist Church. In addition, services are available for the Anglican, Greek Orthodox, Christian Science, Seventh-day Adventist, Latter Day Saints/Mormons, Catholic and Lutheran faiths.

Education

Seoul American Middle School. The middle school program covers students in grades six through eight. The programs and enrollment are similar to those of the DoDDs elementary and DoDDs high schools. Seoul American Elementary School (SAES) (DoDDs). The elementary school program covers kindergarten to grade five. Children must be 5 years old by October 31st of the school year to enroll. SAES follows the U.S. curriculum but has many extracurricular activities. Enrollment is 1,500 students. Unlike many of the private schools in Seoul, it offers an extensive educational, physical, and behavioral

specialist program. There is also a talented/gifted program. After school care is available through the School Age Services (SAS) program.

program for children 3-4 years old. Seoul American High School (SAHS) (DoDDsj). The high school program covers grades 7 to 9. Enrollment is approximately 1,000. The school follows the U.S. curriculum and offers a variety of extracurricular activities. Approximately 80% of graduates pursue higher education. There are programs available for students with special needs.

Seoul Foreign School. The campus consists of two elementary schools (one American and one British), a middle school and a high school. SFS American elementary school provides program for children from Junior-K through grade 5. Children must be 4 years old by September 30 in order to enroll in the half-day JK program. All other programs are full day. SFS British elementary school follows the British system and accepts children from 3 to 12; it works closely with SFS middle school and children can automatically transfer. SFS Middle and High Schools follow the US. curriculum and offer a wide range of programs and activities-SFS has its own pool and auditorium. The high school also offers the international baccalaureate. SFS has extremely high academic standards and caters to high achievers. It does not offer programs with special needs. The school is very popular with the international community and should be contacted as soon as possible to secure a place. For new students there are application and registration fees totaling USD 500, which are due at the time of application.

SFS provides programs from kindergarten through grade 12. JK students must turn 4 by December 31 of the school year. SIS follows the US. curriculum and offers a wide range of programs and activities however, it does not provide programs for children with special needs. The school also has a large

Naksonjae Palace and garden in Seoul

ESL (English as a Second Language) department catering to children who do not speak English as their native language.

Special Educational Opportunities

A multitude of educational opportunities is available at post for spouses and dependents. Many take advantage of the opportunity to complete undergraduate or graduate degrees, as well as to learn Korean.

There are several avenues of educational opportunities available through the military base. The University of Maryland and Central Texas College offer undergraduate level programs. For example, the University of Maryland offers courses in Asian Studies, Business, Computer Studies, English, Government/Politics, History, Management Studies, Psychology, Sociology, and Technical Management. Alternatively, the Central Texas

College offers Associate Degrees in Applied Management, Automobile Maintenance, Business Management, Computer Science, Food Service, Hotel/Motel Management, Law Enforcement, MicroComputer Technology, and Office Management.

Additionally, Troy State University offers graduate degree programs. In general, the school year for these institutions is divided into five 8-week semesters, with classes meeting 2 nights weekly for 3 hours.

The Moyer Recreation Center is a U.S.-military facility that offers classes in arts and crafts. Power tools and photography supplies/equipment are also available for personal projects. Check the military newsletters for scheduling.

Nursery Schools and Child Care. There are a few good preschools in Seoul, using both Montessori and social learning concepts.

Sports

Koreans are sports enthusiasts, and nearly all participate in some form of athletics, including golf, tennis, skiing, hiking, and mountain climbing. Korean spectator sports include soccer, baseball, tennis, and hockey. Foreigners are welcome to attend the competitive sports events held at Seoul City Stadium. In season, the Seoul gymnasium has boxing, wrestling, basketball, or volleyball events.

Golf is extremely popular among Koreans. New golf courses are plentiful, and several are located a short distance outside the city. They are attractive and challenging, but quite expensive.

Ice-skating is available all through the year at an indoor rink in Seoul. It is best to bring your own skates. Korean hockey, figure, and racing skates are available, but they are not of the best quality and often do not fit American feet.

Skiing is a popular sport in Korea. There are several resorts within a 3-4-hour drive of Seoul. However, many families drive themselves. Since natural snowfall near Seoul is unreliable, the closer ski resorts rely on man-made snow, enabling them to operate effectively for the whole season. All areas operate poma lifts and chair lifts, which are kept in good condition. Ski equipment can be rented at local resorts, although it will be expensive. Avid skiers may wish to bring their own equipment. It is possible to purchase equipment here, but the selection may be limited and expensive. A good selection of ski clothes can be made or purchased to order at the local markets, e.g., Itaewon. Ski helmets are not readily available in Seoul—skiers are advised to bring their own.

Courses in the traditional Korean martial arts of Tae Kwon Do and Hap Ki Do are readily available.

Hiking around Seoul is popular or Seoulites, especially in the spring and fall. The mountains and hills near the capital offer relatively easy

climbs and good photo opportunities.

Touring and Outdoor Activities

Korea has a rich, varied culture. As mentioned earlier, there are palaces, parks, museums, and historical sites scattered throughout Seoul. Beyond the cities' limits, regional capitals host exhibits and festivals, and offer even more opportunities for the adventurous traveler.

Families with small children will be interested in the amusement parks and similar facilities geared for younger interests. Lotte World is a huge indoor amusement/shopping complex, and a zoo is located at Seoul Grand Park, located at the southern edge from the city. Everland is a family entertainment area with a modern theme park, zoo, outdoor and indoor water parks and winter sledding about an hour's drive from downtown Seoul. Near the provincial capital of Suwon—a tourist destination in its own right—is the highly popular Korean Folk Village. At the Folk Village, traditional dress, buildings, and folk traditions are re-created, making a pleasant day trip.

There are other travel options on the peninsula. For example, the southern city of Kyoungju, is noted worldwide for its historical importance as the capital of the Shilla Dynasty. Cheju Island, 60 miles off the south coast, offers waterfalls and fishing villages, as well as being a popular honeymoon choice for Korean newlyweds. For the mountain climber, the east coast of Korea offers a myriad of opportunities, most notable of which is Mount Sorak.

Entertainment

Seoul offers a wide range of choices for entertainment, from the very expensive, black-tie event to much more reasonable options. Plays, operas, ballet, and orchestral performances are held frequently throughout the year, and at venues around the city. Local artists, as well as “big-name” international

View of Seoul, South Korea

© Wolfgang Kaehler/Corbis. Reproduced by permission.

artists, perform in Seoul. The National Theater, Sejong Cultural Center, and Seoul Arts Center and the LG Arts Center produce regular programs and schedules of their offerings, as well as ticket prices.

Popular movies find their way to the local Korean theaters. First-run American movies are shown with Korean subtitles. The theaters are clean and quite modern, and prices for shows are commensurate with U.S. prices, if not a little less expensive.

There are ample avenues for the thespian in the family; the Yongsan Players is an active amateur theater group sponsored by the mili-

tary. The Yongsan Chamber Music Society, which has Korean and American professional and amateur members, gives concerts. Shutterbugs will find many fascinating photo opportunities in Korea.

Seoul offers countless restaurants, bars, and coffee shops, to suit everyone's taste and pocketbook. There are some publications that detail some of the more prominent establishments (see Recommended Reading); they provide a good “jumping off point” for exploring the city.

Social Activities

The American Women's Club is active in Seoul as is the Seoul International Women's Association

© Bohemian Nomad Picturemakers/Corbis. Reproduced by permission.

Harbor at Pusan, South Korea

(SIWA). The United Services Organization (USO) and American Red Cross (ARC) also offer volunteer opportunities. Girl Scouts, Boy Scouts, and a new Teen Center for older children offers a variety of family options. Supervised gatherings include barbecues, picnics, swimming, local tours, theater parties, and other activities.

Koreans generally enjoy socializing with Americans. Please refer to Recommended Reading for books that deal with some of the cultural nuances of entertaining, gift giving, etc. In addition to the massive U.S. military presence in Korea, there is likewise a huge expatriate community of third-country diplomats and businesspeople. Finding venues to meet these groups can be a challenge, but well worth the effort in getting different points of view about life on the peninsula.

Pusan

Located about 330 kilometers from Seoul at the southeastern tip of the peninsula, Pusan is Korea's second largest city, its main seaport, and a major industrial center. In July 1950, Korean War refugees increased Pusan's population tenfold, from 200,000 to 2 million.

Today Pusan has nearly 4 million inhabitants.

Automaking, shipbuilding, electronics, footwear, and textiles currently are the main export industries of the district. Aerospace and tourism industries are growing rapidly.

The ocean moderates Pusan's weather, giving it the mildest climate on the Korean peninsula. Although Pusan has four distinct seasons, its winters are usually warmer than Seoul's and its summers are cooler and drier. However, heavy rains and typhoons which come in late summer often hit the southern areas harder than in Seoul, sometimes causing serious damage.

Tourist attractions in and near Pusan include Kyongju, the capital of the ancient Shilla Kingdom; many centuries-old Buddhist temples, fortresses, and Confucian schools; several well-developed beach resorts; and the Hallyo Waterway National Park, a rocky, island-studded 100-kilometer stretch of Korea's south coast that can be visited by hydrofoil or ferryboat.

There are daily flights from Pusan to several Korean and Japanese cit-

ies, including Seoul and Tokyo. Pusan is 1 hour from Seoul by plane; 4 hours by train; and 5-6 hours by car. Ferryboat service also links Pusan to Cheju Island, and to the Japanese ports of Shimonoseki and Osaka.

Food

A wide variety of foods can be purchased in Pusan, although some items are rather expensive. There is a good selection of fresh fish, fruits, and vegetables in local markets. Also, fish is available at the large waterfront fish market.

The tap water quality varies, so boiling is advisable. Bottled distilled water and carbonated water are plentiful but not cheap.

Pusan offers a great variety of Korean, Japanese, Korean-style Chinese, and Western restaurants ranging from cheap noodle houses to expensive tourist hotel restaurants. Pusan is well known for Japanese-style seafood restaurants, where such delicacies as sushi and broiled eel are fresh and authentic, but expensive. Good Western bakeries and American ice cream franchises are more recent arrivals.

Supplies and Services

Almost any consumer goods or services are available on the economy in Pusan, although luxury goods and some imports, such as petroleum products, are expensive.

Pusan's department stores, specialty shops, and open-air markets offer a wide selection of Korean-made consumer goods. Good values are available in clothing, luggage, and leather goods, furniture, brass, porcelain, silks, and other textiles, lacquerware, amethyst, and smoky topaz.

Local labor and services are generally of good quality, but expensive.

Health and Medicine

Pusan has several modern, full-service private hospitals, including two (Baptist and Maryknoll) that have foreigner clinics and American doctors and dentists. There are many

U.S.-trained Korean doctors and dentists. There are also fine doctors trained at Korean medical schools, some of whom speak English well.

Transportation

Pusan has serious traffic problems, with inadequate roads to accommodate the heavy volume of trucks and buses and the growing number of private cars. Public transportation, which includes a subway, is improving but is very crowded.

Religious Activities

Chapels at Hialeah hold regular Catholic, Protestant, and Latter-day Saint services. English-language Protestant services, as well as a wide range of Korean-language Protestant, Catholic, and Buddhist services, also are available off post. Pusan's small expatriate Jewish community is served by a U.S. Army rabbi based in Seoul.

Education

An international school, with a curriculum based on the British system, serves the Pusan expatriate community. In February 1994, the school had six full-time teachers and 60 students, including 30 Americans. Dependents of U.S. diplomats assigned to Pusan are authorized to attend. The school is for preschool through junior high grades, ages 3-13. To enter grade 1, the equivalent of American kindergarten, a student must be 5 years old by December 31.

Special Educational Opportunities

Although the University of Maryland has a branch at Hialeah, only a few courses are offered. Other American universities have more extensive English-language course offerings in Seoul. Several very good Korean universities in the Pusan area offer a full range of undergraduate and graduate-level courses and welcome qualified foreign students. Although the language of instruction is normally Korean, graduate textbooks are often in English.

Sports

Mountain hiking is Pusan's most popular athletic activity. Snow is insufficient for skiing. Coastal sailing is severely restricted for military security reasons. Golf is available at military golf courses, two of which, at Jinhae and Taegu, are about a 1-hour drive from Pusan. Otherwise, golf on the economy is prohibitively expensive.

The USIS, municipal, and university libraries all have English-language collections. Same-day delivery of English-language daily newspapers from Seoul is affordable.

Entertainment

Pusan's symphony orchestra gives periodic concerts, and Pusan's municipal cultural center occasionally hosts attractions from Seoul or foreign countries. Several movie theaters show foreign films, usually with original soundtracks and Korean subtitles.

Pusan has several Korean-language television and radio stations.

Social Activities

English is spoken widely among Pusan's relatively small professional class, especially by the young. Korean working contacts are often eager for social contact. All-male group drinking excursions remain popular, but traditional tendencies for socializing to be segregated by gender and to be done outside the home are gradually weakening. Flower arranging, bonsai tree cultivation, the Korean tea ceremony, Chinese calligraphy, traditional music, martial arts, mountain hiking, Korean chess, go, Buddhism, and Christian churches are among the many foci of local social organizations. Many of these welcome interested foreigners.

The international expatriate community offers many diverse working and social contacts and a broad range of informally organized activities. These activities generally are centered on the International School and on the International Women's Association.

Taegu

Taegu, a city of over 2 million people, is located about 200 miles southeast of Seoul. It is about 50 minutes by air from Seoul, 3 hours by train, or about 3½ hours by car. The city is situated in a large plain surrounded by mountains. The climate is similar to that of Seoul, but is often somewhat colder in the winter and hotter in the summer. It can be windy and dusty.

Taegu has five large universities and is known as an educational and cultural center. Citizens tend to be more conservative than their counterparts in Seoul. Taegu is in the center of the apple- and grape-growing region of Korea. Its economy has traditionally been dependent on textiles, though recently the auto parts and machinery industries have expanded rapidly.

Local markets, with reasonable care in selection, are the best source for seasonal fruits and vegetables and some fish. Two of the larger department stores in the city also stock a variety of supermarket items, but at premium prices.

AFKN television and radio reception is good in Taegu. Three Korean television stations also broadcast. Shortwave radio reception is good.

Local university hospitals have modern facilities and clinics. A Catholic Hospital is also available. A few dentists in the city have U.S. training.

Good beaches are about a 2-hour drive from Taegu on the east coast of Korea, near Pohang. Pusan is also 2 hours away. Kyongju, an historical area dating from the Silla period, is 1 hour away by car. There are many other interesting historical sites easily accessible from Taegu. Hiking and picnicking are favorite pastimes here.

Kwangju

The provinces of Cholla-Namdo and Cholla-Pukto. About 6 million people live in the two provinces; 1.2

million in Kwangju, the capital of Cholla Namdo, and about 500,000 in Chonju, the capital of Cholla-Pukto. Chonju and Kwangju are connected to Seoul and Pusan by a limited access, toll highway. Kwangju is about 4 hours from Seoul and about 3½ hours from Pusan. A four-lane super highway exists between Kwangju and Taejon.

Multiple flights go to and from Seoul daily, and there is air service to Pusan and Cheju. No air service is provided to Taegu. Several express trains travel to and from Seoul every day; one-way travel takes about 3½ hours. Seoul bus service is frequent, but conditions are only fair.

Theaters in Kwangju City show a few foreign films with original soundtrack and subtitles in Korean. A civic auditorium stages Korean pop and classical concerts. The new Kwangju Art Center houses two state-of-the-art theaters, an art gallery, a theater for traditional Korean music, an outdoor amphitheater, and a restaurant and coffee shop. Nearby are the Kwangju National Museum and the Kwangju Folk Art Museum. The Kumho Cultural features individual performing artists from time to time. It also has a small tea room.

Two enclosed sports arenas hold basketball, volleyball, and other indoor sports events. The city's large outdoor sports arena is used for political and civic events and soccer and baseball games. Several private country clubs offering 18-hole golf courses are located within 40 minutes from downtown Kwangju. There is a 9-hole public golf course at Kwangju Air Base.

Kwangju has several first-class hotels, with Western, Chinese, and Japanese restaurants. Prices are expensive. The hotels also have conference facilities, and there has been an increase in the number of events held in Kwangju in recent years.

Beaches nearest Kwangju are of poor quality. The one exception is the beach at Mokpo, but it is small and crowded during the summer season. Within a 2-hour drive, however, there are several nice beaches. There are also bridges to two islands, Chindo and Wando, which have recreational areas with hiking and swimming facilities. Temples and other cultural and scenic spots abound in the two provinces. Mountain climbing and hiking are excellent. In Cholla-Pukto, about 2 1/2 hours from Kwangju, Muju Resort offers skiing, swimming, and golfing.

Korean TV reception is good in Kwangju. Two Korean networks offer a full schedule of variety shows, dramas, and some U.S. shows run with Korean soundtracks. However, AFKN-TV can no longer be received,

Medical facilities are adequate. Kwangju has three large hospitals and numerous clinics. Although there are no American doctors in Kwangju, many doctors have been trained in the U.S. or Europe and speak English. Adequate medical care is available for emergencies.

The city sprays heavily in the summer to help prevent the spread of encephalitis. Cholera is now uncommon, but there still are regular outbreaks of diphtheria. Individuals should keep their inoculations up to date.

Schools for English-speaking children are not available in Kwangju. Children must attend school in other parts of the country, or out of the country.

OTHER CITIES

CHEJU, the capital of the island province of the same name, is located 120 miles south of Kwangju off Korea's southern coast. Called the "Hawaii of Korea," the island is a major tourist spot, and the city is its service center. Along with its international airport and myriad

accommodations, Cheju has a large port and light industries. Among the city's attractions are the Cheju Folk Museum; the Samsonghyöl (Cave of Three Spirits), which is said to have been the cradle of the island's three ancestral families; the Yongduam (Dragon Head Rock), a 30-foot high basalt rock head; and a wood and rock park on the outskirts. Cheju grew as a seaport after 1913; the port facilities were built following World War II. The current population of Cheju is roughly 259,000.

INCHŎN, located in northwest South Korea on the Yellow Sea, is the country's second largest port. Protected by a tidal basin, Inchön has an ice-free harbor and is the port and commercial center for Seoul. The city's economy is heavily dependent on the shipping and transshipping of goods, and is one of the country's main industrial centers. Products manufactured in Inchön include iron, steel, coke, light metals, chemicals, fertilizers, and textiles. In addition, fishing is an important industry. The tidal flats off the coast of Inchön have developed large salt fields. Historically, Inchön was opened to foreign trade in 1883. Formerly called Jinsen by the Japanese as well as Chemulpo, Inchön is famous as the site of the landing of U.S. troops on September 15, 1950; a statue of Douglas MacArthur in Chayu Park commemorates this event. It was from Inchön that the subsequent U.N. drive northward was launched. Inchön's population today is approximately 2.3 million.

KWANGJU, in southwest South Korea, is an agricultural and commercial center built on the site of an ancient market. The capital of South Cholla Province, Kwangju has rice mills, and industries that produce rayon, cotton textiles, and beer. Situated in the Yongsan River lowland, the city is a railroad hub with more than one million residents. Kwangju is connected to Seoul and Pusan by a limited access toll highway and is four hours south of Seoul and three-and-a-half hours west of Pusan. Ancient tombs and

temples are located in the hills around Kwangju. The city of Tamyang, 7.5 miles north of Kwangju, is known for its bamboo wares. They are sold every five days at a market. The city also has a bamboo museum. The provincial town of Namwon is to the northeast. It is the home of Chunhyang, the heroine of Korea's famous story of love and conjugal fidelity.

KYŎNGJU, situated 205 miles southeast of Seoul, has been called one of the world's 10 most historic cities. Often described as a museum without walls, the city was the birthplace of Silla culture in 57 B.C., and served as the dynasty's capital until A.D. 935. Spared the destruction of war, there are many pagodas, shrines, temples, and tombs that survive today. The town's most popular temple—Pulguksa—dates from 535 and is an example of Korean Buddhist architecture. Sökkuram Grotto, home of a stone Buddha, is a well-known historic site. Several of the region's largest royal tombs may be found in downtown Kyöngju's Tumuli Park. Korea's most revered and best-known monument is probably Chömsöngdae Observatory, the country's oldest secular building, constructed in 634. Outside of Seoul's National Museum, the Kyöngju National Museum houses the country's finest exhibits of Silla culture. Kyöngju, with a population of more than 274,000 (1995 figure), is a four-and-a-half hour train or bus ride from Seoul; there is no direct air service. On the outskirts of Kyöngju is Pomun Lake Resort, with deluxe hotels, extensive shopping, and recreational facilities.

MASAN, situated 26 miles west of Pusan, is one of the most important commercial hubs in South Kyöng-sung Province. With a population of 500,000, the city has a thermoelectric plant, and machine and chemical factories. Masan serves as the market center for the agricultural regions of the Kimhae plain, as well as a service center for the hinterland. The port, now a free export zone, was instrumental in the region's expansion early this century. It was closed in 1908 because

of its strategic military location, but was reopened in 1967. Masan has road and rail connections to Pusan, and a junior teachers' college, which opened in 1968.

The village of **PANMUNJÖN** lies just south of the 38th Parallel. Truce negotiations during the Korean War began at nearby Kaesong, north of the 38th Parallel, but in October 1951, were moved to Panmunjön, where the truce was signed on July 27, 1953. Daily tours are arranged only by the Korean Tourist Bureau.

SUWÖN, located just south of Seoul is an 18th-century walled city, famous for its elaborate gates and its replica of a Korean folk village. The capital of Kyonggi province, Suwön is an important communications point and a local agricultural center. With a population of over 755,500, Suwön has large silk and rayon textile mills.

ULSAN is the site of the mammoth Hyundai automobile plant, in the center of a special industrial district. The city lies on the eastern edge of the T'aebaek-sanmaek Mountains, 35 miles northeast of Pusan. Shipbuilding and aluminum and fertilizer factories are among this open port's industries. Ulsan was transformed from a market center and fishing town to an industrial metropolis in the early 1960s, when road and rail links to Korea's major cities were finished. The population is an estimated 967,000.

YÖSU is a port in the extreme south, located 60 miles southeast of Kwangju on the Yösu Peninsula. Korea's navy was headquartered here from 1392 to 1910. This is now a fish exporting area of 183,600 residents, though industrial development in the Yochon Industrial District is also important. Yösu is linked to Seoul by rail and road and has regular connections to other seacoast cities.

COUNTRY PROFILE

Geography and Climate

Located on a peninsula squarely between China and Japan, Korea is a mountainous and ruggedly beautiful land of diverse geographical features. The Republic of Korea encompasses 34,247 square miles, or an area roughly the size of the State of Indiana. Seas form three of its boundaries: to the east is the Sea of Japan (or East Sea); to the south, the narrow Korean Straits, and to the west, the Yellow Sea. The Demilitarized Zone (DMZ) forms the northern boundary, separating the Republic of Korea from the Democratic People's Republic of Korea (DPRK/North Korea).

The capital city of Seoul lies some 30 miles south of the DMZ. In addition, there are the regional capitals for various provinces in the country. There are also several important seaports in Korea. Pusan, about 300 miles southeast of Seoul, is Korea's main seaport. Inchon, about 40 miles west of Seoul, is the second most active port. The cities of Pohang, Ulsan, and Chinhae are also key sites in commerce.

Korea's climate is marked by four very distinct seasons. The winters are dry and cold, with snow usually appearing in January. The advent of the cherry blossoms heralds spring—a season that can also be somewhat unpredictable. A brief monsoon season and high temperatures combine to make city life rather humid in the summertime. Autumn is easily the best time of year in Korea, when both the cities and the countryside benefit from clear skies and vibrant fall foliage.

Only 19% of the country is flat enough to be arable, and that land is farmed intensively. In addition, there has been a steady shift away from the farm and into urban areas. Two-thirds of Korea's population now live in its cities.

Population

Korea is one of the world's most densely populated countries. Government figures from 1999 estimate South Korea's population to be 46.8 million, and the city of Seoul's is figured to be more than 10 million. The average age of the population has increased slightly, but the numbers who have first-hand memory of the Japanese occupation or the Korean war continue to decline.

Since 1945, exposure to Western influences has increased dramatically, bringing with it a corresponding evolution in lifestyles, thought, and behavior. Western-influenced attitudes and dress are now common throughout Seoul, but the traditional ideals still hold considerable sway, particularly in the countryside.

Religious freedom is one of the tenets of Korean law. Buddhism (23%) and Christianity (25%) show the most adherents. Others combine practices from Confucianism and Shamanism in their faith.

The Korean language is very distinct from Chinese, but shares a similar grammar and word order with Japanese. The Department of State classifies Korean as a "super-hard language." Han-gul, the phonetic alphabet, is used almost exclusively in all facets of daily life, with occasional Chinese characters finding their way into various publications. Although not a tonal language (such as Chinese or Vietnamese), Korean relies heavily on the Confucian idea of rank and status within society, using various forms of address, expressions, and grammatical nuances to convey those ideas. However, as with any language, a working knowledge of the Korean script and basic phrases will certainly be ample for most residents.

In Korea, the first name is the family name, followed by a given name. Married women continue to use their maiden names but add the prefix "Mrs." Only when associating with Westerners will women occa-

sionally identify themselves by their husband's surname. Koreans seldom address one another by their first names. It is very common practice here to exchange business cards upon introduction.

Traditionally, Korean homes were built of brick or stone around a courtyard, and had three to four bedrooms, a living room, and a kitchen. Bedrooms had charcoal-heated floors called "ondol." Windows were of glass, and sliding doors between rooms in the homes were latticed frames of wood covered with rice paper. Today, very few can claim to live in such housing. Most city dwellers live in high-rise apartments or in homes of cement block with tile roofing.

Traditional Korean food consists primarily of rice, soups, and the ubiquitous "kimchi," which is a mixture of pickled vegetables, red pepper, and garlic. Grilled meats, such as barbecued beef and ribs ("bulgogi" and "kalbi," respectively) are always popular. As with most of Asia, rice figures prominently in the Korean diet, not just as an essential part of one's meal, but also in traditional drinks. It is used to make "makkoli" (a light rice wine) and "soju" (a considerably stronger libation).

A brief Political History. Throughout most of its history, Korea has been invaded, influenced, and fought over by its larger neighbors. To protect themselves from such buffeting, the Yi Dynasty kings finally adopted a closed-door policy, which earned Korea the title of the "Hermit Kingdom." Although the Yi kings showed nominal fealty to the Chinese throne, Korea was, in fact, independent until the onset of Japanese colonialism in the early 20th century. Japan actually annexed Korea in 1910, beginning an era of almost total control from Tokyo. This era was marked by an effort to replace the Korean language and culture with those of Japan. Japanese colonial rule continued until the end of World War II.

With the defeat of the Japanese in World War II, the peninsula was divided along the 38th parallel. Soviet troops accepted the surrender of the Japanese in the North, and U.S. troops accepted it in the South. This division was cemented when the U.S.S.R. refused to allow a U.N. Commission to enter the North and supervise free elections. Thus, the Republic of Korea was established only in the South. The U.S.S.R. established a separate government in the North, the Democratic People's Republic of Korea (D.P.R.K.), headed by Kim Il Sung.

In June 1950, the D.P.R.K. launched a massive invasion of the Republic of Korea, which was halted at the Naktong River near the southeastern city of Pusan, and then reversed by the historic U.S. Marine landing at Inchon that September.

Three years of bloody fighting followed, with massive numbers of troops from the People's Republic of China aiding the North, and troops of 16 U.N. member nations assisting the South. The truce signed on July 27, 1953 established a demilitarized zone along the 38th parallel.

A peace treaty has never been concluded. U.S. military forces remain in the Republic of Korea today to help enforce the Armistice and to deter aggression, pursuant to the Mutual Security Treaty concluded between the U.S. and the Republic of Korea in 1954. While an uneasy peace has been maintained on the peninsula since the Armistice, large armed forces confront each other across the DMZ and incidents continue to occur.

The Republic of Korea has had a stormy domestic political history. After 1948, short interludes of instability punctuated three long periods of authoritarian rule under Presidents Syngman Rhee (1948-1960), Park, Chung Hee (1961-1979), and Chun, Doo Hwan (1980-1987).

In 1987, a new constitution was drawn up in concert with all political parties. In the December 1987

election, a split between major opposition figures allowed Roh Tae-Woo of the Democratic Justice Party (DJP) to become Korea's first directly elected President since 1971, with just 36% of the vote. In the April 1988 legislative elections, the opposition parties together gained control of the National Assembly for the first time. In January 1990, however, the ruling DJP and two of the opposition parties merged to form the Democratic Liberal Party (DLP), which gained control of more than two-thirds of the seats in the Assembly.

In December 1992, Kim Young-Sam, former leader of one of the opposition parties that had merged to create the ruling DLP, was elected as the first civilian president in three decades. In his first year in office, President Kim implemented sweeping political and economic reforms, which signified a fundamental policy break from the previous administration, and which ended the political careers of several key officials from that administration.

President Kim Dae-Jung's historic election in 1997 represented the first time in Korean history that an opposition leader reached the highest office in the land. An internationally recognized human rights and democracy advocate, President Kim has made political and economic reform, together with the promotion of democracy and human rights, the watchwords of his Presidency. He has also reached out to North Korea with his policy of engagement, and, thus far, progress in expanding private-sector North-South contacts and cooperation has been great. He has also successfully pursued summit diplomacy with the U.S., Japan, China, and Russia, as well as other countries in Asia.

Public Institutions

Under the constitution, the Government is divided into three branches: the executive, legislative, and judicial. The President administers the country with the assistance of the Prime Minister and Cabinet, whom he appoints. All provincial and local

officials are appointed and work under the administration of the Ministry of Home Affairs. The judicial branch consists of the Supreme Court, three appellate courts, three district courts, and one family court. In addition, the military services have special courts.

The one-house National Assembly has 299 members. Three-quarters of the Assembly members are elected from single-member districts, while the others are chosen via a nationwide representative system. Each party receives one proportional seat for every three seats won in the election districts. The constitution provides for direct presidential elections every 5 years and National Assembly elections every 5 years.

Arts, Science, and Education

Korea's 5,000 years of history have produced a rich and vibrant artistic heritage. The handiwork seen, for example, in ceramics, woodworking, architecture, needlework, and calligraphy showcases the high level of craftsmanship evident here. Indeed, Korea has designated several artisans as "Living National Treasures," to honor their contributions to the arts and crafts of Korea, and to pass their skills on to the next generation.

Museums and galleries located primarily in Seoul, but also scattered throughout the country, display the works of the Koguryo, Paekche, and Shilla Dynasties. These displays reflect the different impacts of regional interests and conflicts-e.g., Chinese influence during the Koguryo, Buddhist influence during the Shilla. Later on, the Yi Dynasty (C.E. 1392-1910) illustrated the Confucian mores.

Traditional music in Korea is quite distinctive, and is used primarily in religious rituals, combined with prayer and dance. Concerts showcasing traditional court and temple music are quite popular. The art of "Pan'sori," where a lone singer relates a story, often lasting for up

to 8 hours, is also unique to the region.

Traditional dance is usually court, temple dance, or folk dancing, with highly stylized moves and musical interpretations. Again, festivals and performances highlighting these dances are popular.

Korean research and development activities are centered in the scores of research institutes located in Seoul and elsewhere. These include the Korea Advanced Institute of Science and Technology (KAIS), the Korea Institute of Industrial Economics and Technology (KIET), the Korea Atomic Energy Research Institute (KAERI), the Agency for Defense Development (ADD), and the Korea Educational Development Institute (KEDI).

Education at all levels is a highly emphasized facet of Korean life. School children take their studies seriously, and there is enormous pressure from the family and friends to succeed. Government and private investment in education is heavy, particularly in technical schools and colleges, both of which have expanded exponentially in the last decades.

Numerous institutions of higher education were originally established through missionaries' assistance: Ewha Women's University (Methodist), Yonsei University (interdenominational), Soongjun University (Presbyterian), and Sogang University (Jesuit). Of these, the most prestigious is Seoul National University (SNU). These institutions introduced Western culture to Korea during the early part of the 1900s, and many national leaders have since received their education from them.

Commerce and Industry

Korea is one of the largest of the U.S. trading partners, and, currently, our sixth largest export market, surpassing those of Australia, Brazil, China, France, and Italy.

Imports to Korea are returning to pre-crisis (1997) levels, with strong growth expected throughout 2000. Concurrently, Korea also has been described as one of the toughest markets in the world for doing business, a place where firms must do their homework and take nothing for granted.

In response to the late-1997 economic crisis, the administration is implementing structural reforms, especially in the financial and corporate sectors aimed at putting the Korean economy on a more open, market-oriented basis. With the rapid improvement in the nation's economy, however, the pressure to press on with reform and restructuring has abated somewhat.

Despite these challenges, there are many outstanding export possibilities for U.S. goods and service providers, and new opportunities continue to abound. For instance, Korea will be Asia's third largest e-commerce market by 2002. Korea's e-commerce market is forecast to grow to almost \$10 billion by 2003, making Korea the 10th largest e-commerce market in the world. The number of Korean Internet users is now estimated to be about 10 million more users than exist in Australia, Taiwan, Italy, Sweden, Netherlands, and Spain, and rapidly gaining on Canada and the U.K. The Korean market for U.S. non-memory-integrated circuits and microassemblies continues to expand. Korea imports more integrated circuits than it does gas and oil.

In sum, Korea is undergoing a fundamental and revolutionary period of change. Although barriers remain, it is clear that Korea is gradually evolving into a more competitive, more transparent, more user-friendly business environment. U.S. exporters realize the strategic importance of being active in this key market and contribute to the vibrant commercial environment that is Korea.

Transportation

Automobiles

Given the narrow streets and crowded traffic conditions here, small, maneuverable vehicles that are easy to park are best. Vehicles shipped to Korea should not be crated, and all-risk maritime insurance is recommended. Before driving a vehicle, you must have third-party, property damage, and liability insurance, which can be purchased locally.

To obtain a local drivers license, a valid drivers license issued elsewhere (U.S. or foreign) is needed. Otherwise, the local drivers test, which is considered difficult, must be taken. A Korean license is valid for 5 years and is renewable. The fee for both initial issuance and renewal (as of 1999) is 3,500 won.

Traffic accidents in Korea are a serious problem. The Republic of Korea has one of the world's highest traffic fatality rates per number of cars on the road, well over 10 times the rates in the U.S. and Japan. Pedestrian casualties are also high. There are many streets with unmarked crosswalks, and many crosswalks that are marked yet not observed by drivers. Pedestrians often exacerbate traffic problems by jumping into the street to hail taxis. Motorcycles make the situation even more hazardous, with a marked tendency to drive wherever there happens to be room-which can even include the sidewalks.

Local

Local bus transportation in Seoul is inexpensive (for example, W600 per ride on a city bus, regardless of distance) and offers an easy alternative for getting around town. However, schedules per se are nonexistent and buses can be extremely crowded during the rush hour. Routes are printed on the sides of buses-but in Korean script. A basic knowledge of the local language will be a great help in navigating your way around.

Seoul has a fast, safe, and inexpensive subway system, which is easy

to understand. Routes handle both major city stops and areas well beyond the city boundaries. As with any large city, the subway is crowded at rush hour.

Local cabs are convenient and reasonably priced; all taxis are metered so bargaining is not necessary. Tipping is also not expected. Taxis can be hailed from anywhere on a street, although there are some taxi stands near the larger hotels. When hailing a cab, beckon with your hand facing down. Cabbies will not pick up a rider if they do not wish to go to that destination; they will also be disinclined to pick up fares during their shift change (usually late afternoon).

Deluxe cabs are clearly marked. Geared primarily for foreign tourists, the meter starts at W3,000, and the drivers are said to have a grasp of Japanese and some English-language skills.

Regional

Both highways and city streets are often heavily congested with cars, taxis, and buses. Construction projects are continuous. There are good roads from the airport into Seoul proper, and also to points south and east.

Intercity bus transportation is available throughout Korea. Modern, air-conditioned coaches provide inexpensive transportation to major cities. Schedules are available at both the Seoul Express and Nambu Bus Terminals.

The Government owns and operates the entire railway system and continues its efforts to modernize and expand railroad facilities. The well-developed system has first-class coaches available at reasonable fares. There is train service to all major cities. Night express trains have Pullman sleeper cars, and long-distance trains have a dining car. Licensed vendors are authorized to come aboard to sell refreshments.

Sea transport is essential to Korea because there are no open land bor-

ders. Shipping services are well developed, and almost all major foreign shipping lines regularly call at ports here. Usually, these are cargo or cargo/passenger ships. The principal ports are Pusan, on the southern tip of the peninsula, and Incheon, northwest of Seoul.

Many international airlines operate in Korea, and Korean carriers (Asiana and Korean Airlines) fly domestic routes. The schedules are convenient and the airfares are usually quite reasonable.

Communications

Telephone and Telegraph

The Republic of Korea has made great strides in both its telephone and telecommunications services. Cellular phone service is available with many carriers and options to choose from. A wide variety of Internet services is available and prices are comparable to those found in the US. Prepaid phone cards are available, the price per minute back to the U.S. ranges from 8 to 10 cents a minute.

Radio and TV

Korean radio stations offer a wide variety of good musical programs—particularly classical—on both AM and FM stations. In addition to these local Korean channels, the Armed Forces Network Korea (AFN-K) broadcasts news, music, sports, and some US. radio programs. Voice of America programs and National Public Radio are available as well. Some employees use shortwave radios to pick up the BBC, CBC, Deutsche Welle, and others.

Cable TV, some with foreign programming, is widely available. The four Korean television networks offer a variety of programming, with a few either in English or with the benefit of subtitles for foreign viewers. The AFN-K-TV transmits a choice of CNN newscasts and U.S. television programs. The NTSC system is used in Korea, so a U.S.-make television set can receive local broadcasts. Hong Kong's Star TV

Network is also available. There are plenty of locally run video shops, which also carry popular releases.

Newspapers, Magazines, and Technical Journals

The Korea Times and the Korea Herald are the two English-language newspapers published in Seoul, with an obvious emphasis on Korean news. The U.S. military newspaper, the Pacific Stars and Stripes, is published daily in Japan and shipped to Seoul. All these publications are available for home delivery/subscription. In addition, the International Herald Tribune (Asia edition), and the Financial Times are now printed locally. Asian Wall Street Journal, and USA Today arrive a day late.

Most popular American magazines and recent paperback novels are available at the post exchange.

In addition to these options, the Kyobo Building is well known for its wide selection of English-language titles. Although prices may be higher than in the U.S., the selection is usually quite good.

Health and Medicine

Medical Facilities

Medically speaking, Korea is an advanced country. Hospitals are usually well equipped with state-of-the-art diagnostic and therapeutic equipment. Many Korean physicians have trained and practiced in the US. Specialized care is available at Korean hospitals, as well. High-quality dental care, both general and specialized, is available in Seoul at costs comparable to those in the U.S. U.S.-trained orthodontists are available. Optical services, including American board-certified ophthalmologists, are available at major university-affiliated hospitals at reasonable costs.

In general, specialized medical needs can be handled, but there may be cultural differences that can affect overall satisfaction with services. You may find Korean medical

practices (bedside manners) somewhat different from what you are accustomed to: be prepared to discuss your medical needs and medical history. In Korea, it is normally regarded as the patient's responsibility to inform the doctor of any potential medical concerns. Don't wait until you are asked; you may not be.

Korean doctors do not always volunteer information about their diagnosis or treatment options. When asked, they are usually reluctant to give the patient such information.

Korean doctors rarely tell the patient the nature of the medicines prescribed. The name of the medication, too, will most likely not appear on the package. You may wish to ask your doctor the name and type of medication he is prescribing before having the prescription filled at the pharmacy; the pharmacist may simply refer such questions to the doctor. In Korea there is no primary care system; all doctors are specialists. Be prepared to pay, in cash, at the completion of each visit.

Community Health

Seoul has air pollution levels that are considered moderate by U.S. standards. Hazardous levels are episodic and seasonal, not continuous. Photochemical pollution or smog results from the action of sunlight on motor vehicle exhaust producing ozone. This type of pollution predominates in summer. In winter, particulate and sulfur oxides, which result from coal-fired heating and industrial processes, predominate. Overall levels of winter pollution have decreased in Seoul by 50% in the last 5 years largely due to the switch to natural gas for heating and in industry. However, summertime smog has increased due to the increased number of vehicles in Seoul.

Respiratory problems are the major cause of clinic visits. The cold, dry winters are responsible for recurrent sinusitis, bronchitis, otitis media, and pneumonia. The best protection against these winter illnesses is humid air. Sturdy, cool-

mist humidifiers are the best way to replace the moisture in the air. Humidifiers are available locally. Locally purchased fruits, meats, vegetables need extra cleaning to be on the safe side.

Preventive Measures

Gastrointestinal illnesses are not generally a problem, but the incidence of Hepatitis A, Hepatitis B, and tuberculosis is rising. Anyone traveling to other parts of East Asia (e.g., China and Thailand), should get two series of Hepatitis A and three series of Hepatitis B vaccinations as they are prevalent in those regions. Long-term visitors may want to be checked annually for TB status.

NOTES FOR TRAVELERS

Passage Customs & Duties

A passport is required. Visas are not required for tourist or business stays up to thirty days. For longer stays and other types of travel, visas must be obtained in advance. Changes of status from one type of visa to another (from tourism to teaching, for example) are normally not granted in South Korea. Individuals who stay in Korea longer than the period authorized by Korean immigration are subject to fines and may be required to pay the fines before departing the country. Individuals who plan to stay longer than the period authorized must apply to Korean immigration for an extension in advance.

For further information on entry requirements, please contact the Embassy of the Republic of Korea at 2320 Massachusetts Avenue N.W., Washington, D.C. 20008, telephone (202) 939-5660/63 or the Korean Embassy Internet home page at <http://www.mofat.go.kr/main/etop/html>. South Korean consulates are also located in Atlanta, Boston, Chicago, Guam, Honolulu, Houston, Los Angeles, Miami, New York City, San Francisco, and Seattle. The Korean Ministry of Foreign Affairs

and Trade has a web site with a directory of all Korean diplomatic missions worldwide at http://www.mofat.go.kr/en_missions.htm.

Americans living in or visiting South Korea are encouraged to register at the Consular Section of the U.S. Embassy in Seoul and obtain updated information on travel and security within South Korea. The U.S. Embassy is located at 82 Sejong-Ro Chongro-Ku, Seoul, telephone (82-2) 397-4114 fax (82-2) 738-8845. The U.S. Embassy's web page can be found at <http://usembassy.state.gov/seoul>.

Pets

The 10-day quarantine period for dogs and cats entering Korea from the U.S. has been removed, but importing pets is still subject to the following conditions: Dogs and cats from rabies free areas, such as Hawaii, will be released on the day of arrival into Korea. Puppies and kittens less than 90 days old from anywhere will be released on arrival day if accompanied by a valid animal health certificate. Dogs and cats more than 90 days old from rabies areas, such as the US., will be released upon the day of arrival, if accompanied by a valid animal health certificate that shows that the animal has been vaccinated against rabies at least 30 days prior to departure from the US. (and less than 1 year since the previous vaccination.)

Currency, Banking, and Weights and Measures

The official currency unit is the won, issued in denominations of 1,000, 5,000, and 10,000 won notes. Coins are 10, 50, 100, and 500 Won. U.S. dollars are accepted in the Itaewon shopping area and in some other locations that deal with tourists. As of May, 2001, the exchange rate is approximately W1,300=US\$1. This rate fluctuates almost daily. Travelers checks can be purchased at various local banks, including Citibank.

No limit is placed on the amount of foreign currency you can bring into Korea, provided you declare it. Cur-

rency exchange facilities for American currency or travelers checks (not personal checks) are available at Incheon International Airport. Won, the local currency, cannot be imported. There is a departure tax of approximately Won 10,000 for all passengers.

Security Information

Civil defense air raid drills are usually conducted on the 15th of each month. The drills are always announced in advance in English newspapers and AFKN. The alerts last about 20 minutes. During that time, all local business activities cease, and traffic comes to a complete standstill. If indoors, you remain there until the all-clear siren sounds. If you are on the street, you must go indoors or into an underpass or subway station for the duration of the drill.

Seoul is one of the world's largest cities and has criminal activities normally associated with large urban areas. Robberies and pick-pocketing/purse snatchings, especially those targeting foreigners, are frequent. Incidents of sexual harassment and molestation of foreign women have occurred. Home burglaries and car thefts are more common, but have not affected Embassy personnel. Police are considered capable and well trained.

Isolated acts of violence have been directed at U.S. facilities in the past. It is a function of political dissidence, and the organizers are mainly from a small but active group of radical university students. During periods of increased tension on university campuses, usually in the spring and autumn, Americans are advised to avoid universities and political rallies. The great majority of Korean people consider themselves to be friends of the U.S. Government and the American people.

Seoul is only 30 miles south of the Demilitarized Zone, one of the most heavily fortified and tense borders in the world. However, with the exception of incidents along the Demilitarized Zone (DMZ) and occa-

sional attempts by North Korean agents to infiltrate the South, peace has prevailed on the peninsula for 50 years. However, should it ever be necessary, the Embassy and U.S. Forces Korea have worked together for plans to evacuate noncombatants from the peninsula. The Consular Section, American Citizen Services, has the most current information on Noncombatant Evacuation Operation (NEO) exercises.

LOCAL HOLIDAYS

Jan. 1	Solar New Year's Day

Kuwait City, Kuwait

KUWAIT

State of Kuwait

Major City:

Kuwait City

Other Cities:

Ahmadi, Al-Khiran, Jahra

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated August 1994. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Modern **KUWAIT** was settled early in the 18th century by desert nomads from Saudi Arabia, but archaeological evidence suggests habitation for more than 3,000 years. Its name is derived from the word "kut," meaning small fortress, which was built by the Sheikh of the Bani Khalid in 1672. Today, the country is one of the wealthiest and most progressive in the Middle East. It has been fully independent since 1961, when the British ended a six-decade protectorate sought by the Kuwaitis, who had spent a century under the threat of Turkish and Arabian tribal domination.

Oil, first exported in 1946, is the mainstay of the economy. Oil pays

for free medical care, education, and social security; there are no taxes, except customs duties.

The 1990 Iraqi invasion and subsequent Persian Gulf War brought Kuwait into the world's spotlight. The seven-month occupation by the Iraqis left the country with destruction and rebuilding costs in the billions of dollars. Buildings were not only damaged but also looted by Iraqis; oil wells bombed; and communication, power, and water supply connections severed. Up to a decade will be needed to rebuild and repair the damage.

MAJOR CITY

Kuwait City

Greater Kuwait City extends 15 miles along the Bay of Kuwait and a similar distance down the coast of the Arabian Gulf, where a succession of smaller towns comprise with it a growing metropolitan area where most Kuwaitis live. It is the most important city in the State of Kuwait. The old city outgrew its mud walls with the advent of the country's oil prosperity in the late 1950s, though a few gates have been preserved as historical monuments. The city has continued to expand

along the coast, and new suburban communities have grown up adjacent to it. In contrast to the flat, arid countryside are ever-changing colors of the sea and green areas of trees, flowers, and grass in the city and the older suburbs. Its population in 2000 was estimated at 1,187,000.

Food

Subject to seasonal variations and occasional shortages, a wide variety of foods is readily available in Kuwait. Good fresh fish, fruits, and vegetables are available on the local market. Canned and frozen vegetables from the U.S., Europe, and Australia are sold. Frozen meat and poultry are imported from Denmark, New Zealand, Australia, or the U.S. Pork products are prohibited. The Kuwait Danish Dairy offers a large selection of ice cream, yogurt, cream, sour cream, and milk with different degrees of fat content. All items are reconstituted and quality is good. Soft drinks are available.

Each district of Kuwait has grocery stores and a larger cooperative shopping center complex. One American-type supermarket also exists.

The sale of alcoholic beverages is prohibited in Kuwait.

Clothing

Although summers are long and hot in Kuwait, winters are chilly and occasionally rainy. The same type of clothing worn in Washington, D.C. (without snowsuits and snow boots) is suitable. Summer clothing is worn for about 7 months of the year. You will need more than the usual amount of clothing necessary in the U.S. Wash-and-wear clothes do not last as long as in the U.S. since they must be washed frequently in the summer. (Water tanks on the roof produce hot water during summer.) During November-March, fall, winter, and spring clothing, including topcoats and rainwear, is worn.

A wide variety of fabric is available at reasonable cost. Local dressmakers and tailors have been used with varying degrees of success, but good tailors are expensive.

Lightweight summer suits for office and evening wear, and slacks and sport shirts for casual wear, will meet summer dress requirements. Acceptable dry-cleaners can be found. Tails and morning dress are not worn in Kuwait. Medium to lightweight American fall, spring, and winter suits are appropriate for cooler months. English and continental men's shoes, underwear, shirts, neckties, socks, and ready-made suits are available, but they can be expensive, and the selection of sizes, styles, and quality varies.

Conservative dress is the rule. Bring summer cotton dresses, slacks, skirts and blouses, and pantsuits for all occasions. Shorts are not worn publicly but can be worn at poolside or on private beaches. Sleeveless dresses or blouses are not suitable for street wear; wear short jackets or shawls to cover bare shoulders. For evening wear, cocktail dresses with sleeves are appropriate. Kuwaiti women are fashion conscious, and London and Paris designs and skirt lengths will be seen at most evening parties. In winter, pantsuits, slacks, dresses, skirts, blouses, and coats are worn. Stores selling women's clothing offer a variety of European-made

dresses, skirts, and suits at medium to high prices.

Lingerie (some American-made) is available at reasonable prices, but selection is limited. Most women prefer to wear cotton or cotton blends. Stockings are available at reasonable prices. Formal hats and gloves are seldom worn. European shoes are available at varying prices. Dress or casual sandals do not last long, but reasonably priced local replacements are available.

Clothing for children and babies is available at reasonable prices. Shoes for children are available but are extremely expensive and tend to be of inferior quality. Narrow sizes are almost impossible to find, and shoe repair is substandard. Winter coats, jackets, or windbreakers are needed. Mandatory school uniforms (navy blue slacks or skirts with blue or white shirts) must be purchased locally. No slipovers or T-shirts can be worn in Kuwaiti schools. Navy blue cardigan sweaters are accepted for in-class wear during cooler months. For outdoors, a lightweight, flannel-lined windbreaker for fall and spring and a heavier jacket/coat of your choice for winter is sufficient to get through the year. Physical education uniforms are white shorts and plain white T-shirts for boys, and navy blue shorts and white blouses for girls. These must be purchased locally and are worn for gym only.

Supplies and Services

It is said that everything is available in Kuwait, if you look long and hard enough, but supplies are often limited, and particular items may be out of stock at any given time. Despite minimal import duties, prices are high, as overhead and profit margins are large and transportation costs great. Adequate stocks of toiletries, cosmetics, shaving supplies, medicines, and household entertainment needs are available.

Most common brands of American and British cigarettes and some American brands of cigars, pipe tobacco, and smoking accessories

are available at prices comparable to, or lower than, U.S. prices.

Several satisfactory women's beauty shops exist. A shampoo and set costs \$15 and up. Haircuts range from \$15 to \$42. Men's haircuts cost from \$10 to \$20, and styling is about \$25.

Religious Activities

Both Roman Catholic and Protestant church services are conducted in Kuwait City and in the oil town of Ahmadi, a 45-minute drive south. In Kuwait City, interdenominational Protestant services are held at the National Evangelical Church on Sunday evenings. The Roman Catholic Church, with daily services, is located near the Sheraton Hotel. St. Paul's Church (Anglican) is located in Ahmadi. Its rector holds monthly services in various homes in Kuwait City.

Education

American children attend the American School of Kuwait (ASK), established in September 1964 as a joint Embassy and American business effort. Enrollment (K-12) has exceeded 900. The student body, which represents 35 countries, is about 30% American. Virtually all teachers except Arabic language and Islamic studies teachers are certified American teachers. The school provides instruction for kindergarten through grade 12. The curriculum is that of a U.S. general academic, college preparatory public school. It does not offer separate classes for native and nonnative speakers of English. Religious instruction is offered for Muslim students. Arabic, French, and Spanish are taught as foreign languages with Arabic being mandatory from grade 4. French is an elective from grade 9. High school Advanced Placement courses are offered. Most graduates go on to colleges and universities in the U.S. or other countries.

ASK is housed in two campuses, one for grades K-5 and one for grades 6-12. It has a gymnasium, theaters, a playground, a swimming pool, and labs for art, computers, ESL, music,

reading, science, and special education. The school sponsors an activities program for students of all ages for the payment of an additional activities fee. The school year is divided into two semesters of 18 weeks each. The school year begins in August/September and ends in June.

Some American children also attend the Universal American School (UAS). UAS received full accreditation in November 1985 and like ASK is a member of the Middle States Association of Colleges and Schools. The school provides instruction for kindergarten through grade 12. The curriculum is also that of a U.S. general academic, college preparatory public school. Approximately 85 percent of the faculty is American. Enrollment exceeds 600 students. The school does not offer separate classes for native and nonnative speakers of English. Religious instruction is offered for Muslim students. Advanced Placement courses are available for juniors and seniors.

UAS has a media center (audiovisual), laboratories, a playground, art room, and a gymnasium. The school year is divided into two semesters of 18 weeks each. The school year begins in September and ends in June.

The American International School, a private independent college preparatory day school, offers education from pre-kindergarten through grade 12. The International Baccalaureate program and the Advanced Placement program are available for students in grades eleven and twelve. The current enrollment of over 800 students is served by a faculty 80 percent recruited from North America.

Among Kuwait's numerous private schools are several on the British model and a French school. Several private English-speaking pre-schools are also available.

Special Educational Opportunities

No special facilities exist for advanced or for emotionally, physically, or mentally handicapped American children. Limited help exists for children with learning disabilities. Tutors for catchup work are hard to find. Courses at Kuwait University are taught in Arabic and English depending on the faculty. The Voltaire Institute, attached to the French Embassy, offers instruction in French.

Sports

Soccer and basketball are the only major sports in which Kuwaitis participate regularly. Competition in soccer is between Kuwaiti and other national teams, and is not open to U.S. employees and their families. Ice hockey teams have been formed and include skaters from the U.S., Sweden, and Canada. Activities that one can enjoy are swimming, fishing, snorkeling, tennis, horse-shoes, squash, darts, scuba, golf, water skiing, and sailing, although care must still be taken in water sports due to unexploded ordnance. Many people play tennis, even in midsummer. Bowling leagues function during most of the year. Softball teams have games scheduled from September to April. An ice skating rink is available, and horseback riding is popular.

If foreigners are discreet, photographs can be taken in Kuwait. Some Kuwaitis, especially women, object to being photographed. Local police might warn against picture-taking in the suq (market). In certain areas, including military compounds and ports, photography is prohibited, and in a few cases, film has been confiscated. Muslims regard all things pertaining to their religion as sacred; this applies to mosques, and you should therefore seek permission to enter or take photos of Kuwait's many mosques. No objections arise when photographing at private parties or outings where only friends are present.

Touring and Outdoor Activities

Many touring and outdoor activities were curtailed after the Gulf War because of the presence of unexploded ordnance throughout the country.

The Tareq Rajab collection is privately owned and open to the public at the Rajab Museum in Jabriya. This collection is Islamic with emphasis on ceramics, early Korans and historical documents, and the tracing of the trade routes through jewelry. The Bedouin jewelry collection (mainly silver) is one of the most extensive in the world.

One of the most unique cultural places in Kuwait is the Sadu House, the center for traditional Kuwaiti bedouin weavings. On certain days visitors can watch the women weave. The house also offers a short film on the history of bedouin weaving, a research lab, and a number of exhibition rooms.

Green Island, enclosing a large lagoon, is constructed out into the sea. A fun place to bring children, it features an observation point, paddleboats, and a scaled-down ruined castle surrounded by a moat. Another fun place for children is the recently reopened Kuwait Zoo.

Khiran Resort, about 45 minutes outside of Kuwait City, also reopened recently. A typical beach resort, it offers bungalows and villas for rent, a swimming pool, a playground, a cafeteria, beachfront, recreation areas, and special bicycles for rent.

The Kuwait Towers, Kuwait's most identifiable landmark, serve as an excellent vantage point overlooking the rest of the city. The top sphere has a snack bar with a revolving observation area; there is also a fancy (non-revolving) restaurant.

Three of Kuwait City's gates and a section of the mud wall remain as a reminder of the Wahhabi and Saudi invasion of Kuwait over 65 years ago. The wall, constructed in 1920, remained standing until 1957.

About a half-hour drive from Kuwait City is a group of private shipbuilding establishments on the edge of Kuwait Bay. Here wooden dhows are still constructed with simple tools by skilled craftsmen.

Al Jahra lies about 78 miles west of Kuwait City and was the scene of a famous 1920 battle between Kuwait and Bedouin forces. On Fridays a large and active camel market is held in the center of town. Nearby is the Red Palace, an old fortress of the village.

Another popular Friday activity is the Friday suq, a Kuwaiti-style flea market with a traditional open market flavor.

Indoor gardening is a satisfying outlet for apartment dwellers. Most have found that anything that will grow and flourish in the ground can be coaxed to thrive indoors as well. Nurseries and flower shops are abundant. Potting soil is expensive. Prudent care and programming can assure continuous enjoyment of some kind of flowering plant year round. Limits to indoor gardening are dictated only by light available within a given area and your imagination and perseverance. Excellent investments for the prospective outdoor and indoor gardener are the Sunset books of *Desert Gardening*, *Gardening in Containers*, and *House Plants*.

Outdoor gardening is practical during winter since the weather is cooler and damper.

Entertainment

Kuwait has few indigenous cultural activities accessible to non-Arabic speakers. Musical and artistic groups periodically come to give performances to residents of all nationalities. Public lectures in English are provided occasionally by guest lecturers at Kuwait University. Most cultural activities are do-it-yourself. An amateur theater group performs about four times a year; an amateur choir meets weekly and performs occasional concerts.

Kuwait has no professional orchestra. Many public movie houses in Kuwait show mostly Indian and edited English-language films. Bridge is a popular pastime.

Eating out is also a popular form of recreation and entertainment in Kuwait. Restaurants are expensive. All international hotels (Sheraton, Kuwait International Hotel, Holiday Inn, SAS Hotel, and Meridien) have dining rooms plus coffee shops. These establishments regularly offer specials on food from foreign countries.

Many people find that various fast food places (Kentucky Fried Chicken, Arby's, Baskin Robbins, Wendy's, Hardee's, Pizza Hut) are excellent and maintain good food and health standards.

Social Activities

The American Women's League is an association of women who are U.S. citizens or are married to U.S. citizens. Social in nature, since fund-raising for charitable causes is not deemed necessary by the Kuwaiti Government, the league holds monthly meetings throughout fall, winter, and spring and features general-interest programs. Occasionally, it organizes barbecues, outings, fashion shows, and other similar activities.

Kuwait is an excellent place to begin or continue tennis instruction; prices are comparable to those in the U.S. Bike riding is limited because paved areas on the compound are minimal, and traffic is hazardous on public roads.

Younger children have few adjustment problems in Kuwait, even though the range of activities for them is limited. There is, however, an active Little League, as well as scouting for both girls and boys. Teenagers find life more confining. The school provides limited non-coed social and extracurricular outlets. On weekends and evenings, social life is limited to shopping, movies, video, TV, and swimming (in season). TV programs include a few hours of English-language

shows; 30 minutes of cartoons each evening are the high point of the sunset hour for the younger set. Sesame Street, in Arabic, appears daily. The swimming season, however, extends from the beginning of April through October, and the compound swimming pool is a social and recreational center for dependents of all ages during summer.

Most entertaining is informal. Buffets are the most common form of dinner party. Sit-down dinners are a hazard unless you know your guests, as Arabs are casual about accepting invitations or sending regrets. The formally set table frequently may have several empty places—or may be squeezed to add two more—by the time dinner is served. Cocktail buffets are a common way of handling large groups.

Kuwait's traditionally family-oriented, cosmopolitan society offers opportunities to form excellent professional and personal relationships. In addition, both Arab and other expatriate communities are active socially.

Special Information

Kuwait is a modern, progressive, and in many ways a Western-appearing country. The religious heritage of Islam, however, has given Arabs a different culture and a strict code of ethics. Although they differ from those in the West in many respects, the rules of common sense and politeness will enable a visitor to enjoy Kuwait.

Hospitality is the basic rule of life in the desert, and this custom has been carried forward. Avoid overly admiring or praising the private belongings of your host, or the host may feel compelled by the dictates of his culture to make a gift of the object you admire. You should not refuse an offer of food or drink unless it is necessary. Shopkeepers sometimes offer tea or coffee to shoppers while they are browsing.

Males should not inquire or appear curious about women members of an Arab family. Western women should dress modestly and be dis-

creet whenever they go outside their homes.

During the Holy Month of Ramadan, Muslims abstain from all food and drink from sunrise to sunset. During the day, it is not permissible for anyone (including non-Muslims) to eat, drink, or smoke in public.

OTHER CITIES

AHMADI, situated in eastern Kuwait off the Persian Gulf, offers a contrast to the dry regions of the nation. The pleasant gardens, villas, and tree-lined avenues lure Kuwaitis here to enjoy its peace and tranquility. An industrial and self-sufficient city of 305,000 residents (1985 census), Ahmadi was established as Kuwait's oil town. It developed around the oil industry which provided houses and other facilities for its employees. Crude oil is shipped from Ahmadi's port. Due to rapid growth, Ahmadi will more than likely be merged with the nearby capital in the future.

Situated about 50 miles south of Kuwait City, **AL-KHIRAN** was once an uninhabited desert area visited only by a few swimmers fond of its clear waters. In 1981 urbanization of the city began and its sandy coast was revamped into a modern tourist resort offering a wide range of facilities. This new town has been designed to eventually accommodate 115,000 residents.

One of Kuwait's oldest towns, **JAHRRA** (Al-Jahra) is situated eight miles west of the capital. Archaeological findings in Jahra suggest that it flourished during pre-Islamic times. Traditionally an agricultural city, Jahra's urban development has replaced most of its farm land with modern buildings. Some farms may still be found in the eastern part of the city, but new projects and commercial endeavors are being developed by the government. One of Kuwait's most outstanding tourist landmarks is the Qasr Al-Ahmar (Red Palace). It commemorates the

1920 battle of Jahra. The palace serves as a exhibition center as well as hosting festivals. The city has an approximate population of 280,000 (1985 census).

COUNTRY PROFILE

Geography and Climate

Kuwait is located in the northeastern corner of the Arabian Peninsula. It is bounded on the north and west by Iraq, on the South by Saudi Arabia, and on the east by the Arabian Gulf. With an area of about 7,780 square miles, it is slightly smaller than New Jersey.

The country is a sandy, riverless desert interspersed with small hills. Vegetation is sparse. Kuwait's climate is typical of the region. Summer (April-October) temperatures often exceed 120°F, although daytime temperatures of 110°–115° 120°F are more common. Mean annual rainfall is 4-5 inches and occurs mostly during December and January. Short autumn and spring seasons (November, February, and March) are delightful. During winter (December and January), clear, sunny days are common, but it is often cold enough to require a light winter coat in the mornings and evenings. In the early morning the frost point is occasionally reached. Sand and dust storms occur throughout the year, especially between March and August. Periods of high humidity occur, but during the hottest months (June, July, and August), humidity levels range between 45 percent and 50 percent.

Population

Foreign nationals comprise approximately 55% of Kuwait's population of 2 million (2001 est.). The largest foreign groups are Egyptians, Pakistanis, Bangladeshis, Indians, Syrians, Lebanese, and Filipinos. The largest Western community is Americans (about 6,200), followed

by British, French, Germans, and Canadians are also represented. Kuwaiti citizens include recently settled Bedouin and long-established townspeople with antecedents in central Arabia, Iraq, and Iran. This variety of origins is reflected in religion: about 45% of Kuwaitis are Sunni Muslims; about 40% are Shi'ite Muslims. Although Sunnis comprise the ruling elite, many Shi'a have acquired great wealth and the influence money brings. Other religions practiced include Christianity, Hindi and Parsi.

Arabic is the official language, but English is widely understood and spoken. The literacy rate, estimated at more than 78%, is one of the highest in the Arab world, and exceeds Population growth is 3.5%.

Kuwait's standard of living approaches that of the most developed Western states in many respects. Most families own a car. Homes of wealthy Kuwaitis are large and, in some cases, palatial. While there are pockets of relative poverty, Kuwait's generous system of government social programs guarantees a minimum standard of living that is high by Third World standards.

Public Institutions

Kuwait, independent since 1961, is a constitutional hereditary emirate, ruled by emir's drawn from the al-Sabah family, which has ruled Kuwait since 1756. Succession as emir is restricted by the 1962 constitution to descendants of the late Mubarak al-Sabah "the Great." The emir selects the prime minister in consultation with senior members of the ruling family. By tradition, the emir's successor, the crown prince, also serves as prime minister. The ruling family's selection of a crown prince is subject to parliamentary approval. Kuwait's emirs have traditionally governed in consultation with members of several commercially powerful families and other influential community leaders. With the emergence of Kuwait as an economically wealthy state,

based initially on its vast oil resources and subsequently on its overseas investments, actual power was increasingly centered in the hands of the ruling Al-Sabah family.

Kuwait's National Assembly, the seat of Kuwaiti legislative power, has served both to institutionalize traditional consultative participation with the ruling family and to act as an outlet for popular expression. Its 50 popularly elected deputies are chosen by an electorate composed of the approximately 82,000 adult male Kuwaiti citizens who can trace their Kuwaiti ancestry back to 1920. (Kuwait has not granted suffrage to females or "second class" male Kuwaiti citizens.) The entire Cabinet sits in the Assembly *ex officio*.

The judicial system includes courts of the first degree (magistrates, civil, domestic and commercial courts), a Misdemeanors Court of Appeal, a High Court of Appeal and a Court of Cassation. Kuwait has a civil law system with Islamic law playing a significant role in personal matters. According to the Kuwait constitution, however, Islamic law is not the only source of Kuwaiti law.

Officially, political parties are banned. Nonetheless, political activity finds an outlet in social clubs and religious societies as well as through family or neighborhood fora, known as "diwaniyyas." A number of political "groupings," both secular and Islamic, act as political parties during elections and in the National Assembly. Labor unions are permitted in several sectors but, since they are financed by the Government, seldom act independently.

The government has recently begun to advocate extending the right to vote and hold public office to women. However, in 1999, the Assembly rejected an emiri decree granting women's rights.

Kuwait's democracy, albeit limited, is much more open and participatory than are the regimes of its

Aerial view of Kuwait City, Kuwait

neighbors. In a single generation, oil-related wealth has brought vast change to the once poor, isolated members of the society. The large expatriate population has also exposed Kuwaitis to numerous social and cultural forces. With its high per capita income, Kuwait has distributed its wealth among the population through education, medical care, housing, and guaranteed employment for citizens.

Arts, Science, and Education

A traditional Arab sheikhdom, Kuwait has a cultural life of its own. Kuwait has several artists who work in their own homes or in government-sponsored art studios and who give occasional public showings.

Arab and Western music is heard on radio and TV and in public settings in connection with special events. Western music is also presented at various times during the year, primarily by performers sponsored by Western embassies, cultural centers, or major international hotels.

Kuwait has made great strides in its pursuit of scientific knowledge. Most scientific subjects are offered at the undergraduate level at

Kuwait University, while research is carried on at the Kuwait Institute for Scientific Research (KISR) and in projects funded by the Kuwait Fund for the Advancement of Science (KFAS).

Education is free for all Kuwaiti children. Most foreign dependents attend private schools that charge rates approved by the Ministry of Education. At the university level, Kuwaiti nationals attend Kuwait University free, while other nationalities pay a fee. Scholarships are available for many students from other Islamic and Arab countries. Kuwaiti students scoring in the upper *)% in sciences and upper 70% in arts courses during their secondary schooling years are eligible to study abroad at the governments expense, and many other Kuwaitis do so at their own expense. In 1995, over 12,000 students were enrolled at Kuwait University. In 1992, about 4,000 were studying in the U.S. on scholarship or privately funded programs.

Commerce and Industry

Modern Kuwait was founded about 1740 by desert nomads from Saudi Arabia, but archaeological evidence indicates habitation for over 3,000

years. Because of its Gulf location, fishing, pearl diving, and trading became the most important occupations. Oil was discovered in 1938, but production was insignificant until after World War II. Since 1950, the country has developed rapidly. Today, Kuwait's prosperity depends on oil and income generated by oil revenues invested primarily in the U.S. and Europe. The oil sector provides more than 90%% of Kuwait's export earnings and a comparable proportion of total government revenues. Many other commercial and economic activities serve the petroleum industry and its employees.

Existing industries include water-desalination plants, oil refineries with desulfurizing plants, an LPG plant, an ammonia plant, a chemical fertilizer factory, cement, brick, and concrete block production, bottling plants, and various light industries.

Kuwait has the world's highest per capita imports. The local market reflects Kuwait's free trade outlook. The United States is Kuwait's second largest trading partner, after Japan, owing to Kuwait's purchases of American aircraft, industrial equipment, cars, air-conditioners, and other durable consumer goods. The U.S. also exports substantial services to Kuwait. A wide range of products from the U.S., Europe, neighboring countries, and the Far East are also available. Kuwaiti importers choose their goods almost entirely by price and local demand, not by national origin.

Transportation

Local

Driving is on the right; roads and highways are excellent, and several major highways exist. Most principal roads are divided highways with four to six lanes. Excellent all-weather highways lead south and west to Saudi Arabia. The accident rate in Kuwait is one of the world's highest, due to excessive speed, lax enforcement, and a lack of basic training of many drivers. Practice defensive driving to avoid accidents.

Visitors can use international driving permits issued by their respective countries within the time limit of their visas; however, the visitor must have liability insurance. It is illegal to drive in Kuwait without a license and car registration documents. If you are stopped and cannot produce them, you may be taken to a police station and held until they are presented on your behalf.

If you are in an accident, Kuwaiti law mandates that you must remain at the scene until the police arrive.

The use of seat belts in the front seats is mandatory in Kuwait. Speed limits are posted. Making a right turn on a red light is not permitted unless there is a special lane to do so with a yield sign. Parking is not allowed where the curb is painted black and yellow. Digital cameras for registering traffic violations, including speeding, are in use on Kuwaiti roads.

Driving while under the influence of alcohol is a serious offense, which may result in fines, imprisonment, and/or deportation. Repeat traffic violations or violations of a serious nature may also result in the deportation of an expatriate offender.

When a driver flashes his/her high beams in Kuwait, it is meant as a request to move your car into a slower lane to allow the driver with the flashing beams to proceed ahead.

Kuwait has one of the highest rates of cellular telephone ownership per capita in the world. Although using a cellular telephone while driving is not yet illegal, a law requiring the use of a hands free accessory with the cellular telephone while driving is expected to be enacted.

Local emergency service organizations may be contacted by dialing 777. Ambulance crews do not respond as quickly as in the United States and are often not trained paramedics.

The government-owned Kuwait Public Transportation Company

operates bus service throughout the Kuwait City metropolitan area on 50 different routes and is widely used by the low-income expatriate labor force. Two types of taxi service are available: (1) orange taxis work a fixed route and pick up passengers anywhere along that route and may be shared, and (2) call taxis are available at major hotels and pick up passengers at other locations on telephonic request. Unaccompanied women should not use taxis after dark.

Regional

For destinations outside Kuwait, air transportation is commonly used, and adequate connections can be made to most points. Kuwait is served by a number of international airlines. For travel to the U.S. from Kuwait, the traveler can connect with American carriers in several major European cities. No train service operates from Kuwait.

Communications

Telephone and Telegraph

Local telephone service is good and costs about US\$100 annually. Long-distance telephone service to Europe and the U.S. via satellite is excellent. Trunk calls can also be placed to most countries; reception is good. A 3-minute call to the U.S. costs about US\$11, and US\$3.50 for each additional minute. Most businesses and hotels, including the Kuwait International Hotel, have a fax machine.

U.S. carriers such as AT&T, MCI, and Sprint are not allowed to offer services within the country by order of the Kuwaiti Ministry of Communication.

Kuwait currently has three licensed Internet Service Providers. Internet access prices remain, however, since the Ministry of Communications retains control of both local telephone service and marine cable and satellite telecommunications in and out of Kuwait.

Radio and TV

TV (KTV) has been broadcasting since 1961, and began color transmission in 1974. It is government controlled and operates on PAL 62 lines standard. KTV currently broadcasts on two channels. Channel 1 is exclusively Arabic, but includes a few non-Arabic programs dubbed or subtitled in Arabic. Channel 2 is almost exclusively foreign-language programs, about 90 percent of which are in English with Arabic subtitles. Channel 1 begins transmission each day at 4 pm (earlier on Thursdays and Fridays), while Channel 2 begins daily at 5 pm. Both channels finish transmitting at about midnight, later on Thursdays. Each channel carries one-half hour of news nightly—at 9 pm in Arabic on Channel 1 and at 8 pm in English on Channel 2. Many American programs are shown on KTV, chiefly on Channel 2. They consist mainly of cartoons, family situation comedies, police stories, and wildlife programs. An increasing number of better quality U.S. made-for-TV serials are also beginning to appear on KTV.

Kuwait Radio broadcasts daily in English, Urdu, Persian, and Arabic. Western rock is popular, and classical music is played regularly on the FM station. Voice of America, BBC, and other foreign radio services can be heard and reception is good.

Newspapers, Magazines, and Technical Journals

The Kuwaiti press has traditionally had the reputation of being the most active and unfettered in the Arab world. Kuwait has two English-language daily newspapers. Five dailies and numerous weekly, biweekly, and monthly periodicals are published in Arabic. The *International Herald Tribune*, the *Wall Street Journal* (European edition), and the international editions of *Time*, *USA Today*, and *Newsweek* are available in Kuwait within a day or two of publication. Many other English-language periodicals and newspapers are available, but from 1-3 months after publication.

American and British books on a variety of subjects are available at selected bookshops at 50 to 100 percent above publisher prices. No public libraries carry collections in English, although a small British Council library offers membership at a fee.

Health and Medicine

Medical Facilities

Several local hospitals can provide basic emergency or routine care.

Families with infants may wish to bring a full supply of preferred nutritional supplements and vitamins, many of which are unavailable in Kuwait. Local water is fluoridated but does not supply the currently recommended one part per million of fluoride ion. Use of water filters does not alter the fluoride content, but if you choose to use bottled water, you may wish to bring a supply of fluoride drops.

Bring an extra set of glasses or contact lenses, and have a prescription ready for refill of glasses or contacts. If you or a family member are taking a long-standing medication or allergy injection, bring a supply and arrange beforehand for regular refills.

Community Health

Respiratory infections, colds, coughs, sore throats, etc., lead the list of common complaints. Middle ear and external ear infections, sinusitis, and bronchitis are not uncommon. Dust aggravates the respiratory tract, complicating ordinary infections. Allergic and asthmatic persons may also have increased problems due to dust. May through September is hot and dry, increasing the incidence of urinary tract stones, heat stroke, and exhaustion. Common-sense measures are effective in preventing these conditions. High dry heat can cause serious problems of dehydration if preventive measures are not undertaken. Gastrointestinal infections are not common.

Preventive Measures

Fruits and vegetables should be cleaned well before eating. Meat should be well-cooked. Fly and insect control is rudimentary. Obtain immunizations for typhoid, polio, and tetanus. Have the basic series given in the U.S. Gamma globulin should be given every four months for prevention of hepatitis. Malaria suppressants are not necessary in Kuwait. No immunizations are required, but it is recommended that childhood immunizations be updated. Additional recommended immunizations are meningococcal and the Hepatitis B series.

To prevent sunburn, bring along a strong (SPF of at least 15) sunblock lotion. Local pharmacies carry some sunscreens, but the complete range may not always be available. Protective clothing is also a must, and a sun hat is useful during summer months.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Travel to Kuwait is usually by air. There are direct, nonstop flights to Kuwait on most days of the week from London and Paris, with less frequent flights to Bangkok, Rome, Amsterdam, Frankfurt, Athens, Geneva, New Delhi, and Bombay. Some of the more popular international airlines serving Kuwait are Lufthansa, British Airways, Air France, KLM, Kuwait Airways, Emirate Air, Air India, Gulf Air, and Olympic Airways. The most direct route from the U.S. east coast to Kuwait is via the Atlantic with connections made at any of the European cities serving Kuwait. This is the safest and surest way of travel.

Passports and visas are required for U.S. citizens traveling to Kuwait. For further information on entry requirements, travelers may contact the Embassy of Kuwait at 2940 Tilden St., N.W., Washington, D.C. 20008, telephone (202) 966-0702, or the Kuwaiti Consulate in New York

City, telephone (212) 973-4318. Information also may be obtained from the Consulate's Internet home page at <http://www.undp.org/misions/kuwait>.

Alcohol, pork products, and pornography are illegal in Kuwait. Religious proselytizing is not permitted. Kuwaitis and non-Kuwaitis, including Americans, charged with criminal offenses or placed under investigation, or involved in financial disputes with local business partners, are subject to travel bans. These bans, which are rigidly enforced, prevent the individual from leaving Kuwait for any reason until the matter is resolved. In purely financial disputes, it may be possible to depart the country if a local sponsor authorizes funds equal to the amount in dispute.

U.S. citizens are encouraged to register at the Consular Section of the U.S. Embassy and enroll in the Embassy's emergency alert network in order to obtain updated information on travel and security in Kuwait. Initial registration may be done on-line at <http://www.usembassy.gov.kw/registration-main.htm>. The U.S. Embassy in Kuwait is located at Al-Masjid Al-Aqsa Street, Plot 14, Block 14, Bayan, Kuwait. The mailing address is P.O. Box 77, Safat 13001, Kuwait. The primary telephone numbers are 965-539-5307 or 539-5308. The after-hours number is 965-538-2097. Additional information may also be obtained through the Embassy's Internet web site at <http://www.usembassy.gov.kw>.

Pets

Pets may be brought, but obtain a veterinarian's certificate of good health and rabies vaccination before the animal is sent and have them with you when your pet arrives. No restrictions are placed on entry of pets and no quarantine is required. The climate is severe for pets. Veterinary services in country are limited, so have your U.S. veterinarian recommend medications that your pet may need. Pet food and kitty litter are readily available.

Currency, Banking and Weights and Measures

The unit of currency is the Kuwaiti dinar (KD), which is issued in notes of 20, 10, 5, 1, ½, and ¼ KD. The Kuwaiti dinar is divided into 1,000 fils and currently is equivalent to about US\$3.87.

Foreign banks are not permitted in Kuwait. Travelers checks can be cashed without difficulty.

Kuwait uses the metric system of weights and measures. Gasoline is sold by the liter; temperature is cited in degrees Centigrade; distances are measured in kilometers.

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated January 1996. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The Republic of **KYRGYZSTAN** declared its independence on August 31, 1991, during the collapse of the Soviet Union. Formerly known as the Kirghiz Soviet Socialist Republic, its independence was recognized by the United States on December 25, 1991 and an embassy was opened in Bishkek the following February. The country was admitted to the United Nations on March 2, 1992. Of all the former Soviet republics, Kyrgyzstan has been the most reform-minded, politically and economically. However, the country has severe economic problems, along with continuing ethnic and clan-based conflict.

MAJOR CITY

Bishkek

Bishkek is located in the extreme northern part of Kyrgyzstan, 10 miles from the border with Kazakhstan. It's population in 2000 was approximately 662,000. A 30-minute drive from Bishkek, and one climbs into the foothills of the Ala-Too range of the Tien Shan, or "Heavenly" mountains. Bishkek has lovely tree-lined walking parks and wide streets (although one must watch for open manholes).

Food

Shopping for food on the local economy requires knowledge of local sources, perseverance, and a high tolerance level for crowds and less than hygienic conditions.

Those who prefer to do their own shopping on the local market find the best source of basic foodstuffs to be found in the large open-air food bazaars such as the Osh or Alamedin bazaar. During summer and fall there is a plentiful supply of fruits (apples, oranges, local berries, melons, pears, peaches, tomatoes and imported bananas) and vegetables (cabbage, beans, loose leaf lettuce, onions, cucumbers, radish, squash, beets, spring onions, summer

squash, pickled vegetables and, of course, potatoes). During the winter and early spring months the selection shrinks dramatically leaving only basic root vegetables and a very limited selection of high priced imported fruit.

There are a number of small private shops which import canned goods from Western Europe for sale to the expatriate community. Prices tend to be high but these shops do provide variety during the winter months. Noticeably lacking in even these shops are fresh dairy products. Post continues to experience difficulty in finding reliable sources of long-life milk products. Staff members usually purchase long-life milk in shops in the neighboring capital of Almaty (a seven- to-eight hour round trip drive from Bishkek). Almaty also provides a much larger selection of Western food products, albeit at high prices.

Purchase and preparation of meat products are of particular concern to staff members. There are no western style butchers and most meat is sold in open air, unrefrigerated bazaar stalls. Usually a large piece of meat must be purchased and cut down into smaller pieces at home. Great care must be taken to thoroughly cook all meat products to eliminate the risk of bacterial contamination. Beef, mutton, pork, and

a limited selection of chicken, (and horse, if desired) meat products are available year round. Frozen chicken from Holland and the United States can also be found in the markets.

A selection of soft drink products including Coke, Sprite, Fanta is available. Currently the products are imported from Turkey by a joint venture Coke representative company. This company plans to begin bottling operations in Kyrgyzstan in 1996. A selection of European beer is available on the local market as well as Kyrgyz champagne and cognac products.

Local sources of sugar, flour, salt, baking soda, and macaroni are adequate but the quality of these products may not be suitable for American tastes. Local salt is not adequately iodized.

There is an abundance of local spices but they are sold in bulk and the purchaser must provide his/her own container. The markets also have an abundance of locally-pickled cabbage, onions, cucumbers, tomatoes. There is excellent rice available locally in bulk.

Items which are difficult to find locally include coffee (other than instant), cleaning products (though a Proctor & Gamble representative has recently opened a retail store in the city which sells P&G products such as TIDE), personal care products (some available through the P&G store), paper products (to include toilet paper, tissues, paper napkins, paper towels, note paper, computer paper, construction paper for school supplies, wrapping paper for gifts, gift cards, etc.), women's nylon stockings, chemical products to fight insect infestation (cockroaches, flies, mosquitoes, pet care flea/tick products), school supplies (pens, pencils, notebooks), batteries, English language books and magazines, contemporary music tapes and CDs.

Clothing

The choice of shoes and clothing in Bishkek is limited. The type of

clothing worn in the northeast of the U.S. is appropriate in Bishkek. Winters are cold, snowy and icy. However, Bishkek does have many crystal clear winter days. Late spring, summer, and fall are generally pleasant with long stretches of sunny temperate weather. Midsummer can be very hot (mid-90s). Temperatures average 30°F (-2°C) in midwinter and 80°F (22°C) in midsummer.

A warm coat with a hood or a separate warm hat, several pairs of woolen and waterproof gloves and appropriate shoes are recommended. A good supply of shoes and boots for all types of weather, such as tennis, dress shoes, rubber rain boots, hiking boots and lined, thick-soled winter boots for children and adults is also recommended. Drycleaning is available in Almaty, Kazakstan (4 hours away). Commercial laundries are not available. Washable clothing is most practical.

Both heavy and light topcoats are desirable for spring and fall. Warm waterproof gloves, overshoes, and sweaters are also necessary. Woolen suits worn in the U.S. are satisfactory for winter in Bishkek, but some prefer heavier suits and sweater vests during the coldest months. Lighter suits are needed for summer.

Versatile clothing for luncheons, receptions or the theater is essential. Slacks, skirts, blouses and sweaters are ordinary daily wear. Most Kyrgyz women wear skirts or dresses, not slacks. Women are rarely seen in shorts. Women wear woolen clothing of several weights during fall and winter. Cottons, synthetics and blends, preferably washable, are worn in the summer. Raincoats with removable linings and a heavy coat are necessary.

Children need washable, sturdy wool, corduroy and other heavy clothing. Waterproof boots with insulated foam lining, several pairs of waterproof mittens, long thermal underwear, both heavy and light-weight pajamas, and waterproof snowpants all come in handy. Since

children's clothing available locally is not of Western quality and limited in quantity.

Supplies and Services

Laundry service provided in hotels is hard on clothes. Drycleaning is available in Almaty, Kazakstan.

Tailoring and dressmaking is available in Bishkek. Service varies from place to place, and it is best to frequent shops or dressmakers recommended by others with similar tastes. The choice of fabrics available in Bishkek is limited.

Local barbers and beauty shops are plentiful. Although relatively inexpensive, techniques and methods used by hairdressers differ from those in the West. Some European hair products are available in a few stores. Special hair products generally are not available.

Religious Activities

Religious services are held in several mosques, the Russian Orthodox Church, the Jewish Synagogue, the Presbyterian (Korean), Baptist and the Seventh Day Adventist churches in Bishkek. Several missionary groups are in Bishkek including the Hare Krishna, the Church for Unification and other nondenominational faiths. Some offer services in English.

Education

The Bishkek International School, a private institution which opened in September, 1994, offers English language instruction for elementary students from 5 years through 13 years of age. The school operates under the control of Quality Schools International, a private nonprofit organization, which operates schools in Yemen, Albania, Kazakstan, and Ukraine. The school typically has an enrollment of less than 10 students.

The school term is from early September to mid-June. The curriculum includes English, mathematics, cultural studies, science, art, music and physical education.

Some American parents have placed their children in local Russian language schools. If children are prepared for the extra work involved in learning Russian and if parents are prepared to devote the time to give children extra help, the experience can be rewarding.

Sports

Many sports are available in Bishkek and the surrounding countryside. A large outdoor swimming pool is available in the summer, and a modest indoor pool is sometimes available in the winter. A limited number of tennis courts are available in good weather. An indoor tennis court (converted basketball court) is available for rent in the sports palace during the winter. Some spectator sports such as soccer and wrestling are available.

Downhill skiing is possible in the mountains, about a one hour drive from Bishkek. Ski weekends are organized to the slopes with chalets.

Horseback riding is available in Bishkek. Trekking through the mountains of Kyrgyzstan by horseback and on foot are popular ways to see the beautiful areas of the country during the spring, summer and autumn. Fishing, hunting and white-water rafting are other popular sports in Kyrgyzstan.

In general, bring all your own sports equipment and clothing as items are difficult to find and/or unavailable locally.

Recreation Shopping

Bishkek offers wide range of local products of interest to staff members. Kyrgyz rugs are unique in their design and construction. Local jewelers produce beautiful designs utilizing semiprecious stones and local rocks. Craftsmen also produce stone boxes with inlaid designs from types of rock found throughout the country. Kyrgyz musical instruments, local wool felt hats and ethnic clothing, and pottery are also of great interest to expatriates. There are a large number of expert painters and sculptors in Kyrgyzstan.

Prices for quality Kyrgyz artwork and crafts are still reasonable.

Entertainment

Bishkek has several cultural activities. The Bishkek Opera and Ballet Theater offers autumn and winter performances. The Philharmonic provides classical, modern symphony and Kyrgyz orchestral and traditional performances. The Philharmonic was built in 1980. The gigantic statue in front depicts the 1,000-year-old epic hero Manas atop his magic steed Ak-Kula slaying a dragon. The Kyrgyz Drama Theater and the Russian Drama Theater perform classic productions.

Bishkek has many beautiful parks and monuments. Walking tours to the many architectural and historical landmarks are a good way to get a feel for the city. Within three blocks of the Embassy are the Museum of Fine Arts, the National Library, the Opera House, the National Museum, the Circus (a Kyrgyz troop of horse riders and acrobats have just begun a one year tour with the Barnum and Bailey Circus in the U.S.), the Frunze Memorial House-Museum, the Zoological Museum and the Monument to the Great Patriotic War.

Directly in front of the U.S. Embassy is Erkindik Prospect (Erkindik means "freedom" in Kyrgyz) It is a one mile long walking park lined with huge oak trees. One can stroll Erkindik Prospect through an outdoor sculpture garden, past the Drama Theater, along the Art Gallery in the Park, by the Tea House and continue in the large walking park for 30 minutes until you reach the Train Station. This walk provides a pleasant break in summer and winter.

Markets (rynoks) provide a colorful feature to Bishkek life. The largest market is the Osh market, named for the second largest city in Kyrgyzstan. The Osh market features the greatest variety and least expensive fruits, vegetables, meats and souvenirs in Bishkek. On the weekends, cats, dogs and birds are sold at the Osh market. The Alame-

din market is a smaller market located near the U.S. Embassy. On the weekends, the "Push" Market, so-named because you have to push to get through the market, offers the greatest selection of merchandise in Bishkek, the latest from the popular shopping trips to India, Turkey and the Middle East.

Two Chinese, one Korean, two Turkish and one pizza restaurants are the eating establishments most frequented by the international community in Bishkek. Ethnic Kyrgyz food such as shashlik, plov and manti is served in a few restaurants, but primarily from stands on the streets. One should be careful when deciding to try the local cuisine from street vendors.

The two main hotels in Bishkek have bars, cafes and souvenir gift shops.

Movie theaters, for the most part, show films in Russian. Some Western films also play in theaters, but they are dubbed in Russian. Kyrgyz television programming includes some interesting cultural events and historical documentaries.

Social Activities

The American community in Bishkek numbers around 125 and is composed primarily of USAID contractors and a few businessmen/women. Embassy personnel, as well as contractors, entertain each other informally at dinner, receptions or theatrical performances.

On an informal level, individuals organize visits to areas of interest and short trips for rest and recreation. Members of the international community get together for volleyball, softball, and touch football.

The International Women's Club is a social organization for women of the foreign community of Bishkek. The organization is nonpolitical, nonreligious and wishes to promote friendship and understanding between their members and the people of Kyrgyzstan. The group was founded in May, 1995 to give English-speaking women a chance

to get together socially and to meet new women in the foreign community. Currently the club has over 50 members representing 15 countries. The club has meetings twice a month on Thursdays; new arrivals to Bishkek are always welcome. Meetings are held in homes and restaurants.

Canadian citizens are numerous in Bishkek due to the Kyrgyz-Canadian joint venture gold mining company. Many international visitors with international organizations such as the IMF, UNICEF, UNDP and British, Dutch, German, and European Community assistance organizations are active on the social scene. Social relationships with Kyrgyzstani citizens are not difficult to establish, particularly if one possesses Russian or Kyrgyz language skills. There is no prohibition on establishing social relationships with Kyrgyzstani citizens. On the contrary, reaching out and making Kyrgyzstani friends is encouraged.

Special Information

Americans are popular and generally welcomed by all segments of society in Bishkek. The level of violent crime is not high by American standards; however, theft, burglaries, and even mugging is on the increase because of the declining economy. Westerners are likely to become targets as they are associated with wealth.

Because of energy deficits and broken, unreplaced street lamps, Bishkek is poorly lit after dark. The precautions necessary in any large Western city should be taken in Bishkek after dark. One should avoid walking alone at night, especially where there are few people.

Many apartment buildings have poorly lit entrances through courtyards or in the rear of the building. A pocket flashlight is essential for nighttime activities. Some bars and restaurants are frequented by the local "mafia." It is better to avoid these facilities.

Travel by train from Bishkek to Moscow and other locations is not

recommended due to an increase in crime on the trains. Bus travelers have had backpacks slashed.

Normal precautions, such as not exposing money or dressing ostentatiously, are recommended.

OTHER CITIES

DZHALAL-ABAD, with a population of approximately 74,000, is located in southwest Kyrgyzstan near the border with Uzbekistan. Surrounded by an agricultural area, the city's main commercial enterprises are food processing plants and other light industries.

OSH is near the Uzbekistan border, only 30 miles from the Uzbek city of Andizhan. A large number of ethnic Uzbeks live in the Osh region. Agriculture and mining are the most important enterprises. Silk, cotton textiles, and food processing are the main industries. Many Muslims make a pilgrimage to Osh to visit Takht-i-Sulaiman, a hill mentioned in Islamic lore.

PRZHEVALSK (formerly Karakol) is located in northeast Kyrgyzstan on the eastern boundary of Issyk-Kul. The city is in the center of an agricultural region. A resort area, it is also a transportation hub—as a port for water transportation on the Issyk-Kul and as a commercial transport center with routes to the north and east.

TOKMAK is an industrial town, located just east of Bishkek. The building of a railway in 1938 contributed to the city's development. Tokmak has a population of 72,000.

COUNTRY PROFILE

Geography and Climate

Located in Central Asia, it is about the size of the State of Nebraska, with a total area of 198,500 square

kilometers. It is 900 kilometers east to west and 410 kilometers north to south. Kyrgyzstan is bordered on the Southeast by China, on the north and west by Kazakhstan, and on the south and west by Uzbekistan and Tajikistan. Bishkek (formerly Frunze), the capital, and Osh are the principal cities.

Kyrgyzstan is a mountainous country with the Tien Shan and Pamir mountain ranges dominating 65% of the country. The average elevation is 2,750 meters, ranging from 7,439 meters (24,409 feet) at Pik Pobedy (Mount Victory) to 394 meters in the Fergana Valley of the south. Kyrgyzstan's estimated 6,500 distinct glaciers are thought to hold 650 billion cubic meters water. The alpine regions provide rich pastures for sheep, goats, cattle, horses and yaks. Agriculture is conducted in the Chui River valley of the north and in the Fergana valley in the south. Over half the cultivated area is irrigated. Cotton, sugar beets, silk, tobacco, fruit, grapes and grains are grown. There are gold, coal, antimony, lead, tungsten, mercury, uranium, petroleum and natural gas deposits. Industries include food processing, the manufacture of agricultural machinery and textiles. The country is lightly forested; woods cover only about 3.5% of the country. However, forests in southern Kyrgyzstan include the largest wild nut (walnut) groves on earth.

The local climate is cold in the winter and desertlike hot in the summer. In January, evening temperatures can be in the teens (Fahrenheit); daytime temperatures often rise to above freezing, enough to start melting ice and snow. Summer temperatures can rise above 90 degrees by the end of May. The air is dry year round.

Bishkek, the capital of Kyrgyzstan, is situated in the extreme northern region of the country.

Population

In 2000, the population of Kyrgyzstan was approximately 4,600,000, of whom 52.4% were ethnic Kyrgyz. Russians make up 18%

of the population, Uzbeks 12.9%, Ukrainians 2.5% and Germans 2.4%.

Because of the country's mountainous terrain, the population tends to be concentrated in a relatively small area. About two-thirds of the population live in the Fergana, Talas and Chui valleys. The Chui valley, where the capital Bishkek is located, is the major economic center, producing about 45% of the nation's gross national product. Virtually all ethnic Uzbeks live in the southern area of the country, the Fergana valley. As a result, the Fergana region is more orthodox Muslim and traditional than the north.

The Kyrgyz language is a Turkic-based language with Mongol and Altaic elements. Kyrgyz did not become a written language until 1923, at which time an Arabic-based alphabet was used. Kyrgyz was changed to a Latin-based alphabet in 1928 and to a Cyrillic-based one in 1940. Most Kyrgyz living in the cities speak Russian. In rural areas, more Kyrgyz is spoken.

Arts, Science and Education

The Arts, Science and Education have suffered tremendously from lack of funding for the last four years. Public school teachers, especially in the rural areas, are seldom paid and usually in products rather than salary. Fuel shortages and the lack of funding to purchase fuel have forced many schools to operate without heating. Books and other learning materials are in short supply. At the university level, new private universities are operating entirely on revenues raised by tuitions and public universities likewise are charging tuitions to cover costs. Some universities are affiliated with foreign universities, including several American universities.

Education was one of the strongest features of the old regime, and many areas of strength still exist, especially in the sciences. The Academy of Science still operates. The

recent introduction of Internet communications is expanding the ability of Kyrgyz scientists to work with scientists from other regions of the world. Ecological and environmental concerns of the country are observed by new NGOs which monitor the condition of Lake Issyk-Kul and measure fallout on Kyrgyz territory from Chinese Lop Nur nuclear tests.

Commerce and Industry

While a Soviet republic, Kyrgyzstan was dependent on transfer from Moscow for 12% of its GDP and had developed an industrial structure tightly integrated into Soviet structures and heavily weighted toward the defense industry. Consequently the breakup of the Soviet Union has had severe consequences for Kyrgyzstan's economic output. For this and other reasons, Kyrgyzstan has been in the forefront of economic reforms. Privatization was begun earlier than in other Central Asian states and is now proceeding steadily with U.S. assistance. Collective and state farms have been broken up and investment is being sought to develop gold mining and hydroelectric power.

Kyrgyzstan has stabilized its economy with a stable national currency—the Som—which has traded at around 10 to 11 som per U.S. dollar, and a low inflation rate. Exports began to pickup in 1994 and continued to grow in 1995. The former CIS countries remain major trading partners but China is now the largest market for Kyrgyzstani exports and trade patterns continue to diversify away from traditional trading partners. The banking and financial sector remains weak and tourism, which has great potential, remains undeveloped.

Agriculture accounts for over 40% of GDP with wool, cotton and hides being important products. Since independence the country has not been self-sufficient in grains and has needed to import wheat, rice and animal feeds. Herds have decreased sharply in recent years.

The production of fruits, vegetables and cotton has increased. The agricultural sector is in the midst of a major transition and it will be several years yet before this important sector stabilizes. Aside from mining, food processing and textiles based on locally produced raw materials offer the best prospects for industrial growth.

Unemployment is high in Kyrgyzstan and standards of living for Kyrgyzstanis have dropped dramatically since independence.

Transportation

Traffic regulations and procedures in Kyrgyzstan are similar to those in the U.S. However, driving habits of local drivers mean that one must use caution when driving and when crossing streets as a pedestrian.

Winter evenings in Kyrgyzstan are dark and cold with severe icing on city streets. Only the main streets of Bishkek are plowed regularly; side streets and housing complexes remain covered with snow and ice throughout the winter.

Local

Public transportation in Bishkek is inexpensive, but overcrowded. The city's network of buses and trolley-buses covers the entire city. Riders should be ready to contend with a good deal of pushing and shoving during the morning and evening rush hours. Passengers enter the bus from the rear doors and exit/pay through the front doors. The city has no streetcars or subway.

Many taxis cruise the city and private cars often provide taxi services. There are taxi stands at some busy corners in central Bishkek. After a taxi or car stops, the required destination should be stated; if the driver agrees, a price should be negotiated before entering the vehicle. Kyrgyz or Russian is a necessity when dealing with taxis. Extra precautions should be taken in the evenings, when it is advisable to use only clearly marked taxi rather than a private vehicle.

Regional

Kyrgyzstan's rail and air transportation system is limited and service is marginal. The rail system runs from Bishkek east to Lake Issyk-Kul and to the north to connect with rail lines for Uzbekistan, Russia and Kazakstan. Trains are unclean, overcrowded, dangerous and have no ventilation.

Air travel from the Bishkek International Airport (Manas airport) is often unreliable due to delays, sudden cancellations, or lack of fuel, particularly in winter. The successor to Aeroflot in Kyrgyzstan, Air Kyrgyzstan, operates regular service throughout the country and on a limited basis to Tashkent, Uzbekistan and a few cities in Russia. There are regular charter shopping flights to the United Arab Emirates, Turkey, India and Thailand. A German charter flies several times per month to three cities in Germany.

The road system in Kyrgyzstan provides access to all cities, towns and most villages. However, north-south travel in Kyrgyzstan is impossible from December through March due to heavy snow in the mountain passes. In all seasons, the traveler should plan her/his trip carefully since information, food, water, lodging and fuel are often not readily available. In winter, the traveler must be well prepared with food, water, heavy clothing and fuel as roads can close quickly due to ice and snow, leaving the traveler stranded for hours.

Communications

Telephone and Telegraph

Telephone service from Kyrgyzstan to the U.S. and to most European cities is inadequate but improving. Local calls often have serious static interference. Calls requested through the operator may require a wait. International calls to the U.S. cost about \$1.00 per minute. The phone system in Bishkek uses the "pulse" rather than the "tone" method as commonly found in the U.S.

Newspapers, Magazines and Technical Journals

No foreign newspapers and magazines are available in hotels or in newspaper kiosks. However, copies of the *International Herald Tribune* can be ordered and delivered from Singapore by air through Almaty.

Radio and TV

Television and radio programming in Bishkek provides regular news broadcasts and basic information about Kyrgyzstan and international affairs. Broadcasts rely heavily on educational documentaries, films, and concerts. One station broadcasts from Bishkek, two stations provide broadcasting from Moscow in Russian and one broadcasts in Turkish from Turkey.

Radio programs on Bishkek's radio stations begin early in the morning. Much of the programming is musical. A good shortwave radio is required to receive Voice of America, BBC World Service and Radio Liberty. VOA is broadcast on an AM station in Bishkek at Sam.

Health and Medicine

Medical Facilities

Local medical practice in general is not up to the standards of Western medicine. Pharmaceutical supplies and drugs are in short supply. Routine laboratory work is problematic due to lack of supplies or working equipment.

Community Health

Air pollution in Bishkek continues to increase. Utility smokestacks have no scrubbers. Residents of the suburbs burn coal or wood for heat and cooking, which adds to the haze trapped in the Bishkek valley. Persons with respiratory problems will notice increased sinus/allergic difficulties.

A high pollen count in the spring sometimes compounds air pollution problems. Persons susceptible to hay fever should bring an ample supply of medications and tissues as local supplies are uncertain.

Pests such as cockroaches and ants can be a nuisance in some apartments. Mosquitoes can be an annoyance in the summer. Travelers should bring an ample supply of insect repellent, traps, and fly swatters, as these items are not available locally.

Fruits and vegetables bought locally should be washed with a chlorine disinfectant.

The standard of cleanliness in many public buildings, restaurants, taxis, airports, and train stations fall short of Western standards. The few toilet facilities found on the roads while traveling are usually avoided for the cleanliness of nearby trees.

Drinking tap water is not recommended. Parents should bring fluoride fortified vitamins or fluoride tablets to add to the water supply for their children as once water is distilled, it loses its fluoride content. Locally produced carbonated mineral water is available, but it has a high sodium content.

The number of restaurants available in Bishkek is limited. Local markets have a good variety of fruits and vegetables in the summer, with winter produce consisting of potatoes, carrots, onions, cabbage and beets. Meats are hung in the market without refrigeration. No meat is packaged. A few small stores have opened with imported canned and packaged meats and vegetables.

NOTES FOR TRAVELERS

Passage, Customs & Duties

A passport and visa as well as an invitation are required. For further information regarding entry requirements, contact the Embassy of the Kyrgyz Republic at 1732 Wisconsin Ave., N.W., Washington, D.C. 20007, telephone (202)338-5141, fax: (202) 338-5139, or on the Internet at <http://www.kyrgyzstan.org>. Americans are required to register

their passports with the Office of Visas and Registration, of the Kyrgyz Internal Affairs Ministry, within five business days of arrival in the Kyrgyz Republic. There are fines for failure to register and fines for late registration. This requirement does not apply to official delegation members and bearers of diplomatic passports.

U.S. citizens are encouraged to carry a copy of their U.S. passport with them at all times, so that, if questioned by local officials, proof of identity and citizenship are readily available. To this end, the American Citizen Services Unit of the Consular Section at U.S. Embassy Bishkek provides free-of-charge certified photocopies of the passports of U.S. citizens who register with the Consular Section.

In accordance with the Vienna Convention on Consular Relations and certain bilateral treaties, a consular officer from the U.S. Embassy must be given access to any U.S. citizen arrested in the Kyrgyz Republic. U.S. citizens who are arrested or detained should ask for the U.S. Embassy to be contacted immediately.

Americans living or visiting the Kyrgyz Republic are encouraged to register at the U.S. Embassy and obtain updated information on travel and security in the Kyrgyz Republic. The U.S. Embassy in Bishkek is located at 171 Prospect Mira, 720016 Bishkek, Kyrgyz Republic. The phone number is 996-312-551-241, fax 996-312-551-264.

Pets

All dogs and cats entering Kyrgyzstan and Kazakstan must be accompanied by a certificate of good health bearing the seal of the relevant local board of health and signed by a veterinarian. The certificate should not be issued more than 10 days prior to the animal's arrival. A rabies certificate is needed. Travelers should carefully check with the airlines to ensure that the airline has room on all portions of the trip to Almaty to ensure

that the pets arrive at the same time as the owner.

There are some competent local vets in Bishkek, but in general, veterinary care is at a level similar to that of the U.S. in the 1950s. Few vets have access to up-to-date vaccines from reliable companies. Refrigeration of vaccines is frequently ignored, thereby putting the vaccine's effectiveness at risk.

Currency, Banking, and Weights and Measures

Kyrgyzstan is no longer a part of the Soviet centralized banking system and has established its own independent system. The Kyrgyz Republic is a cash-only economy. The banking system is not well developed and there are no automated teller machines. One or two hotels or banks may, on occasion, accept travelers checks or credit cards but fees can be quite high for travelers checks, as much as 20%. U.S. bills dated earlier than 1990, or bills that are worn, torn or stained are usually not accepted in Kyrgyzstan. Several years ago the country introduced its own currency, the som. The rate of the som to the dollar in December, 1995 was 11Som to US\$1.

The metric system of weights and measures is used.

Disaster Preparedness

The Kyrgyz Republic is an earthquake-prone country. General information about natural disaster preparedness is available via the internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov>.

LOCAL HOLIDAYS

- Jan. 1 New Year's Day

Vientiane, Laos

LAOS

Lao People's Democratic Republic

Major City:

Vientiane

Other Cities:

Luang Prabang, Paksé

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated April 1994. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Although **LAOS** has been known as the Lao People's Democratic Republic only since December 1975, recent archaeological discoveries in Southeast Asia have provoked increased interest and reassessment of the nation and its place in Asian history. The ancient culture that flourished along the upper Mekong River had made basic advances in agriculture, pottery, metallurgy, and the polishing of stone tools made by 3,000 B.C. These people also spread their culture north into China and south-eastward into Indonesia, the Philippines, and even to Australia. The numerically dominant Lao people began entering present-day Laos before A.D. 1,000 from southern China. This migration accelerated

after the Mongol destruction of their kingdom of Yunnan in 1253.

Today, Laos is a nation of pronounced ethnic, linguistic, and geographical diversity. Because it is strategically located, it receives an abundance of interest and a large amount of assistance from other nations. One of the world's poorest countries, Laos faces daunting tasks in every field of economic development.

MAJOR CITY

Vientiane

Vientiane is the political, administrative, and commercial center of Laos. The capital of Laos, it is the largest city in the country, with a population of 534,000 (2000 est.). The name is a French version of the Lao *Vieng Chan*, or "City of Sandalwood." It was once the ancient capital of the rich and powerful kingdom of Muong Lan Xang Hom Khao, the "Land of the Million Elephants and the White Parasol."

Vientiane is a provincial town in appearance and atmosphere. It is situated on the left bank of the Mekong River, at the edge of a large plain which extends some 40 miles

north of the city. To the north and east, the foothills visible from Vientiane are the rugged uplands of the Annamite cordillera, which cover most of the country.

Utilities

Short power failures occur almost daily because the lines are old and poorly maintained. Voltage fluctuates at times and sensitive electronic equipment is subject to damage. Voltage regulators are not available locally. Minor repairs to stereo equipment and small appliances can be done. More complicated repairs must be done in Bangkok.

Food

The local markets offer a large variety of fruit, vegetables, rice, eggs, poultry, pork, fresh fish, and beef. Fruits and vegetables vary with the season; adequate quantities of good quality are available year round. Chicken and pork are fine; beef is tasty but tough. Because local selection is limited, some Westerners shop in Bangkok to supplement their food supply.

Clothing

Dress in Vientiane is generally casual because of the tropical climate. Cottons or cotton blends are worn year round; nylon and other pure synthetics are uncomfortable during the hot season. From

AP/Wide World Photos, Inc. Reproduced by permission..

Wat That Luang in Vientiane, Laos

November to February, when the temperature averages 60°F, spring or fall clothing is appropriate.

The climate and an active social life define wardrobe requirements. Clothing wears out quickly because of more changes during the day and frequent laundering. Tailors and dressmakers of limited capability are available, and clothing needs can be made to order in Vientiane or Bangkok. A variety of materials can be purchased locally.

Raincoats, umbrellas, and rubber boots are needed for the rainy season. Special attire should be brought from home for active sports. Sweaters and jackets are useful in cool weather.

American men in Laos find that suits (including safari styles) are needed only for official functions, and these should be lightweight and washable. Men wear short-sleeved shirts and washable slacks for business, leisure, and most social functions. For the rare occasion when formal attire may be needed, a tuxedo or white dinner jacket and black slacks will suffice at any time of the year.

Women's wardrobes should include washable dresses of cotton blends, or lightweight knits, for office work or for social events. Cottons are most suitable for casual wear, but any cool, washable fabric that does not cling will be comfortable. Shorts are useful at home and for sports,

but are not worn on the street. Pantsuits are acceptable in offices and, in appropriate styles and fabrics, may be worn for all but formal occasions. Lightweight wools and synthetics are suitable in the brief cool season.

During the cooler months, the usual dress for parties is a long-sleeved blouse and long skirt, long dress, or pantsuit. Hats and gloves are not worn.

Supplies & Services

Laundry is done in the home. No bona fide dry cleaning exists in Vientiane; Americans living in the city take their better clothing to first-class Bangkok hotels for cleaning, which is very expensive.

A few beauty shops in Vientiane offer haircuts, permanents, and manicures. Hair coloring can be applied, but it is recommended that coloring kits be brought to the country with you. Even Bangkok beauty shops have limited hair coloring supplies. Several barbershops are located in the downtown area, and their services are reasonably priced; often, however, resident Americans have their hair cut during trips to Bangkok.

Shoes can be repaired locally, usually with satisfactory results.

Several men's tailor shops make suits, slacks, and shirts to order, with acceptable results. Prices are reasonable, but material must be supplied by the customer. Most American women in Vientiane use dressmaker services in Vientiane and Bangkok; prices and results vary. In general, custom-made clothes are reasonable, but not up to the highest U.S. standards.

Religious Activities

Currently, no formally organized English- or French-language Protestant or Jewish religious services are held in the country. Protestant clergymen occasionally visit Vientiane to conduct services; the city has three small Lao Protestant churches. Mass is celebrated daily in Lao, French, and English at the

Roman Catholic Cathedral in Vientiane.

Domestic Help

Domestics are readily available in Vientiane. The hot climate, lack of centralized shipping facilities, and the language barrier make it necessary to hire domestic help.

The number of employees employed depends on preference and life-style (also on the size of living quarters). Most Americans living in Laos find that a combination maid/cook adequately satisfies requirements for shopping, food preparation, entertaining, house cleaning, and laundry. Most residences have quarters for at least one domestic; however, few if any live in. They use the quarters during the day for eating, bathing, and rest periods. Salaries are negotiated between employer and employee, but are quite reasonable by American standards.

The majority of domestics have little command of English, and misunderstandings are frequent. Patience is required.

Prospective domestics should have physical examinations before starting work and periodically thereafter. Exams can be taken at one of the local hospitals for a small fee. Be sure your employees seek medical attention when needed. Many of the employees in Vientiane have been employed in American households for some time and are well versed in health and food requirements. Nevertheless, their activities should be routinely monitored to ensure compliance.

Education

The Vientiane International School is registered with the Lao Ministry of Education and is a member of the International School System. The school curriculum and schedule are patterned on the U.S. system, but with an international flavor. Children from all nationalities are represented, with the Americans and Australians predominating. Instruction is in English; French and Lao are also taught. Classes are from grades pre-K through eight.

The principal and all teaching staff are accredited.

There is also a French school which goes to grade twelve.

Recreation

Facilities exist for golf, tennis, squash, volleyball, swimming, and badminton.

Bicycling is a popular and pleasurable pastime, particularly during cooler weather. Vientiane is flat and easy to get around in by bicycle. Bicycle rallies are occasionally organized and are very popular.

Of particular interest to visitors are the That Luang Monument and the Sisaket and Phra Keo Temples. The National Museum provides interesting insights into recent Lao history. On weekends, many Lao and foreigners make picnic excursions to the Nam Ngum dam or to one of several waterfalls within a few hours of town.

Laos has many natural and historical attractions that can be visited with tours sponsored by local travel agencies. Among the most important tourist destinations are Luang Prabang, the old royal capital, with its many beautiful temples; Xieng Khouang, site of the Plain of Jars; Pakse, famous for its handwoven silks and cottons and for the beautiful Khmer ruins at Wat Phu; Saravane, known for the Bolevans Plateau and its natural surroundings; and Savannakhet, a gateway to the Ho Chi Minh Trail.

Vientiane is served by Lao Aviation, Thai Airways, Air Vietnam, and Aeroflot. Less than two hours away by air, Bangkok is readily accessible for shopping, sight-seeing and vacationing.

Bangkok is a major air stop for connections to other cities in Southeast Asia, and to world capitals. From there, direct flights are available to Kuala Lumpur (Malaysia), Yangon (Myanmar), Singapore, Manila (Philippines), Hong Kong, Australia, and Europe. Thailand has many popular resorts: the beaches of

Phuket and Koh Samui are world famous; and Chiang Mai, Sukothai, and Lopburi are famous for historical monuments.

Pattaya is a popular beach resort two hours' drive south of Bangkok on the east coast of the Gulf of Thailand. Accommodations are available at hotels or private cottages. Boats can be rented for trips to the islands off the coast. Beach resorts are located at Bang Saen on the east coast, and at Hua Hin on the western shore, where there is a good golf course.

No definite restrictions are placed on photography in Laos with the exception of the Wattay Airport and on military installations, where no photos are allowed. Courtesy and discretion should be exercised at all times in photographing people, particularly uniformed security guards or policemen and in taking pictures of any government building or installation. Children welcome having their photograph taken and often follow Westerners around when they observe them taking pictures.

Entertainment

American films are shown weekly at the American Embassy compound, while French films and duplicate bridge nights are organized by the Alliance Francaise. The American and Australian Embassies maintain small libraries. A wide selection of books, including best-sellers, is available in Bangkok.

A limited number of restaurants in Vientiane serve Western, Chinese, French, Vietnamese, and other cuisines.

A few discos have opened and are frequented by both Lao and Westerners.

Many of the Lao festivals, known as *bouns*, celebrate seasonal changes and important dates in the life of Buddha. The Lao New Year, known as *Pi Mai*, lasts for three days and is celebrated in April. It is the most festive and widely celebrated holiday. The annual long boat races on

the Mekong River between Vientiane and Nong Khai, Thailand are well worth seeing. Permission is required, but Americans have been invited to attend in recent years with few problems.

The *baci* ceremony is one of prayers and good wishes. It is uniquely Lao, and is celebrated elsewhere only in northeast Thailand. It can be performed on various occasions, such as Lao New Year, a wedding, farewell, welcome, or the birth of a child. The *baci* ceremony follows a precise pattern, and is conducted by an elderly man (*mohpohn*) who is highly respected for his wisdom and ceremonial skill. Shoes are removed and the participants sit on the floor during the ceremony. Of brief duration, usually less than an hour, it is normally followed by a traditional Lao meal and dancing. It has no Buddhist significance, but derives from native animist beliefs pre-dating the arrival of Buddhism centuries ago. Photography is permitted at a *baci*.

Entertainment in Vientiane depends largely on individual tastes, initiative, and ingenuity. Home entertaining among foreign residents is extensive; dinners, cocktail parties, and barbecues are the usual forms of social activity. The Western community in the capital is small, and people socialize regularly with members of the diplomatic and private communities. It should be noted, however, that home entertainment by the Lao is rare.

OTHER CITIES

The port city of **LUANG PRABANG** lies on the Mekong River, 130 miles northwest of Vientiane. For over two centuries, beginning in 1353, this was the capital of the Lan Xang Kingdom. The city acquired the name Luang Prabang about 1563, and became the capital of a new kingdom in 1707. Over 20 Buddhist pagodas stand in what had long been the nation's religious center—the Phu Si pagoda allegedly

enshrines Buddha's footprint. Luang Prabang is a small, backward community where goldsmithing, lacquering, and silversmithing has flourished. The population is over 46,000.

PAKSÉ (also spelled Pakxe) is a distribution center for the southern panhandle of Laos, located at the convergence of the Xédôn and Mekong rivers. Industry here includes sawmills, brick and tile manufacture, and an ice plant. Electricity arrived in the district only in 1970, when the Selabam Dam was completed. Irrigation of the region was another benefit from the dam. Paksé, until 1966 Laos' main port of entry, has road connections to the Thailand and Cambodia borders. The population of Paksé is over 50,000.

COUNTRY PROFILE

Geography and Climate

The Lao People's Democratic Republic, a landlocked nation, shares a common frontier with five countries: Burma to the northwest; China to the north; Vietnam to the east; Cambodia to the south; and Thailand to the west.

The total land area covers about 91,425 square miles, and is approximately the size of Oregon. Close to six percent of the country's surface, particularly in the north and east, is covered with dense jungle or rugged mountains; mountainous topography is characteristic of all of Laos outside of the Mekong River Basin. Some mountains rise over 7,000 feet; the highest point in the country is 9,249 feet above sea level. Except in limited areas, soil is poor; most of the forested area is not exploitable.

Vientiane, the capital, is also the largest city. Other population centers are, like Vientiane, on or near the banks of the Mekong River.

They are: Luang Prabang, the former royal capital, and the towns of Ban Houei Sai; Savannakhet; Paksé; Sayaboury; and Thakhek.

The Mekong River, with its headwaters in Tibet, flows more than 2,600 miles to its mouth in southern Vietnam. One of the world's great rivers, it forms the country's western boundary for the greater part of its length and is the cradle of Lao culture. The only significant population center in Laos far removed from the Mekong is Vieng Say in Sam Neua Province; it is a new town, established by the Lao People's Revolutionary Party during its struggle with the former Royal Government of Laos. The Lao government has been encouraging the establishment of other new towns and villages in the country's interior.

Laos has a monsoon climate with three overlapping seasons. The rainy season extends for five months, from June through September. In October, the rains start to taper off and the cool season begins in November, and lasts through February. March, April, and May are hot and humid. In April, the hottest month, temperatures in Vientiane normally range between 72°F and 93°F, and in January, the coolest month, between 57°F and 83°F. However, temperature extremes of 103°F (April) and 39°F (January) have been recorded. Vientiane's climate is more varied, drier and cooler than that found in Singapore; Jakarta; Indonesia; or Bangkok, Thailand.

Dust, during the dry period, and mud in the wet season, are common but tolerable obstacles. It is not unusual for the Mekong River to overflow its banks in late August and early September. With the construction of dikes, however, the incidence of flooding in Vientiane has decreased.

Tropical flowers flourish in the Laos climate, as well as a wide and fascinating variety of insects and reptiles. The most common pests are mosquitoes, ants, and termites.

Population

Laos has the smallest population of any Southeast Asian country except Brunei. The population, composed of many ethnic groups, is estimated at 5.6 million (2001 est.). This sparse population is spread out unevenly; the greatest concentration is in the Mekong Valley, especially in the Vientiane Plain and the Savannakhet Basin. Eighty-five percent of the population lives in the countryside. Laos has an extraordinary ethnic diversity. About 68% of the population is composed of ethnic Lao (known as *Lao Loum*), a people of Thai stock who are believed to have migrated originally from southwestern China during the 13th century, in the wake of the onslaught of Kublai Khan's forces. The *Lao Loum* dominate the country politically, culturally, and economically.

The rest of the Lao population is divided into a welter of ethnic groups, some sizable, some tiny. These groups include mountain tribes of Thai stock found in northern Laos, the Hmong (Meo) tribesmen of Tibet-Burman origin, and a number of other mountain tribes of Malayo-Polynesian background who inhabit the hills of central and southern Laos. Although no one is quite sure of the exact number of tribes or ethnic groups, the government estimates 68 different groups.

Vietnamese and Chinese represent less than one percent of the population (most left the country after 1975). There are also small groups of Thai, Cambodians, Indians, and Pakistanis. The ethnic Lao and the population of northeast Thailand share the same language, and historically have had a close social and commercial relationship. Many peo-

ple in Laos have relatives in northeast Thailand and, in numerous cases, a claim to Thai citizenship. There is also a small European community in Vientiane, most of whom are from the Commonwealth of Independent States (C.I.S.) and Eastern Europe. However, there are increasing numbers of Australians, Swedes, Japanese, French, and North Americans working for UN agencies. Improved relations with the West and a growth in foreign investment should contribute to an increase in the number of Westerners living in Laos.

History

Laos was first united in 1353 by Fa Ngum, a Lao prince. He brought the scattered Lao princedoms together to form the Kingdom of Lan Xang (Kingdom of a Million Elephants). The Lan Xang covered much of

present-day Thailand as well as Laos. Fa Ngum also established Buddhism as the state religion. Dynastic struggles and conflicts with neighboring kingdoms precipitated a decline of power that began in the 16th century and by the 18th century the Siamese and Vietnamese kingdoms were competing for control of Laos.

For much of the 19th century, the country was under Thai suzerainty and was split into three parts: Luang Prabang, Vientiane, and Champassak. In 1893, France established a protectorate over Laos, but in the process, a large area of what had been Lan Xang, on the west bank of the Mekong River, became part of Thailand. The Franco-Siamese treaty of 1907 defined the present Lao boundary with Thailand.

Under pressure from Japanese occupation forces during World War II, King Sisavang Vong of Luang Prabang declared his independence from France and in September 1945 a new Kingdom of Laos was formed along with the principalities of Vientiane and Champassak. French troops reoccupied the area but in August 1946 recognized Lao autonomy. In 1949, France formally recognized the independence of Laos within the French Union and Laos remained under French rule until 1953 when the country was granted full independence.

From 1945 to 1975, Laos was involved in the bloody conflict that raged throughout Indochina. In 1972, the Lao People's Revolutionary Party (LPRP) was proclaimed by Lao Communists. A cease-fire was signed in February 1973 and a coalition was set up in April 1974. The Pathet Lao, sparked by communist victories in Indochina in 1975, steadily assumed complete control.

On December 2, 1975, a group led by the Lao People's Revolutionary Party abolished the Kingdom of Laos and established the Lao People's Democratic Republic.

Government

Laos is a communist country. Power is monopolized by the Marxist-Leninist Lao People's Revolutionary Party, the only legally recognized party in the country. The party is small in number, estimated at about 40,000 members and compared to other Communist parties, highly secretive. Party and state are intermingled in Laos; members of the party politburo hold the important government positions.

In 1991, the National Assembly adopted the first constitution to be effective in the country since 1975. The new constitution describes the governing authorities of the country, which include the National Assembly, which is elected by the Lao citizenry; the President of the Republic, who is elected and subject to removal by the National Assembly; and the executive government, headed by the Prime Minister, who is appointed and subject to removal by the President with National Assembly approval.

Since the 1970s, Laos has maintained a close relationship with Vietnam, Cambodia, and the former Soviet bloc countries; while at the same time remaining hostile to the West. However, beginning in the late 1980s, Laos has sought to improve its relations with other countries; economic issues have been the impetus for this dramatic change in policy.

The flag of the Lao People's Democratic Republic is blue, with two horizontal red stripes at the top and bottom; a large white circle is centered.

Arts, Science, Education

Probably the best known form of Lao art is the architecture, ornamentation, and sculpture of the Buddhist pagodas, called *wats* in Lao. Often, an incident from Buddha's life is portrayed. Bas-relief sculpture in wood, finished in gold leaf against a red background, deco-

rate the door panels, archways, and gable ends of the structures.

The architecture of Lao homes reflects the country's pastoral and agrarian traditions. Houses raised on stilts permit livestock to shelter beneath them, and the height allows the occupants to catch the evening breezes and to avoid floods in the rainy season.

Handwoven fabrics and fine embroidery appear in both modern and traditional dress. Appliqué, handloomed fabric, and embroidery characterize the dress of the ethnic minorities.

Lao authorities are attempting to encourage traditional musical forms. These include both the *lam-vong*, or circle dance, and other dances performed by fine arts groups at festivals and ceremonies.

The Lao Government has reorganized the country's educational system. Schooling is compulsory for five years. Primary school begins for children aged six years, followed by three years of secondary school, with an additional three years of high school.

In the past, most secondary education was in French. The government has emphasized that instruction at all levels will be in Lao. Laos has teacher-training institutes and medical schools.

The predominant religion of Laos is Theravada Buddhism. To the Lao, Buddhism is not only a religion—it is a way of life. The mountain tribesmen are principally animists, but some of them have adopted Buddhism, while at the same time retaining many of their old beliefs. The two forms of worship coexist easily. It is not unusual to see spirit shrines alongside Buddhist temples.

Lao, the national language, belongs to the Thai linguistic family. It is a difficult tongue, and has six tones. Diverse dialects are spoken in different regions of the country. Like most languages of Southeast Asia,

Laos has adopted many words of Indian origin into its vocabulary. About 80 minority languages are spoken in Laos, primarily by tribal groups living outside the Mekong Valley. French, formerly the language of government and higher education, is slowly losing its importance. However, many government officials still speak French. Increasingly, English is gaining favor as a common language; Russian is also spoken by a number of Lao.

Commerce and Industry

Over 80% of the population earns its income from agriculture, mostly subsistence farming. Rice, corn, coffee, cotton, and tobacco are grown here. Barter is the principal method of exchange in the countryside; the money economy is limited mainly to cities and towns and along major transportation routes. In most areas, poor transportation facilities and other factors limit production levels to meeting the country's own needs, although the economy produces a small surplus of some agricultural, forest, and mineral commodities for export.

The industrial base is quite limited. Industrial plants include a small foundry; saw mills; rice mills; plywood, furniture, match, and cigarette factories; and other small-scale local enterprises. Cottage industries range from the weaving of silk and cotton textiles to shoe making, clothing, and metalwork. Handicraft production includes pottery, jewelry, silver working, and basketry.

Laos imports most of its manufactured products. Government approval is needed to use foreign exchange for imports, but an active free market exists. With the introduction of the New Economic Management Mechanism in 1985, major economic reforms have been enacted: government regulations have been relaxed, free market prices are allowed, farmers may own land, state firms now exercise greater control in authority but

have lost their subsidies and pricing advantages, and trade restrictions have been lifted. Consumer goods, mostly from Thailand, are now available in the more populated areas of the country. As a landlocked country, Laos has been primarily dependent on the cooperation of Thailand to facilitate the transshipment of imported and exported goods. The Lao Government is now trying to develop, with Vietnamese assistance, alternate transit routes to Vietnamese seaports.

Major exports include timber and forestry products, tin, coffee, and hydroelectric power which is sold to Thailand. Foreign investment in Laos remains low, although the government actively encourages it and has increased ties to the West.

Laos is one of the poorest countries in the world due to its over-dependence on agriculture and its lack of a skilled labor force. Both of these factors present significant problems for the future.

Laos has relied heavily on foreign assistance from the former Soviet bloc nations, which has decreased in recent years. Improved relations with the West is now a priority in order to offset the loss of aid from those countries. Projects financed by Western foreign aid include: expansion of hydroelectric power generation facilities; building of roads, bridges, and port facilities; and the improvement of communications. Most Western assistance has been concentrated on infrastructure and agricultural development projects.

A number of business concerns, mostly Thai but including some from the U.S., Japan, and Europe, have invested in manufacturing, mineral extraction, and service industries. As the government refines its economic reforms and improves banking and communication procedures, foreign investment will increase.

The Lao National Chamber of Commerce and Industry can be reached at P.O. Box 1163, Vientiane, Laos.

Transportation

Vientiane is served by five international airlines: Thai Airways, Air Vietnam, Lao Aviation, and Aeroflot (C.I.S.), and China Southern. Bangkok is the nearest city served by an American carrier, and many people make onward connections from there.

Foreigners may enter and leave the country by air at Vientiane's Wattay Airport, by ferry at Thadeau's ferry crossing, or at Thanaleng shipping port.

Laos is landlocked, mountainous, and sparsely populated—factors which have hindered the development of its transportation system. The country has no railroads, and roads are mostly unpaved and poorly maintained. Public transportation in Vientiane is poor and unreliable. Taxis are available, but meters and fixed rates do not exist. Taxis fares generally depend on the passenger's ability to bargain, and on the distance traveled. Drivers speak little or no English. They pick up as many passengers as the vehicle will hold, although it is possible to engage a taxi privately for a higher fare. Many taxis are old and poorly maintained, and drivers may be reckless.

Several bus routes in the city, and for intracity travel, are available. *Samlors* (tricycle rickshaws) can be engaged for rides within the city limits. Recently motorcycle driven rickshaws (*tuk-tuks*), imported from Thailand, have appeared on the streets of Vientiane. *Samlor* or *tuk-tuk* fares are bargained.

Traffic is light and undisciplined. Ill-trained drivers operate poorly maintained vehicles on crowded, potholed streets. While in theory traffic moves on the right, pedestrians and bicycles use all parts of the streets, so most cars do the same. Animals roam the street as well, including cows, goats, all fowl, as

well as cats and dogs. Cyclists pay little or no heed to cars and bicycles are rarely equipped with functioning lights or reflectors. Driving is particularly dangerous at dusk and at night.

Defensive driving is necessary. Helmets should be worn when riding motorcycles, and gloves and sturdy shoes are strongly recommended.

Seasons of rain and dust cause roads to deteriorate rapidly, consequently placing stress on cars. Vientiane has limited facilities for maintenance and body work. Spare parts for foreign-made cars can generally be obtained from Bangkok, but parts for American-manufactured vehicles are normally ordered from the U.S. Permission is usually granted to drive cars to Bangkok or Udornthani (Thailand) for repairs.

The Lao Government requires proof-of-ownership documents before it will register a vehicle. There is no registration fee for those on the diplomatic list, but other foreigners are required to purchase tax stickers, license plates, and registration cards. The cost of the tax sticker varies with the size and make of the car. Unleaded fuel is not available.

All persons operating motor vehicles in Laos must have valid Lao licenses. U.S. or international permits must be surrendered at the time of application, but will be returned upon departure from the country. The U.S. Embassy in Vientiane suggests that all Americans coming to Laos obtain international permits so that they will not have to give up their U.S. licenses.

Communications

Overseas telephone service is available on a 24-hour basis through the local Posts, Telephone, and Telegraph (PTT) facility, but is not reliable. Calls to the U.S. are frequently inaudible, if one is able to get through at all. The PTT telegraph facility is slow and expensive. A three-minute call to the U.S. costs about \$15. Calls must be "booked"

in advance and there may be a two to three hour wait for your call to be completed.

International mail service is not considered completely dependable. Registered mail service is not available. Transit time to and from the U.S. is approximately two weeks.

Several radio stations broadcast on medium wave (AM) in Vientiane. The most important of these is the Lao National Radio. Most broadcasts are in Lao, but government news is given in English, French, and other languages.

Television is available in Vientiane via satellite from the former Soviet Union. Two TV channels can be received from Thailand. None broadcast in English.

Shortwave programs are received from Voice of America (VOA), British Broadcasting Corporation (BBC), and American Forces Radio and Television Service (AFRTS); other foreign broadcasts can be picked up on shortwave receivers.

Two daily Lao-language papers are published in the capital—*Vientiane Mai* and *Pasason*. Khao San Pathet Lao, the official government news agency, prints daily bulletins in English and French.

Arrangements may be made for personal subscriptions to newspapers and periodicals. English-language books are not available for purchase locally, but can be bought in Bangkok.

Health

Medical and dental facilities and the availability of medicines in Vientiane are extremely limited. It is imperative that all possible medical and dental care be completed before entering Laos. The official U.S. community has consultation access to the regional medical officer in Bangkok, who visits Laos on occasion. Bring or arrange to have sent any special medications required; also bring a supply of non-prescription health aids, such as

aspirin, cold and allergy medications, antiseptic solutions, and Band-aids.

Community health services, including basic programs such as sanitary waste disposal, are inadequate by U.S. standards. Most houses occupied by Americans use septic tanks. The long rainy season and high water table cause frequent malfunction of these and other waste-disposal systems. Neither the municipal water supply in Vientiane nor water from wells is potable without filtration and boiling.

Raw fruits or vegetables which are peeled before they are eaten require only simple cleaning. Fruits eaten whole should be washed and soaked in a germicidal solution. Locally bought leafy vegetables, such as lettuce and watercress, cannot be made completely safe for raw consumption. Eating in a few local restaurants is relatively safe if one is careful to select well-cooked foods and bottled beverages.

Tuberculosis, hepatitis, rabies, and many tropical parasitic diseases are endemic here. Malaria and other mosquito-borne viral diseases do not currently constitute a hazard, but dengue fever occurs sporadically.

Immunizations for visitors to Laos are a source of medical controversy. Some doctors advocate immunization for a wide variety of diseases. It is recommended that visitors consult with their physicians. Consider shots against the following: hepatitis-B, encephalitis, and possibly typhoid. No cholera inoculations are necessary and unless you travel outside the city of Vientiane anti-malaria medicines are not needed. Children should have the normal variety of immunizations, including the three-shot rabies preventives series and a tetanus booster. With added awareness, and with prompt attention to small problems before they become serious, health difficulties can be prevented or significantly minimized during a stay in Laos.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Flights connect Vientiane to Bangkok, Yangon, Hanoi, and Moscow. Bangkok is the nearest city served by a U.S. airline. Almost all

travelers must arrive in Vientiane by air.

A passport and visa are required. Visas are issued upon arrival in Laos to foreign tourists and business persons with two passport size photographs and \$30 at Wattay Airport, Vientiane; Friendship Bridge, Vientiane; and Luang Prabang Airport. Visas on Arrival are not available at the Chong Mek border crossing. Foreign tourists are generally admitted to Laos for 15 days with a Visa on Arrival or for 30 days with a visa issued at a Lao embassy. The Department of Immigration in Vientiane will only extend tourist visas for one day. It is sometimes possible to get an extension for an additional 15 days by submitting an application through a tour agency. Foreigners who overstay in Laos risk arrest, and they will be fined \$5 for each day upon departure.

Foreign tourists planning on entering Laos at any international checkpoint where Visas on Arrival are not available must obtain a visa in advance. In the United States, visas and further information about Lao entry requirements can be obtained directly from the Embassy of the Lao People's Democratic Republic, 2222 S St. N.W., Washington, D.C. 20008, tel. 202-332-6416, fax 202-332-4923, Internet home page: <http://www.laoembassy.com>.

U.S. citizens should not attempt to enter Laos without valid travel documents or outside official ports of entry. Unscrupulous travel agents have sold U.S.-citizen travelers false Lao visas which have resulted in those travelers being denied entry into Laos. Persons attempting to enter Laos outside official ports of entry risk arrest or more serious consequences.

Immigration offices at some of the less used border-crossing points are not well marked. Travelers should make sure that they complete immigration and customs formalities when they enter Laos. Travelers who enter Laos without completing these formalities may be subject to

fine, detention, imprisonment, and/or deportation.

Customs officials may inspect baggage by nondiplomatic visitors upon either arrival or departure or both, but it is usually just a cursory inspection.

According to the Lao Tourist Police, all foreign tourists are required to use the services of a licensed Lao tour company -- unassisted tourism is not permitted. However, this regulation does not appear to be strictly enforced.

Foreign tourists have been informed by the Lao Tourist Police that any group of more than five foreign tourists must be accompanied by a licensed Lao tour guide. Violation of this regulation can result in detention, deportation, and fines of \$200 to \$2000.

Ministry of Trade and Tourism regulations prohibit any person who is not a licensed Lao tour guide from performing the functions of a tour guide -- including explaining Lao culture and custom to foreign tourists. Lao and Thai nationals accompanying American friends to Lao tourist sites have been detained and fined by Lao Tourist Police who suspected that they were acting as unauthorized tour guides.

Lao citizens who wish to have a foreign citizen -- including a family member -- stay in their home must obtain prior approval from the village chief. The foreigner may be held responsible if the Lao host has not secured prior permission for the visit. American citizens are strongly advised to ensure that such permission has been sought and granted before accepting offers to stay in Lao homes.

Lao authorities require that hotels and guesthouses furnish information about the identities and activities of their foreign guests. Lao who interact with foreigners may be compelled to report on those interactions to the Lao Government. Persons traveling outside of the main tourist areas may be required to

register with local authorities and may be questioned by security personnel.

Lao security personnel may place foreign visitors under surveillance. Hotel rooms, telephone conversations, fax transmissions, and e-mail communications may be monitored, and personal possessions in hotel rooms may be searched.

U.S. citizens living in or visiting Laos are encouraged to register at the U.S. Embassy where they may obtain updated information on travel and security within the country. The U.S. Embassy is located at Thanon Bartholonie (near Tat Dam), in Vientiane; from the United States, mail can be addressed to U.S. Embassy Vientiane, Box V, APO AP 96546; telephone (856-21) 212-581, 212-582, 212-585; duty officer's emergency cellular telephone (856-20) 502-016; Consular Section fax number (856-21) 251-624; Embassy-wide fax number (856-21) 512-584; Internet home page: <http://usembassy.state.gov/laos/>.

Pets

Pets brought into Laos must be accompanied by certificates of good health and have had anti-rabies vaccinations. Upon arrival, contact with local animals should be kept to a minimum. Veterinary services are poor, with few vaccines or medications available. Proof that an animal was imported must be shown before officials will allow it to leave the country. It is recommended that pets be carried on board the plane as carry-on baggage, if possible.

Currency, Banking, and Weights and Measures

The time in Laos is Greenwich Mean Time (GMT) plus seven.

The official Lao currency is the *kip*. The *kip* is neither a recognized international monetary unit, nor is it exchangeable outside Laos. Its use within Laos is also limited, since most transactions in which foreigners participate are in dollars or in Thai *baht*, both of which are

freely exchangeable throughout Laos. *Kip* is usually used for small purchases at the market.

There are no automatic teller machines in Laos. Credit cards are accepted only at some major hotels and tourist-oriented businesses. Credit card cash advances can be obtained at some banks in Vientiane. Although it is illegal to do so, the U.S. dollar and Thai baht are both widely used for larger transactions. U.S. dollars are required by the Lao Government for the payment of some taxes and fees, including visa fees and the airport departure tax.

Weights and measures in Laos are based on the metric system, except for gold and silver, which are measured in *baht* (15 grams) or *taels* (30 to 35 grams).

Special Circumstances

The Lao Government prohibits sexual contact between foreign citizens and Lao nationals except when the two parties have been married in accordance with Lao Family Law. Any foreigner who enters into a sexual relationship with a Lao national may be interrogated, detained, arrested, or jailed. Lao police have confiscated passports and imposed fines of up to \$5000 on foreigners who enter into disapproved sexual relationships. The Lao party to the relationship may also be jailed without trial. Foreigners are not permitted to invite Lao nationals of the opposite sex to their hotel rooms; police may raid hotel rooms without notice or consent.

Foreign citizens intending to marry a Lao national are required by Lao law to obtain prior permission from the Lao government. The formal application process can take as long as a year. American citizens may obtain information about these requirements from the U.S. Embassy in Vientiane. The Lao Government will not issue a marriage certificate unless the correct procedures are followed. Any attempt to circumvent Lao regulations governing the marriage of Lao

citizens to foreigners may result in arrest, imprisonment, a fine of \$500-\$5000, and deportation. Foreigners who cohabit with or enter into a close relationship with Lao nationals may be accused by Lao authorities of entering an illegal marriage and be subject to the same penalties.

Foreign citizens who wish to become engaged to a Lao national are required to obtain prior permission of the chief of the village where the Lao national resides. Failure to obtain prior permission can result in a fine of \$500-\$5000. Lao police frequently impose large fines on foreign citizens a few days after they hold an engagement ceremony with a Lao citizen based on the suspicion that the couple probably subsequently had sexual relations out of wedlock.

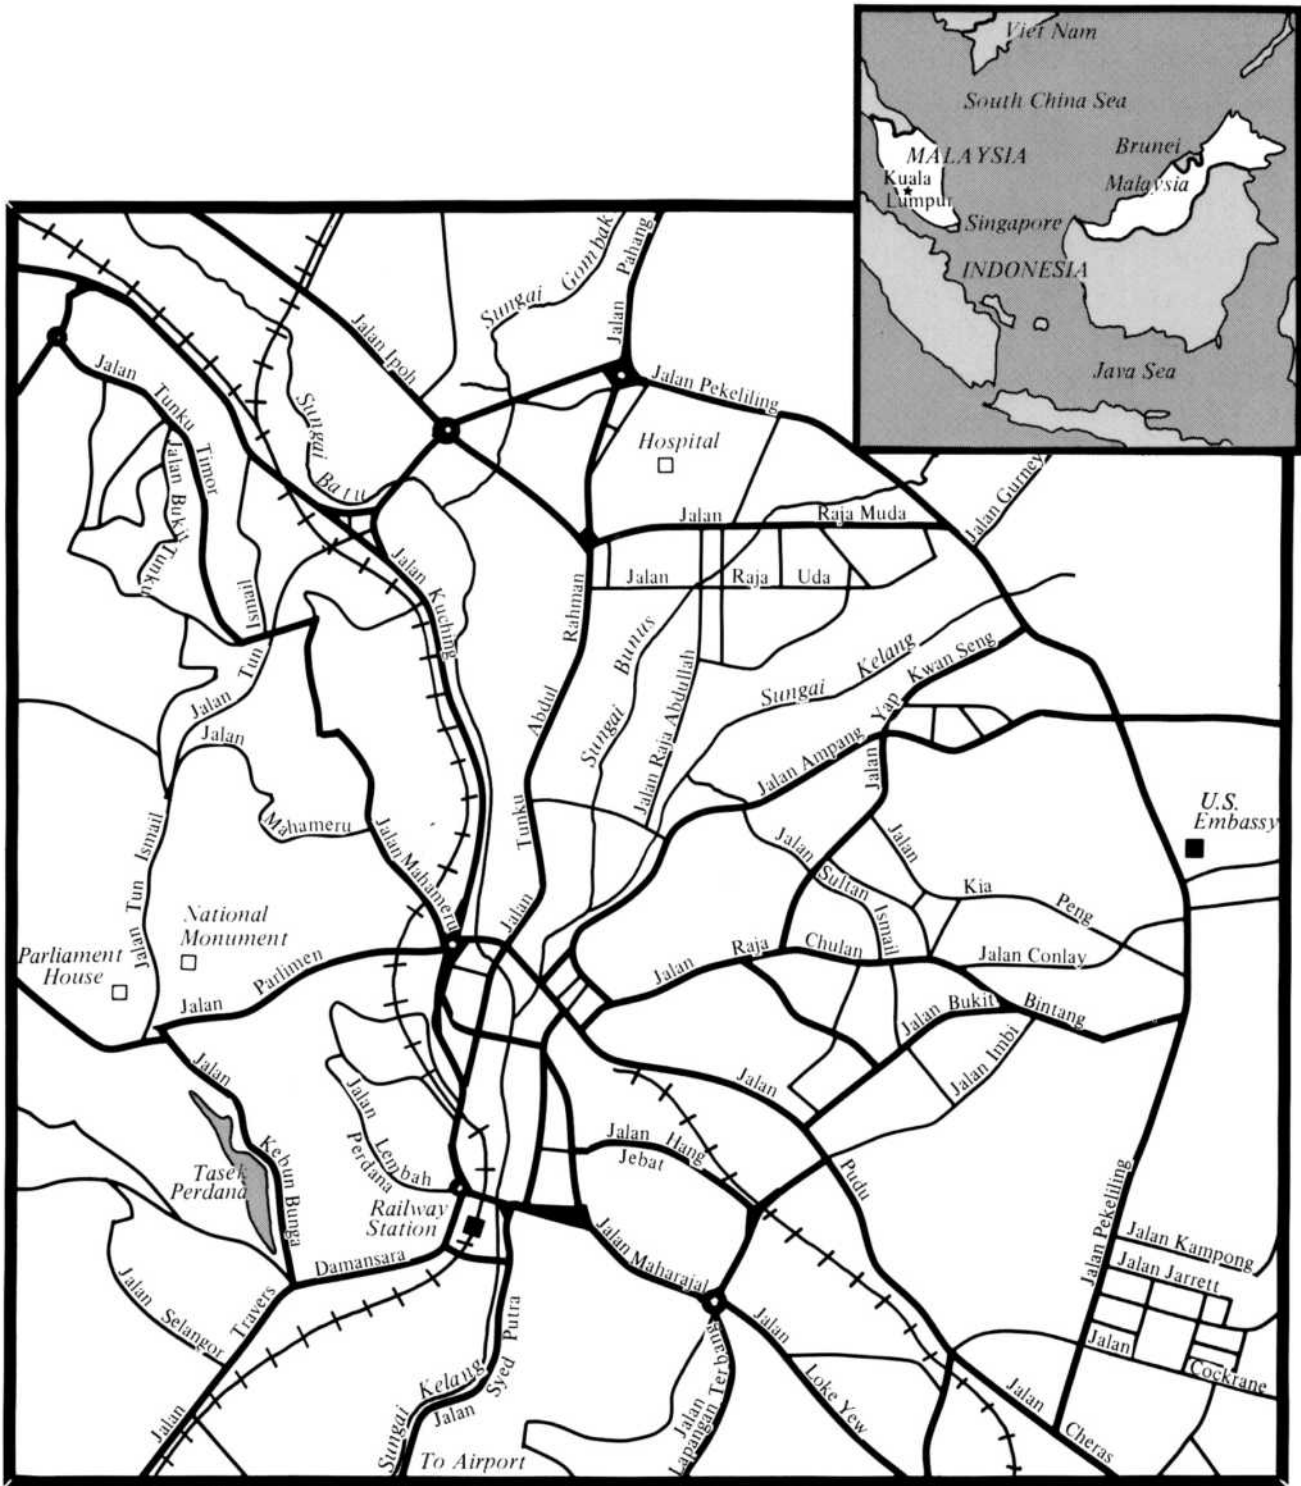

Religious proselytizing or distributing religious material is strictly prohibited. Foreigners caught distributing religious material may be arrested or deported. The Government of Laos restricts the import of religious texts and artifacts. While Lao law allows freedom of religion, the government registers and controls all associations, including religious groups. Meetings, even in private homes, must be registered and those held outside established locations may be broken up and the participants arrested.

Taking photographs of anything that could be perceived as being of military or security interest -- including bridges, airfields, military installations, government buildings or government vehicles, may result in problems with authorities, including detention or arrest and confiscation of the camera. Tourists should be cautious when traveling near military bases and strictly observe signs delineating the military base areas. Military personnel have detained and questioned foreigners who innocently passed by unmarked military facilities.

Kuala Lumpur, George Town

Other Cities:

Alor Setar, Ipoh, Johor Baharu, Kota Baharu, Kota Kinabalu, Kuala Terengganu, Kuantan, Kuching, Melaka, Seremban

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated October 1994. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Malaysia is a colorful amalgam of traditional and modern influences. Situated between the South China Sea and the Indian Ocean, it has drawn on China, India, Western Europe, Polynesia, and the Arab world to create a unique multilingual and multicultural nation.

British stewardship of the Malay States began in Penang in the late eighteenth century. After Japan's temporary conquest during World War II and a major Communist insurgency during the 1950's, sovereignty was transferred peacefully in 1957 to an independent federal government. Since independence, the Federation has expanded to include the former British colonies of Sabah

and Sarawak on the island of Borneo and changed its name from Malaya to Malaysia to recognize the importance to the country of Chinese, Indian, and aboriginal peoples as well as the ethnic Malays. Singapore was a part of the Federation from 1960-1968.

For over a century Malaysia had enjoyed economic prosperity based on large-scale rubber and tin production. Over the past twenty years production of oil and gas has fueled Malaysia's rapid economic growth. Manufacturing, especially of electronics components, has recently assumed the chief position among Malaysia's exports.

The prosperity brought by tin, rubber, and later natural energy and electronics is supplemented by a stable system of public administration and public services. The culture, variety, and people make it a challenging and interesting country in which to live and work.

MAJOR CITY

Kuala Lumpur

Kuala Lumpur lies within the Federal Territory, an area of 244 square kilometers surrounded by the state

of Selangor. It is near the middle of the west coast of peninsular Malaysia, 400 kilometers northwest of Singapore and 40 kilometers inland. Its population is approximately 1.3 million (2000 census). Within metropolitan Kuala Lumpur are located all the major offices of the Malaysian Federal Government; the city also serves as the commercial center of the country.

Food

Kuala Lumpur has several supermarkets, minimarkets, and other local markets that sell fresh produce and imported items. While the variety is large, most imported items cost substantially more than in the U.S. Excellent tropical fruits and vegetables, which often form part of menus here, include both the familiar and the exotic, such as bananas, mangoes, mangosteens, jackfruit, papayas, and the notorious, uniquely-scented durian.

Local seafood of good quality includes prawns, crabs, and a variety of fish. Local beef, mutton, pork, and poultry are also available. Many Americans prefer frozen or chilled beef and lamb imported from Australia and New Zealand. U.S. beef is available but expensive.

Many canned, bottled, frozen, and packaged foods are imported, as are most paper products. Shoppers can

usually find the desired item or brand or a good substitute, but anything imported is expensive. Most stores stock baby foods, including formula, cereals, and strained foods. These items are more expensive here than in the U.S. Strained baby foods carry freshness dates. Not all brands of American-made formula are available and not all formula containers are dated for freshness, so arrange for shipment of any special brand recommended by a pediatrician.

Clothing

Malaysians are increasingly style-conscious; many are fully aware of the latest trends in Western fashions. However, Westerners should be conscious of relatively conservative dress codes in certain circumstances, especially among Malays. Use discretion in selecting attire to avoid inadvertently causing embarrassment to your host or guests. This is particularly important for women. Traditional dresses for Malay women have ankle-length skirts and long sleeves.

Generally speaking, Malaysia's hot, humid climate calls for light clothing, except at hill resorts, where sweaters or light jackets may be needed, especially at night. Extensive use of air conditioning, often supercooled, in offices, hotels and restaurants in Kuala Lumpur and other cities, needs to be taken into account in selecting attire. Hence there are occasions when transitional clothing such as lightweight sweaters, linen jackets for women, and suit jackets or blazers for men, should be worn for comfort. Rainstorms in Kuala Lumpur can be heavy, often occurring in the afternoon or early evening, but usually are brief. Because of the heat, umbrellas are used instead of raincoats.

Clothing and shoe stores in Kuala Lumpur offer a wide selection of items. However, adult sizes tend to be smaller than in the U.S., and large sizes can be hard to find. Prices are comparable to those in the Washington area. It is possible

to find shoemakers who will make shoes to order at reasonable prices.

Many reasonably priced tailors are available, and most of them stock good supplies of imported and domestic materials. Attractive, locally-produced batik ties and shirts are reasonably priced. Cotton long-sleeve batik ranges from \$12 to \$40; silk batiks are more expensive and can exceed \$100 each. Shoes larger than size 10 are difficult to find.

Women wear lightweight dresses with either long or short sleeves, or light skirts and blouses. A number of dressmakers offer an extensive selection of materials. In general, custom-tailored clothes are better than ready-made clothes which can be expensive, poorly tailored, and of inferior quality.

There are many shoe stores in Kuala Lumpur, but shoes larger than size 9 and narrow widths are hard to find.

Clothing requirements for children are simple. Schools require uniforms, but they can be made inexpensively here. Summer-weight clothes are worn all the time, except at the hill resorts. Tennis shoes and thongs are popular for all casual activities. I.S.K.L. uniforms include regulation shirts, which must be purchased at the school, and navy blue pants or skirts which can be made inexpensively by local tailors or purchased locally. High school students can wear navy blue or white slacks or long shorts. Girls may also wear navy blue or white skirts. Bring a basic supply with you. No denim is allowed. Some students wear light weight sweaters to school because of the air conditioning.

Supplies and Services

Malaysia is becoming an increasingly consumer-oriented society, and numerous shopping malls cater to the needs of Malaysia's growing middle class and the many expatriates living in Kuala Lumpur. Almost any product you would want to buy, or a reasonable substitute,

can be purchased in Kuala Lumpur, but prices are higher than in the U.S. Most standard household and medical supplies and toiletries are readily available, but tend to be more expensive here than in the U.S. Some items are in constant supply, while others appear and disappear unexpectedly.

Familiar brands of American and English cigarettes and Dutch and English cigars are sold locally, as are various pipe tobaccos, but American brands are hard to find.

Basic Services: Tailoring, dress-making, and shoe repair are all easy to obtain. Dry-cleaning services are available, but treatment for special-care fabrics is not always available. Beauty shops and barber shops abound. Those in the international-class hotels are convenient and provide the most acceptable service. However, many people try the numerous unisex styling salons found in the shopping malls or the small barber shops clustered in alleyway shophouses run by Malay, Indonesian and Indian barbers.

Religious Activities

Malaysia is officially an Islamic country. However, non-Moslems are free to pursue their own religious beliefs and worship as they please. A variety of religious organizations serve the local Chinese, Indian, and expatriate communities. To avoid unintentionally giving offense, try to become familiar with the standards of behavior appropriate for interacting with members of each of the major Malaysian ethnic groups.

For Christians, local Anglican, Lutheran, Mormon, Presbyterian, Baptist, Methodist, and Roman Catholic denominations hold English-language services. The Presbyterian congregation serves as the principal expatriate international Protestant church, welcoming attendance by all worshippers without regard to previous affiliation. The nearest synagogue is located in Singapore.

Education

The International School of Kuala Lumpur (ISKL) is the only school in Kuala Lumpur which provides elementary and secondary education for foreign students using American elementary and college preparatory curricula. ISKL has been accredited by the Western Association of Secondary Schools and Colleges.

The school offers classes from pre-school (ages 3–4 years) through grade 12. Students transfer to equivalent grades in the U.S. Enrollment is generally about 1400. Students from a total of 46 countries attend ISKL. More Americans attend than any other nationality; Americans make up about 15% of the student body. (The Japanese are second at about 15%) ISKL offers a full college-preparatory program as well as a variety of extracurricular activities and intramural sports. Graduating seniors have a high acceptance rate at the colleges to which they apply in the U.S. The school provides bus transportation but no boarding facilities. Each year the faculty and students present several stage productions. The playing field is used not only for school events, but also for community softball games on Sunday-afternoons, football games sponsored by the American Association, and other community events. ISKL follows the standard American school year, but celebrates Malaysian instead of American holidays.

The school is now divided into two campuses located several miles apart (one for pre-kindergarten through grade 5, the other for grades 6-12). The upper school (grades 6-12), includes a gymnasium, swimming pool, tennis courts, outdoor basketball courts, an outdoor playing field, an open-air snack bar, air-conditioned classrooms, a library, and an auditorium.

For more information, write to the ISKL administrator at the following address:

International School of Kuala Lumpur
PO Box 12645 50784 Kuala Lumpur
Malaysia.

The private Alice Smith School uses a mainly British curriculum. It offers instruction from kindergarten through the equivalent of grade five. For more information, write to: Alice Smith School, Jalan Bellamy, Kuala Lumpur, Malaysia.

The Garden School, although similar to the Alice Smith School in its use of a British curriculum, differs in that it offers instruction through the secondary level. For more information, write to: The Garden School, 251 Jalan Bukit Bintang, Kuala Lumpur, Malaysia.

Special Educational Opportunities

With the exception of the International Islamic University, local 4-year colleges and universities normally are not open to foreigners, and in any case an increasing number of courses are being taught in Bahasa Malaysia instead of English. Some private 2-year colleges will accept foreigners, but check to be sure credits can be transferred to a recognized U.S. school. Other classes in various Malaysian arts and handicrafts are offered periodically in the community. For further information on these classes, check *Selamat Datang*, an information book published by the women's division of the American Association. *Selamat Datang* contains extensive information on such topics as local customs, food, tourism, shopping, churches, schools, and clubs.

ISKL has an extensive ESL program. It also offers special classes for children with reading difficulties and limited facilities for other learning disabilities. No other special educational facilities are available for the handicapped.

Sports & Clubs

Opportunities to join local clubs are limited and require some persistence and patience. Arrangements vary from club to club, but usually involve a deposit of approximately \$1,000 which may or may not be refundable, sponsorship by club members, and an interview. For many years, local clubs were the

main focus of organized social life and athletic activities among the expatriate community. Some of the best clubs in Kuala Lumpur now are either closed to new members, have long waiting lists, or require fees that are prohibitive. However, always inquire about temporary membership at any clubs in which you are interested.

Kelab Darul Ehsan offers "term" and fully transferable memberships. Non-golf term membership costs about \$1,200 per year. Membership including golf costs about \$2,000 per year. The club has indoor and outdoor tennis, squash, badminton, an exercise room, swimming pool, golf course, and restaurants. Many of the larger hotels have modern health clubs open to local residents. One that is especially convenient is the "Sweat Club", located adjacent to the MiCasa Hotel, off Jalan Tun Razak. The Sweat Club offers a full range of health club exercise facilities, including an aerobics studio, exercise machines, a swimming pool, tennis courts and a squash court. Full membership costs around \$400, "off-hour" membership is about \$120; monthly dues cost about \$40.

The Royal Selangor Golf Club, on Jalan Tun Razak, is no longer offering individual short-term memberships. Corporate memberships of \$8,000 per individual might be available, however.

The Subang Golf Club, located near the international airport 30 minutes from downtown, has facilities for golf, swimming, tennis, dining, and slot machines. Foreign applicants are restricted to temporary memberships. The two year temporary membership has a three month waiting list; entry fees are around \$4,000 with monthly dues. The Hilton Hotel Racquet Club has two tennis courts and five squash courts on the roof of the downtown Hilton Hotel. Members are entitled to use the Hotel's pool. Annual dues are over \$900 for family memberships; over \$600 for single memberships. Members are entitled to one hour of

court time per day. Court time must be booked at least two days in advance, and booking is difficult for certain times of the day.

The Lake Club, located near the Parliament Building on the other side of town, has temporary memberships with an initiation fee of about \$1,200. The club has several grass and synthetic tennis courts, squash courts, a large pool complex, a library, several restaurants, and movie presentations on the weekends.

The Selangor Polo and Riding Club offers riding instruction for children and adults as well as polo for experienced adults. School horses are available for lessons, and members may board their own horses at the club. The club has a bar and schedules occasional activities in connection with tournaments and other special events. Entry fees for subscribing members are around \$600; with monthly dues for families or single members. A refundable riding deposit of about \$200 is required for family memberships; \$100 for single members. Lessons range in price. A temporary membership for up to 2 months is available.

The Selangor Yacht Club, located an hour away in nearby Port Kelang, owns several sailboats that members can rent at moderate rates. Mooring and landing facilities are also available. The club operates a bar and restaurant featuring a selection of Western and Eastern dishes. The club, which has about 200 members, sponsors weekly sailboat races. Membership is now open and requires sponsorship by two members, a modest initiation fee, and monthly dues. Temporary memberships for up to a year are available and require, in addition to two sponsors, a low, refundable deposit and monthly dues are required. The Royal Selangor Flying Club, at the military airport 6 kilometers from the center of the city, provides its own planes for private flying instructions and for members' use. Meals are available. Fees for plane rental, which vary according to the

type of plane and whether or not a professional pilot is needed.

Kelab Golf Angkatan Tentera (the Armed Forces Golf Club) is located near the Royal Selangor Flying Club on the Air Force Base just south of town. It features a short, but challenging, nine-hole golf course. The clubhouse includes a bar and small restaurant. Only 50 expatriates can be members at any one time, and a wait of 4–5 months is customary before a membership application is accepted. Entry fees, which include first quarter dues, are about \$650. Monthly dues apply.

The Royal Port Dickson Yacht Club is located 1½ hours away from Kuala Lumpur on a beach along the Straits of Malacca. Facilities include a restaurant, five tennis courts, four squash courts, a swimming pool, billiards, boat rentals, equipment for windsurfing and water skiing, and an active yacht basin. When membership applications were last accepted, initiation fees were \$600, and applicants needed two sponsors and were interviewed by a membership committee. Three month temporary memberships are currently available.

The Hash House Harriers, a 45-year old association of cross-country running enthusiasts, and its associated splinter groups, organize runs through oil palm and rubber plantations. Membership rates are reasonable, but expect a wait to enter as a regular member.

Several other clubs have more open membership arrangements. The Selangor Club, also known as “the Spotted Dog”, is located downtown facing several of Kuala Lumpur's more picturesque colonial structures across a large public green. Housed in a renovated colonial building featuring Tudor styling, it has long been a landmark in Kuala Lumpur. The club uses the green for national tournaments and its own sporting events including cricket, soccer, field hockey, squash and tennis. Besides four grass tennis courts, the club facilities include a restaurant and ballroom. Bridge

lessons are available. All membership applications must be sponsored by two members. Temporary memberships are available, but expect a wait of one year before memberships can become permanent.

Public facilities, such as swimming pools, tennis courts, and playgrounds for children, are limited. The ISKL pool is open to pupils and their families during certain hours of the day. The schedule is posted at school.

Touring and Outdoor Activities

Short trips to outstation areas offer a change of scenery and diversion from the pace of city life, but only the highlands offer any relief from the city's hot, humid climate. Hazardous driving conditions outside of Kuala Lumpur deter many potential travellers, but the rewards of the change of scenery and natural beauty of the country make it worth the effort. In general, the roads are well maintained but winding and overcrowded.

The Awana Golf Club, and Genting Highlands complex, about a one-hour drive from Kuala Lumpur into the Pahang mountains, includes several hotels and a golf course, and offers a cool change to the lowlands.

Fraser's Hill, about 100 kilometers north of Kuala Lumpur and 2½ hours away by car, sits at an altitude of 1,370 meters, and is reached by a narrow, winding mountain road. The resort offers a nine-hole golf course, a few new tennis courts, squash courts, and walking paths through the jungle. The weather is refreshingly cool despite high humidity and intense sunlight during the daytime. Sweaters or light jackets should be worn at night. Besides accommodations at a new hotel, the resort rents numerous houses and bungalows, each with full furnishings and its own staff. Make reservations at least 3 weeks in advance for the hotel and 6 months in advance for bungalows. For major holidays, some families book a year in advance.

Higher at 1,450 meters and farther north than Fraser's Hill, **Cameron Highlands** offers the same basic change in climate. It lies about 240 kilometers north of Kuala Lumpur, about five hours away by car. Cameron Highlands offers hotels, bungalows, restaurants, and an 18-hole golf course, all at reasonable rates. There are also several hiking trails through the mountain forest. Flowers and excellent local produce, such as strawberries, can be purchased in the area, which is also known for numerous tea plantations that dot the hillsides.

A round trip can be made in one day by car to **Port Dickson**, one hundred kilometers southeast of Kuala Lumpur, (about 1½ hours drive each way). Port Dickson, a seaside resort, consists of the town itself and a series of sandy bays stretching 17 kilometers south along the coastal road. Facilities are available for swimming, fishing, water skiing, windsurfing, tennis, and golf. Unfortunately, many areas of the beaches are no longer scenic and have pollution problems. Despite this, clean and picturesque coves can still be found.

Several rest houses and hotels provide meals and accommodations. Company-owned bungalows can be rented for a weekend or several days at reasonable cost, but they have become harder to find.

Malacca, situated about 150 kilometers southeast of Kuala Lumpur, a two hour drive by highway, (longer if the scenic coastal drive is taken), is one of the more interesting and picturesque places in Malaysia. The city's architecture reflects its long history as a seaport city-state and later as a colonial stronghold of the Portuguese, Dutch, and British, who held it from 1824 until Malaysia's independence in 1957. Though prices for antiques have climbed in recent years, window shopping in Malacca for Chinese, Portuguese, Dutch, and British antiques is always enjoyable. Malacca is a good place to take visitors.

Like Malacca, **Penang** offers many opportunities for camera enthusiasts and sightseers. An island city off the northwest coast of Malaysia, Penang boasts beautiful beach hotels, an inclined railway to the top of Penang Hill, ferries to the mainland, small antique shops, and numerous temples, mosques, and British colonial buildings.

Flights from Kuala Lumpur take about an hour. Penang can also be reached in 7 hours by car on a route that takes the traveller through the principal tin mining region of the country and near Kuala Kangsar, the site of the Ubidiyah Mosque, one of the most beautiful in Malaysia.

Singapore lies about an hour away by air or 7 hours by car or train off the southern coast of the peninsula. It offers a wide range of shopping and sight-seeing opportunities, and a cosmopolitan atmosphere.

Both car and boat must be used to reach **Taman Negara**, the National Park, which is in the middle of the peninsula 6 hours from Kuala Lumpur. It offers camping or bungalow facilities, and trails in virgin jungles give hikers excellent opportunities to see Malaysia's flora and fauna in their natural habitat. Caution should be taken to avoid leech and insect bites during certain times of the year.

On the island of **Borneo**, also known as Kalimantan, the states of Sabah and Sarawak and the Sultanate of Brunei, have unique history, some modern resorts, and give the truly adventurous a chance to glimpse aboriginal culture, jungles, and mountains.

East Malaysia can be reached in 2 hours on flights across the South China Sea.

The East Coast, accessible by plane or car, offers beautiful, white-sand beaches and numerous examples of Malay culture and handicrafts. The drive to the nearest East Coast city, **Kuantan**, takes 4 hours. **Kuala Trengganu** and **Kota Baru** and are an additional several hours

north along the coast. Roads are fairly good. The pace of life is considerably more relaxed than in Kuala Lumpur. Several resorts, including a Club Med, have opened along the coast in recent years.

A number of small, secluded islands off both coasts have hotel accommodations. Many are ideal for scuba diving and snorkeling, particularly those off the East Coast, such as **Tioman Island**, one hour from Kuala Lumpur by air, which is lovely, but seasonal (March to September). Off the West Coast, **Pangkor Island** resorts are increasingly popular year-round. By car, it is a 4½ hour drive to Lumut followed by a short ferry ride to the island.

Around Kuala Lumpur are several interesting places to visit, such as the National Museum; Batu Caves, a limestone formation north of the city; Chinatown; bird and butterfly parks, an orchid garden, a pewter factory and a local handicraft center. Tours to visit local places of interest in the vicinity are available through the hotels.

Entertainment

A number of air-conditioned theaters in metropolitan Kuala Lumpur show a good selection of American films, but many films are censored. Local cinemas also show a variety of Chinese, Indian, Indonesian, and Malaysian films, occasionally with English subtitles. Ticket prices are reasonable, but these theaters are not frequented much by the expatriate community.

Although the city has no professional theaters, the major hotels do have occasional dinner theater presentations, amateur theatrical events are staged at ISKL, and local professional productions are occasionally presented at various venues.

Dining out is a favorite pastime. The cuisine offered by local restaurants reflects the rich diversity of Malaysia's population; literally hundreds of restaurants, coffee shops, and open air food stalls spe-

cialize in Malay, Indian, Western, and any of several types of Chinese food. Except at hotel restaurants, dining out is fairly inexpensive. Restaurants are sanitary, and while not up to U.S. standards by any means, are acceptable for most people. The food can be exciting to taste and, at open air restaurants or stalls, exciting to watch being prepared. For those who seek other kinds of excitement, the city also has several discos and a number of bars and nightclubs. Visiting musicians perform at several concerts each year.

Penang and East Malaysia have several organized festivals and pageants that may appeal to the enthusiastic traveler. Most festivals in Kuala Lumpur are celebrated in a low-key manner. A parade marks Independence Day; banners and arches are erected for Hari Raya, which marks the end of the Islamic month of Ramadan; and a Quran-reading contest occurs each year during Ramadan.

At Chinese New Year, lion dancers and fire crackers can be seen and heard throughout the Chinese sections of the city. During the Indian festival of Thaipusam, hundreds of thousands of devotees come to Batu Caves just north of the city to pay homage to Krishna. Many of the devotees carry ornately decorated kavadis, some attached to their bodies with hooks through the skin. Smaller, but still elaborate, versions of the Thaipusam festivities take place in Penang and elsewhere throughout the country.

Social Activities

The American Association of Malaysia, which is open to all resident Americans, conducts charity and social programs, luncheons, and trips to Bangkok and around Malaysia. The AAM also sponsors the annual George Washington Birthday Ball, a the Memorial Day picnic, and a community 4th of July Celebration. The women's division meets monthly and offers a variety of classes and other activities.

AP/Wide World Photos, Inc. Reproduced by permission.

Petronas Twin Towers in downtown Kuala Lumpur, Malaysia

The Lincoln Resource Center, while primarily for Malaysians, welcomes Americans interested in meeting Malaysians and joining the dialogue. The center also features a library of books, journals, films, and video cassettes specializing in American social studies and the humanities. Similar facilities are offered by the British Council, the Goethe Institute, and Alliance Francais.

Special Information

The States of Sabah and Sarawak in East Malaysia maintain separate customs and immigration offices, so travel to the Borneo States must be treated as an international journey. All long-term residents of Malaysia

must obtain national identity cards (ICs).

George Town

George Town is the capital of Penang, a Malay state on the Strait of Malacca. Penang consists of Penang Island where George Town is located and a narrow strip of land along the coast on mainland peninsular Malaysia. George Town has a population of over 180,000 (2000 census), and is Malaysia's leading port. The British were first attracted to George Town's natural harbor as the spot to anchor their warships in defending British East India Company posts. As trading in the area developed, Chinese, Indi-

ans, Arabs, and many others settled harmoniously alongside the indigenous Malays.

George Town boasts two mosques; several historic churches; Chinese, Siva, and Sri Mariamman temples; and Buddhist pagodas. The temple of Kek Lok Si, in the suburb of Ayer Itam, is reputed to be the largest and finest temple in Southeast Asia. The Botanical Gardens and Fort Cornwallis, a historic landmark that marks the spot where Captain Francis Light first set ashore on Penang Island over 200 years ago, are other places of interest. Several religious and/or cultural festivals are held in George Town every year. Street markets are popular, selling interesting things to eat, drink, wear, or use in the home. Penang Island is known as a resort area.

Education

Dalat School, which offers a U.S. curriculum for grades one through 12, is located six miles from the center of the city, on the north shore of the island. Founded in 1928, the school has boarding facilities; enrollment is around 200 with a little over 100 boarders. Accredited by the Western Association of Schools and Colleges, the school is sponsored by the Christian and Missionary Alliance. The staff includes specialists in reading, computers, and learning disabilities; also available are a counselor, psychologist, nurse, and chaplain. The school year runs from the end of August to June, with a six-week vacation in December and January. The campus of Dalat School is situated on eight acres. Facilities include 22 buildings, 13 classrooms, a 10,000-volume library, and six dormitories. The school's address is: Tanjung Bunga, 11200 Penang, Malaysia.

OTHER CITIES

ALOR SETAR (also spelled Alor Star) is the capital of Kedah State in the northwestern region of Malaysia, about 50 miles north of George Town. The city, with a population of approximately 115,000

(2000 census.), lies near the Kedah River. A railway links Alor Setar with Kuala Lumpur to the south and the Thai railroad system to the north. Once a bustling inland port, the city today is fast becoming an important shopping and trading center. The Zahir Mosque in Alor Setar is one of the most beautiful in the country. The city also has a state museum that houses some ancient artifacts, and has an interesting section on early Chinese porcelain ware.

The capital city of Perak State, **IPOH** has an estimated population of over 566,000 (2000 census). It is situated in western Malaysia, midway between George Town and Kuala Lumpur in the tin-producing Kinta Valley. With a hot, rainy, tropical monsoon-type climate, the city's average annual rainfall exceeds 80 inches. Limestone and tin are produced here by both modern and ancient methods. Ipoh has a thriving market and railroad. Known as "the city of millionaires," it has a lovely park, Japanese Gardens, and Chinese cave temples for tourists to visit. The city was occupied by the Japanese from 1942 until the end of World War II. The coastal town of Lumut is 55 miles southwest; its modern naval base has contributed to its fast growth. Known for its shell and coral handicrafts, Lumut is the site of the annual Sea Festival.

JOHORE BAHRU (also spelled Johore Bharu and Johore Bahru) is located in the southern Malay Peninsula, just opposite Singapore and about 175 miles southeast of Kuala Lumpur. The capital of Johore State, the city has a population of more than 384,000, most of whom are Chinese, and is connected with Singapore by a stone causeway across Johore Strait.

Johore Bahru is the seat of the sultan of Johore, and his residence, Bakit Serene, houses priceless art treasures. The beach resort of Desaru is just east of Johore Bahru on the South China Sea. There are luxury-class hotels here, an 18-hole golf course designed by Robert

Trent Jones, and plans for further expansion.

Johore Lama is 18 miles from Johore Bahru. Of historic interest, it is the site of a restored fort originally built in 1587.

To the west is the town of **Pontian** and a famous fishing village with homes on stilts near the water's edge. It is known for its seafood restaurants.

Northwest of Johore Bahru is **Ayer Hitam**, known for the ceramics produced at the Aw pottery works. The quiet town of **Kota Tinggi**, 35 miles north, is known for its waterfalls.

Johore Bahru is accessible by a fine network of road, rail, and air services. The airport at Senai connects it to all major Malaysian cities.

KOTA BAHARU (also spelled Kota Bharu) is situated on the Malay Peninsula, about 380 miles northeast of Kuala Lumpur on the South China Sea. Historically, the city was seized by Japan on December 10, 1941, as part of the offensive against Singapore during World War II.

Today, Kota Bahru, the capital of Kelantan State, is a modern city, with an important power station, and a population of over 234,000 (2000 census). Kota Bahru is connected to almost all major cities in Malaysia and Singapore by roads, rail, and air; Kuala Lumpur is a 45-minute flight away.

The city's cultural center, Gelanggang Seni, offers performances of *gasing* (top-spinning), kite-flying, *wayang kulit* (shadow puppet theater), and *silat* (Malaysian art of self-defense). Native handicrafts may be purchased in the central market.

Landmarks in Kota Bahru include the State Mosque, completed in 1926; Merdeka Square, which honors Malay warriors who died during World War II; and the Istana Jahar, or State Museum, built during the reign of Sultan Muhamad IV and

completed in 1899. The city has many hotels and beach resorts in the area.

KOTA KINABALU was formerly known as Jesselton and is the capital of Sabah, Malaysia in East Malaysia (formerly North Borneo). Situated on a small inlet of the South China Sea, Kota Kinabalu was founded in 1899, and in 1947 became the capital of British North Borneo, replacing Sandakan. It is a relatively new town, built on the ruins of the original city, which was razed during World War II.

With a population of approximately 113,000 (1980 census), the city is the chief port of the state, connected to the interior by road and rail. Rubber is exported from Kota Kinabalu's port. The Kinabalu International School is located three-and-a-half miles from the city. Founded in 1973, this coeducational, day school employs a British and Australian curriculum for kindergarten through grade six.

Kota Kinabalu has an international airport, about four miles from the city. Daily air service operates between all of Sabah's major towns—Kota Kinabalu, Labuan, Sandakan, Lahad Data, and Tawau.

Other cities of interest near Kota Kinabalu include **Penampang**, nine miles away, which reveals a cross-section of Sabah's exotic flora, fauna, and sociocultural life. The village of **Semporna**, on the south coast, is known for its cultured pearls (Sabah is the only state in Malaysia that produces pearls). **Tuaran**, about a half-hour drive from Kota Kinabalu, is known for its *tamu* (market). A colorful *tamu* is also held every Sunday morning at **Kota Belud**, 48 miles north. **Kudat**, 150 miles from Kota Kinabalu, is noted for its natives—the Rungus. **Sandakan**, the former capital of North Borneo, is on Sabah's east coast, 240 miles from Kota Kinabalu. It is a modern city sprawled along the sea's edge, with a population of over 350,000.

KUALA TERENGGANU (also spelled Kuala Trengganu) is located on the South China Sea in central Malaysia. About 175 miles north-east of Kuala Lumpur, Kuala Terengganu is the capital of Terengganu State. With a population over 250,000 (2000 census), it is both a port and the site of an important weaving industry. Situated on the Terengganu River, the city is also the home of the sultan of Terengganu.

South of the city are numerous fishing villages—**Kemaman**, **Kemasik**, and **Kuala Dungan**. **Rantau Abang** is where the famous giant leathery turtles are found. They return to this area to lay their eggs and can be seen from May to September, with the peak months being July and August.

KUANTAN, the capital of Pahang State, is rapidly developing as an important port and seaside resort. Situated on the east coast of the central Malay Peninsula on the South China Sea, Kuantan is just north of the mouth of the Pahang River. The area was a strategic point in the Japanese invasion of the peninsula, and was seized during December 1941 and January 1942.

Today, this city of over 283,000 (2000 census) offers miles of beautiful, clean, sandy beaches, ideal for fishing, swimming, and boating. Kuantan is noted for its authentic craftsmanship in woodcarving, batik printing, brocade, and pandan leaf weaving.

The numerous villages near Kuantan are known for their rich cultural traditions. **Beserah**, six miles north of Kuantan, is a serene fishing village. Cherating, 30 miles north, is the site of Asia's first Club Med, but is also known for its native charms. At **Pekan**, 28 miles south, the Royal Palace, Istana Abu Bakar, stands out as a modern architectural design in this charming town of small, old-fashioned shops. It is also the site of a four-day cultural and sporting festival celebrating the sultan's birthday. Kuantan is accessi-

ble by air and road from Kuala Lumpur 125 miles to the southwest. There is regular bus service as well as outstation taxis.

KUCHING is the capital and financial center of Sarawak in East Malaysia, formerly Northwest Borneo. Situated on the Sarawak River, Kuching is the state's largest city and a river port where sago flour and pepper are exported.

Founded in 1839 by James Brooke, the city has Anglican and Roman Catholic cathedrals and a museum of Borneo folklore. The world-famous Sarawak State Museum here houses one of the finest collections of Sarawak tribal weapons, tools, art, and artifacts. The law courts, the clock tower, and Fort Margherita are some of the best-preserved and most beautiful examples of British colonial architecture in this area. Kuching's Masjid Besar (State Mosque) was completed in 1968; the city also has several historic Chinese temples.

Interesting places near Kuching include **Santubong**, 20 miles away, a seaside village known for its swimming and fishing. From the seventh through 13th centuries, this town was an important trading village for the Chinese dynasties of the period. Kuching's population is approximately 152,300 (2000 census).

The historic city of **MELAKA**, formerly Malacca, is situated on the Strait of Malacca about 90 miles south of Kuala Lumpur. The oldest town in Malaysia, founded about 1400 by a Malay prince, Melaka was one of the leading commercial centers of the Far East until the 17th century. Traders introduced Islam to Malay through Melaka. The city was captured by the Portuguese in 1511 and by the Dutch in 1641. Using the city more as a fortress than as a trading port, the Dutch retained control of Melaka until 1824, when it was transferred to Great Britain.

Today, Melaka has little economic importance, but retains some Portu-

guese and Dutch buildings, as well as a Portuguese-Eurasian community. With a population about 270,000 (2000 census), most of the city's inhabitants are Chinese, who have acquired many Malay customs. It is a mecca for antique hunters, but if an antique is purchased to take out of the country, permission must be sought from the director general of Museum Negara. Melaka can be reached from Kuala Lumpur by express buses or cabs. Domestic flights are also available.

SEREMBAN is situated between Kuala Lumpur and Melaka in southern Malaysia. Linked by rail with Port Dickson on the Strait of Malacca, Seremban is the commercial center for the surrounding rubber-growing region. Tin mines are also located near the city which, as the capital of Negeri Sembilan, has a population over 133,000.

Of interest are Lake Gardens and the State Museum which features a Malay house built without the use of a single nail. Negeri Sembilan is traditionally a matriarchal state, where women inherit rights over property and land to the exclusion of men. West of Seremban is the royal town of **Sri Menanti**, where the Istana, or ruler's palace, is located.

COUNTRY PROFILE

Geography and Climate

Peninsular Malaysia, slightly smaller in size than Michigan, extends south for 800 kilometers from Thailand's Isthmus of Kra to Singapore and the Indonesian Archipelago. Sabah and Sarawak, the states of East Malaysia that together are about the size of Kansas, lie 600 kilometers to the east across the South China Sea. These two states, former British colonies on the northeast coast of Borneo, stretch for 1000 kilometers to the southern islands of the Philippines.

Malaysia's land area covers 336,400 square kilometers. A central mountain range with peaks rising to 2100 meters divides peninsular Malaysia. Scenic coastal plains lie on either side of the mountains; most of the population lives in the plains and foothills of the western coast along the Straits of Malacca. The eastern coast, along the South China Sea, has beautiful white, sandy beaches but fewer people. Between the two coasts lie the mountains and an often impenetrable jungle. Primary forest covers 60% of Malaysia and contains a variety of flowering plants and immense, but now diminishing, timber reserves. Vegetation, even in the cities, is lush and tropical. Forest wildlife includes gibbons; tigers; elephants; mouse deer; countless species of birds, monkeys, and insects; and, in Sabah and Sarawak, the orangutan.

The weather in Kuala Lumpur varies little throughout the year. daily minimum and maximum temperatures remain fairly constant averaging 24°C (75°F) and 32°C (90°F). Average annual rainfall of 250 centimeters keeps the humidity high. Kuala Lumpur's location in a valley compounds not only the humidity but also the smog problem brought on by increasingly congested streets. Longtime foreign residents sometimes complain of the enervating effect of the unchanging climate.

Although Kuala Lumpur is not subject to typhoons or cyclones, brief rainy seasons occur each year and bring scattered flooding to the metropolitan area. One to two months of relatively dry weather usually precede the rainy seasons, although afternoon and evening thunder showers occur regularly in Kuala Lumpur throughout the year. The east coast and East Malaysia experience longer rainy seasons, and more widespread flooding occurs as a result.

Malaysia, an entomologist's paradise, abounds in insect life of all kinds, including beautiful jungle butterflies and incredibly large cockroaches. Insects do carry dis-

ease in Malaysia. Mosquitoes and other bugs can be bothersome; dengue, cholera, and malaria are endemic in parts of the country, but with the exception of dengue, rarely affect the expatriate population in Kuala Lumpur or other major cities.

Population

In 2000, Malaysia's estimated population was approximately 21.8 million, with about 83% in Peninsular Malaysia and 17% in East Malaysia. In 1991, the Federal Territory, consisting primarily of the city of Kuala Lumpur, had a population of over 1.1 million. Malaysia's population is growing at over 2% per year.

The population of Malaysia includes several ethnic groups; the largest group, the Malays, make up about 58% of the population. Almost without exception, Malays follow the state religion of Islam and speak the national language of Bahasa Malaysia (formerly called Malay).

Chinese, most of whose ancestors came to Malaysia from southern China during the 19th and early 20th centuries to work in the tin mines or to set up small businesses, make up about 27% of the population. Today, most Chinese live in urban areas and work in trade, business, and finance. The most common Chinese dialects are Cantonese and Hokkien; however, Mandarin is also widely understood as it is the language of instruction in Chinese schools.

Malaysians of Indian descent make up another 8% of the population. Their ancestors came from the Indian subcontinent as laborers on the rubber plantations and as civil servants in the British colonial government.

Non-Malay indigenous groups, Eurasians, and Europeans make up the remainder of the population. Most of the non-Malay indigenous peoples are concentrated in East Malaysia, where they are an important social and political force.

About 84% of the population speaks Bahasa Malaysia. The literacy rate for the country as a whole is approximately 84%; the rate in East Malaysia is somewhat lower than in Peninsular Malaysia. English is still widely spoken, particularly in urban areas. English proficiency declined in the 1980s, when the government promoted the use of Bahasa Malaysia in schools, government, and business. In recent years, however, the government has promoted English language skills.

Public Institutions

Malaysia has a parliamentary system of government based on free, multi-party elections. A free market economy, abundant natural resources, and a well-educated population have helped Malaysia become one of the most prosperous of the developing countries. Malaysia is a constitutional monarchy, nominally headed by the Yang Di-Pertuan Agong, or paramount ruler. The ruler is elected for a five-year term from among the nine hereditary rulers of the peninsular Malay states. The ruler also is the leader of the Islamic faith in Malaysia, as are the rulers in their own states.

Malaysia's Constitution was promulgated in 1963 when Sabah and Sarawak joined the Federation of Malaya to form Malaysia. The Constitution has been amended frequently since its original enactment. Executive power is vested in the Cabinet, led by the Prime Minister. The Cabinet is chosen from among the members of parliament as in the British system of government. All of Malaysia's Prime Ministers since independence have been the leaders of the country's predominant political party, the United Malays National Organization (UMNO).

The bicameral Parliament consists of the Dewan Negara (the National Council or Senate) and the Dewan Rakyat (the People's Council or House of Representatives). Of the 69 members of the Senate, the Paramount Ruler appoints 43 and each of the 13 state legislatures elects

two. All Senators sit for 6-year terms. Members of the House, the more influential of the two bodies, are elected in single member constituencies by universal adult suffrage. General elections must be called at least once every 5 years. The House has 180 members, of which 133 are from the states of Peninsular Malaysia and the island of Labuan and 47 are from Sabah and Sarawak. Legislative power is divided between the Federal Parliament and the elected assemblies of Malaysia's 13 states, with state governments retaining power over several important areas, including land use and religion.

The Malaysian legal system is based on English Common Law. The Supreme Court, the highest court in Malaysia, reviews decisions referred from the High Courts and has original jurisdiction in constitutional matters and in disputes between states or between the Federal Government and a State. Below the Supreme Court are two High Courts, one for Peninsular Malaysia and one for East Malaysia. Islamic, or Syariah, law applies nationwide to Moslems. Islamic courts come under the jurisdiction of the individual states, and ultimate appellate authority rests with the ruler of the state concerned.

The titular heads of 9 of the 13 states in Malaysia are the hereditary rulers, the others being Governors appointed by the Federal Government. Effective executive power rests in the hands of the Chief Minister of each State, and the members of their State cabinets, selected from the members of the State assemblies.

Arts, Science, and Education

Intellectual life in Malaysia is not limited to the country's seven universities. In addition to public lectures and seminars given in the national language at the universities, there are various other professional and service organizations whose activities are open and which

welcome foreigners as members. Examples are the Malaysian Nature Society, the Malaysian Association for American Studies, and the Malaysian Culture Study Group.

The National Museum in Kuala Lumpur houses exhibits on Malaysian culture and history. The city also has a National Art Gallery and several small private art galleries that regularly put on exhibits of local and internationally recognized artists. Major hotels and foreign missions frequently sponsor exhibitions and musical and dramatic performances. Several amateur groups also present dramatic and/or musical performances relating to the major cultures represented in Malaysia.

The Museum of Asian Art at the University of Malaya exhibits an excellent collection of ceramic art. Lessons are available in Kuala Lumpur in Asian art and music.

Commerce and Industry

Manufacturing has accounted for 33% of GDP in 2000. Principal manufactured products include semiconductors, consumer electronic and electrical products, textiles, and apparel. Malaysia is the world's third-largest producer and one of world's largest exporters of semiconductors. The U.S. is the primary trading partner for these products, taking about 26% of Malaysia's electronic products in 2000.

The agricultural sector employs about 15% of the work force. Malaysia is the world's largest producer and exporter of palm oil (about half of the world's supply). Malaysia is also a significant producer of natural rubber, cocoa and tropical timber.

An increasing variety of American companies are involved in Malaysia, such as Esso, Motorola, Intel, Texas Instruments, Mattel, Colgate-Palmolive, RJR Nabisco, Citibank, American International Assurance

(AIA), Johnson and Johnson, and Baxter Healthcare. In 1992, an Embassy survey of U.S. companies in Malaysia indicated that U.S. firms held nearly \$7 billion in assets in Malaysia at the end of 1991, chiefly in the petroleum (65% of total investment) and the microelectronics and manufacturing (32%) sectors.

The United States is Malaysia's third most important trading partner (after Singapore and Japan).

Transportation

Buses and minibuses are dangerously overcrowded except late at night and can be unreliable at all times. Taxis are numerous, metered, and inexpensive, but hard to find at peak hours or when it is raining. Drivers usually speak enough English to reach a destination and to follow directions, but language problems are still frequent and some drivers do not know the city well.

Kuala Lumpur's narrow and winding streets, built a century ago to handle hawkers and trishaws, are now very crowded. While several new "circular" roads have been built recently to help alleviate the overcrowding, and more new highways are under construction, traffic remains heavy, especially at peak hours. Multilaned highways often merge into narrow two lane roads in the center of town and cause added congestion.

Malaysia's west coast has a well-developed system of roads between major cities. Paved and fairly well-maintained, these primarily two-lane roads are usually congested because of heavy use by buses, intercity taxis, and trucks carrying timber and other commodities. A paved coastal road follows the east coast. Its traffic is not as heavy as that on the west coast, but the main trunk roads occasionally suffer from lack of repair. A good road across the peninsula connects Kuala Lumpur with the east coast. Other cross-peninsular routes exist farther south; in the north a new east-west

Street scene in Malaysia

Cory Langley. Reproduced by permission.

highway cuts through the jungles and mountains and links the two coasts. Although the roads on both coasts are scenic and you can drive to Singapore, Penang, and other distant cities, most employees prefer to fly to these cities and avoid the congested, often hazardous traffic. By car, Singapore and Penang are 6 to 8 hours from Kuala Lumpur. A new Malaysia/Singapore divided highway stretches from Singapore to the Thai border.

Train travel is inexpensive. Many employees find it quaint, even rustic, but occasional delays occur. Daily train service connects Kuala Lumpur with Penang and Singapore. From Penang, the international express operates to Bangkok daily, but reservations must be booked in advance. The trip to Singapore takes from 6 to 10 hours, depending on the type of train. First-class accommodations with air conditioning are available, as are sleeping compartments on night trips. Subang International Airport is 20 kilometers from Kuala Lumpur. Regular jet service operates between major cities in the region with connections to Western Europe and the U.S. Because American carriers do not yet offer direct passenger service to Kuala Lumpur (although United has plans pend-

ing), travelers to and from post use Singapore, Tokyo, Seoul, Hong Kong, or Bangkok to change from either Northwest Orient Airlines or United Airlines to foreign carriers. Taxis are available at the airport. Fares are based on a zone system.

Communications

Telephone and Telegraph

Direct-dial facilities exist to most of Peninsular Malaysia, Singapore and the U.S. The telephone system is only occasionally overloaded.

Telephone service to the U.S. is available 24 hours daily. A 3-minute overseas call to any point within the U.S. through the Malaysian telephone company is about \$9 for person-to-person and \$6 for station-to-station; each additional minute costs around \$2. Persons with an AT&T Calling Card can reach the U.S. via AT&T's "USA Direct" service by dialing 800-0011. Such calls cost about \$3.70 for the first minute and \$1.48 for each additional minute, plus a service charge of \$2.50. Sprint and MCI have similar calling plans and can be accessed in Malaysia. Calls from the U.S. are usually cheaper than those placed from Malaysia. The Malaysian telephone company, Telekom Malaysia, has recently introduced a service

which enables callers in the U.S. to dial a special toll-free number which will connect them to the Malaysian telephone system so they can make a collect call to someone in Malaysia.

Telegrams may be sent from main telegraph offices, post offices, and hotels, by phone. The minimum charge is over \$4 for 22 words; the address counts as regular wording. Each additional word costs \$0.20. FAX facilities are also available, and are often a cost-effective way to communicate.

Radio and TV

English-language programs share time with broadcasts in Malaysian, Chinese, and Tamil on both radio and TV in Malaysia. Voice of America and BBC can be received with some interference, but Radio Singapore and Radio Australia are usually clear. There are three television channels, two of which are run by the Malaysian government. In addition to local productions, Tamil movies, and Chinese movies and soap operas, the stations show a variety of American, British, and Australian programs. Weekday broadcasting usually begins at 4:00 p.m. and lasts until midnight. Programming begins earlier in the afternoon on weekends and in the morning on local holidays.

Malaysia uses the European PAL TV system.

Newspapers, Magazines, and Technical Journals

Numerous magazines and newspapers are published in East and West Malaysia, most in Malaysian, Chinese, and Tamil. Several are published in English, and some English-language newspapers in Kuala Lumpur serve a national market. Most foreigners read the *New Straits Times* (morning), the *Star* (morning), and the *Malay Mail* (afternoon), which give limited coverage to U.S. and international news and sports and more extensive coverage to local news and to other more sensational topics. The *Asian Wall Street Journal* and Asian editions of *USA Today*, *Time*, *News-*

week, and *Reader's Digest* are sold locally. A few other selected U.S. periodicals arrive by air close to the time of their release in the U.S. or by surface mail several weeks or months later. The *International Herald Tribune*, printed in Singapore, usually arrives in Kuala Lumpur in mid-afternoon on the day of publication and always has good coverage of U.S. news and sports. The *Far Eastern Economic Review* and *Asiaweek* give excellent coverage of Asian news.

The Lincoln Resource Center, the library of the U.S. Information Service, has the best collection of American books in the country. It also has an extensive reference section, periodical section, and videotape collection. The International School also has a good library but it does not include recent best sellers.

American and British hardback and paperback books are sold in hotels and numerous bookstores, but they are usually expensive.

Health and Medicine

Medical Facilities

Many local physicians have received at least part of their training in Australia, the U.K. or the U.S.

American citizens are advised to go to Subang Jaya Medical Center in an emergency. A private facility, this hospital resembles a standard western hospital in operation with an emergency room staffed 24 hours daily. Tawakal Hospital, has 24 hour emergency room service and is convenient if time is critical. The General Hospital, which should be used only in an emergency as an alternative to Subang or Tawakal hospitals, also has a 24 hour emergency room. Other hospitals have emergency rooms that are not open or staffed by doctors around the clock. Three other hospitals in the area, Pantai, Assunta, and University, are used to a lesser degree.

Several dentists operate private clinics in the city and can meet rou-

tine dental needs including orthodontic care. Orthodontia tends to be cheaper than in the U.S., but treatment may differ from U.S. practices.

No special facilities provide services for the handicapped except for special instruction given by the International School on a limited basis for children with reading disabilities and some other learning difficulties.

Community Health

Tropical fatigue can last for 6 weeks after arrival. The climate can be debilitating over an extended period because of rainfall, high humidity, uniformly high temperatures, and lack of seasonal variations.

Colds, bronchial disturbances and sinus conditions are common and tend to linger longer than they do in the U.S. Air conditioning probably contributes to this problem since many restaurants and shops are uncomfortably overcooled in relation to the outside temperature. Exhaust fumes from numerous and inadequately maintained motor vehicles combine with smoke from burning brush piles to cause discomfort for those with respiratory conditions.

Dengue fever, including the hemorrhagic variety, exists throughout Malaysia, and expatriates are occasionally affected in Kuala Lumpur. Cholera cases, which are reported less frequently, occur principally in rural areas. In the past, Americans have contracted hepatitis A and dengue fever. Chloroquine-resistant malaria exists, mostly in rural areas, and the number of reported cases has increased. Open drainage ditches and stagnant water at construction sites facilitate breeding of mosquitoes in the city. Malaria suppressants are recommended for extended travel in rural areas outside of Kuala Lumpur. The recommended dose is 500mg of Chloroquine per week and 200 mg of Paludrine daily.

Food poisoning rarely occurs, but a few Americans experience mild

forms of dysentery or diarrhea after eating in the local open-air food stalls and, occasionally, the better restaurants.

As in any tropical country, skin rashes, fungi, and parasites are common. There are also several varieties of snakes, some of which are poisonous.

Drinking water is potable in the urban area of Kuala Lumpur. In outstation areas, water should be boiled or chemically treated. Most medical items and drugs can be purchased locally, but some drugs available over-the-counter in the U.S. require prescriptions in Malaysia, and pharmacies may not have a licensed pharmacist on duty at all times.

Preventive Measures

Before coming to Post, you should be inoculated against tetanus, hepatitis B, immune globulin, and should take an oral dose of typhoid vaccine. Take a tuberculin test so that any change during your stay can be investigated. Children and young adults should be inoculated against diphtheria and take the oral polio vaccine. Yellow fever immunization is required for everyone arriving from Africa and Latin America or other infected areas. Exposure to the intense tropical sun should be gradual to avoid serious sunburns.

LOCAL HOLIDAYS

- Jan. 1. New Year's Day
- Jan/Feb. Thaipusam*
- Feb. 1. Kuala Lumpur City Day
- Feb. Chinese New Year (2 days)*

NOTES FOR TRAVELERS

Passage, Customs & Duties

A passport valid for at least six months is required to enter Malaysia. American citizens do not need a visa for a pleasure or business trip if their stay in Malaysia is 90 days or less. For more information on entry requirements, contact the Embassy of Malaysia, 2401 Massachusetts Avenue, N.W., Washington, D.C. 20008, telephone: (212) 328-2700, or the Malaysian Consulates located in New York, telephone (202) 328-2700, or Los Angeles, telephone (213) 892-1238. See also the Malaysian Government home page on the Internet at <http://www.jaring.my>. Overseas inquiries should be made at the nearest Malaysian embassy or consulate.

Malaysia's customs authorities may enforce strict regulations concerning temporary importation into or export from Malaysia of items such as firearms, religious materials, antiques, medications, business equipment, currency, ivory, and other items. It is advisable to contact the Embassy of Malaysia in Washington or one of Malaysia's

consulates in the United States for specific information regarding customs requirements. Customs officials encourage the use of an ATA (Admission Temporaire/Temporary Admission) carnet for the temporary admission of professional equipment, commercial samples, and/or goods for exhibitions and fair purposes. ATA Carnet Headquarters, located at the U.S. Council for International Business, 1212 Avenue of the Americas, New York, NY 10036, issues and guarantees the ATA carnet in the United States. For additional information call (212)354-4480; send an e-mail to atacarnet@uscib.org, or visit <http://www.uscib.org> for details.

Malaysia strictly enforces its drug laws. Malaysian legislation provides for a mandatory death penalty for convicted drug traffickers. Individuals arrested in possession of 15 grams (1/2 ounce) of heroin or 200 grams (seven ounces) of marijuana are presumed by law to be trafficking in drugs.

U.S. citizens living in or visiting Malaysia are encouraged to register at the U.S. Embassy in Kuala Lumpur and to obtain updated information on travel and security within the country. The U.S. Embassy is located at 376 Jalan Tun Razak 50400, Kuala Lumpur. The mailing address is P.O. Box No. 10035, 50700 Kuala Lumpur; Telephone (60-3)2168-5000. The fax number for the U.S. Embassy is (60-3)242-2207; the fax number for the Consular Section is (60-3)248-5801. Internet home page: <http://usembassymalaysia.org.my/>; e-mail address: klconsular@state.gov.

Pets

Pets shipped from non-Commonwealth countries must be quarantined for one month upon arrival in Malaysia. Current vaccination records must be available at time of entry.

The Subang International Airport quarantine kennel is a 30 minute drive from Kuala Lumpur. The kennel costs about \$1.20 per day to board cats and \$1.60 for dogs.

Excellent veterinary care is available locally. Several tropical canine diseases, for which treatment is not fully successful, are peculiar to Malaysia. Ticks and fleas can be a serious problem in some sections of the city. American pet foods are available, although more expensive than in the U.S.

Currency, Banking, and Weights and Measures

The Malaysian ringgit is freely convertible. The exchange rate, which fluctuates daily, was US\$1.00 = RM3.80 as of May 2002.

Malaysia has adopted the metric system, and government efforts to enforce its use have done away with a host of old measuring units, including pounds, katis, taels, and piculs.

MALDIVES

Republic of Maldives

Major City:

Malé

Other Cities:

Baa Atoll, Seenu Atoll

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report for Maldives. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The Republic of **MALDIVES**, an independent chain of islands in the northern Indian Ocean about 417 miles southwest of Sri Lanka and 300 miles from the southernmost tip of India, was a sultanate under British protection until 1965. Its experience with foreign influences has been limited and, until recently, its principal economic link was through ties with Sri Lanka. During its years as a British protectorate, it was administered under the sovereignty of Ceylon (Sri Lanka). In June 1985, the Republic of Maldives became a full member of the Commonwealth.

MAJOR CITY

Malé

Malé, the capital the Maldives, is an island about one-and-a-half square miles in total area, occupying a central position in the archipelago. Land is slowly being reclaimed on the island's north side. All government offices, the four main government schools, and the single hospital are also here. The commercial district has a wide variety of small shops selling curios, antiques, sea shells, and other goods. Many of the imported items are transported by the 40 vessel Maldivian merchant marine fleet. Malé also has an attractive park, Sultan Park, and a museum with artifacts from the Arab, Dravidian, and Sri Lankan cultures which have influenced the history of this island republic.

Malé's population is about 68,000 (2000 est.). The city is densely populated and there is very little public open space. It is feasible to walk to places within the small urban area. The city is a free port; no duties are levied on articles brought here by visitors, but certain items must be declared at customs. Since the Maldives is a Muslim country, no pork products or liquor may be imported. Tourist islands in the

chain, however, often offer pork and liquor for sale to tourists only.

The Maldives international airport—Malé International—is situated on Hululé Island, adjacent to the capital city; there also are three domestic airports.

Education in government-run schools is free in the republic, but is not compulsory. Western-style education based on the British Commonwealth curriculum exists in Malé only to the high school level; studies beyond high school must be pursued abroad. Most teachers are experienced Maldivian and Sri Lankan nationals. The medium of instruction is both Divehi and English.

Clothing

Warm clothing is never required. Cotton dresses, trousers, skirts, and lightweight tropical suits are the most comfortable year-round attire. Some ready-made clothing, notably shirts, jeans, trousers, dresses and blouses, T-shirts, underwear, rubber sandals, and infants wear, are increasingly available, but only in small sizes and often expensive for the quality. A variety of high-quality synthetic materials is available and relatively inexpensive. Pure cotton cloth, which suits the climate best, is available.

Malé Harbor

Susan Rock. Reproduced by permission.

The correct dress for men in offices is trousers with either a shirt and tie or a bush shirt; shoes are preferred to sandals. Women wear slacks, or dresses with knee-length hemlines and short sleeves to offices in Malé.

Food

Most necessary items can be found on the market, although in varying degrees of availability. Many types of inexpensive fresh fish appear daily (except Friday), but the most common are tuna, bonito, and *seer*. It is possible to arrange occasional supplies of spiny lobster and turtle meat. Poultry and eggs are always available. Fresh meat is available, but dairy products are not.

Fruits such as papayas, limes, bananas, and coconuts are always on the market; one variety of mango is available in season. Tropical yellow vegetables usually can be obtained; potatoes and onions are found intermittently. Fresh green vegetables are imported and available year round.

Good-quality white loaf bread is baked daily. A variety of canned and bottled goods gradually is becoming more common in shops. Nespray powdered milk and tinned cheese, cream, and condensed milk are

nearly always sold locally. Frozen meat is available, as is ice cream. Coca-Cola and 7-Up in cans and other soft drinks are available. Beer, wine, spirits, and other drinks containing alcohol are not sold commercially because of local religious customs.

Supplies & Services

The Maldives has a few laundries and no dry cleaning shops. Shoe repair facilities are fair. Imported, high-quality goods are expensive and scarce. Spare parts for household articles must be imported. Electricians' and plumbers' services are available and are of fair quality. Hairdressers and barbers charge moderate rates. Inexpensive domestic help is available, but experienced, well-qualified servants are scarce. Language and customs differences can create problems.

Recreation

Malé has one or two good restaurants. Four hotels, an Italian restaurant, and the tourist island restaurants provide some diversion in entertainment. Sports such as swimming, scuba diving, windsurfing, and sailing are readily available.

The Maldives are renowned for their beautiful beaches.

The Ministry of Tourism is located in the Ghaazee Building, Malé 20-05, Republic of Maldives.

OTHER CITIES

BAA ATOLL is located north of Malé with a population of about 9,600 (2000 est.). The atoll is actually made up of about 50 different islands. At least five of them have major tourist resorts. The others are undeveloped, but open to visitors looking for a relaxing place to hike or swim. In fact, some of the resorts will organize day trips to the various islands. Divers and snorkellers will enjoy the pristine coral reefs around the islands and perhaps a chance see the mantas and whale sharks that share the waters. Several shops display and sell locally made laquerware and hand woven garments, particularly the "feyli," a traditional wraparound skirt. From the island of Goidhoo, history buffs can learn about the 1602 shipwreck of the French ship "Corbin." Legends say that several castaways and exiles once made Goidhoo their homes.

SEENU ATOLL (also known as Addoo Atoll), is a small, heart-shaped island at the southernmost edge of the Maldives. Diving and snorkeling are popular in the area, where a long outer fringe of reefs are complimented by a number of caves and overhangs that provide homes for turtles and nurse sharks. Mantas may also be seen in the waters. Divers can also see the remains of the "British Royalty," a ship torpedoed by the Japanese in Addoo harbor and later sunk by the British. On land, there is one major resort and travelers can bike through the streets of Hithadhoo, the islands capital, or browse through the many shops located there.

COUNTRY PROFILE

Geography and Climate

A chain of 19 atolls with a total area of 115 square miles, the Maldives extends a distance of 500 miles north to south.

The atolls comprise 1,190 coral islands, 199 of which are inhabited. The islets are small (none larger than five square miles in area) and seldom exceed an elevation of five or six feet above sea level. The tropical vegetation varies from grass and scrub to dense woods of fruit trees or coconut palms.

The climate is hot and humid, with little daily variation; the average temperature is 80°F and the relative humidity 80%. Most of the area is subject to the southwest monsoon (June to August) and the northeast monsoon (November to March); the annual rainfall averages 100 inches in the north and 150 inches in the south. Living conditions are not healthful in this warm, wet environment.

Population

The population of the Maldives is 310,400 (2000). Average annual growth rate is 3%. Approximately 200 of the Maldives' 1,200 islands are inhabited. The population is scattered throughout the islands, but most heavily concentrated in Malé. Almost 75% of Maldivians live in rural areas. The nation is ethnically divided into admixtures of Sinhalese, Dravidian, and Arab. The Islamic faith was adopted by the Maldivian people during the 12th century. It is now the official religion; nearly 100% of the population are Sunni Muslims. Divehi is the official language, with English as a second tongue. The literacy rate is 93%.

Government

The Maldives has a republic form of government. A popularly-elected unicameral national legislature (*Majlis*) consists of 50 members who serve five-year terms. There are two elected members from each atoll and the capital Malé and eight members who are appointed by the president. There are no political parties, so each candidate must run on the basis of personal qualifications.

The president is nominated for a five-year term by a secret ballot of the Majlis, which requires confirmation by national referendum. President Mumoon Abdul Gayoom was elected in 1978 and reconfirmed by referendum in 1983, 1988, 1993, and 1998.

The legal system is based on Islamic law, with English common law applied in commercial matters. An appointed chief justice is responsible for the administration of the former. No organized political parties exist.

The Maldives is a member of the United Nations, World Health Organization (WHO), and United Nations Educational, Scientific, and Cultural Organization (UNESCO), as well as the following international bodies: Asian Development Bank, Colombo Plan, Economic and Social Commission for Asia and the Pacific, Islamic Development Bank, Nonaligned Movement, and the World Bank.

Three countries have diplomatic representation in Malé: India, Pakistan, and Sri Lanka. The Maldives has representation abroad in more than 10 foreign cities, including Bangkok, Thailand; Brussels, Belgium; Tokyo, Japan; Vienna, Austria; and Washington, DC.

The flag of the Republic of Maldives is green with a white crescent, surrounded by a red border.

Arts, Science, Education

Education is free, but only 65% of school-age children are enrolled. Until 1976, all 16 existing schools were located in Malé; most were primary schools.

Three types of formal education are offered: traditional schools (*mak-thabs*), which emphasize knowledge of the Koran (Qur'an); Divehi-language primary schools; and English-language primary and secondary schools, which teach a standard curriculum. The only higher education facility available is a teacher-training institute; most college-age students go abroad for schooling.

Commerce and Industry

The Maldives is one of the poorest and most undeveloped countries in the world. But in recent years, the economy of the Maldives has improved steadily. The gross domestic product (GDP) was \$594 million in 2000, or about \$2,000 per capita. Tourism and fishing are the most important sectors of the economy.

Tourism alone accounts for 20%-30% of GDP and over 60% of foreign exchange earnings. In 2000, there were 84 resorts in operation, with plans for expansion. Over 400,000 visitors were recorded in 2000.

The fishing industry employs 25% of the labor force and accounts for 60% of all exports. Considerable quantities of fish are exported to Japan. Dried fish is exported to Sri Lanka, where it is a delicacy. Canned tuna and dried fish exports accounted for about 53% of all marine product exports. This is quite an accomplishment considering that the use of nets is illegal. All fishing is done by line and pole. The fishing fleet usually consists of a number of small, flat-bottomed boats. Though, fishermen are now permitted to use outboard motors instead of just sails and oars.

The vegetation of the islands is coconut palms with some scrub. Cultivation of crops is virtually impossible, and nearly all food to supplement the basic fish diet has to be imported; Japan, the U.S., and Thailand are major trade partners.

One of the major problems facing the Maldives is a dwindling supply of fresh water and inadequate sewage treatment. Another environmental problem is associated with the reported rising of the world's sea level, which will gradually erode the coral foundation of the islands. Considering that none of the islands are more than six feet above sea level, the sea level is of great importance. Houses built from coral are now forbidden; cement must be imported for construction.

The Ministry of Trade and Industry is located in the Ghaazee Building, Malé 20-05, Republic of Maldives.

Transportation

Five international airlines serve Malé International; also, charter flights are available from Italy, Switzerland, and Germany. Domestic flights are operated by Air Maldives Airways. Malé International is on Hululé Island and there is ferry service to all main islands.

There is little need for transportation on any of the islands since they are so small. All areas on Malé can be reached on foot. There are only a few hundred passenger cars in the Maldives. Limited taxi service is available in Malé; taxis cannot be hailed.

Transportation between the atolls depends mainly on local sailing boats.

Communications

International direct-dial phone calls and fax services are generally available and all 199 inhabited islands of the country have been provided with access to telephone services. Dhiraagu, the partially government owned telecommunications service

provider, also provides Internet services. Mobile phone usage is increasing rapidly. There are over 10,000 mobile phone users in the Maldives with services available on 31 inhabited islands and 80 resorts islands.

Radio broadcasting on the Voice of Maldives began in 1962. Broadcasts are in Divehi and English. Television Maldives is the country's lone TV station. One Indian Ocean INTELSAT station serves the country.

There are two daily publications in Malé that are in Divehi and English: *Aafathis* and *Haveeru*. All publications must be approved by the government, those not sanctioned are banned.

Health

Clinical medical care in Malé is available at the government hospital, which also has two national dental assistants, one trained in Britain and one in Sri Lanka. Although the hospital itself is a superior small facility with excellent nursing care, most surgery or serious illnesses cannot be handled. Singapore is the nearest place giving first-class specialized care.

Malé has no piped public water supply or sewage network. Ensuring an adequate water supply is a continuing and growing problem for the government. Sweet water is obtained from household wells and rain catchment; the well water is for general use and the rain catchment is for drinking. Houses rented to foreigners have individual compound septic tanks.

As in other tropical countries, the main health problems of the population are infectious diseases. Malaria, tuberculosis, filariasis, and leprosy are found; gastroenteritis, ear infections, measles, and skin diseases are common. It is necessary to boil and filter drinking water, and wise to avoid eating raw vegetables and unpeeled fruits. The incidence of mosquito-borne diseases is high.

Cholera and yellow fever vaccinations are required of arrivals from affected areas. Immunization against tetanus, typhoid, and poliomyelitis is recommended.

NOTES FOR TRAVELERS

Passage, Customs & Duties

A valid passport, along with an onward or return ticket and sufficient funds, is required for entry. A no-cost visit visa valid for 30 days is issued upon arrival. If a traveler stays in a resort or hotel, the Department of Immigration and Emigration routinely approves requests for extensions of stays up to 90 days with evidence of sufficient funds. Anyone staying over 60 days without proper authorization faces heavy fines and deportation. All travelers (except diplomats and certain exempted travelers) departing the Republic of the Maldives must pay an airport departure tax.

Arrival by Private Boat: Travelers arriving by private yacht or boat are granted no-cost visas, usually valid until the expected date of departure. Vessels anchoring in atolls other than Male must have prior clearance from the Ministry of Defense and National Security. The clearances can be obtained through local shipping agents in Male. Maldivian customs, police and/or representatives of Maldivian Immigration will meet all vessels, regardless of where they anchor. Vessels arriving with a dog on board will be permitted anchorage, but the dog will not be allowed off the vessel. Any firearms or ammunition on board will be held for bond until the vessel's departure.

Specific inquiries should be addressed to the Maldives High Commission in Sri Lanka at No. 23, Kaviratne Place, Colombo 6, telephone (94) (1) 586-762/500-943, or the Maldives Mission to the U.N. in New York, telephone (212) 599-6195.

Maldivian customs authorities prohibit the importation of non-Islamic religious materials, including religious statues. Personal Bibles are permitted. The importation of pork and pork by-products is restricted. Dogs are not permitted, but visitors may bring their cats. (Many hotels and resorts do not allow pets; travelers should confirm a particular hotel's policy prior to arrival.) Items such as alcohol and religious items will be kept and held for bond until the traveler departs. Pornographic materials are banned, and they will be destroyed upon arrival in the country. A complete summary of custom regulations is available at <http://www.customs.gov.mv/>

There is no U.S. Embassy in Republic of Maldives, but the U.S. Ambassador to Sri Lanka is also accredited to the Maldives. The former U.S. Consular Agency in Male closed on August 9, 1995. Americans living in or visiting the Maldives are encouraged to register at the Consular Section of the U.S. Embassy in Sri Lanka and to obtain updated information on travel and security within the Republic of Maldives. The U.S. Embassy is located at 210 Galle Road, Colombo 3, Sri Lanka. The Embassy's telephone number during normal business hours Monday through Friday is (94) (1) 448-007. The Embassy's after-hours and emergency telephone number is (94)(1) 448-601. The Consular Section fax number is (94)(1) 436-943. The Internet address is <http://usembassy.state.gov/srilanka>. The e-mail address for the Consular Section is consularcolombo@state.gov.

Currency, Banking, and Weights and Measures

The monetary unit used in the Maldives is the *rufiyaa*, which is equal to 100 *laaris*.

The Maldives operates on both the metric and imperial systems of weights and measures.

The time in the Maldives is Greenwich Mean Time (GMT) plus five hours.

Special Circumstances

Public observance of any religion other than Islam is prohibited. All Maldivian citizens living in the Republic of Maldives are Moslem, and places of worship for adherents of other religions do not exist. Religious gatherings such as Bible study groups are prohibited; however, a family unit of foreigners may practice its religion, including Bible readings, privately within its residence. It is against the law to invite or encourage Maldivian citizens to attend these gatherings. Offenders may face jail sentences, expulsion and/or fines.

LOCAL HOLIDAYS

- Jan. 1 New Year's Day
- Jan. 7 National Day
- July 26 & 27 Independence Day
- Aug. 12 Huravee Day
- Nov. 3 Victory Day
- Nov. 11 & 12 Republic Day
- Dec. 10 Fisheries Day
- Ramadan
- Id al-Fitr*
- Id al-Adha*

MARSHALL ISLANDS

Republic of the Marshall Islands

Major City:

Majuro

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 2001 for Marshall Islands. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Comprising over a thousand flat coral islands of white sand beaches and turquoise lagoons, the Marshall Islands beckon visitors with all the promise of a tropical paradise. There are pristine diving and lush tropical greenery, and the Marshallese people retain many of their pre-colonial crafts and traditions, especially on the outer islands. You can still watch outrigger canoes zipping around the lagoons, though these days you are as likely as not to find a VCR in that little grass shack and Coke replacing coconut milk as the drink of choice of many islanders.

Marshallese society has always been stratified, and despite increasing Westernization and the intro-

duction of a moneyed economy, social status still comes as much from one's kinship as it does from one's own achievements. Chiefs continue to wield a great deal of authority over land ownership and usage.

In travels between the islands, early inhabitants learned to read the patterns of the waves and the positions of the stars, and they made stick charts to record and pass on their observations to less-experienced navigators. By tying flat strips of wood together in imitation of the wave patterns and attaching cowry shells to the sticks to represent particular islands and atolls, the experienced navigator could memorize the patterns for when he was out at sea the charts were not actually taken on the journeys.

The first Micronesian navigators arrived in the Marshall Islands sometime between 500 and 2000 B.C.E. Little is known of their origin or culture.

In 1494 Micronesia was ceded to Spain. The Marshall Islands, however, were off the main trade routes and consequently received little attention from early European explorers. In 1525, Alonso de Salazar of Spain became the first European to sight the islands, but Spain did nothing to colonize them. After another 200 years devoid of

Europeans, the islands received a visit from English captain John Marshall (from whom they later took their name) in 1788.

Traders and whalers began to visit the islands en masse in the early 1800s, until encounters with the "friendly" native Marshallese began to turn sour. Ship after ship putting into port at various atolls in the Marshalls quickly weighed anchor after the death of their captain or crew members.

Germany annexed the Marshalls in 1885 but did not place government officials on the islands until 1906, leaving island affairs to a group of powerful German trading companies. Japan took over in 1914 and colonized the Marshalls extensively.

In 1973 the Marshall Islands withdrew from the Congress of Micronesia, seeking political independence. In 1979, the Marshalls' constitution became effective.

The flip side to the paradise picture is that many of the Marshallese still struggle with the effects of 20th century's technology. Two atolls—the Bikini Atoll in particular—served as testing sites for atomic bombs through 1958. And yet, despite these hardships, you will find the Marshallese exceptionally welcom-

ing and their culture and identity alive and well.

MAJOR CITY

Majuro

Majuro is the political and economic center of the Marshall Islands. The inhabited islands along the southern side of Majuro Atoll have been joined over time by landfill and a bridge to form a 30-mile road from Rita, on the extreme eastern end, to Laura, at the western end. Both villages were so code-named by U.S. forces in World War II after favorite pinups Rita Hayworth and Lauren Bacall.

The main downtown business and shopping area is located in Rita and extends 4 miles to the southeast corner of the atoll, home of a second shopping center, the Capitol building, and government offices. The downtown area includes the islands of Djarrit, Uliga, and Delap (DUD). Newcomers cannot identify where one area ends and another begins, but it is not necessary for finding one's way. A single paved main street parallels the lagoon, and a smaller unimproved road follows the oceanside as far as the government office area. Schools, offices, shops, restaurants, hotels, and the hospital are along the street. No longer a village, Majuro is a small town - compact, offering far more Western amenities than one might expect in the middle of the Pacific, a place where people know one another and you cannot get lost.

The DUD area contains approximately 12,000 to 15,000 people living in mostly crowded housing, many without water and sewer facilities. Since land is in short supply and controlled by each clan, graves of family members occupy a central place in front of many dwellings.

Marshallese homes typically have no furniture, only pandanus sleeping mats, which are rolled out at

night. Cooking facilities, kerosene cookers, or pit fires are often outside and may be shared by more than one family. The lagoon and ocean have traditionally been used as toilet facilities. Such use continues, despite the population increase, and causes health problems at the Rita end of the lagoon.

The population density lessens as you drive westward, and the environment becomes more suburban. The housing standard improves; green grass, coconut, and breadfruit trees are abundant. The area has a few neighborhood shops, selling individual cigarettes, some canned foods, soft drinks, and snack food.

Utilities

Electrical current is 110 v, 60 cycles. The power is stable, although fluctuations are frequent and surge protectors are a good idea for any sensitive electronic equipment. Announced outages of a few hours each are necessary at times to complete system maintenance.

Food

Majuro retail stores offer a surprising variety of consumer goods despite the country's remote location. The two largest grocery stores in Majuro are Robert Reimers Enterprises and Gibson's. Both stock a large variety of American grocery products, including packaged and canned goods, frozen meats, vegetables, ice cream, bread, fresh vegetables, and a good supply of dairy products. These two stores have a good selection of household items as well as clothing, sewing notions, cards, toys, nonprescription drugstore items, and office supplies. A limited supply of baby food and formula is available, as are disposable diapers.

Most goods are imported from California, New Zealand and Australia. Food products look a little different, for example, the cuts of meat available are not what we are accustomed to but most people agree that you can find almost anything you need. You have to plan ahead and buy when you see something that you think you may want to use in

the future and freeze it if it's perishable. Depending on the item, most food is priced higher than in the U.S. Fresh vegetables are very expensive and not always of good quality.

Imported rice is a staple in the Marshallese diet. Imported chicken is the major meat; some fish is available, but most local families who catch fish only take enough to feed their own families. Until recently the only locally grown fruits and vegetables were coconut, pandanus, papaya, bananas, and breadfruit. Recently the Taiwan government started a farm in Laura, which has produced wonderful vegetables such as tomatoes, corn, and peppers, which can be purchased in the local grocery stores.

Clothing

Majuro's tropical climate is best appreciated while wearing cotton. Synthetics may be comfortable in air-conditioning, but outside the office, they are uncomfortable in the heat and humidity.

Local stores offer few cotton garments and little of U.S. style and quality, except for a vast array of Majuro T-shirts, which are popular with local and visitors alike.

Men: The local dress code is basic. Around town, men wear T-shirts or Hawaiian aloha shirts (open-neck sport shirts usually worn untucked), long pants (shorts are acceptable in certain situations) and sandals, athletic shoes or, occasionally, conventional shoes.

Women: Local women wear long muumuus with short sleeves and rubber sandals. Few women wear American-style clothes; pants and shorts are not usually worn. Women's thighs and shoulders should be covered. Marshallese women swim in their muumuus, which are made of silky polyester that dries quickly.

Most women wear skirts and blouses or dresses. Either is also suitable for evening wear. Because of the climate, stockings are not worn and sandals, casual and

dressy, are the norm. Fancy or revealing cocktail dresses are out of place in Majuro. Long skirts and dresses are fine for evening wear.

Foreign women normally wear clothing similar to what they wear at home during hot weather, with the exception that women do not wear shorts, except those at least knee length, in public. Foreign women may wear pants to go to town or to an evening function. Women may wear a bathing suit into the water, but should wear a skirt or a wrap around their lower torso while on the beach.

Children: Several of the private schools in Majuro require uniforms, which are locally made and available at a modest cost. Otherwise, children wear T-shirts, shorts, rubber sandals (known as “zorries”), and bathing suits. Athletic shoes are occasionally worn and are best ordered from the U.S. Boys wear long pants to church and girls wear dresses. Dress clothes are not needed. Climbing coconut trees, playing on coral sand and rocks, swimming, clothed Marshallese style, and banana and coconut stains take their toll on children's clothes.

Supplies and Services

Majuro has two hardware stores, Ace and True Value, which have lately been well supplied with basic items. Fishing tackles and rods are expensive; fishermen should bring their own and buy lures here. Most items will be more expensive, so if you anticipate needing something and have the room to ship it, then do so; you will save money in the long run. The NAPA auto parts store has an uneven inventory but may have what you need or will order it. Tires may be ordered and shipped in.

A few basic services are available in Majuro. There are a few beauty shops providing haircuts and simple styling. Repair services for appliances and electronics are limited. There is one drycleaner. Majuro has only a few reputable car repair shops, so be sure to ask for recommendations when you arrive as to

where the best service can be obtained.

Religious Activities

The first Christian missionaries arrived in the Marshall Islands in 1857, and Christian religions continue to play an important part in Marshallese life. Churches provide a particularly important social setting, with gatherings throughout the week. A single village may have competing churches that create tension within the community over membership and status. The Bible, translated into Marshallese, is used as a reading textbook, and many children have Old Testament names.

Many religious denominations still support missionaries in Majuro, Ebeye, and the outer islands. Several small, private religious elementary and high schools exist throughout the Marshall Islands. Denominations represented include Unified Church of Christ (Protestant), Roman Catholic, Assembly of God, Seventh-Day Adventist, Independent Baptist, Mormon, Jehovah's Witnesses, Baha'i, and the Salvation Army program. The Unified Church of Christ and the Assembly of God churches have a theological college in Majuro.

In Majuro, Assumption Roman Catholic Church and the Assembly of God Church offer weekly services in English. Other services are in Marshallese, although most of the missionaries in every denomination are English speaking.

Education

The two private schools in Majuro most used by foreigners are the Majuro Cooperative School and Assumption Catholic School. Both schools use American textbooks and follow an American curriculum. Home schooling is always an option and is used by many Americans living in Majuro.

Recreation and Social Life

Recreation in Majuro is almost entirely of an aquatic nature. Fishing is popular with Marshallese and foreigners alike. Small boat reef

fishing, throw netting, and surf casting are popular. Larger outboard boats are available for deep-sea fishing for marlin, tuna, and other gamefish that abound in the Marshall Islands. Although no commercial charter boats are available, you can arrange for private charter or to be included in a day's fishing trip on a small boat.

The warm, clear waters are home to vast communities of fish, coral formations, and abundant tropical marine life, all easily accessible to snorkelers and divers. Sailing, windsurfing, swimming, boogie boarding, occasionally surfing, and picnicking at the beach are popular activities. The local dive shops fill air tanks, rent equipment, and offer scuba lessons, and have a small inventory of diving gear for sale.

Majuro has one large indoor athletic facility, which is used for sporting events and large assemblies. There are many outdoor basketball courts, two public tennis courts, a baseball field, and one bowling alley. Foreigners enjoy walking, bike riding, and jogging, but because of the narrow roads this can be dangerous. Rust is a problem with bicycles, and you should bring locks and patch kits for making repairs.

Evening entertainment in Majuro is limited. There are several good restaurants to go for dinner, several bars that offer live music are open at night, and there is one movie theater with three screens.

Marshallese live simply and entertain rarely, except for singular events, the most common being a “kemem,” or child's first birthday celebration. These are socially important events to which large numbers of people are invited. Food preparation for a kemem takes several days. Marshallese women usually do not accompany their husbands to events, public or private, but that situation is changing slowly. It is awkward for a Marshallese to decline an invitation, so you never can be sure if an invited guest will attend. An RSVP is not usually understood.

Most of the foreign social activity consists of friends meeting at homes or at a restaurant. Many foreigners live in modest housing and have limited ability to entertain the way they are accustomed. The tiny diplomatic community, the retiring nature of the Marshallese, the small number of foreigners, and the lack of social events, public or private, are all factors that at times emphasize the sense of isolation in Majuro. Be creative, entertain yourself, and be willing to meet others.

Bring mail-order sources for all your hobbies, reading, and audio needs.

Majuro is a casual town, where people know one another and first names are used immediately. Marshallese custom places no importance on punctuality. The concepts of planning and preparation are unfamiliar.

COUNTRY PROFILE

Geography and Climate

The Marshall Islands are located in the eastern part of the geographic region known as Micronesia, or "Little Islands," a myriad of more than 2,100 coral atolls and volcanic islands scattered across 3 million square miles of the western Pacific Ocean.

The Marshall Islands lie between latitude 4-14°N. and longitude 160-173°E. The 29 coral atolls and 5 single islands of the Marshall Islands form two parallel groups extending northwest and southeast—the Ratak ("Sunrise") Chain and Ralik ("Sunset") chain. Total land area of all of the Marshall Islands is 70 square miles. Marine resources are abundant, but poor soil provides little opportunity for agriculture, except for the harvesting and drying of coconut meat into copra, the only revenue opportunity for outer islanders.

Each atoll is a cluster of small, low-lying islands, none more than a few meters above sea level, circling a lagoon. The development of a coral atoll begins with coral growth around the edge of a high, often volcanic mountain. Growth continues as the mountain slowly sinks beneath the sea, leaving behind a circular reef that grows into small islands, islets, and open reef surrounding a lagoon.

Most atolls have free-flowing water across most of the reef, with one or two openings for boats to enter the lagoon. The islands of most atolls are not contiguous, with stretches of open reef extending for miles between islands. As the distances between islands in an atoll can be many miles, travel from island to island within an atoll can be difficult.

The capital of the Marshall Islands is Majuro, which lies 2,300 miles southwest of Honolulu and nearly 2,000 miles southeast of Guam. Majuro lies west of the international dateline, making it 17 hours ahead of Eastern Standard Time.

Linking the islands of the southern side of Majuro Atoll runs the longest paved road in Micronesia, the islands having been artificially joined over the years by a 32-mile continuous road.

The climate of the Marshall Islands is tropical, with high humidity, and an average year-round temperature of 81 °F. Trade winds pick up in October or November and blow strongly from January through April, with winds varying from 12 to 22 knots. The trades, often bringing overcast skies, have a cooling effect, although the lagoon can become rough, compared to the placid days of glassy water, so frequent in summer.

Typhoon (tropical hurricane) season is from December through March. Tropical depressions form in the Marshall Islands and increase to typhoon strength as they move further west with the prevailing trade winds, making the Marshall Islands

less susceptible to a full strength typhoon than most islands in the Pacific.

In Majuro, January, February, and March are traditionally the driest months, with rainfall averaging 6-8 inches a month. September through December are the wettest months, with 12-14 inches of average monthly rainfall. The temperature remains stable year-round, averaging 84°F in the day and 76°F at night.

The Marshall Islands enjoy clean air, clear ocean water, sunshine, and adequate amounts of rainfall, with the exception of the heavily populated areas of Majuro and Ebeye, where city living has taken its toll on the environment. Water shortages occur at any time when rainfall has been below normal, but in Majuro, shortages will occur most toward the end of the dry season in March. The use of water catchment devices is being promoted throughout the Marshall Islands. The outer islands rely more on a subsistence economy, occasionally experiencing food shortages due to seasonal variations.

Population

An ethnically homogeneous population of Marshallese populates the Marshall Islands, whose origins, as determined through research of the language, appear to be in the Malayo-Indonesian area. The population shares a single language and culture, with some dialect and sub-cultural differences between the two island chains.

The total population of the Marshall Islands as of the 1999 census was 50,840 people. That was an increase of 7,460 people since the 1988 census. Majuro and Ebeye are the two urban population centers. Over 50% of Marshallese live on Majuro Atoll. Out of the total population, 19% live in the island of Ebeye in Kwajalein Atoll and 3% on the outer islands of Kwajalein Atoll. With just 0.14 square miles, Ebeye Island is the most densely populated area in the Marshall Islands, with an equiva-

lent population density of 66,750 persons per square mile. The city of Majuro and Ebeye offer amenities, such as electricity, modern Western lifestyles, and employment opportunities (albeit limited) that continually draw younger Marshallese from the outer islands. On the outer atolls the lifestyle is mostly unchanged and untouched by modern development. Fewer than 3% of the population are foreigners. Countries other than the U.S. are beginning to send diplomatic representatives to the Marshall Islands. Taiwan and Japan have embassies in Majuro. The Marshall Islands is a young population, where 43% of the population is under 15 years of age and 15% is under 5. The working age group of 15 to 65 years old is 55% of the population.

The population has doubled in the last 26 years. With limited land and economic opportunities, controlling population growth has become a major goal of government authorities.

The urban areas of the Marshall Islands, where lifestyles move away from the traditional culture, are experiencing increasingly severe problems with youth suicide, alcoholism, sexually transmitted diseases, juvenile delinquency, and disregard of parental influence.

The social structure in the Marshall Islands is based on membership in a "bwij," a system of extended families or small clans. All members of the bwij work together for the common good, sharing food, housing, property, and resources. The leader of a bwij is the "alap," who acts as manager. Each bwij forms part of a larger group, led by an "iroij," or chief. It is traditionally the chief's responsibility to allocate resources among all his people and to resolve disputes.

Land is a scarce resource in the Marshall Islands and forms an important base for the establishment of social structure. Marshallese own all land; none may be sold to foreigners, although it may be

leased to foreigners if all those holding an interest in the land agree. Ownership of land defines social status and family identity. Land rights are inherited through membership in a bwij, which is determined through the female line. Inheritance of titles is also matrilineal.

The traditional Marshallese method of dividing property, crops or catch, and income is one-third for the iroij, one-third for the alap, and one-third for the "dri jermal," or common people who make up the bwij. This customary method of allocation is now creating social, economic, and legal difficulties within Marshallese society, as the country becomes increasingly westernized and moves from a subsistence economy to a money economy.

Major disputes arise over iroij titles as they command not only great prestige, but, with the advent of U.S. aid and lease payments, great wealth as well.

The Marshallese have a relaxed and casual attitude to life and informal dress is normal. Marshallese have strong family relationships, and thus, family needs and desires take precedence over non-family matters. Most Marshallese can expect family or extended family support at any time. This social network allows relatives from the outer islands, whether invited or not, to join family members in Ebeye or Majuro, and be assured of a home and food, even if the newcomer does not plan to work or make a contribution to the host family. Many young people prefer the U.S.-influenced lifestyles of Majuro and Ebeye to the remote and quiet living of an outer island. As the population density of both centers increases, there are no indications that this trend will change in the future. There are no statistics to document how many Marshallese are actually living in the U.S. but many do and more leave for the U.S. every day. Because of the relationship between the U.S. and the RMI, Marshallese are allowed to live and work in the U.S. at will.

Public Institutions

The Marshall Islands were claimed by Spain in 1592, but were left undisturbed by the Spanish Empire for 300 years. In 1885, Germany took over the administration of the Marshall Islands and located trading stations on the islands of Jaluit and Ebon to pursue the flourishing copra (dried coconut meat) trade. Marshallese High Chiefs continued to rule under indirect colonial German administration.

At the beginning of World War I, Japan assumed control of the Marshall Islands, first under civil and later naval administration. Their headquarters remained on Jaluit.

In early 1944, U.S. Marines and Army troops with naval air support took control from the Japanese following intense fighting on Kwajalein and Enewetak Atolls. In 1947, the U.S. as the occupying power entered into an agreement with the U.N. Security Council to administer the Micronesia area as the "Strategic Trust Territory of the Pacific Islands." The area included what is now the Marshall Islands, the Federated States of Micronesia, the Republic of Palau, and the Commonwealth of the Northern Marianas. During the lengthy negotiations leading to the present political entities, the various peoples voted to pursue their separate courses rather than join as one country.

On May 1, 1979, the U.S. extended recognition both to the Constitution of the Marshall Islands, a document that incorporates both American and British constitutional concepts, and to the establishment of the Government of the Marshall Islands.

After 13 years of negotiation, on June 25, 1983, the Government of the Marshall Islands and the Government of the U.S. signed the Compact of Free Association. The people of the Marshall Islands approved the compact in a U.S. observed plebiscite on September 7, 1983. The U.S. Congress subsequently reviewed the compact and included

several amendments that were accepted by the Government of the Marshall Islands. President Reagan signed the compact into law on January 14, 1986. The compact entered into force in the Marshall Islands on October 21, 1986. The UN voted to terminate the trusteeship with respect to the Marshall Islands and the Federated States of Micronesia in December 1990.

The status of free association recognized the Republic of the Marshall Islands as a self-governing state with the capacity to conduct foreign affairs consistent with the terms of the compact.

The compact places full responsibility for defense of the Marshall Islands with the U.S. The basic relationship of free association continues indefinitely, while the economic and defense provisions of the compact are subject to renegotiating at the end of 15 years. Congress provides most of the compact funding through the U.S. Department of the Interior.

A major subsidiary agreement of the compact allows the U.S. continued use of the US. Army installation at Kwajalein, an atoll consisting of 90 islets around the largest lagoon in the world. The U.S. Department of Defense (DOD) uses the facility on a lease agreement with the Government of the Marshall Islands. DOD controls 11 islands within Kwajalein Atoll.

Another major agreement of the compact provides for settlement of all claims arising out of the nuclear testing programs that the U.S. conducted at Bikini and Enewetak Atolls from 1946 to 1958.

The legislative branch of the government is made up of the Nitijela (Parliament) with an advisory Council of Iroij (high chiefs). The Nitijela has 33 members from 25 districts that are elected for concurrent 4-year terms. Members of the Nitijela hold the title of Senator.

The executive branch is under the leadership of the President, who is

elected by the Nitijela from among its membership. The President selects the other 10 members of his cabinet from the Nitijela. The first president of the republic was elected in 1979.

The Marshall Islands has four court systems: the Supreme Court, High Court, District and Community Courts, and the Traditional Rights Court. Most trial cases are heard before a judge. Jury trial is used only in unusual circumstances because of the difficulty in finding unbiased jurors within such a small population. Jurisdiction of the Traditional Rights Court is limited to cases involving titles, land rights, or other disputes arising from customary law and traditional practices. The Council of Iroij, representing traditional authority, advises the Cabinet on matters concerning customary law.

Arts, Science, and Education

The Marshall Islands has 77 public elementary schools and three public secondary schools. There are 26 private elementary schools and 13 private secondary schools. Forty-eight Head Start centers throughout the country provide preschool training. Head Start is available to 35% of the 3- to 5-year-olds in the Marshall Islands. In 1999, 84% of elementary school age children and 69% of the secondary school age children attended classes.

Test scores reveal that the education system needs to be improved. Though there is a 19 to 1 ratio of students to teachers, the quality of education is of great concern. Nearly half of the teachers in the Marshall Islands have only a secondary school diploma as their highest qualification. Scores on the entrance tests to the College of the Marshall Islands (CMI) in February 2000 required 73% of those applying to take remedial training of up to 2 years before being allowed to enroll in traditional college credit courses. CMI provides 2-year degree programs in liberal arts and sciences,

teacher education, nursing and allied health, business and computer science, and vocational and occupational education and training. Remedial programs are available to prepare students to enter CMI's degree programs, and it has an adult education program to provide an opportunity for obtaining a high school diploma. CMI is in partnership in the Workforce Investment Act (WIA), which is U.S. federally funded. The University of the South Pacific (USP) provides post-secondary education through extension programs in Majuro. Students are able to complete full majors and degrees without having to attend classes on USP campuses. USP provides training in conjunction with a U.S. federally funded Head Start Program for pre-school certificate and a diploma in early childhood education and community nutrition.

The Marshall Islands women are respected throughout Micronesia for the quality of the woven handicrafts they produce from coconut and pandanus fibers. Intricate and delicate baskets are decorated with many small shells; fans, mats, belts, handbags, and hats are woven to be decorative as well as practical. Most of the weaving is done by women on the outer islands who ship their goods to Majuro for sale at local handicraft stores. Men carve and assemble small replicas of the wooden sailing canoes that were once the only means of travel in the Marshall Islands. They also make modern stick charts, illustrating the principles of wave shape and change, which were used by Marshallese navigators to travel throughout the island chains.

The Marshallese have an oral tradition of song and legend, which is closely held and not shared with foreigners. With the increasing move toward a Western society, many fear that much of this tradition will soon be lost.

The Alele Museum is a private, non-profit corporation that operates a small museum with photos and objects of traditional Marshallese

culture and history It has an extensive microfilm inventory of documents relating to the history of the Marshall Islands and the Trust Territories. It actively encourages preservation and documentation of the Marshallese cultural heritage.

A Marshallese festive occasion always includes a song or two, sung by men and women in harmony, sometimes a cappella sometimes with a ukulele. As individuals, the Marshallese people are quiet and somewhat reticent, but they will spontaneously form a group and give an enthusiastic vocal performance at almost any event.

The "jepta" dancing performed by groups of youth and adults at their respective churches highlights the Christmas celebration. A month of late-night practices culminates in Christmas night dancing, each group in their own costume, performing variations of traditional dances.

Commerce and Industry

The government is the largest employer in the country, employing about one quarter of the workforce. The gross domestic product is derived mainly from U.S.-funded expenditures. Direct U.S. aid under the Compact of Free Association accounted for two-thirds of the Marshall Islands' 2000 budget of US \$100 million.

Per capita gross domestic product during 1999 was about US \$1,500, a figure that to understand the standard of living. The economy is a mixture of a small subsistence sector and a modern urban sector. The modern sector is largely a service-oriented economy located in Majuro and Ebeye, sustained by expenditure of the Marshall Islands Government and the U.S. Army installation at Kwajalein Atoll (USAKA). Wages, salaries, and other benefits to employees from these two sectors accounted for more than half of the gross domestic product in 1999.

The modern private sector consists of wholesale and retail trade, restaurants, banking and insurance, construction and repair services, professional services, and a small amount of copra processing. Despite its small size, however, copra cake and copra oil are by far the largest exports, standing at US \$1 million in 1999. The Marshall Islands have 22,000 acres of coconut plantations, and copra production has been the most important single commercial economic activity for the past hundred years. Unfortunately, the world market for coconut oil is currently in decline and diminishes the value of the Marshall Islands' largest export commodity.

The minimum wage is US \$2 an hour, which places the Marshall Islands at a competitive disadvantage vis-à-vis its potential Pacific and East Asian competitors. Skilled workers are few. The U.S. dollar is the official currency.

Outer islanders in an otherwise subsistence economy make copra and weave handicrafts as their sole source of income. These limited revenues fund what few items they can afford, such as soap, lantern fuel, and clothing. Most imports are consumed on Majuro and Ebeye.

Agriculture, marine resources, and tourism are top government development priorities. The Marshall Islands has no large-scale fishing operations. Sale of fishing rights to the Japanese, Taiwanese, and Koreans is a source of income, and the Marshall Islands is the recipient of aid, particularly from Japan to ensure the continuation of these rights. The U.S. and Japan are the Marshall Islands' major trading partners; retail trade with Australia and New Zealand is increasing. The Marshall Islands receives additional aid from the government of Australia.

Transportation

Automobiles

Majuro enjoys the longest paved road system in all of Micronesia:

from Rita, at the eastern end of Majuro Atoll, to Laura, the village on the far western end, a distance of about 30 miles. The island is so narrow that when driving the length of the island there are very few places where you are unable to see the lagoon and ocean at the same time. There are no street names and no addresses. As is typical in small towns all over the world, locations are identified by their occupant, their former occupant, or the nearest landmark. There are very few traffic signs, and there are no stoplights. Local police are working hard to enforce good driving habits but almost anyone who pays the fee required can acquire a drivers license. Drivers must be extra cautious as children and animals dart into the street day and night. There are no sidewalks, so the narrow roads are shared with pedestrians, and one must be alert as people and cars seem to come out of nowhere. Because there are so many vehicles, traffic is becoming a problem especially in the mornings, at noon, and at 5 o'clock. The speed limit in most areas is 25mph, but at times it's impossible to maintain even that rate of speed. Gasoline costs about twice as much as in the U.S.

Taxis are the main means of transportation for the Marshallese people. A person can ride in one direction anywhere from the end of Rita to the bridge (approximately 7 miles) for 50 cents. If a person were to travel from Rita to Long Island (at the other side of the bridge) the charge would be \$1.50. It becomes more costly to travel from town to the airport and beyond.

Taxis are not always convenient, especially on Long Island. At night it is very difficult and possibly dangerous to get a taxi into town from Long Island. What makes it dangerous is that there are few streetlights and people waiting on the side of the road to hail a taxi are not clearly visible. Drunk drivers are more likely to be driving at night so standing by the side of the narrow roads after dark is not a good idea. When using the taxi service you must share the car with as many

people as the driver chooses to pick up. That means that there are many stops made from when one gets in, to the final destination.

The convenience of having a personal car is immeasurable. Buying a new car locally is a possibility; buying a used car in Majuro, as in the U.S., can be a gamble.

It is a requirement of the Marshall Islands that vehicles be licensed. The weight of the vehicle determines the charge, but for the average car, the fee is \$35. Law requires that vehicles be inspected yearly. Inspection stickers are issued when the car is licensed, although this law is not strictly enforced. The licensing fee includes the fee for the inspection sticker. Liability insurance is required and must be obtained before the vehicle is licensed. The cost for minimum coverage locally is less than US \$200. Persons planning to drive in Majuro should have a current Marshall Islands driver's license. This driver's license will be issued for \$20. No test is required but you will probably be asked to present your U.S. driver's license when applying.

Local

Those who don't have their own vehicles move about town using the local taxi service. Individuals can license cars or vans of all descriptions as taxis. Taxis cruise the road picking up passengers who hail them from the roadside. Riders are picked up until the car is full and then dropped at their various destinations. The fare schedule is simple, with downtown transfers costing 50 cents and longer rides costing \$1.50. Students and children pay only 25 cents, but, as a result, may be ignored as they wait for a ride. The ride may be hot and the car rickety and you may have to wait for a taxi to drive by, but the operators are honest, and the service proves to be convenient.

To find a nice public sandy beach where you can spend the day swimming and snorkeling, you must drive to Laura. The road is paved

and the drive is a pleasant one. It can take as much as an hour to drive the approximately 20 miles, but there is much to see along the way, as the scenery is beautiful. Laura is a small village, different from downtown Majuro, with more land and fewer inhabitants.

Chartered boat trips can be arranged and are a wonderful way to get away from the city. Just a few islands up the reef from Majuro you will find islands that are almost completely uninhabited. Perfectly clear warm water and beautiful sandy beaches are there to explore. Most island inhabitants welcome guests but you must ask first.

Travel to the other atolls in the Marshall Islands is by boat or plane. Air Marshall Islands (AMI) provides service to the 26 grass airstrips located on various other atolls. Travel within an atoll is by small, outboard boats, as the islands on an atoll are connected only by long sections of open reef. Arno, 12 miles away and the atoll closest to Majuro, is the only outer island accessible from Majuro by small boat in a single day. Because of the travel impediments and lack of any guest facilities, the most frequent foreign visitors to the outer islands are those on occasional sailboats passing through on cruises of the Pacific.

Regional

Both Majuro and Kwajalein Atolls have airports that accommodate large jet aircraft. Continental Micronesia provides jet service between Honolulu and Guam, via Majuro and Kwajalein. Aloha Airlines provides service between Honolulu and Kwajalein via Majuro.

Majuro has excellent shipping links to the West Coast of the U.S., Hawaii, Australia, Japan, the South Pacific, and to other parts of Micronesia. Regular shipping service is provided by PM&O Lines, Matson Navigation Company, NYK, and Forum Lines. Tiger Lines and Saipan Shipping provide transship-

ment facilities out of Guam and Saipan. The ports in Majuro and Ebeye provide containerized cargo handling, warehousing, and transshipment operations.

Communications

The Marshall Islands National Telecommunications Authority (NTA) provides telecommunications services for the Marshall Islands. NTA provides access to domestic and international telephone service, local cellular telephone service, and Internet services. Residential, one party line charge is \$12 per month with a one time \$35 connection fee. As in the U.S. you can subscribe to enhanced services such as Caller ID, Call Waiting, etc. Charges for these enhanced services are nominal.

Mobile cellular telephone service is \$25 a month with a one-time \$35 service connection. Users may avail of 60 free minutes of airtime allowed per month (not including long distance time) and \$0.10 per minute airtime charge after the first 60 minutes. Cellular phones are usually available for purchase on the island.

Internet service is costly compared to the U.S. NTA charges \$40 a month plus \$3 an hour of use. There is an initial \$15 installation fee.

Mail

The Marshall Islands is a U.S. domestic mail zone and receives international mail service through the U.S. Postal Service. Because of the close ties with the U.S. system Majuro has been assigned a two-digit state abbreviation which is MH. The ZIP Code for Majuro is 96960.

U.S. domestic rates apply to and from the U.S. Although the Marshall Islands issues its own stamps, the postal system in Majuro has accepted U.S. postage stamps on single pieces mailed to the U.S.

First-class letter mail arrives by air 610 days from the East Coast. Pack-

ages sent Priority Mail also arrive about the same time, or slightly longer. Non first class mail, including parcel post and magazines sent second class, arrive by ship within 2-4 months.

In Majuro mail is delivered only to a post office box. Outer island mail requires a first class stamp; parcels are charged as freight and delivered by local plane or ship.

Radio and TV

The Marshall Islands has two radio stations. V7AB, AM 1098, is run by the Ministry of Interior and Outer Islands Affairs, broadcasting news, announcements, the Nitijela meetings when the Nitijela is in session, and popular and Marshallese music. Some news and announcements are in both Marshallese and English. WSZF, FM 104, is run by the Baptist Church and broadcasts religious music and programs. Real time news can be heard on the hour on FM 104 from the BBC; however, the reception for the BBC is poor.

Cable TV is available in Majuro through Marshalls Broadcasting Company. Initial installation is \$30 with a monthly charge of \$29.99 for one TV and \$10 a month extra for each additional TV that is hooked up. For an additional \$10 a month a Philippine station can be accessed. There are about 11 stations in all. Real time news can be received on CNN, CNBC and BBC. At this time almost everything seen here is shown approximately two weeks after its U.S. showing. A TV schedule is not published but many shows are broadcast with some regularity so one is able to predict when some shows will be aired. Movies are shown both day and night and most are suitable for all audiences. There are many video stores on the island and the selections available are quite good.

Newspaper, Magazines, and Technical Journals

The Marshall Islands Journal is an independently published weekly newspaper and is the only printed source of local news. It is issued

every Thursday at a cost of 50 cents and provides coverage of local events in both Marshallese and English.

A few magazines and paperback books are available at local stores but the selection is poor, usually out of date, and the price is high.

The Majuro public library located in the Alele Museum building is small and limited. The College of the Marshall Islands makes its library available to anyone who would want to use it.

Health and Medicine

Medical Facilities

Medical care in Majuro is not up to U.S. standards. The Majuro Hospital is staffed with doctors from many countries around the Pacific. There are no American doctors at this time at the Majuro Hospital. There is one private clinic operated by a doctor from the Philippines. The 177 Clinic is the medical facility serving those affected by the nuclear testing. At present, there is a doctor from the U.S. manning this facility. Although the 177 Clinic is there to serve this exclusive group of people, if scheduling permits you may be able to request an appointment with this doctor. The Youth to Youth in Health has a clinic in Majuro catering to the young community.

Obtaining medicine is often a problem. Many times the hospital is not able to stock an adequate supply, so they are frequently out of some of the most basic medicines. You cannot depend on being able to have a prescription filled here so bring regularly needed medications with you or make arrangements to have them sent from the U.S.

Routine laboratory work is available. More complicated tests are sent to Honolulu for evaluation.

Dental care is available for simple dental work, checkups, cleaning,

and x-ray but again, not up to U.S. standards. Majuro has no facilities for optical care. Bring spare eyeglasses, and sunglasses. Selections of contact lens solutions are limited.

Try to bring with you any medicine or medical supplies you anticipate needing on a regular basis. Simple things like bandages and antibiotic cream, aspirin, Motrin, Tylenol and cold medicines are usually obtainable from the two largest stores on the island. You cannot always count on finding your favorite brands so it would be a good idea to bring a small supply of your favorites to use until you find out if they are available here.

Community Health

Ebeye Island in Kwajalein Atoll, the second-largest population center in the Marshall Islands, has an expanding health center for its large population. All other outer island communities are served by 64 health centers staffed with modestly trained health assistants who utilize small dispensaries and are connected by marine high frequency radio to the main center in Majuro. Boats or planes evacuate medical emergencies from the outer islands to Majuro. In Majuro there is also a church based health clinic in Laura, a non-government operated clinic run by the Baptist Church and one run by Mission Pacific.

Common infectious and communicable diseases in the Marshall Islands include amoebiasis, conjunctivitis, diarrhea, gastroenteritis, gonorrhoea, influenza, leprosy, scabies, syphilis, and tuberculosis. Water supply, sanitation, personal hygiene and overcrowding are among factors related to the infectious and communicable diseases. Tests for HIV/AIDS in 1997-1999 found no positive cases. However, tests in 1996 detected one positive HIV case. With the increasing level of prostitution and the large number of foreign fishing boats calling at Majuro, the risk of HIV and AIDS being introduced to this area becomes more of a possibility each day.

The most prevalent noncommunicable disease in the Marshall Islands is diabetes, which is now a major health problem. Hypertension and heart disease are also on the increase. Poor eating habits, the consumption of large amounts of alcohol and tobacco, and the lack of exercise contribute heavily to these major health problems.

Preventive Measures

All should follow standard State Department immunization guidelines, including inoculation for Hepatitis A & B.

Sunburn is a problem year round. Everyone is urged to use sunscreen and wear sunglasses and protective clothing. Coral cuts are a common occurrence and no matter how small are slow to heal and susceptible to infection. Wounds should be cleaned, treated with antibiotic cream and kept bandaged until completely healed. Prevent cuts to feet by wearing shoes while in the water and out. Everyone is urged to drink plenty of fluid in order to stay hydrated.

Eating in major restaurants is safe. Be careful when eating at private or public events, because food is commonly not refrigerated properly and could be prepared in less than sanitary conditions. Most meats, fruits and vegetables are imported from the U.S., Australia and New Zealand and are safe. Local vegetables, pork, chicken and fish are also safe. Some reef fish contain toxins, and the varieties that are safe to eat vary from atoll to atoll. If you catch your own fish, check with a local fisherman to see if it is safe to eat. When purchasing products at any store be sure to check the expiration dates on the packages as it is common to find many that are still on the shelf long beyond their shelf life.

The normal tropical rodents and small lizards are present, but not in excess. Cockroaches and ants can become a problem. Flies and a few mosquitoes are a nuisance, but often the trade winds keep them away. The Majuro Water and Sewer

Company, which is government-owned, provides the water and sewer system in Majuro. The public water system relies primarily on a rainwater catchment system, which is located at the airport runway and in the wells in Laura. Public water is normally available three days a week for 14 hours per day. Individual homes must have their own catchment and storage tanks to provide round-the clock water.

A 1999 census reported that 61% of all households in the Marshall Islands used flush toilets and 25% used pit latrines or no toilet facilities at all. A great part of the population continues traditional customs, using the ocean and lagoon reefs for elimination and personal hygiene, contributing significantly to local pollution. Public garbage collection exists but unfortunately, vast amounts of trash are dumped oceanside or lagoonside by residents, creating, among other problems, unsightly pollution in many areas.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Travel to Majuro is via jet from Honolulu or Guam. Continental Micronesia arrives in Majuro from Honolulu on Tuesday, Thursday, and Saturday. From Majuro the plane goes on to Kwajalein and then Guam with stops in Kosrae, Pohnpei, and Chunk. The plane returns to Honolulu from Guam on Monday, Wednesday and Friday with stops in Kwajalein and Majuro. Aloha Airlines flies from Honolulu to Majuro arriving in Majuro on Friday evenings. Aloha then flies on to Kwajalein and returns through Majuro on Saturday morning back to Honolulu.

Unaccompanied baggage takes about 3-4 weeks by air from the U.S. During peak passenger seasons, lack of freight space on incoming flights can cause delays. Surface shipments arrive in 2-3 months from the East Coast. Shipments are through Los Angeles or Honolulu from points east of the Marshall Islands. West of the Marshall Islands there are also good connections, with vessels coming from Guam, Manila, and Hong Kong.

Visas are not required for U.S. citizens. A valid passport, sufficient funds for a stay, and an onward/return ticket are required for stays up to 30 days (and may be extended for up to 90 days from the date of entry). A departure fee is required. A health certificate is required if arriving from infected areas. An AIDS test may be required for visits over 30 days. (U.S. test are accepted.) For further information on entry requirements for the Marshall Islands, please contact the Embassy of the Republic of the Marshall Islands, 2433 Massachusetts Avenue, N.W., Washington, D.C. 20008. The telephone number is (202) 234-5414. Also, please see the home page for the Embassy of the Marshall Islands at <http://www.rmiembassyus.org/>.

Americans living in or visiting the Marshall Islands are encouraged to register at the Consular Section of the U.S. Embassy in Majuro. The U.S. Embassy does not have a street address in Majuro. The Embassy is located on the ocean-side of the island's road, near the Church of the Latter-Day Saints and Gibson's Express, "Long Island." The U.S. Embassy's mailing address is P.O. Box 1379, Majuro, MH 96960-1379. The telephone number is (692) 247-4011. The fax number is (692) 247-4012. The U.S. Embassy home page on the Internet is <http://www.usembassy.state.gov/majuro/>.

Pets

Importation of dogs and cats is allowed. However, there is a quarantine period for a minimum of 120 days. Animals are also required to have a health and rabies certificate, both for transiting Honolulu and to enter the Marshall Islands. Rabies is not present in RMI. Therefore, strict regulations must be followed. If pets are being sent unaccompanied, all airlines are obliged to deliver arriving dogs and cats to the Airport Animal Quarantine Holding Facility until their onward flight to the Marshall Islands. However, if the flight delay is over 24 hours (approximately), the pet(s) will be transported to the Animal Quarantine Branch facility in Aiea, Hawaii, where they will remain until their scheduled flight. (If the animal must be transported to the Aiea facility, there will be charges for this service to include a \$35 registration fee per animal. Additionally, one cannot pay by credit card or cash; a certified check must be sent to the facility prior to any boarding arrangements. If your pets will be detained in Hawaii, it is best to call the Animal Quarantine Branch for details: Tel: (808) 483-7145; Fax: (808) 4837161. The Marshall Islands have no kennels or veterinary services, so one must be prepared for any illnesses that their pet(s) may come down with.

The following requirements must be followed in importing pets into the country: A permit must be obtained

from the Department of Agriculture, Quarantine Section, which costs \$10. The permit is valid for one shipment only. A copy must accompany the shipment and be surrendered to a Quarantine Officer on duty upon arrival of shipment into the RMI. The importation of animals into the RMI requires presentation of an international animal health certificate, attesting that the animal(s): a) were examined within 48 hours of shipment, found to be in good health, and showed no sign of any infectious disease; b) have been effectively vaccinated against distemper, hepatitis, and canine Parvovirus at least 1 month and not more than 3 months before shipment; c) have been effectively treated against echinococcosis-hydatidosis, round, hook, and whipworms within 3 days of shipment; d) have been effectively treated against, and found on examination to be visibly free of, Ectoparasites within 3 days of shipment; e) showed no clinical sign of rabies on the day of shipment, and were kept from birth or for 6 months prior to shipment in the exporting country where no case of rabies was officially reported during the 2 years immediately preceding the importation of the animals concerned; f) have been vaccinated with an inactivated rabies virus more than 30 days prior to entry into the RMI; and g) for animals originating from a country where rabies occurs or is reported to occur or where rabies vaccination is routinely practiced, such animals must be confined for a period of not less than 120 days in an approved quarantine facility in a rabies-free area prior to entry to the RMI; or h) should meet the requirements of the State of Hawaii or the Territory of Guam.

Upon arrival in the RMI, imported animals shall immediately be taken under the control of a Quarantine Officer to the quarantine premises previously approved by the Chief of Agriculture where the animals shall remain until they are released by a Quarantine Officer.

Animals imported not in compliance with the permit requirements may be re-exported or destroyed upon arrival.

The quarantine Section of the Department of Agriculture can be contacted through the following: Tel: (692) 625-3206; Fax: (692) 625-3821; E-mail: rndadm@ntamar.com.

Firearms and Ammunition

Importation of firearms is officially prohibited. No opportunities for recreational firearm use exist in the Marshall Islands.

Currency, Banking, and Weights and Measures

The U.S. dollar is the official currency of the Marshall Islands. Credit cards are accepted at a few establishments. Travelers checks are acceptable, but ask before making purchases. Non-diplomatic passengers pay a US \$20 departure tax at the airport.

MICRONESIA

Major City:

Kolonia

Other Cities:

Chuuk Atoll, Kosrae

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated March 1996. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

After forty years as a United Nations Trust Territory, the Federated States of Micronesia in 1986 emerged as a sovereign nation. The Embassy in Kolonia has the unusual opportunity of shaping this new diplomatic relationship and overseeing US Government activities across a broad expanse of the Pacific. The 607 islands that comprise the Federated States are among the most untouristed, unspoiled sites in the world.

MAJOR CITY

Kolonia

Kolonia, the capital of the state of Pohnpei, is a town of approximately

10,000 which occupies seven square miles at the northern end of Pohnpei Island.

Food

A basic selection of food is available, but high prices and very limited choices. Three fairly large supermarkets are operating in Kolonia along with a few small general stores whose food stocks vary with cargo ship arrival. The selection approximates that of a Seven-Eleven: basic canned goods, cleaning supplies, condiments, and some dairy products, frozen vegetables, and frozen meat and poultry. Locally baked bread is adequate and is supplemented by imported frozen loaves. Steak, hamburger, pork, and chicken are imported from the US, and while of lower quality than found in a normal supermarket, are fully acceptable if the purchaser takes care to inspect it for freezer burn or thawing/refreezing. Fresh tuna and small "reef fish" are for sale in the public market and mangrove crab is frequently offered. Some canned baby foods are available, but the selection is not large. The high humidity wilts crackers and cereals, although chips purchased in metal tins keep well.

Dairy supplies are improving. Imported butter and margarine are in good supply. Ice cream is very popular on Pohnpei, and the stores are careful to keep this in stock. No fresh milk is to be found, but there is an ample supply of California and

Australian ultra-high temperature (UHT) milk. A modest number of cheeses are in stock.

Kolonia has only a slim selection of fresh fruits and vegetables. Although Pohnpei is lush, cultivation of these crops is rare. Local agriculture revolves around yam, taro, banana and sakau cultivation (the popular local narcotic drink). Sweet potatoes, plantain, pineapple, and green onion can usually be found, while the only fresh green vegetables consistently available are cucumber, Chinese cabbage, bell pepper, and eggplant. Arrangements can also be made with local farmers and the Pohnpei Agricultural and Technical School (PATS) to provide fresh vegetables on a fairly regular basis.

Supply of soft drinks is very good, and Kolonia can boast a respectable variety of imported beers on the shelves. Wine is scarce and expensive, and is stored under inhospitable conditions.

The FSM permits import of fresh produce. Agriculture inspectors tend to admit without problem foods brought from the US mainland in the original packages, e.g. shrink-wrapped, plastic-packaged vegetables and meats. The traveler's assurance that the items originated in the US will usually suffice. Loose vegetables and fruits are usually confiscated. Meat and poultry

Street in Kolonia, Micronesia

may be imported from the US mainland, Hawaii and Guam.

Clothing

Style of dress is very casual. Office attire for men is slacks, with a pull-over sport shirt or short-sleeve buttoned shirt. Women wear blouses and skirts or sun dresses. Micronesians consider exposure of women's thighs to be indecent, so short shorts and tight-fitting slacks should not be worn as everyday attire. Bermuda shorts are okay. Standards are changing, however, and expatriate women runners wear jogging shorts on the street without problems. Given the heat and humidity, we strongly recommend that personnel purchase light all-cotton clothing. Lightweight poplin pants and cool shorts are good purchases for casual wear. No dry cleaning nor professional laundry is available on island.

Footwear is also very casual, with sandals and plastic thongs the norm. Good cheap thick-soled

thongs can be purchased locally. Lightweight fabric and woven leather shoes are also good choices. The climate makes wearing of hosiery by women impractical.

Since there is little seasonal variation, the same type of attire may be worn year-round. Clothing supply in Kolonia is disappointing, and personnel should bring a full tropical wardrobe with them or plan on making purchases en route, in Honolulu or Manila. Colorful local embroidered skirts and a small but attractive selection of dresses from Bali are sold in local stores, so women will have better luck in local purchases than men.

Children's clothing can be bought locally, but prices are high and selection is poor.

Supplies and Services

Stocks vary from month to month with each arrival of a cargo ship. Store managers are not always consistent in their orders, and are not

inclined to maintain large inventories. Local stores sell sundries, cleaning supplies, and other household items, but the selection is very small and supply unpredictable. Prices for these items may be two to three times the US price.

A few pounds of boric acid will be an excellent investment in cockroach control. Pohnpei cockroaches have no immunity to insecticides, and any commercial spray will be effective. Mosquitoes are not a problem in Kolonia. Mosquito coils and netting (15-20 yards for two persons) will come in handy on trips to outlying islands.

Local dressmakers provide simple repairs and make curtains. Local laundromats are available but not a dry cleaning service. A few beauty shops are in operation.

Religious Activities

Catholic and Protestant services are held in English and Micronesian languages. Americans normally

attend either the Saturday evening English mass at the Catholic Mission or Sunday morning English nondenominational Protestant service. Individual Protestant denominations represented include Congregationalist, Baptist, Seventh Day Adventist, Jehovah's Witnesses, Assembly of God, and Mormon. The Mormon church is particularly well-represented in missionary activities. The Baha'i faith has a mission in Kolonia.

Education

The Seventh Day Adventist School offers kindergarten through high school instruction in English, and has well-kept facilities with US textbooks and US volunteer missionary instructors. Education is best in grades one through six; above that level, the school falls short of the facilities and faculty required to give students an American-equivalent education. Host country and expatriate children alike attend. Extracurricular activities, including sports, are a part of the program. Since places in the school are limited, it is advisable to contact the school in advance to reserve a spot. The Catholic Mission and the Baptist Church operate schools, and standards are said to be adequate. The public schools do not meet US standards. All dependent children currently at post are elementary school age or younger.

Special Educational Opportunities

Although Kolonia hosts the College of Micronesia-FSM, its facilities are poor and most classes are likely to be insufficiently rigorous for American students. The College also offers courses in Pohnpeian and Japanese. Programs for the handicapped are lacking.

Sports

Micronesia offers outstanding opportunities for divers and snorkelers. The marine life is unspoiled, and local dive shops give reasonable prices on equipment rental and air refills. Certification classes are offered only once or twice a year, so prospective divers should try to

become certified before arrival. Chuuk Lagoon, 425 miles to the west, is world-famous for its diving. More than 100 sunken planes, ships, and submarines are at the bottom of the lagoon, accessible to divers, the result of US Navy bombing raids in World War II. Tuna is abundant in waters off Kolonia, and game fish such as marlin and mahi-mahi are also to be found. Anglers should bring ocean rigs or handlines. Due to unpredictable, often slack winds, only a few sailboats are on the island.

Swimming in the warm, clear water is popular, but the absence of local beaches means that persons must take a boat out to the nearby reef.

For joggers Kolonia offers interesting terrain for early morning and evening runs. The heat of the day makes midday exertion difficult. A basketball league plays on Sundays in the winter months. Baseball is an island-wide passion, and volleyball is also very popular. There are two tennis courts on island, although the public courts are in considerable disrepair.

Touring and Outdoor Activities

The 800-year-old ruins of Nan Madol lie in the south of the island, amid a maze of man-made channels overhung with tropical foliage. The ruins are the remnants of the palace of the Saudeleurs, the ancient chiefs of Pohnpei, and is the island's most noteworthy site. Nan Madol is accessible only by boat. Kepirohi Falls, seventy feet high, is a beautiful sight with a fresh water pool at the base for swimming. Visitors take picnic lunches there and to Liduduhniap Falls, a short drive from Kolonia. Cross-island camping treks through the jungle-like interior are possible, led by guides. Never venture into the interior without a guide.

A favorite activity is spending the weekend on Black Coral or Hags Island Villa (formerly Joy Island). These are tiny privately-owned islands just off Pohnpei's northern and southern coasts. For a small fee

per night, persons receive padded mats, kerosene lamp, and use of a covered wooden cottage. Cooking is by campfire. A small store on the island supplies some essentials, but visitors must bring food, beverages, and cookware. Six miles offshore is Ant Atoll, accurately described by a local writer as "the tropic isle of romantic novels." Permission can be obtained to camp on this palm-shaded island with its white sand beaches.

Entertainment

Kolonia has no movies, theaters, or concerts. A few well-stocked video rental stores are located in Kolonia, and this is the main form of entertainment.

Social Activities

Social life for travelers to Kolonia exists largely within the expatriate community, and consists of casual home dinners, Sunday brunch at the Village Hotel, and shared boating and atoll expeditions. For host-country nationals, socializing is primarily a family and clan event, and invitations to Americans are very rare. But a personable American will find that opportunities arise to become more familiar with the people and partake of generous Micronesian hospitality.

OTHER CITIES

CHUUK ATOLL is a collection of 15 large islands and 80 islets. The district center is on Weno, where visitors can experience island life and culture by browsing through the shop-lined streets. A lovely view of Weno and the lagoon can be seen from the Sapuk Lighthouse, built by the Japanese in the 1930s as a watchtower against the Americans. The abandoned houses of the lighthouse guards are still standing nearby.

Scuba divers wont want to miss a trip to the area, which includes the Truk Lagoon Underwater Fleet. More than 60 submerged vessels and several downed aircraft can be seen in this lagoon, which has

become known as the world's largest underwater museum.

Hiking enthusiasts will enjoy a number of trail locations. Tonachau Mountain Iras (229 meters) is believed to be the home of the god Souwoniras and his divine son. The area also contains the Wichon Men's Meeting House, where Weno chiefs are said to have met with Poomey, the eldest of the six brothers who were the first chiefs of Chuuk. The Wichon River and Falls include a bathing pool. Numerous petroglyphs are etched in the basalt above the falls. Nefo Cave is about 10 feet wide, 6 feet high and 78 feet long and contains a gun used by Japanese soldiers to guard entry to the north pass.

KOSRAE is a one of the least developed areas in the Federated States, and so offers a unique chance to enjoy the natural beauty and native culture of the area. The main island is about 42 sq miles with natural features including rainforest areas, a pristine coral reef, and a coast that includes sandy beaches and mangrove swamps. The Blue Hole in the Lelu harbor, traditionally used as a burial place for royalty, offers divers and snorkellers the chance to see coral heads, lionfish, stingrays and barracuda. Lelu Harbor also contains the remains of an American search plane, two Japanese boats and the remains of a whaling ship. Lelu Hill includes caves and tunnels used by the Japanese in WWII.

Hikers may enjoy Mt. Finkol, the highest peak in Kosrae (2,064 ft). The hike requires a guide and the hiker must be in good physical condition. The tour takes about seven to eight hours and offers a spectacular rainforest experience. The Mt. Oma hiking trails feature a wide variety of tropical fauna, flora and cascading waterfalls. Tours are offered for short hikes of about 45 minutes or longer trips of six or seven hours. The Menke Ruins hiking trails pass by the temple of the Goddess of Breadfruit, Sinlaku. Legends say that this is where she spent her last days before fleeing to

Yap, before the arrival of the missionaries in 1852. The story tells that Sinkalu saw a brilliant light coming over the horizon of the sea that frightened her, causing her to flee. The Christian missionaries arrived by ship the next morning. This story of the coming of "the light" was part of the early Christian conversion of the natives. A guided tour takes about two hours.

Two waterfalls worthy of note are the Sipyen and Saolong. Both offer bottom pools where swimming is allowed.

For the history minded, the Kosrae State Museum contains ancient artifacts and restored photos of Kosrae history and culture. The Lelu Ruins, the remains of the ancient capital city of the Kosrae rulers, include huge basaltic slabs arranged in 20 ft walls, and the remains of several street paths, living areas, and tombs.

COUNTRY PROFILE

Geography and Climate

The Federated States of Micronesia consists of four states, Yap, Chuuk, Pohnpei, and Kosrae, and covers a wide expanse in the Caroline Islands chain. FSM waters begin just north of the equator and stretch from 136°E to 166°E longitude. Palikir, the capital, is located on Pohnpei Island (previously known as "Ponape") in the Central Pacific at latitude 6° 54' N, longitude 158° 14' E. The post is 3106 miles from Honolulu, 2363 miles from Manila, and 1070 miles from Guam, the closest American territory.

"Micronesia" denotes "small islands," an apt description for the geography of the FSM. Although there are 607 islands within the one million square mile boundaries of the nation, total land area is a modest 270.8 square miles. Only 65 of the islands are inhabited. Pohnpei

Island, with 133 square miles of land area, is the largest island in the country and is the site of the U.S. Embassy. Geologically, Pohnpei readily shows its volcanic origins with many hills and cliffs, as well as striking basalt outcroppings such as Sokehs Rock at the entrance to Kolonia Harbor.

Pohnpei Island is lush and thickly forested with tropical foliage. Pohnpei is one of the wettest spots on earth, with an annual rainfall in Kolonia of 200 inches per year. The interior receives as much as 400 inches. January through March are the less rainy months, with steadier rain coming in the summer and fall. High winds may occur in the latter part of the year, but damaging tropical storms generally bypass Pohnpei. The temperature averages a pleasant 81 degrees year-round. Evenings are mild, in the low 70s, and daytime temperatures seldom exceed the upper 80s. Temperatures do not noticeably vary throughout the year. Humidity is high, averaging 89%, and causes rapid growth of mildew and mold in unair-conditioned environments. Air quality is excellent, free of pollutants. Some of the other islands of the FSM, such as Kosrae, are "high islands" like Pohnpei, characterized by hilly terrain and fertile soil. Many other islands are low-lying coral atolls a few feet above sea level covered with coconut palm and scrub vegetation.

As a tropical city, Kolonia has the expected complement of pests: ants, termites, roaches, and centipedes. All of these can be kept under control by regular cleaning and spraying. Geckoes populate the houses and provide a natural insect control service. The island has no venomous snakes, and is malaria-free and rabies-free. Wild deer live in the interior and are hunted by the local population.

Population

Estimated 2000 population of the Federated States is approximately 133,140. Pohnpei State has approx-

imately 34,976 inhabitants, 10,000 of whom reside in Kolonia.

Although most peoples of the FSM share a Micronesian heritage, languages and cultures differ among and within the different states. There are four major languages, Yapese, Chuukese, Pohnpeian, and Kosraean, all part of the Austronesian family. Eleven other languages and dialects are also spoken within the country, including two Polynesian languages. The many linguistic gaps are bridged by English, which is widely spoken and is the official language of the country.

The years of American administration have seen an influx of Western culture that has eroded the traditional cultures of the societies, although traditional leaders and cultural patterns still are influential, especially in the state of Yap. As a rule, the smaller "outer" islands away from the state capitals preserve traditional ways. Due to its scarcity, land is the ultimate denominator of social status in Micronesia. Parcels are passed down through the generations, thus reinforcing the importance of the family to Micronesian society. Social activity in Micronesia revolves around the family and the extended clan, to a degree difficult for outsiders to appreciate.

The Micronesian islands have been fertile fields for missionary activity, with the result that almost all FSM citizens are Christian. A full range of denominations is represented. Kolonia is served by Catholic, Protestant, Mormon, Jehovah's Witness, and Seventh-Day Adventist churches, as well as a Baha'i mission. Religion is an important part of the culture, and clergymen are well respected by the inhabitants.

The outside world had little contact with the islands until the mid-19th Century, when American whalers and missionaries entered the region. Spain claimed the Caroline and Mariana Islands in 1885 and retained them until 1899, when Germany purchased most of the island chains in the aftermath of

the Spanish-American War. Germany, in turn, lost its possessions to Japan in 1914 at the beginning of World War I. The League of Nations formally extended a mandate to Japan in 1920, thus confirming the Japanese conquest, and a new era of colonization. Intensive crop and copra production began, and the islands became exporters of many agricultural products. In 1945, control passed to the United States Navy, which administered the area until formation of the Trusteeship under UN auspices in 1947. The FSM, together with the Marshall Islands, Palau, and Northern Mariana Islands, comprised the Trust Territory of the Pacific Islands. On November 3, 1986, the Trusteeship era came to a close when the Trusteeship was terminated for the FSM and the Compact of Free Association came into effect. The FSM is now a fully self-governing, sovereign nation in Free Association with the United States.

Public Institutions

The terms of this relationship are contained in the Compact of Free Association, valid for 15 years. The Compact confirms the FSM's authority to manage its domestic affairs and conduct foreign affairs in its own right. The United States retains full authority and responsibility for security and defense issues. Other sections of the Compact outline governmental, legal, and economic relations between the two countries. The Compact is also in effect between the United States and the Republic of the Marshall Islands and as of October 1, 1994, between the United States and the Republic of Palau.

The Federated States governmental structure is modeled on the United States. The national government is headed by a President and Vice President; the President appoints cabinet members, who administer national affairs. The other two branches, Congress and the Supreme Court, function much as the American institutions, albeit with fewer personnel. The Congress is unicameral, and legislators serve

either two- or four-year terms. Two-year senators are elected from districts apportioned on the basis of population. Four-year senators are elected at large, one from each state. The President and Vice President are chosen from the ranks of the at-large senators by a majority vote of Congress. No political parties exist.

Each state is headed by a governor, elected for a four-year term, balanced by a state legislature and a state supreme court. Although this structure parallels the American system, the states have substantially more power than their American counterparts. Compact fund distribution reflects this: 87% of annual Compact assistance is earmarked for the states, the remainder to the national government.

Arts, Science, and Education

The FSM participates with other Micronesian nations and with US territories in the College of Micronesia. This is an umbrella organization which maintains individual institutions throughout the region. Kolonia is home to the College of Micronesia (COM-FSM). COM-FSM offers a two-year academic program leading to an Associate of Arts degree. The focus of its program is teacher training, but studies are offered in a number of other subjects. Outside of the formal educational structure, the FSM is host in any given year to several visiting researchers, particularly in the fields of anthropology, marine resources, and agriculture. Cultural and artistic institutions in the Western sense do not exist in Kolonia, although wood carving and choral singing are popular local forms of artistic expression.

Commerce and Industry

More than half of the population earns a livelihood from subsistence fishing and cultivation. Of those working within the monetized econ-

omy, 60% are employed by government. Palikir, as the national capital, has an even higher proportion of government employees, drawn from all four states. Micronesian technical and legal specialists are in short supply, so many professional positions are filled by American contract employees. One of the three Supreme Court Justices, the FSM Deputy Attorney General, and Pohnpei's Attorney General, for example, are United States citizens.

Estimated gross domestic product (GDP) was \$263 million in 1999, (per capita GDP = \$2,000).

The FSM is working to strengthen local production and exports in the Compact period. Currently, the business sector in the FSM is modest, and centers on small retail establishments selling imported goods. Potential for development of agricultural exports is good in the states of Kosrae and Pohnpei, which produce excellent citrus and world-renowned pepper, respectively. Yap and Chuuk have large fish transshipment facilities, and Chuuk and Pohnpei are exploring possibilities for canning plants. The untouched islands of the FSM are desirable tourist destinations, but this sector remains small in scale. The nation encompasses rich tuna fishing waters. Its multilateral fisheries pact with the U.S. and several bilateral fishing treaties provide a steady flow of tuna licensing fees.

The Compact of Free Association provides the Federated States with \$1.3 billion in US economic assistance over a 15-year period, in addition to a number of US federal programs and grants for which the FSM remains eligible. A \$20 million Investment Development Fund was also provided by the United States as a means of encouraging joint ventures. The national government has implemented an ambitious National Development Plan to enhance infrastructure and expand local production and social services.

Transportation

While taxis are available in Kolonia, a personal vehicle is essential. Twenty-five miles of road on the island are paved, thus daily driving presents few challenges. Outside of town, the roads are partially paved (21 miles). Most vehicles on island are Japanese. Reliable repair service is available.

Transportation between Kolonia and the other states and neighboring countries is by Continental Air Micronesia jet. Protestant Missionary Airlines runs weekly propeller flights to the nearby islands of Mokil and Pingelap. Travel to outer islands is also accomplished by government-owned "field trip" ships, which ply regular routes out of the state capitals.

Communications

Telephone and Telegraph

Telephones are available on Pohnpei Island. Connections with the United States are excellent and cost about \$2.50 - \$3.00 per minute (\$2.00 per minute on Sunday). AT&T calling cards are accepted in the FSM, but cost more than using the local service. Kolonia can be dialed directly from the United States, using the sequence 011-691-320- (local number). Telex communications are equally reliable, and are billed at about \$2.50 - \$3.00 per minute outgoing.

Radio and TV

A local AM and an FM radio station broadcast music and occasional news, primarily in Pohnpeian. A short-wave radio is needed to stay in touch with world affairs. Radio Australia comes in clearly, and Voice of America, Armed Forces Radio, and BBC are not hard to raise. Kolonia has a cable television company, which broadcasts copies of Los Angeles and San Francisco TV tapes with a one-week delay in addition to HBO, Disney Channel and VH-1 channels. They also broadcast CNN and ESPN live. Basic monthly rate is \$20.00 (\$10.00 extra for HBO or Disney). The broadcast system is

the same as the United States, so no special set is needed.

Newspapers, Magazines

The Guam Pacific Daily News is sold in one outlet; copies are received one to three days after publication date. No bookstores are found on island.

Health and Medicine

Medical facilities

Health care facilities in the FSM consist of hospitals on each of the four major islands and a few scattered clinics. These facilities sometimes lack basic supplies and medicines, and the quality of health care is variable. Doctors and hospitals may expect immediate cash payment for health services.

Community Health

While great improvements in the quality of the water supply were made from 1992-1994, individuals are cautioned not to drink the tap water. Local standards of community health are variable, and sanitation practices in stores and restaurants are in general far below American standards. Public health measures are few. Tuberculosis, leprosy, and venereal disease are common, but post personnel who have no intimate contact with the population have no cause for concern. There is no AIDS in Pohnpei, but two cases have been reported in other states of the FSM.

Preventive Measures

If you have no distiller, boil water for 10 minutes before drinking. Some Americans choose to take their chances with occasional gastrointestinal distress. No local milk is available, but there is a steady supply of potable ultra-high temperature (UHT) milk from California and Australia. Vegetables should be rinsed with treated water.

Travelers should have up-to-date immunizations. Since hepatitis B is endemic in the Pacific islands, some personnel have chosen to be vaccinated against this disease at their

own expense. This disease is transmitted solely by blood exchange and sexual contact; nonetheless, the possibility, however remote, of an emergency blood transfusion has prompted a few persons to seek out the vaccine. Gamma globulin shots are recommended. There are two pharmacies on island. The pharmacies can have refills shipped in. It is advisable that families bring a good supply of over-the-counter remedies, since local stores may fail to have even common items, or if available, sell them at high prices.

The island is free of malaria and rabies, as well as other insect-borne diseases. Pests encountered are seldom dangerous. Exceptions are venomous centipedes, which inflict painful stings, and jellyfish, which sometimes drift through local waters.

NOTE FOR TRAVELERS

Passage, Customs & Duties

Proof of citizenship, sufficient funds, and onward/return ticket are required for tourist visits up to 30 days. Visits are extendible for up to 60 days total from the initial entry; this extension is sought after arrival in Micronesia. An entry permit may be needed for types of travel other than tourism; the necessary forms may be obtained from the airlines. There is a departure fee of five U.S. dollars. A health certificate may be required if the traveler is arriving from infected area. Travelers are advised to enter and leave the FSM on a valid U.S. passport. The U.S. Embassy in Kolonia does not issue passports; passports for persons living or traveling in the FSM are issued by the Honolulu Passport Agency. For more information about entry requirements of the Federated States of Micronesia, travelers may consult the Embassy of the Federated States of Micronesia, 1725 N Street, N.W., Washington, D.C. 20038, tel: (202) 223-4383 or via the Internet at <http://www.fsmembassy.org>. The Feder-

ated States of Micronesia also have consulates in Honolulu and Guam.

U.S. citizens living in or visiting the Federated States of Micronesia are encouraged to register at the U.S. Embassy in Kolonia, where they may also obtain updated information on travel and security within the country. The U.S. Embassy in Kolonia is located on Kasalehlie Street (the main downtown street). The mailing address is P.O. Box 1286, Pohnpei, Federated States of Micronesia 96941. The telephone number is (691) 320-2187. The fax number is (691) 320-2186.

Pets

The FSM permits imports of dogs and cats from the United States and other countries on the "rabies-free" list. For import of animals from other countries, write the mission for information. The dog or cat must have the following: certificate showing the animal's country of origin; certificate of rabies vaccination; certificate showing that the animal has been dipped for parasites within the past five days; certificate affirming that the animal is free from any signs of infectious or communicable disease.

If transiting Honolulu, the pet will have to be in quarantine for the stopover. Pet-owners should avoid Guam, which also quarantines pets, but which has no facilities or procedures for caring for them. Contact the airline for information on procedures and fees. Other animals may enter only upon issuance of a quarantine permit.

As of early 1995, two veterinarians reside in the FSM. Services, including spaying, can be performed. Owners should bring flea collars, worm medicine, vaccine if needed, and any other desired accessories.

Currency, Banking and Weights and Measures

The national currency is the US dollar. Kolonia has branches of the Bank of Hawaii and Bank of Guam. Weights and measures follow the American system.

MONGOLIA

Major City:

Ulaanbaatar

Other Cities:

Choybalsan, Darhan, Erdenet, Hovd, Shbaatar

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated June 1994. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

Genghis Khan's warriors galloped out of Mongolia's fertile grasslands and windswept deserts to sack both Peking and Moscow. But the far-flung empire they built crumbled, and Manchu overlords tamed the once ruthless horsemen by fostering Buddhist Lamaism. Half of Mongolia's males were monks when a Russian-aided revolution overthrew Chinese rule in 1921.

Today only two monasteries remain in operation. Other changes profoundly alter the nation's ways. Growing industry calls former herdsmen to new skills ranging from flour milling to movie making. In the developing nation, Russia and China vie for influence. But

most Mongols still wander north of the sandy Gobi with their herds of sheep, cattle, camels, and goats. They sleep in felt-covered tents, drink fermented mare's milk, and hold 30-mile cross-country horse races.

MAJOR CITY

Ulaanbaatar

Ulaanbaatar, the capital of Mongolia, is located in north-central Mongolia, some 420 miles (675 kilometers) from the Chinese border at Erlian (by train), and 180 miles (290 km) from the Russian border at Ulan Ude. Its altitude and continental location make Ulaanbaatar the world's coldest capital city.

Ulaanbaatar ("Red Hero") has been so named since the Socialist revolution in 1921. It was formerly called Urga and Ikh Huroo ("Big Circle") when it was the center of the government of its last non-Communist ruler, the living Buddha Bogda Khan. Of the many monasteries extant in 1920, only one remained open during the Communist period.

The present city of some 666,000 inhabitants is typified by wide streets, large, concrete government

structures, movie theaters, cultural facilities, and apartment buildings. The focal point of Ulaanbaatar is Sukhbaatar Square, which is surrounded by Government House, art shops, the new stock exchange, the central Post Office, and two cultural halls, as well as Ulaanbaatar's main thoroughfare, Enkh Taivan Gudumj (Peace Avenue). The Hotel Ulaanbaatar and the Ministry of Foreign Relations are close by. Sukhbaatar Square is dominated by a statue of this Socialist Revolutionary hero, who is buried in a tomb modeled on Lenin's Tomb in Moscow's Red Square. It is a popular place for wedding photos, and easily accommodates 100,000 people.

To the north and south lies the Bogda Khan mountain range, which is trisected in Ulaanbaatar by the Tuul and Selbe Rivers. Train travelers from Russia will pass through the valleys of the Selenge, which ends in Lake Baikal, and Orhon Rivers, passing through rolling steppe country, covered by wild flowers in the early summer, and larch trees in the valleys and hollows. Those traveling on to China by train will soon enter the Gobi Desert, a predominantly flat steppe of scrubby grassland and roving sheep and camel herds.

An average of 236 days of the year are sunny—blue skies and sunshine

Gandan Monastery in Ulaanbaatar

make even the coldest temperatures seem pleasant.

Utilities

Severe fuel shortages and problems with central heating and electrical systems may cause seriously reduced heating levels and power outages in Ulaanbaatar and the cities of Darham and Erdenet during the winter months of November through April. Smaller towns in the countryside may have no heat or electricity at all during these months.

Food

Food supplies, such as imported canned goods, eggs, and meat can be purchased in local dollar stores on an irregular basis but are expensive. Local supplies of other food stuffs are limited.

Shipped foodstuffs available have included oranges, apples, bananas, grapes, potatoes, sweet potatoes,

eggplant, cabbage, carrots, tomatoes, onions, garlic, green beans, bell peppers, cucumbers, and watermelon.

Meat is available at the butcher shop at the Bayangol Hotel in downtown Ulaanbaatar.

Clothing

Because temperatures in Mongolia range from summertime highs of 90°F to wintertime lows of -30°F to -40°F, a wide range of clothing is necessary. Winter clothing needs are especially critical in order to avoid hypothermia. Every family member needs a warm coat, a warm hat, heavy gloves or mittens, a scarf, and boots. Fur coats, leather hats, cashmere sweaters and gloves, camel hair sweaters, cashmere scarves, and sheepskin lined boots are sometimes available in Ulaanbaatar. Quality varies. Summer rains warrant boots, umbrella, and a waterproof coat. Heavy snow is

uncommon in the city, but for trips to the countryside, arctic boots, moon boots, or “pacs” are highly desirable. Thermal underwear, sweaters, a down vest, down booties, wool socks, silk underwear, and wool socks should be brought. If traveling to Ulaanbaatar in the late summer, include some of these items in your airfreight.

A heavy wool topcoat or dress parka for winter and a lighter topcoat for spring and fall are desirable. Warm gloves, boots, and sweaters are essential. Some buildings are uncomfortably warm in winter, while others are barely warm. During unheated months, cold temperatures may still be a problem. Sweaters, vests, and lightweight long underwear that can be worn under daytime wear are all useful.

Plan on wearing the same clothing you would in Washington, D.C. Good shoes and nylons under skirts,

dresses, and suits are common. Although Mongolians tend to be formal dressers, a certain relaxation in styles is occurring in Ulaanbaatar. Slacks are increasingly common. Wool clothing for the winter, and cotton clothing for the summer are worn. A warm, fairly dressy overcoat (down or fur) and wool overcoat are sufficient for nonsummer seasons. Washable woolens and silks are recommended.

Bring clothing for outdoor activities, warm boots, thermal socks, warm gloves or mittens, and thermal underwear. For summer, bring sportswear and a bathing suit.

Bring warm, washable, sturdy playclothes. Zippered snowsuits, arctic boots, mittens, waterproof mitten covers, face masks, thermal underwear, warm socks, underwear, scarves, hats, rain boots, tennis shoes, warm slippers, sweaters, and waterproof pants are recommended. Bring warm pajamas and a robe. Summer clothing should include jeans, shorts, and extra sneakers. Babies also need winter clothing. It is difficult to purchase quality clothing for children in Ulaanbaatar.

Supplies and Services

Since nearly everything is unavailable in Ulaanbaatar, you should plan on bringing all products you normally use, such as toiletries, cosmetics, prescription drugs and medicines, paper products, and household and kitchen cleaning supplies. Bring a large supply of hand/face lotion, sunscreen, and lip balm. Detergent, dish soap, and bar soap made in China are usually available in dollar shops, but may not be acceptable by U.S. standards. Bring a large supply of items that can be given as gifts, as there are a great number of adult birthday exchanges, and gifts are freely exchanged at New Year's.

Local dry-cleaning facilities are inadequate for valuable items. Dry-cleaning may be taken to Beijing.

Men and women use the local hairdressers and barbers. Patrons provide their own hair care products.

The two operating hotels and the Cultural Palace have public restaurants. Privately owned restaurants are also in business. A restaurant offers cultural programs of folk singing, dancing, and music on a monthly schedule. Two of the restaurants will cater events both on and off their premises.

Religious Activities

There are a number of Buddhist monasteries, and informal Christian services are held weekly.

Education

Several foreign schools are now operating in Ulaanbaatar. A new International School opened in September 1992 with grades kindergarten through grade 3. The school plans to add a grade each year.

Sports

No sports facilities are available for unlimited use by post personnel. There are three tennis courts operated by the Mongolian Government, but they have not been used, except by special invitation. The Sports Hall has a Universal Machine and the Lenin/St. Petersburg Club has weights. Several pools are available in Ulaanbaatar.

Members of the international community sometimes organize hikes, fishing trips, and picnics on an ad hoc basis.

Horseback riding is possible for members of the Mongol Horse Society (membership fee is approximately \$10 a year). Some American students attending the university in Ulaanbaatar have joined a swimming club at an indoor pool.

Touring and Outdoor Activities

During the warmer months (May to October), tours may be taken to other parts of Mongolia. These trips are usually arranged through Zhuulchin, the Mongolian tourist bureau. A trip to the Gobi costs about \$200 round trip for transportation and about \$180 for a night's stay in a ger. Each ger will accommodate 1 to 3 people. A trip to the

tourist camp outside Ulaanbaatar, Terelj, costs \$100 for the hotel per person. By special request, Zhuulchin will attempt to make the 160 km round trip to Terelj and back in 1 day.

Ulaanbaatar offers a variety of museums and sites that may be visited. These include the Gandan monastery, Bogda Khan palace, the winter residence of Mongolia's last khan, the Central Museum with its dusty but outstanding collections of dinosaur bones, and the Fine Arts Museum, in which exquisite panel embroideries are on display.

Weekends are nice for trips to the country, where you can walk, climb rocks, birdwatch, fish (a license is necessary), picnic, and enjoy the fresh air. With proper clothing, outdoor activities can be enjoyed all year. The country has nearly limitless areas for camping. In summer months, it is wise to wear long pants to avoid flea bites. Fleas that infest the Mongolian marmot are known to carry bubonic plague.

Excellent cross country skiing and sledding are possible about 20 km from Ulaanbaatar. Because of the dryness and extreme cold, there is not much snowfall in the vicinity of the capital. Fishing, kayaking, and boating (small rubber boats only) may be done on the Tuul River near Ulaanbaatar.

Big game hunting is available in Mongolia, but it must be arranged through Zhuulchin Tours and is expensive.

Photographers find the extraordinary light and exquisite scenery make Mongolia an excellent place to enjoy their hobby. Color film is available locally, but is quite expensive.

Entertainment

Excellent ballet, opera, and symphonic programs are presented in Ulaanbaatar, both by local companies and by visiting performers. The folk song and dance troupe performs three times a week. The Mongolian Circus has a permanent venue

© Dean Conger/Corbis. Reproduced by permission.

View of Ulaanbaatar Mongolia

where visiting circuses may be seen. Tickets are inexpensive and easy to obtain. One of the local restaurants offers cultural programs on a monthly schedule.

Movie theaters show films dubbed in Mongolian. TV programming has been in Mongolian and Russian; some English programming may also be available, as USIA has installed a World Net link at the TV station.

Social Activities

Social life is generally casual, with most informal entertaining done at home. Picnics and holiday activities are popular.

An International Club, established in 1991, occasionally sponsors activities. Visitors to Ulaanbaatar are able to attend functions on a temporary basis. An International Women's Club was established in May 1992. It meets the first Tuesday of each month.

Special Information

While tugriks are used for some transactions, hard currency may be used in most shops and in the Sunday market. Hard currency may be hard to come by, however, so travelers should bring cash and coins to Post. American Express or Barclays' Travelers Checks can be cashed at the Central Bank. Although banks, restaurants, and hotels will accept travelers checks and sometimes Diners Club and Amex credit cards, you will not be able to obtain a cash advance against a credit card. Currency can be exchanged by cashing travelers checks at the bank or at the dollar shops using the "parallel exchange rate." U.S. dollars may be transferred to a personal account at the Central Bank of Mongolia through its associated bank, American Express Bank, or through Chase Manhattan Bank in New York.

OTHER CITIES

Located approximately 390 miles (625 km) east of Ulan Bator, **CHOYBALSAN** is one of Mongolia's major industrial cities. Choybalsan, known as Sainbeisn Hree until 1923, was once an important religious center. The city also benefited greatly from its location on Mongolia's main trading route with Manchuria, Siberia, and China and quickly became a major trading center. The town was renamed Bayan Tmen in 1923 and given its present name in the early 1940s in honor of revolutionary war hero, Horloyn Choybalsan. The city has roughly 39,000 residents. Today, Choybalsan is eastern Mongolia's leading industrial center, producing about 50% of the region's gross industrial output. The city has a diverse industrial base that includes a flour mill, a meat-packing plant, and a wool-scouring mill. Other factories in the city produce foodstuffs, building

materials, and carpets. A coal mine near Choybalsan produces nearly 600,000 tons of coal a year. Most of this is consumed by the city's large electric power plant. Choybalsan is easily accessible by a major east-west highway which links the city with Ulan Bator and the western city of Hovd. An eastern branch of the Ulan Bator Railway links Choybalsan with Borzya, Russia.

The city of **DARHAN** (also spelled Darkhan), located 136 miles (219 km) northwest of Ulan Bator, is Mongolia's second largest city. Darhan is situated in a valley near the Hor Gol River and is nearly surrounded by mountains. The average mean temperature in Darhan is approximately 28°F (-2°C). In 2000, Darhan had a population of 90,000. Darhan is a relatively new city, financed and constructed in 1961 by the former Soviet Union and several Eastern European nations. The city quickly became a major industrial center specializing in the production of construction materials such as reinforced concrete, bricks, synthetic fibers, and wood and steel products. Other factories in Darhan produce consumer goods, carpets, foodstuffs, clothing, sheepskin, and textiles. The city's industries remain productive due to the ample reserves of coal, marble, limestone, sand, and clay located near Darhan. A huge power plant, fueled by coal from the Sharin coal mine, provides energy for the city's industries. In addition to industry, Darhan is the site of an important science institute. This institute, the Research Institute of Plant Growing and Land Cultivation, is dedicated to the improvement of agricultural production and farming techniques in northern regions of Mongolia. Cultural entertainment in the city is provided by the Darhan Music and Drama Theater.

ERDENET, with an estimated population of 58,200 (2000) is located in a mountain valley 230 miles (371 km) northwest of Ulan Bator. The city was founded in 1976 following the construction of a huge copper-molybdenum processing plant. This plant, funded by both the former

Soviet Union and Mongolia, is the largest of its kind in Asia and produces 90% of Mongolia's total mining output. In addition to copper and molybdenum processing, several factories manufacture carpets, foodstuffs, and processed timber. Erdenet is connected via railway with Ulan Bator and is also accessible by air and a paved highway.

With a population of roughly 27,900 (1999 est.), **HOVD** is the major economic center of western Mongolia. The city is located on the Buyant River and is nearly surrounded by the Mongolian Altai Mountains. The origins of the city date back to the early 1800s when Hovd served as a strategic outpost for Mongolia's Manchu rulers. Merchants, eager to trade with the Manchu, soon arrived in the city. Over a span of one hundred years, Hovd developed into a thriving trading center for agricultural products, butter, and wool. These products are still actively traded today. During the twentieth century, several factories were built in Hovd. These industries include a woodworking factory, a food processing plant, and a wool-scouring mill. An agricultural college is located in Hovd and, in the past, the school has hosted international geological expeditions. One of Hovd's major attractions is the Local History Museum, which provides exhibits illustrating the ethnic groups and natural resources of Mongolia's western region.

The small city of **SHBAATAR** (also spelled Schbaatar or Skhbaatar), located near Mongolia's northern border with Russia, is 160 miles (258 km) north-northwest of Ulan Bator. Named for revolutionary war hero, Damdiny Sukhbaatar, Shbaatar is home to several small industries. These industries produce distilled beverages, matches, flour, and building materials. The Ulan Bator Railway connects Shbaatar with Ulan Bator and Naushki, Russia. In 1999, Shbaatar had 22,900 residents. A more recent population figure is unavailable.

COUNTRY PROFILE

Geography and Climate

Mongolia, a large, sparsely populated country located between China and Russia, has an area of just over 600,000 square miles—slightly smaller than the combined area of Texas, Arizona, New Mexico, and Louisiana. The capital, Ulaanbaatar, is over 4,000 feet above sea level. Because of the elevation and distance from any ocean or sea, Mongolia has a continental climate. Marked seasonal, even daily, changes in temperature, numerous high pressure systems, and severe cold occur during much of the year.

The country is divided into three basic zones: the Gobi, a vast, dry grassland in the east and south; the low Hangai mountains of the north; and the high Altai mountains of the west and northwest. Mongolia's largest lake is in Hovsgol Aimag, in the Altai, where elevations range up to 15,000 feet. There are three major river systems: the Tuul, which runs through Ulaanbaatar; the Orhon, into which the Tuul flows and which, in turn, flows into Lake Baikal; and the Selenge, in the northeast.

Population

One-fourth or more of Mongolia's roughly 2.7 million people live in the capital city—many in "ger tent settlements" around the outskirts of Ulaanbaatar. Other cities are Erdenet, the site of a large copper mine, and Darhan. Both cities are north of Ulaanbaatar and served by the rail line that runs from Beijing to Moscow through Mongolia.

About 33% of the population is under the age of 15. The literacy rate is high, but unemployment has become a problem, particularly for young men.

Most Mongolians living in Mongolia belong to the Khalka Mongol ethnic

group. A number of smaller, Mongol ethnic groups reside in scattered areas of Mongolia. About 3 million other Mongols, primarily of the Chahar ethnic group, reside in the Inner Mongolian Autonomous Region of China. Buryat Mongols live in north Mongolia and in the Buryat Autonomous Region of Russia, east of Lake Baikal. Another Mongol ethnic group resides in the Kalmyk Autonomous Republic of Russia. Kazaks make up about 6% of the population and live mainly in the far west.

Public Institutions

Mongolia has 18 "aimags" (provinces) and three autonomous cities (Ulaanbaatar, Erdenet, and Darhan).

A new constitution, signed in February 1992, provided for a reorganization of the local government structure.

The primary legislative body, the State Great Hural, was elected in June 1992. A unicameral body, it has 76 members elected by secret ballot of the citizens for 4-year terms. The Hural will enact, amend, and supervise the implementation of laws; determine fiscal policies; set dates for elections of the Hural and the President; appoint the Prime Minister and other officials; and engage in other activities.

The President, subject to direct election for a maximum of two 4-year terms, is the head of State. He has veto power over legislation; he can propose, in consultation with the majority party or parties, names for Prime Minister; he can propose dissolution of the government, or instruct the government and issue decrees, which must be signed by the Prime Minister; he represents Mongolia in foreign relations, may enter into treaties subject to ratification by the Hural; he may propose legislation; and he serves as commander-in-chief and heads the National Security Council.

The State Great Hural appoints the Prime Minister who heads the gov-

ernment. If the Prime Minister resigns, the government is dissolved.

Independent judges are nominated by a General Council and confirmed by the President, and, in the case of Supreme Court judges, the State Great Hural. There are specialized courts for criminal, civil, and administrative matters, which are not subject to Supreme Court review. The Supreme Court does have power to act as court of first instance for certain criminal and other actions, examine lower court decisions by appeal, examine questions transferred to it by the Constitutional Court or Prosecutor General, provide official interpretations of all laws, except the Constitution, and make judgments on other matters assigned by law. Trials are open, in the Mongolian language, and with right to counsel.

The Constitutional Court's members are appointed by the State Great Hural for 6-year terms. The nine members are nominated by the Hural (3), the President (3), and the Supreme Court (3). The Court interprets the Constitution, acting upon the request of the President, Prime Minister, Hural, Supreme Court, Prosecutor General, or on its own motion. In addition to reviewing the conformity of treaties and legislative acts with the Constitution, the Court may invalidate any that are not in conformity with the Constitution. It may also examine breaches of law by the President, Prime Minister or other Minister, the Prosecutor General, and members of the State Great Hural or Supreme Court.

Aimags each have local legislative hurals in 4-year terms. Each aimag enjoys some rights of self-government. Governors for aimags and Ulaanbaatar City will be appointed by the Prime Minister, and will, in turn, appoint governors of the "soums" (subunits of the aimags, roughly equivalent to counties), and various districts of Ulaanbaatar. Local hurals will legislate local issues.

The new constitution was the outgrowth of earlier events. In the first half of 1990, Mongolian citizens held mass demonstrations in the capital, demanding an end to 70 years of Communist rule and the Socialist system. The government acquiesced, and the first free elections were held in July 1990. Although the Communist Mongolian Peoples' Revolutionary Party (MPRP) won the majority of seats in the national legislature, the reform movement gathered strength. Together with the MPRP, it formed a unity government, which undertook political and economic reforms, culminating in the new constitution described above. In February 1992 to symbolize the changes, the star at the top of the Mongolian flag was removed, and the state seal was changed to a modernist flying horse design.

Mongolia now claims 13 political parties, including the Mongolian Democratic Party, the Social Democrats, the Party of National Progress, the Free Labor Party, and the Green Party, as well as the MPRP.

Arts, Science, and Education

Eight years of education are compulsory, although dropout rates have recently increased. The literacy rate is about 97%.

In addition to the schools operated by the state, private schools are now permitted. In 1991, seven graduate institutes, one trade school, and one technical school began holding classes.

Commerce and Industry

Formerly, most supplies for Mongolian industry were obtained from the various republics of the former U.S.S.R. and members of COMECON. Following the cataclysmic changes in the U.S.S.R. and Mongolia, the quantity and diversity of many supplies, particularly explo-

sives, petroleum and petroleum products, wheat and other food-stuffs, have been insufficient.

Mongolia's own industries include production of cashmere, skins and leathers, furs and animal hair, coal, copper and minerals, and other raw materials.

Natural resources include coal, copper, molybdenum, iron, phosphates, tin, nickel, zinc, wolfram, fluor spar, gold, and uranium. Joint ventures with Western companies in oil exploration and gold mining are under negotiation.

The growing season for this high, dry, northern country is quite short, but wheat, oats, barley, fodder, and some vegetables are grown. The principal industry, however, is livestock production, in which about 45% of the population is engaged.

One major problem Mongolia faces in expanding trade ties with foreign countries is the shortage of bulk transport facilities. One railroad line traverses the country, having a broad Russian gauge track, which necessitates the substitution of wheels at the Chinese border. This rail route allows for shipments to Tianjin, China, in one direction, and to Moscow or Vladivostok in the other. Both Russian and Chinese rail lines are subject to lengthy delays in shipment. International air routes are via Beijing and Moscow, but the amount of freight that may be forwarded by this method is limited by space and high shipment costs.

Mongolia is actively seeking trading partners in the West and receives aid through a group of donor countries known as the Mongolian Assistance Group. A stock exchange recently opened in Ulaanbaatar, and privatization of publicly held companies and the establishment of private businesses should improve Mongolia's prospects for earnings over the middle term.

Transportation

Local

Ulaanbaatar and its environs are served by buses and trolleys. Prices are low, but the buses are generally very crowded and pickpockets are a problem.

Driving in the capital city of Ulaanbaatar can be extremely difficult due to poorly maintained streets, malfunctioning traffic lights, inadequate street lighting, and a shortage of traffic signs. There has been a dramatic increase in the number of vehicles on the road in recent years, but the knowledge and skills of the driving population has not kept pace with the influx of automobiles. There are few taxis in town and there is no regulation of the industry. Most people simply wave down a vehicle and negotiate a price with the driver. There are no car rental companies currently operating in Mongolia, but it is sometimes possible to hire a car and driver. A small donation (US\$1-US\$2) to the driver is expected.

There are few paved roads outside of the capital and driving can be hazardous, particularly after dark.

Regional

Transportation to other cities is by train for communities that abut the tracks, or by air and long-distance bus. Occasionally, you can rent automobiles.

Road conditions in Mongolia vary greatly. One major highway is predominantly paved, but the narrow road has no lane markings. Other roads are dirt. In most rural locations, there are no roads, but tracks across country. Rain makes many routes impassable.

Communications

Telephone and Telegraph

Telephone service in Ulaanbaatar is fair. Busy lines and crossed lines are common, and phones may ring when no one is calling. A call may be made to any location within Ulaanbaatar at no charge. An account

must be established to book calls outside of Ulaanbaatar.

Phones for international calls are available at the Central Post Office and at the Ulaanbaatar Hotel. Delays of 2-12 hours are common in completing international phone calls. Improved international service occurred in late 1993. The country code for Mongolia is 976 and the city code for Ulaanbaatar is 1. Direct dial to the U.S. is available from some phones, but is still difficult.

Radio and TV

BBC, VOA, and Radio Moscow programming are somewhat available, although reception can be affected by weather and sunspot activity. Local programming is in Mongolian and Russian, but some English-language programming is offered occasionally. Mongolian TV programming is SECAM.

Newspapers, Magazines, and Technical Journals

An English-language newsletter, the *Mongol Messenger*, is published weekly. It has news of ongoing events, cultural opportunities, and interviews with Mongolian officials. No international English-language newspapers and periodicals are currently available locally.

Health and Medicine

Medical Facilities

Local hospital facilities may be used for a fee, but often the most basic medicines, equipment, and supplies are unavailable, and sanitation standards do not meet U.S. specifications. The U.S. Embassy recommends that health problems be treated outside Mongolia—either in Beijing or Hong Kong.

Community Health

No unusual health problems or hazards exist. Tap-water may be rusty and is boiled and filtered for drinking and cooking, but dishes may be washed without ill effect. In warm months, flies and mosquitoes are a nuisance. Avoid flea bites in the

summer by wearing long pants and socks in the country (fleas may carry plague germs). The German Embassy maintains a list of blood donors from the international official community.

Preventive Measures

Rabies, hepatitis B, gamma globulin, typhoid, tetanus, and Japanese B encephalitis immunizations are recommended. Boil water for 10 minutes and filter before drinking or cooking.

NOTES FOR TRAVELERS

Passage, Customs & Duties

Most Americans visiting Ulaanbaatar travel through China and on to Ulaanbaatar by train or airplane. It is possible, but not recommended, to travel via Moscow. A short stay in Beijing is recommended, to allow for a break, especially important for train travelers, who face another 40 or more hours in transit before arriving in Ulaanbaatar. Winter train travelers should carry warm clothes, a cup and spoon and instant soup mixes, and one or more good books to enjoy on the train. A "mini booklight" is also a good idea. Five flights are offered between Beijing and Ulaanbaatar each week by Mongolian Airlines (MIAT) and Air China (CAAC). Flight time is about 2 hours.

Bring warm clothing with you. Snowflakes have been seen in the air, even in July. Airfreight from the U.S. can take up to 4 months to arrive due to limited space on flights from Beijing.

A valid passport and entry/exit visa are required. While it is recommended that visitors obtain the appropriate entry/exit visa prior to travel, visas may be obtained at the international airport in Ulaanbaatar and at train stations on the Russian and Chinese borders. Two photographs and a US\$50 processing fee are required. Visitors planning to stay in Mongolia for more

than 30 days are required to register with the police at the Citizens' Information and Registration Center. Visitors who stay longer than the time permitted by their visa may be stopped at departure, denied exit, and fined. A departure tax must be paid at the airport on departure. For current information on visa issuance, fees, and registration requirements, travelers should contact the Embassy of Mongolia at 2833 M Street, N.W., Washington, D.C. 20007, telephone: (202) 333-7117 or <http://www.MongoliaNet.com>.

Travelers arriving or departing Mongolia through China should also be aware of Chinese visa regulations. American citizens are not permitted to transit through China without a visa. For more information, see the Consular Information Sheet for China or contact the Embassy of the People's Republic of China, 2300 Connecticut Avenue, N.W., Washington, D.C. 20008, Tel: (202) 328-2500 or <http://www.china-embassy.org> or the Chinese consulates general in Los Angeles, San Francisco, Chicago, New York City, and Houston.

U.S. citizens residing in or visiting Mongolia are encouraged to register with the Consular Section of the U.S. Embassy, located in Micro Region 11, Big Ring Road, Ulaanbaatar, and to obtain updated information on travel and security within Mongolia. The telephone number is (976)-1-329-095, and the Embassy web site is <http://www.us-mongolia.com>.

Pets

No quarantine period is required for cats and dogs in Mongolia. Bring a health certificate and proof of vaccinations. If the pet weighs less than 16 pounds, including carrier, it may be brought into the passenger compartment on most flights. Pets are not accepted for baggage compartment travel on flights from Beijing to Ulaanbaatar. Arrangements must be made for the Beijing tran-

sit, since pets are not allowed in Chinese hotels.

Neither adequate veterinary service nor pet food is available in Ulaanbaatar. Bring all grooming aids and a supply of commonly used animal medicines. There is a Department of Health where a health certificate may be obtained upon departure for reentry into the U.S.

Be cautious about taking your dog into the countryside. Local fleas may carry bubonic plague.

Currency, Banking and Weights and Measures

The local currency is the Mongolian tugrik. There are two exchange rates, the "official" rate, used by diplomatic missions and foreign businesses, and the "parallel" rate, used by individuals. The parallel rate is more favorable. U.S. dollars are generally accepted in most hotels and restaurants in Ulaanbaatar and other major tourist locations, despite an existing law that requires all commercial transactions to be conducted in tugriks. Some places even refuse to accept tugriks. Travelers may find it useful to carry some cash in tugriks, and visitors to areas outside of Ulaanbaatar should certainly do so. Traveler's checks denominated in dollars are accepted at some hotels and may be converted to dollars or Tugriks at several banks. Credit cards can be used at a variety of hotels, restaurants, and shops, almost exclusively in Ulaanbaatar. Cash advances against credit cards are available at one commercial bank, and international bank wire transfers are also possible.

Banking services are available at the State Bank of Mongolia and at the Trade and Development Bank. Individuals may open foreign currency or tugrik accounts. Exchanges from tugriks to dollars may be limited by frequent shortages of hard currency.

Mongolia uses the metric system.

The U.S. Embassy is located in Micro Region 11, Big Ring Road,

Ulaanbaatar. The telephone numbers is (976-1) 329-095. Americans who register at the U.S. Embassy may obtain updated information on travel, security, and health problems within the country.

LOCAL HOLIDAYS

Jan. 1	New Year's Day

MYANMAR

Union of Myanmar

Major Cities:

Yangon, Mandalay

Other Cities:

Amarapura, Bassein, Bhamo, Henzada, Mogok, Moulmein, Myitkyina, Pyè, Sandoway, Sittwe, Tavoy

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 2001 for Myanmar. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

For over half a century Myanmar (formerly Burma) has been bloodied and bowed by dictators, militia governments, and rebel factions. Successive dictators have tried (but failed) to extinguish any notion of democracy by arresting entire parliaments, suppressing any dissenting voices, and by using forced labor to prop up a failing economy.

As Myanmar moves into the 21st century, it is attempting to abandon its isolationist and socialist politics for economic pragmatism. The ruling junta is trying to perfect the juggling act of wooing foreign investment while simultaneously maintaining its vice-like grip on power. Revolutionists are split

between maintaining the revolutionary rage and settling for food on the table.

The 11th-century Burman kingdom of Bagan was the first to gain control of the territory that is present-day Myanmar, but it failed to unify the disparate racial groups and collapsed before a Tartar invasion in 1287. For the next 250 years, Burma remained in chaos, and the territory was not reunified until the mid-16th century.

In 1852 Burma became a part of British India, and the British built a colonial infrastructure and developed the country into a major rice exporter. Indians and Chinese arrived with the British to complicate the racial mix. In 1937, Burma was separated from British India, and there was nascent murmuring for self-rule. In 1948, Burma became independent and almost immediately began to disintegrate as hill tribes, communists, Moslems, and Mons all revolted.

In 1987, massive confrontations between prodemocracy demonstrators and the military resulted in a military coup. The new leader promised elections in 1989, but the junta prevented the elected party leaders from taking office.

The Union of Burma was renamed the Union of Myanmar in 1989 in order to reflect the multi-racial make up of the country.

Agitation for reform and real democracy is still being fought on the streets of Yangon. Old guard revolutionists insist that independence can only be won through maintaining embargoes and upholding the sanctions on tourism, whereas more practical proindependent supporters find themselves agreeing that "opposing foreign aid and investment and opposing tourism is like breaking the rice bowl of the man on the street."

Because of the government's clampdown on outside influences, it is one of the least Western-influenced countries in the world. Many people mistake this for quaintness, but no one should be blinded to the political realities that created this situation.

Myanmar has some magical sights, incredibly friendly people, and offers a glimpse of a bizarre Orwellian society that has withdrawn from contact with the late 20th century.

MAJOR CITIES

Yangon

Yangon (formerly Rangoon) is a British and Indian creation. Although Myanmar villages existed near the great Shwedagon Pagoda for many centuries, modern Yangon dates from about 1852, when it was designated the capital for British-held Lower Myanmar. British firms were brought in to develop the economy of the new colony, and Indian workers and business representatives followed in great numbers. The Myanmar remained a minority in Yangon until after independence in 1948, and even today Yangon's atmosphere is far more multiracial than that of other Myanmar cities. Yangon's population is a mixture of Myanmar, Indians, Karens, and Chinese, with a few non-Myanmar ethnic groups.

The golden Shwedagon Pagoda, dominates the Yangon skyline and landscape. Located within the city are Royal Lake and Inya Lake, the shorelines of which are dotted with large, handsome houses in varying states of repair. Many of Yangon's public buildings are attractive. Streets were widened and public parks spruced up after the 1988 military takeover.

Utilities

Electrical power in Myanmar is 220v, 50-cycles. Brownouts, blackouts, and voltage fluctuations are common. Telephone service is sporadic.

Food

Imported canned goods are sold locally. Supplies are not reliable, and prices are extremely high. Fresh beef, lamb, pork, chicken, and seafood are sold but must be carefully prepared. Most fresh food items are bought in the local market. Excellent crab, shrimp, fish, and pork are available year round. Fresh vegetables available include cabbage, string beans, carrots, potatoes, squash, beets, spinach, onions, okra, eggplant, cucumbers, toma-

atoes, lettuce, cauliflower, and sometimes broccoli and snow peas. Some people bring seeds for home vegetable gardens. Excellent rice is available and inexpensive. Avocados, watermelons, mangoes, papayas, pineapples, pamelos, mangosteens, strawberries, oranges, sweet limes, and tangerines can be purchased in season. Bananas and limes are sold year round.

Many items can be bought in Bangkok while out of the country, but they can be expensive and airfare is high.

Clothing

Clothing should be light, summer type fashion and washable. Very few items of Western clothing are available in shops. Bring what you need with you and use mail orders for replenishment. Bangkok is the only nearby source for ready-made clothing and footwear. Tailor made wear of excellent quality is available in Bangkok and Hong Kong. Yangon has a few acceptable dressmakers, and a limited selection of Myanmar silk and cotton is available. Those expecting to participate in sports such as golf and tennis should bring appropriate clothing and footwear with them. Bring swimwear.

Men: Most wear shirts without ties or safari suits to the office. Occasional "informal" receptions call for a business suit. Social functions are "casual," with sport shirts and slacks prevailing.

Women: In the evening, dresses and skirts are worn for both casual and informal social functions. What is appropriate for social events in the U.S. will be suitable in Myanmar, except for short skirts and dresses.

Around Yangon, skirts and modest attire are expected. Some women wear nylon hose in the cooler season. Hats are not worn. Light evening wraps, shawls, or sweaters are occasionally needed during the cool season or for trips to Upper Myanmar. Umbrellas are necessary

for the monsoon season and are sometimes used for sun protection. Raincoats are not practical in the tropical heat.

Children: Although the international school has no uniform dress code, dress, in general, should be in line with the Myanmar sense of modesty. Girls wear dresses, skirts, slacks, jeans. Boys wear long pants, jeans, and shorts. Shorts are needed for physical education by both boys and girls.

In high school, girls are not allowed to wear shorts to school except for physical education. They wear dresses, skirts, slacks, and jeans. Boys are allowed to wear the longer length shorts plus slacks and jeans. Sneakers, sandals, and thongs are common footwear; bring a good supply of children's shoes along with you.

Supplies and Services

Local dressmakers and tailors are satisfactory. Services are reasonable, and quality ranges from fair to excellent. Local sewing supplies such as thread, elastic, zippers, buttons, snaps, and interlining are of poor quality, and the supply is limited.

Laundry is usually done in the home by a maid. Good dry cleaning is available. Some personnel carry their dry cleaning along on occasional trips to Bangkok, Singapore, or Hong Kong and have it done there.

A few hairdressers are available, but styling, cutting, and cleanliness are below par. Bring any special preparations needed for hair care. Electrical appliance repair is poor; spare parts are not available.

Domestic Help

Servants' wages are reasonable. For a family, the staff usually includes a cook/bearer who cooks, serves meals, and cleans; a wash nanny to do washing and ironing; and a gardener. A driver is also helpful, particularly if children must be taken to school. A family with small children may also need a nanny to care

Cory Langley. Reproduced by permission.

Swedagon Pagoda with gilded stupas in Yangon

for the children. The employer traditionally assumes responsibility for the health and welfare of servants, and often of their families.

Religious Activities

Yangon has Anglican, Baptist, Catholic, Methodist, Armenian, and Seventh-day Adventist churches, a Jewish synagogue, and a Jehovah's Witnesses Assembly Hall. English services are conducted regularly.

Education

The International School of Yangon (ISY) is a private, coeducational day school that offers an educational program from prekindergarten through grade 12 for students of all nationalities. The curriculum is that of a standard college preparatory U.S. elementary, middle, or high school. Students at the elementary level (grades 1 to 5) have daily classes in English (reading, writing, speaking, and listening), mathematics, social studies (geography, history, and social science), and science. These classes are usually

taught by the homeroom teachers. Students at the middle-school level (grades 6 to 8) begin a transition to high school. They study the same subjects as in elementary school, but may be taught by different, subject specialist teachers. Students at the high school level (grades 9 to 12) earn credits each semester in order to accumulate at least 21 credits over 4 years and earn a high school diploma. Music, art, computer studies, and physical education are offered at all grade levels. English-as-a second-language, is offered to students in grades 3 to 12.

Students in the upper grades have the opportunity to study French and Spanish as foreign languages. The testing program includes the Iowa Test of Basic Skills (grades 3-8) and the Tests of Achievement and Proficiency (grades 9-11). The PSAT, SAT, and TOEFL exams are regularly offered.

College Entrance: 95% of ISY graduates attend a 4-year college.

Recent graduates have matriculated at Bradley University, University of San Francisco, King's college, Ithaca College, Duquesne University, Syracuse University, Tufts University, Purdue University, Colorado School of Mines, Texas' Women University, University of Houston, State University of New York, Hamilton College, Fordham University, Queen's University, McGill University, Carnegie Mellon University, Duke University, Cornell University, Bucknell University, University of Pacific, Tulane University, Colorado College, University of California Santa Cruz.

ISY is fully accredited by the Western Association of Schools and Colleges and by the East Asia Regional Council of Overseas Schools.

There were 46 full-time and 3 part-time faculty members at the beginning of the 1999-2000 school year, including 30 U.S. citizens, 15 host country nationals, and 4 third-country nationals.

Enrollment at the beginning of the 1999-2000 school year was 342 (pre-kindergarten through grade 12), including 40 U.S. citizens, 108 host country nationals and 194 children of other nationalities.

The school is governed by a 9-member Board of Management. Eight members are elected for 2-year terms by the Parents Association, the sponsors of the school. Membership in the association is automatically conferred on the parents or guardians of children enrolled in the school. One member of the Board of Management represents the U. S. Ambassador. ISY is in practice sponsored by the U.S. Embassy. The school is nonprofit and nonsectarian. It is unofficially permitted to operate by the Myanmar Government.

The school consists of six buildings on a 4-acre site in a residential area of Yangon. It has a well-equipped library, two music rooms, 2 art rooms, 2 computer rooms, 2 science laboratories and a multipurpose room. All indoor facilities are air-conditioned. There is a playground, a playing field, and 2 basketball/volleyball courts. No boarding facilities are available.

Annual tuition rates for 2000-2001 are as follows: prekindergarten; \$1,706, kindergarten; \$5,640, and grades 1 to 12, \$7,890. These fees are payable in U.S. dollars only. There is a registration fee of \$1,000, payable by each new student. In addition, a capital fee of \$4,000 per new student (grades 1-12) is levied. The capital fee for kindergarten is \$1,000. If a child has paid \$1,000 in kindergarten, he/she will be asked to pay the remaining \$3,000 when he/she enters first grade. Fees are payable by semester.

The school year is divided into two semesters. In 2000-2001, the dates are August 9-December 22 and January 15-May 30. Classes meet Monday through Friday from 8 a.m. to 2:30 p.m. After-school activities often extend the day to 3:30 p.m. or later.

Special Educational Opportunities

Art classes are available by excellent Myanmar artists, but bring your own supplies. Local special meditation centers accept foreigners as students. Private tutoring can also be arranged for various foreign languages and for piano and guitar lessons. Inexpensive guitars are available locally but are of poor quality, and pianos can be rented but their quality ranges from fair to poor.

Burmese-language classes are available as are private tutors are available.

Sports

Yangon's climate and facilities make outdoor sports possible and enjoyable except during the 2-3 months of heavy monsoon. Almost every sport is available in Yangon.

From November to March, softball is a major part of the sports scene. The AERA sponsors a slow-pitch league with men's and women's divisions, and the international and Myanmar communities field teams. There are also T-Ball and softball leagues for children ages 5-13. Bring shoes, gloves, and caps. Metal cleats are not permitted. The leagues play their games on the weekends and provide a spectator sport for the whole community.

In May, volleyball succeeds the softball season at the AERA Club. The game is enjoyed by most of the American and international community.

Tennis is very popular among the American and international community. Tennis is played mainly at American homes or compounds with courts. Good tennis racquets are sold locally. Tennis shoes wear out rapidly on the cement courts. Excellent instruction is available at reasonable fees.

Two 18-hole golf courses, the Myanmar Golf Club and the Yangon Golf Club, are located 10 miles and 16 miles, respectively, from downtown. Clubs, gloves, and bags are not

available, but golf balls are sold occasionally at the course. Golfers should bring umbrellas, canvas shoes, and moisture-proof shoes as the courses are very wet during the rainy season. Instruction is inexpensive and good.

The Yangon Sailing Club on Inya Lake provides small sailboats, 12-foot Sharpies and 14-foot Raters, for members. Old hands are willing to help beginners. Races are held weekly.

The Yangon Riding Club is located at the Kyaikkasan Grounds about 3-4 miles from downtown Yangon. English riding instruction is available from Myanmar riding masters. The horses and livery are not the best however. Another riding Club is situated downtown by the Mingala Market. It is not recommended for beginners as the horses are not well trained.

Myanmar travel regulations severely limit available hunting areas, and permission to import firearms is extremely difficult to obtain. Bird watching opportunities are good, but vary seasonally and by location. Despite travel restrictions in more remote areas, dry-season viewing is good at the Moyhingyi bird sanctuary, Hlawgar Reservoir near Yangon, at Pagan, and at the Botanic Gardens at Maymyo, among other places.

Individual hobbies and interests are more important here than in the U.S. A quilting and sewing group of ladies gather on a regular basis. Bring all hobby supplies as little is available locally. The International School has a good library for a school of its size; the British Embassy library also has some children's books. Families should include a supply of children's books in their effects. Bring along a TV and VCR (VHS type) for additional home entertainment.

Touring and Outdoor Activities

Travelers, except those on tourist visas, who wish to tour up country must submit their plans to the Min-

Temples atop a mountain in Mandalay

Cory Langley. Reproduced by permission.

istry of Foreign Affairs 10 workdays in advance. Government approval can sometimes be obtained and arrangements made for large groups to rent riverboats for a day's trip.

Because Yangon is not typical of Myanmar, visits to other points of interest are recommended. Mandalay, the last capital of the Myanmar kings, still retains historical and cultural interest. It is reached by plane (55 minutes). Air schedule reliability varies. Travel by car to Mandalay takes 14-16 hours over poor roads. It is a 14-17 hour trip by overnight train—the rail bed is rough.

Many places of historic, cultural, and artistic interest are in Mandalay or within easy driving distance. Ancient and modern pagodas dot the landscape, particularly in Sagaing, across the Irrawaddy River, and Ava and Amarapura, all former Myanmar capitals. Photography buffs can find many interesting scenes.

Maymyo, a British hill station and summer capital before independence, is in the mountains 42 miles northeast of Mandalay and provides a welcome relief from Mandalay heat. Maymyo has an excellent 18-

hole golf course, and tennis is also popular in the area.

Pagan, the ancient capital during the golden era of Myanmar history (C.E. 10th-13th centuries), is the site of hundreds of pagodas, many in ruins, but many still preserved as religious and cultural monuments. It may be reached by a daily flight from Yangon (1-1/4 hours). For hardy adventurers, Pagan can be reached by river steamer from Mandalay (12 hours).

The other hill station of Kalaw and the Shan Plateau town of Taunggyi have cooler temperatures than Yangon and Mandalay and offer lovely mountain scenery and colorful market/bazaars. Taunggyi may be reached by plane (1 hour, 20 minutes) from Yangon, plus a 45-minute bus ride. Kalaw, approached on the same plane ride, requires 2 hours by bus. Inle Lake lies slightly to the south. Its villages and pagodas, which are built on the lake are a favorite tourist spot. Sandoway, on the Arakan coast, is Myanmar's finest accessible beach and is popular with both Myanmar and Westerners. Regular flights, 4 days a week, are available to Sandoway (45 minutes). However, during the beach season the Tourist Agency makes a special arrangement with the Air-

ways Corporation to accommodate passengers, and flights are available daily but schedules are irregular.

Another seaside resort is Chaung Tha in the Bassein District. This place is conveniently accessible by road. One can drive in either private or rented vehicles. The journey takes approximately 7 hours and is open daily during the summer season. During the rainy season the road is rough. This seaside beach was recently opened by the host government and is popular with Myanmar and foreigners. Accommodations are available and fairly modest.

Regional places of interest outside Myanmar include Bangkok, Penang, Angkor Wat, Kuala Lumpur, Bali, Cameron Highlands, Jakarta, Singapore, Calcutta, New Delhi, and Kathmandu. Sightseeing in Yangon should include the numerous pagodas as well as local shops and bazaars and the various artisans who hand-fashion Myanmar goods. Children enjoy the zoo. An interesting circular train trip around Yangon takes 2 hours.

During the year several colorful festivals are held, such as the Festival of Lights and the 4-day Water Festival (when everyone gets drenched). Other interesting cultural events are the Indian fire-walking ceremonies, the Myanmar pwes (plays), Myanmar dancing, and puppet shows.

Myanmar is a Buddhist country, and visitors are expected to show respect to the Buddhist pagodas and Buddhist monks, easily identified by their saffron robes. Visitors to pagodas must remove shoes and socks before entering roofed walkways on grounds leading to the pagodas.

The photographer will find many interesting scenes in Myanmar. Local processing of black and white and color film is good. Batteries and other camera accessories are not normally available locally.

Cory Langley. Reproduced by permission.

A street scene in Myanmar

Entertainment

Six movie theaters in Yangon feature Myanmar, Indian, European, Chinese, Japanese, and American films. Projection equipment is good, but theaters are hot and uncomfortable, and the doors are locked during the shows, which in case of fire, would be extremely dangerous.

Social Activities

The American community in Yangon consists mainly of Embassy personnel and teachers at the school and their dependents. A few Americans are assigned to Myanmar by various U.N. agencies and NGOs. The total American community, including children, does not exceed 180.

Much of the community's social life centers around the AERA Club facilities, the Australian Club and the British Club. Numerous hotels around town also offer an alternative to the Clubs. These facilities are supplemented by extensive home entertaining.

Yangon's two golf clubs and the sailing club provide pleasant surroundings for meeting Myanmar and third country nationals. The International Cultural Group, an organization of Myanmar women and Embassy wives, sponsors a wide

spectrum of activities with an international flavor. The U.N. Women's Association offers a way to make contact with a wide variety of expatriates and local women.

Mandalay

Mandalay was founded as a new royal capital (replacing Amarapura) in 1860, and the picturesque palace walls and side moat still are near the heart of the city. Even though Mandalay did not long endure as the last royal capital—it was taken over by the British when they annexed all of Upper Myanmar in 1886—it remains a major center of the country's cultural and religious life.

Moreover, with its location on the Irrawaddy River near the geographic center of Myanmar, and its urban population which is close to 535,000, Mandalay, Myanmar's second largest city, is the most important administrative, commercial, and political city in the northern section of the country. Situated over 400 miles north of Yangon, the climate is both hotter and drier than that of the capital. Mandalay was heavily damaged during World War II, when shelling destroyed the royal palace and several pagodas.

Life is relatively relaxed in Mandalay, more attuned to the pace of the horse cart than to the automobile. Few Westerners live in the city. There are no bright lights, but for people who can forgo some of the Western amenities and adjust to its slower tempo, Mandalay has a certain quiet charm and hospitality. It provides an intimate glimpse into an Asian society.

There are many places of historic, cultural, and artistic interest in Mandalay or within easy driving distance. The city is noted for the Arakan pagoda, which is built around an ancient shrine. Ancient and modern pagodas dot the landscape, particularly in Sagaing, across the Irrawaddy River, and in Ava and Amarapura, which were all former royal capitals. Photography buffs can find many interesting scenes. A group of sacred buildings called the Seven Hundred and Thirty Pagodas was built during the reign of King Mindon, 1853–1878. Maymyo, a British hill station and summer capital before independence, is in the mountains 42 miles northeast of Mandalay, and provides a welcome relief from Mandalay's heat. Maymyo has an excellent 18-hole golf course, and tennis is also popular in the area.

Modest accommodations in hotels or government-owned circuit houses are available at some tourist spots. Trips to other parts of Myanmar, and overnight stops between Yangon and Mandalay or Kalaw present some difficulties.

OTHER CITIES

AMARAPURA is located on the Irrawaddy River in central Myanmar, just south of Mandalay and 325 miles north of Yangon. Founded in 1782, Amarapura was the capital of Myanmar from 1783 to 1823 and, again, from 1837 to 1860, and is considered one of the country's oldest centers of civilization. The city's royal palace, magnificent temples, and fortifications are in ruins. Today, with an estimated popula-

tion exceeding 150,000, Amarapura is a silk-weaving center with various handicraft industries.

BASSEIN is located in southern Myanmar, about 85 miles west of Yangon. Situated at the western edge of the Irrawaddy Delta, it is accessible by large vessels and is one of Myanmar's chief ports. A rice-milling and export center, with 145,000 residents, Bassein also handles teak and bamboo. A fort was established here by the British in 1852. The city was occupied by the Japanese during World War II.

BHAMO, situated in northeastern Myanmar on the Irrawaddy River, is the head of navigation on the river. Important for its ruby mines, Bhamo is also the market town for the surrounding hill region. Located 175 miles north of Mandalay, Bhamo was historically significant as a center for overland trade with China. During World War II, the Stillwell Road linked Bhamo to Ledo, India. The population is estimated at more than 25,000.

HENZADA is the capital of Henzada District, 75 miles northwest of Yangon. It is connected by rail with Bassein. Henzada is the center of rice and tobacco cultivation.

MOGOK, about 65 miles north of Mandalay, is a small town known as the centuries-old center of the country's ruby trade.

MOULMEIN, the country's third largest city, is located in southeastern Myanmar almost directly across the Gulf of Martaban from Yangon. Moulmein has a population of 220,000 and, as a river port and commercial center, it has shipyards and teak mills. The chief town of British Myanmar, Moulmein is one of the few places where trained elephants are still used in lumber mills.

MYITKYINA is located on the Irrawaddy River in northern Myanmar, near the Chinese border, and about 240 miles north of Mandalay. The most important town in northern Myanmar, Myitkyina is a trade

Local restaurant in Yangon

center for teak and jade, as well as the extreme northern terminus of a railroad line from Yangon. It was captured by Allied troops in August 1944 after a 78-day siege, marking a turning point in Myanmar's liberation from the Japanese. The population is estimated at more than 20,000.

PYÈ (also called Prome) is located on the Irrawaddy River in south central Myanmar, about 240 miles south of Mandalay and 150 miles north of Yangon. Pyè is one of the oldest cities in Myanmar, founded in the eighth century; it became part of British Myanmar in 1852. Today, Pyè has an estimated population of more than 80,000, and is a commercial town and port, with railroad connections to Yangon. Visitors can see the ruins of ancient Pyè near the modern city.

SANDOWAY, on the Arkan coast, is the finest accessible beach in Myanmar, and is popular with both the Myanma people and Westerners. Daily flights are available during the tourist season, which usually lasts from November through May.

SITTWE, formerly called Akyab, is located on the Bay of Bengal, 325 miles northwest of Yangon. Originally a small fishing village, it

became a port for exporting rice after being occupied by the British in 1826. Sittwe has a population of approximately 108,000. Sittwe is an important port and rice-milling center.

TAVOY, situated on the left bank of the Tavoy River, is about 160 miles west of Bangkok, Thailand. The city is an important port and exports tin ore.

COUNTRY PROFILE

Geography and Climate

Myanmar (also known as Burma), with an area of 262,000 square miles (slightly smaller than Texas), is the largest country in mainland Southeast Asia. Yangon (also called Rangoon), the capital (population about 5.5 million), is Myanmar's largest city. Mandalay (population 700,000) is second. Myanmar's population is about 49 million.

Yangon is Myanmar's most important port for both domestic and foreign trade. Located on the Yangon River, 30 miles north of the Gulf of Martaban, it serves not only ocean-

going freighters and tankers but also river steamers and country craft that ply Yangon's major waterways. The city is built on flat lowland bounded on three sides by the Pazundaung Creek and the Yangon and Hlaing Rivers. The surrounding countryside consists of rice paddies, patches of brush, and occasional rubber plantations.

Located in the Southeast Asian monsoon belt, Yangon has a tropical climate with three distinct seasons: monsoon, cool, and hot. During the monsoon season, mid-May through mid-October, Yangon receives most of its 100-inch plus average annual rainfall. Temperatures are moderate (75°F-90°F), but relative humidity is high. During the monsoon, dampness and mildew can cause serious damage to clothing, furniture, books, records, electrical appliances, and leather goods.

In mid-November, after a brief period of warm, humid weather, the cool season begins from then until March, weather is pleasant (60°F-90°F) with lower humidity and almost no rain. Days are sunny and clear; nights are cool. In March, temperatures and humidity rise until the monsoon begins in mid-May. During the March-May hot season, the weather is hot and humid, usually rising in the day to over 100°F. As at most tropical posts, insects and snakes are numerous year round.

Population

Most of Myanmar's 42 million people are ethnic Myanmas. Shans, Karens, Kachins, Chins, Mons, and many other smaller indigenous ethnic groups form about 30% of the population. Indians and Chinese are the largest foreign groups. Although Burmese is the most widely spoken language, other ethnic groups have retained their own languages. Many people in Yangon speak English. The Indian and Chinese residents speak various languages and dialects of their homelands: Hindi, Urdu, Tamil, Bengali, Mandarin, Fukienese, and Cantonese. The variety of racial

types, languages, customs, and other cultural manifestations creates a cosmopolitan atmosphere. About a hundred non-U.S. Government Americans and 60 U.S. Government employees and dependents live in Myanmar. Yangon's diplomatic community includes employees of the U.N. and its specialized agencies and officials from 26 embassies.

Public Institutions

The Union of Myanmar consists of 14 states and divisions. Administrative control is exercised from the central government at Yangon through a system of subordinate executive bodies.

The people of Myanmar continue to live under a highly repressive, authoritarian military regime. The international community widely condemns that regime for its serious human rights abuses. The State Peace and Development Council (SPDC), Myanmar's ruling military junta since 1997, has made no significant changes in the governing policies of its predecessor, the State Law and Order Restoration Council (SLORC), which seized power in 1988. Elections for a civilian government were held in May 1990. Although the National League for Democracy (NLD) won over 80% of the parliamentary seats, the military refused to cede power to the civilian government. Instead the SLORC and the SPDC have attacked the coalition of winning parties and their leaders through intimidation, detention and arrests. The military government appears determined to ensure a dominant role for the military services in the country's future political structure.

Arts, Science, and Education

The population of Myanmar includes seven major ethnic groups and a number of smaller groups. Almost 70% are Burmese, a Tibeto-Mongolian people. The myths, traditions, and religions derive largely from India and have mixed with folk

traditions of Myanmar's varied peoples to form a unique Myanmar culture. The merger of Hindu and Buddhist influences is seen in the ruins of Pagan and in the dramatic fine arts of today, which include music, dance, puppetry, painting, tapestry, and sculpture.

Myanmar's long and continuing isolation has degraded its scientific resources and capacity. Although medical schools continue to produce medical personnel with basic knowledge, the public health system has deteriorated because of under funding and neglect. Two major technical universities (plus a military science and technology school) have engineering programs, but facilities and resources are old and outdated.

Myanmar has 105 institutions of higher learning, including 16 universities, 4 professional institutes, 9 degree-granting colleges, 10 intermediate colleges, and 19 education colleges under the Ministry of Education. Other ministries administer institutes of medicine, dentistry, pharmacy, nursing, animal husbandry and veterinary science, agriculture, and forestry. Many of the universities and colleges, however, have been closed for lengthy periods during the 1990s. More than two thirds of the university population is now in distance learning programs. Instruction is in English or Burmese, depending on the subject. Few foreigners attend Burmese institutions of higher learning. Those who are admitted generally attend the University of Foreign Languages and study some aspect of the Burmese language. A university for the propagation of Theravada Buddhism has opened and encourages enrollment by foreigners interested in Buddhism.

Commerce and Industry

Myanmar is a resource-rich country with a strong agricultural base. It also has vast timber and fishery reserves and is a leading source of gems and jade. Tourist potential is great but remains undeveloped because of weak infrastructure and Myanmar's pariah state international image, due to the junta's

human rights abuses and oppression of the democratic opposition.

Long-term economic mismanagement under military rule has prevented the economy from developing in line with its potential. Myanmar experienced 26 years of socialist rule under Dictator General Ne Win from 1962-1987. In 1988 the economy collapsed and prodemocracy demonstrators took to the streets. The military junta that assumed control, the State Law and Order Restoration Council (SLORC), violently put an end to the civil unrest and pledged to move toward a market based economy. Although significant economic reforms resulting in strong private sector growth were enacted in the early 1990s, the state remains heavily involved in economic policy and additional, much needed reforms have not been forthcoming. The benefits of economic liberalization have not been widely shared. The vast majority of Burmese nationals subsist on a standard of living not much different from 10 years ago. Also, rampant inflation caused primarily by public sector deficit spending has eroded economic gains for many persons.

After the military junta disavowed the results of the 1990 parliamentary election, which was won overwhelmingly by the National League for Democracy led by Daw Aung San Suu Kyi, the U.S. imposed a host of broad-reaching sanctions against the regime. The U.S. opposes the extension of international financial assistance to Myanmar, prohibits military sales, suspended economic aid and commercial assistance programs, banned the issuance of U.S. visas to members of the military elite, and downgraded our representation in Yangon from Ambassador to Charge. In 1997, by Executive Order, the President banned new U.S. investment in Myanmar. In addition to Federal sanctions, 26 state and local governments have enacted selective purchasing laws that penalize companies doing business in Myanmar. A number of other countries, including the EU, Canada, Australia, Japan and

Korea have enacted some form of sanctions against the regime.

Myanmar remains a primarily agricultural economy with 43% of GDP derived from agriculture, livestock and fisheries, and forestry. Manufacturing constitutes only 9% of recorded economic activity, and state industries continue to play a large role in that sector. Services now constitute nearly 19% of GDP. According to official figures, GDP growth averaged over 5% annually throughout the 1990s. However, inflation exceeded 30% in many of those years. Myanmar runs a growing annual trade deficit, and foreign exchange reserves are in short supply.

The government continues to monopolize key sectors, including international rice and timber sales. Efforts to privatize state industries have been largely halted in recent years. In the past few years, the military has strengthened its hold over the economy through the activities of Myanmar Economic Corporation (MEC) and Myanmar Economic Holdings Ltd. (MEHL). These two military conglomerates control a large portion of private sector activity, including a number of key joint venture corporations. The military suspended independent audits of MEC and MEHL in 1999.

Under the military junta (renamed the State Peace and Development Council in 1997), the move to a market economy appears to have favored crony capitalism. A handful of companies loyal to the regime have enjoyed policies that promote monopoly and privilege among few. For example, the National Entrepreneurs, about 20 construction companies that signed on to develop farmlands, were given special vehicle import permits and discounted interest rates on commercial loans in FY 98/99. Companies not in league with the military leadership have found it preferable to keep a low profile.

Economic growth slowed considerably after FY 96-97. Foreign investment approvals declined by 98% in

FY 98-99, due in part to the effects of the Asian financial crisis. The economy continues to suffer from severe macro-economic imbalances due primarily to faulty economic management. The official exchange rate overvalues the Burmese kyat by 54 times the market rate, causing serious distortions in economic accounts and official data. The government maintains a loose monetary policy, cutting the interest rate three times in the past 2 years to prime the economy despite rampant inflation. Interest rates are sharply negative in real terms. General Maung Aye, Commander in Chief of the Armed Services, has executed growing control over trade and regulatory policy via the Trade Policy Council, an extraministerial committee overseeing economic policy. Since 1998, trade policy has become more restrictive. Due to various disagreements with Thailand, the Myanmar-Thai border has been shut down for months at a time on several occasions.

During the past 10 years of military rule, socioeconomic indicators have shown scant improvement. According to the World Bank, per capita income is about \$300. The number of families in absolute poverty is nearly 23%. Only 60% of the population have access to safe drinking water. Malnutrition, infant and maternal mortality all remain miserably high. The military government has dedicated fewer and fewer resources to health and education. Government expenditures on these two sectors combined total only 1.2% of GDP. In contrast, 40% of the government ministries budgets is dedicated to defense.

Singapore is the largest investor in Myanmar, with concerns concentrated in hotels and tourism and light manufacturing, such as beverages and tobacco. Thailand is another large investor. Western investment in Myanmar has focused largely on the extractive industries of oil and natural gas, and mining. The single largest foreign investment in the country is the \$1.2 billion Yadana natural gas pipeline from the offshore Yadana

natural gas reserve to Thailand. That investment is operated by Total Fina of France, and is jointly owned with UNOCAL of the U.S., PTT of Thailand, and Myanmar Oil and Gas Enterprise (MOGE). A second offshore natural gas pipeline to Thailand, the Yetagun pipeline, is still under construction. It is operated by Premier Petroleum of the UK and is coowned by a consortium involving Nippon of Japan, PTT of Thailand, Petronas of Malaysia, and MOGE.

Myanmar exports primarily commodities, with pulses and beans, prawns and seafood, teak and hardwoods, sesame seeds, corn and rubber accounting for 50% of annual export earnings. In recent years, the production of pulses and beans, a largely free-market crop, has soared. Rice production and trade, which is heavily regulated by the state, has not shown similar gains. Uncut teak logs remain a top export.

Foreign trade has expanded since most trade was privatized and cross-border trade was legalized in late 1988, but Myanmar continues to operate a large trade deficit. Myanmar's chief trading partners are Singapore, Japan, Thailand, China, and Bangladesh. The U.S. has a minor trading relationship with Myanmar. However, Myanmar's exports of garments and textiles to the U.S. has more than doubled in the past 2 years, reaching \$186 million in FY 98/99.

Labor unions have been forbidden since the 1988 military takeover. Myanmar is under investigation by the International Labor Organization (ILO) for its forced labor practices.

Transportation

Automobiles

Cars older than 10 years may not be imported. Smaller cars and four-door cars have a better resale value. Fuel-injected vehicles are not recommended. Air-conditioning is a must. Cars shipped to Myanmar

should have good tires and a good battery, since replacements are difficult to find, take time to receive, and are costly to ship.

Those shipping a car should bring a factory handbook and a supply of spare parts, including spark plugs, fan belts, ignition kits, oil and air filters, wiper blades, and a carburetor kit. Repair parts are not always available in Yangon but can be ordered or obtained from Bangkok, Singapore, Tokyo or the U.S. Local mechanics vary in ability from poor to good. Many are skilled in "make do" repairs that keep vehicles operating when parts are not available.

Local

Buses are unsafe and overcrowded. Taxis are available, not necessarily safe, and rates must be negotiated.

Regional

Mingaladon Airport, about 13 miles (30 minutes) from the Embassy in downtown Yangon, has domestic and international flights. Airlines servicing Myanmar are Myanmar Airways (UB), Thai Airways (TG) and Silk Air (MI), plus 4-5 smaller airlines with regional flights. UB and TG have daily flights to and from Bangkok, but flight confirmations usually cannot be made from the U.S. because of the lack of a computer system.

Internal air service is available but risky. Only Mandalay Air and Yangon Air are approved for USG travelers. Travel by car and train is possible in the dry season, but roads and rail tracks are subject to wash-out in the rainy season. Gasoline available outside of Yangon is leaded and 80-82 octane.

Communications

Telephone and Telegraph

International, in-country and local telephone service in Myanmar is unreliable and expensive. For example, an International call to the U.S. ranges between \$4.50-\$7 per minute depending where the call is made, i.e., hotels charge the most to make a call. Calls to neighboring

Asian countries average \$2.00 per minute. However, the general condition of the country's outdated telecommunications infrastructure is poor, and desperately needs upgrading to meet the demands of a capital city. The current system that services Yangon barely copes with current demand. Additionally, the heavy monsoon rains that fall between May and September only make matters worse. Unfortunately, there are no known plans by the government to modernize its telephone infrastructure to improve telephone service within Myanmar.

However, according to the government-controlled Myanmar Times, GSM cellular telephone service is scheduled for implementation. This same newspaper article reads that Myanmar Public Telephone (MPT), will be selling the cellular handsets for approximately \$1,500 each. Airtime is not included.

Facsimile service is available at major hotels. Fax service has proved relatively reliable considering the condition of the telephone transmission lines. International fax messages are charged the same rates as an international call.

E-mail service is available locally for home or business use for roughly \$2 per hour. The initial cost for E-mail in one's home or office is roughly \$250. This fee includes modem and software.

Mail

The international mail system is slow: 2 to 3 weeks for letter mail, plus pilferage and censorship are common.

Radio and TV

Shortwave radio reception in Myanmar is satisfactory. Multiband portable receivers can pick up VOA, BBC, Radio Australia, and other international broadcasts. Radio Myanmar is the only station in Myanmar. It broadcasts in English 2-112 hours daily and is limited to brief international news and music.

Myanmar has limited TV service with broadcasting of about 5 hours

each night, and on weekends, an additional 2 hours in the morning, and 3 hours in the afternoon. Locally produced programming is in Burmese, with a short satellite news segment and a feature entertainment program in English. Broadcasting is in the U.S. NTSC system and usually in color.

Videotapes are very popular in Yangon and there are numerous video stores eager for your business. However, the tape quality from these shops is poor, but the tapes are inexpensive to rent. Tapes from the Local rental shops use both NTSC and the PAL format.

Newspapers, Magazines, and Technical Journals

One English-language daily newspaper, The New Light of Myanmar, offers limited international news, highly censored local coverage, and much propaganda. The Myanmar Times and Business Report is published weekly and offers thinly veiled propaganda and some economic, cultural, and social news. The monthly Today magazine provides stories and information useful for foreign visitors and residents in Myanmar. The International Herald Tribune, Time, Newsweek, Far Eastern Economic Review, and Asia Week are sold locally for hard currency at a few selected locations, but are occasionally censored when stories refer to Myanmar.

Yangon has a few used book shops, which carry outdated English-language books and periodicals. The American Center Information Resource Center has a collection of historical books on Myanmar and materials on the U.S. The British Council and Alliance Française also have libraries. Unfortunately, Internet is still not available in Myanmar, so online ordering is not possible.

Health and Medicine

Medical Facilities

Yangon hospitals are crowded. Sub-optimal in sanitation, physical plants are in poor condition and emergency equipment is sparse and primitive in nature. Regional evacuation points are Bangkok and Singapore depending on severity of patient's condition.

There are two expatriate clinics in Yangon:

(1) SOS International is situated at The New World Inya Lake Hotel, #37, Kaba Aye Pagoda Road. It offers the following core services: 24-hour alarm center; family medicine practice and outpatient facility; pharmacy; X-ray facility; specialist consultations and referrals; 24-hour emergency medical unit; emergency medical evacuation. It is staffed by one expatriate doctor and three local doctors. Recently, however, SOS International has advised that they are reducing operations and cutting staff.

(2) Pacific Medical Center is situated at #81, Kaba Aye Pagoda Road. They also have a pharmacy; Lab; X-ray facility and dental clinic. It is staffed by three local doctors and specialists for consultation when required. It opens for 8 a.m. to 6:30 p.m. from Monday to Saturday.

Dental care is available in Yangon, but in general, it is substandard. Significant dental problems for which treatment cannot be delayed are sent to Bangkok. Travel and minimum per diem are provided when justified. A recent exam and all necessary dental work should be completed before arrival in Yangon. Yangon has two dental clinics run by a foreign-trained orthodontist.

Community Health

Local sanitation and health conditions are poor. All water must be boiled and filtered to make it potable. Fecal-oral disease transmission is a major public health concern in Myanmar.

Local dairy products are not considered safe. Most Americans buy canned or powdered milk from the commissary. Local fruits and vegetables should be scrubbed and soaked in a Clorox solution. Local restaurants do not maintain U.S. levels of sanitation.

The health of servants is important in maintaining family health. Pre-employment physicals, immunizations, and constant health supervision are strongly recommended.

Preventive Measures

The only required immunization for entry into Myanmar is yellow fever, and then only if coming from endemic areas of South America or Africa. Immunizations recommended for Myanmar (in addition to those given in the U.S.) are: hepatitis B, Japanese B encephalitis, typhoid, rabies, and Hepatitis A. All can be received at post.

Bacillary and amoebic dysentery are prevalent. A variety of intestinal roundworms and other parasites commonly infect people. Careful food preparation, strict personal hygiene, supervision of the cleanliness and health of servants, and avoidance of local restaurants help reduce opportunities for infections.

Myanmar's increasing prevalence of tuberculosis (a result of overcrowding and taxing of public utilities), makes use of public transportation, movie theaters, restaurants, etc., unduly hazardous. Increased contamination during the early part of the very heavy monsoon season gives rise to increases in many diseases each June and July. Because of the presence of several varieties of poisonous snakes and endemic rabies (beware of stray dogs), antivenom and rabies vaccines are available in the Medical Unit.

Malaria is a serious problem in the rural areas of Myanmar, but transmission occurs very rarely in Yangon. No drug prophylaxis is necessary in Yangon or most of the usual tourist sites in the country. Prophylaxis is necessary in some

areas. Dengue, another mosquito-borne disease, occurs throughout the country, including Yangon, and protective measures to avoid mosquito bites should be used. The peak season of dengue hemorrhagic fever is June-July and again in November-December. Health Unit supplies mosquito nets, repellents and Malaria Prophylactic Medications.

NOTES FOR TRAVELERS

Passage, Customs & Duties
Most arrive in Yangon by air. American carriers must be used for as

much of the journey as possible. The most commonly used transfer point is Bangkok, where an overnight stop is usually necessary. Only Thai Airlines and Myanmar International Airways fly to Yangon from Bangkok.

Travel to, from and within Myanmar is strictly controlled by the Government of Myanmar. A passport and visa are required. Travelers are required to show their passports with valid visa at airports, train stations and hotels. There are frequent security roadblocks on all roads and immigration checkpoints in Myanmar, even on domestic air flights.

Upon entry into Myanmar, tourists are required to exchange a minimum of \$200 (U.S.) for Foreign Exchange Certificates (FEC). The FEC office is located between Immigration and Customs. The face value of the FEC, issued in denominations from one to 20 dollar equivalents, is equal to the U.S. dollar, but its actual value fluctuates. Any amount over \$200 (U.S.) may be exchanged back to U.S. dollars. The first \$200 (U.S.) cannot be exchanged back into U.S. dollars. These procedures are subject to change without notice.

The military government rarely issues visas to journalists, and several journalists traveling to Myanmar on tourist visas have been denied entry. Journalists, and tourists mistaken for journalists, have been harassed. Some journalists have had film and notes confiscated upon leaving the country.

Information about entry requirements as well as other information may be obtained from the Embassy of the Union of Myanmar, 2300 S Street, N.W., Washington, D.C. 20008, telephone 202-332-9044/6, or the Permanent Mission of Myanmar to the U.N. 10 East 77th St., New York, N.Y. 10021, telephone 212-535-1311. Overseas inquiries may be made at the nearest embassy or consulate of Myanmar (Burma).

Unrestricted travel exists to the main tourist areas of Pagan, Inle Lake and the Mandalay area. The military government restricts access to some areas of the country on an ad hoc basis. Those planning to travel in Myanmar should check with Burmese tourism authorities to see if travel is permitted. However, some tourists traveling to places where permission is not expressly required have reported delays due to questioning by local security personnel. Reportedly, 10 of the 14 Burmese states and divisions are polluted with anti-personnel land mines.

Customs officials may confiscate prohibited items such as firearms (including air-powered guns and toy guns), ammunition, and certain books, photographs and magazines that might be considered offensive.

On all outgoing shipments, the number of boxes/vans and weight is checked against the same information listed in the documents when a traveler entered the country. Discrepancies either up or down, which cannot be explained, may result in your outgoing shipment being delayed in customs.

Permits are required for export of teak/rattan furniture, antique lacquerware or wood carvings, and jewelry. Itemized lists and receipts for such purchases should be retained.

U.S. citizens living or in or visiting Myanmar are encouraged to register at the U.S. Embassy and obtain updated information on travel and security within the country from the Embassy. The U.S. Embassy is located at 581 Merchant Street, Yangon, tel. (95-1) 282055 and (95-1) 282182; fax (95-1) 256018

Pets

Pets are not quarantined if accompanied by a health certificate and proof of rabies vaccination. Pet food and supplies are available most of the time in local supermarkets. Local veterinarians are sometimes competent but often lack medicines; when supplied, they are of unfavourable quality.

miliar brands. E-mail consultations with a stateside vet are invaluable. Clipping service is not available; dog owners should bring their own clippers.

Currency, Banking, and Weights and Measures

There are two Burmese currencies, Kyat (pronounced "Chat" (rhymes with Shot)) and Foreign Exchange Certificates (FECs). Kyat are the most prevalent and widely accepted, with the value fluctuating on a daily basis. FECs are essentially "dollar equivalency" currency and are valued at a fixed rate of one FEC/\$1.00.

There are no restrictions on the amount of dollars, traveler's checks or other foreign currency brought into Myanmar.

Local currency checking accounts cannot be opened by foreigners in Myanmar. Business transactions are generally on a cash basis. Not all major credit cards can be used in Myanmar, and generally only large international hotels in Yangon and Mandalay accept them. There are no automatic cash machines in the country to access currency from overseas, and it is not possible to cash a personal check drawn on a foreign bank.

Although money changers sometimes approach travelers to offer to change dollars into Burmese kyat at the market rate, it is illegal to exchange currency except at authorized locations such as the airport, banks and government stores.

Foreign Exchange Certificates (FEC) are required by foreigners for the payment of plane tickets, train tickets and most hotels. Burmese kyat are accepted for most other transactions. It is possible to purchase FEC with some credit cards at the Myanmar Foreign Trade Bank in Yangon or any place that exchanges foreign currency.

In Myanmar, the weight utilized for gold is called tical. One tical equals 58 ounces, or 1 ounce equals 1.72 ticals. At the local market all foodstuffs are weighed in viss and ticals.

One viss equals 3.6 pounds, and there are 100 ticals to a viss. Liquid capacity for gasoline (Burmese call it petrol) is measured by the U.K. gallon. One gallon equals 4.5 liters

Special Information

Burmese authorities require that hotels and guesthouses furnish information about the identities and activities of their foreign guests. Burmese who interact with foreigners may be compelled to report on those interactions to the Burmese Government.

Taking photographs of people in uniform or any military installation is discouraged by Burmese authorities, and it could lead to arrest or the confiscation of cameras and film.

NAURU

Republic of Nauru

Major City:

No official capital; government offices in Yaren District

INTRODUCTION

The original inhabitants of **NAURU** came from a mixture of people from Polynesia, Micronesia, and Melanesia. Nauru remained fairly isolated until the early 19th century, when it became a base for American whalers. In the late 19th century the island came under German administration, which discovered the island's immense phosphate reserves and developed them. In 1914 Nauru was surrendered to Australia. Nauru was made a League of Nations mandate of the British Empire in 1919, and was occupied by the Japanese and bombed by the Allies during World War II. In 1947 it became a trust territory of the United Nations, administered by Australia, New Zealand, and the United Kingdom. Nauru became the world's smallest independent republic on January 31, 1968. Nauru's economy relies entirely on exports from phosphate mining. A century of mining, however, has left the landscape barren, and phosphate reserves are all but exhausted. Profits from the phosphate industry have been invested abroad for when the phosphate runs out. Australia, New Zealand, and the United Kingdom have agreed to compensate Nauru with \$73 million for the loss of the island's topsoil that occurred from phosphate min-

ing during the years of the League of Nations mandate and United Nations trusteeship.

MAJOR CITY

Since it is so small, Nauru has no major city. The **YAREN DISTRICT**, on the southwest part of the island, is the main distribution area for goods and the center of the island's government. In 2000, the estimated population was 10,000. Many residents go shopping in Yaren once a week. The government-owned Nauru Phosphate Corp. is the primary employer. Others work in public administration and education. There is a marina. Nauru's own airline, Air Nauru, has scheduled flights to Australia (Sydney, Melbourne, Brisbane), Pohnpei and Guam in Micronesia, Kiribati, Solomon Islands, Fiji and Manila in the Philippines.

Recreation and Entertainment

Nauru lies in the middle of some excellent fishing grounds, with water depths rapidly plunging to 2,000 feet just off the edge of the island's shores and reefs. The island's waters are becoming popular with Australian anglers, who come looking for marlin, sailfish, wahoo, yellowfin tuna, and dolphin-

fish. The ocean floor's precipitous dropoff makes it possible to catch large game fish within 1,000 feet from the shore. The best months for fishing are from April to December.

Nauru has virtually no tourism. There is only one hotel in the country, the Menen Hotel, which is perched on the edge of the ocean. For many years the hotel has served as the meeting place for residents and visitors. The hotel was recently renovated and expanded to international standards, and now features bars and restaurants, a gaming room, and tennis courts. The Parliament House, the seat of Nauru's government, is in the Yaren District.

COUNTRY PROFILE

Geography and Climate

Nauru is an oval-shaped coral island with an area of just under 8.2 square miles in the southwestern Pacific Ocean. Nauru is one of the smallest nations in the world, and its nearest neighbor is the Kiribati island of Banabar, some 180 miles away. The island has a coastline of about 18.6 miles.

There is a relatively fertile belt of soil 500–1,000 feet wide that encircles the island. From the lowlands, coral cliffs rise to a central plateau some 200 feet above sea level. Buada Lagoon, in the southern end of the central plateau, covers 300 acres and is a permanent (often brackish) lake.

Nauru's position just 37 miles south of the equator gives the island a hot and humid tropical climate, but the landscape is arid and desolate.

Population

The population of Nauru is approximately 12,000 (2001 est.) Most Nauruans live along the coastal fringes in one of the traditional districts. The majority of the inhabitants are Nauruans, a mixture of Micronesian, Melanesian, and Polynesian origins. The remainder are Chinese and immigrants from Kiribati and Tuvalu, Australian and New Zealander employees, and some Filipino contract workers. The majority of the population is Protestant, while over one-third is Roman Catholic. Nauruan is the predominant language, but English is widely spoken and understood.

Government

Nauru adopted its constitution on January 29, 1968, and amended on it on May 17, 1968. The country was established as a republic with a parliamentary system of government. The president is head of state as well as head of government. The president is elected by the parliament from among its members every three years. The president serves as prime minister, appointing four or five members of parliament to form the cabinet. Cabinet ministers, including the president, take charge of the various government departments and are held accountable by parliament. The unicameral parliament consists of eighteen members, who are elected every three years by resident Nauru citizens over the age of twenty. A speaker and a deputy speaker are chosen from the parliament's mem-

bers. A Supreme Court was established by the constitution and a District Court and a Family Court also operate. In most cases, the highest court of appeal is the High Court of Australia.

Nauru's flag has a blue background divided horizontally by a narrow gold band, symbolizing the equator. Below the band is a white 12-pointed star, representing the island's 12 original tribes.

Arts, Science, Education

Education is compulsory between the ages of 6 and 16. The government subsidizes the schools, and some schools are run by the government while others are operated by the Roman Catholic Church. The government provides higher education through competitive scholarships to attend university overseas, usually in Australia. There is also an extension center of Fiji's University of the South Pacific.

Commerce and Industry

Despite the lack of agriculture, the per capita income of Nauru is among the highest in the world, and the standard of living is much higher than on other Pacific Islands. Nauru's economy has been based on the export of phosphates (a mineral used to make fertilizers). Nauru is the only remaining producer of the three historic phosphate-producing islands of the South Pacific. The other two were Banaba (in the Gilbert Islands of Kiribati) and Makatea (French Polynesia). Phosphate exports have given Nauruans one of the highest living standards in the world. There are no naturally-occurring fruits and vegetables, just a few coconut palms and scrub bushes imported by visitors. Food is not scarce, however, and plenty of fresh fish is caught on the island to make up the dietary mainstay along with canned meat and vegetables.

Transportation

Nauru International Airport is located about half a mile northwest of Yaren District's center. Traffic moves on the left in Nauru. The main road circling the island is paved, but the remaining roads are unpaved. Animals and pedestrians walking in the road make night driving on unlit secondary roads hazardous. There are fewer than 2,000 motor vehicles, and a school bus service is the only form of local transport. The only railway is a 2.4-mile shuttle used to carry phosphates.

Communications

A ground satellite station has provided telecommunications service with the outside world since 1975. There is also a local telephone exchange to handle local calls. Radio Nauru and Nauru Television are operated by the government. The *Central Star News* is a private newspaper published twice a month. *Nauru Bulletin* is a weekly published by the Department of Island Development and Industry.

Health

Nauru has two hospitals, with over 200 beds, and about ten resident physicians. Tuberculosis, leprosy, diabetes, and vitamin deficiencies have been the main health problems, partly due to a Westernized diet. Cardiovascular disease is a major cause of illness and death.

NOTES FOR TRAVELERS

A passport, visa, onward/return ticket, and proof of hotel bookings (or sponsorship from a resident of Nauru) are required for tourists. Tourist visas are issued for a maximum of thirty days. Travelers transiting with valid ticket/onward destination do not require a visa, provided that the first connecting flight departs within three days of arrival in Nauru. Business visitors must have a visa and a local sponsor. Nauru collects a departure tax that must be paid in cash and in Australian dollars. For more information on entry/exit requirements,

travelers may wish to contact the Nauru Consulate General in Melbourne, Australia at telephone (613) 9653-5709, fax (613) 9654-4738.

Nauru's customs authorities may enforce strict regulations concerning temporary importation into or export from Nauru of items such as foodstuffs, animals, and pornographic materials. It is advisable to contact the Nauru Consulate General in Melbourne, Australia for specific information regarding customs requirements.

There is no U.S. Embassy or diplomatic post in Nauru. Assistance for U.S. citizens in Nauru is provided by the U.S. Embassy in Fiji, which is located at 31 Loftus Street in Fiji's

capital city of Suva. The telephone number is (679) 314-466; the fax number is (679)300-081. Americans may register with the U.S. Embassy in Suva, Fiji and obtain up-to-date information on travel and security in Nauru from the Embassy. Information may also be obtained by visiting the Embassy's home page at <http://www.amembassy-fiji.gov>.

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report 1999 for Nepal. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

The mosaic of Nepal's history and culture was protected for centuries from the forces of change that defined the world's international relationships. Its resources began to develop to meet the demands of modern nationhood only after 1951, when the borders were opened to foreigners. The U.S. has played a major part in assisting this development and continues to influence the course of progress in a relationship of mutual respect and cooperation.

Politically, Nepal is neutral in most of the world's disputes, and its foreign policy reflects the position of a small and landlocked country located between two giants, India and China.

Challenges to Nepal's development are formidable and unique, given its high mountains, fast and flooding rivers, undeveloped natural resources, and its previous isolation.

Impressive changes have occurred nonetheless in the fields of transportation, communications, education, and commerce. Nepal must accommodate its enormous geographic and ethnic diversity while managing economic development. Its rapidly growing population is deeply and genuinely attached to ancient customs and traditional attitudes.

The central government is committed to the concept of development and is encouraging growth of a national consciousness and pride in the nation's heritage. A major challenge of the American Mission in Nepal is to assist the country's efforts to become a modern nation while retaining its unique cultural heritage.

A visit to Nepal not only is an introduction to a land of centuries-old cultures relatively untouched in many ways by the outside world but is also an opportunity to explore ancient kingdoms in the shadow of the world's highest mountains.

MAJOR CITIES

Kāthmāndu

Kāthmāndu, the nation's capital, is situated in a beautiful valley of about 225 square miles, at an altitude of nearly 4,500 feet, and at the confluence of two rivers. The city is completely surrounded by high hills and, during much of the year, the snow-covered Himalayan peaks can be seen. The valley was once a lake bed and the soil is extremely fertile. Where sufficient water is available, the soil can produce three crops a year.

Kāthmāndu was originally known as Kantipur, or City of Glory. Its modern name is derived from an important temple, Kath Mandir, built in the heart of the city, reportedly with the wood of a single tree. Some of the principal landmarks are the royal palace; the Tundikhel, a large parade ground; and Durbar Square, a fascinating collection of intricately carved temples.

The historic 17th-century Hanuman Khoka Palace and its temple complex, once the residence of the Malla Kings, dominates the old city. Several of the palace's courtyards are open to the public, as is the nine-story Basantapur Tower, with

magnificent views of the city. The palace has a gallery and a museum that contains relics of former royal dynasties.

Typical Kāthmāndu houses are of three- or four-story brick construction, many with ornately carved wood trim. The bazaars are a typical Asian assemblage of people, vegetable stalls, tiny shops, and free-roaming cattle.

Utilities

Kathmandu's electric power is 220v, 50cycle, AC. Power fluctuations and failures that can damage electrical appliances occur often. Transformers are required for 110v appliances. Bring extra transformers to meet your equipment needs. Transformers available on the local market are expensive.

As electrical power is 50 cycles, many U.S. appliances with electric motors such as tape decks (with DC motors) and vacuum cleaners will not operate properly even with a transformer, because the motor speed will be reduced. Some 60-cycle appliances can be modified to work at 50 cycles. Consult your owner's manual or a service representative. Heating appliances such as griddles or coffee makers are not affected by cycles and will work fine with a transformer.

The municipal water is not potable and must be filtered and boiled prior to drinking. Most houses have both a ground-level water storage tank and a roof-mounted supply tank. Water pressure is low by American standards, as the water supply is gravity fed. Water shortages occur during the dry season, and water delivery is available on an as-needed basis from Mission sources.

Food

A variety of fresh meats, fruits, and vegetables is available locally. Meats include pork, poultry, buffalo, and goat. Beef, fresh and frozen fish, and seafood from India are sold in Western-oriented "cold storage" stores. Rice, potatoes, and eggs are plentiful. Fresh fruits and veg-

etables are available seasonally. Fruits include apples, bananas, oranges, tangerines, papayas, mangoes, watermelon, grapes, coconut, pineapple, and grapefruit. Vegetables include asparagus, green beans, broccoli, cauliflower, carrots, radishes, cucumbers, tomatoes, peas, onions, eggplant, various squashes, lettuce, local spinach, and fresh spices.

A good selection of canned goods, oils, butter, flour, sugar, and other baking items is available in the markets.

Most breads and pastries are made at home, but a number of good local bakeries are here. Although respectable Indian brands of ice cream are sold locally and are safe for consumption.

Clothing

Summer clothing is worn from April to November. Lightweight tropical suits are worn in the office and women wear short-sleeved or sleeveless cotton or other lightweight washable dresses, skirts, or pantsuits.

During winter, woolen clothing is needed, especially at night. Good use can be made of stoles, sweaters, slacks, and warm long-sleeved dresses. By midday it is often warm enough to shed an outer garment, although at night some choose to wear a heavy winter coat. Warm sleeping wear is essential during the winter months. Flannel sheets and down comforters are popular winter bedtime accessories.

Limited suitable ready-made clothing is available in Kathmandu. Bring clothing for tennis, swimming, and hiking. A lightweight raincoat and umbrella are needed during the monsoon season (June-October).

Women dress simply and informally. Appropriate dress for luncheons, dinners, and informal receptions is required. A few full-length summer and winter dresses are needed.

Bring a generous supply of shoes. Unpaved, rough, and muddy surfaces cause shoes to wear out rapidly. If you intend to hike, bring a pair of good-quality hiking shoes and socks. (Most camping and hiking equipment is available for rent in Kathmandu, and local reproductions of Western-manufactured equipment are for sale.) Good-quality dress shoes for men and women are hard to find in Kathmandu, and the larger sizes are impossible to find. Bring a good supply of children's clothing for warm and cold weather. Include sweaters, flannel pajamas, and a heavy jacket for winter.

Supplies and Services

Kathmandu has several good beauty- and barbershops. Most Westerners patronize the major hotels for this purpose. Excellent facials and massages are offered at major hotels at reasonable costs.

Drycleaning is available. Laundry almost always is done at home by a servant. Local tailors are frequently used. The results usually are acceptable after you have found a tailor to your liking. Woolen and cotton materials are available in Kathmandu, mostly of Indian and Chinese manufacture, though some of British origin also are available. Choice of colors and prints are sometimes limited. Some ready-made clothing is available (usually of Indian, Hong Kong, Japanese, or Thai manufacture, but sometimes European), but styles and sizes are limited. Several quality boutiques cater to Western tastes, and prices in these markets usually are comparable to those in the U.S.

Both large and small supermarkets carry a variety of local goods and imported items. You can find almost anything, including sports equipment and electrical appliances (expensive), cosmetics, nylons (bring your own), clothing, fabrics, children's toys, cassette tapes and CDs (all kinds of music, but as usual, quality varies), and much more.

Susan Rock. Reproduced by permission.

Kathmandu Valley monastery and snowcapped Himalayas

Since most imported items are more expensive than in the U.S., bring enough of those items you use most.

Kathmandu has a limited number of experienced and trained repair people; available spare parts for cars, trucks, appliances, radios, and phonographs also are limited.

Local bookstores are reasonably stocked with English-language books, including recent novels, many of the classics, histories (mostly regional), travel book, and trekking guides, photographic essay; on Nepal, how-to books, folk tales, anthropology, politics, philosophy, religion, and a growing number of children's books, games, and puzzles. The American Women of Nepal (AWON) operates a 6,000-volume public library.

Domestic Help

Household servants are commonly employed in Kathmandu. Staff may include a cook, housekeeper, gardener, nursemaid (for babies and young children), driver (if you do not wish to risk the local traffic yourself), and day guard. Finding good cook is particularly difficult. In addition to basic wages (currently \$50-\$80, month for an experienced cook, less for housekeepers, gardeners, or nursemaids), extras include

uniforms (usually some form of local dress), a food allowance, a bonus equivalent to 1-month's salary before the Dasain holidays (the largest Hindu celebration of the year, usually in October), medical expenses, transportation, and various other discretionary benefits. It is common for servants to request loans from employers. Employers do not universally agree and repayment arrangements vary for those that do.

Religious Activities

Although traditionally religiously tolerant, Nepal is officially a Hindu state. The law forbids proselytizing and conversion of Hindus to other religions. Christian missionaries, first admitted in 1950, are involved in medical and educational work.

A full-time ordained minister serves the interdenominational Protestant community. Sunday worship services, Sunday school classes, and auxiliary fellowships are available. Roman Catholic Masses are conducted by American Jesuit and Mary knoll priests at least once daily and several times on Sunday at various locations in Kathmandu. Anglican/Episcopalian Holy Communion Services are held about six times a year at the British Embassy. A small, international Baha'i com-

munity holds regular meetings and conducts children's classes. No organized Jewish community exists in Kathmandu, and no regular Jewish services are conducted, but the Israeli Embassy holds occasional holiday services. Other religious groups do not have formal facilities, although occasionally ministers of other faiths visit Kathmandu. Some religious groups gather informally in homes, depending on members present in Kathmandu.

Education

Lincoln School, a private coeducational day school founded by USAID in 1954, provides an educational program from kindergarten through grade 12 for students of all nationalities. Enrollment averages 250 students and usually represents more than 30 nationalities. Approximately a third of the students are American and up to a quarter Nepali or Tibetan.

The school is governed by a nine-member board of directors elected for 2-year terms by the Lincoln School Association, which is made up of all parents and faculty. The school is administered by an American-recruited and -trained principal who directs 30 full- and part-time teachers, 20 Nepalese teaching assistants, and several native language teachers. Facilities include 21 classrooms, an auditorium, gymnasium, library/instructional center, computer center, music room, outdoor reading areas, and a 2½ acre athletic field.

The school year extends from late August to mid-June.

The Lincoln School curriculum is based on the U.S. public school system of education but more recently encompasses an internationalized curriculum to reflect the needs of the diverse student body. Instruction is in English. Kindergarten is a comprehensive school preparation program. Grades 6 to 8 are departmentalized, with students moving from one subject teacher to the next for languages, mathematics, social studies, science, and computers. A variety of

extracurricular activities also are offered, either by teacher specialists or regular staff. The high school students follow a similar program but are even more mobile according to their broader curriculum needs. Nepal studies, including language and culture, is offered, and the trek program takes students in grades 5 to 12 into mountain villages for up to 14 days in the fall or spring. Students in all grades bring their lunch from home, as the school does not have a kitchen.

Lincoln School has an extensive Advanced Placement (AP) academic program in the high school in English, U.S. and world history, math, numerous sciences, and art. Students who successfully complete these courses and score a 3 or better on the final examination receive college credit for their work. Lincoln does not offer an International Baccalaureate (IB) diploma.

Kathmandu has a British school, a French school, and a Norwegian school for those who do not wish to enroll their elementary schoolchildren in Lincoln School. There also are a number of preschool or nursery school options available at any time.

Special Educational Opportunities

Several international language schools offer language training in Nepali, while other embassies and missions sponsor training in French, German, Japanese, and Chinese. Private instructors give courses in history and culture, as well as private lessons in music and Nepali dancing. Lecture programs and cultural tours are provided on a regular basis by International Community Service (ICS), a British expatriate support organization. Several American colleges offer programs in Kathmandu.

Sports

The pleasant year-round climate of Kathmandu, combined with the social and cultural climate of an international community, permits a variety of both indoor and outdoor activities.

The Phora Durbar recreation center, situated on several acres of land in the center of town, in addition to swimming offers three hard-surface tennis courts, an outdoor basketball court, baseball/softball diamond, and volleyball court. The snackbar serves breakfast and lunch every day, dinner many evenings, and pastries, popcorn, and other snacks throughout the day. The facility also houses a video club.

Kathmandu has a few private tennis courts and two golf courses (bring your own equipment). Golf memberships are expensive.

Private and hotel health club memberships also are available. Major hotels offer summer "sauna-and-swim" packages to families and individuals, as well as year-round exercise opportunities.

Touring and Outdoor Activities

The Kathmandu Valley is a sightseeing fantasy land, but the dirt and garbage in the larger towns and cities can interfere with otherwise pleasurable experiences. Tourists can visit the seven national museums scattered throughout the Valley, a small national zoo, botanical gardens, and local art galleries; or wander through Kathmandu's old city and shop at the colorful markets and experience the Newari architecture and temples up close. The other two main cities of the Valley, Patan and Bhaktapur, are marvels of traditional Newari architecture and were once home to kings of the Malla Dynasty. For more organized and in-depth cultural queries, ICS offers lectures, music programs, and hikes through outlying towns and villages to view places and faces mostly unchanged over the centuries. On the hills ringing the Valley are many foot trails that lead to breathtaking views of the Himalayas just north of the Valley.

Sightseeing outside of the Valley might take you north on a trek, organized by one of the many competent local agencies, into the middle hills (6,000-10,000 feet) if you

want to meander gently under the Himalayas, or high up into the mountains themselves. Treks suited to all tastes, abilities, and incomes are available, many of which you can organize independently at very little cost. It is an excellent way to experience Nepali village life. If you plan to trek, it is best to bring your own camping equipment (tents, sleeping bags, mats, hiking shoes, rucksacks, canteens). All types of equipment are available for rental or (except for tents) purchase from the many local shops, but buyers must remember that in most cases the items were manufactured in the back room or around the corner. Bring your own shoes, as locally available ones do not last.

If you opt to go south to the warmer jungle climate of Nepal's Terai, you might visit one of the jungle camps located in the Royal Chitwan National Park, a Government of Nepal-sponsored wildlife preserve, where the one-horned rhinoceros co-exists with the Royal Bengal tiger, the leopard, the elephant, and the tourist. Hunting is severely restricted. Licenses are required for firearms. Excellent fishing is available in the Narayani and Rapti Rivers in the Terai. Permits are not necessary, but bring your own equipment.

Another choice for adventure sightseeing could take you rafting gently down one of Nepal's rivers during the winter months or over some of the wildest white-water routes during the wet months.

Countless local agencies will arrange the rafting/camping trip most suitable for you. Nepal's many festivals offer a colorful and lively change of pace throughout the year and are a delight for the photographer. Photographic supplies, including black-and-white and color print and slide film, cameras, and lenses are available in the local photo shops. One-hour developing services are abundant, and many are quite good.

Kathmandu is a gardener's paradise. Things grow well here and

quickly, even through the winter season when night temperatures often fall below freezing. If you enjoy a garden, you will have great personal satisfaction in Kathmandu. Although most households employ a gardener, you can continue your pursuits (less the heavy work) at your leisure. Gardening tools are available in Kathmandu but are Nepali style. Seed catalogs are available, and local seeds are excellent for local varieties of flowers and vegetables.

Many people in Kathmandu own personal computers. Several good computer hardware stores repair and clean equipment and sell paper, disks, and software, but bring enough parts and extras to fit your own computer. A number of computer schools offer short-term courses in programming, spreadsheets, and word processing. Internet and e-mail is commercially available through local servers. Prices are higher than in the U.S. but are decreasing almost monthly.

Entertainment

Many cuisines are available for those who enjoy dining out, from Nepali, Tibetan, and Indian, to Italian, Thai, Korean, Japanese, Chinese, and American. Quality varies. Prices except for liquor are reasonable. Many restaurants offer live and local entertainment (traditional dances, instrumentals, and Nepalese/Indian ghazals). Others offer beautiful garden settings or views of the Himalayas.

Kathmandu nightlife offers several discotheques, hotel restaurants with dancing and live entertainment, and the occasional visiting cultural program. Several casinos offer to separate you from your money 24 hours daily.

Many Americans participate in an active amateur dramatic group, the Himalayan Amateurs (HAMS), providing periodic dinner/drama entertainment.

Local movie theaters feature only Nepali- and Hindi-language films. Video rentals (PAL system) are

available throughout Kathmandu in English, although quality varies.

Social Activities

Because the Nepalese are so friendly and the international community is so accessible, it is easy to meet Nepalese and third country nationals. International contacts can be made through the International Club, membership in which is available to all duty-free personnel in Nepal, and at such organizations as the Lions, Rotary Club, Junior Chamber of Commerce, church groups, the amateur theater group, and by volunteer work at hospitals or charitable organizations.

Another place to meet people is at Phora Durbar, the American Mission Association recreation facilities. Membership includes third-country diplomats and others with duty-free status in the Kingdom. The recreation area sponsors community tournaments for tennis, volleyball, and other games.

Volunteer work through the Active Women's Organization of Nepal (AWON) is a rewarding way to meet people of all nationalities and to participate in social development activities in Nepal. The organization manages a thrift shop, a health clinic for the poor, a 6,000-volume public library, and a girl's scholarship program. Profits are contributed to local charities.

Parents of Lincoln School students automatically are members of the Lincoln School Association, which brings parents together for various school activities throughout the year.

Entertaining at home is a pleasant and often used way to meet people and see friends in a casual atmosphere.

Pokharā

Pokharā, with a population of over 46,000, is situated 96 miles from Kāthmāndu and is connected by air as well as by two land routes. The old Rajpath Highway is a 12 hour

drive (via Hetauda and Butwal), while the road via Mugling takes six to eight hours. Daily flights connect Pokharā with Kāthmāndu, except during monsoon season when schedules depend on the weather; it is a 25 minute flight. Pokharā, the third largest city in Nepal, is the center of trade between the high mountain and middle hill people. The skyline of the town is dominated by the 23,000 foot Machapuchare ("the fish-tail mountain").

The Pokharā valley is one of the picturesque spots of Nepal. The beauty of the valley is enhanced by such famous lakes as Phewa, Begnas, and Rupa, which have their perennial source in the glacial region of the Annapuran range of the Himalayas. During the dry months of the year, Pokharā offers spectacular views of the Himalayas. Pokharā is a major departure point for treks into the Himalayan foothills.

Several very good hotels are available in Pokharā at reasonable prices; running water and electricity are available year round. From March to September, the temperature ranges from 69°F to 95°F with occasional showers. The monsoon rains begin about mid-June and last until September. From October to February, the temperature ranges from 35°F to 68°F with clear weather.

Pokharā has limited shopping facilities. Food, clothing, and other necessities are available, although in less variety than in Kāthmāndu. There is a missionary-run hospital with several doctors, but most Americans are treated in Kāthmāndu.

Communications are provided by international mail and cable. In an emergency, Nepalese Government facilities are used to relay messages by radio. Telephone lines connect Pokharā and Kāthmāndu, but calls must be made through telephone exchange offices.

Many tourists visit Pokharā, either to stay and enjoy the scenery or in passing when going on treks into

higher elevations or on the way to India.

Hetauda

The population of Hetauda is more than 40,000. The city is located on a major paved road connecting Kāthmāndu with the Indian border, close to a jungle area. Hetauda is a one-hour drive from Raxual, India, which serves as the primary entry surface point into Nepal.

Royal Nepal Airlines serves the Sumira airstrip, 40 minutes from Hetauda, daily. Service can be very irregular during the monsoon season. Travel time by the old Rajpath Highway to Kāthmāndu is about five hours. Travel to Kāthmāndu can also be made via Narayanghat and Mugling on a longer, but paved, route and requires only four hours.

A government hospital is located at Hetauda and a missionary hospital is located at Raxual at the Nepal/Indian border. Communication is by international mail, telephone, and Government of Nepal cable facilities.

Hetauda is situated above the Terai and, although summer is hot, that season is milder than on the plains. Winters are very mild, with flowers blooming year round. The entire Himalayan range, including Mt. Everest, is visible.

Some hunting is available in the nearby jungle. There is an elephant camp in the Chitwan district, and many opportunities for fishing and trekking exist.

Tulsipur

Tulsipur is located in Dang district in the Rapati Zone of western Nepal. Tulsipur is accessible by road from the Indian border and from Nepalgunj in the far west all year. With the completion of the Tulsipur-Ghorahi-Lamahi road (paved) in 1982, access is easy and assured. The East-West Highway provides year-round access to Kāthmāndu by road (12–13 hours). Com-

Susan Rock. Reproduced by permission.

Himalaya Mountains near Pokhara

mercial flights from Tulsipur to Nepalgunj and to Kāthmāndu are generally reliable, except during monsoon season.

In spite of this isolation, and concomitant logistics problems, most basic commodities (rice, kerosene, salt, sugar) are normally available. Tulsipur bazaar has an ever-increasing variety of fresh fruits and vegetables in season, and meat and poultry are generally available. Canned, packaged, and bottled goods suited to American tastes must be brought in from either Kāthmāndu or India.

Running water is normally available for living quarters the year round. Electricity is available and is run by generator. Residential arrangements are adequate by American standards, but are by no means luxurious.

No recreational facilities other than trekking, horseback riding, and possibly volleyball are available in the town. Most health problems requiring diagnosis and treatment are done in Kāthmāndu.

March through September are extremely hot months in Tulsipur, with monsoon rains bringing some relief during July and August. Octo-

ber through to March brings a pleasantly warm climate, with cool nights.

OTHER CITIES

BHAIRAWA is located in the central Terai, close to the Indian border. Roads connecting Bhairawa to Pokharā and Kāthmāndu are occasionally closed because of rock slides during the monsoon season. There is air service to Kāthmāndu. Bhairawa has adequate health facilities, but most medical treatment of Americans is done in Kāthmāndu. Communications are provided by international mail and cable. In an emergency, Nepalese Government facilities are used to relay messages by radio. Radio communication has been established between the Agricultural Farm and the Department of Agriculture, Kāthmāndu.

BHAKTAPUR (also called Bhadgoan) is one of the oldest cities in the Kāthmāndu Valley. Located nine miles from the capital city at the eastern end of the valley, Bhaktapur is known as a center of medieval art. Its five-story Nyatapola Temple is an excellent example of Nepalese architecture. The temple's stairway is flanked by a series of

animal pairs, humans, and gods, each supposedly 10 times as strong as that below it. In the center of the old city is the art gallery, which contains Buddhist and Hindu tantric art; the 15th-century Royal Palace; and a replica of the 15th-century Pushupatinath Temple. Adjoining the art gallery is the Golden Gate of Bhaktapur. Near the city is the ancient Pujahari monastery; its central courtyard contains rich wood carvings and a noteworthy peacock window. This enclosure has been renovated and restored. Bhaktapur (which means “the city of devotees”) was founded in the ninth century, according to legend. Its industries include pottery and weaving. The city’s population is over 130,000.

BIRĀTNAGAR, situated in southeastern Nepal about 150 miles from Kāthmāndu, is one of Nepal’s important manufacturing cities. Furniture, stainless steel, processed rice, and oilseeds are produced here. The population is more than 130,000.

BIRGANJ is located in the Terai on the Indian border, about 105 miles south of Kāthmāndu. The city has a population of over 43,000 and is a market town for agricultural products. It is also a manufacturing town producing textiles, sugar, flour, jute, and shoes.

LUMBINI is situated in a remote area south of Pokharā, in the western Terai. This is supposedly the birthplace of Buddha, and there are many religious shrines here. The broken Ashokan Pillar, remnants of a monastery, and images of Buddha’s mother are among preserved areas. Extensive excavation work is being conducted in Lumbini.

PAṬĀN is located three miles southeast of Kāthmāndu and, with a population of more than 117,000, is the second largest town in the Kāthmāndu Valley. Once called Lalitpur, meaning “the city of beauty,” it was the capital of the independent Malla kingdom. Today, Paṭān is a major center of Buddhist art and craftsmanship; many craft shops

are in the market area. The old section of Paṭān provides visitors with many examples of temple architecture, most dating from the 17th century. Krishna Mandir, Bhimsen, Taleju, and Shiva are some of the temples that may be seen in this area of the city. The old royal palace is also open to tourists. Nearby is Hiranya Varna Mahabihar, one of the most ornately decorated Buddhist temples in the country. The five-storied temple of Kumbeshwar is also interesting; ritual bathing takes place in the courtyard yearly. The spring water here is said to originate in the sacred lake of Gosainkund and the Mahabouddha Temple.

RAMPUR is located in a valley some 140 miles from Kāthmāndu. Royal Nepal Airlines offers regular commercial service to Bharatpur, seven miles from Rampur, over an all-weather road. Rampur has no doctors or hospitals, although both can be found in Bharatpur. Most medical treatment is obtained in Kāthmāndu. No telephone lines connect Kāthmāndu and Rampur. International mail and local telegraphic services are available, but are unreliable. Rampur has virtually no shopping facilities; the nearest bazaar is in Narayanghat near Bharatpur. Clothing, some food, and other necessities must be purchased in Kāthmāndu. Because of the extremely poor road conditions in the area, only four-wheel-drive vehicles should be used. The climate is pleasant from October to March, ranging from the mid-40s(F) at night to the 60s during the day. From April to June, it is extremely hot with occasional rains, and during the monsoon season (June to October), it is hot and humid. The Tiger Tops jungle resort is only 15 miles from Rampur, and is accessible by road except during the monsoons.

COUNTRY PROFILE

Geography and Climate

The Kingdom of Nepal is roughly the size and shape of Tennessee, with an area of about 55,000 square miles. The country is wedged between China to the north and India to the south, east, and west.

Nepal’s geography is perhaps the most varied of any nation in the world. From the plains and lowlands of the south (about 150 feet above sea level), the terrain rises in a mere 100 miles to the dramatic heights of the world’s highest mountain range, the Himalayas, which include Mount Everest (Sagarmatha) at 29,028 feet. Ten other mountains exceed 24,000 feet, and more than 200 peaks exceed 21,000 feet.

Geographically, the country may be divided into three roughly parallel strips, each running generally east and west. The Terai region, the southernmost strip about 15 miles wide, covers about 20 percent of the total land area. It is an extension of the Gangetic Plain of north India—flat open country blending to forested hills, and once noted for its heavy jungles and big game, including tiger, rhinoceros, elephant, wild boar, and crocodile. The central region, sometimes called the “hill area,” is about 60 miles wide, ranges from 3,000 to 12,000 feet above sea level, and covers approximately 60 percent of the land area. It includes the Valley of Kāthmāndu, with its encircling “hills” up to 9,000 feet in height. The northern region consists of the high mountain area, 12,000 to 29,000 feet, forming the majestic panorama of the perpetually snow-covered Himalayan range. The region is about 25 miles wide and accounts for nearly 20 percent of the total land area.

The climate in Kāthmāndu, the capital, is generally pleasant. During the fall and winter season (October

to March), temperatures range from 28°F to 75°F. This season is characterized by morning fog, sunny days, and cold nights. It may rain occasionally, but Kāthmāndu has had no snow since 1939.

The spring season (March through May) has a temperature range from 40°F to 90°F, with intermittent rain, warm days, and usually comfortable nights. Near the end of the spring season and before the rainy season begins, dust gathers heavily throughout the Kāthmāndu Valley, covering everything with its film and creating a haze that obscures the mountains.

The monsoon season begins in June and continues until late September. Temperatures in the rainy season range from 55°F to 90°F, rainfall is from 30 to 60 inches. Rain showers occur daily.

Population

Nepal's population of 23 million is growing at an annual rate of 2.5%. Approximately 45% of the population live in the Terai Region on 20% of the total land area, and the remaining 55% live in the central or hill regions. The Kathmandu Valley, home to the nation's capital, is growing rapidly and is the most densely populated area, accounting for about 10% of the total population (or 2 million), with Kathmandu proper at about 800,000.

Agriculture absorbs 90% of the economically active workforce and includes animal husbandry, forestry, and fishing. The remainder are occupied in business, industrial, and service sectors. Per capita income is approximately US \$210.

Nepal is a multiracial, multilingual country. Major ethnic groups that make up Nepal include Newar, Tamang, Sherpa, Rai, Limbu, Thakali, and Tibetan. Within the different groups, people are further differentiated socially by caste or occupational group. In the hill and Terai regions, people of both Indo-Aryan and Mongoloid stock can be found, and many are a mixture of

the two. The northern mountain region is inhabited by the Sherpas of mountaineering fame, as well as by large numbers of Tibetans.

The official language is Nepali, although more than 18 other languages and many dialects are spoken throughout the country. Nepali, derived from Sanskrit, is related to the Indian languages of Hindi and Bengali. The written script (Devnagari) is the same as Hindi. Nepali is spoken by most Nepalese in the Kāthmāndu Valley. The Newars, the original inhabitants of the Kāthmāndu Valley, still constitute over half of the Valley's population and work as artisans, business people, professionals, government officials, and farmers. The old cultural and architectural monuments of the Valley are almost entirely of Newar origin. The Newars have their own language, Newari, a Tibeto-Burman language not related to Nepali; however, most Newars in the Valley also understand Nepali. Many government and business people speak English.

Most Nepalis profess Hinduism, the official religion. The King is believed to be a manifestation of Lord Vishnu, the Protector and Preserver. Religion is important in Nepal, and the Kāthmāndu Valley alone has more than 2,700 religious shrines, some more than 2,000 years old. Temples, stupas, and pagodas vary in size and type, with some of austere simplicity and others of rich architectural beauty. A significant Buddhist minority lives peacefully with the Hindu majority, so that Hindu temples are sacred to Buddhists, and Buddhist shrines are important to the Hindus. Buddhist and Hindu festivals are occasions for common worship and rejoicing.

Public Institutions

For about 100 years, up to 1951, Nepal's Government was in the hands of hereditary Prime Ministers of the Rana family, and the King was a figurehead without real power. After 1947, the people of Nepal, in part sparked by India's

independence movement, began to show open resentment to the autocratic Rana rule. Agitation increased for a government more responsive to changing times.

Relations between King Tribhuvan and the Rana Prime Minister deteriorated, and in November 1950, the King escaped from his palace prison and took asylum in India. An armed revolt to overthrow the Rana regime then flared throughout the country, with an armistice being signed the following February. King Tribhuvan returned amid popular rejoicing, and non-Ranas for the first time assumed key positions in the government. Shortly thereafter, the last Rana Prime Minister resigned, marking the end of Rana rule.

The late King Mahendra approved a new constitution in February 1959, under which Nepal's first multi-party parliament was elected. After a brief period of parliamentary rule, the King proclaimed in December 1960 that the experiment in parliamentary democracy had failed. He took full personal control of the government, dissolved the parliament, and banned political parties.

In 1962, the government proclaimed a new constitution, which established a "partyless panchayat system" of government consisting of various councils (panchayat) of increasing power, with ultimate power vested in the King. Subsequently, the constitution has been amended several times in response to the country's developing political demands. King Bihendra in 1979 ordered a referendum to decide whether to retain the panchayat system with suitable reforms or to reintroduce a multiparty system, following widespread discontent spearheaded by university students.

The panchayat system won a disputed election by 2.4 million votes to 2.1 million, and the constitution was amended to establish the direct election of members of the Rastriya Panchayat (national legislature) and expand freedoms of speech, publication, and assembly. In 1990,

in response to nationwide agitation for a return to a multiparty system of government, King Bihendra agreed to lift the ban on political parties; to further revise the constitution; and to hold general elections. These elections took place in May 1991, constituting the first free multiparty elections under the new constitution. In all, there have been three free elections in the first 9 years of this constitution.

Arts, Science, and Education

Nepal in 1950 had 321 primary schools enrolling about 8,000 students; 11 secondary schools with 1,500 students; and one small college and a technical school with a combined student body of 250. The country then had no educational facilities for girls, and the few who were educated were either privately tutored or had studied in India. Literacy was negligible.

When Rana rule ended, Nepal undertook to establish a system of universal primary education, greatly supported and developed through USAID efforts. The most recent statistics, from 1994, indicate that 40% of the Nepalese adult population is literate (male: 55%; female: 25%). Approximately 65% of the Kāthmāndu Valley population is literate. The figures reflect the increased importance attached to education: 21,100 primary schools with 3,195,000 students (of whom 1,260,000 were girls) and 81,500 teachers; 4,800 lower secondary schools with 680,000 students and 15,750 teachers; 2,200 secondary schools with 414,000 students and 11,100 teachers; and a higher education system of 10 institutes comprising Tribhuvan University. The University directly administers and supports 65 campuses, approximately half of which are outside the Kāthmāndu Valley. The total number of students of all university campuses is approximately 100,000. The University has four research centers: the Center for Nepal and Asian Studies; the Center for Economic Development and Adminis-

tration; the Research Center for Applied Science and Technology; and the Center for Educational Reforms, Innovations, and Development.

Severe strains developed within the educational system with such a rapid expansion. In 1970, the Palace appointed a task force to redesign the education system, resulting in the National Education System Plan (NESP) that came into effect in 1971. The educational structure was reorganized in accordance with the NESP to broaden the availability of education to the rural areas, increase its access to women, and meet manpower requirements. In 1975, primary education was made free (but not compulsory), including the provision of classrooms, teachers, and educational materials. Private schools are permitted and have been expanding rapidly.

Under the new plan, Nepal's educational structure is divided into two levels, the school level and the higher education level. Institutes in each subject of higher education have been established under the supervision and control of Tribhuvan University.

The widespread desire for education puts great pressure on the government to increase the number of schools and teachers. In spite of the NESP, quality varies widely, with higher quality schools located in population centers. Under the NESP, however, intense efforts have been made to equalize educational opportunity. Although Nepal is still a long way from universal education, great strides are being made.

In the arts, Nepal, and particularly the Kāthmāndu Valley, is a living museum. Pagoda-style architecture may have originated in Nepal and moved northward to China and Japan. Hundreds of temples are ornately carved; old Nepalese bronzes are exquisite; and older, elaborately carved wooden Newari homes reflect the skills of the Valley woodworkers. The King has established a Royal Nepal Academy, where traditional Nepalese dance

and music performances may be seen. Occasional exhibitions of paintings by the country's artists are held at the Nepal Association of Fine Arts. In the past few years, several galleries have opened that regularly exhibit local artwork.

Science is in its infancy in Nepal, although Tribhuvan University has graduate departments in chemistry, zoology, physics, and botany. As a step toward the development of science education, in 1983 His Majesty's Government constituted the Royal Nepal Academy of Science and Technology to promote the study and research of science and technology. Fulbright and National Science Foundation scholars are helping to improve science and mathematics education.

Commerce and Industry

Nepal remains one of the poorest countries in the world, with more than 40% of the population below the Government's poverty line, and little industrialization or private sector growth. Some progress has been achieved with technical and economic assistance, principally from India, Germany, Japan, China, the U.S., the World Bank, and the Asian Development Bank. Malaria is under control in the fertile lowland areas, thereby increasing the potential for agricultural productivity. Roads, although in poor condition, link Kāthmāndu to India and Tibet, and additional roads are being constructed linking major urban centers. Several hydroelectric projects have been completed, and more are being proposed and built. A national and international communications network, including a satellite earth station, has been completed, and small industries such as cotton and jute textiles, cement, cigarettes, and shoes have been operating for years. Commercial attention is directed at development of Nepal's major economic resources: hydroelectric power and tourism.

The economy is essentially agrarian. Agriculture provides about two-thirds of the country's income, with rice the main food crop and jute now grown as the main export crop.

Foreign trade plays a key role in the economic development of Nepal. Currently, Nepal has trade agreements with 16 countries and trade relations with about 60 others.

One-third of Nepal's exports—mainly agricultural products and timber—go to India, and a third of Nepal's imports come from India—mostly textiles and other manufactured goods. Nepal signed a trade agreement with India in 1996, which effectively places it within a free trade area with India. Increased exports of ready-made garments have made the U.S. one of Nepal's leading export markets. Carpets

account for about half the exports, going mainly to Europe. Tourism is also a major industry.

Transportation

Automobiles

A personal vehicle is strongly recommended but not absolutely necessary. Toyota and Mitsubishi have the largest dealership systems in Kathmandu; Nissan, Honda, and Subaru are represented but have more limited direct dealer service available. If you ship a car from the U.S. or Japan, consider spare parts. If you ship a used vehicle, make sure it is in excellent condition and has a new or good battery and new tires, since these are expensive and hard to obtain in Nepal. Current Nepali law forbids the import of a car more than 5 years old by anyone who is not on the diplomatic list.

Do not bring large American cars because of the narrow streets of Kathmandu, and because spare parts for American cars are not readily available. Consider a four-wheel-drive vehicle for most travel outside the Kathmandu Valley. Do not bring a vehicle with low ground clearance, even for strictly local driving within the Valley. A right-

hand drive vehicle is best for safety reasons, as Nepalis drive on the left in the British and Japanese manner, but U.S.-style, left-hand drive vehicles are permitted and used without serious problems by assigned employees.

A Nepalese drivers license is required in Nepal and may be obtained on presentation of a valid U.S. drivers license.

Local

The Kathmandu Valley has hard-surface roads but also has many dirt roads and jeep tracks. Most streets and roads are narrow and bumpy with blind corners, and congested with ever-increasing numbers of pedestrians, porters, carts, cows, buses, taxis, trolleys, pedicabs, bicycles, and motorbikes. Foreign residents seldom use buses as taxis, and pedicabs are plentiful and convenient, except after dark. Indian and Chinese bicycles are widely used and can be purchased locally at reasonable cost. Used Western-made mountain bikes sometimes can be purchased, although many prefer to bring their own bikes. Air pollution has increased dramatically in the last several years due to the substantial increase in motor vehicles and brick factories within the Valley. Air-filter breathing masks, therefore, are becoming increasingly popular among bikers and walkers.

The national road system linking the major towns within Nepal is improving but still limited, with some of the fewest miles of paved and improved hardpacked road; compared to population density of any country in the world (about 5,000 miles in 1997). Most of the primary internal Nepali destinations such as Pokhara, Biratnagar, Birgunj, and Janakpur are connected to the capital by paved road. The East-West Highway provides a good paved road throughout the Terai, except west of Nepalgunj. Most of the more famous mountain trekking destinations are accessible only by plane, as are some of the more remote lowland destinations.

It is necessary to go on foot to reach many places in rural Nepal. Use of porters is a traditional and practical method of transporting goods to and from many places in the country.

Kathmandu is connected to the Indian border by two all-weather roads. Another, mostly fair-weather road, links the capital with Tibet. Tourists should check the current regulations regarding travel to Tibet, as they are subject to frequent change. Tourists in 1997 could travel to Tibet by obtaining a visa at the border.

Regional

Royal Nepal Airlines Corporation (RNAC) has an extensive route structure within Nepal, encompassing more than 30 airfields nationwide. RNAC is a government-owned corporation. Several private airlines also operate domestic routes. They use smaller (and newer) planes and frequently offer lower prices for similar trips. Air travel is the only practical means of transportation (save walking) to many areas these airlines service. For domestic routes, RNAC depends on Avro, Twin Otter, and other STOL (short takeoff and landing) aircraft. In the tourist season (October–April), RNAC and domestic private airlines offer a 1-hour "Mountain Flight" from Kathmandu and Pokhara that gives a close-up view of the major Himalayan peaks, including Mount Everest.

Ten regional or international airlines serve Kathmandu as of June 1999. These include RNAC, Singapore Airlines, Indian Airlines, Thai International, Biman Bangladesh, Burma Airways, Pakistan International, Druk Air, Air Qatar, Dragonair, and Austrian Air. Kathmandu enjoys three times a day service to and from New Delhi, daily service to and from Bangkok, 6 days a week service to and from Calcutta, and 3 days a week connections with Singapore. Kathmandu also is linked to Dhaka, Rangoon, Karachi, and Hong Kong with several flights a week. Connections for ongoing international flights to Europe and the U.S. are made generally through

Bangkok or New Delhi. RNAC flies from Kāthmāndu to London via Dubai, as does Air Qatar through Doha. Bangkok, Hong Kong, and Singapore are the gateways for flights to Japan and the U.S. west coast.

Communications

Telephone and Telegraph

Kāthmāndu has an automatic telephone exchange. The cost is modest, and service is generally good, as are long distance connections within Nepal. International telephone service is available via satellite, and direct-dial calls to the U.S. and elsewhere are routine. A call to the U.S. costs about \$4.50 per minute. Cellular telephones became available in 1999 but are very expensive.

Facsimile service in Nepal is available locally in all major hotels.

Internet access and e-mail service is available through local commercial sources. Rates generally are higher than in the U.S. but are coming down.

Radio and TV

Kāthmāndu has 20-channel cable TV service available in many, but not all, parts of the city. Stations broadcast a mix of English and Hindi programming. Service accessibility is increasing continuously. Set-up minimum charges and monthly rates are quite reasonable by U.S. standards, usually about \$25-\$40 and \$5, respectively. CNN, BBC, HBO, ESPN, Cinemax, Star Movies, and Star Sports are among the English offerings. TV satellite dishes can be purchased locally.

Cable and local TV broadcasts are on the PAL system. Videotapes available for rent at the American Recreation Center are NTSC, while the British Library next door offers PAL tapes. Bring a multisystem TV and VCR, as local equipment is quite expensive. Radio Nepal broadcasts in English at certain times daily. Reception of VOA, BBC, Indian, and Pakistani stations, and

some from the Far East, sometimes is possible with a shortwave radio.

Newspapers, Magazines, and Technical Journals

Several English-language daily newspapers are published in Kāthmāndu. The Rising Nepal and The Kāthmāndu Post are read widely. A total of 450 vernacular newspapers circulate in Nepal. English language Indian newspapers also are available, as are international editions of Time and Newsweek. The international editions of the International Herald Tribune, USA Today, The Economist, and The Asian Wall Street Journal can be purchased locally or are available by subscription from Singapore.

Health and Medicine

Medical Facilities

It is also recommended strongly to have mail-in prescription service in your personal medical insurance.

If you wear glasses, bring at least two pairs and a copy of your current prescription. Contact lenses can be worn here, although only limited local replacements are available.

Although a number of well-trained, excellent Nepali physicians are in Kāthmāndu, local hospitals are poorly equipped and considered inadequate by Western standards. Therefore, for anything but the gravest emergency, serious medical problems requiring hospitalization demand evacuation; in some cases, this may be to the U.S. Kāthmāndu is considered medically inappropriate for obstetrics either complicated or routine.

There are several private clinics used by the international community in Kāthmāndu with doctors and medical staff trained in Europe or in the U.S.

Dental health care is available through a private dental clinic. The dental clinic is staffed by two American dentists and a hygienist and is operated on a fee-for-service basis

with a fee structure similar to that in the U.S. Orthodontic care is available.

Community Health

The general lack of basic public sanitation and sewage management poses major health problems in Kāthmāndu and all parts of Nepal. This leads to many illnesses within the Nepali community and is, potentially, a source of disease transmission to the expatriate community. Understanding the problem, however, and taking necessary precautionary measures, such as water purification and proper food handling techniques, help to ensure personal good health. The opportunities for outdoor physical activities in this pleasant climate also contribute to good physical well-being. Air pollution contributes to respiratory problems in the Kāthmāndu Valley.

Preventive Measures

Infectious diseases are a major health problem in Nepal, whether it is a simple respiratory infection, parasitic bowel infestation, or a more serious medical problem such as tuberculosis. Common medical problems among Americans include respiratory infections, allergies, diarrheal diseases, and skin diseases. Although some malaria (falciparum and vivax) still is present in the lowlands (Terai), the government's malarial control programs since the 1960s have transformed an area that once endured the reputation of being one of the worst malarial areas in the world to one where people work and play in relative safety from the malarial parasite. Antimalarial prophylaxis still is necessary for those living in the Terai, or those visiting during most of the year, however. To date, chloroquine-resistant strains of falciparum have not been identified, and chloroquine (Aralen) is the recommended prophylactic. As Kāthmāndu is at 4,500 feet, malaria is not a problem in the city or valley, nor is it a problem anywhere in the middle hills or mountain areas.

Have your immunization status current before departing. Recom-

mended vaccinations (in addition to the usual childhood shots such as DPT, polio, MMR, and HIB) include: rabies (human diploid cell), typhoid, meningococcal (A and C) bivalent vaccine, Hepatitis A and B, and Japanese-B Encephalitis.

All water must be filtered and boiled before consumption. All fresh vegetables, whether purchased in the local market or grown at home, must be soaked and sterilized using a chlorine bleach solution. Iodine is not as effective for protection against parasites and other intestinal agents. Local milk must be boiled before use.

The many pharmacies in Kāthmāndu carry a wide range of pharmaceuticals (most available without prescription), although few American-manufactured drugs are available. Most drugs are manufactured by Indian subsidiaries of European or American pharmaceutical firms and have not passed the rigorous quality controls of Western-manufactured drugs. Bring those brands or items you prefer or arrange for a supply from the U.S.

NOTES FOR TRAVELERS

The normal route from the U.S. east coast to Kāthmāndu is over the North Pole via Tokyo to Bangkok, then to Kāthmāndu after an overnight stay caused by airline connections. The adventuresome still can cross the Atlantic and pass through Europe to India, but connections between India and Nepal can be troublesome. Flights routinely are canceled and New Delhi Airport accommodations are spartan.

Travelers occasionally report immigration difficulties in crossing the Nepal-China border overland in either direction. U.S. citizens planning to travel to Tibet from Nepal may contact the U.S. Embassy in Kāthmāndu for current information on the status of the border-crossing

points. Travelers may also wish to check with the People's Republic of China Embassy in Nepal for current regulations for entry into Tibet.

Passport and visa required. Tourist visas can be purchased upon arrival at Tribhuvan International Airport in Kāthmāndu and at all other ports of entry. All foreigners flying out of the country must pay an airport exit tax, regardless of the length of their stay. Travelers may obtain further information on entry/exit requirements by contacting the Royal Nepalese Embassy at 2131 Leroy Place, N.W., Washington, D.C. 20008, telephone (202) 667-4550 or the Consulate General in New York at (212) 370-3988. The Internet address of the Embassy of Nepal is http://www/newweb.net/nepal_embassy/

Americans living in or visiting Nepal are encouraged to register at the Consular Section of the U.S. Embassy in Nepal and to obtain updated information on travel and security within Nepal. The U.S. Embassy is located at Pani Pokhari in Kāthmāndu, telephone (977) (1) 411179; fax (977) (1) 419963. U.S. citizens may also register by e-mail by accessing the U.S. Embassy's home page at <http://www.southasia.com/USA>. The home page also provides updated information regarding security in Nepal, Embassy services, and travel in Nepal.

Pets

Nepal has no quarantine requirements, but Customs does require a current rabies shot and a certificate of health. Get the full range of inoculations to protect your pets. Veterinary service is available in Kāthmāndu with several licensed veterinarians.

Firearms and Ammunition

Only diplomatic-list personnel may import firearms to Nepal.

Currency, Banking and Weights and Measures

The unit of currency is the Nepali rupee, divided into 100 paisa. One

rupee equals about 1.6 cents. The abbreviation for rupee is Rs. before the sum, or often NC after the sum to distinguish from Indian currency, which is sometimes expressed as IC. The official rate of exchange in December 1999 was US\$1=Rs68.5, but it can fluctuate daily. Nepali currency notes are issued in denominations of Rs. 1,000, 500, 100, 50, 25, 20, 10, 5, 2, and 1. Nepali coins range from 5 rupees down to 1 paisa.

Nepal has its own system of weights and measures, but the metric system is widely used in Kāthmāndu.

Disaster Preparedness

Nepal is an earthquake-prone country. General information about natural disaster preparedness is available via the Internet from the U.S. Federal Emergency Management Agency (FEMA) at <http://www.fema.gov>.

Wellington, New Zealand

NEW ZEALAND

Major Cities:

Wellington, Auckland, Christchurch, Dunedin

Other Cities:

Gisborne, Hamilton, Hastings, Invercargill, Napier, Palmerston North, Rotorua, Timaru, Whangarei

EDITOR'S NOTE

This chapter was adapted from the Department of State Post Report dated March 1993. Supplemental material has been added to increase coverage of minor cities, facts have been updated, and some material has been condensed. Readers are encouraged to visit the Department of State's web site at <http://travel.state.gov/> for the most recent information available on travel to this country.

INTRODUCTION

NEW ZEALAND, which lies in the South Pacific just west of the international date line, is a fresh and vigorous country that delights the senses with its towering mountains and swift, clear rivers, its green pastures and deep lakes, and its glaciers and geysers and hot springs. The splendid scenery is one of the most rewarding aspects of this South Pacific nation.

Although New Zealand participated in the Paris Peace Conference that resulted in the Treaty of Versailles, and ratified the treaty on September 2, 1919, it is comparatively new on the stage of world affairs. Until 1935, the view was held that, in foreign policy, the British Empire

should be regarded as a unit and that, ideally, it should speak with one voice. From 1936 onward, however, New Zealand began asserting an independent position on matters of international concern. New Zealand is a member of the United Nations and other international organizations. Since 1985, the country has maintained an anti-nuclear stance. All nuclear powered or armed ships are prohibited from entering New Zealand ports.

MAJOR CITIES

Wellington

Wellington is a city of superb views whose motto, *Suprema a Situ* (Supreme by Situation), is apt. Many Americans find it somewhat reminiscent of San Francisco or Seattle. It has a population estimated at 326,000 (2000). Located where the North Island tapers to its end in the Cook Strait, Wellington's land has been pushed up and twisted into a pattern of ridges and gullies. Settlement dates from 1840, when the first shiploads of settlers arrived under the auspices of the London-based New Zealand Land Company. The city was named for the Duke of Wellington and became New Zealand's capital in 1865. Well-

ington's Port Nicholson Harbor has many moods, but when the sun is shining and the air is still, it is breathtakingly beautiful. The city and its suburbs extend like a huge amphitheater across the green hills surrounding Port Nicholson.

Wellington's aggressive terrain has a climate to match, and the threat of earthquakes is ever present. Windy Wellington is a term of abuse applied by some visitors unprepared for the city's gales but a term of affection from residents who have long since come to terms with the vagaries of the local weather.

Except for a small area of flat land in the city center, most of it reclaimed, Wellington clings to the steep hillsides. There is no room for expansion, except upwards. Residential areas spread across the hillsides, providing many residents with spectacular views of the city and harbor below. The downtown area is dominated by many modern commercial office buildings and by the Parliament Buildings, especially the Executive Wing of Parliament known as the Beehive.

Located near the geographical center of the country, Wellington is a principal overseas shipping terminal, even though it has direct international air connections only with Australia. Wellington houses the

head offices of all government departments and many national organizations.

Food

You can purchase most familiar foods in Wellington. Although Wellington has several fairly large supermarkets that resemble those of American chains, visits to the smaller stores and specialty shops, such as the greengrocer, the butcher, and the delicatessen, are often desirable.

Staple items are in adequate supply, but items such as canned goods and imported food items are expensive. Fresh meats are abundant and relatively inexpensive. Some Americans buy fresh meat from butchers.

Dairy products are excellent and cost less than in the U.S. Fresh pasteurized milk is completely safe for infants, and you can buy it in dairy stores and supermarkets or through home delivery. Skim milk and cow's milk substitutes are also available.

Fresh fruit and vegetables are plentiful and reasonably priced if bought in season. Some supermarkets have good supplies of these items, but greengrocers usually have better selections, although at higher prices. Frozen fruits and vegetables are usually limited and are more expensive than in the U.S. New Zealand laws prohibit the importation of frozen, refrigerated or uncooked meat, poultry, eggs and egg products, and of pet food containing raw lamb or sheep meat.

Clothing

You can wear warm clothing comfortably most of the year.

Men wear springweight suits about 3 months of the year and heavier suits the rest of the time. Temperatures may occasionally call for a topcoat, but a raincoat is essential. A topcoat with a zip-in liner is useful. Umbrellas are sometimes impractical because of Wellington's high winds but are highly useful at other times. You may purchase shirts, suits, topcoats, raincoats, and sport coats locally, and, with the current

exchange rate, they are reasonably priced. However, selections may be limited by quality and/or size.

The selection of women's clothing is not as limited as menswear. In Wellington, summer cottons are practical for only 2 or 3 months of the year. Long-sleeved dresses of any weight, suits, heavier dresses, slacks, sweaters, and skirts are comfortable the rest of the time. Good rain gear is essential, and the same types of coats suggested for men are recommended. Wellington evenings are cool, and women need wraps or stoles most of the year. Even when the weather permits the wearing of lightweight apparel, most women carry a light wrap or sweater to guard against sudden temperature changes. Skirts with a variety of dressy blouses and tops are useful for dinner parties.

Clothing for children and infants is expensive and limited. School uniforms that must be bought here, satisfy much of the clothing needs of most school-age children. Boys and girls at all secondary schools and most private primary schools wear uniforms that include a raincoat, shirt or blouse, pants or skirt, cap, socks or stockings, sweater (jersey), and blazer. Some public primary schools (ages 5–12) do not require uniforms. Away from school, children and teenagers wear essentially what they would wear in the U.S.

Bring a good supply of play clothes and dress clothing. For boys up to 12 years old, you can combine white shirt, tie, and sweater with school pants for dressy events. During most of the year, a jacket and a lightweight coat are useful. Children need cardigans or sweaters and warm pajamas for winter.

Supplies and Services

Most toiletries and cosmetics are available, but imported perfumes and cosmetics are expensive. Common first-aid medical supplies and medicines, miscellaneous household items, e.g., cleaning equipment, repair materials, clothespins, tools, etc., are readily available.

Some American cigarette brands, including some filter-tipped brands, are sold locally. New Zealand is a wine-producing nation and produces some excellent wines. New Zealand brews excellent export beers. You can obtain a few brands of American wine, bourbon, and beer from local suppliers, but choice is limited.

Barbers and beauty shops are plentiful and do good quality work; prices are comparable to those in the U.S. Appointments are necessary at most shops. Tipping is not customary.

Dressmakers and tailors are skilled but are heavily booked and quite expensive.

Some dry-cleaners use American equipment and methods, but their work may not always be good, especially on suede and leather. Commercial laundries are adequate but hard on clothes. Doing your own laundry is preferable.

Religious Activities

Virtually all religious denominations can be found in the Wellington area. There are Anglican, Presbyterian, Roman Catholic, Methodist, Baptist, Jewish, and Latter-day Saints congregations, as well as smaller groups.

Education

Like the U.S., New Zealand's public school system is secular. Children start school at age 5 and must attend until age 15. Tuition is free in public schools, but charges are made for some books and supplies. In schools requiring uniforms, the cost may be as much as NZ\$300–NZ\$500 per child. Students who commute by bus pay a reduced fare.

Most private schools are usually denominational (Anglican, Roman Catholic, or other). About one in nine New Zealand schoolchildren attends private school. Tuition, uniforms, and other charges vary, and at some schools, children must buy books and other supplies.

Kindergartens are available for pre-schoolers. Subsequent school levels are designated Primer 1–4 for students 5–6 years old; Standard 1–4 for ages 7–10; and Form I–VII for ages 11–17. Primer 1 through Standard 4 are primary grades; Forms I and II, intermediate; and Forms III–VII, high school or college.

At the end of Form V, students take nationally administered school certificate examinations in as many as six subjects. If successful, they then go on to Sixth Form.

A University Entrance Examination for students completing Form VI was conducted for the last time in 1985. Beginning in 1986, each secondary school issues a diploma on the basis of internal assessment. Students who scored well on the UEE (1985) or were awarded diplomas (1986 and thereafter) may, after completing Form VI, go directly to a university or remain in the secondary system for Form VII, at the end of which they take the Bursary or Scholarship Examination. Success in those examinations entitles a student to a government stipend during his or her university career.

Because of specific prerequisites for entry into U.S. universities, American students may have to supplement their New Zealand high school courses. A few American students have felt that New Zealand schools discourage individual initiative and have chosen to finish their high school work in the U.S.

The standard of education at universities in Wellington, Auckland, Christchurch, Dunedin, Hamilton, and Palmerston North is similar to that in the U.S. through the BA level. However, facilities for graduate study are not equal to those in the U.S.

The typical university undergraduate takes six courses a year and earns a bachelor's degree after 3 years, although some courses of study are longer. Unsupervised individual study is the norm. Courses may vary from those

offered by average American universities.

The school year differs from that in the U.S. For primary and secondary schools, the year begins in early February and ends in mid-December with a 2-week vacation in May. In late August, primary schools have a 2-week vacation and secondary schools, a 3-week vacation. Except for upper-level classes at Victoria University of Wellington, universities do not operate on the semester system but treat the full academic year as a single unit. Opening in late February or early March, universities have essentially the same vacations as secondary schools. Formal lectures at most universities end in mid-October, but exams extend well into November.

In grading, examinations are emphasized over daily classwork. A passing grade is 50, and marks above 70 are rare. Numerical grades thus cannot be taken as equivalent to U.S. grades.

New Zealand schools strongly emphasize sports and usually have excellent athletic facilities.

Special Educational Opportunities

Special education services are available for pupils whose educational requirements cannot be met by an ordinary school. The policy in New Zealand is to educate these pupils in ordinary classes as far as possible and to provide separate classes and schools only where necessary. Most students enrolled in the special education services are primary pupils aged 5–12, but emphasis is now being placed on developing services for preschool children and secondary pupils.

Selected schools provide special classes for students who are intellectually and physically handicapped, visually handicapped, hearing impaired, or emotionally disturbed. Classes are run in hospitals, and speech and reading clinics offer part-time tuition for selected pupils. Special day schools are provided for intellectually handicapped

and some physically handicapped students.

The Department of Education administers six residential schools for pupils who cannot be cared for in special classes—two for hearing impaired, two for mentally handicapped, and two for maladjusted pupils. The Department also has an advisory service on special education for hearing impaired children and a psychological service. The Department maintains a close association with voluntary groups such as the Royal New Zealand Foundation for the Blind and the Intellectually Handicapped Children's Society.

Recent experience has indicated that special education services in Wellington are not comparable to those available in the Washington area for either primary or secondary level pupils.

Sports

New Zealand is a sportsman's paradise. Golf courses are plentiful and popular. Tennis and squash courts are accessible and inexpensive. Four indoor tennis courts are available in Wellington. Because Wellington offers only four indoor tennis courts to the public, most players join private clubs that are less expensive than in the U.S. Jogging is very popular among men and women. A Marathon Clinic is available. New Zealand is the current amateur world champion in men's and women's softball, and softball clubs for all skill levels abound.

Sports attire for general outdoor activity is similar to that in the U.S., except that on the golf course, women wear skirts rather than slacks. Shorts worn with knee socks are acceptable for male golfers. Whites are often mandatory for tennis and squash at private clubs. A wide variety of sports equipment is available, including golf clubs, tennis rackets, and scuba gear, but at higher prices than in the U.S.

For hunters, the following animals are found in varying degrees of abundance: wapiti (elk); chamois

(Austrian antelope); thar (Himalayan mountain goat); red, fallow, Virginia, sambur, and sika deer (Japanese); wild pig; goat; and opossum (Australian marsupial). Except for wapiti, game can be killed year round. A license is not needed, but permits are required to hunt on most lands. Upland game shooting, which requires a license, is available. Commercial hunting and farming of big game animals has drastically reduced the once-abundant herds. However, successful hunts are possible for those willing to walk into deep forests under difficult conditions.

Deep-sea fishing is good; trout fishing is popular. Rainbow and brown trout were introduced into New Zealand in 1877 from California and have flourished in many lakes and streams. Fishing season in most districts opens October 1 (earlier for some South Island areas) and extends to April 30 in most South Island and North Island areas. Fishing is allowed all year on Lakes Rotorua and Taupo. A limit of 10 fish, minimum length 14 inches, is imposed at Lake Taupo. Fishing is permitted from 5 am to 11 pm. Some areas are open to fly casting only.

Skiing is popular, despite the fact that the nearest slope is 220 miles from Wellington. Both the North and South Islands have good skiing most years. Although the facilities are adequate, they are not what many U.S. skiers are accustomed to.

Rugby football is New Zealand's national game, and the New Zealand team, known as the All Blacks, has earned international respect for its ability over more than 60 years.

New Zealand has gained international recognition in cricket, soccer, golf, lawn bowls, track and field, rowing, sailing, motor racing, and distance running.

The largest spectator sport is horse-racing, and hundreds of race meetings are held each year in various towns and cities throughout the country. New Zealand-bred horses

are known throughout the world for their strength and stamina and are much sought after as breeding stock in other countries.

All water sports are popular in New Zealand. Within an hour's drive north of Wellington are a half-dozen sandy beaches used in summer for sunbathing and swimming. During summer, water temperatures are slightly warmer than at beaches on the Oregon, Maine, or northern California coasts, but much cooler than beaches on the southern California or South Atlantic coasts.

New Zealanders have a keen interest in pottery making and weaving. Day and evening classes are available.

Touring and Outdoor Activities

Flowers blossom in the garden year round and grow in profusion in spring and summer. Camelias, rhododendrons, fuchsia, azaleas, and roses flourish, as well as many native New Zealand, Australian, and South African species.

New Zealand's natural scenery is a most rewarding aspect of the country. The North Island is justly proud of its mountains, bays, and farm country. And the South Island, with its Alps, fjords, lakes, waterfalls, and glaciers is equally but differently scenic.

Hiking and walking possibilities abound on both islands. Several hiking (tramping) clubs in Wellington sponsor outings on weekends and holidays. Many excursions by bus (or bus and air) are offered at reasonable prices. The cost includes meals and lodging.

Four times daily a ferry carries passengers and cars on a 3-hour trip across Cook Strait from Wellington to the South Island. Return fare for an adult passenger is around NZ\$60 and for a medium-sized car is NZ\$250. Air service is frequent and expensive. The South Island exhibits spectacular mountains and beautiful coasts along its 1,500-mile

periphery, most of which are accessible by car.

Entertainment

Public entertainment and night life are limited. Most restaurants and hotels usually stop serving dinner between 10 pm and 11 pm. Reservations are necessary in most restaurants; relatively few places cater to the walk-in public.

Some restaurants not licensed to sell alcohol have Bring Your Own (BYO) licenses. BYO restaurants provide wine glasses and charge a NZ\$1–NZ\$2 corkage fee per bottle. The sale of alcoholic drinks, including beer, at public bars is prohibited after 10 pm or 11 pm. Licensed hotels may serve liquor after hours to *bona fide* hotel guests. Tipping is not customary in hotels and restaurants.

Cabarets, which sponsor dancing, have no other attractions, except for a few that also offer dining. During winter, many business, charitable, and professional groups sponsor annual balls. Many are open to the public.

American, Australian, British, and occasionally other foreign films are shown in Wellington's theaters and are a principal source of entertainment.

Professional theater productions are staged during the season. Touring companies sometimes feature American musicals. Several intimate repertory theater groups, and many amateur theatrical organizations also perform. Concerts by the New Zealand Symphony Orchestra, chamber music groups, and soloists are frequent. The New Zealand Opera Company offers several productions each year; performances are often superior.

Social Activities

The Association of American Women (AAW) is open to women employees and dependents.

The New Zealand-American Association (NZAA), an organization consisting primarily of New Zealanders

with particular ties to the U.S., has a wide variety of activities, including holiday celebrations, sports events, lectures, and cultural events. The NZAA Ladies Auxiliary invites women employees and dependents to its monthly ladies' coffee mornings.

Many voluntary groups providing aid to the handicapped either solicit or are receptive to help from Americans, particularly those with special qualifications or experience. Scout activities are available for boys and girls. These groups are also receptive to offers of assistance.

Auckland

Auckland is located on a narrow isthmus between two harbors that opens into the Pacific Ocean and the Tasman Sea. With a population of over 1 million (for the metropolitan area), it is the commercial and industrial center of New Zealand and a main port of entry for ships and planes. Auckland is home to many immigrants and visitors from Pacific Island nations and has been described as the world's most populous Polynesian city.

Auckland's International Airport is at Mangere, 13 miles from the Consulate General. Bus and taxi service is available to the center of town. Overseas ships dock in downtown Auckland.

Downtown Auckland is modernizing rapidly. A large number of office buildings and several large hotels of international standards have been built in the last few years. The downtown area is surrounded by many attractive residential areas and many satellite cities and boroughs. Most homes are not modern by U.S. standards either in architecture or in equipment, but most are comfortable, and many have magnificent views. North Shore homes are newer; many have been built since 1961 when the harbor bridge was completed.

Auckland offers education, medical care, and a standard of living comparable to those in Wellington.

Auckland's temperatures are cool in winter and warm in summer. Average annual rainfall is 50 inches; hours of sunshine per year average 2,140. Occasional storms are accompanied by fairly high winds, but they are not a great hazard. Because of high humidity and dampness in most houses, mildew is a threat, especially to leather goods. During summer, flies, mosquitoes, and other insects are troublesome, because most houses are unscreened. Moths and silverfish are a threat to woolens.

About 6,000 Americans reside in this U.S. consular district, and as many as 900 American visitors are in the consular district at any given time.

Food

Meat and dairy produce, including pasteurized milk, are abundant. Many fresh fruits and vegetables are also available. Supplies of frozen and canned vegetables are limited. Since canned baby foods are expensive, a blender is useful in making baby food at home. A meat grinder is also useful. Coffee and tea is sold in various grades and blends.

A few prepared meals are available. Local flour, vegetable shortening, and yeast are different from American products. Local breads are good. Items that are not sold include certain herbs and seasonings, double-action baking powder, Karo syrup, American tomato ketchup and chili sauce, meat tenderizers, Bisquick, and Sanka. The selection of such items as cake mixes is not as widespread as in the U.S. Local mayonnaise does not suit American taste.

New Zealand wines have improved dramatically in the last few years and are generally quite acceptable as table wines, particularly white wines. If you wish to serve American wines, which are seldom available, you must arrange to import them.

Clothing

Auckland winters are not so severe as those in most parts of the U.S. In the Auckland metropolitan area, it

never snows or freezes. However, the wind chill factor frequently offsets moderate temperatures. Few homes are centrally heated, but most are insulated. Summer temperatures seldom reach levels that most Americans would consider hot, but conditions are often warm enough to require summer clothing. Summer evenings can be quite cool.

Clothing sizes, qualities, and prices in New Zealand differ from what most Americans are accustomed to.

Men do not require a heavy overcoat but do need a light topcoat and especially a good raincoat. Medium-weight suits are usually sufficient for winter, and lightweight suits are sufficient for summer.

New Zealand shirts are cut differently from American shirts. They offer a normal range of neck sizes but few sleeve lengths. Lightweight wash-and-wear suits are not available. A few good hand tailors are available. New Zealand men seldom wear hats. Men should bring clothing for the sports that interest them, including tennis whites and lightweight waders for fishing. Local athletic equipment and footwear are limited and expensive.

Mediumweight wool dresses, especially with long sleeves, and knitted and tailored suits are worn from fall through spring. A fur cape or stole or an evening sweater or shawl is necessary. A good supply of light summer clothes is desirable.

Bring clothes for informal, leisure, sports, and formal evening wear. Formal day occasions require hat and gloves, and formal evening functions can require long dresses. Lingerie, hosiery, and accessories are available. A raincoat, or several for variety, is essential. Bring a warm woolen or quilted dressing gown.

A wide range of good imported woolen, silk, and American cotton fabrics is available, but some accessories for dressmaking, such as seam and sleeve boards, are in limited supply or different from Ameri-

can types. A few good dressmakers are available.

Footwear should include several pairs of crepe-soled shoes for use during rainy weather and a good pair of walking shoes.

Uniforms are worn in most schools and must be bought here. Boys of up to high school age wear short trousers above the knee. Ready-made clothes, especially for children under 8 years, are expensive and limited in variety and supply.

Supplies and Services

Supplies: Most cosmetics and toilet articles, including some American brands made in New Zealand or Australia, are available but are expensive.

Medical and household supplies are generally available.

Such basic services as dry-cleaning, laundry, shoe repair, beauty shops, appliance repair, and other repair services are often less than adequate and are expensive. Mail, milk, and newspapers are delivered daily. Trash is collected weekly.

Auckland is covered by a regional bus service that extends to the outlying suburbs and satellite towns. Service is good during the morning and evening rush hours but is not frequent at other times. A ferry service operates frequently between the foot of Queen Street in downtown Auckland and Devonport across the harbor. Commuter train service is limited. Although the cost of gasoline is high, more than 60% of New Zealand's work force use private transportation to commute to work. An automobile is indispensable in Auckland.

Religious Activities

Most religions and sects are represented in Auckland; there are Church of England (Anglican), Presbyterian, Roman Catholic, Methodist, Baptist, and Jewish congregations.

Education

Schools are available from kindergarten through university level. Children may attend kindergarten several half-days a week from the age of 3. Kindergartens usually have a waiting list of at least 8 months. Children may begin school at age 5 and are automatically accepted at primary school. School is compulsory between ages 7 and 15. Some private and public schools provide transportation for day students. Facilities for athletics and other activities are adequate in all schools. Private schools vary considerably; public schools are free, but parents must buy books and school supplies.

The University of Auckland offers degrees in arts, science, commerce, law, and medicine. Music and art classes are provided in private schools, and art classes are provided in public schools at primary and secondary levels.

Special Educational Opportunities

The University of Auckland, Auckland Technical Institute, and many secondary schools conduct extensive programs of adult education in commerce and the trades for hobbyists and those who work about the home. Auckland's public libraries and the library of the University of Auckland provide a good if limited coverage of all major fields.

Sports

Aucklanders spend much of their time outside, and opportunities for outdoor activity abound. Most homeowners take pride in maintaining their lawns and gardens.

Many fine beaches are in and near Auckland. The city has five large swimming pools. Heated pools offer year-round activity.

Waitemata Harbor, with its irregular coastline and many islands, is a paradise for boating enthusiasts. About 4,000 sailboats of all classes participate in the Anniversary Day Regatta races.

The area offers several excellent golf clubs and two public links.

Grass and asphalt tennis courts are located in all sections of the city. Except for a few courts at schools, all are either private or club owned. Organized midweek tennis for women is available at all clubs. Squash is popular.

Waitemata Harbor and Hauraki Gulf have numerous fish. The Bay of Islands, Coromandel Peninsula, and Tauranga, in the Bay of Plenty, are centers for big game fishing. Lake Taupo and several other lakes are noted for their abundance of rainbow trout, and fishing is permitted year round. Many trout streams and rivers exist. Although trolling is permitted in the lakes and spinning in some sections of the major rivers, only fly casting is allowed in the streams.

Many places in New Zealand provide hunting for deer, wild pig, duck, and rabbit. Slide-action (pump) and semiautomatic shotguns must have magazines pinned (not plugged) to limit total capacity to two rounds, one in the magazine and one in the chamber. This regulation is now under review, however, so owners of such guns should inquire before shipping them. Firearms owners and users are licensed by the police.

Good hiking trails are found in the mountains (particularly the Waitakere Ranges) near Auckland. Hiking or tramping clubs are popular. Rain gear is essential; good quality, reasonably priced, and lightweight gear is available locally. Heavy-duty shoes are less useful than medium- or lightweight shoes. Other camping gear (tents, bags, etc.) is available but expensive.

Bowling on the green is a popular sport, and clubs exist in all parts of the city. Currently, only four American-style bowling alleys are available in New Zealand (one is in Auckland).

Halfway between Wellington and Auckland at Mount Ruapehu, snow skiing occurs through the winter.

Skyline and harbor of Auckland

Susan Rock. Reproduced by permission..

Auckland offers ample opportunities for water-skiing and surfing.

Many good potters exist, and dyeing and weaving are popular.

Principal spectator sports include horse racing, autoracing, rugby, soccer, cricket, and tennis.

Sports attire for men and women is similar to that worn in the U.S., except that New Zealanders adhere more closely to the traditional forms of sports dress. Sports equipment is available but expensive.

Entertainment

Auckland offers many first-class movie theaters downtown and many suburban ones. Most films are American or British, with French, Italian, and Swedish films shown occasionally.

Auckland has a professional repertory theater. Occasional plays or musicals are staged by touring over-

seas companies. The Grand Opera Society usually features one or two productions a year. The New Zealand Symphony Orchestra, the Auckland Regional Orchestra, and various other groups perform frequent concerts and recitals.

The city has a museum containing many interesting relics of Maori and European life and an art museum.

Local events of interest include an annual agricultural and pastoral show, gymkhanas, and Maori concerts. The 3-week Auckland Festival held each May offers plays, concerts, recitals, art exhibitions, and a film festival.

Many good restaurants and one or two nightclubs exist; most are closed on Mondays. Several hotels offer good meals. Traditionally, tipping is not practiced.

Radio reception is good and local stations offer a fairly broad selec-

tion of programs. American and other rock music is popular with local disc jockeys. Each of Auckland's two TV channels, both government enterprises, broadcast 10-12 hours per day, 7 days a week.

Social Activities

Auckland's American community is not so cohesive as those in some countries. Most American residents have been here for many years and have integrated into New Zealand society. However, many Americans do belong to the American Club and/or the American Women's Club. They are composed almost equally of Americans and New Zealanders who have lived in or have an interest in the U.S.

Christchurch

Christchurch, the capital of the Canterbury Provincial District on South Island, is the center of New Zealand's most productive wheat and grain region. It is situated on

the east coast of South Island on the Avon River, at the base of Banks Peninsula. Christchurch was founded in 1850 by a group of Anglicans, and named for the old Oxford College attended by John Robert Godley, the leader of its first settlers. It now is an industrial city of 307,000 (urban area), and a center for many large businesses, including tanneries and meat-packing plants.

Christchurch Cathedral (Anglican), a Gothic structure built over a period of 40 years, from 1864 to 1904, and the Cathedral of the Blessed Sacrament (Roman Catholic), of Classic Revival architecture, are among New Zealand's most outstanding ecclesiastical buildings. The city is also the site of Canterbury College (founded in 1873), and the noted School of Arts, dating to 1882. Queen Elizabeth II Park in Christchurch was the site of the 1974 Commonwealth Games and the 1981 World Veterans Games—it is a large complex of sports grounds, pools, and athletic courts. The Town Hall, acknowledged as the finest in New Zealand, opened in 1972, and provides extensive conference facilities for South Island.

Other notable places in the city are Canterbury Museum; the Botanic Gardens, laid out more than one hundred years ago; and McDougall Art Gallery. The Bridge of Remembrance, built as a First World War memorial, crosses the Avon River. Also near the river are the Canterbury Provincial Government buildings, dating from the mid-19th century, and the only remaining administrative structures of their kind in New Zealand.

Hagley Park, the largest area of public grounds, extends over many acres of woodlands and formal gardens. Together with the city's Victorian buildings and lawn-fringed houses, it intensifies Christchurch's reputation as "the most English town outside of England."

The airport at Christchurch, which gained international status in 1950, was opened in 1936 as the first

municipal airport in the Southern Hemisphere.

There are recreational facilities throughout the city, both public and private. Much of Christchurch's social activity centers around club life.

Christchurch serves as a natural gateway for touring South Island. A combination fly-drive tour of the area might include a visit to a nearby sheep farm; the resort town of Queenstown, situated on the north shore of Lake Wakatipu in a mountain setting; and the small town of Te Anau located at the entrance to Fjordland National Park. One of the fjords—Milford Sound—is the foremost attraction on South Island, with more than 300,000 tourists visiting annually.

Dunedin

Dunedin, New Zealand's fifth largest city, was founded by Free Church of Scotland (Presbyterian) settlers in 1848. They laid out the city around an octagon, rather than the traditional square, and this central area is a major point of interest even today. Known as the "Edinburgh of the South," Dunedin is famous for its late 19th century architectural styles and its Scottish festivities.

Dunedin was the base for the ships of Admiral Richard Byrd's Antarctic expeditions between 1928 and 1935, and a memorial stands here in his honor.

The city is situated at the head of Otago Harbor, a Pacific Ocean inlet, and is the major port for the Otago area. A South Island urban center with a population of 109,500, Dunedin produces chemicals, soap, furniture, and fertilizers; shipyards and breweries are also among its industries. Wool and dairy products are shipped from here in large quantities.

Otago University, with respected medical and dental schools among its many departments, was established in Dunedin in 1869. It is

among the several points of interest on both city and peninsular tours; others include the Queen's Gardens, Larnach Castle, the Cenotaph, Glenfalloch Woodland Gardens, Prospect Park, and Lookout Point.

OTHER CITIES

GISBORNE is a seaport city of more than 30,000 residents on the eastern shore of North Island. Lying on Poverty Bay in the East Cape area, it is known for its fine beaches and beautiful scenery, and is fast becoming a popular resort. Grapes, maize, and citrus fruits are grown in abundance around Gisborne.

HAMILTON is New Zealand's largest inland city. It lies on the banks of the Waikato River in central North Island, and is the hub of a prosperous dairy farming and sheep-raising area. With a population of over 170,900 (2000 est.) in its urban area, it ranks sixth in population in the country. The University of Waikato was established here in 1964.

HASTINGS is a city of more than 36,000 near Napier, and the district which encompasses both cities and the area in between is generally considered one urban center. The total population of the combined area has grown to approximately 108,000. Hastings proper is the commercial center of a pastoral region. Orchards, vineyards, and grazing flocks add to the singular beauty of the surrounding landscape.

INVERCARGILL, the southernmost city in New Zealand, is situated on an estuary of Foveaux Strait, the channel which separates South and Stewart islands. It is a busy, modern city of 48,000 (1987 est.), with a well-defined Scottish atmosphere—many of its streets are named for the rivers of Scotland. Invercargill, founded in 1856, is the administrative center of Southland Province. Queen's Park, Rose Gardens, Waihopi Scenic Reserve, and

Christchurch Cathedral

Bluff Harbor are among its scenic areas.

NAPIER, on the east coast of North Island, is a modern seaside city of over 50,000 residents. After a devastating earthquake in 1931, the town was rebuilt in the Art Deco style. The city is noted for its beautiful, two-mile-long Marine Parade, an esplanade lined with Norfolk pines. The Kiwi House on the parade exhibits the wingless kiwi bird, the national emblem of New Zealand. The botanical gardens and Napier proper can be seen in panorama from Bluff Hill overlooking Hawke Bay—this lookout is one of the city’s interesting tourist spots.

PALMERSTON NORTH, with a population of about 75,800 (2000 est.), lies on the Manawatu River on North Island, about 80 miles north-east of Wellington. Although the center of a dairy farming region, it also produces pharmaceuticals, electrical equipment, and knitted goods. Massey University, a well-known agricultural school, was founded nearby in 1964.

ROTORUA, where many of New Zealand’s noted Maori settlements are located, is a city of 54,900 residents on Rotorua Lake in north-central North Island. Often called “New Zealand’s Yellowstone,” it is one of the nation’s most famous resorts,

featuring thermal springs, deep craters, caverns, the legendary Mokoia Island, exotic pine forests, hunting and fishing and, especially, the New Zealand Maori Arts and Crafts Institute, with its fine examples of carving and other arts and crafts. Of particular interest are the Maori concerts and traditional *hamgi* (pit-cooked meals) held nightly at several locations.

The port city of **TIMARU**, with a population of approximately 28,000, lies on the east coast of South Island, about 90 miles southwest of Christchurch. Timaru is a commercial hub, whose exports include frozen foods.

WHANGAREI, with a population of over 40,000, is one of New Zealand’s fastest-growing cities. It is situated about 85 miles north of Auckland, on North Island, and is the urban center of a livestock-raising area. The waters of its harbor are noted for deep-sea fishing, and among its scenic spots is beautiful Whangarei Falls. The city’s Clapham Clock Museum contains over 400 clocks from around the world. To the north are the extensive Kauri forests and the picturesque Bay of Islands, as well as Kaitaia, the far north’s principal city.

COUNTRY PROFILE

Geography and Climate

New Zealand is located in the South Pacific, some 1,200 miles southeast of Australia. The country consists primarily of three islands that extend nearly 1,000 miles from north to south. New Zealand’s total area, 103,736 square miles, is slightly smaller than that of Colorado. All but 1% of its area is in the two main islands: the North, 44,281 square miles, and the South, 58,093 square miles that are separated by Cook Strait. Stewart Island, south

of the South Island, covers 670 square miles.

Although it has several large plains, New Zealand is mainly a mountainous country, with many rivers and lakes. The highest peak, Mount Cook, rises over 12,000 feet in the Southern Alps, a massive range stretching almost the length of the South Island. The North Island has several intermittently active volcanoes.

New Zealand lies in the Temperate Zone and has a generally mild, invigorating climate. The surrounding ocean tempers the climate, with the result that seasons do not vary as much as in most of America. Spells of cool, damp weather occur in the summer from December through February. Rainy winter days of June, July, and August are interspersed with days of brilliant sunshine and crisp, clear air. The chart shows statistics on climatic ranges for New Zealand's three main centers: Auckland, Wellington, and Christchurch.

Areas outside the main islands are: the Chatham Islands, located 500 miles off the east coast of the South Island; several sub-Antarctic groups with no permanent habitation; and the Three Kings, a small, uninhabited group off the northernmost tip of the North Island. Farther away are the Cook Islands and Niue, two self-governing associated states, and Tokelau, a group of three atolls that New Zealand administers. New Zealand claims the Ross Dependency in Antarctica, but the U.S. does not recognize this claim.

In addition to the U.S. Embassy in Wellington, the U.S. has a Consulate General in Auckland and a Consular Agency in Christchurch. The U.S. Naval Support Force Antarctica/Detachment Christchurch—better known as Operation Deep Freeze—has a permanent complement of about 60 Navy and Air Force personnel and about the same number of New Zealand staff. It provides extensive logistic support to the U.S. Antarctic Research Program operated by the National

Science Foundation that also maintains an office in Christchurch. Five civilian astronomers employed by the U.S. Naval Observatory in Washington operate an astrometric observatory on Black Birch Mountain near Blenheim on the South Island.

October, November, and December are usually particularly windy months. Winds of 60 mph are not unusual, especially in the Wellington area, and on rare occasions they exceed 100 mph. Earth tremors are sometimes noticeable but rarely cause damage. New Zealand lies in an area of active earthquakes and volcanism ringing the Pacific Plate. A major fault line runs through Wellington.

Population

New Zealand's population in 2000 was estimated at 3,700,000. Maori, descendants of the early Polynesian settlers, make up about 10% of the population. Most of the balance is of British descent, and immigrants continue to arrive in modest numbers from the U.K., Australia, Europe, North America, some of the Pacific Islands, and Asia.

About 75% of New Zealand's population lives on the North Island, and Auckland's urban area, with 1 million inhabitants, is the largest population center. The population of the greater Auckland area is more vast than that of the entire South Island. Wellington, including the Hutt Valley and other adjacent areas, is the next largest and numbers 326,000. The Christchurch area, population 307,200, is third largest and is followed by Dunedin, 109,500; and Hamilton, 149,000.

Throughout New Zealand, the influence of the Maori culture is evident in the names of streets, towns, rivers, and mountains, as well as in art, literature, and music. Historically, Maori have accommodated reasonably well to the European culture that arrived after them and quickly dominated the country, but recent years have seen a resurgent Maori identity characterized by

increased assertion of Maori rights guaranteed under the Treaty of Waitangi that ceded sovereignty from the Maori chiefs to the British Crown. The Waitangi Tribunal has been charged with hearing disputes over land and resource rights and recommending settlements to the government.

Public Institutions

New Zealand is a parliamentary democracy based on the British model but with important modifications. The Governor General performs the ceremonial role of head of state, representing Queen Elizabeth II. Parliament consists of one Chamber, the House of Representatives, with 97 Members: 93 representing the general population and 4 Maori members representing those who claim to be Maori by descent and have asked to be included on the Maori electoral rolls. The highest vote winner in each of the 97 electorates is elected to Parliament. The parliamentary term is 3 years; an election may be held at any time, but only two early elections have been held since World War II. Voting is not compulsory, but all voters must register at age 18. About 90% of the electorate has voted in general elections held since World War II. New Zealand has had universal male suffrage since 1879 and women's suffrage since 1893.

The executive branch of the government is the Cabinet, led by a Prime Minister as head of government. The current Cabinet includes 18 other ministers, each of whom oversees one or more ministries or departments of government. Each of these is headed by a career civil servant who usually bears the title of chief executive officer.

Two political parties, the National Party and the Labour Party, have dominated Parliament and the nation's political life since 1935. The present National Party Government was elected in October 1990. The Labour Party originated with the trade union movement. Its support is strongest in urban areas. It gov-

Downtown Christchurch viewed from post office

erned from 1935 to 1949, from 1957 to 1960, and from 1972 to 1975. The National Party's traditional strength has been in the rural areas, but it has been successful at times in appealing to urban-based workers and business leaders.

Minor parties occasionally attract substantial numbers of votes, but traditionally have obtained little representation in Parliament. The New Zealand Democratic Party, the New Zealand Party, the Christian Heritage Party, and the New Labour Party all receive about 1 to 2% public support each.

New Zealand communist parties are legal but are riven by ideological fissures. They enjoy little popular support and have never been represented in Parliament. Several leaders of the Socialist Unity Party, a small pro-Moscow Communist group, hold leadership positions within the trade union movement.

New Zealand is a unitary state whose government at Wellington makes and directs all national policy. Provincial (or state) administrative entities do not exist. Some 540 local bodies, including city, borough, and county town councils; regional authorities; and boards that deal with electric power, harbors, pest

control, and other special functions, are being replaced with a smaller number of united councils and regional authorities.

New Zealand is a comparatively new country on the stage of world affairs. Although New Zealand participated in the Versailles Conference and was a founding member of the League of Nations, successive governments until 1935 held the view that in foreign policy the British Empire should be regarded as a unit and that, ideally, the Empire should speak with one voice. From 1936 onward, however, New Zealand began to assert an independent position in foreign affairs. In 1942, New Zealand's first diplomatic mission was opened in Washington, followed by one in Ottawa later that year and another in Canberra in 1943. An American Legation was opened in Wellington on April 1, 1942. A Department of External Affairs was created in 1943 to manage New Zealand's relations with foreign countries.

New Zealand now has diplomatic or consular posts in more than 30 countries and has accredited representatives to more than 60 countries and to the U.N., European Economic Community (EEC), and the Organization for Economic

Cooperation and Development (OECD). Strong ties of tradition and sentiment link New Zealand with the U.K. and the Commonwealth. New Zealand is an active participant in Commonwealth affairs and also a strong supporter and active U.N. member.

The U.S. suspended its security guarantees to New Zealand under the ANZUS mutual security treaty when the latter barred visits by nuclear-powered or armed warships to its ports. The treaty remains in effect but is now active only between the U.S. and Australia, the third party to the agreement. New Zealand works closely with the U.S. in scientific research in Antarctica and on international trade issues.

Arts, Science, and Education

New Zealand's larger cities offer a great deal of activity in the visual and performing arts, both amateur and professional. Instrumental and choral groups hold frequent dramatic and operatic performances and concerts. Overseas artists often visit the country. Officers and their dependents have many chances to participate in amateur artistic activities. The larger centers also have art galleries (mostly private), museums, and zoos.

The government is an important source of support for the arts. It maintains such institutions as the National Art Gallery in Wellington and does much to promote music through the government-owned Radio New Zealand (RNZ). RNZ administers and supports the National Symphony Orchestra and arranges tours that bring its music to the most remote parts of the country.

Scientific activity is largely in the hands of the universities and Crown Research Institutes, which have a large and varied program. Many scientific associations are active, including the New Zealand branch of Britain's famous Royal Society.

The primary school system is satisfactory. Although secondary schools are of high quality in some respects, they may not prepare some children adequately for American universities. The U.S. Embassy has prepared a comprehensive comparative analysis of the New Zealand and U.S. secondary education systems, which is available from the Embassy and also from the Foreign Service Institute (FSI) and the Family Liaison Office (FLO) in the Department of State.

Universities at Wellington, Auckland, Christchurch, Dunedin, Palmerston North, and Hamilton offer undergraduate facilities comparable to those in the U.S. The normal undergraduate program leading to a bachelor's degree lasts 3 years. Several teacher-training colleges and technical and business schools exist. Most universities offer evening courses at the university level as well as adult education classes.

Commerce and Industry

A remote island nation, New Zealand is heavily dependent on foreign trade. But the pattern of New Zealand's export commodities is changing. The largest contributors to annual growth are expected to come from forestry & logging, financial & insurance services, communications, construction, non-metallic mineral products and electricity, gas & water.

The U.K. was for many years New Zealand's principal market. With Britain's entry into the European Community, however, New Zealand was obliged to diversify its export markets and has succeeded to a considerable degree. The U.S. is New Zealand's largest export market.

Apart from an aluminum smelter, a steel mill, an oil refinery, and a growing forest-products industry, most industry is classified as light. A wide variety of consumer goods is manufactured, mainly for the domestic market. Manufactured

exports, mostly to Australia, have shown encouraging growth. Exports of forest products and mineral sands have also increased. There are several energy-based industries, including a synthetic gasoline plant that uses natural gas from the Maui field. Despite active exploration, petroleum has only been discovered in small quantities.

The government plays a direct role in economic life. Railways, electric power, airlines, and communications systems are nationalized. Marketing of meat and dairy products is subject to the control of boards with government participation. Approximately 65% of the labor force is involved in service sectors, 25% are in industry and 19% in agriculture.

Per capita GDP is estimated at \$17,700 (2000 est), which translates into a reasonable standard of living for New Zealanders. Income is evenly distributed, with no extremes of poverty and wealth. Systems of social security, national health, and old-age benefits are comprehensive.

Transportation

Local

Ample public transportation serves residents of New Zealand's larger cities. Buses and taxis are available at reasonable fares. Commuter trains run from Wellington to Lower Hutt and Tawa.

New Zealand generally has good main roads. Two-lane paved surfaces are common in well-traveled areas. Secondary roads, especially in farming or isolated areas and on the west coast of South Island, are often not paved.

Regional

International airports are in Wellington, Auckland, and Christchurch, although Wellington cannot accommodate 747 model aircraft. All in-country service is provided by Air New Zealand and small local carriers. International airlines

serve New Zealand from many countries.

Train service between Auckland and Wellington takes about 12 hours. Trains make several stops along the 400-mile route, allowing passengers a chance to relax and eat. Car rental companies in New Zealand charge an average daily rate of about NZ\$86, plus 21¢ per kilometer for a medium-sized vehicle.

Communications

Telephone and Telegraph

Local phone service is good. Phone calls to the U.S. need not be booked in advance, except at Christmas. You can dial most areas in the U.S. direct, and connections are usually excellent. A 3-minute call to the U.S. costs about NZ\$9.18 plus NZ\$8 per call (person to person) or NZ\$9.18 (station to station). Special rates are available in the late evening (New Zealand time) and all day Saturday. International service to other parts of the world is equally good.

Fax service to and from the U.S. is excellent; commercial fax services are widely available.

Newspapers, Magazines, and Technical Journals

American magazines appear at local newsstands several weeks after publication, and the *International Herald Tribune* is available by mail—5 days late. The Pacific edition of *Time* is printed in New Zealand and that of *Newsweek*, printed with *The Bulletin*, in Australia.

The USIS library in Wellington and Auckland carry a good stock of U.S. periodicals, the Singapore edition of the *International Herald Tribune*, and several U.S. newspapers, plus the usual supply of books and reference materials.

In the principal cities, morning and evening newspapers are published 6 days a week, except on certain holidays. Three national newspapers are published on Sunday. Local

news coverage is good, but international coverage is limited.

Health and Medicine

Medical Facilities

New Zealand has a socialized medical system, and, although medical services are considered excellent by world standards, they are not equivalent to those in the U.S. Americans are accustomed to more intensive diagnostic testing and to easier access to specialists. Some of the latest techniques and medicines are not yet available in New Zealand due to the high cost of equipment. Medical costs range from nil to minimal (currently about NZ\$27 for a visit to a general practitioner). Prescriptions are filled at nominal cost.

One of the primary differences between the U.S. and New Zealand medical systems is that in New Zealand it is almost impossible to see a specialist without a referral from a general practitioner.

Hospital facilities for surgery and inpatient care are considered adequate. For normal pregnancies, obstetrical care is provided by a general practitioner with follow-up care provided by nurses from the Plunket Society, a voluntary agency subsidized by the New Zealand Government, which cares for mothers and children.

Public hospitals have only a few private rooms.

Dental care is adequate. Orthodontists are located in Wellington and in Auckland. New Zealand orthodontists use treatment methods and techniques that differ from those of their U.S. counterparts, making it difficult to continue treatment begun in the U.S. Periodontic treatment is available.

The services of opticians and oculists are satisfactory and available at reasonable rates.

Community Health

Except for Hepatitis B no endemic diseases exist. All preschool children in New Zealand are vaccinated against Hepatitis B.

New Zealand's damp climate may trouble persons suffering from asthma, arthritis, rheumatism, and sinusitis. Colds and flu are frequent, partly as a result of frequent weather changes. BCG vaccination (against tuberculosis) of all 13-year olds is performed in the majority of North Island schools but is voluntary. Because the vaccine will cause a positive reaction when tine tests are administered, parents may wish to have their children exempted from vaccinations.

Preventive Measures

Milk is pasteurized. All urban water supplies are chlorinated, and it is safe to eat raw fruits and vegetables. Inoculations are not required for entry into New Zealand. Except for the pre-exposure rabies and Japanese B Encephalitis vaccines, you can obtain all other shots required for travel to points outside New Zealand. Oral polio vaccine is available locally.

NOTES FOR TRAVELERS

Passage, Customs & Duties

When traveling from the Northern Hemisphere, remember that the seasons are reversed in New Zealand so pack accordingly. When coming to New Zealand from the west coast of the U.S., travelers lose a day crossing the international dateline. For instance, a passenger who leaves Los Angeles by air on the evening of April 14 will arrive in Auckland on the morning of April 16. For air travel from the U.S., a rest-stop may be arranged in Honolulu.

U.S. citizens eligible for a visa waiver do not need a visa for tourist stays of three months or less. For more information about visa waivers and entry requirements contact the Embassy of New Zealand, 37 Observatory Circle, N.W., Washington, D.C. 20008, telephone (202) 328-4800, the Embassy's home page at <http://www.nzemb.org>, or the Consulate General of New Zealand in Los Angeles, telephone (310) 207-1605.

New Zealand's customs authorities may enforce strict regulations concerning temporary importation into or export from New Zealand of certain items, including firearms and agricultural products. Handguns may not be brought into the country, and a permit for other firearms must be obtained from the New Zealand police immediately after arrival. Tourists have also faced police inquiries as a result of importing or brandishing toy weapons. The Ministry of Agriculture of New Zealand has stringent requirements for the entry of food and agricultural products. Travelers are required to declare any items that come under agricultural quarantine restrictions as stated on the customs form at the port of entry. Heavy fines have been levied against those attempting to bring in undeclared prohibited items. For more information, contact the New Zealand Customs Service at <http://>

www.customs.govt.nz and the Ministry of Agriculture and Forestry at <http://www.maf.govt.nz>. It is also advisable to contact the Embassy of New Zealand in Washington, D.C. at (202) 775-5200, or one of New Zealand's consulates in the United States, for specific information regarding customs requirements.

New Zealand Ministry of Agriculture officials board many incoming international flights and spray the cabins with a nontoxic insect spray before passengers disembark. This is a routine procedure.

Agricultural inspectors will question new arrivals and may examine their luggage to ensure against the entry of agricultural diseases and pests. Everything made of wood, paper (including books), leather, and straw will be inspected carefully and may be held for disinfecting.

Under New Zealand law, all arriving passengers are required (without exception) to complete an agricultural questionnaire, which is contained in the Passenger Declaration Form.

All footwear in your baggage should be soil-free, especially if the footwear has been worn on farms or in areas where animals are held.

To guard against the accidental introduction of pests and diseases, some agricultural items are restricted from entry into New Zealand.

Americans living in or visiting New Zealand are encouraged to register at the Consular Section of the U.S. Consulate General in Auckland by mail, phone, fax or in person, where they can obtain updated information on travel and security.

The U.S. Consulate General in Auckland is located on the third floor of the Citibank Centre, 23 Customs Street East, between Commerce and Queen Streets. The telephone number is (64)(9) 303-2724. The fax number is (64-9) 366-0870. See also the Consulate Gen-

eral home page via the Internet at <http://www.usembassy.org.nz>.

The U.S. Embassy is located at 29 Fitzherbert Terrace, Thorndon, Wellington; the telephone number is (64)(4) 462-6000. The fax number is (64)(4) 471-2380. The Consular Section of the U.S. Embassy in Wellington closed on May 15, 1996. All routine consular services and most emergency services are provided by the Consulate General in Auckland.

Pets

You may import dogs and cats only via Australia and the U.K. The quarantine requirements of those countries are:

Australia

4-month quarantine in Hawaii followed by 1 month's residence then 4-month quarantine in Australia.

U.K.

6-month quarantine followed by 3 month's residence.

Imported dogs and cats are not quarantined in New Zealand.

You may import aviary birds from Australia only.

Currency, Banking and Weights and Measures

New Zealand dollar is broken down into 100 cents. Coins in circulation are 5¢, 10¢, 20¢, and 50¢ pieces. Bank notes in use are \$1, \$2, \$5, \$10, \$20, \$50, and \$100.

The New Zealand Government's foreign currency regulations do not permit currency transactions on the open market. However, you may purchase local currency with dollar instruments at banks, hotels, and certain stores. Only banks are permitted to reconvert local currency into U.S. dollars. Banks require a 1 day's notice for such transactions.

New Zealand uses the metric system of weights and measures.

Disaster Preparedness

Some heavily populated parts of New Zealand are located in an area

of very high seismic activity. Although the probability of a major earthquake occurring during an individual trip is remote, earthquakes can and will continue to happen. General information regarding disaster preparedness is available via the Internet at <http://travel.state.gov/crisismg.html>, and from the U.S. Federal Emergency Management Agency (FEMA) home page at <http://www.fema.gov>.
